- `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV` specifies that the `shadingRateImageEnable` state in `VkPipelineViewportShadingRateImageStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetShadingRateImageEnableNV` before any draw call.
- `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV` specifies that the `representativeFragmentTestEnable` state in `VkPipelineRepresentativeFragmentTestStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetRepresentativeFragmentTestEnableNV` before any draw call.
- `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` specifies that the `coverageReductionMode` state in `VkPipelineCoverageReductionStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetCoverageReductionModeNV` before any draw call.
- `VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT` specifies that the `VK_PIPELINE_CREATE_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` and `VK_PIPELINE_CREATE_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` flags will be ignored and **must** be set dynamically with `vkCmdSetAttachmentFeedbackLoopEnableEXT` before any draw call.

10.3.1. Valid Combinations of Stages for Graphics Pipelines

Primitive processing can be handled either on a per primitive basis by the vertex, tessellation, and geometry shader stages, or on a per mesh basis using task and mesh shader stages. If the pipeline includes a mesh shader stage, it uses the mesh pipeline, otherwise it uses the primitive pipeline.

If a task shader is omitted, the task shading stage is skipped.

If tessellation shader stages are omitted, the tessellation shading and fixed-function stages of the pipeline are skipped.

If a geometry shader is omitted, the geometry shading stage is skipped.

If a fragment shader is omitted, fragment color outputs have undefined values, and the fragment depth value is determined by [Fragment Operations](#) state. This **can** be useful for depth-only rendering.

Presence of a shader stage in a pipeline is indicated by including a valid `VkPipelineShaderStageCreateInfo` with `module` and `pName` selecting an entry point from a shader module, where that entry point is valid for the stage specified by `stage`.

Presence of some of the fixed-function stages in the pipeline is implicitly derived from enabled shaders and provided state. For example, the fixed-function tessellator is always present when the

pipeline has valid Tessellation Control and Tessellation Evaluation shaders.

For example:

- Depth/stencil-only rendering in a subpass with no color attachments
 - Active Pipeline Shader Stages
 - Vertex Shader
 - Required: Fixed-Function Pipeline Stages
 - [VkPipelineVertexInputStateCreateInfo](#)
 - [VkPipelineInputAssemblyStateCreateInfo](#)
 - [VkPipelineViewportStateCreateInfo](#)
 - [VkPipelineRasterizationStateCreateInfo](#)
 - [VkPipelineMultisampleStateCreateInfo](#)
 - [VkPipelineDepthStencilStateCreateInfo](#)
- Color-only rendering in a subpass with no depth/stencil attachment
 - Active Pipeline Shader Stages
 - Vertex Shader
 - Fragment Shader
 - Required: Fixed-Function Pipeline Stages
 - [VkPipelineVertexInputStateCreateInfo](#)
 - [VkPipelineInputAssemblyStateCreateInfo](#)
 - [VkPipelineViewportStateCreateInfo](#)
 - [VkPipelineRasterizationStateCreateInfo](#)
 - [VkPipelineMultisampleStateCreateInfo](#)
 - [VkPipelineColorBlendStateCreateInfo](#)
- Rendering pipeline with tessellation and geometry shaders
 - Active Pipeline Shader Stages
 - Vertex Shader
 - Tessellation Control Shader
 - Tessellation Evaluation Shader
 - Geometry Shader
 - Fragment Shader
 - Required: Fixed-Function Pipeline Stages
 - [VkPipelineVertexInputStateCreateInfo](#)
 - [VkPipelineInputAssemblyStateCreateInfo](#)
 - [VkPipelineTessellationStateCreateInfo](#)

- [VkPipelineViewportStateCreateInfo](#)
- [VkPipelineRasterizationStateCreateInfo](#)
- [VkPipelineMultisampleStateCreateInfo](#)
- [VkPipelineDepthStencilStateCreateInfo](#)
- [VkPipelineColorBlendStateCreateInfo](#)
- Rendering pipeline with task and mesh shaders
 - Active Pipeline Shader Stages
 - Task Shader
 - Mesh Shader
 - Fragment Shader
 - Required: Fixed-Function Pipeline Stages
 - [VkPipelineViewportStateCreateInfo](#)
 - [VkPipelineRasterizationStateCreateInfo](#)
 - [VkPipelineMultisampleStateCreateInfo](#)
 - [VkPipelineDepthStencilStateCreateInfo](#)
 - [VkPipelineColorBlendStateCreateInfo](#)

10.3.2. Graphics Pipeline Shader Groups

Graphics pipelines can contain multiple shader groups that can be bound individually. Each shader group behaves as if it was a pipeline using the shader group's state. When the pipeline is bound by regular means, it behaves as if the state of group `0` is active, use [vkCmdBindPipelineShaderGroupNV](#) to bind an individual shader group.

The primary purpose of shader groups is allowing the device to bind different pipeline state using [Device-Generated Commands](#).

The [VkGraphicsPipelineShaderGroupsCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkGraphicsPipelineShaderGroupsCreateInfoNV {
    VkStructureType           sType;
    const void*               pNext;
    uint32_t                  groupCount;
    const VkGraphicsShaderGroupCreateInfoNV* pGroups;
    uint32_t                  pipelineCount;
    const VkPipeline*          pPipelines;
} VkGraphicsPipelineShaderGroupsCreateInfoNV;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `groupCount` is the number of elements in the `pGroups` array.
- `pGroups` is a pointer to an array of `VkGraphicsShaderGroupCreateInfoNV` structures specifying which state of the original `VkGraphicsPipelineCreateInfo` each shader group overrides.
- `pipelineCount` is the number of elements in the `pPipelines` array.
- `pPipelines` is a pointer to an array of graphics `VkPipeline` structures which are referenced within the created pipeline, including all their shader groups.

When referencing shader groups by index, groups defined in the referenced pipelines are treated as if they were defined as additional entries in `pGroups`. They are appended in the order they appear in the `pPipelines` array and in the `pGroups` array when those pipelines were defined.

The application **must** maintain the lifetime of all such referenced pipelines based on the pipelines that make use of them.

Valid Usage

- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-groupCount-02879
`groupCount` **must** be at least 1 and as maximum `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::maxGraphicsShaderGroupCount`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-groupCount-02880
The sum of `groupCount` including those groups added from referenced `pPipelines` **must** also be as maximum `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::maxGraphicsShaderGroupCount`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-02881
The state of the first element of `pGroups` **must** match its equivalent within the parent's `VkGraphicsPipelineCreateInfo`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-02882
Each element of `pGroups` **must** in combination with the rest of the pipeline state yield a valid state configuration
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-02884
All elements of `pGroups` **must** use the same shader stage combinations unless any mesh shader stage is used, then either combination of task and mesh or just mesh shader is valid
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-02885
Mesh and regular primitive shading stages cannot be mixed across `pGroups`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pPipelines-02886
Each element of `pPipelines` **must** have been created with identical state to the pipeline currently created except the state that can be overridden by `VkGraphicsShaderGroupCreateInfoNV`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-deviceGeneratedCommands-02887
The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_GRAPHICS_PIPELINE_SHADER_GROUPS_CREATE_INFO_NV`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-parameter
If `groupCount` is not 0, `pGroups` **must** be a valid pointer to an array of `groupCount` valid `VkGraphicsShaderGroupCreateInfoNV` structures
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pPipelines-parameter
If `pipelineCount` is not 0, `pPipelines` **must** be a valid pointer to an array of `pipelineCount` valid `VkPipeline` handles

The `VkGraphicsShaderGroupCreateInfoNV` structure provides the state overrides for each shader group. Each shader group behaves like a pipeline that was created from its state as well as the remaining parent's state. It is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkGraphicsShaderGroupCreateInfoNV {
    VkStructureType           sType;
    const void*               pNext;
    uint32_t                  stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    const VkPipelineVertexInputStateCreateInfo* pVertexInputState;
    const VkPipelineTessellationStateCreateInfo* pTessellationState;
} VkGraphicsShaderGroupCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageCount` is the number of entries in the `pStages` array.
- `pStages` is a pointer to an array `VkPipelineShaderStageCreateInfo` structures specifying the set of the shader stages to be included in this shader group.
- `pVertexInputState` is a pointer to a `VkPipelineVertexInputStateCreateInfo` structure.
- `pTessellationState` is a pointer to a `VkPipelineTessellationStateCreateInfo` structure, and is ignored if the shader group does not include a tessellation control shader stage and tessellation evaluation shader stage.

Valid Usage

- VUID-VkGraphicsShaderGroupCreateInfoNV-stageCount-02888
For `stageCount`, the same restrictions as in `VkGraphicsPipelineCreateInfo::stageCount` apply
- VUID-VkGraphicsShaderGroupCreateInfoNV-pStages-02889
For `pStages`, the same restrictions as in `VkGraphicsPipelineCreateInfo::pStages` apply

- VUID-VkGraphicsShaderGroupCreateInfoNV-pVertexInputState-02890
For `pVertexInputState`, the same restrictions as in `VkGraphicsPipelineCreateInfo::pVertexInputState` apply
- VUID-VkGraphicsShaderGroupCreateInfoNV-pTessellationState-02891
For `pTessellationState`, the same restrictions as in `VkGraphicsPipelineCreateInfo::pTessellationState` apply

Valid Usage (Implicit)

- VUID-VkGraphicsShaderGroupCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_GRAPHICS_SHADER_GROUP_CREATE_INFO_NV`
- VUID-VkGraphicsShaderGroupCreateInfoNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkGraphicsShaderGroupCreateInfoNV-pStages-parameter
`pStages` **must** be a valid pointer to an array of `stageCount` valid `VkPipelineShaderStageCreateInfo` structures
- VUID-VkGraphicsShaderGroupCreateInfoNV-stageCount-arraylength
`stageCount` **must** be greater than 0

10.4. Ray Tracing Pipelines

Ray tracing pipelines consist of multiple shader stages, fixed-function traversal stages, and a pipeline layout.

`VK_SHADER_UNUSED_KHR` is a special shader index used to indicate that a ray generation, miss, or callable shader member is not used.

```
#define VK_SHADER_UNUSED_KHR          (~0U)
```

or the equivalent

```
#define VK_SHADER_UNUSED_NV          VK_SHADER_UNUSED_KHR
```

To create ray tracing pipelines, call:

```
// Provided by VK_NV_ray_tracing
VkResult vkCreateRayTracingPipelinesNV(
    VkDevice                                device,
    VkPipelineCache                        pipelineCache,
    uint32_t                               createInfoCount,
    const VkRayTracingPipelineCreateInfoNV* pCreateInfos,
    const VkAllocationCallbacks*          pAllocator,
    VkPipeline*                            pPipelines);
```

- **device** is the logical device that creates the ray tracing pipelines.
- **pipelineCache** is either [VK_NULL_HANDLE](#), indicating that pipeline caching is disabled, or the handle of a valid [pipeline cache](#) object, in which case use of that cache is enabled for the duration of the command.
- **createInfoCount** is the length of the **pCreateInfos** and **pPipelines** arrays.
- **pCreateInfos** is a pointer to an array of [VkRayTracingPipelineCreateInfoNV](#) structures.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pPipelines** is a pointer to an array in which the resulting ray tracing pipeline objects are returned.

Pipelines are created and returned as described for [Multiple Pipeline Creation](#).

Valid Usage

- VUID-vkCreateRayTracingPipelinesNV-device-09677
device **must** support at least one queue family with the [VK_QUEUE_COMPUTE_BIT](#) capability
- VUID-vkCreateRayTracingPipelinesNV-flags-03415
If the **flags** member of any element of **pCreateInfos** contains the [VK_PIPELINE_CREATE_DERIVATIVE_BIT](#) flag, and the **basePipelineIndex** member of that same element is not -1, **basePipelineIndex** **must** be less than the index into **pCreateInfos** that corresponds to that element
- VUID-vkCreateRayTracingPipelinesNV-flags-03416
If the **flags** member of any element of **pCreateInfos** contains the [VK_PIPELINE_CREATE_DERIVATIVE_BIT](#) flag, the base pipeline **must** have been created with the [VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT](#) flag set
- VUID-vkCreateRayTracingPipelinesNV-flags-03816
flags **must** not contain the [VK_PIPELINE_CREATE_DISPATCH_BASE](#) flag
- VUID-vkCreateRayTracingPipelinesNV-pipelineCache-02903
If **pipelineCache** was created with [VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT](#), host access to **pipelineCache** **must** be [externally synchronized](#)
- VUID-vkCreateRayTracingPipelinesNV-pNext-09616
If [VkPipelineBinaryInfoKHR::binaryCount](#) is not 0 for any element of **pCreateInfos**, **pipelineCache** **must** be [VK_NULL_HANDLE](#)

- VUID-vkCreateRayTracingPipelinesNV-pNext-09617
If a `VkPipelineCreateFlags2CreateInfoKHR` structure with the `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag set is included in the `pNext` chain of any element of `pCreateInfos`, `pipelineCache` **must** be `VK_NULL_HANDLE`
- VUID-vkCreateRayTracingPipelinesNV-binaryCount-09620
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfos`, `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` **must** not be set in the `flags` of that element
- VUID-vkCreateRayTracingPipelinesNV-binaryCount-09621
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfos`, `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` **must** not be set in the `flags` of that element
- VUID-vkCreateRayTracingPipelinesNV-binaryCount-09622
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfos`, `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT` **must** not be set in the `flags` of that element
- VUID-vkCreateRayTracingPipelinesNV-pNext-10150
If a `VkPipelineCreateFlags2CreateInfoKHR` structure is included in the `pNext` chain of any element of `pCreateInfos`, `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag **must** not be set

Valid Usage (Implicit)

- VUID-vkCreateRayTracingPipelinesNV-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateRayTracingPipelinesNV-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkCreateRayTracingPipelinesNV-pCreateInfos-parameter
`pCreateInfos` **must** be a valid pointer to an array of `createInfoCount` valid `VkRayTracingPipelineCreateInfoNV` structures
- VUID-vkCreateRayTracingPipelinesNV-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateRayTracingPipelinesNV-pPipelines-parameter
`pPipelines` **must** be a valid pointer to an array of `createInfoCount` `VkPipeline` handles
- VUID-vkCreateRayTracingPipelinesNV-createInfoCount-arraylength
`createInfoCount` **must** be greater than `0`
- VUID-vkCreateRayTracingPipelinesNV-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_PIPELINE_COMPILE_REQUIRED_EXT`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_INVALID_SHADER_NV`

To create ray tracing pipelines, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkResult vkCreateRayTracingPipelinesKHR(
    VkDevice                device,
    VkDeferredOperationKHR  deferredOperation,
    VkPipelineCache         pipelineCache,
    uint32_t                createInfoCount,
    const VkRayTracingPipelineCreateInfoKHR* pCreateInfos,
    const VkAllocationCallbacks* pAllocator,
    VkPipeline*              pPipelines);
```

- `device` is the logical device that creates the ray tracing pipelines.
- `deferredOperation` is `VK_NULL_HANDLE` or the handle of a valid `VkDeferredOperationKHR` request deferral object for this command.
- `pipelineCache` is either `VK_NULL_HANDLE`, indicating that pipeline caching is disabled, or the handle of a valid `pipeline cache` object, in which case use of that cache is enabled for the duration of the command.
- `createInfoCount` is the length of the `pCreateInfos` and `pPipelines` arrays.
- `pCreateInfos` is a pointer to an array of `VkRayTracingPipelineCreateInfoKHR` structures.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pPipelines` is a pointer to an array in which the resulting ray tracing pipeline objects are returned.

The `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS` error is returned if the implementation is unable to reuse the shader group handles provided in `VkRayTracingShaderGroupCreateInfoKHR::pShaderGroupCaptureReplayHandle` when `VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay` is enabled.

Pipelines are created and returned as described for [Multiple Pipeline Creation](#).

Valid Usage

- VUID-vkCreateRayTracingPipelinesKHR-device-09677
`device` **must** support at least one queue family with the `VK_QUEUE_COMPUTE_BIT` capability
- VUID-vkCreateRayTracingPipelinesKHR-flags-03415
If the `flags` member of any element of `pCreateInfo`s contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and the `basePipelineIndex` member of that same element is not `-1`, `basePipelineIndex` **must** be less than the index into `pCreateInfo`s that corresponds to that element
- VUID-vkCreateRayTracingPipelinesKHR-flags-03416
If the `flags` member of any element of `pCreateInfo`s contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, the base pipeline **must** have been created with the `VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT` flag set
- VUID-vkCreateRayTracingPipelinesKHR-flags-03816
`flags` **must** not contain the `VK_PIPELINE_CREATE_DISPATCH_BASE` flag
- VUID-vkCreateRayTracingPipelinesKHR-pipelineCache-02903
If `pipelineCache` was created with `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`, host access to `pipelineCache` **must** be `externally synchronized`
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-03678
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCreateRayTracingPipelinesKHR-pNext-09616
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfo`s, `pipelineCache` **must** be `VK_NULL_HANDLE`
- VUID-vkCreateRayTracingPipelinesKHR-pNext-09617
If a `VkPipelineCreateFlags2CreateInfoKHR` structure with the `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag set is included in the `pNext` chain of any element of `pCreateInfo`s, `pipelineCache` **must** be `VK_NULL_HANDLE`
- VUID-vkCreateRayTracingPipelinesKHR-binaryCount-09620
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfo`s, `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` **must** not be set in the `flags` of that element
- VUID-vkCreateRayTracingPipelinesKHR-binaryCount-09621
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfo`s, `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` **must** not be set in the `flags` of that element
- VUID-vkCreateRayTracingPipelinesKHR-binaryCount-09622
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfo`s, `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT` **must** not be set in the `flags` of that element
- VUID-vkCreateRayTracingPipelinesKHR-rayTracingPipeline-03586
The `rayTracingPipeline` feature **must** be enabled

- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-03587
If `deferredOperation` is not `VK_NULL_HANDLE`, the `flags` member of elements of `pCreateInfos` **must** not include `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`

Valid Usage (Implicit)

- VUID-vkCreateRayTracingPipelinesKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCreateRayTracingPipelinesKHR-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkCreateRayTracingPipelinesKHR-pCreateInfos-parameter
`pCreateInfos` **must** be a valid pointer to an array of `createInfoCount` valid `VkRayTracingPipelineCreateInfoKHR` structures
- VUID-vkCreateRayTracingPipelinesKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateRayTracingPipelinesKHR-pPipelines-parameter
`pPipelines` **must** be a valid pointer to an array of `createInfoCount` `VkPipeline` handles
- VUID-vkCreateRayTracingPipelinesKHR-createInfoCount-arraylength
`createInfoCount` **must** be greater than `0`
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`
- VUID-vkCreateRayTracingPipelinesKHR-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`
- `VK_PIPELINE_COMPILE_REQUIRED_EXT`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS`

The `VkRayTracingPipelineCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkRayTracingPipelineCreateInfoNV {
    VkStructureType           sType;
    const void*               pNext;
    VkPipelineCreateFlags     flags;
    uint32_t                  stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    uint32_t                  groupCount;
    const VkRayTracingShaderGroupCreateInfoNV* pGroups;
    uint32_t                  maxRecursionDepth;
    VkPipelineLayout          layout;
    VkPipeline                basePipelineHandle;
    int32_t                   basePipelineIndex;
} VkRayTracingPipelineCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPipelineCreateFlagBits` specifying how the pipeline will be generated.
- `stageCount` is the number of entries in the `pStages` array.
- `pStages` is a pointer to an array of `VkPipelineShaderStageCreateInfo` structures specifying the set of the shader stages to be included in the ray tracing pipeline.
- `groupCount` is the number of entries in the `pGroups` array.
- `pGroups` is a pointer to an array of `VkRayTracingShaderGroupCreateInfoNV` structures describing the set of the shader stages to be included in each shader group in the ray tracing pipeline.
- `maxRecursionDepth` is the `maximum recursion depth` of shaders executed by this pipeline.
- `layout` is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline.
- `basePipelineHandle` is a pipeline to derive from.
- `basePipelineIndex` is an index into the `pCreateInfos` parameter to use as a pipeline to derive from.

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in [Pipeline Derivatives](#).

If the `pNext` chain includes a `VkPipelineCreateFlags2CreateInfoKHR` structure, `VkPipelineCreateFlags2CreateInfoKHR::flags` from that structure is used instead of `flags` from this structure.

Valid Usage

- VUID-VkRayTracingPipelineCreateInfoNV-None-09497
If the `pNext` chain does not include a `VkPipelineCreateFlags2CreateInfoKHR` structure, `flags` **must** be a valid combination of `VkPipelineCreateFlagBits` values
- VUID-VkRayTracingPipelineCreateInfoNV-flags-07984
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineIndex` is -1, `basePipelineHandle` **must** be a valid ray tracing `VkPipeline` handle
- VUID-VkRayTracingPipelineCreateInfoNV-flags-07985
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` **must** be a valid index into the calling command's `pCreateInfos` parameter
- VUID-VkRayTracingPipelineCreateInfoNV-flags-07986
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, `basePipelineIndex` **must** be -1 or `basePipelineHandle` **must** be `VK_NULL_HANDLE`
- VUID-VkRayTracingPipelineCreateInfoNV-layout-07987
If a push constant block is declared in a shader, a push constant range in `layout` **must** match the shader stage
- VUID-VkRayTracingPipelineCreateInfoNV-layout-10069
If a push constant block is declared in a shader, the block must be contained inside the push constant range in `layout` that matches the stage
- VUID-VkRayTracingPipelineCreateInfoNV-layout-07988
If a `resource variables` is declared in a shader, a descriptor slot in `layout` **must** match the shader stage
- VUID-VkRayTracingPipelineCreateInfoNV-layout-07990
If a `resource variables` is declared in a shader, and the descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, a descriptor slot in `layout` **must** match the descriptor type
- VUID-VkRayTracingPipelineCreateInfoNV-layout-07991
If a `resource variables` is declared in a shader as an array, a descriptor slot in `layout` **must** match the descriptor count
- VUID-VkRayTracingPipelineCreateInfoNV-pStages-03426
The shader code for the entry points identified by `pStages`, and the rest of the state identified by this structure **must** adhere to the pipeline linking rules described in the [Shader Interfaces](#) chapter
- VUID-VkRayTracingPipelineCreateInfoNV-layout-03428
The number of resources in `layout` accessible to each shader stage that is used by the pipeline **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageResources`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-02904
`flags` **must** not include `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`
- VUID-VkRayTracingPipelineCreateInfoNV-pipelineCreationCacheControl-02905
If the `pipelineCreationCacheControl` feature is not enabled, `flags` **must** not include

VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT or
VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT

- VUID-VkRayTracingPipelineCreateInfoNV-stage-06232
The `stage` member of at least one element of `pStages` **must** be `VK_SHADER_STAGE_RAYGEN_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03456
`flags` **must** not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-maxRecursionDepth-03457
`maxRecursionDepth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxRecursionDepth`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03458
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03459
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03460
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03461
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03462
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03463
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03588
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-04948
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-02957
`flags` **must** not include both `VK_PIPELINE_CREATE_DEFER_COMPILE_BIT_NV` and `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` at the same time
- VUID-VkRayTracingPipelineCreateInfoNV-pipelineStageCreationFeedbackCount-06651
If `VkPipelineCreationFeedbackCreateInfo::pipelineStageCreationFeedbackCount` is not 0, it **must** be equal to `stageCount`
- VUID-VkRayTracingPipelineCreateInfoNV-stage-06898
The `stage` value in all `pStages` elements **must** be one of `VK_SHADER_STAGE_RAYGEN_BIT_KHR`, `VK_SHADER_STAGE_ANY_HIT_BIT_KHR`, `VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR`, `VK_SHADER_STAGE_MISS_BIT_KHR`, `VK_SHADER_STAGE_INTERSECTION_BIT_KHR`, or `VK_SHADER_STAGE_CALLABLE_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-07402
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT`

- VUID-VkRayTracingPipelineCreateInfoNV-flags-07998
flags must not include `VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-11008
flags must not include `VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkRayTracingPipelineCreateInfoNV-sType-sType
sType must be `VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_CREATE_INFO_NV`
- VUID-VkRayTracingPipelineCreateInfoNV-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either `NULL` or a pointer to a valid instance of `VkPipelineCreateFlags2CreateInfoKHR` or `VkPipelineCreationFeedbackCreateInfo`
- VUID-VkRayTracingPipelineCreateInfoNV-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique
- VUID-VkRayTracingPipelineCreateInfoNV-pStages-parameter
pStages must be a valid pointer to an array of **stageCount** valid `VkPipelineShaderStageCreateInfo` structures
- VUID-VkRayTracingPipelineCreateInfoNV-pGroups-parameter
pGroups must be a valid pointer to an array of **groupCount** valid `VkRayTracingShaderGroupCreateInfoNV` structures
- VUID-VkRayTracingPipelineCreateInfoNV-layout-parameter
layout must be a valid `VkPipelineLayout` handle
- VUID-VkRayTracingPipelineCreateInfoNV-stageCount-arraylength
stageCount must be greater than 0
- VUID-VkRayTracingPipelineCreateInfoNV-groupCount-arraylength
groupCount must be greater than 0
- VUID-VkRayTracingPipelineCreateInfoNV-commonparent
Both of **basePipelineHandle**, and **layout** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkRayTracingPipelineCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkRayTracingPipelineCreateInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    VkPipelineCreateFlags     flags;
    uint32_t                  stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    uint32_t                  groupCount;
    const VkRayTracingShaderGroupCreateInfoKHR* pGroups;
    uint32_t                  maxPipelineRayRecursionDepth;
    const VkPipelineLibraryCreateInfoKHR* pLibraryInfo;
    const VkRayTracingPipelineInterfaceCreateInfoKHR* pLibraryInterface;
    const VkPipelineDynamicStateCreateInfo* pDynamicState;
    VkPipelineLayout          layout;
    VkPipeline                basePipelineHandle;
    int32_t                   basePipelineIndex;
} VkRayTracingPipelineCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkPipelineCreateFlagBits](#) specifying how the pipeline will be generated.
- **stageCount** is the number of entries in the **pStages** array.
- **pStages** is a pointer to an array of **stageCount** [VkPipelineShaderStageCreateInfo](#) structures describing the set of the shader stages to be included in the ray tracing pipeline.
- **groupCount** is the number of entries in the **pGroups** array.
- **pGroups** is a pointer to an array of **groupCount** [VkRayTracingShaderGroupCreateInfoKHR](#) structures describing the set of the shader stages to be included in each shader group in the ray tracing pipeline.
- **maxPipelineRayRecursionDepth** is the [maximum recursion depth](#) of shaders executed by this pipeline.
- **pLibraryInfo** is a pointer to a [VkPipelineLibraryCreateInfoKHR](#) structure defining pipeline libraries to include.
- **pLibraryInterface** is a pointer to a [VkRayTracingPipelineInterfaceCreateInfoKHR](#) structure defining additional information when using pipeline libraries.
- **pDynamicState** is a pointer to a [VkPipelineDynamicStateCreateInfo](#) structure, and is used to indicate which properties of the pipeline state object are dynamic and **can** be changed independently of the pipeline state. This **can** be `NULL`, which means no state in the pipeline is considered dynamic.
- **layout** is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline.
- **basePipelineHandle** is a pipeline to derive from.
- **basePipelineIndex** is an index into the **pCreateInfos** parameter to use as a pipeline to derive from.

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in [Pipeline Derivatives](#).

When `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` is specified, this pipeline defines a *pipeline library* which **cannot** be bound as a ray tracing pipeline directly. Instead, pipeline libraries define common shaders and shader groups which **can** be included in future pipeline creation.

If pipeline libraries are included in `pLibraryInfo`, shaders defined in those libraries are treated as if they were defined as additional entries in `pStages`, appended in the order they appear in the `pLibraries` array and in the `pStages` array when those libraries were defined.

When referencing shader groups in order to obtain a shader group handle, groups defined in those libraries are treated as if they were defined as additional entries in `pGroups`, appended in the order they appear in the `pLibraries` array and in the `pGroups` array when those libraries were defined. The shaders these groups reference are set when the pipeline library is created, referencing those specified in the pipeline library, not in the pipeline that includes it.

The default stack size for a pipeline if `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` is not provided is computed as described in [Ray Tracing Pipeline Stack](#).

If the `pNext` chain includes a `VkPipelineCreateFlags2CreateInfoKHR` structure, `VkPipelineCreateFlags2CreateInfoKHR::flags` from that structure is used instead of `flags` from this structure.

Valid Usage

- VUID-VkRayTracingPipelineCreateInfoKHR-None-09497
If the `pNext` chain does not include a `VkPipelineCreateFlags2CreateInfoKHR` structure, `flags` **must** be a valid combination of `VkPipelineCreateFlagBits` values
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07984
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineIndex` is -1, `basePipelineHandle` **must** be a valid ray tracing `VkPipeline` handle
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07985
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` **must** be a valid index into the calling command's `pCreateInfos` parameter
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07986
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, `basePipelineIndex` **must** be -1 or `basePipelineHandle` **must** be `VK_NULL_HANDLE`
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07987
If a push constant block is declared in a shader, a push constant range in `layout` **must** match the shader stage
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-10069
If a push constant block is declared in a shader, the block must be contained inside the push constant range in `layout` that matches the stage
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07988

If a `resource variables` is declared in a shader, a descriptor slot in `layout` **must** match the shader stage

- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07990

If a `resource variables` is declared in a shader, and the descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, a descriptor slot in `layout` **must** match the descriptor type

- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07991

If a `resource variables` is declared in a shader as an array, a descriptor slot in `layout` **must** match the descriptor count

- VUID-VkRayTracingPipelineCreateInfoKHR-pStages-03426

The shader code for the entry points identified by `pStages`, and the rest of the state identified by this structure **must** adhere to the pipeline linking rules described in the [Shader Interfaces](#) chapter

- VUID-VkRayTracingPipelineCreateInfoKHR-layout-03428

The number of resources in `layout` accessible to each shader stage that is used by the pipeline **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageResources`

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-02904

`flags` **must** not include `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`

- VUID-VkRayTracingPipelineCreateInfoKHR-pipelineCreationCacheControl-02905

If the `pipelineCreationCacheControl` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` or `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`

- VUID-VkRayTracingPipelineCreateInfoKHR-stage-03425

If `flags` does not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`, the `stage` member of at least one element of `pStages`, including those implicitly added by `pLibraryInfo`, **must** be `VK_SHADER_STAGE_RAYGEN_BIT_KHR`

- VUID-VkRayTracingPipelineCreateInfoKHR-maxPipelineRayRecursionDepth-03589

`maxPipelineRayRecursionDepth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayRecursionDepth`

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03465

If `flags` includes `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`, `pLibraryInterface` **must** not be `NULL`

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03590

If `pLibraryInfo` is not `NULL` and its `libraryCount` member is greater than 0, `pLibraryInterface` **must** not be `NULL`

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraries-03591

Each element of `pLibraryInfo->pLibraries` **must** have been created with the value of `maxPipelineRayRecursionDepth` equal to that in this pipeline

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03592

If `pLibraryInfo` is not `NULL`, each element of its `pLibraries` member **must** have been created with a `layout` that is compatible with the `layout` in this pipeline

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03593

If `pLibraryInfo` is not `NULL`, each element of its `pLibraries` member **must** have been created

with values of the `maxPipelineRayPayloadSize` and `maxPipelineRayHitAttributeSize` members of `pLibraryInterface` equal to those in this pipeline

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03594
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04718
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04719
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04720
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04721
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04722
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04723
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03595
If the `VK_KHR_pipeline_library` extension is not enabled, `pLibraryInfo` and `pLibraryInterface` **must** be NULL
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03470
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, for any element of `pGroups` with a type of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`, the `anyHitShader` of that element **must** not be `VK_SHADER_UNUSED_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03471
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, for any element of `pGroups` with a type of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` or

VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR, the `closestHitShader` of that element **must** not be `VK_SHADER_UNUSED_KHR`

- VUID-VkRayTracingPipelineCreateInfoKHR-rayTraversalPrimitiveCulling-03596
If the `rayTraversalPrimitiveCulling` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-rayTraversalPrimitiveCulling-03597
If the `rayTraversalPrimitiveCulling` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-06546
`flags` **must** not include both `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR` and `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03598
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`, `rayTracingPipelineShaderGroupHandleCaptureReplay` **must** be enabled
- VUID-VkRayTracingPipelineCreateInfoKHR-rayTracingPipelineShaderGroupHandleCaptureReplay-03599
If `VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay` is `VK_TRUE` and the `pShaderGroupCaptureReplayHandle` member of any element of `pGroups` is not `NULL`, `flags` **must** include `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-07999
If `pLibraryInfo` is `NULL` or its `libraryCount` is `0`, `stageCount` **must** not be `0`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-08700
If `flags` does not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` and either `pLibraryInfo` is `NULL` or its `libraryCount` is `0`, `groupCount` **must** not be `0`
- VUID-VkRayTracingPipelineCreateInfoKHR-pDynamicStates-03602
Any element of the `pDynamicStates` member of `pDynamicState` **must** be `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-pipelineStageCreationFeedbackCount-06652
If `VkPipelineCreationFeedbackCreateInfo::pipelineStageCreationFeedbackCount` is not `0`, it **must** be equal to `stageCount`
- VUID-VkRayTracingPipelineCreateInfoKHR-stage-06899
The `stage` value in all `pStages` elements **must** be one of `VK_SHADER_STAGE_RAYGEN_BIT_KHR`, `VK_SHADER_STAGE_ANY_HIT_BIT_KHR`, `VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR`, `VK_SHADER_STAGE_MISS_BIT_KHR`, `VK_SHADER_STAGE_INTERSECTION_BIT_KHR`, or `VK_SHADER_STAGE_CALLABLE_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07403
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-08701

If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV` bit set

Valid Usage (Implicit)

- VUID-VkRayTracingPipelineCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_CREATE_INFO_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkPipelineBinaryInfoKHR`, `VkPipelineCreateFlags2CreateInfoKHR`, `VkPipelineCreationFeedbackCreateInfo`, or `VkPipelineRobustnessCreateInfoEXT`
- VUID-VkRayTracingPipelineCreateInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkRayTracingPipelineCreateInfoKHR-pStages-parameter
If `stageCount` is not 0, `pStages` **must** be a valid pointer to an array of `stageCount` valid `VkPipelineShaderStageCreateInfo` structures
- VUID-VkRayTracingPipelineCreateInfoKHR-pGroups-parameter
If `groupCount` is not 0, `pGroups` **must** be a valid pointer to an array of `groupCount` valid `VkRayTracingShaderGroupCreateInfoKHR` structures
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-parameter
If `pLibraryInfo` is not `NULL`, `pLibraryInfo` **must** be a valid pointer to a valid `VkPipelineLibraryCreateInfoKHR` structure
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInterface-parameter
If `pLibraryInterface` is not `NULL`, `pLibraryInterface` **must** be a valid pointer to a valid `VkRayTracingPipelineInterfaceCreateInfoKHR` structure
- VUID-VkRayTracingPipelineCreateInfoKHR-pDynamicState-parameter
If `pDynamicState` is not `NULL`, `pDynamicState` **must** be a valid pointer to a valid `VkPipelineDynamicStateCreateInfo` structure
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-parameter
`layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkRayTracingPipelineCreateInfoKHR-commonparent
Both of `basePipelineHandle`, and `layout` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkRayTracingShaderGroupCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkRayTracingShaderGroupCreateInfoNV {
    VkStructureType      sType;
    const void*          pNext;
    VkRayTracingShaderGroupTypeKHR type;
    uint32_t              generalShader;
    uint32_t              closestHitShader;
    uint32_t              anyHitShader;
    uint32_t              intersectionShader;
} VkRayTracingShaderGroupCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is the type of hit group specified in this structure.
- `generalShader` is the index of the ray generation, miss, or callable shader from `VkRayTracingPipelineCreateInfoNV::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_NV`, and `VK_SHADER_UNUSED_NV` otherwise.
- `closestHitShader` is the optional index of the closest hit shader from `VkRayTracingPipelineCreateInfoNV::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_NV` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV`, and `VK_SHADER_UNUSED_NV` otherwise.
- `anyHitShader` is the optional index of the any-hit shader from `VkRayTracingPipelineCreateInfoNV::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_NV` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV`, and `VK_SHADER_UNUSED_NV` otherwise.
- `intersectionShader` is the index of the intersection shader from `VkRayTracingPipelineCreateInfoNV::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV`, and `VK_SHADER_UNUSED_NV` otherwise.

Valid Usage

- VUID-VkRayTracingShaderGroupCreateInfoNV-type-02413
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_NV` then `generalShader` **must** be a valid index into `VkRayTracingPipelineCreateInfoNV::pStages` referring to a shader of `VK_SHADER_STAGE_RAYGEN_BIT_NV`, `VK_SHADER_STAGE_MISS_BIT_NV`, or `VK_SHADER_STAGE_CALLABLE_BIT_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-type-02414
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_NV` then `closestHitShader`, `anyHitShader`, and `intersectionShader` **must** be `VK_SHADER_UNUSED_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-type-02415
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV` then `intersectionShader` **must** be a valid index into `VkRayTracingPipelineCreateInfoNV::pStages` referring to a shader of `VK_SHADER_STAGE_INTERSECTION_BIT_NV`

- VUID-VkRayTracingShaderGroupCreateInfoNV-type-02416
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_NV` then `intersectionShader` **must** be `VK_SHADER_UNUSED_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-closestHitShader-02417
`closestHitShader` **must** be either `VK_SHADER_UNUSED_NV` or a valid index into `VkRayTracingPipelineCreateInfoNV::pStages` referring to a shader of `VK_SHADER_STAGE_CLOSEST_HIT_BIT_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-anyHitShader-02418
`anyHitShader` **must** be either `VK_SHADER_UNUSED_NV` or a valid index into `VkRayTracingPipelineCreateInfoNV::pStages` referring to a shader of `VK_SHADER_STAGE_ANY_HIT_BIT_NV`

Valid Usage (Implicit)

- VUID-VkRayTracingShaderGroupCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RAY_TRACING_SHADER_GROUP_CREATE_INFO_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkRayTracingShaderGroupCreateInfoNV-type-parameter
`type` **must** be a valid `VkRayTracingShaderGroupTypeKHR` value

The `VkRayTracingShaderGroupCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkRayTracingShaderGroupCreateInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkRayTracingShaderGroupTypeKHR type;
    uint32_t                    generalShader;
    uint32_t                    closestHitShader;
    uint32_t                    anyHitShader;
    uint32_t                    intersectionShader;
    const void*                 pShaderGroupCaptureReplayHandle;
} VkRayTracingShaderGroupCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is the type of hit group specified in this structure.
- `generalShader` is the index of the ray generation, miss, or callable shader from `VkRayTracingPipelineCreateInfoKHR::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR`, and `VK_SHADER_UNUSED_KHR` otherwise.
- `closestHitShader` is the optional index of the closest hit shader from `VkRayTracingPipelineCreateInfoKHR::pStages` in the group if the shader group has `type` of

VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR or
VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR, and VK_SHADER_UNUSED_KHR
otherwise.

- `anyHitShader` is the optional index of the any-hit shader from `VkRayTracingPipelineCreateInfoKHR::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`, and `VK_SHADER_UNUSED_KHR` otherwise.
- `intersectionShader` is the index of the intersection shader from `VkRayTracingPipelineCreateInfoKHR::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`, and `VK_SHADER_UNUSED_KHR` otherwise.
- `pShaderGroupCaptureReplayHandle` is `NULL` or a pointer to replay information for this shader group queried from `vkGetRayTracingCaptureReplayShaderGroupHandlesKHR`, as described in [Ray Tracing Capture Replay](#). Ignored if `VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay` is `VK_FALSE`.

If the pipeline is created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` and the `pipelineLibraryGroupHandles` feature is enabled, `pShaderGroupCaptureReplayHandle` is inherited by all pipelines which link against this pipeline and remains bitwise identical for any pipeline which references this pipeline library.

Valid Usage

- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03474
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR` then `generalShader` **must** be a valid index into `VkRayTracingPipelineCreateInfoKHR::pStages` referring to a shader of `VK_SHADER_STAGE_RAYGEN_BIT_KHR`, `VK_SHADER_STAGE_MISS_BIT_KHR`, or `VK_SHADER_STAGE_CALLABLE_BIT_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03475
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR` then `closestHitShader`, `anyHitShader`, and `intersectionShader` **must** be `VK_SHADER_UNUSED_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03476
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR` then `intersectionShader` **must** be a valid index into `VkRayTracingPipelineCreateInfoKHR::pStages` referring to a shader of `VK_SHADER_STAGE_INTERSECTION_BIT_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03477
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` then `intersectionShader` **must** be `VK_SHADER_UNUSED_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-closestHitShader-03478
`closestHitShader` **must** be either `VK_SHADER_UNUSED_KHR` or a valid index into `VkRayTracingPipelineCreateInfoKHR::pStages` referring to a shader of `VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-anyHitShader-03479

`anyHitShader` **must** be either `VK_SHADER_UNUSED_KHR` or a valid index into `VkRayTracingPipelineCreateInfoKHR::pStages` referring to a shader of `VK_SHADER_STAGE_ANY_HIT_BIT_KHR`

- VUID-VkRayTracingShaderGroupCreateInfoKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03603
If `VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is `VK_FALSE` then `pShaderGroupCaptureReplayHandle` **must** not be provided if it has not been provided on a previous call to ray tracing pipeline creation
- VUID-VkRayTracingShaderGroupCreateInfoKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03604
If `VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is `VK_FALSE` then the caller **must** guarantee that no ray tracing pipeline creation commands with `pShaderGroupCaptureReplayHandle` provided execute simultaneously with ray tracing pipeline creation commands without `pShaderGroupCaptureReplayHandle` provided

Valid Usage (Implicit)

- VUID-VkRayTracingShaderGroupCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RAY_TRACING_SHADER_GROUP_CREATE_INFO_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-parameter
`type` **must** be a valid `VkRayTracingShaderGroupTypeKHR` value

The `VkRayTracingShaderGroupTypeKHR` enumeration is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef enum VkRayTracingShaderGroupTypeKHR {
    VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR = 0,
    VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR = 1,
    VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR = 2,
// Provided by VK_NV_ray_tracing
    VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_NV =
VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR,
// Provided by VK_NV_ray_tracing
    VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_NV =
VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR,
// Provided by VK_NV_ray_tracing
    VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV =
VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR,
} VkRayTracingShaderGroupTypeKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkRayTracingShaderGroupTypeKHR VkRayTracingShaderGroupTypeNV;
```

- `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR` indicates a shader group with a single `VK_SHADER_STAGE_RAYGEN_BIT_KHR`, `VK_SHADER_STAGE_MISS_BIT_KHR`, or `VK_SHADER_STAGE_CALLABLE_BIT_KHR` shader in it.
- `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` specifies a shader group that only hits triangles and **must** not contain an intersection shader, only closest hit and any-hit shaders.
- `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR` specifies a shader group that only intersects with custom geometry and **must** contain an intersection shader and **may** contain closest hit and any-hit shaders.

NOTE

For current group types, the hit group type could be inferred from the presence or absence of the intersection shader, but we provide the type explicitly for future hit groups that do not have that property.

The `VkRayTracingPipelineInterfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkRayTracingPipelineInterfaceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t            maxPipelineRayPayloadSize;
    uint32_t            maxPipelineRayHitAttributeSize;
} VkRayTracingPipelineInterfaceCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxPipelineRayPayloadSize` is the maximum payload size in bytes used by any shader in the pipeline.
- `maxPipelineRayHitAttributeSize` is the maximum attribute structure size in bytes used by any shader in the pipeline.

`maxPipelineRayPayloadSize` is calculated as the maximum number of bytes used by any block declared in the `RayPayloadKHR` or `IncomingRayPayloadKHR` storage classes. `maxPipelineRayHitAttributeSize` is calculated as the maximum number of bytes used by any block declared in the `HitAttributeKHR` storage class. As variables in these storage classes do not have explicit offsets, the size should be calculated as if each variable has a `scalar alignment` equal to the largest scalar alignment of any of the block's members.

NOTE

There is no explicit upper limit for `maxPipelineRayPayloadSize`, but in practice it should be kept as small as possible. Similar to invocation local memory, it must be allocated for each shader invocation and for devices which support many simultaneous invocations, this storage can rapidly be exhausted, resulting in

failure.

Valid Usage

- VUID-VkRayTracingPipelineInterfaceCreateInfoKHR-maxPipelineRayHitAttributeSize-03605
`maxPipelineRayHitAttributeSize` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayHitAttributeSize`

Valid Usage (Implicit)

- VUID-VkRayTracingPipelineInterfaceCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_INTERFACE_CREATE_INFO_KHR`
- VUID-VkRayTracingPipelineInterfaceCreateInfoKHR-pNext-pNext
`pNext` **must** be `NULL`

To query the opaque handles of shaders in the ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkResult vkGetRayTracingShaderGroupHandlesKHR(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          firstGroup,
    uint32_t          groupCount,
    size_t            dataSize,
    void*             pData);
```

or the equivalent command

```
// Provided by VK_NV_ray_tracing
VkResult vkGetRayTracingShaderGroupHandlesNV(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          firstGroup,
    uint32_t          groupCount,
    size_t            dataSize,
    void*             pData);
```

- `device` is the logical device containing the ray tracing pipeline.
- `pipeline` is the ray tracing pipeline object containing the shaders.
- `firstGroup` is the index of the first group to retrieve a handle for from the `VkRayTracingPipelineCreateInfoKHR::pGroups` or `VkRayTracingPipelineCreateInfoNV::pGroups` array.

- `groupCount` is the number of shader handles to retrieve.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written.

On success, an array of `groupCount` shader handles will be written to `pData`, with each element being of size `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleSize`.

If `pipeline` was created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` and the `pipelineLibraryGroupHandles` feature is enabled applications **can** query group handles from that pipeline, even if the pipeline is a library and is never bound to a command buffer. These group handles remain bitwise identical for any `pipeline` which references the pipeline library. Group indices are assigned as-if the pipeline was created without `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`.

Valid Usage

- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-04619
`pipeline` **must** be a ray tracing pipeline
- VUID-vkGetRayTracingShaderGroupHandlesKHR-firstGroup-04050
`firstGroup` **must** be less than the number of shader groups in `pipeline`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-firstGroup-02419
The sum of `firstGroup` and `groupCount` **must** be less than or equal to the number of shader groups in `pipeline`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-dataSize-02420
`dataSize` **must** be at least `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleSize × groupCount`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-07828
If the `pipelineLibraryGroupHandles` feature is not enabled, `pipeline` **must** not have been created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkGetRayTracingShaderGroupHandlesKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-parameter
`pipeline` **must** be a valid `VkPipeline` handle
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkGetRayTracingShaderGroupHandlesKHR-dataSize-arraylength
`dataSize` **must** be greater than 0
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-parent
`pipeline` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

To query the opaque capture data of shader groups in a ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkResult vkGetRayTracingCaptureReplayShaderGroupHandlesKHR(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          firstGroup,
    uint32_t          groupCount,
    size_t            dataSize,
    void*             pData);
```

- `device` is the logical device containing the ray tracing pipeline.
- `pipeline` is the ray tracing pipeline object containing the shaders.
- `firstGroup` is the index of the first group to retrieve a handle for from the `VkRayTracingPipelineCreateInfoKHR::pGroups` array.
- `groupCount` is the number of shader handles to retrieve.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written.

On success, an array of `groupCount` shader handles will be written to `pData`, with each element being of size `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleCaptureReplaySize`.

Once queried, this opaque data **can** be provided at pipeline creation time (in a subsequent execution), using `VkRayTracingShaderGroupCreateInfoKHR::pShaderGroupCaptureReplayHandle`, as described in [Ray Tracing Capture Replay](#).

If `pipeline` was created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` and the `pipelineLibraryGroupHandles` feature is enabled applications **can** query capture replay group handles from that pipeline. The capture replay handle remains bitwise identical for any `pipeline` which references the pipeline library. Group indices are assigned as-if the pipeline was created without `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`.

Valid Usage

- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-04620

pipeline **must** be a ray tracing pipeline

- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-firstGroup-04051
firstGroup **must** be less than the number of shader groups in **pipeline**
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-firstGroup-03483
The sum of **firstGroup** and **groupCount** **must** be less than or equal to the number of shader groups in **pipeline**
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-dataSize-03484
dataSize **must** be at least `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleCaptureReplaySize × groupCount`
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-rayTracingPipelineShaderGroupHandleCaptureReplay-03606
`VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay` **must** be enabled to call this function
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-03607
pipeline **must** have been created with a **flags** that included `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-07829
If the `pipelineLibraryGroupHandles` feature is not enabled, **pipeline** **must** not have been created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-device-parameter
device **must** be a valid `VkDevice` handle
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-parameter
pipeline **must** be a valid `VkPipeline` handle
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pData-parameter
pData **must** be a valid pointer to an array of **dataSize** bytes
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-dataSize-arraylength
dataSize **must** be greater than 0
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-parent
pipeline **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

Ray tracing pipelines **can** contain more shaders than a graphics or compute pipeline, so to allow parallel compilation of shaders within a pipeline, an application **can** choose to defer compilation until a later point in time.

To compile a deferred shader in a pipeline call:

```
// Provided by VK_NV_ray_tracing
VkResult vkCompileDeferredNV(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          shader);
```

- **device** is the logical device containing the ray tracing pipeline.
- **pipeline** is the ray tracing pipeline object containing the shaders.
- **shader** is the index of the shader to compile.

Valid Usage

- VUID-vkCompileDeferredNV-pipeline-04621
pipeline must be a ray tracing pipeline
- VUID-vkCompileDeferredNV-pipeline-02237
pipeline must have been created with **VK_PIPELINE_CREATE_DEFER_COMPILE_BIT_NV**
- VUID-vkCompileDeferredNV-shader-02238
shader must not have been called as a deferred compile before

Valid Usage (Implicit)

- VUID-vkCompileDeferredNV-device-parameter
device must be a valid **VkDevice** handle
- VUID-vkCompileDeferredNV-pipeline-parameter
pipeline must be a valid **VkPipeline** handle
- VUID-vkCompileDeferredNV-pipeline-parent
pipeline must have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**

To query the pipeline stack size of shaders in a shader group in the ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkDeviceSize vkGetRayTracingShaderGroupStackSizeKHR(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          group,
    VkShaderGroupShaderKHR groupShader);
```

- **device** is the logical device containing the ray tracing pipeline.
- **pipeline** is the ray tracing pipeline object containing the shaders groups.
- **group** is the index of the shader group to query.
- **groupShader** is the type of shader from the group to query.

The return value is the ray tracing pipeline stack size in bytes for the specified shader as called from the specified shader group.

Valid Usage

- VUID-vkGetRayTracingShaderGroupStackSizeKHR-pipeline-04622
pipeline must be a ray tracing pipeline
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-group-03608
The value of **group must** be less than the number of shader groups in **pipeline**
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-groupShader-03609
The shader identified by **groupShader** in **group must** not be **VK_SHADER_UNUSED_KHR**

Valid Usage (Implicit)

- VUID-vkGetRayTracingShaderGroupStackSizeKHR-device-parameter
device must be a valid **VkDevice** handle
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-pipeline-parameter
pipeline must be a valid **VkPipeline** handle
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-groupShader-parameter
groupShader must be a valid **VkShaderGroupShaderKHR** value
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-pipeline-parent
pipeline must have been created, allocated, or retrieved from **device**

Possible values of **groupShader** in **vkGetRayTracingShaderGroupStackSizeKHR** are:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef enum VkShaderGroupShaderKHR {
    VK_SHADER_GROUP_SHADER_GENERAL_KHR = 0,
    VK_SHADER_GROUP_SHADER_CLOSEST_HIT_KHR = 1,
    VK_SHADER_GROUP_SHADER_ANY_HIT_KHR = 2,
    VK_SHADER_GROUP_SHADER_INTERSECTION_KHR = 3,
} VkShaderGroupShaderKHR;
```

- `VK_SHADER_GROUP_SHADER_GENERAL_KHR` uses the shader specified in the group with `VkRayTracingShaderGroupCreateInfoKHR::generalShader`
- `VK_SHADER_GROUP_SHADER_CLOSEST_HIT_KHR` uses the shader specified in the group with `VkRayTracingShaderGroupCreateInfoKHR::closestHitShader`
- `VK_SHADER_GROUP_SHADER_ANY_HIT_KHR` uses the shader specified in the group with `VkRayTracingShaderGroupCreateInfoKHR::anyHitShader`
- `VK_SHADER_GROUP_SHADER_INTERSECTION_KHR` uses the shader specified in the group with `VkRayTracingShaderGroupCreateInfoKHR::intersectionShader`

To [dynamically set](#) the stack size for a ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdSetRayTracingPipelineStackSizeKHR(
    VkCommandBuffer          commandBuffer,
    uint32_t                 pipelineStackSize);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pipelineStackSize` is the stack size to use for subsequent ray tracing trace commands.

This command sets the stack size for subsequent ray tracing commands when the ray tracing pipeline is created with `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`. Otherwise, the stack size is computed as described in [Ray Tracing Pipeline Stack](#).

Valid Usage

- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-pipelineStackSize-03610
`pipelineStackSize` **must** be large enough for any dynamic execution through the shaders in the ray tracing pipeline used by a subsequent trace call

Valid Usage (Implicit)

- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-commandBuffer-recording

`commandBuffer` **must** be in the [recording state](#)

- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	State

10.5. Pipeline Destruction

To destroy a pipeline, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyPipeline(
    VkDevice          device,
    VkPipeline        pipeline,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the pipeline.
- `pipeline` is the handle of the pipeline to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyPipeline-pipeline-00765
All submitted commands that refer to `pipeline` **must** have completed execution

- VUID-vkDestroyPipeline-pipeline-00766
If `VkAllocationCallbacks` were provided when `pipeline` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipeline-pipeline-00767
If no `VkAllocationCallbacks` were provided when `pipeline` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyPipeline-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyPipeline-pipeline-parameter
If `pipeline` is not `VK_NULL_HANDLE`, `pipeline` **must** be a valid `VkPipeline` handle
- VUID-vkDestroyPipeline-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyPipeline-pipeline-parent
If `pipeline` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `pipeline` **must** be externally synchronized

10.6. Pipeline Derivatives

A pipeline derivative is a child pipeline created from a parent pipeline, where the child and parent are expected to have much commonality.

The goal of derivative pipelines is that they be cheaper to create using the parent as a starting point, and that it be more efficient (on either host or device) to switch/bind between children of the same parent.

A derivative pipeline is created by setting the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag in the `Vk*PipelineCreateInfo` structure. If this is set, then exactly one of `basePipelineHandle` or `basePipelineIndex` members of the structure **must** have a valid handle/index, and specifies the parent pipeline. If `basePipelineHandle` is used, the parent pipeline **must** have already been created. If `basePipelineIndex` is used, then the parent is being created in the same command. `VK_NULL_HANDLE` acts as the invalid handle for `basePipelineHandle`, and -1 is the invalid index for `basePipelineIndex`. If `basePipelineIndex` is used, the base pipeline **must** appear earlier in the array. The base pipeline **must** have been created with the `VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT` flag set.

10.7. Pipeline Cache

Pipeline cache objects allow the result of pipeline construction to be reused between pipelines and between runs of an application. Reuse between pipelines is achieved by passing the same pipeline cache object when creating multiple related pipelines. Reuse across runs of an application is achieved by retrieving pipeline cache contents in one run of an application, saving the contents, and using them to preinitialize a pipeline cache on a subsequent run. The contents of the pipeline cache objects are managed by the implementation. Applications **can** manage the host memory consumed by a pipeline cache object and control the amount of data retrieved from a pipeline cache object.

Pipeline cache objects are represented by `VkPipelineCache` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineCache)
```

10.7.1. Creating a Pipeline Cache

To create pipeline cache objects, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreatePipelineCache(
    VkDevice                                device,
    const VkPipelineCacheCreateInfo*        pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkPipelineCache*                        pPipelineCache);
```

- `device` is the logical device that creates the pipeline cache object.
- `pCreateInfo` is a pointer to a `VkPipelineCacheCreateInfo` structure containing initial parameters for the pipeline cache object.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pPipelineCache` is a pointer to a `VkPipelineCache` handle in which the resulting pipeline cache object is returned.

NOTE

Applications **can** track and manage the total host memory size of a pipeline cache object using the `pAllocator`. Applications **can** limit the amount of data retrieved from a pipeline cache object in `vkGetPipelineCacheData`. Implementations **should** not internally limit the total number of entries added to a pipeline cache object or the total host memory consumed.

Once created, a pipeline cache **can** be passed to the `vkCreateGraphicsPipelines`, `vkCreateRayTracingPipelinesKHR`, `vkCreateRayTracingPipelinesNV`, and `vkCreateComputePipelines` commands. If the pipeline cache passed into these commands is not `VK_NULL_HANDLE`, the implementation will query it for possible reuse opportunities and update it with new content. The use of the pipeline cache object in these commands is internally synchronized, and the same

pipeline cache object **can** be used in multiple threads simultaneously.

If `flags` of `pCreateInfo` includes `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`, all commands that modify the returned pipeline cache object **must** be [externally synchronized](#).

NOTE

Implementations **should** make every effort to limit any critical sections to the actual accesses to the cache, which is expected to be significantly shorter than the duration of the `vkCreate*Pipelines` commands.

Valid Usage (Implicit)

- VUID-vkCreatePipelineCache-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreatePipelineCache-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkPipelineCacheCreateInfo` structure
- VUID-vkCreatePipelineCache-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreatePipelineCache-pPipelineCache-parameter
`pPipelineCache` **must** be a valid pointer to a `VkPipelineCache` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkPipelineCacheCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineCacheCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkPipelineCacheCreateFlags flags;
    size_t             initialDataSize;
    const void*        pInitialData;
} VkPipelineCacheCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- **flags** is a bitmask of [VkPipelineCacheCreateFlagBits](#) specifying the behavior of the pipeline cache.
- **initialDataSize** is the number of bytes in **pInitialData**. If **initialDataSize** is zero, the pipeline cache will initially be empty.
- **pInitialData** is a pointer to previously retrieved pipeline cache data. If the pipeline cache data is incompatible (as defined below) with the device, the pipeline cache will be initially empty. If **initialDataSize** is zero, **pInitialData** is ignored.

Valid Usage

- VUID-VkPipelineCacheCreateInfo-initialDataSize-00768
If **initialDataSize** is not 0, it **must** be equal to the size of **pInitialData**, as returned by **vkGetPipelineCacheData** when **pInitialData** was originally retrieved
- VUID-VkPipelineCacheCreateInfo-initialDataSize-00769
If **initialDataSize** is not 0, **pInitialData** **must** have been retrieved from a previous call to **vkGetPipelineCacheData**
- VUID-VkPipelineCacheCreateInfo-pipelineCreationCacheControl-02892
If the **pipelineCreationCacheControl** feature is not enabled, **flags** **must** not include **VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT**

Valid Usage (Implicit)

- VUID-VkPipelineCacheCreateInfo-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_PIPELINE_CACHE_CREATE_INFO**
- VUID-VkPipelineCacheCreateInfo-pNext-pNext
pNext **must** be **NULL**
- VUID-VkPipelineCacheCreateInfo-flags-parameter
flags **must** be a valid combination of [VkPipelineCacheCreateFlagBits](#) values
- VUID-VkPipelineCacheCreateInfo-pInitialData-parameter
If **initialDataSize** is not 0, **pInitialData** **must** be a valid pointer to an array of **initialDataSize** bytes

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineCacheCreateFlags;
```

VkPipelineCacheCreateFlags is a bitmask type for setting a mask of zero or more [VkPipelineCacheCreateFlagBits](#).

Bits which **can** be set in [VkPipelineCacheCreateInfo::flags](#), specifying behavior of the pipeline cache, are:

```
// Provided by VK_EXT_pipeline_creation_cache_control
typedef enum VkPipelineCacheCreateFlagBits {
    // Provided by VK_VERSION_1_3
    VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT = 0x00000001,
    // Provided by VK_EXT_pipeline_creation_cache_control
    VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT_EXT =
VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT,
} VkPipelineCacheCreateFlagBits;
```

- **VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT** specifies that all commands that modify the created **VkPipelineCache** will be **externally synchronized**. When set, the implementation **may** skip any unnecessary processing needed to support simultaneous modification from multiple threads where allowed.

10.7.2. Merging Pipeline Caches

Pipeline cache objects **can** be merged using the command:

```
// Provided by VK_VERSION_1_0
VkResult vkMergePipelineCaches(
    VkDevice                device,
    VkPipelineCache          dstCache,
    uint32_t                 srcCacheCount,
    const VkPipelineCache*   pSrcCaches);
```

- **device** is the logical device that owns the pipeline cache objects.
- **dstCache** is the handle of the pipeline cache to merge results into.
- **srcCacheCount** is the length of the **pSrcCaches** array.
- **pSrcCaches** is a pointer to an array of pipeline cache handles, which will be merged into **dstCache**. The previous contents of **dstCache** are included after the merge.

NOTE

The details of the merge operation are implementation-dependent, but implementations **should** merge the contents of the specified pipelines and prune duplicate entries.

Valid Usage

- VUID-vkMergePipelineCaches-dstCache-00770
dstCache **must** not appear in the list of source caches

Valid Usage (Implicit)

- VUID-vkMergePipelineCaches-device-parameter
device **must** be a valid **VkDevice** handle

- VUID-vkMergePipelineCaches-dstCache-parameter
dstCache **must** be a valid [VkPipelineCache](#) handle
- VUID-vkMergePipelineCaches-pSrcCaches-parameter
pSrcCaches **must** be a valid pointer to an array of **srcCacheCount** valid [VkPipelineCache](#) handles
- VUID-vkMergePipelineCaches-srcCacheCount-arraylength
srcCacheCount **must** be greater than 0
- VUID-vkMergePipelineCaches-dstCache-parent
dstCache **must** have been created, allocated, or retrieved from **device**
- VUID-vkMergePipelineCaches-pSrcCaches-parent
Each element of **pSrcCaches** **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **dstCache** **must** be externally synchronized

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**

10.7.3. Retrieving Pipeline Cache Data

Data **can** be retrieved from a pipeline cache object using the command:

```
// Provided by VK_VERSION_1_0
VkResult vkGetPipelineCacheData(
    VkDevice                device,
    VkPipelineCache         pipelineCache,
    size_t*                 pDataSize,
    void*                   pData);
```

- **device** is the logical device that owns the pipeline cache.
- **pipelineCache** is the pipeline cache to retrieve data from.
- **pDataSize** is a pointer to a **size_t** value related to the amount of data in the pipeline cache, as described below.
- **pData** is either **NULL** or a pointer to a buffer.

If `pData` is `NULL`, then the maximum size of the data that **can** be retrieved from the pipeline cache, in bytes, is returned in `pDataSize`. Otherwise, `pDataSize` **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by `pData`, and on return the variable is overwritten with the amount of data actually written to `pData`. If `pDataSize` is less than the maximum size that **can** be retrieved by the pipeline cache, at most `pDataSize` bytes will be written to `pData`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all of the pipeline cache was returned.

Any data written to `pData` is valid and **can** be provided as the `pInitialData` member of the `VkPipelineCacheCreateInfo` structure passed to `vkCreatePipelineCache`.

Two calls to `vkGetPipelineCacheData` with the same parameters **must** retrieve the same data unless a command that modifies the contents of the cache is called between them.

The initial bytes written to `pData` **must** be a header as described in the [Pipeline Cache Header](#) section.

If `pDataSize` is less than what is necessary to store this header, nothing will be written to `pData` and zero will be written to `pDataSize`.

Valid Usage (Implicit)

- VUID-vkGetPipelineCacheData-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetPipelineCacheData-pipelineCache-parameter `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkGetPipelineCacheData-pDataSize-parameter `pDataSize` **must** be a valid pointer to a `size_t` value
- VUID-vkGetPipelineCacheData-pData-parameter
If the value referenced by `pDataSize` is not 0, and `pData` is not `NULL`, `pData` **must** be a valid pointer to an array of `pDataSize` bytes
- VUID-vkGetPipelineCacheData-pipelineCache-parent `pipelineCache` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

10.7.4. Pipeline Cache Header

Applications **can** store the data retrieved from the pipeline cache, and use these data, possibly in a future run of the application, to populate new pipeline cache objects. The results of pipeline compiles, however, **may** depend on the vendor ID, device ID, driver version, and other details of the device. To enable applications to detect when previously retrieved data is incompatible with the device, the pipeline cache data **must** begin with a valid pipeline cache header.

NOTE

Structures described in this section are not part of the Vulkan API and are only used to describe the representation of data elements in pipeline cache data. Accordingly, the valid usage clauses defined for structures defined in this section do not define valid usage conditions for APIs accepting pipeline cache data as input, as providing invalid pipeline cache data as input to any Vulkan API commands will result in the provided pipeline cache data being ignored.

Version one of the pipeline cache header is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineCacheHeaderVersionOne {
    uint32_t          headerSize;
    VkPipelineCacheHeaderVersion headerVersion;
    uint32_t          vendorID;
    uint32_t          deviceID;
    uint8_t           pipelineCacheUUID[VK_UUID_SIZE];
} VkPipelineCacheHeaderVersionOne;
```

- **headerSize** is the length in bytes of the pipeline cache header.
- **headerVersion** is a [VkPipelineCacheHeaderVersion](#) value specifying the version of the header. A consumer of the pipeline cache **should** use the cache version to interpret the remainder of the cache header.
- **vendorID** is the [VkPhysicalDeviceProperties::vendorID](#) of the implementation.
- **deviceID** is the [VkPhysicalDeviceProperties::deviceID](#) of the implementation.
- **pipelineCacheUUID** is the [VkPhysicalDeviceProperties::pipelineCacheUUID](#) of the implementation.

Unlike most structures declared by the Vulkan API, all fields of this structure are written with the least significant byte first, regardless of host byte-order.

The C language specification does not define the packing of structure members. This layout assumes tight structure member packing, with members laid out in the order listed in the structure, and the intended size of the structure is 32 bytes. If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values at the correct offsets.

Valid Usage

- VUID-VkPipelineCacheHeaderVersionOne-headerSize-04967
headerSize must be 32

- VUID-VkPipelineCacheHeaderVersionOne-headerVersion-04968
`headerVersion` **must** be `VK_PIPELINE_CACHE_HEADER_VERSION_ONE`
- VUID-VkPipelineCacheHeaderVersionOne-headerSize-08990
`headerSize` **must** not exceed the size of the pipeline cache

Valid Usage (Implicit)

- VUID-VkPipelineCacheHeaderVersionOne-headerVersion-parameter
`headerVersion` **must** be a valid `VkPipelineCacheHeaderVersion` value

Possible values of the `headerVersion` value of the pipeline cache header are:

```
// Provided by VK_VERSION_1_0
typedef enum VkPipelineCacheHeaderVersion {
    VK_PIPELINE_CACHE_HEADER_VERSION_ONE = 1,
} VkPipelineCacheHeaderVersion;
```

- `VK_PIPELINE_CACHE_HEADER_VERSION_ONE` specifies version one of the pipeline cache, described by `VkPipelineCacheHeaderVersionOne`.

10.7.5. Destroying a Pipeline Cache

To destroy a pipeline cache, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyPipelineCache(
    VkDevice          device,
    VkPipelineCache   pipelineCache,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the pipeline cache object.
- `pipelineCache` is the handle of the pipeline cache to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyPipelineCache-pipelineCache-00771
If `VkAllocationCallbacks` were provided when `pipelineCache` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipelineCache-pipelineCache-00772
If no `VkAllocationCallbacks` were provided when `pipelineCache` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyPipelineCache-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyPipelineCache-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkDestroyPipelineCache-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyPipelineCache-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `pipelineCache` **must** be externally synchronized

10.8. Pipeline Binaries

Pipeline binary objects allow the result of pipeline construction to be reused between pipelines and between runs of an application. Reuse is achieved by extracting pipeline binaries from a `VkPipeline` object, associating them with a corresponding `VkPipelineBinaryKeyKHR` and then adding a `VkPipelineBinaryInfoKHR` to the `pNext` chain of any `Vk*PipelineCreateInfo` when creating a pipeline. Pipeline binaries can be reused between runs by extracting `VkPipelineBinaryDataKHR` from `VkPipelineBinaryKHR` objects, saving the contents, and then using them to create a `VkPipelineBinaryKHR` object on subsequent runs.

When creating a pipeline that includes `VkPipelineBinaryInfoKHR` in the `pNext` chain, or has the `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag set, the use of `VkPipelineCache` objects is not allowed.

Pipeline binary objects are represented by `VkPipelineBinaryKHR` handles:

```
// Provided by VK_KHR_pipeline_binary
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineBinaryKHR)
```

10.8.1. Generating the Pipeline Key

To generate the key for a particular pipeline creation info, call:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkGetPipelineKeyKHR(
    VkDevice device,
    const VkPipelineCreateInfoKHR* pPipelineCreateInfo,
    VkPipelineBinaryKeyKHR* pPipelineKey);
```

- **device** is the logical device that creates the pipeline object.
- **pPipelineCreateInfo** is **NULL** or a pointer to a [VkPipelineCreateInfoKHR](#) structure.
- **pPipelineKey** is a pointer to a [VkPipelineBinaryKeyKHR](#) structure in which the resulting key is returned.

If **pPipelineCreateInfo** is **NULL**, then the implementation **must** return the global key that applies to all pipelines. If the key obtained in this way changes between saving and restoring data obtained from [vkGetPipelineBinaryDataKHR](#) in a different [VkDevice](#), then the application **must** assume that the restored data is invalid and cannot be passed to [vkCreatePipelineBinariesKHR](#). Otherwise the application **can** assume the data is still valid.

If **pPipelineCreateInfo** is not **NULL**, the key obtained functions as a method to compare two pipeline creation info structures. Implementations **may** not compare parts of a pipeline creation info which would not contribute to the final binary output. If a shader module identifier is used instead of a shader module, the **pPipelineKey** generated **must** be equal to the key generated when using the shader module from which the identifier was queried. If the content of two **pPipelineKey** are equal, pipelines created with the two **pPipelineCreateInfo->pname:pNext** create infos **must** produce the same [VkPipelineBinaryKHR](#) contents.

The pipeline key is distinct from pipeline binary key. Pipeline binary keys **can** only be obtained after compilation. The pipeline key is intended to optionally allow associating pipeline create info with multiple pipeline binary keys.

Valid Usage

- VUID-vkGetPipelineKeyKHR-pNext-09605
The **pNext** chain of **pPipelineCreateInfo** **must** not set [VkPipelineBinaryInfoKHR::binaryCount](#) to a value greater than 0

Valid Usage (Implicit)

- VUID-vkGetPipelineKeyKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetPipelineKeyKHR-pPipelineCreateInfo-parameter
If **pPipelineCreateInfo** is not **NULL**, **pPipelineCreateInfo** **must** be a valid pointer to a valid [VkPipelineCreateInfoKHR](#) structure
- VUID-vkGetPipelineKeyKHR-pPipelineKey-parameter
pPipelineKey **must** be a valid pointer to a [VkPipelineBinaryKeyKHR](#) structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkPipelineCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineCreateInfoKHR {
    VkStructureType    sType;
    void*              pNext;
} VkPipelineCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is a pointer to a structure extending this structure.

Valid Usage

- VUID-VkPipelineCreateInfoKHR-pNext-09604
`pNext` **must** be pointer to a valid instance of `VkGraphicsPipelineCreateInfo`, `VkExecutionGraphPipelineCreateInfoAMD`, `VkRayTracingPipelineCreateInfoKHR`, or `VkComputePipelineCreateInfo`

Valid Usage (Implicit)

- VUID-VkPipelineCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_CREATE_INFO_KHR`

The `VkPipelineBinaryKeyKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryKeyKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           keySize;
    uint8_t             key[VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR];
} VkPipelineBinaryKeyKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `keySize` is the size, in bytes, of valid data returned in `key`.
- `key` is a buffer of opaque data specifying a pipeline binary key.

Any returned values beyond the first `keySize` bytes are undefined. Implementations **must** return a `keySize` greater than 0, and less-or-equal to `VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR`.

Two keys are considered equal if `keySize` is equal and the first `keySize` bytes of `key` compare equal.

Implementations **may** return a different `keySize` for different binaries.

Implementations **should** ensure that `keySize` is large enough to uniquely identify a pipeline binary.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryKeyKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_BINARY_KEY_KHR`
- VUID-VkPipelineBinaryKeyKHR-pNext-pNext
`pNext` **must** be `NULL`

`VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR` is the length in bytes of a binary key, as returned in `VkPipelineBinaryKeyKHR::keySize`.

```
#define VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR 32U
```

10.8.2. Creating Pipeline Binaries

To create pipeline binary objects, call:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkCreatePipelineBinariesKHR(
    VkDevice                                device,
    const VkPipelineBinaryCreateInfoKHR*    pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkPipelineBinaryHandlesInfoKHR*        pBinaries);
```

- `device` is the logical device that creates the pipeline binary objects.
- `pCreateInfo` is a pointer to a `VkPipelineBinaryCreateInfoKHR` structure that contains the data to create the pipeline binaries from.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pBinaries` is a pointer to a `VkPipelineBinaryHandlesInfoKHR` structure in which the resulting pipeline binaries are returned.

The implementation will attempt to create all pipeline binaries. If creation fails for any pipeline

binary, then:

- The corresponding entry in the `pPipelineBinaries` output array will be filled with `VK_NULL_HANDLE`.
- The `VkResult` returned by `vkCreatePipelineBinariesKHR` will contain the error value for the first entry in the output array in `pBinaries` containing `VK_NULL_HANDLE`.

Valid Usage (Implicit)

- VUID-vkCreatePipelineBinariesKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkCreatePipelineBinariesKHR-pCreateInfo-parameter `pCreateInfo` **must** be a valid pointer to a valid `VkPipelineBinaryCreateInfoKHR` structure
- VUID-vkCreatePipelineBinariesKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreatePipelineBinariesKHR-pBinaries-parameter
`pBinaries` **must** be a valid pointer to a `VkPipelineBinaryHandlesInfoKHR` structure

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`
- `VK_PIPELINE_BINARY_MISSING_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_INITIALIZATION_FAILED`

The `VkPipelineBinaryHandlesInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryHandlesInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             pipelineBinaryCount;
    VkPipelineBinaryKHR* pPipelineBinaries;
} VkPipelineBinaryHandlesInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBinaryCount` is the number of binaries associated with this pipeline or the number of entries in the `pPipelineBinaries` array.
- `pPipelineBinaries` is `NULL` or a pointer to an array of `VkPipelineBinaryKHR` handles in which the resulting pipeline binaries are returned.

If `pPipelineBinaries` is `NULL`, the number of binaries that would be created is returned in `pipelineBinaryCount`. Otherwise, `pipelineBinaryCount` **must** be the number of entries in the `pPipelineBinaries` array, and on return from `vkCreatePipelineBinariesKHR` `pipelineBinaryCount` is overwritten with the number of handles actually written to `pPipelineBinaries`. If the value of `pipelineBinaryCount` is less than the number of binaries that would have been created, at most `pipelineBinaryCount` handles will be written to `pPipelineBinaries` and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that `pPipelineBinaries` was not large enough to create all the binaries.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryHandlesInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_BINARY_HANDLES_INFO_KHR`
- VUID-VkPipelineBinaryHandlesInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPipelineBinaryHandlesInfoKHR-pPipelineBinaries-parameter
If `pipelineBinaryCount` is not 0, and `pPipelineBinaries` is not `NULL`, `pPipelineBinaries` **must** be a valid pointer to an array of `pipelineBinaryCount` `VkPipelineBinaryKHR` handles

The `VkPipelineBinaryCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryCreateInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    const VkPipelineBinaryKeysAndDataKHR* pKeysAndDataInfo;
    VkPipeline                pipeline;
    const VkPipelineCreateInfo* pPipelineCreateInfo;
} VkPipelineBinaryCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pKeysAndDataInfo` is `NULL` or a pointer to a `VkPipelineBinaryKeysAndDataKHR` structure that contains keys and data to create the pipeline binaries from.
- `pipeline` is `VK_NULL_HANDLE` or a `VkPipeline` that contains data to create the pipeline binaries from.
- `pPipelineCreateInfo` is `NULL` or a pointer to a `VkPipelineCreateInfoKHR` structure with the pipeline creation info. This is used to probe the implementation's internal cache for pipeline

binaries.

When `pPipelineCreateInfo` is not `NULL`, an implementation will attempt to retrieve pipeline binary data from an internal cache external to the application if `pipelineBinaryInternalCache` is `VK_TRUE`. Applications **can** use this to determine if a pipeline **can** be created without compilation. If the implementation fails to create a pipeline binary due to missing an internal cache entry, `VK_PIPELINE_BINARY_MISSING_KHR` is returned. If creation succeeds, the resulting binary **can** be used to create a pipeline. `VK_PIPELINE_BINARY_MISSING_KHR` **may** be returned for any reason in this situation, even if creating a pipeline binary with the same parameters that succeeded earlier.

If `pipelineBinaryPrecompiledInternalCache` is `VK_TRUE`, the implementation **may** be able to create pipeline binaries even when `pPipelineCreateInfo` has not been used to create binaries before by the application.

NOTE

On some platforms, internal pipeline caches may be pre-populated before running the application.

Valid Usage

- VUID-VkPipelineBinaryCreateInfoKHR-pipeline-09607
If `pipeline` is not `VK_NULL_HANDLE`, `pipeline` **must** have been created with `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR`
- VUID-VkPipelineBinaryCreateInfoKHR-pipeline-09608
If `pipeline` is not `VK_NULL_HANDLE`, `vkReleaseCapturedPipelineDataKHR` **must** not have been called on `pipeline` prior to this command
- VUID-VkPipelineBinaryCreateInfoKHR-pipelineBinaryInternalCache-09609
If `pipelineBinaryInternalCache` is `VK_FALSE` `pPipelineCreateInfo` **must** be `NULL`
- VUID-VkPipelineBinaryCreateInfoKHR-device-09610
If `device` was created with `VkDevicePipelineBinaryInternalCacheControlKHR::disableInternalCache` set to `VK_TRUE`, `pPipelineCreateInfo` **must** be `NULL`
- VUID-VkPipelineBinaryCreateInfoKHR-pKeysAndDataInfo-09619
One and only one of `pKeysAndDataInfo`, `pipeline`, or `pPipelineCreateInfo` **must** be non-`NULL`
- VUID-VkPipelineBinaryCreateInfoKHR-pPipelineCreateInfo-09606
If `pPipelineCreateInfo` is not `NULL`, the `pNext` chain of `pPipelineCreateInfo` **must** not set `VkPipelineBinaryInfoKHR::binaryCount` to a value greater than 0

Valid Usage (Implicit)

- VUID-VkPipelineBinaryCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_BINARY_CREATE_INFO_KHR`
- VUID-VkPipelineBinaryCreateInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPipelineBinaryCreateInfoKHR-pKeysAndDataInfo-parameter
If `pKeysAndDataInfo` is not `NULL`, `pKeysAndDataInfo` **must** be a valid pointer to a valid

VkPipelineBinaryKeysAndDataKHR structure

- VUID-VkPipelineBinaryCreateInfoKHR-pipeline-parameter
If **pipeline** is not **VK_NULL_HANDLE**, **pipeline** **must** be a valid **VkPipeline** handle
- VUID-VkPipelineBinaryCreateInfoKHR-pPipelineCreateInfo-parameter
If **pPipelineCreateInfo** is not **NULL**, **pPipelineCreateInfo** **must** be a valid pointer to a valid **VkPipelineCreateInfoKHR** structure

The **VkPipelineBinaryKeysAndDataKHR** structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryKeysAndDataKHR {
    uint32_t          binaryCount;
    const VkPipelineBinaryKeyKHR*  pPipelineBinaryKeys;
    const VkPipelineBinaryDataKHR* pPipelineBinaryData;
} VkPipelineBinaryKeysAndDataKHR;
```

- **binaryCount** is the size of the **pPipelineBinaryKeys** and **pPipelineBinaryData** arrays
- **pPipelineBinaryKeys** is a pointer to an array of **VkPipelineBinaryKeyKHR** structures containing the pipeline binary keys
- **pPipelineBinaryData** is a pointer to an array of **VkPipelineBinaryDataKHR** structures containing the pipeline binary data

Valid Usage (Implicit)

- VUID-VkPipelineBinaryKeysAndDataKHR-pPipelineBinaryKeys-parameter
pPipelineBinaryKeys **must** be a valid pointer to an array of **binaryCount** valid **VkPipelineBinaryKeyKHR** structures
- VUID-VkPipelineBinaryKeysAndDataKHR-pPipelineBinaryData-parameter
pPipelineBinaryData **must** be a valid pointer to an array of **binaryCount** valid **VkPipelineBinaryDataKHR** structures
- VUID-VkPipelineBinaryKeysAndDataKHR-binaryCount-arraylength
binaryCount **must** be greater than 0

The **VkPipelineBinaryDataKHR** structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryDataKHR {
    size_t    dataSize;
    void*     pData;
} VkPipelineBinaryDataKHR;
```

- **dataSize** is the size of the **pData** buffer in bytes.

- `pData` is a pointer to a buffer of `size` bytes that contains pipeline binary data obtained from `vkGetPipelineBinaryDataKHR`.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryDataKHR-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-VkPipelineBinaryDataKHR-dataSize-arraylength
`dataSize` **must** be greater than 0

10.8.3. Retrieving Pipeline Binary Data

Data **can** be retrieved from a pipeline binary object using the command:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkGetPipelineBinaryDataKHR(
    VkDevice                                device,
    const VkPipelineBinaryDataInfoKHR*      pInfo,
    VkPipelineBinaryKeyKHR*                 pPipelineBinaryKey,
    size_t*                                 pPipelineBinaryDataSize,
    void*                                    pPipelineBinaryData);
```

- `device` is the logical device that created the pipeline binary.
- `pInfo` is a pointer to a `VkPipelineBinaryDataInfoKHR` structure which describes the pipeline binary to get data from.
- `pPipelineBinaryKey` is a pointer to a `VkPipelineBinaryKeyKHR` structure where the key for this binary will be written.
- `pPipelineBinaryDataSize` is a pointer to a `size_t` value related to the amount of data in the pipeline binary, as described below.
- `pPipelineBinaryData` is either `NULL` or a pointer to a buffer.

If `pPipelineBinaryData` is `NULL`, then the size of the data, in bytes, that is required to store the binary is returned in `pPipelineBinaryDataSize`. Otherwise, `pPipelineBinaryDataSize` **must** contain the size of the buffer, in bytes, pointed to by `pPipelineBinaryData`, and on return `pPipelineBinaryDataSize` is overwritten with the size of the data, in bytes, that is required to store the binary. If `pPipelineBinaryDataSize` is less than the size that is required to store the binary, nothing is written to `pPipelineBinaryData` and `VK_ERROR_NOT_ENOUGH_SPACE_KHR` will be returned, instead of `VK_SUCCESS`.

If `pipelineBinaryCompressedData` is `VK_FALSE`, implementations **should** not return compressed pipeline binary data to the application.

Valid Usage (Implicit)

- VUID-vkGetPipelineBinaryDataKHR-device-parameter

device **must** be a valid [VkDevice](#) handle

- VUID-vkGetPipelineBinaryDataKHR-pInfo-parameter
pInfo **must** be a valid pointer to a valid [VkPipelineBinaryDataInfoKHR](#) structure
- VUID-vkGetPipelineBinaryDataKHR-pPipelineBinaryKey-parameter
pPipelineBinaryKey **must** be a valid pointer to a [VkPipelineBinaryKeyKHR](#) structure
- VUID-vkGetPipelineBinaryDataKHR-pPipelineBinaryDataSize-parameter
pPipelineBinaryDataSize **must** be a valid pointer to a `size_t` value
- VUID-vkGetPipelineBinaryDataKHR-pPipelineBinaryData-parameter
If the value referenced by **pPipelineBinaryDataSize** is not 0, and **pPipelineBinaryData** is not **NULL**, **pPipelineBinaryData** **must** be a valid pointer to an array of **pPipelineBinaryDataSize** bytes

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_NOT_ENOUGH_SPACE_KHR`

The [VkPipelineBinaryDataInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryDataInfoKHR {
    VkStructureType      sType;
    void*                pNext;
    VkPipelineBinaryKHR  pipelineBinary;
} VkPipelineBinaryDataInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pipelineBinary** is the pipeline binary to get data from.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryDataInfoKHR-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_PIPELINE_BINARY_DATA_INFO_KHR`
- VUID-VkPipelineBinaryDataInfoKHR-pNext-pNext
pNext **must** be **NULL**
- VUID-VkPipelineBinaryDataInfoKHR-pipelineBinary-parameter

`pipelineBinary` **must** be a valid `VkPipelineBinaryKHR` handle

10.8.4. Releasing Captured Pipeline Binary Data

To release pipeline resources captured with `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR`, call:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkReleaseCapturedPipelineDataKHR(
    VkDevice device,
    const VkReleaseCapturedPipelineDataInfoKHR* pInfo,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that created the pipeline object.
- `pInfo` is a pointer to a `VkReleaseCapturedPipelineDataInfoKHR` structure which describes the pipeline to release the data from.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

The implementation **may** free any resources captured as a result of creating the pipeline with `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` and put the pipeline into a state as if `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` had not been provided at pipeline creation time.

NOTE	Any resources captured as a result of creating the pipeline with <code>VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR</code> are implicitly freed by <code>vkDestroyPipeline</code> .
-------------	--

Valid Usage

- VUID-vkReleaseCapturedPipelineDataKHR-pipeline-09611
If `VkAllocationCallbacks` were provided when `pipeline` was created, a compatible set of callbacks **must** be provided in `pAllocator`
- VUID-vkReleaseCapturedPipelineDataKHR-pipeline-09612
If no `VkAllocationCallbacks` were provided when `pipeline` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkReleaseCapturedPipelineDataKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkReleaseCapturedPipelineDataKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkReleaseCapturedPipelineDataInfoKHR` structure
- VUID-vkReleaseCapturedPipelineDataKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

Host Synchronization

- Host access to `pInfo->pipeline` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`

Failure

None

The `VkReleaseCapturedPipelineDataInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkReleaseCapturedPipelineDataInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkPipeline          pipeline;
} VkReleaseCapturedPipelineDataInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipeline` the handle of the pipeline object to release the data from.

Valid Usage

- VUID-VkReleaseCapturedPipelineDataInfoKHR-pipeline-09613
`pipeline` **must** have been created with `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR`
- VUID-VkReleaseCapturedPipelineDataInfoKHR-pipeline-09618
`pipeline` **must** not have been used in a previous call to `vkReleaseCapturedPipelineDataKHR`

Valid Usage (Implicit)

- VUID-VkReleaseCapturedPipelineDataInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RELEASE_CAPTURED_PIPELINE_DATA_INFO_KHR`
- VUID-VkReleaseCapturedPipelineDataInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkReleaseCapturedPipelineDataInfoKHR-pipeline-parameter
`pipeline` **must** be a valid `VkPipeline` handle

10.8.5. Destroying Pipeline Binaries

To destroy a [VkPipelineBinaryKHR](#), call:

```
// Provided by VK_KHR_pipeline_binary
void vkDestroyPipelineBinaryKHR(
    VkDevice          device,
    VkPipelineBinaryKHR pipelineBinary,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that created the pipeline binary object.
- **pipelineBinary** is the handle of the pipeline binary object to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-09614
If **VkAllocationCallbacks** were provided when **pipelineBinary** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-09615
If no **VkAllocationCallbacks** were provided when **pipelineBinary** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyPipelineBinaryKHR-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-parameter
If **pipelineBinary** is not **VK_NULL_HANDLE**, **pipelineBinary** **must** be a valid **VkPipelineBinaryKHR** handle
- VUID-vkDestroyPipelineBinaryKHR-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-parent
If **pipelineBinary** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **pipelineBinary** **must** be externally synchronized

10.9. Specialization Constants

Specialization constants are a mechanism whereby constants in a SPIR-V module **can** have their constant value specified at the time the `VkPipeline` is created. This allows a SPIR-V module to have constants that **can** be modified while executing an application that uses the Vulkan API.

NOTE

Specialization constants are useful to allow a compute shader to have its local workgroup size changed at runtime by the user, for example.

Each `VkPipelineShaderStageCreateInfo` structure contains a `pSpecializationInfo` member, which **can** be `NULL` to indicate no specialization constants, or point to a `VkSpecializationInfo` structure.

The `VkSpecializationInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSpecializationInfo {
    uint32_t          mapEntryCount;
    const VkSpecializationMapEntry* pMapEntries;
    size_t            dataSize;
    const void*        pData;
} VkSpecializationInfo;
```

- `mapEntryCount` is the number of entries in the `pMapEntries` array.
- `pMapEntries` is a pointer to an array of `VkSpecializationMapEntry` structures, which map constant IDs to offsets in `pData`.
- `dataSize` is the byte size of the `pData` buffer.
- `pData` contains the actual constant values to specialize with.

Valid Usage

- VUID-VkSpecializationInfo-offset-00773
The `offset` member of each element of `pMapEntries` **must** be less than `dataSize`
- VUID-VkSpecializationInfo-pMapEntries-00774
The `size` member of each element of `pMapEntries` **must** be less than or equal to `dataSize` minus `offset`
- VUID-VkSpecializationInfo-constantID-04911
The `constantID` value of each element of `pMapEntries` **must** be unique within `pMapEntries`

Valid Usage (Implicit)

- VUID-VkSpecializationInfo-pMapEntries-parameter
If `mapEntryCount` is not 0, `pMapEntries` **must** be a valid pointer to an array of `mapEntryCount` valid `VkSpecializationMapEntry` structures

- VUID-VkSpecializationInfo-pData-parameter
If `dataSize` is not 0, `pData` **must** be a valid pointer to an array of `dataSize` bytes

The `VkSpecializationMapEntry` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSpecializationMapEntry {
    uint32_t    constantID;
    uint32_t    offset;
    size_t      size;
} VkSpecializationMapEntry;
```

- `constantID` is the ID of the specialization constant in SPIR-V.
- `offset` is the byte offset of the specialization constant value within the supplied data buffer.
- `size` is the byte size of the specialization constant value within the supplied data buffer.

If a `constantID` value is not a specialization constant ID used in the shader, that map entry does not affect the behavior of the pipeline.

Valid Usage

- VUID-VkSpecializationMapEntry-constantID-00776
For a `constantID` specialization constant declared in a shader, `size` **must** match the byte size of the `constantID`. If the specialization constant is of type `boolean`, `size` **must** be the byte size of `VkBool32`

In human readable SPIR-V:

```
OpDecorate %x SpecId 13 ; decorate .x component of WorkgroupSize with ID 13
OpDecorate %y SpecId 42 ; decorate .y component of WorkgroupSize with ID 42
OpDecorate %z SpecId 3 ; decorate .z component of WorkgroupSize with ID 3
OpDecorate %wgsz BuiltIn WorkgroupSize ; decorate WorkgroupSize onto constant
%i32 = OpTypeInt 32 0 ; declare an unsigned 32-bit type
%uvec3 = OpTypeVector %i32 3 ; declare a 3 element vector type of unsigned 32-bit
%x = OpSpecConstant %i32 1 ; declare the .x component of WorkgroupSize
%y = OpSpecConstant %i32 1 ; declare the .y component of WorkgroupSize
%z = OpSpecConstant %i32 1 ; declare the .z component of WorkgroupSize
%wgsz = OpSpecConstantComposite %uvec3 %x %y %z ; declare WorkgroupSize
```

From the above we have three specialization constants, one for each of the x, y & z elements of the `WorkgroupSize` vector.

Now to specialize the above via the specialization constants mechanism:

```
const VkSpecializationMapEntry entries[] =
```

```

{
    {
        .constantID = 13,
        .offset = 0 * sizeof(uint32_t),
        .size = sizeof(uint32_t)
    },
    {
        .constantID = 42,
        .offset = 1 * sizeof(uint32_t),
        .size = sizeof(uint32_t)
    },
    {
        .constantID = 3,
        .offset = 2 * sizeof(uint32_t),
        .size = sizeof(uint32_t)
    }
};

const uint32_t data[] = { 16, 8, 4 }; // our workgroup size is 16x8x4

const VkSpecializationInfo info =
{
    .mapEntryCount = 3,
    .pMapEntries = entries,
    .dataSize = 3 * sizeof(uint32_t),
    .pData = data,
};

```

Then when calling `vkCreateComputePipelines`, and passing the `VkSpecializationInfo` we defined as the `pSpecializationInfo` parameter of `VkPipelineShaderStageCreateInfo`, we will create a compute pipeline with the runtime specified local workgroup size.

Another example would be that an application has a SPIR-V module that has some platform-dependent constants they wish to use.

In human readable SPIR-V:

```

OpDecorate %1 SpecId 0 ; decorate our signed 32-bit integer constant
OpDecorate %2 SpecId 12 ; decorate our 32-bit floating-point constant
%i32 = OpTypeInt 32 1 ; declare a signed 32-bit type
%float = OpTypeFloat 32 ; declare a 32-bit floating-point type
%1 = OpSpecConstant %i32 -1 ; some signed 32-bit integer constant
%2 = OpSpecConstant %float 0.5 ; some 32-bit floating-point constant

```

From the above we have two specialization constants, one is a signed 32-bit integer and the second is a 32-bit floating-point value.

Now to specialize the above via the specialization constants mechanism:

```

struct SpecializationData {
    int32_t data0;
    float data1;
};

const VkSpecializationMapEntry entries[] =
{
    {
        .constantID = 0,
        .offset = offsetof(SpecializationData, data0),
        .size = sizeof(SpecializationData::data0)
    },
    {
        .constantID = 12,
        .offset = offsetof(SpecializationData, data1),
        .size = sizeof(SpecializationData::data1)
    }
};

SpecializationData data;
data.data0 = -42;    // set the data for the 32-bit integer
data.data1 = 42.0f; // set the data for the 32-bit floating-point

const VkSpecializationInfo info =
{
    .mapEntryCount = 2,
    .pMapEntries = entries,
    .dataSize = sizeof(data),
    .pdata = &data,
};

```

It is legal for a SPIR-V module with specializations to be compiled into a pipeline where no specialization information was provided. SPIR-V specialization constants contain default values such that if a specialization is not provided, the default value will be used. In the examples above, it would be valid for an application to only specialize some of the specialization constants within the SPIR-V module, and let the other constants use their default values encoded within the `OpSpecConstant` declarations.

10.10. Pipeline Libraries

A pipeline library is a special pipeline that was created using the `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` and cannot be bound, instead it defines a set of pipeline state which can be linked into other pipelines. For ray tracing pipelines this includes shaders and shader groups. For graphics pipelines this includes distinct library types defined by `VkGraphicsPipelineLibraryFlagBitsEXT`. The application **must** maintain the lifetime of a pipeline library based on the pipelines that link with it.

This linkage is achieved by using the following structure within the appropriate creation

mechanisms:

The `VkPipelineLibraryCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_library
typedef struct VkPipelineLibraryCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           libraryCount;
    const VkPipeline*  pLibraries;
} VkPipelineLibraryCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `libraryCount` is the number of pipeline libraries in `pLibraries`.
- `pLibraries` is a pointer to an array of `VkPipeline` structures specifying pipeline libraries to use when creating a pipeline.

Valid Usage

- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-03381
Each element of `pLibraries` **must** have been created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`
- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-06855
If any library in `pLibraries` was created with a shader stage with `VkPipelineShaderStageModuleIdentifierCreateInfoEXT` and `identifierSize` not equal to 0, the pipeline **must** be created with the `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` flag set
- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-08096
If any element of `pLibraries` was created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, all elements **must** have been created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-VkPipelineLibraryCreateInfoKHR-pipeline-07404
If `pipeline` is being created with `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT_EXT`, every element of `pLibraries` **must** have been created with `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT_EXT`
- VUID-VkPipelineLibraryCreateInfoKHR-pipeline-07405
If `pipeline` is being created without `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT_EXT`, every element of `pLibraries` **must** have been created without `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT_EXT`
- VUID-VkPipelineLibraryCreateInfoKHR-pipeline-07406
If `pipeline` is being created with `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT_EXT`, every element of `pLibraries` **must** have been created with `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT_EXT`

- VUID-VkPipelineLibraryCreateInfoKHR-pipeline-07407

If `pipeline` is being created without `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT_EXT`, every element of `pLibraries` **must** have been created without `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkPipelineLibraryCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_LIBRARY_CREATE_INFO_KHR`
- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-parameter
If `libraryCount` is not 0, `pLibraries` **must** be a valid pointer to an array of `libraryCount` valid `VkPipeline` handles

Pipelines created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` libraries **can** depend on other pipeline libraries in `VkPipelineLibraryCreateInfoKHR`.

A pipeline library is considered in-use, as long as one of the linking pipelines is in-use. This applies recursively if a pipeline library includes other pipeline libraries.

10.11. Pipeline Binding

Once a pipeline has been created, it **can** be bound to the command buffer using the command:

```
// Provided by VK_VERSION_1_0
void vkCmdBindPipeline(
    VkCommandBuffer          commandBuffer,
    VkPipelineBindPoint      pipelineBindPoint,
    VkPipeline               pipeline);
```

- `commandBuffer` is the command buffer that the pipeline will be bound to.
- `pipelineBindPoint` is a `VkPipelineBindPoint` value specifying to which bind point the pipeline is bound. Binding one does not disturb the others.
- `pipeline` is the pipeline to be bound.

Once bound, a pipeline binding affects subsequent commands that interact with the given pipeline type in the command buffer until a different pipeline of the same type is bound to the bind point, or until the pipeline bind point is disturbed by binding a `shader object` as described in [Interaction with Pipelines](#). Commands that do not interact with the `given pipeline` type **must** not be affected by the pipeline state.

Valid Usage

- VUID-vkCmdBindPipeline-pipelineBindPoint-00777
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_COMPUTE`, the `VkCommandPool` that

`commandBuffer` was allocated from **must** support compute operations

- VUID-vkCmdBindPipeline-pipelineBindPoint-00778
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBindPipeline-pipelineBindPoint-00779
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_COMPUTE`, `pipeline` **must** be a compute pipeline
- VUID-vkCmdBindPipeline-pipelineBindPoint-00780
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS`, `pipeline` **must** be a graphics pipeline
- VUID-vkCmdBindPipeline-pipeline-00781
If the `variableMultisampleRate` feature is not supported, `pipeline` is a graphics pipeline, the current subpass [uses no attachments](#), and this is not the first call to this function with a graphics pipeline after transitioning to the current subpass, then the sample count specified by this pipeline **must** match that set in the previous pipeline
- VUID-vkCmdBindPipeline-variableSampleLocations-01525
If `VkPhysicalDeviceSampleLocationsPropertiesEXT::variableSampleLocations` is `VK_FALSE`, and `pipeline` is a graphics pipeline created with a `VkPipelineSampleLocationsStateCreateInfoEXT` structure having its `sampleLocationsEnable` member set to `VK_TRUE` but without `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` enabled then the current render pass instance **must** have been begun by specifying a `VkRenderPassSampleLocationsBeginInfoEXT` structure whose `pPostSubpassSampleLocations` member contains an element with a `subpassIndex` matching the current subpass index and the `sampleLocationsInfo` member of that element **must** match the `sampleLocationsInfo` specified in `VkPipelineSampleLocationsStateCreateInfoEXT` when the pipeline was created
- VUID-vkCmdBindPipeline-None-02323
This command **must** not be recorded when transform feedback is active
- VUID-vkCmdBindPipeline-pipelineBindPoint-02391
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdBindPipeline-pipelineBindPoint-02392
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR`, `pipeline` **must** be a ray tracing pipeline
- VUID-vkCmdBindPipeline-pipelineBindPoint-06721
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR`, `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdBindPipeline-pipelineProtectedAccess-07408
If the `pipelineProtectedAccess` feature is enabled, and `commandBuffer` is a protected command buffer, `pipeline` **must** have been created without `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT_EXT`
- VUID-vkCmdBindPipeline-pipelineProtectedAccess-07409
If the `pipelineProtectedAccess` feature is enabled, and `commandBuffer` is not a protected

command buffer, pipeline **must** have been created without `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT_EXT`

- VUID-vkCmdBindPipeline-pipeline-03382
pipeline **must** not have been created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` set
- VUID-vkCmdBindPipeline-commandBuffer-04808
If `commandBuffer` is a secondary command buffer with `VkCommandBufferInheritanceViewportScissorInfoNV::viewportScissor2D` enabled and `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS`, then the pipeline **must** have been created with `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` or `VK_DYNAMIC_STATE_VIEWPORT`, and `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` or `VK_DYNAMIC_STATE_SCISSOR` enabled
- VUID-vkCmdBindPipeline-commandBuffer-04809
If `commandBuffer` is a secondary command buffer with `VkCommandBufferInheritanceViewportScissorInfoNV::viewportScissor2D` enabled and `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS` and pipeline was created with `VkPipelineDiscardRectangleStateCreateInfoEXT` structure and its `discardRectangleCount` member is not 0, or the pipeline was created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` enabled, then the pipeline **must** have been created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` enabled
- VUID-vkCmdBindPipeline-pipelineBindPoint-04881
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS` and the `provokingVertexModePerPipeline` limit is `VK_FALSE`, then pipeline's `VkPipelineRasterizationProvokingVertexStateCreateInfoEXT::provokingVertexMode` **must** be the same as that of any other pipelines previously bound to this bind point within the current render pass instance, including any pipeline already bound when beginning the render pass instance
- VUID-vkCmdBindPipeline-pipelineBindPoint-04949
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdBindPipeline-pipelineBindPoint-04950
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI`, pipeline **must** be a subpass shading pipeline

Valid Usage (Implicit)

- VUID-vkCmdBindPipeline-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindPipeline-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-vkCmdBindPipeline-pipeline-parameter
pipeline **must** be a valid `VkPipeline` handle
- VUID-vkCmdBindPipeline-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBindPipeline-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations

- VUID-vkCmdBindPipeline-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdBindPipeline-commonparent

Both of `commandBuffer`, and `pipeline` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

Possible values of `vkCmdBindPipeline::pipelineBindPoint`, specifying the bind point of a pipeline object, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkPipelineBindPoint {
    VK_PIPELINE_BIND_POINT_GRAPHICS = 0,
    VK_PIPELINE_BIND_POINT_COMPUTE = 1,
#ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_AMD_shader_enqueue
    VK_PIPELINE_BIND_POINT_EXECUTION_GRAPH_AMD = 1000134000,
#endif
    // Provided by VK_KHR_ray_tracing_pipeline
    VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR = 1000165000,
    // Provided by VK_HUAWEI_subpass_shading
    VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI = 1000369003,
    // Provided by VK_NV_ray_tracing
    VK_PIPELINE_BIND_POINT_RAY_TRACING_NV = VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR,
} VkPipelineBindPoint;
```

- `VK_PIPELINE_BIND_POINT_COMPUTE` specifies binding as a compute pipeline.
- `VK_PIPELINE_BIND_POINT_GRAPHICS` specifies binding as a graphics pipeline.

- `VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR` specifies binding as a ray tracing pipeline.
- `VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI` specifies binding as a subpass shading pipeline.
- `VK_PIPELINE_BIND_POINT_EXECUTION_GRAPH_AMD` specifies binding as an [execution graph pipeline](#).

For pipelines that were created with the support of multiple shader groups (see [Graphics Pipeline Shader Groups](#)), the regular `vkCmdBindPipeline` command will bind Shader Group `0`. To explicitly bind a shader group use:

```
// Provided by VK_NV_device_generated_commands
void vkCmdBindPipelineShaderGroupNV(
    VkCommandBuffer          commandBuffer,
    VkPipelineBindPoint      pipelineBindPoint,
    VkPipeline               pipeline,
    uint32_t                 groupIndex);
```

- `commandBuffer` is the command buffer that the pipeline will be bound to.
- `pipelineBindPoint` is a `VkPipelineBindPoint` value specifying the bind point to which the pipeline will be bound.
- `pipeline` is the pipeline to be bound.
- `groupIndex` is the shader group to be bound.

Valid Usage

- VUID-vkCmdBindPipelineShaderGroupNV-groupIndex-02893
`groupIndex` **must** be `0` or less than the effective `VkGraphicsPipelineShaderGroupsCreateInfoNV::groupCount` including the referenced pipelines
- VUID-vkCmdBindPipelineShaderGroupNV-pipelineBindPoint-02894
The `pipelineBindPoint` **must** be `VK_PIPELINE_BIND_POINT_GRAPHICS`
- VUID-vkCmdBindPipelineShaderGroupNV-groupIndex-02895
The same restrictions as `vkCmdBindPipeline` apply as if the bound pipeline was created only with the Shader Group from the `groupIndex` information
- VUID-vkCmdBindPipelineShaderGroupNV-deviceGeneratedCommands-02896
The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdBindPipelineShaderGroupNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindPipelineShaderGroupNV-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value

- VUID-vkCmdBindPipelineShaderGroupNV-pipeline-parameter **pipeline** **must** be a valid [VkPipeline](#) handle
- VUID-vkCmdBindPipelineShaderGroupNV-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdBindPipelineShaderGroupNV-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support graphics, or compute operations
- VUID-vkCmdBindPipelineShaderGroupNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindPipelineShaderGroupNV-commonparent
Both of **commandBuffer**, and **pipeline** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

10.11.1. Interaction With Shader Objects

If the [shaderObject](#) feature is enabled, applications **can** use both pipelines and [shader objects](#) at the same time. The interaction between pipelines and shader objects is described in [Interaction with Pipelines](#).

10.12. Dynamic State

When a pipeline object is bound, any pipeline object state that is not specified as dynamic is applied to the command buffer state. Pipeline object state that is specified as dynamic is not applied to the command buffer state at this time.

Instead, dynamic state **can** be modified at any time and persists for the lifetime of the command buffer, or until modified by another dynamic state setting command, or made invalid by binding a pipeline in which that state is statically specified.

If the `commandBufferInheritance` feature is enabled, all valid state from the previously executed command buffer in the queue is inherited into the next command buffer executed in the same queue. This inherited state does not need to be set again before draw or dispatch commands.

When a pipeline object is bound, the following applies to each state parameter:

- If the state is not specified as dynamic in the new pipeline object, then that command buffer state is overwritten by the state in the new pipeline object. Before any draw or dispatch call with this pipeline there **must** not have been any calls to any of the corresponding dynamic state setting commands after this pipeline was bound.
- If the state is specified as dynamic in the new pipeline object, then that command buffer state is not disturbed. Before any draw or dispatch call with this pipeline there **must** have been at least one call to each of the corresponding dynamic state setting commands. The state-setting commands **must** be recorded after command buffer recording was begun, or after the last command binding a pipeline object with that state specified as static, whichever was the latter.
- If the state is not included (corresponding pointer in `VkGraphicsPipelineCreateInfo` was `NULL` or was ignored) in the new pipeline object, then that command buffer state is not disturbed. For example, mesh shading pipelines do not include vertex input state and therefore do not disturb any such command buffer state.

Dynamic state that does not affect the result of operations **can** be left undefined.

NOTE

For example, if blending is disabled by the pipeline object state then the dynamic color blend constants do not need to be specified in the command buffer, even if this state is specified as dynamic in the pipeline object.

NOTE

Applications running on Vulkan implementations advertising an `VkPhysicalDeviceDriverProperties::conformanceVersion` less than 1.3.8.0 should be aware that rebinding the currently bound pipeline object may not reapply static state.

10.13. Pipeline Properties and Shader Information

When a pipeline is created, its state and shaders are compiled into zero or more device-specific executables, which are used when executing commands against that pipeline. To query the properties of these pipeline executables, call:

```
// Provided by VK_KHR_pipeline_executable_properties
VkResult vkGetPipelineExecutablePropertiesKHR(
    VkDevice device,
    const VkPipelineInfoKHR* pPipelineInfo,
    uint32_t* pExecutableCount,
    VkPipelineExecutablePropertiesKHR* pProperties);
```

- `device` is the device that created the pipeline.
- `pPipelineInfo` describes the pipeline being queried.

- `pExecutableCount` is a pointer to an integer related to the number of pipeline executables available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkPipelineExecutablePropertiesKHR` structures.

If `pProperties` is `NULL`, then the number of pipeline executables associated with the pipeline is returned in `pExecutableCount`. Otherwise, `pExecutableCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pExecutableCount` is less than the number of pipeline executables associated with the pipeline, at most `pExecutableCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

Valid Usage

- VUID-vkGetPipelineExecutablePropertiesKHR-pipelineExecutableInfo-03270
The `pipelineExecutableInfo` feature **must** be enabled
- VUID-vkGetPipelineExecutablePropertiesKHR-pipeline-03271
The `pipeline` member of `pPipelineInfo` **must** have been created with `device`

Valid Usage (Implicit)

- VUID-vkGetPipelineExecutablePropertiesKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetPipelineExecutablePropertiesKHR-pPipelineInfo-parameter
`pPipelineInfo` **must** be a valid pointer to a valid `VkPipelineInfoKHR` structure
- VUID-vkGetPipelineExecutablePropertiesKHR-pExecutableCount-parameter
`pExecutableCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPipelineExecutablePropertiesKHR-pProperties-parameter
If the value referenced by `pExecutableCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pExecutableCount` `VkPipelineExecutablePropertiesKHR` structures

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkPipelineExecutablePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutablePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkShaderStageFlags stages;
    char               name[VK_MAX_DESCRIPTION_SIZE];
    char               description[VK_MAX_DESCRIPTION_SIZE];
    uint32_t           subgroupSize;
} VkPipelineExecutablePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stages` is a bitmask of zero or more `VkShaderStageFlagBits` indicating which shader stages (if any) were principally used as inputs to compile this pipeline executable.
- `name` is an array of `VK_MAX_DESCRIPTION_SIZE char` containing a null-terminated UTF-8 string which is a short human readable name for this pipeline executable.
- `description` is an array of `VK_MAX_DESCRIPTION_SIZE char` containing a null-terminated UTF-8 string which is a human readable description for this pipeline executable.
- `subgroupSize` is the subgroup size with which this pipeline executable is dispatched.

Not all implementations have a 1:1 mapping between shader stages and pipeline executables and some implementations **may** reduce a given shader stage to fixed function hardware programming such that no pipeline executable is available. No guarantees are provided about the mapping between shader stages and pipeline executables and `stages` **should** be considered a best effort hint. Because the application **cannot** rely on the `stages` field to provide an exact description, `name` and `description` provide a human readable name and description which more accurately describes the given pipeline executable.

Valid Usage (Implicit)

- VUID-VkPipelineExecutablePropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_PROPERTIES_KHR`
- VUID-VkPipelineExecutablePropertiesKHR-pNext-pNext
`pNext` **must** be `NULL`

To query the pipeline properties call:

```
// Provided by VK_EXT_pipeline_properties
VkResult vkGetPipelinePropertiesEXT(
    VkDevice device,
    const VkPipelineInfoEXT* pPipelineInfo,
    VkBaseOutStructure* pPipelineProperties);
```

- **device** is the logical device that created the pipeline.
- **pPipelineInfo** is a pointer to a **VkPipelineInfoEXT** structure which describes the pipeline being queried.
- **pPipelineProperties** is a pointer to a **VkBaseOutStructure** structure in which the pipeline properties will be written.

To query a pipeline's **pipelineIdentifier** pass a **VkPipelinePropertiesIdentifierEXT** structure in **pPipelineProperties**. Each pipeline is associated with a **pipelineIdentifier** and the identifier is implementation specific.

Valid Usage

- VUID-vkGetPipelinePropertiesEXT-pipeline-06738
The **pipeline** member of **pPipelineInfo** **must** have been created with **device**
- VUID-vkGetPipelinePropertiesEXT-pPipelineProperties-06739
pPipelineProperties **must** be a valid pointer to a **VkPipelinePropertiesIdentifierEXT** structure
- VUID-vkGetPipelinePropertiesEXT-None-06766
The **pipelinePropertiesIdentifier** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetPipelinePropertiesEXT-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkGetPipelinePropertiesEXT-pPipelineInfo-parameter
pPipelineInfo **must** be a valid pointer to a valid **VkPipelineInfoEXT** structure

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**

The **VkPipelinePropertiesIdentifierEXT** structure is defined as:

```
// Provided by VK_EXT_pipeline_properties
typedef struct VkPipelinePropertiesIdentifierEXT {
    VkStructureType    sType;
    void*              pNext;
    uint8_t            pipelineIdentifier[VK_UUID_SIZE];
} VkPipelinePropertiesIdentifierEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineIdentifier` is an array of `VK_UUID_SIZE` `uint8_t` values into which the pipeline identifier will be written.

Valid Usage (Implicit)

- VUID-VkPipelinePropertiesIdentifierEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_PROPERTIES_IDENTIFIER_EXT`
- VUID-VkPipelinePropertiesIdentifierEXT-pNext-pNext
`pNext` **must** be `NULL`

The `VkPipelineInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline          pipeline;
} VkPipelineInfoKHR;
```

or the equivalent

```
// Provided by VK_EXT_pipeline_properties
typedef VkPipelineInfoKHR VkPipelineInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipeline` is a `VkPipeline` handle.

Valid Usage (Implicit)

- VUID-VkPipelineInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_INFO_KHR`
- VUID-VkPipelineInfoKHR-pNext-pNext

pNext must be NULL

- VUID-VkPipelineInfoKHR-pipeline-parameter
pipeline must be a valid [VkPipeline](#) handle

Each pipeline executable **may** have a set of statistics associated with it that are generated by the pipeline compilation process. These statistics **may** include things such as instruction counts, amount of spilling (if any), maximum number of simultaneous threads, or anything else which **may** aid developers in evaluating the expected performance of a shader. To query the compile time statistics associated with a pipeline executable, call:

```
// Provided by VK_KHR_pipeline_executable_properties
VkResult vkGetPipelineExecutableStatisticsKHR(
    VkDevice device,
    const VkPipelineExecutableInfoKHR* pExecutableInfo,
    uint32_t* pStatisticCount,
    VkPipelineExecutableStatisticKHR* pStatistics);
```

- **device** is the device that created the pipeline.
- **pExecutableInfo** describes the pipeline executable being queried.
- **pStatisticCount** is a pointer to an integer related to the number of statistics available or queried, as described below.
- **pStatistics** is either NULL or a pointer to an array of [VkPipelineExecutableStatisticKHR](#) structures.

If **pStatistics** is NULL, then the number of statistics associated with the pipeline executable is returned in **pStatisticCount**. Otherwise, **pStatisticCount** must point to a variable set by the application to the number of elements in the **pStatistics** array, and on return the variable is overwritten with the number of structures actually written to **pStatistics**. If **pStatisticCount** is less than the number of statistics associated with the pipeline executable, at most **pStatisticCount** structures will be written, and **VK_INCOMPLETE** will be returned instead of **VK_SUCCESS**, to indicate that not all the available statistics were returned.

Valid Usage

- VUID-vkGetPipelineExecutableStatisticsKHR-pipelineExecutableInfo-03272
The **pipelineExecutableInfo** feature must be enabled
- VUID-vkGetPipelineExecutableStatisticsKHR-pipeline-03273
The **pipeline** member of **pExecutableInfo** must have been created with **device**
- VUID-vkGetPipelineExecutableStatisticsKHR-pipeline-03274
The **pipeline** member of **pExecutableInfo** must have been created with **VK_PIPELINE_CREATE_CAPTURE_STATISTICS_BIT_KHR**

Valid Usage (Implicit)

- VUID-vkGetPipelineExecutableStatisticsKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetPipelineExecutableStatisticsKHR-pExecutableInfo-parameter **pExecutableInfo** **must** be a valid pointer to a valid [VkPipelineExecutableInfoKHR](#) structure
- VUID-vkGetPipelineExecutableStatisticsKHR-pStatisticCount-parameter **pStatisticCount** **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPipelineExecutableStatisticsKHR-pStatistics-parameter
If the value referenced by **pStatisticCount** is not 0, and **pStatistics** is not `NULL`, **pStatistics** **must** be a valid pointer to an array of **pStatisticCount** [VkPipelineExecutableStatisticKHR](#) structures

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The [VkPipelineExecutableInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutableInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline          pipeline;
    uint32_t            executableIndex;
} VkPipelineExecutableInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **pipeline** is the pipeline to query.
- **executableIndex** is the index of the pipeline executable to query in the array of executable properties returned by [vkGetPipelineExecutablePropertiesKHR](#).

Valid Usage

- VUID-VkPipelineExecutableInfoKHR-executableIndex-03275

`executableIndex` **must** be less than the number of pipeline executables associated with `pipeline` as returned in the `pExecutableCount` parameter of `vkGetPipelineExecutablePropertiesKHR`

Valid Usage (Implicit)

- VUID-VkPipelineExecutableInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_INFO_KHR`
- VUID-VkPipelineExecutableInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPipelineExecutableInfoKHR-pipeline-parameter
`pipeline` **must** be a valid `VkPipeline` handle

The `VkPipelineExecutableStatisticKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutableStatisticKHR {
    VkStructureType    sType;
    void*              pNext;
    char               name[VK_MAX_DESCRIPTION_SIZE];
    char               description[VK_MAX_DESCRIPTION_SIZE];
    VkPipelineExecutableStatisticFormatKHR format;
    VkPipelineExecutableStatisticValueKHR value;
} VkPipelineExecutableStatisticKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `name` is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which is a short human readable name for this statistic.
- `description` is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which is a human readable description for this statistic.
- `format` is a `VkPipelineExecutableStatisticFormatKHR` value specifying the format of the data found in `value`.
- `value` is the value of this statistic.

Valid Usage (Implicit)

- VUID-VkPipelineExecutableStatisticKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_STATISTIC_KHR`

- VUID-VkPipelineExecutableStatisticKHR-pNext-pNext
pNext **must** be NULL

The `VkPipelineExecutableStatisticFormatKHR` enum is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef enum VkPipelineExecutableStatisticFormatKHR {
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_BOOL32_KHR = 0,
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_INT64_KHR = 1,
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_UINT64_KHR = 2,
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_FLOAT64_KHR = 3,
} VkPipelineExecutableStatisticFormatKHR;
```

- `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_BOOL32_KHR` specifies that the statistic is returned as a 32-bit boolean value which **must** be either `VK_TRUE` or `VK_FALSE` and **should** be read from the `b32` field of `VkPipelineExecutableStatisticValueKHR`.
- `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_INT64_KHR` specifies that the statistic is returned as a signed 64-bit integer and **should** be read from the `i64` field of `VkPipelineExecutableStatisticValueKHR`.
- `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_UINT64_KHR` specifies that the statistic is returned as an unsigned 64-bit integer and **should** be read from the `u64` field of `VkPipelineExecutableStatisticValueKHR`.
- `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_FLOAT64_KHR` specifies that the statistic is returned as a 64-bit floating-point value and **should** be read from the `f64` field of `VkPipelineExecutableStatisticValueKHR`.

The `VkPipelineExecutableStatisticValueKHR` union is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef union VkPipelineExecutableStatisticValueKHR {
    VkBool32    b32;
    int64_t     i64;
    uint64_t    u64;
    double      f64;
} VkPipelineExecutableStatisticValueKHR;
```

- `b32` is the 32-bit boolean value if the `VkPipelineExecutableStatisticFormatKHR` is `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_BOOL32_KHR`.
- `i64` is the signed 64-bit integer value if the `VkPipelineExecutableStatisticFormatKHR` is `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_INT64_KHR`.
- `u64` is the unsigned 64-bit integer value if the `VkPipelineExecutableStatisticFormatKHR` is `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_UINT64_KHR`.
- `f64` is the 64-bit floating-point value if the `VkPipelineExecutableStatisticFormatKHR` is `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_FLOAT64_KHR`.

Each pipeline executable **may** have one or more text or binary internal representations associated with it which are generated as part of the compile process. These **may** include the final shader assembly, a binary form of the compiled shader, or the shader compiler's internal representation at any number of intermediate compile steps. To query the internal representations associated with a pipeline executable, call:

```
// Provided by VK_KHR_pipeline_executable_properties
VkResult vkGetPipelineExecutableInternalRepresentationsKHR(
    VkDevice device,
    const VkPipelineExecutableInfoKHR* pExecutableInfo,
    uint32_t* pInternalRepresentationCount,
    VkPipelineExecutableInternalRepresentationKHR* pInternalRepresentations);
```

- **device** is the device that created the pipeline.
- **pExecutableInfo** describes the pipeline executable being queried.
- **pInternalRepresentationCount** is a pointer to an integer related to the number of internal representations available or queried, as described below.
- **pInternalRepresentations** is either **NULL** or a pointer to an array of **VkPipelineExecutableInternalRepresentationKHR** structures.

If **pInternalRepresentations** is **NULL**, then the number of internal representations associated with the pipeline executable is returned in **pInternalRepresentationCount**. Otherwise, **pInternalRepresentationCount** **must** point to a variable set by the application to the number of elements in the **pInternalRepresentations** array, and on return the variable is overwritten with the number of structures actually written to **pInternalRepresentations**. If **pInternalRepresentationCount** is less than the number of internal representations associated with the pipeline executable, at most **pInternalRepresentationCount** structures will be written, and **VK_INCOMPLETE** will be returned instead of **VK_SUCCESS**, to indicate that not all the available representations were returned.

While the details of the internal representations remain implementation-dependent, the implementation **should** order the internal representations in the order in which they occur in the compiled pipeline with the final shader assembly (if any) last.

Valid Usage

- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pipelineExecutableInfo-03276
The **pipelineExecutableInfo** feature **must** be enabled
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pipeline-03277
The **pipeline** member of **pExecutableInfo** **must** have been created with **device**
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pipeline-03278
The **pipeline** member of **pExecutableInfo** **must** have been created with **VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR**

Valid Usage (Implicit)

- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pExecutableInfo-parameter **pExecutableInfo** **must** be a valid pointer to a valid [VkPipelineExecutableInfoKHR](#) structure
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pInternalRepresentationCount-parameter **pInternalRepresentationCount** **must** be a valid pointer to a [uint32_t](#) value
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pInternalRepresentations-parameter
If the value referenced by **pInternalRepresentationCount** is not **0**, and **pInternalRepresentations** is not **NULL**, **pInternalRepresentations** **must** be a valid pointer to an array of **pInternalRepresentationCount** [VkPipelineExecutableInternalRepresentationKHR](#) structures

Return Codes

Success

- [VK_SUCCESS](#)
- [VK_INCOMPLETE](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)

The [VkPipelineExecutableInternalRepresentationKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutableInternalRepresentationKHR {
    VkStructureType    sType;
    void*              pNext;
    char                name[VK_MAX_DESCRIPTION_SIZE];
    char               description[VK_MAX_DESCRIPTION_SIZE];
    VkBool32           isText;
    size_t             dataSize;
    void*              pData;
} VkPipelineExecutableInternalRepresentationKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **name** is an array of [VK_MAX_DESCRIPTION_SIZE](#) **char** containing a null-terminated UTF-8 string

which is a short human readable name for this internal representation.

- **description** is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which is a human readable description for this internal representation.
- **isText** specifies whether the returned data is text or opaque data. If **isText** is `VK_TRUE` then the data returned in **pData** is text and is guaranteed to be a null-terminated UTF-8 string.
- **dataSize** is an integer related to the size, in bytes, of the internal representation's data, as described below.
- **pData** is either `NULL` or a pointer to a block of data into which the implementation will write the internal representation.

If **pData** is `NULL`, then the size, in bytes, of the internal representation data is returned in **dataSize**. Otherwise, **dataSize** **must** be the size of the buffer, in bytes, pointed to by **pData** and on return **dataSize** is overwritten with the number of bytes of data actually written to **pData** including any trailing null character. If **dataSize** is less than the size, in bytes, of the internal representation's data, at most **dataSize** bytes of data will be written to **pData**, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available representation was returned.

If **isText** is `VK_TRUE` and **pData** is not `NULL` and **dataSize** is not zero, the last byte written to **pData** will be a null character.

Valid Usage (Implicit)

- `VUID-VkPipelineExecutableInternalRepresentationKHR-sType-sType`
sType **must** be `VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_INTERNAL_REPRESENTATION_KHR`
- `VUID-VkPipelineExecutableInternalRepresentationKHR-pNext-pNext`
pNext **must** be `NULL`

Information about a particular shader that has been compiled as part of a pipeline object can be extracted by calling:

```
// Provided by VK_AMD_shader_info
VkResult vkGetShaderInfoAMD(
    VkDevice          device,
    VkPipeline        pipeline,
    VkShaderStageFlagBits shaderStage,
    VkShaderInfoTypeAMD infoType,
    size_t*           pInfoSize,
    void*             pInfo);
```

- **device** is the device that created **pipeline**.
- **pipeline** is the target of the query.
- **shaderStage** is a `VkShaderStageFlagBits` specifying the particular shader within the pipeline about which information is being queried.
- **infoType** describes what kind of information is being queried.

- `pInfoSize` is a pointer to a value related to the amount of data the query returns, as described below.
- `pInfo` is either `NULL` or a pointer to a buffer.

If `pInfo` is `NULL`, then the maximum size of the information that **can** be retrieved about the shader, in bytes, is returned in `pInfoSize`. Otherwise, `pInfoSize` **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by `pInfo`, and on return the variable is overwritten with the amount of data actually written to `pInfo`. If `pInfoSize` is less than the maximum size that **can** be retrieved by the pipeline cache, then at most `pInfoSize` bytes will be written to `pInfo`, and `VK_INCOMPLETE` will be returned, instead of `VK_SUCCESS`, to indicate that not all required of the pipeline cache was returned.

Not all information is available for every shader and implementations may not support all kinds of information for any shader. When a certain type of information is unavailable, the function returns `VK_ERROR_FEATURE_NOT_PRESENT`.

If information is successfully and fully queried, the function will return `VK_SUCCESS`.

For `infoType` `VK_SHADER_INFO_TYPE_STATISTICS_AMD`, a `VkShaderStatisticsInfoAMD` structure will be written to the buffer pointed to by `pInfo`. This structure will be populated with statistics regarding the physical device resources used by that shader along with other miscellaneous information and is described in further detail below.

For `infoType` `VK_SHADER_INFO_TYPE_DISASSEMBLY_AMD`, `pInfo` is a pointer to a null-terminated UTF-8 string containing human-readable disassembly. The exact formatting and contents of the disassembly string are vendor-specific.

The formatting and contents of all other types of information, including `infoType` `VK_SHADER_INFO_TYPE_BINARY_AMD`, are left to the vendor and are not further specified by this extension.

Valid Usage (Implicit)

- VUID-vkGetShaderInfoAMD-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetShaderInfoAMD-pipeline-parameter
`pipeline` **must** be a valid `VkPipeline` handle
- VUID-vkGetShaderInfoAMD-shaderStage-parameter
`shaderStage` **must** be a valid `VkShaderStageFlagBits` value
- VUID-vkGetShaderInfoAMD-infoType-parameter
`infoType` **must** be a valid `VkShaderInfoTypeAMD` value
- VUID-vkGetShaderInfoAMD-pInfoSize-parameter
`pInfoSize` **must** be a valid pointer to a `size_t` value
- VUID-vkGetShaderInfoAMD-pInfo-parameter
If the value referenced by `pInfoSize` is not 0, and `pInfo` is not `NULL`, `pInfo` **must** be a valid pointer to an array of `pInfoSize` bytes

- VUID-vkGetShaderInfoAMD-pipeline-parent
pipeline **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- VK_SUCCESS
- VK_INCOMPLETE

Failure

- VK_ERROR_FEATURE_NOT_PRESENT
- VK_ERROR_OUT_OF_HOST_MEMORY

Possible values of `vkGetShaderInfoAMD::infoType`, specifying the information being queried from a shader, are:

```
// Provided by VK_AMD_shader_info
typedef enum VkShaderInfoTypeAMD {
    VK_SHADER_INFO_TYPE_STATISTICS_AMD = 0,
    VK_SHADER_INFO_TYPE_BINARY_AMD = 1,
    VK_SHADER_INFO_TYPE_DISASSEMBLY_AMD = 2,
} VkShaderInfoTypeAMD;
```

- `VK_SHADER_INFO_TYPE_STATISTICS_AMD` specifies that device resources used by a shader will be queried.
- `VK_SHADER_INFO_TYPE_BINARY_AMD` specifies that implementation-specific information will be queried.
- `VK_SHADER_INFO_TYPE_DISASSEMBLY_AMD` specifies that human-readable disassembly of a shader.

The `VkShaderStatisticsInfoAMD` structure is defined as:

```
// Provided by VK_AMD_shader_info
typedef struct VkShaderStatisticsInfoAMD {
    VkShaderStageFlags      shaderStageMask;
    VkShaderResourceUsageAMD resourceUsage;
    uint32_t                numPhysicalVgprs;
    uint32_t                numPhysicalSgprs;
    uint32_t                numAvailableVgprs;
    uint32_t                numAvailableSgprs;
    uint32_t                computeWorkGroupSize[3];
} VkShaderStatisticsInfoAMD;
```

- `shaderStageMask` are the combination of logical shader stages contained within this shader.
- `resourceUsage` is a `VkShaderResourceUsageAMD` structure describing internal physical device

resources used by this shader.

- `numPhysicalVgprs` is the maximum number of vector instruction general-purpose registers (VGPRs) available to the physical device.
- `numPhysicalSgprs` is the maximum number of scalar instruction general-purpose registers (SGPRs) available to the physical device.
- `numAvailableVgprs` is the maximum limit of VGPRs made available to the shader compiler.
- `numAvailableSgprs` is the maximum limit of SGPRs made available to the shader compiler.
- `computeWorkgroupSize` is the local workgroup size of this shader in { X, Y, Z } dimensions.

Some implementations may merge multiple logical shader stages together in a single shader. In such cases, `shaderStageMask` will contain a bitmask of all of the stages that are active within that shader. Consequently, if specifying those stages as input to `vkGetShaderInfoAMD`, the same output information **may** be returned for all such shader stage queries.

The number of available VGPRs and SGPRs (`numAvailableVgprs` and `numAvailableSgprs` respectively) are the shader-addressable subset of physical registers that is given as a limit to the compiler for register assignment. These values **may** further be limited by implementations due to performance optimizations where register pressure is a bottleneck.

The `VkShaderResourceUsageAMD` structure is defined as:

```
// Provided by VK_AMD_shader_info
typedef struct VkShaderResourceUsageAMD {
    uint32_t    numUsedVgprs;
    uint32_t    numUsedSgprs;
    uint32_t    ldsSizePerLocalWorkGroup;
    size_t      ldsUsageSizeInBytes;
    size_t      scratchMemUsageInBytes;
} VkShaderResourceUsageAMD;
```

- `numUsedVgprs` is the number of vector instruction general-purpose registers used by this shader.
- `numUsedSgprs` is the number of scalar instruction general-purpose registers used by this shader.
- `ldsSizePerLocalWorkGroup` is the maximum local data store size per work group in bytes.
- `ldsUsageSizeInBytes` is the LDS usage size in bytes per work group by this shader.
- `scratchMemUsageInBytes` is the scratch memory usage in bytes by this shader.

10.14. Pipeline Compiler Control

The compilation of a pipeline **can** be tuned by adding a `VkPipelineCompilerControlCreateInfoAMD` structure to the `pNext` chain of `VkGraphicsPipelineCreateInfo` or `VkComputePipelineCreateInfo`.

```
// Provided by VK_AMD_pipeline_compiler_control
typedef struct VkPipelineCompilerControlCreateInfoAMD {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineCompilerControlFlagsAMD compilerControlFlags;
} VkPipelineCompilerControlCreateInfoAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `compilerControlFlags` is a bitmask of `VkPipelineCompilerControlFlagBitsAMD` affecting how the pipeline will be compiled.

Valid Usage (Implicit)

- VUID-VkPipelineCompilerControlCreateInfoAMD-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_COMPILER_CONTROL_CREATE_INFO_AMD`
- VUID-VkPipelineCompilerControlCreateInfoAMD-compilerControlFlags-zerobitmask
`compilerControlFlags` **must** be `0`

There are currently no available flags for this extension; flags will be added by future versions of this extension.

```
// Provided by VK_AMD_pipeline_compiler_control
typedef enum VkPipelineCompilerControlFlagBitsAMD {
} VkPipelineCompilerControlFlagBitsAMD;
```

```
// Provided by VK_AMD_pipeline_compiler_control
typedef VkFlags VkPipelineCompilerControlFlagsAMD;
```

`VkPipelineCompilerControlFlagsAMD` is a bitmask type for setting a mask of zero or more `VkPipelineCompilerControlFlagBitsAMD`.

10.15. Pipeline Creation Feedback

Feedback about the creation of a particular pipeline object **can** be obtained by adding a `VkPipelineCreationFeedbackCreateInfo` structure to the `pNext` chain of `VkGraphicsPipelineCreateInfo`, `VkRayTracingPipelineCreateInfoKHR`, `VkRayTracingPipelineCreateInfoNV`, or `VkComputePipelineCreateInfo`. The `VkPipelineCreationFeedbackCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPipelineCreationFeedbackCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkPipelineCreationFeedback* pPipelineCreationFeedback;
    uint32_t              pipelineStageCreationFeedbackCount;
    VkPipelineCreationFeedback* pPipelineStageCreationFeedbacks;
} VkPipelineCreationFeedbackCreateInfo;
```

or the equivalent

```
// Provided by VK_EXT_pipeline_creation_feedback
typedef VkPipelineCreationFeedbackCreateInfo VkPipelineCreationFeedbackCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pPipelineCreationFeedback` is a pointer to a `VkPipelineCreationFeedback` structure.
- `pipelineStageCreationFeedbackCount` is the number of elements in `pPipelineStageCreationFeedbacks`.
- `pPipelineStageCreationFeedbacks` is a pointer to an array of `pipelineStageCreationFeedbackCount` `VkPipelineCreationFeedback` structures.

An implementation **should** write pipeline creation feedback to `pPipelineCreationFeedback` and **may** write pipeline stage creation feedback to `pPipelineStageCreationFeedbacks`. An implementation **must** set or clear the `VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT` in `VkPipelineCreationFeedback::flags` for `pPipelineCreationFeedback` and every element of `pPipelineStageCreationFeedbacks`.

NOTE

One common scenario for an implementation to skip per-stage feedback is when `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` is set in `pPipelineCreationFeedback`.

When chained to `VkRayTracingPipelineCreateInfoKHR`, `VkRayTracingPipelineCreateInfoNV`, or `VkGraphicsPipelineCreateInfo`, the `i` element of `pPipelineStageCreationFeedbacks` corresponds to the `i` element of `VkRayTracingPipelineCreateInfoKHR::pStages`, `VkRayTracingPipelineCreateInfoNV::pStages`, or `VkGraphicsPipelineCreateInfo::pStages`. When chained to `VkComputePipelineCreateInfo`, the first element of `pPipelineStageCreationFeedbacks` corresponds to `VkComputePipelineCreateInfo::stage`.

Valid Usage (Implicit)

- VUID-VkPipelineCreationFeedbackCreateInfo-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_CREATION_FEEDBACK_CREATE_INFO`
- VUID-VkPipelineCreationFeedbackCreateInfo-pPipelineCreationFeedback-parameter `pPipelineCreationFeedback` **must** be a valid pointer to a `VkPipelineCreationFeedback`

structure

- VUID-VkPipelineCreationFeedbackCreateInfo-pPipelineStageCreationFeedbacks-parameter

If `pipelineStageCreationFeedbackCount` is not 0, `pPipelineStageCreationFeedbacks` **must** be a valid pointer to an array of `pipelineStageCreationFeedbackCount` `VkPipelineCreationFeedback` structures

The `VkPipelineCreationFeedback` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPipelineCreationFeedback {
    VkPipelineCreationFeedbackFlags    flags;
    uint64_t                          duration;
} VkPipelineCreationFeedback;
```

or the equivalent

```
// Provided by VK_EXT_pipeline_creation_feedback
typedef VkPipelineCreationFeedback VkPipelineCreationFeedbackEXT;
```

- `flags` is a bitmask of `VkPipelineCreationFeedbackFlagBits` providing feedback about the creation of a pipeline or of a pipeline stage.
- `duration` is the duration spent creating a pipeline or pipeline stage in nanoseconds.

If the `VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT` is not set in `flags`, an implementation **must** not set any other bits in `flags`, and the values of all other `VkPipelineCreationFeedback` data members are undefined.

Possible values of the `flags` member of `VkPipelineCreationFeedback` are:

```
// Provided by VK_VERSION_1_3
typedef enum VkPipelineCreationFeedbackFlagBits {
    VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT = 0x00000001,
    VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT = 0x00000002,
    VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT = 0x00000004,
    VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT_EXT =
VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT,
    VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT_EXT =
VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT,
    VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT_EXT =
VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT,
} VkPipelineCreationFeedbackFlagBits;
```

or the equivalent

```
// Provided by VK_EXT_pipeline_creation_feedback
typedef VkPipelineCreationFeedbackFlagBits VkPipelineCreationFeedbackFlagBitsEXT;
```

- `VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT` indicates that the feedback information is valid.
- `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` indicates that a readily usable pipeline or pipeline stage was found in the `pipelineCache` specified by the application in the pipeline creation command.

An implementation **should** set the `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` bit if it was able to avoid the large majority of pipeline or pipeline stage creation work by using the `pipelineCache` parameter of `vkCreateGraphicsPipelines`, `vkCreateRayTracingPipelinesKHR`, `vkCreateRayTracingPipelinesNV`, or `vkCreateComputePipelines`. When an implementation sets this bit for the entire pipeline, it **may** leave it unset for any stage.

NOTE

Implementations are encouraged to provide a meaningful signal to applications using this bit. The intention is to communicate to the application that the pipeline or pipeline stage was created “as fast as it gets” using the pipeline cache provided by the application. If an implementation uses an internal cache, it is discouraged from setting this bit as the feedback would be unactionable.

- `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` indicates that the base pipeline specified by the `basePipelineHandle` or `basePipelineIndex` member of the `Vk*PipelineCreateInfo` structure was used to accelerate the creation of the pipeline.

An implementation **should** set the `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` bit if it was able to avoid a significant amount of work by using the base pipeline.

NOTE

While “significant amount of work” is subjective, implementations are encouraged to provide a meaningful signal to applications using this bit. For example, a 1% reduction in duration may not warrant setting this bit, while a 50% reduction would.

```
// Provided by VK_VERSION_1_3
typedef VkFlags VkPipelineCreationFeedbackFlags;
```

or the equivalent

```
// Provided by VK_EXT_pipeline_creation_feedback
typedef VkPipelineCreationFeedbackFlags VkPipelineCreationFeedbackFlagsEXT;
```

`VkPipelineCreationFeedbackFlags` is a bitmask type for providing zero or more `VkPipelineCreationFeedbackFlagBits`.

Chapter 11. Memory Allocation

Vulkan memory is broken up into two categories, *host memory* and *device memory*.

11.1. Host Memory

Host memory is memory needed by the Vulkan implementation for non-device-visible storage.

NOTE This memory **may** be used to store the implementation's representation and state of Vulkan objects.

Vulkan provides applications the opportunity to perform host memory allocations on behalf of the Vulkan implementation. If this feature is not used, the implementation will perform its own memory allocations. Since most memory allocations are off the critical path, this is not meant as a performance feature. Rather, this **can** be useful for certain embedded systems, for debugging purposes (e.g. putting a guard page after all host allocations), or for memory allocation logging.

Allocators are provided by the application as a pointer to a `VkAllocationCallbacks` structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkAllocationCallbacks {
    void*                                pUserData;
    PFN_vkAllocationFunction              pfnAllocation;
    PFN_vkReallocationFunction            pfnReallocation;
    PFN_vkFreeFunction                   pfnFree;
    PFN_vkInternalAllocationNotification pfnInternalAllocation;
    PFN_vkInternalFreeNotification       pfnInternalFree;
} VkAllocationCallbacks;
```

- `pUserData` is a value to be interpreted by the implementation of the callbacks. When any of the callbacks in `VkAllocationCallbacks` are called, the Vulkan implementation will pass this value as the first parameter to the callback. This value **can** vary each time an allocator is passed into a command, even when the same object takes an allocator in multiple commands.
- `pfnAllocation` is a `PFN_vkAllocationFunction` pointer to an application-defined memory allocation function.
- `pfnReallocation` is a `PFN_vkReallocationFunction` pointer to an application-defined memory reallocation function.
- `pfnFree` is a `PFN_vkFreeFunction` pointer to an application-defined memory free function.
- `pfnInternalAllocation` is a `PFN_vkInternalAllocationNotification` pointer to an application-defined function that is called by the implementation when the implementation makes internal allocations.
- `pfnInternalFree` is a `PFN_vkInternalFreeNotification` pointer to an application-defined function that is called by the implementation when the implementation frees internal allocations.

Valid Usage

- VUID-VkAllocationCallbacks-pfnAllocation-00632
`pfnAllocation` **must** be a valid pointer to a valid application-defined [PFN_vkAllocationFunction](#)
- VUID-VkAllocationCallbacks-pfnReallocation-00633
`pfnReallocation` **must** be a valid pointer to a valid application-defined [PFN_vkReallocationFunction](#)
- VUID-VkAllocationCallbacks-pfnFree-00634
`pfnFree` **must** be a valid pointer to a valid application-defined [PFN_vkFreeFunction](#)
- VUID-VkAllocationCallbacks-pfnInternalAllocation-00635
If either of `pfnInternalAllocation` or `pfnInternalFree` is not `NULL`, both **must** be valid callbacks

The type of `pfnAllocation` is:

```
// Provided by VK_VERSION_1_0
typedef void* (VKAPI_PTR *PFN_vkAllocationFunction)(
    void*                pUserData,
    size_t               size,
    size_t               alignment,
    VkSystemAllocationScope allocationScope);
```

- `pUserData` is the value specified for [VkAllocationCallbacks::pUserData](#) in the allocator specified by the application.
- `size` is the size in bytes of the requested allocation.
- `alignment` is the requested alignment of the allocation in bytes and **must** be a power of two.
- `allocationScope` is a [VkSystemAllocationScope](#) value specifying the allocation scope of the lifetime of the allocation, as described [here](#).

If `pfnAllocation` is unable to allocate the requested memory, it **must** return `NULL`. If the allocation was successful, it **must** return a valid pointer to memory allocation containing at least `size` bytes, and with the pointer value being a multiple of `alignment`.

NOTE

Correct Vulkan operation **cannot** be assumed if the application does not follow these rules.

For example, `pfnAllocation` (or `pfnReallocation`) could cause termination of running Vulkan instance(s) on a failed allocation for debugging purposes, either directly or indirectly. In these circumstances, it **cannot** be assumed that any part of any affected [VkInstance](#) objects are going to operate correctly (even [vkDestroyInstance](#)), and the application **must** ensure it cleans up properly via other means (e.g. process termination).

If `pfnAllocation` returns `NULL`, and if the implementation is unable to continue correct processing of the current command without the requested allocation, it **must** treat this as a runtime error, and generate `VK_ERROR_OUT_OF_HOST_MEMORY` at the appropriate time for the command in which the condition was detected, as described in [Return Codes](#).

If the implementation is able to continue correct processing of the current command without the requested allocation, then it **may** do so, and **must** not generate `VK_ERROR_OUT_OF_HOST_MEMORY` as a result of this failed allocation.

The type of `pfnReallocation` is:

```
// Provided by VK_VERSION_1_0
typedef void* (VKAPI_PTR *PFN_vkReallocationFunction)(
    void*                pUserData,
    void*                pOriginal,
    size_t               size,
    size_t               alignment,
    VkSystemAllocationScope allocationScope);
```

- `pUserData` is the value specified for `VkAllocationCallbacks::pUserData` in the allocator specified by the application.
- `pOriginal` **must** be either `NULL` or a pointer previously returned by `pfnReallocation` or `pfnAllocation` of a compatible allocator.
- `size` is the size in bytes of the requested allocation.
- `alignment` is the requested alignment of the allocation in bytes and **must** be a power of two.
- `allocationScope` is a `VkSystemAllocationScope` value specifying the allocation scope of the lifetime of the allocation, as described [here](#).

If the reallocation was successful, `pfnReallocation` **must** return an allocation with enough space for `size` bytes, and the contents of the original allocation from bytes zero to `min(original size, new size) - 1` **must** be preserved in the returned allocation. If `size` is larger than the old size, the contents of the additional space are undefined. If satisfying these requirements involves creating a new allocation, then the old allocation **should** be freed.

If `pOriginal` is `NULL`, then `pfnReallocation` **must** behave equivalently to a call to `PFN_vkAllocationFunction` with the same parameter values (without `pOriginal`).

If `size` is zero, then `pfnReallocation` **must** behave equivalently to a call to `PFN_vkFreeFunction` with the same `pUserData` parameter value, and `pMemory` equal to `pOriginal`.

If `pOriginal` is non-`NULL`, the implementation **must** ensure that `alignment` is equal to the `alignment` used to originally allocate `pOriginal`.

If this function fails and `pOriginal` is non-`NULL` the application **must** not free the old allocation.

`pfnReallocation` **must** follow the same [rules for return values](#) as `PFN_vkAllocationFunction`.

The type of `pfnFree` is:

```
// Provided by VK_VERSION_1_0
typedef void (VKAPI_PTR *PFN_vkFreeFunction)(
    void*                                pUserData,
    void*                                pMemory);
```

- `pUserData` is the value specified for `VkAllocationCallbacks::pUserData` in the allocator specified by the application.
- `pMemory` is the allocation to be freed.

`pMemory` **may** be `NULL`, which the callback **must** handle safely. If `pMemory` is non-`NULL`, it **must** be a pointer previously allocated by `pfnAllocation` or `pfnReallocation`. The application **should** free this memory.

The type of `pfnInternalAllocation` is:

```
// Provided by VK_VERSION_1_0
typedef void (VKAPI_PTR *PFN_vkInternalAllocationNotification)(
    void*                                pUserData,
    size_t                                size,
    VkInternalAllocationType             allocationType,
    VkSystemAllocationScope              allocationScope);
```

- `pUserData` is the value specified for `VkAllocationCallbacks::pUserData` in the allocator specified by the application.
- `size` is the requested size of an allocation.
- `allocationType` is a `VkInternalAllocationType` value specifying the requested type of an allocation.
- `allocationScope` is a `VkSystemAllocationScope` value specifying the allocation scope of the lifetime of the allocation, as described [here](#).

This is a purely informational callback.

The type of `pfnInternalFree` is:

```
// Provided by VK_VERSION_1_0
typedef void (VKAPI_PTR *PFN_vkInternalFreeNotification)(
    void*                                pUserData,
    size_t                                size,
    VkInternalAllocationType             allocationType,
    VkSystemAllocationScope              allocationScope);
```

- `pUserData` is the value specified for `VkAllocationCallbacks::pUserData` in the allocator specified by the application.
- `size` is the requested size of an allocation.

- `allocationType` is a `VkInternalAllocationType` value specifying the requested type of an allocation.
- `allocationScope` is a `VkSystemAllocationScope` value specifying the allocation scope of the lifetime of the allocation, as described [here](#).

Each allocation has an *allocation scope* defining its lifetime and which object it is associated with. Possible values passed to the `allocationScope` parameter of the callback functions specified by `VkAllocationCallbacks`, indicating the allocation scope, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSystemAllocationScope {
    VK_SYSTEM_ALLOCATION_SCOPE_COMMAND = 0,
    VK_SYSTEM_ALLOCATION_SCOPE_OBJECT = 1,
    VK_SYSTEM_ALLOCATION_SCOPE_CACHE = 2,
    VK_SYSTEM_ALLOCATION_SCOPE_DEVICE = 3,
    VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE = 4,
} VkSystemAllocationScope;
```

- `VK_SYSTEM_ALLOCATION_SCOPE_COMMAND` specifies that the allocation is scoped to the duration of the Vulkan command.
- `VK_SYSTEM_ALLOCATION_SCOPE_OBJECT` specifies that the allocation is scoped to the lifetime of the Vulkan object that is being created or used.
- `VK_SYSTEM_ALLOCATION_SCOPE_CACHE` specifies that the allocation is scoped to the lifetime of a `VkPipelineCache` or `VkValidationCacheEXT` object.
- `VK_SYSTEM_ALLOCATION_SCOPE_DEVICE` specifies that the allocation is scoped to the lifetime of the Vulkan device.
- `VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE` specifies that the allocation is scoped to the lifetime of the Vulkan instance.

Most Vulkan commands operate on a single object, or there is a sole object that is being created or manipulated. When an allocation uses an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_OBJECT` or `VK_SYSTEM_ALLOCATION_SCOPE_CACHE`, the allocation is scoped to the object being created or manipulated.

When an implementation requires host memory, it will make callbacks to the application using the most specific allocator and allocation scope available:

- If an allocation is scoped to the duration of a command, the allocator will use the `VK_SYSTEM_ALLOCATION_SCOPE_COMMAND` allocation scope. The most specific allocator available is used: if the object being created or manipulated has an allocator, that object's allocator will be used, else if the parent `VkDevice` has an allocator it will be used, else if the parent `VkInstance` has an allocator it will be used. Else,
- If an allocation is associated with a `VkValidationCacheEXT` or `VkPipelineCache` object, the allocator will use the `VK_SYSTEM_ALLOCATION_SCOPE_CACHE` allocation scope. The most specific allocator available is used (cache, else device, else instance). Else,

- If an allocation is scoped to the lifetime of an object, that object is being created or manipulated by the command, and that object's type is not `VkDevice` or `VkInstance`, the allocator will use an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_OBJECT`. The most specific allocator available is used (object, else device, else instance). Else,
- If an allocation is scoped to the lifetime of a device, the allocator will use an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_DEVICE`. The most specific allocator available is used (device, else instance). Else,
- If the allocation is scoped to the lifetime of an instance and the instance has an allocator, its allocator will be used with an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE`.
- Otherwise an implementation will allocate memory through an alternative mechanism that is unspecified.

Objects that are allocated from pools do not specify their own allocator. When an implementation requires host memory for such an object, that memory is sourced from the object's parent pool's allocator.

The application is not expected to handle allocating memory that is intended for execution by the host due to the complexities of differing security implementations across multiple platforms. The implementation will allocate such memory internally and invoke an application provided informational callback when these *internal allocations* are allocated and freed. Upon allocation of executable memory, `pfnInternalAllocation` will be called. Upon freeing executable memory, `pfnInternalFree` will be called. An implementation will only call an informational callback for executable memory allocations and frees.

The `allocationType` parameter to the `pfnInternalAllocation` and `pfnInternalFree` functions **may** be one of the following values:

```
// Provided by VK_VERSION_1_0
typedef enum VkInternalAllocationType {
    VK_INTERNAL_ALLOCATION_TYPE_EXECUTABLE = 0,
} VkInternalAllocationType;
```

- `VK_INTERNAL_ALLOCATION_TYPE_EXECUTABLE` specifies that the allocation is intended for execution by the host.

An implementation **must** only make calls into an application-provided allocator during the execution of an API command. An implementation **must** only make calls into an application-provided allocator from the same thread that called the provoking API command. The implementation **should** not synchronize calls to any of the callbacks. If synchronization is needed, the callbacks **must** provide it themselves. The informational callbacks are subject to the same restrictions as the allocation callbacks.

If an implementation intends to make calls through a `VkAllocationCallbacks` structure between the time a `vkCreate*` command returns and the time a corresponding `vkDestroy*` command begins, that implementation **must** save a copy of the allocator before the `vkCreate*` command returns. The callback functions and any data structures they rely upon **must** remain valid for the lifetime of the object they are associated with.

If an allocator is provided to a `vkCreate*` command, a *compatible* allocator **must** be provided to the corresponding `vkDestroy*` command. Two `VkAllocationCallbacks` structures are compatible if memory allocated with `pfnAllocation` or `pfnReallocation` in each **can** be freed with `pfnReallocation` or `pfnFree` in the other. An allocator **must** not be provided to a `vkDestroy*` command if an allocator was not provided to the corresponding `vkCreate*` command.

If a non-NULL allocator is used, the `pfnAllocation`, `pfnReallocation` and `pfnFree` members **must** be non-NULL and point to valid implementations of the callbacks. An application **can** choose to not provide informational callbacks by setting both `pfnInternalAllocation` and `pfnInternalFree` to NULL. `pfnInternalAllocation` and `pfnInternalFree` **must** either both be NULL or both be non-NULL.

If `pfnAllocation` or `pfnReallocation` fail, the implementation **may** fail object creation and/or generate a `VK_ERROR_OUT_OF_HOST_MEMORY` error, as appropriate.

Allocation callbacks **must** not call any Vulkan commands.

The following sets of rules define when an implementation is permitted to call the allocator callbacks.

`pfnAllocation` or `pfnReallocation` **may** be called in the following situations:

- Allocations scoped to a `VkDevice` or `VkInstance` **may** be allocated from any API command.
- Allocations scoped to a command **may** be allocated from any API command.
- Allocations scoped to a `VkPipelineCache` **may** only be allocated from:
 - `vkCreatePipelineCache`
 - `vkMergePipelineCaches` for `dstCache`
 - `vkCreateGraphicsPipelines` for `pipelineCache`
 - `vkCreateComputePipelines` for `pipelineCache`
- Allocations scoped to a `VkValidationCacheEXT` **may** only be allocated from:
 - `vkCreateValidationCacheEXT`
 - `vkMergeValidationCachesEXT` for `dstCache`
 - `vkCreateShaderModule` for `validationCache` in `VkShaderModuleValidationCacheCreateInfoEXT`
- Allocations scoped to a `VkDescriptorPool` **may** only be allocated from:
 - any command that takes the pool as a direct argument
 - `vkAllocateDescriptorSets` for the `descriptorPool` member of its `pAllocateInfo` parameter
 - `vkCreateDescriptorPool`
- Allocations scoped to a `VkCommandPool` **may** only be allocated from:
 - any command that takes the pool as a direct argument
 - `vkCreateCommandPool`
 - `vkAllocateCommandBuffers` for the `commandPool` member of its `pAllocateInfo` parameter
 - any `vkCmd*` command whose `commandBuffer` was allocated from that `VkCommandPool`

- Allocations scoped to any other object **may** only be allocated in that object's `vkCreate*` command.

`pfnFree`, or `pfnReallocation` with zero `size`, **may** be called in the following situations:

- Allocations scoped to a `VkDevice` or `VkInstance` **may** be freed from any API command.
- Allocations scoped to a command **must** be freed by any API command which allocates such memory.
- Allocations scoped to a `VkPipelineCache` **may** be freed from `vkDestroyPipelineCache`.
- Allocations scoped to a `VkValidationCacheEXT` **may** be freed from `vkDestroyValidationCacheEXT`.
- Allocations scoped to a `VkDescriptorPool` **may** be freed from
 - any command that takes the pool as a direct argument
- Allocations scoped to a `VkCommandPool` **may** be freed from:
 - any command that takes the pool as a direct argument
 - `vkResetCommandBuffer` whose `commandBuffer` was allocated from that `VkCommandPool`
- Allocations scoped to any other object **may** be freed in that object's `vkDestroy*` command.
- Any command that allocates host memory **may** also free host memory of the same scope.

11.2. Device Memory

Device memory is memory that is visible to the device—for example the contents of the image or buffer objects, which **can** be natively used by the device.

11.2.1. Device Memory Properties

Memory properties of a physical device describe the memory heaps and memory types available.

To query memory properties, call:

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceMemoryProperties(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceMemoryProperties* pMemoryProperties);
```

- `physicalDevice` is the handle to the device to query.
- `pMemoryProperties` is a pointer to a `VkPhysicalDeviceMemoryProperties` structure in which the properties are returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMemoryProperties-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceMemoryProperties-pMemoryProperties-parameter

`pMemoryProperties` **must** be a valid pointer to a `VkPhysicalDeviceMemoryProperties` structure

The `VkPhysicalDeviceMemoryProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceMemoryProperties {
    uint32_t      memoryTypeCount;
    VkMemoryType  memoryTypes[VK_MAX_MEMORY_TYPES];
    uint32_t      memoryHeapCount;
    VkMemoryHeap  memoryHeaps[VK_MAX_MEMORY_HEAPS];
} VkPhysicalDeviceMemoryProperties;
```

- `memoryTypeCount` is the number of valid elements in the `memoryTypes` array.
- `memoryTypes` is an array of `VK_MAX_MEMORY_TYPES` `VkMemoryType` structures describing the *memory types* that **can** be used to access memory allocated from the heaps specified by `memoryHeaps`.
- `memoryHeapCount` is the number of valid elements in the `memoryHeaps` array.
- `memoryHeaps` is an array of `VK_MAX_MEMORY_HEAPS` `VkMemoryHeap` structures describing the *memory heaps* from which memory **can** be allocated.

The `VkPhysicalDeviceMemoryProperties` structure describes a number of *memory heaps* as well as a number of *memory types* that **can** be used to access memory allocated in those heaps. Each heap describes a memory resource of a particular size, and each memory type describes a set of memory properties (e.g. host cached vs. uncached) that **can** be used with a given memory heap. Allocations using a particular memory type will consume resources from the heap indicated by that memory type's heap index. More than one memory type **may** share each heap, and the heaps and memory types provide a mechanism to advertise an accurate size of the physical memory resources while allowing the memory to be used with a variety of different properties.

The number of memory heaps is given by `memoryHeapCount` and is less than or equal to `VK_MAX_MEMORY_HEAPS`. Each heap is described by an element of the `memoryHeaps` array as a `VkMemoryHeap` structure. The number of memory types available across all memory heaps is given by `memoryTypeCount` and is less than or equal to `VK_MAX_MEMORY_TYPES`. Each memory type is described by an element of the `memoryTypes` array as a `VkMemoryType` structure.

At least one heap **must** include `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT` in `VkMemoryHeap::flags`. If there are multiple heaps that all have similar performance characteristics, they **may** all include `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT`. In a unified memory architecture (UMA) system there is often only a single memory heap which is considered to be equally “local” to the host and to the device, and such an implementation **must** advertise the heap as device-local.

Each memory type returned by `vkGetPhysicalDeviceMemoryProperties` **must** have its `propertyFlags` set to one of the following values:

- 0

- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT
- VK_MEMORY_PROPERTY_PROTECTED_BIT
- VK_MEMORY_PROPERTY_PROTECTED_BIT | VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT |

- VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD |
 VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT |
 VK_MEMORY_PROPERTY_HOST_CACHED_BIT |
 VK_MEMORY_PROPERTY_HOST_COHERENT_BIT |
 VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD |
 VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT |
 VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD |
 VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT |
 VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT |
 VK_MEMORY_PROPERTY_HOST_COHERENT_BIT |
 VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD |
 VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT |
 VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT |
 VK_MEMORY_PROPERTY_HOST_CACHED_BIT |
 VK_MEMORY_PROPERTY_HOST_COHERENT_BIT |
 VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD |
 VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT |
 VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV

There **must** be at least one memory type with both the `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT` and `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` bits set in its `propertyFlags`. There **must** be at least one memory type with the `VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT` bit set in its `propertyFlags`. If the `deviceCoherentMemory` feature is enabled, there **must** be at least one memory type with the `VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD` bit set in its `propertyFlags`.

For each pair of elements **X** and **Y** returned in `memoryTypes`, **X** **must** be placed at a lower index position than **Y** if:

- the set of bit flags returned in the `propertyFlags` member of **X** is a strict subset of the set of bit flags returned in the `propertyFlags` member of **Y**; or
- the `propertyFlags` members of **X** and **Y** are equal, and **X** belongs to a memory heap with greater performance (as determined in an implementation-specific manner); or
- the `propertyFlags` members of **Y** includes `VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD` or `VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD` and **X** does not

NOTE

There is no ordering requirement between **X** and **Y** elements for the case their `propertyFlags` members are not in a subset relation. That potentially allows more than one possible way to order the same set of memory types. Notice that the [list of all allowed memory property flag combinations](#) is written in a valid order. But if instead `VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT` was before `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT` | `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT`, the

list would still be in a valid order.

There may be a performance penalty for using device coherent or uncached device memory types, and using these accidentally is undesirable. In order to avoid this, memory types with these properties always appear at the end of the list; but are subject to the same rules otherwise.

This ordering requirement enables applications to use a simple search loop to select the desired memory type along the lines of:

```
// Find a memory in `memoryTypeBitsRequirement` that includes all of
`requiredProperties`
int32_t findProperties(const VkPhysicalDeviceMemoryProperties* pMemoryProperties,
                     uint32_t memoryTypeBitsRequirement,
                     VkMemoryPropertyFlags requiredProperties) {
    const uint32_t memoryCount = pMemoryProperties->memoryTypeCount;
    for (uint32_t memoryIndex = 0; memoryIndex < memoryCount; ++memoryIndex) {
        const uint32_t memoryTypeBits = (1 << memoryIndex);
        const bool isRequiredMemoryType = memoryTypeBitsRequirement & memoryTypeBits;

        const VkMemoryPropertyFlags properties =
            pMemoryProperties->memoryTypes[memoryIndex].propertyFlags;
        const bool hasRequiredProperties =
            (properties & requiredProperties) == requiredProperties;

        if (isRequiredMemoryType && hasRequiredProperties)
            return static_cast<int32_t>(memoryIndex);
    }

    // failed to find memory type
    return -1;
}

// Try to find an optimal memory type, or if it does not exist try fallback memory
type
// `device` is the VkDevice
// `image` is the VkImage that requires memory to be bound
// `memoryProperties` properties as returned by vkGetPhysicalDeviceMemoryProperties
// `requiredProperties` are the property flags that must be present
// `optimalProperties` are the property flags that are preferred by the application
VkMemoryRequirements memoryRequirements;
vkGetImageMemoryRequirements(device, image, &memoryRequirements);
int32_t memoryType =
    findProperties(&memoryProperties, memoryRequirements.memoryTypeBits,
optimalProperties);
if (memoryType == -1) // not found; try fallback properties
    memoryType =
        findProperties(&memoryProperties, memoryRequirements.memoryTypeBits,
requiredProperties);
```

`VK_MAX_MEMORY_TYPES` is the length of an array of `VkMemoryType` structures describing memory types, as returned in `VkPhysicalDeviceMemoryProperties::memoryTypes`.

```
#define VK_MAX_MEMORY_TYPES          32U
```

`VK_MAX_MEMORY_HEAPS` is the length of an array of `VkMemoryHeap` structures describing memory heaps, as returned in `VkPhysicalDeviceMemoryProperties::memoryHeaps`.

```
#define VK_MAX_MEMORY_HEAPS          16U
```

To query memory properties, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceMemoryProperties2(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceMemoryProperties2* pMemoryProperties);
```

or the equivalent command

```
// Provided by VK_KHR_get_physical_device_properties2
void vkGetPhysicalDeviceMemoryProperties2KHR(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceMemoryProperties2* pMemoryProperties);
```

- `physicalDevice` is the handle to the device to query.
- `pMemoryProperties` is a pointer to a `VkPhysicalDeviceMemoryProperties2` structure in which the properties are returned.

`vkGetPhysicalDeviceMemoryProperties2` behaves similarly to `vkGetPhysicalDeviceMemoryProperties`, with the ability to return extended information in a `pNext` chain of output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMemoryProperties2-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceMemoryProperties2-pMemoryProperties-parameter `pMemoryProperties` **must** be a valid pointer to a `VkPhysicalDeviceMemoryProperties2` structure

The `VkPhysicalDeviceMemoryProperties2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMemoryProperties2 {
    VkStructureType          sType;
    void*                    pNext;
    VkPhysicalDeviceMemoryProperties memoryProperties;
} VkPhysicalDeviceMemoryProperties2;
```

or the equivalent

```
// Provided by VK_KHR_get_physical_device_properties2
typedef VkPhysicalDeviceMemoryProperties2 VkPhysicalDeviceMemoryProperties2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memoryProperties** is a [VkPhysicalDeviceMemoryProperties](#) structure which is populated with the same values as in [vkGetPhysicalDeviceMemoryProperties](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryProperties2-sType-sType
sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PROPERTIES_2**
- VUID-VkPhysicalDeviceMemoryProperties2-pNext-pNext
pNext must be **NULL** or a pointer to a valid instance of [VkPhysicalDeviceMemoryBudgetPropertiesEXT](#)
- VUID-VkPhysicalDeviceMemoryProperties2-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique

The [VkMemoryHeap](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryHeap {
    VkDeviceSize      size;
    VkMemoryHeapFlags flags;
} VkMemoryHeap;
```

- **size** is the total memory size in bytes in the heap.
- **flags** is a bitmask of [VkMemoryHeapFlagBits](#) specifying attribute flags for the heap.

Bits which **may** be set in [VkMemoryHeap::flags](#), indicating attribute flags for the heap, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkMemoryHeapFlagBits {
    VK_MEMORY_HEAP_DEVICE_LOCAL_BIT = 0x00000001,
    // Provided by VK_VERSION_1_1
    VK_MEMORY_HEAP_MULTI_INSTANCE_BIT = 0x00000002,
    // Provided by VK_KHR_device_group_creation
    VK_MEMORY_HEAP_MULTI_INSTANCE_BIT_KHR = VK_MEMORY_HEAP_MULTI_INSTANCE_BIT,
} VkMemoryHeapFlagBits;
```

- **VK_MEMORY_HEAP_DEVICE_LOCAL_BIT** specifies that the heap corresponds to device-local memory. Device-local memory **may** have different performance characteristics than host-local memory, and **may** support different memory property flags.
- **VK_MEMORY_HEAP_MULTI_INSTANCE_BIT** specifies that in a logical device representing more than one physical device, there is a per-physical device instance of the heap memory. By default, an allocation from such a heap will be replicated to each physical device's instance of the heap.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryHeapFlags;
```

VkMemoryHeapFlags is a bitmask type for setting a mask of zero or more **VkMemoryHeapFlagBits**.

The **VkMemoryType** structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryType {
    VkMemoryPropertyFlags    propertyFlags;
    uint32_t                 heapIndex;
} VkMemoryType;
```

- **heapIndex** describes which memory heap this memory type corresponds to, and **must** be less than **memoryHeapCount** from the **VkPhysicalDeviceMemoryProperties** structure.
- **propertyFlags** is a bitmask of **VkMemoryPropertyFlagBits** of properties for this memory type.

Bits which **may** be set in **VkMemoryType::propertyFlags**, indicating properties of a memory type, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkMemoryPropertyFlagBits {
    VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT = 0x00000001,
    VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT = 0x00000002,
    VK_MEMORY_PROPERTY_HOST_COHERENT_BIT = 0x00000004,
    VK_MEMORY_PROPERTY_HOST_CACHED_BIT = 0x00000008,
    VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT = 0x00000010,
// Provided by VK_VERSION_1_1
    VK_MEMORY_PROPERTY_PROTECTED_BIT = 0x00000020,
// Provided by VK_AMD_device_coherent_memory
    VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD = 0x00000040,
// Provided by VK_AMD_device_coherent_memory
    VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD = 0x00000080,
// Provided by VK_NV_external_memory_rdma
    VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV = 0x00000100,
} VkMemoryPropertyFlagBits;
```

- **VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT** bit specifies that memory allocated with this type is the most efficient for device access. This property will be set if and only if the memory type belongs to a heap with the **VK_MEMORY_HEAP_DEVICE_LOCAL_BIT** set.
- **VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT** bit specifies that memory allocated with this type **can** be mapped for host access using [vkMapMemory](#).
- **VK_MEMORY_PROPERTY_HOST_COHERENT_BIT** bit specifies that the host cache management commands [vkFlushMappedMemoryRanges](#) and [vkInvalidateMappedMemoryRanges](#) are not needed to manage [availability and visibility](#) on the host.
- **VK_MEMORY_PROPERTY_HOST_CACHED_BIT** bit specifies that memory allocated with this type is cached on the host. Host memory accesses to uncached memory are slower than to cached memory, however uncached memory is always host coherent.
- **VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT** bit specifies that the memory type only allows device access to the memory. Memory types **must** not have both **VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT** and **VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT** set. Additionally, the object's backing memory **may** be provided by the implementation lazily as specified in [Lazily Allocated Memory](#).
- **VK_MEMORY_PROPERTY_PROTECTED_BIT** bit specifies that the memory type only allows device access to the memory, and allows protected queue operations to access the memory. Memory types **must** not have **VK_MEMORY_PROPERTY_PROTECTED_BIT** set and any of **VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT** set, or **VK_MEMORY_PROPERTY_HOST_COHERENT_BIT** set, or **VK_MEMORY_PROPERTY_HOST_CACHED_BIT** set.
- **VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD** bit specifies that device accesses to allocations of this memory type are automatically made [available and visible](#) on the device. If paired with **VK_MEMORY_PROPERTY_HOST_COHERENT_BIT**, [memory domain operations](#) are also performed automatically between host and device.
- **VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD** bit specifies that memory allocated with this type is not cached on the device. Uncached device memory is always device coherent.

- `VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV` bit specifies that external devices can access this memory directly.

For any memory allocated with both the `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` and the `VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD`, host or device accesses also perform automatic memory domain transfer operations, such that writes are always automatically available and visible to both host and device memory domains.

NOTE

Device coherence is a useful property for certain debugging use cases (e.g. crash analysis, where performing separate coherence actions could mean values are not reported correctly). However, device coherent accesses may be slower than equivalent accesses without device coherence, particularly if they are also device uncached. For device uncached memory in particular, repeated accesses to the same or neighboring memory locations over a short time period (e.g. within a frame) may be slower than it would be for the equivalent cached memory type. As such, it is generally inadvisable to use device coherent or device uncached memory except when really needed.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryPropertyFlags;
```

`VkMemoryPropertyFlags` is a bitmask type for setting a mask of zero or more `VkMemoryPropertyFlagBits`.

If the `VkPhysicalDeviceMemoryBudgetPropertiesEXT` structure is included in the `pNext` chain of `VkPhysicalDeviceMemoryProperties2`, it is filled with the current memory budgets and usages.

The `VkPhysicalDeviceMemoryBudgetPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_memory_budget
typedef struct VkPhysicalDeviceMemoryBudgetPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        heapBudget[VK_MAX_MEMORY_HEAPS];
    VkDeviceSize        heapUsage[VK_MAX_MEMORY_HEAPS];
} VkPhysicalDeviceMemoryBudgetPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `heapBudget` is an array of `VK_MAX_MEMORY_HEAPS` `VkDeviceSize` values in which memory budgets are returned, with one element for each memory heap. A heap's budget is a rough estimate of how much memory the process **can** allocate from that heap before allocations **may** fail or cause performance degradation. The budget includes any currently allocated device memory.
- `heapUsage` is an array of `VK_MAX_MEMORY_HEAPS` `VkDeviceSize` values in which memory usages are returned, with one element for each memory heap. A heap's usage is an estimate of how much memory the process is currently using in that heap.

The values returned in this structure are not invariant. The `heapBudget` and `heapUsage` values **must** be zero for array elements greater than or equal to `VkPhysicalDeviceMemoryProperties::memoryHeapCount`. The `heapBudget` value **must** be non-zero for array elements less than `VkPhysicalDeviceMemoryProperties::memoryHeapCount`. The `heapBudget` value **must** be less than or equal to `VkMemoryHeap::size` for each heap.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryBudgetPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_BUDGET_PROPERTIES_EXT`

11.2.2. Device Memory Objects

A Vulkan device operates on data in device memory via memory objects that are represented in the API by a `VkDeviceMemory` handle:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDeviceMemory)
```

11.2.3. Device Memory Allocation

To allocate memory objects, call:

```
// Provided by VK_VERSION_1_0
VkResult vkAllocateMemory(
    VkDevice                device,
    const VkMemoryAllocateInfo* pAllocateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDeviceMemory*         pMemory);
```

- `device` is the logical device that owns the memory.
- `pAllocateInfo` is a pointer to a `VkMemoryAllocateInfo` structure describing parameters of the allocation. A successfully returned allocation **must** use the requested parameters—no substitution is permitted by the implementation.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pMemory` is a pointer to a `VkDeviceMemory` handle in which information about the allocated memory is returned.

Allocations returned by `vkAllocateMemory` are guaranteed to meet any alignment requirement of the implementation. For example, if an implementation requires 128 byte alignment for images and 64 byte alignment for buffers, the device memory returned through this mechanism would be 128-byte aligned. This ensures that applications **can** correctly suballocate objects of different types (with potentially different alignment requirements) in the same memory object.

When memory is allocated, its contents are undefined with the following constraint:

- The contents of unprotected memory **must** not be a function of the contents of data protected memory objects, even if those memory objects were previously freed.

NOTE

The contents of memory allocated by one application **should** not be a function of data from protected memory objects of another application, even if those memory objects were previously freed.

The maximum number of valid memory allocations that **can** exist simultaneously within a [VkDevice](#) **may** be restricted by implementation- or platform-dependent limits. The [maxMemoryAllocationCount](#) feature describes the number of allocations that **can** exist simultaneously before encountering these internal limits.

NOTE

For historical reasons, if [maxMemoryAllocationCount](#) is exceeded, some implementations may return [VK_ERROR_TOO_MANY_OBJECTS](#). Exceeding this limit will result in undefined behavior, and an application should not rely on the use of the returned error code in order to identify when the limit is reached.

NOTE

Many protected memory implementations involve complex hardware and system software support, and often have additional and much lower limits on the number of simultaneous protected memory allocations (from memory types with the [VK_MEMORY_PROPERTY_PROTECTED_BIT](#) property) than for non-protected memory allocations. These limits can be system-wide, and depend on a variety of factors outside of the Vulkan implementation, so they cannot be queried in Vulkan. Applications **should** use as few allocations as possible from such memory types by suballocating aggressively, and be prepared for allocation failure even when there is apparently plenty of capacity remaining in the memory heap. As a guideline, the Vulkan conformance test suite requires that at least 80 minimum-size allocations can exist concurrently when no other uses of protected memory are active in the system.

Some platforms **may** have a limit on the maximum size of a single allocation. For example, certain systems **may** fail to create allocations with a size greater than or equal to 4GB. Such a limit is implementation-dependent, and if such a failure occurs then the error [VK_ERROR_OUT_OF_DEVICE_MEMORY](#) **must** be returned. This limit is advertised in [VkPhysicalDeviceMaintenance3Properties::maxMemoryAllocationSize](#).

The cumulative memory size allocated to a heap **can** be limited by the size of the specified heap. In such cases, allocated memory is tracked on a per-device and per-heap basis. Some platforms allow overallocation into other heaps. The overallocation behavior **can** be specified through the [VK_AMD_memory_overallocation_behavior](#) extension.

If the [VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT::pageableDeviceLocalMemory](#) feature is enabled, memory allocations made from a heap that includes [VK_MEMORY_HEAP_DEVICE_LOCAL_BIT](#) in [VkMemoryHeap::flags](#) **may** be transparently moved to host-local memory allowing multiple applications to share device-local memory. If there is no space left in device-local memory when this new allocation is made, other allocations **may** be moved out transparently to make room. The operating system will determine which allocations to move to device-local memory or host-local memory based on platform-specific criteria. To help the

operating system make good choices, the application **should** set the appropriate memory priority with `VkMemoryPriorityAllocateInfoEXT` and adjust it as necessary with `vkSetDeviceMemoryPriorityEXT`. Higher priority allocations will be moved to device-local memory first.

Memory allocations made on heaps without the `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT` property will not be transparently promoted to device-local memory by the operating system.

Valid Usage

- VUID-vkAllocateMemory-pAllocateInfo-01713
`pAllocateInfo->allocationSize` **must** be less than or equal to `VkPhysicalDeviceMemoryProperties::memoryHeaps[memindex].size` where `memindex` = `VkPhysicalDeviceMemoryProperties::memoryTypes[pAllocateInfo->memoryTypeIndex].heapIndex` as returned by `vkGetPhysicalDeviceMemoryProperties` for the `VkPhysicalDevice` that `device` was created from
- VUID-vkAllocateMemory-pAllocateInfo-01714
`pAllocateInfo->memoryTypeIndex` **must** be less than `VkPhysicalDeviceMemoryProperties::memoryTypeCount` as returned by `vkGetPhysicalDeviceMemoryProperties` for the `VkPhysicalDevice` that `device` was created from
- VUID-vkAllocateMemory-deviceCoherentMemory-02790
If the `deviceCoherentMemory` feature is not enabled, `pAllocateInfo->memoryTypeIndex` **must** not identify a memory type supporting `VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD`
- VUID-vkAllocateMemory-maxMemoryAllocationCount-04101
There **must** be less than `VkPhysicalDeviceLimits::maxMemoryAllocationCount` device memory allocations currently allocated on the device

Valid Usage (Implicit)

- VUID-vkAllocateMemory-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkAllocateMemory-pAllocateInfo-parameter
`pAllocateInfo` **must** be a valid pointer to a valid `VkMemoryAllocateInfo` structure
- VUID-vkAllocateMemory-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkAllocateMemory-pMemory-parameter
`pMemory` **must** be a valid pointer to a `VkDeviceMemory` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_INVALID_EXTERNAL_HANDLE`
- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`

The `VkMemoryAllocateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize        allocationSize;
    uint32_t           memoryTypeIndex;
} VkMemoryAllocateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `allocationSize` is the size of the allocation in bytes.
- `memoryTypeIndex` is an index identifying a memory type from the `memoryTypes` array of the `VkPhysicalDeviceMemoryProperties` structure.

The internal data of an allocated device memory object **must** include a reference to implementation-specific resources, referred to as the memory object's *payload*. Applications **can** also import and export that internal data to and from device memory objects to share data between Vulkan instances and other compatible APIs. A `VkMemoryAllocateInfo` structure defines a memory import operation if its `pNext` chain includes one of the following structures:

- `VkImportMemoryWin32HandleInfoKHR` with a non-zero `handleType` value
- `VkImportMemoryFdInfoKHR` with a non-zero `handleType` value
- `VkImportMemoryHostPointerInfoEXT` with a non-zero `handleType` value
- `VkImportAndroidHardwareBufferInfoANDROID` with a non-`NULL` `buffer` value
- `VkImportMemoryZirconHandleInfoFUCHSIA` with a non-zero `handleType` value
- `VkImportMemoryBufferCollectionFUCHSIA`
- `VkImportScreenBufferInfoQNX` with a non-`NULL` `buffer` value

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT`, or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT`, `allocationSize` is ignored. The implementation **must** query the size of these allocations from the OS.

Whether device memory objects constructed via a memory import operation hold a reference to

their payload depends on the properties of the handle type used to perform the import, as defined below for each valid handle type. Importing memory **must** not modify the content of the memory. Implementations **must** ensure that importing memory does not enable the importing Vulkan instance to access any memory or resources in other Vulkan instances other than that corresponding to the memory object imported. Implementations **must** also ensure accessing imported memory which has not been initialized does not allow the importing Vulkan instance to obtain data from the exporting Vulkan instance or vice-versa.

NOTE How exported and imported memory is isolated is left to the implementation, but applications should be aware that such isolation **may** prevent implementations from placing multiple exportable memory objects in the same physical or virtual page. Hence, applications **should** avoid creating many small external memory objects whenever possible.

Importing memory **must** not increase overall heap usage within a system. However, it **must** affect the following per-process values:

- `VkPhysicalDeviceLimits::maxMemoryAllocationCount`
- `VkPhysicalDeviceMemoryBudgetPropertiesEXT::heapUsage`

When performing a memory import operation, it is the responsibility of the application to ensure the external handles and their associated payloads meet all valid usage requirements. However, implementations **must** perform sufficient validation of external handles and payloads to ensure that the operation results in a valid memory object which will not cause program termination, device loss, queue stalls, or corruption of other resources when used as allowed according to its allocation parameters. If the external handle provided does not meet these requirements, the implementation **must** fail the memory import operation with the error code `VK_ERROR_INVALID_EXTERNAL_HANDLE`. If the parameters define an export operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, implementations **should** not strictly follow `memoryTypeIndex`. Instead, they **should** modify the allocation internally to use the required memory type for the application's given usage. This is because for an export operation, there is currently no way for the application to know the memory type index before allocating.

Valid Usage

- VUID-VkMemoryAllocateInfo-allocationSize-07897
If the parameters do not define an `import or export operation`, `allocationSize` **must** be greater than 0
- VUID-VkMemoryAllocateInfo-None-06657
The parameters **must** not define more than one `import operation`
- VUID-VkMemoryAllocateInfo-allocationSize-07899
If the parameters define an export operation and the handle type is not `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, `allocationSize` **must** be greater than 0
- VUID-VkMemoryAllocateInfo-buffer-06380

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), and [VkMemoryDedicatedAllocateInfo::buffer](#) is present and non-NULL, [VkImportMemoryBufferCollectionFUCHSIA::collection](#) and [VkImportMemoryBufferCollectionFUCHSIA::index](#) **must** match [VkBufferCollectionBufferCreateInfoFUCHSIA::collection](#) and [VkBufferCollectionBufferCreateInfoFUCHSIA::index](#), respectively, of the [VkBufferCollectionBufferCreateInfoFUCHSIA](#) structure used to create the [VkMemoryDedicatedAllocateInfo::buffer](#)

- VUID-VkMemoryAllocateInfo-image-06381

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), and [VkMemoryDedicatedAllocateInfo::image](#) is present and non-NULL, [VkImportMemoryBufferCollectionFUCHSIA::collection](#) and [VkImportMemoryBufferCollectionFUCHSIA::index](#) **must** match [VkBufferCollectionImageCreateInfoFUCHSIA::collection](#) and [VkBufferCollectionImageCreateInfoFUCHSIA::index](#), respectively, of the [VkBufferCollectionImageCreateInfoFUCHSIA](#) structure used to create the [VkMemoryDedicatedAllocateInfo::image](#)

- VUID-VkMemoryAllocateInfo-allocationSize-06382

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), [allocationSize](#) **must** match [VkMemoryRequirements::size](#) value retrieved by [vkGetImageMemoryRequirements](#) or [vkGetBufferMemoryRequirements](#) for image-based or buffer-based collections respectively

- VUID-VkMemoryAllocateInfo-pNext-06383

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), the [pNext](#) chain **must** include a [VkMemoryDedicatedAllocateInfo](#) structure with either its [image](#) or [buffer](#) field set to a value other than [VK_NULL_HANDLE](#)

- VUID-VkMemoryAllocateInfo-image-06384

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#) and [VkMemoryDedicatedAllocateInfo::image](#) is not [VK_NULL_HANDLE](#), the [image](#) **must** be created with a [VkBufferCollectionImageCreateInfoFUCHSIA](#) structure chained to its [VkImageCreateInfo::pNext](#) pointer

- VUID-VkMemoryAllocateInfo-buffer-06385

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#) and [VkMemoryDedicatedAllocateInfo::buffer](#) is not [VK_NULL_HANDLE](#), the [buffer](#) **must** be created with a [VkBufferCollectionBufferCreateInfoFUCHSIA](#) structure chained to its [VkBufferCreateInfo::pNext](#) pointer

- VUID-VkMemoryAllocateInfo-memoryTypeIndex-06386

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), [memoryTypeIndex](#) **must** be from [VkBufferCollectionPropertiesFUCHSIA](#) as retrieved by [vkGetBufferCollectionPropertiesFUCHSIA](#)

- VUID-VkMemoryAllocateInfo-pNext-00639

If the [pNext](#) chain includes a [VkExportMemoryAllocateInfo](#) structure, and any of the handle types specified in [VkExportMemoryAllocateInfo::handleTypes](#) require a dedicated allocation, as reported by [vkGetPhysicalDeviceImageFormatProperties2](#) in [VkExternalImageFormatProperties::externalMemoryProperties.externalMemoryFeatures](#), or by

`vkGetPhysicalDeviceExternalBufferProperties` in `VkExternalBufferProperties::externalMemoryProperties.externalMemoryFeatures`, the `pNext` chain **must** include a `VkMemoryDedicatedAllocateInfo` or `VkDedicatedAllocationMemoryAllocateInfoNV` structure with either its `image` or `buffer` member set to a value other than `VK_NULL_HANDLE`

- VUID-VkMemoryAllocateInfo-pNext-00640
If the `pNext` chain includes a `VkExportMemoryAllocateInfo` structure, it **must** not include a `VkExportMemoryAllocateInfoNV` or `VkExportMemoryWin32HandleInfoNV` structure
- VUID-VkMemoryAllocateInfo-pNext-00641
If the `pNext` chain includes a `VkImportMemoryWin32HandleInfoKHR` structure, it **must** not include a `VkImportMemoryWin32HandleInfoNV` structure
- VUID-VkMemoryAllocateInfo-allocationSize-01742
If the parameters define an import operation, the external handle specified was created by the Vulkan API, and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT`, then the values of `allocationSize` and `memoryTypeIndex` **must** match those specified when the payload being imported was created
- VUID-VkMemoryAllocateInfo-None-00643
If the parameters define an import operation and the external handle specified was created by the Vulkan API, the device mask specified by `VkMemoryAllocateFlagsInfo` **must** match the mask specified when the payload being imported was allocated
- VUID-VkMemoryAllocateInfo-None-00644
If the parameters define an import operation and the external handle specified was created by the Vulkan API, the list of physical devices that comprise the logical device passed to `vkAllocateMemory` **must** match the list of physical devices that comprise the logical device on which the payload was originally allocated
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-00645
If the parameters define an import operation and the external handle is an NT handle or a global share handle created outside of the Vulkan API, the value of `memoryTypeIndex` **must** be one of those returned by `vkGetMemoryWin32HandlePropertiesKHR`
- VUID-VkMemoryAllocateInfo-allocationSize-01743
If the parameters define an import operation, the external handle was created by the Vulkan API, and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT`, then the values of `allocationSize` and `memoryTypeIndex` **must** match those specified when the payload being imported was created
- VUID-VkMemoryAllocateInfo-allocationSize-00647
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT`, `allocationSize` **must** match the size specified when creating the Direct3D 12 heap from which the payload was extracted
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-00648
If the parameters define an import operation and the external handle is a POSIX file descriptor created outside of the Vulkan API, the value of `memoryTypeIndex` **must** be one of those returned by `vkGetMemoryFdPropertiesKHR`

- VUID-VkMemoryAllocateInfo-memoryTypeIndex-01872
If the `protectedMemory` feature is not enabled, the `VkMemoryAllocateInfo::memoryTypeIndex` **must** not indicate a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-01744
If the parameters define an import operation and the external handle is a host pointer, the value of `memoryTypeIndex` **must** be one of those returned by `vkGetMemoryHostPointerPropertiesEXT`
- VUID-VkMemoryAllocateInfo-allocationSize-01745
If the parameters define an import operation and the external handle is a host pointer, `allocationSize` **must** be an integer multiple of `VkPhysicalDeviceExternalMemoryHostPropertiesEXT::minImportedHostPointerAlignment`
- VUID-VkMemoryAllocateInfo-pNext-02805
If the parameters define an import operation and the external handle is a host pointer, the `pNext` chain **must** not include a `VkDedicatedAllocationMemoryAllocateInfoNV` structure with either its `image` or `buffer` field set to a value other than `VK_NULL_HANDLE`
- VUID-VkMemoryAllocateInfo-pNext-02806
If the parameters define an import operation and the external handle is a host pointer, the `pNext` chain **must** not include a `VkMemoryDedicatedAllocateInfo` structure with either its `image` or `buffer` field set to a value other than `VK_NULL_HANDLE`
- VUID-VkMemoryAllocateInfo-allocationSize-02383
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, `allocationSize` **must** be the size returned by `vkGetAndroidHardwareBufferPropertiesANDROID` for the Android hardware buffer
- VUID-VkMemoryAllocateInfo-pNext-02384
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, and the `pNext` chain does not include a `VkMemoryDedicatedAllocateInfo` structure or `VkMemoryDedicatedAllocateInfo::image` is `VK_NULL_HANDLE`, the Android hardware buffer **must** have a `AHardwareBuffer_Desc::format` of `AHardwareBufferFormatBlob` and a `AHardwareBuffer_Desc::usage` that includes `AHardwareBufferUsageGpuDataBuffer`
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-02385
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, `memoryTypeIndex` **must** be one of those returned by `vkGetAndroidHardwareBufferPropertiesANDROID` for the Android hardware buffer
- VUID-VkMemoryAllocateInfo-pNext-01874
If the parameters do not define an import operation, and the `pNext` chain includes a `VkExportMemoryAllocateInfo` structure with `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` included in its `handleTypes` member, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` not equal to `VK_NULL_HANDLE`, then `allocationSize` **must** be 0
- VUID-VkMemoryAllocateInfo-pNext-07900
If the parameters define an export operation, the handle type is

VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, and the pNext does not include a VkMemoryDedicatedAllocateInfo structure, allocationSize **must** be greater than 0

- VUID-VkMemoryAllocateInfo-pNext-07901

If the parameters define an export operation, the handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, and the pNext chain includes a VkMemoryDedicatedAllocateInfo structure with buffer set to a valid VkBuffer object, allocationSize **must** be greater than 0

- VUID-VkMemoryAllocateInfo-pNext-02386

If the parameters define an import operation, the external handle is an Android hardware buffer, and the pNext chain includes a VkMemoryDedicatedAllocateInfo with image that is not VK_NULL_HANDLE, the Android hardware buffer's AHardwareBuffer::usage **must** include at least one of AHARDWAREBUFFER_USAGE_GPU_FRAMEBUFFER, AHARDWAREBUFFER_USAGE_GPU_SAMPLED_IMAGE or AHARDWAREBUFFER_USAGE_GPU_DATA_BUFFER

- VUID-VkMemoryAllocateInfo-pNext-02387

If the parameters define an import operation, the external handle is an Android hardware buffer, and the pNext chain includes a VkMemoryDedicatedAllocateInfo with image that is not VK_NULL_HANDLE, the format of image **must** be VK_FORMAT_UNDEFINED or the format returned by vkGetAndroidHardwareBufferPropertiesANDROID in VkAndroidHardwareBufferFormatPropertiesANDROID::format for the Android hardware buffer

- VUID-VkMemoryAllocateInfo-pNext-02388

If the parameters define an import operation, the external handle is an Android hardware buffer, and the pNext chain includes a VkMemoryDedicatedAllocateInfo structure with image that is not VK_NULL_HANDLE, the width, height, and array layer dimensions of image and the Android hardware buffer's AHardwareBuffer_Desc **must** be identical

- VUID-VkMemoryAllocateInfo-pNext-02389

If the parameters define an import operation, the external handle is an Android hardware buffer, and the pNext chain includes a VkMemoryDedicatedAllocateInfo structure with image that is not VK_NULL_HANDLE, and the Android hardware buffer's AHardwareBuffer::usage includes AHARDWAREBUFFER_USAGE_GPU_MIPMAP_COMPLETE, the image **must** have a complete mipmap chain

- VUID-VkMemoryAllocateInfo-pNext-02586

If the parameters define an import operation, the external handle is an Android hardware buffer, and the pNext chain includes a VkMemoryDedicatedAllocateInfo structure with image that is not VK_NULL_HANDLE, and the Android hardware buffer's AHardwareBuffer::usage does not include AHARDWAREBUFFER_USAGE_GPU_MIPMAP_COMPLETE, the image **must** have exactly one mipmap level

- VUID-VkMemoryAllocateInfo-pNext-02390

If the parameters define an import operation, the external handle is an Android hardware buffer, and the pNext chain includes a VkMemoryDedicatedAllocateInfo structure with image that is not VK_NULL_HANDLE, each bit set in the usage of image **must** be listed in AHardwareBuffer Usage Equivalence, and if there is a corresponding AHARDWAREBUFFER_USAGE bit listed that bit **must** be included in the Android hardware buffer's AHardwareBuffer_Desc::usage

- VUID-VkMemoryAllocateInfo-screenBufferImport-08941
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX::screenBufferImport` **must** be enabled
- VUID-VkMemoryAllocateInfo-allocationSize-08942
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `allocationSize` **must** be the size returned by `vkGetScreenBufferPropertiesQNX` for the QNX Screen buffer
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-08943
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `memoryTypeIndex` **must** be one of those returned by `vkGetScreenBufferPropertiesQNX` for the QNX Screen buffer
- VUID-VkMemoryAllocateInfo-pNext-08944
If the parameters define an import operation, the external handle is a QNX Screen buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` with `image` that is not `VK_NULL_HANDLE`, the QNX Screen's buffer **must** be a valid QNX Screen buffer
- VUID-VkMemoryAllocateInfo-pNext-08945
If the parameters define an import operation, the external handle is an QNX Screen buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` with `image` that is not `VK_NULL_HANDLE`, the format of `image` **must** be `VK_FORMAT_UNDEFINED` or the format returned by `vkGetScreenBufferPropertiesQNX` in `VkScreenBufferFormatPropertiesQNX::format` for the QNX Screen buffer
- VUID-VkMemoryAllocateInfo-pNext-08946
If the parameters define an import operation, the external handle is a QNX Screen buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, the width, height, and array layer dimensions of `image` and the QNX Screen buffer's `_screen_buffer` **must** be identical
- VUID-VkMemoryAllocateInfo-opaqueCaptureAddress-03329
If `VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress` is not zero, `VkMemoryAllocateFlagsInfo::flags` **must** include `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`
- VUID-VkMemoryAllocateInfo-flags-03330
If `VkMemoryAllocateFlagsInfo::flags` includes `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, the `bufferDeviceAddressCaptureReplay` feature **must** be enabled
- VUID-VkMemoryAllocateInfo-flags-03331
If `VkMemoryAllocateFlagsInfo::flags` includes `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT`, the `bufferDeviceAddress` feature **must** be enabled
- VUID-VkMemoryAllocateInfo-pNext-03332
If the `pNext` chain includes a `VkImportMemoryHostPointerInfoEXT` structure, `VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress` **must** be zero
- VUID-VkMemoryAllocateInfo-opaqueCaptureAddress-03333
If the parameters define an import operation,

`VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress` **must** be zero

- VUID-VkMemoryAllocateInfo-None-04749

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the value of `memoryTypeIndex` **must** be an index identifying a memory type from the `memoryTypeBits` field of the `VkMemoryZirconHandlePropertiesFUCHSIA` structure populated by a call to `vkGetMemoryZirconHandlePropertiesFUCHSIA`

- VUID-VkMemoryAllocateInfo-allocationSize-07902

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the value of `allocationSize` **must** be greater than 0

- VUID-VkMemoryAllocateInfo-allocationSize-07903

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the value of `allocationSize` **must** be less than or equal to the size of the VMO as determined by `zx_vmo_get_size(handle)` where `handle` is the VMO handle to the imported external memory

- VUID-VkMemoryAllocateInfo-pNext-06780

If the `pNext` chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its `exportObjectType` member **must** be `VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkMemoryAllocateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_INFO`

- VUID-VkMemoryAllocateInfo-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDedicatedAllocationMemoryAllocateInfoNV`, `VkExportMemoryAllocateInfo`, `VkExportMemoryAllocateInfoNV`, `VkExportMemoryWin32HandleInfoKHR`, `VkExportMemoryWin32HandleInfoNV`, `VkExportMetalObjectCreateInfoEXT`, `VkImportAndroidHardwareBufferInfoANDROID`, `VkImportMemoryBufferCollectionFUCHSIA`, `VkImportMemoryFdInfoKHR`, `VkImportMemoryHostPointerInfoEXT`, `VkImportMemoryWin32HandleInfoKHR`, `VkImportMemoryWin32HandleInfoNV`, `VkImportMemoryZirconHandleInfoFUCHSIA`, `VkImportMetalBufferInfoEXT`, `VkImportScreenBufferInfoQNX`, `VkMemoryAllocateFlagsInfo`, `VkMemoryDedicatedAllocateInfo`, `VkMemoryOpaqueCaptureAddressAllocateInfo`, or `VkMemoryPriorityAllocateInfoEXT`

- VUID-VkMemoryAllocateInfo-sType-unique

The `sType` value of each struct in the `pNext` chain **must** be unique, with the exception of structures of type `VkExportMetalObjectCreateInfoEXT`

If the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure, then that structure includes a handle of the sole buffer or image resource that the memory **can** be bound to.

The `VkMemoryDedicatedAllocateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryDedicatedAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
    VkBuffer            buffer;
} VkMemoryDedicatedAllocateInfo;
```

or the equivalent

```
// Provided by VK_KHR_dedicated_allocation
typedef VkMemoryDedicatedAllocateInfo VkMemoryDedicatedAllocateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **image** is [VK_NULL_HANDLE](#) or a handle of an image which this memory will be bound to.
- **buffer** is [VK_NULL_HANDLE](#) or a handle of a buffer which this memory will be bound to.

Valid Usage

- VUID-VkMemoryDedicatedAllocateInfo-image-01432
At least one of **image** and **buffer** **must** be [VK_NULL_HANDLE](#)
- VUID-VkMemoryDedicatedAllocateInfo-image-02964
If **image** is not [VK_NULL_HANDLE](#) and the memory is not an imported Android Hardware Buffer or an imported QNX Screen buffer , **VkMemoryAllocateInfo::allocationSize** **must** equal the **VkMemoryRequirements::size** of the image
- VUID-VkMemoryDedicatedAllocateInfo-image-01434
If **image** is not [VK_NULL_HANDLE](#), **image** **must** have been created without **VK_IMAGE_CREATE_SPARSE_BINDING_BIT** set in **VkImageCreateInfo::flags**
- VUID-VkMemoryDedicatedAllocateInfo-buffer-02965
If **buffer** is not [VK_NULL_HANDLE](#) and the memory is not an imported Android Hardware Buffer or an imported QNX Screen buffer , **VkMemoryAllocateInfo::allocationSize** **must** equal the **VkMemoryRequirements::size** of the buffer
- VUID-VkMemoryDedicatedAllocateInfo-buffer-01436
If **buffer** is not [VK_NULL_HANDLE](#), **buffer** **must** have been created without **VK_BUFFER_CREATE_SPARSE_BINDING_BIT** set in **VkBufferCreateInfo::flags**
- VUID-VkMemoryDedicatedAllocateInfo-image-01876
If **image** is not [VK_NULL_HANDLE](#) and **VkMemoryAllocateInfo** defines a memory import operation with handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT**,
or

`VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT`, and the external handle was created by the Vulkan API, then the memory being imported **must** also be a dedicated image allocation and **image must** be identical to the image associated with the imported memory

- VUID-VkMemoryDedicatedAllocateInfo-buffer-01877

If **buffer** is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation with handle type `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT`, or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT`, and the external handle was created by the Vulkan API, then the memory being imported **must** also be a dedicated buffer allocation and **buffer must** be identical to the buffer associated with the imported memory

- VUID-VkMemoryDedicatedAllocateInfo-image-01878

If **image** is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation with handle type `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT`, the memory being imported **must** also be a dedicated image allocation and **image must** be identical to the image associated with the imported memory

- VUID-VkMemoryDedicatedAllocateInfo-buffer-01879

If **buffer** is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation with handle type `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT`, the memory being imported **must** also be a dedicated buffer allocation and **buffer must** be identical to the buffer associated with the imported memory

- VUID-VkMemoryDedicatedAllocateInfo-image-01797

If **image** is not `VK_NULL_HANDLE`, **image must** not have been created with `VK_IMAGE_CREATE_DISJOINT_BIT` set in `VkImageCreateInfo::flags`

- VUID-VkMemoryDedicatedAllocateInfo-image-04751

If **image** is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation with handle type `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the memory being imported **must** also be a dedicated image allocation and **image must** be identical to the image associated with the imported memory

- VUID-VkMemoryDedicatedAllocateInfo-buffer-04752

If **buffer** is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation with handle type `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the memory being imported **must** also be a dedicated buffer allocation and **buffer must** be identical to the buffer associated with the imported memory

Valid Usage (Implicit)

- VUID-VkMemoryDedicatedAllocateInfo-sType-sType

sType must be `VK_STRUCTURE_TYPE_MEMORY_DEDICATED_ALLOCATE_INFO`

- VUID-VkMemoryDedicatedAllocateInfo-image-parameter

If **image** is not `VK_NULL_HANDLE`, **image must** be a valid `VkImage` handle

- VUID-VkMemoryDedicatedAllocateInfo-buffer-parameter
If **buffer** is not `VK_NULL_HANDLE`, **buffer** **must** be a valid `VkBuffer` handle
- VUID-VkMemoryDedicatedAllocateInfo-commonparent
Both of **buffer**, and **image** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

If the **pNext** chain includes a `VkDedicatedAllocationMemoryAllocateInfoNV` structure, then that structure includes a handle of the sole buffer or image resource that the memory **can** be bound to.

The `VkDedicatedAllocationMemoryAllocateInfoNV` structure is defined as:

```
// Provided by VK_NV_dedicated_allocation
typedef struct VkDedicatedAllocationMemoryAllocateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
    VkBuffer            buffer;
} VkDedicatedAllocationMemoryAllocateInfoNV;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **image** is `VK_NULL_HANDLE` or a handle of an image which this memory will be bound to.
- **buffer** is `VK_NULL_HANDLE` or a handle of a buffer which this memory will be bound to.

Valid Usage

- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00649
At least one of **image** and **buffer** **must** be `VK_NULL_HANDLE`
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00650
If **image** is not `VK_NULL_HANDLE`, the image **must** have been created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-00651
If **buffer** is not `VK_NULL_HANDLE`, the buffer **must** have been created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00652
If **image** is not `VK_NULL_HANDLE`, `VkMemoryAllocateInfo::allocationSize` **must** equal the `VkMemoryRequirements::size` of the image
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-00653
If **buffer** is not `VK_NULL_HANDLE`, `VkMemoryAllocateInfo::allocationSize` **must** equal the `VkMemoryRequirements::size` of the buffer
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00654
If **image** is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation, the memory being imported **must** also be a dedicated image allocation and

image **must** be identical to the image associated with the imported memory

- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-00655

If **buffer** is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation, the memory being imported **must** also be a dedicated buffer allocation and **buffer** **must** be identical to the buffer associated with the imported memory

Valid Usage (Implicit)

- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_MEMORY_ALLOCATE_INFO_NV`
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-parameter
If **image** is not `VK_NULL_HANDLE`, **image** **must** be a valid `VkImage` handle
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-parameter
If **buffer** is not `VK_NULL_HANDLE`, **buffer** **must** be a valid `VkBuffer` handle
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-commonparent
Both of **buffer**, and **image** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

If the **pNext** chain includes a `VkMemoryPriorityAllocateInfoEXT` structure, then that structure includes a priority for the memory.

The `VkMemoryPriorityAllocateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_memory_priority
typedef struct VkMemoryPriorityAllocateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    float               priority;
} VkMemoryPriorityAllocateInfoEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **priority** is a floating-point value between `0` and `1`, indicating the priority of the allocation relative to other memory allocations. Larger values are higher priority. The granularity of the priorities is implementation-dependent.

Memory allocations with higher priority **may** be more likely to stay in device-local memory when the system is under memory pressure.

If this structure is not included, it is as if the **priority** value were `0.5`.

Valid Usage

- VUID-VkMemoryPriorityAllocateInfoEXT-priority-02602

priority must be between 0 and 1, inclusive

Valid Usage (Implicit)

- VUID-VkMemoryPriorityAllocateInfoEXT-sType-sType
sType must be `VK_STRUCTURE_TYPE_MEMORY_PRIORITY_ALLOCATE_INFO_EXT`

To modify the priority of an existing memory allocation, call:

```
// Provided by VK_EXT_pageable_device_local_memory
void vkSetDeviceMemoryPriorityEXT(
    VkDevice          device,
    VkDeviceMemory    memory,
    float             priority);
```

- **device** is the logical device that owns the memory.
- **memory** is the `VkDeviceMemory` object to which the new priority will be applied.
- **priority** is a floating-point value between 0 and 1, indicating the priority of the allocation relative to other memory allocations. Larger values are higher priority. The granularity of the priorities is implementation-dependent.

Memory allocations with higher priority **may** be more likely to stay in device-local memory when the system is under memory pressure.

Valid Usage

- VUID-vkSetDeviceMemoryPriorityEXT-priority-06258
priority must be between 0 and 1, inclusive

Valid Usage (Implicit)

- VUID-vkSetDeviceMemoryPriorityEXT-device-parameter
device must be a valid `VkDevice` handle
- VUID-vkSetDeviceMemoryPriorityEXT-memory-parameter
memory must be a valid `VkDeviceMemory` handle
- VUID-vkSetDeviceMemoryPriorityEXT-memory-parent
memory must have been created, allocated, or retrieved from **device**

When allocating memory whose payload **may** be exported to another process or Vulkan instance, add a `VkExportMemoryAllocateInfo` structure to the **pNext** chain of the `VkMemoryAllocateInfo` structure, specifying the handle types that **may** be exported.

The [VkExportMemoryAllocateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExportMemoryAllocateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkExternalMemoryHandleTypeFlags handleTypes;
} VkExportMemoryAllocateInfo;
```

or the equivalent

```
// Provided by VK_KHR_external_memory
typedef VkExportMemoryAllocateInfo VkExportMemoryAllocateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **handleTypes** is zero or a bitmask of [VkExternalMemoryHandleTypeFlagBits](#) specifying one or more memory handle types the application **can** export from the resulting allocation. The application **can** request multiple handle types for the same allocation.

Valid Usage

- VUID-VkExportMemoryAllocateInfo-handleTypes-00656
The bits in **handleTypes** **must** be supported and compatible, as reported by [VkExternalImageFormatProperties](#) or [VkExternalBufferProperties](#)

Valid Usage (Implicit)

- VUID-VkExportMemoryAllocateInfo-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_EXPORT_MEMORY_ALLOCATE_INFO**
- VUID-VkExportMemoryAllocateInfo-handleTypes-parameter
handleTypes **must** be a valid combination of [VkExternalMemoryHandleTypeFlagBits](#) values

When allocating memory that **may** be exported to another process or Vulkan instance, add a [VkExportMemoryAllocateInfoNV](#) structure to the **pNext** chain of the [VkMemoryAllocateInfo](#) structure, specifying the handle types that **may** be exported.

The [VkExportMemoryAllocateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_external_memory
typedef struct VkExportMemoryAllocateInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlagsNV handleTypes;
} VkExportMemoryAllocateInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **handleTypes** is a bitmask of [VkExternalMemoryHandleTypeFlagBitsNV](#) specifying one or more memory handle types that **may** be exported. Multiple handle types **may** be requested for the same allocation as long as they are compatible, as reported by [vkGetPhysicalDeviceExternalImageFormatPropertiesNV](#).

Valid Usage (Implicit)

- VUID-VkExportMemoryAllocateInfoNV-sType-sType
sType must be `VK_STRUCTURE_TYPE_EXPORT_MEMORY_ALLOCATE_INFO_NV`
- VUID-VkExportMemoryAllocateInfoNV-handleTypes-parameter
handleTypes must be a valid combination of [VkExternalMemoryHandleTypeFlagBitsNV](#) values

11.2.4. Win32 External Memory

To specify additional attributes of NT handles exported from a memory object, add a [VkExportMemoryWin32HandleInfoKHR](#) structure to the **pNext** chain of the [VkMemoryAllocateInfo](#) structure. The [VkExportMemoryWin32HandleInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkExportMemoryWin32HandleInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const SECURITY_ATTRIBUTES* pAttributes;
    DWORD                    dwAccess;
    LPCWSTR                   name;
} VkExportMemoryWin32HandleInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pAttributes** is a pointer to a Windows `SECURITY_ATTRIBUTES` structure specifying security attributes of the handle.
- **dwAccess** is a `DWORD` specifying access rights of the handle.
- **name** is a null-terminated UTF-16 string to associate with the payload referenced by NT handles

exported from the created memory.

If `VkExportMemoryAllocateInfo` is not included in the same `pNext` chain, this structure is ignored.

If `VkExportMemoryAllocateInfo` is included in the `pNext` chain of `VkMemoryAllocateInfo` with a Windows `handleType`, but either `VkExportMemoryWin32HandleInfoKHR` is not included in the `pNext` chain, or it is included but `pAttributes` is set to `NULL`, default security descriptor values will be used, and child processes created by the application will not inherit the handle, as described in the MSDN documentation for “Synchronization Object Security and Access Rights”¹. Further, if the structure is not present, the access rights used depend on the handle type.

For handles of the following types:

- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`

The implementation **must** ensure the access rights allow read and write access to the memory.

1

<https://docs.microsoft.com/en-us/windows/win32/sync/synchronization-object-security-and-access-rights>

Valid Usage

- VUID-VkExportMemoryWin32HandleInfoKHR-handleTypes-00657

If `VkExportMemoryAllocateInfo::handleTypes` does not include `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`, a `VkExportMemoryWin32HandleInfoKHR` structure **must** not be included in the `pNext` chain of `VkMemoryAllocateInfo`

Valid Usage (Implicit)

- VUID-VkExportMemoryWin32HandleInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_KHR`

- VUID-VkExportMemoryWin32HandleInfoKHR-pAttributes-parameter

If `pAttributes` is not `NULL`, `pAttributes` **must** be a valid pointer to a valid `SECURITY_ATTRIBUTES` value

To import memory from a Windows handle, add a `VkImportMemoryWin32HandleInfoKHR` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure.

The `VkImportMemoryWin32HandleInfoKHR` structure is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkImportMemoryWin32HandleInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    HANDLE                   handle;
    LPCWSTR                  name;
} VkImportMemoryWin32HandleInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **handleType** is a **VkExternalMemoryHandleTypeFlagBits** value specifying the type of **handle** or **name**.
- **handle** is **NULL** or the external handle to import.
- **name** is **NULL** or a null-terminated UTF-16 string naming the payload to import.

Importing memory object payloads from Windows handles does not transfer ownership of the handle to the Vulkan implementation. For handle types defined as NT handles, the application **must** release handle ownership using the **CloseHandle** system call when the handle is no longer needed. For handle types defined as NT handles, the imported memory object holds a reference to its payload.

NOTE

Non-NT handle import operations do not add a reference to their associated payload. If the original object owning the payload is destroyed, all resources and handles sharing that payload will become invalid.

Applications **can** import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct **VkDeviceMemory** object.

Valid Usage

- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-00658
If **handleType** is not **0**, it **must** be supported for import, as reported by **VkExternalImageFormatProperties** or **VkExternalBufferProperties**
- VUID-VkImportMemoryWin32HandleInfoKHR-handle-00659
The memory from which **handle** was exported, or the memory named by **name** **must** have been created on the same underlying physical device as **device**
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-00660
If **handleType** is not **0**, it **must** be defined as an NT handle or a global share handle
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-01439
If **handleType** is not **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT**,
or

VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT, **name** **must** be NULL

- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-01440
If **handleType** is not 0 and **handle** is NULL, **name** **must** name a valid memory resource of the type specified by **handleType**
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-00661
If **handleType** is not 0 and **name** is NULL, **handle** **must** be a valid handle of the type specified by **handleType**
- VUID-VkImportMemoryWin32HandleInfoKHR-handle-01441
If **handle** is not NULL, **name** **must** be NULL
- VUID-VkImportMemoryWin32HandleInfoKHR-handle-01518
If **handle** is not NULL, it **must** obey any requirements listed for **handleType** in [external memory handle types compatibility](#)
- VUID-VkImportMemoryWin32HandleInfoKHR-name-01519
If **name** is not NULL, it **must** obey any requirements listed for **handleType** in [external memory handle types compatibility](#)

Valid Usage (Implicit)

- VUID-VkImportMemoryWin32HandleInfoKHR-sType-sType
sType **must** be VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_KHR
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-parameter
If **handleType** is not 0, **handleType** **must** be a valid [VkExternalMemoryHandleTypeFlagBits](#) value

To export a Windows handle representing the payload of a Vulkan device memory object, call:

```
// Provided by VK_KHR_external_memory_win32
VkResult vkGetMemoryWin32HandleKHR(
    VkDevice device,
    const VkMemoryGetWin32HandleInfoKHR* pGetWin32HandleInfo,
    HANDLE* pHandle);
```

- **device** is the logical device that created the device memory being exported.
- **pGetWin32HandleInfo** is a pointer to a [VkMemoryGetWin32HandleInfoKHR](#) structure containing parameters of the export operation.
- **pHandle** will return the Windows handle representing the payload of the device memory object.

For handle types defined as NT handles, the handles returned by **vkGetMemoryWin32HandleKHR** are owned by the application and hold a reference to their payload. To avoid leaking resources, the application **must** release ownership of them using the **CloseHandle** system call when they are no longer needed.

NOTE | Non-NT handle types do not add a reference to their associated payload. If the

original object owning the payload is destroyed, all resources and handles sharing that payload will become invalid.

Valid Usage (Implicit)

- VUID-vkGetMemoryWin32HandleKHR-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetMemoryWin32HandleKHR-pGetWin32HandleInfo-parameter **pGetWin32HandleInfo** must be a valid pointer to a valid [VkMemoryGetWin32HandleInfoKHR](#) structure
- VUID-vkGetMemoryWin32HandleKHR-pHandle-parameter **pHandle** must be a valid pointer to a **HANDLE** value

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_TOO_MANY_OBJECTS**
- **VK_ERROR_OUT_OF_HOST_MEMORY**

The [VkMemoryGetWin32HandleInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkMemoryGetWin32HandleInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceMemory           memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetWin32HandleInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memory** is the memory object from which the handle will be exported.
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of handle requested.

The properties of the handle returned depend on the value of **handleType**. See [VkExternalMemoryHandleTypeFlagBits](#) for a description of the properties of the defined external memory handle types.

Valid Usage

- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00662
`handleType` **must** have been included in `VkExportMemoryAllocateInfo::handleTypes` when `memory` was created
- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00663
If `handleType` is defined as an NT handle, `vkGetMemoryWin32HandleKHR` **must** be called no more than once for each valid unique combination of `memory` and `handleType`
- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00664
`handleType` **must** be defined as an NT handle or a global share handle

Valid Usage (Implicit)

- VUID-VkMemoryGetWin32HandleInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_GET_WIN32_HANDLE_INFO_KHR`
- VUID-VkMemoryGetWin32HandleInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMemoryGetWin32HandleInfoKHR-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle
- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-parameter
`handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value

Windows memory handles compatible with Vulkan **may** also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```
// Provided by VK_KHR_external_memory_win32
VkResult vkGetMemoryWin32HandlePropertiesKHR(
    VkDevice                device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    HANDLE                  handle,
    VkMemoryWin32HandlePropertiesKHR* pMemoryWin32HandleProperties);
```

- `device` is the logical device that will be importing `handle`.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of the handle `handle`.
- `handle` is the handle which will be imported.
- `pMemoryWin32HandleProperties` is a pointer to a `VkMemoryWin32HandlePropertiesKHR` structure in which properties of `handle` are returned.

Valid Usage

- VUID-vkGetMemoryWin32HandlePropertiesKHR-handle-00665
`handle` **must** point to a valid Windows memory handle
- VUID-vkGetMemoryWin32HandlePropertiesKHR-handleType-00666
`handleType` **must** not be one of the handle types defined as opaque

Valid Usage (Implicit)

- VUID-vkGetMemoryWin32HandlePropertiesKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryWin32HandlePropertiesKHR-handleType-parameter
`handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value
- VUID-vkGetMemoryWin32HandlePropertiesKHR-pMemoryWin32HandleProperties-parameter
`pMemoryWin32HandleProperties` **must** be a valid pointer to a `VkMemoryWin32HandlePropertiesKHR` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_INVALID_EXTERNAL_HANDLE`

The `VkMemoryWin32HandlePropertiesKHR` structure returned is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkMemoryWin32HandlePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryWin32HandlePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified windows handle **can** be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryWin32HandlePropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_WIN32_HANDLE_PROPERTIES_KHR`
- VUID-VkMemoryWin32HandlePropertiesKHR-pNext-pNext
`pNext` **must** be `NULL`

When `VkExportMemoryAllocateInfoNV::handleTypes` includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV`, add a `VkExportMemoryWin32HandleInfoNV` structure to the `pNext` chain of the `VkExportMemoryAllocateInfoNV` structure to specify security attributes and access rights for the memory object's external handle.

The `VkExportMemoryWin32HandleInfoNV` structure is defined as:

```
// Provided by VK_NV_external_memory_win32
typedef struct VkExportMemoryWin32HandleInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    const SECURITY_ATTRIBUTES* pAttributes;
    DWORD              dwAccess;
} VkExportMemoryWin32HandleInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pAttributes` is a pointer to a Windows `SECURITY_ATTRIBUTES` structure specifying security attributes of the handle.
- `dwAccess` is a `DWORD` specifying access rights of the handle.

If this structure is not present, or if `pAttributes` is `NULL`, default security descriptor values will be used, and child processes created by the application will not inherit the handle, as described in the MSDN documentation for “Synchronization Object Security and Access Rights”¹. Further, if the structure is not present, the access rights will be

`DXGI_SHARED_RESOURCE_READ | DXGI_SHARED_RESOURCE_WRITE`

1

<https://docs.microsoft.com/en-us/windows/win32/sync/synchronization-object-security-and-access-rights>

Valid Usage (Implicit)

- VUID-VkExportMemoryWin32HandleInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_NV`
- VUID-VkExportMemoryWin32HandleInfoNV-pAttributes-parameter
If `pAttributes` is not `NULL`, `pAttributes` **must** be a valid pointer to a valid

SECURITY_ATTRIBUTES value

To import memory created on the same physical device but outside of the current Vulkan instance, add a [VkImportMemoryWin32HandleInfoNV](#) structure to the `pNext` chain of the [VkMemoryAllocateInfo](#) structure, specifying a handle to and the type of the memory.

The [VkImportMemoryWin32HandleInfoNV](#) structure is defined as:

```
// Provided by VK_NV_external_memory_win32
typedef struct VkImportMemoryWin32HandleInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlagsNV handleType;
    HANDLE                   handle;
} VkImportMemoryWin32HandleInfoNV;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is `0` or a [VkExternalMemoryHandleTypeFlagBitsNV](#) value specifying the type of memory handle in `handle`.
- `handle` is a Windows `HANDLE` referring to the memory.

If `handleType` is `0`, this structure is ignored by consumers of the [VkMemoryAllocateInfo](#) structure it is chained from.

Valid Usage

- VUID-VkImportMemoryWin32HandleInfoNV-handleType-01327
`handleType` **must** not have more than one bit set
- VUID-VkImportMemoryWin32HandleInfoNV-handle-01328
`handle` **must** be a valid handle to memory, obtained as specified by `handleType`

Valid Usage (Implicit)

- VUID-VkImportMemoryWin32HandleInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_NV`
- VUID-VkImportMemoryWin32HandleInfoNV-handleType-parameter
`handleType` **must** be a valid combination of [VkExternalMemoryHandleTypeFlagBitsNV](#) values

Bits which **can** be set in `handleType` are:

Possible values of [VkImportMemoryWin32HandleInfoNV::handleType](#), specifying the type of an

external memory handle, are:

```
// Provided by VK_NV_external_memory_capabilities
typedef enum VkExternalMemoryHandleTypeFlagBitsNV {
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV = 0x00000001,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_NV = 0x00000002,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_BIT_NV = 0x00000004,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_KMT_BIT_NV = 0x00000008,
} VkExternalMemoryHandleTypeFlagBitsNV;
```

- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_NV` specifies a handle to memory returned by `vkGetMemoryWin32HandleNV`.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV` specifies a handle to memory returned by `vkGetMemoryWin32HandleNV`, or one duplicated from such a handle using `DuplicateHandle()`.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_BIT_NV` specifies a valid NT handle to memory returned by `IDXGIResource1::CreateSharedHandle`, or a handle duplicated from such a handle using `DuplicateHandle()`.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_KMT_BIT_NV` specifies a handle to memory returned by `IDXGIResource::GetSharedHandle()`.

```
// Provided by VK_NV_external_memory_capabilities
typedef VkFlags VkExternalMemoryHandleTypeFlagsNV;
```

`VkExternalMemoryHandleTypeFlagsNV` is a bitmask type for setting a mask of zero or more `VkExternalMemoryHandleTypeFlagBitsNV`.

To retrieve the handle corresponding to a device memory object created with `VkExportMemoryAllocateInfoNV::handleTypes` set to include `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_NV`, call:

```
// Provided by VK_NV_external_memory_win32
VkResult vkGetMemoryWin32HandleNV(
    VkDevice                device,
    VkDeviceMemory          memory,
    VkExternalMemoryHandleTypeFlagsNV handleType,
    HANDLE*                 pHandle);
```

- `device` is the logical device that owns the memory.
- `memory` is the `VkDeviceMemory` object.
- `handleType` is a bitmask of `VkExternalMemoryHandleTypeFlagBitsNV` containing a single bit specifying the type of handle requested.
- `handle` is a pointer to a Windows `HANDLE` in which the handle is returned.

Valid Usage

- VUID-vkGetMemoryWin32HandleNV-handleType-01326
handleType must be a flag specified in [VkExportMemoryAllocateInfoNV::handleTypes](#) when allocating **memory**

Valid Usage (Implicit)

- VUID-vkGetMemoryWin32HandleNV-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkGetMemoryWin32HandleNV-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle
- VUID-vkGetMemoryWin32HandleNV-handleType-parameter
handleType must be a valid combination of [VkExternalMemoryHandleTypeFlagBitsNV](#) values
- VUID-vkGetMemoryWin32HandleNV-handleType-requiredbitmask
handleType must not be 0
- VUID-vkGetMemoryWin32HandleNV-pHandle-parameter
pHandle must be a valid pointer to a **HANDLE** value
- VUID-vkGetMemoryWin32HandleNV-memory-parent
memory must have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_TOO_MANY_OBJECTS**
- **VK_ERROR_OUT_OF_HOST_MEMORY**

11.2.5. File Descriptor External Memory

To import memory from a POSIX file descriptor handle, add a [VkImportMemoryFdInfoKHR](#) structure to the **pNext** chain of the [VkMemoryAllocateInfo](#) structure. The [VkImportMemoryFdInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_external_memory_fd
typedef struct VkImportMemoryFdInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    int                      fd;
} VkImportMemoryFdInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the handle type of `fd`.
- `fd` is the external handle to import.

Importing memory from a file descriptor transfers ownership of the file descriptor from the application to the Vulkan implementation. The application **must** not perform any operations on the file descriptor after a successful import. The imported memory object holds a reference to its payload.

Applications **can** import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct `VkDeviceMemory` object.

Valid Usage

- VUID-VkImportMemoryFdInfoKHR-handleType-00667
If `handleType` is not `0`, it **must** be supported for import, as reported by `VkExternalImageFormatProperties` or `VkExternalBufferProperties`
- VUID-VkImportMemoryFdInfoKHR-fd-00668
The memory from which `fd` was exported **must** have been created on the same underlying physical device as `device`
- VUID-VkImportMemoryFdInfoKHR-handleType-00669
If `handleType` is not `0`, it **must** be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT`
- VUID-VkImportMemoryFdInfoKHR-handleType-00670
If `handleType` is not `0`, `fd` **must** be a valid handle of the type specified by `handleType`
- VUID-VkImportMemoryFdInfoKHR-fd-01746
The memory represented by `fd` **must** have been created from a physical device and driver that is compatible with `device` and `handleType`, as described in [External Memory Handle Types Compatibility](#)
- VUID-VkImportMemoryFdInfoKHR-fd-01520
`fd` **must** obey any requirements listed for `handleType` in [external memory handle types compatibility](#)

Valid Usage (Implicit)

- VUID-VkImportMemoryFdInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_MEMORY_FD_INFO_KHR`
- VUID-VkImportMemoryFdInfoKHR-handleType-parameter
If `handleType` is not `0`, `handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value

To export a POSIX file descriptor referencing the payload of a Vulkan device memory object, call:

```
// Provided by VK_KHR_external_memory_fd
VkResult vkGetMemoryFdKHR(
    VkDevice          device,
    const VkMemoryGetFdInfoKHR* pGetFdInfo,
    int*              pFd);
```

- `device` is the logical device that created the device memory being exported.
- `pGetFdInfo` is a pointer to a `VkMemoryGetFdInfoKHR` structure containing parameters of the export operation.
- `pFd` will return a file descriptor referencing the payload of the device memory object.

Each call to `vkGetMemoryFdKHR` **must** create a new file descriptor holding a reference to the memory object's payload and transfer ownership of the file descriptor to the application. To avoid leaking resources, the application **must** release ownership of the file descriptor using the `close` system call when it is no longer needed, or by importing a Vulkan memory object from it. Where supported by the operating system, the implementation **must** set the file descriptor to be closed automatically when an `execve` system call is made.

Valid Usage (Implicit)

- VUID-vkGetMemoryFdKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryFdKHR-pGetFdInfo-parameter
`pGetFdInfo` **must** be a valid pointer to a valid `VkMemoryGetFdInfoKHR` structure
- VUID-vkGetMemoryFdKHR-pFd-parameter
`pFd` **must** be a valid pointer to an `int` value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkMemoryGetFdInfoKHR` structure is defined as:

```
// Provided by VK_KHR_external_memory_fd
typedef struct VkMemoryGetFdInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    VkDeviceMemory            memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetFdInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is the memory object from which the handle will be exported.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of handle requested.

The properties of the file descriptor exported depend on the value of `handleType`. See `VkExternalMemoryHandleTypeFlagBits` for a description of the properties of the defined external memory handle types.

NOTE

The size of the exported file **may** be larger than the size requested by `VkMemoryAllocateInfo::allocationSize`. If `handleType` is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT`, then the application **can** query the file's actual size with `lseek`.

Valid Usage

- VUID-VkMemoryGetFdInfoKHR-handleType-00671
`handleType` **must** have been included in `VkExportMemoryAllocateInfo::handleTypes` when `memory` was created
- VUID-VkMemoryGetFdInfoKHR-handleType-00672
`handleType` **must** be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkMemoryGetFdInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_GET_FD_INFO_KHR`
- VUID-VkMemoryGetFdInfoKHR-pNext-pNext

pNext must be NULL

- VUID-VkMemoryGetFdInfoKHR-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle
- VUID-VkMemoryGetFdInfoKHR-handleType-parameter
handleType must be a valid [VkExternalMemoryHandleTypeFlagBits](#) value

POSIX file descriptor memory handles compatible with Vulkan **may** also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```
// Provided by VK_KHR_external_memory_fd
VkResult vkGetMemoryFdPropertiesKHR(
    VkDevice                device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    int                     fd,
    VkMemoryFdPropertiesKHR* pMemoryFdProperties);
```

- **device** is the logical device that will be importing **fd**.
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of the handle **fd**.
- **fd** is the handle which will be imported.
- **pMemoryFdProperties** is a pointer to a [VkMemoryFdPropertiesKHR](#) structure in which the properties of the handle **fd** are returned.

Valid Usage

- VUID-vkGetMemoryFdPropertiesKHR-fd-00673
fd must point to a valid POSIX file descriptor memory handle
- VUID-vkGetMemoryFdPropertiesKHR-handleType-00674
handleType must not be [VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT](#)

Valid Usage (Implicit)

- VUID-vkGetMemoryFdPropertiesKHR-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkGetMemoryFdPropertiesKHR-handleType-parameter
handleType must be a valid [VkExternalMemoryHandleTypeFlagBits](#) value
- VUID-vkGetMemoryFdPropertiesKHR-pMemoryFdProperties-parameter
pMemoryFdProperties must be a valid pointer to a [VkMemoryFdPropertiesKHR](#) structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_INVALID_EXTERNAL_HANDLE`

The `VkMemoryFdPropertiesKHR` structure returned is defined as:

```
// Provided by VK_KHR_external_memory_fd
typedef struct VkMemoryFdPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryFdPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified file descriptor **can** be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryFdPropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_FD_PROPERTIES_KHR`
- VUID-VkMemoryFdPropertiesKHR-pNext-pNext
`pNext` **must** be `NULL`

11.2.6. Host External Memory

To import memory from a host pointer, add a `VkImportMemoryHostPointerInfoEXT` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkImportMemoryHostPointerInfoEXT` structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkImportMemoryHostPointerInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    void*              pHostPointer;
} VkImportMemoryHostPointerInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the handle type.
- `pHostPointer` is the host pointer to import from.

Importing memory from a host pointer shares ownership of the memory between the host and the Vulkan implementation. The application **can** continue to access the memory through the host pointer but it is the application's responsibility to synchronize device and non-device access to the payload as defined in [Host Access to Device Memory Objects](#).

Applications **can** import the same payload into multiple instances of Vulkan and multiple times into a given Vulkan instance. However, implementations **may** fail to import the same payload multiple times into a given physical device due to platform constraints.

Importing memory from a particular host pointer **may** not be possible due to additional platform-specific restrictions beyond the scope of this specification in which case the implementation **must** fail the memory import operation with the error code `VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR`.

Whether device memory objects imported from a host pointer hold a reference to their payload is undefined. As such, the application **must** ensure that the imported memory range remains valid and accessible for the lifetime of the imported memory object.

Implementations **may** support importing host pointers for memory types which are not host-visible. In this case, after a successful call to `vkAllocateMemory`, the memory range imported from `pHostPointer` **must** not be accessed by the application until the `VkDeviceMemory` has been destroyed. Memory contents for the host memory becomes undefined on import, and is left undefined after the `VkDeviceMemory` has been destroyed. Applications **must** also not access host memory which is mapped to the same physical memory as `pHostPointer`, but mapped to a different host pointer while the `VkDeviceMemory` handle is valid. Implementations running on general-purpose operating systems **should** not support importing host pointers for memory types which are not host-visible.

NOTE

Using host pointers to back non-host visible allocations is a platform-specific use case, and applications should not attempt to do this unless instructed by the platform.

Valid Usage

- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01747
If `handleType` is not `0`, it **must** be supported for import, as reported in [VkExternalMemoryProperties](#)
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01748
If `handleType` is not `0`, it **must** be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT`
- VUID-VkImportMemoryHostPointerInfoEXT-pHostPointer-01749
`pHostPointer` **must** be a pointer aligned to an integer multiple of

VkPhysicalDeviceExternalMemoryHostPropertiesEXT::minImportedHostPointerAlignment

- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01750

If `handleType` is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT`, `pHostPointer` **must** be a pointer to `allocationSize` number of bytes of host memory, where `allocationSize` is the member of the `VkMemoryAllocateInfo` structure this structure is chained to

- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01751

If `handleType` is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT`, `pHostPointer` **must** be a pointer to `allocationSize` number of bytes of host mapped foreign memory, where `allocationSize` is the member of the `VkMemoryAllocateInfo` structure this structure is chained to

Valid Usage (Implicit)

- VUID-VkImportMemoryHostPointerInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_MEMORY_HOST_POINTER_INFO_EXT`
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-parameter
`handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value
- VUID-VkImportMemoryHostPointerInfoEXT-pHostPointer-parameter
`pHostPointer` **must** be a pointer value

To determine the correct parameters to use when importing host pointers, call:

```
// Provided by VK_EXT_external_memory_host
VkResult vkGetMemoryHostPointerPropertiesEXT(
    VkDevice device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    const void* pHostPointer,
    VkMemoryHostPointerPropertiesEXT* pMemoryHostPointerProperties);
```

- `device` is the logical device that will be importing `pHostPointer`.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of the handle `pHostPointer`.
- `pHostPointer` is the host pointer to import from.
- `pMemoryHostPointerProperties` is a pointer to a `VkMemoryHostPointerPropertiesEXT` structure in which the host pointer properties are returned.

Valid Usage

- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01752

`handleType` **must** be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT`

- VUID-vkGetMemoryHostPointerPropertiesEXT-pHostPointer-01753
`pHostPointer` **must** be a pointer aligned to an integer multiple of `VkPhysicalDeviceExternalMemoryHostPropertiesEXT::minImportedHostPointerAlignment`
- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01754
If `handleType` is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT`, `pHostPointer` **must** be a pointer to host memory
- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01755
If `handleType` is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT`, `pHostPointer` **must** be a pointer to host mapped foreign memory

Valid Usage (Implicit)

- VUID-vkGetMemoryHostPointerPropertiesEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-parameter
`handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value
- VUID-vkGetMemoryHostPointerPropertiesEXT-pHostPointer-parameter
`pHostPointer` **must** be a pointer value
- VUID-vkGetMemoryHostPointerPropertiesEXT-pMemoryHostPointerProperties-parameter
`pMemoryHostPointerProperties` **must** be a valid pointer to a `VkMemoryHostPointerPropertiesEXT` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_INVALID_EXTERNAL_HANDLE`

The `VkMemoryHostPointerPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkMemoryHostPointerPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryHostPointerPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified host pointer **can** be imported as.

The value returned by `memoryTypeBits` **should** only include bits that identify memory types which are host visible. Implementations **may** include bits that identify memory types which are not host visible. Behavior for imported pointers of such types is defined by [VkImportMemoryHostPointerInfoEXT](#).

Valid Usage (Implicit)

- VUID-VkMemoryHostPointerPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_HOST_POINTER_PROPERTIES_EXT`
- VUID-VkMemoryHostPointerPropertiesEXT-pNext-pNext
`pNext` **must** be `NULL`

11.2.7. Android Hardware Buffer External Memory

To import memory created outside of the current Vulkan instance from an Android hardware buffer, add a `VkImportAndroidHardwareBufferInfoANDROID` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkImportAndroidHardwareBufferInfoANDROID` structure is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkImportAndroidHardwareBufferInfoANDROID {
    VkStructureType      sType;
    const void*          pNext;
    struct AHardwareBuffer* buffer;
} VkImportAndroidHardwareBufferInfoANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the Android hardware buffer to import.

If the `vkAllocateMemory` command succeeds, the implementation **must** acquire a reference to the imported hardware buffer, which it **must** release when the device memory object is freed. If the command fails, the implementation **must** not retain a reference.

Valid Usage

- VUID-VkImportAndroidHardwareBufferInfoANDROID-buffer-01880
If `buffer` is not `NULL`, Android hardware buffers **must** be supported for import, as reported by [VkExternalImageFormatProperties](#) or [VkExternalBufferProperties](#)
- VUID-VkImportAndroidHardwareBufferInfoANDROID-buffer-01881

If `buffer` is not `NULL`, it **must** be a valid Android hardware buffer object with `AHardwareBuffer_Desc::usage` compatible with Vulkan as described in [Android Hardware Buffers](#)

Valid Usage (Implicit)

- VUID-VkImportAndroidHardwareBufferInfoANDROID-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_ANDROID_HARDWARE_BUFFER_INFO_ANDROID`
- VUID-VkImportAndroidHardwareBufferInfoANDROID-buffer-parameter `buffer` **must** be a valid pointer to an [AHardwareBuffer](#) value

To export an Android hardware buffer referencing the payload of a Vulkan device memory object, call:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
VkResult vkGetMemoryAndroidHardwareBufferANDROID(
    VkDevice device,
    const VkMemoryGetAndroidHardwareBufferInfoANDROID* pInfo,
    struct AHardwareBuffer** pBuffer);
```

- `device` is the logical device that created the device memory being exported.
- `pInfo` is a pointer to a [VkMemoryGetAndroidHardwareBufferInfoANDROID](#) structure containing parameters of the export operation.
- `pBuffer` will return an Android hardware buffer referencing the payload of the device memory object.

Each call to `vkGetMemoryAndroidHardwareBufferANDROID` **must** return an Android hardware buffer with a new reference acquired in addition to the reference held by the [VkDeviceMemory](#). To avoid leaking resources, the application **must** release the reference by calling `AHardwareBuffer_release` when it is no longer needed. When called with the same handle in [VkMemoryGetAndroidHardwareBufferInfoANDROID::memory](#), `vkGetMemoryAndroidHardwareBufferANDROID` **must** return the same Android hardware buffer object. If the device memory was created by importing an Android hardware buffer, `vkGetMemoryAndroidHardwareBufferANDROID` **must** return that same Android hardware buffer object.

Valid Usage (Implicit)

- VUID-vkGetMemoryAndroidHardwareBufferANDROID-device-parameter `device` **must** be a valid [VkDevice](#) handle
- VUID-vkGetMemoryAndroidHardwareBufferANDROID-pInfo-parameter `pInfo` **must** be a valid pointer to a valid [VkMemoryGetAndroidHardwareBufferInfoANDROID](#) structure
- VUID-vkGetMemoryAndroidHardwareBufferANDROID-pBuffer-parameter

pBuffer **must** be a valid pointer to a valid pointer to an [AHardwareBuffer](#) value

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_TOO_MANY_OBJECTS**
- **VK_ERROR_OUT_OF_HOST_MEMORY**

The **VkMemoryGetAndroidHardwareBufferInfoANDROID** structure is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkMemoryGetAndroidHardwareBufferInfoANDROID {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory     memory;
} VkMemoryGetAndroidHardwareBufferInfoANDROID;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memory** is the memory object from which the Android hardware buffer will be exported.

Valid Usage

- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-handleTypes-01882
VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID **must** have been included in [VkExportMemoryAllocateInfo::handleTypes](#) when **memory** was created
- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-pNext-01883
If the **pNext** chain of the [VkMemoryAllocateInfo](#) used to allocate **memory** included a [VkMemoryDedicatedAllocateInfo](#) with non-**NULL** **image** member, then that **image** **must** already be bound to **memory**

Valid Usage (Implicit)

- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_MEMORY_GET_ANDROID_HARDWARE_BUFFER_INFO_ANDROID**
- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-pNext-pNext
pNext **must** be **NULL**
- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-memory-parameter
memory **must** be a valid [VkDeviceMemory](#) handle

To determine the memory parameters to use when importing an Android hardware buffer, call:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
VkResult vkGetAndroidHardwareBufferPropertiesANDROID(
    VkDevice device,
    const struct AHardwareBuffer* buffer,
    VkAndroidHardwareBufferPropertiesANDROID* pProperties);
```

- **device** is the logical device that will be importing **buffer**.
- **buffer** is the Android hardware buffer which will be imported.
- **pProperties** is a pointer to a [VkAndroidHardwareBufferPropertiesANDROID](#) structure in which the properties of **buffer** are returned.

Valid Usage

- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-buffer-01884
buffer must be a valid Android hardware buffer object with at least one of the `AHardwareBuffer_USAGE_GPU_*` flags in its `AHardwareBuffer_Desc::usage`

Valid Usage (Implicit)

- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-buffer-parameter
buffer must be a valid pointer to a valid [AHardwareBuffer](#) value
- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-pProperties-parameter
pProperties must be a valid pointer to a [VkAndroidHardwareBufferPropertiesANDROID](#) structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR`

The `VkAndroidHardwareBufferPropertiesANDROID` structure returned is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkAndroidHardwareBufferPropertiesANDROID {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        allocationSize;
    uint32_t            memoryTypeBits;
} VkAndroidHardwareBufferPropertiesANDROID;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **allocationSize** is the size of the external memory
- **memoryTypeBits** is a bitmask containing one bit set for every memory type which the specified Android hardware buffer **can** be imported as.

Valid Usage (Implicit)

- VUID-VkAndroidHardwareBufferPropertiesANDROID-sType-sType
sType must be [VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_PROPERTIES_ANDROID](#)
- VUID-VkAndroidHardwareBufferPropertiesANDROID-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkAndroidHardwareBufferFormatProperties2ANDROID](#), [VkAndroidHardwareBufferFormatPropertiesANDROID](#), or [VkAndroidHardwareBufferFormatResolvePropertiesANDROID](#)
- VUID-VkAndroidHardwareBufferPropertiesANDROID-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique

To obtain format properties of an Android hardware buffer, include a [VkAndroidHardwareBufferFormatPropertiesANDROID](#) structure in the **pNext** chain of the [VkAndroidHardwareBufferPropertiesANDROID](#) structure passed to [vkGetAndroidHardwareBufferPropertiesANDROID](#). This structure is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkAndroidHardwareBufferFormatPropertiesANDROID {
    VkStructureType      sType;
    void*                pNext;
    VkFormat             format;
    uint64_t             externalFormat;
    VkFormatFeatureFlags formatFeatures;
    VkComponentMapping    samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange   suggestedYcbcrRange;
    VkChromaLocation      suggestedXChromaOffset;
    VkChromaLocation      suggestedYChromaOffset;
} VkAndroidHardwareBufferFormatPropertiesANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is the Vulkan format corresponding to the Android hardware buffer's format, or `VK_FORMAT_UNDEFINED` if there is not an equivalent Vulkan format.
- `externalFormat` is an implementation-defined external format identifier for use with `VkExternalFormatANDROID`. It **must** not be zero.
- `formatFeatures` describes the capabilities of this external format when used with an image bound to memory imported from `buffer`.
- `samplerYcbcrConversionComponents` is the component swizzle that **should** be used in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYcbcrModel` is a suggested color model to use in the `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYcbcrRange` is a suggested numerical value range to use in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedXChromaOffset` is a suggested X chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYChromaOffset` is a suggested Y chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.

If the Android hardware buffer has one of the formats listed in the [Format Equivalence table](#), then `format` **must** have the equivalent Vulkan format listed in the table. Otherwise, `format` **may** be `VK_FORMAT_UNDEFINED`, indicating the Android hardware buffer **can** only be used with an external format.

The `formatFeatures` member **must** include `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` and at least one of `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT` or `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`, and **should** include `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT`.

NOTE

The `formatFeatures` member only indicates the features available when using an

[external-format image](#) created from the Android hardware buffer. Images from Android hardware buffers with a format other than `VK_FORMAT_UNDEFINED` are subject to the format capabilities obtained from [vkGetPhysicalDeviceFormatProperties2](#), and [vkGetPhysicalDeviceImageFormatProperties2](#) with appropriate parameters. These sets of features are independent of each other, e.g. the external format will support sampler Y'C_BC_R conversion even if the non-external format does not, and rendering directly to the external format will not be supported even if the non-external format does support this.

Android hardware buffers with the same external format **must** have the same support for `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`, `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT`, `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`, `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT`, `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT`, and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT` in `formatFeatures`. Other format features **may** differ between Android hardware buffers that have the same external format. This allows applications to use the same [VkSamplerYcbcrConversion](#) object (and samplers and pipelines created from them) for any Android hardware buffers that have the same external format.

If `format` is not `VK_FORMAT_UNDEFINED`, then the value of `samplerYcbcrConversionComponents` **must** be valid when used as the `components` member of [VkSamplerYcbcrConversionCreateInfo](#) with that format. If `format` is `VK_FORMAT_UNDEFINED`, all members of `samplerYcbcrConversionComponents` **must** be the [identity swizzle](#).

Implementations **may** not always be able to determine the color model, numerical range, or chroma offsets of the image contents, so the values in `VkAndroidHardwareBufferFormatPropertiesANDROID` are only suggestions. Applications **should** treat these values as sensible defaults to use in the absence of more reliable information obtained through some other means. If the underlying physical device is also usable via OpenGL ES with the `GL_OES_EGL_image_external` extension, the implementation **should** suggest values that will produce similar sampled values as would be obtained by sampling the same external image via `samplerExternalOES` in OpenGL ES using equivalent sampler parameters.

NOTE Since `GL_OES_EGL_image_external` does not require the same sampling and conversion calculations as Vulkan does, achieving identical results between APIs **may** not be possible on some implementations.

Valid Usage (Implicit)

- `VOID-VkAndroidHardwareBufferFormatPropertiesANDROID-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_PROPERTIES_ANDROID`

The format properties of an Android hardware buffer **can** be obtained by including a `VkAndroidHardwareBufferFormatProperties2ANDROID` structure in the `pNext` chain of the `VkAndroidHardwareBufferPropertiesANDROID` structure passed to [vkGetAndroidHardwareBufferPropertiesANDROID](#). This structure is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer with
VK_KHR_format_feature_flags2 or VK_VERSION_1_3
typedef struct VkAndroidHardwareBufferFormatProperties2ANDROID {
    VkStructureType      sType;
    void*                pNext;
    VkFormat              format;
    uint64_t             externalFormat;
    VkFormatFeatureFlags2 formatFeatures;
    VkComponentMapping    samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange    suggestedYcbcrRange;
    VkChromaLocation       suggestedXChromaOffset;
    VkChromaLocation       suggestedYChromaOffset;
} VkAndroidHardwareBufferFormatProperties2ANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is the Vulkan format corresponding to the Android hardware buffer's format, or `VK_FORMAT_UNDEFINED` if there is not an equivalent Vulkan format.
- `externalFormat` is an implementation-defined external format identifier for use with `VkExternalFormatANDROID`. It **must** not be zero.
- `formatFeatures` describes the capabilities of this external format when used with an image bound to memory imported from `buffer`.
- `samplerYcbcrConversionComponents` is the component swizzle that **should** be used in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYcbcrModel` is a suggested color model to use in the `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYcbcrRange` is a suggested numerical value range to use in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedXChromaOffset` is a suggested X chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYChromaOffset` is a suggested Y chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.

The bits reported in `formatFeatures` **must** include the bits reported in the corresponding fields of `VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures`.

Valid Usage (Implicit)

- VUID-VkAndroidHardwareBufferFormatProperties2ANDROID-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_PROPERTIES_2_ANDROID`

The `VkAndroidHardwareBufferFormatResolvePropertiesANDROID` structure is defined as:

```
// Provided by VK_ANDROID_external_format_resolve
typedef struct VkAndroidHardwareBufferFormatResolvePropertiesANDROID {
    VkStructureType    sType;
    void*              pNext;
    VkFormat            colorAttachmentFormat;
} VkAndroidHardwareBufferFormatResolvePropertiesANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `colorAttachmentFormat` is a `VkFormat` specifying the format of color attachment images that **must** be used for color attachments when resolving to the specified external format. If the implementation supports external format resolves for the specified external format, this value will be a color format supporting the `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` in `VkFormatProperties::optimalTilingFeatures` as returned by `vkGetPhysicalDeviceFormatProperties` with `format` equal to `colorAttachmentFormat`. If external format resolves are not supported, this value will be `VK_FORMAT_UNDEFINED`.

Any Android hardware buffer created with the `GRALLOC_USAGE_HW_RENDER` flag **must** be renderable in some way in Vulkan, either:

- `VkAndroidHardwareBufferFormatPropertiesANDROID::format` **must** be a format that supports `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT` in `VkFormatProperties::optimalTilingFeatures`; or
- `colorAttachmentFormat` **must** be a format that supports `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` in `VkFormatProperties::optimalTilingFeatures`.

Valid Usage (Implicit)

- VUID-VkAndroidHardwareBufferFormatResolvePropertiesANDROID-sType-sType **must** be `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_RESOLVE_PROPERTIES_ANDROID`

11.2.8. Remote Device External Memory

To export an address representing the payload of a Vulkan device memory object accessible by remote devices, call:

```
// Provided by VK_NV_external_memory_rdma
VkResult vkGetMemoryRemoteAddressNV(
    VkDevice device,
    const VkMemoryGetRemoteAddressInfoNV* pMemoryGetRemoteAddressInfo,
    VkRemoteAddressNV* pAddress);
```

- `device` is the logical device that created the device memory being exported.

- `pMemoryGetRemoteAddressInfo` is a pointer to a `VkMemoryGetRemoteAddressInfoNV` structure containing parameters of the export operation.
- `pAddress` is a pointer to a `VkRemoteAddressNV` value in which an address representing the payload of the device memory object is returned.

More communication may be required between the kernel-mode drivers of the devices involved. This information is out of scope of this documentation and should be requested from the vendors of the devices.

Valid Usage (Implicit)

- VUID-vkGetMemoryRemoteAddressNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryRemoteAddressNV-pMemoryGetRemoteAddressInfo-parameter `pMemoryGetRemoteAddressInfo` **must** be a valid pointer to a valid `VkMemoryGetRemoteAddressInfoNV` structure
- VUID-vkGetMemoryRemoteAddressNV-pAddress-parameter `pAddress` **must** be a valid pointer to a `VkRemoteAddressNV` value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_EXTERNAL_HANDLE`

The `VkMemoryGetRemoteAddressInfoNV` structure is defined as:

```
// Provided by VK_NV_external_memory_rdma
typedef struct VkMemoryGetRemoteAddressInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory      memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetRemoteAddressInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is the memory object from which the remote accessible address will be exported.
- `handleType` is the type of handle requested.

Valid Usage

- VUID-VkMemoryGetRemoteAddressInfoNV-handleType-04966
`handleType` **must** have been included in `VkExportMemoryAllocateInfo::handleTypes` when `memory` was created

Valid Usage (Implicit)

- VUID-VkMemoryGetRemoteAddressInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_GET_REMOTE_ADDRESS_INFO_NV`
- VUID-VkMemoryGetRemoteAddressInfoNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMemoryGetRemoteAddressInfoNV-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle
- VUID-VkMemoryGetRemoteAddressInfoNV-handleType-parameter
`handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value

`VkRemoteAddressNV` represents an address of a memory object accessible by remote devices, as returned in `vkGetMemoryRemoteAddressNV::pAddress`.

```
// Provided by VK_NV_external_memory_rdma
typedef void* VkRemoteAddressNV;
```

11.2.9. Fuchsia External Memory

On Fuchsia, when allocating memory that **may** be imported from another device, process or Vulkan instance, add a `VkImportMemoryZirconHandleInfoFUCHSIA` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure.

External memory on Fuchsia is imported and exported using VMO handles of type `zx_handle_t`. VMO handles to external memory are canonically obtained from Fuchsia's Sysmem service or from syscalls such as `zx_vmo_create()`. VMO handles for import can also be obtained by exporting them from another Vulkan instance as described in [exporting fuchsia device memory](#).

Importing VMO handles to the Vulkan instance transfers ownership of the handle to the instance from the application. The application **must** not perform any operations on the handle after successful import.

Applications **can** import the same underlying memory into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct `VkDeviceMemory` object.

Importing Fuchsia External Memory

The `VkImportMemoryZirconHandleInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_external_memory
typedef struct VkImportMemoryZirconHandleInfoFUCHSIA {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    zx_handle_t               handle;
} VkImportMemoryZirconHandleInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of `handle`.
- `handle` is a `zx_handle_t` (Zircon) handle to the external memory.

Valid Usage

- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-handleType-04771
`handleType` **must** be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`
- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-handle-04772
`handle` **must** be a valid VMO handle

Valid Usage (Implicit)

- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_MEMORY_ZIRCON_HANDLE_INFO_FUCHSIA`
- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-handleType-parameter
If `handleType` is not `0`, `handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value

To obtain the `memoryTypeIndex` for the `VkMemoryAllocateInfo` structure, call `vkGetMemoryZirconHandlePropertiesFUCHSIA`:

```
// Provided by VK_FUCHSIA_external_memory
VkResult vkGetMemoryZirconHandlePropertiesFUCHSIA(
    VkDevice          device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    zx_handle_t        zirconHandle,
    VkMemoryZirconHandlePropertiesFUCHSIA* pMemoryZirconHandleProperties);
```

- `device` is the `VkDevice`.

- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of `zirconHandle`
- `zirconHandle` is a `zx_handle_t` (Zircon) handle to the external resource.
- `pMemoryZirconHandleProperties` is a pointer to a `VkMemoryZirconHandlePropertiesFUCHSIA` structure in which the result will be stored.

Valid Usage

- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-handleType-04773
`handleType` **must** be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`
- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-zirconHandle-04774
`zirconHandle` **must** reference a valid VMO

Valid Usage (Implicit)

- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-handleType-parameter
`handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value
- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-pMemoryZirconHandleProperties-parameter
`pMemoryZirconHandleProperties` **must** be a valid pointer to a `VkMemoryZirconHandlePropertiesFUCHSIA` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_EXTERNAL_HANDLE`

The `VkMemoryZirconHandlePropertiesFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_external_memory
typedef struct VkMemoryZirconHandlePropertiesFUCHSIA {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryZirconHandlePropertiesFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `memoryTypeBits` a bitmask containing one bit set for every memory type which the specified handle can be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryZirconHandlePropertiesFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_ZIRCON_HANDLE_PROPERTIES_FUCHSIA`
- VUID-VkMemoryZirconHandlePropertiesFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`

With `pMemoryZirconHandleProperties` now successfully populated by `vkGetMemoryZirconHandlePropertiesFUCHSIA`, assign the `VkMemoryAllocateInfo` `memoryTypeIndex` field to a memory type which has a bit set in the `VkMemoryZirconHandlePropertiesFUCHSIA` `memoryTypeBits` field.

Exporting Fuchsia Device Memory

Similar to importing, exporting a VMO handle from Vulkan transfers ownership of the handle from the Vulkan instance to the application. The application is responsible for closing the handle with `zx_handle_close()` when it is no longer in use.

To export device memory as a Zircon handle that can be used by another instance, device, or process, retrieve the handle to the `VkDeviceMemory` using the command:

```
// Provided by VK_FUCHSIA_external_memory
VkResult vkGetMemoryZirconHandleFUCHSIA(
    VkDevice device,
    const VkMemoryGetZirconHandleInfoFUCHSIA* pGetZirconHandleInfo,
    zx_handle_t* pZirconHandle);
```

- `device` is the `VkDevice`.
- `pGetZirconHandleInfo` is a pointer to a `VkMemoryGetZirconHandleInfoFUCHSIA` structure.
- `pZirconHandle` is a pointer to a `zx_handle_t` which holds the resulting Zircon handle.

Valid Usage (Implicit)

- VUID-vkGetMemoryZirconHandleFUCHSIA-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryZirconHandleFUCHSIA-pGetZirconHandleInfo-parameter
`pGetZirconHandleInfo` **must** be a valid pointer to a valid `VkMemoryGetZirconHandleInfoFUCHSIA` structure
- VUID-vkGetMemoryZirconHandleFUCHSIA-pZirconHandle-parameter
`pZirconHandle` **must** be a valid pointer to a `zx_handle_t` value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

`VkMemoryGetZirconHandleInfoFUCHSIA` is defined as:

```
// Provided by VK_FUCHSIA_external_memory
typedef struct VkMemoryGetZirconHandleInfoFUCHSIA {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceMemory            memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetZirconHandleInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` the `VkDeviceMemory` being exported.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of the handle pointed to by `vkGetMemoryZirconHandleFUCHSIA::pZirconHandle`.

Valid Usage

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-handleType-04775
`handleType` **must** be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`
- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-handleType-04776
`handleType` **must** have been included in the `handleTypes` field of the `VkExportMemoryAllocateInfo` structure when the external memory was allocated

Valid Usage (Implicit)

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_GET_ZIRCON_HANDLE_INFO_FUCHSIA`
- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle
- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-handleType-parameter

`handleType` must be a valid `VkExternalMemoryHandleTypeFlagBits` value

With the result `pZirconHandle` now obtained, the memory properties for the handle can be retrieved using `vkGetMemoryZirconHandlePropertiesFUCHSIA` as documented above substituting the dereferenced, retrieved `pZirconHandle` in for the `zirconHandle` argument.

11.2.10. Metal Objects

A Vulkan implementation that is layered on top of Metal on Apple device platform, and implements the `VK_EXT_metal_objects` extension, supports the ability to import and export the underlying Metal objects associated with specific Vulkan objects.

The underlying Metal objects associated with certain Vulkan objects can be exported from those Vulkan objects using the `pNext` chain of the `VkExportMetalObjectsInfoEXT` parameter of the `vkExportMetalObjectsEXT` command.

An `VkDeviceMemory` object can be allocated on an existing `MTLBuffer` object, by including the `MTLBuffer` object in a `VkImportMetalBufferInfoEXT` structure in the `pNext` chain of the `VkMemoryAllocateInfo` structure in the `vkAllocateMemory` command.

A new `VkImage` object can be created on an existing `IOSurface` object, or one or more existing Metal `MTLTexture` objects, by including those Metal objects in either `VkImportMetalIOSurfaceInfoEXT` or `VkImportMetalTextureInfoEXT` structures in the `pNext` chain of the `VkImageCreateInfo` structure in the `vkCreateImage` command.

To export Metal objects from Vulkan objects, the application **must** first indicate the intention to do so during the creation of the Vulkan object, by including one or more `VkExportMetalObjectCreateInfoEXT` structures in the `pNext` chain of the `VkInstanceCreateInfo`, `VkMemoryAllocateInfo`, `VkImageCreateInfo`, `VkImageViewCreateInfo`, `VkBufferViewCreateInfo`, `VkSemaphoreCreateInfo`, or `VkEventCreateInfo`, in the corresponding Vulkan object creation command.

The `VkExportMetalObjectCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalObjectCreateInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkExportMetalObjectTypeFlagBitsEXT exportObjectType;
} VkExportMetalObjectCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `exportObjectType` is a `VkExportMetalObjectTypeFlagBitsEXT` indicating the type of Metal object that the application may request to be exported from the Vulkan object.

Valid Usage (Implicit)

- VUID-VkExportMetalObjectCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECT_CREATE_INFO_EXT`
- VUID-VkExportMetalObjectCreateInfoEXT-exportObjectType-parameter
If `exportObjectType` is not `0`, `exportObjectType` **must** be a valid `VkExportMetalObjectTypeFlagBitsEXT` value

Bits which indicate the types of Metal objects that may be exported from a corresponding Vulkan object are:

```
// Provided by VK_EXT_metal_objects
typedef enum VkExportMetalObjectTypeFlagBitsEXT {
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT = 0x00000001,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT = 0x00000002,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT = 0x00000004,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT = 0x00000008,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT = 0x00000010,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT = 0x00000020,
} VkExportMetalObjectTypeFlagBitsEXT;
```

- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT` indicates a Metal `MTLDevice` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT` indicates a Metal `MTLCommandQueue` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT` indicates a Metal `MTLBuffer` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT` indicates a Metal `MTLTexture` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT` indicates a Metal `IOSurface` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT` indicates a Metal `MTLSharedEvent` may be exported.

```
// Provided by VK_EXT_metal_objects
typedef VkFlags VkExportMetalObjectTypeFlagsEXT;
```

`VkExportMetalObjectTypeFlagsEXT` is a bitmask type for setting a mask of zero or more `VkExportMetalObjectTypeFlagBitsEXT`.

To export Metal objects that underlie Vulkan objects, call:

```
// Provided by VK_EXT_metal_objects
void vkExportMetalObjectsEXT(
    VkDevice                                device,
    VkExportMetalObjectsInfoEXT*            pMetalObjectsInfo);
```

- **device** is the device that created the Vulkan objects.
- **pMetalObjectsInfo** is a pointer to a [VkExportMetalObjectsInfoEXT](#) structure whose **pNext** chain contains structures, each identifying a Vulkan object and providing a pointer through which the Metal object will be returned.

Valid Usage (Implicit)

- VUID-vkExportMetalObjectsEXT-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkExportMetalObjectsEXT-pMetalObjectsInfo-parameter **pMetalObjectsInfo** must be a valid pointer to a [VkExportMetalObjectsInfoEXT](#) structure

The [VkExportMetalObjectsInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalObjectsInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
} VkExportMetalObjectsInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

Valid Usage

- VUID-VkExportMetalObjectsInfoEXT-pNext-06791
If the **pNext** chain includes a [VkExportMetalDeviceInfoEXT](#) structure, the [VkInstance](#) must have been created with [VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT](#) in the **exportObjectType** member of a [VkExportMetalObjectCreateInfoEXT](#) structure in the **pNext** chain of the [VkInstanceCreateInfo](#) structure in the [vkCreateInstance](#) command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06792
If the **pNext** chain includes a [VkExportMetalCommandQueueInfoEXT](#) structure, the [VkInstance](#) must have been created with [VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT](#) in the **exportObjectType** member of a [VkExportMetalObjectCreateInfoEXT](#) structure in the **pNext** chain of the [VkInstanceCreateInfo](#) structure in the [vkCreateInstance](#) command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06793
If the **pNext** chain includes a [VkExportMetalBufferInfoEXT](#) structure, the

`VkDeviceMemory` in its `memory` member **must** have been allocated with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkMemoryAllocateInfo` structure in the `vkAllocateMemory` command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06794

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, exactly one of its `image`, `imageView`, or `bufferView` members **must** not be `VK_NULL_HANDLE`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06795

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, and its `image` member is not `VK_NULL_HANDLE`, the `VkImage` in its `image` member **must** have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkImageCreateInfo` structure in the `vkCreateImage` command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06796

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, and its `imageView` member is not `VK_NULL_HANDLE`, the `VkImageView` in its `imageView` member **must** have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkImageViewCreateInfo` structure in the `vkCreateImageView` command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06797

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, and its `bufferView` member is not `VK_NULL_HANDLE`, the `VkBufferView` in its `bufferView` member **must** have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkBufferViewCreateInfo` structure in the `vkCreateBufferView` command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06798

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, and if either its `image` or `imageView` member is not `VK_NULL_HANDLE`, then `plane` **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT`, or `VK_IMAGE_ASPECT_PLANE_2_BIT`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06799

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, and if the `VkImage` in its `image` member does not have a multi-planar format, then its `plane` member **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06800

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, and if the `VkImage` in its `image` member has a multi-planar format with only two planes, then its `plane` member **must** not be `VK_IMAGE_ASPECT_PLANE_2_BIT`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06801

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, and if the `VkImageView` in its `imageView` member does not have a multi-planar format, then its `plane` member **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06802

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, and if the `VkImageView` in its `imageView` member has a multi-planar format with only two planes,

then its `plane` member **must** not be `VK_IMAGE_ASPECT_PLANE_2_BIT`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06803

If the `pNext` chain includes a `VkExportMetalIOSurfaceInfoEXT` structure, the `VkImage` in its `image` member **must** have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkImageCreateInfo` structure in the `vkCreateImage` command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06804

If the `pNext` chain includes a `VkExportMetalSharedEventInfoEXT` structure, exactly one of its `semaphore` or `event` members **must** not be `VK_NULL_HANDLE`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06805

If the `pNext` chain includes a `VkExportMetalSharedEventInfoEXT` structure, and its `semaphore` member is not `VK_NULL_HANDLE`, the `VkSemaphore` in its `semaphore` member **must** have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkSemaphoreCreateInfo` structure in the `vkCreateSemaphore` command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06806

If the `pNext` chain includes a `VkExportMetalSharedEventInfoEXT` structure, and its `event` member is not `VK_NULL_HANDLE`, the `VkEvent` in its `event` member **must** have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkEventCreateInfo` structure in the `vkCreateEvent` command

Valid Usage (Implicit)

- VUID-VkExportMetalObjectsInfoEXT-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECTS_INFO_EXT`

- VUID-VkExportMetalObjectsInfoEXT-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkExportMetalBufferInfoEXT`, `VkExportMetalCommandQueueInfoEXT`, `VkExportMetalDeviceInfoEXT`, `VkExportMetalIOSurfaceInfoEXT`, `VkExportMetalSharedEventInfoEXT`, or `VkExportMetalTextureInfoEXT`

- VUID-VkExportMetalObjectsInfoEXT-sType-unique

The `sType` value of each struct in the `pNext` chain **must** be unique, with the exception of structures of type `VkExportMetalBufferInfoEXT`, `VkExportMetalCommandQueueInfoEXT`, `VkExportMetalIOSurfaceInfoEXT`, `VkExportMetalSharedEventInfoEXT`, or `VkExportMetalTextureInfoEXT`

To export the Metal `MTLDevice` object underlying the `VkPhysicalDevice` associated with a `VkDevice` object, include a `VkExportMetalDeviceInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalDeviceInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalDeviceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    MTLDevice_id       mtlDevice;
} VkExportMetalDeviceInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlDevice` is the Metal `id<MTLDevice>` object underlying the `VkPhysicalDevice` associated with the `VkDevice` object identified in the call. The implementation will return the `MTLDevice` in this member, or it will return `NULL` if no `MTLDevice` could be found underlying the `VkPhysicalDevice` object.

Valid Usage (Implicit)

- VUID-VkExportMetalDeviceInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_DEVICE_INFO_EXT`

The type `id<MTLDevice>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLDevice_id` is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLDevice;
typedef __unsafe_unretained id<MTLDevice> MTLDevice_id;
#else
typedef void* MTLDevice_id;
#endif
```

To export the Metal `MTLCommandQueue` object underlying a `VkQueue` object, include a `VkExportMetalCommandQueueInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalCommandQueueInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalCommandQueueInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkQueue             queue;
    MTLCommandQueue_id mtlCommandQueue;
} VkExportMetalCommandQueueInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queue` is a `VkQueue`.
- `mtlCommandQueue` is the Metal `id<MTLCommandQueue>` object underlying the `VkQueue` object in `queue`. The implementation will return the `MTLCommandQueue` in this member, or it will return `NULL` if no `MTLCommandQueue` could be found underlying the `VkQueue` object.

Valid Usage (Implicit)

- VUID-VkExportMetalCommandQueueInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_COMMAND_QUEUE_INFO_EXT`
- VUID-VkExportMetalCommandQueueInfoEXT-queue-parameter
`queue` **must** be a valid `VkQueue` handle

The type `id<MTLCommandQueue>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLCommandQueue_id` is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLCommandQueue;
typedef __unsafe_unretained id<MTLCommandQueue> MTLCommandQueue_id;
#else
typedef void* MTLCommandQueue_id;
#endif
```

To export the Metal `MTLBuffer` object underlying a `VkDeviceMemory` object, include a `VkExportMetalBufferInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalBufferInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalBufferInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory     memory;
    MTLBuffer_id       mtlBuffer;
} VkExportMetalBufferInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is a `VkDeviceMemory`.
- `mtlBuffer` is the Metal `id<MTLBuffer>` object underlying the `VkDeviceMemory` object in `memory`. The implementation will return the `MTLBuffer` in this member, or it will return `NULL` if no `MTLBuffer` could be found underlying the `VkDeviceMemory` object.

Valid Usage (Implicit)

- VUID-VkExportMetalBufferInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_BUFFER_INFO_EXT`
- VUID-VkExportMetalBufferInfoEXT-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle

To import a Metal `MTLBuffer` object to underlie a `VkDeviceMemory` object, include a `VkImportMetalBufferInfoEXT` structure in the `pNext` chain of the `VkMemoryAllocateInfo` structure in a `vkAllocateMemory` command.

The `VkImportMetalBufferInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalBufferInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    MTLBuffer_id       mtlBuffer;
} VkImportMetalBufferInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlBuffer` is the Metal `id<MTLBuffer>` object that is to underlie the `VkDeviceMemory`.

The application **must** ensure that the configuration of the `id<MTLBuffer>` object is compatible with the configuration of the `VkDeviceMemory`. Failure to do so results in undefined behavior.

Valid Usage (Implicit)

- VUID-VkImportMetalBufferInfoEXT-sType-sType
sType **must** be VK_STRUCTURE_TYPE_IMPORT_METAL_BUFFER_INFO_EXT

The type `id<MTLBuffer>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLBuffer_id` is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLBuffer;
typedef __unsafe_unretained id<MTLBuffer> MTLBuffer_id;
#else
typedef void* MTLBuffer_id;
#endif
```

To export a Metal `MTLTexture` object underlying a `VkImage`, `VkImageView`, or `VkBufferView` object, include a `VkExportMetalTextureInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalTextureInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalTextureInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
    VkImageView         imageView;
    VkBufferView        bufferView;
    VkImageAspectFlags plane;
    MTLTexture_id       mtlTexture;
} VkExportMetalTextureInfoEXT;
```

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- image is `VK_NULL_HANDLE` or a `VkImage`.
- imageView is `VK_NULL_HANDLE` or a `VkImageView`.
- bufferView is `VK_NULL_HANDLE` or a `VkBufferView`.
- plane indicates the plane of a multi-planar `VkImage` or `VkImageView`.
- mtlTexture is the Metal `id<MTLTexture>` object underlying the `VkImage`, `VkImageView`, or `VkBufferView` object in `image`, `imageView`, or `bufferView`, respectively, at the plane indicated in `aspectMask`. The implementation will return the `MTLTexture` in this member, or it will return `NULL` if no `MTLTexture` could be found underlying the `VkImage`, `VkImageView`, or `VkBufferView` object,

at the plane indicated in `aspectMask`.

Valid Usage (Implicit)

- VUID-VkExportMetalTextureInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_TEXTURE_INFO_EXT`
- VUID-VkExportMetalTextureInfoEXT-image-parameter
If `image` is not `VK_NULL_HANDLE`, `image` **must** be a valid `VkImage` handle
- VUID-VkExportMetalTextureInfoEXT-imageView-parameter
If `imageView` is not `VK_NULL_HANDLE`, `imageView` **must** be a valid `VkImageView` handle
- VUID-VkExportMetalTextureInfoEXT-bufferView-parameter
If `bufferView` is not `VK_NULL_HANDLE`, `bufferView` **must** be a valid `VkBufferView` handle
- VUID-VkExportMetalTextureInfoEXT-plane-parameter
`plane` **must** be a valid `VkImageAspectFlagBits` value
- VUID-VkExportMetalTextureInfoEXT-commonparent
Each of `bufferView`, `image`, and `imageView` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

To import one or more existing Metal `MTLTexture` objects to underlie a `VkImage` object, include one or more `VkImportMetalTextureInfoEXT` structures in the `pNext` chain of the `VkImageCreateInfo` structure in a `vkCreateImage` command.

The `VkImportMetalTextureInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalTextureInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImageAspectFlagBits plane;
    MTLTexture_id      mtlTexture;
} VkImportMetalTextureInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `plane` indicates the plane of the `VkImage` that the `id<MTLTexture>` object should be attached to.
- `mtlTexture` is a the Metal `id<MTLTexture>` object that is to underlie the `VkImage` plane.

The `pNext` chain **must** include one `VkImportMetalTextureInfoEXT` structure for each plane in the `VkImage`. The application **must** ensure that the configuration of the Metal `id<MTLTexture>` objects are compatible with the configuration of the `VkImage`. Failure to do so results in undefined behavior.

Valid Usage (Implicit)

- VUID-VkImportMetalTextureInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_METAL_TEXTURE_INFO_EXT`
- VUID-VkImportMetalTextureInfoEXT-plane-parameter
`plane` **must** be a valid `VkImageAspectFlagBits` value

The type `id<MTLTexture>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLTexture_id` is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLTexture;
typedef __unsafe_unretained id<MTLTexture> MTLTexture_id;
#else
typedef void* MTLTexture_id;
#endif
```

To export the Metal `IOSurfaceRef` object underlying a `VkImage` object, include a `VkExportMetalIOSurfaceInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalIOSurfaceInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalIOSurfaceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
    IOSurfaceRef        ioSurface;
} VkExportMetalIOSurfaceInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is a `VkImage`.
- `ioSurface` is the Metal `IOSurfaceRef` object underlying the `VkImage` object in `image`. The implementation will return the `IOSurfaceRef` in this member, or it will return `NULL` if no `IOSurfaceRef` could be found underlying the `VkImage` object.

Valid Usage (Implicit)

- VUID-VkExportMetalIOSurfaceInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_IO_SURFACE_INFO_EXT`

- VUID-VkExportMetalIOSurfaceInfoEXT-image-parameter
image must be a valid [VkImage](#) handle

To import, or create, a Metal [IOSurfaceRef](#) object to underlie a [VkImage](#) object, include a [VkImportMetalIOSurfaceInfoEXT](#) structure in the **pNext** chain of the [VkImageCreateInfo](#) structure in a [vkCreateImage](#) command.

The [VkImportMetalIOSurfaceInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalIOSurfaceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    IOSurfaceRef       ioSurface;
} VkImportMetalIOSurfaceInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **ioSurface** is [VK_NULL_HANDLE](#) or the Metal [IOSurfaceRef](#) object that is to underlie the [VkImage](#).

If **ioSurface** is not [VK_NULL_HANDLE](#), it will be used to underlie the [VkImage](#). If **ioSurface** is [VK_NULL_HANDLE](#), the implementation will create a new [IOSurface](#) to underlie the [VkImage](#).

If provided, the application **must** ensure that the configuration of the [IOSurfaceRef](#) object is compatible with the configuration of the [VkImage](#). Failure to do so results in undefined behavior.

Valid Usage (Implicit)

- VUID-VkImportMetalIOSurfaceInfoEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_IMPORT_METAL_IO_SURFACE_INFO_EXT](#)

The type [IOSurfaceRef](#) is defined in Apple's CoreGraphics framework, but to remove an unnecessary compile time dependency, an incomplete type definition of [IOSurfaceRef](#) is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
typedef struct __IOSurface* IOSurfaceRef;
```

To export the Metal [MTLSharedEvent](#) object underlying a [VkSemaphore](#) or [VkEvent](#) object, include a [VkExportMetalSharedEventInfoEXT](#) structure in the **pNext** chain of the **pMetalObjectsInfo** parameter of a [vkExportMetalObjectsEXT](#) call.

The [VkExportMetalSharedEventInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalSharedEventInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkSemaphore        semaphore;
    VkEvent            event;
    MTLSharedEvent_id  mtlSharedEvent;
} VkExportMetalSharedEventInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **semaphore** is [VK_NULL_HANDLE](#) or a [VkSemaphore](#).
- **event** is [VK_NULL_HANDLE](#) or a [VkEvent](#).
- **mtlSharedEvent** is the Metal `id<MTLSharedEvent>` object underlying the [VkSemaphore](#) or [VkEvent](#) object in **semaphore** or **event**, respectively. The implementation will return the [MTLSharedEvent](#) in this member, or it will return **NULL** if no [MTLSharedEvent](#) could be found underlying the [VkSemaphore](#) or [VkEvent](#) object.

Valid Usage (Implicit)

- VUID-VkExportMetalSharedEventInfoEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_EXPORT_METAL_SHARED_EVENT_INFO_EXT](#)
- VUID-VkExportMetalSharedEventInfoEXT-semaphore-parameter
If **semaphore** is not [VK_NULL_HANDLE](#), **semaphore must** be a valid [VkSemaphore](#) handle
- VUID-VkExportMetalSharedEventInfoEXT-event-parameter
If **event** is not [VK_NULL_HANDLE](#), **event must** be a valid [VkEvent](#) handle
- VUID-VkExportMetalSharedEventInfoEXT-commonparent
Both of **event**, and **semaphore** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

To import a Metal `id<MTLSharedEvent>` object to underlie a [VkSemaphore](#) or [VkEvent](#) object, include a [VkImportMetalSharedEventInfoEXT](#) structure in the **pNext** chain of the [VkSemaphoreCreateInfo](#) or [VkEventCreateInfo](#) structure in a [vkCreateSemaphore](#) or [vkCreateEvent](#) command, respectively.

The [VkImportMetalSharedEventInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalSharedEventInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    MTLSharedEvent_id  mtlSharedEvent;
} VkImportMetalSharedEventInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlSharedEvent` is the Metal `id<MTLSharedEvent>` object that is to underlie the `VkSemaphore` or `VkEvent`.

If the `pNext` chain of the `VkSemaphoreCreateInfo` structure includes both `VkImportMetalSharedEventInfoEXT` and `VkSemaphoreTypeCreateInfo`, the `signaledValue` property of the imported `id<MTLSharedEvent>` object will be set to `VkSemaphoreTypeCreateInfo::initialValue`.

Valid Usage (Implicit)

- VUID-VkImportMetalSharedEventInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_METAL_SHARED_EVENT_INFO_EXT`

The type `id<MTLSharedEvent>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLSharedEvent_id` is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLSharedEvent;
typedef __unsafe_unretained id<MTLSharedEvent> MTLSharedEvent_id;
#else
typedef void* MTLSharedEvent_id;
#endif
```

11.2.11. QNX Screen Buffer External Memory

To import memory created outside of the current Vulkan instance from a QNX Screen buffer, add a `VkImportScreenBufferInfoQNX` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkImportScreenBufferInfoQNX` structure is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkImportScreenBufferInfoQNX {
    VkStructureType    sType;
    const void*        pNext;
    struct _screen_buffer* buffer;
} VkImportScreenBufferInfoQNX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is a pointer to a `struct _screen_buffer`, the QNX Screen buffer to import

The implementation **may** not acquire a reference to the imported Screen buffer. Therefore, the application **must** ensure that the object referred to by `buffer` stays valid as long as the device

memory to which it is imported is being used.

Valid Usage

- VUID-VkImportScreenBufferInfoQNX-buffer-08966
If **buffer** is not **NULL**, QNX Screen Buffers **must** be supported for import, as reported by [VkExternalImageFormatProperties](#) or [VkExternalBufferProperties](#)
- VUID-VkImportScreenBufferInfoQNX-buffer-08967
buffer is not **NULL**, it **must** be a pointer to [valid QNX Screen buffer](#)

Valid Usage (Implicit)

- VUID-VkImportScreenBufferInfoQNX-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IMPORT_SCREEN_BUFFER_INFO_QNX](#)

To determine the memory parameters to use when importing a QNX Screen buffer, call:

```
// Provided by VK_QNX_external_memory_screen_buffer
VkResult vkGetScreenBufferPropertiesQNX(
    VkDevice device,
    const struct _screen_buffer* buffer,
    VkScreenBufferPropertiesQNX* pProperties);
```

- **device** is the logical device that will be importing **buffer**.
- **buffer** is the QNX Screen buffer which will be imported.
- **pProperties** is a pointer to a [VkScreenBufferPropertiesQNX](#) structure in which the properties of **buffer** are returned.

Valid Usage

- VUID-vkGetScreenBufferPropertiesQNX-buffer-08968
buffer **must** be a [valid QNX Screen buffer](#)

Valid Usage (Implicit)

- VUID-vkGetScreenBufferPropertiesQNX-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetScreenBufferPropertiesQNX-buffer-parameter
buffer **must** be a valid pointer to a valid **_screen_buffer** value
- VUID-vkGetScreenBufferPropertiesQNX-pProperties-parameter
pProperties **must** be a valid pointer to a [VkScreenBufferPropertiesQNX](#) structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR`

The `VkScreenBufferPropertiesQNX` structure returned is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkScreenBufferPropertiesQNX {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       allocationSize;
    uint32_t           memoryTypeBits;
} VkScreenBufferPropertiesQNX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `allocationSize` is the size of the external memory.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified Screen buffer **can** be imported as.

Valid Usage (Implicit)

- VUID-VkScreenBufferPropertiesQNX-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SCREEN_BUFFER_PROPERTIES_QNX`
- VUID-VkScreenBufferPropertiesQNX-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkScreenBufferFormatPropertiesQNX`
- VUID-VkScreenBufferPropertiesQNX-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique

To obtain format properties of a QNX Screen buffer, include a `VkScreenBufferFormatPropertiesQNX` structure in the `pNext` chain of the `VkScreenBufferPropertiesQNX` structure passed to `vkGetScreenBufferPropertiesQNX`. This structure is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkScreenBufferFormatPropertiesQNX {
    VkStructureType      sType;
    void*                pNext;
    VkFormat              format;
    uint64_t              externalFormat;
    uint64_t              screenUsage;
    VkFormatFeatureFlags formatFeatures;
    VkComponentMapping    samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange    suggestedYcbcrRange;
    VkChromaLocation        suggestedXChromaOffset;
    VkChromaLocation        suggestedYChromaOffset;
} VkScreenBufferFormatPropertiesQNX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is the Vulkan format corresponding to the Screen buffer's format or `VK_FORMAT_UNDEFINED` if there is not an equivalent Vulkan format.
- `externalFormat` is an implementation-defined external format identifier for use with `VkExternalFormatQNX`. It **must** not be zero.
- `screenUsage` is an implementation-defined external usage identifier for the QNX Screen buffer.
- `formatFeatures` describes the capabilities of this external format when used with an image bound to memory imported from `buffer`.
- `samplerYcbcrConversionComponents` is the component swizzle that **should** be used in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYcbcrModel` is a suggested color model to use in the `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYcbcrRange` is a suggested numerical value range to use in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedXChromaOffset` is a suggested X chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYChromaOffset` is a suggested Y chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.

If the QNX Screen buffer has one of the formats listed in the [QNX Screen Format Equivalence table](#), then `format` **must** have the equivalent Vulkan format listed in the table. Otherwise, `format` **may** be `VK_FORMAT_UNDEFINED`, indicating the QNX Screen buffer **can** only be used with an external format. The `formatFeatures` member **must** include `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` and **should** include `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT`.

Valid Usage (Implicit)

- VUID-VkScreenBufferFormatPropertiesQNX-sType-sType
sType **must** be VK_STRUCTURE_TYPE_SCREEN_BUFFER_FORMAT_PROPERTIES_QNX

11.2.12. Device Group Memory Allocations

If the pNext chain of [VkMemoryAllocateInfo](#) includes a [VkMemoryAllocateFlagsInfo](#) structure, then that structure includes flags and a device mask controlling how many instances of the memory will be allocated.

The [VkMemoryAllocateFlagsInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryAllocateFlagsInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkMemoryAllocateFlags flags;
    uint32_t           deviceMask;
} VkMemoryAllocateFlagsInfo;
```

or the equivalent

```
// Provided by VK_KHR_device_group
typedef VkMemoryAllocateFlagsInfo VkMemoryAllocateFlagsInfoKHR;
```

- sType is a [VkStructureType](#) value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of [VkMemoryAllocateFlagBits](#) controlling the allocation.
- deviceMask is a mask of physical devices in the logical device, indicating that memory **must** be allocated on each device in the mask, if VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT is set in flags.

If VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT is not set, the number of instances allocated depends on whether VK_MEMORY_HEAP_MULTI_INSTANCE_BIT is set in the memory heap. If VK_MEMORY_HEAP_MULTI_INSTANCE_BIT is set, then memory is allocated for every physical device in the logical device (as if deviceMask has bits set for all device indices). If VK_MEMORY_HEAP_MULTI_INSTANCE_BIT is not set, then a single instance of memory is allocated (as if deviceMask is set to one).

On some implementations, allocations from a multi-instance heap **may** consume memory on all physical devices even if the deviceMask excludes some devices. If [VkPhysicalDeviceGroupProperties::subsetAllocation](#) is VK_TRUE, then memory is only consumed for the devices in the device mask.

NOTE

In practice, most allocations on a multi-instance heap will be allocated across all

physical devices. Unicast allocation support is an optional optimization for a minority of allocations.

Valid Usage

- VUID-VkMemoryAllocateFlagsInfo-deviceMask-00675
If `VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT` is set, `deviceMask` **must** be a valid device mask
- VUID-VkMemoryAllocateFlagsInfo-deviceMask-00676
If `VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT` is set, `deviceMask` **must** not be zero

Valid Usage (Implicit)

- VUID-VkMemoryAllocateFlagsInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_FLAGS_INFO`
- VUID-VkMemoryAllocateFlagsInfo-flags-parameter
`flags` **must** be a valid combination of `VkMemoryAllocateFlagBits` values

Bits which **can** be set in `VkMemoryAllocateFlagsInfo::flags`, controlling device memory allocation, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkMemoryAllocateFlagBits {
    VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT = 0x00000001,
    // Provided by VK_VERSION_1_2
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT = 0x00000002,
    // Provided by VK_VERSION_1_2
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT = 0x00000004,
    // Provided by VK_KHR_device_group
    VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT_KHR = VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT,
    // Provided by VK_KHR_buffer_device_address
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT_KHR = VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT,
    // Provided by VK_KHR_buffer_device_address
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT,
} VkMemoryAllocateFlagBits;
```

or the equivalent

```
// Provided by VK_KHR_device_group
typedef VkMemoryAllocateFlagBits VkMemoryAllocateFlagBitsKHR;
```

- `VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT` specifies that memory will be allocated for the devices in `VkMemoryAllocateFlagsInfo::deviceMask`.
- `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` specifies that the memory **can** be attached to a buffer

object created with the `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` bit set in `usage`, and that the memory handle **can** be used to retrieve an opaque address via `vkGetDeviceMemoryOpaqueCaptureAddress`.

- `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` specifies that the memory's address **can** be saved and reused on a subsequent run (e.g. for trace capture and replay), see `VkBufferOpaqueCaptureAddressCreateInfo` for more detail.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkMemoryAllocateFlags;
```

or the equivalent

```
// Provided by VK_KHR_device_group
typedef VkMemoryAllocateFlags VkMemoryAllocateFlagsKHR;
```

`VkMemoryAllocateFlags` is a bitmask type for setting a mask of zero or more `VkMemoryAllocateFlagBits`.

11.2.13. Opaque Capture Address Allocation

To request a specific device address for a memory allocation, add a `VkMemoryOpaqueCaptureAddressAllocateInfo` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkMemoryOpaqueCaptureAddressAllocateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkMemoryOpaqueCaptureAddressAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           opaqueCaptureAddress;
} VkMemoryOpaqueCaptureAddressAllocateInfo;
```

or the equivalent

```
// Provided by VK_KHR_buffer_device_address
typedef VkMemoryOpaqueCaptureAddressAllocateInfo
VkMemoryOpaqueCaptureAddressAllocateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `opaqueCaptureAddress` is the opaque capture address requested for the memory allocation.

If `opaqueCaptureAddress` is zero, no specific address is requested.

If `opaqueCaptureAddress` is not zero, it **should** be an address retrieved from `vkGetDeviceMemoryOpaqueCaptureAddress` on an identically created memory allocation on the same implementation.

NOTE

In most cases, it is expected that a non-zero `opaqueAddress` is an address retrieved from `vkGetDeviceMemoryOpaqueCaptureAddress` on an identically created memory allocation. If this is not the case, it is likely that `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS` errors will occur.

This is, however, not a strict requirement because trace capture/replay tools may need to adjust memory allocation parameters for imported memory.

If this structure is not present, it is as if `opaqueCaptureAddress` is zero.

Valid Usage (Implicit)

- `VUID-VkMemoryOpaqueCaptureAddressAllocateInfo-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_OPAQUE_CAPTURE_ADDRESS_ALLOCATE_INFO`

11.2.14. Freeing Device Memory

To free a memory object, call:

```
// Provided by VK_VERSION_1_0
void vkFreeMemory(
    VkDevice                device,
    VkDeviceMemory          memory,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that owns the memory.
- `memory` is the `VkDeviceMemory` object to be freed.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Before freeing a memory object, an application **must** ensure the memory object is no longer in use by the device—for example by command buffers in the *pending state*. Memory **can** be freed whilst still bound to resources, but those resources **must** not be used afterwards. Freeing a memory object releases the reference it held, if any, to its payload. If there are still any bound images or buffers, the memory object's payload **may** not be immediately released by the implementation, but **must** be released by the time all bound images and buffers have been destroyed. Once all references to a payload are released, it is returned to the heap from which it was allocated.

How memory objects are bound to Images and Buffers is described in detail in the [Resource Memory Association](#) section.

If a memory object is mapped at the time it is freed, it is implicitly unmapped.

NOTE

As described [below](#), host writes are not implicitly flushed when the memory object is unmapped, but the implementation **must** guarantee that writes that have not been flushed do not affect any other memory.

Valid Usage

- VUID-vkFreeMemory-memory-00677

All submitted commands that refer to **memory** (via images or buffers) **must** have completed execution

Valid Usage (Implicit)

- VUID-vkFreeMemory-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkFreeMemory-memory-parameter
If **memory** is not [VK_NULL_HANDLE](#), **memory** **must** be a valid [VkDeviceMemory](#) handle
- VUID-vkFreeMemory-pAllocator-parameter
If **pAllocator** is not [NULL](#), **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkFreeMemory-memory-parent
If **memory** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **memory** **must** be externally synchronized

11.2.15. Host Access to Device Memory Objects

Memory objects created with [vkAllocateMemory](#) are not directly host accessible.

Memory objects created with the memory property [VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT](#) are considered *mappable*. Memory objects **must** be mappable in order to be successfully mapped on the host.

To retrieve a host virtual address pointer to a region of a mappable memory object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkMapMemory(
    VkDevice                device,
    VkDeviceMemory          memory,
    VkDeviceSize            offset,
    VkDeviceSize            size,
    VkMemoryMapFlags        flags,
    void**                  ppData);
```

- **device** is the logical device that owns the memory.
- **memory** is the `VkDeviceMemory` object to be mapped.
- **offset** is a zero-based byte offset from the beginning of the memory object.
- **size** is the size of the memory range to map, or `VK_WHOLE_SIZE` to map from **offset** to the end of the allocation.
- **flags** is a bitmask of `VkMemoryMapFlagBits` specifying additional parameters of the memory map operation.
- **ppData** is a pointer to a `void*` variable in which a host-accessible pointer to the beginning of the mapped range is returned. The value of the returned pointer minus **offset** **must** be aligned to `VkPhysicalDeviceLimits::minMemoryMapAlignment`.

After a successful call to `vkMapMemory` the memory object **memory** is considered to be currently *host mapped*.

NOTE

It is an application error to call `vkMapMemory` on a memory object that is already *host mapped*.

NOTE

`vkMapMemory` will fail if the implementation is unable to allocate an appropriately sized contiguous virtual address range, e.g. due to virtual address space fragmentation or platform limits. In such cases, `vkMapMemory` **must** return `VK_ERROR_MEMORY_MAP_FAILED`. The application **can** improve the likelihood of success by reducing the size of the mapped range and/or removing unneeded mappings using `vkUnmapMemory`.

`vkMapMemory` does not check whether the device memory is currently in use before returning the host-accessible pointer. The application **must** guarantee that any previously submitted command that writes to this range has completed before the host reads from or writes to that range, and that any previously submitted command that reads from that range has completed before the host writes to that region (see [here](#) for details on fulfilling such a guarantee). If the device memory was allocated without the `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` set, these guarantees **must** be made for an extended range: the application **must** round down the start of the range to the nearest multiple of `VkPhysicalDeviceLimits::nonCoherentAtomSize`, and round the end of the range up to the nearest multiple of `VkPhysicalDeviceLimits::nonCoherentAtomSize`.

While a range of device memory is host mapped, the application is responsible for synchronizing both device and host access to that memory range.

NOTE

It is important for the application developer to become meticulously familiar with all of the mechanisms described in the chapter on [Synchronization and Cache Control](#) as they are crucial to maintaining memory access ordering.

Calling `vkMapMemory` is equivalent to calling `vkMapMemory2KHR` with an empty `pNext` chain.

Valid Usage

- VUID-vkMapMemory-memory-00678
`memory` **must** not be currently host mapped
- VUID-vkMapMemory-offset-00679
`offset` **must** be less than the size of `memory`
- VUID-vkMapMemory-size-00680
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be greater than `0`
- VUID-vkMapMemory-size-00681
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be less than or equal to the size of the `memory` minus `offset`
- VUID-vkMapMemory-memory-00682
`memory` **must** have been created with a memory type that reports `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT`
- VUID-vkMapMemory-memory-00683
`memory` **must** not have been allocated with multiple instances
- VUID-vkMapMemory-flags-09568
`VK_MEMORY_MAP_PLACED_BIT_EXT` **must** not be set in `flags`

Valid Usage (Implicit)

- VUID-vkMapMemory-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkMapMemory-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle
- VUID-vkMapMemory-flags-parameter
`flags` **must** be a valid combination of `VkMemoryMapFlagBits` values
- VUID-vkMapMemory-ppData-parameter
`ppData` **must** be a valid pointer to a pointer value
- VUID-vkMapMemory-memory-parent
`memory` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `memory` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_MEMORY_MAP_FAILED`

Bits which **can** be set in `vkMapMemory::flags` and `VkMemoryMapInfoKHR::flags`, specifying additional properties of a memory map, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkMemoryMapFlagBits {
    // Provided by VK_EXT_map_memory_placed
    VK_MEMORY_MAP_PLACED_BIT_EXT = 0x00000001,
} VkMemoryMapFlagBits;
```

- `VK_MEMORY_MAP_PLACED_BIT_EXT` requests that the implementation place the memory map at the virtual address specified by the application via `VkMemoryMapPlacedInfoEXT::pPlacedAddress`, replacing any existing mapping at that address. This flag **must** not be used with `vkMapMemory` as there is no way to specify the placement address.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryMapFlags;
```

`VkMemoryMapFlags` is a bitmask type for setting a mask of zero or more `VkMemoryMapFlagBits`.

Alternatively, to retrieve a host virtual address pointer to a region of a mappable memory object, call:

```
// Provided by VK_KHR_map_memory2
VkResult vkMapMemory2KHR(
    VkDevice device,
    const VkMemoryMapInfoKHR* pMemoryMapInfo,
    void** ppData);
```

- `device` is the logical device that owns the memory.
- `pMemoryMapInfo` is a pointer to a `VkMemoryMapInfoKHR` structure describing parameters of the map.
- `ppData` is a pointer to a `void *` variable in which is returned a host-accessible pointer to the beginning of the mapped range. This pointer minus `VkMemoryMapInfoKHR::offset` **must** be

aligned to at least `VkPhysicalDeviceLimits::minMemoryMapAlignment`.

This function behaves identically to `vkMapMemory` except that it gets its parameters via an extensible structure pointer rather than directly as function arguments.

Valid Usage (Implicit)

- VUID-vkMapMemory2KHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkMapMemory2KHR-pMemoryMapInfo-parameter
`pMemoryMapInfo` **must** be a valid pointer to a valid `VkMemoryMapInfoKHR` structure
- VUID-vkMapMemory2KHR-ppData-parameter
`ppData` **must** be a valid pointer to a pointer value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_MEMORY_MAP_FAILED`

The `VkMemoryMapInfoKHR` structure is defined as:

```
// Provided by VK_KHR_map_memory2
typedef struct VkMemoryMapInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkMemoryMapFlags    flags;
    VkDeviceMemory      memory;
    VkDeviceSize        offset;
    VkDeviceSize        size;
} VkMemoryMapInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkMemoryMapFlagBits` specifying additional parameters of the memory map operation.
- `memory` is the `VkDeviceMemory` object to be mapped.
- `offset` is a zero-based byte offset from the beginning of the memory object.

- `size` is the size of the memory range to map, or `VK_WHOLE_SIZE` to map from `offset` to the end of the allocation.

Valid Usage

- VUID-VkMemoryMapInfoKHR-memory-07958
`memory` **must** not be currently host mapped
- VUID-VkMemoryMapInfoKHR-offset-07959
`offset` **must** be less than the size of `memory`
- VUID-VkMemoryMapInfoKHR-size-07960
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be greater than 0
- VUID-VkMemoryMapInfoKHR-size-07961
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be less than or equal to the size of the `memory` minus `offset`
- VUID-VkMemoryMapInfoKHR-memory-07962
`memory` **must** have been created with a memory type that reports `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT`
- VUID-VkMemoryMapInfoKHR-memory-07963
`memory` **must** not have been allocated with multiple instances
- VUID-VkMemoryMapInfoKHR-flags-09569
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags`, the `memoryMapPlaced` feature **must** be enabled
- VUID-VkMemoryMapInfoKHR-flags-09570
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags`, the `pNext` chain **must** include a `VkMemoryMapPlacedInfoEXT` structure and `VkMemoryMapPlacedInfoEXT::pPlacedAddress` **must** not be `NULL`
- VUID-VkMemoryMapInfoKHR-flags-09571
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and the `memoryMapRangePlaced` feature is not enabled, `offset` **must** be zero
- VUID-VkMemoryMapInfoKHR-flags-09572
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and the `memoryMapRangePlaced` feature is not enabled, `size` **must** be `VK_WHOLE_SIZE` or `VkMemoryAllocateInfo::allocationSize`
- VUID-VkMemoryMapInfoKHR-flags-09573
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and the `memoryMapRangePlaced` feature is enabled, `offset` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT::minPlacedMemoryMapAlignment`
- VUID-VkMemoryMapInfoKHR-flags-09574
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and `size` is not `VK_WHOLE_SIZE`, `size` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT::minPlacedMemoryMapAlignment`
- VUID-VkMemoryMapInfoKHR-flags-09651
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and `size` is `VK_WHOLE_SIZE`, `VkMemoryAllocateInfo::allocationSize` **must** be aligned to an integer multiple of

VkPhysicalDeviceMapMemoryPlacedPropertiesEXT::minPlacedMemoryMapAlignment

- VUID-VkMemoryMapInfoKHR-flags-09575

If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags`, the memory object **must** not have been imported from a handle type of `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkMemoryMapInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_MAP_INFO_KHR`
- VUID-VkMemoryMapInfoKHR-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkMemoryMapPlacedInfoEXT`
- VUID-VkMemoryMapInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkMemoryMapInfoKHR-flags-parameter
`flags` **must** be a valid combination of `VkMemoryMapFlagBits` values
- VUID-VkMemoryMapInfoKHR-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle

Host Synchronization

- Host access to `memory` **must** be externally synchronized

If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `VkMemoryMapInfoKHR::flags` and the `pNext` chain of `VkMemoryMapInfoKHR` includes a `VkMemoryMapPlacedInfoEXT` structure, then that structure specifies the placement address of the memory map. The implementation will place the memory map at the specified address, replacing any existing maps in the specified memory range. Replacing memory maps in this way does not implicitly unmap Vulkan memory objects. Instead, the application **must** ensure no other Vulkan memory objects are mapped anywhere in the specified virtual address range. If successful, `ppData` will be set to the same value as `VkMemoryMapPlacedInfoEXT::pPlacedAddress` and `vkMapMemory2KHR` will return `VK_SUCCESS`. If it cannot place the map at the requested address for any reason, the memory object is left unmapped and `vkMapMemory2KHR` will return `VK_ERROR_MEMORY_MAP_FAILED`.

The `VkMemoryMapPlacedInfoEXT` structure is defined as:

```
// Provided by VK_EXT_map_memory_placed
typedef struct VkMemoryMapPlacedInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    void*              pPlacedAddress;
} VkMemoryMapPlacedInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pPlacedAddress` is the virtual address at which to place the address. If `VkMemoryMapInfoKHR::flags` does not contain `VK_MEMORY_MAP_PLACED_BIT_EXT`, this value is ignored.

Valid Usage

- VUID-VkMemoryMapPlacedInfoEXT-flags-09576
If `VkMemoryMapInfoKHR::flags` contains `VK_MEMORY_MAP_PLACED_BIT_EXT`, `pPlacedAddress` **must** not be `NULL`
- VUID-VkMemoryMapPlacedInfoEXT-pPlacedAddress-09577
`pPlacedAddress` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT::minPlacedMemoryMapAlignment`
- VUID-VkMemoryMapPlacedInfoEXT-pPlacedAddress-09578
The address range specified by `pPlacedAddress` and `VkMemoryMapInfoKHR::size` **must** not overlap any existing Vulkan memory object mapping

Valid Usage (Implicit)

- VUID-VkMemoryMapPlacedInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_MAP_PLACED_INFO_EXT`

Two commands are provided to enable applications to work with non-coherent memory allocations: `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges`.

NOTE

If the memory object was created with the `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` set, `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges` are unnecessary and **may** have a performance cost. However, [availability and visibility operations](#) still need to be managed on the device. See the description of [host access types](#) for more information.

NOTE

While memory objects imported from a handle type of `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT` are inherently mapped to host address space, they are not considered to be host mapped device memory unless they are explicitly host mapped using `vkMapMemory`. That means flushing or invalidating host caches with respect to host accesses performed on such memory through the original host pointer specified at import time is the responsibility of the application and **must** be performed with appropriate synchronization primitives provided by the platform which are outside the scope of Vulkan. `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges`, however, **can** still be used on such memory objects to synchronize host accesses performed through the host pointer of the host mapped device memory range returned by `vkMapMemory`.

After a successful call to `vkMapMemory` or `vkMapMemory2KHR` the memory object `memory` is considered to be currently *host mapped*.

To flush ranges of non-coherent memory from the host caches, call:

```
// Provided by VK_VERSION_1_0
VkResult vkFlushMappedMemoryRanges(
    VkDevice                                device,
    uint32_t                                memoryRangeCount,
    const VkMappedMemoryRange*              pMemoryRanges);
```

- `device` is the logical device that owns the memory ranges.
- `memoryRangeCount` is the length of the `pMemoryRanges` array.
- `pMemoryRanges` is a pointer to an array of `VkMappedMemoryRange` structures describing the memory ranges to flush.

`vkFlushMappedMemoryRanges` guarantees that host writes to the memory ranges described by `pMemoryRanges` are made available to the host memory domain, such that they **can** be made available to the device memory domain via [memory domain operations](#) using the `VK_ACCESS_HOST_WRITE_BIT` access type.

The first [synchronization scope](#) includes all host operations that happened-before it, as defined by the host memory model.

NOTE	<i>Note</i> Some systems allow writes that do not directly integrate with the host memory model; these have to be synchronized by the application manually. One example of this is non-temporal store instructions on x86; to ensure these happen-before submission, applications should call <code>_mm_sfence()</code> .
-------------	--

The second [synchronization scope](#) is empty.

The first [access scope](#) includes host writes to the specified memory ranges.

NOTE	<i>Note</i> When a host write to a memory location is made available in this way, each whole aligned set of <code>nonCoherentAtomSize</code> bytes that the memory location exists in will also be made available as if they were written by the host. For example, with a <code>nonCoherentAtomSize</code> of 128, if an application writes to the first byte of a memory object via a host mapping, the first 128 bytes of the memory object will be made available by this command. While the value of the following 127 bytes will be unchanged, this does count as an access for the purpose of synchronization, so care must be taken to avoid data races.
-------------	---

The second [access scope](#) is empty.

Unmapping non-coherent memory does not implicitly flush the host mapped memory, and host

writes that have not been flushed **may** not ever be visible to the device. However, implementations **must** ensure that writes that have not been flushed do not become visible to any other memory.

NOTE

The above guarantee avoids a potential memory corruption in scenarios where host writes to a mapped memory object have not been flushed before the memory is unmapped (or freed), and the virtual address range is subsequently reused for a different mapping (or memory allocation).

Valid Usage (Implicit)

- VUID-vkFlushMappedMemoryRanges-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkFlushMappedMemoryRanges-pMemoryRanges-parameter
pMemoryRanges **must** be a valid pointer to an array of **memoryRangeCount** valid [VkMappedMemoryRange](#) structures
- VUID-vkFlushMappedMemoryRanges-memoryRangeCount-arraylength
memoryRangeCount **must** be greater than 0

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)

To invalidate ranges of non-coherent memory from the host caches, call:

```
// Provided by VK_VERSION_1_0
VkResult vkInvalidateMappedMemoryRanges(
    VkDevice          device,
    uint32_t          memoryRangeCount,
    const VkMappedMemoryRange* pMemoryRanges);
```

- **device** is the logical device that owns the memory ranges.
- **memoryRangeCount** is the length of the **pMemoryRanges** array.
- **pMemoryRanges** is a pointer to an array of [VkMappedMemoryRange](#) structures describing the memory ranges to invalidate.

vkInvalidateMappedMemoryRanges guarantees that device writes to the memory ranges described by **pMemoryRanges**, which have been made available to the host memory domain using the [VK_ACCESS_HOST_WRITE_BIT](#) and [VK_ACCESS_HOST_READ_BIT](#) [access types](#), are made visible to the host. If

a range of non-coherent memory is written by the host and then invalidated without first being flushed, its contents are undefined.

The first [synchronization scope](#) includes all host operations that happened-before it, as defined by the host memory model.

Note

This function does not synchronize with device operations directly - other host [synchronization operations](#) that depend on device operations such as [vkWaitForFences](#) must be executed beforehand. So for any non-coherent device write to be made visible to the host, there has to be a dependency chain along the following lines:

NOTE

1. Device write
2. Device memory barrier including host reads in its second scope
3. Signal on the device (e.g. a [fence signal operation](#))
4. Wait on the host (e.g. [vkWaitForFences](#))
5. [vkInvalidateMappedMemoryRanges](#)

The second [synchronization scope](#) includes all host operations that happen-after it, as defined by the host memory model.

The first [access scope](#) is empty.

The second [access scope](#) includes host reads to the specified memory ranges.

Note

When a device write to a memory location is made visible to the host in this way, each whole aligned set of [nonCoherentAtomSize](#) bytes that the memory location exists in will also be made visible as if they were written by the device. For example, with a [nonCoherentAtomSize](#) of 128, if an application writes to the first byte of a memory object on the device, the first 128 bytes of the memory object will be made visible by this command. While the value of the following 127 bytes will be unchanged, this does count as an access for the purpose of synchronization, so care must be taken to avoid data races.

NOTE

NOTE

Mapping non-coherent memory does not implicitly invalidate that memory.

Valid Usage (Implicit)

- VUID-vkInvalidateMappedMemoryRanges-device-parameter [device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkInvalidateMappedMemoryRanges-pMemoryRanges-parameter [pMemoryRanges](#) **must** be a valid pointer to an array of [memoryRangeCount](#) valid [VkMappedMemoryRange](#) structures

- VUID-vkInvalidateMappedMemoryRanges-memoryRangeCount-arraylength
`memoryRangeCount` **must** be greater than 0

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkMappedMemoryRange` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMappedMemoryRange {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory      memory;
    VkDeviceSize        offset;
    VkDeviceSize        size;
} VkMappedMemoryRange;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is the memory object to which this range belongs.
- `offset` is the zero-based byte offset from the beginning of the memory object.
- `size` is either the size of range, or `VK_WHOLE_SIZE` to affect the range from `offset` to the end of the current mapping of the allocation.

Valid Usage

- VUID-VkMappedMemoryRange-memory-00684
`memory` **must** be currently host mapped
- VUID-VkMappedMemoryRange-size-00685
If `size` is not equal to `VK_WHOLE_SIZE`, `offset` and `size` **must** specify a range contained within the currently mapped range of `memory`
- VUID-VkMappedMemoryRange-size-00686
If `size` is equal to `VK_WHOLE_SIZE`, `offset` **must** be within the currently mapped range of `memory`
- VUID-VkMappedMemoryRange-offset-00687
`offset` **must** be a multiple of `VkPhysicalDeviceLimits::nonCoherentAtomSize`

- VUID-VkMappedMemoryRange-size-01389

If **size** is equal to **VK_WHOLE_SIZE**, the end of the current mapping of **memory** **must** either be a multiple of **VkPhysicalDeviceLimits::nonCoherentAtomSize** bytes from the beginning of the memory object, or be equal to the end of the memory object

- VUID-VkMappedMemoryRange-size-01390

If **size** is not equal to **VK_WHOLE_SIZE**, **size** **must** either be a multiple of **VkPhysicalDeviceLimits::nonCoherentAtomSize**, or **offset** plus **size** **must** equal the size of **memory**

Valid Usage (Implicit)

- VUID-VkMappedMemoryRange-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_MAPPED_MEMORY_RANGE**
- VUID-VkMappedMemoryRange-pNext-pNext
pNext **must** be **NULL**
- VUID-VkMappedMemoryRange-memory-parameter
memory **must** be a valid **VkDeviceMemory** handle

To unmap a memory object once host access to it is no longer needed by the application, call:

```
// Provided by VK_VERSION_1_0
void vkUnmapMemory(
    VkDevice          device,
    VkDeviceMemory    memory);
```

- **device** is the logical device that owns the memory.
- **memory** is the memory object to be unmapped.

Calling **vkUnmapMemory** is equivalent to calling **vkUnmapMemory2KHR** with an empty **pNext** chain and **flags** set to zero.

Valid Usage

- VUID-vkUnmapMemory-memory-00689
memory **must** be currently host mapped

Valid Usage (Implicit)

- VUID-vkUnmapMemory-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkUnmapMemory-memory-parameter
memory **must** be a valid **VkDeviceMemory** handle

- VUID-vkUnmapMemory-memory-parent
memory must have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **memory must** be externally synchronized

Alternatively, to unmap a memory object once host access to it is no longer needed by the application, call:

```
// Provided by VK_KHR_map_memory2
VkResult vkUnmapMemory2KHR(
    VkDevice                                device,
    const VkMemoryUnmapInfoKHR*             pMemoryUnmapInfo);
```

- **device** is the logical device that owns the memory.
- **pMemoryUnmapInfo** is a pointer to a [VkMemoryUnmapInfoKHR](#) structure describing parameters of the unmap.

This function behaves identically to [vkUnmapMemory](#) except that it gets its parameters via an extensible structure pointer rather than directly as function arguments.

Valid Usage (Implicit)

- VUID-vkUnmapMemory2KHR-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkUnmapMemory2KHR-pMemoryUnmapInfo-parameter
pMemoryUnmapInfo must be a valid pointer to a valid [VkMemoryUnmapInfoKHR](#) structure

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_MEMORY_MAP_FAILED**

The [VkMemoryUnmapInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_map_memory2
typedef struct VkMemoryUnmapInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkMemoryUnmapFlagsKHR flags;
    VkDeviceMemory       memory;
} VkMemoryUnmapInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkMemoryUnmapFlagBitsKHR](#) specifying additional parameters of the memory map operation.
- **memory** is the [VkDeviceMemory](#) object to be unmapped.

Valid Usage

- VUID-VkMemoryUnmapInfoKHR-memory-07964
memory must be currently host mapped
- VUID-VkMemoryUnmapInfoKHR-flags-09579
If **VK_MEMORY_UNMAP_RESERVE_BIT_EXT** is set in **flags**, the **memoryUnmapReserve must** be enabled
- VUID-VkMemoryUnmapInfoKHR-flags-09580
If **VK_MEMORY_UNMAP_RESERVE_BIT_EXT** is set in **flags**, the memory object **must** not have been imported from a handle type of **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT** or **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT**

Valid Usage (Implicit)

- VUID-VkMemoryUnmapInfoKHR-sType-sType
sType must be **VK_STRUCTURE_TYPE_MEMORY_UNMAP_INFO_KHR**
- VUID-VkMemoryUnmapInfoKHR-pNext-pNext
pNext must be **NULL**
- VUID-VkMemoryUnmapInfoKHR-flags-parameter
flags must be a valid combination of [VkMemoryUnmapFlagBitsKHR](#) values
- VUID-VkMemoryUnmapInfoKHR-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle

Host Synchronization

- Host access to **memory must** be externally synchronized

Bits which **can** be set in [VkMemoryUnmapInfoKHR::flags](#), specifying additional properties of a

memory unmap, are:

```
// Provided by VK_KHR_map_memory2
typedef enum VkMemoryUnmapFlagBitsKHR {
    // Provided by VK_EXT_map_memory_placed
    VK_MEMORY_UNMAP_RESERVE_BIT_EXT = 0x00000001,
} VkMemoryUnmapFlagBitsKHR;
```

- **VK_MEMORY_UNMAP_RESERVE_BIT_EXT** requests that virtual address range currently occupied by the memory map remain reserved after the **vkUnmapMemory2KHR** call completes. Future system memory map operations or calls to **vkMapMemory** or **vkMapMemory2KHR** will not return addresses in that range unless the range has since been unreserved by the application or the mapping is explicitly placed in that range by calling **vkMapMemory2KHR** with **VK_MEMORY_MAP_PLACED_BIT_EXT**, or doing the system memory map equivalent. When **VK_MEMORY_UNMAP_RESERVE_BIT_EXT** is set, the memory unmap operation **may** fail, in which case the memory object will remain host mapped and **vkUnmapMemory2KHR** will return **VK_ERROR_MEMORY_MAP_FAILED**.

```
// Provided by VK_KHR_map_memory2
typedef VkFlags VkMemoryUnmapFlagsKHR;
```

VkMemoryUnmapFlagsKHR is a bitmask type for setting a mask of zero or more **VkMemoryUnmapFlagBitsKHR**.

11.2.16. Lazily Allocated Memory

If the memory object is allocated from a heap with the **VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT** bit set, that object's backing memory **may** be provided by the implementation lazily. The actual committed size of the memory **may** initially be as small as zero (or as large as the requested size), and monotonically increases as additional memory is needed.

A memory type with this flag set is only allowed to be bound to a **VkImage** whose usage flags include **VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT**.

NOTE

Using lazily allocated memory objects for framebuffer attachments that are not needed once a render pass instance has completed **may** allow some implementations to never allocate memory for such attachments.

To determine the amount of lazily-allocated memory that is currently committed for a memory object, call:

```
// Provided by VK_VERSION_1_0
void vkGetDeviceMemoryCommitment(
    VkDevice                device,
    VkDeviceMemory          memory,
    VkDeviceSize*           pCommittedMemoryInBytes);
```

- **device** is the logical device that owns the memory.
- **memory** is the memory object being queried.
- **pCommittedMemoryInBytes** is a pointer to a **VkDeviceSize** value in which the number of bytes currently committed is returned, on success.

The implementation **may** update the commitment at any time, and the value returned by this query **may** be out of date.

The implementation guarantees to allocate any committed memory from the **heapIndex** indicated by the memory type that the memory object was created with.

Valid Usage

- VUID-vkGetDeviceMemoryCommitment-memory-00690
memory must have been created with a memory type that reports **VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT**

Valid Usage (Implicit)

- VUID-vkGetDeviceMemoryCommitment-device-parameter
device must be a valid **VkDevice** handle
- VUID-vkGetDeviceMemoryCommitment-memory-parameter
memory must be a valid **VkDeviceMemory** handle
- VUID-vkGetDeviceMemoryCommitment-pCommittedMemoryInBytes-parameter
pCommittedMemoryInBytes must be a valid pointer to a **VkDeviceSize** value
- VUID-vkGetDeviceMemoryCommitment-memory-parent
memory must have been created, allocated, or retrieved from **device**

11.2.17. Protected Memory

Protected memory divides device memory into protected device memory and unprotected device memory.

Protected memory adds the following concepts:

- Memory:
 - Unprotected device memory, which **can** be visible to the device and **can** be visible to the host
 - Protected device memory, which **can** be visible to the device but **must** not be visible to the host
- Resources:
 - Unprotected images and unprotected buffers, to which unprotected memory **can** be bound
 - Protected images and protected buffers, to which protected memory **can** be bound

- Command buffers:
 - Unprotected command buffers, which **can** be submitted to a device queue to execute unprotected queue operations
 - Protected command buffers, which **can** be submitted to a protected-capable device queue to execute protected queue operations
- Device queues:
 - Unprotected device queues, to which unprotected command buffers **can** be submitted
 - Protected-capable device queues, to which unprotected command buffers or protected command buffers **can** be submitted
- Queue submissions
 - Unprotected queue submissions, through which unprotected command buffers **can** be submitted
 - Protected queue submissions, through which protected command buffers **can** be submitted
- Queue operations
 - Unprotected queue operations
 - Protected queue operations

NOTE

When the `protectedMemory` feature is enabled, all pipelines **may** be recorded in either protected or unprotected command buffers (or both), which may incur an extra cost on some implementations. This **can** be mitigated by enabling the `pipelineProtectedAccess` feature, in which case pipelines created with `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT_EXT` may only be recorded in protected command buffers, and pipelines created with `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT_EXT` may only be recorded in unprotected command buffers.

Protected Memory Access Rules

If `VkPhysicalDeviceProtectedMemoryProperties::protectedNoFault` is `VK_FALSE`, applications **must** not perform any of the following operations:

- Write to unprotected memory within protected queue operations.
- Access protected memory within protected queue operations other than in framebuffer-space pipeline stages, the compute shader stage, or the transfer stage.
- Perform a query within protected queue operations.

If `VkPhysicalDeviceProtectedMemoryProperties::protectedNoFault` is `VK_TRUE`, these operations are valid, but reads will return undefined values, and writes will either be dropped or store undefined values.

Additionally, indirect operations **must** not be performed within protected queue operations.

Whether these operations are valid or not, or if any other invalid usage is performed, the implementation **must** guarantee that:

- Protected device memory **must** never be visible to the host.
- Values written to unprotected device memory **must** not be a function of values from protected memory.

11.2.18. External Memory Handle Types

Android Hardware Buffer

Android's NDK defines [AHardwareBuffer](#) objects, which represent device memory that is shareable across processes and that **can** be accessed by a variety of media APIs and the hardware used to implement them. These Android hardware buffer objects **may** be imported into [VkDeviceMemory](#) objects for access via Vulkan, or exported from Vulkan. An [VkImage](#) or [VkBuffer](#) **can** be bound to the imported or exported [VkDeviceMemory](#) object if it is created with `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`.

To remove an unnecessary compile time dependency, an incomplete type definition of [AHardwareBuffer](#) is provided in the Vulkan headers:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
struct AHardwareBuffer;
```

The actual [AHardwareBuffer](#) type is defined in Android NDK headers.

NOTE

The NDK format, usage, and size/dimensions of an [AHardwareBuffer](#) object can be obtained with the [AHardwareBuffer_describe](#) function. While Android hardware buffers can be imported to or exported from Vulkan without using that function, valid usage and implementation behavior is defined in terms of the [AHardwareBuffer_Desc](#) properties it returns.

Android hardware buffer objects are reference-counted using Android NDK functions outside of the scope of this specification. A [VkDeviceMemory](#) imported from an Android hardware buffer or that **can** be exported to an Android hardware buffer **must** acquire a reference to its [AHardwareBuffer](#) object, and **must** release this reference when the device memory is freed. During the host execution of a Vulkan command that has an Android hardware buffer as a parameter (including indirect parameters via [pNext](#) chains), the application **must** not decrement the Android hardware buffer's reference count to zero.

Android hardware buffers **can** be mapped and unmapped for CPU access using the NDK functions. These lock and unlock APIs are considered to acquire and release ownership of the Android hardware buffer, and applications **must** follow the rules described in [External Resource Sharing](#) to transfer ownership between the Vulkan instance and these native APIs.

Android hardware buffers **can** be shared with external APIs and Vulkan instances on the same device, and also with foreign devices. When transferring ownership of the Android hardware buffer, the external and foreign special queue families described in [Queue Family Ownership Transfer](#) are not identical. All APIs which produce or consume Android hardware buffers are considered to use foreign devices, except OpenGL ES contexts and Vulkan logical devices that have

matching device and driver UUIDs. Implementations **may** treat a transfer to or from the foreign queue family as if it were a transfer to or from the external queue family when the Android hardware buffer's usage only permits it to be used on the same physical device.

Android Hardware Buffer Optimal Usages

Vulkan buffer and image usage flags do not correspond exactly to Android hardware buffer usage flags. When allocating Android hardware buffers with non-Vulkan APIs, if any `AHARDWAREBUFFER_USAGE_GPU_*` usage bits are included, by default the allocator **must** allocate the memory in such a way that it supports Vulkan usages and creation flags in the [usage equivalence table](#) which do not have Android hardware buffer equivalents.

An `VkAndroidHardwareBufferUsageANDROID` structure **can** be included in the `pNext` chain of a `VkImageFormatProperties2` structure passed to `vkGetPhysicalDeviceImageFormatProperties2` to obtain optimal Android hardware buffer usage flags for specific Vulkan resource creation parameters. Some usage flags returned by these commands are **required** based on the input parameters, but additional vendor-specific usage flags (`AHARDWAREBUFFER_USAGE_VENDOR_*`) **may** also be returned. Any Android hardware buffer allocated with these vendor-specific usage flags and imported to Vulkan **must** only be bound to resources created with parameters that are a subset of the parameters used to obtain the Android hardware buffer usage, since the memory **may** have been allocated in a way incompatible with other parameters. If an Android hardware buffer is successfully allocated with additional non-vendor-specific usage flags in addition to the recommended usage, it **must** support being used in the same ways as an Android hardware buffer allocated with only the recommended usage, and also in ways indicated by the additional usage.

Android Hardware Buffer External Formats

Android hardware buffers **may** represent images using implementation-specific formats, layouts, color models, etc., which do not have Vulkan equivalents. Such *external formats* are commonly used by external image sources such as video decoders or cameras. Vulkan **can** import Android hardware buffers that have external formats, but since the image contents are in a possibly proprietary representation, images with external formats **must** have optimal tiling, and their use is restricted. Images with external formats **must** only be sampled with a sampler that has $Y'C_B C_R$ conversion enabled.

Images that will be backed by an Android hardware buffer **can** use an external format by setting `VkImageCreateInfo::format` to `VK_FORMAT_UNDEFINED` and including a `VkExternalFormatANDROID` structure in the `pNext` chain. Images **can** be created with an external format even if the Android hardware buffer has a format which has an [equivalent Vulkan format](#) to enable consistent handling of images from sources that might use either category of format. However, all images created with an external format are subject to the valid usage requirements associated with external formats, even if the Android hardware buffer's format has a Vulkan equivalent. The external format of an Android hardware buffer **can** be obtained by passing a `VkAndroidHardwareBufferFormatPropertiesANDROID` structure to `vkGetAndroidHardwareBufferPropertiesANDROID`.

Android Hardware Buffer Image Resources

Android hardware buffers have intrinsic width, height, format, and usage properties, so Vulkan

images bound to memory imported from an Android hardware buffer **must** use dedicated allocations: `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` **must** be `VK_TRUE` for images created with `VkExternalMemoryImageCreateInfo::handleTypes` that includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`. When creating an image that will be bound to an imported Android hardware buffer, the image creation parameters **must** be equivalent to the `AHardwareBuffer` properties as described by the valid usage of `VkMemoryAllocateInfo`. Similarly, device memory allocated for a dedicated image **must** not be exported to an Android hardware buffer until it has been bound to that image, and the implementation **must** return an Android hardware buffer with properties derived from the image:

- The `width` and `height` members of `AHardwareBuffer_Desc` **must** be the same as the `width` and `height` members of `VkImageCreateInfo::extent`, respectively.
- The `layers` member of `AHardwareBuffer_Desc` **must** be the same as the `arrayLayers` member of `VkImageCreateInfo`.
- The `format` member of `AHardwareBuffer_Desc` **must** be equivalent to `VkImageCreateInfo::format` as defined by `AHardwareBuffer Format Equivalence`.
- The `usage` member of `AHardwareBuffer_Desc` **must** include bits corresponding to bits included in `VkImageCreateInfo::usage` and `VkImageCreateInfo::flags` where such a correspondence exists according to `AHardwareBuffer Usage Equivalence`. It **may** also include additional usage bits, including vendor-specific usages. Presence of vendor usage bits **may** make the Android hardware buffer only usable in ways indicated by the image creation parameters, even when used outside Vulkan, in a similar way that allocating the Android hardware buffer with usage returned in `VkAndroidHardwareBufferUsageANDROID` does.

Implementations **may** support fewer combinations of image creation parameters for images with Android hardware buffer external handle type than for non-external images. Support for a given set of parameters **can** be determined by passing `VkExternalImageFormatProperties` to `vkGetPhysicalDeviceImageFormatProperties2` with `handleType` set to `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`. Any Android hardware buffer successfully allocated outside Vulkan with usage that includes `AHardwareBuffer_USAGE_GPU_*` **must** be supported when using equivalent Vulkan image parameters. If a given choice of image parameters are supported for import, they **can** also be used to create an image and memory that will be exported to an Android hardware buffer.

Table 13. *AHardwareBuffer Format Equivalence*

AHardwareBuffer Format	Vulkan Format
<code>AHardwareBuffer_FORMAT_R8G8B8A8_UNORM</code>	<code>VK_FORMAT_R8G8B8A8_UNORM</code>
<code>AHardwareBuffer_FORMAT_R8G8B8X8_UNORM</code> ¹	<code>VK_FORMAT_R8G8B8A8_UNORM</code>

AHardwareBuffer_Usage_GPU_Data_Buffer ⁴	VK_IMAGE_USAGE_STORAGE_BIT

1

Vulkan does not differentiate between `AHardwareBuffer_Format_R8G8B8A8_Unorm` and `AHardwareBuffer_Format_R8G8B8X8_Unorm`: they both behave as `VK_FORMAT_R8G8B8A8_UNORM`. After an external entity writes to a `AHardwareBuffer_Format_R8G8B8X8_Unorm` Android hardware buffer, the values read by Vulkan from the X/A component are undefined. To emulate the traditional behavior of the X component during sampling or blending, applications **should** use `VK_COMPONENT_SWIZZLE_ONE` in image view component mappings and `VK_BLEND_FACTOR_ONE` in color blend factors. There is no way to avoid copying these undefined values when copying from such an image to another image or buffer.

2

The `AHardwareBuffer_Usage_GPU_Mipmap_Complete` flag does not correspond to a Vulkan image usage or creation flag. Instead, its presence indicates that the Android hardware buffer contains a complete mipmap chain, and its absence indicates that the Android hardware buffer contains only a single mip level.

3

Only image usages valid for the format are valid. It would be invalid to take a Android Hardware Buffer with a format of `AHardwareBuffer_Format_R8G8B8A8_Unorm` that has a `AHardwareBuffer_Usage_GPU_Framebuffer` usage and try to create an image with `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`.

In combination with a hardware buffer format other than `BLOB`.

NOTE

When using `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` with Android hardware buffer images, applications **should** use `VkImageFormatListCreateInfo` to inform the implementation which view formats will be used with the image. For some common sets of format, this allows some implementations to provide significantly better performance when accessing the image via Vulkan.

Android Hardware Buffer Resources

Android hardware buffers with a format of `AHARDWAREBUFFER_FORMAT_BLOB` and usage that includes `AHARDWAREBUFFER_USAGE_GPU_DATA_BUFFER` **can** be used as the backing store for `VkBuffer` objects. Such Android hardware buffers have a size in bytes specified by their `width`; `height` and `layers` are both 1.

Unlike images, buffer resources backed by Android hardware buffers do not require dedicated allocations.

Exported `AHardwareBuffer` objects that do not have dedicated images **must** have a format of `AHARDWAREBUFFER_FORMAT_BLOB`, usage **must** include `AHARDWAREBUFFER_USAGE_GPU_DATA_BUFFER`, `width` **must** equal the device memory allocation size, and `height` and `layers` **must** be 1.

QNX Screen Buffer

The QNX SDP defines `_screen_buffer` objects, which represent a buffer that the QNX Screen graphics subsystem can use directly in its windowing system APIs. More specifically, a Screen buffer is an area of memory that stores pixel data. It can be attached to Screen windows, streams, or pixmaps. These QNX Screen buffer objects **may** be imported into `VkDeviceMemory` objects for access via Vulkan. An `VkImage` or `VkBuffer` **can** be bound to the imported `VkDeviceMemory` object if it is created with `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`.

`struct _screen_buffer` is strongly typed, so naming the handle type is redundant. The internal layout and therefore size of a `struct _screen_buffer` image may depend on native usage flags that do not have corresponding Vulkan counterparts.

QNX Screen Buffer Validity

The design of Screen in the QNX SDP makes it difficult to determine the validity of objects from outside of Screen. Therefore, applications **must** ensure that QNX Screen buffer objects provided used in various Vulkan interfaces are ones created explicitly with QNX Screen APIs. See QNX SDP documentation for more information.

A `VkDeviceMemory` imported from a QNX Screen buffer has no way to acquire a reference to its `_screen_buffer` object. Therefore, during the host execution of a Vulkan command that has a QNX Screen buffer as a parameter (including indirect parameters via `pNext` chains), the application **must** ensure that the QNX Screen buffer resource remains valid.

Generally, for a `_screen_buffer` object to be valid for use within a Vulkan implementation, the buffer object **should** have a `_screen_buffer::SCREEN_PROPERTY_USAGE` that includes at least one of: `SCREEN_USAGE_VULKAN`, `SCREEN_USAGE_OPENGL_ES2`, `SCREEN_USAGE_OPENGL_ES3`, or `SCREEN_USAGE_NATIVE`. The

exact Screen-native usage flags required depends on the Vulkan implementation, and QNX Screen itself will not necessarily enforce these requirements. Note that Screen-native usage flags are in no way related to usage flags in the Vulkan specification.

QNX Screen Buffer External Formats

QNX Screen buffers **may** represent images using implementation-specific formats, layouts, color models, etc., which do not have Vulkan equivalents. Such *external formats* are commonly used by external image sources such as video decoders or cameras. Vulkan **can** import QNX Screen buffers that have external formats, but since the image contents are in an undiscoverable and possibly proprietary representation, images with external formats **must** only be used as sampled images, **must** only be sampled with a sampler that has Y'C_BC_R conversion enabled, and **must** have optimal tiling.

Images that will be backed by a QNX Screen buffer **can** use an external format by setting `VkImageCreateInfo::format` to `VK_FORMAT_UNDEFINED` and including a `VkExternalFormatQNX` structure in the `pNext` chain. Images **can** be created with an external format even if the QNX Screen buffer has a format which has an *equivalent Vulkan format* to enable consistent handling of images from sources that might use either category of format. The external format of a QNX Screen buffer **can** be obtained by passing a `VkScreenBufferFormatPropertiesQNX` structure to `vkGetScreenBufferPropertiesQNX`.

QNX Screen Buffer Image Resources

QNX Screen buffers have intrinsic width, height, format, and usage properties, so Vulkan images bound to memory imported from a QNX Screen buffer **must** use dedicated allocations: `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` **must** be `VK_TRUE` for images created with `VkExternalMemoryImageCreateInfo::handleTypes` that includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`. When creating an image that will be bound to an imported QNX Screen buffer, the image creation parameters **must** be equivalent to the `_screen_buffer` properties as described by the valid usage of `VkMemoryAllocateInfo`.

Table 15. QNX Screen Buffer Format Equivalence

QNX Screen Format	Vulkan Format
SCREEN_FORMAT_RGBA8888	VK_FORMAT_B8G8R8A8_UNORM
SCREEN_FORMAT_RGBX8888 ¹	VK_FORMAT_B8G8R8A8_UNORM
SCREEN_FORMAT_BGRA8888	VK_FORMAT_R8G8B8A8_UNORM
SCREEN_FORMAT_BGRX8888 ¹	VK_FORMAT_R8G8B8A8_UNORM
SCREEN_FORMAT_RGBA1010102	VK_FORMAT_A2R10G10B10_UNORM_PACK32
SCREEN_FORMAT_RGBX1010102 ¹	VK_FORMAT_A2R10G10B10_UNORM_PACK32
SCREEN_FORMAT_BGRA1010102	VK_FORMAT_A2B10G10R10_UNORM_PACK32
SCREEN_FORMAT_BGRX1010102 ¹	VK_FORMAT_A2B10G10R10_UNORM_PACK32
SCREEN_FORMAT_RGBA5551	VK_FORMAT_A1R5G5B5_UNORM_PACK16
SCREEN_FORMAT_RGBX5551 ¹	VK_FORMAT_A1R5G5B5_UNORM_PACK16
SCREEN_FORMAT_RGB565	VK_FORMAT_R5G6B5_UNORM_PACK16

QNX Screen Format	Vulkan Format
SCREEN_FORMAT_RGB888	VK_FORMAT_R8G8B8_UNORM

1

Vulkan does not differentiate between `SCREEN_FORMAT_RGBA8888` and `SCREEN_FORMAT_RGBX8888`: they both behave as `VK_FORMAT_R8G8B8A8_UNORM`. After an external entity writes to a `SCREEN_FORMAT_RGBX8888` QNX Screen buffer, the values read by Vulkan from the X/A component are undefined. To emulate the traditional behavior of the X component during sampling or blending, applications **should** use `VK_COMPONENT_SWIZZLE_ONE` in image view component mappings and `VK_BLEND_FACTOR_ONE` in color blend factors. There is no way to avoid copying these undefined values when copying from such an image to another image or buffer. The same behavior applies to the following pairs: `SCREEN_FORMAT_BGRA8888` and `SCREEN_FORMAT_BGRX8888`, `SCREEN_FORMAT_RGBA1010102` and `SCREEN_FORMAT_RGBX1010102`, `SCREEN_FORMAT_BGRA1010102` and `SCREEN_FORMAT_BGRX1010102`, `SCREEN_FORMAT_RGBA5551` and `SCREEN_FORMAT_RGBX5551`

11.2.19. Peer Memory Features

Peer memory is memory that is allocated for a given physical device and then bound to a resource and accessed by a different physical device, in a logical device that represents multiple physical devices. Some ways of reading and writing peer memory **may** not be supported by a device.

To determine how peer memory **can** be accessed, call:

```
// Provided by VK_VERSION_1_1
void vkGetDeviceGroupPeerMemoryFeatures(
    VkDevice          device,
    uint32_t          heapIndex,
    uint32_t          localDeviceIndex,
    uint32_t          remoteDeviceIndex,
    VkPeerMemoryFeatureFlags* pPeerMemoryFeatures);
```

or the equivalent command

```
// Provided by VK_KHR_device_group
void vkGetDeviceGroupPeerMemoryFeaturesKHR(
    VkDevice          device,
    uint32_t          heapIndex,
    uint32_t          localDeviceIndex,
    uint32_t          remoteDeviceIndex,
    VkPeerMemoryFeatureFlags* pPeerMemoryFeatures);
```

- `device` is the logical device that owns the memory.
- `heapIndex` is the index of the memory heap from which the memory is allocated.
- `localDeviceIndex` is the device index of the physical device that performs the memory access.
- `remoteDeviceIndex` is the device index of the physical device that the memory is allocated for.

- `pPeerMemoryFeatures` is a pointer to a `VkPeerMemoryFeatureFlags` bitmask indicating which types of memory accesses are supported for the combination of heap, local, and remote devices.

Valid Usage

- VUID-vkGetDeviceGroupPeerMemoryFeatures-heapIndex-00691
`heapIndex` **must** be less than `memoryHeapCount`
- VUID-vkGetDeviceGroupPeerMemoryFeatures-localDeviceIndex-00692
`localDeviceIndex` **must** be a valid device index
- VUID-vkGetDeviceGroupPeerMemoryFeatures-remoteDeviceIndex-00693
`remoteDeviceIndex` **must** be a valid device index
- VUID-vkGetDeviceGroupPeerMemoryFeatures-localDeviceIndex-00694
`localDeviceIndex` **must** not equal `remoteDeviceIndex`

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupPeerMemoryFeatures-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeviceGroupPeerMemoryFeatures-pPeerMemoryFeatures-parameter
`pPeerMemoryFeatures` **must** be a valid pointer to a `VkPeerMemoryFeatureFlags` value

Bits which **may** be set in `vkGetDeviceGroupPeerMemoryFeatures::pPeerMemoryFeatures`, indicating supported peer memory features, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkPeerMemoryFeatureFlagBits {
    VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT = 0x00000001,
    VK_PEER_MEMORY_FEATURE_COPY_DST_BIT = 0x00000002,
    VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT = 0x00000004,
    VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT = 0x00000008,
    // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT_KHR = VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT,
    // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_COPY_DST_BIT_KHR = VK_PEER_MEMORY_FEATURE_COPY_DST_BIT,
    // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT_KHR =
VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT,
    // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT_KHR =
VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT,
} VkPeerMemoryFeatureFlagBits;
```

or the equivalent

```
// Provided by VK_KHR_device_group
typedef VkPeerMemoryFeatureFlagBits VkPeerMemoryFeatureFlagBitsKHR;
```

- **VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT** specifies that the memory **can** be accessed as the source of any **vkCmdCopy*** command.
- **VK_PEER_MEMORY_FEATURE_COPY_DST_BIT** specifies that the memory **can** be accessed as the destination of any **vkCmdCopy*** command.
- **VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT** specifies that the memory **can** be read as any memory access type.
- **VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT** specifies that the memory **can** be written as any memory access type. Shader atomics are considered to be writes.

NOTE

The peer memory features of a memory heap also apply to any accesses that **may** be performed during [image layout transitions](#).

VK_PEER_MEMORY_FEATURE_COPY_DST_BIT **must** be supported for all host local heaps and for at least one device-local memory heap.

If a device does not support a peer memory feature, it is still valid to use a resource that includes both local and peer memory bindings with the corresponding access type as long as only the local bindings are actually accessed. For example, an application doing split-frame rendering would use framebuffer attachments that include both local and peer memory bindings, but would scissor the rendering to only update local memory.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkPeerMemoryFeatureFlags;
```

or the equivalent

```
// Provided by VK_KHR_device_group
typedef VkPeerMemoryFeatureFlags VkPeerMemoryFeatureFlagsKHR;
```

VkPeerMemoryFeatureFlags is a bitmask type for setting a mask of zero or more [VkPeerMemoryFeatureFlagBits](#).

11.2.20. Opaque Capture Address Query

To query a 64-bit opaque capture address value from a memory object, call:

```
// Provided by VK_VERSION_1_2
uint64_t vkGetDeviceMemoryOpaqueCaptureAddress(
    VkDevice device,
    const VkDeviceMemoryOpaqueCaptureAddressInfo* pInfo);
```

or the equivalent command

```
// Provided by VK_KHR_buffer_device_address
uint64_t vkGetDeviceMemoryOpaqueCaptureAddressKHR(
    VkDevice device,
    const VkDeviceMemoryOpaqueCaptureAddressInfo* pInfo);
```

- **device** is the logical device that the memory object was allocated on.
- **pInfo** is a pointer to a [VkDeviceMemoryOpaqueCaptureAddressInfo](#) structure specifying the memory object to retrieve an address for.

The 64-bit return value is an opaque address representing the start of **pInfo->memory**.

If the memory object was allocated with a non-zero value of [VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress](#), the return value **must** be the same address.

NOTE

The expected usage for these opaque addresses is only for trace capture/replay tools to store these addresses in a trace and subsequently specify them during replay.

Valid Usage

- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-None-03334
The **bufferDeviceAddress** feature **must** be enabled
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-device-03335
If **device** was created with multiple physical devices, then the **bufferDeviceAddressMultiDevice** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-pInfo-parameter
pInfo **must** be a valid pointer to a valid [VkDeviceMemoryOpaqueCaptureAddressInfo](#) structure

The [VkDeviceMemoryOpaqueCaptureAddressInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkDeviceMemoryOpaqueCaptureAddressInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory     memory;
} VkDeviceMemoryOpaqueCaptureAddressInfo;
```

or the equivalent

```
// Provided by VK_KHR_buffer_device_address
typedef VkDeviceMemoryOpaqueCaptureAddressInfo
VkDeviceMemoryOpaqueCaptureAddressInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memory** specifies the memory whose address is being queried.

Valid Usage

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-memory-03336
memory must have been allocated with **VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT**

Valid Usage (Implicit)

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-sType-sType
sType must be **VK_STRUCTURE_TYPE_DEVICE_MEMORY_OPAQUE_CAPTURE_ADDRESS_INFO**
- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-pNext-pNext
pNext must be **NULL**
- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle

Chapter 12. Resource Creation

Vulkan supports two primary resource types: *buffers* and *images*. Resources are views of memory with associated formatting and dimensionality. Buffers provide access to raw arrays of bytes, whereas images **can** be multidimensional and **may** have associated metadata.

Other resource types, such as [acceleration structures](#) and [micromaps](#) use buffers as the backing store for opaque data structures.

12.1. Buffers

Buffers represent linear arrays of data which are used for various purposes by binding them to a graphics or compute pipeline via descriptor sets or certain commands, or by directly specifying them as parameters to certain commands.

Buffers are represented by `VkBuffer` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBuffer)
```

To create buffers, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateBuffer(
    VkDevice                                device,
    const VkBufferCreateInfo*               pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkBuffer*                               pBuffer);
```

- `device` is the logical device that creates the buffer object.
- `pCreateInfo` is a pointer to a `VkBufferCreateInfo` structure containing parameters affecting creation of the buffer.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pBuffer` is a pointer to a `VkBuffer` handle in which the resulting buffer object is returned.

Valid Usage

- VUID-vkCreateBuffer-device-09664
`device` **must** support at least one queue family with one of the `VK_QUEUE_VIDEO_ENCODE_BIT_KHR`, `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, `VK_QUEUE_SPARSE_BINDING_BIT`, `VK_QUEUE_TRANSFER_BIT`, `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` capabilities
- VUID-vkCreateBuffer-flags-00911
If the `flags` member of `pCreateInfo` includes `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`, and the

`extendedSparseAddressSpace` feature is not enabled, creating this `VkBuffer` **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed `VkPhysicalDeviceLimits::sparseAddressSpaceSize`

- VUID-vkCreateBuffer-flags-09383

If the `flags` member of `pCreateInfo` includes `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`, the `extendedSparseAddressSpace` feature is enabled, and the `usage` member of `pCreateInfo` contains bits not in `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseBufferUsageFlags`, creating this `VkBuffer` **must** not cause the total required sparse memory for all currently valid sparse resources on the device, excluding `VkBuffer` created with `usage` member of `pCreateInfo` containing bits in `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseBufferUsageFlags` and `VkImage` created with `usage` member of `pCreateInfo` containing bits in `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseImageUsageFlags`, to exceed `VkPhysicalDeviceLimits::sparseAddressSpaceSize`

- VUID-vkCreateBuffer-flags-09384

If the `flags` member of `pCreateInfo` includes `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` and the `extendedSparseAddressSpace` feature is enabled, creating this `VkBuffer` **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseAddressSpaceSize`

- VUID-vkCreateBuffer-pNext-06387

If using the `VkBuffer` for an import operation from a `VkBufferCollectionFUCHSIA` where a `VkBufferCollectionBufferCreateInfoFUCHSIA` has been chained to `pNext`, `pCreateInfo` **must** match the `VkBufferConstraintsInfoFUCHSIA::createInfo` used when setting the constraints on the buffer collection with `vkSetBufferCollectionBufferConstraintsFUCHSIA`

Valid Usage (Implicit)

- VUID-vkCreateBuffer-device-parameter

`device` **must** be a valid `VkDevice` handle

- VUID-vkCreateBuffer-pCreateInfo-parameter

`pCreateInfo` **must** be a valid pointer to a valid `VkBufferCreateInfo` structure

- VUID-vkCreateBuffer-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- VUID-vkCreateBuffer-pBuffer-parameter

`pBuffer` **must** be a valid pointer to a `VkBuffer` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`

The `VkBufferCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkBufferCreateFlags flags;
    VkDeviceSize        size;
    VkBufferUsageFlags  usage;
    VkSharingMode        sharingMode;
    uint32_t            queueFamilyIndexCount;
    const uint32_t*     pQueueFamilyIndices;
} VkBufferCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkBufferCreateFlagBits` specifying additional parameters of the buffer.
- `size` is the size in bytes of the buffer to be created.
- `usage` is a bitmask of `VkBufferUsageFlagBits` specifying allowed usages of the buffer.
- `sharingMode` is a `VkSharingMode` value specifying the sharing mode of the buffer when it will be accessed by multiple queue families.
- `queueFamilyIndexCount` is the number of entries in the `pQueueFamilyIndices` array.
- `pQueueFamilyIndices` is a pointer to an array of queue families that will access this buffer. It is ignored if `sharingMode` is not `VK_SHARING_MODE_CONCURRENT`.

If the `pNext` chain includes a `VkBufferUsageFlags2CreateInfoKHR` structure, `VkBufferUsageFlags2CreateInfoKHR::usage` from that structure is used instead of `usage` from this structure.

Valid Usage

- VUID-VkBufferCreateInfo-None-09499
If the `pNext` chain does not include a `VkBufferUsageFlags2CreateInfoKHR` structure, `usage` **must** be a valid combination of `VkBufferUsageFlagBits` values
- VUID-VkBufferCreateInfo-None-09500
If the `pNext` chain does not include a `VkBufferUsageFlags2CreateInfoKHR` structure, `usage` **must not** be 0

- VUID-VkBufferCreateInfo-size-00912
size **must** be greater than 0
- VUID-VkBufferCreateInfo-sharingMode-00913
If sharingMode is VK_SHARING_MODE_CONCURRENT, pQueueFamilyIndices **must** be a valid pointer to an array of queueFamilyIndexCount uint32_t values
- VUID-VkBufferCreateInfo-sharingMode-00914
If sharingMode is VK_SHARING_MODE_CONCURRENT, queueFamilyIndexCount **must** be greater than 1
- VUID-VkBufferCreateInfo-sharingMode-01419
If sharingMode is VK_SHARING_MODE_CONCURRENT, each element of pQueueFamilyIndices **must** be unique and **must** be less than pQueueFamilyPropertyCount returned by either vkGetPhysicalDeviceQueueFamilyProperties2 or vkGetPhysicalDeviceQueueFamilyProperties for the physicalDevice that was used to create device
- VUID-VkBufferCreateInfo-flags-00915
If the sparseBinding feature is not enabled, flags **must** not contain VK_BUFFER_CREATE_SPARSE_BINDING_BIT
- VUID-VkBufferCreateInfo-flags-00916
If the sparseResidencyBuffer feature is not enabled, flags **must** not contain VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkBufferCreateInfo-flags-00917
If the sparseResidencyAliased feature is not enabled, flags **must** not contain VK_BUFFER_CREATE_SPARSE_ALIASED_BIT
- VUID-VkBufferCreateInfo-flags-00918
If flags contains VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT or VK_BUFFER_CREATE_SPARSE_ALIASED_BIT, it **must** also contain VK_BUFFER_CREATE_SPARSE_BINDING_BIT
- VUID-VkBufferCreateInfo-pNext-00920
If the pNext chain includes a VkExternalMemoryBufferCreateInfo structure, its handleTypes member **must** only contain bits that are also in VkExternalBufferProperties::externalMemoryProperties.compatibleHandleTypes, as returned by vkGetPhysicalDeviceExternalBufferProperties with pExternalBufferInfo->handleType equal to any one of the handle types specified in VkExternalMemoryBufferCreateInfo::handleTypes
- VUID-VkBufferCreateInfo-flags-01887
If the protectedMemory feature is not enabled, flags **must** not contain VK_BUFFER_CREATE_PROTECTED_BIT
- VUID-VkBufferCreateInfo-None-01888
If any of the bits VK_BUFFER_CREATE_SPARSE_BINDING_BIT, VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT, or VK_BUFFER_CREATE_SPARSE_ALIASED_BIT are set, VK_BUFFER_CREATE_PROTECTED_BIT **must** not also be set
- VUID-VkBufferCreateInfo-pNext-01571
If the pNext chain includes a VkDedicatedAllocationBufferCreateInfoNV structure, and the

`dedicatedAllocation` member of the chained structure is `VK_TRUE`, then `flags` **must** not include `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`, `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT`

- VUID-VkBufferCreateInfo-deviceAddress-02604

If `VkBufferDeviceAddressCreateInfoEXT::deviceAddress` is not zero, `flags` **must** include `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`

- VUID-VkBufferCreateInfo-opaqueCaptureAddress-03337

If `VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress` is not zero, `flags` **must** include `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`

- VUID-VkBufferCreateInfo-flags-03338

If `flags` includes `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, the `bufferDeviceAddressCaptureReplay` feature **must** be enabled

- VUID-VkBufferCreateInfo-usage-04813

If `usage` includes `VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR` or `VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR`, and `flags` does not include `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0 and `pProfiles` including at least one `VkVideoProfileInfoKHR` structure with a `videoCodecOperation` member specifying a decode operation

- VUID-VkBufferCreateInfo-usage-04814

If `usage` includes `VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR` or `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR`, and `flags` does not include `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0 and `pProfiles` including at least one `VkVideoProfileInfoKHR` structure with a `videoCodecOperation` member specifying an encode operation

- VUID-VkBufferCreateInfo-flags-08325

If `flags` includes `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then `videoMaintenance1` **must** be enabled

- VUID-VkBufferCreateInfo-size-06409

`size` **must** be less than or equal to `VkPhysicalDeviceMaintenance4Properties::maxBufferSize`

- VUID-VkBufferCreateInfo-usage-08097

If `usage` includes `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`, creating this `VkBuffer` **must** not cause the total required space for all currently valid buffers using this flag on the device to exceed `VkPhysicalDeviceDescriptorBufferPropertiesEXT::samplerDescriptorBufferAddressSpaceSize` or `VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferAddressSpaceSize`

- VUID-VkBufferCreateInfo-usage-08098

If `usage` includes `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`, creating this `VkBuffer` **must** not cause the total required space for all currently valid buffers using this flag on the device to exceed `VkPhysicalDeviceDescriptorBufferPropertiesEXT::resourceDescriptorBufferAddressSpaceSize` or `VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferAddressSpaceSize`

- VUID-VkBufferCreateInfo-flags-08099
If `flags` includes `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-VkBufferCreateInfo-pNext-08100
If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `flags` **must** contain `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`
- VUID-VkBufferCreateInfo-usage-08101
If `usage` includes `VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT`, the `descriptorBufferPushDescriptors` feature **must** be enabled
- VUID-VkBufferCreateInfo-usage-08102
If `usage` includes `VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT` `VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors` **must** be `VK_FALSE`
- VUID-VkBufferCreateInfo-usage-08103
If `usage` includes `VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT`, `usage` **must** contain at least one of `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` or `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-VkBufferCreateInfo-flags-09641
If `flags` includes `VK_BUFFER_CREATE_PROTECTED_BIT`, then `usage` **must** not contain any of the following bits
 - `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`
 - `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT`
 - `VK_BUFFER_USAGE_CONDITIONAL_RENDERING_BIT_EXT`
 - `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR`
 - `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR`
 - `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR`
 - `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`
 - `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`
 - `VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT`
 - `VK_BUFFER_USAGE_MICROMAP_BUILD_INPUT_READ_ONLY_BIT_EXT`
 - `VK_BUFFER_USAGE_MICROMAP_STORAGE_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkBufferCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_CREATE_INFO`
- VUID-VkBufferCreateInfo-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkBufferCollectionBufferCreateInfoFUCHSIA`, `VkBufferDeviceAddressCreateInfoEXT`, `VkBufferOpaqueCaptureAddressCreateInfo`,

VkBufferUsageFlags2CreateInfoKHR, VkDedicatedAllocationBufferCreateInfoNV, VkExternalMemoryBufferCreateInfo, VkOpaqueCaptureDescriptorDataCreateInfoEXT, or VkVideoProfileListInfoKHR

- VUID-VkBufferCreateInfo-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique
- VUID-VkBufferCreateInfo-flags-parameter
flags **must** be a valid combination of **VkBufferCreateFlagBits** values
- VUID-VkBufferCreateInfo-sharingMode-parameter
sharingMode **must** be a valid **VkSharingMode** value

The **VkBufferUsageFlags2CreateInfoKHR** structure is defined as:

```
// Provided by VK_KHR_maintenance5
typedef struct VkBufferUsageFlags2CreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBufferUsageFlags2KHR    usage;
} VkBufferUsageFlags2CreateInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **usage** is a bitmask of **VkBufferUsageFlagBits2KHR** specifying allowed usages of the buffer.

If this structure is included in the **pNext** chain of a buffer creation structure, **usage** is used instead of the corresponding **usage** value passed in that creation structure, allowing additional usage flags to be specified. If this structure is included in the **pNext** chain of a buffer query structure, the usage flags of the buffer are returned in **usage** of this structure, and the usage flags representable in **usage** of the buffer query structure are also returned in that field.

Valid Usage (Implicit)

- VUID-VkBufferUsageFlags2CreateInfoKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_BUFFER_USAGE_FLAGS_2_CREATE_INFO_KHR**
- VUID-VkBufferUsageFlags2CreateInfoKHR-usage-parameter
usage **must** be a valid combination of **VkBufferUsageFlagBits2KHR** values
- VUID-VkBufferUsageFlags2CreateInfoKHR-usage-requiredbitmask
usage **must** not be 0

Bits which **can** be set in **VkBufferUsageFlags2CreateInfoKHR::usage**, specifying usage behavior of a buffer, are:

```
// Provided by VK_KHR_maintenance5
// Flag bits for VkBufferUsageFlagBits2KHR
```

```

typedef VkFlags64 VkBufferUsageFlagBits2KHR;

```

- **VK_BUFFER_USAGE_2_TRANSFER_SRC_BIT_KHR** specifies that the buffer **can** be used as the source of a *transfer command* (see the definition of **VK_PIPELINE_STAGE_TRANSFER_BIT**).
- **VK_BUFFER_USAGE_2_TRANSFER_DST_BIT_KHR** specifies that the buffer **can** be used as the destination of a transfer command.
- **VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT_KHR** specifies that the buffer **can** be used to create a **VkBufferView** suitable for occupying a **VkDescriptorSet** slot of type **VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER**.
- **VK_BUFFER_USAGE_2_STORAGE_TEXEL_BUFFER_BIT_KHR** specifies that the buffer **can** be used to create a **VkBufferView** suitable for occupying a **VkDescriptorSet** slot of type **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER**.
- **VK_BUFFER_USAGE_2_UNIFORM_BUFFER_BIT_KHR** specifies that the buffer **can** be used in a **VkDescriptorBufferInfo** suitable for occupying a **VkDescriptorSet** slot either of type **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER** or **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC**.
- **VK_BUFFER_USAGE_2_STORAGE_BUFFER_BIT_KHR** specifies that the buffer **can** be used in a **VkDescriptorBufferInfo** suitable for occupying a **VkDescriptorSet** slot either of type **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER** or **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC**.
- **VK_BUFFER_USAGE_2_INDEX_BUFFER_BIT_KHR** specifies that the buffer is suitable for passing as the

`buffer` parameter to `vkCmdBindIndexBuffer2KHR` and `vkCmdBindIndexBuffer`.

- `VK_BUFFER_USAGE_2_VERTEX_BUFFER_BIT_KHR` specifies that the buffer is suitable for passing as an element of the `pBuffers` array to `vkCmdBindVertexBuffers`.
- `VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT_KHR` specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdDrawIndirect`, `vkCmdDrawIndexedIndirect`, `vkCmdDrawMeshTasksIndirectNV`, `vkCmdDrawMeshTasksIndirectCountNV`, `vkCmdDrawMeshTasksIndirectEXT`, `vkCmdDrawMeshTasksIndirectCountEXT`, `vkCmdDrawClusterIndirectHUAWEI`, or `vkCmdDispatchIndirect`. It is also suitable for passing as the `buffer` member of `VkIndirectCommandsStreamNV`, or `sequencesCountBuffer` or `sequencesIndexBuffer` or `preprocessedBuffer` member of `VkGeneratedCommandsInfoNV`. It is also suitable for passing as the underlying buffer of either the `preprocessAddress` or `sequenceCountAddress` members of `VkGeneratedCommandsInfoEXT`.
- `VK_BUFFER_USAGE_2_CONDITIONAL_RENDERING_BIT_EXT` specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdBeginConditionalRenderingEXT`.
- `VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT` specifies that the buffer is suitable for using for binding as a transform feedback buffer with `vkCmdBindTransformFeedbackBuffersEXT`.
- `VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT` specifies that the buffer is suitable for using as a counter buffer with `vkCmdBeginTransformFeedbackEXT` and `vkCmdEndTransformFeedbackEXT`.
- `VK_BUFFER_USAGE_2_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` specifies that the buffer is suitable to contain sampler and combined image sampler descriptors when bound as a descriptor buffer. Buffers containing combined image sampler descriptors **must** also specify `VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`.
- `VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` specifies that the buffer is suitable to contain resource descriptors when bound as a descriptor buffer.
- `VK_BUFFER_USAGE_2_PUSH_DESCRIPTOR_DESCRIPTOR_BUFFER_BIT_EXT` specifies that the buffer, when bound, **can** be used by the implementation to support push descriptors when using descriptor buffers.
- `VK_BUFFER_USAGE_2_RAY_TRACING_BIT_NV` specifies that the buffer is suitable for use in `vkCmdTraceRaysNV`.
- `VK_BUFFER_USAGE_2_SHADER_BINDING_TABLE_BIT_KHR` specifies that the buffer is suitable for use as a `Shader Binding Table`.
- `VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` specifies that the buffer is suitable for use as a read-only input to an `acceleration structure build`.
- `VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR` specifies that the buffer is suitable for storage space for a `VkAccelerationStructureKHR`.
- `VK_BUFFER_USAGE_2_SHADER_DEVICE_ADDRESS_BIT_KHR` specifies that the buffer **can** be used to retrieve a buffer device address via `vkGetBufferDeviceAddress` and use that address to access the buffer's memory from a shader.
- `VK_BUFFER_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR` specifies that the buffer **can** be used as the source video bitstream buffer in a `video decode operation`.

- `VK_BUFFER_USAGE_2_VIDEO_DECODE_DST_BIT_KHR` is reserved for future use.
- `VK_BUFFER_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR` specifies that the buffer **can** be used as the destination video bitstream buffer in a [video encode operation](#).
- `VK_BUFFER_USAGE_2_VIDEO_ENCODE_SRC_BIT_KHR` is reserved for future use.
- `VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMD` specifies that the buffer **can** be used for as scratch memory for [execution graph dispatch](#).
- `VK_BUFFER_USAGE_2_PREPROCESS_BUFFER_BIT_EXT` specifies that the buffer **can** be used as a preprocess buffer for [Device-Generated Commands](#).

```
// Provided by VK_KHR_maintenance5
typedef VkFlags64 VkBufferUsageFlags2KHR;
```

`VkBufferUsageFlags2KHR` is a bitmask type for setting a mask of zero or more `VkBufferUsageFlagBits2KHR`.

Bits which **can** be set in `VkBufferCreateInfo::usage`, specifying usage behavior of a buffer, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkBufferUsageFlagBits {
    VK_BUFFER_USAGE_TRANSFER_SRC_BIT = 0x00000001,
    VK_BUFFER_USAGE_TRANSFER_DST_BIT = 0x00000002,

// Provided by VK_KHR_buffer_device_address
VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT_KHR =
VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT,
} VkBufferUsageFlagBits;

```

- **VK_BUFFER_USAGE_TRANSFER_SRC_BIT** specifies that the buffer **can** be used as the source of a *transfer command* (see the definition of **VK_PIPELINE_STAGE_TRANSFER_BIT**).
- **VK_BUFFER_USAGE_TRANSFER_DST_BIT** specifies that the buffer **can** be used as the destination of a transfer command.
- **VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT** specifies that the buffer **can** be used to create a **VkBufferView** suitable for occupying a **VkDescriptorSet** slot of type **VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER**.
- **VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT** specifies that the buffer **can** be used to create a **VkBufferView** suitable for occupying a **VkDescriptorSet** slot of type **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER**.
- **VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT** specifies that the buffer **can** be used in a **VkDescriptorBufferInfo** suitable for occupying a **VkDescriptorSet** slot either of type **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER** or **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC**.
- **VK_BUFFER_USAGE_STORAGE_BUFFER_BIT** specifies that the buffer **can** be used in a **VkDescriptorBufferInfo** suitable for occupying a **VkDescriptorSet** slot either of type **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER** or **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC**.
- **VK_BUFFER_USAGE_INDEX_BUFFER_BIT** specifies that the buffer is suitable for passing as the **buffer** parameter to **vkCmdBindIndexBuffer2KHR** and **vkCmdBindIndexBuffer**.
- **VK_BUFFER_USAGE_VERTEX_BUFFER_BIT** specifies that the buffer is suitable for passing as an element

of the `pBuffers` array to `vkCmdBindVertexBuffers`.

- `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdDrawIndirect`, `vkCmdDrawIndexedIndirect`, `vkCmdDrawMeshTasksIndirectNV`, `vkCmdDrawMeshTasksIndirectCountNV`, `vkCmdDrawMeshTasksIndirectEXT`, `vkCmdDrawMeshTasksIndirectCountEXT`, `vkCmdDrawClusterIndirectHUAWEI`, or `vkCmdDispatchIndirect`. It is also suitable for passing as the `buffer` member of `VkIndirectCommandsStreamNV`, or `sequencesCountBuffer` or `sequencesIndexBuffer` or `preprocessedBuffer` member of `VkGeneratedCommandsInfoNV`. It is also suitable for passing as the underlying buffer of either the `preprocessAddress` or `sequenceCountAddress` members of `VkGeneratedCommandsInfoEXT`.
- `VK_BUFFER_USAGE_CONDITIONAL_RENDERING_BIT_EXT` specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdBeginConditionalRenderingEXT`.
- `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT` specifies that the buffer is suitable for using for binding as a transform feedback buffer with `vkCmdBindTransformFeedbackBuffersEXT`.
- `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT` specifies that the buffer is suitable for using as a counter buffer with `vkCmdBeginTransformFeedbackEXT` and `vkCmdEndTransformFeedbackEXT`.
- `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` specifies that the buffer is suitable to contain sampler and combined image sampler descriptors when bound as a descriptor buffer. Buffers containing combined image sampler descriptors **must** also specify `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`.
- `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` specifies that the buffer is suitable to contain resource descriptors when bound as a descriptor buffer.
- `VK_BUFFER_USAGE_PUSH_DESCRIPTOR_DESCRIPTOR_BUFFER_BIT_EXT` specifies that the buffer, when bound, **can** be used by the implementation to support push descriptors when using descriptor buffers.
- `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` specifies that the buffer is suitable for use in `vkCmdTraceRaysNV`.
- `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` specifies that the buffer is suitable for use as a [Shader Binding Table](#).
- `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` specifies that the buffer is suitable for use as a read-only input to an [acceleration structure build](#).
- `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR` specifies that the buffer is suitable for storage space for a `VkAccelerationStructureKHR`.
- `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` specifies that the buffer **can** be used to retrieve a buffer device address via `vkGetBufferDeviceAddress` and use that address to access the buffer's memory from a shader.
- `VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR` specifies that the buffer **can** be used as the source video bitstream buffer in a [video decode operation](#).
- `VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR` is reserved for future use.
- `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR` specifies that the buffer **can** be used as the destination video bitstream buffer in a [video encode operation](#).

- `VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR` is reserved for future use.
- `VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMD` specifies that the buffer **can** be used for as scratch memory for [execution graph dispatch](#).

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferUsageFlags;
```

`VkBufferUsageFlags` is a bitmask type for setting a mask of zero or more `VkBufferUsageFlagBits`.

Bits which **can** be set in `VkBufferCreateInfo::flags`, specifying additional parameters of a buffer, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkBufferCreateFlagBits {
    VK_BUFFER_CREATE_SPARSE_BINDING_BIT = 0x00000001,
    VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT = 0x00000002,
    VK_BUFFER_CREATE_SPARSE_ALIASED_BIT = 0x00000004,
    // Provided by VK_VERSION_1_1
    VK_BUFFER_CREATE_PROTECTED_BIT = 0x00000008,
    // Provided by VK_VERSION_1_2
    VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT = 0x00000010,
    // Provided by VK_EXT_descriptor_buffer
    VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000020,
    // Provided by VK_KHR_video_maintenance1
    VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR = 0x00000040,
    // Provided by VK_EXT_buffer_device_address
    VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT =
VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT,
    // Provided by VK_KHR_buffer_device_address
    VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT,
} VkBufferCreateFlagBits;
```

- `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` specifies that the buffer will be backed using sparse memory binding.
- `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` specifies that the buffer **can** be partially backed using sparse memory binding. Buffers created with this flag **must** also be created with the `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` flag.
- `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` specifies that the buffer will be backed using sparse memory binding with memory ranges that might also simultaneously be backing another buffer (or another portion of the same buffer). Buffers created with this flag **must** also be created with the `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` flag.
- `VK_BUFFER_CREATE_PROTECTED_BIT` specifies that the buffer is a protected buffer.
- `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` specifies that the buffer's address **can** be saved and reused on a subsequent run (e.g. for trace capture and replay), see [VkBufferOpaqueCaptureAddressCreateInfo](#) for more detail.

- `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` specifies that the buffer **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.
- `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` specifies that the buffer **can** be used in [video coding operations](#) without having to specify at buffer creation time the set of video profiles the buffer will be used with.

See [Sparse Resource Features](#) and [Physical Device Features](#) for details of the sparse memory features supported on a device.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferCreateFlags;
```

`VkBufferCreateFlags` is a bitmask type for setting a mask of zero or more [VkBufferCreateFlagBits](#).

If the `pNext` chain includes a `VkDedicatedAllocationBufferCreateInfoNV` structure, then that structure includes an enable controlling whether the buffer will have a dedicated memory allocation bound to it.

The `VkDedicatedAllocationBufferCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_dedicated_allocation
typedef struct VkDedicatedAllocationBufferCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           dedicatedAllocation;
} VkDedicatedAllocationBufferCreateInfoNV;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dedicatedAllocation` specifies whether the buffer will have a dedicated allocation bound to it.

Valid Usage (Implicit)

- VUID-VkDedicatedAllocationBufferCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_BUFFER_CREATE_INFO_NV`

To define a set of external memory handle types that **may** be used as backing store for a buffer, add a `VkExternalMemoryBufferCreateInfo` structure to the `pNext` chain of the `VkBufferCreateInfo` structure. The `VkExternalMemoryBufferCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalMemoryBufferCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkExternalMemoryHandleTypeFlags handleTypes;
} VkExternalMemoryBufferCreateInfo;
```

or the equivalent

```
// Provided by VK_KHR_external_memory
typedef VkExternalMemoryBufferCreateInfo VkExternalMemoryBufferCreateInfoKHR;
```

NOTE

A `VkExternalMemoryBufferCreateInfo` structure with a non-zero `handleTypes` field must be included in the creation parameters for a buffer that will be bound to memory that is either exported or imported.

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleTypes` is zero or a bitmask of `VkExternalMemoryHandleTypeFlagBits` specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryBufferCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_BUFFER_CREATE_INFO`
- VUID-VkExternalMemoryBufferCreateInfo-handleTypes-parameter
`handleTypes` **must** be a valid combination of `VkExternalMemoryHandleTypeFlagBits` values

To request a specific device address for a buffer, add a `VkBufferOpaqueCaptureAddressCreateInfo` structure to the `pNext` chain of the `VkBufferCreateInfo` structure. The `VkBufferOpaqueCaptureAddressCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkBufferOpaqueCaptureAddressCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           opaqueCaptureAddress;
} VkBufferOpaqueCaptureAddressCreateInfo;
```

or the equivalent

```
// Provided by VK_KHR_buffer_device_address
typedef VkBufferOpaqueCaptureAddressCreateInfo
VkBufferOpaqueCaptureAddressCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `opaqueCaptureAddress` is the opaque capture address requested for the buffer.

If `opaqueCaptureAddress` is zero, no specific address is requested.

If `opaqueCaptureAddress` is not zero, then it **should** be an address retrieved from `vkGetBufferOpaqueCaptureAddress` for an identically created buffer on the same implementation.

If this structure is not present, it is as if `opaqueCaptureAddress` is zero.

Apps **should** avoid creating buffers with app-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS` errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` flag to all buffers that use `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT`, and during capture will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Apps/tools should avoid mixing app-provided and implementation-provided addresses for buffers created with `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, to avoid address space allocation conflicts.

Valid Usage (Implicit)

- VUID-VkBufferOpaqueCaptureAddressCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_OPAQUE_CAPTURE_ADDRESS_CREATE_INFO`

Alternatively, to request a specific device address for a buffer, add a `VkBufferDeviceAddressCreateInfoEXT` structure to the `pNext` chain of the `VkBufferCreateInfo` structure. The `VkBufferDeviceAddressCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_buffer_device_address
typedef struct VkBufferDeviceAddressCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceAddress     deviceAddress;
} VkBufferDeviceAddressCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceAddress` is the device address requested for the buffer.

If `deviceAddress` is zero, no specific address is requested.

If `deviceAddress` is not zero, then it **must** be an address retrieved from an identically created buffer on the same implementation. The buffer **must** also be bound to an identically created `VkDeviceMemory` object.

If this structure is not present, it is as if `deviceAddress` is zero.

Apps **should** avoid creating buffers with app-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of `VK_ERROR_INVALID_DEVICE_ADDRESS_EXT` errors.

Valid Usage (Implicit)

- VUID-VkBufferDeviceAddressCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_DEVICE_ADDRESS_CREATE_INFO_EXT`

The `VkBufferCollectionBufferCreateInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionBufferCreateInfoFUCHSIA {
    VkStructureType      sType;
    const void*          pNext;
    VkBufferCollectionFUCHSIA collection;
    uint32_t             index;
} VkBufferCollectionBufferCreateInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `collection` is the `VkBufferCollectionFUCHSIA` handle
- `index` is the index of the buffer in the buffer collection from which the memory will be imported

Valid Usage

- VUID-VkBufferCollectionBufferCreateInfoFUCHSIA-index-06388
index **must** be less than `VkBufferCollectionPropertiesFUCHSIA::bufferCount`

Valid Usage (Implicit)

- VUID-VkBufferCollectionBufferCreateInfoFUCHSIA-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_BUFFER_CREATE_INFO_FUCHSIA`
- VUID-VkBufferCollectionBufferCreateInfoFUCHSIA-collection-parameter
collection **must** be a valid `VkBufferCollectionFUCHSIA` handle

To destroy a buffer, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyBuffer(
    VkDevice          device,
    VkBuffer          buffer,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the buffer.
- **buffer** is the buffer to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyBuffer-buffer-00922
All submitted commands that refer to **buffer**, either directly or via a `VkBufferView`, **must** have completed execution
- VUID-vkDestroyBuffer-buffer-00923
If `VkAllocationCallbacks` were provided when **buffer** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyBuffer-buffer-00924
If no `VkAllocationCallbacks` were provided when **buffer** was created, **pAllocator** **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyBuffer-device-parameter
device **must** be a valid `VkDevice` handle
- VUID-vkDestroyBuffer-buffer-parameter

If `buffer` is not `VK_NULL_HANDLE`, `buffer` **must** be a valid `VkBuffer` handle

- `VUID-vkDestroyBuffer-pAllocator-parameter`

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- `VUID-vkDestroyBuffer-buffer-parent`

If `buffer` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `buffer` **must** be externally synchronized

12.2. Buffer Views

A *buffer view* represents a contiguous range of a buffer and a specific format to be used to interpret the data. Buffer views are used to enable shaders to access buffer contents using [image operations](#). In order to create a valid buffer view, the buffer **must** have been created with at least one of the following usage flags:

- `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT`
- `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT`

Buffer views are represented by `VkBufferView` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBufferView)
```

To create a buffer view, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateBufferView(
    VkDevice                                device,
    const VkBufferViewCreateInfo*           pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkBufferView*                           pView);
```

- `device` is the logical device that creates the buffer view.
- `pCreateInfo` is a pointer to a `VkBufferViewCreateInfo` structure containing parameters to be used to create the buffer view.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pView` is a pointer to a `VkBufferView` handle in which the resulting buffer view object is returned.

Valid Usage

- VUID-vkCreateBufferView-device-09665
device **must** support at least one queue family with one of the `VK_QUEUE_COMPUTE_BIT` or `VK_QUEUE_GRAPHICS_BIT` capabilities

Valid Usage (Implicit)

- VUID-vkCreateBufferView-device-parameter
device **must** be a valid `VkDevice` handle
- VUID-vkCreateBufferView-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid `VkBufferViewCreateInfo` structure
- VUID-vkCreateBufferView-pAllocator-parameter
If **pAllocator** is not `NULL`, **pAllocator** **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateBufferView-pView-parameter
pView **must** be a valid pointer to a `VkBufferView` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkBufferViewCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferViewCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkBufferViewCreateFlags flags;
    VkBuffer            buffer;
    VkFormat            format;
    VkDeviceSize        offset;
    VkDeviceSize        range;
} VkBufferViewCreateInfo;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.

- **flags** is reserved for future use.
- **buffer** is a [VkBuffer](#) on which the view will be created.
- **format** is a [VkFormat](#) describing the format of the data elements in the buffer.
- **offset** is an offset in bytes from the base address of the buffer. Accesses to the buffer view from shaders use addressing that is relative to this starting offset.
- **range** is a size in bytes of the buffer view. If **range** is equal to **VK_WHOLE_SIZE**, the range from **offset** to the end of the buffer is used. If **VK_WHOLE_SIZE** is used and the remaining size of the buffer is not a multiple of the [texel block size](#) of **format**, the nearest smaller multiple is used.

The buffer view has a *buffer view usage* identifying which descriptor types can be created from it. This usage **can** be defined by including the [VkBufferUsageFlags2CreateInfoKHR](#) structure in the **pNext** chain, and specifying the **usage** value there. If this structure is not included, it is equal to the [VkBufferCreateInfo::usage](#) value used to create **buffer**.

Valid Usage

- VUID-VkBufferViewCreateInfo-offset-00925
offset **must** be less than the size of **buffer**
- VUID-VkBufferViewCreateInfo-range-00928
If **range** is not equal to **VK_WHOLE_SIZE**, **range** **must** be greater than 0
- VUID-VkBufferViewCreateInfo-range-00929
If **range** is not equal to **VK_WHOLE_SIZE**, **range** **must** be an integer multiple of the texel block size of **format**
- VUID-VkBufferViewCreateInfo-range-00930
If **range** is not equal to **VK_WHOLE_SIZE**, the number of texel buffer elements given by $(\lceil \text{range} / (\text{texel block size}) \rceil \times (\text{texels per block}))$ where texel block size and texels per block are as defined in the [Compatible Formats](#) table for **format**, **must** be less than or equal to [VkPhysicalDeviceLimits::maxTexelBufferElements](#)
- VUID-VkBufferViewCreateInfo-offset-00931
If **range** is not equal to **VK_WHOLE_SIZE**, the sum of **offset** and **range** **must** be less than or equal to the size of **buffer**
- VUID-VkBufferViewCreateInfo-range-04059
If **range** is equal to **VK_WHOLE_SIZE**, the number of texel buffer elements given by $(\lceil (\text{size} - \text{offset}) / (\text{texel block size}) \rceil \times (\text{texels per block}))$ where size is the size of **buffer**, and texel block size and texels per block are as defined in the [Compatible Formats](#) table for **format**, **must** be less than or equal to [VkPhysicalDeviceLimits::maxTexelBufferElements](#)
- VUID-VkBufferViewCreateInfo-buffer-00932
buffer **must** have been created with a **usage** value containing at least one of **VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT** or **VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT**
- VUID-VkBufferViewCreateInfo-format-08778
If the [buffer view usage](#) contains **VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT**, then [format features](#) of **format** **must** contain **VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT**
- VUID-VkBufferViewCreateInfo-format-08779

If the `buffer view usage` contains `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT`, then `format features` of `format` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT`

- VUID-VkBufferViewCreateInfo-buffer-00935

If `buffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkBufferViewCreateInfo-offset-02749

If the `texelBufferAlignment` feature is not enabled, `offset` **must** be a multiple of `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`

- VUID-VkBufferViewCreateInfo-buffer-02750

If the `texelBufferAlignment` feature is enabled and if `buffer` was created with `usage` containing `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT`, `offset` **must** be a multiple of the lesser of `VkPhysicalDeviceTexelBufferAlignmentProperties::storageTexelBufferOffsetAlignmentBytes` or, if `VkPhysicalDeviceTexelBufferAlignmentProperties::storageTexelBufferOffsetSingleTexelAlignment` is `VK_TRUE`, the size of a texel of the requested `format`. If the size of a texel is a multiple of three bytes, then the size of a single component of `format` is used instead

- VUID-VkBufferViewCreateInfo-buffer-02751

If the `texelBufferAlignment` feature is enabled and if `buffer` was created with `usage` containing `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT`, `offset` **must** be a multiple of the lesser of `VkPhysicalDeviceTexelBufferAlignmentProperties::uniformTexelBufferOffsetAlignmentBytes` or, if `VkPhysicalDeviceTexelBufferAlignmentProperties::uniformTexelBufferOffsetSingleTexelAlignment` is `VK_TRUE`, the size of a texel of the requested `format`. If the size of a texel is a multiple of three bytes, then the size of a single component of `format` is used instead

- VUID-VkBufferViewCreateInfo-pNext-06782

If the `pNext` chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its `exportObjectType` member **must** be `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT`

- VUID-VkBufferViewCreateInfo-pNext-08780

If the `pNext` chain includes a `VkBufferUsageFlags2CreateInfoKHR`, its `usage` **must** not contain any other bit than `VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT_KHR` or `VK_BUFFER_USAGE_2_STORAGE_TEXEL_BUFFER_BIT_KHR`

- VUID-VkBufferViewCreateInfo-pNext-08781

If the `pNext` chain includes a `VkBufferUsageFlags2CreateInfoKHR`, its `usage` **must** be a subset of the `VkBufferCreateInfo::usage` specified or `VkBufferUsageFlags2CreateInfoKHR::usage` from `VkBufferCreateInfo::pNext` when creating `buffer`

Valid Usage (Implicit)

- VUID-VkBufferViewCreateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_VIEW_CREATE_INFO`

- VUID-VkBufferViewCreateInfo-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkBufferUsageFlags2CreateInfoKHR` or

VkExportMetalObjectCreateInfoEXT

- VUID-VkBufferViewCreateInfo-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique, with the exception of structures of type [VkExportMetalObjectCreateInfoEXT](#)
- VUID-VkBufferViewCreateInfo-flags-zerobitmask
flags **must** be 0
- VUID-VkBufferViewCreateInfo-buffer-parameter
buffer **must** be a valid [VkBuffer](#) handle
- VUID-VkBufferViewCreateInfo-format-parameter
format **must** be a valid [VkFormat](#) value

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferViewCreateFlags;
```

VkBufferViewCreateFlags is a bitmask type for setting a mask, but is currently reserved for future use.

To destroy a buffer view, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyBufferView(
    VkDevice          device,
    VkBufferView       bufferView,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the buffer view.
- **bufferView** is the buffer view to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyBufferView-bufferView-00936
All submitted commands that refer to **bufferView** **must** have completed execution
- VUID-vkDestroyBufferView-bufferView-00937
If **VkAllocationCallbacks** were provided when **bufferView** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyBufferView-bufferView-00938
If no **VkAllocationCallbacks** were provided when **bufferView** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyBufferView-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyBufferView-bufferView-parameter
If `bufferView` is not `VK_NULL_HANDLE`, `bufferView` **must** be a valid `VkBufferView` handle
- VUID-vkDestroyBufferView-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyBufferView-bufferView-parent
If `bufferView` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `bufferView` **must** be externally synchronized

12.2.1. Buffer View Format Features

Valid uses of a `VkBufferView` **may** depend on the buffer view's *format features*, defined below. Such constraints are documented in the affected valid usage statement.

- If Vulkan 1.3 is supported or the `VK_KHR_format_feature_flags2` extension is supported, then the buffer view's set of *format features* is the value of `VkFormatProperties3::bufferFeatures` found by calling `vkGetPhysicalDeviceFormatProperties2` on the same `format` as `VkBufferViewCreateInfo::format`.

12.3. Images

Images represent multidimensional - up to 3 - arrays of data which **can** be used for various purposes (e.g. attachments, textures), by binding them to a graphics or compute pipeline via descriptor sets, or by directly specifying them as parameters to certain commands.

Images are represented by `VkImage` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkImage)
```

To create images, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateImage(
    VkDevice                                device,
    const VkImageCreateInfo*                pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkImage*)                               pImage);
```

- **device** is the logical device that creates the image.
- **pCreateInfo** is a pointer to a **VkImageCreateInfo** structure containing parameters to be used to create the image.
- **pAllocator** controls host memory allocation as described in the **Memory Allocation** chapter.
- **pImage** is a pointer to a **VkImage** handle in which the resulting image object is returned.

Valid Usage

- VUID-vkCreateImage-device-09666

device **must** support at least one queue family with one of the **VK_QUEUE_VIDEO_ENCODE_BIT_KHR**, **VK_QUEUE_VIDEO_DECODE_BIT_KHR**, **VK_QUEUE_OPTICAL_FLOW_BIT_NV**, **VK_QUEUE_SPARSE_BINDING_BIT**, **VK_QUEUE_TRANSFER_BIT**, **VK_QUEUE_COMPUTE_BIT**, or **VK_QUEUE_GRAPHICS_BIT** capabilities

- VUID-vkCreateImage-flags-00939

If the **flags** member of **pCreateInfo** includes **VK_IMAGE_CREATE_SPARSE_BINDING_BIT**, and the **extendedSparseAddressSpace** feature is not enabled, creating this **VkImage** **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed **VkPhysicalDeviceLimits::sparseAddressSpaceSize**

- VUID-vkCreateImage-flags-09385

If the **flags** member of **pCreateInfo** includes **VK_IMAGE_CREATE_SPARSE_BINDING_BIT**, the **extendedSparseAddressSpace** feature is enabled, and the **usage** member of **pCreateInfo** contains bits not in **VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseImageUsageFlags**, creating this **VkImage** **must** not cause the total required sparse memory for all currently valid sparse resources on the device, excluding **VkBuffer** created with **usage** member of **pCreateInfo** containing bits in **VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseBufferUsageFlags** and **VkImage** created with **usage** member of **pCreateInfo** containing bits in **VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseImageUsageFlags**, to exceed **VkPhysicalDeviceLimits::sparseAddressSpaceSize**

- VUID-vkCreateImage-flags-09386

If the **flags** member of **pCreateInfo** includes **VK_IMAGE_CREATE_SPARSE_BINDING_BIT** and the **extendedSparseAddressSpace** feature is enabled, creating this **VkImage** **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed **VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseAddressSpaceSize**

- VUID-vkCreateImage-pNext-06389

If a `VkBufferCollectionImageCreateInfoFUCHSIA` has been chained to `pNext`, `pCreateInfo` **must** match the `System` chosen `VkImageCreateInfo` excepting members `VkImageCreateInfo::extent` and `VkImageCreateInfo::usage` in the match criteria

Valid Usage (Implicit)

- VUID-vkCreateImage-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateImage-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkImageCreateInfo` structure
- VUID-vkCreateImage-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateImage-pImage-parameter
`pImage` **must** be a valid pointer to a `VkImage` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_COMPRESSION_EXHAUSTED_EXT`
- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`

The `VkImageCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkImageCreateFlags    flags;
    VkImageType           imageType;
    VkFormat              format;
    VkExtent3D            extent;
    uint32_t              mipLevels;
    uint32_t              arrayLayers;
    VkSampleCountFlagBits samples;
    VkImageTiling          tiling;
    VkImageUsageFlags      usage;
    VkSharingMode          sharingMode;
    uint32_t              queueFamilyIndexCount;
    const uint32_t*        pQueueFamilyIndices;
    VkImageLayout          initialLayout;
} VkImageCreateInfo;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of **VkImageCreateFlagBits** describing additional parameters of the image.
- **imageType** is a **VkImageType** value specifying the basic dimensionality of the image. Layers in array textures do not count as a dimension for the purposes of the image type.
- **format** is a **VkFormat** describing the format and type of the texel blocks that will be contained in the image.
- **extent** is a **VkExtent3D** describing the number of data elements in each dimension of the base level.
- **mipLevels** describes the number of levels of detail available for minified sampling of the image.
- **arrayLayers** is the number of layers in the image.
- **samples** is a **VkSampleCountFlagBits** value specifying the number of **samples per texel**.
- **tiling** is a **VkImageTiling** value specifying the tiling arrangement of the texel blocks in memory.
- **usage** is a bitmask of **VkImageUsageFlagBits** describing the intended usage of the image.
- **sharingMode** is a **VkSharingMode** value specifying the sharing mode of the image when it will be accessed by multiple queue families.
- **queueFamilyIndexCount** is the number of entries in the **pQueueFamilyIndices** array.
- **pQueueFamilyIndices** is a pointer to an array of queue families that will access this image. It is ignored if **sharingMode** is not **VK_SHARING_MODE_CONCURRENT**.
- **initialLayout** is a **VkImageLayout** value specifying the initial **VkImageLayout** of all image subresources of the image. See **Image Layouts**.

Images created with **tiling** equal to **VK_IMAGE_TILING_LINEAR** have further restrictions on their limits and capabilities compared to images created with **tiling** equal to **VK_IMAGE_TILING_OPTIMAL**. Creation

of images with tiling `VK_IMAGE_TILING_LINEAR` **may** not be supported unless other parameters meet all of the constraints:

- `imageType` is `VK_IMAGE_TYPE_2D`
- `format` is not a depth/stencil format
- `mipLevels` is 1
- `arrayLayers` is 1
- `samples` is `VK_SAMPLE_COUNT_1_BIT`
- `usage` only includes `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` and/or `VK_IMAGE_USAGE_TRANSFER_DST_BIT`

Images created with one of the [formats that require a sampler Y'C_BC_R conversion](#), have further restrictions on their limits and capabilities compared to images created with other formats. Creation of images with a format requiring [Y'C_BC_R conversion](#) **may** not be supported unless other parameters meet all of the constraints:

- `imageType` is `VK_IMAGE_TYPE_2D`
- `mipLevels` is 1
- `arrayLayers` is 1, unless the `ycbcrImageArrays` feature is enabled, or otherwise indicated by `VkImageFormatProperties::maxArrayLayers`, as returned by `vkGetPhysicalDeviceImageFormatProperties`
- `samples` is `VK_SAMPLE_COUNT_1_BIT`

Implementations **may** support additional limits and capabilities beyond those listed above.

To determine the set of valid `usage` bits for a given format, call `vkGetPhysicalDeviceFormatProperties`.

If the size of the resultant image would exceed `maxResourceSize`, then `vkCreateImage` **must** fail and return `VK_ERROR_OUT_OF_DEVICE_MEMORY`. This failure **may** occur even when all image creation parameters satisfy their valid usage requirements.

If the implementation reports `VK_TRUE` in `VkPhysicalDeviceHostImageCopyPropertiesEXT::identicalMemoryTypeRequirements`, usage of `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` **must** not affect the memory type requirements of the image as described in [Sparse Resource Memory Requirements](#) and [Resource Memory Association](#).

NOTE

For images created without `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT` a `usage` bit is valid if it is supported for the format the image is created with.

For images created with `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT` a `usage` bit is valid if it is supported for at least one of the formats a `VkImageView` created from the image **can** have (see [Image Views](#) for more detail).

Image Creation Limits

Valid values for some image creation parameters are limited by a numerical upper bound or

by inclusion in a bitset. For example, `VkImageCreateInfo::arrayLayers` is limited by `imageCreateMaxArrayLayers`, defined below; and `VkImageCreateInfo::samples` is limited by `imageCreateSampleCounts`, also defined below.

Several limiting values are defined below, as well as assisting values from which the limiting values are derived. The limiting values are referenced by the relevant valid usage statements of `VkImageCreateInfo`.

- Let `uint64_t imageCreateDrmFormatModifiers[]` be the set of `Linux DRM format modifiers` that the resultant image **may** have.
 - If `tiling` is not `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `imageCreateDrmFormatModifiers` is empty.
 - If `VkImageCreateInfo::pNext` contains `VkImageDrmFormatModifierExplicitCreateInfoEXT`, then `imageCreateDrmFormatModifiers` contains exactly one modifier, `VkImageDrmFormatModifierExplicitCreateInfoEXT::drmFormatModifier`.
 - If `VkImageCreateInfo::pNext` contains `VkImageDrmFormatModifierListCreateInfoEXT`, then `imageCreateDrmFormatModifiers` contains the entire array `VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers`.
- Let `VkBool32 imageCreateMaybeLinear` indicate if the resultant image may be `linear`.
 - If `tiling` is `VK_IMAGE_TILING_LINEAR`, then `imageCreateMaybeLinear` is `VK_TRUE`.
 - If `tiling` is `VK_IMAGE_TILING_OPTIMAL`, then `imageCreateMaybeLinear` is `VK_FALSE`.
 - If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `imageCreateMaybeLinear` is `VK_TRUE` if and only if `imageCreateDrmFormatModifiers` contains `DRM_FORMAT_MOD_LINEAR`.
- Let `VkFormatFeatureFlags imageCreateFormatFeatures` be the set of valid *format features* available during image creation.
 - If `tiling` is `VK_IMAGE_TILING_LINEAR`, then `imageCreateFormatFeatures` is the value of `VkFormatProperties::linearTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` with parameter `format` equal to `VkImageCreateInfo::format`.
 - If `tiling` is `VK_IMAGE_TILING_OPTIMAL`, and if the `pNext` chain includes no `VkExternalFormatANDROID` or `VkExternalFormatQNX` structure with non-zero `externalFormat`, then `imageCreateFormatFeatures` is the value of `VkFormatProperties::optimalTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` with parameter `format` equal to `VkImageCreateInfo::format`.
 - If `tiling` is `VK_IMAGE_TILING_OPTIMAL`, and if the `pNext` chain includes a `VkExternalFormatANDROID` structure with non-zero `externalFormat`, then `imageCreateFormatFeatures` is the value of `VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures` obtained by `vkGetAndroidHardwareBufferPropertiesANDROID` with a matching `externalFormat` value.
 - If `tiling` is `VK_IMAGE_TILING_OPTIMAL`, and if the `pNext` chain includes a `VkExternalFormatQNX` structure with non-zero `externalFormat`, then

`imageCreateFormatFeatures` is the value of `VkScreenBufferFormatPropertiesQNX::formatFeatures` obtained by `vkGetScreenBufferPropertiesQNX` with a matching `externalFormat` value.

- If the `pNext` chain includes a `VkBufferCollectionImageCreateInfoFUCHSIA` structure, then `imageCreateFormatFeatures` is the value of `VkBufferCollectionPropertiesFUCHSIA::formatFeatures` found by calling `vkGetBufferCollectionPropertiesFUCHSIA` with a parameter `collection` equal to `VkBufferCollectionImageCreateInfoFUCHSIA::collection`
 - If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then the value of `imageCreateFormatFeatures` is found by calling `vkGetPhysicalDeviceFormatProperties2` with `VkImageFormatProperties::format` equal to `VkImageCreateInfo::format` and with `VkDrmFormatModifierPropertiesListEXT` chained into `VkFormatProperties2`; by collecting all members of the returned array `VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties` whose `drmFormatModifier` belongs to `imageCreateDrmFormatModifiers`; and by taking the bitwise intersection, over the collected array members, of `drmFormatModifierTilingFeatures`. (The resultant `imageCreateFormatFeatures` may be empty).
- Let `VkImageFormatProperties2 imageCreateImageFormatPropertiesList[]` be defined as follows.
 - If `VkImageCreateInfo::pNext` contains no `VkExternalFormatANDROID` or `VkExternalFormatQNX` structure with non-zero `externalFormat`, then `imageCreateImageFormatPropertiesList` is the list of structures obtained by calling `vkGetPhysicalDeviceImageFormatProperties2`, possibly multiple times, as follows:
 - The parameters `VkPhysicalDeviceImageFormatInfo2::format`, `imageType`, `tiling`, `usage`, and `flags` **must** be equal to those in `VkImageCreateInfo`.
 - If `VkImageCreateInfo::pNext` contains a `VkExternalMemoryImageCreateInfo` structure whose `handleTypes` is not `0`, then `VkPhysicalDeviceImageFormatInfo2::pNext` **must** contain a `VkPhysicalDeviceExternalImageFormatInfo` structure whose `handleType` is not `0`; and `vkGetPhysicalDeviceImageFormatProperties2` **must** be called for each handle type in `VkExternalMemoryImageCreateInfo::handleTypes`, successively setting `VkPhysicalDeviceExternalImageFormatInfo::handleType` on each call.
 - If `VkImageCreateInfo::pNext` contains no `VkExternalMemoryImageCreateInfo` structure, or contains a structure whose `handleTypes` is `0`, then `VkPhysicalDeviceImageFormatInfo2::pNext` **must** either contain no `VkPhysicalDeviceExternalImageFormatInfo` structure, or contain a structure whose `handleType` is `0`.
 - If `VkImageCreateInfo::pNext` contains a `VkVideoProfileListInfoKHR` structure then `VkPhysicalDeviceImageFormatInfo2::pNext` **must** also contain the same `VkVideoProfileListInfoKHR` structure on each call.
 - If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then:
 - `VkPhysicalDeviceImageFormatInfo2::pNext` **must** contain a `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure where `sharingMode` is equal to `VkImageCreateInfo::sharingMode`;

- if `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` and `pQueueFamilyIndices` **must** be equal to those in `VkImageCreateInfo`;
- if `flags` contains `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, then the `VkImageFormatListCreateInfo` structure included in the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2` **must** be equivalent to the one included in the `pNext` chain of `VkImageCreateInfo`;
- if `VkImageCreateInfo::pNext` contains a `VkImageCompressionControlEXT` structure, then the `VkPhysicalDeviceImageFormatInfo2::pNext` chain **must** contain an equivalent structure;
- `vkGetPhysicalDeviceImageFormatProperties2` **must** be called for each modifier in `imageCreateDrmFormatModifiers`, successively setting `VkPhysicalDeviceImageDrmFormatModifierInfoEXT::drmFormatModifier` on each call.
- If `tiling` is not `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `VkPhysicalDeviceImageFormatInfo2::pNext` **must** contain no `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure.
- If any call to `vkGetPhysicalDeviceImageFormatProperties2` returns an error, then `imageCreateImageFormatPropertiesList` is defined to be the empty list.
- If `VkImageCreateInfo::pNext` contains a `VkExternalFormatANDROID` structure with non-zero `externalFormat`, then `imageCreateImageFormatPropertiesList` contains a single element where:
 - `VkImageFormatProperties::maxMipLevels` is $\lceil \log_2(\max(\text{extent.width}, \text{extent.height}, \text{extent.depth})) \rceil + 1$.
 - `VkImageFormatProperties::maxArrayLayers` is `VkPhysicalDeviceLimits::maxImageArrayLayers`.
 - Each component of `VkImageFormatProperties::maxExtent` is `VkPhysicalDeviceLimits::maxImageDimension2D`.
 - `VkImageFormatProperties::sampleCounts` contains exactly `VK_SAMPLE_COUNT_1_BIT`.
- Let `uint32_t imageCreateMaxMipLevels` be the minimum value of `VkImageFormatProperties::maxMipLevels` in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `uint32_t imageCreateMaxArrayLayers` be the minimum value of `VkImageFormatProperties::maxArrayLayers` in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `VkExtent3D imageCreateMaxExtent` be the component-wise minimum over all `VkImageFormatProperties::maxExtent` values in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `VkSampleCountFlags imageCreateSampleCounts` be the intersection of each `VkImageFormatProperties::sampleCounts` in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `VkVideoFormatPropertiesKHR videoFormatProperties[]` be defined as follows.

- If `VkImageCreateInfo::pNext` contains a `VkVideoProfileListInfoKHR` structure, then `videoFormatProperties` is the list of structures obtained by calling `vkGetPhysicalDeviceVideoFormatPropertiesKHR` with `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` equal to the `usage` member of `VkImageCreateInfo` and `VkPhysicalDeviceVideoFormatInfoKHR::pNext` containing the same `VkVideoProfileListInfoKHR` structure chained to `VkImageCreateInfo`.
- If `VkImageCreateInfo::pNext` contains no `VkVideoProfileListInfoKHR` structure, then `videoFormatProperties` is an empty list.
- Let `VkBool32 supportedVideoFormat` indicate if the image parameters are supported by the specified video profiles.
 - `supportedVideoFormat` is `VK_TRUE` if there exists an element in the `videoFormatProperties` list for which all of the following conditions are true:
 - `VkImageCreateInfo::format` equals `VkVideoFormatPropertiesKHR::format`.
 - `VkImageCreateInfo::flags` only contains `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and/or bits also set in `VkVideoFormatPropertiesKHR::imageCreateFlags`.
 - `VkImageCreateInfo::imageType` equals `VkVideoFormatPropertiesKHR::imageType`.
 - `VkImageCreateInfo::tiling` equals `VkVideoFormatPropertiesKHR::imageTiling`.
 - `VkImageCreateInfo::usage` only contains bits also set in `VkVideoFormatPropertiesKHR::imageUsageFlags`, or `VkImageCreateInfo::flags` includes `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT`.
 - Otherwise `supportedVideoFormat` is `VK_FALSE`.

Valid Usage

- VUID-VkImageCreateInfo-imageCreateMaxMipLevels-02251
Each of the following values (as described in [Image Creation Limits](#)) **must** not be undefined : `imageCreateMaxMipLevels`, `imageCreateMaxArrayLayers`, `imageCreateMaxExtent`, and `imageCreateSampleCounts`
- VUID-VkImageCreateInfo-sharingMode-00941
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, `pQueueFamilyIndices` **must** be a valid pointer to an array of `queueFamilyIndexCount` `uint32_t` values
- VUID-VkImageCreateInfo-sharingMode-00942
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, `queueFamilyIndexCount` **must** be greater than 1
- VUID-VkImageCreateInfo-sharingMode-01420
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of `pQueueFamilyIndices` **must** be unique and **must** be less than `pQueueFamilyPropertyCount` returned by either `vkGetPhysicalDeviceQueueFamilyProperties` or `vkGetPhysicalDeviceQueueFamilyProperties2` for the `physicalDevice` that was used to create `device`
- VUID-VkImageCreateInfo-pNext-01974

If the `pNext` chain includes a `VkExternalFormatANDROID` structure, and its `externalFormat` member is non-zero the `format` **must** be `VK_FORMAT_UNDEFINED`

- VUID-VkImageCreateInfo-pNext-01975

If the `pNext` chain does not include a `VkExternalFormatANDROID` structure, or does and its `externalFormat` member is `0`, the `format` **must** not be `VK_FORMAT_UNDEFINED`

- VUID-VkImageCreateInfo-extent-00944

`extent.width` **must** be greater than `0`

- VUID-VkImageCreateInfo-extent-00945

`extent.height` **must** be greater than `0`

- VUID-VkImageCreateInfo-extent-00946

`extent.depth` **must** be greater than `0`

- VUID-VkImageCreateInfo-mipLevels-00947

`mipLevels` **must** be greater than `0`

- VUID-VkImageCreateInfo-arrayLayers-00948

`arrayLayers` **must** be greater than `0`

- VUID-VkImageCreateInfo-flags-00949

If `flags` contains `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`, `imageType` **must** be `VK_IMAGE_TYPE_2D`

- VUID-VkImageCreateInfo-flags-08865

If `flags` contains `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`, `extent.width` and `extent.height` **must** be equal

- VUID-VkImageCreateInfo-flags-08866

If `flags` contains `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`, `arrayLayers` **must** be greater than or equal to `6`

- VUID-VkImageCreateInfo-flags-02557

If `flags` contains `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`, `imageType` **must** be `VK_IMAGE_TYPE_2D`

- VUID-VkImageCreateInfo-flags-00950

If `flags` contains `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT`, `imageType` **must** be `VK_IMAGE_TYPE_3D`

- VUID-VkImageCreateInfo-flags-09403

If `flags` contains `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT`, `flags` **must** not include `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`, `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, or `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-flags-07755

If `flags` contains `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT`, `imageType` **must** be `VK_IMAGE_TYPE_3D`

- VUID-VkImageCreateInfo-imageType-10197

If `flags` contains `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT`, `flags` **must** not include `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`, `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, or `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-extent-02252

`extent.width` **must** be less than or equal to `imageCreateMaxExtent.width` (as defined in [Image Creation Limits](#))

- VUID-VkImageCreateInfo-extent-02253
`extent.height` **must** be less than or equal to `imageCreateMaxExtent.height` (as defined in [Image Creation Limits](#))
- VUID-VkImageCreateInfo-extent-02254
`extent.depth` **must** be less than or equal to `imageCreateMaxExtent.depth` (as defined in [Image Creation Limits](#))
- VUID-VkImageCreateInfo-imageType-00956
If `imageType` is `VK_IMAGE_TYPE_1D`, both `extent.height` and `extent.depth` **must** be 1
- VUID-VkImageCreateInfo-imageType-00957
If `imageType` is `VK_IMAGE_TYPE_2D`, `extent.depth` **must** be 1
- VUID-VkImageCreateInfo-mipLevels-00958
`mipLevels` **must** be less than or equal to the number of levels in the complete mipmap chain based on `extent.width`, `extent.height`, and `extent.depth`
- VUID-VkImageCreateInfo-mipLevels-02255
`mipLevels` **must** be less than or equal to `imageCreateMaxMipLevels` (as defined in [Image Creation Limits](#))
- VUID-VkImageCreateInfo-arrayLayers-02256
`arrayLayers` **must** be less than or equal to `imageCreateMaxArrayLayers` (as defined in [Image Creation Limits](#))
- VUID-VkImageCreateInfo-imageType-00961
If `imageType` is `VK_IMAGE_TYPE_3D`, `arrayLayers` **must** be 1
- VUID-VkImageCreateInfo-samples-02257
If `samples` is not `VK_SAMPLE_COUNT_1_BIT`, then `imageType` **must** be `VK_IMAGE_TYPE_2D`, `flags` **must** not contain `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`, `mipLevels` **must** be equal to 1, and `imageCreateMayBeLinear` (as defined in [Image Creation Limits](#)) **must** be `VK_FALSE`,
- VUID-VkImageCreateInfo-samples-02558
If `samples` is not `VK_SAMPLE_COUNT_1_BIT`, `usage` **must** not contain `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`
- VUID-VkImageCreateInfo-usage-00963
If `usage` includes `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, then bits other than `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` **must** not be set
- VUID-VkImageCreateInfo-usage-00964
If `usage` includes `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, or `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, `extent.width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxFramebufferWidth`
- VUID-VkImageCreateInfo-usage-00965
If `usage` includes `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, or `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, `extent.height` **must** be less than or equal to

VkPhysicalDeviceLimits::maxFramebufferHeight

- VUID-VkImageCreateInfo-fragmentDensityMapOffset-06514

If the `fragmentDensityMapOffset` feature is not enabled and `usage` includes `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`, `extent.width` **must** be less than or equal to $\lceil \frac{\text{maxFramebufferWidth}}{\text{minFragmentDensityTexelSize}_{\text{width}}} \rceil$

- VUID-VkImageCreateInfo-fragmentDensityMapOffset-06515

If the `fragmentDensityMapOffset` feature is not enabled and `usage` includes `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`, `extent.height` **must** be less than or equal to $\lceil \frac{\text{maxFramebufferHeight}}{\text{minFragmentDensityTexelSize}_{\text{height}}} \rceil$

- VUID-VkImageCreateInfo-usage-00966

If `usage` includes `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, `usage` **must** also contain at least one of `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, or `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`

- VUID-VkImageCreateInfo-samples-02258

`samples` **must** be a valid `VkSampleCountFlagBits` value that is set in `imageCreateSampleCounts` (as defined in [Image Creation Limits](#))

- VUID-VkImageCreateInfo-usage-00968

If the `shaderStorageImageMultisample` feature is not enabled, and `usage` contains `VK_IMAGE_USAGE_STORAGE_BIT`, `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`

- VUID-VkImageCreateInfo-flags-00969

If the `sparseBinding` feature is not enabled, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`

- VUID-VkImageCreateInfo-flags-01924

If the `sparseResidencyAliased` feature is not enabled, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`

- VUID-VkImageCreateInfo-tiling-04121

If `tiling` is `VK_IMAGE_TILING_LINEAR`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-imageType-00970

If `imageType` is `VK_IMAGE_TYPE_1D`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-imageType-00971

If the `sparseResidencyImage2D` feature is not enabled, and `imageType` is `VK_IMAGE_TYPE_2D`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-imageType-00972

If the `sparseResidencyImage3D` feature is not enabled, and `imageType` is `VK_IMAGE_TYPE_3D`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-imageType-00973

If the `sparseResidency2Samples` feature is not enabled, `imageType` is `VK_IMAGE_TYPE_2D`, and `samples` is `VK_SAMPLE_COUNT_2_BIT`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-imageType-00974

If the `sparseResidency4Samples` feature is not enabled, `imageType` is `VK_IMAGE_TYPE_2D`, and

`samples` is `VK_SAMPLE_COUNT_4_BIT`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-imageType-00975

If the `sparseResidency8Samples` feature is not enabled, `imageType` is `VK_IMAGE_TYPE_2D`, and `samples` is `VK_SAMPLE_COUNT_8_BIT`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-imageType-00976

If the `sparseResidency16Samples` feature is not enabled, `imageType` is `VK_IMAGE_TYPE_2D`, and `samples` is `VK_SAMPLE_COUNT_16_BIT`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-flags-00987

If `flags` contains `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`, it **must** also contain `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`

- VUID-VkImageCreateInfo-None-01925

If any of the bits `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` are set, `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` **must** not also be set

- VUID-VkImageCreateInfo-flags-01890

If the `protectedMemory` feature is not enabled, `flags` **must** not contain `VK_IMAGE_CREATE_PROTECTED_BIT`

- VUID-VkImageCreateInfo-None-01891

If any of the bits `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` are set, `VK_IMAGE_CREATE_PROTECTED_BIT` **must** not also be set

- VUID-VkImageCreateInfo-pNext-00988

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfoNV` structure, it **must** not contain a `VkExternalMemoryImageCreateInfo` structure

- VUID-VkImageCreateInfo-pNext-00990

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` structure, its `handleTypes` member **must** only contain bits that are also in `VkExternalImageFormatProperties::externalMemoryProperties.compatibleHandleTypes`, as returned by `vkGetPhysicalDeviceImageFormatProperties2` with `format`, `imageType`, `tiling`, `usage`, and `flags` equal to those in this structure, and with a `VkPhysicalDeviceExternalImageFormatInfo` structure included in the `pNext` chain, with a `handleType` equal to any one of the handle types specified in `VkExternalMemoryImageCreateInfo::handleTypes`

- VUID-VkImageCreateInfo-pNext-00991

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfoNV` structure, its `handleTypes` member **must** only contain bits that are also in `VkExternalImageFormatPropertiesNV::externalMemoryProperties.compatibleHandleTypes`, as returned by `vkGetPhysicalDeviceExternalImageFormatPropertiesNV` with `format`, `imageType`, `tiling`, `usage`, and `flags` equal to those in this structure, and with `externalHandleType` equal to any one of the handle types specified in

VkExternalMemoryImageCreateInfoNV::handleTypes

- VUID-VkImageCreateInfo-physicalDeviceCount-01421
If the logical device was created with `VkDeviceGroupDeviceCreateInfo::physicalDeviceCount` equal to 1, `flags` **must** not contain `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT`
- VUID-VkImageCreateInfo-flags-02259
If `flags` contains `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT`, then `mipLevels` **must** be one, `arrayLayers` **must** be one, `imageType` **must** be `VK_IMAGE_TYPE_2D`, and `imageCreateMayBeLinear` (as defined in [Image Creation Limits](#)) **must** be `VK_FALSE`
- VUID-VkImageCreateInfo-flags-01572
If `flags` contains `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT`, then `format` **must** be a [compressed image format](#)
- VUID-VkImageCreateInfo-flags-01573
If `flags` contains `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT`, then `flags` **must** also contain `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`
- VUID-VkImageCreateInfo-initialLayout-00993
`initialLayout` **must** be `VK_IMAGE_LAYOUT_UNDEFINED` or `VK_IMAGE_LAYOUT_PREINITIALIZED`
- VUID-VkImageCreateInfo-pNext-01443
If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` or `VkExternalMemoryImageCreateInfoNV` structure whose `handleTypes` member is not 0, `initialLayout` **must** be `VK_IMAGE_LAYOUT_UNDEFINED`
- VUID-VkImageCreateInfo-format-06410
If the image `format` is one of the [formats that require a sampler Y'C_BC_R conversion](#), `mipLevels` **must** be 1
- VUID-VkImageCreateInfo-format-06411
If the image `format` is one of the [formats that require a sampler Y'C_BC_R conversion](#), `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkImageCreateInfo-format-06412
If the image `format` is one of the [formats that require a sampler Y'C_BC_R conversion](#), `imageType` **must** be `VK_IMAGE_TYPE_2D`
- VUID-VkImageCreateInfo-imageCreateFormatFeatures-02260
If `format` is a *multi-planar* format, and if `imageCreateFormatFeatures` (as defined in [Image Creation Limits](#)) does not contain `VK_FORMAT_FEATURE_DISJOINT_BIT`, then `flags` **must** not contain `VK_IMAGE_CREATE_DISJOINT_BIT`
- VUID-VkImageCreateInfo-format-01577
If `format` is not a *multi-planar* format, and `flags` does not include `VK_IMAGE_CREATE_ALIAS_BIT`, `flags` **must** not contain `VK_IMAGE_CREATE_DISJOINT_BIT`
- VUID-VkImageCreateInfo-format-04712
If `format` has a `_422` or `_420` suffix, `extent.width` **must** be a multiple of 2
- VUID-VkImageCreateInfo-format-04713
If `format` has a `_420` suffix, `extent.height` **must** be a multiple of 2
- VUID-VkImageCreateInfo-format-09583

If `format` is one of the `VK_FORMAT_PVRTC1*_IMG` formats, `extent.width` **must** be a power of 2

- VUID-VkImageCreateInfo-format-09584

If `format` is one of the `VK_FORMAT_PVRTC1*_IMG` formats, `extent.height` **must** be a power of 2

- VUID-VkImageCreateInfo-tiling-02261

If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then the `pNext` chain **must** include exactly one of `VkImageDrmFormatModifierListCreateInfoEXT` or `VkImageDrmFormatModifierExplicitCreateInfoEXT` structures

- VUID-VkImageCreateInfo-pNext-02262

If the `pNext` chain includes a `VkImageDrmFormatModifierListCreateInfoEXT` or `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure, then `tiling` **must** be `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`

- VUID-VkImageCreateInfo-tiling-02353

If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` and `flags` contains `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, then the `pNext` chain **must** include a `VkImageFormatListCreateInfo` structure with non-zero `viewFormatCount`

- VUID-VkImageCreateInfo-flags-01533

If `flags` contains `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` `format` **must** be a depth or depth/stencil format

- VUID-VkImageCreateInfo-pNext-02393

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` structure whose `handleTypes` member includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, `imageType` **must** be `VK_IMAGE_TYPE_2D`

- VUID-VkImageCreateInfo-pNext-02394

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` structure whose `handleTypes` member includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, `mipLevels` **must** either be 1 or equal to the number of levels in the complete mipmap chain based on `extent.width`, `extent.height`, and `extent.depth`

- VUID-VkImageCreateInfo-pNext-02396

If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not 0, `flags` **must** not include `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`

- VUID-VkImageCreateInfo-pNext-02397

If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not 0, `usage` **must** not include any usages except `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, or `VK_IMAGE_USAGE_SAMPLED_BIT`

- VUID-VkImageCreateInfo-pNext-09457

If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not 0, and `externalFormatResolve` feature is not enabled, `usage` **must** not include `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` or `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`

- VUID-VkImageCreateInfo-pNext-02398

If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat`

member is not 0, **tiling** must be `VK_IMAGE_TILING_OPTIMAL`

- VUID-VkImageCreateInfo-pNext-08951

If the **pNext** chain includes a `VkExternalMemoryImageCreateInfo` structure whose **handleTypes** member includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, **imageType** must be `VK_IMAGE_TYPE_2D`

- VUID-VkImageCreateInfo-pNext-08952

If the **pNext** chain includes a `VkExternalMemoryImageCreateInfo` structure whose **handleTypes** member includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, **mipLevels** must either be 1 or equal to the number of levels in the complete mipmap chain based on **extent.width**, **extent.height**, and **extent.depth**

- VUID-VkImageCreateInfo-pNext-08953

If the **pNext** chain includes a `VkExternalFormatQNX` structure whose **externalFormat** member is not 0, **flags** must not include `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`

- VUID-VkImageCreateInfo-pNext-08954

If the **pNext** chain includes a `VkExternalFormatQNX` structure whose **externalFormat** member is not 0, **usage** must not include any usages except `VK_IMAGE_USAGE_SAMPLED_BIT`

- VUID-VkImageCreateInfo-pNext-08955

If the **pNext** chain includes a `VkExternalFormatQNX` structure whose **externalFormat** member is not 0, **tiling** must be `VK_IMAGE_TILING_OPTIMAL`

- VUID-VkImageCreateInfo-format-02795

If **format** is a depth-stencil format, **usage** includes `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and the **pNext** chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member must also include `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`

- VUID-VkImageCreateInfo-format-02796

If **format** is a depth-stencil format, **usage** does not include `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and the **pNext** chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member must also not include `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`

- VUID-VkImageCreateInfo-format-02797

If **format** is a depth-stencil format, **usage** includes `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, and the **pNext** chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member must also include `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`

- VUID-VkImageCreateInfo-format-02798

If **format** is a depth-stencil format, **usage** does not include `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, and the **pNext** chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member must also not include `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`

- VUID-VkImageCreateInfo-Format-02536

If **Format** is a depth-stencil format and the **pNext** chain includes a `VkImageStencilUsageCreateInfo` structure with its **stencilUsage** member including `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, **extent.width** must be less than or equal to

VkPhysicalDeviceLimits::maxFramebufferWidth

- VUID-VkImageCreateInfo-format-02537

If `format` is a depth-stencil format and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure with its `stencilUsage` member including `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, `extent.height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxFramebufferHeight`

- VUID-VkImageCreateInfo-format-02538

If the `shaderStorageImageMultisample` feature is not enabled, `format` is a depth-stencil format and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure with its `stencilUsage` including `VK_IMAGE_USAGE_STORAGE_BIT`, `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`

- VUID-VkImageCreateInfo-flags-02050

If `flags` contains `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV`, `imageType` **must** be `VK_IMAGE_TYPE_2D` or `VK_IMAGE_TYPE_3D`

- VUID-VkImageCreateInfo-flags-02051

If `flags` contains `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV`, it **must** not contain `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` and the `format` **must** not be a depth/stencil format

- VUID-VkImageCreateInfo-flags-02052

If `flags` contains `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` and `imageType` is `VK_IMAGE_TYPE_2D`, `extent.width` and `extent.height` **must** be greater than 1

- VUID-VkImageCreateInfo-flags-02053

If `flags` contains `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` and `imageType` is `VK_IMAGE_TYPE_3D`, `extent.width`, `extent.height`, and `extent.depth` **must** be greater than 1

- VUID-VkImageCreateInfo-imageType-02082

If `usage` includes `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, `imageType` **must** be `VK_IMAGE_TYPE_2D`

- VUID-VkImageCreateInfo-samples-02083

If `usage` includes `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`

- VUID-VkImageCreateInfo-shadingRateImage-07727

If the `shadingRateImage` feature is enabled and `usage` includes `VK_IMAGE_USAGE_SHADING_RATE_IMAGE_BIT_NV`, `tiling` **must** be `VK_IMAGE_TILING_OPTIMAL`

- VUID-VkImageCreateInfo-flags-02565

If `flags` contains `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`, `tiling` **must** be `VK_IMAGE_TILING_OPTIMAL`

- VUID-VkImageCreateInfo-flags-02566

If `flags` contains `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`, `imageType` **must** be `VK_IMAGE_TYPE_2D`

- VUID-VkImageCreateInfo-flags-02567

If `flags` contains `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`, `flags` **must** not contain `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`

- VUID-VkImageCreateInfo-flags-02568

If `flags` contains `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`, `mipLevels` **must** be 1

- VUID-VkImageCreateInfo-usage-04992
If `usage` includes `VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI`, `tiling` **must** be `VK_IMAGE_TILING_LINEAR`
- VUID-VkImageCreateInfo-imageView2DOn3DImage-04459
If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageView2DOn3DImage` is `VK_FALSE`, `flags` **must** not contain `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT`
- VUID-VkImageCreateInfo-multisampleArrayImage-04460
If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::multisampleArrayImage` is `VK_FALSE`, and `samples` is not `VK_SAMPLE_COUNT_1_BIT`, then `arrayLayers` **must** be 1
- VUID-VkImageCreateInfo-pNext-06722
If a `VkImageFormatListCreateInfo` structure was included in the `pNext` chain and `format` is not a `multi-planar` format and `VkImageFormatListCreateInfo::viewFormatCount` is not zero, then each format in `VkImageFormatListCreateInfo::pViewFormats` **must** either be compatible with the `format` as described in the `compatibility table` or, if `flags` contains `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT`, be an uncompressed format that is size-compatible with `format`
- VUID-VkImageCreateInfo-pNext-10062
If a `VkImageFormatListCreateInfo` structure was included in the `pNext` chain and `format` is a `multi-planar` format and `flags` contains `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` and `VkImageFormatListCreateInfo::viewFormatCount` is not zero, then each format in `VkImageFormatListCreateInfo::pViewFormats` **must** be compatible with the `VkFormat` for the plane of the image format
- VUID-VkImageCreateInfo-flags-04738
If `flags` does not contain `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` and the `pNext` chain includes a `VkImageFormatListCreateInfo` structure, then `VkImageFormatListCreateInfo::viewFormatCount` **must** be 0 or 1
- VUID-VkImageCreateInfo-usage-04815
If `usage` includes `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, and `flags` does not include `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0 and `pProfiles` including at least one `VkVideoProfileInfoKHR` structure with a `videoCodecOperation` member specifying a decode operation
- VUID-VkImageCreateInfo-usage-04816
If `usage` includes `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, and `flags` does not include `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0 and `pProfiles` including at least one `VkVideoProfileInfoKHR` structure with a `videoCodecOperation` member specifying an encode operation
- VUID-VkImageCreateInfo-flags-08328
If `flags` includes `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then `videoMaintenance1` **must** be enabled

- VUID-VkImageCreateInfo-flags-08329
If `flags` includes `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and `usage` does not include `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, then `usage` **must** not include `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`
- VUID-VkImageCreateInfo-flags-08331
If `flags` includes `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then `usage` **must** not include `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`
- VUID-VkImageCreateInfo-pNext-06811
If the `pNext` chain includes a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0, then `supportedVideoFormat` **must** be `VK_TRUE`
- VUID-VkImageCreateInfo-pNext-06390
If the `VkImage` is to be used to import memory from a `VkBufferCollectionFUCHSIA`, a `VkBufferCollectionImageCreateInfoFUCHSIA` structure **must** be chained to `pNext`
- VUID-VkImageCreateInfo-multisampledRenderToSingleSampled-06882
If the `multisampledRenderToSingleSampled` feature is not enabled, `flags` **must** not contain `VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT`
- VUID-VkImageCreateInfo-flags-06883
If `flags` contains `VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT`, `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkImageCreateInfo-pNext-06743
If the `pNext` chain includes a `VkImageCompressionControlEXT` structure, `format` is a `multi-planar` format, and `VkImageCompressionControlEXT::flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, then `VkImageCompressionControlEXT::compressionControlPlaneCount` **must** be equal to the number of planes in `format`
- VUID-VkImageCreateInfo-pNext-06744
If the `pNext` chain includes a `VkImageCompressionControlEXT` structure, `format` is not a `multi-planar` format, and `VkImageCompressionControlEXT::flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, then `VkImageCompressionControlEXT::compressionControlPlaneCount` **must** be 1
- VUID-VkImageCreateInfo-pNext-06746
If the `pNext` chain includes a `VkImageCompressionControlEXT` structure, it **must** not contain a `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure
- VUID-VkImageCreateInfo-flags-08104
If `flags` includes `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-VkImageCreateInfo-pNext-08105
If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `flags` **must** contain `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`
- VUID-VkImageCreateInfo-pNext-06783
If the `pNext` chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its `exportObjectType` member **must** be either `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT` or `VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT`

- VUID-VkImageCreateInfo-pNext-06784
If the **pNext** chain includes a [VkImportMetalTextureInfoEXT](#) structure its **plane** member **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT`, or `VK_IMAGE_ASPECT_PLANE_2_BIT`
- VUID-VkImageCreateInfo-pNext-06785
If the **pNext** chain includes a [VkImportMetalTextureInfoEXT](#) structure and the image does not have a multi-planar format, then [VkImportMetalTextureInfoEXT::plane](#) **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`
- VUID-VkImageCreateInfo-pNext-06786
If the **pNext** chain includes a [VkImportMetalTextureInfoEXT](#) structure and the image has a multi-planar format with only two planes, then [VkImportMetalTextureInfoEXT::plane](#) **must** not be `VK_IMAGE_ASPECT_PLANE_2_BIT`
- VUID-VkImageCreateInfo-imageCreateFormatFeatures-09048
If **imageCreateFormatFeatures** (as defined in [Image Creation Limits](#)) does not contain `VK_FORMAT_FEATURE_2_HOST_IMAGE_TRANSFER_BIT_EXT`, then **usage** **must** not contain `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT`
- VUID-VkImageCreateInfo-usage-10245
If **usage** includes `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT`, then the **hostImageCopy** feature **must** be enabled
- VUID-VkImageCreateInfo-pNext-09653
If the **pNext** chain contains a [VkImageAlignmentControlCreateInfoMESA](#) structure, **tiling** **must** be `VK_IMAGE_TILING_OPTIMAL`
- VUID-VkImageCreateInfo-pNext-09654
If the **pNext** chain contains a [VkImageAlignmentControlCreateInfoMESA](#) structure, it **must** not contain a [VkExternalMemoryImageCreateInfo](#) structure

Valid Usage (Implicit)

- VUID-VkImageCreateInfo-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_IMAGE_CREATE_INFO`
- VUID-VkImageCreateInfo-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either `NULL` or a pointer to a valid instance of [VkBufferCollectionImageCreateInfoFUCHSIA](#), [VkDedicatedAllocationImageCreateInfoNV](#), [VkExportMetalObjectCreateInfoEXT](#), [VkExternalFormatANDROID](#), [VkExternalFormatQNX](#), [VkExternalMemoryImageCreateInfo](#), [VkExternalMemoryImageCreateInfoNV](#), [VkImageAlignmentControlCreateInfoMESA](#), [VkImageCompressionControlEXT](#), [VkImageDrmFormatModifierExplicitCreateInfoEXT](#), [VkImageFormatListCreateInfo](#), [VkImageDrmFormatModifierListCreateInfoEXT](#), [VkImageStencilUsageCreateInfo](#), [VkImageSwapchainCreateInfoKHR](#), [VkImportMetalIOSurfaceInfoEXT](#), [VkImportMetalTextureInfoEXT](#), [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#), [VkOpticalFlowImageFormatInfoNV](#), or [VkVideoProfileListInfoKHR](#)

- VUID-VkImageCreateInfo-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique, with the exception of structures of type [VkExportMetalObjectCreateInfoEXT](#) or [VkImportMetalTextureInfoEXT](#)
- VUID-VkImageCreateInfo-flags-parameter
flags **must** be a valid combination of [VkImageCreateFlagBits](#) values
- VUID-VkImageCreateInfo-imageType-parameter
imageType **must** be a valid [VkImageType](#) value
- VUID-VkImageCreateInfo-format-parameter
format **must** be a valid [VkFormat](#) value
- VUID-VkImageCreateInfo-samples-parameter
samples **must** be a valid [VkSampleCountFlagBits](#) value
- VUID-VkImageCreateInfo-tiling-parameter
tiling **must** be a valid [VkImageTiling](#) value
- VUID-VkImageCreateInfo-usage-parameter
usage **must** be a valid combination of [VkImageUsageFlagBits](#) values
- VUID-VkImageCreateInfo-usage-requiredbitmask
usage **must** not be 0
- VUID-VkImageCreateInfo-sharingMode-parameter
sharingMode **must** be a valid [VkSharingMode](#) value
- VUID-VkImageCreateInfo-initialLayout-parameter
initialLayout **must** be a valid [VkImageLayout](#) value

The [VkBufferCollectionImageCreateInfoFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionImageCreateInfoFUCHSIA {
    VkStructureType      sType;
    const void*          pNext;
    VkBufferCollectionFUCHSIA collection;
    uint32_t             index;
} VkBufferCollectionImageCreateInfoFUCHSIA;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure
- **collection** is the [VkBufferCollectionFUCHSIA](#) handle
- **index** is the index of the buffer in the buffer collection from which the memory will be imported

Valid Usage

- VUID-VkBufferCollectionImageCreateInfoFUCHSIA-index-06391
index **must** be less than [VkBufferCollectionPropertiesFUCHSIA::bufferCount](#)

Valid Usage (Implicit)

- VUID-VkBufferCollectionImageCreateInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_IMAGE_CREATE_INFO_FUCHSIA`
- VUID-VkBufferCollectionImageCreateInfoFUCHSIA-collection-parameter
`collection` **must** be a valid `VkBufferCollectionFUCHSIA` handle

The `VkImageStencilUsageCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkImageStencilUsageCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImageUsageFlags  stencilUsage;
} VkImageStencilUsageCreateInfo;
```

or the equivalent

```
// Provided by VK_EXT_separate_stencil_usage
typedef VkImageStencilUsageCreateInfo VkImageStencilUsageCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stencilUsage` is a bitmask of `VkImageUsageFlagBits` describing the intended usage of the stencil aspect of the image.

If the `pNext` chain of `VkImageCreateInfo` includes a `VkImageStencilUsageCreateInfo` structure, then that structure includes the usage flags specific to the stencil aspect of the image for an image with a depth-stencil format.

This structure specifies image usages which only apply to the stencil aspect of a depth/stencil format image. When this structure is included in the `pNext` chain of `VkImageCreateInfo`, the stencil aspect of the image **must** only be used as specified by `stencilUsage`. When this structure is not included in the `pNext` chain of `VkImageCreateInfo`, the stencil aspect of an image **must** only be used as specified by `VkImageCreateInfo::usage`. Use of other aspects of an image are unaffected by this structure.

This structure **can** also be included in the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2` to query additional capabilities specific to image creation parameter combinations including a separate set of usage flags for the stencil aspect of the image using `vkGetPhysicalDeviceImageFormatProperties2`. When this structure is not included in the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2` then the implicit value of `stencilUsage` matches that of `VkPhysicalDeviceImageFormatInfo2::usage`.

Valid Usage

- VUID-VkImageStencilUsageCreateInfo-stencilUsage-02539

If `stencilUsage` includes `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, it **must** not include bits other than `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT` or `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`

Valid Usage (Implicit)

- VUID-VkImageStencilUsageCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_STENCIL_USAGE_CREATE_INFO`
- VUID-VkImageStencilUsageCreateInfo-stencilUsage-parameter
`stencilUsage` **must** be a valid combination of `VkImageUsageFlagBits` values
- VUID-VkImageStencilUsageCreateInfo-stencilUsage-requiredbitmask
`stencilUsage` **must** not be 0

If the `pNext` chain includes a `VkDedicatedAllocationImageCreateInfoNV` structure, then that structure includes an enable controlling whether the image will have a dedicated memory allocation bound to it.

The `VkDedicatedAllocationImageCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_dedicated_allocation
typedef struct VkDedicatedAllocationImageCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           dedicatedAllocation;
} VkDedicatedAllocationImageCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dedicatedAllocation` specifies whether the image will have a dedicated allocation bound to it.

NOTE

Using a dedicated allocation for color and depth/stencil attachments or other large images **may** improve performance on some devices.

Valid Usage

- VUID-VkDedicatedAllocationImageCreateInfoNV-dedicatedAllocation-00994

If `dedicatedAllocation` is `VK_TRUE`, `VkImageCreateInfo::flags` **must** not include `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`

Valid Usage (Implicit)

- VUID-VkDedicatedAllocationImageCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_IMAGE_CREATE_INFO_NV`

To define a set of external memory handle types that **may** be used as backing store for an image, add a `VkExternalMemoryImageCreateInfo` structure to the `pNext` chain of the `VkImageCreateInfo` structure. The `VkExternalMemoryImageCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalMemoryImageCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlags handleTypes;
} VkExternalMemoryImageCreateInfo;
```

or the equivalent

```
// Provided by VK_KHR_external_memory
typedef VkExternalMemoryImageCreateInfo VkExternalMemoryImageCreateInfoKHR;
```

NOTE

A `VkExternalMemoryImageCreateInfo` structure with a non-zero `handleTypes` field must be included in the creation parameters for an image that will be bound to memory that is either exported or imported.

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleTypes` is zero or a bitmask of `VkExternalMemoryHandleTypeFlagBits` specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryImageCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_IMAGE_CREATE_INFO`
- VUID-VkExternalMemoryImageCreateInfo-handleTypes-parameter
`handleTypes` **must** be a valid combination of `VkExternalMemoryHandleTypeFlagBits` values

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfoNV` structure, then that structure defines a set of external memory handle types that **may** be used as backing store for the image.

The `VkExternalMemoryImageCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_external_memory
typedef struct VkExternalMemoryImageCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkExternalMemoryHandleTypeFlagsNV handleTypes;
} VkExternalMemoryImageCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleTypes` is zero or a bitmask of `VkExternalMemoryHandleTypeFlagBitsNV` specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryImageCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_IMAGE_CREATE_INFO_NV`
- VUID-VkExternalMemoryImageCreateInfoNV-handleTypes-parameter
`handleTypes` **must** be a valid combination of `VkExternalMemoryHandleTypeFlagBitsNV` values

`VkExternalFormatANDROID` is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkExternalFormatANDROID {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           externalFormat;
} VkExternalFormatANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalFormat` is an implementation-defined identifier for the external format

When included in the `pNext` chain of another structure, it indicates [additional format information](#) beyond what is provided by `VkFormat` values for an Android hardware buffer. If `externalFormat` is zero, it indicates that no external format is used, and implementations should rely only on other format information. If this structure is not present, it is equivalent to setting `externalFormat` to zero.

Valid Usage

- VUID-VkExternalFormatANDROID-externalFormat-01894
`externalFormat` **must** be `0` or a value returned in the `externalFormat` member of `VkAndroidHardwareBufferFormatPropertiesANDROID` by an earlier call to

Valid Usage (Implicit)

- VUID-VkExternalFormatANDROID-sType-sType
sType **must** be VK_STRUCTURE_TYPE_EXTERNAL_FORMAT_ANDROID

To create an image with an [QNX Screen external format](#), add a [VkExternalFormatQNX](#) structure in the pNext chain of [VkImageCreateInfo](#). [VkExternalFormatQNX](#) is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkExternalFormatQNX {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           externalFormat;
} VkExternalFormatQNX;
```

- sType is a [VkStructureType](#) value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- externalFormat is an implementation-defined identifier for the external format

If externalFormat is zero, the effect is as if the [VkExternalFormatQNX](#) structure was not present. Otherwise, the image will have the specified external format.

Valid Usage

- VUID-VkExternalFormatQNX-externalFormat-08956
externalFormat **must** be 0 or a value returned in the externalFormat member of [VkScreenBufferFormatPropertiesQNX](#) by an earlier call to [vkGetScreenBufferPropertiesQNX](#)

Valid Usage (Implicit)

- VUID-VkExternalFormatQNX-sType-sType
sType **must** be VK_STRUCTURE_TYPE_EXTERNAL_FORMAT_QNX

If the pNext chain of [VkImageCreateInfo](#) includes a [VkImageSwapchainCreateInfoKHR](#) structure, then that structure includes a swapchain handle indicating that the image will be bound to memory from that swapchain.

The [VkImageSwapchainCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkImageSwapchainCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
} VkImageSwapchainCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **swapchain** is [VK_NULL_HANDLE](#) or a handle of a swapchain that the image will be bound to.

Valid Usage

- VUID-VkImageSwapchainCreateInfoKHR-swapchain-00995
If **swapchain** is not [VK_NULL_HANDLE](#), the fields of [VkImageCreateInfo](#) **must** match the [implied image creation parameters](#) of the swapchain

Valid Usage (Implicit)

- VUID-VkImageSwapchainCreateInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IMAGE_SWAPCHAIN_CREATE_INFO_KHR](#)
- VUID-VkImageSwapchainCreateInfoKHR-swapchain-parameter
If **swapchain** is not [VK_NULL_HANDLE](#), **swapchain** **must** be a valid [VkSwapchainKHR](#) handle

If the **pNext** chain of [VkImageCreateInfo](#) includes a [VkImageFormatListCreateInfo](#) structure, then that structure contains a list of all formats that **can** be used when creating views of this image.

The [VkImageFormatListCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkImageFormatListCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           viewFormatCount;
    const VkFormat*    pViewFormats;
} VkImageFormatListCreateInfo;
```

or the equivalent

```
// Provided by VK_KHR_image_format_list
typedef VkImageFormatListCreateInfo VkImageFormatListCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `viewFormatCount` is the number of entries in the `pViewFormats` array.
- `pViewFormats` is a pointer to an array of `VkFormat` values specifying all formats which **can** be used when creating views of this image.

If `viewFormatCount` is zero, `pViewFormats` is ignored and the image is created as if the `VkImageFormatListCreateInfo` structure were not included in the `pNext` chain of `VkImageCreateInfo`.

Valid Usage

- VUID-VkImageFormatListCreateInfo-viewFormatCount-09540
If `viewFormatCount` is not 0, each element of `pViewFormats` **must** not be `VK_FORMAT_UNDEFINED`

Valid Usage (Implicit)

- VUID-VkImageFormatListCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_FORMAT_LIST_CREATE_INFO`
- VUID-VkImageFormatListCreateInfo-pViewFormats-parameter
If `viewFormatCount` is not 0, `pViewFormats` **must** be a valid pointer to an array of `viewFormatCount` valid `VkFormat` values

If the `pNext` chain of `VkImageCreateInfo` includes a `VkImageDrmFormatModifierListCreateInfoEXT` structure, then the image will be created with one of the [Linux DRM format modifiers](#) listed in the structure. The choice of modifier is implementation-dependent.

The `VkImageDrmFormatModifierListCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierListCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           drmFormatModifierCount;
    const uint64_t*     pDrmFormatModifiers;
} VkImageDrmFormatModifierListCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifierCount` is the length of the `pDrmFormatModifiers` array.
- `pDrmFormatModifiers` is a pointer to an array of *Linux DRM format modifiers*.

Valid Usage

- VUID-VkImageDrmFormatModifierListCreateInfoEXT-pDrmFormatModifiers-02263

Each *modifier* in `pDrmFormatModifiers` **must** be compatible with the parameters in `VkImageCreateInfo` and its `pNext` chain, as determined by querying `VkPhysicalDeviceImageFormatInfo2` extended with `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`

Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierListCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_LIST_CREATE_INFO_EXT`
- VUID-VkImageDrmFormatModifierListCreateInfoEXT-pDrmFormatModifiers-parameter
`pDrmFormatModifiers` **must** be a valid pointer to an array of `drmFormatModifierCount` `uint64_t` values
- VUID-VkImageDrmFormatModifierListCreateInfoEXT-drmFormatModifierCount-arraylength
`drmFormatModifierCount` **must** be greater than 0

If the `pNext` chain of `VkImageCreateInfo` includes a `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure, then the image will be created with the `Linux DRM format modifier` and memory layout defined by the structure.

The `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierExplicitCreateInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    uint64_t             drmFormatModifier;
    uint32_t             drmFormatModifierPlaneCount;
    const VkSubresourceLayout* pPlaneLayouts;
} VkImageDrmFormatModifierExplicitCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifier` is the *Linux DRM format modifier* with which the image will be created.
- `drmFormatModifierPlaneCount` is the number of *memory planes* in the image (as reported by `VkDrmFormatModifierPropertiesEXT`) as well as the length of the `pPlaneLayouts` array.
- `pPlaneLayouts` is a pointer to an array of `VkSubresourceLayout` structures describing the image's *memory planes*.

The i^{th} member of `pPlaneLayouts` describes the layout of the image's i^{th} *memory plane* (that is,

VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT). In each element of `pPlaneLayouts`, the implementation **must** ignore `size`. The implementation calculates the size of each plane, which the application **can** query with `vkGetImageSubresourceLayout`.

When creating an image with `VkImageDrmFormatModifierExplicitCreateInfoEXT`, it is the application's responsibility to satisfy all valid usage requirements. However, the implementation **must** validate that the provided `pPlaneLayouts`, when combined with the provided `drmFormatModifier` and other creation parameters in `VkImageCreateInfo` and its `pNext` chain, produce a valid image. (This validation is necessarily implementation-dependent and outside the scope of Vulkan, and therefore not described by valid usage requirements). If this validation fails, then `vkCreateImage` returns `VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT`.

Valid Usage

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifier-02264
`drmFormatModifier` **must** be compatible with the parameters in `VkImageCreateInfo` and its `pNext` chain, as determined by querying `VkPhysicalDeviceImageFormatInfo2` extended with `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifierPlaneCount-02265
`drmFormatModifierPlaneCount` **must** be equal to the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with `VkImageCreateInfo::format` and `drmFormatModifier`, as found by querying `VkDrmFormatModifierPropertiesListEXT`
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-size-02267
For each element of `pPlaneLayouts`, `size` **must** be 0
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-arrayPitch-02268
For each element of `pPlaneLayouts`, `arrayPitch` **must** be 0 if `VkImageCreateInfo::arrayLayers` is 1
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-depthPitch-02269
For each element of `pPlaneLayouts`, `depthPitch` **must** be 0 if `VkImageCreateInfo::extent.depth` is 1

Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_EXPLICIT_CREATE_INFO_EXT`
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-pPlaneLayouts-parameter
`pPlaneLayouts` **must** be a valid pointer to an array of `drmFormatModifierPlaneCount` `VkSubresourceLayout` structures
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifierPlaneCount-arraylength
`drmFormatModifierPlaneCount` **must** be greater than 0

If the `pNext` list of `VkImageCreateInfo` includes a `VkImageCompressionControlEXT` structure, then that

structure describes compression controls for this image.

The `VkImageCompressionControlEXT` structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkImageCompressionControlEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImageCompressionFlagsEXT flags;
    uint32_t           compressionControlPlaneCount;
    VkImageCompressionFixedRateFlagsEXT* pFixedRateFlags;
} VkImageCompressionControlEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkImageCompressionFlagBitsEXT` describing compression controls for the image.
- `compressionControlPlaneCount` is the number of entries in the `pFixedRateFlags` array.
- `pFixedRateFlags` is `NULL` or a pointer to an array of `VkImageCompressionFixedRateFlagsEXT` bitfields describing allowed fixed-rate compression rates of each image plane. It is ignored if `flags` does not include `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`.

If enabled, fixed-rate compression is done in an implementation-defined manner and **may** be applied at block granularity. In that case, a write to an individual texel **may** modify the value of other texels in the same block.

Valid Usage

- VUID-VkImageCompressionControlEXT-flags-06747
`flags` **must** be one of `VK_IMAGE_COMPRESSION_DEFAULT_EXT`, `VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT`, `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, or `VK_IMAGE_COMPRESSION_DISABLED_EXT`
- VUID-VkImageCompressionControlEXT-flags-06748
If `flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, `pFixedRateFlags` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkImageCompressionControlEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_COMPRESSION_CONTROL_EXT`

NOTE

Some combinations of compression properties may not be supported. For example, some implementations may not support different fixed-rate compression rates per plane of a multi-planar format and will not be able to enable fixed-rate compression

for any plane if the requested rates differ.

Possible values of `VkImageCompressionControlEXT::flags`, specifying compression controls for an image, are:

```
// Provided by VK_EXT_image_compression_control
typedef enum VkImageCompressionFlagBitsEXT {
    VK_IMAGE_COMPRESSION_DEFAULT_EXT = 0,
    VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT = 0x00000001,
    VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT = 0x00000002,
    VK_IMAGE_COMPRESSION_DISABLED_EXT = 0x00000004,
} VkImageCompressionFlagBitsEXT;
```

- `VK_IMAGE_COMPRESSION_DEFAULT_EXT` specifies that the default image compression setting is used. Implementations **must** not apply fixed-rate compression.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT` specifies that the implementation **may** choose any supported fixed-rate compression setting in an implementation-defined manner based on the properties of the image.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT` specifies that fixed-rate compression **may** be used and that the allowed compression rates are specified by `VkImageCompressionControlEXT::pFixedRateFlags`.
- `VK_IMAGE_COMPRESSION_DISABLED_EXT` specifies that all lossless and fixed-rate compression **should** be disabled.

If `VkImageCompressionControlEXT::flags` is `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, then the i^{th} member of the `pFixedRateFlags` array specifies the allowed compression rates for the image's i^{th} plane.

NOTE If `VK_IMAGE_COMPRESSION_DISABLED_EXT` is included in `VkImageCompressionControlEXT::flags`, both lossless and fixed-rate compression will be disabled. This is likely to have a negative impact on performance and is only intended to be used for debugging purposes.

```
// Provided by VK_EXT_image_compression_control
typedef VkFlags VkImageCompressionFlagsEXT;
```

`VkImageCompressionFlagsEXT` is a bitmask type for setting a mask of zero or more `VkImageCompressionFlagBitsEXT`.

```
// Provided by VK_EXT_image_compression_control
typedef VkFlags VkImageCompressionFixedRateFlagsEXT;
```

`VkImageCompressionFixedRateFlagsEXT` is a bitmask type for setting a mask of zero or more `VkImageCompressionFixedRateFlagBitsEXT`.

Bits which **can** be set in `VkImageCompressionControlEXT::pFixedRateFlags`, specifying allowed compression rates for an image plane, are:

```
// Provided by VK_EXT_image_compression_control
typedef enum VkImageCompressionFixedRateFlagBitsEXT {
    VK_IMAGE_COMPRESSION_FIXED_RATE_NONE_EXT = 0,
    VK_IMAGE_COMPRESSION_FIXED_RATE_1BPC_BIT_EXT = 0x00000001,
    VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT = 0x00000002,
    VK_IMAGE_COMPRESSION_FIXED_RATE_3BPC_BIT_EXT = 0x00000004,
    VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT = 0x00000008,
    VK_IMAGE_COMPRESSION_FIXED_RATE_5BPC_BIT_EXT = 0x00000010,
    VK_IMAGE_COMPRESSION_FIXED_RATE_6BPC_BIT_EXT = 0x00000020,
    VK_IMAGE_COMPRESSION_FIXED_RATE_7BPC_BIT_EXT = 0x00000040,
    VK_IMAGE_COMPRESSION_FIXED_RATE_8BPC_BIT_EXT = 0x00000080,
    VK_IMAGE_COMPRESSION_FIXED_RATE_9BPC_BIT_EXT = 0x00000100,
    VK_IMAGE_COMPRESSION_FIXED_RATE_10BPC_BIT_EXT = 0x00000200,
    VK_IMAGE_COMPRESSION_FIXED_RATE_11BPC_BIT_EXT = 0x00000400,
    VK_IMAGE_COMPRESSION_FIXED_RATE_12BPC_BIT_EXT = 0x00000800,
    VK_IMAGE_COMPRESSION_FIXED_RATE_13BPC_BIT_EXT = 0x00001000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_14BPC_BIT_EXT = 0x00002000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_15BPC_BIT_EXT = 0x00004000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_16BPC_BIT_EXT = 0x00008000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_17BPC_BIT_EXT = 0x00010000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_18BPC_BIT_EXT = 0x00020000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_19BPC_BIT_EXT = 0x00040000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_20BPC_BIT_EXT = 0x00080000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_21BPC_BIT_EXT = 0x00100000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_22BPC_BIT_EXT = 0x00200000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_23BPC_BIT_EXT = 0x00400000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_24BPC_BIT_EXT = 0x00800000,
} VkImageCompressionFixedRateFlagBitsEXT;
```

- `VK_IMAGE_COMPRESSION_FIXED_RATE_NONE_EXT` specifies that fixed-rate compression **must** not be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_1BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [1,2) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [2,3) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_3BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [3,4) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [4,5) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_5BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [5,6) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_6BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [6,7) bits per component **may** be used.

- `VK_IMAGE_COMPRESSION_FIXED_RATE_7BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [7,8) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_8BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [8,9) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_9BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [9,10) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_10BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [10,11) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_11BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of [11,12) bits per component **may** be used.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_12BPC_BIT_EXT` specifies that fixed-rate compression with a bitrate of at least 12 bits per component **may** be used.

If the format has a different bit rate for different components, `VkImageCompressionControlEXT::pFixedRateFlags` describes the rate of the component with the largest number of bits assigned to it, scaled pro rata. For example, to request that a `VK_FORMAT_A2R10G10B10_UNORM_PACK32` format be stored at a rate of 8 bits per pixel, use `VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT` (10 bits for the largest component, stored at quarter the original size, 2.5 bits, rounded down).

If `flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, and multiple bits are set in `VkImageCompressionControlEXT::pFixedRateFlags` for a plane, implementations **should** apply the lowest allowed bitrate that is supported.

NOTE

The choice of “bits per component” terminology was chosen so that the same compression rate describes the same degree of compression applied to formats that differ only in the number of components. For example, `VK_FORMAT_R8G8_UNORM` compressed to half its original size is a rate of 4 bits per component, 8 bits per pixel. `VK_FORMAT_R8G8B8A8_UNORM` compressed to half *its* original size is 4 bits per component, 16 bits per pixel. Both of these cases can be requested with `VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT`.

To query the compression properties of an image, add a `VkImageCompressionPropertiesEXT` structure to the `pNext` chain of the `VkSubresourceLayout2EXT` structure in a call to `vkGetImageSubresourceLayout2KHR` or `vkGetImageSubresourceLayout2EXT`.

To determine the compression rates that are supported for a given image format, add a `VkImageCompressionPropertiesEXT` structure to the `pNext` chain of the `VkImageFormatProperties2` structure in a call to `vkGetPhysicalDeviceImageFormatProperties2`.

NOTE

Since fixed-rate compression is disabled by default, the `VkImageCompressionPropertiesEXT` structure passed to `vkGetPhysicalDeviceImageFormatProperties2` will not indicate any fixed-rate compression support unless a `VkImageCompressionControlEXT` structure is also included in the `pNext` chain of the `VkPhysicalDeviceImageFormatInfo2` structure passed to the same command.

The `VkImageCompressionPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkImageCompressionPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkImageCompressionFlagsEXT    imageCompressionFlags;
    VkImageCompressionFixedRateFlagsEXT    imageCompressionFixedRateFlags;
} VkImageCompressionPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageCompressionFlags` returns a value describing the compression controls that apply to the image. The value will be either `VK_IMAGE_COMPRESSION_DEFAULT_EXT` to indicate no fixed-rate compression, `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT` to indicate fixed-rate compression, or `VK_IMAGE_COMPRESSION_DISABLED_EXT` to indicate no compression.
- `imageCompressionFixedRateFlags` returns a `VkImageCompressionFixedRateFlagsEXT` value describing the compression rates that apply to the specified aspect of the image.

Valid Usage (Implicit)

- VUID-VkImageCompressionPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_COMPRESSION_PROPERTIES_EXT`

If the `pNext` list of `VkImageCreateInfo` includes a `VkImageAlignmentControlCreateInfoMESA` structure, then that structure describes desired alignment for this image.

The `VkImageAlignmentControlCreateInfoMESA` structure is defined as:

```
// Provided by VK_MESA_image_alignment_control
typedef struct VkImageAlignmentControlCreateInfoMESA {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           maximumRequestedAlignment;
} VkImageAlignmentControlCreateInfoMESA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maximumRequestedAlignment` specifies the maximum alignment for the image.

If `maximumRequestedAlignment` is not 0, the implementation **should** choose an image memory layout that requires an alignment no larger than `maximumRequestedAlignment` as reported in `VkMemoryRequirements::alignment`. If such a layout does not exist for the given image creation parameters, the implementation **should** return the smallest alignment which is supported in

VkMemoryRequirements.

If an implementation needs to disable image compression for `maximumRequestedAlignment` to be honored - where a larger alignment would enable image compression - the implementation **should** not use `maximumRequestedAlignment`, and **should** return the smallest alignment which does not compromise compression. If `imageCompressionControl` is enabled, the application **can** chain a `VkImageCompressionControlEXT` with `VK_IMAGE_COMPRESSION_DISABLED_EXT`. In this case, image compression considerations **should** not apply when implementation decides alignment.

Valid Usage

- VUID-VkImageAlignmentControlCreateInfoMESA-maximumRequestedAlignment-09655
If `maximumRequestedAlignment` is not 0, `maximumRequestedAlignment` **must** be a power of two
- VUID-VkImageAlignmentControlCreateInfoMESA-maximumRequestedAlignment-09656
If `maximumRequestedAlignment` is not 0, the bitwise-and of `maximumRequestedAlignment` and `supportedImageAlignmentMask` **must** be non-zero
- VUID-VkImageAlignmentControlCreateInfoMESA-imageAlignmentControl-09657
`imageAlignmentControl` **must** be enabled on the device

Valid Usage (Implicit)

- VUID-VkImageAlignmentControlCreateInfoMESA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_ALIGNMENT_CONTROL_CREATE_INFO_MESA`

Bits which **can** be set in

- `VkImageViewUsageCreateInfo::usage`
- `VkImageStencilUsageCreateInfo::stencilUsage`
- `VkImageCreateInfo::usage`

specify intended usage of an image, and are:

```

// Provided by VK_VERSION_1_0
typedef enum VkImageUsageFlagBits {
    VK_IMAGE_USAGE_TRANSFER_SRC_BIT = 0x00000001,
    VK_IMAGE_USAGE_TRANSFER_DST_BIT = 0x00000002,
    VK_IMAGE_USAGE_SAMPLED_BIT = 0x00000004,
    VK_IMAGE_USAGE_STORAGE_BIT = 0x00000008,
    VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT = 0x00000010,
    VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT = 0x00000020,
    VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT = 0x00000040,
    VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT = 0x00000080,
    // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR = 0x00000400,
    // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR = 0x00000800,
    // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR = 0x00001000,
    // Provided by VK_EXT_fragment_density_map
    VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT = 0x00000200,
    // Provided by VK_KHR_fragment_shading_rate
    VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR = 0x00000100,
    // Provided by VK_EXT_host_image_copy
    VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT = 0x00400000,
    // Provided by VK_KHR_video_encode_queue
    VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR = 0x00002000,
    // Provided by VK_KHR_video_encode_queue
    VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR = 0x00004000,
    // Provided by VK_KHR_video_encode_queue
    VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR = 0x00008000,
    // Provided by VK_EXT_attachment_feedback_loop_layout
    VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT = 0x00080000,
    // Provided by VK_HUAWEI_invocation_mask
    VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI = 0x00040000,
    // Provided by VK_QCOM_image_processing
    VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM = 0x00100000,
    // Provided by VK_QCOM_image_processing
    VK_IMAGE_USAGE_SAMPLE_BLOCK_MATCH_BIT_QCOM = 0x00200000,
    // Provided by VK_NV_shading_rate_image
    VK_IMAGE_USAGE_SHADING_RATE_IMAGE_BIT_NV =
VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR,
} VkImageUsageFlagBits;

```

- **VK_IMAGE_USAGE_TRANSFER_SRC_BIT** specifies that the image **can** be used as the source of a transfer command.
- **VK_IMAGE_USAGE_TRANSFER_DST_BIT** specifies that the image **can** be used as the destination of a transfer command.
- **VK_IMAGE_USAGE_SAMPLED_BIT** specifies that the image **can** be used to create a **VkImageView** suitable for occupying a **VkDescriptorSet** slot either of type **VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE** or **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER**, and be sampled by a shader.

- `VK_IMAGE_USAGE_STORAGE_BIT` specifies that the image **can** be used to create a `VkImageView` suitable for occupying a `VkDescriptorSet` slot of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`.
- `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT` specifies that the image **can** be used to create a `VkImageView` suitable for use as a color or resolve attachment in a `VkFramebuffer`.
- `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT` specifies that the image **can** be used to create a `VkImageView` suitable for use as a depth/stencil or depth/stencil resolve attachment in a `VkFramebuffer`.
- `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` specifies that implementations **may** support using [memory allocations](#) with the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` to back an image with this usage. This bit **can** be set for any image that **can** be used to create a `VkImageView` suitable for use as a color, resolve, depth/stencil, or input attachment.
- `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` specifies that the image **can** be used to create a `VkImageView` suitable for occupying `VkDescriptorSet` slot of type `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`; be read from a shader as an input attachment; and be used as an input attachment in a framebuffer.
- `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT` specifies that the image **can** be used to create a `VkImageView` suitable for use as a [fragment density map image](#).
- `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR` specifies that the image **can** be used to create a `VkImageView` suitable for use as a [fragment shading rate attachment](#) or [shading rate image](#).
- `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` specifies that the image **can** be used as a [decode output picture](#) in a [video decode operation](#).
- `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR` is reserved for future use.
- `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` specifies that the image **can** be used as an output [reconstructed picture](#) or an input [reference picture](#) in a [video decode operation](#).
- `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR` is reserved for future use.
- `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR` specifies that the image **can** be used as an [encode input picture](#) in a [video encode operation](#).
- `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR` specifies that the image **can** be used as an output [reconstructed picture](#) or an input [reference picture](#) in a [video encode operation](#).
- `VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` specifies that the image **can** be transitioned to the `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` layout to be used as a color or depth/stencil attachment in a `VkFramebuffer` and/or as a read-only input resource in a shader (sampled image, combined image sampler or input attachment) in the same render pass.
- `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` specifies that the image **can** be used with host copy commands and host layout transitions.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageUsageFlags;
```

`VkImageUsageFlags` is a bitmask type for setting a mask of zero or more [VkImageUsageFlagBits](#).

When creating a `VkImageView` one of the following `VkImageUsageFlagBits` **must** be set:

- `VK_IMAGE_USAGE_SAMPLED_BIT`
- `VK_IMAGE_USAGE_STORAGE_BIT`
- `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`
- `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`
- `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`
- `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`
- `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`
- `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`
- `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`
- `VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM`
- `VK_IMAGE_USAGE_SAMPLE_BLOCK_MATCH_BIT_QCOM`

Bits which **can** be set in `VkImageCreateInfo::flags`, specifying additional parameters of an image, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageCreateFlagBits {
    VK_IMAGE_CREATE_SPARSE_BINDING_BIT = 0x00000001,
    VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT = 0x00000002,
    VK_IMAGE_CREATE_SPARSE_ALIASED_BIT = 0x00000004,
    VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT = 0x00000008,
    VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT = 0x00000010,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_ALIAS_BIT = 0x00000400,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT = 0x00000040,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT = 0x00000020,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT = 0x00000080,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_EXTENDED_USAGE_BIT = 0x00000100,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_PROTECTED_BIT = 0x00000800,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_DISJOINT_BIT = 0x00000200,
    // Provided by VK_NV_corner_sampled_image
    VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV = 0x00002000,
    // Provided by VK_EXT_sample_locations
```

```

    VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT = 0x00001000,
// Provided by VK_EXT_fragment_density_map
    VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT = 0x00004000,
// Provided by VK_EXT_descriptor_buffer
    VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00010000,
// Provided by VK_EXT_multisampled_render_to_single_sampled
    VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT = 0x00040000,
// Provided by VK_EXT_image_2d_view_of_3d
    VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT = 0x00020000,
// Provided by VK_QCOM_fragment_density_map_offset
    VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_QCOM = 0x00008000,
// Provided by VK_KHR_video_maintenance1
    VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR = 0x00100000,
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
    VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR =
VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT,
// Provided by VK_KHR_maintenance1
    VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT_KHR =
VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT,
// Provided by VK_KHR_maintenance2
    VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT_KHR =
VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT,
// Provided by VK_KHR_maintenance2
    VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR = VK_IMAGE_CREATE_EXTENDED_USAGE_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_CREATE_DISJOINT_BIT_KHR = VK_IMAGE_CREATE_DISJOINT_BIT,
// Provided by VK_KHR_bind_memory2
    VK_IMAGE_CREATE_ALIAS_BIT_KHR = VK_IMAGE_CREATE_ALIAS_BIT,
} VkImageCreateFlagBits;

```

- **VK_IMAGE_CREATE_SPARSE_BINDING_BIT** specifies that the image will be backed using sparse memory binding.
- **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** specifies that the image **can** be partially backed using sparse memory binding. Images created with this flag **must** also be created with the **VK_IMAGE_CREATE_SPARSE_BINDING_BIT** flag.
- **VK_IMAGE_CREATE_SPARSE_ALIASED_BIT** specifies that the image will be backed using sparse memory binding with memory ranges that might also simultaneously be backing another image (or another portion of the same image). Images created with this flag **must** also be created with the **VK_IMAGE_CREATE_SPARSE_BINDING_BIT** flag.
- **VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT** specifies that the image **can** be used to create a **VkImageView** with a different format from the image. For **multi-planar** formats, **VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT** specifies that a **VkImageView** can be created of a *plane* of the image.
- **VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT** specifies that the image **can** be used to create a **VkImageView** of type **VK_IMAGE_VIEW_TYPE_CUBE** or **VK_IMAGE_VIEW_TYPE_CUBE_ARRAY**.
- **VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT** specifies that the image **can** be used to create a **VkImageView** of type **VK_IMAGE_VIEW_TYPE_2D** or **VK_IMAGE_VIEW_TYPE_2D_ARRAY**.

- `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` specifies that the image **can** be used to create a `VkImageView` of type `VK_IMAGE_VIEW_TYPE_2D`.
- `VK_IMAGE_CREATE_PROTECTED_BIT` specifies that the image is a protected image.
- `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` specifies that the image **can** be used with a non-zero value of the `splitInstanceBindRegionCount` member of a `VkBindImageMemoryDeviceGroupInfo` structure passed into `vkBindImageMemory2`. This flag also has the effect of making the image use the standard sparse image block dimensions.
- `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` specifies that the image having a compressed format **can** be used to create a `VkImageView` with an uncompressed format where each texel in the image view corresponds to a compressed texel block of the image.
- `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT` specifies that the image **can** be created with usage flags that are not supported for the format the image is created with but are supported for at least one format a `VkImageView` created from the image **can** have.
- `VK_IMAGE_CREATE_DISJOINT_BIT` specifies that an image with a **multi-planar format** **must** have each plane separately bound to memory, rather than having a single memory binding for the whole image; the presence of this bit distinguishes a *disjoint image* from an image without this bit set.
- `VK_IMAGE_CREATE_ALIAS_BIT` specifies that two images created with the same creation parameters and aliased to the same memory **can** interpret the contents of the memory consistently with each other, subject to the rules described in the **Memory Aliasing** section. This flag further specifies that each plane of a *disjoint* image **can** share an in-memory non-linear representation with single-plane images, and that a single-plane image **can** share an in-memory non-linear representation with a plane of a multi-planar disjoint image, according to the rules in **Compatible Formats of Planes of Multi-Planar Formats**. If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` or `VkExternalMemoryImageCreateInfoNV` structure whose `handleTypes` member is not `0`, it is as if `VK_IMAGE_CREATE_ALIAS_BIT` is set.
- `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` specifies that an image with a depth or depth/stencil format **can** be used with custom sample locations when used as a depth/stencil attachment.
- `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` specifies that the image is a **corner-sampled image**.
- `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT` specifies that an image **can** be in a subsampled format which **may** be more optimal when written as an attachment by a render pass that has a fragment density map attachment. Accessing a subsampled image has additional considerations:
 - Image data read as an image sampler will have undefined values if the sampler was not created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` or was not sampled through the use of a combined image sampler with an immutable sampler in `VkDescriptorSetLayoutBinding`.
 - Image data read with an input attachment will have undefined values if the contents were not written as an attachment in an earlier subpass of the same render pass.
 - Image data read as an image sampler in the fragment shader will be additionally be read by the device during `VK_PIPELINE_STAGE_VERTEX_SHADER_BIT` if `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledCoarseReconstructionEarlyAcce`

`ss` is `VK_TRUE` and the sampler was created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT`.

- Image data read with load operations are resampled to the fragment density of the render pass if `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledLoads` is `VK_TRUE`. Otherwise, values of image data are undefined.
- Image contents outside of the render area take on undefined values if the image is stored as a render pass attachment.
- `VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_QCOM` specifies that an image **can** be used in a render pass with non-zero [fragment density map offsets](#). In a render pass with non-zero offsets, fragment density map attachments, input attachments, color attachments, depth/stencil attachment, resolve attachments, and preserve attachments **must** be created with `VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_QCOM`.
- `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` specifies that the image **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.
- `VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT` specifies that an image **can** be used with [multisampled rendering as a single-sampled framebuffer attachment](#)
- `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` specifies that the image **can** be used in [video coding operations](#) without having to specify at image creation time the set of video profiles the image will be used with, except for images used only as [DPB](#) pictures, as long as the image is otherwise [compatible](#) with the video profile in question.

NOTE

This enables exchanging video picture data without additional copies or conversions when used as:

- [Decode output pictures](#), indifferent of the video profile used to produce them.
- [Encode input pictures](#), indifferent of the video profile used to consume them.

This includes images created with both `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` and `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, which is necessary to use the same video picture as the [reconstructed picture](#) and [decode output picture](#) in a video decode operation on implementations supporting `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR`.

However, images with only DPB usage remain tied to the video profiles the image was created with, as the data layout of such DPB-only images **may** be implementation- and codec-dependent.

If an application would like to share or reuse the device memory backing such images (e.g. for the purposes of temporal aliasing), then it **should** create separate image objects for each video profile and bind them to the same underlying device memory range, similar to how memory resources **can** be shared across separate video sessions or any other memory-backed resource.

See [Sparse Resource Features](#) and [Sparse Physical Device Features](#) for more details.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageCreateFlags;
```

`VkImageCreateFlags` is a bitmask type for setting a mask of zero or more `VkImageCreateFlagBits`.

Possible values of `VkImageCreateInfo::imageType`, specifying the basic dimensionality of an image, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageType {
    VK_IMAGE_TYPE_1D = 0,
    VK_IMAGE_TYPE_2D = 1,
    VK_IMAGE_TYPE_3D = 2,
} VkImageType;
```

- `VK_IMAGE_TYPE_1D` specifies a one-dimensional image.
- `VK_IMAGE_TYPE_2D` specifies a two-dimensional image.
- `VK_IMAGE_TYPE_3D` specifies a three-dimensional image.

Possible values of `VkImageCreateInfo::tiling`, specifying the tiling arrangement of texel blocks in an image, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageTiling {
    VK_IMAGE_TILING_OPTIMAL = 0,
    VK_IMAGE_TILING_LINEAR = 1,
    // Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT = 1000158000,
} VkImageTiling;
```

- `VK_IMAGE_TILING_OPTIMAL` specifies optimal tiling (texels are laid out in an implementation-dependent arrangement, for more efficient memory access).
- `VK_IMAGE_TILING_LINEAR` specifies linear tiling (texels are laid out in memory in row-major order, possibly with some padding on each row).
- `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` indicates that the image's tiling is defined by a [Linux DRM format modifier](#). The modifier is specified at image creation with `VkImageDrmFormatModifierListCreateInfoEXT` or `VkImageDrmFormatModifierExplicitCreateInfoEXT`, and can be queried with `vkGetImageDrmFormatModifierPropertiesEXT`.

To query the memory layout of an image subresource, call:

```
// Provided by VK_VERSION_1_0
void vkGetImageSubresourceLayout(
    VkDevice          device,
    VkImage           image,
    const VkImageSubresource* pSubresource,
    VkSubresourceLayout* pLayout);
```

- **device** is the logical device that owns the image.
- **image** is the image whose layout is being queried.
- **pSubresource** is a pointer to a **VkImageSubresource** structure selecting a specific image subresource from the image.
- **pLayout** is a pointer to a **VkSubresourceLayout** structure in which the layout is returned.

If the image is **linear**, then the returned layout is valid for **host access**.

If the image's tiling is **VK_IMAGE_TILING_LINEAR** and its format is a **multi-planar format**, then **vkGetImageSubresourceLayout** describes one *format plane* of the image. If the image's tiling is **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**, then **vkGetImageSubresourceLayout** describes one *memory plane* of the image. If the image's tiling is **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT** and the image is **non-linear**, then the returned layout has an implementation-dependent meaning; the vendor of the image's **DRM format modifier** **may** provide documentation that explains how to interpret the returned layout.

vkGetImageSubresourceLayout is invariant for the lifetime of a single image. However, the subresource layout of images in Android hardware buffer or QNX Screen buffer external memory is not known until the image has been bound to memory, so applications **must** not call **vkGetImageSubresourceLayout** for such an image before it has been bound.

Valid Usage

- VUID-vkGetImageSubresourceLayout-image-07790
image **must** have been created with **tiling** equal to **VK_IMAGE_TILING_LINEAR** or **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**
- VUID-vkGetImageSubresourceLayout-aspectMask-00997
The **aspectMask** member of **pSubresource** **must** only have a single bit set
- VUID-vkGetImageSubresourceLayout-mipLevel-01716
The **mipLevel** member of **pSubresource** **must** be less than the **mipLevels** specified in **image**
- VUID-vkGetImageSubresourceLayout-arrayLayer-01717
The **arrayLayer** member of **pSubresource** **must** be less than the **arrayLayers** specified in **image**
- VUID-vkGetImageSubresourceLayout-format-08886
If **format** of the **image** is a color format that is not a **multi-planar image format**, and **tiling** of the **image** is **VK_IMAGE_TILING_LINEAR** or **VK_IMAGE_TILING_OPTIMAL**, the **aspectMask** member of **pSubresource** **must** be **VK_IMAGE_ASPECT_COLOR_BIT**

- VUID-vkGetImageSubresourceLayout-format-04462
If **format** of the **image** has a depth component, the **aspectMask** member of **pSubresource** **must** contain **VK_IMAGE_ASPECT_DEPTH_BIT**
- VUID-vkGetImageSubresourceLayout-format-04463
If **format** of the **image** has a stencil component, the **aspectMask** member of **pSubresource** **must** contain **VK_IMAGE_ASPECT_STENCIL_BIT**
- VUID-vkGetImageSubresourceLayout-format-04464
If **format** of the **image** does not contain a stencil or depth component, the **aspectMask** member of **pSubresource** **must** not contain **VK_IMAGE_ASPECT_DEPTH_BIT** or **VK_IMAGE_ASPECT_STENCIL_BIT**
- VUID-vkGetImageSubresourceLayout-tiling-08717
If the **tiling** of the **image** is **VK_IMAGE_TILING_LINEAR** and has a **multi-planar image format**, then the **aspectMask** member of **pSubresource** **must** be a single valid **multi-planar aspect mask** bit
- VUID-vkGetImageSubresourceLayout-image-09432
If **image** was created with the **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID** external memory handle type, then **image** **must** be bound to memory
- VUID-vkGetImageSubresourceLayout-tiling-09433
If the **tiling** of the **image** is **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**, then the **aspectMask** member of **pSubresource** **must** be **VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT** and the index **i** **must** be less than the **VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount** associated with the image's **format** and **VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier**

Valid Usage (Implicit)

- VUID-vkGetImageSubresourceLayout-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkGetImageSubresourceLayout-image-parameter
image **must** be a valid **VkImage** handle
- VUID-vkGetImageSubresourceLayout-pSubresource-parameter
pSubresource **must** be a valid pointer to a valid **VkImageSubresource** structure
- VUID-vkGetImageSubresourceLayout-pLayout-parameter
pLayout **must** be a valid pointer to a **VkSubresourceLayout** structure
- VUID-vkGetImageSubresourceLayout-image-parent
image **must** have been created, allocated, or retrieved from **device**

The **VkImageSubresource** structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresource {
    VkImageAspectFlags    aspectMask;
    uint32_t              mipLevel;
    uint32_t              arrayLayer;
} VkImageSubresource;
```

- **aspectMask** is a [VkImageAspectFlags](#) value selecting the image *aspect*.
- **mipLevel** selects the mipmap level.
- **arrayLayer** selects the array layer.

Valid Usage (Implicit)

- VUID-VkImageSubresource-aspectMask-parameter **aspectMask** must be a valid combination of [VkImageAspectFlagBits](#) values
- VUID-VkImageSubresource-aspectMask-requiredbitmask **aspectMask** must not be 0

Information about the layout of the image subresource is returned in a [VkSubresourceLayout](#) structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSubresourceLayout {
    VkDeviceSize    offset;
    VkDeviceSize    size;
    VkDeviceSize    rowPitch;
    VkDeviceSize    arrayPitch;
    VkDeviceSize    depthPitch;
} VkSubresourceLayout;
```

- **offset** is the byte offset from the start of the image or the plane where the image subresource begins.
- **size** is the size in bytes of the image subresource. **size** includes any extra memory that is required based on **rowPitch**.
- **rowPitch** describes the number of bytes between each row of texels in an image.
- **arrayPitch** describes the number of bytes between each array layer of an image.
- **depthPitch** describes the number of bytes between each slice of 3D image.

If the image is [linear](#), then **rowPitch**, **arrayPitch** and **depthPitch** describe the layout of the image subresource in linear memory. For uncompressed formats, **rowPitch** is the number of bytes between texels with the same x coordinate in adjacent rows (y coordinates differ by one). **arrayPitch** is the number of bytes between texels with the same x and y coordinate in adjacent array layers of the image (array layer values differ by one). **depthPitch** is the number of bytes between texels with the

same x and y coordinate in adjacent slices of a 3D image (z coordinates differ by one). Expressed as an addressing formula, the starting byte of a texel in the image subresource has address:

```
// (x,y,z,layer) are in texel coordinates
address(x,y,z,layer) = layer*arrayPitch + z*depthPitch + y*rowPitch + x*elementSize +
offset
```

For compressed formats, the `rowPitch` is the number of bytes between compressed texel blocks in adjacent rows. `arrayPitch` is the number of bytes between compressed texel blocks in adjacent array layers. `depthPitch` is the number of bytes between compressed texel blocks in adjacent slices of a 3D image.

```
// (x,y,z,layer) are in compressed texel block coordinates
address(x,y,z,layer) = layer*arrayPitch + z*depthPitch + y*rowPitch + x
*compressedTexelBlockByteSize + offset;
```

The value of `arrayPitch` is undefined for images that were not created as arrays. `depthPitch` is defined only for 3D images.

If the image has a *single-plane* color format and its tiling is `VK_IMAGE_TILING_LINEAR`, then the `aspectMask` member of `VkImageSubresource` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`.

If the image has a depth/stencil format and its tiling is `VK_IMAGE_TILING_LINEAR`, then `aspectMask` **must** be either `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`. On implementations that store depth and stencil aspects separately, querying each of these image subresource layouts will return a different `offset` and `size` representing the region of memory used for that aspect. On implementations that store depth and stencil aspects interleaved, the same `offset` and `size` are returned and represent the interleaved memory allocation.

If the image has a *multi-planar format* and its tiling is `VK_IMAGE_TILING_LINEAR`, then the `aspectMask` member of `VkImageSubresource` **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT`, or (for 3-plane formats only) `VK_IMAGE_ASPECT_PLANE_2_BIT`. Querying each of these image subresource layouts will return a different `offset` and `size` representing the region of memory used for that plane. If the image is *disjoint*, then the `offset` is relative to the base address of the plane. If the image is *non-disjoint*, then the `offset` is relative to the base address of the image.

If the image's tiling is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then the `aspectMask` member of `VkImageSubresource` **must** be one of `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT`, where the maximum allowed plane index *i* is defined by the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image's `VkImageCreateInfo::format` and `modifier`. The memory range used by the subresource is described by `offset` and `size`. If the image is *disjoint*, then the `offset` is relative to the base address of the *memory plane*. If the image is *non-disjoint*, then the `offset` is relative to the base address of the image. If the image is *non-linear*, then `rowPitch`, `arrayPitch`, and `depthPitch` have an implementation-dependent meaning.

To query the memory layout of an image subresource, call:

```
// Provided by VK_KHR_maintenance5
void vkGetImageSubresourceLayout2KHR(
    VkDevice          device,
    VkImage           image,
    const VkImageSubresource2KHR* pSubresource,
    VkSubresourceLayout2KHR*      pLayout);
```

or the equivalent command

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
void vkGetImageSubresourceLayout2EXT(
    VkDevice          device,
    VkImage           image,
    const VkImageSubresource2KHR* pSubresource,
    VkSubresourceLayout2KHR*      pLayout);
```

- **device** is the logical device that owns the image.
- **image** is the image whose layout is being queried.
- **pSubresource** is a pointer to a [VkImageSubresource2KHR](#) structure selecting a specific image for the image subresource.
- **pLayout** is a pointer to a [VkSubresourceLayout2KHR](#) structure in which the layout is returned.

[vkGetImageSubresourceLayout2KHR](#) behaves similarly to [vkGetImageSubresourceLayout](#), with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

It is legal to call [vkGetImageSubresourceLayout2KHR](#) with an **image** created with **tiling** equal to [VK_IMAGE_TILING_OPTIMAL](#), but the members of [VkSubresourceLayout2KHR::subresourceLayout](#) will have undefined values in this case.

NOTE Structures chained from [VkImageSubresource2KHR::pNext](#) will also be updated when **tiling** is equal to [VK_IMAGE_TILING_OPTIMAL](#).

Valid Usage

- VUID-vkGetImageSubresourceLayout2KHR-aspectMask-00997
The **aspectMask** member of **pSubresource** **must** only have a single bit set
- VUID-vkGetImageSubresourceLayout2KHR-mipLevel-01716
The **mipLevel** member of **pSubresource** **must** be less than the **mipLevels** specified in **image**
- VUID-vkGetImageSubresourceLayout2KHR-arrayLayer-01717
The **arrayLayer** member of **pSubresource** **must** be less than the **arrayLayers** specified in **image**
- VUID-vkGetImageSubresourceLayout2KHR-format-08886
If **format** of the **image** is a color format that is not a [multi-planar image format](#), and **tiling**

of the `image` is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, the `aspectMask` member of `pSubresource` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`

- VUID-vkGetImageSubresourceLayout2KHR-format-04462
If `format` of the `image` has a depth component, the `aspectMask` member of `pSubresource` **must** contain `VK_IMAGE_ASPECT_DEPTH_BIT`
- VUID-vkGetImageSubresourceLayout2KHR-format-04463
If `format` of the `image` has a stencil component, the `aspectMask` member of `pSubresource` **must** contain `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkGetImageSubresourceLayout2KHR-format-04464
If `format` of the `image` does not contain a stencil or depth component, the `aspectMask` member of `pSubresource` **must** not contain `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkGetImageSubresourceLayout2KHR-tiling-08717
If the `tiling` of the `image` is `VK_IMAGE_TILING_LINEAR` and has a `multi-planar image format`, then the `aspectMask` member of `pSubresource` **must** be a single valid `multi-planar aspect mask` bit
- VUID-vkGetImageSubresourceLayout2KHR-image-09434
If `image` was created with the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` external memory handle type, then `image` **must** be bound to memory
- VUID-vkGetImageSubresourceLayout2KHR-tiling-09435
If the `tiling` of the `image` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then the `aspectMask` member of `pSubresource` **must** be `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` and the index `i` **must** be less than the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image's `format` and `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier`

Valid Usage (Implicit)

- VUID-vkGetImageSubresourceLayout2KHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetImageSubresourceLayout2KHR-image-parameter
`image` **must** be a valid `VkImage` handle
- VUID-vkGetImageSubresourceLayout2KHR-pSubresource-parameter
`pSubresource` **must** be a valid pointer to a valid `VkImageSubresource2KHR` structure
- VUID-vkGetImageSubresourceLayout2KHR-pLayout-parameter
`pLayout` **must** be a valid pointer to a `VkSubresourceLayout2KHR` structure
- VUID-vkGetImageSubresourceLayout2KHR-image-parent
`image` **must** have been created, allocated, or retrieved from `device`

The `VkImageSubresource2KHR` structure is defined as:

```
// Provided by VK_KHR_maintenance5
typedef struct VkImageSubresource2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkImageSubresource imageSubresource;
} VkImageSubresource2KHR;
```

or the equivalent

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
typedef VkImageSubresource2KHR VkImageSubresource2EXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **imageSubresource** is a [VkImageSubresource](#) structure.

Valid Usage (Implicit)

- VUID-VkImageSubresource2KHR-sType-sType
sType must be **VK_STRUCTURE_TYPE_IMAGE_SUBRESOURCE_2_KHR**
- VUID-VkImageSubresource2KHR-pNext-pNext
pNext must be **NULL**
- VUID-VkImageSubresource2KHR-imageSubresource-parameter
imageSubresource must be a valid [VkImageSubresource](#) structure

Information about the layout of the image subresource is returned in a [VkSubresourceLayout2KHR](#) structure:

```
// Provided by VK_KHR_maintenance5
typedef struct VkSubresourceLayout2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkSubresourceLayout subresourceLayout;
} VkSubresourceLayout2KHR;
```

or the equivalent

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
typedef VkSubresourceLayout2KHR VkSubresourceLayout2EXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- `subresourceLayout` is a `VkSubresourceLayout` structure.

Valid Usage (Implicit)

- VUID-VkSubresourceLayout2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SUBRESOURCE_LAYOUT_2_KHR`
- VUID-VkSubresourceLayout2KHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkImageCompressionPropertiesEXT` or `VkSubresourceHostMemcpySizeEXT`
- VUID-VkSubresourceLayout2KHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique

To query the memory size needed to copy to or from an image using `vkCopyMemoryToImageEXT` or `vkCopyImageToMemoryEXT` when the `VK_HOST_IMAGE_COPY_MEMCPY_EXT` flag is specified, add a `VkSubresourceHostMemcpySizeEXT` structure to the `pNext` chain of the `VkSubresourceLayout2EXT` structure in a call to `vkGetImageSubresourceLayout2EXT`.

The `VkSubresourceHostMemcpySizeEXT` structure is defined as:

```
// Provided by VK_EXT_host_image_copy
typedef struct VkSubresourceHostMemcpySizeEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        size;
} VkSubresourceHostMemcpySizeEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `size` is the size in bytes of the image subresource.

Valid Usage (Implicit)

- VUID-VkSubresourceHostMemcpySizeEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SUBRESOURCE_HOST_MEMCPY_SIZE_EXT`

To query the memory layout of an image subresource, without an image object, call:

```
// Provided by VK_KHR_maintenance5
void vkGetDeviceImageSubresourceLayoutKHR(
    VkDevice                device,
    const VkDeviceImageSubresourceInfoKHR* pInfo,
    VkSubresourceLayout2KHR* pLayout);
```

- **device** is the logical device that owns the image.
- **pInfo** is a pointer to a [VkDeviceImageSubresourceInfoKHR](#) structure containing parameters required for the subresource layout query.
- **pLayout** is a pointer to a [VkSubresourceLayout2KHR](#) structure in which the layout is returned.

[vkGetDeviceImageSubresourceLayoutKHR](#) behaves similarly to [vkGetImageSubresourceLayout2KHR](#), but uses a [VkImageCreateInfo](#) structure to specify the image rather than a [VkImage](#) object.

Valid Usage (Implicit)

- VUID-vkGetDeviceImageSubresourceLayoutKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceImageSubresourceLayoutKHR-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkDeviceImageSubresourceInfoKHR](#) structure
- VUID-vkGetDeviceImageSubresourceLayoutKHR-pLayout-parameter **pLayout** **must** be a valid pointer to a [VkSubresourceLayout2KHR](#) structure

The [VkDeviceImageSubresourceInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance5
typedef struct VkDeviceImageSubresourceInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    const VkImageCreateInfo* pCreateInfo;
    const VkImageSubresource2KHR* pSubresource;
} VkDeviceImageSubresourceInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **pCreateInfo** is a pointer to a [VkImageCreateInfo](#) structure containing parameters affecting creation of the image to query.
- **pSubresource** **pSubresource** is a pointer to a [VkImageSubresource2KHR](#) structure selecting a specific image subresource for the query.

Valid Usage

- VUID-VkDeviceImageSubresourceInfoKHR-aspectMask-00997
The **aspectMask** member of **pSubresource** **must** only have a single bit set
- VUID-VkDeviceImageSubresourceInfoKHR-mipLevel-01716
The **mipLevel** member of **pSubresource** **must** be less than the **mipLevels** specified in **pCreateInfo**
- VUID-VkDeviceImageSubresourceInfoKHR-arrayLayer-01717
The **arrayLayer** member of **pSubresource** **must** be less than the **arrayLayers** specified in

pCreateInfo

- VUID-VkDeviceImageSubresourceInfoKHR-format-08886
If **format** of the **image** is a color format that is not a **multi-planar image format**, and **tiling** of the **pCreateInfo** is **VK_IMAGE_TILING_LINEAR** or **VK_IMAGE_TILING_OPTIMAL**, the **aspectMask** member of **pSubresource** **must** be **VK_IMAGE_ASPECT_COLOR_BIT**
- VUID-VkDeviceImageSubresourceInfoKHR-format-04462
If **format** of the **pCreateInfo** has a depth component, the **aspectMask** member of **pSubresource** **must** contain **VK_IMAGE_ASPECT_DEPTH_BIT**
- VUID-VkDeviceImageSubresourceInfoKHR-format-04463
If **format** of the **pCreateInfo** has a stencil component, the **aspectMask** member of **pSubresource** **must** contain **VK_IMAGE_ASPECT_STENCIL_BIT**
- VUID-VkDeviceImageSubresourceInfoKHR-format-04464
If **format** of the **pCreateInfo** does not contain a stencil or depth component, the **aspectMask** member of **pSubresource** **must** not contain **VK_IMAGE_ASPECT_DEPTH_BIT** or **VK_IMAGE_ASPECT_STENCIL_BIT**
- VUID-VkDeviceImageSubresourceInfoKHR-tiling-08717
If the **tiling** of the **pCreateInfo** is **VK_IMAGE_TILING_LINEAR** and has a **multi-planar image format**, then the **aspectMask** member of **pSubresource** **must** be a single valid **multi-planar aspect mask** bit

Valid Usage (Implicit)

- VUID-VkDeviceImageSubresourceInfoKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_DEVICE_IMAGE_SUBRESOURCE_INFO_KHR**
- VUID-VkDeviceImageSubresourceInfoKHR-pNext-pNext
pNext **must** be **NULL**
- VUID-VkDeviceImageSubresourceInfoKHR-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid **VkImageCreateInfo** structure
- VUID-VkDeviceImageSubresourceInfoKHR-pSubresource-parameter
pSubresource **must** be a valid pointer to a valid **VkImageSubresource2KHR** structure

If an image was created with **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**, then the image has a **Linux DRM format modifier**. To query the *modifier*, call:

```
// Provided by VK_EXT_image_drm_format_modifier
VkResult vkGetImageDrmFormatModifierPropertiesEXT(
    VkDevice          device,
    VkImage           image,
    VkImageDrmFormatModifierPropertiesEXT* pProperties);
```

- **device** is the logical device that owns the image.
- **image** is the queried image.

- `pProperties` is a pointer to a `VkImageDrmFormatModifierPropertiesEXT` structure in which properties of the image's *DRM format modifier* are returned.

Valid Usage

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-02272
`image` **must** have been created with `tiling` equal to `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`

Valid Usage (Implicit)

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-parameter
`image` **must** be a valid `VkImage` handle
- VUID-vkGetImageDrmFormatModifierPropertiesEXT-pProperties-parameter
`pProperties` **must** be a valid pointer to a `VkImageDrmFormatModifierPropertiesEXT` structure
- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-parent
`image` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkImageDrmFormatModifierPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           drmFormatModifier;
} VkImageDrmFormatModifierPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifier` returns the image's `Linux DRM format modifier`.

If the `image` was created with `VkImageDrmFormatModifierListCreateInfoEXT`, then the returned

`drmFormatModifier` **must** belong to the list of modifiers provided at time of image creation in `VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers`. If the `image` was created with `VkImageDrmFormatModifierExplicitCreateInfoEXT`, then the returned `drmFormatModifier` **must** be the modifier provided at time of image creation in `VkImageDrmFormatModifierExplicitCreateInfoEXT::drmFormatModifier`.

Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_PROPERTIES_EXT`
- VUID-VkImageDrmFormatModifierPropertiesEXT-pNext-pNext
`pNext` **must** be `NULL`

To destroy an image, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyImage(
    VkDevice          device,
    VkImage           image,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the image.
- `image` is the image to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyImage-image-01000
All submitted commands that refer to `image`, either directly or via a `VkImageView`, **must** have completed execution
- VUID-vkDestroyImage-image-01001
If `VkAllocationCallbacks` were provided when `image` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyImage-image-01002
If no `VkAllocationCallbacks` were provided when `image` was created, `pAllocator` **must** be `NULL`
- VUID-vkDestroyImage-image-04882
`image` **must** not have been acquired from [vkGetSwapchainImagesKHR](#)

Valid Usage (Implicit)

- VUID-vkDestroyImage-device-parameter

device must be a valid `VkDevice` handle

- VUID-vkDestroyImage-image-parameter

If **image** is not `VK_NULL_HANDLE`, **image** must be a valid `VkImage` handle

- VUID-vkDestroyImage-pAllocator-parameter

If **pAllocator** is not `NULL`, **pAllocator** must be a valid pointer to a valid `VkAllocationCallbacks` structure

- VUID-vkDestroyImage-image-parent

If **image** is a valid handle, it must have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **image** must be externally synchronized

12.3.1. Image Format Features

Valid uses of a `VkImage` may depend on the image's *format features*, defined below. Such constraints are documented in the affected valid usage statement.

- If the image was created with `VK_IMAGE_TILING_LINEAR`, then its set of *format features* is the value of `VkFormatProperties::linearTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` on the same **format** as `VkImageCreateInfo::format`.
- If the image was created with `VK_IMAGE_TILING_OPTIMAL`, but without an `Android hardware buffer external format`, or a `QNX Screen Buffer external format` or an `VkBufferCollectionImageCreateInfoFUCHSIA`, then its set of *format features* is the value of `VkFormatProperties::optimalTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` on the same **format** as `VkImageCreateInfo::format`.
- If the image was created with an `Android hardware buffer external format`, then its set of *format features* is the value of `VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures` found by calling `vkGetAndroidHardwareBufferPropertiesANDROID` on the Android hardware buffer that was imported to the `VkDeviceMemory` to which the image is bound.
- If the image was created with an `QNX Screen buffer external format`, then its set of *format features* is the value of `VkScreenBufferFormatPropertiesQNX::formatFeatures` found by calling `vkGetScreenBufferPropertiesQNX` on the QNX Screen buffer that was imported to the `VkDeviceMemory` to which the image is bound.
- If the image was created with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then:
 - The image's DRM format modifier is the value of `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier` found by calling `vkGetImageDrmFormatModifierPropertiesEXT`.
 - Let `VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties` be the array found by calling `vkGetPhysicalDeviceFormatProperties2` on the same **format** as `VkImageCreateInfo::format`.

- Let `VkDrmFormatModifierPropertiesEXT prop` be the array element whose `drmFormatModifier` member is the value of the image's DRM format modifier.
- Then the image's set of *format features* is the value of `prop::drmFormatModifierTilingFeatures`.

12.3.2. Corner-Sampled Images

A *corner-sampled image* is an image where unnormalized texel coordinates are centered on integer values rather than half-integer values.

A corner-sampled image has a number of differences compared to conventional texture image:

- Texels are centered on integer coordinates. See [Unnormalized Texel Coordinate Operations](#)
- Normalized coordinates are scaled using $\text{coord} \times (\text{dim} - 1)$ rather than $\text{coord} \times \text{dim}$, where `dim` is the size of one dimension of the image. See [normalized texel coordinate transform](#).
- Partial derivatives are scaled using $\text{coord} \times (\text{dim} - 1)$ rather than $\text{coord} \times \text{dim}$. See [Scale Factor Operation](#).
- Calculation of the next higher LOD size goes according to $\lceil \text{dim} / 2 \rceil$ rather than $\lceil \text{dim} / 2 \rceil$. See [Image Mip Level Sizing](#).
- The minimum level size is 2x2 for 2D images and 2x2x2 for 3D images. See [Image Mip Level Sizing](#).

Corner-sampling is only supported for 2D and 3D images. When sampling a corner-sampled image, the sampler addressing mode **must** be `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`. Corner-sampled images are not supported as cube maps or depth/stencil images.

12.3.3. Image Mip Level Sizing

A *complete mipmap chain* is the full set of mip levels, from the largest mip level provided, down to the *minimum mip level size*.

Conventional Images

For conventional images, the dimensions of each successive mip level, $n+1$, are:

$$\text{width}_{n+1} = \max(\lceil \text{width}_n / 2 \rceil, 1)$$

$$\text{height}_{n+1} = \max(\lceil \text{height}_n / 2 \rceil, 1)$$

$$\text{depth}_{n+1} = \max(\lceil \text{depth}_n / 2 \rceil, 1)$$

where `widthn`, `heightn`, and `depthn` are the dimensions of the next larger mip level, n .

The minimum mip level size is:

- 1 for one-dimensional images,

- 1x1 for two-dimensional images, and
- 1x1x1 for three-dimensional images.

The number of levels in a complete mipmap chain is:

$$\lceil \log_2(\max(\text{width}_0, \text{height}_0, \text{depth}_0)) \rceil + 1$$

where width_0 , height_0 , and depth_0 are the dimensions of the largest (most detailed) mip level, 0.

Corner-Sampled Images

For corner-sampled images, the dimensions of each successive mip level, $n+1$, are:

$$\text{width}_{n+1} = \max(\lceil \text{width}_n / 2 \rceil, 2)$$

$$\text{height}_{n+1} = \max(\lceil \text{height}_n / 2 \rceil, 2)$$

$$\text{depth}_{n+1} = \max(\lceil \text{depth}_n / 2 \rceil, 2)$$

where width_n , height_n , and depth_n are the dimensions of the next larger mip level, n .

The minimum mip level size is:

- 2x2 for two-dimensional images, and
- 2x2x2 for three-dimensional images.

The number of levels in a complete mipmap chain is:

$$\lceil \log_2(\max(\text{width}_0, \text{height}_0, \text{depth}_0)) \rceil$$

where width_0 , height_0 , and depth_0 are the dimensions of the largest (most detailed) mip level, 0.

12.4. Image Layouts

Images are stored in implementation-dependent opaque layouts in memory. Each layout has limitations on what kinds of operations are supported for image subresources using the layout. At any given time, the data representing an image subresource in memory exists in a particular layout which is determined by the most recent layout transition that was performed on that image subresource. Applications have control over which layout each image subresource uses, and **can** transition an image subresource from one layout to another. Transitions **can** happen with an image memory barrier, included as part of a [vkCmdPipelineBarrier](#) or a [vkCmdWaitEvents](#) command buffer command (see [Image Memory Barriers](#)), or as part of a subpass dependency within a render pass (see [VkSubpassDependency](#)).

Image layout is per-image subresource. Separate image subresources of the same image **can** be in different layouts at the same time, with the exception that depth and stencil aspects of a given image subresource **can** only be in different layouts if the `separateDepthStencilLayouts` feature is enabled.

NOTE

Each layout **may** offer optimal performance for a specific usage of image memory. For example, an image with a layout of `VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL` **may** provide optimal performance for use as a color attachment, but be unsupported for use in transfer commands. Applications **can** transition an image subresource from one layout to another in order to achieve optimal performance when the image subresource is used for multiple kinds of operations. After initialization, applications need not use any layout other than the general layout, though this **may** produce suboptimal performance on some implementations.

Upon creation, all image subresources of an image are initially in the same layout, where that layout is selected by the `VkImageCreateInfo::initialLayout` member. The `initialLayout` **must** be either `VK_IMAGE_LAYOUT_UNDEFINED` or `VK_IMAGE_LAYOUT_PREINITIALIZED`. If it is `VK_IMAGE_LAYOUT_PREINITIALIZED`, then the image data **can** be preinitialized by the host while using this layout, and the transition away from this layout will preserve that data. If it is `VK_IMAGE_LAYOUT_UNDEFINED`, then the contents of the data are considered to be undefined, and the transition away from this layout is not guaranteed to preserve that data. For either of these initial layouts, any image subresources **must** be transitioned to another layout before they are accessed by the device.

Host access to image memory is only well-defined for `linear` images and for image subresources of those images which are currently in either the `VK_IMAGE_LAYOUT_PREINITIALIZED` or `VK_IMAGE_LAYOUT_GENERAL` layout. Calling `vkGetImageSubresourceLayout` for a linear image returns a subresource layout mapping that is valid for either of those image layouts.

The set of image layouts consists of:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageLayout {
    VK_IMAGE_LAYOUT_UNDEFINED = 0,
    VK_IMAGE_LAYOUT_GENERAL = 1,
    VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL = 2,
    VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL = 3,
    VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL = 4,
    VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL = 5,
    VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL = 6,
    VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL = 7,
    VK_IMAGE_LAYOUT_PREINITIALIZED = 8,
// Provided by VK_VERSION_1_1
    VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL = 1000117000,
// Provided by VK_VERSION_1_1
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL = 1000117001,
// Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL = 1000241000,
// Provided by VK_VERSION_1_2
```

```

VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL = 1000241001,
// Provided by VK_VERSION_1_2
VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL = 1000241002,
// Provided by VK_VERSION_1_2
VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL = 1000241003,
// Provided by VK_VERSION_1_3
VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL = 1000314000,
// Provided by VK_VERSION_1_3
VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL = 1000314001,
// Provided by VK_KHR_swapchain
VK_IMAGE_LAYOUT_PRESENT_SRC_KHR = 1000001002,
// Provided by VK_KHR_video_decode_queue
VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR = 1000024000,
// Provided by VK_KHR_video_decode_queue
VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR = 1000024001,
// Provided by VK_KHR_video_decode_queue
VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR = 1000024002,
// Provided by VK_KHR_shared_presentable_image
VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR = 1000111000,
// Provided by VK_EXT_fragment_density_map
VK_IMAGE_LAYOUT_FRAGMENT_DENSITY_MAP_OPTIMAL_EXT = 1000218000,
// Provided by VK_KHR_fragment_shading_rate
VK_IMAGE_LAYOUT_FRAGMENT_SHADING_RATE_ATTACHMENT_OPTIMAL_KHR = 1000164003,
// Provided by VK_KHR_dynamic_rendering_local_read
VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ_KHR = 1000232000,
// Provided by VK_KHR_video_encode_queue
VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR = 1000299000,
// Provided by VK_KHR_video_encode_queue
VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR = 1000299001,
// Provided by VK_KHR_video_encode_queue
VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR = 1000299002,
// Provided by VK_EXT_attachment_feedback_loop_layout
VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT = 1000339000,
// Provided by VK_KHR_maintenance2
VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL,
// Provided by VK_KHR_maintenance2
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL,
// Provided by VK_NV_shading_rate_image
VK_IMAGE_LAYOUT_SHADING_RATE_OPTIMAL_NV =
VK_IMAGE_LAYOUT_FRAGMENT_SHADING_RATE_ATTACHMENT_OPTIMAL_KHR,
// Provided by VK_KHR_separate_depth_stencil_layouts
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL,
// Provided by VK_KHR_separate_depth_stencil_layouts
VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL,
// Provided by VK_KHR_separate_depth_stencil_layouts
VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL,

```

```

// Provided by VK_KHR_separate_depth_stencil_layouts
VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL,
// Provided by VK_KHR_synchronization2
VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR = VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL,
// Provided by VK_KHR_synchronization2
VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL_KHR = VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL,
} VkImageLayout;

```

The type(s) of device access supported by each layout are:

- **VK_IMAGE_LAYOUT_UNDEFINED** specifies that the layout is unknown. Image memory **cannot** be transitioned into this layout. This layout **can** be used as the **initialLayout** member of **VkImageCreateInfo**. This layout **can** be used in place of the current image layout in a layout transition, but doing so will cause the contents of the image's memory to be undefined.
- **VK_IMAGE_LAYOUT_PREINITIALIZED** specifies that an image's memory is in a defined layout and **can** be populated by data, but that it has not yet been initialized by the driver. Image memory **cannot** be transitioned into this layout. This layout **can** be used as the **initialLayout** member of **VkImageCreateInfo**. This layout is intended to be used as the initial layout for an image whose contents are written by the host, and hence the data **can** be written to memory immediately, without first executing a layout transition. Currently, **VK_IMAGE_LAYOUT_PREINITIALIZED** is only useful with **linear** images because there is not a standard layout defined for **VK_IMAGE_TILING_OPTIMAL** images.
- **VK_IMAGE_LAYOUT_GENERAL** supports all types of device access.
- **VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL** specifies a layout that **must** only be used with attachment accesses in the graphics pipeline.
- **VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL** specifies a layout allowing read only access as an attachment, or in shaders as a sampled image, combined image/sampler, or input attachment.
- **VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL** **must** only be used as a color or resolve attachment in a **VkFramebuffer**. This layout is valid only for image subresources of images created with the **VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT** usage bit enabled.
- **VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL** specifies a layout for both the depth and stencil aspects of a depth/stencil format image allowing read and write access as a depth/stencil attachment. It is equivalent to **VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL** and **VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL**.
- **VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL** specifies a layout for both the depth and stencil aspects of a depth/stencil format image allowing read only access as a depth/stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to **VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL** and **VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL**.
- **VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL** specifies a layout for depth/stencil format images allowing read and write access to the stencil aspect as a stencil attachment, and read only access to the depth aspect as a depth attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to **VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL** and **VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL**.

- `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL` specifies a layout for depth/stencil format images allowing read and write access to the depth aspect as a depth attachment, and read only access to the stencil aspect as a stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL` and `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`.
- `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL` specifies a layout for the depth aspect of a depth/stencil format image allowing read and write access as a depth attachment.
- `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL` specifies a layout for the depth aspect of a depth/stencil format image allowing read-only access as a depth attachment or in shaders as a sampled image, combined image/sampler, or input attachment.
- `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL` specifies a layout for the stencil aspect of a depth/stencil format image allowing read and write access as a stencil attachment.
- `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL` specifies a layout for the stencil aspect of a depth/stencil format image allowing read-only access as a stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment.
- `VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL` specifies a layout allowing read-only access in a shader as a sampled image, combined image/sampler, or input attachment. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_SAMPLED_BIT` or `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` usage bits enabled.
- `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL` **must** only be used as a source image of a transfer command (see the definition of `VK_PIPELINE_STAGE_TRANSFER_BIT`). This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage bit enabled.
- `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` **must** only be used as a destination image of a transfer command. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage bit enabled.
- `VK_IMAGE_LAYOUT_PRESENT_SRC_KHR` **must** only be used for presenting a presentable image for display.
- `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR` is valid only for shared presentable images, and **must** be used for any usage the image supports.
- `VK_IMAGE_LAYOUT_FRAGMENT_SHADING_RATE_ATTACHMENT_OPTIMAL_KHR` **must** only be used as a [fragment shading rate attachment](#) or [shading rate image](#). This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR` usage bit enabled.
- `VK_IMAGE_LAYOUT_FRAGMENT_DENSITY_MAP_OPTIMAL_EXT` **must** only be used as a fragment density map attachment in a `VkRenderPass`. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT` usage bit enabled.
- `VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR` **must** only be used as a [decode output picture](#) in a [video decode operation](#). This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` usage bit enabled.
- `VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR` is reserved for future use.
- `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` **must** only be used as an output [reconstructed picture](#) or

an input [reference picture](#) in a [video decode operation](#). This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` usage bit enabled.

- `VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR` is reserved for future use.
- `VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR` **must** only be used as an [encode input picture](#) in a [video encode operation](#). This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR` usage bit enabled.
- `VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR` **must** only be used as an output [reconstructed picture](#) or an input [reference picture](#) in a [video encode operation](#). This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR` usage bit enabled.
- `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` **must** only be used as either a color attachment or depth/stencil attachment in a `VkFramebuffer` and/or read-only access in a shader as a sampled image, combined image/sampler, or input attachment. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` usage bit enabled and either the `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT` or `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT` and either the `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` or `VK_IMAGE_USAGE_SAMPLED_BIT` usage bits enabled.
- `VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ_KHR` **must** only be used as either a storage image, or a color or depth/stencil attachment and an input attachment. This layout is valid only for image subresources of images created with either `VK_IMAGE_USAGE_STORAGE_BIT`, or both `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` and either of `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT` or `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`.

The layout of each image subresource is not a state of the image subresource itself, but is rather a property of how the data in memory is organized, and thus for each mechanism of accessing an image in the API the application **must** specify a parameter or structure member that indicates which image layout the image subresource(s) are considered to be in when the image will be accessed. For transfer commands, this is a parameter to the command (see [Clear Commands](#) and [Copy Commands](#)). For use as a framebuffer attachment, this is a member in the substructures of the `VkRenderPassCreateInfo` (see [Render Pass](#)). For use in a descriptor set, this is a member in the `VkDescriptorImageInfo` structure (see [Descriptor Set Updates](#)).

12.4.1. Image Layout Matching Rules

At the time that any command buffer command accessing an image executes on any queue, the layouts of the image subresources that are accessed **must** all match exactly the layout specified via the API controlling those accesses, except in case of accesses to an image with a depth/stencil format performed through descriptors referring to only a single aspect of the image, where the following relaxed matching rules apply:

- Descriptors referring just to the depth aspect of a depth/stencil image only need to match in the image layout of the depth aspect, thus `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL` and `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL` are considered to match.
- Descriptors referring just to the stencil aspect of a depth/stencil image only need to match in the image layout of the stencil aspect, thus `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL` and

`VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL` are considered to match.

When performing a layout transition on an image subresource, the old layout value **must** either equal the current layout of the image subresource (at the time the transition executes), or else be `VK_IMAGE_LAYOUT_UNDEFINED` (implying that the contents of the image subresource need not be preserved). The new layout used in a transition **must** not be `VK_IMAGE_LAYOUT_UNDEFINED` or `VK_IMAGE_LAYOUT_PREINITIALIZED`.

The image layout of each image subresource of a depth/stencil image created with `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` is dependent on the last sample locations used to render to the image subresource as a depth/stencil attachment, thus applications **must** provide the same sample locations that were last used to render to the given image subresource whenever a layout transition of the image subresource happens, otherwise the contents of the depth aspect of the image subresource become undefined.

In addition, depth reads from a depth/stencil attachment referring to an image subresource range of a depth/stencil image created with `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` using different sample locations than what have been last used to perform depth writes to the image subresources of the same image subresource range return undefined values.

Similarly, depth writes to a depth/stencil attachment referring to an image subresource range of a depth/stencil image created with `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` using different sample locations than what have been last used to perform depth writes to the image subresources of the same image subresource range make the contents of the depth aspect of those image subresources undefined.

12.5. Image Views

Image objects are not directly accessed by pipeline shaders for reading or writing image data. Instead, *image views* representing contiguous ranges of the image subresources and containing additional metadata are used for that purpose. Views **must** be created on images of compatible types, and **must** represent a valid subset of image subresources.

Image views are represented by `VkImageView` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkImageView)
```

`VK_REMAINING_ARRAY_LAYERS` is a special constant value used for image views to indicate that all remaining array layers in an image after the base layer should be included in the view.

```
#define VK_REMAINING_ARRAY_LAYERS        (~0U)
```

`VK_REMAINING_MIP_LEVELS` is a special constant value used for image views to indicate that all remaining mipmap levels in an image after the base level should be included in the view.

```
#define VK_REMAINING_MIP_LEVELS (~0U)
```

The types of image views that **can** be created are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageViewType {
    VK_IMAGE_VIEW_TYPE_1D = 0,
    VK_IMAGE_VIEW_TYPE_2D = 1,
    VK_IMAGE_VIEW_TYPE_3D = 2,
    VK_IMAGE_VIEW_TYPE_CUBE = 3,
    VK_IMAGE_VIEW_TYPE_1D_ARRAY = 4,
    VK_IMAGE_VIEW_TYPE_2D_ARRAY = 5,
    VK_IMAGE_VIEW_TYPE_CUBE_ARRAY = 6,
} VkImageViewType;
```

To create an image view, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateImageView(
    VkDevice                                device,
    const VkImageViewCreateInfo*             pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkImageView*                             pView);
```

- **device** is the logical device that creates the image view.
- **pCreateInfo** is a pointer to a **VkImageViewCreateInfo** structure containing parameters to be used to create the image view.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pView** is a pointer to a **VkImageView** handle in which the resulting image view object is returned.

Valid Usage

- VUID-vkCreateImageView-device-09667
device must support at least one queue family with one of the **VK_QUEUE_VIDEO_ENCODE_BIT_KHR**, **VK_QUEUE_VIDEO_DECODE_BIT_KHR**, **VK_QUEUE_COMPUTE_BIT**, or **VK_QUEUE_GRAPHICS_BIT** capabilities
- VUID-vkCreateImageView-image-09179
VkImageViewCreateInfo::image must have been created from **device**

Valid Usage (Implicit)

- VUID-vkCreateImageView-device-parameter

device must be a valid [VkDevice](#) handle

- VUID-vkCreateImageView-pCreateInfo-parameter

pCreateInfo must be a valid pointer to a valid [VkImageViewCreateInfo](#) structure

- VUID-vkCreateImageView-pAllocator-parameter

If **pAllocator** is not **NULL**, **pAllocator** must be a valid pointer to a valid [VkAllocationCallbacks](#) structure

- VUID-vkCreateImageView-pView-parameter

pView must be a valid pointer to a [VkImageView](#) handle

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR**

The [VkImageViewCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageViewCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImageViewCreateFlags flags;
    VkImage             image;
    VkImageViewType     viewType;
    VkFormat            format;
    VkComponentMapping  components;
    VkImageSubresourceRange subresourceRange;
} VkImageViewCreateInfo;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkImageViewCreateFlagBits](#) specifying additional parameters of the image view.
- **image** is a [VkImage](#) on which the view will be created.
- **viewType** is a [VkImageViewType](#) value specifying the type of the image view.
- **format** is a [VkFormat](#) specifying the format and type used to interpret texel blocks of the image.
- **components** is a [VkComponentMapping](#) structure specifying a remapping of color components (or of depth or stencil components after they have been converted into color components).

- `subresourceRange` is a `VkImageSubresourceRange` structure selecting the set of mipmap levels and array layers to be accessible to the view.

Some of the `image` creation parameters are inherited by the view. In particular, image view creation inherits the implicit parameter `usage` specifying the allowed usages of the image view that, by default, takes the value of the corresponding `usage` parameter specified in `VkImageCreateInfo` at image creation time. The implicit `usage` **can** be overridden by adding a `VkImageViewUsageCreateInfo` structure to the `pNext` chain, but the view usage **must** be a subset of the image usage. If `image` has a depth-stencil format and was created with a `VkImageStencilUsageCreateInfo` structure included in the `pNext` chain of `VkImageCreateInfo`, the usage is calculated based on the `subresource.aspectMask` provided:

- If `aspectMask` includes only `VK_IMAGE_ASPECT_STENCIL_BIT`, the implicit `usage` is equal to `VkImageStencilUsageCreateInfo::stencilUsage`.
- If `aspectMask` includes only `VK_IMAGE_ASPECT_DEPTH_BIT`, the implicit `usage` is equal to `VkImageCreateInfo::usage`.
- If both aspects are included in `aspectMask`, the implicit `usage` is equal to the intersection of `VkImageCreateInfo::usage` and `VkImageStencilUsageCreateInfo::stencilUsage`.

If `image` is a 3D image, its Z range **can** be restricted to a subset by adding a `VkImageViewSlicedCreateInfoEXT` to the `pNext` chain.

If `image` was created with the `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` flag, and if the `format` of the image is not `multi-planar`, `format` **can** be different from the image's format, but if `image` was created without the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag and they are not equal they **must** be *compatible*. Image format compatibility is defined in the [Format Compatibility Classes](#) section. Views of compatible formats will have the same mapping between texel coordinates and memory locations irrespective of the `format`, with only the interpretation of the bit pattern changing.

If `image` was created with a `multi-planar` format, and the image view's `aspectMask` is one of `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT` or `VK_IMAGE_ASPECT_PLANE_2_BIT`, the view's aspect mask is considered to be equivalent to `VK_IMAGE_ASPECT_COLOR_BIT` when used as a framebuffer attachment.

NOTE

Values intended to be used with one view format **may** not be exactly preserved when written or read through a different format. For example, an integer value that happens to have the bit pattern of a floating-point denorm or NaN **may** be flushed or canonicalized when written or read through a view with a floating-point format. Similarly, a value written through a signed normalized format that has a bit pattern exactly equal to -2^b **may** be changed to $-2^b + 1$ as described in [Conversion from Normalized Fixed-Point to Floating-Point](#).

If `image` was created with the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag, `format` **must** be *compatible* with the image's format as described above; or **must** be an uncompressed format, in which case it **must** be *size-compatible* with the image's format. In this case, the resulting image view's texel dimensions equal the dimensions of the selected mip level divided by the compressed texel block size and rounded up.

The `VkComponentMapping` `components` member describes a remapping from components of the image to components of the vector returned by shader image instructions. This remapping **must** be the identity swizzle for storage image descriptors, input attachment descriptors, framebuffer attachments, and any `VkImageView` used with a combined image sampler that enables `sampler Y'CBCR conversion`.

If the image view is to be used with a sampler which supports `sampler Y'CBCR conversion`, an *identically defined object* of type `VkSamplerYcbcrConversion` to that used to create the sampler **must** be passed to `vkCreateImageView` in a `VkSamplerYcbcrConversionInfo` included in the `pNext` chain of `VkImageViewCreateInfo`. Conversely, if a `VkSamplerYcbcrConversion` object is passed to `vkCreateImageView`, an identically defined `VkSamplerYcbcrConversion` object **must** be used when sampling the image.

If the image has a `multi-planar` format, `subresourceRange.aspectMask` is `VK_IMAGE_ASPECT_COLOR_BIT`, and `usage` includes `VK_IMAGE_USAGE_SAMPLED_BIT`, then the `format` **must** be identical to the image `format` and the sampler to be used with the image view **must** enable `sampler Y'CBCR conversion`.

When such an image is used in a `video coding` operation, the `sampler Y'CBCR conversion` has no effect.

If `image` was created with the `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` and the image has a `multi-planar` format, and if `subresourceRange.aspectMask` is `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT`, or `VK_IMAGE_ASPECT_PLANE_2_BIT`, `format` **must** be `compatible` with the corresponding plane of the image, and the sampler to be used with the image view **must** not enable `sampler Y'CBCR conversion`. The `width` and `height` of the single-plane image view **must** be derived from the multi-planar image's dimensions in the manner listed for `plane compatibility` for the plane.

Any view of an image plane will have the same mapping between texel coordinates and memory locations as used by the components of the color aspect, subject to the formulae relating texel coordinates to lower-resolution planes as described in `Chroma Reconstruction`. That is, if an R or B plane has a reduced resolution relative to the G plane of the multi-planar image, the image view operates using the (u_{plane}, v_{plane}) unnormalized coordinates of the reduced-resolution plane, and these coordinates access the same memory locations as the (u_{color}, v_{color}) unnormalized coordinates of the color aspect for which chroma reconstruction operations operate on the same (u_{plane}, v_{plane}) or (i_{plane}, j_{plane}) coordinates.

Table 16. Image Type and Image View Type Compatibility Requirements

Image View Type	Compatible Image Types
<code>VK_IMAGE_VIEW_TYPE_1D</code>	<code>VK_IMAGE_TYPE_1D</code>
<code>VK_IMAGE_VIEW_TYPE_1D_ARRAY</code>	<code>VK_IMAGE_TYPE_1D</code>
<code>VK_IMAGE_VIEW_TYPE_2D</code>	<code>VK_IMAGE_TYPE_2D</code> , <code>VK_IMAGE_TYPE_3D</code>
<code>VK_IMAGE_VIEW_TYPE_2D_ARRAY</code>	<code>VK_IMAGE_TYPE_2D</code> , <code>VK_IMAGE_TYPE_3D</code>
<code>VK_IMAGE_VIEW_TYPE_CUBE</code>	<code>VK_IMAGE_TYPE_2D</code>
<code>VK_IMAGE_VIEW_TYPE_CUBE_ARRAY</code>	<code>VK_IMAGE_TYPE_2D</code>
<code>VK_IMAGE_VIEW_TYPE_3D</code>	<code>VK_IMAGE_TYPE_3D</code>

Valid Usage

- VUID-VkImageViewCreateInfo-image-01003
If `image` was not created with `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` then `viewType` **must** not be `VK_IMAGE_VIEW_TYPE_CUBE` or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-VkImageViewCreateInfo-viewType-01004
If the `imageCubeArray` feature is not enabled, `viewType` **must** not be `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-VkImageViewCreateInfo-image-06723
If `image` was created with `VK_IMAGE_TYPE_3D` but without `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` set then `viewType` **must** not be `VK_IMAGE_VIEW_TYPE_2D_ARRAY`
- VUID-VkImageViewCreateInfo-image-06728
If `image` was created with `VK_IMAGE_TYPE_3D` but without `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` or `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` set, then `viewType` **must** not be `VK_IMAGE_VIEW_TYPE_2D`
- VUID-VkImageViewCreateInfo-image-04970
If `image` was created with `VK_IMAGE_TYPE_3D` and `viewType` is `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY` then `subresourceRange.levelCount` **must** be 1
- VUID-VkImageViewCreateInfo-image-04972
If `image` was created with a `samples` value not equal to `VK_SAMPLE_COUNT_1_BIT` then `viewType` **must** be either `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`
- VUID-VkImageViewCreateInfo-image-04441
`image` **must** have been created with a `usage` value containing at least one of the usages defined in the [valid image usage](#) list for image views
- VUID-VkImageViewCreateInfo-None-02273
The [format features](#) of the resultant image view **must** contain at least one bit
- VUID-VkImageViewCreateInfo-usage-02274
If `usage` contains `VK_IMAGE_USAGE_SAMPLED_BIT`, then the [format features](#) of the resultant image view **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`
- VUID-VkImageViewCreateInfo-usage-02275
If `usage` contains `VK_IMAGE_USAGE_STORAGE_BIT`, then the image view's [format features](#) **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`
- VUID-VkImageViewCreateInfo-usage-08931
If `usage` contains `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, then the image view's [format features](#) **must** contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV`
- VUID-VkImageViewCreateInfo-usage-02277
If `usage` contains `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, then the image view's [format features](#) **must** contain `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
- VUID-VkImageViewCreateInfo-image-08333
If `image` was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and `usage`

contains `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, then the image view's **format features** **must** contain `VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR`

- VUID-VkImageViewCreateInfo-image-08334

If **image** was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and **usage** contains `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, then the image view's **format features** **must** contain `VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR`

- VUID-VkImageViewCreateInfo-image-08335

If **image** was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then **usage** **must** not include `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`

- VUID-VkImageViewCreateInfo-image-08336

If **image** was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and **usage** contains `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, then the image view's **format features** **must** contain `VK_FORMAT_FEATURE_VIDEO_ENCODE_INPUT_BIT_KHR`

- VUID-VkImageViewCreateInfo-image-08337

If **image** was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and **usage** contains `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, then the image view's **format features** **must** contain `VK_FORMAT_FEATURE_VIDEO_ENCODE_DPB_BIT_KHR`

- VUID-VkImageViewCreateInfo-image-08338

If **image** was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then **usage** **must** not include `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`

- VUID-VkImageViewCreateInfo-usage-08932

If **usage** contains `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, and any of the following is true:

- the `externalFormatResolve` feature is not enabled
- the `nullColorAttachmentWithExternalFormatResolve` property is `VK_FALSE`
- **image** was created with an `VkExternalFormatANDROID::externalFormat` value of 0

then the image view's **format features** **must** contain at least one of
`VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or
`VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT` or
`VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV`

- VUID-VkImageViewCreateInfo-subresourceRange-01478

`subresourceRange.baseMipLevel` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when **image** was created

- VUID-VkImageViewCreateInfo-subresourceRange-01718

If `subresourceRange.levelCount` is not `VK_REMAINING_MIP_LEVELS`, `subresourceRange.baseMipLevel + subresourceRange.levelCount` **must** be less than or equal to the `mipLevels` specified in `VkImageCreateInfo` when **image** was created

- VUID-VkImageViewCreateInfo-image-02571

If **image** was created with **usage** containing `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`, `subresourceRange.levelCount` **must** be 1

- VUID-VkImageViewCreateInfo-image-06724

If **image** is not a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` or `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` set, or `viewType` is not `VK_IMAGE_VIEW_TYPE_2D`

or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, `subresourceRange.baseArrayLayer` **must** be less than the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created

- VUID-VkImageViewCreateInfo-subresourceRange-06725

If `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `image` is not a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` or `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` set, or `viewType` is not `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, `subresourceRange.layerCount` **must** be non-zero and `subresourceRange.baseArrayLayer + subresourceRange.layerCount` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created

- VUID-VkImageViewCreateInfo-image-02724

If `image` is a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` set, and `viewType` is `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, `subresourceRange.baseArrayLayer` **must** be less than the depth computed from `baseMipLevel` and `extent.depth` specified in `VkImageCreateInfo` when `image` was created, according to the formula defined in [Image Mip Level Sizing](#)

- VUID-VkImageViewCreateInfo-subresourceRange-02725

If `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `image` is a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` set, and `viewType` is `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, `subresourceRange.layerCount` **must** be non-zero and `subresourceRange.baseArrayLayer + subresourceRange.layerCount` **must** be less than or equal to the depth computed from `baseMipLevel` and `extent.depth` specified in `VkImageCreateInfo` when `image` was created, according to the formula defined in [Image Mip Level Sizing](#)

- VUID-VkImageViewCreateInfo-image-01761

If `image` was created with the `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` flag, but without the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag, and if the `format` of the `image` is not a [multi-planar](#) format, `format` **must** be compatible with the `format` used to create `image`, as defined in [Format Compatibility Classes](#)

- VUID-VkImageViewCreateInfo-image-01583

If `image` was created with the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag, `format` **must** be compatible with, or **must** be an uncompressed format that is size-compatible with, the `format` used to create `image`

- VUID-VkImageViewCreateInfo-image-07072

If `image` was created with the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag and `format` is a non-compressed format, the `levelCount` member of `subresourceRange` **must** be 1

- VUID-VkImageViewCreateInfo-image-09487

If `image` was created with the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag, the `VkPhysicalDeviceMaintenance6PropertiesKHR::blockTexelViewCompatibleMultipleLayers` property is not `VK_TRUE`, and `format` is a non-compressed format, then the `layerCount` member of `subresourceRange` **must** be 1

- VUID-VkImageViewCreateInfo-pNext-01585

If a `VkImageFormatListCreateInfo` structure was included in the `pNext` chain of the `VkImageCreateInfo` structure used when creating `image` and `VkImageFormatListCreateInfo::viewFormatCount` is not zero then `format` **must** be one of the formats in `VkImageFormatListCreateInfo::pViewFormats`

- VUID-VkImageViewCreateInfo-image-01586
If **image** was created with the `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` flag, if the **format** of the **image** is a **multi-planar** format, and if **subresourceRange.aspectMask** is one of the **multi-planar aspect mask** bits, then **format** **must** be compatible with the **VkFormat** for the plane of the **image format** indicated by **subresourceRange.aspectMask**, as defined in **Compatible Formats of Planes of Multi-Planar Formats**
- VUID-VkImageViewCreateInfo-subresourceRange-07818
subresourceRange.aspectMask **must** only have at most 1 valid **multi-planar aspect mask** bit
- VUID-VkImageViewCreateInfo-image-01762
If **image** was not created with the `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` flag, or if the **format** of the **image** is a **multi-planar** format and if **subresourceRange.aspectMask** is `VK_IMAGE_ASPECT_COLOR_BIT`, **format** **must** be identical to the **format** used to create **image**
- VUID-VkImageViewCreateInfo-format-06415
If the image view **requires a sampler $Y'C_B C_R$ conversion** and **usage** contains `VK_IMAGE_USAGE_SAMPLED_BIT`, then the **pNext** chain **must** include a **VkSamplerYcbcrConversionInfo** structure with a conversion value other than `VK_NULL_HANDLE`
- VUID-VkImageViewCreateInfo-format-04714
If **format** has a `_422` or `_420` suffix then **image** **must** have been created with a width that is a multiple of 2
- VUID-VkImageViewCreateInfo-format-04715
If **format** has a `_420` suffix then **image** **must** have been created with a height that is a multiple of 2
- VUID-VkImageViewCreateInfo-pNext-01970
If the **pNext** chain includes a **VkSamplerYcbcrConversionInfo** structure with a **conversion** value other than `VK_NULL_HANDLE`, all members of **components** **must** have the **identity swizzle**
- VUID-VkImageViewCreateInfo-pNext-06658
If the **pNext** chain includes a **VkSamplerYcbcrConversionInfo** structure with a **conversion** value other than `VK_NULL_HANDLE`, **format** **must** be the same used in **VkSamplerYcbcrConversionCreateInfo::format**
- VUID-VkImageViewCreateInfo-image-01020
If **image** is non-sparse then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object
- VUID-VkImageViewCreateInfo-subResourceRange-01021
viewType **must** be compatible with the type of **image** as shown in the **view type compatibility table**
- VUID-VkImageViewCreateInfo-image-02399
If **image** has an **Android external format**, **format** **must** be `VK_FORMAT_UNDEFINED`
- VUID-VkImageViewCreateInfo-image-02400
If **image** has an **Android external format**, the **pNext** chain **must** include a **VkSamplerYcbcrConversionInfo** structure with a **conversion** object created with the same external format as **image**

- VUID-VkImageViewCreateInfo-image-02401
If **image** has an **Android external format**, all members of **components** **must** be the **identity swizzle**
- VUID-VkImageViewCreateInfo-image-08957
If **image** has an **QNX Screen external format**, **format** **must** be **VK_FORMAT_UNDEFINED**
- VUID-VkImageViewCreateInfo-image-08958
If **image** has an **QNX Screen external format**, the **pNext** chain **must** include a **VkSamplerYcbcrConversionInfo** structure with a **conversion** object created with the same external format as **image**
- VUID-VkImageViewCreateInfo-image-08959
If **image** has an **QNX Screen external format**, all members of **components** **must** be the **identity swizzle**
- VUID-VkImageViewCreateInfo-image-02086
If **image** was created with **usage** containing **VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR**, **viewType** **must** be **VK_IMAGE_VIEW_TYPE_2D** or **VK_IMAGE_VIEW_TYPE_2D_ARRAY**
- VUID-VkImageViewCreateInfo-image-02087
If the **shadingRateImage** feature is enabled, and If **image** was created with **usage** containing **VK_IMAGE_USAGE_SHADING_RATE_IMAGE_BIT_NV**, **format** **must** be **VK_FORMAT_R8_UINT**
- VUID-VkImageViewCreateInfo-usage-04550
If the **attachmentFragmentShadingRate** feature is enabled, and the **usage** for the image view includes **VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR**, then the image view's **format** **features** **must** contain **VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR**
- VUID-VkImageViewCreateInfo-usage-04551
If the **attachmentFragmentShadingRate** feature is enabled, the **usage** for the image view includes **VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR**, and **layeredShadingRateAttachments** is **VK_FALSE**, **subresourceRange.layerCount** **must** be **1**
- VUID-VkImageViewCreateInfo-flags-02572
If the **fragmentDensityMapDynamic** feature is not enabled, **flags** **must** not contain **VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT**
- VUID-VkImageViewCreateInfo-flags-03567
If the **fragmentDensityMapDeferred** feature is not enabled, **flags** **must** not contain **VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT**
- VUID-VkImageViewCreateInfo-flags-03568
If **flags** contains **VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT**, **flags** **must** not contain **VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT**
- VUID-VkImageViewCreateInfo-image-03569
If **image** was created with **flags** containing **VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT** and **usage** containing **VK_IMAGE_USAGE_SAMPLED_BIT**, **subresourceRange.layerCount** **must** be less than or equal to **VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::maxSubsampledArrayLayers**
- VUID-VkImageViewCreateInfo-invocationMask-04993
If the **invocationMask** feature is enabled, and if **image** was created with **usage** containing

VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI, format **must** be VK_FORMAT_R8_UINT

- VUID-VkImageViewCreateInfo-flags-04116

If `flags` does not contain `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT` and `image` was created with `usage` containing `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`, its `flags` **must** not contain any of `VK_IMAGE_CREATE_PROTECTED_BIT`, `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`

- VUID-VkImageViewCreateInfo-pNext-02662

If the `pNext` chain includes a `VkImageViewUsageCreateInfo` structure, and `image` was not created with a `VkImageStencilUsageCreateInfo` structure included in the `pNext` chain of `VkImageCreateInfo`, its `usage` member **must** not include any bits that were not set in the `usage` member of the `VkImageCreateInfo` structure used to create `image`

- VUID-VkImageViewCreateInfo-pNext-02663

If the `pNext` chain includes a `VkImageViewUsageCreateInfo` structure, `image` was created with a `VkImageStencilUsageCreateInfo` structure included in the `pNext` chain of `VkImageCreateInfo`, and `subresourceRange.aspectMask` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, the `usage` member of the `VkImageViewUsageCreateInfo` structure **must** not include any bits that were not set in the `usage` member of the `VkImageStencilUsageCreateInfo` structure used to create `image`

- VUID-VkImageViewCreateInfo-pNext-02664

If the `pNext` chain includes a `VkImageViewUsageCreateInfo` structure, `image` was created with a `VkImageStencilUsageCreateInfo` structure included in the `pNext` chain of `VkImageCreateInfo`, and `subresourceRange.aspectMask` includes bits other than `VK_IMAGE_ASPECT_STENCIL_BIT`, the `usage` member of the `VkImageViewUsageCreateInfo` structure **must** not include any bits that were not set in the `usage` member of the `VkImageCreateInfo` structure used to create `image`

- VUID-VkImageViewCreateInfo-imageViewType-04973

If `viewType` is `VK_IMAGE_VIEW_TYPE_1D`, `VK_IMAGE_VIEW_TYPE_2D`, or `VK_IMAGE_VIEW_TYPE_3D`; and `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, then `subresourceRange.layerCount` **must** be 1

- VUID-VkImageViewCreateInfo-imageViewType-04974

If `viewType` is `VK_IMAGE_VIEW_TYPE_1D`, `VK_IMAGE_VIEW_TYPE_2D`, or `VK_IMAGE_VIEW_TYPE_3D`; and `subresourceRange.layerCount` is `VK_REMAINING_ARRAY_LAYERS`, then the remaining number of layers **must** be 1

- VUID-VkImageViewCreateInfo-viewType-02960

If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE` and `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `subresourceRange.layerCount` **must** be 6

- VUID-VkImageViewCreateInfo-viewType-02961

If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY` and `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `subresourceRange.layerCount` **must** be a multiple of 6

- VUID-VkImageViewCreateInfo-viewType-02962

If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE` and `subresourceRange.layerCount` is `VK_REMAINING_ARRAY_LAYERS`, the remaining number of layers **must** be 6

- VUID-VkImageViewCreateInfo-viewType-02963

If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY` and `subresourceRange.layerCount` is `VK_REMAINING_ARRAY_LAYERS`, the remaining number of layers **must** be a multiple of 6

- VUID-VkImageViewCreateInfo-imageViewFormatSwizzle-04465

If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageViewFormatSwizzle` is `VK_FALSE`, all elements of `components` **must** have the `identity swizzle`

- VUID-VkImageViewCreateInfo-imageViewFormatReinterpretation-04466

If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageViewFormatReinterpretation` is `VK_FALSE`, the `VkFormat` in `format` **must** not contain a different number of components, or a different number of bits in each component, than the format of the `VkImage` in `image`

- VUID-VkImageViewCreateInfo-image-04817

If `image` was created with `usage` containing `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, then the `viewType` **must** be `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

- VUID-VkImageViewCreateInfo-image-04818

If `image` was created with `usage` containing `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, then the `viewType` **must** be `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

- VUID-VkImageViewCreateInfo-flags-08106

If `flags` includes `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the `descriptorBufferCaptureReplay` feature **must** be enabled

- VUID-VkImageViewCreateInfo-pNext-08107

If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `flags` **must** contain `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

- VUID-VkImageViewCreateInfo-pNext-06787

If the `pNext` chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its `exportObjectType` member **must** be `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT`

- VUID-VkImageViewCreateInfo-pNext-06944

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `textureSampleWeighted` feature **must** be enabled

- VUID-VkImageViewCreateInfo-pNext-06945

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `image` **must** have been created with `usage` containing `VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM`

- VUID-VkImageViewCreateInfo-pNext-06946

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `components` **must** be `VK_COMPONENT_SWIZZLE_IDENTITY` for all components

- VUID-VkImageViewCreateInfo-pNext-06947

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `subresourceRange.aspectMask` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`

- VUID-VkImageViewCreateInfo-pNext-06948

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then

`subresourceRange.levelCount` **must** be 1

- VUID-VkImageViewCreateInfo-pNext-06949

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D_ARRAY` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

- VUID-VkImageViewCreateInfo-pNext-06950

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and if `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, then `image` **must** have been created with `imageType` `VK_IMAGE_TYPE_1D`

- VUID-VkImageViewCreateInfo-pNext-06951

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, then `subresourceRange.layerCount` **must** be equal to 2

- VUID-VkImageViewCreateInfo-pNext-06952

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, then `image` **must** have been created with `width` equal to or greater than $(numPhases \times \max(\text{align}(\text{filterSize.width}, 4), \text{filterSize.height}))$

- VUID-VkImageViewCreateInfo-pNext-06953

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and if `viewType` is `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, then `image` **must** have been created with `imageType` `VK_IMAGE_TYPE_2D`

- VUID-VkImageViewCreateInfo-pNext-06954

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, then `subresourceRange.layerCount` **must** be equal or greater than `numPhases`

- VUID-VkImageViewCreateInfo-pNext-06955

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, then `image` **must** have been created with `width` equal to or greater than `filterSize.width`

- VUID-VkImageViewCreateInfo-pNext-06956

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, then `image` **must** have been created with `height` equal to or greater than `filterSize.height`

- VUID-VkImageViewCreateInfo-pNext-06957

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure then `VkImageViewSampleWeightCreateInfoQCOM::filterSize.height` **must** be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension.height`

- VUID-VkImageViewCreateInfo-subresourceRange-09594

`subresourceRange.aspectMask` **must** be valid for the `format` the `image` was created with

Valid Usage (Implicit)

- VUID-VkImageViewCreateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_CREATE_INFO`

- VUID-VkImageViewCreateInfo-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkExportMetalObjectCreateInfoEXT**, **VkImageViewASTCDecodeModeEXT**, **VkImageViewMinLodCreateInfoEXT**, **VkImageViewSampleWeightCreateInfoQCOM**, **VkImageViewSlicedCreateInfoEXT**, **VkImageViewUsageCreateInfo**, **VkOpaqueCaptureDescriptorDataCreateInfoEXT**, or **VkSamplerYcbcrConversionInfo**
- VUID-VkImageViewCreateInfo-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique, with the exception of structures of type **VkExportMetalObjectCreateInfoEXT**
- VUID-VkImageViewCreateInfo-flags-parameter
flags **must** be a valid combination of **VkImageViewCreateFlagBits** values
- VUID-VkImageViewCreateInfo-image-parameter
image **must** be a valid **VkImage** handle
- VUID-VkImageViewCreateInfo-viewType-parameter
viewType **must** be a valid **VkImageViewType** value
- VUID-VkImageViewCreateInfo-format-parameter
format **must** be a valid **VkFormat** value
- VUID-VkImageViewCreateInfo-components-parameter
components **must** be a valid **VkComponentMapping** structure
- VUID-VkImageViewCreateInfo-subresourceRange-parameter
subresourceRange **must** be a valid **VkImageSubresourceRange** structure

Bits which **can** be set in **VkImageViewCreateInfo::flags**, specifying additional parameters of an image view, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageViewCreateFlagBits {
    // Provided by VK_EXT_fragment_density_map
    VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT = 0x00000001,
    // Provided by VK_EXT_descriptor_buffer
    VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000004,
    // Provided by VK_EXT_fragment_density_map2
    VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT = 0x00000002,
} VkImageViewCreateFlagBits;
```

- **VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT** specifies that the fragment density map will be read by device during **VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT**
- **VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT** specifies that the fragment density map will be read by the host during **vkEndCommandBuffer** for the primary command buffer that the render pass is recorded into
- **VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT** specifies that the image view **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and

replay), see [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageViewCreateFlags;
```

[VkImageViewCreateFlags](#) is a bitmask type for setting a mask of zero or more [VkImageViewCreateFlagBits](#).

The set of usages for the created image view **can** be restricted compared to the parent image's [usage](#) flags by adding a [VkImageViewUsageCreateInfo](#) structure to the [pNext](#) chain of [VkImageViewCreateInfo](#).

The [VkImageViewUsageCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageViewUsageCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImageUsageFlags  usage;
} VkImageViewUsageCreateInfo;
```

or the equivalent

```
// Provided by VK_KHR_maintenance2
typedef VkImageViewUsageCreateInfo VkImageViewUsageCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [usage](#) is a bitmask of [VkImageUsageFlagBits](#) specifying allowed usages of the image view.

When this structure is chained to [VkImageViewCreateInfo](#) the [usage](#) field overrides the implicit [usage](#) parameter inherited from image creation time and its value is used instead for the purposes of determining the valid usage conditions of [VkImageViewCreateInfo](#).

Valid Usage (Implicit)

- VUID-VkImageViewUsageCreateInfo-sType-sType
[sType](#) **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_USAGE_CREATE_INFO`
- VUID-VkImageViewUsageCreateInfo-usage-parameter
[usage](#) **must** be a valid combination of [VkImageUsageFlagBits](#) values
- VUID-VkImageViewUsageCreateInfo-usage-requiredbitmask
[usage](#) **must** not be `0`

The range of 3D slices for the created image view **can** be restricted to a subset of the parent image's

Z range by adding a `VkImageViewSlicedCreateInfoEXT` structure to the `pNext` chain of `VkImageViewCreateInfo`.

The `VkImageViewSlicedCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_sliced_view_of_3d
typedef struct VkImageViewSlicedCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           sliceOffset;
    uint32_t           sliceCount;
} VkImageViewSlicedCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sliceOffset` is the Z-offset for the first 3D slice accessible to the image view.
- `sliceCount` is the number of 3D slices accessible to the image view.

When this structure is chained to `VkImageViewCreateInfo` the `sliceOffset` field is treated as a Z-offset for the sliced view and `sliceCount` specifies the range. Shader accesses using a Z coordinate of 0 will access the depth slice corresponding to `sliceOffset` in the image, and in a shader, the maximum in-bounds Z coordinate for the view is `sliceCount - 1`.

A sliced 3D view **must** only be used with a single mip level. The slice coordinates are integer coordinates within the `subresourceRange.baseMipLevel` used to create the image view.

The effective view depth is equal to `extent.depth` used to create the `image` for this view adjusted by `subresourceRange.baseMipLevel` as specified in [Image Mip Level Sizing](#).

Shader access to this image view is only affected by `VkImageViewSlicedCreateInfoEXT` if it uses a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`. For access using any other descriptor type, the contents of `VkImageViewSlicedCreateInfoEXT` are ignored; instead, `sliceOffset` is treated as being equal to 0, and `sliceCount` is treated as being equal to `VK_REMAINING_3D_SLICES_EXT`.

Valid Usage

- VUID-VkImageViewSlicedCreateInfoEXT-sliceOffset-07867
`sliceOffset` **must** be less than the effective view depth as specified in [Image Mip Level Sizing](#)
- VUID-VkImageViewSlicedCreateInfoEXT-sliceCount-07868
If `sliceCount` is not `VK_REMAINING_3D_SLICES_EXT`, it **must** be non-zero and `sliceOffset + sliceCount` **must** be less than or equal to the effective view depth as specified in [Image Mip Level Sizing](#)
- VUID-VkImageViewSlicedCreateInfoEXT-image-07869
`image` **must** have been created with `imageType` equal to `VK_IMAGE_TYPE_3D`
- VUID-VkImageViewSlicedCreateInfoEXT-viewType-07909

`viewType` **must** be `VK_IMAGE_VIEW_TYPE_3D`

- VUID-VkImageViewSlicedCreateInfoEXT-None-07870
The image view **must** reference exactly 1 mip level
- VUID-VkImageViewSlicedCreateInfoEXT-None-07871
The `imageSlicedViewOf3D` feature **must** be enabled on the device

Valid Usage (Implicit)

- VUID-VkImageViewSlicedCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_SLICED_CREATE_INFO_EXT`

`VK_REMAINING_3D_SLICES_EXT` is a special constant value used for `VkImageViewSlicedCreateInfoEXT::sliceCount` to indicate that all remaining 3D slices in an image after the first slice offset specified should be included in the view.

```
#define VK_REMAINING_3D_SLICES_EXT    (~0U)
```

The `VkImageSubresourceRange` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresourceRange {
    VkImageAspectFlags    aspectMask;
    uint32_t              baseMipLevel;
    uint32_t              levelCount;
    uint32_t              baseArrayLayer;
    uint32_t              layerCount;
} VkImageSubresourceRange;
```

- `aspectMask` is a bitmask of `VkImageAspectFlagBits` specifying which aspect(s) of the image are included in the view.
- `baseMipLevel` is the first mipmap level accessible to the view.
- `levelCount` is the number of mipmap levels (starting from `baseMipLevel`) accessible to the view.
- `baseArrayLayer` is the first array layer accessible to the view.
- `layerCount` is the number of array layers (starting from `baseArrayLayer`) accessible to the view.

The number of mipmap levels and array layers **must** be a subset of the image subresources in the image. If an application wants to use all mip levels or layers in an image after the `baseMipLevel` or `baseArrayLayer`, it **can** set `levelCount` and `layerCount` to the special values `VK_REMAINING_MIP_LEVELS` and `VK_REMAINING_ARRAY_LAYERS` without knowing the exact number of mip levels or layers.

For cube and cube array image views, the layers of the image view starting at `baseArrayLayer` correspond to faces in the order +X, -X, +Y, -Y, +Z, -Z. For cube arrays, each set of six sequential layers is a single cube, so the number of cube maps in a cube map array view is `layerCount / 6`, and

image array layer (`baseArrayLayer + i`) is face index $(i \bmod 6)$ of cube $i / 6$. If the number of layers in the view, whether set explicitly in `layerCount` or implied by `VK_REMAINING_ARRAY_LAYERS`, is not a multiple of 6, the last cube map in the array **must** not be accessed.

`aspectMask` **must** be only `VK_IMAGE_ASPECT_COLOR_BIT`, `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` if `format` is a color, depth-only or stencil-only format, respectively, except if `format` is a `multi-planar format`. If using a depth/stencil format with both depth and stencil components, `aspectMask` **must** include at least one of `VK_IMAGE_ASPECT_DEPTH_BIT` and `VK_IMAGE_ASPECT_STENCIL_BIT`, and **can** include both.

When the `VkImageSubresourceRange` structure is used to select a subset of the slices of a 3D image's mip level in order to create a 2D or 2D array image view of a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT`, `baseArrayLayer` and `layerCount` specify the first slice index and the number of slices to include in the created image view. Such an image view **can** be used as a framebuffer attachment that refers only to the specified range of slices of the selected mip level. However, any layout transitions performed on such an attachment view during a render pass instance still apply to the entire subresource referenced which includes all the slices of the selected mip level.

When using an image view of a depth/stencil image to populate a descriptor set (e.g. for sampling in the shader, or for use as an input attachment), the `aspectMask` **must** only include one bit, which selects whether the image view is used for depth reads (i.e. using a floating-point sampler or input attachment in the shader) or stencil reads (i.e. using an unsigned integer sampler or input attachment in the shader). When an image view of a depth/stencil image is used as a depth/stencil framebuffer attachment, the `aspectMask` is ignored and both depth and stencil image subresources are used.

When creating a `VkImageView`, if `sampler Y'CBCR conversion` is enabled in the sampler, the `aspectMask` of a `subresourceRange` used by the `VkImageView` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`.

When creating a `VkImageView`, if `sampler Y'CBCR conversion` is not enabled in the sampler and the image `format` is `multi-planar`, the image **must** have been created with `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, and the `aspectMask` of the `VkImageView`'s `subresourceRange` **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT` or `VK_IMAGE_ASPECT_PLANE_2_BIT`.

Valid Usage

- VUID-VkImageSubresourceRange-levelCount-01720
If `levelCount` is not `VK_REMAINING_MIP_LEVELS`, it **must** be greater than 0
- VUID-VkImageSubresourceRange-layerCount-01721
If `layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, it **must** be greater than 0
- VUID-VkImageSubresourceRange-aspectMask-01670
If `aspectMask` includes `VK_IMAGE_ASPECT_COLOR_BIT`, then it **must** not include any of `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT`, or `VK_IMAGE_ASPECT_PLANE_2_BIT`
- VUID-VkImageSubresourceRange-aspectMask-02278
`aspectMask` **must** not include `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` for any index i

Valid Usage (Implicit)

- VUID-VkImageSubresourceRange-aspectMask-parameter
aspectMask must be a valid combination of [VkImageAspectFlagBits](#) values
- VUID-VkImageSubresourceRange-aspectMask-requiredbitmask
aspectMask must not be 0

Bits which **can** be set in an aspect mask to specify aspects of an image for purposes such as identifying a subresource, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageAspectFlagBits {
    VK_IMAGE_ASPECT_COLOR_BIT = 0x00000001,
    VK_IMAGE_ASPECT_DEPTH_BIT = 0x00000002,
    VK_IMAGE_ASPECT_STENCIL_BIT = 0x00000004,
    VK_IMAGE_ASPECT_METADATA_BIT = 0x00000008,
// Provided by VK_VERSION_1_1
    VK_IMAGE_ASPECT_PLANE_0_BIT = 0x00000010,
// Provided by VK_VERSION_1_1
    VK_IMAGE_ASPECT_PLANE_1_BIT = 0x00000020,
// Provided by VK_VERSION_1_1
    VK_IMAGE_ASPECT_PLANE_2_BIT = 0x00000040,
// Provided by VK_VERSION_1_3
    VK_IMAGE_ASPECT_NONE = 0,
// Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT = 0x00000080,
// Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT = 0x00000100,
// Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT = 0x00000200,
// Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT = 0x00000400,
// Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_ASPECT_PLANE_0_BIT_KHR = VK_IMAGE_ASPECT_PLANE_0_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_ASPECT_PLANE_1_BIT_KHR = VK_IMAGE_ASPECT_PLANE_1_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_ASPECT_PLANE_2_BIT_KHR = VK_IMAGE_ASPECT_PLANE_2_BIT,
// Provided by VK_KHR_maintenance4
    VK_IMAGE_ASPECT_NONE_KHR = VK_IMAGE_ASPECT_NONE,
} VkImageAspectFlagBits;
```

- **VK_IMAGE_ASPECT_NONE** specifies no image aspect, or the image aspect is not applicable.
- **VK_IMAGE_ASPECT_COLOR_BIT** specifies the color aspect.
- **VK_IMAGE_ASPECT_DEPTH_BIT** specifies the depth aspect.
- **VK_IMAGE_ASPECT_STENCIL_BIT** specifies the stencil aspect.

- `VK_IMAGE_ASPECT_METADATA_BIT` specifies the metadata aspect used for [sparse resource](#) operations.
- `VK_IMAGE_ASPECT_PLANE_0_BIT` specifies plane 0 of a *multi-planar* image format.
- `VK_IMAGE_ASPECT_PLANE_1_BIT` specifies plane 1 of a *multi-planar* image format.
- `VK_IMAGE_ASPECT_PLANE_2_BIT` specifies plane 2 of a *multi-planar* image format.
- `VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT` specifies *memory plane* 0.
- `VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT` specifies *memory plane* 1.
- `VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT` specifies *memory plane* 2.
- `VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT` specifies *memory plane* 3.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageAspectFlags;
```

`VkImageAspectFlags` is a bitmask type for setting a mask of zero or more [VkImageAspectFlagBits](#).

The `VkComponentMapping` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkComponentMapping {
    VkComponentSwizzle    r;
    VkComponentSwizzle    g;
    VkComponentSwizzle    b;
    VkComponentSwizzle    a;
} VkComponentMapping;
```

- `r` is a [VkComponentSwizzle](#) specifying the component value placed in the R component of the output vector.
- `g` is a [VkComponentSwizzle](#) specifying the component value placed in the G component of the output vector.
- `b` is a [VkComponentSwizzle](#) specifying the component value placed in the B component of the output vector.
- `a` is a [VkComponentSwizzle](#) specifying the component value placed in the A component of the output vector.

Valid Usage (Implicit)

- VUID-VkComponentMapping-r-parameter
`r` must be a valid [VkComponentSwizzle](#) value
- VUID-VkComponentMapping-g-parameter
`g` must be a valid [VkComponentSwizzle](#) value
- VUID-VkComponentMapping-b-parameter
`b` must be a valid [VkComponentSwizzle](#) value

- VUID-VkComponentMapping-a-parameter
a **must** be a valid [VkComponentSwizzle](#) value

Possible values of the members of [VkComponentMapping](#), specifying the component values placed in each component of the output vector, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkComponentSwizzle {
    VK_COMPONENT_SWIZZLE_IDENTITY = 0,
    VK_COMPONENT_SWIZZLE_ZERO = 1,
    VK_COMPONENT_SWIZZLE_ONE = 2,
    VK_COMPONENT_SWIZZLE_R = 3,
    VK_COMPONENT_SWIZZLE_G = 4,
    VK_COMPONENT_SWIZZLE_B = 5,
    VK_COMPONENT_SWIZZLE_A = 6,
} VkComponentSwizzle;
```

- [VK_COMPONENT_SWIZZLE_IDENTITY](#) specifies that the component is set to the identity swizzle.
- [VK_COMPONENT_SWIZZLE_ZERO](#) specifies that the component is set to zero.
- [VK_COMPONENT_SWIZZLE_ONE](#) specifies that the component is set to either 1 or 1.0, depending on whether the type of the image view format is integer or floating-point respectively, as determined by the [Format Definition](#) section for each [VkFormat](#).
- [VK_COMPONENT_SWIZZLE_R](#) specifies that the component is set to the value of the R component of the image.
- [VK_COMPONENT_SWIZZLE_G](#) specifies that the component is set to the value of the G component of the image.
- [VK_COMPONENT_SWIZZLE_B](#) specifies that the component is set to the value of the B component of the image.
- [VK_COMPONENT_SWIZZLE_A](#) specifies that the component is set to the value of the A component of the image.

Setting the identity swizzle on a component is equivalent to setting the identity mapping on that component. That is:

Table 17. Component Mappings Equivalent To [VK_COMPONENT_SWIZZLE_IDENTITY](#)

Component	Identity Mapping
components.r	VK_COMPONENT_SWIZZLE_R
components.g	VK_COMPONENT_SWIZZLE_G
components.b	VK_COMPONENT_SWIZZLE_B
components.a	VK_COMPONENT_SWIZZLE_A

If the [pNext](#) chain includes a [VkImageViewASTCDecodeModeEXT](#) structure, then that structure includes a parameter specifying the decode mode for image views using ASTC compressed formats.

The `VkImageViewASTCDecodeModeEXT` structure is defined as:

```
// Provided by VK_EXT_astc_decode_mode
typedef struct VkImageViewASTCDecodeModeEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkFormat            decodeMode;
} VkImageViewASTCDecodeModeEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `decodeMode` is the intermediate format used to decode ASTC compressed formats.

Valid Usage

- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02230
`decodeMode` **must** be one of `VK_FORMAT_R16G16B16A16_SFLOAT`, `VK_FORMAT_R8G8B8A8_UNORM`, or `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`
- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02231
If the `decodeModeSharedExponent` feature is not enabled, `decodeMode` **must** not be `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`
- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02232
If `decodeMode` is `VK_FORMAT_R8G8B8A8_UNORM` the image view **must** not include blocks using any of the ASTC HDR modes
- VUID-VkImageViewASTCDecodeModeEXT-format-04084
`format` of the image view **must** be one of the [ASTC Compressed Image Formats](#)

If `format` uses sRGB encoding then the `decodeMode` has no effect.

Valid Usage (Implicit)

- VUID-VkImageViewASTCDecodeModeEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_ASTC_DECODE_MODE_EXT`
- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-parameter
`decodeMode` **must** be a valid `VkFormat` value

If the `pNext` chain includes a `VkImageViewSampleWeightCreateInfoQCOM` structure, then that structure includes a parameter specifying the parameters for weight image views used in [weight image sampling](#).

The `VkImageViewSampleWeightCreateInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_image_processing
typedef struct VkImageViewSampleWeightCreateInfoQCOM {
    VkStructureType    sType;
    const void*        pNext;
    VkOffset2D         filterCenter;
    VkExtent2D         filterSize;
    uint32_t           numPhases;
} VkImageViewSampleWeightCreateInfoQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `filterCenter` is a `VkOffset2D` describing the location of the weight filter origin.
- `filterSize` is a `VkExtent2D` specifying weight filter dimensions.
- `numPhases` is number of sub-pixel filter phases.

The `filterCenter` specifies the origin or center of the filter kernel, as described in [Weight Sampling Operation](#). The `numPhases` describes the number of sub-pixel filter phases as described in [Weight Sampling Phases](#).

Valid Usage

- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterSize-06958
`filterSize.width` **must** be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension.width`
- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterSize-06959
`filterSize.height` **must** be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension.height`
- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterCenter-06960
`filterCenter.x` **must** be less than or equal to $(\text{filterSize.width} - 1)$
- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterCenter-06961
`filterCenter.y` **must** be less than or equal to $(\text{filterSize.height} - 1)$
- VUID-VkImageViewSampleWeightCreateInfoQCOM-numPhases-06962
`numPhases` **must** be a power of two squared value (i.e., 1, 4, 16, 64, 256, etc.)
- VUID-VkImageViewSampleWeightCreateInfoQCOM-numPhases-06963
`numPhases` **must** be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterPhases`

Valid Usage (Implicit)

- VUID-VkImageViewSampleWeightCreateInfoQCOM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_SAMPLE_WEIGHT_CREATE_INFO_QCOM`

To destroy an image view, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyImageView(
    VkDevice          device,
    VkImageView       imageView,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the image view.
- **imageView** is the image view to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyImageView-imageView-01026
All submitted commands that refer to **imageView** **must** have completed execution
- VUID-vkDestroyImageView-imageView-01027
If **VkAllocationCallbacks** were provided when **imageView** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyImageView-imageView-01028
If no **VkAllocationCallbacks** were provided when **imageView** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyImageView-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyImageView-imageView-parameter
If **imageView** is not **VK_NULL_HANDLE**, **imageView** **must** be a valid **VkImageView** handle
- VUID-vkDestroyImageView-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyImageView-imageView-parent
If **imageView** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **imageView** **must** be externally synchronized

To get the handle for an image view, call:

```
// Provided by VK_NVX_image_view_handle
uint32_t vkGetImageViewHandleNVX(
    VkDevice          device,
    const VkImageViewHandleInfoNVX* pInfo);
```

- **device** is the logical device that owns the image view.
- **pInfo** describes the image view to query and type of handle.

Valid Usage (Implicit)

- VUID-vkGetImageViewHandleNVX-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetImageViewHandleNVX-pInfo-parameter **pInfo** must be a valid pointer to a valid [VkImageViewHandleInfoNVX](#) structure

The [VkImageViewHandleInfoNVX](#) structure is defined as:

```
// Provided by VK_NVX_image_view_handle
typedef struct VkImageViewHandleInfoNVX {
    VkStructureType    sType;
    const void*        pNext;
    VkImageView         imageView;
    VkDescriptorType    descriptorType;
    VkSampler           sampler;
} VkImageViewHandleInfoNVX;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **imageView** is the image view to query.
- **descriptorType** is the type of descriptor for which to query a handle.
- **sampler** is the sampler to combine with the image view when generating the handle.

Valid Usage

- VUID-VkImageViewHandleInfoNVX-descriptorType-02654
descriptorType must be **VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE**, **VK_DESCRIPTOR_TYPE_STORAGE_IMAGE**, or **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER**
- VUID-VkImageViewHandleInfoNVX-sampler-02655
sampler must be a valid [VkSampler](#) if **descriptorType** is **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER**
- VUID-VkImageViewHandleInfoNVX-imageView-02656
If **descriptorType** is **VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE** or

`VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the image that `imageView` was created from **must** have been created with the `VK_IMAGE_USAGE_SAMPLED_BIT` usage bit set

- VUID-VkImageViewHandleInfoNVX-imageView-02657

If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, the image that `imageView` was created from **must** have been created with the `VK_IMAGE_USAGE_STORAGE_BIT` usage bit set

Valid Usage (Implicit)

- VUID-VkImageViewHandleInfoNVX-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_HANDLE_INFO_NVX`
- VUID-VkImageViewHandleInfoNVX-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageViewHandleInfoNVX-imageView-parameter
`imageView` **must** be a valid `VkImageView` handle
- VUID-VkImageViewHandleInfoNVX-descriptorType-parameter
`descriptorType` **must** be a valid `VkDescriptorType` value
- VUID-VkImageViewHandleInfoNVX-sampler-parameter
If `sampler` is not `VK_NULL_HANDLE`, `sampler` **must** be a valid `VkSampler` handle
- VUID-VkImageViewHandleInfoNVX-commonparent
Both of `imageView`, and `sampler` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

To get the device address for an image view, call:

```
// Provided by VK_NVX_image_view_handle
VkResult vkGetImageViewAddressNVX(
    VkDevice          device,
    VkImageView       imageView,
    VkImageViewAddressPropertiesNVX* pProperties);
```

- `device` is the logical device that owns the image view.
- `imageView` is a handle to the image view.
- `pProperties` contains the device address and size when the call returns.

Valid Usage (Implicit)

- VUID-vkGetImageViewAddressNVX-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetImageViewAddressNVX-imageView-parameter
`imageView` **must** be a valid `VkImageView` handle
- VUID-vkGetImageViewAddressNVX-pProperties-parameter

`pProperties` **must** be a valid pointer to a `VkImageViewAddressPropertiesNVX` structure

- VUID-vkGetImageViewAddressNVX-imageView-parent
`imageView` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkImageViewAddressPropertiesNVX` structure is defined as:

```
// Provided by VK_NVX_image_view_handle
typedef struct VkImageViewAddressPropertiesNVX {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceAddress    deviceAddress;
    VkDeviceSize       size;
} VkImageViewAddressPropertiesNVX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceAddress` is the device address of the image view.
- `size` is the size in bytes of the image view device memory.

Valid Usage (Implicit)

- VUID-VkImageViewAddressPropertiesNVX-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_ADDRESS_PROPERTIES_NVX`
- VUID-VkImageViewAddressPropertiesNVX-pNext-pNext
`pNext` **must** be `NULL`

12.5.1. Image View Format Features

Valid uses of a `VkImageView` **may** depend on the image view's *format features*, defined below. Such constraints are documented in the affected valid usage statement.

- If Vulkan 1.3 is supported or the `VK_KHR_format_feature_flags2` extension is supported, and `VkImageViewCreateInfo::image` was created with `VK_IMAGE_TILING_LINEAR`, then the image view's set of *format features* is the value of `VkFormatProperties3::linearTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties2` on the same `format` as `VkImageViewCreateInfo`

::format.

- If Vulkan 1.3 is not supported and the `VK_KHR_format_feature_flags2` extension is not supported, and `VkImageViewCreateInfo::image` was created with `VK_IMAGE_TILING_LINEAR`, then the image view's set of *format features* is the union of the value of `VkFormatProperties::linearTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` on the same `format` as `VkImageViewCreateInfo::format`, with:
 - `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT` if the format is a depth/stencil format and the image view features also contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT`.
 - `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT` if the format is one of the `extended storage formats` and `shaderStorageImageReadWithoutFormat` is enabled on the device.
 - `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT` if the format is one of the `extended storage formats` and `shaderStorageImageWriteWithoutFormat` is enabled on the device.
- If Vulkan 1.3 is supported or the `VK_KHR_format_feature_flags2` extension is supported, and `VkImageViewCreateInfo::image` was created with `VK_IMAGE_TILING_OPTIMAL`, but without an `Android hardware buffer external format`, or a `QNX Screen buffer external format`, then the image view's set of *format features* is the value of `VkFormatProperties::optimalTilingFeatures` or `VkFormatProperties3::optimalTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` or `vkGetPhysicalDeviceImageFormatProperties2` on the same `format` as `VkImageViewCreateInfo::format`.
- If Vulkan 1.3 is not supported and the `VK_KHR_format_feature_flags2` extension is not supported, and `VkImageViewCreateInfo::image` was created with `VK_IMAGE_TILING_OPTIMAL`, but without an `Android hardware buffer external format`, or a `QNX Screen buffer external format`, then the image view's set of *format features* is the union of the value of `VkFormatProperties::optimalTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` on the same `format` as `VkImageViewCreateInfo::format`, with:
 - `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT` if the format is a depth/stencil format and the image view features also contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT`.
 - `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT` if the format is one of the `extended storage formats` and `shaderStorageImageReadWithoutFormat` is enabled on the device.
 - `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT` if the format is one of the `extended storage formats` and `shaderStorageImageWriteWithoutFormat` is enabled on the device.
- If `VkImageViewCreateInfo::image` was created with an `Android hardware buffer external format`, then the image views's set of *format features* is the value of `VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures` found by calling `vkGetAndroidHardwareBufferPropertiesANDROID` on the Android hardware buffer that was imported to the `VkDeviceMemory` to which the `VkImageViewCreateInfo::image` is bound.
- If `VkImageViewCreateInfo::image` was created with a `QNX Screen buffer external format`, then the image views's set of *format features* is the value of `VkScreenBufferFormatPropertiesQNX::formatFeatures` found by calling `vkGetScreenBufferPropertiesQNX` on the QNX Screen buffer that was imported to the `VkDeviceMemory` to which the `VkImageViewCreateInfo::image` is bound.
- If `VkImageViewCreateInfo::image` was created with a chained `VkBufferCollectionImageCreateInfoFUCHSIA`, then the image view's set of *format features* is the

value of `VkBufferCollectionPropertiesFUCHSIA::formatFeatures` found by calling `vkGetBufferCollectionPropertiesFUCHSIA` on the buffer collection passed as `VkBufferCollectionImageCreateInfoFUCHSIA::collection` when the image was created.

- If `VkImageViewCreateInfo::image` was created with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then:
 - The image's DRM format modifier is the value of `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier` found by calling `vkGetImageDrmFormatModifierPropertiesEXT`.
 - Let `VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties` be the array found by calling `vkGetPhysicalDeviceFormatProperties2` on the same `format` as `VkImageViewCreateInfo::format`.
 - Let `VkDrmFormatModifierPropertiesEXT prop` be the array element whose `drmFormatModifier` member is the value of the image's DRM format modifier.
 - Then the image view's set of *format features* is `prop::drmFormatModifierTilingFeatures`.

The `VkImageViewMinLodCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_view_min_lod
typedef struct VkImageViewMinLodCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    float               minLod;
} VkImageViewMinLodCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minLod` is the value to clamp the minimum LOD accessible by this `VkImageView`.

If the `pNext` chain includes a `VkImageViewMinLodCreateInfoEXT` structure, then that structure includes a parameter specifying a value to clamp the minimum LOD value during [Image Level\(s\) Selection](#), [Texel Gathering](#) and [Integer Texel Coordinate Operations](#).

If the image view contains `VkImageViewMinLodCreateInfoEXT` and it is used as part of a sampling operation:

$$\text{minLodFloat}_{\text{imageView}} = \text{minLod}$$

otherwise:

$$\text{minLodFloat}_{\text{imageView}} = 0.0$$

An integer variant of this parameter is also defined for sampling operations which access integer mipmap levels:

$$\text{minLodInteger}_{\text{imageView}} = \lceil \text{minLodFloat}_{\text{imageView}} \rceil$$

Valid Usage

- VUID-VkImageViewMinLodCreateInfoEXT-minLod-06455
If the `minLod` feature is not enabled, `minLod` **must** be `0.0`
- VUID-VkImageViewMinLodCreateInfoEXT-minLod-06456
`minLod` **must** be less or equal to the index of the last mipmap level accessible to the view

Valid Usage (Implicit)

- VUID-VkImageViewMinLodCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_MIN_LOD_CREATE_INFO_EXT`

12.6. Acceleration Structures

Acceleration structures are opaque data structures that are built by the implementation to more efficiently perform spatial queries on the provided geometric data. For these extensions, an acceleration structure is either a top-level acceleration structure containing a set of bottom-level acceleration structures or a bottom-level acceleration structure containing either a set of axis-aligned bounding boxes for custom geometry or a set of triangles.

Each instance in the top-level acceleration structure contains a reference to a bottom-level acceleration structure as well as an instance transform plus information required to index into the shader bindings. The top-level acceleration structure is what is bound to the acceleration descriptor, for example to trace inside the shader in the ray tracing pipeline.

Acceleration structures for the `VK_KHR_acceleration_structure` extension are represented by `VkAccelerationStructureKHR` handles:

```
// Provided by VK_KHR_acceleration_structure
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkAccelerationStructureKHR)
```

To create an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCreateAccelerationStructureKHR(
    VkDevice device,
    const VkAccelerationStructureCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkAccelerationStructureKHR* pAccelerationStructure);
```

- `device` is the logical device that creates the acceleration structure object.
- `pCreateInfo` is a pointer to a `VkAccelerationStructureCreateInfoKHR` structure containing parameters affecting creation of the acceleration structure.

- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pAccelerationStructure` is a pointer to a `VkAccelerationStructureKHR` handle in which the resulting acceleration structure object is returned.

Similar to other objects in Vulkan, the acceleration structure creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into an acceleration structure is determined by the parameters of `VkAccelerationStructureCreateInfoKHR`.

The acceleration structure data is stored in the object referred to by `VkAccelerationStructureCreateInfoKHR::buffer`. Once memory has been bound to that buffer, it **must** be populated by acceleration structure build or acceleration structure copy commands such as `vkCmdBuildAccelerationStructuresKHR`, `vkBuildAccelerationStructuresKHR`, `vkCmdCopyAccelerationStructureKHR`, and `vkCopyAccelerationStructureKHR`.

NOTE The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the acceleration structure data using acceleration structure copy commands. During capture the tool will use `vkCopyAccelerationStructureToMemoryKHR` or `vkCmdCopyAccelerationStructureToMemoryKHR` with a `mode` of `VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR`, and `vkCopyMemoryToAccelerationStructureKHR` or `vkCmdCopyMemoryToAccelerationStructureKHR` with a `mode` of `VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR` during replay.

NOTE Memory does not need to be bound to the underlying buffer when `vkCreateAccelerationStructureKHR` is called.

The input buffers passed to acceleration structure build commands will be referenced by the implementation for the duration of the command. After the command completes, the acceleration structure **may** hold a reference to any acceleration structure specified by an active instance contained therein. Apart from this referencing, acceleration structures **must** be fully self-contained. The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of ray traversal.

Valid Usage

- VUID-vkCreateAccelerationStructureKHR-accelerationStructure-03611
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCreateAccelerationStructureKHR-deviceAddress-03488
If `VkAccelerationStructureCreateInfoKHR::deviceAddress` is not zero, the `accelerationStructureCaptureReplay` feature **must** be enabled
- VUID-vkCreateAccelerationStructureKHR-device-03489
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateAccelerationStructureKHR-device-parameter
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkCreateAccelerationStructureKHR-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid [VkAccelerationStructureCreateInfoKHR](#) structure
- VUID-vkCreateAccelerationStructureKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateAccelerationStructureKHR-pAccelerationStructure-parameter
`pAccelerationStructure` **must** be a valid pointer to a [VkAccelerationStructureKHR](#) handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`

The [VkAccelerationStructureCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureCreateFlagsKHR createFlags;
    VkBuffer                  buffer;
    VkDeviceSize              offset;
    VkDeviceSize              size;
    VkAccelerationStructureTypeKHR type;
    VkDeviceAddress            deviceAddress;
} VkAccelerationStructureCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `createFlags` is a bitmask of [VkAccelerationStructureCreateFlagBitsKHR](#) specifying additional creation parameters of the acceleration structure.
- `buffer` is the buffer on which the acceleration structure will be stored.
- `offset` is an offset in bytes from the base address of the buffer at which the acceleration

structure will be stored, and **must** be a multiple of 256.

- **size** is the size required for the acceleration structure.
- **type** is a `VkAccelerationStructureTypeKHR` value specifying the type of acceleration structure that will be created.
- **deviceAddress** is the device address requested for the acceleration structure if the `accelerationStructureCaptureReplay` feature is being used. If **deviceAddress** is zero, no specific address is requested.

Applications **should** avoid creating acceleration structures with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR` errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` flag to all buffers that use `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT`, and will add `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` to all buffers used as storage for an acceleration structure where **deviceAddress** is not zero. This also means that the tool will need to add `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` to memory allocations to allow the flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Apps/tools should avoid mixing app-provided and implementation-provided addresses for buffers created with `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, to avoid address space allocation conflicts.

Applications **should** create an acceleration structure with a specific `VkAccelerationStructureTypeKHR` other than `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`.

NOTE

`VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR` is intended to be used by API translation layers. This can be used at acceleration structure creation time in cases where the actual acceleration structure type (top or bottom) is not yet known. The actual acceleration structure type must be specified as `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` when the build is performed.

If the acceleration structure will be the target of a build operation, the required size for an acceleration structure **can** be queried with `vkGetAccelerationStructureBuildSizesKHR`. If the acceleration structure is going to be the target of a compacting copy, `vkCmdWriteAccelerationStructuresPropertiesKHR` or `vkWriteAccelerationStructuresPropertiesKHR` **can** be used to obtain the compacted size required.

If the acceleration structure will be the target of a build operation with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` it **must** include

`VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV` in `createFlags` and include `VkAccelerationStructureMotionInfoNV` as an extension structure in `pNext` with the number of instances as metadata for the object.

Valid Usage

- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-03612
If `deviceAddress` is not zero, `createFlags` **must** include `VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR`
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09488
If `deviceAddress` is not zero, it **must** have been retrieved from an identically created acceleration structure, except for `buffer` and `deviceAddress`
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09489
If `deviceAddress` is not zero, `buffer` **must** have been created identically to the `buffer` used to create the acceleration structure from which `deviceAddress` was retrieved, except for `VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress`
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09490
If `deviceAddress` is not zero, `buffer` **must** have been created with a `VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress` that was retrieved from `vkGetBufferOpaqueCaptureAddress` for the `buffer` that was used to create the acceleration structure from which `deviceAddress` was retrieved
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-03613
If `createFlags` includes `VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR`, `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureCaptureReplay` **must** be `VK_TRUE`
- VUID-VkAccelerationStructureCreateInfoKHR-buffer-03614
`buffer` **must** have been created with a `usage` value containing `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR`
- VUID-VkAccelerationStructureCreateInfoKHR-buffer-03615
`buffer` **must** not have been created with `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkAccelerationStructureCreateInfoKHR-offset-03616
The sum of `offset` and `size` **must** be less than the size of `buffer`
- VUID-VkAccelerationStructureCreateInfoKHR-offset-03734
`offset` **must** be a multiple of 256 bytes
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-04954
If `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV` is set in `createFlags` and `type` is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, one member of the `pNext` chain **must** be a pointer to a valid instance of `VkAccelerationStructureMotionInfoNV`
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-04955
If any geometry includes `VkAccelerationStructureGeometryMotionTrianglesDataNV` then `createFlags` **must** contain `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV`
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-08108

If `createFlags` includes the `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the `descriptorBufferCaptureReplay` feature **must** be enabled

- VUID-VkAccelerationStructureCreateInfoKHR-pNext-08109
If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `createFlags` **must** contain `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_KHR`
- VUID-VkAccelerationStructureCreateInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkAccelerationStructureMotionInfoNV` or `VkOpaqueCaptureDescriptorDataCreateInfoEXT`
- VUID-VkAccelerationStructureCreateInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-parameter
`createFlags` **must** be a valid combination of `VkAccelerationStructureCreateFlagBitsKHR` values
- VUID-VkAccelerationStructureCreateInfoKHR-buffer-parameter
`buffer` **must** be a valid `VkBuffer` handle
- VUID-VkAccelerationStructureCreateInfoKHR-type-parameter
`type` **must** be a valid `VkAccelerationStructureTypeKHR` value

The `VkAccelerationStructureMotionInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureMotionInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxInstances;
    VkAccelerationStructureMotionInfoFlagsNV flags;
} VkAccelerationStructureMotionInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxInstances` is the maximum number of instances that **may** be used in the motion top-level acceleration structure.
- `flags` is 0 and reserved for future use.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMotionInfoNV-sType-sType
sType **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_MOTION_INFO_NV
- VUID-VkAccelerationStructureMotionInfoNV-flags-zeroBitmask
flags **must** be 0

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef VkFlags VkAccelerationStructureMotionInfoFlagsNV;
```

VkAccelerationStructureMotionInfoFlagsNV is a bitmask type for setting a mask, but is currently reserved for future use.

To get the build sizes for an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
void vkGetAccelerationStructureBuildSizesKHR(
    VkDevice device,
    VkAccelerationStructureBuildTypeKHR buildType,
    const VkAccelerationStructureBuildGeometryInfoKHR* pBuildInfo,
    const uint32_t* pMaxPrimitiveCounts,
    VkAccelerationStructureBuildSizesInfoKHR* pSizeInfo);
```

- device is the logical device that will be used for creating the acceleration structure.
- buildType defines whether host or device operations (or both) are being queried for.
- pBuildInfo is a pointer to a VkAccelerationStructureBuildGeometryInfoKHR structure describing parameters of a build operation.
- pMaxPrimitiveCounts is a pointer to an array of pBuildInfo->geometryCount uint32_t values defining the number of primitives built into each geometry.
- pSizeInfo is a pointer to a VkAccelerationStructureBuildSizesInfoKHR structure which returns the size required for an acceleration structure and the sizes required for the scratch buffers, given the build parameters.

The srcAccelerationStructure, dstAccelerationStructure, and mode members of pBuildInfo are ignored. Any VkDeviceOrHostAddressKHR or VkDeviceOrHostAddressConstKHR members of pBuildInfo are ignored by this command, except that the hostAddress member of VkAccelerationStructureGeometryTrianglesDataKHR::transformData will be examined to check if it is NULL.

An acceleration structure created with the accelerationStructureSize returned by this command supports any build or update with a VkAccelerationStructureBuildGeometryInfoKHR structure and array of VkAccelerationStructureBuildRangeInfoKHR structures subject to the following properties:

- The build command is a host build command, and buildType is

VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR or
VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR

- The build command is a device build command, and `buildType` is VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR or VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR
- For `VkAccelerationStructureBuildGeometryInfoKHR`:
 - Its `type`, and `flags` members are equal to `pBuildInfo->type` and `pBuildInfo->flags`, respectively.
 - `geometryCount` is less than or equal to `pBuildInfo->geometryCount`.
 - For each element of either `pGeometries` or `ppGeometries` at a given index, its `geometryType` member is equal to `pBuildInfo->geometryType`.
 - For each element of either `pGeometries` or `ppGeometries` at a given index, its `flags` member is equal to the corresponding member of the same element in `pBuildInfo`.
 - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the `vertexFormat` and `indexType` members of `geometry.triangles` are equal to the corresponding members of the same element in `pBuildInfo`.
 - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the `maxVertex` member of `geometry.triangles` is less than or equal to the corresponding member of the same element in `pBuildInfo`.
 - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the applicable address in the `transformData` member of `geometry.triangles` is not `NULL`, the corresponding `transformData.hostAddress` parameter in `pBuildInfo` is not `NULL`.
- For each `VkAccelerationStructureBuildRangeInfoKHR` corresponding to the `VkAccelerationStructureBuildGeometryInfoKHR`:
 - Its `primitiveCount` member is less than or equal to the corresponding element of `pMaxPrimitiveCounts`.
 - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the `pNext` chain contains `VkAccelerationStructureTrianglesOpacityMicromapEXT` the corresponding member of `pBuildInfo` also contains `VkAccelerationStructureTrianglesOpacityMicromapEXT` and with an equivalent `micromap`.
 - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the `pNext` chain contains `VkAccelerationStructureTrianglesDisplacementMicromapNV` the corresponding member of `pBuildInfo` also contains `VkAccelerationStructureTrianglesDisplacementMicromapNV` and with an equivalent `micromap`.

Similarly, the `updateScratchSize` value will support any build command specifying the `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` mode under the above conditions, and the `buildScratchSize` value will support any build command specifying the

VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR mode under the above conditions.

Valid Usage

- VUID-vkGetAccelerationStructureBuildSizesKHR-accelerationStructure-08933
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkGetAccelerationStructureBuildSizesKHR-device-03618
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-03619
If `pBuildInfo->geometryCount` is not 0, `pMaxPrimitiveCounts` **must** be a valid pointer to an array of `pBuildInfo->geometryCount` `uint32_t` values
- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-03785
If `pBuildInfo->pGeometries` or `pBuildInfo->ppGeometries` has a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `pMaxPrimitiveCounts[i]` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureBuildSizesKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetAccelerationStructureBuildSizesKHR-buildType-parameter
`buildType` **must** be a valid `VkAccelerationStructureBuildTypeKHR` value
- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-parameter
`pBuildInfo` **must** be a valid pointer to a valid `VkAccelerationStructureBuildGeometryInfoKHR` structure
- VUID-vkGetAccelerationStructureBuildSizesKHR-pMaxPrimitiveCounts-parameter
If `pMaxPrimitiveCounts` is not NULL, `pMaxPrimitiveCounts` **must** be a valid pointer to an array of `pBuildInfo->geometryCount` `uint32_t` values
- VUID-vkGetAccelerationStructureBuildSizesKHR-pSizeInfo-parameter
`pSizeInfo` **must** be a valid pointer to a `VkAccelerationStructureBuildSizesInfoKHR` structure

The `VkAccelerationStructureBuildSizesInfoKHR` structure describes the required build sizes for an acceleration structure and scratch buffers and is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildSizesInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize        accelerationStructureSize;
    VkDeviceSize        updateScratchSize;
    VkDeviceSize        buildScratchSize;
} VkAccelerationStructureBuildSizesInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **accelerationStructureSize** is the size in bytes required in a [VkAccelerationStructureKHR](#) for a build or update operation.
- **updateScratchSize** is the size in bytes required in a scratch buffer for an update operation.
- **buildScratchSize** is the size in bytes required in a scratch buffer for a build operation.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureBuildSizesInfoKHR-sType-sType
sType must be **VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_SIZES_INFO_KHR**
- VUID-VkAccelerationStructureBuildSizesInfoKHR-pNext-pNext
pNext must be **NULL**

Acceleration structures for the [VK_NV_ray_tracing](#) extension are represented by the similar [VkAccelerationStructureNV](#) handles:

```
// Provided by VK_NV_ray_tracing
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkAccelerationStructureNV)
```

To create acceleration structures, call:

```
// Provided by VK_NV_ray_tracing
VkResult vkCreateAccelerationStructureNV(
    VkDevice                device,
    const VkAccelerationStructureCreateInfoNV* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkAccelerationStructureNV* pAccelerationStructure);
```

- **device** is the logical device that creates the buffer object.
- **pCreateInfo** is a pointer to a [VkAccelerationStructureCreateInfoNV](#) structure containing parameters affecting creation of the acceleration structure.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

- `pAccelerationStructure` is a pointer to a `VkAccelerationStructureNV` handle in which the resulting acceleration structure object is returned.

Similarly to other objects in Vulkan, the acceleration structure creation merely creates an object with a specific “shape” as specified by the information in `VkAccelerationStructureInfoNV` and `compactSize` in `pCreateInfo`.

Once memory has been bound to the acceleration structure using `vkBindAccelerationStructureMemoryNV`, that memory is populated by calls to `vkCmdBuildAccelerationStructureNV` and `vkCmdCopyAccelerationStructureNV`.

Acceleration structure creation uses the count and type information from the geometries, but does not use the data references in the structures.

Valid Usage (Implicit)

- VUID-vkCreateAccelerationStructureNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkCreateAccelerationStructureNV-pCreateInfo-parameter `pCreateInfo` **must** be a valid pointer to a valid `VkAccelerationStructureCreateInfoNV` structure
- VUID-vkCreateAccelerationStructureNV-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateAccelerationStructureNV-pAccelerationStructure-parameter
`pAccelerationStructure` **must** be a valid pointer to a `VkAccelerationStructureNV` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkAccelerationStructureCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkAccelerationStructureCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize        compactedSize;
    VkAccelerationStructureInfoNV info;
} VkAccelerationStructureCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `compactSize` is the size from the result of `vkCmdWriteAccelerationStructuresPropertiesNV` if this acceleration structure is going to be the target of a compacting copy.
- `info` is the `VkAccelerationStructureInfoNV` structure specifying further parameters of the created acceleration structure.

Valid Usage

- VUID-VkAccelerationStructureCreateInfoNV-compactSize-02421
If `compactSize` is not 0 then both `info.geometryCount` and `info.instanceCount` **must** be 0

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_NV`
- VUID-VkAccelerationStructureCreateInfoNV-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkOpaqueCaptureDescriptorDataCreateInfoEXT`
- VUID-VkAccelerationStructureCreateInfoNV-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkAccelerationStructureCreateInfoNV-info-parameter
`info` **must** be a valid `VkAccelerationStructureInfoNV` structure

The `VkAccelerationStructureInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkAccelerationStructureInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureTypeNV type;
    VkBuildAccelerationStructureFlagsNV flags;
    uint32_t                 instanceCount;
    uint32_t                 geometryCount;
    const VkGeometryNV*      pGeometries;
} VkAccelerationStructureInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a `VkAccelerationStructureTypeNV` value specifying the type of acceleration structure that will be created.
- `flags` is a bitmask of `VkBuildAccelerationStructureFlagBitsNV` specifying additional parameters

of the acceleration structure.

- `instanceCount` specifies the number of instances that will be in the new acceleration structure.
- `geometryCount` specifies the number of geometries that will be in the new acceleration structure.
- `pGeometries` is a pointer to an array of `geometryCount` `VkGeometryNV` structures containing the scene data being passed into the acceleration structure.

`VkAccelerationStructureInfoNV` contains information that is used both for acceleration structure creation with `vkCreateAccelerationStructureNV` and in combination with the actual geometric data to build the acceleration structure with `vkCmdBuildAccelerationStructureNV`.

Valid Usage

- VUID-VkAccelerationStructureInfoNV-geometryCount-02422
`geometryCount` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxGeometryCount`
- VUID-VkAccelerationStructureInfoNV-instanceCount-02423
`instanceCount` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxInstanceCount`
- VUID-VkAccelerationStructureInfoNV-maxTriangleCount-02424
The total number of triangles in all geometries **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxTriangleCount`
- VUID-VkAccelerationStructureInfoNV-type-02425
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_NV` then `geometryCount` **must** be 0
- VUID-VkAccelerationStructureInfoNV-type-02426
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_NV` then `instanceCount` **must** be 0
- VUID-VkAccelerationStructureInfoNV-type-02786
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_NV` then the `geometryType` member of each geometry in `pGeometries` **must** be the same
- VUID-VkAccelerationStructureInfoNV-type-04623
`type` **must** not be `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-VkAccelerationStructureInfoNV-flags-02592
If `flags` has the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_NV` bit set, then it **must** not have the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_NV` bit set
- VUID-VkAccelerationStructureInfoNV-scratch-02781
`scratch` **must** have been created with `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` usage flag
- VUID-VkAccelerationStructureInfoNV-instanceData-02782
If `instanceData` is not `VK_NULL_HANDLE`, `instanceData` **must** have been created with `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` usage flag

Valid Usage (Implicit)

- VUID-VkAccelerationStructureInfoNV-sType-sType

sType **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_INFO_NV`

- `VOID-VkAccelerationStructureInfoNV-pNext-pNext`
pNext **must** be `NULL`
- `VOID-VkAccelerationStructureInfoNV-type-parameter`
type **must** be a valid `VkAccelerationStructureTypeNV` value
- `VOID-VkAccelerationStructureInfoNV-flags-parameter`
flags **must** be a valid combination of `VkBuildAccelerationStructureFlagBitsNV` values
- `VOID-VkAccelerationStructureInfoNV-pGeometries-parameter`
If **geometryCount** is not `0`, **pGeometries** **must** be a valid pointer to an array of **geometryCount** valid `VkGeometryNV` structures

Values which **can** be set in `VkAccelerationStructureCreateInfoKHR::type` or `VkAccelerationStructureInfoNV::type` specifying the type of acceleration structure, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureTypeKHR {
    VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR = 0,
    VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR = 1,
    VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR = 2,
    // Provided by VK_NV_ray_tracing
    VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_NV =
VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR,
    // Provided by VK_NV_ray_tracing
    VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_NV =
VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR,
} VkAccelerationStructureTypeKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkAccelerationStructureTypeKHR VkAccelerationStructureTypeNV;
```

- `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` is a top-level acceleration structure containing instance data referring to bottom-level acceleration structures.
- `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` is a bottom-level acceleration structure containing the AABBs or geometry to be intersected.
- `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR` is an acceleration structure whose type is determined at build time used for special circumstances. In these cases, the acceleration structure type is not known at creation time, but **must** be specified at build time as either top or bottom.

Bits which **can** be set in `VkAccelerationStructureCreateInfoKHR::createFlags`, specifying additional creation parameters for acceleration structures, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureCreateFlagBitsKHR {
    VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
0x00000001,
    // Provided by VK_EXT_descriptor_buffer
    VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT =
0x00000008,
    // Provided by VK_NV_ray_tracing_motion_blur
    VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV = 0x00000004,
} VkAccelerationStructureCreateFlagBitsKHR;
```

- `VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR` specifies that the acceleration structure's address **can** be saved and reused on a subsequent run.
- `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` specifies that the acceleration structure **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.
- `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV` specifies that the acceleration structure will be used with motion information, see [VkAccelerationStructureMotionInfoNV](#) for more detail.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkAccelerationStructureCreateFlagsKHR;
```

`VkAccelerationStructureCreateFlagsKHR` is a bitmask type for setting a mask of zero or more [VkAccelerationStructureCreateFlagBitsKHR](#).

Bits which **can** be set in [VkAccelerationStructureBuildGeometryInfoKHR::flags](#) or [VkAccelerationStructureInfoNV::flags](#) specifying additional parameters for acceleration structure builds, are:

```

// Provided by VK_KHR_acceleration_structure
typedef enum VkBuildAccelerationStructureFlagBitsKHR {
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR = 0x00000001,
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR = 0x00000002,
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR = 0x00000004,
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR = 0x00000008,
    VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR = 0x00000010,
// Provided by VK_NV_ray_tracing_motion_blur
    VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV = 0x00000020,
// Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT = 0x00000040,
// Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_EXT = 0x00000080,
// Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT =
0x00000100,
#ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_NV_displacement_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_NV =
0x00000200,
#endif
    // Provided by VK_KHR_ray_tracing_position_fetch
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR = 0x00000800,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_NV =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_NV =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_NV =
VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_NV =
VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_NV =
VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR,
} VkBuildAccelerationStructureFlagBitsKHR;

```

or the equivalent

```

// Provided by VK_NV_ray_tracing
typedef VkBuildAccelerationStructureFlagBitsKHR
VkBuildAccelerationStructureFlagBitsNV;

```

- **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR** indicates that the specified acceleration structure **can** be updated with a **mode** of **VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR** in

VkAccelerationStructureBuildGeometryInfoKHR or an update of VK_TRUE in vkCmdBuildAccelerationStructureNV.

- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR indicates that the specified acceleration structure **can** act as the source for a copy acceleration structure command with mode of VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR to produce a compacted acceleration structure.
- VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR indicates that the given acceleration structure build **should** prioritize trace performance over build time.
- VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR indicates that the given acceleration structure build **should** prioritize build time over trace performance.
- VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR indicates that this acceleration structure **should** minimize the size of the scratch memory and the final result acceleration structure, potentially at the expense of build time or trace performance.
- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT indicates that the opacity micromaps associated with the specified acceleration structure **may** change with an acceleration structure update.
- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT indicates that the data of the opacity micromaps associated with the specified acceleration structure **may** change with an acceleration structure update.
- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_EXT indicates that the specified acceleration structure **may** be referenced in an instance with VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT set.
- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR indicates that the specified acceleration structure **can** be used when fetching the vertex positions of a hit triangle.
- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_NV indicates that the displacement micromaps associated with the specified acceleration structure **may** change with an acceleration structure update.

NOTE

VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR and VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR **may** take more time and memory than a normal build, and so **should** only be used when those features are needed.

NOTE

VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR and VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR are allowed to be used together. In that case, the result of the compaction copy is used as the source of a build with mode of VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR to perform the compacted update.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkBuildAccelerationStructureFlagsKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkBuildAccelerationStructureFlagsKHR VkBuildAccelerationStructureFlagsNV;
```

`VkBuildAccelerationStructureFlagsKHR` is a bitmask type for setting a mask of zero or more `VkBuildAccelerationStructureFlagBitsKHR`.

The `VkGeometryNV` structure describes geometry in a bottom-level acceleration structure and is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryNV {
    VkStructureType    sType;
    const void*        pNext;
    VkGeometryTypeKHR  geometryType;
    VkGeometryDataNV   geometry;
    VkGeometryFlagsKHR flags;
} VkGeometryNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `geometryType` specifies the `VkGeometryTypeKHR` which this geometry refers to.
- `geometry` contains the geometry data as described in `VkGeometryDataNV`.
- `flags` has `VkGeometryFlagBitsKHR` describing options for this geometry.

Valid Usage

- VUID-VkGeometryNV-geometryType-03503
`geometryType` **must** be `VK_GEOMETRY_TYPE_TRIANGLES_NV` or `VK_GEOMETRY_TYPE_AABBS_NV`

Valid Usage (Implicit)

- VUID-VkGeometryNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_GEOMETRY_NV`
- VUID-VkGeometryNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkGeometryNV-geometryType-parameter
`geometryType` **must** be a valid `VkGeometryTypeKHR` value
- VUID-VkGeometryNV-geometry-parameter
`geometry` **must** be a valid `VkGeometryDataNV` structure
- VUID-VkGeometryNV-flags-parameter
`flags` **must** be a valid combination of `VkGeometryFlagBitsKHR` values

Geometry types are specified by [VkGeometryTypeKHR](#), which takes values:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryTypeKHR {
    VK_GEOMETRY_TYPE_TRIANGLES_KHR = 0,
    VK_GEOMETRY_TYPE_AABBS_KHR = 1,
    VK_GEOMETRY_TYPE_INSTANCES_KHR = 2,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_TYPE_TRIANGLES_NV = VK_GEOMETRY_TYPE_TRIANGLES_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_TYPE_AABBS_NV = VK_GEOMETRY_TYPE_AABBS_KHR,
} VkGeometryTypeKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkGeometryTypeKHR VkGeometryTypeNV;
```

- [VK_GEOMETRY_TYPE_TRIANGLES_KHR](#) specifies a geometry type consisting of triangles.
- [VK_GEOMETRY_TYPE_AABBS_KHR](#) specifies a geometry type consisting of axis-aligned bounding boxes.
- [VK_GEOMETRY_TYPE_INSTANCES_KHR](#) specifies a geometry type consisting of acceleration structure instances.

Bits specifying additional parameters for geometries in acceleration structure builds, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryFlagBitsKHR {
    VK_GEOMETRY_OPAQUE_BIT_KHR = 0x00000001,
    VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR = 0x00000002,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_OPAQUE_BIT_NV = VK_GEOMETRY_OPAQUE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_NV =
VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR,
} VkGeometryFlagBitsKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkGeometryFlagBitsKHR VkGeometryFlagBitsNV;
```

- [VK_GEOMETRY_OPAQUE_BIT_KHR](#) indicates that this geometry does not invoke the any-hit shaders even if present in a hit group.
- [VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR](#) indicates that the implementation **must** only call the any-hit shader a single time for each primitive in this geometry. If this bit is absent

an implementation **may** invoke the any-hit shader more than once for this geometry.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkGeometryFlagsKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkGeometryFlagsKHR VkGeometryFlagsNV;
```

`VkGeometryFlagsKHR` is a bitmask type for setting a mask of zero or more `VkGeometryFlagBitsKHR`.

The `VkGeometryDataNV` structure specifies geometry in a bottom-level acceleration structure and is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryDataNV {
    VkGeometryTrianglesNV    triangles;
    VkGeometryAABBNV         aabbs;
} VkGeometryDataNV;
```

- `triangles` contains triangle data if `VkGeometryNV::geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_NV`.
- `aabbs` contains axis-aligned bounding box data if `VkGeometryNV::geometryType` is `VK_GEOMETRY_TYPE_AABBS_NV`.

Valid Usage (Implicit)

- VUID-VkGeometryDataNV-triangles-parameter
`triangles` **must** be a valid `VkGeometryTrianglesNV` structure
- VUID-VkGeometryDataNV-aabbs-parameter
`aabbs` **must** be a valid `VkGeometryAABBNV` structure

The `VkGeometryTrianglesNV` structure specifies triangle geometry in a bottom-level acceleration structure and is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryTrianglesNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            vertexData;
    VkDeviceSize        vertexOffset;
    uint32_t            vertexCount;
    VkDeviceSize        vertexStride;
    VkFormat            vertexFormat;
    VkBuffer            indexData;
    VkDeviceSize        indexOffset;
    uint32_t            indexCount;
    VkIndexType         indexType;
    VkBuffer            transformData;
    VkDeviceSize        transformOffset;
} VkGeometryTrianglesNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **vertexData** is the buffer containing vertex data for this geometry.
- **vertexOffset** is the offset in bytes within **vertexData** containing vertex data for this geometry.
- **vertexCount** is the number of valid vertices.
- **vertexStride** is the stride in bytes between each vertex.
- **vertexFormat** is a [VkFormat](#) describing the format of each vertex element.
- **indexData** is the buffer containing index data for this geometry.
- **indexOffset** is the offset in bytes within **indexData** containing index data for this geometry.
- **indexCount** is the number of indices to include in this geometry.
- **indexType** is a [VkIndexType](#) describing the format of each index.
- **transformData** is an optional buffer containing an [VkTransformMatrixNV](#) structure defining a transformation to be applied to this geometry.
- **transformOffset** is the offset in bytes in **transformData** of the transform information described above.

If **indexType** is `VK_INDEX_TYPE_NONE_NV`, then this structure describes a set of triangles determined by **vertexCount**. Otherwise, this structure describes a set of indexed triangles determined by **indexCount**.

Valid Usage

- VUID-VkGeometryTrianglesNV-vertexOffset-02428
vertexOffset **must** be less than the size of **vertexData**
- VUID-VkGeometryTrianglesNV-vertexOffset-02429
vertexOffset **must** be a multiple of the component size of **vertexFormat**

- VUID-VkGeometryTrianglesNV-vertexFormat-02430
`vertexFormat` **must** be one of `VK_FORMAT_R32G32B32_SFLOAT`, `VK_FORMAT_R32G32_SFLOAT`, `VK_FORMAT_R16G16B16_SFLOAT`, `VK_FORMAT_R16G16_SFLOAT`, `VK_FORMAT_R16G16_SNORM`, or `VK_FORMAT_R16G16B16_SNORM`
- VUID-VkGeometryTrianglesNV-vertexStride-03818
`vertexStride` **must** be less than or equal to $2^{32}-1$
- VUID-VkGeometryTrianglesNV-indexOffset-02431
`indexOffset` **must** be less than the size of `indexData`
- VUID-VkGeometryTrianglesNV-indexOffset-02432
`indexOffset` **must** be a multiple of the element size of `indexType`
- VUID-VkGeometryTrianglesNV-indexType-02433
`indexType` **must** be `VK_INDEX_TYPE_UINT16`, `VK_INDEX_TYPE_UINT32`, or `VK_INDEX_TYPE_NONE_NV`
- VUID-VkGeometryTrianglesNV-indexData-02434
`indexData` **must** be `VK_NULL_HANDLE` if `indexType` is `VK_INDEX_TYPE_NONE_NV`
- VUID-VkGeometryTrianglesNV-indexData-02435
`indexData` **must** be a valid `VkBuffer` handle if `indexType` is not `VK_INDEX_TYPE_NONE_NV`
- VUID-VkGeometryTrianglesNV-indexCount-02436
`indexCount` **must** be 0 if `indexType` is `VK_INDEX_TYPE_NONE_NV`
- VUID-VkGeometryTrianglesNV-transformOffset-02437
`transformOffset` **must** be less than the size of `transformData`
- VUID-VkGeometryTrianglesNV-transformOffset-02438
`transformOffset` **must** be a multiple of 16

Valid Usage (Implicit)

- VUID-VkGeometryTrianglesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_GEOMETRY_TRIANGLES_NV`
- VUID-VkGeometryTrianglesNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkGeometryTrianglesNV-vertexData-parameter
If `vertexData` is not `VK_NULL_HANDLE`, `vertexData` **must** be a valid `VkBuffer` handle
- VUID-VkGeometryTrianglesNV-vertexFormat-parameter
`vertexFormat` **must** be a valid `VkFormat` value
- VUID-VkGeometryTrianglesNV-indexData-parameter
If `indexData` is not `VK_NULL_HANDLE`, `indexData` **must** be a valid `VkBuffer` handle
- VUID-VkGeometryTrianglesNV-indexType-parameter
`indexType` **must** be a valid `VkIndexType` value
- VUID-VkGeometryTrianglesNV-transformData-parameter
If `transformData` is not `VK_NULL_HANDLE`, `transformData` **must** be a valid `VkBuffer` handle
- VUID-VkGeometryTrianglesNV-commonparent

Each of `indexData`, `transformData`, and `vertexData` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

The `VkGeometryAABBNV` structure specifies axis-aligned bounding box geometry in a bottom-level acceleration structure, and is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryAABBNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            aabbData;
    uint32_t            numAABBs;
    uint32_t            stride;
    VkDeviceSize        offset;
} VkGeometryAABBNV;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `aabbData` is the buffer containing axis-aligned bounding box data.
- `numAABBs` is the number of AABBs in this geometry.
- `stride` is the stride in bytes between AABBs in `aabbData`.
- `offset` is the offset in bytes of the first AABB in `aabbData`.

The AABB data in memory is six 32-bit floats consisting of the minimum x, y, and z values followed by the maximum x, y, and z values.

Valid Usage

- VUID-VkGeometryAABBNV-offset-02439
`offset` **must** be less than the size of `aabbData`
- VUID-VkGeometryAABBNV-offset-02440
`offset` **must** be a multiple of 8
- VUID-VkGeometryAABBNV-stride-02441
`stride` **must** be a multiple of 8

Valid Usage (Implicit)

- VUID-VkGeometryAABBNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_GEOMETRY_AABB_NV`
- VUID-VkGeometryAABBNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkGeometryAABBNV-aabbData-parameter

If `aabbData` is not `VK_NULL_HANDLE`, `aabbData` **must** be a valid `VkBuffer` handle

To destroy an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
void vkDestroyAccelerationStructureKHR(
    VkDevice                device,
    VkAccelerationStructureKHR accelerationStructure,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the acceleration structure.
- `accelerationStructure` is the acceleration structure to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-08934
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02442
All submitted commands that refer to `accelerationStructure` **must** have completed execution
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02443
If `VkAllocationCallbacks` were provided when `accelerationStructure` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02444
If no `VkAllocationCallbacks` were provided when `accelerationStructure` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyAccelerationStructureKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-parameter
If `accelerationStructure` is not `VK_NULL_HANDLE`, `accelerationStructure` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkDestroyAccelerationStructureKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-parent
If `accelerationStructure` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `accelerationStructure` **must** be externally synchronized

To destroy an acceleration structure, call:

```
// Provided by VK_NV_ray_tracing
void vkDestroyAccelerationStructureNV(
    VkDevice                                device,
    VkAccelerationStructureNV               accelerationStructure,
    const VkAllocationCallbacks*           pAllocator);
```

- `device` is the logical device that destroys the buffer.
- `accelerationStructure` is the acceleration structure to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-03752
All submitted commands that refer to `accelerationStructure` **must** have completed execution
- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-03753
If `VkAllocationCallbacks` were provided when `accelerationStructure` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-03754
If no `VkAllocationCallbacks` were provided when `accelerationStructure` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyAccelerationStructureNV-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-parameter
If `accelerationStructure` is not `VK_NULL_HANDLE`, `accelerationStructure` **must** be a valid `VkAccelerationStructureNV` handle
- VUID-vkDestroyAccelerationStructureNV-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-parent
If `accelerationStructure` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `accelerationStructure` **must** be externally synchronized

An acceleration structure has memory requirements for the structure object itself, scratch space for the build, and scratch space for the update.

Scratch space is allocated as a `VkBuffer`, so for `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV` and `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV` the `pMemoryRequirements->alignment` and `pMemoryRequirements->memoryTypeBits` values returned by this call **must** be filled with zero, and **should** be ignored by the application.

To query the memory requirements, call:

```
// Provided by VK_NV_ray_tracing
void vkGetAccelerationStructureMemoryRequirementsNV(
    VkDevice device,
    const VkAccelerationStructureMemoryRequirementsInfoNV* pInfo,
    VkMemoryRequirements2KHR* pMemoryRequirements);
```

- `device` is the logical device on which the acceleration structure was created.
- `pInfo` is a pointer to a `VkAccelerationStructureMemoryRequirementsInfoNV` structure specifying the acceleration structure to get memory requirements for.
- `pMemoryRequirements` is a pointer to a `VkMemoryRequirements2KHR` structure in which the requested acceleration structure memory requirements are returned.

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureMemoryRequirementsNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetAccelerationStructureMemoryRequirementsNV-pInfo-parameter `pInfo` **must** be a valid pointer to a valid `VkAccelerationStructureMemoryRequirementsInfoNV` structure
- VUID-vkGetAccelerationStructureMemoryRequirementsNV-pMemoryRequirements-parameter `pMemoryRequirements` **must** be a valid pointer to a `VkMemoryRequirements2KHR` structure

The `VkAccelerationStructureMemoryRequirementsInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkAccelerationStructureMemoryRequirementsInfoNV {
    VkStructureType                sType;
    const void*                    pNext;
    VkAccelerationStructureMemoryRequirementsTypeNV type;
    VkAccelerationStructureNV      accelerationStructure;
} VkAccelerationStructureMemoryRequirementsInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **type** selects the type of memory requirement being queried. [VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV](#) returns the memory requirements for the object itself. [VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV](#) returns the memory requirements for the scratch memory when doing a build. [VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV](#) returns the memory requirements for the scratch memory when doing an update.
- **accelerationStructure** is the acceleration structure to be queried for memory requirements.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMemoryRequirementsInfoNV-sType-sType
sType must be [VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_INFO_NV](#)
- VUID-VkAccelerationStructureMemoryRequirementsInfoNV-pNext-pNext
pNext must be **NULL**
- VUID-VkAccelerationStructureMemoryRequirementsInfoNV-type-parameter
type must be a valid [VkAccelerationStructureMemoryRequirementsTypeNV](#) value
- VUID-VkAccelerationStructureMemoryRequirementsInfoNV-accelerationStructure-parameter
accelerationStructure must be a valid [VkAccelerationStructureNV](#) handle

Possible values of **type** in [VkAccelerationStructureMemoryRequirementsInfoNV](#) are;

```
// Provided by VK_NV_ray_tracing
typedef enum VkAccelerationStructureMemoryRequirementsTypeNV {
    VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV = 0,
    VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV = 1,
    VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV = 2,
} VkAccelerationStructureMemoryRequirementsTypeNV;
```

- [VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV](#) requests the memory requirement for the [VkAccelerationStructureNV](#) backing store.
- [VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV](#) requests the memory

requirement for scratch space during the initial build.

- `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV` requests the memory requirement for scratch space during an update.

Possible values of `buildType` in `vkGetAccelerationStructureBuildSizesKHR` are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureBuildTypeKHR {
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR = 0,
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR = 1,
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR = 2,
} VkAccelerationStructureBuildTypeKHR;
```

- `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR` requests the memory requirement for operations performed by the host.
- `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR` requests the memory requirement for operations performed by the device.
- `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR` requests the memory requirement for operations performed by either the host, or the device.

To attach memory to one or more acceleration structures at a time, call:

```
// Provided by VK_NV_ray_tracing
VkResult vkBindAccelerationStructureMemoryNV(
    VkDevice device,
    uint32_t bindInfoCount,
    const VkBindAccelerationStructureMemoryInfoNV* pBindInfos);
```

- `device` is the logical device that owns the acceleration structures and memory.
- `bindInfoCount` is the number of elements in `pBindInfos`.
- `pBindInfos` is a pointer to an array of `VkBindAccelerationStructureMemoryInfoNV` structures describing acceleration structures and memory to bind.

Valid Usage (Implicit)

- VUID-vkBindAccelerationStructureMemoryNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkBindAccelerationStructureMemoryNV-pBindInfos-parameter `pBindInfos` **must** be a valid pointer to an array of `bindInfoCount` valid `VkBindAccelerationStructureMemoryInfoNV` structures
- VUID-vkBindAccelerationStructureMemoryNV-bindInfoCount-arraylength `bindInfoCount` **must** be greater than 0

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkBindAccelerationStructureMemoryInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkBindAccelerationStructureMemoryInfoNV {
    VkStructureType           sType;
    const void*               pNext;
    VkAccelerationStructureNV accelerationStructure;
    VkDeviceMemory            memory;
    VkDeviceSize              memoryOffset;
    uint32_t                  deviceIndexCount;
    const uint32_t*           pDeviceIndices;
} VkBindAccelerationStructureMemoryInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructure` is the acceleration structure to be attached to memory.
- `memory` is a `VkDeviceMemory` object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of memory that is to be bound to the acceleration structure. The number of bytes returned in the `VkMemoryRequirements::size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified acceleration structure.
- `deviceIndexCount` is the number of elements in `pDeviceIndices`.
- `pDeviceIndices` is a pointer to an array of device indices.

Valid Usage

- VUID-VkBindAccelerationStructureMemoryInfoNV-accelerationStructure-03620 `accelerationStructure` **must** not already be backed by a memory object
- VUID-VkBindAccelerationStructureMemoryInfoNV-memoryOffset-03621 `memoryOffset` **must** be less than the size of `memory`
- VUID-VkBindAccelerationStructureMemoryInfoNV-memory-03622 `memory` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetAccelerationStructureMemoryRequirementsNV` with `accelerationStructure` and `type` of `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV`

- VUID-VkBindAccelerationStructureMemoryInfoNV-memoryOffset-03623
`memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetAccelerationStructureMemoryRequirementsNV` with `accelerationStructure` and `type` of `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV`
- VUID-VkBindAccelerationStructureMemoryInfoNV-size-03624
The `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetAccelerationStructureMemoryRequirementsNV` with `accelerationStructure` and `type` of `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV` **must** be less than or equal to the size of `memory` minus `memoryOffset`

Valid Usage (Implicit)

- VUID-VkBindAccelerationStructureMemoryInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_ACCELERATION_STRUCTURE_MEMORY_INFO_NV`
- VUID-VkBindAccelerationStructureMemoryInfoNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkBindAccelerationStructureMemoryInfoNV-accelerationStructure-parameter
`accelerationStructure` **must** be a valid `VkAccelerationStructureNV` handle
- VUID-VkBindAccelerationStructureMemoryInfoNV-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle
- VUID-VkBindAccelerationStructureMemoryInfoNV-pDeviceIndices-parameter
If `deviceIndexCount` is not 0, `pDeviceIndices` **must** be a valid pointer to an array of `deviceIndexCount` `uint32_t` values
- VUID-VkBindAccelerationStructureMemoryInfoNV-commonparent
Both of `accelerationStructure`, and `memory` **must** have been created, allocated, or retrieved from the same `VkDevice`

To allow constructing geometry instances with device code if desired, we need to be able to query an opaque handle for an acceleration structure. This handle is a value of 8 bytes. To get this handle, call:

```
// Provided by VK_NV_ray_tracing
VkResult vkGetAccelerationStructureHandleNV(
    VkDevice                device,
    VkAccelerationStructureNV accelerationStructure,
    size_t                  dataSize,
    void*                    pData);
```

- `device` is the logical device that owns the acceleration structures.
- `accelerationStructure` is the acceleration structure.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.

- `pData` is a pointer to an application-allocated buffer where the results will be written.

Valid Usage

- VUID-vkGetAccelerationStructureHandleNV-dataSize-02240
`dataSize` **must** be large enough to contain the result of the query, as described above
- VUID-vkGetAccelerationStructureHandleNV-accelerationStructure-02787
`accelerationStructure` **must** be bound completely and contiguously to a single `VkDeviceMemory` object via `vkBindAccelerationStructureMemoryNV`

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureHandleNV-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetAccelerationStructureHandleNV-accelerationStructure-parameter
`accelerationStructure` **must** be a valid `VkAccelerationStructureNV` handle
- VUID-vkGetAccelerationStructureHandleNV-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkGetAccelerationStructureHandleNV-dataSize-arraylength
`dataSize` **must** be greater than 0
- VUID-vkGetAccelerationStructureHandleNV-accelerationStructure-parent
`accelerationStructure` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

To query the 64-bit device address for an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
VkDeviceAddress vkGetAccelerationStructureDeviceAddressKHR(
    VkDevice device,
    const VkAccelerationStructureDeviceAddressInfoKHR* pInfo);
```

- `device` is the logical device that the acceleration structure was created on.
- `pInfo` is a pointer to a `VkAccelerationStructureDeviceAddressInfoKHR` structure specifying the

acceleration structure to retrieve an address for.

The 64-bit return value is an address of the acceleration structure, which can be used for device and shader operations that involve acceleration structures, such as ray traversal and acceleration structure building.

If the acceleration structure was created with a non-zero value of `VkAccelerationStructureCreateInfoKHR::deviceAddress`, the return value will be the same address.

If the acceleration structure was created with a `type` of `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`, the returned address **must** be consistent with the relative offset to other acceleration structures with `type VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR` allocated with the same `VkBuffer`. That is, the difference in returned addresses between the two **must** be the same as the difference in offsets provided at acceleration structure creation.

The returned address **must** be aligned to 256 bytes.

NOTE

The acceleration structure device address **may** be different from the buffer device address corresponding to the acceleration structure's start offset in its storage buffer for acceleration structure types other than `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`.

Valid Usage

- VUID-vkGetAccelerationStructureDeviceAddressKHR-accelerationStructure-08935
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkGetAccelerationStructureDeviceAddressKHR-device-03504
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-09541
If the buffer on which `pInfo->accelerationStructure` was placed is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-09542
The buffer on which `pInfo->accelerationStructure` was placed **must** have been created with the `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` usage flag

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureDeviceAddressKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkAccelerationStructureDeviceAddressInfoKHR` structure

The `VkAccelerationStructureDeviceAddressInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureDeviceAddressInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkAccelerationStructureKHR accelerationStructure;
} VkAccelerationStructureDeviceAddressInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructure` specifies the acceleration structure whose address is being queried.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureDeviceAddressInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_DEVICE_ADDRESS_INFO_KHR`
- VUID-VkAccelerationStructureDeviceAddressInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkAccelerationStructureDeviceAddressInfoKHR-accelerationStructure-parameter
`accelerationStructure` **must** be a valid `VkAccelerationStructureKHR` handle

12.7. Micromaps

Micromaps are opaque data structures that are built by the implementation to encode sub-triangle data to be included in an acceleration structure.

Micromaps are represented by `VkMicromapEXT` handles:

```
// Provided by VK_EXT_opacity_micromap
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkMicromapEXT)
```

To create a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCreateMicromapEXT(
    VkDevice                                device,
    const VkMicromapCreateInfoEXT*          pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkMicromapEXT*                          pMicromap);
```

- `device` is the logical device that creates the acceleration structure object.
- `pCreateInfo` is a pointer to a `VkMicromapCreateInfoEXT` structure containing parameters

affecting creation of the micromap.

- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pMicromap` is a pointer to a `VkMicromapEXT` handle in which the resulting micromap object is returned.

Similar to other objects in Vulkan, the micromap creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into a micromap is determined by the parameters of `VkMicromapCreateInfoEXT`.

The micromap data is stored in the object referred to by `VkMicromapCreateInfoEXT::buffer`. Once memory has been bound to that buffer, it **must** be populated by micromap build or micromap copy commands such as `vkCmdBuildMicromapsEXT`, `vkBuildMicromapsEXT`, `vkCmdCopyMicromapEXT`, and `vkCopyMicromapEXT`.

NOTE

The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the micromap data using micromap copy commands. During capture the tool will use `vkCopyMicromapToMemoryEXT` or `vkCmdCopyMicromapToMemoryEXT` with a `mode` of `VK_COPY_MICROMAP_MODE_SERIALIZE_EXT`, and `vkCopyMemoryToMicromapEXT` or `vkCmdCopyMemoryToMicromapEXT` with a `mode` of `VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT` during replay.

The input buffers passed to micromap build commands will be referenced by the implementation for the duration of the command. Micromaps **must** be fully self-contained. The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of a subsequent acceleration structure build using the micromap or traversal of that acceleration structure.

Valid Usage

- VUID-vkCreateMicromapEXT-micromap-07430
The `micromap` feature **must** be enabled
- VUID-vkCreateMicromapEXT-deviceAddress-07431
If `VkMicromapCreateInfoEXT::deviceAddress` is not zero, the `micromapCaptureReplay` feature **must** be enabled
- VUID-vkCreateMicromapEXT-device-07432
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateMicromapEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateMicromapEXT-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkMicromapCreateInfoEXT` structure

- VUID-vkCreateMicromapEXT-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateMicromapEXT-pMicromap-parameter
`pMicromap` **must** be a valid pointer to a `VkMicromapEXT` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`

The `VkMicromapCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapCreateInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkMicromapCreateFlagsEXT createFlags;
    VkBuffer              buffer;
    VkDeviceSize          offset;
    VkDeviceSize          size;
    VkMicromapTypeEXT     type;
    VkDeviceAddress        deviceAddress;
} VkMicromapCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `createFlags` is a bitmask of `VkMicromapCreateFlagBitsEXT` specifying additional creation parameters of the micromap.
- `buffer` is the buffer on which the micromap will be stored.
- `offset` is an offset in bytes from the base address of the buffer at which the micromap will be stored, and **must** be a multiple of `256`.
- `size` is the size required for the micromap.
- `type` is a `VkMicromapTypeEXT` value specifying the type of micromap that will be created.
- `deviceAddress` is the device address requested for the micromap if the `micromapCaptureReplay` feature is being used.

If `deviceAddress` is zero, no specific address is requested.

If `deviceAddress` is not zero, `deviceAddress` **must** be an address retrieved from an identically created micromap on the same implementation. The micromap **must** also be placed on an identically created `buffer` and at the same `offset`.

Applications **should** avoid creating micromaps with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR` errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` flag to all buffers that use `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT`, and will add `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` to all buffers used as storage for a micromap where `deviceAddress` is not zero. This also means that the tool will need to add `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` to memory allocations to allow the flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Apps/tools should avoid mixing app-provided and implementation-provided addresses for buffers created with `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, to avoid address space allocation conflicts.

If the micromap will be the target of a build operation, the required size for a micromap **can** be queried with `vkGetMicromapBuildSizesEXT`.

Valid Usage

- VUID-VkMicromapCreateInfoEXT-deviceAddress-07433
If `deviceAddress` is not zero, `createFlags` **must** include `VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT`
- VUID-VkMicromapCreateInfoEXT-createFlags-07434
If `createFlags` includes `VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT`, `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapCaptureReplay` **must** be `VK_TRUE`
- VUID-VkMicromapCreateInfoEXT-buffer-07435
`buffer` **must** have been created with a `usage` value containing `VK_BUFFER_USAGE_MICROMAP_STORAGE_BIT_EXT`
- VUID-VkMicromapCreateInfoEXT-buffer-07436
`buffer` **must** not have been created with `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkMicromapCreateInfoEXT-offset-07437
The sum of `offset` and `size` **must** be less than the size of `buffer`
- VUID-VkMicromapCreateInfoEXT-offset-07438
`offset` **must** be a multiple of 256 bytes

Valid Usage (Implicit)

- VUID-VkMicromapCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MICROMAP_CREATE_INFO_EXT`
- VUID-VkMicromapCreateInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMicromapCreateInfoEXT-createFlags-parameter
`createFlags` **must** be a valid combination of `VkMicromapCreateFlagBitsEXT` values
- VUID-VkMicromapCreateInfoEXT-buffer-parameter
`buffer` **must** be a valid `VkBuffer` handle
- VUID-VkMicromapCreateInfoEXT-type-parameter
`type` **must** be a valid `VkMicromapTypeEXT` value

To get the build sizes for a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
void vkGetMicromapBuildSizesEXT(
    VkDevice                                device,
    VkAccelerationStructureBuildTypeKHR     buildType,
    const VkMicromapBuildInfoEXT*           pBuildInfo,
    VkMicromapBuildSizesInfoEXT*            pSizeInfo);
```

- `device` is the logical device that will be used for creating the micromap.
- `buildType` defines whether host or device operations (or both) are being queried for.
- `pBuildInfo` is a pointer to a `VkMicromapBuildInfoEXT` structure describing parameters of a build operation.
- `pSizeInfo` is a pointer to a `VkMicromapBuildSizesInfoEXT` structure which returns the size required for a micromap and the sizes required for the scratch buffers, given the build parameters.

The `dstMicromap` and `mode` members of `pBuildInfo` are ignored. Any `VkDeviceOrHostAddressKHR` members of `pBuildInfo` are ignored by this command.

A micromap created with the `micromapSize` returned by this command supports any build with a `VkMicromapBuildInfoEXT` structure subject to the following properties:

- The build command is a host build command, and `buildType` is `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR` or `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR`
- The build command is a device build command, and `buildType` is `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR` or `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR`
- For `VkMicromapBuildInfoEXT`:

- Its `type`, and `flags` members are equal to `pBuildInfo->type` and `pBuildInfo->flags`, respectively.
- The sum of usage information in either `pUsageCounts` or `ppUsageCounts` is equal to the sum of usage information in either `pBuildInfo->pUsageCounts` or `pBuildInfo->ppUsageCounts`.

Similarly, the `buildScratchSize` value will support any build command specifying the `VK_BUILD_MICROMAP_MODE_BUILD_EXT` mode under the above conditions.

Valid Usage

- VUID-vkGetMicromapBuildSizesEXT-dstMicromap-09180
`VkMicromapBuildInfoEXT::dstMicromap` **must** have been created from `device`
- VUID-vkGetMicromapBuildSizesEXT-micromap-07439
The `micromap` feature **must** be enabled
- VUID-vkGetMicromapBuildSizesEXT-device-07440
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetMicromapBuildSizesEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetMicromapBuildSizesEXT-buildType-parameter
`buildType` **must** be a valid `VkAccelerationStructureBuildTypeKHR` value
- VUID-vkGetMicromapBuildSizesEXT-pBuildInfo-parameter
`pBuildInfo` **must** be a valid pointer to a valid `VkMicromapBuildInfoEXT` structure
- VUID-vkGetMicromapBuildSizesEXT-pSizeInfo-parameter
`pSizeInfo` **must** be a valid pointer to a `VkMicromapBuildSizesInfoEXT` structure

The `VkMicromapBuildSizesInfoEXT` structure describes the required build sizes for a micromap and scratch buffers and is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapBuildSizesInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize        micromapSize;
    VkDeviceSize        buildScratchSize;
    VkBool32            discardable;
} VkMicromapBuildSizesInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `micromapSize` is the size in bytes required in a `VkMicromapEXT` for a build or update operation.
- `buildScratchSize` is the size in bytes required in a scratch buffer for a build operation.
- `discardable` indicates whether or not the micromap object may be destroyed after an acceleration structure build or update. A false value means that acceleration structures built with this micromap **may** contain references to the data contained therein, and the application **must** not destroy the micromap until ray traversal has concluded. A true value means that the information in the micromap will be copied by value into the acceleration structure, and the micromap **may** be destroyed after the acceleration structure build concludes.

Valid Usage (Implicit)

- VUID-VkMicromapBuildSizesInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MICROMAP_BUILD_SIZES_INFO_EXT`
- VUID-VkMicromapBuildSizesInfoEXT-pNext-pNext
`pNext` **must** be `NULL`

Values which **can** be set in `VkMicromapCreateInfoEXT::type` specifying the type of micromap, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkMicromapTypeEXT {
    VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT = 0,
#ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_NV_displacement_micromap
    VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV = 1000397000,
#endif
} VkMicromapTypeEXT;
```

- `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` is a micromap containing data to control the opacity of a triangle.
- `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` is a micromap containing data to control the displacement of subtriangles within a triangle.

Bits which **can** be set in `VkMicromapCreateInfoEXT::createFlags`, specifying additional creation parameters for micromaps, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkMicromapCreateFlagBitsEXT {
    VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT = 0x00000001,
} VkMicromapCreateFlagBitsEXT;
```

- `VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT` specifies that the micromap's address **can** be saved and reused on a subsequent run.

```
// Provided by VK_EXT_opacity_micromap
typedef VkFlags VkMicromapCreateFlagsEXT;
```

`VkMicromapCreateFlagsEXT` is a bitmask type for setting a mask of zero or more `VkMicromapCreateFlagBitsEXT`.

Bits which **can** be set in `VkMicromapBuildInfoEXT::flags` specifying additional parameters for micromap builds, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkBuildMicromapFlagBitsEXT {
    VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT = 0x00000001,
    VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT = 0x00000002,
    VK_BUILD_MICROMAP_ALLOW_COMPACTON_BIT_EXT = 0x00000004,
} VkBuildMicromapFlagBitsEXT;
```

- `VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT` indicates that the given micromap build **should** prioritize trace performance over build time.
- `VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT` indicates that the given micromap build **should** prioritize build time over trace performance.

```
// Provided by VK_EXT_opacity_micromap
typedef VkFlags VkBuildMicromapFlagsEXT;
```

`VkBuildMicromapFlagsEXT` is a bitmask type for setting a mask of zero or more `VkBuildMicromapFlagBitsEXT`.

To destroy a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
void vkDestroyMicromapEXT(
    VkDevice          device,
    VkMicromapEXT     micromap,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the micromap.
- `micromap` is the micromap to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyMicromapEXT-micromap-07441
All submitted commands that refer to `micromap` **must** have completed execution

- VUID-vkDestroyMicromapEXT-micromap-07442
If `VkAllocationCallbacks` were provided when `micromap` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyMicromapEXT-micromap-07443
If no `VkAllocationCallbacks` were provided when `micromap` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyMicromapEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyMicromapEXT-micromap-parameter
If `micromap` is not `VK_NULL_HANDLE`, `micromap` **must** be a valid `VkMicromapEXT` handle
- VUID-vkDestroyMicromapEXT-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyMicromapEXT-micromap-parent
If `micromap` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `micromap` **must** be externally synchronized

12.8. Resource Memory Association

Resources are initially created as *virtual allocations* with no backing memory. Device memory is allocated separately (see [Device Memory](#)) and then associated with the resource. This association is done differently for sparse and non-sparse resources.

Resources created with any of the sparse creation flags are considered sparse resources. Resources created without these flags are non-sparse. The details on resource memory association for sparse resources is described in [Sparse Resources](#).

Non-sparse resources **must** be bound completely and contiguously to a single `VkDeviceMemory` object before the resource is passed as a parameter to any of the following operations:

- creating image or buffer views
- updating descriptor sets
- recording commands in a command buffer

Once bound, the memory binding is immutable for the lifetime of the resource.

In a logical device representing more than one physical device, buffer and image resources exist on

all physical devices but **can** be bound to memory differently on each. Each such replicated resource is an *instance* of the resource. For sparse resources, each instance **can** be bound to memory arbitrarily differently. For non-sparse resources, each instance **can** either be bound to the local or a peer instance of the memory, or for images **can** be bound to rectangular regions from the local and/or peer instances. When a resource is used in a descriptor set, each physical device interprets the descriptor according to its own instance's binding to memory.

NOTE

There are no new copy commands to transfer data between physical devices. Instead, an application **can** create a resource with a peer mapping and use it as the source or destination of a transfer command executed by a single physical device to copy the data from one physical device to another.

To determine the memory requirements for a buffer resource, call:

```
// Provided by VK_VERSION_1_0
void vkGetBufferMemoryRequirements(
    VkDevice          device,
    VkBuffer          buffer,
    VkMemoryRequirements* pMemoryRequirements);
```

- **device** is the logical device that owns the buffer.
- **buffer** is the buffer to query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements](#) structure in which the memory requirements of the buffer object are returned.

Valid Usage (Implicit)

- VUID-vkGetBufferMemoryRequirements-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetBufferMemoryRequirements-buffer-parameter **buffer** **must** be a valid [VkBuffer](#) handle
- VUID-vkGetBufferMemoryRequirements-pMemoryRequirements-parameter **pMemoryRequirements** **must** be a valid pointer to a [VkMemoryRequirements](#) structure
- VUID-vkGetBufferMemoryRequirements-buffer-parent **buffer** **must** have been created, allocated, or retrieved from **device**

To determine the memory requirements for an image resource which is not created with the [VK_IMAGE_CREATE_DISJOINT_BIT](#) flag set, call:

```
// Provided by VK_VERSION_1_0
void vkGetImageMemoryRequirements(
    VkDevice          device,
    VkImage           image,
    VkMemoryRequirements* pMemoryRequirements);
```

- **device** is the logical device that owns the image.
- **image** is the image to query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements](#) structure in which the memory requirements of the image object are returned.

Valid Usage

- VUID-vkGetImageMemoryRequirements-image-01588
image must not have been created with the [VK_IMAGE_CREATE_DISJOINT_BIT](#) flag set
- VUID-vkGetImageMemoryRequirements-image-04004
If **image** was created with the [VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID](#) external memory handle type, then **image must** be bound to memory
- VUID-vkGetImageMemoryRequirements-image-08960
If **image** was created with the [VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX](#) external memory handle type, then **image must** be bound to memory

Valid Usage (Implicit)

- VUID-vkGetImageMemoryRequirements-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkGetImageMemoryRequirements-image-parameter
image must be a valid [VkImage](#) handle
- VUID-vkGetImageMemoryRequirements-pMemoryRequirements-parameter
pMemoryRequirements must be a valid pointer to a [VkMemoryRequirements](#) structure
- VUID-vkGetImageMemoryRequirements-image-parent
image must have been created, allocated, or retrieved from **device**

The [VkMemoryRequirements](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryRequirements {
    VkDeviceSize    size;
    VkDeviceSize    alignment;
    uint32_t        memoryTypeBits;
} VkMemoryRequirements;
```

- **size** is the size, in bytes, of the memory allocation **required** for the resource.
- **alignment** is the alignment, in bytes, of the offset within the allocation **required** for the resource.
- **memoryTypeBits** is a bitmask and contains one bit set for every supported memory type for the resource. Bit **i** is set if and only if the memory type **i** in the **VkPhysicalDeviceMemoryProperties** structure for the physical device is supported for the resource.

The precise size of images that will be bound to external Android hardware buffer memory is unknown until the memory has been imported or allocated, so applications **must** not call **vkGetImageMemoryRequirements** or **vkGetImageMemoryRequirements2** with such a **VkImage** before it has been bound to memory. For this reason, applications also **must** not call **vkGetDeviceImageMemoryRequirements** with a **VkImageCreateInfo** describing an external Android hardware buffer. When importing Android hardware buffer memory, the **allocationSize** **can** be determined by calling **vkGetAndroidHardwareBufferPropertiesANDROID**. When allocating new memory for a **VkImage** that **can** be exported to an Android hardware buffer, the memory's **allocationSize** **must** be zero; the actual size will be determined by the dedicated image's parameters. After the memory has been allocated, the amount of space allocated from the memory's heap **can** be obtained by getting the image's memory requirements or by calling **vkGetAndroidHardwareBufferPropertiesANDROID** with the Android hardware buffer exported from the memory.

When allocating new memory for a **VkBuffer** that **can** be exported to an Android hardware buffer an application **may** still call **vkGetBufferMemoryRequirements** or **vkGetBufferMemoryRequirements2** with **VkBuffer** before it has been bound to memory.

If the resource being queried was created with the **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT**, or **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT** external memory handle type, the value of **size** has no meaning and **should** be ignored.

The implementation guarantees certain properties about the memory requirements returned by **vkGetBufferMemoryRequirements2**, **vkGetImageMemoryRequirements2**, **vkGetDeviceBufferMemoryRequirements**, **vkGetDeviceImageMemoryRequirements**, **vkGetBufferMemoryRequirements** and **vkGetImageMemoryRequirements**:

- The **memoryTypeBits** member always contains at least one bit set.
- If **buffer** is a **VkBuffer** not created with the **VK_BUFFER_CREATE_SPARSE_BINDING_BIT** or **VK_BUFFER_CREATE_PROTECTED_BIT** bits set, or if **image** is a **linear** image that was not created with the **VK_IMAGE_CREATE_PROTECTED_BIT** bit set, then the **memoryTypeBits** member always contains at

least one bit set corresponding to a `VkMemoryType` with a `propertyFlags` that has both the `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT` bit and the `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` bit set. In other words, mappable coherent memory **can** always be attached to these objects.

- If `buffer` was created with `VkExternalMemoryBufferCreateInfo::handleTypes` set to 0 or `image` was created with `VkExternalMemoryImageCreateInfo::handleTypes` set to 0, the `memoryTypeBits` member always contains at least one bit set corresponding to a `VkMemoryType` with a `propertyFlags` that has the `VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT` bit set.
- The `memoryTypeBits` member is identical for all `VkBuffer` objects created with the same value for the `flags` and `usage` members in the `VkBufferCreateInfo` structure and the `handleTypes` member of the `VkExternalMemoryBufferCreateInfo` structure passed to `vkCreateBuffer`. Further, if `usage1` and `usage2` of type `VkBufferUsageFlags` are such that the bits set in `usage2` are a subset of the bits set in `usage1`, and they have the same `flags` and `VkExternalMemoryBufferCreateInfo::handleTypes`, then the bits set in `memoryTypeBits` returned for `usage1` **must** be a subset of the bits set in `memoryTypeBits` returned for `usage2`, for all values of `flags`.
- The `alignment` member is a power of two.
- The `alignment` member is identical for all `VkBuffer` objects created with the same combination of values for the `usage` and `flags` members in the `VkBufferCreateInfo` structure passed to `vkCreateBuffer`.
- If the `maintenance4` feature is enabled, then the `alignment` member is identical for all `VkImage` objects created with the same combination of values for the `flags`, `imageType`, `format`, `extent`, `mipLevels`, `arrayLayers`, `samples`, `tiling` and `usage` members in the `VkImageCreateInfo` structure passed to `vkCreateImage`.
- The `alignment` member satisfies the buffer descriptor offset alignment requirements associated with the `VkBuffer`'s `usage`:
 - If `usage` included `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT` or `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT`, `alignment` **must** be an integer multiple of `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`.
 - If `usage` included `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT`, `alignment` **must** be an integer multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`.
 - If `usage` included `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `alignment` **must** be an integer multiple of `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`.
- For images created with a color format, the `memoryTypeBits` member is identical for all `VkImage` objects created with the same combination of values for the `tiling` member, the `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` bit and `VK_IMAGE_CREATE_PROTECTED_BIT` bit of the `flags` member, the `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` bit of the `flags` member, the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` bit of the `usage` member if the `VkPhysicalDeviceHostImageCopyPropertiesEXT::identicalMemoryTypeRequirements` property is `VK_FALSE`, `handleTypes` member of `VkExternalMemoryImageCreateInfo`, and the `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` of the `usage` member in the `VkImageCreateInfo` structure passed to `vkCreateImage`.
- For images created with a depth/stencil format, the `memoryTypeBits` member is identical for all `VkImage` objects created with the same combination of values for the `format` member, the `tiling` member, the `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` bit and `VK_IMAGE_CREATE_PROTECTED_BIT` bit of

the `flags` member, the `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` bit of the `flags` member, the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` bit of the `usage` member if the `VkPhysicalDeviceHostImageCopyPropertiesEXT::identicalMemoryTypeRequirements` property is `VK_FALSE`, `handleTypes` member of `VkExternalMemoryImageCreateInfo`, and the `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` of the `usage` member in the `VkImageCreateInfo` structure passed to `vkCreateImage`.

- If the memory requirements are for a `VkImage`, the `memoryTypeBits` member **must** not refer to a `VkMemoryType` with a `propertyFlags` that has the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set if the `image` did not have `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` bit set in the `usage` member of the `VkImageCreateInfo` structure passed to `vkCreateImage`.
- If the memory requirements are for a `VkBuffer`, the `memoryTypeBits` member **must** not refer to a `VkMemoryType` with a `propertyFlags` that has the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set.

NOTE

The implication of this requirement is that lazily allocated memory is disallowed for buffers in all cases.

- The `size` member is identical for all `VkBuffer` objects created with the same combination of creation parameters specified in `VkBufferCreateInfo` and its `pNext` chain.
- The `size` member is identical for all `VkImage` objects created with the same combination of creation parameters specified in `VkImageCreateInfo` and its `pNext` chain.

NOTE

This, however, does not imply that they interpret the contents of the bound memory identically with each other. That additional guarantee, however, **can** be explicitly requested using `VK_IMAGE_CREATE_ALIAS_BIT`.

- If the `maintenance4` feature is enabled, these additional guarantees apply:
 - For a `VkBuffer`, the `size` memory requirement is never greater than that of another `VkBuffer` created with a greater or equal `size` specified in `VkBufferCreateInfo`, all other creation parameters being identical.
 - For a `VkBuffer`, the `size` memory requirement is never greater than the result of aligning `VkBufferCreateInfo::size` with the `alignment` memory requirement.
 - For a `VkImage`, the `size` memory requirement is never greater than that of another `VkImage` created with a greater or equal value in each of `extent.width`, `extent.height`, and `extent.depth`; all other creation parameters being identical.
 - The memory requirements returned by `vkGetDeviceBufferMemoryRequirements` are identical to those that would be returned by `vkGetBufferMemoryRequirements2` if it were called with a `VkBuffer` created with the same `VkBufferCreateInfo` values.
 - The memory requirements returned by `vkGetDeviceImageMemoryRequirements` are identical to those that would be returned by `vkGetImageMemoryRequirements2` if it were called with a `VkImage` created with the same `VkImageCreateInfo` values.

To determine the memory requirements for a buffer resource, call:

```
// Provided by VK_VERSION_1_1
void vkGetBufferMemoryRequirements2(
    VkDevice                device,
    const VkBufferMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

or the equivalent command

```
// Provided by VK_KHR_get_memory_requirements2
void vkGetBufferMemoryRequirements2KHR(
    VkDevice                device,
    const VkBufferMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- **device** is the logical device that owns the buffer.
- **pInfo** is a pointer to a [VkBufferMemoryRequirementsInfo2](#) structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements2](#) structure in which the memory requirements of the buffer object are returned.

Valid Usage (Implicit)

- VUID-vkGetBufferMemoryRequirements2-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetBufferMemoryRequirements2-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkBufferMemoryRequirementsInfo2](#) structure
- VUID-vkGetBufferMemoryRequirements2-pMemoryRequirements-parameter **pMemoryRequirements** **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

To determine the memory requirements for a buffer resource without creating an object, call:

```
// Provided by VK_VERSION_1_3
void vkGetDeviceBufferMemoryRequirements(
    VkDevice                device,
    const VkDeviceBufferMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

or the equivalent command

```
// Provided by VK_KHR_maintenance4
void vkGetDeviceBufferMemoryRequirementsKHR(
    VkDevice device,
    const VkDeviceBufferMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- **device** is the logical device intended to own the buffer.
- **pInfo** is a pointer to a [VkDeviceBufferMemoryRequirements](#) structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements2](#) structure in which the memory requirements of the buffer object are returned.

Valid Usage (Implicit)

- VUID-vkGetDeviceBufferMemoryRequirements-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceBufferMemoryRequirements-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkDeviceBufferMemoryRequirements](#) structure
- VUID-vkGetDeviceBufferMemoryRequirements-pMemoryRequirements-parameter **pMemoryRequirements** **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

The [VkBufferMemoryRequirementsInfo2](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBufferMemoryRequirementsInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkBuffer buffer;
} VkBufferMemoryRequirementsInfo2;
```

or the equivalent

```
// Provided by VK_KHR_get_memory_requirements2
typedef VkBufferMemoryRequirementsInfo2 VkBufferMemoryRequirementsInfo2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **buffer** is the buffer to query.

Valid Usage (Implicit)

- VUID-VkBufferMemoryRequirementsInfo2-sType-sType

sType must be `VK_STRUCTURE_TYPE_BUFFER_MEMORY_REQUIREMENTS_INFO_2`

- `VUID-VkBufferMemoryRequirementsInfo2-pNext-pNext`
pNext must be `NULL`
- `VUID-VkBufferMemoryRequirementsInfo2-buffer-parameter`
buffer must be a valid `VkBuffer` handle

The `VkDeviceBufferMemoryRequirements` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkDeviceBufferMemoryRequirements {
    VkStructureType      sType;
    const void*          pNext;
    const VkBufferCreateInfo* pCreateInfo;
} VkDeviceBufferMemoryRequirements;
```

or the equivalent

```
// Provided by VK_KHR_maintenance4
typedef VkDeviceBufferMemoryRequirements VkDeviceBufferMemoryRequirementsKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **pCreateInfo** is a pointer to a `VkBufferCreateInfo` structure containing parameters affecting creation of the buffer to query.

Valid Usage (Implicit)

- `VUID-VkDeviceBufferMemoryRequirements-sType-sType`
sType must be `VK_STRUCTURE_TYPE_DEVICE_BUFFER_MEMORY_REQUIREMENTS`
- `VUID-VkDeviceBufferMemoryRequirements-pNext-pNext`
pNext must be `NULL`
- `VUID-VkDeviceBufferMemoryRequirements-pCreateInfo-parameter`
pCreateInfo must be a valid pointer to a valid `VkBufferCreateInfo` structure

To determine the memory requirements for an image resource, call:

```
// Provided by VK_VERSION_1_1
void vkGetImageMemoryRequirements2(
    VkDevice          device,
    const VkImageMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

or the equivalent command

```
// Provided by VK_KHR_get_memory_requirements2
void vkGetImageMemoryRequirements2KHR(
    VkDevice device,
    const VkImageMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- **device** is the logical device that owns the image.
- **pInfo** is a pointer to a [VkImageMemoryRequirementsInfo2](#) structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements2](#) structure in which the memory requirements of the image object are returned.

Valid Usage (Implicit)

- VUID-vkGetImageMemoryRequirements2-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetImageMemoryRequirements2-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkImageMemoryRequirementsInfo2](#) structure
- VUID-vkGetImageMemoryRequirements2-pMemoryRequirements-parameter **pMemoryRequirements** **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

To determine the memory requirements for an image resource without creating an object, call:

```
// Provided by VK_VERSION_1_3
void vkGetDeviceImageMemoryRequirements(
    VkDevice device,
    const VkDeviceImageMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

or the equivalent command

```
// Provided by VK_KHR_maintenance4
void vkGetDeviceImageMemoryRequirementsKHR(
    VkDevice device,
    const VkDeviceImageMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- **device** is the logical device intended to own the image.
- **pInfo** is a pointer to a [VkDeviceImageMemoryRequirements](#) structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements2](#) structure in which the memory

requirements of the image object are returned.

Valid Usage (Implicit)

- VUID-vkGetDeviceImageMemoryRequirements-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetDeviceImageMemoryRequirements-pInfo-parameter **pInfo** must be a valid pointer to a valid [VkDeviceImageMemoryRequirements](#) structure
- VUID-vkGetDeviceImageMemoryRequirements-pMemoryRequirements-parameter **pMemoryRequirements** must be a valid pointer to a [VkMemoryRequirements2](#) structure

The [VkImageMemoryRequirementsInfo2](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageMemoryRequirementsInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImage            image;
} VkImageMemoryRequirementsInfo2;
```

or the equivalent

```
// Provided by VK_KHR_get_memory_requirements2
typedef VkImageMemoryRequirementsInfo2 VkImageMemoryRequirementsInfo2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **image** is the image to query.

Valid Usage

- VUID-VkImageMemoryRequirementsInfo2-image-01589
If **image** was created with a *multi-planar* format and the [VK_IMAGE_CREATE_DISJOINT_BIT](#) flag, there **must** be a [VkImagePlaneMemoryRequirementsInfo](#) included in the **pNext** chain of the [VkImageMemoryRequirementsInfo2](#) structure
- VUID-VkImageMemoryRequirementsInfo2-image-02279
If **image** was created with [VK_IMAGE_CREATE_DISJOINT_BIT](#) and with [VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT](#), then there **must** be a [VkImagePlaneMemoryRequirementsInfo](#) included in the **pNext** chain of the [VkImageMemoryRequirementsInfo2](#) structure
- VUID-VkImageMemoryRequirementsInfo2-image-01590
If **image** was not created with the [VK_IMAGE_CREATE_DISJOINT_BIT](#) flag, there **must** not be a [VkImagePlaneMemoryRequirementsInfo](#) included in the **pNext** chain of the

[VkImageMemoryRequirementsInfo2](#) structure

- VUID-VkImageMemoryRequirementsInfo2-image-02280

If **image** was created with a single-plane format and with any **tiling** other than **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**, then there **must** not be a [VkImagePlaneMemoryRequirementsInfo](#) included in the **pNext** chain of the [VkImageMemoryRequirementsInfo2](#) structure

- VUID-VkImageMemoryRequirementsInfo2-image-01897

If **image** was created with the **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID** external memory handle type, then **image** **must** be bound to memory

- VUID-VkImageMemoryRequirementsInfo2-image-08961

If **image** was created with the **VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX** external memory handle type, then **image** **must** be bound to memory

Valid Usage (Implicit)

- VUID-VkImageMemoryRequirementsInfo2-sType-sType

sType **must** be **VK_STRUCTURE_TYPE_IMAGE_MEMORY_REQUIREMENTS_INFO_2**

- VUID-VkImageMemoryRequirementsInfo2-pNext-pNext

pNext **must** be **NULL** or a pointer to a valid instance of [VkImagePlaneMemoryRequirementsInfo](#)

- VUID-VkImageMemoryRequirementsInfo2-sType-unique

The **sType** value of each struct in the **pNext** chain **must** be unique

- VUID-VkImageMemoryRequirementsInfo2-image-parameter

image **must** be a valid [VkImage](#) handle

The [VkDeviceImageMemoryRequirements](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkDeviceImageMemoryRequirements {
    VkStructureType    sType;
    const void*        pNext;
    const VkImageCreateInfo* pCreateInfo;
    VkImageAspectFlagBits planeAspect;
} VkDeviceImageMemoryRequirements;
```

or the equivalent

```
// Provided by VK_KHR_maintenance4
typedef VkDeviceImageMemoryRequirements VkDeviceImageMemoryRequirementsKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pCreateInfo` is a pointer to a `VkImageCreateInfo` structure containing parameters affecting creation of the image to query.
- `planeAspect` is a `VkImageAspectFlagBits` value specifying the aspect corresponding to the image plane to query. This parameter is ignored unless `pCreateInfo->tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, or `pCreateInfo->flags` has `VK_IMAGE_CREATE_DISJOINT_BIT` set.

Valid Usage

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06416
The `pCreateInfo->pNext` chain **must** not contain a `VkImageSwapchainCreateInfoKHR` structure
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06776
The `pCreateInfo->pNext` chain **must** not contain a `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure
- VUID-VkDeviceImageMemoryRequirements-pNext-06996
Applications also **must** not call `vkGetDeviceImageMemoryRequirements` with a `VkImageCreateInfo` whose `pNext` chain includes a `VkExternalFormatANDROID` structure with non-zero `externalFormat`
- VUID-VkDeviceImageMemoryRequirements-pNext-08962
Applications also **must** not call `vkGetDeviceImageMemoryRequirements` with a `VkImageCreateInfo` whose `pNext` chain includes a `VkExternalFormatQNX` structure with non-zero `externalFormat`
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06417
If `pCreateInfo->format` specifies a *multi-planar* format and `pCreateInfo->flags` has `VK_IMAGE_CREATE_DISJOINT_BIT` set then `planeAspect` **must** not be `VK_IMAGE_ASPECT_NONE_KHR`
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06419
If `pCreateInfo->flags` has `VK_IMAGE_CREATE_DISJOINT_BIT` set and if the `pCreateInfo->tiling` is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, then `planeAspect` **must** be a single valid *multi-planar aspect mask* bit
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06420
If `pCreateInfo->tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `planeAspect` **must** be a single valid *memory plane* for the image (that is, `aspectMask` **must** specify a plane index that is less than the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image's `format` and `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier`)

Valid Usage (Implicit)

- VUID-VkDeviceImageMemoryRequirements-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_IMAGE_MEMORY_REQUIREMENTS`
- VUID-VkDeviceImageMemoryRequirements-pNext-pNext

pNext must be NULL

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-parameter
pCreateInfo must be a valid pointer to a valid [VkImageCreateInfo](#) structure
- VUID-VkDeviceImageMemoryRequirements-planeAspect-parameter
If **planeAspect** is not 0, **planeAspect** must be a valid [VkImageAspectFlagBits](#) value

To determine the memory requirements for a plane of a disjoint image, add a [VkImagePlaneMemoryRequirementsInfo](#) structure to the **pNext** chain of the [VkImageMemoryRequirementsInfo2](#) structure.

The [VkImagePlaneMemoryRequirementsInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImagePlaneMemoryRequirementsInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkImageAspectFlagBits planeAspect;
} VkImagePlaneMemoryRequirementsInfo;
```

or the equivalent

```
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkImagePlaneMemoryRequirementsInfo VkImagePlaneMemoryRequirementsInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **planeAspect** is a [VkImageAspectFlagBits](#) value specifying the aspect corresponding to the image plane to query.

Valid Usage

- VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-02281
If the image's **tiling** is [VK_IMAGE_TILING_LINEAR](#) or [VK_IMAGE_TILING_OPTIMAL](#), then **planeAspect** must be a single valid [multi-planar aspect mask](#) bit
- VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-02282
If the image's **tiling** is [VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT](#), then **planeAspect** must be a single valid *memory plane* for the image (that is, **aspectMask** must specify a plane index that is less than the [VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount](#) associated with the image's **format** and [VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier](#))

Valid Usage (Implicit)

- VUID-VkImagePlaneMemoryRequirementsInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_PLANE_MEMORY_REQUIREMENTS_INFO`
- VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-parameter
`planeAspect` **must** be a valid `VkImageAspectFlagBits` value

The `VkMemoryRequirements2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryRequirements2 {
    VkStructureType    sType;
    void*              pNext;
    VkMemoryRequirements memoryRequirements;
} VkMemoryRequirements2;
```

or the equivalent

```
// Provided by VK_KHR_get_memory_requirements2, VK_NV_ray_tracing with
VK_KHR_get_memory_requirements2 or VK_VERSION_1_1
typedef VkMemoryRequirements2 VkMemoryRequirements2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryRequirements` is a `VkMemoryRequirements` structure describing the memory requirements of the resource.

Valid Usage (Implicit)

- VUID-VkMemoryRequirements2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_REQUIREMENTS_2`
- VUID-VkMemoryRequirements2-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkMemoryDedicatedRequirements`
- VUID-VkMemoryRequirements2-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique

The `VkMemoryDedicatedRequirements` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryDedicatedRequirements {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           prefersDedicatedAllocation;
    VkBool32           requiresDedicatedAllocation;
} VkMemoryDedicatedRequirements;
```

or the equivalent

```
// Provided by VK_KHR_dedicated_allocation
typedef VkMemoryDedicatedRequirements VkMemoryDedicatedRequirementsKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `prefersDedicatedAllocation` specifies that the implementation would prefer a dedicated allocation for this resource. The application is still free to suballocate the resource but it **may** get better performance if a dedicated allocation is used.
- `requiresDedicatedAllocation` specifies that a dedicated allocation is required for this resource.

To determine the dedicated allocation requirements of a buffer or image resource, add a `VkMemoryDedicatedRequirements` structure to the `pNext` chain of the `VkMemoryRequirements2` structure passed as the `pMemoryRequirements` parameter of `vkGetBufferMemoryRequirements2` or `vkGetImageMemoryRequirements2`, respectively.

Constraints on the values returned for buffer resources are:

- `requiresDedicatedAllocation` **may** be `VK_TRUE` if the `pNext` chain of `VkBufferCreateInfo` for the call to `vkCreateBuffer` used to create the buffer being queried included a `VkExternalMemoryBufferCreateInfo` structure, and any of the handle types specified in `VkExternalMemoryBufferCreateInfo::handleTypes` requires dedicated allocation, as reported by `vkGetPhysicalDeviceExternalBufferProperties` in `VkExternalBufferProperties::externalMemoryProperties.externalMemoryFeatures`. Otherwise, `requiresDedicatedAllocation` will be `VK_FALSE`.
- When the implementation sets `requiresDedicatedAllocation` to `VK_TRUE`, it **must** also set `prefersDedicatedAllocation` to `VK_TRUE`.
- If `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` was set in `VkBufferCreateInfo::flags` when `buffer` was created, then both `prefersDedicatedAllocation` and `requiresDedicatedAllocation` will be `VK_FALSE`.

Constraints on the values returned for image resources are:

- `requiresDedicatedAllocation` **may** be `VK_TRUE` if the `pNext` chain of `VkImageCreateInfo` for the call to `vkCreateImage` used to create the image being queried included a `VkExternalMemoryImageCreateInfo` structure, and any of the handle types specified in `VkExternalMemoryImageCreateInfo::handleTypes` requires dedicated allocation, as reported by

`vkGetPhysicalDeviceImageFormatProperties2` in `VkExternalImageFormatProperties::externalMemoryProperties.externalMemoryFeatures`.

- `requiresDedicatedAllocation` may be `VK_TRUE` if the image's tiling is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`.
- `requiresDedicatedAllocation` will otherwise be `VK_FALSE`
- If `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` was set in `VkImageCreateInfo::flags` when `image` was created, then both `prefersDedicatedAllocation` and `requiresDedicatedAllocation` will be `VK_FALSE`.

Valid Usage (Implicit)

- VUID-VkMemoryDedicatedRequirements-sType-sType `sType` must be `VK_STRUCTURE_TYPE_MEMORY_DEDICATED_REQUIREMENTS`

To attach memory to a buffer object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkBindBufferMemory(
    VkDevice          device,
    VkBuffer           buffer,
    VkDeviceMemory     memory,
    VkDeviceSize       memoryOffset);
```

- `device` is the logical device that owns the buffer and memory.
- `buffer` is the buffer to be attached to memory.
- `memory` is a `VkDeviceMemory` object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the buffer. The number of bytes returned in the `VkMemoryRequirements::size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified buffer.

`vkBindBufferMemory` is equivalent to passing the same parameters through `VkBindBufferMemoryInfo` to `vkBindBufferMemory2`.

Valid Usage

- VUID-vkBindBufferMemory-buffer-07459
`buffer` must not have been bound to a memory object
- VUID-vkBindBufferMemory-buffer-01030
`buffer` must not have been created with any sparse memory binding flags
- VUID-vkBindBufferMemory-memoryOffset-01031
`memoryOffset` must be less than the size of `memory`
- VUID-vkBindBufferMemory-memory-01035
`memory` must have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to

`vkGetBufferMemoryRequirements` with `buffer`

- VUID-vkBindBufferMemory-memoryOffset-01036

`memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer`

- VUID-vkBindBufferMemory-size-01037

The `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer` **must** be less than or equal to the size of `memory` minus `memoryOffset`

- VUID-vkBindBufferMemory-buffer-01444

If `buffer` requires a dedicated allocation (as reported by `vkGetBufferMemoryRequirements2` in `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` for `buffer`), `memory` **must** have been allocated with `VkMemoryDedicatedAllocateInfo::buffer` equal to `buffer`

- VUID-vkBindBufferMemory-memory-01508

If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, and `VkMemoryDedicatedAllocateInfo::buffer` was not `VK_NULL_HANDLE`, then `buffer` **must** equal `VkMemoryDedicatedAllocateInfo::buffer`, and `memoryOffset` **must** be zero

- VUID-vkBindBufferMemory-None-01898

If `buffer` was created with the `VK_BUFFER_CREATE_PROTECTED_BIT` bit set, the buffer **must** be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-vkBindBufferMemory-None-01899

If `buffer` was created with the `VK_BUFFER_CREATE_PROTECTED_BIT` bit not set, the buffer **must** not be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-vkBindBufferMemory-buffer-01038

If `buffer` was created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** have been allocated with `VkDedicatedAllocationMemoryAllocateInfoNV::buffer` equal to a buffer handle created with identical creation parameters to `buffer` and `memoryOffset` **must** be zero

- VUID-vkBindBufferMemory-apiVersion-07920

If the `VK_KHR_dedicated_allocation` extension is not enabled, `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and `buffer` was not created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** not have been allocated dedicated for a specific buffer or image

- VUID-vkBindBufferMemory-memory-02726

If the value of `VkExportMemoryAllocateInfo::handleTypes` used to allocate `memory` is not 0, it **must** include at least one of the handles set in `VkExternalMemoryBufferCreateInfo::handleTypes` when `buffer` was created

- VUID-vkBindBufferMemory-memory-02985

If `memory` was allocated by a memory import operation, that is not `VkImportAndroidHardwareBufferInfoANDROID` with a non-NULL `buffer` value, the

external handle type of the imported memory **must** also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` when `buffer` was created

- VUID-vkBindBufferMemory-memory-02986

If `memory` was allocated with the `VkImportAndroidHardwareBufferInfoANDROID` memory import operation with a non-NULL `buffer` value, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` **must** also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` when `buffer` was created

- VUID-vkBindBufferMemory-bufferDeviceAddress-03339

If the `VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddress` feature is enabled and `buffer` was created with the `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-vkBindBufferMemory-bufferDeviceAddressCaptureReplay-09200

If the `VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddressCaptureReplay` feature is enabled and `buffer` was created with the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set

- VUID-vkBindBufferMemory-buffer-06408

If `buffer` was created with `VkBufferCollectionBufferCreateInfoFUCHSIA` chained to `VkBufferCreateInfo::pNext`, `memory` **must** be allocated with a `VkImportMemoryBufferCollectionFUCHSIA` chained to `VkMemoryAllocateInfo::pNext`

- VUID-vkBindBufferMemory-descriptorBufferCaptureReplay-08112

If the `buffer` was created with the `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-vkBindBufferMemory-buffer-09201

If the `buffer` was created with the `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set

Valid Usage (Implicit)

- VUID-vkBindBufferMemory-device-parameter

`device` **must** be a valid `VkDevice` handle

- VUID-vkBindBufferMemory-buffer-parameter

`buffer` **must** be a valid `VkBuffer` handle

- VUID-vkBindBufferMemory-memory-parameter

`memory` **must** be a valid `VkDeviceMemory` handle

- VUID-vkBindBufferMemory-buffer-parent

`buffer` **must** have been created, allocated, or retrieved from `device`

- VUID-vkBindBufferMemory-memory-parent

`memory` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to **buffer** **must** be externally synchronized

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR**

To attach memory to buffer objects for one or more buffers at a time, call:

```
// Provided by VK_VERSION_1_1
VkResult vkBindBufferMemory2(
    VkDevice                                device,
    uint32_t                                bindInfoCount,
    const VkBindBufferMemoryInfo*          pBindInfos);
```

or the equivalent command

```
// Provided by VK_KHR_bind_memory2
VkResult vkBindBufferMemory2KHR(
    VkDevice                                device,
    uint32_t                                bindInfoCount,
    const VkBindBufferMemoryInfo*          pBindInfos);
```

- **device** is the logical device that owns the buffers and memory.
- **bindInfoCount** is the number of elements in **pBindInfos**.
- **pBindInfos** is a pointer to an array of **bindInfoCount** **VkBindBufferMemoryInfo** structures describing buffers and memory to bind.

On some implementations, it **may** be more efficient to batch memory bindings into a single command.

If the **maintenance6** feature is enabled, this command **must** attempt to perform all of the memory binding operations described by **pBindInfos**, and **must** not early exit on the first failure.

If any of the memory binding operations described by **pBindInfos** fail, the **VkResult** returned by this command **must** be the return value of any one of the memory binding operations which did not return **VK_SUCCESS**.

NOTE

If the `vkBindBufferMemory2` command failed, `VkBindMemoryStatusKHR` structures were not included in the `pNext` chains of each element of `pBindInfos`, and `bindInfoCount` was greater than one, then the buffers referenced by `pBindInfos` will be in an indeterminate state, and must not be used.

Applications should destroy these buffers.

Valid Usage (Implicit)

- VUID-vkBindBufferMemory2-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkBindBufferMemory2-pBindInfos-parameter `pBindInfos` **must** be a valid pointer to an array of `bindInfoCount` valid `VkBindBufferMemoryInfo` structures
- VUID-vkBindBufferMemory2-bindInfoCount-arraylength `bindInfoCount` **must** be greater than 0

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`

`VkBindBufferMemoryInfo` contains members corresponding to the parameters of `vkBindBufferMemory`.

The `VkBindBufferMemoryInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindBufferMemoryInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            buffer;
    VkDeviceMemory      memory;
    VkDeviceSize        memoryOffset;
} VkBindBufferMemoryInfo;
```

or the equivalent

```
// Provided by VK_KHR_bind_memory2
typedef VkBindBufferMemoryInfo VkBindBufferMemoryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the buffer to be attached to memory.
- `memory` is a `VkDeviceMemory` object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the buffer. The number of bytes returned in the `VkMemoryRequirements::size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified buffer.

Valid Usage

- VUID-VkBindBufferMemoryInfo-buffer-07459
`buffer` **must** not have been bound to a memory object
- VUID-VkBindBufferMemoryInfo-buffer-01030
`buffer` **must** not have been created with any sparse memory binding flags
- VUID-VkBindBufferMemoryInfo-memoryOffset-01031
`memoryOffset` **must** be less than the size of `memory`
- VUID-VkBindBufferMemoryInfo-memory-01035
`memory` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer`
- VUID-VkBindBufferMemoryInfo-memoryOffset-01036
`memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer`
- VUID-VkBindBufferMemoryInfo-size-01037
The `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer` **must** be less than or equal to the size of `memory` minus `memoryOffset`
- VUID-VkBindBufferMemoryInfo-buffer-01444
If `buffer` requires a dedicated allocation (as reported by `vkGetBufferMemoryRequirements2` in `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` for `buffer`), `memory` **must** have been allocated with `VkMemoryDedicatedAllocateInfo::buffer` equal to `buffer`
- VUID-VkBindBufferMemoryInfo-memory-01508
If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, and `VkMemoryDedicatedAllocateInfo::buffer` was not `VK_NULL_HANDLE`, then `buffer` **must** equal `VkMemoryDedicatedAllocateInfo::buffer`, and `memoryOffset` **must** be zero
- VUID-VkBindBufferMemoryInfo-None-01898

If **buffer** was created with the **VK_BUFFER_CREATE_PROTECTED_BIT** bit set, the buffer **must** be bound to a memory object allocated with a memory type that reports **VK_MEMORY_PROPERTY_PROTECTED_BIT**

- VUID-VkBindBufferMemoryInfo-None-01899

If **buffer** was created with the **VK_BUFFER_CREATE_PROTECTED_BIT** bit not set, the buffer **must** not be bound to a memory object allocated with a memory type that reports **VK_MEMORY_PROPERTY_PROTECTED_BIT**

- VUID-VkBindBufferMemoryInfo-buffer-01038

If **buffer** was created with **VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation** equal to **VK_TRUE**, **memory** **must** have been allocated with **VkDedicatedAllocationMemoryAllocateInfoNV::buffer** equal to a buffer handle created with identical creation parameters to **buffer** and **memoryOffset** **must** be zero

- VUID-VkBindBufferMemoryInfo-apiVersion-07920

If the **VK_KHR_dedicated_allocation** extension is not enabled, **VkPhysicalDeviceProperties::apiVersion** is less than Vulkan 1.1, and **buffer** was not created with **VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation** equal to **VK_TRUE**, **memory** **must** not have been allocated dedicated for a specific buffer or image

- VUID-VkBindBufferMemoryInfo-memory-02726

If the value of **VkExportMemoryAllocateInfo::handleTypes** used to allocate **memory** is not **0**, it **must** include at least one of the handles set in **VkExternalMemoryBufferCreateInfo::handleTypes** when **buffer** was created

- VUID-VkBindBufferMemoryInfo-memory-02985

If **memory** was allocated by a memory import operation, that is not **VkImportAndroidHardwareBufferInfoANDROID** with a non-NULL **buffer** value, the external handle type of the imported memory **must** also have been set in **VkExternalMemoryBufferCreateInfo::handleTypes** when **buffer** was created

- VUID-VkBindBufferMemoryInfo-memory-02986

If **memory** was allocated with the **VkImportAndroidHardwareBufferInfoANDROID** memory import operation with a non-NULL **buffer** value, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID** **must** also have been set in **VkExternalMemoryBufferCreateInfo::handleTypes** when **buffer** was created

- VUID-VkBindBufferMemoryInfo-bufferDeviceAddress-03339

If the **VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddress** feature is enabled and **buffer** was created with the **VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT** bit set, **memory** **must** have been allocated with the **VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT** bit set

- VUID-VkBindBufferMemoryInfo-bufferDeviceAddressCaptureReplay-09200

If the **VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddressCaptureReplay** feature is enabled and **buffer** was created with the **VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT** bit set, **memory** **must** have been allocated with the **VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT** bit set

- VUID-VkBindBufferMemoryInfo-buffer-06408

If **buffer** was created with **VkBufferCollectionBufferCreateInfoFUCHSIA** chained to **VkBufferCreateInfo::pNext**, **memory** **must** be allocated with a

[VkImportMemoryBufferCollectionFUCHSIA](#) chained to [VkMemoryAllocateInfo::pNext](#)

- VUID-VkBindBufferMemoryInfo-descriptorBufferCaptureReplay-08112

If the [buffer](#) was created with the [VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#) bit set, [memory](#) **must** have been allocated with the [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT](#) bit set

- VUID-VkBindBufferMemoryInfo-buffer-09201

If the [buffer](#) was created with the [VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#) bit set, [memory](#) **must** have been allocated with the [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#) bit set

- VUID-VkBindBufferMemoryInfo-pNext-01605

If the [pNext](#) chain includes a [VkBindBufferMemoryDeviceGroupInfo](#) structure, all instances of [memory](#) specified by [VkBindBufferMemoryDeviceGroupInfo::pDeviceIndices](#) **must** have been allocated

Valid Usage (Implicit)

- VUID-VkBindBufferMemoryInfo-sType-sType

[sType](#) **must** be [VK_STRUCTURE_TYPE_BIND_BUFFER_MEMORY_INFO](#)

- VUID-VkBindBufferMemoryInfo-pNext-pNext

Each [pNext](#) member of any structure (including this one) in the [pNext](#) chain **must** be either [NULL](#) or a pointer to a valid instance of [VkBindBufferMemoryDeviceGroupInfo](#) or [VkBindMemoryStatusKHR](#)

- VUID-VkBindBufferMemoryInfo-sType-unique

The [sType](#) value of each struct in the [pNext](#) chain **must** be unique

- VUID-VkBindBufferMemoryInfo-buffer-parameter

[buffer](#) **must** be a valid [VkBuffer](#) handle

- VUID-VkBindBufferMemoryInfo-memory-parameter

[memory](#) **must** be a valid [VkDeviceMemory](#) handle

- VUID-VkBindBufferMemoryInfo-commonparent

Both of [buffer](#), and [memory](#) **must** have been created, allocated, or retrieved from the same [VkDevice](#)

The [VkBindBufferMemoryDeviceGroupInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindBufferMemoryDeviceGroupInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           deviceIndexCount;
    const uint32_t*     pDeviceIndices;
} VkBindBufferMemoryDeviceGroupInfo;
```

or the equivalent

```
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
typedef VkBindBufferMemoryDeviceGroupInfo VkBindBufferMemoryDeviceGroupInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceIndexCount` is the number of elements in `pDeviceIndices`.
- `pDeviceIndices` is a pointer to an array of device indices.

If the `pNext` chain of `VkBindBufferMemoryInfo` includes a `VkBindBufferMemoryDeviceGroupInfo` structure, then that structure determines how memory is bound to buffers across multiple devices in a device group.

If `deviceIndexCount` is greater than zero, then on device index `i` the buffer is attached to the instance of `memory` on the physical device with device index `pDeviceIndices[i]`.

If `deviceIndexCount` is zero and `memory` comes from a memory heap with the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains consecutive indices from zero to the number of physical devices in the logical device, minus one. In other words, by default each physical device attaches to its own instance of `memory`.

If `deviceIndexCount` is zero and `memory` comes from a memory heap without the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains an array of zeros. In other words, by default each physical device attaches to instance zero.

Valid Usage

- VUID-VkBindBufferMemoryDeviceGroupInfo-deviceIndexCount-01606
`deviceIndexCount` **must** either be zero or equal to the number of physical devices in the logical device
- VUID-VkBindBufferMemoryDeviceGroupInfo-pDeviceIndices-01607
All elements of `pDeviceIndices` **must** be valid device indices

Valid Usage (Implicit)

- VUID-VkBindBufferMemoryDeviceGroupInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_BUFFER_MEMORY_DEVICE_GROUP_INFO`
- VUID-VkBindBufferMemoryDeviceGroupInfo-pDeviceIndices-parameter
If `deviceIndexCount` is not 0, `pDeviceIndices` **must** be a valid pointer to an array of `deviceIndexCount` `uint32_t` values

The `VkBindMemoryStatusKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance6
typedef struct VkBindMemoryStatusKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkResult*          pResult;
} VkBindMemoryStatusKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pResult` is a pointer to a `VkResult` value.

If the `pNext` chain of `VkBindBufferMemoryInfo` or `VkBindImageMemoryInfo` includes a `VkBindMemoryStatusKHR` structure, then the `VkBindMemoryStatusKHR::pResult` will be populated with a value describing the result of the corresponding memory binding operation.

Valid Usage (Implicit)

- VUID-VkBindMemoryStatusKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_MEMORY_STATUS_KHR`
- VUID-VkBindMemoryStatusKHR-pResult-parameter
`pResult` **must** be a valid pointer to a `VkResult` value

To attach memory to a `VkImage` object created without the `VK_IMAGE_CREATE_DISJOINT_BIT` set, call:

```
// Provided by VK_VERSION_1_0
VkResult vkBindImageMemory(
    VkDevice          device,
    VkImage           image,
    VkDeviceMemory    memory,
    VkDeviceSize      memoryOffset);
```

- `device` is the logical device that owns the image and memory.
- `image` is the image.
- `memory` is the `VkDeviceMemory` object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the image. The number of bytes returned in the `VkMemoryRequirements::size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified image.

`vkBindImageMemory` is equivalent to passing the same parameters through `VkBindImageMemoryInfo` to `vkBindImageMemory2`.

Valid Usage

- VUID-vkBindImageMemory-image-07460
`image` **must** not have been bound to a memory object
- VUID-vkBindImageMemory-image-01045
`image` **must** not have been created with any sparse memory binding flags
- VUID-vkBindImageMemory-memoryOffset-01046
`memoryOffset` **must** be less than the size of `memory`
- VUID-vkBindImageMemory-image-01445
If `image` requires a dedicated allocation (as reported by `vkGetImageMemoryRequirements2` in `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` for `image`), `memory` **must** have been created with `VkMemoryDedicatedAllocateInfo::image` equal to `image`
- VUID-vkBindImageMemory-memory-02628
If the `dedicatedAllocationImageAliasing` feature is not enabled, and the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, and `VkMemoryDedicatedAllocateInfo::image` was not `VK_NULL_HANDLE`, then `image` **must** equal `VkMemoryDedicatedAllocateInfo::image` and `memoryOffset` **must** be zero
- VUID-vkBindImageMemory-memory-02629
If the `dedicatedAllocationImageAliasing` feature is enabled, and the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, and `VkMemoryDedicatedAllocateInfo::image` was not `VK_NULL_HANDLE`, then `memoryOffset` **must** be zero, and `image` **must** be either equal to `VkMemoryDedicatedAllocateInfo::image` or an image that was created using the same parameters in `VkImageCreateInfo`, with the exception that `extent` and `arrayLayers` **may** differ subject to the following restrictions: every dimension in the `extent` parameter of the image being bound **must** be equal to or smaller than the original image for which the allocation was created; and the `arrayLayers` parameter of the image being bound **must** be equal to or smaller than the original image for which the allocation was created
- VUID-vkBindImageMemory-None-01901
If image was created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit set, the image **must** be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`
- VUID-vkBindImageMemory-None-01902
If image was created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit not set, the image **must** not be bound to a memory object created with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`
- VUID-vkBindImageMemory-image-01050
If `image` was created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** have been created with `VkDedicatedAllocationMemoryAllocateInfoNV::image` equal to an image handle created with identical creation parameters to `image` and `memoryOffset` **must** be zero
- VUID-vkBindImageMemory-apiVersion-07921

If the `VK_KHR_dedicated_allocation` extension is not enabled, `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and `image` was not created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** not have been allocated dedicated for a specific buffer or image

- VUID-vkBindImageMemory-memory-02728

If the value of `VkExportMemoryAllocateInfo::handleTypes` used to allocate `memory` is not `0`, it **must** include at least one of the handles set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-vkBindImageMemory-memory-02989

If `memory` was created by a memory import operation, that is not `VkImportAndroidHardwareBufferInfoANDROID` with a non-NULL `buffer` value, the external handle type of the imported memory **must** also have been set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-vkBindImageMemory-memory-02990

If `memory` was created with the `VkImportAndroidHardwareBufferInfoANDROID` memory import operation with a non-NULL `buffer` value, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` **must** also have been set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-vkBindImageMemory-descriptorBufferCaptureReplay-08113

If the `image` was created with the `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-vkBindImageMemory-image-09202

If the `image` was created with the `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set

- VUID-vkBindImageMemory-image-01608

`image` **must** not have been created with the `VK_IMAGE_CREATE_DISJOINT_BIT` set

- VUID-vkBindImageMemory-memory-01047

`memory` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements` with `image`

- VUID-vkBindImageMemory-memoryOffset-01048

`memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements` with `image`

- VUID-vkBindImageMemory-size-01049

The difference of the size of `memory` and `memoryOffset` **must** be greater than or equal to the `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements` with the same `image`

- VUID-vkBindImageMemory-image-06392

If `image` was created with `VkBufferCollectionImageCreateInfoFUCHSIA` chained to `VkImageCreateInfo::pNext`, `memory` **must** be allocated with a `VkImportMemoryBufferCollectionFUCHSIA` chained to `VkMemoryAllocateInfo::pNext`

Valid Usage (Implicit)

- VUID-vkBindImageMemory-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkBindImageMemory-image-parameter
image must be a valid [VkImage](#) handle
- VUID-vkBindImageMemory-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle
- VUID-vkBindImageMemory-image-parent
image must have been created, allocated, or retrieved from **device**
- VUID-vkBindImageMemory-memory-parent
memory must have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **image must** be externally synchronized

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)

To attach memory to image objects for one or more images at a time, call:

```
// Provided by VK_VERSION_1_1
VkResult vkBindImageMemory2(
    VkDevice                                device,
    uint32_t                                bindInfoCount,
    const VkBindImageMemoryInfo*            pBindInfos);
```

or the equivalent command

```
// Provided by VK_KHR_bind_memory2
VkResult vkBindImageMemory2KHR(
    VkDevice                                device,
    uint32_t                                bindInfoCount,
    const VkBindImageMemoryInfo*            pBindInfos);
```

- **device** is the logical device that owns the images and memory.
- **bindInfoCount** is the number of elements in **pBindInfos**.
- **pBindInfos** is a pointer to an array of **VkBindImageMemoryInfo** structures, describing images and memory to bind.

On some implementations, it **may** be more efficient to batch memory bindings into a single command.

If the **maintenance6** feature is enabled, this command **must** attempt to perform all of the memory binding operations described by **pBindInfos**, and **must** not early exit on the first failure.

If any of the memory binding operations described by **pBindInfos** fail, the **VkResult** returned by this command **must** be the return value of any one of the memory binding operations which did not return **VK_SUCCESS**.

NOTE

If the **vkBindImageMemory2** command failed, **VkBindMemoryStatusKHR** structures were not included in the **pNext** chains of each element of **pBindInfos**, and **bindInfoCount** was greater than one, then the images referenced by **pBindInfos** will be in an indeterminate state, and must not be used.

Applications should destroy these images.

Valid Usage

- VUID-vkBindImageMemory2-pBindInfos-02858
If any **VkBindImageMemoryInfo::image** was created with **VK_IMAGE_CREATE_DISJOINT_BIT** then all planes of **VkBindImageMemoryInfo::image** **must** be bound individually in separate **pBindInfos**
- VUID-vkBindImageMemory2-pBindInfos-04006
pBindInfos **must** not refer to the same image subresource more than once

Valid Usage (Implicit)

- VUID-vkBindImageMemory2-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkBindImageMemory2-pBindInfos-parameter
pBindInfos **must** be a valid pointer to an array of **bindInfoCount** valid **VkBindImageMemoryInfo** structures
- VUID-vkBindImageMemory2-bindInfoCount-arraylength
bindInfoCount **must** be greater than 0

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

`VkBindImageMemoryInfo` contains members corresponding to the parameters of `vkBindImageMemory`.

The `VkBindImageMemoryInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindImageMemoryInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
    VkDeviceMemory      memory;
    VkDeviceSize        memoryOffset;
} VkBindImageMemoryInfo;
```

or the equivalent

```
// Provided by VK_KHR_bind_memory2
typedef VkBindImageMemoryInfo VkBindImageMemoryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the image to be attached to memory.
- `memory` is a `VkDeviceMemory` object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the image. The number of bytes returned in the `VkMemoryRequirements::size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified image.

Valid Usage

- VUID-VkBindImageMemoryInfo-image-07460
`image` **must** not have been bound to a memory object
- VUID-VkBindImageMemoryInfo-image-01045
`image` **must** not have been created with any sparse memory binding flags
- VUID-VkBindImageMemoryInfo-memoryOffset-01046

`memoryOffset` **must** be less than the size of `memory`

- VUID-VkBindImageMemoryInfo-image-01445

If `image` requires a dedicated allocation (as reported by `vkGetImageMemoryRequirements2` in `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` for `image`), `memory` **must** have been created with `VkMemoryDedicatedAllocateInfo::image` equal to `image`

- VUID-VkBindImageMemoryInfo-memory-02628

If the `dedicatedAllocationImageAliasing` feature is not enabled, and the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, and `VkMemoryDedicatedAllocateInfo::image` was not `VK_NULL_HANDLE`, then `image` **must** equal `VkMemoryDedicatedAllocateInfo::image` and `memoryOffset` **must** be zero

- VUID-VkBindImageMemoryInfo-memory-02629

If the `dedicatedAllocationImageAliasing` feature is enabled, and the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, and `VkMemoryDedicatedAllocateInfo::image` was not `VK_NULL_HANDLE`, then `memoryOffset` **must** be zero, and `image` **must** be either equal to `VkMemoryDedicatedAllocateInfo::image` or an image that was created using the same parameters in `VkImageCreateInfo`, with the exception that `extent` and `arrayLayers` **may** differ subject to the following restrictions: every dimension in the `extent` parameter of the image being bound **must** be equal to or smaller than the original image for which the allocation was created; and the `arrayLayers` parameter of the image being bound **must** be equal to or smaller than the original image for which the allocation was created

- VUID-VkBindImageMemoryInfo-None-01901

If image was created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit set, the image **must** be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-VkBindImageMemoryInfo-None-01902

If image was created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit not set, the image **must** not be bound to a memory object created with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-VkBindImageMemoryInfo-image-01050

If `image` was created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** have been created with `VkDedicatedAllocationMemoryAllocateInfoNV::image` equal to an image handle created with identical creation parameters to `image` and `memoryOffset` **must** be zero

- VUID-VkBindImageMemoryInfo-apiVersion-07921

If the `VK_KHR_dedicated_allocation` extension is not enabled, `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and `image` was not created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** not have been allocated dedicated for a specific buffer or image

- VUID-VkBindImageMemoryInfo-memory-02728

If the value of `VkExportMemoryAllocateInfo::handleTypes` used to allocate `memory` is not `0`, it **must** include at least one of the handles set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-VkBindImageMemoryInfo-memory-02989
If **memory** was created by a memory import operation, that is not [VkImportAndroidHardwareBufferInfoANDROID](#) with a non-NULL **buffer** value, the external handle type of the imported memory **must** also have been set in [VkExternalMemoryImageCreateInfo::handleTypes](#) when **image** was created
- VUID-VkBindImageMemoryInfo-memory-02990
If **memory** was created with the [VkImportAndroidHardwareBufferInfoANDROID](#) memory import operation with a non-NULL **buffer** value, [VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID](#) **must** also have been set in [VkExternalMemoryImageCreateInfo::handleTypes](#) when **image** was created
- VUID-VkBindImageMemoryInfo-descriptorBufferCaptureReplay-08113
If the **image** was created with the [VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#) bit set, **memory** **must** have been allocated with the [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT](#) bit set
- VUID-VkBindImageMemoryInfo-image-09202
If the **image** was created with the [VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#) bit set, **memory** **must** have been allocated with the [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#) bit set
- VUID-VkBindImageMemoryInfo-pNext-01615
If the **pNext** chain does not include a [VkBindImagePlaneMemoryInfo](#) structure, **memory** **must** have been allocated using one of the memory types allowed in the **memoryTypeBits** member of the [VkMemoryRequirements](#) structure returned from a call to [vkGetImageMemoryRequirements2](#) with **image**
- VUID-VkBindImageMemoryInfo-pNext-01616
If the **pNext** chain does not include a [VkBindImagePlaneMemoryInfo](#) structure, **memoryOffset** **must** be an integer multiple of the **alignment** member of the [VkMemoryRequirements](#) structure returned from a call to [vkGetImageMemoryRequirements2](#) with **image**
- VUID-VkBindImageMemoryInfo-pNext-01617
If the **pNext** chain does not include a [VkBindImagePlaneMemoryInfo](#) structure, the difference of the size of **memory** and **memoryOffset** **must** be greater than or equal to the **size** member of the [VkMemoryRequirements](#) structure returned from a call to [vkGetImageMemoryRequirements2](#) with the same **image**
- VUID-VkBindImageMemoryInfo-pNext-01618
If the **pNext** chain includes a [VkBindImagePlaneMemoryInfo](#) structure, **image** **must** have been created with the [VK_IMAGE_CREATE_DISJOINT_BIT](#) bit set
- VUID-VkBindImageMemoryInfo-image-07736
If **image** was created with the [VK_IMAGE_CREATE_DISJOINT_BIT](#) bit set, then the **pNext** chain **must** include a [VkBindImagePlaneMemoryInfo](#) structure
- VUID-VkBindImageMemoryInfo-pNext-01619
If the **pNext** chain includes a [VkBindImagePlaneMemoryInfo](#) structure, **memory** **must** have been allocated using one of the memory types allowed in the **memoryTypeBits** member of the [VkMemoryRequirements](#) structure returned from a call to [vkGetImageMemoryRequirements2](#) with **image** and where

`VkBindImagePlaneMemoryInfo::planeAspect` corresponds to the `VkImagePlaneMemoryRequirementsInfo::planeAspect` in the `VkImageMemoryRequirementsInfo2` structure's `pNext` chain

- VUID-VkBindImageMemoryInfo-pNext-01620

If the `pNext` chain includes a `VkBindImagePlaneMemoryInfo` structure, `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements2` with `image` and where `VkBindImagePlaneMemoryInfo::planeAspect` corresponds to the `VkImagePlaneMemoryRequirementsInfo::planeAspect` in the `VkImageMemoryRequirementsInfo2` structure's `pNext` chain

- VUID-VkBindImageMemoryInfo-pNext-01621

If the `pNext` chain includes a `VkBindImagePlaneMemoryInfo` structure, the difference of the size of `memory` and `memoryOffset` **must** be greater than or equal to the `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements2` with the same `image` and where `VkBindImagePlaneMemoryInfo::planeAspect` corresponds to the `VkImagePlaneMemoryRequirementsInfo::planeAspect` in the `VkImageMemoryRequirementsInfo2` structure's `pNext` chain

- VUID-VkBindImageMemoryInfo-pNext-01626

If the `pNext` chain includes a `VkBindImageMemoryDeviceGroupInfo` structure, all instances of `memory` specified by `VkBindImageMemoryDeviceGroupInfo::pDeviceIndices` **must** have been allocated

- VUID-VkBindImageMemoryInfo-pNext-01627

If the `pNext` chain includes a `VkBindImageMemoryDeviceGroupInfo` structure, and `VkBindImageMemoryDeviceGroupInfo::splitInstanceBindRegionCount` is not zero, then `image` **must** have been created with the `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` bit set

- VUID-VkBindImageMemoryInfo-pNext-01628

If the `pNext` chain includes a `VkBindImageMemoryDeviceGroupInfo` structure, all elements of `VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions` **must** be valid rectangles contained within the dimensions of `image`

- VUID-VkBindImageMemoryInfo-pNext-01629

If the `pNext` chain includes a `VkBindImageMemoryDeviceGroupInfo` structure, the union of the areas of all elements of `VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions` that correspond to the same instance of `image` **must** cover the entire image

- VUID-VkBindImageMemoryInfo-image-01630

If `image` was created with a valid swapchain handle in `VkImageSwapchainCreateInfoKHR::swapchain`, then the `pNext` chain **must** include a `VkBindImageMemorySwapchainInfoKHR` structure containing the same swapchain handle

- VUID-VkBindImageMemoryInfo-pNext-01631

If the `pNext` chain includes a `VkBindImageMemorySwapchainInfoKHR` structure, `memory` **must** be `VK_NULL_HANDLE`

- VUID-VkBindImageMemoryInfo-pNext-01632

If the **pNext** chain does not include a [VkBindImageMemorySwapchainInfoKHR](#) structure, **memory** **must** be a valid [VkDeviceMemory](#) handle

Valid Usage (Implicit)

- VUID-VkBindImageMemoryInfo-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_INFO`
- VUID-VkBindImageMemoryInfo-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either `NULL` or a pointer to a valid instance of [VkBindImageMemoryDeviceGroupInfo](#), [VkBindImageMemorySwapchainInfoKHR](#), [VkBindImagePlaneMemoryInfo](#), or [VkBindMemoryStatusKHR](#)
- VUID-VkBindImageMemoryInfo-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique
- VUID-VkBindImageMemoryInfo-image-parameter
image **must** be a valid [VkImage](#) handle
- VUID-VkBindImageMemoryInfo-commonparent
Both of **image**, and **memory** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

The [VkBindImageMemoryDeviceGroupInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindImageMemoryDeviceGroupInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           deviceIndexCount;
    const uint32_t*     pDeviceIndices;
    uint32_t           splitInstanceBindRegionCount;
    const VkRect2D*     pSplitInstanceBindRegions;
} VkBindImageMemoryDeviceGroupInfo;
```

or the equivalent

```
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
typedef VkBindImageMemoryDeviceGroupInfo VkBindImageMemoryDeviceGroupInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **deviceIndexCount** is the number of elements in **pDeviceIndices**.
- **pDeviceIndices** is a pointer to an array of device indices.

- `splitInstanceBindRegionCount` is the number of elements in `pSplitInstanceBindRegions`.
- `pSplitInstanceBindRegions` is a pointer to an array of `VkRect2D` structures describing which regions of the image are attached to each instance of memory.

If the `pNext` chain of `VkBindImageMemoryInfo` includes a `VkBindImageMemoryDeviceGroupInfo` structure, then that structure determines how memory is bound to images across multiple devices in a device group.

If `deviceIndexCount` is greater than zero, then on device index `i` `image` is attached to the instance of the memory on the physical device with device index `pDeviceIndices[i]`.

Let `N` be the number of physical devices in the logical device. If `splitInstanceBindRegionCount` is greater than zero, then `pSplitInstanceBindRegions` is a pointer to an array of N^2 rectangles, where the image region specified by the rectangle at element $i*N+j$ in resource instance `i` is bound to the memory instance `j`. The blocks of the memory that are bound to each sparse image block region use an offset in memory, relative to `memoryOffset`, computed as if the whole image was being bound to a contiguous range of memory. In other words, horizontally adjacent image blocks use consecutive blocks of memory, vertically adjacent image blocks are separated by the number of bytes per block multiplied by the width in blocks of `image`, and the block at (0,0) corresponds to memory starting at `memoryOffset`.

If `splitInstanceBindRegionCount` and `deviceIndexCount` are zero and the memory comes from a memory heap with the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains consecutive indices from zero to the number of physical devices in the logical device, minus one. In other words, by default each physical device attaches to its own instance of the memory.

If `splitInstanceBindRegionCount` and `deviceIndexCount` are zero and the memory comes from a memory heap without the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains an array of zeros. In other words, by default each physical device attaches to instance zero.

Valid Usage

- VUID-VkBindImageMemoryDeviceGroupInfo-deviceIndexCount-01633
At least one of `deviceIndexCount` and `splitInstanceBindRegionCount` **must** be zero
- VUID-VkBindImageMemoryDeviceGroupInfo-deviceIndexCount-01634
`deviceIndexCount` **must** either be zero or equal to the number of physical devices in the logical device
- VUID-VkBindImageMemoryDeviceGroupInfo-pDeviceIndices-01635
All elements of `pDeviceIndices` **must** be valid device indices
- VUID-VkBindImageMemoryDeviceGroupInfo-splitInstanceBindRegionCount-01636
`splitInstanceBindRegionCount` **must** either be zero or equal to the number of physical devices in the logical device squared
- VUID-VkBindImageMemoryDeviceGroupInfo-pSplitInstanceBindRegions-01637
Elements of `pSplitInstanceBindRegions` that correspond to the same instance of an image **must** not overlap

- VUID-VkBindImageMemoryDeviceGroupInfo-offset-01638
The `offset.x` member of any element of `pSplitInstanceBindRegions` **must** be a multiple of the sparse image block width (`VkSparseImageFormatProperties::imageGranularity.width`) of all non-metadata aspects of the image
- VUID-VkBindImageMemoryDeviceGroupInfo-offset-01639
The `offset.y` member of any element of `pSplitInstanceBindRegions` **must** be a multiple of the sparse image block height (`VkSparseImageFormatProperties::imageGranularity.height`) of all non-metadata aspects of the image
- VUID-VkBindImageMemoryDeviceGroupInfo-extent-01640
The `extent.width` member of any element of `pSplitInstanceBindRegions` **must** either be a multiple of the sparse image block width of all non-metadata aspects of the image, or else `extent.width + offset.x` **must** equal the width of the image subresource
- VUID-VkBindImageMemoryDeviceGroupInfo-extent-01641
The `extent.height` member of any element of `pSplitInstanceBindRegions` **must** either be a multiple of the sparse image block height of all non-metadata aspects of the image, or else `extent.height + offset.y` **must** equal the height of the image subresource

Valid Usage (Implicit)

- VUID-VkBindImageMemoryDeviceGroupInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_DEVICE_GROUP_INFO`
- VUID-VkBindImageMemoryDeviceGroupInfo-pDeviceIndices-parameter
If `deviceIndexCount` is not 0, `pDeviceIndices` **must** be a valid pointer to an array of `deviceIndexCount` `uint32_t` values
- VUID-VkBindImageMemoryDeviceGroupInfo-pSplitInstanceBindRegions-parameter
If `splitInstanceBindRegionCount` is not 0, `pSplitInstanceBindRegions` **must** be a valid pointer to an array of `splitInstanceBindRegionCount` `VkRect2D` structures

If the `pNext` chain of `VkBindImageMemoryInfo` includes a `VkBindImageMemorySwapchainInfoKHR` structure, then that structure includes a swapchain handle and image index indicating that the image will be bound to memory from that swapchain.

The `VkBindImageMemorySwapchainInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkBindImageMemorySwapchainInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint32_t           imageIndex;
} VkBindImageMemorySwapchainInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is `VK_NULL_HANDLE` or a swapchain handle.
- `imageIndex` is an image index within `swapchain`.

If `swapchain` is not `NULL`, the `swapchain` and `imageIndex` are used to determine the memory that the image is bound to, instead of `memory` and `memoryOffset`.

Memory **can** be bound to a swapchain and use the `pDeviceIndices` or `pSplitInstanceBindRegions` members of `VkBindImageMemoryDeviceGroupInfo`.

Valid Usage

- VUID-VkBindImageMemorySwapchainInfoKHR-imageIndex-01644
`imageIndex` **must** be less than the number of images in `swapchain`
- VUID-VkBindImageMemorySwapchainInfoKHR-swapchain-07756
If the `swapchain` has been created with `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT`, `imageIndex` **must** be one that has previously been returned by `vkAcquireNextImageKHR` or `vkAcquireNextImage2KHR`

Valid Usage (Implicit)

- VUID-VkBindImageMemorySwapchainInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_SWAPCHAIN_INFO_KHR`
- VUID-VkBindImageMemorySwapchainInfoKHR-swapchain-parameter
`swapchain` **must** be a valid `VkSwapchainKHR` handle

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

In order to bind *planes* of a *disjoint image*, add a `VkBindImagePlaneMemoryInfo` structure to the `pNext` chain of `VkBindImageMemoryInfo`.

The `VkBindImagePlaneMemoryInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindImagePlaneMemoryInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImageAspectFlags planeAspect;
} VkBindImagePlaneMemoryInfo;
```

or the equivalent

```
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkBindImagePlaneMemoryInfo VkBindImagePlaneMemoryInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **planeAspect** is a [VkImageAspectFlagBits](#) value specifying the aspect of the disjoint image plane to bind.

Valid Usage

- VUID-VkBindImagePlaneMemoryInfo-planeAspect-02283
If the image's **tiling** is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, then **planeAspect** **must** be a single valid [multi-planar aspect mask](#) bit
- VUID-VkBindImagePlaneMemoryInfo-planeAspect-02284
If the image's **tiling** is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then **planeAspect** **must** be a single valid *memory plane* for the image (that is, **aspectMask** **must** specify a plane index that is less than the [VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount](#) associated with the image's **format** and [VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier](#))

Valid Usage (Implicit)

- VUID-VkBindImagePlaneMemoryInfo-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_BIND_IMAGE_PLANE_MEMORY_INFO`
- VUID-VkBindImagePlaneMemoryInfo-planeAspect-parameter
planeAspect **must** be a valid [VkImageAspectFlagBits](#) value

Buffer-Image Granularity

The implementation-dependent limit **bufferImageGranularity** specifies a page-like granularity at which linear and non-linear resources **must** be placed in adjacent memory locations to avoid aliasing. Two resources which do not satisfy this granularity requirement are said to [alias](#). **bufferImageGranularity** is specified in bytes, and **must** be a power of two. Implementations which do not impose a granularity restriction **may** report a **bufferImageGranularity** value of one.

NOTE

Despite its name, **bufferImageGranularity** is really a granularity between “linear” and “non-linear” resources.

Given resourceA at the lower memory offset and resourceB at the higher memory offset in the same [VkDeviceMemory](#) object, where one resource is linear and the other is non-linear (as defined in the [Glossary](#)), and the following:

```
resourceA.end      = resourceA.memoryOffset + resourceA.size - 1
resourceA.endPage  = resourceA.end & ~(bufferImageGranularity-1)
```

```
resourceB.start      = resourceB.memoryOffset
resourceB.startPage = resourceB.start & ~(bufferImageGranularity-1)
```

The following property **must** hold:

```
resourceA.endPage < resourceB.startPage
```

That is, the end of the first resource (A) and the beginning of the second resource (B) **must** be on separate “pages” of size `bufferImageGranularity`. `bufferImageGranularity` **may** be different than the physical page size of the memory heap. This restriction is only needed when a linear resource and a non-linear resource are adjacent in memory and will be used simultaneously. The memory ranges of adjacent resources **can** be closer than `bufferImageGranularity`, provided they meet the **alignment** requirement for the objects in question.

Sparse block size in bytes and sparse image and buffer memory alignments **must** all be multiples of the `bufferImageGranularity`. Therefore, memory bound to sparse resources naturally satisfies the `bufferImageGranularity`.

12.9. Resource Sharing Mode

Buffer and image objects are created with a *sharing mode* controlling how they **can** be accessed from queues. The supported sharing modes are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSharingMode {
    VK_SHARING_MODE_EXCLUSIVE = 0,
    VK_SHARING_MODE_CONCURRENT = 1,
} VkSharingMode;
```

- `VK_SHARING_MODE_EXCLUSIVE` specifies that access to any range or image subresource of the object will be exclusive to a single queue family at a time.
- `VK_SHARING_MODE_CONCURRENT` specifies that concurrent access to any range or image subresource of the object from multiple queue families is supported.

NOTE

`VK_SHARING_MODE_CONCURRENT` **may** result in lower performance access to the buffer or image than `VK_SHARING_MODE_EXCLUSIVE`.

Ranges of buffers and image subresources of image objects created using `VK_SHARING_MODE_EXCLUSIVE` **must** only be accessed by queues in the queue family that has *ownership* of the resource. Upon creation, such resources are not owned by any queue family; ownership is implicitly acquired upon first use within a queue. Once a resource using `VK_SHARING_MODE_EXCLUSIVE` is owned by some queue family, the application **must** perform a [queue family ownership transfer](#) to make the memory contents of a range or image subresource accessible to a different queue family.

NOTE

Images still require a [layout transition](#) from `VK_IMAGE_LAYOUT_UNDEFINED` or

`VK_IMAGE_LAYOUT_PREINITIALIZED` before being used on the first queue.

A queue family **can** take ownership of an image subresource or buffer range of a resource created with `VK_SHARING_MODE_EXCLUSIVE`, without an ownership transfer, in the same way as for a resource that was just created; however, taking ownership in this way has the effect that the contents of the image subresource or buffer range are undefined.

Ranges of buffers and image subresources of image objects created using `VK_SHARING_MODE_CONCURRENT` **must** only be accessed by queues from the queue families specified through the `queueFamilyIndexCount` and `pQueueFamilyIndices` members of the corresponding create info structures.

12.9.1. External Resource Sharing

Resources **should** only be accessed in the Vulkan instance that has exclusive ownership of their underlying memory. Only one Vulkan instance has exclusive ownership of a resource's underlying memory at a given time, regardless of whether the resource was created using `VK_SHARING_MODE_EXCLUSIVE` or `VK_SHARING_MODE_CONCURRENT`. Applications can transfer ownership of a resource's underlying memory only if the memory has been imported from or exported to another instance or external API using external memory handles. The semantics for transferring ownership outside of the instance are similar to those used for transferring ownership of `VK_SHARING_MODE_EXCLUSIVE` resources between queues, and is also accomplished using `VkBufferMemoryBarrier` or `VkImageMemoryBarrier` operations. To make the contents of the underlying memory accessible in the destination instance or API, applications **must**

1. Release exclusive ownership from the source instance or API.
2. Ensure the release operation has completed using semaphores or fences.
3. Acquire exclusive ownership in the destination instance or API

Unlike queue family ownership transfers, the destination instance or API is not specified explicitly when releasing ownership, nor is the source instance or API specified when acquiring ownership. Instead, the image or memory barrier's `dstQueueFamilyIndex` or `srcQueueFamilyIndex` parameters are set to the reserved queue family index `VK_QUEUE_FAMILY_EXTERNAL` or `VK_QUEUE_FAMILY_FOREIGN_EXT` to represent the external destination or source respectively.

Binding a resource to a memory object shared between multiple Vulkan instances or other APIs does not change the ownership of the underlying memory. The first entity to access the resource implicitly acquires ownership. An entity **can** also implicitly take ownership from another entity in the same way without an explicit ownership transfer. However, taking ownership in this way has the effect that the contents of the underlying memory are undefined.

Accessing a resource backed by memory that is owned by a particular instance or API has the same semantics as accessing a `VK_SHARING_MODE_EXCLUSIVE` resource, with one exception: Implementations **must** ensure layout transitions performed on one member of a set of identical subresources of identical images that alias the same range of an underlying memory object affect the layout of all the subresources in the set.

As a corollary, writes to any image subresources in such a set **must** not make the contents of

memory used by other subresources in the set undefined. An application **can** define the content of a subresource of one image by performing device writes to an identical subresource of another image provided both images are bound to the same region of external memory. Applications **may** also add resources to such a set after the content of the existing set members has been defined without making the content undefined by creating a new image with the initial layout `VK_IMAGE_LAYOUT_UNDEFINED` and binding it to the same region of external memory as the existing images.

NOTE

Because layout transitions apply to all identical images aliasing the same region of external memory, the actual layout of the memory backing a new image as well as an existing image with defined content will not be undefined. Such an image is not usable until it acquires ownership of its memory from the existing owner. Therefore, the layout specified as part of this transition will be the true initial layout of the image. The undefined layout specified when creating it is a placeholder to simplify valid usage requirements.

12.10. Memory Aliasing

A range of a `VkDeviceMemory` allocation is *aliased* if it is bound to multiple resources simultaneously, as described below, via `vkBindImageMemory`, `vkBindBufferMemory`, `vkBindAccelerationStructureMemoryNV`, via *sparse memory bindings*, or by binding the memory to resources in multiple Vulkan instances or external APIs using external memory handle export and import mechanisms.

Consider two resources, resource_A and resource_B , bound respectively to memory range_A and range_B. Let paddedRange_A and paddedRange_B be, respectively, range_A and range_B aligned to `bufferImageGranularity`. If the resources are both linear or both non-linear (as defined in the [Glossary](#)), then the resources *alias* the memory in the intersection of range_A and range_B. If one resource is linear and the other is non-linear, then the resources *alias* the memory in the intersection of paddedRange_A and paddedRange_B .

Applications **can** alias memory, but use of multiple aliases is subject to several constraints.

NOTE

Memory aliasing **can** be useful to reduce the total device memory footprint of an application, if some large resources are used for disjoint periods of time.

When a *non-linear*, non-`VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` image is bound to an aliased range, all image subresources of the image *overlap* the range. When a linear image is bound to an aliased range, the image subresources that (according to the image's advertised layout) include bytes from the aliased range *overlap* the range. When a `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` image has sparse image blocks bound to an aliased range, only image subresources including those sparse image blocks *overlap* the range, and when the memory bound to the image's mip tail overlaps an aliased range all image subresources in the mip tail *overlap* the range.

Buffers, and linear image subresources in either the `VK_IMAGE_LAYOUT_PREINITIALIZED` or `VK_IMAGE_LAYOUT_GENERAL` layouts, are *host-accessible subresources*. That is, the host has a well-defined addressing scheme to interpret the contents, and thus the layout of the data in memory **can** be consistently interpreted across aliases if each of those aliases is a host-accessible subresource.

Non-linear images, and linear image subresources in other layouts, are not host-accessible.

If two aliases are both host-accessible, then they interpret the contents of the memory in consistent ways, and data written to one alias **can** be read by the other alias.

If two aliases are both images that were created with identical creation parameters, both were created with the `VK_IMAGE_CREATE_ALIAS_BIT` flag set, and both are bound identically to memory except for `VkBindImageMemoryDeviceGroupInfo::pDeviceIndices` and `VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions`, then they interpret the contents of the memory in consistent ways, and data written to one alias **can** be read by the other alias.

Additionally, if an individual plane of a multi-planar image and a single-plane image alias the same memory, then they also interpret the contents of the memory in consistent ways under the same conditions, but with the following modifications:

- Both **must** have been created with the `VK_IMAGE_CREATE_DISJOINT_BIT` flag.
- The single-plane image **must** have a `VkFormat` that is **equivalent** to that of the multi-planar image's individual plane.
- The single-plane image and the individual plane of the multi-planar image **must** be bound identically to memory except for `VkBindImageMemoryDeviceGroupInfo::pDeviceIndices` and `VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions`.
- The **width** and **height** of the single-plane image are derived from the multi-planar image's dimensions in the manner listed for **plane compatibility** for the aliased plane.
- If either image's **tiling** is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then both images **must** be **linear**.
- All other creation parameters **must** be identical

Aliases created by binding the same memory to resources in multiple Vulkan instances or external APIs using external memory handle export and import mechanisms interpret the contents of the memory in consistent ways, and data written to one alias **can** be read by the other alias.

Otherwise, the aliases interpret the contents of the memory differently, and writes via one alias make the contents of memory partially or completely undefined to the other alias. If the first alias is a host-accessible subresource, then the bytes affected are those written by the memory operations according to its addressing scheme. If the first alias is not host-accessible, then the bytes affected are those overlapped by the image subresources that were written. If the second alias is a host-accessible subresource, the affected bytes become undefined. If the second alias is not host-accessible, all sparse image blocks (for sparse partially-resident images) or all image subresources (for non-sparse image and fully resident sparse images) that overlap the affected bytes become undefined.

If any image subresources are made undefined due to writes to an alias, then each of those image subresources **must** have its layout transitioned from `VK_IMAGE_LAYOUT_UNDEFINED` to a valid layout before it is used, or from `VK_IMAGE_LAYOUT_PREINITIALIZED` if the memory has been written by the host. If any sparse blocks of a sparse image have been made undefined, then only the image subresources containing them **must** be transitioned.

Use of an overlapping range by two aliases **must** be separated by a memory dependency using the

appropriate [access types](#) if at least one of those uses performs writes, whether the aliases interpret memory consistently or not. If buffer or image memory barriers are used, the scope of the barrier **must** contain the entire range and/or set of image subresources that overlap.

If two aliasing image views are used in the same framebuffer, then the render pass **must** declare the attachments using the `VK_ATTACHMENT_DESCRIPTION_MAY_ALIAS_BIT`, and follow the other rules listed in that section.

NOTE

Memory recycled via an application suballocator (i.e. without freeing and reallocating the memory objects) is not substantially different from memory aliasing. However, a suballocator usually waits on a fence before recycling a region of memory, and signaling a fence involves sufficient implicit dependencies to satisfy all the above requirements.

12.10.1. Resource Memory Overlap

Applications **can** safely access resources concurrently via separate device and host operations as long as the accessed memory locations are guaranteed to not overlap, as defined in [Memory Location](#), and the operation, resource, and access are otherwise independently valid.

Some operations have alignment requirements or access ambiguous [memory locations](#), so the semantics of a particular operation **should** be considered when determining the overlap. Such requirements will be described alongside the operation. Operations between host and device when using non-coherent memory are aligned to `nonCoherentAtomSize`, as defined by `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges`.

NOTE

The intent is that buffers (or linear images) can be accessed concurrently, even when they share cache lines, but otherwise do not access the same memory range. The concept of a device cache line size is not exposed in the memory model.

12.11. Buffer Collections

Fuchsia's FIDL-based Sysmem service interoperates with Vulkan via the `VK_FUCHSIA_buffer_collection` extension.

A buffer collection is a set of one or more buffers which were allocated together as a group and which all have the same properties. These properties describe the buffers' internal representation, such as its dimensions and memory layout. This ensures that all of the buffers can be used interchangeably by tasks that require swapping among multiple buffers, such as double-buffered graphics rendering.

On Fuchsia, the Sysmem service uses buffer collections as a core construct in its design.

Buffer collections are represented by `VkBufferCollectionFUCHSIA` handles:

```
// Provided by VK_FUCHSIA_buffer_collection
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBufferCollectionFUCHSIA)
```

12.11.1. Definitions

- FIDL - Fuchsia Interface Definition Language. The declarative language used to define FIDL interprocess communication interfaces on Fuchsia. FIDL files use the `fidl` extension. FIDL is also used to refer to the services defined by interfaces declared in the FIDL language
- Sysmem - The FIDL service that facilitates optimal buffer sharing and reuse on Fuchsia
- client - Any participant of the buffer collection e.g. the Vulkan application
- token - A `zx_handle_t` Zircon channel object that allows participation in the buffer collection

12.11.2. Platform Initialization for Buffer Collections

To initialize a buffer collection on Fuchsia:

- Connect to the Sysmem service to initialize a Sysmem allocator
- Create an initial buffer collection token using the Sysmem allocator
- Duplicate the token for each participant beyond the initiator
- See the Sysmem Overview and `fuchsia.sysmem` FIDL documentation on `fuchsia.dev` for more detailed information

12.11.3. Create the Buffer Collection

To create a `VkBufferCollectionFUCHSIA` for Vulkan to participate in the buffer collection:

```
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkCreateBufferCollectionFUCHSIA(
    VkDevice device,
    const VkBufferCollectionCreateInfoFUCHSIA* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkBufferCollectionFUCHSIA* pCollection);
```

- `device` is the logical device that creates the `VkBufferCollectionFUCHSIA`
- `pCreateInfo` is a pointer to a `VkBufferCollectionCreateInfoFUCHSIA` structure containing parameters affecting creation of the buffer collection
- `pAllocator` is a pointer to a `VkAllocationCallbacks` structure controlling host memory allocation as described in the [Memory Allocation](#) chapter
- `pBufferCollection` is a pointer to a `VkBufferCollectionFUCHSIA` handle in which the resulting buffer collection object is returned

Valid Usage (Implicit)

- VUID-vkCreateBufferCollectionFUCHSIA-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkCreateBufferCollectionFUCHSIA-pCreateInfo-parameter `pCreateInfo` **must** be a valid pointer to a valid `VkBufferCollectionCreateInfoFUCHSIA`

structure

- VUID-vkCreateBufferCollectionFUCHSIA-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- VUID-vkCreateBufferCollectionFUCHSIA-pCollection-parameter

`pCollection` **must** be a valid pointer to a `VkBufferCollectionFUCHSIA` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_INVALID_EXTERNAL_HANDLE`
- `VK_ERROR_INITIALIZATION_FAILED`

Host Access

All functions referencing a `VkBufferCollectionFUCHSIA` **must** be externally synchronized with the exception of `vkCreateBufferCollectionFUCHSIA`.

The `VkBufferCollectionCreateInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionCreateInfoFUCHSIA {
    VkStructureType    sType;
    const void*        pNext;
    zx_handle_t         collectionToken;
} VkBufferCollectionCreateInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `collectionToken` is a `zx_handle_t` containing the Systemem client's buffer collection token

Valid Usage

- VUID-VkBufferCollectionCreateInfoFUCHSIA-collectionToken-06393

`collectionToken` **must** be a valid `zx_handle_t` to a Zircon channel allocated from Systemem (`fuchsia.sysmem.Allocator/AllocateSharedCollection`) with `ZX_DEFAULT_CHANNEL_RIGHTS` rights

Valid Usage (Implicit)

- VUID-VkBufferCollectionCreateInfoFUCHSIA-sType-sType
sType **must** be VK_STRUCTURE_TYPE_BUFFER_COLLECTION_CREATE_INFO_FUCHSIA
- VUID-VkBufferCollectionCreateInfoFUCHSIA-pNext-pNext
pNext **must** be NULL

12.11.4. Set the Constraints

Buffer collections can be established for [VkImage](#) allocations or [VkBuffer](#) allocations.

Set Image-Based Buffer Collection Constraints

Setting the constraints on the buffer collection initiates the format negotiation and allocation of the buffer collection. To set the constraints on a [VkImage](#) buffer collection, call:

```
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkSetBufferCollectionImageConstraintsFUCHSIA(
    VkDevice                device,
    VkBufferCollectionFUCHSIA collection,
    const VkImageConstraintsInfoFUCHSIA* pImageConstraintsInfo);
```

- **device** is the logical device
- **collection** is the [VkBufferCollectionFUCHSIA](#) handle
- **pImageConstraintsInfo** is a pointer to a [VkImageConstraintsInfoFUCHSIA](#) structure

[vkSetBufferCollectionImageConstraintsFUCHSIA](#) **may** fail if **pImageConstraintsInfo->formatConstraintsCount** is larger than the implementation-defined limit. If that occurs, [vkSetBufferCollectionImageConstraintsFUCHSIA](#) will return **VK_ERROR_INITIALIZATION_FAILED**.

[vkSetBufferCollectionImageConstraintsFUCHSIA](#) **may** fail if the implementation does not support any of the formats described by the **pImageConstraintsInfo** structure. If that occurs, [vkSetBufferCollectionImageConstraintsFUCHSIA](#) will return **VK_ERROR_FORMAT_NOT_SUPPORTED**.

Valid Usage

- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-collection-06394
[vkSetBufferCollectionImageConstraintsFUCHSIA](#) **or**
[vkSetBufferCollectionBufferConstraintsFUCHSIA](#) **must** not have already been called on
collection

Valid Usage (Implicit)

- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-device-parameter

device must be a valid [VkDevice](#) handle

- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-collection-parameter **collection** must be a valid [VkBufferCollectionFUCHSIA](#) handle
- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-pImageConstraintsInfo-parameter **pImageConstraintsInfo** must be a valid pointer to a valid [VkImageConstraintsInfoFUCHSIA](#) structure
- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-collection-parent **collection** must have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_FORMAT_NOT_SUPPORTED](#)

The [VkImageConstraintsInfoFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkImageConstraintsInfoFUCHSIA {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                  formatConstraintsCount;
    const VkImageFormatConstraintsInfoFUCHSIA* pFormatConstraints;
    VkBufferCollectionConstraintsInfoFUCHSIA  bufferCollectionConstraints;
    VkImageConstraintsInfoFlagsFUCHSIA        flags;
} VkImageConstraintsInfoFUCHSIA;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **formatConstraintsCount** is the number of elements in **pFormatConstraints**.
- **pFormatConstraints** is a pointer to an array of [VkImageFormatConstraintsInfoFUCHSIA](#) structures of size **formatConstraintsCount** that is used to further constrain buffer collection format selection for image-based buffer collections.
- **bufferCollectionConstraints** is a [VkBufferCollectionConstraintsInfoFUCHSIA](#) structure used to supply parameters for the negotiation and allocation for buffer-based buffer collections.
- **flags** is a [VkImageConstraintsInfoFlagBitsFUCHSIA](#) value specifying hints about the type of memory System should allocate for the buffer collection.

Valid Usage

- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06395
All elements of `pFormatConstraints` **must** have at least one bit set in its `VkImageFormatConstraintsInfoFUCHSIA::requiredFormatFeatures`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06396
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_SAMPLED_BIT`, then `pFormatConstraints->requiredFormatFeatures` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06397
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_STORAGE_BIT`, then `pFormatConstraints->requiredFormatFeatures` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06398
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, then `pFormatConstraints->requiredFormatFeatures` **must** contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06399
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, then `pFormatConstraints->requiredFormatFeatures` **must** contain `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06400
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, then `pFormatConstraints->requiredFormatFeatures` **must** contain at least one of `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
- VUID-VkImageConstraintsInfoFUCHSIA-attachmentFragmentShadingRate-06401
If the `attachmentFragmentShadingRate` feature is enabled, and `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, then `pFormatConstraints->requiredFormatFeatures` **must** contain `VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

Valid Usage (Implicit)

- VUID-VkImageConstraintsInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_CONSTRAINTS_INFO_FUCHSIA`
- VUID-VkImageConstraintsInfoFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-parameter
`pFormatConstraints` **must** be a valid pointer to an array of `formatConstraintsCount` valid `VkImageFormatConstraintsInfoFUCHSIA` structures

- VUID-VkImageConstraintsInfoFUCHSIA-bufferCollectionConstraints-parameter **bufferCollectionConstraints** **must** be a valid [VkBufferCollectionConstraintsInfoFUCHSIA](#) structure
- VUID-VkImageConstraintsInfoFUCHSIA-flags-parameter **flags** **must** be a valid combination of [VkImageConstraintsInfoFlagBitsFUCHSIA](#) values
- VUID-VkImageConstraintsInfoFUCHSIA-formatConstraintsCount-arraylength **formatConstraintsCount** **must** be greater than 0

```
// Provided by VK_FUCHSIA_buffer_collection
typedef VkFlags VkImageConstraintsInfoFlagsFUCHSIA;
```

[VkImageConstraintsInfoFlagsFUCHSIA](#) is a bitmask type for setting a mask of zero or more [VkImageConstraintsInfoFlagBitsFUCHSIA](#) bits.

Bits which **can** be set in [VkImageConstraintsInfoFlagBitsFUCHSIA::flags](#) include:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef enum VkImageConstraintsInfoFlagBitsFUCHSIA {
    VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_RARELY_FUCHSIA = 0x00000001,
    VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_OFTEN_FUCHSIA = 0x00000002,
    VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_RARELY_FUCHSIA = 0x00000004,
    VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_OFTEN_FUCHSIA = 0x00000008,
    VK_IMAGE_CONSTRAINTS_INFO_PROTECTED_OPTIONAL_FUCHSIA = 0x00000010,
} VkImageConstraintsInfoFlagBitsFUCHSIA;
```

General hints about the type of memory that should be allocated by System based on the expected usage of the images in the buffer collection include:

- [VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_RARELY_FUCHSIA](#)
- [VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_OFTEN_FUCHSIA](#)
- [VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_RARELY_FUCHSIA](#)
- [VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_OFTEN_FUCHSIA](#)

For protected memory:

- [VK_IMAGE_CONSTRAINTS_INFO_PROTECTED_OPTIONAL_FUCHSIA](#) specifies that protected memory is optional for the buffer collection.

Note that if all participants in the buffer collection (Vulkan or otherwise) specify that protected memory is optional, System will not allocate protected memory.

The [VkImageFormatConstraintsInfoFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkImageFormatConstraintsInfoFUCHSIA {
    VkStructureType          sType;
    const void*              pNext;
    VkImageCreateInfo        imageCreateInfo;
    VkFormatFeatureFlags     requiredFormatFeatures;
    VkImageFormatConstraintsFlagsFUCHSIA flags;
    uint64_t                 systemPixelFormat;
    uint32_t                 colorSpaceCount;
    const VkSystemColorSpaceFUCHSIA* pColorSpaces;
} VkImageFormatConstraintsInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `imageCreateInfo` is the `VkImageCreateInfo` used to create a `VkImage` that is to use memory from the `VkBufferCollectionFUCHSIA`
- `requiredFormatFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying required features of the buffers in the buffer collection
- `flags` is reserved for future use
- `systemPixelFormat` is a `PixelFormatType` value from the `fuchsia.system/image_formats.fidl` FIDL interface
- `colorSpaceCount` the element count of `pColorSpaces`
- `pColorSpaces` is a pointer to an array of `VkSystemColorSpaceFUCHSIA` structs of size `colorSpaceCount`

Valid Usage (Implicit)

- VUID-VkImageFormatConstraintsInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_FORMAT_CONSTRAINTS_INFO_FUCHSIA`
- VUID-VkImageFormatConstraintsInfoFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageFormatConstraintsInfoFUCHSIA-imageCreateInfo-parameter
`imageCreateInfo` **must** be a valid `VkImageCreateInfo` structure
- VUID-VkImageFormatConstraintsInfoFUCHSIA-requiredFormatFeatures-parameter
`requiredFormatFeatures` **must** be a valid combination of `VkFormatFeatureFlagBits` values
- VUID-VkImageFormatConstraintsInfoFUCHSIA-requiredFormatFeatures-requiredbitmask
`requiredFormatFeatures` **must** not be `0`
- VUID-VkImageFormatConstraintsInfoFUCHSIA-flags-zero bitmask
`flags` **must** be `0`
- VUID-VkImageFormatConstraintsInfoFUCHSIA-pColorSpaces-parameter
`pColorSpaces` **must** be a valid pointer to an array of `colorSpaceCount` valid `VkSystemColorSpaceFUCHSIA` structures

- VUID-VkImageFormatConstraintsInfoFUCHSIA-colorSpaceCount-arraylength `colorSpaceCount` **must** be greater than 0

```
// Provided by VK_FUCHSIA_buffer_collection
typedef VkFlags VkImageFormatConstraintsFlagsFUCHSIA;
```

`VkImageFormatConstraintsFlagsFUCHSIA` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkBufferCollectionConstraintsInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionConstraintsInfoFUCHSIA {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           minBufferCount;
    uint32_t           maxBufferCount;
    uint32_t           minBufferCountForCamping;
    uint32_t           minBufferCountForDedicatedSlack;
    uint32_t           minBufferCountForSharedSlack;
} VkBufferCollectionConstraintsInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `minBufferCount` is the minimum number of buffers available in the collection
- `maxBufferCount` is the maximum number of buffers allowed in the collection
- `minBufferCountForCamping` is the per-participant minimum buffers for camping
- `minBufferCountForDedicatedSlack` is the per-participant minimum buffers for dedicated slack
- `minBufferCountForSharedSlack` is the per-participant minimum buffers for shared slack

System uses all buffer count parameters in combination to determine the number of buffers it will allocate. System defines buffer count constraints in `fuchsia.sysmem/constraints.fidl`.

Camping as referred to by `minBufferCountForCamping`, is the number of buffers that should be available for the participant that are not for transient use. This number of buffers is required for the participant to logically operate.

Slack as referred to by `minBufferCountForDedicatedSlack` and `minBufferCountForSharedSlack`, refers to the number of buffers desired by participants for optimal performance. `minBufferCountForDedicatedSlack` refers to the current participant. `minBufferCountForSharedSlack` refers to buffer slack for all participants in the collection.

Valid Usage (Implicit)

- VUID-VkBufferCollectionConstraintsInfoFUCHSIA-sType-sType
sType must be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_CONSTRAINTS_INFO_FUCHSIA`
- VUID-VkBufferCollectionConstraintsInfoFUCHSIA-pNext-pNext
pNext must be `NULL`

The `VkSystemColorSpaceFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkSystemColorSpaceFUCHSIA {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           colorSpace;
} VkSystemColorSpaceFUCHSIA;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure
- **colorSpace** value of the System `ColorSpaceType`

Valid Usage

- VUID-VkSystemColorSpaceFUCHSIA-colorSpace-06402
colorSpace must be a `ColorSpaceType` as defined in `fuchsia.system/image_formats.fidl`

Valid Usage (Implicit)

- VUID-VkSystemColorSpaceFUCHSIA-sType-sType
sType must be `VK_STRUCTURE_TYPE_SYSMEM_COLOR_SPACE_FUCHSIA`
- VUID-VkSystemColorSpaceFUCHSIA-pNext-pNext
pNext must be `NULL`

Set Buffer-Based Buffer Collection Constraints

To set the constraints on a `VkBuffer` buffer collection, call:

```
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkSetBufferCollectionBufferConstraintsFUCHSIA(
    VkDevice                device,
    VkBufferCollectionFUCHSIA collection,
    const VkBufferConstraintsInfoFUCHSIA* pBufferConstraintsInfo);
```

- `device` is the logical device
- `collection` is the `VkBufferCollectionFUCHSIA` handle
- `pBufferConstraintsInfo` is a pointer to a `VkBufferConstraintsInfoFUCHSIA` structure

`vkSetBufferCollectionBufferConstraintsFUCHSIA` **may** fail if the implementation does not support the constraints specified in the `bufferCollectionConstraints` structure. If that occurs, `vkSetBufferCollectionBufferConstraintsFUCHSIA` will return `VK_ERROR_FORMAT_NOT_SUPPORTED`.

Valid Usage

- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-collection-06403
`vkSetBufferCollectionImageConstraintsFUCHSIA` or
`vkSetBufferCollectionBufferConstraintsFUCHSIA` **must** not have already been called on `collection`

Valid Usage (Implicit)

- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-collection-parameter
`collection` **must** be a valid `VkBufferCollectionFUCHSIA` handle
- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-pBufferConstraintsInfo-parameter
`pBufferConstraintsInfo` **must** be a valid pointer to a valid `VkBufferConstraintsInfoFUCHSIA` structure
- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-collection-parent
`collection` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_FORMAT_NOT_SUPPORTED`

The `VkBufferConstraintsInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferConstraintsInfoFUCHSIA {
    VkStructureType          sType;
    const void*              pNext;
    VkBufferCreateInfo        createInfo;
    VkFormatFeatureFlags      requiredFormatFeatures;
    VkBufferCollectionConstraintsInfoFUCHSIA bufferCollectionConstraints;
} VkBufferConstraintsInfoFUCHSIA;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure
- **pBufferCreateInfo** a pointer to a [VkBufferCreateInfo](#) struct describing the buffer attributes for the buffer collection
- **requiredFormatFeatures** bitmask of [VkFormatFeatureFlagBits](#) required features of the buffers in the buffer collection
- **bufferCollectionConstraints** is used to supply parameters for the negotiation and allocation of the buffer collection

Valid Usage

- VUID-VkBufferConstraintsInfoFUCHSIA-requiredFormatFeatures-06404
The **requiredFormatFeatures** bitmask of [VkFormatFeatureFlagBits](#) **must** be chosen from among the buffer compatible format features listed in [buffer compatible format features](#)

Valid Usage (Implicit)

- VUID-VkBufferConstraintsInfoFUCHSIA-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_BUFFER_CONSTRAINTS_INFO_FUCHSIA](#)
- VUID-VkBufferConstraintsInfoFUCHSIA-pNext-pNext
pNext **must** be **NULL**
- VUID-VkBufferConstraintsInfoFUCHSIA-createInfo-parameter
createInfo **must** be a valid [VkBufferCreateInfo](#) structure
- VUID-VkBufferConstraintsInfoFUCHSIA-requiredFormatFeatures-parameter
requiredFormatFeatures **must** be a valid combination of [VkFormatFeatureFlagBits](#) values
- VUID-VkBufferConstraintsInfoFUCHSIA-bufferCollectionConstraints-parameter
bufferCollectionConstraints **must** be a valid [VkBufferCollectionConstraintsInfoFUCHSIA](#) structure

12.11.5. Retrieve Buffer Collection Properties

After constraints have been set on the buffer collection by calling [vkSetBufferCollectionImageConstraintsFUCHSIA](#) or

`vkSetBufferCollectionBufferConstraintsFUCHSIA`, call `vkGetBufferCollectionPropertiesFUCHSIA` to retrieve the negotiated and finalized properties of the buffer collection.

The call to `vkGetBufferCollectionPropertiesFUCHSIA` is synchronous. It waits for the System format negotiation and buffer collection allocation to complete before returning.

```
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkGetBufferCollectionPropertiesFUCHSIA(
    VkDevice          device,
    VkBufferCollectionFUCHSIA collection,
    VkBufferCollectionPropertiesFUCHSIA* pProperties);
```

- `device` is the logical device handle
- `collection` is the `VkBufferCollectionFUCHSIA` handle
- `pProperties` is a pointer to the retrieved `VkBufferCollectionPropertiesFUCHSIA` struct

For image-based buffer collections, upon calling `vkGetBufferCollectionPropertiesFUCHSIA`, System will choose an element of the `VkImageConstraintsInfoFUCHSIA::pImageCreateInfos` established by the preceding call to `vkSetBufferCollectionImageConstraintsFUCHSIA`. The index of the element chosen is stored in and can be retrieved from `VkBufferCollectionPropertiesFUCHSIA::createInfoIndex`.

For buffer-based buffer collections, a single `VkBufferCreateInfo` is specified as `VkBufferConstraintsInfoFUCHSIA::createInfo`. `VkBufferCollectionPropertiesFUCHSIA::createInfoIndex` will therefore always be zero.

`vkGetBufferCollectionPropertiesFUCHSIA` **may** fail if System is unable to resolve the constraints of all of the participants in the buffer collection. If that occurs, `vkGetBufferCollectionPropertiesFUCHSIA` will return `VK_ERROR_INITIALIZATION_FAILED`.

Valid Usage

- VUID-vkGetBufferCollectionPropertiesFUCHSIA-None-06405
Prior to calling `vkGetBufferCollectionPropertiesFUCHSIA`, the constraints on the buffer collection **must** have been set by either `vkSetBufferCollectionImageConstraintsFUCHSIA` or `vkSetBufferCollectionBufferConstraintsFUCHSIA`

Valid Usage (Implicit)

- VUID-vkGetBufferCollectionPropertiesFUCHSIA-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetBufferCollectionPropertiesFUCHSIA-collection-parameter
`collection` **must** be a valid `VkBufferCollectionFUCHSIA` handle
- VUID-vkGetBufferCollectionPropertiesFUCHSIA-pProperties-parameter
`pProperties` **must** be a valid pointer to a `VkBufferCollectionPropertiesFUCHSIA` structure

- VUID-vkGetBufferCollectionPropertiesFUCHSIA-collection-parent **collection** must have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_INITIALIZATION_FAILED**

The **VkBufferCollectionPropertiesFUCHSIA** structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionPropertiesFUCHSIA {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             memoryTypeBits;
    uint32_t             bufferCount;
    uint32_t             createInfoIndex;
    uint64_t             systemPixelFormat;
    VkFormatFeatureFlags formatFeatures;
    VkSystemColorSpaceFUCHSIA systemColorSpaceIndex;
    VkComponentMapping    samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange    suggestedYcbcrRange;
    VkChromaLocation       suggestedXChromaOffset;
    VkChromaLocation       suggestedYChromaOffset;
} VkBufferCollectionPropertiesFUCHSIA;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure
- **memoryTypeBits** is a bitmask containing one bit set for every memory type which the buffer collection can be imported as buffer collection
- **bufferCount** is the number of buffers in the collection
- **createInfoIndex** as described in [Systemem chosen create infos](#)
- **systemPixelFormat** is the **System PixelFormatType** as defined in [fuchsia.system/image_formats.fidl](#)
- **formatFeatures** is a bitmask of **VkFormatFeatureFlagBits** shared by the buffer collection
- **systemColorSpaceIndex** is a **VkSystemColorSpaceFUCHSIA** struct specifying the color space
- **samplerYcbcrConversionComponents** is a **VkComponentMapping** struct specifying the component mapping

- `suggestedYcbcrModel` is a `VkSamplerYcbcrModelConversion` value specifying the suggested Y'C_BC_R model
- `suggestedYcbcrRange` is a `VkSamplerYcbcrRange` value specifying the suggested Y'C_BC_R range
- `suggestedXChromaOffset` is a `VkChromaLocation` value specifying the suggested X chroma offset
- `suggestedYChromaOffset` is a `VkChromaLocation` value specifying the suggested Y chroma offset

`systemColorSpace` is only set for image-based buffer collections where the constraints were specified using `VkImageConstraintsInfoFUCHSIA` in a call to `vkSetBufferCollectionImageConstraintsFUCHSIA`.

For image-based buffer collections, `createInfoIndex` will identify both the `VkImageConstraintsInfoFUCHSIA::pImageCreateInfos` element and the `VkImageConstraintsInfoFUCHSIA::pFormatConstraints` element chosen by System when `vkSetBufferCollectionImageConstraintsFUCHSIA` was called. The value of `systemColorSpaceIndex` will be an index to one of the color spaces provided in the `VkImageFormatConstraintsInfoFUCHSIA::pColorSpaces` array.

The implementation **must** have `formatFeatures` with all bits set that were set in `VkImageFormatConstraintsInfoFUCHSIA::requiredFormatFeatures`, by the call to `vkSetBufferCollectionImageConstraintsFUCHSIA`, at `createInfoIndex` (other bits could be set as well).

Valid Usage (Implicit)

- VUID-VkBufferCollectionPropertiesFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_PROPERTIES_FUCHSIA`
- VUID-VkBufferCollectionPropertiesFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`

12.11.6. Memory Allocation

To import memory from a buffer collection into a `VkImage` or a `VkBuffer`, chain a `VkImportMemoryBufferCollectionFUCHSIA` structure to the `pNext` member of the `VkMemoryAllocateInfo` in the call to `vkAllocateMemory`.

The `VkImportMemoryBufferCollectionFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkImportMemoryBufferCollectionFUCHSIA {
    VkStructureType    sType;
    const void*        pNext;
    VkBufferCollectionFUCHSIA collection;
    uint32_t           index;
} VkImportMemoryBufferCollectionFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure

- **collection** is the [VkBufferCollectionFUCHSIA](#) handle
- **index** the index of the buffer to import from **collection**

Valid Usage

- VUID-VkImportMemoryBufferCollectionFUCHSIA-index-06406
index **must** be less than the value retrieved as [VkBufferCollectionPropertiesFUCHSIA:bufferCount](#)

Valid Usage (Implicit)

- VUID-VkImportMemoryBufferCollectionFUCHSIA-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IMPORT_MEMORY_BUFFER_COLLECTION_FUCHSIA](#)
- VUID-VkImportMemoryBufferCollectionFUCHSIA-collection-parameter
collection **must** be a valid [VkBufferCollectionFUCHSIA](#) handle

To release a [VkBufferCollectionFUCHSIA](#):

```
// Provided by VK_FUCHSIA_buffer_collection
void vkDestroyBufferCollectionFUCHSIA(
    VkDevice                device,
    VkBufferCollectionFUCHSIA collection,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that creates the [VkBufferCollectionFUCHSIA](#)
- **collection** is the [VkBufferCollectionFUCHSIA](#) handle
- **pAllocator** is a pointer to a [VkAllocationCallbacks](#) structure controlling host memory allocation as described in the [Memory Allocation](#) chapter

Valid Usage

- VUID-vkDestroyBufferCollectionFUCHSIA-collection-06407
[VkImage](#) and [VkBuffer](#) objects that referenced **collection** upon creation by inclusion of a [VkBufferCollectionImageCreateInfoFUCHSIA](#) or [VkBufferCollectionBufferCreateInfoFUCHSIA](#) chained to their [VkImageCreateInfo](#) or [VkBufferCreateInfo](#) structures respectively, **may** outlive **collection**

Valid Usage (Implicit)

- VUID-vkDestroyBufferCollectionFUCHSIA-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyBufferCollectionFUCHSIA-collection-parameter

collection must be a valid [VkBufferCollectionFUCHSIA](#) handle

- VUID-vkDestroyBufferCollectionFUCHSIA-pAllocator-parameter

If **pAllocator** is not **NULL**, **pAllocator** must be a valid pointer to a valid [VkAllocationCallbacks](#) structure

- VUID-vkDestroyBufferCollectionFUCHSIA-collection-parent

collection must have been created, allocated, or retrieved from **device**

Chapter 13. Samplers

VkSampler objects represent the state of an image sampler which is used by the implementation to read image data and apply filtering and other transformations for the shader.

Samplers are represented by **VkSampler** handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSampler)
```

To create a sampler object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateSampler(
    VkDevice                                device,
    const VkSamplerCreateInfo*              pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkSampler*                              pSampler);
```

- **device** is the logical device that creates the sampler.
- **pCreateInfo** is a pointer to a **VkSamplerCreateInfo** structure specifying the state of the sampler object.
- **pAllocator** controls host memory allocation as described in the **Memory Allocation** chapter.
- **pSampler** is a pointer to a **VkSampler** handle in which the resulting sampler object is returned.

Valid Usage

- VUID-vkCreateSampler-device-09668
device **must** support at least one queue family with one of the **VK_QUEUE_COMPUTE_BIT** or **VK_QUEUE_GRAPHICS_BIT** capabilities
- VUID-vkCreateSampler-maxSamplerAllocationCount-04110
There **must** be less than **VkPhysicalDeviceLimits::maxSamplerAllocationCount** **VkSampler** objects currently created on the device

Valid Usage (Implicit)

- VUID-vkCreateSampler-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkCreateSampler-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid **VkSamplerCreateInfo** structure
- VUID-vkCreateSampler-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid

[VkAllocationCallbacks](#) structure

- VUID-vkCreateSampler-pSampler-parameter
[pSampler](#) **must** be a valid pointer to a [VkSampler](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR](#)

The [VkSamplerCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSamplerCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkSamplerCreateFlags  flags;
    VkFilter              magFilter;
    VkFilter              minFilter;
    VkSamplerMipmapMode   mipmapMode;
    VkSamplerAddressMode   addressModeU;
    VkSamplerAddressMode   addressModeV;
    VkSamplerAddressMode   addressModeW;
    float                 mipLodBias;
    VkBool32              anisotropyEnable;
    float                 maxAnisotropy;
    VkBool32              compareEnable;
    VkCompareOp           compareOp;
    float                 minLod;
    float                 maxLod;
    VkBorderColor          borderColor;
    VkBool32              unnormalizedCoordinates;
} VkSamplerCreateInfo;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkSamplerCreateFlagBits](#) describing additional parameters of the sampler.
- [magFilter](#) is a [VkFilter](#) value specifying the magnification filter to apply to lookups.
- [minFilter](#) is a [VkFilter](#) value specifying the minification filter to apply to lookups.
- [mipmapMode](#) is a [VkSamplerMipmapMode](#) value specifying the mipmap filter to apply to lookups.

- `addressModeU` is a `VkSamplerAddressMode` value specifying the addressing mode for U coordinates outside [0,1).
- `addressModeV` is a `VkSamplerAddressMode` value specifying the addressing mode for V coordinates outside [0,1).
- `addressModeW` is a `VkSamplerAddressMode` value specifying the addressing mode for W coordinates outside [0,1).
- `mipLodBias` is the bias to be added to mipmap LOD calculation and bias provided by image sampling functions in SPIR-V, as described in the [LOD Operation](#) section.
- `anisotropyEnable` is `VK_TRUE` to enable anisotropic filtering, as described in the [Texel Anisotropic Filtering](#) section, or `VK_FALSE` otherwise.
- `maxAnisotropy` is the anisotropy value clamp used by the sampler when `anisotropyEnable` is `VK_TRUE`. If `anisotropyEnable` is `VK_FALSE`, `maxAnisotropy` is ignored.
- `compareEnable` is `VK_TRUE` to enable comparison against a reference value during lookups, or `VK_FALSE` otherwise.
 - Note: Some implementations will default to shader state if this member does not match.
- `compareOp` is a `VkCompareOp` value specifying the comparison operator to apply to fetched data before filtering as described in the [Depth Compare Operation](#) section.
- `minLod` is used to clamp the [minimum of the computed LOD value](#).
- `maxLod` is used to clamp the [maximum of the computed LOD value](#). To avoid clamping the maximum value, set `maxLod` to the constant `VK_LOD_CLAMP_NONE`.
- `borderColor` is a `VkBorderColor` value specifying the predefined border color to use.
- `unnormalizedCoordinates` controls whether to use unnormalized or normalized texel coordinates to address texels of the image. When `unnormalizedCoordinates` is `VK_TRUE`, the range of the image coordinates used to lookup the texel is in the range of zero to the image size in each dimension. When `unnormalizedCoordinates` is `VK_FALSE`, the range of image coordinates is zero to one.

When `unnormalizedCoordinates` is `VK_TRUE`, images the sampler is used with in the shader have the following requirements:

- The `viewType` **must** be either `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`.
- The image view **must** have a single layer and a single mip level.

When `unnormalizedCoordinates` is `VK_TRUE`, image built-in functions in the shader that use the sampler have the following requirements:

- The functions **must** not use projection.
- The functions **must** not use offsets.

NOTE

Mapping of OpenGL to Vulkan Filter Modes

`magFilter` values of `VK_FILTER_NEAREST` and `VK_FILTER_LINEAR` directly correspond to `GL_NEAREST` and `GL_LINEAR` magnification filters. `minFilter` and `mipmapMode` combine to correspond to the similarly named OpenGL minification filter of `GL_minFilter_MIPMAP_mipmapMode` (e.g. `minFilter` of `VK_FILTER_LINEAR` and `mipmapMode` of

`VK_SAMPLER_MIPMAP_MODE_NEAREST` correspond to `GL_LINEAR_MIPMAP_NEAREST`).

There are no Vulkan filter modes that directly correspond to OpenGL minification filters of `GL_LINEAR` or `GL_NEAREST`, but they **can** be emulated using `VK_SAMPLER_MIPMAP_MODE_NEAREST`, `minLod = 0`, and `maxLod = 0.25`, and using `minFilter = VK_FILTER_LINEAR` or `minFilter = VK_FILTER_NEAREST`, respectively.

Note that using a `maxLod` of zero would cause **magnification** to always be performed, and the `magFilter` to always be used. This is valid, just not an exact match for OpenGL behavior. Clamping the maximum LOD to 0.25 allows the λ value to be non-zero and minification to be performed, while still always rounding down to the base level. If the `minFilter` and `magFilter` are equal, then using a `maxLod` of zero also works.

The maximum number of sampler objects which **can** be simultaneously created on a device is implementation-dependent and specified by the `maxSamplerAllocationCount` member of the `VkPhysicalDeviceLimits` structure.

NOTE

For historical reasons, if `maxSamplerAllocationCount` is exceeded, some implementations may return `VK_ERROR_TOO_MANY_OBJECTS`. Exceeding this limit will result in undefined behavior, and an application should not rely on the use of the returned error code in order to identify when the limit is reached.

Since `VkSampler` is a non-dispatchable handle type, implementations **may** return the same handle for sampler state vectors that are identical. In such cases, all such objects would only count once against the `maxSamplerAllocationCount` limit.

Valid Usage

- VUID-VkSamplerCreateInfo-mipLodBias-01069
The absolute value of `mipLodBias` **must** be less than or equal to `VkPhysicalDeviceLimits::maxSamplerLodBias`
- VUID-VkSamplerCreateInfo-samplerMipLodBias-04467
If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::samplerMipLodBias` is `VK_FALSE`, `mipLodBias` **must** be zero
- VUID-VkSamplerCreateInfo-maxLod-01973
`maxLod` **must** be greater than or equal to `minLod`
- VUID-VkSamplerCreateInfo-anisotropyEnable-01070
If the `samplerAnisotropy` feature is not enabled, `anisotropyEnable` **must** be `VK_FALSE`
- VUID-VkSamplerCreateInfo-anisotropyEnable-01071
If `anisotropyEnable` is `VK_TRUE`, `maxAnisotropy` **must** be between `1.0` and `VkPhysicalDeviceLimits::maxSamplerAnisotropy`, inclusive
- VUID-VkSamplerCreateInfo-minFilter-01645
If `sampler YCBCR conversion` is enabled and the `potential format features` of the sampler `YCBCR` conversion do not support

VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT, minFilter and magFilter **must** be equal to the sampler Y'C_BC_R conversion's chromaFilter

- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01072
If unnormalizedCoordinates is VK_TRUE, minFilter and magFilter **must** be equal
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01073
If unnormalizedCoordinates is VK_TRUE, mipmapMode **must** be VK_SAMPLER_MIPMAP_MODE_NEAREST
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01074
If unnormalizedCoordinates is VK_TRUE, minLod and maxLod **must** be zero
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01075
If unnormalizedCoordinates is VK_TRUE, addressModeU and addressModeV **must** each be either VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE or VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01076
If unnormalizedCoordinates is VK_TRUE, anisotropyEnable **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01077
If unnormalizedCoordinates is VK_TRUE, compareEnable **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-addressModeU-01078
If any of addressModeU, addressModeV or addressModeW are VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER, borderColor **must** be a valid VkBorderColor value
- VUID-VkSamplerCreateInfo-addressModeU-01646
If sampler Y'C_BC_R conversion is enabled, addressModeU, addressModeV, and addressModeW **must** be VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, anisotropyEnable **must** be VK_FALSE, and unnormalizedCoordinates **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-None-01647
If sampler Y'C_BC_R conversion is enabled and the pNext chain includes a VkSamplerReductionModeCreateInfo structure, then the sampler reduction mode **must** be VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE
- VUID-VkSamplerCreateInfo-pNext-06726
If samplerFilterMinmax is not enabled and the pNext chain includes a VkSamplerReductionModeCreateInfo structure, then the sampler reduction mode **must** be VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE
- VUID-VkSamplerCreateInfo-addressModeU-01079
If samplerMirrorClampToEdge is not enabled, and if the VK_KHR_sampler_mirror_clamp_to_edge extension is not enabled, addressModeU, addressModeV and addressModeW **must** not be VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE
- VUID-VkSamplerCreateInfo-compareEnable-01080
If compareEnable is VK_TRUE, compareOp **must** be a valid VkCompareOp value
- VUID-VkSamplerCreateInfo-magFilter-01081
If either magFilter or minFilter is VK_FILTER_CUBIC_EXT, anisotropyEnable **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-magFilter-07911
If the VK_EXT_filter_cubic extension is not enabled and either magFilter or minFilter is VK_FILTER_CUBIC_IMG, the reductionMode member of VkSamplerReductionModeCreateInfo

must be `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`

- VUID-VkSamplerCreateInfo-compareEnable-01423

If `compareEnable` is `VK_TRUE`, the `reductionMode` member of `VkSamplerReductionModeCreateInfo` **must** be `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`

- VUID-VkSamplerCreateInfo-flags-02574

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `minFilter` and `magFilter` **must** be equal

- VUID-VkSamplerCreateInfo-flags-02575

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `mipmapMode` **must** be `VK_SAMPLER_MIPMAP_MODE_NEAREST`

- VUID-VkSamplerCreateInfo-flags-02576

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `minLod` and `maxLod` **must** be zero

- VUID-VkSamplerCreateInfo-flags-02577

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `addressModeU` and `addressModeV` **must** each be either `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE` or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER`

- VUID-VkSamplerCreateInfo-flags-02578

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `anisotropyEnable` **must** be `VK_FALSE`

- VUID-VkSamplerCreateInfo-flags-02579

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `compareEnable` **must** be `VK_FALSE`

- VUID-VkSamplerCreateInfo-flags-02580

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `unnormalizedCoordinates` **must** be `VK_FALSE`

- VUID-VkSamplerCreateInfo-nonSeamlessCubeMap-06788

If the `nonSeamlessCubeMap` feature is not enabled, `flags` **must** not include `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT`

- VUID-VkSamplerCreateInfo-borderColor-04011

If `borderColor` is one of `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`, then a `VkSamplerCustomBorderColorCreateInfoEXT` **must** be included in the `pNext` chain

- VUID-VkSamplerCreateInfo-customBorderColors-04085

If the `customBorderColors` feature is not enabled, `borderColor` **must** not be `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`

- VUID-VkSamplerCreateInfo-borderColor-04442

If `borderColor` is one of `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`, and `VkSamplerCustomBorderColorCreateInfoEXT::format` is not `VK_FORMAT_UNDEFINED`, `VkSamplerCustomBorderColorCreateInfoEXT::customBorderColor` **must** be within the range of values representable in `format`

- VUID-VkSamplerCreateInfo-None-04012

The maximum number of samplers with custom border colors which **can** be simultaneously created on a device is implementation-dependent and specified by the `maxCustomBorderColorSamplers` member of the `VkPhysicalDeviceCustomBorderColorPropertiesEXT` structure

- VUID-VkSamplerCreateInfo-flags-08110
If `flags` includes `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-VkSamplerCreateInfo-pNext-08111
If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `flags` **must** contain `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`
- VUID-VkSamplerCreateInfo-flags-06964
If `flags` includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then `minFilter` and `magFilter` **must** be `VK_FILTER_NEAREST`
- VUID-VkSamplerCreateInfo-flags-06965
If `flags` includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then `mipmapMode` **must** be `VK_SAMPLER_MIPMAP_MODE_NEAREST`
- VUID-VkSamplerCreateInfo-flags-06966
[If `flags` includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then `minLod` and `maxLod` **must** be zero
- VUID-VkSamplerCreateInfo-flags-06967
If `flags` includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then `addressModeU` and `addressModeV` **must** each be either `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE` or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER`
- VUID-VkSamplerCreateInfo-flags-06968
If `flags` includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, and if `addressModeU` or `addressModeV` is `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER`, then `borderColor` **must** be `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`
- VUID-VkSamplerCreateInfo-flags-06969
If `flags` includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then `anisotropyEnable` **must** be `VK_FALSE`
- VUID-VkSamplerCreateInfo-flags-06970
If `flags` includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then `compareEnable` **must** be `VK_FALSE`

Valid Usage (Implicit)

- VUID-VkSamplerCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SAMPLER_CREATE_INFO`
- VUID-VkSamplerCreateInfo-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkOpaqueCaptureDescriptorDataCreateInfoEXT`, `VkSamplerBlockMatchWindowCreateInfoQCOM`, `VkSamplerBorderColorComponentMappingCreateInfoEXT`,

[VkSamplerCubicWeightsCreateInfoQCOM](#), [VkSamplerCustomBorderColorCreateInfoEXT](#), [VkSamplerReductionModeCreateInfo](#), or [VkSamplerYcbcrConversionInfo](#)

- VUID-VkSamplerCreateInfo-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique
- VUID-VkSamplerCreateInfo-flags-parameter
flags **must** be a valid combination of [VkSamplerCreateFlagBits](#) values
- VUID-VkSamplerCreateInfo-magFilter-parameter
magFilter **must** be a valid [VkFilter](#) value
- VUID-VkSamplerCreateInfo-minFilter-parameter
minFilter **must** be a valid [VkFilter](#) value
- VUID-VkSamplerCreateInfo-mipmapMode-parameter
mipmapMode **must** be a valid [VkSamplerMipmapMode](#) value
- VUID-VkSamplerCreateInfo-addressModeU-parameter
addressModeU **must** be a valid [VkSamplerAddressMode](#) value
- VUID-VkSamplerCreateInfo-addressModeV-parameter
addressModeV **must** be a valid [VkSamplerAddressMode](#) value
- VUID-VkSamplerCreateInfo-addressModeW-parameter
addressModeW **must** be a valid [VkSamplerAddressMode](#) value

VK_LOD_CLAMP_NONE is a special constant value used for [VkSamplerCreateInfo::maxLod](#) to indicate that maximum LOD clamping should not be performed.

```
#define VK_LOD_CLAMP_NONE 1000.0F
```

Bits which **can** be set in [VkSamplerCreateInfo::flags](#), specifying additional parameters of a sampler, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSamplerCreateFlagBits {
    // Provided by VK_EXT_fragment_density_map
    VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT = 0x00000001,
    // Provided by VK_EXT_fragment_density_map
    VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT = 0x00000002,
    // Provided by VK_EXT_descriptor_buffer
    VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000008,
    // Provided by VK_EXT_non_seamless_cube_map
    VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT = 0x00000004,
    // Provided by VK_QCOM_image_processing
    VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM = 0x00000010,
} VkSamplerCreateFlagBits;
```

- **VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT** specifies that the sampler will read from an image created with **flags** containing **VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT**.

- `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT` specifies that the implementation **may** use approximations when reconstructing a full color value for texture access from a subsampled image.
- `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT` specifies that [cube map edge handling](#) is not performed.
- `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM` specifies that the sampler will read from images using only `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM`.

NOTE

The approximations used when `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT` is specified are implementation defined. Some implementations **may** interpolate between fragment density levels in a subsampled image. In that case, this bit **may** be used to decide whether the interpolation factors are calculated per fragment or at a coarser granularity.

- `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` specifies that the sampler **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSamplerCreateFlags;
```

`VkSamplerCreateFlags` is a bitmask type for setting a mask of zero or more [VkSamplerCreateFlagBits](#).

The `VkSamplerReductionModeCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkSamplerReductionModeCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkSamplerReductionMode    reductionMode;
} VkSamplerReductionModeCreateInfo;
```

or the equivalent

```
// Provided by VK_EXT_sampler_filter_minmax
typedef VkSamplerReductionModeCreateInfo VkSamplerReductionModeCreateInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `reductionMode` is a [VkSamplerReductionMode](#) value controlling how texture filtering combines texel values.

If the `pNext` chain of `VkSamplerCreateInfo` includes a `VkSamplerReductionModeCreateInfo` structure, then that structure includes a mode controlling how texture filtering combines texel values.

If this structure is not present, `reductionMode` is considered to be `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`.

Valid Usage (Implicit)

- VUID-VkSamplerReductionModeCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SAMPLER_REDUCTION_MODE_CREATE_INFO`
- VUID-VkSamplerReductionModeCreateInfo-reductionMode-parameter
`reductionMode` **must** be a valid `VkSamplerReductionMode` value

Reduction modes are specified by `VkSamplerReductionMode`, which takes values:

```
// Provided by VK_VERSION_1_2
typedef enum VkSamplerReductionMode {
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE = 0,
    VK_SAMPLER_REDUCTION_MODE_MIN = 1,
    VK_SAMPLER_REDUCTION_MODE_MAX = 2,
    // Provided by VK_QCOM_filter_cubic_clamp
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM = 1000521000,
    // Provided by VK_EXT_sampler_filter_minmax
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_EXT =
VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE,
    // Provided by VK_EXT_sampler_filter_minmax
    VK_SAMPLER_REDUCTION_MODE_MIN_EXT = VK_SAMPLER_REDUCTION_MODE_MIN,
    // Provided by VK_EXT_sampler_filter_minmax
    VK_SAMPLER_REDUCTION_MODE_MAX_EXT = VK_SAMPLER_REDUCTION_MODE_MAX,
} VkSamplerReductionMode;
```

or the equivalent

```
// Provided by VK_EXT_sampler_filter_minmax
typedef VkSamplerReductionMode VkSamplerReductionModeEXT;
```

- `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE` specifies that texel values are combined by computing a weighted average of values in the footprint, using weights as specified in [the image operations chapter](#).
- `VK_SAMPLER_REDUCTION_MODE_MIN` specifies that texel values are combined by taking the component-wise minimum of values in the footprint with non-zero weights.
- `VK_SAMPLER_REDUCTION_MODE_MAX` specifies that texel values are combined by taking the component-wise maximum of values in the footprint with non-zero weights.
- `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` specifies values are combined as described by `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, followed by a [texel range clamp](#).

The `VkSamplerCubicWeightsCreateInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_filter_cubic_weights
typedef struct VkSamplerCubicWeightsCreateInfoQCOM {
    VkStructureType      sType;
    const void*          pNext;
    VkCubicFilterWeightsQCOM cubicWeights;
} VkSamplerCubicWeightsCreateInfoQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cubicWeights` is a `VkCubicFilterWeightsQCOM` value controlling which cubic weights are used.

If the `pNext` chain of `VkSamplerCreateInfo` includes a `VkSamplerCubicWeightsCreateInfoQCOM` structure, then that structure specifies which cubic weights are used.

If that structure is not present, `cubicWeights` is considered to be `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`.

Valid Usage (Implicit)

- VUID-VkSamplerCubicWeightsCreateInfoQCOM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SAMPLER_CUBIC_WEIGHTS_CREATE_INFO_QCOM`
- VUID-VkSamplerCubicWeightsCreateInfoQCOM-cubicWeights-parameter
`cubicWeights` **must** be a valid `VkCubicFilterWeightsQCOM` value

Possible values of the `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights`, specifying cubic weights used in [Texel Cubic Filtering](#) are:

```
// Provided by VK_QCOM_filter_cubic_weights
typedef enum VkCubicFilterWeightsQCOM {
    VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM = 0,
    VK_CUBIC_FILTER_WEIGHTS_ZERO_TANGENT_CARDINAL_QCOM = 1,
    VK_CUBIC_FILTER_WEIGHTS_B_SPLINE_QCOM = 2,
    VK_CUBIC_FILTER_WEIGHTS_MITCHELL_NETRAVALI_QCOM = 3,
} VkCubicFilterWeightsQCOM;
```

- `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM` specifies Catmull-Rom weights.
- `VK_CUBIC_FILTER_WEIGHTS_ZERO_TANGENT_CARDINAL_QCOM` specifies Zero Tangent Cardinal weights.
- `VK_CUBIC_FILTER_WEIGHTS_B_SPLINE_QCOM` specifies B-Spline weights.
- `VK_CUBIC_FILTER_WEIGHTS_MITCHELL_NETRAVALI_QCOM` specifies Mitchell-Netravali weights.

Possible values of the `VkSamplerCreateInfo::magFilter` and `minFilter` parameters, specifying filters used for texture lookups, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkFilter {
    VK_FILTER_NEAREST = 0,
    VK_FILTER_LINEAR = 1,
    // Provided by VK_EXT_filter_cubic
    VK_FILTER_CUBIC_EXT = 1000015000,
    // Provided by VK_IMG_filter_cubic
    VK_FILTER_CUBIC_IMG = VK_FILTER_CUBIC_EXT,
} VkFilter;
```

- `VK_FILTER_NEAREST` specifies nearest filtering.
- `VK_FILTER_LINEAR` specifies linear filtering.
- `VK_FILTER_CUBIC_EXT` specifies cubic filtering.

These filters are described in detail in [Texel Filtering](#).

Possible values of the `VkSamplerCreateInfo::mipmapMode`, specifying the mipmap mode used for texture lookups, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSamplerMipmapMode {
    VK_SAMPLER_MIPMAP_MODE_NEAREST = 0,
    VK_SAMPLER_MIPMAP_MODE_LINEAR = 1,
} VkSamplerMipmapMode;
```

- `VK_SAMPLER_MIPMAP_MODE_NEAREST` specifies nearest filtering.
- `VK_SAMPLER_MIPMAP_MODE_LINEAR` specifies linear filtering.

These modes are described in detail in [Texel Filtering](#).

Possible values of the `VkSamplerCreateInfo::addressMode*` parameters, specifying the behavior of sampling with coordinates outside the range [0,1] for the respective u, v, or w coordinate as defined in the [Wrapping Operation](#) section, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSamplerAddressMode {
    VK_SAMPLER_ADDRESS_MODE_REPEAT = 0,
    VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT = 1,
    VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE = 2,
    VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER = 3,
    // Provided by VK_VERSION_1_2, VK_KHR_sampler_mirror_clamp_to_edge
    VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE = 4,
    // Provided by VK_KHR_sampler_mirror_clamp_to_edge
    // VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE_KHR is a deprecated alias
    VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE_KHR =
VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE,
} VkSamplerAddressMode;
```

- **VK_SAMPLER_ADDRESS_MODE_REPEAT** specifies that the repeat wrap mode will be used.
- **VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT** specifies that the mirrored repeat wrap mode will be used.
- **VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE** specifies that the clamp to edge wrap mode will be used.
- **VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER** specifies that the clamp to border wrap mode will be used.
- **VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE** specifies that the mirror clamp to edge wrap mode will be used. This is only valid if **samplerMirrorClampToEdge** is enabled, or if the **VK_KHR_sampler_mirror_clamp_to_edge** extension is enabled.

Comparison operators compare a *reference* and a *test* value, and return a true (“passed”) or false (“failed”) value depending on the comparison operator chosen. The supported operators are:

```
// Provided by VK_VERSION_1_0
typedef enum VkCompareOp {
    VK_COMPARE_OP_NEVER = 0,
    VK_COMPARE_OP_LESS = 1,
    VK_COMPARE_OP_EQUAL = 2,
    VK_COMPARE_OP_LESS_OR_EQUAL = 3,
    VK_COMPARE_OP_GREATER = 4,
    VK_COMPARE_OP_NOT_EQUAL = 5,
    VK_COMPARE_OP_GREATER_OR_EQUAL = 6,
    VK_COMPARE_OP_ALWAYS = 7,
} VkCompareOp;
```

- **VK_COMPARE_OP_NEVER** specifies that the comparison always evaluates false.
- **VK_COMPARE_OP_LESS** specifies that the comparison evaluates *reference* < *test*.
- **VK_COMPARE_OP_EQUAL** specifies that the comparison evaluates *reference* = *test*.
- **VK_COMPARE_OP_LESS_OR_EQUAL** specifies that the comparison evaluates *reference* ≤ *test*.
- **VK_COMPARE_OP_GREATER** specifies that the comparison evaluates *reference* > *test*.

- `VK_COMPARE_OP_NOT_EQUAL` specifies that the comparison evaluates *reference* \neq *test*.
- `VK_COMPARE_OP_GREATER_OR_EQUAL` specifies that the comparison evaluates *reference* \geq *test*.
- `VK_COMPARE_OP_ALWAYS` specifies that the comparison always evaluates true.

Comparison operators are used for:

- The `Depth Compare Operation` operator for a sampler, specified by `VkSamplerCreateInfo::compareOp`.
- The stencil comparison operator for the `stencil test`, specified by `vkCmdSetStencilOp::compareOp` or `VkStencilOpState::compareOp`.
- The `Depth Comparison` operator for the `depth test`, specified by `vkCmdSetDepthCompareOp::depthCompareOp` or `VkPipelineDepthStencilStateCreateInfo::depthCompareOp`.

Each such use describes how the *reference* and *test* values for that comparison are determined.

Possible values of `VkSamplerCreateInfo::borderColor`, specifying the border color used for texture lookups, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkBorderColor {
    VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK = 0,
    VK_BORDER_COLOR_INT_TRANSPARENT_BLACK = 1,
    VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK = 2,
    VK_BORDER_COLOR_INT_OPAQUE_BLACK = 3,
    VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE = 4,
    VK_BORDER_COLOR_INT_OPAQUE_WHITE = 5,
    // Provided by VK_EXT_custom_border_color
    VK_BORDER_COLOR_FLOAT_CUSTOM_EXT = 1000287003,
    // Provided by VK_EXT_custom_border_color
    VK_BORDER_COLOR_INT_CUSTOM_EXT = 1000287004,
} VkBorderColor;
```

- `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK` specifies a transparent, floating-point format, black color.
- `VK_BORDER_COLOR_INT_TRANSPARENT_BLACK` specifies a transparent, integer format, black color.
- `VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK` specifies an opaque, floating-point format, black color.
- `VK_BORDER_COLOR_INT_OPAQUE_BLACK` specifies an opaque, integer format, black color.
- `VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE` specifies an opaque, floating-point format, white color.
- `VK_BORDER_COLOR_INT_OPAQUE_WHITE` specifies an opaque, integer format, white color.
- `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` indicates that a `VkSamplerCustomBorderColorCreateInfoEXT` structure is included in the `VkSamplerCreateInfo::pNext` chain containing the color data in floating-point format.
- `VK_BORDER_COLOR_INT_CUSTOM_EXT` indicates that a `VkSamplerCustomBorderColorCreateInfoEXT` structure is included in the `VkSamplerCreateInfo::pNext` chain containing the color data in integer format.

integer format.

These colors are described in detail in [Texel Replacement](#).

To destroy a sampler, call:

```
// Provided by VK_VERSION_1_0
void vkDestroySampler(
    VkDevice          device,
    VkSampler          sampler,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the sampler.
- **sampler** is the sampler to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroySampler-sampler-01082
All submitted commands that refer to **sampler** **must** have completed execution
- VUID-vkDestroySampler-sampler-01083
If **VkAllocationCallbacks** were provided when **sampler** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroySampler-sampler-01084
If no **VkAllocationCallbacks** were provided when **sampler** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroySampler-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroySampler-sampler-parameter
If **sampler** is not [VK_NULL_HANDLE](#), **sampler** **must** be a valid [VkSampler](#) handle
- VUID-vkDestroySampler-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroySampler-sampler-parent
If **sampler** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **sampler** **must** be externally synchronized

13.1. Sampler Y'C_BC_R Conversion

To create a sampler with Y'C_BC_R conversion enabled, add a [VkSamplerYcbcrConversionInfo](#) structure to the `pNext` chain of the [VkSamplerCreateInfo](#) structure. To create a sampler Y'C_BC_R conversion, the `samplerYcbcrConversion` feature **must** be enabled. Conversion **must** be fixed at pipeline creation time, through use of a combined image sampler with an immutable sampler in [VkDescriptorSetLayoutBinding](#).

A [VkSamplerYcbcrConversionInfo](#) **must** be provided for samplers to be used with image views that access `VK_IMAGE_ASPECT_COLOR_BIT` if the format is one of the [formats that require a sampler Y'C_BC_R conversion](#), or if the image view has an [external format](#).

The [VkSamplerYcbcrConversionInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkSamplerYcbcrConversion conversion;
} VkSamplerYcbcrConversionInfo;
```

or the equivalent

```
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrConversionInfo VkSamplerYcbcrConversionInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `conversion` is a [VkSamplerYcbcrConversion](#) handle created with [vkCreateSamplerYcbcrConversion](#).

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_INFO`
- VUID-VkSamplerYcbcrConversionInfo-conversion-parameter
`conversion` **must** be a valid [VkSamplerYcbcrConversion](#) handle

A sampler Y'C_BC_R conversion is an opaque representation of a device-specific sampler Y'C_BC_R conversion description, represented as a [VkSamplerYcbcrConversion](#) handle:

```
// Provided by VK_VERSION_1_1
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSamplerYcbcrConversion)
```

or the equivalent

```
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrConversion VkSamplerYcbcrConversionKHR;
```

To create a [VkSamplerYcbcrConversion](#), call:

```
// Provided by VK_VERSION_1_1
VkResult vkCreateSamplerYcbcrConversion(
    VkDevice                                device,
    const VkSamplerYcbcrConversionCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSamplerYcbcrConversion*                pYcbcrConversion);
```

or the equivalent command

```
// Provided by VK_KHR_sampler_ycbcr_conversion
VkResult vkCreateSamplerYcbcrConversionKHR(
    VkDevice                                device,
    const VkSamplerYcbcrConversionCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSamplerYcbcrConversion*                pYcbcrConversion);
```

- **device** is the logical device that creates the sampler Y'C_BC_R conversion.
- **pCreateInfo** is a pointer to a [VkSamplerYcbcrConversionCreateInfo](#) structure specifying the requested sampler Y'C_BC_R conversion.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pYcbcrConversion** is a pointer to a [VkSamplerYcbcrConversion](#) handle in which the resulting sampler Y'C_BC_R conversion is returned.

The interpretation of the configured sampler Y'C_BC_R conversion is described in more detail in [the description of sampler Y'C_BC_R conversion](#) in the [Image Operations](#) chapter.

Valid Usage

- VUID-vkCreateSamplerYcbcrConversion-None-01648
The **samplerYcbcrConversion** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateSamplerYcbcrConversion-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreateSamplerYcbcrConversion-pCreateInfo-parameter

`pCreateInfo` **must** be a valid pointer to a valid `VkSamplerYcbcrConversionCreateInfo` structure

- VUID-vkCreateSamplerYcbcrConversion-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateSamplerYcbcrConversion-pYcbcrConversion-parameter
`pYcbcrConversion` **must** be a valid pointer to a `VkSamplerYcbcrConversion` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkSamplerYcbcrConversionCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkFormat            format;
    VkSamplerYcbcrModelConversion ycbcrModel;
    VkSamplerYcbcrRange ycbcrRange;
    VkComponentMapping  components;
    VkChromaLocation    xChromaOffset;
    VkChromaLocation    yChromaOffset;
    VkFilter            chromaFilter;
    VkBool32            forceExplicitReconstruction;
} VkSamplerYcbcrConversionCreateInfo;
```

or the equivalent

```
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrConversionCreateInfo VkSamplerYcbcrConversionCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is the format of the image from which color information will be retrieved.
- `ycbcrModel` describes the color matrix for conversion between color models.
- `ycbcrRange` describes whether the encoded values have headroom and foot room, or whether

the encoding uses the full numerical range.

- **components** applies a *swizzle* based on `VkComponentSwizzle` enums prior to range expansion and color model conversion.
- **xChromaOffset** describes the *sample location* associated with downsampled chroma components in the x dimension. **xChromaOffset** has no effect for formats in which chroma components are not downsampled horizontally.
- **yChromaOffset** describes the *sample location* associated with downsampled chroma components in the y dimension. **yChromaOffset** has no effect for formats in which the chroma components are not downsampled vertically.
- **chromaFilter** is the filter for chroma reconstruction.
- **forceExplicitReconstruction** **can** be used to ensure that reconstruction is done explicitly, if supported.

NOTE

Setting **forceExplicitReconstruction** to `VK_TRUE` **may** have a performance penalty on implementations where explicit reconstruction is not the default mode of operation.

If `format` supports `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT` the **forceExplicitReconstruction** value behaves as if it were `VK_TRUE`.

If the **pNext** chain includes a `VkExternalFormatANDROID` structure with non-zero **externalFormat** member, the sampler $Y'C_B C_R$ conversion object represents an *external format conversion*, and **format** **must** be `VK_FORMAT_UNDEFINED`. Such conversions **must** only be used to sample image views with a matching *external format*. When creating an external format conversion, the value of **components** is ignored.

Valid Usage

- VUID-VkSamplerYcbcrConversionCreateInfo-format-01904
If an external format conversion is being created, **format** **must** be `VK_FORMAT_UNDEFINED`
- VUID-VkSamplerYcbcrConversionCreateInfo-format-04061
If an external format conversion is not being created, **format** **must** represent unsigned normalized values (i.e. the format **must** be a `UNORM` format)
- VUID-VkSamplerYcbcrConversionCreateInfo-format-01650
The *potential format features* of the sampler $Y'C_B C_R$ conversion **must** support `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT` or `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`
- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-01651
If the *potential format features* of the sampler $Y'C_B C_R$ conversion do not support `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`, **xChromaOffset** and **yChromaOffset** **must** not be `VK_CHROMA_LOCATION_COSITED_EVEN` if the corresponding components are *downsampled*
- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-01652
If the *potential format features* of the sampler $Y'C_B C_R$ conversion do not support `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT`, **xChromaOffset** and **yChromaOffset** **must**

not be `VK_CHROMA_LOCATION_MIDPOINT` if the corresponding components are [downsampled](#)

- VUID-VkSamplerYcbcrConversionCreateInfo-components-02581
If the format has a `_422` or `_420` suffix, then `components.g` **must** be the [identity swizzle](#)
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02582
If the format has a `_422` or `_420` suffix, then `components.a` **must** be the [identity swizzle](#), `VK_COMPONENT_SWIZZLE_ONE`, or `VK_COMPONENT_SWIZZLE_ZERO`
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02583
If the format has a `_422` or `_420` suffix, then `components.r` **must** be the [identity swizzle](#) or `VK_COMPONENT_SWIZZLE_B`
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02584
If the format has a `_422` or `_420` suffix, then `components.b` **must** be the [identity swizzle](#) or `VK_COMPONENT_SWIZZLE_R`
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02585
If the format has a `_422` or `_420` suffix, and if either `components.r` or `components.b` is the [identity swizzle](#), both values **must** be the identity swizzle
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrModel-01655
If `ycbcrModel` is not `VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY`, then `components.r`, `components.g`, and `components.b` **must** correspond to components of the `format`; that is, `components.r`, `components.g`, and `components.b` **must** not be `VK_COMPONENT_SWIZZLE_ZERO` or `VK_COMPONENT_SWIZZLE_ONE`, and **must** not correspond to a component containing zero or one as a consequence of [conversion to RGBA](#)
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrRange-02748
If `ycbcrRange` is `VK_SAMPLER_YCBCR_RANGE_ITU_NARROW` then the R, G and B components obtained by applying the `component` swizzle to `format` **must** each have a bit-depth greater than or equal to 8
- VUID-VkSamplerYcbcrConversionCreateInfo-forceExplicitReconstruction-01656
If the [potential format features](#) of the sampler Y'C_BC_R conversion do not support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT` `forceExplicitReconstruction` **must** be `VK_FALSE`
- VUID-VkSamplerYcbcrConversionCreateInfo-chromaFilter-01657
If the [potential format features](#) of the sampler Y'C_BC_R conversion do not support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT`, `chromaFilter` **must** not be `VK_FILTER_LINEAR`
- VUID-VkSamplerYcbcrConversionCreateInfo-pNext-09207
If the `pNext` chain includes a [VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM](#) structure, and if the `ycbcrDegamma` feature is not enabled, then [VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableYDegamma](#) **must** be `VK_FALSE`
- VUID-VkSamplerYcbcrConversionCreateInfo-pNext-09208
If the `pNext` chain includes a [VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM](#) structure, and if the `ycbcrDegamma` feature is not enabled, then [VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableCbCrDegamma](#) **must** be `VK_FALSE`

- VUID-VkSamplerYcbcrConversionCreateInfo-pNext-09209
If the **pNext** chain includes a [VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM](#) structure, **format** **must** be a format with 8-bit R, G, and B components

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionCreateInfo-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_CREATE_INFO`
- VUID-VkSamplerYcbcrConversionCreateInfo-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either `NULL` or a pointer to a valid instance of [VkExternalFormatANDROID](#), [VkExternalFormatQNX](#), or [VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM](#)
- VUID-VkSamplerYcbcrConversionCreateInfo-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique
- VUID-VkSamplerYcbcrConversionCreateInfo-format-parameter
format **must** be a valid [VkFormat](#) value
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrModel-parameter
ycbcrModel **must** be a valid [VkSamplerYcbcrModelConversion](#) value
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrRange-parameter
ycbcrRange **must** be a valid [VkSamplerYcbcrRange](#) value
- VUID-VkSamplerYcbcrConversionCreateInfo-components-parameter
components **must** be a valid [VkComponentMapping](#) structure
- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-parameter
xChromaOffset **must** be a valid [VkChromaLocation](#) value
- VUID-VkSamplerYcbcrConversionCreateInfo-yChromaOffset-parameter
yChromaOffset **must** be a valid [VkChromaLocation](#) value
- VUID-VkSamplerYcbcrConversionCreateInfo-chromaFilter-parameter
chromaFilter **must** be a valid [VkFilter](#) value

If **chromaFilter** is `VK_FILTER_NEAREST`, chroma samples are reconstructed to luma component resolution using nearest-neighbour sampling. Otherwise, chroma samples are reconstructed using interpolation. More details can be found in the [description of sampler Y'C_BC_R conversion](#) in the [Image Operations](#) chapter.

[VkSamplerYcbcrModelConversion](#) defines the conversion from the source color model to the shader color model. Possible values are:

```
// Provided by VK_VERSION_1_1
typedef enum VkSamplerYcbcrModelConversion {
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY = 0,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY = 1,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709 = 2,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601 = 3,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020 = 4,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020,
} VkSamplerYcbcrModelConversion;
```

or the equivalent

```
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrModelConversion VkSamplerYcbcrModelConversionKHR;
```

- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY** specifies that the input values to the conversion are unmodified.
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY** specifies no model conversion but the inputs are range expanded as for $Y'C_B C_R$.
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709** specifies the color model conversion from $Y'C_B C_R$ to R'G'B' defined in BT.709 and described in the “BT.709 $Y'C_B C_R$ conversion” section of the [Khronos Data Format Specification](#).
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601** specifies the color model conversion from $Y'C_B C_R$ to R'G'B' defined in BT.601 and described in the “BT.601 $Y'C_B C_R$ conversion” section of the [Khronos Data Format Specification](#).
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020** specifies the color model conversion from $Y'C_B C_R$ to R'G'B' defined in BT.2020 and described in the “BT.2020 $Y'C_B C_R$ conversion” section of the [Khronos Data Format Specification](#).

In the **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_*** color models, for the input to the sampler $Y'C_B C_R$ range expansion and model conversion:

- the Y (Y' luma) component corresponds to the G component of an RGB image.
- the CB (C_B or “U” blue color difference) component corresponds to the B component of an RGB image.
- the CR (C_R or “V” red color difference) component corresponds to the R component of an RGB image.
- the alpha component, if present, is not modified by color model conversion.

These rules reflect the mapping of components after the component swizzle operation (controlled by [VkSamplerYcbcrConversionCreateInfo::components](#)).

NOTE

For example, an “YUVA” 32-bit format comprising four 8-bit components can be implemented as [VK_FORMAT_R8G8B8A8_UNORM](#) with a component mapping:

- `components.a = VK_COMPONENT_SWIZZLE_IDENTITY`
- `components.r = VK_COMPONENT_SWIZZLE_B`
- `components.g = VK_COMPONENT_SWIZZLE_R`
- `components.b = VK_COMPONENT_SWIZZLE_G`

The [VkSamplerYcbcrRange](#) enum describes whether color components are encoded using the full range of numerical values or whether values are reserved for headroom and foot room. [VkSamplerYcbcrRange](#) is defined as:

```
// Provided by VK_VERSION_1_1
typedef enum VkSamplerYcbcrRange {
    VK_SAMPLER_YCBCR_RANGE_ITU_FULL = 0,
    VK_SAMPLER_YCBCR_RANGE_ITU_NARROW = 1,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_RANGE_ITU_FULL_KHR = VK_SAMPLER_YCBCR_RANGE_ITU_FULL,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_RANGE_ITU_NARROW_KHR = VK_SAMPLER_YCBCR_RANGE_ITU_NARROW,
} VkSamplerYcbcrRange;
```

or the equivalent

```
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrRange VkSamplerYcbcrRangeKHR;
```

- [VK_SAMPLER_YCBCR_RANGE_ITU_FULL](#) specifies that the full range of the encoded values are valid and interpreted according to the ITU “full range” quantization rules.
- [VK_SAMPLER_YCBCR_RANGE_ITU_NARROW](#) specifies that headroom and foot room are reserved in the numerical range of encoded values, and the remaining values are expanded according to the ITU “narrow range” quantization rules.

The formulae for these conversions is described in the [Sampler Y'C_BC_R Range Expansion](#) section of

the [Image Operations](#) chapter.

No range modification takes place if `ycbcrModel` is `VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY`; the `ycbcrRange` field of `VkSamplerYcbcrConversionCreateInfo` is ignored in this case.

The `VkChromaLocation` enum defines the location of downsampled chroma component samples relative to the luma samples, and is defined as:

```
// Provided by VK_VERSION_1_1
typedef enum VkChromaLocation {
    VK_CHROMA_LOCATION_COSITED_EVEN = 0,
    VK_CHROMA_LOCATION_MIDPOINT = 1,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_CHROMA_LOCATION_COSITED_EVEN_KHR = VK_CHROMA_LOCATION_COSITED_EVEN,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_CHROMA_LOCATION_MIDPOINT_KHR = VK_CHROMA_LOCATION_MIDPOINT,
} VkChromaLocation;
```

or the equivalent

```
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkChromaLocation VkChromaLocationKHR;
```

- `VK_CHROMA_LOCATION_COSITED_EVEN` specifies that downsampled chroma samples are aligned with luma samples with even coordinates.
- `VK_CHROMA_LOCATION_MIDPOINT` specifies that downsampled chroma samples are located half way between each even luma sample and the nearest higher odd luma sample.

Applications **can** enable sRGB to linear conversion for the R, G, and B components of a $Y'C_B C_R$ image during [format conversion](#) by including `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM` structure in the `pNext` chain of `VkSamplerYcbcrConversionCreateInfo`.

The `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_ycbcr_degama
typedef struct VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           enableYDegamma;
    VkBool32           enableCbCrDegamma;
} VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `enableYDegamma` indicates [sRGB to linear](#) conversion is enabled for the G component.

- `enableCbCrDegamma` indicates [sRGB to linear](#) conversion is enabled for the R and B components.

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM-sType-sType `must` be `VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_YCBCR_DEGAMMA_CREATE_INFO_QCOM`

To destroy a sampler Y'C_BC_R conversion, call:

```
// Provided by VK_VERSION_1_1
void vkDestroySamplerYcbcrConversion(
    VkDevice          device,
    VkSamplerYcbcrConversion ycbcrConversion,
    const VkAllocationCallbacks* pAllocator);
```

or the equivalent command

```
// Provided by VK_KHR_sampler_ycbcr_conversion
void vkDestroySamplerYcbcrConversionKHR(
    VkDevice          device,
    VkSamplerYcbcrConversion ycbcrConversion,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the Y'C_BC_R conversion.
- `ycbcrConversion` is the conversion to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage (Implicit)

- VUID-vkDestroySamplerYcbcrConversion-device-parameter `device` **must** be a valid [VkDevice](#) handle
- VUID-vkDestroySamplerYcbcrConversion-ycbcrConversion-parameter
If `ycbcrConversion` is not `VK_NULL_HANDLE`, `ycbcrConversion` **must** be a valid [VkSamplerYcbcrConversion](#) handle
- VUID-vkDestroySamplerYcbcrConversion-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroySamplerYcbcrConversion-ycbcrConversion-parent
If `ycbcrConversion` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `ycbcrConversion` **must** be externally synchronized

In addition to the predefined border color values, applications **can** provide a custom border color value by including the `VkSamplerCustomBorderColorCreateInfoEXT` structure in the `VkSamplerCreateInfo::pNext` chain.

The `VkSamplerCustomBorderColorCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_custom_border_color
typedef struct VkSamplerCustomBorderColorCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkClearColorValue  customBorderColor;
    VkFormat            format;
} VkSamplerCustomBorderColorCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `customBorderColor` is a `VkClearColorValue` representing the desired custom sampler border color.
- `format` is a `VkFormat` representing the format of the sampled image view(s). This field may be `VK_FORMAT_UNDEFINED` if the `customBorderColorWithoutFormat` feature is enabled.

NOTE

If `format` is a depth/stencil format, the aspect is determined by the value of `VkSamplerCreateInfo::borderColor`. If `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`, the depth aspect is considered. If `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_INT_CUSTOM_EXT`, the stencil aspect is considered.

If `format` is `VK_FORMAT_UNDEFINED`, the `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_INT_CUSTOM_EXT`, and the sampler is used with an image with a stencil format, then the implementation **must** source the custom border color from either the first or second components of `VkSamplerCreateInfo::customBorderColor` and **should** source it from the first component.

Valid Usage

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-07605

If `format` is not `VK_FORMAT_UNDEFINED` and `format` is not a depth/stencil format then the `VkSamplerCreateInfo::borderColor` type **must** match the sampled type of the provided `format`, as shown in the *SPIR-V Type* column of the [Interpretation of Numeric Format](#) table

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-04014

If the `customBorderColorWithoutFormat` feature is not enabled then `format` **must** not be `VK_FORMAT_UNDEFINED`

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-04015

If the sampler is used to sample an image view of `VK_FORMAT_B4G4R4A4_UNORM_PACK16`, `VK_FORMAT_B5G6R5_UNORM_PACK16`, `VK_FORMAT_A1B5G5R5_UNORM_PACK16_KHR`, or `VK_FORMAT_B5G5R5A1_UNORM_PACK16` format then `format` **must** not be `VK_FORMAT_UNDEFINED`

Valid Usage (Implicit)

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SAMPLER_CUSTOM_BORDER_COLOR_CREATE_INFO_EXT`
- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-parameter
`format` **must** be a valid `VkFormat` value

If the sampler is created with `VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK`, `VK_BORDER_COLOR_INT_OPAQUE_BLACK`, `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`, or `VK_BORDER_COLOR_INT_CUSTOM_EXT` `borderColor`, and that sampler will be combined with an image view that does not have an `identity swizzle`, and `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::borderColorSwizzleFromImage` is not enabled, then it is necessary to specify the component mapping of the border color, by including the `VkSamplerBorderColorComponentMappingCreateInfoEXT` structure in the `VkSamplerCreateInfo::pNext` chain, to get defined results.

The `VkSamplerBorderColorComponentMappingCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_border_color_swizzle
typedef struct VkSamplerBorderColorComponentMappingCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkComponentMapping components;
    VkBool32           srgb;
} VkSamplerBorderColorComponentMappingCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `components` is a `VkComponentMapping` structure specifying a remapping of the border color components.
- `srgb` indicates that the sampler will be combined with an image view that has an image format which is sRGB encoded.

The `VkComponentMapping` `components` member describes a remapping from components of the border color to components of the vector returned by shader image instructions when the border color is used.

Valid Usage

- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-borderColorSwizzle-06437
The `borderColorSwizzle` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_SAMPLER_BORDER_COLOR_COMPONENT_MAPPING_CREATE_INFO_EXT`
- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-components-parameter **components** **must** be a valid `VkComponentMapping` structure

The `VkSamplerBlockMatchWindowCreateInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_image_processing2
typedef struct VkSamplerBlockMatchWindowCreateInfoQCOM {
    VkStructureType    sType;
    const void*        pNext;
    VkExtent2D         windowExtent;
    VkBlockMatchWindowCompareModeQCOM windowCompareMode;
} VkSamplerBlockMatchWindowCreateInfoQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `windowExtent` is a `VkExtent2D` specifying a the width and height of the block match window.
- `windowCompareMode` is a `VkBlockMatchWindowCompareModeQCOM` specifying the compare mode.

Valid Usage

- VUID-VkSamplerBlockMatchWindowCreateInfoQCOM-WindowExtent-09210
`WindowExtent` **must** not be larger than `VkPhysicalDeviceImageProcessing2PropertiesQCOM::maxBlockMatchWindow`

Valid Usage (Implicit)

- VUID-VkSamplerBlockMatchWindowCreateInfoQCOM-sType-sType **sType** **must** be `VK_STRUCTURE_TYPE_SAMPLER_BLOCK_MATCH_WINDOW_CREATE_INFO_QCOM`
- VUID-VkSamplerBlockMatchWindowCreateInfoQCOM-windowCompareMode-parameter `windowCompareMode` **must** be a valid `VkBlockMatchWindowCompareModeQCOM` value

The [VkBlockMatchWindowCompareModeQCOM](#) enum describes how block match values within the window are compared. [VkBlockMatchWindowCompareModeQCOM](#) is defined as:

```
// Provided by VK_QCOM_image_processing2
typedef enum VkBlockMatchWindowCompareModeQCOM {
    VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MIN_QCOM = 0,
    VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MAX_QCOM = 1,
} VkBlockMatchWindowCompareModeQCOM;
```

- [VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MIN_QCOM](#) specifies that windowed block match operations return the minimum error within the window.
- [VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MAX_QCOM](#) specifies that windowed block match operations return the maximum error within the window.

Chapter 14. Resource Descriptors

A *descriptor* is an opaque data structure representing a shader resource such as a buffer, buffer view, image view, sampler, or combined image sampler. Descriptors are organized into *descriptor sets*, which are bound during command recording for use in subsequent drawing commands. The arrangement of content in each descriptor set is determined by a *descriptor set layout*, which determines what descriptors can be stored within it. The sequence of descriptor set layouts that **can** be used by a pipeline is specified in a *pipeline layout*. Each pipeline object **can** use up to `maxBoundDescriptorSets` (see [Limits](#)) descriptor sets.

If the `descriptorBuffer` feature is enabled, the implementation supports placing descriptors into [descriptor buffers](#) which are bound during command recording in a similar way to descriptor sets.

Shaders access resources via variables decorated with a descriptor set and binding number that link them to a descriptor in a descriptor set. The shader interface mapping to bound descriptor sets is described in the [Shader Resource Interface](#) section.

Shaders **can** also access buffers without going through descriptors by using [Physical Storage Buffer Access](#) to access them through 64-bit addresses.

14.1. Descriptor Types

There are a number of different types of descriptor supported by Vulkan, corresponding to different resources or usage. The following sections describe the API definitions of each descriptor type. The mapping of each type to SPIR-V is listed in the [Shader Resource and Descriptor Type Correspondence](#) and [Shader Resource and Storage Class Correspondence](#) tables in the [Shader Interfaces](#) chapter.

14.1.1. Storage Image

A *storage image* (`VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`) is a descriptor type associated with an [image resource](#) via an [image view](#) that load, store, and atomic operations **can** be performed on.

Storage image loads are supported in all shader stages for image views whose [format features](#) contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`.

Stores to storage images are supported in task, mesh and compute shaders for image views whose [format features](#) contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`.

Atomic operations on storage images are supported in task, mesh and compute shaders for image views whose [format features](#) contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`.

When the `fragmentStoresAndAtomics` feature is enabled, stores and atomic operations are also supported for storage images in fragment shaders with the same set of image formats as supported in compute shaders. When the `vertexPipelineStoresAndAtomics` feature is enabled, stores and atomic operations are also supported in vertex, tessellation, and geometry shaders with the same set of image formats as supported in compute shaders.

The image subresources for a storage image **must** be in the `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR` or

`VK_IMAGE_LAYOUT_GENERAL` layout in order to access its data in a shader.

14.1.2. Sampler

A *sampler descriptor* (`VK_DESCRIPTOR_TYPE_SAMPLER`) is a descriptor type associated with a [sampler](#) object, used to control the behavior of [sampling operations](#) performed on a [sampled image](#).

14.1.3. Sampled Image

A *sampled image* (`VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`) is a descriptor type associated with an [image resource](#) via an [image view](#) that [sampling operations](#) **can** be performed on.

Shaders combine a sampled image variable and a sampler variable to perform sampling operations.

Sampled images are supported in all shader stages for image views whose [format features](#) contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`.

An image subresources for a sampled image **must** be in one of the following layouts:

- `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_GENERAL`
- `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`
- `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`
- `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR`
- `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT`

14.1.4. Combined Image Sampler

A *combined image sampler* (`VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`) is a single descriptor type associated with both a [sampler](#) and an [image resource](#), combining both a [sampler](#) and [sampled image](#) descriptor into a single descriptor.

If the descriptor refers to a sampler that performs [Y'C_BC_R conversion](#) or samples a [subsampled image](#), the sampler **must** only be used to sample the image in the same descriptor. Otherwise, the sampler and image in this type of descriptor **can** be used freely with any other samplers and images.

An image subresources for a combined image sampler **must** be in one of the following layouts:

- `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL`

- `VK_IMAGE_LAYOUT_GENERAL`
- `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`
- `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`
- `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR`
- `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT`

NOTE

On some implementations, it **may** be more efficient to sample from an image using a combination of sampler and sampled image that are stored together in the descriptor set in a combined descriptor.

14.1.5. Uniform Texel Buffer

A *uniform texel buffer* (`VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`) is a descriptor type associated with a [buffer resource](#) via a [buffer view](#) that [image sampling operations](#) **can** be performed on.

Uniform texel buffers define a tightly-packed 1-dimensional linear array of texels, with texels going through format conversion when read in a shader in the same way as they are for an image.

Load operations from uniform texel buffers are supported in all shader stages for buffer view formats which report [format features](#) support for `VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT`

14.1.6. Storage Texel Buffer

A *storage texel buffer* (`VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`) is a descriptor type associated with a [buffer resource](#) via a [buffer view](#) that [image load, store, and atomic operations](#) **can** be performed on.

Storage texel buffers define a tightly-packed 1-dimensional linear array of texels, with texels going through format conversion when read in a shader in the same way as they are for an image. Unlike [uniform texel buffers](#), these buffers can also be written to in the same way as for [storage images](#).

Storage texel buffer loads are supported in all shader stages for texel buffer view formats which report [format features](#) support for `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT`

Stores to storage texel buffers are supported in task, mesh and compute shaders for texel buffer formats which report [format features](#) support for `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT`

Atomic operations on storage texel buffers are supported in task, mesh and compute shaders for texel buffer formats which report [format features](#) support for `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

When the `fragmentStoresAndAtomics` feature is enabled, stores and atomic operations are also supported for storage texel buffers in fragment shaders with the same set of texel buffer formats as supported in compute shaders. When the `vertexPipelineStoresAndAtomics` feature is enabled, stores

and atomic operations are also supported in vertex, tessellation, and geometry shaders with the same set of texel buffer formats as supported in compute shaders.

14.1.7. Storage Buffer

A *storage buffer* (`VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`) is a descriptor type associated with a [buffer resource](#) directly, described in a shader as a structure with various members that load, store, and atomic operations **can** be performed on.

NOTE	Atomic operations can only be performed on members of certain types as defined in the SPIR-V environment appendix .
-------------	--

14.1.8. Uniform Buffer

A *uniform buffer* (`VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`) is a descriptor type associated with a [buffer resource](#) directly, described in a shader as a structure with various members that load operations **can** be performed on.

14.1.9. Dynamic Uniform Buffer

A *dynamic uniform buffer* (`VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`) is almost identical to a [uniform buffer](#), and differs only in how the offset into the buffer is specified. The base offset calculated by the `VkDescriptorBufferInfo` when initially [updating the descriptor set](#) is added to a [dynamic offset](#) when binding the descriptor set.

14.1.10. Dynamic Storage Buffer

A *dynamic storage buffer* (`VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`) is almost identical to a [storage buffer](#), and differs only in how the offset into the buffer is specified. The base offset calculated by the `VkDescriptorBufferInfo` when initially [updating the descriptor set](#) is added to a [dynamic offset](#) when binding the descriptor set.

14.1.11. Inline Uniform Block

An *inline uniform block* (`VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`) is almost identical to a [uniform buffer](#), and differs only in taking its storage directly from the encompassing descriptor set instead of being backed by buffer memory. It is typically used to access a small set of constant data that does not require the additional flexibility provided by the indirection enabled when using a uniform buffer where the descriptor and the referenced buffer memory are decoupled. Compared to push constants, they allow reusing the same set of constant data across multiple disjoint sets of drawing and dispatching commands.

Inline uniform block descriptors **cannot** be aggregated into arrays. Instead, the array size specified for an inline uniform block descriptor binding specifies the binding's capacity in bytes.

14.1.12. Sample Weight Image

A *sample weight image* (`VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`) is a descriptor type

associated with an [image resource](#) via an [image view](#) that **can** be used in [weight image sampling](#). The image view **must** have been created with [VkImageViewSampleWeightCreateInfoQCOM](#).

Shaders **can** combine a weight image variable, a sampled image variable, and a sampler variable to perform [weight image sampling](#).

Weight image sampling is supported in all shader stages if the weight image view specifies a format that supports [format feature](#) [VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM](#) and the sampled image view specifies a format that supports [format feature](#) [VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM](#).

The image subresources for the weight image **must** be in the [VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL](#), or [VK_IMAGE_LAYOUT_GENERAL](#) layout in order to access its data in a shader.

14.1.13. Block Matching Image

A *block matching image* ([VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#)) is a descriptor type associated with an [image resource](#) via an [image view](#) that **can** be used in [block matching](#).

Shaders **can** combine a target image variable, a reference image variable, and a sampler variable to perform [block matching](#).

Block matching is supported in all shader stages for if both the target view and reference view specifies a format that supports [format feature](#) [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#).

The image subresources for block matching **must** be in the [VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL](#), or [VK_IMAGE_LAYOUT_GENERAL](#) layout in order to access its data in a shader.

14.1.14. Input Attachment

An *input attachment* ([VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#)) is a descriptor type associated with an [image resource](#) via an [image view](#) that **can** be used for [framebuffer local](#) load operations in fragment shaders.

All image formats that are supported for color attachments ([VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT](#) or [VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV](#)) or depth/stencil attachments ([VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT](#)) for a given image tiling mode are also supported for input attachments.

An image view used as an input attachment **must** be in one of the following layouts:

- [VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL](#)
- [VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL](#)
- [VK_IMAGE_LAYOUT_GENERAL](#)
- [VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR](#)
- [VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL](#)

- `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR`
- `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT`
- `VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ_KHR`

14.1.15. Acceleration Structure

An *acceleration structure* (`VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` or `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`) is a descriptor type that is used to retrieve scene geometry from within shaders that are used for ray traversal. Shaders have read-only access to the memory.

14.1.16. Mutable

A descriptor of *mutable* (`VK_DESCRIPTOR_TYPE_MUTABLE_EXT`) type indicates that this descriptor **can** mutate to any of the descriptor types given in the `VkMutableDescriptorTypeListEXT::pDescriptorTypes` list of descriptor types in the `pNext` chain of `VkDescriptorSetLayoutCreateInfo` for this binding. At any point, each individual descriptor of mutable type has an active descriptor type. The active descriptor type **can** be any one of the declared types in `pDescriptorTypes`. Additionally, a mutable descriptor's active descriptor type **can** be of the `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` type, which is the initial active descriptor type. The active descriptor type **can** change when the descriptor is updated. When a descriptor is consumed by binding a descriptor set, the active descriptor type is considered, not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`.

An active descriptor type of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` is considered an undefined descriptor. If a descriptor is consumed where the active descriptor type does not match what the shader expects, the descriptor is considered an undefined descriptor.

NOTE

To find which descriptor types are supported as `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the application **can** use `vkGetDescriptorSetLayoutSupport` with a `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` binding, with the list of descriptor types to query in the `VkMutableDescriptorTypeCreateInfoEXT::pDescriptorTypes` array for that binding.

NOTE

The intention of a mutable descriptor type is that implementations allocate N bytes per descriptor, where N is determined by the maximum descriptor size for a given descriptor binding. Implementations are not expected to keep track of the active descriptor type, and it should be considered a C-like union type.

A mutable descriptor type is not considered as efficient in terms of runtime performance as using a non-mutable descriptor type, and applications are not encouraged to use them outside API layering efforts. Mutable descriptor types can be more efficient if the alternative is using many different descriptors to emulate mutable descriptor types.

14.2. Descriptor Sets

Descriptors are grouped together into descriptor set objects. A descriptor set object is an opaque object containing storage for a set of descriptors, where the types and number of descriptors is defined by a descriptor set layout. The layout object **may** be used to define the association of each descriptor binding with memory or other implementation resources. The layout is used both for determining the resources that need to be associated with the descriptor set, and determining the interface between shader stages and shader resources.

14.2.1. Descriptor Set Layout

A descriptor set layout object is defined by an array of zero or more descriptor bindings. Each individual descriptor binding is specified by a descriptor type, a count (array size) of the number of descriptors in the binding, a set of shader stages that **can** access the binding, and (if using immutable samplers) an array of sampler descriptors.

Descriptor set layout objects are represented by `VkDescriptorSetLayout` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorSetLayout)
```

To create descriptor set layout objects, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateDescriptorSetLayout(
    VkDevice                device,
    const VkDescriptorSetLayoutCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDescriptorSetLayout* pSetLayout);
```

- `device` is the logical device that creates the descriptor set layout.
- `pCreateInfo` is a pointer to a `VkDescriptorSetLayoutCreateInfo` structure specifying the state of the descriptor set layout object.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pSetLayout` is a pointer to a `VkDescriptorSetLayout` handle in which the resulting descriptor set layout object is returned.

Valid Usage

- VUID-vkCreateDescriptorSetLayout-support-09582

If the descriptor layout exceeds the limits reported through the [physical device limits](#), then `vkGetDescriptorSetLayoutSupport` **must** have returned `VkDescriptorSetLayoutSupport` with `support` equal to `VK_TRUE` for `pCreateInfo`

Valid Usage (Implicit)

- VUID-vkCreateDescriptorSetLayout-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkCreateDescriptorSetLayout-pCreateInfo-parameter **pCreateInfo** must be a valid pointer to a valid [VkDescriptorSetLayoutCreateInfo](#) structure
- VUID-vkCreateDescriptorSetLayout-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** must be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateDescriptorSetLayout-pSetLayout-parameter **pSetLayout** must be a valid pointer to a [VkDescriptorSetLayout](#) handle

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**

Information about the descriptor set layout is passed in a [VkDescriptorSetLayoutCreateInfo](#) structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetLayoutCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkDescriptorSetLayoutCreateFlags flags;
    uint32_t           bindingCount;
    const VkDescriptorSetLayoutBinding* pBindings;
} VkDescriptorSetLayoutCreateInfo;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkDescriptorSetLayoutCreateFlagBits](#) specifying options for descriptor set layout creation.
- **bindingCount** is the number of elements in **pBindings**.
- **pBindings** is a pointer to an array of [VkDescriptorSetLayoutBinding](#) structures.

Valid Usage

- VUID-VkDescriptorSetLayoutCreateInfo-binding-00279

If the `perStageDescriptorSet` feature is not enabled, or `flags` does not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV`, then the `VkDescriptorSetLayoutBinding::binding` members of the elements of the `pBindings` array **must** each have different values

- VUID-VkDescriptorSetLayoutCreateInfo-flags-00280

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, then all elements of `pBindings` **must** not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-02208

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, then all elements of `pBindings` **must** not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-00281

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, then the total number of elements of all bindings **must** be less than or equal to `VkPhysicalDevicePushDescriptorPropertiesKHR::maxPushDescriptors`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-04590

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, `flags` **must** not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-04591

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, `pBindings` **must** not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-03000

If any binding has the `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` bit set, `flags` **must** include `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`

- VUID-VkDescriptorSetLayoutCreateInfo-descriptorType-03001

If any binding has the `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` bit set, then all bindings **must** not have `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-04592

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, `flags` **must** not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`

- VUID-VkDescriptorSetLayoutCreateInfo-pBindings-07303

If any element `pBindings[i]` has a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, then the `pNext` chain **must** include a `VkMutableDescriptorTypeCreateInfoEXT` structure, and `mutableDescriptorTypeListCount` **must** be greater than `i`

- VUID-VkDescriptorSetLayoutCreateInfo-descriptorType-04594

If a binding has a `descriptorType` value of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, then `pImmutableSamplers` **must** be `NULL`

- VUID-VkDescriptorSetLayoutCreateInfo-mutableDescriptorType-04595

If `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` is not enabled, `pBindings` **must** not contain a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-04596

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`, `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` **must** be enabled

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08000

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, then all elements of `pBindings` **must** not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08001

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, `flags` **must** also contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08002

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, then `flags` **must** not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08003

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, then `flags` **must** not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_VALVE`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-09463

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV`, then `perStageDescriptorSet` **must** be enabled

- VUID-VkDescriptorSetLayoutCreateInfo-flags-09464

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV`, then there **must** not be any two elements of the `pBindings` array with the same `VkDescriptorSetLayoutBinding::binding` value and their `VkDescriptorSetLayoutBinding::stageFlags` containing the same bit

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutCreateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO`

- VUID-VkDescriptorSetLayoutCreateInfo-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDescriptorSetLayoutBindingFlagsCreateInfo` or `VkMutableDescriptorTypeCreateInfoEXT`

- VUID-VkDescriptorSetLayoutCreateInfo-sType-unique

The `sType` value of each struct in the `pNext` chain **must** be unique

- VUID-VkDescriptorSetLayoutCreateInfo-flags-parameter

`flags` **must** be a valid combination of `VkDescriptorSetLayoutCreateFlagBits` values

- VUID-VkDescriptorSetLayoutCreateInfo-pBindings-parameter

If `bindingCount` is not 0, `pBindings` **must** be a valid pointer to an array of `bindingCount` valid

VkDescriptorSetLayoutBinding structures

If the `pNext` chain of a `VkDescriptorSetLayoutCreateInfo` or `VkDescriptorPoolCreateInfo` structure includes a `VkMutableDescriptorTypeCreateInfoEXT` structure, then that structure specifies Information about the possible descriptor types for mutable descriptor types.

The `VkMutableDescriptorTypeCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkMutableDescriptorTypeCreateInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 mutableDescriptorTypeListCount;
    const VkMutableDescriptorTypeListEXT* pMutableDescriptorTypeLists;
} VkMutableDescriptorTypeCreateInfoEXT;
```

or the equivalent

```
// Provided by VK_VALVE_mutable_descriptor_type
typedef VkMutableDescriptorTypeCreateInfoEXT VkMutableDescriptorTypeCreateInfoVALVE;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mutableDescriptorTypeListCount` is the number of elements in `pMutableDescriptorTypeLists`.
- `pMutableDescriptorTypeLists` is a pointer to an array of `VkMutableDescriptorTypeListEXT` structures.

If `mutableDescriptorTypeListCount` is zero or if this structure is not included in the `pNext` chain, the `VkMutableDescriptorTypeListEXT` for each element is considered to be zero or `NULL` for each member. Otherwise, the descriptor set layout binding at `VkDescriptorSetLayoutCreateInfo::pBindings[i]` uses the descriptor type lists in `VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists[i]`.

Valid Usage (Implicit)

- VUID-VkMutableDescriptorTypeCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MUTABLE_DESCRIPTOR_TYPE_CREATE_INFO_EXT`
- VUID-VkMutableDescriptorTypeCreateInfoEXT-pMutableDescriptorTypeLists-parameter
If `mutableDescriptorTypeListCount` is not 0, `pMutableDescriptorTypeLists` **must** be a valid pointer to an array of `mutableDescriptorTypeListCount` valid `VkMutableDescriptorTypeListEXT` structures

The list of potential descriptor types a given mutable descriptor **can** mutate to is passed in a `VkMutableDescriptorTypeListEXT` structure.

The `VkMutableDescriptorTypeListEXT` structure is defined as:

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkMutableDescriptorTypeListEXT {
    uint32_t          descriptorTypeCount;
    const VkDescriptorType* pDescriptorTypes;
} VkMutableDescriptorTypeListEXT;
```

or the equivalent

```
// Provided by VK_VALVE_mutable_descriptor_type
typedef VkMutableDescriptorTypeListEXT VkMutableDescriptorTypeListVALVE;
```

- `descriptorTypeCount` is the number of elements in `pDescriptorTypes`.
- `pDescriptorTypes` is `NULL` or a pointer to an array of `descriptorTypeCount` `VkDescriptorType` values defining which descriptor types a given binding may mutate to.

Valid Usage

- VUID-VkMutableDescriptorTypeListEXT-descriptorTypeCount-04597
`descriptorTypeCount` **must** not be `0` if the corresponding binding is of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04598
`pDescriptorTypes` **must** be a valid pointer to an array of `descriptorTypeCount` valid, unique `VkDescriptorType` values if the given binding is of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` type
- VUID-VkMutableDescriptorTypeListEXT-descriptorTypeCount-04599
`descriptorTypeCount` **must** be `0` if the corresponding binding is not of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04600
`pDescriptorTypes` **must** not contain `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04601
`pDescriptorTypes` **must** not contain `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04602
`pDescriptorTypes` **must** not contain `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04603
`pDescriptorTypes` **must** not contain `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`

Valid Usage (Implicit)

- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-parameter
If `descriptorTypeCount` is not `0`, `pDescriptorTypes` **must** be a valid pointer to an array of `descriptorTypeCount` valid `VkDescriptorType` values

Bits which **can** be set in `VkDescriptorSetLayoutCreateInfo::flags`, specifying options for descriptor set layout, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkDescriptorSetLayoutCreateFlagBits {
    // Provided by VK_VERSION_1_2
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT = 0x00000002,
    // Provided by VK_KHR_push_descriptor
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR = 0x00000001,
    // Provided by VK_EXT_descriptor_buffer
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT = 0x00000010,
    // Provided by VK_EXT_descriptor_buffer
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT = 0x00000020,
    // Provided by VK_NV_device_generated_commands_compute
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_INDIRECT_BINDABLE_BIT_NV = 0x00000080,
    // Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT = 0x00000004,
    // Provided by VK_NV_per_stage_descriptor_set
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV = 0x00000040,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT_EXT =
VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT,
    // Provided by VK_VALVE_mutable_descriptor_type
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_VALVE =
VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT,
} VkDescriptorSetLayoutCreateFlagBits;
```

- `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR` specifies that descriptor sets **must** not be allocated using this layout, and descriptors are instead pushed by `vkCmdPushDescriptorSetKHR`.
- `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` specifies that descriptor sets using this layout **must** be allocated from a descriptor pool created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit set. Descriptor set layouts created with this bit set have alternate limits for the maximum number of descriptors per-stage and per-pipeline layout. The non-UpdateAfterBind limits only count descriptors in sets created without this flag. The UpdateAfterBind limits count all descriptors, but the limits **may** be higher than the non-UpdateAfterBind limits.
- `VK_DESCRIPTOR_SET_LAYOUT_CREATE_INDIRECT_BINDABLE_BIT_NV` specifies that descriptor sets using this layout allows them to be bound with compute pipelines that are created with `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV` flag set to be used in `Device-Generated Commands`.
- `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` specifies that this layout **must** only be used with descriptor buffers.
- `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT` specifies that this is a layout only containing immutable samplers that **can** be bound by `vkCmdBindDescriptorBufferEmbeddedSamplersEXT`. Unlike normal immutable samplers, embedded immutable samplers do not require the application to provide them in a descriptor

buffer.

- `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT` specifies that descriptor sets using this layout **must** be allocated from a descriptor pool created with the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` bit set. Descriptor set layouts created with this bit have no expressible limit for maximum number of descriptors per-stage. Host descriptor sets are limited only by available host memory, but **may** be limited for implementation specific reasons. Implementations **may** limit the number of supported descriptors to `UpdateAfterBind` limits or `non-UpdateAfterBind` limits, whichever is larger.
- `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV` specifies that binding numbers in descriptor sets using this layout **may** represent different resources and/or types of resources in each stage.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorSetLayoutCreateFlags;
```

`VkDescriptorSetLayoutCreateFlags` is a bitmask type for setting a mask of zero or more `VkDescriptorSetLayoutCreateFlagBits`.

The `VkDescriptorSetLayoutBinding` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetLayoutBinding {
    uint32_t          binding;
    VkDescriptorType   descriptorType;
    uint32_t          descriptorCount;
    VkShaderStageFlags stageFlags;
    const VkSampler*   pImmutableSamplers;
} VkDescriptorSetLayoutBinding;
```

- `binding` is the binding number of this entry and corresponds to a resource of the same binding number in the shader stages.
- `descriptorType` is a `VkDescriptorType` specifying which type of resource descriptors are used for this binding.
- `descriptorCount` is the number of descriptors contained in the binding, accessed in a shader as an array, except if `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` in which case `descriptorCount` is the size in bytes of the inline uniform block. If `descriptorCount` is zero this binding entry is reserved and the resource **must** not be accessed from any stage via this binding within any pipeline using the set layout.
- `stageFlags` member is a bitmask of `VkShaderStageFlagBits` specifying which pipeline shader stages **can** access a resource for this binding. `VK_SHADER_STAGE_ALL` is a shorthand specifying that all defined shader stages, including any additional stages defined by extensions, **can** access the resource.

If a shader stage is not included in `stageFlags`, then a resource **must** not be accessed from that stage via this binding within any pipeline using the set layout. Other than input attachments which are limited to the fragment shader, there are no limitations on what combinations of

stages **can** use a descriptor binding, and in particular a binding **can** be used by both graphics stages and the compute stage.

- `pImmutableSamplers` affects initialization of samplers. If `descriptorType` specifies a `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` type descriptor, then `pImmutableSamplers` **can** be used to initialize a set of *immutable samplers*. Immutable samplers are permanently bound into the set layout and **must** not be changed; updating a `VK_DESCRIPTOR_TYPE_SAMPLER` descriptor with immutable samplers is not allowed and updates to a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor with immutable samplers does not modify the samplers (the image views are updated, but the sampler updates are ignored). If `pImmutableSamplers` is not `NULL`, then it is a pointer to an array of sampler handles that will be copied into the set layout and used for the corresponding binding. Only the sampler handles are copied; the sampler objects **must** not be destroyed before the final use of the set layout and any descriptor pools and sets created using it. If `pImmutableSamplers` is `NULL`, then the sampler slots are dynamic and sampler handles **must** be bound into descriptor sets using this layout. If `descriptorType` is not one of these descriptor types, then `pImmutableSamplers` is ignored.

The above layout definition allows the descriptor bindings to be specified sparsely such that not all binding numbers between 0 and the maximum binding number need to be specified in the `pBindings` array. Bindings that are not specified have a `descriptorCount` and `stageFlags` of zero, and the value of `descriptorType` is undefined. However, all binding numbers between 0 and the maximum binding number in the `VkDescriptorSetLayoutCreateInfo::pBindings` array **may** consume memory in the descriptor set layout even if not all descriptor bindings are used, though it **should** not consume additional memory from the descriptor pool.

NOTE

The maximum binding number specified **should** be as compact as possible to avoid wasted memory.

Valid Usage

- VUID-VkDescriptorSetLayoutBinding-descriptorType-00282
If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `descriptorCount` is not 0 and `pImmutableSamplers` is not `NULL`, `pImmutableSamplers` **must** be a valid pointer to an array of `descriptorCount` valid `VkSampler` handles
- VUID-VkDescriptorSetLayoutBinding-descriptorType-04604
If the `inlineUniformBlock` feature is not enabled, `descriptorType` **must** not be `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`
- VUID-VkDescriptorSetLayoutBinding-descriptorType-02209
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` **must** be a multiple of 4
- VUID-VkDescriptorSetLayoutBinding-descriptorType-08004
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` and `VkDescriptorSetLayoutCreateInfo::flags` does not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` then `descriptorCount` **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties`

`::maxInlineUniformBlockSize`

- VUID-VkDescriptorSetLayoutBinding-flags-08005
If `VkDescriptorSetLayoutCreateInfo::flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, `descriptorType` **must** be `VK_DESCRIPTOR_TYPE_SAMPLER`
- VUID-VkDescriptorSetLayoutBinding-flags-08006
If `VkDescriptorSetLayoutCreateInfo::flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, `descriptorCount` **must** be less than or equal to 1
- VUID-VkDescriptorSetLayoutBinding-flags-08007
If `VkDescriptorSetLayoutCreateInfo::flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, and `descriptorCount` is equal to 1, `pImmutableSamplers` **must** not be `NULL`
- VUID-VkDescriptorSetLayoutBinding-descriptorCount-09465
If `descriptorCount` is not 0, `stageFlags` **must** be `VK_SHADER_STAGE_ALL` or a valid combination of other `VkShaderStageFlagBits` values
- VUID-VkDescriptorSetLayoutBinding-descriptorType-01510
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` and `descriptorCount` is not 0, then `stageFlags` **must** be 0 or `VK_SHADER_STAGE_FRAGMENT_BIT`
- VUID-VkDescriptorSetLayoutBinding-pImmutableSamplers-04009
The sampler objects indicated by `pImmutableSamplers` **must** not have a `borderColor` with one of the values `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- VUID-VkDescriptorSetLayoutBinding-descriptorType-04605
If `descriptorType` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, then `pImmutableSamplers` **must** be `NULL`
- VUID-VkDescriptorSetLayoutBinding-flags-09466
If `VkDescriptorSetLayoutCreateInfo::flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV`, and `descriptorCount` is not 0, then `stageFlags` **must** be a valid combination of `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`, `VK_SHADER_STAGE_GEOMETRY_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT` and `VK_SHADER_STAGE_COMPUTE_BIT` values

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutBinding-descriptorType-parameter
`descriptorType` **must** be a valid `VkDescriptorType` value

If the `pNext` chain of a `VkDescriptorSetLayoutCreateInfo` structure includes a `VkDescriptorSetLayoutBindingFlagsCreateInfo` structure, then that structure includes an array of flags, one for each descriptor set layout binding.

The `VkDescriptorSetLayoutBindingFlagsCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetLayoutBindingFlagsCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             bindingCount;
    const VkDescriptorBindingFlags* pBindingFlags;
} VkDescriptorSetLayoutBindingFlagsCreateInfo;
```

or the equivalent

```
// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorSetLayoutBindingFlagsCreateInfo
VkDescriptorSetLayoutBindingFlagsCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bindingCount` is zero or the number of elements in `pBindingFlags`.
- `pBindingFlags` is a pointer to an array of `VkDescriptorBindingFlags` bitfields, one for each descriptor set layout binding.

If `bindingCount` is zero or if this structure is not included in the `pNext` chain, the `VkDescriptorBindingFlags` for each descriptor set layout binding is considered to be zero. Otherwise, the descriptor set layout binding at `VkDescriptorSetLayoutCreateInfo::pBindings[i]` uses the flags in `pBindingFlags[i]`.

Valid Usage

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-bindingCount-03002
If `bindingCount` is not zero, `bindingCount` **must** equal `VkDescriptorSetLayoutCreateInfo::bindingCount`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-flags-03003
If `VkDescriptorSetLayoutCreateInfo::flags` includes `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, then all elements of `pBindingFlags` **must** not include `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT`, or `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-03004
If an element of `pBindingFlags` includes `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, then it **must** be the element with the highest `binding` number
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUniformBufferUpdateAfterBind-03005
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUniformBufferUpdateAfterBind` is not enabled, all bindings with

descriptor type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` **must** not use
`VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingSampledImageUpdateAfterBind-03006
If [VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingSampledImageUpdateAfterBind](#) is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageImageUpdateAfterBind-03007
If [VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageImageUpdateAfterBind](#) is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageBufferUpdateAfterBind-03008
If [VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageBufferUpdateAfterBind](#) is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUniformTexelBufferUpdateAfterBind-03009
If [VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUniformTexelBufferUpdateAfterBind](#) is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageTexelBufferUpdateAfterBind-03010
If [VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageTexelBufferUpdateAfterBind](#) is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingInlineUniformBlockUpdateAfterBind-02211
If [VkPhysicalDeviceInlineUniformBlockFeatures::descriptorBindingInlineUniformBlockUpdateAfterBind](#) is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingAccelerationStructureUpdateAfterBind-03570
If [VkPhysicalDeviceAccelerationStructureFeaturesKHR::descriptorBindingAccelerationStructureUpdateAfterBind](#) is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` or `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` **must** not use

VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-None-03011
All bindings with descriptor type `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUpdateUnusedWhilePending-03012
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUpdateUnusedWhilePending` is not enabled, all elements of `pBindingFlags` **must** not include `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingPartiallyBound-03013
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingPartiallyBound` is not enabled, all elements of `pBindingFlags` **must** not include `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingVariableDescriptorCount-03014
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingVariableDescriptorCount` is not enabled, all elements of `pBindingFlags` **must** not include `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-03015
If an element of `pBindingFlags` includes `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, that element's `descriptorType` **must** not be `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_BINDING_FLAGS_CREATE_INFO`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-parameter
If `bindingCount` is not 0, `pBindingFlags` **must** be a valid pointer to an array of `bindingCount` valid combinations of `VkDescriptorBindingFlagBits` values

Bits which **can** be set in each element of `VkDescriptorSetLayoutBindingFlagsCreateInfo::pBindingFlags`, specifying options for the corresponding descriptor set layout binding, are:

```
// Provided by VK_VERSION_1_2
typedef enum VkDescriptorBindingFlagBits {
    VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT = 0x00000001,
    VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT = 0x00000002,
    VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT = 0x00000004,
    VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT = 0x00000008,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT_EXT =
VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT_EXT =
VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT_EXT =
VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT_EXT =
VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT,
} VkDescriptorBindingFlagBits;
```

or the equivalent

```
// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorBindingFlagBits VkDescriptorBindingFlagBitsEXT;
```

- **VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT** indicates that if descriptors in this binding are updated between when the descriptor set is bound in a command buffer and when that command buffer is submitted to a queue, then the submission will use the most recently set descriptors for this binding and the updates do not invalidate the command buffer. Descriptor bindings created with this flag are also partially exempt from the external synchronization requirement in [vkUpdateDescriptorSetWithTemplateKHR](#) and [vkUpdateDescriptorSets](#). Multiple descriptors with this flag set **can** be updated concurrently in different threads, though the same descriptor **must** not be updated concurrently by two threads. Descriptors with this flag set **can** be updated concurrently with the set being bound to a command buffer in another thread, but not concurrently with the set being reset or freed.
- **VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT** indicates that descriptors in this binding that are not *dynamically used* need not contain valid descriptors at the time the descriptors are consumed. A descriptor is dynamically used if any shader invocation executes an instruction that performs any memory access using the descriptor. If a descriptor is not dynamically used, any resource referenced by the descriptor is not considered to be referenced during command execution.
- **VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT** indicates that descriptors in this binding **can** be updated after a command buffer has bound this descriptor set, or while a command buffer that uses this descriptor set is pending execution, as long as the descriptors that are updated are not used by those command buffers. Descriptor bindings created with this flag are also partially exempt from the external synchronization requirement in

`vkUpdateDescriptorSetWithTemplateKHR` and `vkUpdateDescriptorSets` in the same way as for `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`. If `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` is also set, then descriptors **can** be updated as long as they are not dynamically used by any shader invocations. If `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` is not set, then descriptors **can** be updated as long as they are not statically used by any shader invocations.

- `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` indicates that this is a *variable-sized descriptor binding* whose size will be specified when a descriptor set is allocated using this layout. The value of `descriptorCount` is treated as an upper bound on the size of the binding. This **must** only be used for the last binding in the descriptor set layout (i.e. the binding with the largest value of `binding`). For the purposes of counting against limits such as `maxDescriptorSet*` and `maxPerStageDescriptor*`, the full value of `descriptorCount` is counted, except for descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, when `VkDescriptorSetLayoutCreateInfo::flags` does not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`. In this case, `descriptorCount` specifies the upper bound on the byte size of the binding; thus it counts against the `maxInlineUniformBlockSize` and `maxInlineUniformTotalSize` limits instead.

NOTE

Note that while `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` and `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` both involve updates to descriptor sets after they are bound, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` is a weaker requirement since it is only about descriptors that are not used, whereas `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` requires the implementation to observe updates to descriptors that are used.

```
// Provided by VK_VERSION_1_2
typedef VkFlags VkDescriptorBindingFlags;
```

or the equivalent

```
// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorBindingFlags VkDescriptorBindingFlagsEXT;
```

`VkDescriptorBindingFlags` is a bitmask type for setting a mask of zero or more `VkDescriptorBindingFlagBits`.

To query information about whether a descriptor set layout **can** be created, call:

```
// Provided by VK_VERSION_1_1
void vkGetDescriptorSetLayoutSupport(
    VkDevice device,
    const VkDescriptorSetLayoutCreateInfo* pCreateInfo,
    VkDescriptorSetLayoutSupport* pSupport);
```

or the equivalent command

```
// Provided by VK_KHR_maintenance3
void vkGetDescriptorSetLayoutSupportKHR(
    VkDevice device,
    const VkDescriptorSetLayoutCreateInfo* pCreateInfo,
    VkDescriptorSetLayoutSupport* pSupport);
```

- **device** is the logical device that would create the descriptor set layout.
- **pCreateInfo** is a pointer to a [VkDescriptorSetLayoutCreateInfo](#) structure specifying the state of the descriptor set layout object.
- **pSupport** is a pointer to a [VkDescriptorSetLayoutSupport](#) structure, in which information about support for the descriptor set layout object is returned.

Some implementations have limitations on what fits in a descriptor set which are not easily expressible in terms of existing limits like **maxDescriptorSet***, for example if all descriptor types share a limited space in memory but each descriptor is a different size or alignment. This command returns information about whether a descriptor set satisfies this limit. If the descriptor set layout satisfies the [VkPhysicalDeviceMaintenance3Properties::maxPerSetDescriptors](#) limit, this command is guaranteed to return **VK_TRUE** in [VkDescriptorSetLayoutSupport::supported](#). If the descriptor set layout exceeds the [VkPhysicalDeviceMaintenance3Properties::maxPerSetDescriptors](#) limit, whether the descriptor set layout is supported is implementation-dependent and **may** depend on whether the descriptor sizes and alignments cause the layout to exceed an internal limit.

This command does not consider other limits such as **maxPerStageDescriptor***, and so a descriptor set layout that is supported according to this command **must** still satisfy the pipeline layout limits such as **maxPerStageDescriptor*** in order to be used in a pipeline layout.

NOTE	This is a VkDevice query rather than VkPhysicalDevice because the answer may depend on enabled features.
-------------	---

Valid Usage (Implicit)

- VUID-vkGetDescriptorSetLayoutSupport-device-parameter **device must** be a valid [VkDevice](#) handle
- VUID-vkGetDescriptorSetLayoutSupport-pCreateInfo-parameter **pCreateInfo must** be a valid pointer to a valid [VkDescriptorSetLayoutCreateInfo](#) structure
- VUID-vkGetDescriptorSetLayoutSupport-pSupport-parameter **pSupport must** be a valid pointer to a [VkDescriptorSetLayoutSupport](#) structure

Information about support for the descriptor set layout is returned in a [VkDescriptorSetLayoutSupport](#) structure:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorSetLayoutSupport {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           supported;
} VkDescriptorSetLayoutSupport;
```

or the equivalent

```
// Provided by VK_KHR_maintenance3
typedef VkDescriptorSetLayoutSupport VkDescriptorSetLayoutSupportKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **supported** specifies whether the descriptor set layout **can** be created.

supported will be **VK_TRUE** if the descriptor set **can** be created, or else **VK_FALSE**.

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutSupport-sType-sType
sType must be **VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_SUPPORT**
- VUID-VkDescriptorSetLayoutSupport-pNext-pNext
pNext must be **NULL** or a pointer to a valid instance of [VkDescriptorSetVariableDescriptorCountLayoutSupport](#)
- VUID-VkDescriptorSetLayoutSupport-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique

If the **pNext** chain of a [VkDescriptorSetLayoutSupport](#) structure includes a [VkDescriptorSetVariableDescriptorCountLayoutSupport](#) structure, then that structure returns additional information about whether the descriptor set layout is supported.

```
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetVariableDescriptorCountLayoutSupport {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVariableDescriptorCount;
} VkDescriptorSetVariableDescriptorCountLayoutSupport;
```

or the equivalent

```
// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorSetVariableDescriptorCountLayoutSupport
VkDescriptorSetVariableDescriptorCountLayoutSupportEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxVariableDescriptorCount` indicates the maximum number of descriptors supported in the highest numbered binding of the layout, if that binding is variable-sized. If the highest numbered binding of the layout has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `maxVariableDescriptorCount` indicates the maximum byte size supported for the binding, if that binding is variable-sized.

If the `VkDescriptorSetLayoutCreateInfo` structure specified in `vkGetDescriptorSetLayoutSupport::pCreateInfo` includes a variable-sized descriptor, then `supported` is determined assuming the requested size of the variable-sized descriptor, and `maxVariableDescriptorCount` is the maximum size of that descriptor that **can** be successfully created (which is greater than or equal to the requested size passed in). If the `VkDescriptorSetLayoutCreateInfo` structure does not include a variable-sized descriptor, or if the `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingVariableDescriptorCount` feature is not enabled, then `maxVariableDescriptorCount` is zero. For the purposes of this command, a variable-sized descriptor binding with a `descriptorCount` of zero is treated as having a `descriptorCount` of four if `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, or one otherwise, and thus the binding is not ignored and the maximum descriptor count will be returned. If the layout is not supported, then the value written to `maxVariableDescriptorCount` is undefined.

Valid Usage (Implicit)

- VUID-VkDescriptorSetVariableDescriptorCountLayoutSupport-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_LAYOUT_SUPPORT`

The following examples show a shader snippet using two descriptor sets, and application code that creates corresponding descriptor set layouts.

GLSL Example

```
//
// binding to a single sampled image descriptor in set 0
//
layout (set=0, binding=0) uniform texture2D mySampledImage;

//
// binding to an array of sampled image descriptors in set 0
//
layout (set=0, binding=1) uniform texture2D myArrayOfSampledImages[12];
```

```
//
// binding to a single uniform buffer descriptor in set 1
//
layout (set=1, binding=0) uniform myUniformBuffer
{
    vec4 myElement[32];
};
```

SPIR-V Example

```
...
%1 = OpExtInstImport "GLSL.std.450"
...
OpName %9 "mySampledImage"
OpName %14 "myArrayOfSampledImages"
OpName %18 "myUniformBuffer"
OpMemberName %18 0 "myElement"
OpName %20 ""
OpDecorate %9 DescriptorSet 0
OpDecorate %9 Binding 0
OpDecorate %14 DescriptorSet 0
OpDecorate %14 Binding 1
OpDecorate %17 ArrayStride 16
OpMemberDecorate %18 0 Offset 0
OpDecorate %18 Block
OpDecorate %20 DescriptorSet 1
OpDecorate %20 Binding 0
%2 = OpTypeVoid
%3 = OpTypeFunction %2
%6 = OpTypeFloat 32
%7 = OpTypeImage %6 2D 0 0 0 1 Unknown
%8 = OpTypePointer UniformConstant %7
%9 = OpVariable %8 UniformConstant
%10 = OpTypeInt 32 0
%11 = OpConstant %10 12
%12 = OpTypeArray %7 %11
%13 = OpTypePointer UniformConstant %12
%14 = OpVariable %13 UniformConstant
%15 = OpTypeVector %6 4
%16 = OpConstant %10 32
%17 = OpTypeArray %15 %16
%18 = OpTypeStruct %17
%19 = OpTypePointer Uniform %18
%20 = OpVariable %19 Uniform
...
```

API Example

```
VkResult myResult;
```

```

const VkDescriptorSetLayoutBinding myDescriptorSetLayoutBinding[] =
{
    // binding to a single image descriptor
    {
        .binding = 0,
        .descriptorType = VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
        .descriptorCount = 1,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    },

    // binding to an array of image descriptors
    {
        .binding = 1,
        .descriptorType = VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
        .descriptorCount = 12,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    },

    // binding to a single uniform buffer descriptor
    {
        .binding = 0,
        .descriptorType = VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER,
        .descriptorCount = 1,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    }
};

const VkDescriptorSetLayoutCreateInfo myDescriptorSetLayoutCreateInfo[] =
{
    // Information for first descriptor set with two descriptor bindings
    {
        .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO,
        .pNext = NULL,
        .flags = 0,
        .bindingCount = 2,
        .pBindings = &myDescriptorSetLayoutBinding[0]
    },

    // Information for second descriptor set with one descriptor binding
    {
        .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO,
        .pNext = NULL,
        .flags = 0,
        .bindingCount = 1,
        .pBindings = &myDescriptorSetLayoutBinding[2]
    }
};

```

```
VkDescriptorSetLayout myDescriptorSetLayout[2];
```

```
//  
// Create first descriptor set layout  
//  
myResult = vkCreateDescriptorSetLayout(  
    myDevice,  
    &myDescriptorSetLayoutCreateInfo[0],  
    NULL,  
    &myDescriptorSetLayout[0]);  
  
//  
// Create second descriptor set layout  
//  
myResult = vkCreateDescriptorSetLayout(  
    myDevice,  
    &myDescriptorSetLayoutCreateInfo[1],  
    NULL,  
    &myDescriptorSetLayout[1]);
```

To destroy a descriptor set layout, call:

```
// Provided by VK_VERSION_1_0  
void vkDestroyDescriptorSetLayout(  
    VkDevice device,  
    VkDescriptorSetLayout descriptorSetLayout,  
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the descriptor set layout.
- **descriptorSetLayout** is the descriptor set layout to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-00284
If **VkAllocationCallbacks** were provided when **descriptorSetLayout** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-00285
If no **VkAllocationCallbacks** were provided when **descriptorSetLayout** was created, **pAllocator** **must** be NULL

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorSetLayout-device-parameter
device **must** be a valid **VkDevice** handle

- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-parameter
If `descriptorSetLayout` is not `VK_NULL_HANDLE`, `descriptorSetLayout` **must** be a valid `VkDescriptorSetLayout` handle
- VUID-vkDestroyDescriptorSetLayout-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-parent
If `descriptorSetLayout` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `descriptorSetLayout` **must** be externally synchronized

14.2.2. Pipeline Layouts

Access to descriptor sets from a pipeline is accomplished through a *pipeline layout*. Zero or more descriptor set layouts and zero or more push constant ranges are combined to form a pipeline layout object describing the complete set of resources that **can** be accessed by a pipeline. The pipeline layout represents a sequence of descriptor sets with each having a specific layout. This sequence of layouts is used to determine the interface between shader stages and shader resources. Each pipeline is created using a pipeline layout.

Pipeline layout objects are represented by `VkPipelineLayout` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineLayout)
```

To create a pipeline layout, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreatePipelineLayout(
    VkDevice                                device,
    const VkPipelineLayoutCreateInfo*       pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkPipelineLayout*                       pPipelineLayout);
```

- `device` is the logical device that creates the pipeline layout.
- `pCreateInfo` is a pointer to a `VkPipelineLayoutCreateInfo` structure specifying the state of the pipeline layout object.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pPipelineLayout` is a pointer to a `VkPipelineLayout` handle in which the resulting pipeline layout object is returned.

Valid Usage (Implicit)

- VUID-vkCreatePipelineLayout-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreatePipelineLayout-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkPipelineLayoutCreateInfo` structure
- VUID-vkCreatePipelineLayout-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreatePipelineLayout-pPipelineLayout-parameter
`pPipelineLayout` **must** be a valid pointer to a `VkPipelineLayout` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkPipelineLayoutCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineLayoutCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkPipelineLayoutCreateFlags flags;
    uint32_t           setLayoutCount;
    const VkDescriptorSetLayout* pSetLayouts;
    uint32_t           pushConstantRangeCount;
    const VkPushConstantRange* pPushConstantRanges;
} VkPipelineLayoutCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPipelineLayoutCreateFlagBits` specifying options for pipeline layout creation.
- `setLayoutCount` is the number of descriptor sets included in the pipeline layout.
- `pSetLayouts` is a pointer to an array of `VkDescriptorSetLayout` objects.
- `pushConstantRangeCount` is the number of push constant ranges included in the pipeline layout.
- `pPushConstantRanges` is a pointer to an array of `VkPushConstantRange` structures defining a set of

push constant ranges for use in a single pipeline layout. In addition to descriptor set layouts, a pipeline layout also describes how many push constants **can** be accessed by each stage of the pipeline.

NOTE

Push constants represent a high speed path to modify constant data in pipelines that is expected to outperform memory-backed resource updates.

Valid Usage

- VUID-VkPipelineLayoutCreateInfo-setLayoutCount-00286
`setLayoutCount` **must** be less than or equal to `VkPhysicalDeviceLimits::maxBoundDescriptorSets`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03016
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorSamplers`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03017
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` and `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorUniformBuffers`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03018
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` and `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorStorageBuffers`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-06939
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorSampledImages`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03020
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorStorageImages`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03021

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorInputAttachments`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-02214

The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set and with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible to any given shader stage across all elements of `pSetLayouts`, **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxPerStageDescriptorInlineUniformBlocks`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03022

The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindSamplers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03023

The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` and `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindUniformBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03024

The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` and `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindStorageBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03025

The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindSampledImages`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03026

The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindStorageImages`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03027

The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible to any given shader stage across all

elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindInputAttachments`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-02215

The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03028

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetSamplers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03029

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03030

If the `maintenance7` feature is not enabled, the total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-maintenance7-10003

If the `maintenance7` feature is enabled, the total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalUniformBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03031

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03032

If the `maintenance7` feature is not enabled, the total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal

to `VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-maintenance7-10004

If the `maintenance7` feature is enabled, the total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalStorageBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-None-10005

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-10006

The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetUpdateAfterBindTotalBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03033

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetSampledImages`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03034

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetStorageImages`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03035

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetInputAttachments`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-02216

The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to

VkPhysicalDeviceInlineUniformBlockProperties::maxDescriptorSetInlineUniformBlocks

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03036

The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindSamplers`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03037

The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindUniformBuffers`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03038

If the `maintenance7` feature is not enabled, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetUpdateAfterBindUniformBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-maintenance7-10007

If the `maintenance7` feature is enabled, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03039

The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindStorageBuffers`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03040

If the `maintenance7` feature is not enabled, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetUpdateAfterBindStorageBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-maintenance7-10008

If the `maintenance7` feature is enabled, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03041

The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindSampledImages`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03042
The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindStorageImages`
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03043
The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindInputAttachments`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-02217
The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxDescriptorSetUpdateAfterBindInlineUniformBlocks`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-06531
The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceVulkan13Properties::maxInlineUniformTotalSize`
- VUID-VkPipelineLayoutCreateInfo-pPushConstantRanges-00292
Any two elements of `pPushConstantRanges` **must** not include the same stage in `stageFlags`
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-00293
`pSetLayouts` **must** not contain more than one descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR` set
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03571
The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorAccelerationStructures`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03572
The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorUpdateAfterBindAccelerationStructures`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03573
The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to

VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxDescriptorSetAccelerationStructures

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03574
The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxDescriptorSetUpdateAfterBindAccelerationStructures`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-02381
The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxDescriptorSetAccelerationStructures`
- VUID-VkPipelineLayoutCreateInfo-pImmutableSamplers-03566
The total number of `pImmutableSamplers` created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` or `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT` across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::maxDescriptorSetSubsampledSamplers`
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-04606
Any element of `pSetLayouts` **must** not have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT` bit set
- VUID-VkPipelineLayoutCreateInfo-graphicsPipelineLibrary-06753
If `graphicsPipelineLibrary` is not enabled, elements of `pSetLayouts` **must** be valid `VkDescriptorSetLayout` objects
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-08008
If any element of `pSetLayouts` was created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set, all elements of `pSetLayouts` **must** have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set

Valid Usage (Implicit)

- VUID-VkPipelineLayoutCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_LAYOUT_CREATE_INFO`
- VUID-VkPipelineLayoutCreateInfo-flags-parameter
`flags` **must** be a valid combination of `VkPipelineLayoutCreateFlagBits` values
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-parameter
If `setLayoutCount` is not 0, `pSetLayouts` **must** be a valid pointer to an array of `setLayoutCount` valid or `VK_NULL_HANDLE` `VkDescriptorSetLayout` handles
- VUID-VkPipelineLayoutCreateInfo-pPushConstantRanges-parameter
If `pushConstantRangeCount` is not 0, `pPushConstantRanges` **must** be a valid pointer to an array of `pushConstantRangeCount` valid `VkPushConstantRange` structures

```
// Provided by VK_EXT_graphics_pipeline_library
typedef enum VkPipelineLayoutCreateFlagBits {
    // Provided by VK_EXT_graphics_pipeline_library
    VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT = 0x00000002,
} VkPipelineLayoutCreateFlagBits;
```

- `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` specifies that implementations **must** ensure that the properties and/or absence of a particular descriptor set do not influence any other properties of the pipeline layout. This allows pipelines libraries linked without `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT` to be created with a subset of the total descriptor sets.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineLayoutCreateFlags;
```

`VkPipelineLayoutCreateFlags` is a bitmask type for setting a mask of `VkPipelineLayoutCreateFlagBits`.

The `VkPushConstantRange` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPushConstantRange {
    VkShaderStageFlags    stageFlags;
    uint32_t              offset;
    uint32_t              size;
} VkPushConstantRange;
```

- `stageFlags` is a set of stage flags describing the shader stages that will access a range of push constants. If a particular stage is not included in the range, then accessing members of that range of push constants from the corresponding shader stage will return undefined values.
- `offset` and `size` are the start offset and size, respectively, consumed by the range. Both `offset` and `size` are in units of bytes and **must** be a multiple of 4. The layout of the push constant variables is specified in the shader.

Valid Usage

- VUID-VkPushConstantRange-offset-00294
`offset` **must** be less than `VkPhysicalDeviceLimits::maxPushConstantsSize`
- VUID-VkPushConstantRange-offset-00295
`offset` **must** be a multiple of 4
- VUID-VkPushConstantRange-size-00296
`size` **must** be greater than 0
- VUID-VkPushConstantRange-size-00297
`size` **must** be a multiple of 4

- VUID-VkPushConstantRange-size-00298
size **must** be less than or equal to `VkPhysicalDeviceLimits::maxPushConstantsSize` minus offset

Valid Usage (Implicit)

- VUID-VkPushConstantRange-stageFlags-parameter
stageFlags **must** be a valid combination of `VkShaderStageFlagBits` values
- VUID-VkPushConstantRange-stageFlags-requiredbitmask
stageFlags **must** not be 0

Once created, pipeline layouts are used as part of pipeline creation (see [Pipelines](#)), as part of binding descriptor sets (see [Descriptor Set Binding](#)), and as part of setting push constants (see [Push Constant Updates](#)). Pipeline creation accepts a pipeline layout as input, and the layout **may** be used to map (set, binding, arrayElement) tuples to implementation resources or memory locations within a descriptor set. The assignment of implementation resources depends only on the bindings defined in the descriptor sets that comprise the pipeline layout, and not on any shader source.

All resource variables [statically used](#) in all shaders in a pipeline **must** be declared with a (set, binding, arrayElement) that exists in the corresponding descriptor set layout and is of an appropriate descriptor type and includes the set of shader stages it is used by in `stageFlags`. The pipeline layout **can** include entries that are not used by a particular pipeline. The pipeline layout allows the application to provide a consistent set of bindings across multiple pipeline compiles, which enables those pipelines to be compiled in a way that the implementation **may** cheaply switch pipelines without reprogramming the bindings.

Similarly, the push constant block declared in each shader (if present) **must** only place variables at offsets that are each included in a push constant range with `stageFlags` including the bit corresponding to the shader stage that uses it. The pipeline layout **can** include ranges or portions of ranges that are not used by a particular pipeline.

There is a limit on the total number of resources of each type that **can** be included in bindings in all descriptor set layouts in a pipeline layout as shown in [Pipeline Layout Resource Limits](#). The “Total Resources Available” column gives the limit on the number of each type of resource that **can** be included in bindings in all descriptor sets in the pipeline layout. Some resource types count against multiple limits. Additionally, there are limits on the total number of each type of resource that **can** be used in any pipeline stage as described in [Shader Resource Limits](#).

Table 18. Pipeline Layout Resource Limits

Total Resources Available	Resource Types
<code>maxDescriptorSetSamplers</code> or <code>maxDescriptorSetUpdateAfterBindSamplers</code>	sampler
	combined image sampler

Total Resources Available	Resource Types
maxDescriptorSetSampledImages or maxDescriptorSetUpdateAfterBindSampledImages	sampled image
	combined image sampler
	uniform texel buffer
maxDescriptorSetStorageImages or maxDescriptorSetUpdateAfterBindStorageImages	storage image
	storage texel buffer
maxDescriptorSetUniformBuffers or maxDescriptorSetUpdateAfterBindUniformBuffers	uniform buffer
	uniform buffer dynamic
maxDescriptorSetUniformBuffersDynamic or maxDescriptorSetUpdateAfterBindUniformBuffersDynamic or maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic	uniform buffer dynamic
maxDescriptorSetStorageBuffers or maxDescriptorSetUpdateAfterBindStorageBuffers	storage buffer
	storage buffer dynamic
maxDescriptorSetStorageBuffersDynamic or maxDescriptorSetUpdateAfterBindStorageBuffersDynamic or maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic	storage buffer dynamic
maxDescriptorSetInputAttachments or maxDescriptorSetUpdateAfterBindInputAttachments	input attachment
maxDescriptorSetInlineUniformBlocks or maxDescriptorSetUpdateAfterBindInlineUniformBlocks	inline uniform block
maxDescriptorSetAccelerationStructures or maxDescriptorSetUpdateAfterBindAccelerationStructures	acceleration structure

To destroy a pipeline layout, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyPipelineLayout(
    VkDevice          device,
    VkPipelineLayout  pipelineLayout,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the pipeline layout.
- **pipelineLayout** is the pipeline layout to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyPipelineLayout-pipelineLayout-00299
If `VkAllocationCallbacks` were provided when `pipelineLayout` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipelineLayout-pipelineLayout-00300
If no `VkAllocationCallbacks` were provided when `pipelineLayout` was created, `pAllocator` **must** be `NULL`
- VUID-vkDestroyPipelineLayout-pipelineLayout-02004
`pipelineLayout` **must** not have been passed to any `vkCmd*` command for any command buffers that are still in the `recording state` when `vkDestroyPipelineLayout` is called

Valid Usage (Implicit)

- VUID-vkDestroyPipelineLayout-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyPipelineLayout-pipelineLayout-parameter
If `pipelineLayout` is not `VK_NULL_HANDLE`, `pipelineLayout` **must** be a valid `VkPipelineLayout` handle
- VUID-vkDestroyPipelineLayout-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyPipelineLayout-pipelineLayout-parent
If `pipelineLayout` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `pipelineLayout` **must** be externally synchronized

Pipeline Layout Compatibility

Two pipeline layouts are defined to be “compatible for `push constants`” if they were created with identical push constant ranges. Two pipeline layouts are defined to be “compatible for set N” if they were created with *identically defined* descriptor set layouts for sets zero through N, if both of them either were or were not created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, and if they were created with identical push constant ranges.

When binding a descriptor set (see [Descriptor Set Binding](#)) to set number N, a previously bound descriptor set bound with lower index M than N is disturbed if the pipeline layouts for set M and N are not compatible for set M. Otherwise, the bound descriptor set in M is not disturbed.

If, additionally, the previously bound descriptor set for set N was bound using a pipeline layout not

compatible for set N, then all bindings in sets numbered greater than N are disturbed.

When binding a pipeline, the pipeline **can** correctly access any previously bound descriptor set N if it was bound with compatible pipeline layout for set N, and it was not disturbed.

Layout compatibility means that descriptor sets **can** be bound to a command buffer for use by any pipeline created with a compatible pipeline layout, and without having bound a particular pipeline first. It also means that descriptor sets **can** remain valid across a pipeline change, and the same resources will be accessible to the newly bound pipeline.

When a descriptor set is disturbed by binding descriptor sets, the disturbed set is considered to contain undefined descriptors bound with the same pipeline layout as the disturbing descriptor set.

Implementor's Note

A consequence of layout compatibility is that when the implementation compiles a pipeline layout and maps pipeline resources to implementation resources, the mechanism for set N **should** only be a function of sets [0..N].

NOTE

Place the least frequently changing descriptor sets near the start of the pipeline layout, and place the descriptor sets representing the most frequently changing resources near the end. When pipelines are switched, only the descriptor set bindings that have been invalidated will need to be updated and the remainder of the descriptor set bindings will remain in place.

The maximum number of descriptor sets that **can** be bound to a pipeline layout is queried from physical device properties (see `maxBoundDescriptorSets` in [Limits](#)).

API Example

```
const VkDescriptorSetLayout layouts[] = { layout1, layout2 };

const VkPushConstantRange ranges[] =
{
    {
        .stageFlags = VK_SHADER_STAGE_VERTEX_BIT,
        .offset = 0,
        .size = 4
    },
    {
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .offset = 4,
        .size = 4
    },
};

const VkPipelineLayoutCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_PIPELINE_LAYOUT_CREATE_INFO,
```

```

        .pNext = NULL,
        .flags = 0,
        .setLayoutCount = 2,
        .pSetLayouts = layouts,
        .pushConstantRangeCount = 2,
        .pPushConstantRanges = ranges
    };

```

```

VkPipelineLayout myPipelineLayout;
myResult = vkCreatePipelineLayout(
    myDevice,
    &createInfo,
    NULL,
    &myPipelineLayout);

```

14.2.3. Allocation of Descriptor Sets

A *descriptor pool* maintains a pool of descriptors, from which descriptor sets are allocated. Descriptor pools are externally synchronized, meaning that the application **must** not allocate and/or free descriptor sets from the same pool in multiple threads simultaneously.

Descriptor pools are represented by `VkDescriptorPool` handles:

```

// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorPool)

```

To create a descriptor pool object, call:

```

// Provided by VK_VERSION_1_0
VkResult vkCreateDescriptorPool(
    VkDevice                                device,
    const VkDescriptorPoolCreateInfo*      pCreateInfo,
    const VkAllocationCallbacks*          pAllocator,
    VkDescriptorPool*                      pDescriptorPool);

```

- `device` is the logical device that creates the descriptor pool.
- `pCreateInfo` is a pointer to a `VkDescriptorPoolCreateInfo` structure specifying the state of the descriptor pool object.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pDescriptorPool` is a pointer to a `VkDescriptorPool` handle in which the resulting descriptor pool object is returned.

The created descriptor pool is returned in `pDescriptorPool`.

Valid Usage (Implicit)

- VUID-vkCreateDescriptorPool-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateDescriptorPool-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkDescriptorPoolCreateInfo` structure
- VUID-vkCreateDescriptorPool-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateDescriptorPool-pDescriptorPool-parameter
`pDescriptorPool` **must** be a valid pointer to a `VkDescriptorPool` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_FRAGMENTATION_EXT`

Additional information about the pool is passed in a `VkDescriptorPoolCreateInfo` structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorPoolCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkDescriptorPoolCreateFlags flags;
    uint32_t           maxSets;
    uint32_t           poolSizeCount;
    const VkDescriptorPoolSize* pPoolSizes;
} VkDescriptorPoolCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkDescriptorPoolCreateFlagBits` specifying certain supported operations on the pool.
- `maxSets` is the maximum number of descriptor sets that **can** be allocated from the pool.
- `poolSizeCount` is the number of elements in `pPoolSizes`.
- `pPoolSizes` is a pointer to an array of `VkDescriptorPoolSize` structures, each containing a descriptor type and number of descriptors of that type to be allocated in the pool.

If multiple `VkDescriptorPoolSize` structures containing the same descriptor type appear in the `pPoolSizes` array then the pool will be created with enough storage for the total number of descriptors of each type.

Fragmentation of a descriptor pool is possible and **may** lead to descriptor set allocation failures. A failure due to fragmentation is defined as failing a descriptor set allocation despite the sum of all outstanding descriptor set allocations from the pool plus the requested allocation requiring no more than the total number of descriptors requested at pool creation. Implementations provide certain guarantees of when fragmentation **must** not cause allocation failure, as described below.

If a descriptor pool has not had any descriptor sets freed since it was created or most recently reset then fragmentation **must** not cause an allocation failure (note that this is always the case for a pool created without the `VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT` bit set). Additionally, if all sets allocated from the pool since it was created or most recently reset use the same number of descriptors (of each type) and the requested allocation also uses that same number of descriptors (of each type), then fragmentation **must** not cause an allocation failure.

If an allocation failure occurs due to fragmentation, an application **can** create an additional descriptor pool to perform further descriptor set allocations.

If `flags` has the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit set, descriptor pool creation **may** fail with the error `VK_ERROR_FRAGMENTATION` if the total number of descriptors across all pools (including this one) created with this bit set exceeds `maxUpdateAfterBindDescriptorsInAllPools`, or if fragmentation of the underlying hardware resources occurs.

If a `pPoolSizes[i]::type` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, a `VkMutableDescriptorTypeCreateInfoEXT` struct in the `pNext` chain **can** be used to specify which mutable descriptor types **can** be allocated from the pool. If included in the `pNext` chain, `VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists[i]` specifies which kind of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` descriptors **can** be allocated from this pool entry. If `VkMutableDescriptorTypeCreateInfoEXT` does not exist in the `pNext` chain, or `VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists[i]` is out of range, the descriptor pool allocates enough memory to be able to allocate a `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` descriptor with any supported `VkDescriptorType` as a mutable descriptor. A mutable descriptor **can** be allocated from a pool entry if the type list in `VkDescriptorSetLayoutCreateInfo` is a subset of the type list declared in the descriptor pool, or if the pool entry is created without a descriptor type list. Multiple `pPoolSizes` entries with `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` **can** be declared. When multiple such pool entries are present in `pPoolSizes`, they specify sets of supported descriptor types which either fully overlap, partially overlap, or are disjoint. Two sets fully overlap if the sets of supported descriptor types are equal. If the sets are not disjoint they partially overlap. A pool entry without a `VkMutableDescriptorTypeListEXT` assigned to it is considered to partially overlap any other pool entry which has a `VkMutableDescriptorTypeListEXT` assigned to it. The application **must** ensure that partial overlap does not exist in `pPoolSizes`.

NOTE

The requirement of no partial overlap is intended to resolve ambiguity for validation as there is no confusion which `pPoolSizes` entries will be allocated from. An implementation is not expected to depend on this requirement.

Valid Usage

- VUID-VkDescriptorPoolCreateInfo-descriptorPoolOverallocation-09227
If the `descriptorPoolOverallocation` feature is not enabled, or `flags` does not have `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV` set, `maxSets` **must** be greater than 0
- VUID-VkDescriptorPoolCreateInfo-flags-09228
If `flags` has the `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV` or `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV` bits set, then `descriptorPoolOverallocation` **must** be enabled
- VUID-VkDescriptorPoolCreateInfo-flags-04607
If `flags` has the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` bit set, then the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit **must** not be set
- VUID-VkDescriptorPoolCreateInfo-mutableDescriptorType-04608
If `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` is not enabled, `pPoolSizes` **must** not contain a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkDescriptorPoolCreateInfo-flags-04609
If `flags` has the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` bit set, `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` **must** be enabled
- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-04787
If `pPoolSizes` contains a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, any other `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` element in `pPoolSizes` **must** not have sets of supported descriptor types which partially overlap
- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-09424
If `pPoolSizes` contains a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, the `pNext` chain **must** include a `VkDescriptorPoolInlineUniformBlockCreateInfo` structure whose `maxInlineUniformBlockBindings` member is not zero

Valid Usage (Implicit)

- VUID-VkDescriptorPoolCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_POOL_CREATE_INFO`
- VUID-VkDescriptorPoolCreateInfo-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDescriptorPoolInlineUniformBlockCreateInfo` or `VkMutableDescriptorTypeCreateInfoEXT`
- VUID-VkDescriptorPoolCreateInfo-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkDescriptorPoolCreateInfo-flags-parameter
`flags` **must** be a valid combination of `VkDescriptorPoolCreateFlagBits` values
- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-parameter

If `poolSizeCount` is not 0, `pPoolSizes` **must** be a valid pointer to an array of `poolSizeCount` valid `VkDescriptorPoolSize` structures

In order to be able to allocate descriptor sets having `inline uniform block` bindings the descriptor pool **must** be created with specifying the inline uniform block binding capacity of the descriptor pool, in addition to the total inline uniform data capacity in bytes which is specified through a `VkDescriptorPoolSize` structure with a `descriptorType` value of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`. This **can** be done by adding a `VkDescriptorPoolInlineUniformBlockCreateInfo` structure to the `pNext` chain of `VkDescriptorPoolCreateInfo`.

The `VkDescriptorPoolInlineUniformBlockCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkDescriptorPoolInlineUniformBlockCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           maxInlineUniformBlockBindings;
} VkDescriptorPoolInlineUniformBlockCreateInfo;
```

or the equivalent

```
// Provided by VK_EXT_inline_uniform_block
typedef VkDescriptorPoolInlineUniformBlockCreateInfo
VkDescriptorPoolInlineUniformBlockCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxInlineUniformBlockBindings` is the number of inline uniform block bindings to allocate.

Valid Usage (Implicit)

- VUID-VkDescriptorPoolInlineUniformBlockCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_POOL_INLINE_UNIFORM_BLOCK_CREATE_INFO`

Bits which **can** be set in `VkDescriptorPoolCreateInfo::flags`, enabling operations on a descriptor pool, are:

```

// Provided by VK_VERSION_1_0
typedef enum VkDescriptorPoolCreateFlagBits {
    VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT = 0x00000001,
    // Provided by VK_VERSION_1_2
    VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT = 0x00000002,
    // Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT = 0x00000004,
    // Provided by VK_NV_descriptor_pool_overallocation
    VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV = 0x00000008,
    // Provided by VK_NV_descriptor_pool_overallocation
    VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV = 0x00000010,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT_EXT =
VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT,
    // Provided by VK_VALVE_mutable_descriptor_type
    VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_VALVE =
VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT,
} VkDescriptorPoolCreateFlagBits;

```

- **VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT** specifies that descriptor sets **can** return their individual allocations to the pool, i.e. all of [vkAllocateDescriptorSets](#), [vkFreeDescriptorSets](#), and [vkResetDescriptorPool](#) are allowed. Otherwise, descriptor sets allocated from the pool **must** not be individually freed back to the pool, i.e. only [vkAllocateDescriptorSets](#) and [vkResetDescriptorPool](#) are allowed.
- **VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT** specifies that descriptor sets allocated from this pool **can** include bindings with the **VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT** bit set. It is valid to allocate descriptor sets that have bindings that do not set the **VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT** bit from a pool that has **VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT** set.
- **VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT** specifies that this descriptor pool and the descriptor sets allocated from it reside entirely in host memory and cannot be bound. Similar to descriptor sets allocated without this flag, applications **can** copy-from and copy-to descriptors sets allocated from this descriptor pool. Descriptor sets allocated from this pool are partially exempt from the external synchronization requirement in [vkUpdateDescriptorSetWithTemplateKHR](#) and [vkUpdateDescriptorSets](#). Descriptor sets and their descriptors can be updated concurrently in different threads, though the same descriptor **must** not be updated concurrently by two threads.
- **VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV** specifies that the implementation should allow the application to allocate more than [VkDescriptorPoolCreateInfo::maxSets](#) descriptor set objects from the descriptor pool as available resources allow. The implementation **may** use the **maxSets** value to allocate the initial available sets, but using zero is permitted.
- **VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV** specifies that the implementation should allow the application to allocate more descriptors from the pool than was specified by the [VkDescriptorPoolSize::descriptorCount](#) for any descriptor type as specified by [VkDescriptorPoolCreateInfo::poolSizeCount](#) and [VkDescriptorPoolCreateInfo::pPoolSizes](#), as available resources allow. The implementation **may** use the **descriptorCount** for each descriptor

type to allocate the initial pool, but the application is allowed to set the `poolSizeCount` to zero, or any of the `descriptorCount` values in the `pPoolSizes` array to zero.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorPoolCreateFlags;
```

`VkDescriptorPoolCreateFlags` is a bitmask type for setting a mask of zero or more `VkDescriptorPoolCreateFlagBits`.

The `VkDescriptorPoolSize` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorPoolSize {
    VkDescriptorType    type;
    uint32_t            descriptorCount;
} VkDescriptorPoolSize;
```

- `type` is the type of descriptor.
- `descriptorCount` is the number of descriptors of that type to allocate. If `type` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` is the number of bytes to allocate for descriptors of this type.

NOTE

When creating a descriptor pool that will contain descriptors for combined image samplers of multi-planar formats, an application needs to account for non-trivial descriptor consumption when choosing the `descriptorCount` value, as indicated by `VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount`.

For simplicity the application **can** use the `VkPhysicalDeviceMaintenance6PropertiesKHR::maxCombinedImageSamplerDescriptorCount` property, which is sized to accommodate any and all **formats that require a sampler Y'C_BC_R conversion** supported by the implementation.

Valid Usage

- VUID-VkDescriptorPoolSize-descriptorCount-00302
`descriptorCount` **must** be greater than 0
- VUID-VkDescriptorPoolSize-type-02218
If `type` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-VkDescriptorPoolSize-type-parameter

type **must** be a valid [VkDescriptorType](#) value

To destroy a descriptor pool, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyDescriptorPool(
    VkDevice          device,
    VkDescriptorPool  descriptorPool,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the descriptor pool.
- **descriptorPool** is the descriptor pool to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

When a pool is destroyed, all descriptor sets allocated from the pool are implicitly freed and become invalid. Descriptor sets allocated from a given pool do not need to be freed before destroying that descriptor pool.

Valid Usage

- VUID-vkDestroyDescriptorPool-descriptorPool-00303
All submitted commands that refer to **descriptorPool** (via any allocated descriptor sets) **must** have completed execution
- VUID-vkDestroyDescriptorPool-descriptorPool-00304
If **VkAllocationCallbacks** were provided when **descriptorPool** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDescriptorPool-descriptorPool-00305
If no **VkAllocationCallbacks** were provided when **descriptorPool** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorPool-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyDescriptorPool-descriptorPool-parameter
If **descriptorPool** is not [VK_NULL_HANDLE](#), **descriptorPool** **must** be a valid [VkDescriptorPool](#) handle
- VUID-vkDestroyDescriptorPool-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyDescriptorPool-descriptorPool-parent
If **descriptorPool** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to `descriptorPool` **must** be externally synchronized

Descriptor sets are allocated from descriptor pool objects, and are represented by `VkDescriptorSet` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorSet)
```

To allocate descriptor sets from a descriptor pool, call:

```
// Provided by VK_VERSION_1_0
VkResult vkAllocateDescriptorSets(
    VkDevice device,
    const VkDescriptorSetAllocateInfo* pAllocateInfo,
    VkDescriptorSet* pDescriptorSets);
```

- `device` is the logical device that owns the descriptor pool.
- `pAllocateInfo` is a pointer to a `VkDescriptorSetAllocateInfo` structure describing parameters of the allocation.
- `pDescriptorSets` is a pointer to an array of `VkDescriptorSet` handles in which the resulting descriptor set objects are returned.

The allocated descriptor sets are returned in `pDescriptorSets`.

When a descriptor set is allocated, the initial state is largely uninitialized and all descriptors are undefined, with the exception that samplers with a non-null `pImmutableSamplers` are initialized on allocation. Descriptors also become undefined if the underlying resource or view object is destroyed. Descriptor sets containing undefined descriptors **can** still be bound and used, subject to the following conditions:

- For descriptor set bindings created with the `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` bit set, all descriptors in that binding that are dynamically used **must** have been populated before the descriptor set is `consumed`.
- For descriptor set bindings created without the `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` bit set, all descriptors in that binding that are statically used **must** have been populated before the descriptor set is `consumed`.
- Descriptor bindings with descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` **can** be undefined when the descriptor set is `consumed`; though values in that block will be undefined.
- Entries that are not used by a pipeline **can** have undefined descriptors.

If a call to `vkAllocateDescriptorSets` would cause the total number of descriptor sets allocated from the pool to exceed the value of `VkDescriptorPoolCreateInfo::maxSets` used to create `pAllocateInfo`-

>`descriptorPool`, then the allocation **may** fail due to lack of space in the descriptor pool. Similarly, the allocation **may** fail due to lack of space if the call to `vkAllocateDescriptorSets` would cause the number of any given descriptor type to exceed the sum of all the `descriptorCount` members of each element of `VkDescriptorPoolCreateInfo::pPoolSizes` with a `type` equal to that type.

Additionally, the allocation **may** also fail if a call to `vkAllocateDescriptorSets` would cause the total number of inline uniform block bindings allocated from the pool to exceed the value of `VkDescriptorPoolInlineUniformBlockCreateInfo::maxInlineUniformBlockBindings` used to create the descriptor pool.

If the allocation fails due to no more space in the descriptor pool, and not because of system or device memory exhaustion, then `VK_ERROR_OUT_OF_POOL_MEMORY` **must** be returned.

`vkAllocateDescriptorSets` **can** be used to create multiple descriptor sets. If the creation of any of those descriptor sets fails, then the implementation **must** destroy all successfully created descriptor set objects from this command, set all entries of the `pDescriptorSets` array to `VK_NULL_HANDLE` and return the error.

Valid Usage (Implicit)

- VUID-vkAllocateDescriptorSets-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkAllocateDescriptorSets-pAllocateInfo-parameter
`pAllocateInfo` **must** be a valid pointer to a valid `VkDescriptorSetAllocateInfo` structure
- VUID-vkAllocateDescriptorSets-pDescriptorSets-parameter
`pDescriptorSets` **must** be a valid pointer to an array of `pAllocateInfo->descriptorSetCount` `VkDescriptorSet` handles
- VUID-vkAllocateDescriptorSets-pAllocateInfo::descriptorSetCount-arraylength
`pAllocateInfo->descriptorSetCount` **must** be greater than 0

Host Synchronization

- Host access to `pAllocateInfo->descriptorPool` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_FRAGMENTED_POOL`
- `VK_ERROR_OUT_OF_POOL_MEMORY`

The `VkDescriptorSetAllocateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetAllocateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkDescriptorPool          descriptorPool;
    uint32_t                 descriptorSetCount;
    const VkDescriptorSetLayout* pSetLayouts;
} VkDescriptorSetAllocateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorPool` is the pool which the sets will be allocated from.
- `descriptorSetCount` determines the number of descriptor sets to be allocated from the pool.
- `pSetLayouts` is a pointer to an array of descriptor set layouts, with each member specifying how the corresponding descriptor set is allocated.

Valid Usage

- VUID-VkDescriptorSetAllocateInfo-apiVersion-07895
If the `VK_KHR_maintenance1` extension is not enabled and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `descriptorSetCount` **must** not be greater than the number of sets that are currently available for allocation in `descriptorPool`
- VUID-VkDescriptorSetAllocateInfo-apiVersion-07896
If the `VK_KHR_maintenance1` extension is not enabled and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `descriptorPool` **must** have enough free descriptor capacity remaining to allocate the descriptor sets of the specified layouts
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-00308
Each element of `pSetLayouts` **must** not have been created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR` set
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-03044
If any element of `pSetLayouts` was created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set, `descriptorPool` **must** have been created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-09380
If `pSetLayouts[i]` was created with an element of `pBindingFlags` that includes `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, and `VkDescriptorSetVariableDescriptorCountAllocateInfo` is included in the `pNext` chain, and `VkDescriptorSetVariableDescriptorCountAllocateInfo::descriptorSetCount` is not zero, then `VkDescriptorSetVariableDescriptorCountAllocateInfo::pDescriptorCounts[i]` **must** be less than or equal to `VkDescriptorSetLayoutBinding::descriptorCount` for the corresponding binding used to create `pSetLayouts[i]`

- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-04610

If any element of `pSetLayouts` was created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT` bit set, `descriptorPool` **must** have been created with the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` flag set

- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-08009

Each element of `pSetLayouts` **must** not have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set

Valid Usage (Implicit)

- VUID-VkDescriptorSetAllocateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_ALLOCATE_INFO`

- VUID-VkDescriptorSetAllocateInfo-pNext-pNext

`pNext` **must** be `NULL` or a pointer to a valid instance of `VkDescriptorSetVariableDescriptorCountAllocateInfo`

- VUID-VkDescriptorSetAllocateInfo-sType-unique

The `sType` value of each struct in the `pNext` chain **must** be unique

- VUID-VkDescriptorSetAllocateInfo-descriptorPool-parameter

`descriptorPool` **must** be a valid `VkDescriptorPool` handle

- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-parameter

`pSetLayouts` **must** be a valid pointer to an array of `descriptorSetCount` valid `VkDescriptorSetLayout` handles

- VUID-VkDescriptorSetAllocateInfo-descriptorSetCount-arraylength

`descriptorSetCount` **must** be greater than 0

- VUID-VkDescriptorSetAllocateInfo-commonparent

Both of `descriptorPool`, and the elements of `pSetLayouts` **must** have been created, allocated, or retrieved from the same `VkDevice`

If the `pNext` chain of a `VkDescriptorSetAllocateInfo` structure includes a `VkDescriptorSetVariableDescriptorCountAllocateInfo` structure, then that structure includes an array of descriptor counts for variable-sized descriptor bindings, one for each descriptor set being allocated.

The `VkDescriptorSetVariableDescriptorCountAllocateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetVariableDescriptorCountAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           descriptorSetCount;
    const uint32_t*     pDescriptorCounts;
} VkDescriptorSetVariableDescriptorCountAllocateInfo;
```

or the equivalent

```
// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorSetVariableDescriptorCountAllocateInfo
VkDescriptorSetVariableDescriptorCountAllocateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorSetCount` is zero or the number of elements in `pDescriptorCounts`.
- `pDescriptorCounts` is a pointer to an array of descriptor counts, with each member specifying the number of descriptors in a variable-sized descriptor binding in the corresponding descriptor set being allocated.

If `descriptorSetCount` is zero or this structure is not included in the `pNext` chain, then the variable lengths are considered to be zero. Otherwise, `pDescriptorCounts[i]` is the number of descriptors in the variable-sized descriptor binding in the corresponding descriptor set layout. If the variable-sized descriptor binding in the corresponding descriptor set layout has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `pDescriptorCounts[i]` specifies the binding's capacity in bytes. If `VkDescriptorSetAllocateInfo::pSetLayouts[i]` does not include a variable-sized descriptor binding, then `pDescriptorCounts[i]` is ignored.

Valid Usage

- VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-descriptorSetCount-03045
If `descriptorSetCount` is not zero, `descriptorSetCount` **must** equal `VkDescriptorSetAllocateInfo::descriptorSetCount`

Valid Usage (Implicit)

- VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_ALLOCATE_INFO`
- VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-pDescriptorCounts-parameter
If `descriptorSetCount` is not 0, `pDescriptorCounts` **must** be a valid pointer to an array of `descriptorSetCount` `uint32_t` values

To free allocated descriptor sets, call:

```
// Provided by VK_VERSION_1_0
VkResult vkFreeDescriptorSets(
    VkDevice          device,
    VkDescriptorPool   descriptorPool,
    uint32_t          descriptorSetCount,
    const VkDescriptorSet* pDescriptorSets);
```

- **device** is the logical device that owns the descriptor pool.
- **descriptorPool** is the descriptor pool from which the descriptor sets were allocated.
- **descriptorSetCount** is the number of elements in the **pDescriptorSets** array.
- **pDescriptorSets** is a pointer to an array of handles to **VkDescriptorSet** objects.

After calling **vkFreeDescriptorSets**, all descriptor sets in **pDescriptorSets** are invalid.

Valid Usage

- VUID-vkFreeDescriptorSets-pDescriptorSets-00309
All submitted commands that refer to any element of **pDescriptorSets** **must** have completed execution
- VUID-vkFreeDescriptorSets-pDescriptorSets-00310
pDescriptorSets **must** be a valid pointer to an array of **descriptorSetCount** **VkDescriptorSet** handles, each element of which **must** either be a valid handle or **VK_NULL_HANDLE**
- VUID-vkFreeDescriptorSets-descriptorPool-00312
descriptorPool **must** have been created with the **VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT** flag

Valid Usage (Implicit)

- VUID-vkFreeDescriptorSets-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkFreeDescriptorSets-descriptorPool-parameter
descriptorPool **must** be a valid **VkDescriptorPool** handle
- VUID-vkFreeDescriptorSets-descriptorSetCount-arraylength
descriptorSetCount **must** be greater than 0
- VUID-vkFreeDescriptorSets-descriptorPool-parent
descriptorPool **must** have been created, allocated, or retrieved from **device**
- VUID-vkFreeDescriptorSets-pDescriptorSets-parent
Each element of **pDescriptorSets** that is a valid handle **must** have been created, allocated, or retrieved from **descriptorPool**

Host Synchronization

- Host access to **descriptorPool** **must** be externally synchronized
- Host access to each member of **pDescriptorSets** **must** be externally synchronized

Return Codes

Success

- **VK_SUCCESS**

Failure

None

To return all descriptor sets allocated from a given pool to the pool, rather than freeing individual descriptor sets, call:

```
// Provided by VK_VERSION_1_0
VkResult vkResetDescriptorPool(
    VkDevice                device,
    VkDescriptorPool        descriptorPool,
    VkDescriptorPoolResetFlags flags);
```

- **device** is the logical device that owns the descriptor pool.
- **descriptorPool** is the descriptor pool to be reset.
- **flags** is reserved for future use.

Resetting a descriptor pool recycles all of the resources from all of the descriptor sets allocated from the descriptor pool back to the descriptor pool, and the descriptor sets are implicitly freed.

Valid Usage

- VUID-vkResetDescriptorPool-descriptorPool-00313
All uses of **descriptorPool** (via any allocated descriptor sets) **must** have completed execution

Valid Usage (Implicit)

- VUID-vkResetDescriptorPool-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkResetDescriptorPool-descriptorPool-parameter
descriptorPool **must** be a valid **VkDescriptorPool** handle
- VUID-vkResetDescriptorPool-flags-zero bitmask

flags must be 0

- VUID-vkResetDescriptorPool-descriptorPool-parent
descriptorPool must have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **descriptorPool must** be externally synchronized
- Host access to any **VkDescriptorSet** objects allocated from **descriptorPool must** be externally synchronized

Return Codes

Success

- **VK_SUCCESS**

Failure

None

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorPoolResetFlags;
```

VkDescriptorPoolResetFlags is a bitmask type for setting a mask, but is currently reserved for future use.

14.2.4. Descriptor Set Updates

Once allocated, descriptor sets **can** be updated with a combination of write and copy operations. To update descriptor sets, call:

```
// Provided by VK_VERSION_1_0
void vkUpdateDescriptorSets(
    VkDevice                device,
    uint32_t                descriptorWriteCount,
    const VkWriteDescriptorSet* pDescriptorWrites,
    uint32_t                descriptorCopyCount,
    const VkCopyDescriptorSet* pDescriptorCopies);
```

- **device** is the logical device that updates the descriptor sets.
- **descriptorWriteCount** is the number of elements in the **pDescriptorWrites** array.
- **pDescriptorWrites** is a pointer to an array of **VkWriteDescriptorSet** structures describing the descriptor sets to write to.
- **descriptorCopyCount** is the number of elements in the **pDescriptorCopies** array.

- `pDescriptorCopies` is a pointer to an array of `VkCopyDescriptorSet` structures describing the descriptor sets to copy between.

The operations described by `pDescriptorWrites` are performed first, followed by the operations described by `pDescriptorCopies`. Within each array, the operations are performed in the order they appear in the array.

Each element in the `pDescriptorWrites` array describes an operation updating the descriptor set using descriptors for resources specified in the structure.

Each element in the `pDescriptorCopies` array is a `VkCopyDescriptorSet` structure describing an operation copying descriptors between sets.

If the `dstSet` member of any element of `pDescriptorWrites` or `pDescriptorCopies` is bound, accessed, or modified by any command that was recorded to a command buffer which is currently in the [recording or executable state](#), and any of the descriptor bindings that are updated were not created with the `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` or `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` bits set, that command buffer becomes [invalid](#).

Valid Usage

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06236
For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, elements of the `pTexelBufferView` member of `pDescriptorWrites[i]` **must** have been created on `device`
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06237
For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, the `buffer` member of any element of the `pBufferInfo` member of `pDescriptorWrites[i]` **must** have been created on `device`
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06238
For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `dstSet` was not allocated with a layout that included immutable samplers for `dstBinding` with `descriptorType`, the `sampler` member of any element of the `pImageInfo` member of `pDescriptorWrites[i]` **must** have been created on `device`
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06239
For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` the `imageView` member of any element of `pDescriptorWrites[i]` **must** have been created on `device`
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06240
For each element `i` where `pDescriptorWrites[i].descriptorType` is

VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, elements of the pAccelerationStructures member of a VkWriteDescriptorSetAccelerationStructureKHR structure in the pNext chain of pDescriptorWrites[i] **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06241

For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV, elements of the pAccelerationStructures member of a VkWriteDescriptorSetAccelerationStructureNV structure in the pNext chain of pDescriptorWrites[i] **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06940

For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM or VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, the imageView member of any element of pDescriptorWrites[i] **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06493

For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, pDescriptorWrites[i].pImageInfo **must** be a valid pointer to an array of pDescriptorWrites[i].descriptorCount valid VkDescriptorImageInfo structures

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06941

For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM or VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, pDescriptorWrites[i].pImageInfo **must** be a valid pointer to an array of pDescriptorWrites[i].descriptorCount valid VkDescriptorImageInfo structures

- VUID-vkUpdateDescriptorSets-None-03047

The dstSet member of each element of pDescriptorWrites or pDescriptorCopies for bindings which were created without the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT or VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT bits set **must** not be used by any command that was recorded to a command buffer which is in the pending state

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06993

Host access to pDescriptorWrites[i].dstSet and pDescriptorCopies[i].dstSet **must** be externally synchronized unless explicitly denoted otherwise for specific flags

Valid Usage (Implicit)

- VUID-vkUpdateDescriptorSets-device-parameter

device **must** be a valid VkDevice handle

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-parameter

If descriptorWriteCount is not 0, pDescriptorWrites **must** be a valid pointer to an array of descriptorWriteCount valid VkWriteDescriptorSet structures

- VUID-vkUpdateDescriptorSets-pDescriptorCopies-parameter

If `descriptorCopyCount` is not 0, `pDescriptorCopies` **must** be a valid pointer to an array of `descriptorCopyCount` valid `VkCopyDescriptorSet` structures

The `VkWriteDescriptorSet` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkWriteDescriptorSet {
    VkStructureType      sType;
    const void*          pNext;
    VkDescriptorSet      dstSet;
    uint32_t             dstBinding;
    uint32_t             dstArrayElement;
    uint32_t             descriptorCount;
    VkDescriptorType      descriptorType;
    const VkDescriptorImageInfo* pImageInfo;
    const VkDescriptorBufferInfo* pBufferInfo;
    const VkBufferView*    pTexelBufferView;
} VkWriteDescriptorSet;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dstSet` is the destination descriptor set to update.
- `dstBinding` is the descriptor binding within that set.
- `dstArrayElement` is the starting element in that array. If the descriptor binding identified by `dstSet` and `dstBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `dstArrayElement` specifies the starting byte offset within the binding.
- `descriptorCount` is the number of descriptors to update. If the descriptor binding identified by `dstSet` and `dstBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, then `descriptorCount` specifies the number of bytes to update. Otherwise, `descriptorCount` is one of
 - the number of elements in `pImageInfo`
 - the number of elements in `pBufferInfo`
 - the number of elements in `pTexelBufferView`
 - a value matching the `dataSize` member of a `VkWriteDescriptorSetInlineUniformBlock` structure in the `pNext` chain
 - a value matching the `accelerationStructureCount` of a `VkWriteDescriptorSetAccelerationStructureKHR` or `VkWriteDescriptorSetAccelerationStructureNV` structure in the `pNext` chain
- `descriptorType` is a `VkDescriptorType` specifying the type of each descriptor in `pImageInfo`, `pBufferInfo`, or `pTexelBufferView`, as described below. If `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is not equal to `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, `descriptorType` **must** be the same type as the `descriptorType` specified in `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding`. The type of the descriptor also controls which array the descriptors are taken from.

- `pImageInfo` is a pointer to an array of `VkDescriptorImageInfo` structures or is ignored, as described below.
- `pBufferInfo` is a pointer to an array of `VkDescriptorBufferInfo` structures or is ignored, as described below.
- `pTexelBufferView` is a pointer to an array of `VkBufferView` handles as described in the [Buffer Views](#) section or is ignored, as described below.

Only one of `pImageInfo`, `pBufferInfo`, or `pTexelBufferView` members is used according to the descriptor type specified in the `descriptorType` member of the containing `VkWriteDescriptorSet` structure, or none of them in case `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, in which case the source data for the descriptor writes is taken from the `VkWriteDescriptorSetInlineUniformBlock` structure included in the `pNext` chain of `VkWriteDescriptorSet`, or if `descriptorType` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, in which case the source data for the descriptor writes is taken from the `VkWriteDescriptorSetAccelerationStructureKHR` structure in the `pNext` chain of `VkWriteDescriptorSet`, or if `descriptorType` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, in which case the source data for the descriptor writes is taken from the `VkWriteDescriptorSetAccelerationStructureNV` structure in the `pNext` chain of `VkWriteDescriptorSet`, as specified below.

If the `nullDescriptor` feature is enabled, the buffer, acceleration structure, imageView, or bufferView **can** be `VK_NULL_HANDLE`. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded. A null acceleration structure descriptor results in the miss shader being invoked.

If the destination descriptor is a mutable descriptor, the active descriptor type for the destination descriptor becomes `descriptorType`.

Consecutive Binding Updates

If the `dstBinding` has fewer than `descriptorCount` array elements remaining starting from `dstArrayElement`, then the remainder will be used to update the subsequent binding - `dstBinding`+1 starting at array element zero. If a binding has a `descriptorCount` of zero, it is skipped. This behavior applies recursively, with the update affecting consecutive bindings as needed to update all `descriptorCount` descriptors. Consecutive bindings **must** have identical `VkDescriptorType`, `VkShaderStageFlags`, `VkDescriptorBindingFlagBits`, and immutable samplers references. In addition, if the `VkDescriptorType` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the supported descriptor types in `VkMutableDescriptorTypeCreateInfoEXT` **must** be equally defined.

NOTE

The same behavior applies to bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` where `descriptorCount` specifies the number of bytes to update while `dstArrayElement` specifies the starting byte offset, thus in this case if the `dstBinding` has a smaller byte size than the sum of `dstArrayElement` and `descriptorCount`, then the remainder will be used to update the subsequent binding - `dstBinding`+1 starting at offset zero. This falls out as a special case of the above rule.

Valid Usage

- VUID-VkWriteDescriptorSet-dstBinding-00315
`dstBinding` **must** be less than or equal to the maximum value of `binding` of all `VkDescriptorSetLayoutBinding` structures specified when `dstSet`'s descriptor set layout was created
- VUID-VkWriteDescriptorSet-dstBinding-00316
`dstBinding` **must** be a binding with a non-zero `descriptorCount`
- VUID-VkWriteDescriptorSet-dstBinding-10009
`dstBinding` **must** be a binding with a non-zero `VkDescriptorSetLayoutCreateInfo::bindingCount`
- VUID-VkWriteDescriptorSet-descriptorCount-00317
All consecutive bindings updated via a single `VkWriteDescriptorSet` structure, except those with a `descriptorCount` of zero, **must** have identical `descriptorType` and `stageFlags`
- VUID-VkWriteDescriptorSet-descriptorCount-00318
All consecutive bindings updated via a single `VkWriteDescriptorSet` structure, except those with a `descriptorCount` of zero, **must** all either use immutable samplers or **must** all not use immutable samplers
- VUID-VkWriteDescriptorSet-descriptorType-00319
`descriptorType` **must** match the type of `dstBinding` within `dstSet`
- VUID-VkWriteDescriptorSet-dstSet-00320
`dstSet` **must** be a valid `VkDescriptorSet` handle
- VUID-VkWriteDescriptorSet-dstArrayElement-00321
The sum of `dstArrayElement` and `descriptorCount` **must** be less than or equal to the number of array elements in the descriptor set binding specified by `dstBinding`, and all applicable consecutive bindings
- VUID-VkWriteDescriptorSet-descriptorType-02219
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `dstArrayElement` **must** be an integer multiple of 4
- VUID-VkWriteDescriptorSet-descriptorType-02220
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `descriptorCount` **must** be an integer multiple of 4
- VUID-VkWriteDescriptorSet-descriptorType-02994
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, each element of `pTexelBufferView` **must** be either a valid `VkBufferView` handle or `VK_NULL_HANDLE`
- VUID-VkWriteDescriptorSet-descriptorType-02995
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` and the `nullDescriptor` feature is not enabled, each element of `pTexelBufferView` **must** not be `VK_NULL_HANDLE`
- VUID-VkWriteDescriptorSet-descriptorType-00324
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`,

VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, pBufferInfo **must** be a valid pointer to an array of descriptorCount valid VkDescriptorBufferInfo structures

- VUID-VkWriteDescriptorSet-descriptorType-00325

If descriptorType is VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and dstSet was not allocated with a layout that included immutable samplers for dstBinding with descriptorType, the sampler member of each element of pImageInfo **must** be a valid VkSampler object

- VUID-VkWriteDescriptorSet-descriptorType-02996

If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, the imageView member of each element of pImageInfo **must** be either a valid VkImageView handle or VK_NULL_HANDLE

- VUID-VkWriteDescriptorSet-descriptorType-02997

If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and the nullDescriptor feature is not enabled, the imageView member of each element of pImageInfo **must** not be VK_NULL_HANDLE

- VUID-VkWriteDescriptorSet-descriptorType-07683

If descriptorType is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, the imageView member of each element of pImageInfo **must** not be VK_NULL_HANDLE

- VUID-VkWriteDescriptorSet-descriptorType-02221

If descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, the pNext chain **must** include a VkWriteDescriptorSetInlineUniformBlock structure whose dataSize member equals descriptorCount

- VUID-VkWriteDescriptorSet-descriptorType-02382

If descriptorType is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, the pNext chain **must** include a VkWriteDescriptorSetAccelerationStructureKHR structure whose accelerationStructureCount member equals descriptorCount

- VUID-VkWriteDescriptorSet-descriptorType-03817

If descriptorType is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV, the pNext chain **must** include a VkWriteDescriptorSetAccelerationStructureNV structure whose accelerationStructureCount member equals descriptorCount

- VUID-VkWriteDescriptorSet-descriptorType-01946

If descriptorType is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, then the imageView member of each pImageInfo element **must** have been created without a VkSamplerYcbcrConversionInfo structure in its pNext chain

- VUID-VkWriteDescriptorSet-descriptorType-02738

If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and if any element of pImageInfo has an imageView member that was created with a VkSamplerYcbcrConversionInfo structure in its pNext chain, then dstSet **must** have been allocated with a layout that included immutable samplers for dstBinding, and the corresponding immutable sampler **must** have been created with an *identically defined* VkSamplerYcbcrConversionInfo object

- VUID-VkWriteDescriptorSet-descriptorType-01948
If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `dstSet` was allocated with a layout that included immutable samplers for `dstBinding`, then the `imageView` member of each element of `pImageInfo` which corresponds to an immutable sampler that enables `sampler Y'CBCR conversion` **must** have been created with a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain with an *identically defined* `VkSamplerYcbcrConversionInfo` to the corresponding immutable sampler
- VUID-VkWriteDescriptorSet-descriptorType-09506
If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `dstSet` was allocated with a layout that included immutable samplers for `dstBinding`, and those samplers enable `sampler Y'CBCR conversion`, then `imageView` **must** not be `VK_NULL_HANDLE`
- VUID-VkWriteDescriptorSet-descriptorType-00327
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, the `offset` member of each element of `pBufferInfo` **must** be a multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`
- VUID-VkWriteDescriptorSet-descriptorType-00328
If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, the `offset` member of each element of `pBufferInfo` **must** be a multiple of `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`
- VUID-VkWriteDescriptorSet-descriptorType-00329
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, and the `buffer` member of any element of `pBufferInfo` is the handle of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkWriteDescriptorSet-descriptorType-00330
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, the `buffer` member of each element of `pBufferInfo` **must** have been created with `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` set
- VUID-VkWriteDescriptorSet-descriptorType-00331
If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, the `buffer` member of each element of `pBufferInfo` **must** have been created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` set
- VUID-VkWriteDescriptorSet-descriptorType-00332
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, the `range` member of each element of `pBufferInfo`, or the `effective range` if `range` is `VK_WHOLE_SIZE`, **must** be less than or equal to `VkPhysicalDeviceLimits::maxUniformBufferRange`
- VUID-VkWriteDescriptorSet-descriptorType-00333
If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, the `range` member of each element of `pBufferInfo`, or the `effective range` if `range` is `VK_WHOLE_SIZE`, **must** be less than or equal to `VkPhysicalDeviceLimits::maxStorageBufferRange`

- VUID-VkWriteDescriptorSet-descriptorType-08765
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, the `pTexelBufferView` [buffer view usage](#) **must** include `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT`
- VUID-VkWriteDescriptorSet-descriptorType-08766
If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, the `pTexelBufferView` [buffer view usage](#) **must** include `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT`
- VUID-VkWriteDescriptorSet-descriptorType-00336
If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `imageView` member of each element of `pImageInfo` **must** have been created with the [identity swizzle](#)
- VUID-VkWriteDescriptorSet-descriptorType-00337
If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the `imageView` member of each element of `pImageInfo` **must** have been created with `VK_IMAGE_USAGE_SAMPLED_BIT` set
- VUID-VkWriteDescriptorSet-descriptorType-04149
If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in [Sampled Image](#)
- VUID-VkWriteDescriptorSet-descriptorType-04150
If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in [Combined Image Sampler](#)
- VUID-VkWriteDescriptorSet-descriptorType-04151
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in [Input Attachment](#)
- VUID-VkWriteDescriptorSet-descriptorType-04152
If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in [Storage Image](#)
- VUID-VkWriteDescriptorSet-descriptorType-00338
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `imageView` member of each element of `pImageInfo` **must** have been created with `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` set
- VUID-VkWriteDescriptorSet-descriptorType-00339
If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, the `imageView` member of each element of `pImageInfo` **must** have been created with `VK_IMAGE_USAGE_STORAGE_BIT` set
- VUID-VkWriteDescriptorSet-descriptorType-02752
If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER`, then `dstSet` **must** not have been allocated with a layout that included immutable samplers for `dstBinding`
- VUID-VkWriteDescriptorSet-dstSet-04611
If the `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the new active descriptor type `descriptorType` **must** exist in the corresponding `pMutableDescriptorTypeLists` list for `dstBinding`
- VUID-VkWriteDescriptorSet-descriptorType-06450
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `imageView` member of each

element of `pImageInfo` **must** have either been created without a `VkImageViewMinLodCreateInfoEXT` included in the `pNext` chain or with a `VkImageViewMinLodCreateInfoEXT::minLod` of `0.0`

- VUID-VkWriteDescriptorSet-descriptorType-06942

If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, the `imageView` member of each element of `pImageInfo` **must** have been created with a view created with an `image` created with `VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM`

- VUID-VkWriteDescriptorSet-descriptorType-06943

If `descriptorType` is `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, the `imageView` member of each element of `pImageInfo` **must** have been created with a view created with an `image` created with `VK_IMAGE_USAGE_SAMPLE_BLOCK_MATCH_BIT_QCOM`

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSet-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET`

- VUID-VkWriteDescriptorSet-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkWriteDescriptorSetAccelerationStructureKHR`, `VkWriteDescriptorSetAccelerationStructureNV`, or `VkWriteDescriptorSetInlineUniformBlock`

- VUID-VkWriteDescriptorSet-sType-unique

The `sType` value of each struct in the `pNext` chain **must** be unique

- VUID-VkWriteDescriptorSet-descriptorType-parameter

`descriptorType` **must** be a valid `VkDescriptorType` value

- VUID-VkWriteDescriptorSet-descriptorCount-arraylength

`descriptorCount` **must** be greater than `0`

- VUID-VkWriteDescriptorSet-commonparent

Both of `dstSet`, and the elements of `pTexelBufferView` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The type of descriptors in a descriptor set is specified by `VkWriteDescriptorSet::descriptorType`, which **must** be one of the values:

```

// Provided by VK_VERSION_1_0
typedef enum VkDescriptorType {
    VK_DESCRIPTOR_TYPE_SAMPLER = 0,
    VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER = 1,
    VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE = 2,
    VK_DESCRIPTOR_TYPE_STORAGE_IMAGE = 3,
    VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER = 4,
    VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER = 5,
    VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER = 6,
    VK_DESCRIPTOR_TYPE_STORAGE_BUFFER = 7,
    VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC = 8,
    VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC = 9,
    VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT = 10,
// Provided by VK_VERSION_1_3
    VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK = 1000138000,
// Provided by VK_KHR_acceleration_structure
    VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR = 1000150000,
// Provided by VK_NV_ray_tracing
    VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV = 1000165000,
// Provided by VK_QCOM_image_processing
    VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM = 1000440000,
// Provided by VK_QCOM_image_processing
    VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM = 1000440001,
// Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_TYPE_MUTABLE_EXT = 1000351000,
// Provided by VK_EXT_inline_uniform_block
    VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK_EXT =
VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK,
// Provided by VK_VALVE_mutable_descriptor_type
    VK_DESCRIPTOR_TYPE_MUTABLE_VALVE = VK_DESCRIPTOR_TYPE_MUTABLE_EXT,
} VkDescriptorType;

```

- `VK_DESCRIPTOR_TYPE_SAMPLER` specifies a [sampler descriptor](#).
- `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` specifies a [combined image sampler descriptor](#).
- `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` specifies a [sampled image descriptor](#).
- `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` specifies a [storage image descriptor](#).
- `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` specifies a [uniform texel buffer descriptor](#).
- `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` specifies a [storage texel buffer descriptor](#).
- `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` specifies a [uniform buffer descriptor](#).
- `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` specifies a [storage buffer descriptor](#).
- `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` specifies a [dynamic uniform buffer descriptor](#).
- `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` specifies a [dynamic storage buffer descriptor](#).
- `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` specifies an [input attachment descriptor](#).
- `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` specifies an [inline uniform block](#).

- `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` specifies a [descriptor of mutable type](#).
- `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM` specifies a [sampled weight image descriptor](#).
- `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM` specifies a [block matching image descriptor](#).

When a descriptor set is updated via elements of `VkWriteDescriptorSet`, members of `pImageInfo`, `pBufferInfo` and `pTexelBufferView` are only accessed by the implementation when they correspond to descriptor type being defined - otherwise they are ignored. The members accessed are as follows for each descriptor type:

- For `VK_DESCRIPTOR_TYPE_SAMPLER`, only the `sampler` member of each element of `VkWriteDescriptorSet::pImageInfo` is accessed.
- For `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, only the `imageView` and `imageLayout` members of each element of `VkWriteDescriptorSet::pImageInfo` are accessed.
- For `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, all members of each element of `VkWriteDescriptorSet::pImageInfo` are accessed.
- For `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, all members of each element of `VkWriteDescriptorSet::pBufferInfo` are accessed.
- For `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, each element of `VkWriteDescriptorSet::pTexelBufferView` is accessed.

When updating descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, none of the `pImageInfo`, `pBufferInfo`, or `pTexelBufferView` members are accessed, instead the source data of the descriptor update operation is taken from the `VkWriteDescriptorSetInlineUniformBlock` structure in the `pNext` chain of `VkWriteDescriptorSet`. When updating descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, none of the `pImageInfo`, `pBufferInfo`, or `pTexelBufferView` members are accessed, instead the source data of the descriptor update operation is taken from the `VkWriteDescriptorSetAccelerationStructureKHR` structure in the `pNext` chain of `VkWriteDescriptorSet`. When updating descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, none of the `pImageInfo`, `pBufferInfo`, or `pTexelBufferView` members are accessed, instead the source data of the descriptor update operation is taken from the `VkWriteDescriptorSetAccelerationStructureNV` structure in the `pNext` chain of `VkWriteDescriptorSet`.

The `VkDescriptorBufferInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorBufferInfo {
    VkBuffer          buffer;
    VkDeviceSize      offset;
    VkDeviceSize      range;
} VkDescriptorBufferInfo;
```

- `buffer` is `VK_NULL_HANDLE` or the buffer resource.

- **offset** is the offset in bytes from the start of **buffer**. Access to buffer memory via this descriptor uses addressing that is relative to this starting offset.
- **range** is the size in bytes that is used for this descriptor update, or **VK_WHOLE_SIZE** to use the range from **offset** to the end of the buffer.

NOTE

When setting **range** to **VK_WHOLE_SIZE**, the **effective range** **must** not be larger than the maximum range for the descriptor type (**maxUniformBufferRange** or **maxStorageBufferRange**). This means that **VK_WHOLE_SIZE** is not typically useful in the common case where uniform buffer descriptors are suballocated from a buffer that is much larger than **maxUniformBufferRange**.

For **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC** and **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC** descriptor types, **offset** is the base offset from which the dynamic offset is applied and **range** is the static size used for all dynamic offsets.

When **range** is **VK_WHOLE_SIZE** the effective range is calculated at **vkUpdateDescriptorSets** is by taking the size of **buffer** minus the **offset**.

Valid Usage

- VUID-VkDescriptorBufferInfo-offset-00340
offset **must** be less than the size of **buffer**
- VUID-VkDescriptorBufferInfo-range-00341
If **range** is not equal to **VK_WHOLE_SIZE**, **range** **must** be greater than 0
- VUID-VkDescriptorBufferInfo-range-00342
If **range** is not equal to **VK_WHOLE_SIZE**, **range** **must** be less than or equal to the size of **buffer** minus **offset**
- VUID-VkDescriptorBufferInfo-buffer-02998
If the **nullDescriptor** feature is not enabled, **buffer** **must** not be **VK_NULL_HANDLE**
- VUID-VkDescriptorBufferInfo-buffer-02999
If **buffer** is **VK_NULL_HANDLE**, **offset** **must** be zero and **range** **must** be **VK_WHOLE_SIZE**

Valid Usage (Implicit)

- VUID-VkDescriptorBufferInfo-buffer-parameter
If **buffer** is not **VK_NULL_HANDLE**, **buffer** **must** be a valid **VkBuffer** handle

The **VkDescriptorImageInfo** structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorImageInfo {
    VkSampler      sampler;
    VkImageView     imageView;
    VkImageLayout  imageLayout;
} VkDescriptorImageInfo;
```

- `sampler` is a sampler handle, and is used in descriptor updates for types `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` if the binding being updated does not use immutable samplers.
- `imageView` is `VK_NULL_HANDLE` or an image view handle, and is used in descriptor updates for types `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`.
- `imageLayout` is the layout that the image subresources accessible from `imageView` will be in at the time this descriptor is accessed. `imageLayout` is used in descriptor updates for types `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`.

Members of `VkDescriptorImageInfo` that are not used in an update (as described above) are ignored.

Valid Usage

- VUID-VkDescriptorImageInfo-imageView-06712
`imageView` **must** not be a 2D array image view created from a 3D image
- VUID-VkDescriptorImageInfo-imageView-07795
If `imageView` is a 2D view created from a 3D image, then `descriptorType` **must** be `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`
- VUID-VkDescriptorImageInfo-imageView-07796
If `imageView` is a 2D view created from a 3D image, then the image **must** have been created with `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` set
- VUID-VkDescriptorImageInfo-descriptorType-06713
If the `image2DViewOf3D` feature is not enabled or `descriptorType` is not `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` then `imageView` **must** not be a 2D view created from a 3D image
- VUID-VkDescriptorImageInfo-descriptorType-06714
If the `sampler2DViewOf3D` feature is not enabled or `descriptorType` is not `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` then `imageView` **must** not be a 2D view created from a 3D image
- VUID-VkDescriptorImageInfo-imageView-01976
If `imageView` is created from a depth/stencil image, the `aspectMask` used to create the `imageView` **must** include either `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` but not both
- VUID-VkDescriptorImageInfo-imageLayout-09425

If `imageLayout` is `VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL`, then the `aspectMask` used to create `imageView` **must** not include either `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`

- VUID-VkDescriptorImageInfo-imageLayout-09426

If `imageLayout` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL` or `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, then the `aspectMask` used to create `imageView` **must** not include `VK_IMAGE_ASPECT_COLOR_BIT`

- VUID-VkDescriptorImageInfo-imageLayout-00344

`imageLayout` **must** match the actual `VkImageLayout` of each subresource accessible from `imageView` at the time this descriptor is accessed as defined by the [image layout matching rules](#)

- VUID-VkDescriptorImageInfo-sampler-01564

If `sampler` is used and the `VkFormat` of the image is a [multi-planar format](#), the image **must** have been created with `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, and the `aspectMask` of the `imageView` **must** be a valid [multi-planar aspect mask](#) bit

- VUID-VkDescriptorImageInfo-mutableComparisonSamplers-04450

If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::mutableComparisonSamplers` is `VK_FALSE`, then `sampler` **must** have been created with `VkSamplerCreateInfo::compareEnable` set to `VK_FALSE`

Valid Usage (Implicit)

- VUID-VkDescriptorImageInfo-commonparent

Both of `imageView`, and `sampler` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

If the `descriptorType` member of `VkWriteDescriptorSet` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then the data to write to the descriptor set is specified through a `VkWriteDescriptorSetInlineUniformBlock` structure included in the `pNext` chain of `VkWriteDescriptorSet`.

The `VkWriteDescriptorSetInlineUniformBlock` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkWriteDescriptorSetInlineUniformBlock {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           dataSize;
    const void*        pData;
} VkWriteDescriptorSetInlineUniformBlock;
```

or the equivalent

```
// Provided by VK_EXT_inline_uniform_block
typedef VkWriteDescriptorSetInlineUniformBlock
VkWriteDescriptorSetInlineUniformBlockEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataSize` is the number of bytes of inline uniform block data pointed to by `pData`.
- `pData` is a pointer to `dataSize` number of bytes of data to write to the inline uniform block.

Valid Usage

- VUID-VkWriteDescriptorSetInlineUniformBlock-dataSize-02222
`dataSize` **must** be an integer multiple of 4

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetInlineUniformBlock-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_INLINE_UNIFORM_BLOCK`
- VUID-VkWriteDescriptorSetInlineUniformBlock-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-VkWriteDescriptorSetInlineUniformBlock-dataSize-arraylength
`dataSize` **must** be greater than 0

The `VkWriteDescriptorSetAccelerationStructureKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkWriteDescriptorSetAccelerationStructureKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           accelerationStructureCount;
    const VkAccelerationStructureKHR* pAccelerationStructures;
} VkWriteDescriptorSetAccelerationStructureKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructureCount` is the number of elements in `pAccelerationStructures`.
- `pAccelerationStructures` is a pointer to an array of `VkAccelerationStructureKHR` structures specifying the acceleration structures to update.

Valid Usage

- VUID-VkWriteDescriptorSetAccelerationStructureKHR-accelerationStructureCount-02236
`accelerationStructureCount` **must** be equal to `descriptorCount` in the extended structure
- VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-03579
Each acceleration structure in `pAccelerationStructures` **must** have been created with a `type` of `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-03580
If the `nullDescriptor` feature is not enabled, each element of `pAccelerationStructures` **must** not be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetAccelerationStructureKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_ACCELERATION_STRUCTURE_KHR`
- VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-parameter
`pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid or `VK_NULL_HANDLE` `VkAccelerationStructureKHR` handles
- VUID-VkWriteDescriptorSetAccelerationStructureKHR-accelerationStructureCount-arraylength
`accelerationStructureCount` **must** be greater than 0

The `VkWriteDescriptorSetAccelerationStructureNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkWriteDescriptorSetAccelerationStructureNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           accelerationStructureCount;
    const VkAccelerationStructureNV* pAccelerationStructures;
} VkWriteDescriptorSetAccelerationStructureNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `accelerationStructureCount` is the number of elements in `pAccelerationStructures`.
- `pAccelerationStructures` is a pointer to an array of `VkAccelerationStructureNV` structures specifying the acceleration structures to update.

Valid Usage

- VUID-VkWriteDescriptorSetAccelerationStructureNV-accelerationStructureCount-03747 `accelerationStructureCount` **must** be equal to `descriptorCount` in the extended structure
- VUID-VkWriteDescriptorSetAccelerationStructureNV-pAccelerationStructures-03748 Each acceleration structure in `pAccelerationStructures` **must** have been created with `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`
- VUID-VkWriteDescriptorSetAccelerationStructureNV-pAccelerationStructures-03749 If the `nullDescriptor` feature is not enabled, each member of `pAccelerationStructures` **must** not be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetAccelerationStructureNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_ACCELERATION_STRUCTURE_NV`
- VUID-VkWriteDescriptorSetAccelerationStructureNV-pAccelerationStructures-parameter `pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid or `VK_NULL_HANDLE` `VkAccelerationStructureNV` handles
- VUID-VkWriteDescriptorSetAccelerationStructureNV-accelerationStructureCount-arraylength `accelerationStructureCount` **must** be greater than 0

The `VkCopyDescriptorSet` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkCopyDescriptorSet {
    VkStructureType    sType;
    const void*        pNext;
    VkDescriptorSet     srcSet;
    uint32_t           srcBinding;
    uint32_t           srcArrayElement;
    VkDescriptorSet     dstSet;
    uint32_t           dstBinding;
    uint32_t           dstArrayElement;
    uint32_t           descriptorCount;
} VkCopyDescriptorSet;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `srcSet`, `srcBinding`, and `srcArrayElement` are the source set, binding, and array element, respectively. If the descriptor binding identified by `srcSet` and `srcBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `srcArrayElement` specifies the starting byte offset within the binding to copy from.
- `dstSet`, `dstBinding`, and `dstArrayElement` are the destination set, binding, and array element, respectively. If the descriptor binding identified by `dstSet` and `dstBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `dstArrayElement` specifies the starting byte offset within the binding to copy to.
- `descriptorCount` is the number of descriptors to copy from the source to destination. If `descriptorCount` is greater than the number of remaining array elements in the source or destination binding, those affect consecutive bindings in a manner similar to [VkWriteDescriptorSet](#) above. If the descriptor binding identified by `srcSet` and `srcBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` specifies the number of bytes to copy and the remaining array elements in the source or destination binding refer to the remaining number of bytes in those.

If the `VkDescriptorSetLayoutBinding` for `dstBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` and `srcBinding` is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the new active descriptor type becomes the descriptor type of `srcBinding`. If both `VkDescriptorSetLayoutBinding` for `srcBinding` and `dstBinding` are `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the active descriptor type in each source descriptor is copied into the corresponding destination descriptor. The active descriptor type **can** be different for each source descriptor.

NOTE

The intention is that copies to and from mutable descriptors is a simple memcpy. Copies between non-mutable and mutable descriptors are expected to require one memcpy per descriptor to handle the difference in size, but this use case with more than one `descriptorCount` is considered rare.

Valid Usage

- VUID-VkCopyDescriptorSet-srcBinding-00345
`srcBinding` **must** be a valid binding within `srcSet`
- VUID-VkCopyDescriptorSet-srcArrayElement-00346
The sum of `srcArrayElement` and `descriptorCount` **must** be less than or equal to the number of array elements in the descriptor set binding specified by `srcBinding`, and all applicable [consecutive bindings](#)
- VUID-VkCopyDescriptorSet-dstBinding-00347
`dstBinding` **must** be a valid binding within `dstSet`
- VUID-VkCopyDescriptorSet-dstArrayElement-00348
The sum of `dstArrayElement` and `descriptorCount` **must** be less than or equal to the number of array elements in the descriptor set binding specified by `dstBinding`, and all applicable [consecutive bindings](#)
- VUID-VkCopyDescriptorSet-dstBinding-02632
The type of `dstBinding` within `dstSet` **must** be equal to the type of `srcBinding` within `srcSet`
- VUID-VkCopyDescriptorSet-srcSet-00349

If `srcSet` is equal to `dstSet`, then the source and destination ranges of descriptors **must** not overlap, where the ranges **may** include array elements from [consecutive bindings](#)

- VUID-VkCopyDescriptorSet-srcBinding-02223

If the descriptor type of the descriptor set binding specified by `srcBinding` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `srcArrayElement` **must** be an integer multiple of 4

- VUID-VkCopyDescriptorSet-dstBinding-02224

If the descriptor type of the descriptor set binding specified by `dstBinding` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `dstArrayElement` **must** be an integer multiple of 4

- VUID-VkCopyDescriptorSet-srcBinding-02225

If the descriptor type of the descriptor set binding specified by either `srcBinding` or `dstBinding` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `descriptorCount` **must** be an integer multiple of 4

- VUID-VkCopyDescriptorSet-srcSet-01918

If `srcSet`'s layout was created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` flag set, then `dstSet`'s layout **must** also have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` flag set

- VUID-VkCopyDescriptorSet-srcSet-04885

If `srcSet`'s layout was created without either the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT` flag or the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` flag set, then `dstSet`'s layout **must** have been created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` flag set

- VUID-VkCopyDescriptorSet-srcSet-01920

If the descriptor pool from which `srcSet` was allocated was created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set, then the descriptor pool from which `dstSet` was allocated **must** also have been created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set

- VUID-VkCopyDescriptorSet-srcSet-04887

If the descriptor pool from which `srcSet` was allocated was created without either the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` flag or the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set, then the descriptor pool from which `dstSet` was allocated **must** have been created without the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set

- VUID-VkCopyDescriptorSet-dstBinding-02753

If the descriptor type of the descriptor set binding specified by `dstBinding` is `VK_DESCRIPTOR_TYPE_SAMPLER`, then `dstSet` **must** not have been allocated with a layout that included immutable samplers for `dstBinding`

- VUID-VkCopyDescriptorSet-dstSet-04612

If `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the new active descriptor type **must** exist in the corresponding `pMutableDescriptorTypeLists` list for `dstBinding` if the new active descriptor type is not

VK_DESCRIPTOR_TYPE_MUTABLE_EXT

- VUID-VkCopyDescriptorSet-srcSet-04613
If `VkDescriptorSetLayoutBinding` for `srcSet` at `srcBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` and the `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the active descriptor type for the source descriptor **must** match the descriptor type of `dstBinding`
- VUID-VkCopyDescriptorSet-dstSet-04614
If `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, and the new active descriptor type is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the `pMutableDescriptorTypeLists` for `srcBinding` and `dstBinding` **must** match exactly

Valid Usage (Implicit)

- VUID-VkCopyDescriptorSet-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_DESCRIPTOR_SET`
- VUID-VkCopyDescriptorSet-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyDescriptorSet-srcSet-parameter
`srcSet` **must** be a valid `VkDescriptorSet` handle
- VUID-VkCopyDescriptorSet-dstSet-parameter
`dstSet` **must** be a valid `VkDescriptorSet` handle
- VUID-VkCopyDescriptorSet-commonparent
Both of `dstSet`, and `srcSet` **must** have been created, allocated, or retrieved from the same `VkDevice`

14.2.5. Descriptor Update Templates

A descriptor update template specifies a mapping from descriptor update information in host memory to descriptors in a descriptor set. It is designed to avoid passing redundant information to the driver when frequently updating the same set of descriptors in descriptor sets.

Descriptor update template objects are represented by `VkDescriptorUpdateTemplate` handles:

```
// Provided by VK_VERSION_1_1
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorUpdateTemplate)
```

or the equivalent

```
// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplate VkDescriptorUpdateTemplateKHR;
```

14.2.6. Descriptor Set Updates With Templates

Updating a large `VkDescriptorSet` array **can** be an expensive operation since an application **must** specify one `VkWriteDescriptorSet` structure for each descriptor or descriptor array to update, each of which re-specifies the same state when updating the same descriptor in multiple descriptor sets. For cases when an application wishes to update the same set of descriptors in multiple descriptor sets allocated using the same `VkDescriptorSetLayout`, `vkUpdateDescriptorSetWithTemplate` **can** be used as a replacement for `vkUpdateDescriptorSets`.

`VkDescriptorUpdateTemplate` allows implementations to convert a set of descriptor update operations on a single descriptor set to an internal format that, in conjunction with `vkUpdateDescriptorSetWithTemplate` or `vkCmdPushDescriptorSetWithTemplateKHR`, **can** be more efficient compared to calling `vkUpdateDescriptorSets` or `vkCmdPushDescriptorSetKHR`. The descriptors themselves are not specified in the `VkDescriptorUpdateTemplate`, rather, offsets into an application provided pointer to host memory are specified, which are combined with a pointer passed to `vkUpdateDescriptorSetWithTemplate` or `vkCmdPushDescriptorSetWithTemplateKHR`. This allows large batches of updates to be executed without having to convert application data structures into a strictly-defined Vulkan data structure.

To create a descriptor update template, call:

```
// Provided by VK_VERSION_1_1
VkResult vkCreateDescriptorUpdateTemplate(
    VkDevice                                device,
    const VkDescriptorUpdateTemplateCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*              pAllocator,
    VkDescriptorUpdateTemplate*               pDescriptorUpdateTemplate);
```

or the equivalent command

```
// Provided by VK_KHR_descriptor_update_template
VkResult vkCreateDescriptorUpdateTemplateKHR(
    VkDevice                                device,
    const VkDescriptorUpdateTemplateCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*              pAllocator,
    VkDescriptorUpdateTemplate*               pDescriptorUpdateTemplate);
```

- `device` is the logical device that creates the descriptor update template.
- `pCreateInfo` is a pointer to a `VkDescriptorUpdateTemplateCreateInfo` structure specifying the set of descriptors to update with a single call to `vkCmdPushDescriptorSetWithTemplateKHR` or `vkUpdateDescriptorSetWithTemplate`.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pDescriptorUpdateTemplate` is a pointer to a `VkDescriptorUpdateTemplate` handle in which the resulting descriptor update template object is returned.

Valid Usage (Implicit)

- VUID-vkCreateDescriptorUpdateTemplate-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateDescriptorUpdateTemplate-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkDescriptorUpdateTemplateCreateInfo` structure
- VUID-vkCreateDescriptorUpdateTemplate-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateDescriptorUpdateTemplate-pDescriptorUpdateTemplate-parameter
`pDescriptorUpdateTemplate` **must** be a valid pointer to a `VkDescriptorUpdateTemplate` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkDescriptorUpdateTemplateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorUpdateTemplateCreateInfo {
    VkStructureType             sType;
    const void*                 pNext;
    VkDescriptorUpdateTemplateCreateFlags flags;
    uint32_t                    descriptorUpdateEntryCount;
    const VkDescriptorUpdateTemplateEntry* pDescriptorUpdateEntries;
    VkDescriptorUpdateTemplateType templateType;
    VkDescriptorSetLayout        descriptorSetLayout;
    VkPipelineBindPoint          pipelineBindPoint;
    VkPipelineLayout             pipelineLayout;
    uint32_t                     set;
} VkDescriptorUpdateTemplateCreateInfo;
```

or the equivalent

```
// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplateCreateInfo VkDescriptorUpdateTemplateCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `descriptorUpdateEntryCount` is the number of elements in the `pDescriptorUpdateEntries` array.
- `pDescriptorUpdateEntries` is a pointer to an array of `VkDescriptorUpdateTemplateEntry` structures describing the descriptors to be updated by the descriptor update template.
- `templateType` Specifies the type of the descriptor update template. If set to `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET` it **can** only be used to update descriptor sets with a fixed `descriptorSetLayout`. If set to `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_KHR` it **can** only be used to push descriptor sets using the provided `pipelineBindPoint`, `pipelineLayout`, and `set` number.
- `descriptorSetLayout` is the descriptor set layout used to build the descriptor update template. All descriptor sets which are going to be updated through the newly created descriptor update template **must** be created with a layout that matches (is the same as, or defined identically to) this layout. This parameter is ignored if `templateType` is not `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET`.
- `pipelineBindPoint` is a `VkPipelineBindPoint` indicating the type of the pipeline that will use the descriptors. This parameter is ignored if `templateType` is not `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_KHR`.
- `pipelineLayout` is a `VkPipelineLayout` object used to program the bindings. This parameter is ignored if `templateType` is not `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_KHR`.
- `set` is the set number of the descriptor set in the pipeline layout that will be updated. This parameter is ignored if `templateType` is not `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_KHR`.

Valid Usage

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00350
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET`, `descriptorSetLayout` **must** be a valid `VkDescriptorSetLayout` handle
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00351
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_KHR`, `pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00352
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_KHR`, `pipelineLayout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00353
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_KHR`, `set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-04615
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET`, `descriptorSetLayout`

must not contain a binding with type `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`

Valid Usage (Implicit)

- `VUID-VkDescriptorUpdateTemplateCreateInfo-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO`
- `VUID-VkDescriptorUpdateTemplateCreateInfo-pNext-pNext`
`pNext` **must** be `NULL`
- `VUID-VkDescriptorUpdateTemplateCreateInfo-flags-zeroBitmask`
`flags` **must** be `0`
- `VUID-VkDescriptorUpdateTemplateCreateInfo-pDescriptorUpdateEntries-parameter`
`pDescriptorUpdateEntries` **must** be a valid pointer to an array of `descriptorUpdateEntryCount` valid `VkDescriptorUpdateTemplateEntry` structures
- `VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-parameter`
`templateType` **must** be a valid `VkDescriptorUpdateTemplateType` value
- `VUID-VkDescriptorUpdateTemplateCreateInfo-descriptorUpdateEntryCount-arraylength`
`descriptorUpdateEntryCount` **must** be greater than `0`
- `VUID-VkDescriptorUpdateTemplateCreateInfo-commonParent`
Both of `descriptorSetLayout`, and `pipelineLayout` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkDescriptorUpdateTemplateCreateFlags;
```

or the equivalent

```
// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplateCreateFlags
VkDescriptorUpdateTemplateCreateFlagsKHR;
```

`VkDescriptorUpdateTemplateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

The descriptor update template type is determined by the `VkDescriptorUpdateTemplateCreateInfo::templateType` property, which takes the following values:

```
// Provided by VK_VERSION_1_1
typedef enum VkDescriptorUpdateTemplateType {
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET = 0,
    // Provided by VK_KHR_descriptor_update_template with VK_KHR_push_descriptor,
    // VK_KHR_push_descriptor with VK_VERSION_1_1 or VK_KHR_descriptor_update_template
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_SET_KHR = 1,
    // Provided by VK_KHR_descriptor_update_template
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET_KHR =
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET,
} VkDescriptorUpdateTemplateType;
```

or the equivalent

```
// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplateType VkDescriptorUpdateTemplateTypeKHR;
```

- `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET` specifies that the descriptor update template will be used for descriptor set updates only.
- `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_SET_KHR` specifies that the descriptor update template will be used for push descriptor updates only.

The `VkDescriptorUpdateTemplateEntry` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorUpdateTemplateEntry {
    uint32_t          dstBinding;
    uint32_t          dstArrayElement;
    uint32_t          descriptorCount;
    VkDescriptorType   descriptorType;
    size_t            offset;
    size_t            stride;
} VkDescriptorUpdateTemplateEntry;
```

or the equivalent

```
// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplateEntry VkDescriptorUpdateTemplateEntryKHR;
```

- `dstBinding` is the descriptor binding to update when using this descriptor update template.
- `dstArrayElement` is the starting element in the array belonging to `dstBinding`. If the descriptor binding identified by `dstBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `dstArrayElement` specifies the starting byte offset to update.
- `descriptorCount` is the number of descriptors to update. If `descriptorCount` is greater than the

number of remaining array elements in the destination binding, those affect consecutive bindings in a manner similar to [VkWriteDescriptorSet](#) above. If the descriptor binding identified by `dstBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` specifies the number of bytes to update and the remaining array elements in the destination binding refer to the remaining number of bytes in it.

- `descriptorType` is a [VkDescriptorType](#) specifying the type of the descriptor.
- `offset` is the offset in bytes of the first binding in the raw data structure.
- `stride` is the stride in bytes between two consecutive array elements of the descriptor update information in the raw data structure. The actual pointer ptr for each array element j of update entry i is computed using the following formula:

```
const char *ptr = (const char *)pData + pDescriptorUpdateEntries[i].offset + j
* pDescriptorUpdateEntries[i].stride
```

The stride is useful in case the bindings are stored in structs along with other data. If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then the value of `stride` is ignored and the stride is assumed to be 1, i.e. the descriptor update information for them is always specified as a contiguous range.

Valid Usage

- VUID-VkDescriptorUpdateTemplateEntry-dstBinding-00354
`dstBinding` **must** be a valid binding in the descriptor set layout implicitly specified when using a descriptor update template to update descriptors
- VUID-VkDescriptorUpdateTemplateEntry-dstArrayElement-00355
`dstArrayElement` and `descriptorCount` **must** be less than or equal to the number of array elements in the descriptor set binding implicitly specified when using a descriptor update template to update descriptors, and all applicable [consecutive bindings](#)
- VUID-VkDescriptorUpdateTemplateEntry-descriptor-02226
If `descriptor` type is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `dstArrayElement` **must** be an integer multiple of 4
- VUID-VkDescriptorUpdateTemplateEntry-descriptor-02227
If `descriptor` type is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `descriptorCount` **must** be an integer multiple of 4

Valid Usage (Implicit)

- VUID-VkDescriptorUpdateTemplateEntry-descriptorType-parameter
`descriptorType` **must** be a valid [VkDescriptorType](#) value

To destroy a descriptor update template, call:

```
// Provided by VK_VERSION_1_1
void vkDestroyDescriptorUpdateTemplate(
    VkDevice                device,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const VkAllocationCallbacks* pAllocator);
```

or the equivalent command

```
// Provided by VK_KHR_descriptor_update_template
void vkDestroyDescriptorUpdateTemplateKHR(
    VkDevice                device,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that has been used to create the descriptor update template
- **descriptorUpdateTemplate** is the descriptor update template to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyDescriptorUpdateTemplate-descriptorSetLayout-00356
If **VkAllocationCallbacks** were provided when **descriptorUpdateTemplate** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDescriptorUpdateTemplate-descriptorSetLayout-00357
If no **VkAllocationCallbacks** were provided when **descriptorUpdateTemplate** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorUpdateTemplate-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyDescriptorUpdateTemplate-descriptorUpdateTemplate-parameter
If **descriptorUpdateTemplate** is not [VK_NULL_HANDLE](#), **descriptorUpdateTemplate** **must** be a valid [VkDescriptorUpdateTemplate](#) handle
- VUID-vkDestroyDescriptorUpdateTemplate-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyDescriptorUpdateTemplate-descriptorUpdateTemplate-parent
If **descriptorUpdateTemplate** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to `descriptorUpdateTemplate` **must** be externally synchronized

Once a `VkDescriptorUpdateTemplate` has been created, descriptor sets **can** be updated by calling:

```
// Provided by VK_VERSION_1_1
void vkUpdateDescriptorSetWithTemplate(
    VkDevice                device,
    VkDescriptorSet          descriptorSet,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const void*              pData);
```

or the equivalent command

```
// Provided by VK_KHR_descriptor_update_template
void vkUpdateDescriptorSetWithTemplateKHR(
    VkDevice                device,
    VkDescriptorSet          descriptorSet,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const void*              pData);
```

- `device` is the logical device that updates the descriptor set.
- `descriptorSet` is the descriptor set to update
- `descriptorUpdateTemplate` is a `VkDescriptorUpdateTemplate` object specifying the update mapping between `pData` and the descriptor set to update.
- `pData` is a pointer to memory containing one or more `VkDescriptorImageInfo`, `VkDescriptorBufferInfo`, or `VkBufferView` structures or `VkAccelerationStructureKHR` or `VkAccelerationStructureNV` handles used to write the descriptors.

Valid Usage

- VUID-vkUpdateDescriptorSetWithTemplate-pData-01685
`pData` **must** be a valid pointer to a memory containing one or more valid instances of `VkDescriptorImageInfo`, `VkDescriptorBufferInfo`, or `VkBufferView` in a layout defined by `descriptorUpdateTemplate` when it was created with `vkCreateDescriptorUpdateTemplate`
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-06995
Host access to `descriptorSet` **must** be `externally synchronized` unless explicitly denoted otherwise for specific flags

Valid Usage (Implicit)

- VUID-vkUpdateDescriptorSetWithTemplate-device-parameter

device must be a valid [VkDevice](#) handle

- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-parameter **descriptorSet** must be a valid [VkDescriptorSet](#) handle
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorUpdateTemplate-parameter **descriptorUpdateTemplate** must be a valid [VkDescriptorUpdateTemplate](#) handle
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-parent **descriptorSet** must have been created, allocated, or retrieved from **device**
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorUpdateTemplate-parent **descriptorUpdateTemplate** must have been created, allocated, or retrieved from **device**

API Example

```
struct AppBufferView {
    VkBufferView bufferView;
    uint32_t      applicationRelatedInformation;
};

struct AppDataStructure
{
    VkDescriptorImageInfo  imageInfo;           // a single image info
    VkDescriptorBufferInfo bufferInfoArray[3]; // 3 buffer infos in an array
    AppBufferView          bufferView[2];      // An application-defined structure
    containing a bufferView
    // ... some more application-related data
};

const VkDescriptorUpdateTemplateEntry descriptorUpdateTemplateEntries[] =
{
    // binding to a single image descriptor
    {
        .binding = 0,
        .dstArrayElement = 0,
        .descriptorCount = 1,
        .descriptorType = VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER,
        .offset = offsetof(AppDataStructure, imageInfo),
        .stride = 0 // stride not required if descriptorCount is 1
    },

    // binding to an array of buffer descriptors
    {
        .binding = 1,
        .dstArrayElement = 0,
        .descriptorCount = 3,
        .descriptorType = VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER,
        .offset = offsetof(AppDataStructure, bufferInfoArray),
        .stride = sizeof(VkDescriptorBufferInfo) // descriptor buffer infos are
compact
    },
};
```

```

// binding to an array of buffer views
{
    .binding = 2,
    .dstArrayElement = 0,
    .descriptorCount = 2,
    .descriptorType = VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER,
    .offset = offsetof(AppDataStructure, bufferView) +
                offsetof(AppBufferView, bufferView),
    .stride = sizeof(AppBufferView) // bufferViews do not have to be
compact
    },
};

// create a descriptor update template for descriptor set updates
const VkDescriptorUpdateTemplateCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .descriptorUpdateEntryCount = 3,
    .pDescriptorUpdateEntries = descriptorUpdateTemplateEntries,
    .templateType = VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET,
    .descriptorSetLayout = myLayout,
    .pipelineBindPoint = 0, // ignored by given templateType
    .pipelineLayout = 0, // ignored by given templateType
    .set = 0, // ignored by given templateType
};

VkDescriptorUpdateTemplate myDescriptorUpdateTemplate;
myResult = vkCreateDescriptorUpdateTemplate(
    myDevice,
    &createInfo,
    NULL,
    &myDescriptorUpdateTemplate);

AppDataStructure appData;

// fill appData here or cache it in your engine
vkUpdateDescriptorSetWithTemplate(myDevice, myDescriptorSet,
myDescriptorUpdateTemplate, &appData);

```

14.2.7. Descriptor Set Binding

To bind one or more descriptor sets to a command buffer, call:

```
// Provided by VK_VERSION_1_0
void vkCmdBindDescriptorSets(
    VkCommandBuffer                commandBuffer,
    VkPipelineBindPoint            pipelineBindPoint,
    VkPipelineLayout               layout,
    uint32_t                       firstSet,
    uint32_t                       descriptorSetCount,
    const VkDescriptorSet*         pDescriptorSets,
    uint32_t                       dynamicOffsetCount,
    const uint32_t*                pDynamicOffsets);
```

- `commandBuffer` is the command buffer that the descriptor sets will be bound to.
- `pipelineBindPoint` is a [VkPipelineBindPoint](#) indicating the type of the pipeline that will use the descriptors. There is a separate set of bind points for each pipeline type, so binding one does not disturb the others.
- `layout` is a [VkPipelineLayout](#) object used to program the bindings.
- `firstSet` is the set number of the first descriptor set to be bound.
- `descriptorSetCount` is the number of elements in the `pDescriptorSets` array.
- `pDescriptorSets` is a pointer to an array of handles to [VkDescriptorSet](#) objects describing the descriptor sets to bind to.
- `dynamicOffsetCount` is the number of dynamic offsets in the `pDynamicOffsets` array.
- `pDynamicOffsets` is a pointer to an array of `uint32_t` values specifying dynamic offsets.

`vkCmdBindDescriptorSets` binds descriptor sets `pDescriptorSets[0..descriptorSetCount-1]` to set numbers `[firstSet..firstSet+descriptorSetCount-1]` for subsequent [bound pipeline commands](#) set by `pipelineBindPoint`. Any bindings that were previously applied via these sets, or calls to [vkCmdSetDescriptorBufferOffsetsEXT](#) or [vkCmdBindDescriptorBufferEmbeddedSamplersEXT](#), are no longer valid.

Once bound, a descriptor set affects rendering of subsequent commands that interact with the given pipeline type in the command buffer until either a different set is bound to the same set number, or the set is disturbed as described in [Pipeline Layout Compatibility](#).

A compatible descriptor set **must** be bound for all set numbers that any shaders in a pipeline access, at the time that a drawing or dispatching command is recorded to execute using that pipeline. However, if none of the shaders in a pipeline statically use any bindings with a particular set number, then no descriptor set need be bound for that set number, even if the pipeline layout includes a non-trivial descriptor set layout for that set number.

When consuming a descriptor, a descriptor is considered valid if the descriptor is not undefined as described by [descriptor set allocation](#). If the `nullDescriptor` feature is enabled, a null descriptor is also considered valid. A descriptor that was disturbed by [Pipeline Layout Compatibility](#), or was never bound by `vkCmdBindDescriptorSets` is not considered valid. If a pipeline accesses a descriptor either statically or dynamically depending on the [VkDescriptorBindingFlagBits](#), the consuming descriptor type in the pipeline **must** match the [VkDescriptorType](#) in

[VkDescriptorSetLayoutCreateInfo](#) for the descriptor to be considered valid. If a descriptor is a mutable descriptor, the consuming descriptor type in the pipeline **must** match the active descriptor type for the descriptor to be considered valid.

NOTE

Further validation may be carried out beyond validation for descriptor types, e.g. [Texel Input Validation](#).

If any of the sets being bound include dynamic uniform or storage buffers, then [pDynamicOffsets](#) includes one element for each array element in each dynamic descriptor type binding in each set. Values are taken from [pDynamicOffsets](#) in an order such that all entries for set N come before set N+1; within a set, entries are ordered by the binding numbers in the descriptor set layouts; and within a binding array, elements are in order. [dynamicOffsetCount](#) **must** equal the total number of dynamic descriptors in the sets being bound.

The effective offset used for dynamic uniform and storage buffer bindings is the sum of the relative offset taken from [pDynamicOffsets](#), and the base address of the buffer plus base offset in the descriptor set. The range of the dynamic uniform and storage buffer bindings is the buffer range as specified in the descriptor set.

Each of the [pDescriptorSets](#) **must** be compatible with the pipeline layout specified by [layout](#). The layout used to program the bindings **must** also be compatible with the pipeline used in subsequent [bound pipeline commands](#) with that pipeline type, as defined in the [Pipeline Layout Compatibility](#) section.

The descriptor set contents bound by a call to [vkCmdBindDescriptorSets](#) **may** be consumed at the following times:

- For descriptor bindings created with the [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#) bit set, the contents **may** be consumed when the command buffer is submitted to a queue, or during shader execution of the resulting draws and dispatches, or any time in between. Otherwise,
- during host execution of the command, or during shader execution of the resulting draws and dispatches, or any time in between.

Thus, the contents of a descriptor set binding **must** not be altered (overwritten by an update command, or freed) between the first point in time that it **may** be consumed, and when the command completes executing on the queue.

The contents of [pDynamicOffsets](#) are consumed immediately during execution of [vkCmdBindDescriptorSets](#). Once all pending uses have completed, it is legal to update and reuse a descriptor set.

Valid Usage

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-00358
Each element of [pDescriptorSets](#) **must** have been allocated with a [VkDescriptorSetLayout](#) that matches (is the same as, or identically defined as) the [VkDescriptorSetLayout](#) at set *n* in [layout](#), where *n* is the sum of [firstSet](#) and the index into [pDescriptorSets](#)
- VUID-vkCmdBindDescriptorSets-dynamicOffsetCount-00359

`dynamicOffsetCount` **must** be equal to the total number of dynamic descriptors in `pDescriptorSets`

- VUID-vkCmdBindDescriptorSets-firstSet-00360

The sum of `firstSet` and `descriptorSetCount` **must** be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created

- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-01971

Each element of `pDynamicOffsets` which corresponds to a descriptor binding with type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** be a multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`

- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-01972

Each element of `pDynamicOffsets` which corresponds to a descriptor binding with type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** be a multiple of `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-01979

For each dynamic uniform or storage buffer binding in `pDescriptorSets`, the sum of the `effective offset` and the range of the binding **must** be less than or equal to the size of the buffer

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-06715

For each dynamic uniform or storage buffer binding in `pDescriptorSets`, if the range was set with `VK_WHOLE_SIZE` then `pDynamicOffsets` which corresponds to the descriptor binding **must** be 0

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-04616

Each element of `pDescriptorSets` **must** not have been allocated from a `VkDescriptorPool` with the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` flag set

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-06563

If `graphicsPipelineLibrary` is not enabled, each element of `pDescriptorSets` **must** be a valid `VkDescriptorSet`

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-08010

Each element of `pDescriptorSets` **must** have been allocated with a `VkDescriptorSetLayout` which was not created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdBindDescriptorSets-pipelineBindPoint-00361

`pipelineBindPoint` **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorSets-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdBindDescriptorSets-pipelineBindPoint-parameter

`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value

- VUID-vkCmdBindDescriptorSets-layout-parameter

`layout` **must** be a valid `VkPipelineLayout` handle

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-parameter
`pDescriptorSets` **must** be a valid pointer to an array of `descriptorSetCount` valid or `VK_NULL_HANDLE` `VkDescriptorSet` handles
- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-parameter
If `dynamicOffsetCount` is not 0, `pDynamicOffsets` **must** be a valid pointer to an array of `dynamicOffsetCount` `uint32_t` values
- VUID-vkCmdBindDescriptorSets-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBindDescriptorSets-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdBindDescriptorSets-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindDescriptorSets-descriptorSetCount-arraylength
`descriptorSetCount` **must** be greater than 0
- VUID-vkCmdBindDescriptorSets-commonparent
Each of `commandBuffer`, `layout`, and the elements of `pDescriptorSets` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

Alternatively, to bind one or more descriptor sets to a command buffer, call:

```
// Provided by VK_KHR_maintenance6
void vkCmdBindDescriptorSets2KHR(
    VkCommandBuffer          commandBuffer,
    const VkBindDescriptorSetsInfoKHR* pBindDescriptorSetsInfo);
```

- `commandBuffer` is the command buffer that the descriptor sets will be bound to.

- `pBindDescriptorSetsInfo` is a pointer to a `VkBindDescriptorSetsInfoKHR` structure.

Valid Usage

- VUID-vkCmdBindDescriptorSets2KHR-pBindDescriptorSetsInfo-09467
Each bit in `pBindDescriptorSetsInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorSets2KHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindDescriptorSets2KHR-pBindDescriptorSetsInfo-parameter
`pBindDescriptorSetsInfo` **must** be a valid pointer to a valid `VkBindDescriptorSetsInfoKHR` structure
- VUID-vkCmdBindDescriptorSets2KHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBindDescriptorSets2KHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdBindDescriptorSets2KHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

The `VkBindDescriptorSetsInfoKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance6
typedef struct VkBindDescriptorSetsInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkShaderStageFlags   stageFlags;
    VkPipelineLayout      layout;
    uint32_t              firstSet;
    uint32_t              descriptorSetCount;
    const VkDescriptorSet* pDescriptorSets;
    uint32_t              dynamicOffsetCount;
    const uint32_t*       pDynamicOffsets;
} VkBindDescriptorSetsInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages the descriptor sets will be bound to.
- `layout` is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, `layout` **can** be `VK_NULL_HANDLE` and the layout **must** be specified by chaining the `VkPipelineLayoutCreateInfo` structure off the `pNext`
- `firstSet` is the set number of the first descriptor set to be bound.
- `descriptorSetCount` is the number of elements in the `pDescriptorSets` array.
- `pDescriptorSets` is a pointer to an array of handles to `VkDescriptorSet` objects describing the descriptor sets to bind to.
- `dynamicOffsetCount` is the number of dynamic offsets in the `pDynamicOffsets` array.
- `pDynamicOffsets` is a pointer to an array of `uint32_t` values specifying dynamic offsets.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`.

Valid Usage

- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-00358
Each element of `pDescriptorSets` **must** have been allocated with a `VkDescriptorSetLayout` that matches (is the same as, or identically defined as) the `VkDescriptorSetLayout` at set n in `layout`, where n is the sum of `firstSet` and the index into `pDescriptorSets`
- VUID-VkBindDescriptorSetsInfoKHR-dynamicOffsetCount-00359
`dynamicOffsetCount` **must** be equal to the total number of dynamic descriptors in `pDescriptorSets`

- VUID-VkBindDescriptorSetsInfoKHR-firstSet-00360
The sum of `firstSet` and `descriptorSetCount` **must** be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-VkBindDescriptorSetsInfoKHR-pDynamicOffsets-01971
Each element of `pDynamicOffsets` which corresponds to a descriptor binding with type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** be a multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`
- VUID-VkBindDescriptorSetsInfoKHR-pDynamicOffsets-01972
Each element of `pDynamicOffsets` which corresponds to a descriptor binding with type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** be a multiple of `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`
- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-01979
For each dynamic uniform or storage buffer binding in `pDescriptorSets`, the sum of the `effective offset` and the range of the binding **must** be less than or equal to the size of the buffer
- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-06715
For each dynamic uniform or storage buffer binding in `pDescriptorSets`, if the range was set with `VK_WHOLE_SIZE` then `pDynamicOffsets` which corresponds to the descriptor binding **must** be 0
- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-04616
Each element of `pDescriptorSets` **must** not have been allocated from a `VkDescriptorPool` with the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` flag set
- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-06563
If `graphicsPipelineLibrary` is not enabled, each element of `pDescriptorSets` **must** be a valid `VkDescriptorSet`
- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-08010
Each element of `pDescriptorSets` **must** have been allocated with a `VkDescriptorSetLayout` which was not created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-VkBindDescriptorSetsInfoKHR-None-09495
If the `dynamicPipelineLayout` feature is not enabled, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkBindDescriptorSetsInfoKHR-layout-09496
If `layout` is `VK_NULL_HANDLE`, the `pNext` chain **must** include a valid `VkPipelineLayoutCreateInfo` structure

Valid Usage (Implicit)

- VUID-VkBindDescriptorSetsInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_DESCRIPTOR_SETS_INFO_KHR`
- VUID-VkBindDescriptorSetsInfoKHR-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`
- VUID-VkBindDescriptorSetsInfoKHR-sType-unique

The `sType` value of each struct in the `pNext` chain **must** be unique

- VUID-VkBindDescriptorSetsInfoKHR-stageFlags-parameter
`stageFlags` **must** be a valid combination of `VkShaderStageFlagBits` values
- VUID-VkBindDescriptorSetsInfoKHR-stageFlags-requiredbitmask
`stageFlags` **must** not be 0
- VUID-VkBindDescriptorSetsInfoKHR-layout-parameter
If `layout` is not `VK_NULL_HANDLE`, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-parameter
`pDescriptorSets` **must** be a valid pointer to an array of `descriptorSetCount` valid `VkDescriptorSet` handles
- VUID-VkBindDescriptorSetsInfoKHR-pDynamicOffsets-parameter
If `dynamicOffsetCount` is not 0, and `pDynamicOffsets` is not `NULL`, `pDynamicOffsets` **must** be a valid pointer to an array of `dynamicOffsetCount` or `VK_NULL_HANDLE` `uint32_t` values
- VUID-VkBindDescriptorSetsInfoKHR-descriptorSetCount-arraylength
`descriptorSetCount` **must** be greater than 0
- VUID-VkBindDescriptorSetsInfoKHR-commonparent
Both of `layout`, and the elements of `pDescriptorSets` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

14.2.8. Push Descriptor Updates

In addition to allocating descriptor sets and binding them to a command buffer, an application **can** record descriptor updates into the command buffer.

To push descriptor updates into a command buffer, call:

```
// Provided by VK_KHR_push_descriptor
void vkCmdPushDescriptorSetKHR(
    VkCommandBuffer          commandBuffer,
    VkPipelineBindPoint      pipelineBindPoint,
    VkPipelineLayout         layout,
    uint32_t                 set,
    uint32_t                 descriptorWriteCount,
    const VkWriteDescriptorSet* pDescriptorWrites);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `pipelineBindPoint` is a `VkPipelineBindPoint` indicating the type of the pipeline that will use the descriptors. There is a separate set of push descriptor bindings for each pipeline type, so binding one does not disturb the others.
- `layout` is a `VkPipelineLayout` object used to program the bindings.
- `set` is the set number of the descriptor set in the pipeline layout that will be updated.
- `descriptorWriteCount` is the number of elements in the `pDescriptorWrites` array.

- `pDescriptorWrites` is a pointer to an array of `VkWriteDescriptorSet` structures describing the descriptors to be updated.

Push descriptors are a small bank of descriptors whose storage is internally managed by the command buffer rather than being written into a descriptor set and later bound to a command buffer. Push descriptors allow for incremental updates of descriptors without managing the lifetime of descriptor sets.

When a command buffer begins recording, all push descriptors are undefined. Push descriptors **can** be updated incrementally and cause shaders to use the updated descriptors for subsequent `bound pipeline commands` with the pipeline type set by `pipelineBindPoint` until the descriptor is overwritten, or else until the set is disturbed as described in `Pipeline Layout Compatibility`. When the set is disturbed or push descriptors with a different descriptor set layout are set, all push descriptors are undefined.

Push descriptors that are `statically used` by a pipeline **must** not be undefined at the time that a drawing or dispatching command is recorded to execute using that pipeline. This includes immutable sampler descriptors, which **must** be pushed before they are accessed by a pipeline (the immutable samplers are pushed, rather than the samplers in `pDescriptorWrites`). Push descriptors that are not statically used **can** remain undefined.

Push descriptors do not use dynamic offsets. Instead, the corresponding non-dynamic descriptor types **can** be used and the `offset` member of `VkDescriptorBufferInfo` **can** be changed each time the descriptor is written.

Each element of `pDescriptorWrites` is interpreted as in `VkWriteDescriptorSet`, except the `dstSet` member is ignored.

To push an immutable sampler, use a `VkWriteDescriptorSet` with `dstBinding` and `dstArrayElement` selecting the immutable sampler's binding. If the descriptor type is `VK_DESCRIPTOR_TYPE_SAMPLER`, the `pImageInfo` parameter is ignored and the immutable sampler is taken from the push descriptor set layout in the pipeline layout. If the descriptor type is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the `sampler` member of the `pImageInfo` parameter is ignored and the immutable sampler is taken from the push descriptor set layout in the pipeline layout.

Valid Usage

- VUID-vkCmdPushDescriptorSetKHR-set-00364
`set` **must** be less than `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-vkCmdPushDescriptorSetKHR-set-00365
`set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`
- VUID-vkCmdPushDescriptorSetKHR-pDescriptorWrites-06494
For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `pDescriptorWrites[i].pImageInfo` **must** be a valid

pointer to an array of `pDescriptorWrites[i].descriptorCount` valid `VkDescriptorImageInfo` structures

- VUID-vkCmdPushDescriptorSetKHR-pipelineBindPoint-00363
`pipelineBindPoint` **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSetKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushDescriptorSetKHR-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-vkCmdPushDescriptorSetKHR-layout-parameter
`layout` **must** be a valid `VkPipelineLayout` handle
- VUID-vkCmdPushDescriptorSetKHR-pDescriptorWrites-parameter
`pDescriptorWrites` **must** be a valid pointer to an array of `descriptorWriteCount` valid `VkWriteDescriptorSet` structures
- VUID-vkCmdPushDescriptorSetKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdPushDescriptorSetKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdPushDescriptorSetKHR-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdPushDescriptorSetKHR-descriptorWriteCount-arraylength
`descriptorWriteCount` **must** be greater than 0
- VUID-vkCmdPushDescriptorSetKHR-commonparent
Both of `commandBuffer`, and `layout` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

Alternatively, to push descriptor updates into a command buffer, call:

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
void vkCmdPushDescriptorSet2KHR(
    VkCommandBuffer                commandBuffer,
    const VkPushDescriptorSetInfoKHR* pPushDescriptorSetInfo);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `pPushDescriptorSetInfo` is a pointer to a `VkPushDescriptorSetInfoKHR` structure.

Valid Usage

- VUID-vkCmdPushDescriptorSet2KHR-pPushDescriptorSetInfo-09468
Each bit in `pPushDescriptorSetInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSet2KHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushDescriptorSet2KHR-pPushDescriptorSetInfo-parameter
`pPushDescriptorSetInfo` **must** be a valid pointer to a valid `VkPushDescriptorSetInfoKHR` structure
- VUID-vkCmdPushDescriptorSet2KHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdPushDescriptorSet2KHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdPushDescriptorSet2KHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

The `VkPushDescriptorSetInfoKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
typedef struct VkPushDescriptorSetInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkShaderStageFlags   stageFlags;
    VkPipelineLayout      layout;
    uint32_t             set;
    uint32_t             descriptorWriteCount;
    const VkWriteDescriptorSet* pDescriptorWrites;
} VkPushDescriptorSetInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages that will use the descriptors.
- `layout` is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, `layout` **can** be `VK_NULL_HANDLE` and the layout **must** be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`
- `set` is the set number of the descriptor set in the pipeline layout that will be updated.
- `descriptorWriteCount` is the number of elements in the `pDescriptorWrites` array.
- `pDescriptorWrites` is a pointer to an array of `VkWriteDescriptorSet` structures describing the descriptors to be updated.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`.

Valid Usage

- VUID-VkPushDescriptorSetInfoKHR-set-00364
`set` **must** be less than `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-VkPushDescriptorSetInfoKHR-set-00365
`set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`
- VUID-VkPushDescriptorSetInfoKHR-pDescriptorWrites-06494
For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `pDescriptorWrites[i].pImageInfo` **must** be a valid pointer to an array of `pDescriptorWrites[i].descriptorCount` valid `VkDescriptorImageInfo` structures
- VUID-VkPushDescriptorSetInfoKHR-None-09495
If the `dynamicPipelineLayout` feature is not enabled, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkPushDescriptorSetInfoKHR-layout-09496
If `layout` is `VK_NULL_HANDLE`, the `pNext` chain **must** include a valid `VkPipelineLayoutCreateInfo` structure

Valid Usage (Implicit)

- VUID-VkPushDescriptorSetInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PUSH_DESCRIPTOR_SET_INFO_KHR`
- VUID-VkPushDescriptorSetInfoKHR-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`
- VUID-VkPushDescriptorSetInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkPushDescriptorSetInfoKHR-stageFlags-parameter
`stageFlags` **must** be a valid combination of `VkShaderStageFlagBits` values
- VUID-VkPushDescriptorSetInfoKHR-stageFlags-requiredbitmask
`stageFlags` **must** not be `0`
- VUID-VkPushDescriptorSetInfoKHR-layout-parameter
If `layout` is not `VK_NULL_HANDLE`, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkPushDescriptorSetInfoKHR-pDescriptorWrites-parameter
`pDescriptorWrites` **must** be a valid pointer to an array of `descriptorWriteCount` valid `VkWriteDescriptorSet` structures
- VUID-VkPushDescriptorSetInfoKHR-descriptorWriteCount-arraylength
`descriptorWriteCount` **must** be greater than `0`

14.2.9. Push Descriptor Updates With Descriptor Update Templates

It is also possible to use a descriptor update template to specify the push descriptors to update. To do so, call:

```
// Provided by VK_KHR_descriptor_update_template with VK_KHR_push_descriptor,  
VK_KHR_push_descriptor with VK_VERSION_1_1 or VK_KHR_descriptor_update_template  
void vkCmdPushDescriptorSetWithTemplateKHR(  
    VkCommandBuffer                      commandBuffer,  
    VkDescriptorUpdateTemplate           descriptorUpdateTemplate,  
    VkPipelineLayout                     layout,  
    uint32_t                             set,  
    const void*                          pData);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `descriptorUpdateTemplate` is a descriptor update template defining how to interpret the descriptor information in `pData`.
- `layout` is a `VkPipelineLayout` object used to program the bindings. It **must** be compatible with the layout used to create the `descriptorUpdateTemplate` handle.
- `set` is the set number of the descriptor set in the pipeline layout that will be updated. This **must** be the same number used to create the `descriptorUpdateTemplate` handle.
- `pData` is a pointer to memory containing descriptors for the templated update.

Valid Usage

- VUID-vkCmdPushDescriptorSetWithTemplateKHR-commandBuffer-00366
The `pipelineBindPoint` specified during the creation of the descriptor update template **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-pData-01686
`pData` **must** be a valid pointer to a memory containing one or more valid instances of `VkDescriptorImageInfo`, `VkDescriptorBufferInfo`, or `VkBufferView` in a layout defined by `descriptorUpdateTemplate` when it was created with `vkCreateDescriptorUpdateTemplate`
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-layout-07993
`layout` **must** be compatible with the layout used to create `descriptorUpdateTemplate`
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-descriptorUpdateTemplate-07994
`descriptorUpdateTemplate` **must** have been created with a `templateType` of `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR`
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-set-07995
`set` **must** be the same value used to create `descriptorUpdateTemplate`
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-set-07304
`set` **must** be less than `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-set-07305

set must be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSetWithTemplateKHR-commandBuffer-parameter **commandBuffer must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-descriptorUpdateTemplate-parameter **descriptorUpdateTemplate must** be a valid `VkDescriptorUpdateTemplate` handle
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-layout-parameter **layout must** be a valid `VkPipelineLayout` handle
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-commandBuffer-recording **commandBuffer must** be in the `recording state`
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-commandBuffer-cmdpool
The `VkCommandPool` that **commandBuffer** was allocated from **must** support graphics, or compute operations
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdPushDescriptorSetWithTemplateKHR-commonparent
Each of **commandBuffer**, **descriptorUpdateTemplate**, and **layout must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to **commandBuffer must** be externally synchronized
- Host access to the `VkCommandPool` that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

API Example

```
struct AppDataStructure
{
    VkDescriptorImageInfo imageInfo;           // a single image info
    // ... some more application-related data
```

```

};

const VkDescriptorUpdateTemplateEntry descriptorUpdateTemplateEntries[] =
{
    // binding to a single image descriptor
    {
        .binding = 0,
        .dstArrayElement = 0,
        .descriptorCount = 1,
        .descriptorType = VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER,
        .offset = offsetof(AppDataStructure, imageInfo),
        .stride = 0    // not required if descriptorCount is 1
    }
};

// create a descriptor update template for push descriptor set updates
const VkDescriptorUpdateTemplateCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .descriptorUpdateEntryCount = 1,
    .pDescriptorUpdateEntries = descriptorUpdateTemplateEntries,
    .templateType = VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_KHR,
    .descriptorSetLayout = 0,    // ignored by given templateType
    .pipelineBindPoint = VK_PIPELINE_BIND_POINT_GRAPHICS,
    .pipelineLayout = myPipelineLayout,
    .set = 0,
};

VkDescriptorUpdateTemplate myDescriptorUpdateTemplate;
myResult = vkCreateDescriptorUpdateTemplate(
    myDevice,
    &createInfo,
    NULL,
    &myDescriptorUpdateTemplate);

AppDataStructure appData;
// fill appData here or cache it in your engine
vkCmdPushDescriptorSetWithTemplateKHR(myCmdBuffer, myDescriptorUpdateTemplate,
myPipelineLayout, 0, &appData);

```

Alternatively, to use a descriptor update template to specify the push descriptors to update, call:

```

// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
void vkCmdPushDescriptorSetWithTemplate2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkPushDescriptorSetWithTemplateInfoKHR* pPushDescriptorSetWithTemplateInfo);

```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `pPushDescriptorSetWithTemplateInfo` is a pointer to a `VkPushDescriptorSetWithTemplateInfoKHR` structure.

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-pPushDescriptorSetWithTemplateInfo-parameter `pPushDescriptorSetWithTemplateInfo` **must** be a valid pointer to a valid `VkPushDescriptorSetWithTemplateInfoKHR` structure
- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

The `VkPushDescriptorSetWithTemplateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
typedef struct VkPushDescriptorSetWithTemplateInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkDescriptorUpdateTemplate descriptorUpdateTemplate;
    VkPipelineLayout      layout;
    uint32_t              set;
    const void*          pData;
} VkPushDescriptorSetWithTemplateInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **descriptorUpdateTemplate** is a descriptor update template defining how to interpret the descriptor information in **pData**.
- **layout** is a **VkPipelineLayout** object used to program the bindings. It **must** be compatible with the layout used to create the **descriptorUpdateTemplate** handle. If the **dynamicPipelineLayout** feature is enabled, **layout** can be **VK_NULL_HANDLE** and the layout **must** be specified by chaining **VkPipelineLayoutCreateInfo** structure off the **pNext**
- **set** is the set number of the descriptor set in the pipeline layout that will be updated. This **must** be the same number used to create the **descriptorUpdateTemplate** handle.
- **pData** is a pointer to memory containing descriptors for the templated update.

Valid Usage

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-commandBuffer-00366
The **pipelineBindPoint** specified during the creation of the descriptor update template **must** be supported by the **commandBuffer**'s parent **VkCommandPool**'s queue family
- VUID-VkPushDescriptorSetWithTemplateInfoKHR-pData-01686
pData **must** be a valid pointer to a memory containing one or more valid instances of **VkDescriptorImageInfo**, **VkDescriptorBufferInfo**, or **VkBufferView** in a layout defined by **descriptorUpdateTemplate** when it was created with **vkCreateDescriptorUpdateTemplate**
- VUID-VkPushDescriptorSetWithTemplateInfoKHR-layout-07993
layout **must** be compatible with the layout used to create **descriptorUpdateTemplate**
- VUID-VkPushDescriptorSetWithTemplateInfoKHR-descriptorUpdateTemplate-07994
descriptorUpdateTemplate **must** have been created with a **templateType** of **VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR_KHR**
- VUID-VkPushDescriptorSetWithTemplateInfoKHR-set-07995
set **must** be the same value used to create **descriptorUpdateTemplate**
- VUID-VkPushDescriptorSetWithTemplateInfoKHR-set-07304
set **must** be less than **VkPipelineLayoutCreateInfo::setLayoutCount** provided when **layout** was created
- VUID-VkPushDescriptorSetWithTemplateInfoKHR-set-07305

set **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-None-09495

If the `dynamicPipelineLayout` feature is not enabled, **layout** **must** be a valid `VkPipelineLayout` handle

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-layout-09496

If **layout** is `VK_NULL_HANDLE`, the **pNext** chain **must** include a valid `VkPipelineLayoutCreateInfo` structure

Valid Usage (Implicit)

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-sType-sType

sType **must** be `VK_STRUCTURE_TYPE_PUSH_DESCRIPTOR_SET_WITH_TEMPLATE_INFO_KHR`

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-pNext-pNext

pNext **must** be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-sType-unique

The **sType** value of each struct in the **pNext** chain **must** be unique

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-descriptorUpdateTemplate-parameter

descriptorUpdateTemplate **must** be a valid `VkDescriptorUpdateTemplate` handle

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-layout-parameter

If **layout** is not `VK_NULL_HANDLE`, **layout** **must** be a valid `VkPipelineLayout` handle

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-pData-parameter

pData **must** be a pointer value

- VUID-VkPushDescriptorSetWithTemplateInfoKHR-commonparent

Both of **descriptorUpdateTemplate**, and **layout** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

14.2.10. Push Constant Updates

As described above in section [Pipeline Layouts](#), the pipeline layout defines shader push constants which are updated via Vulkan commands rather than via writes to memory or copy commands.

NOTE

Push constants represent a high speed path to modify constant data in pipelines that is expected to outperform memory-backed resource updates.

To update push constants, call:

```
// Provided by VK_VERSION_1_0
void vkCmdPushConstants(
    VkCommandBuffer          commandBuffer,
    VkPipelineLayout         layout,
    VkShaderStageFlags       stageFlags,
    uint32_t                 offset,
    uint32_t                 size,
    const void*              pValues);
```

- **commandBuffer** is the command buffer in which the push constant update will be recorded.
- **layout** is the pipeline layout used to program the push constant updates.
- **stageFlags** is a bitmask of **VkShaderStageFlagBits** specifying the shader stages that will use the push constants in the updated range.
- **offset** is the start offset of the push constant range to update, in units of bytes.
- **size** is the size of the push constant range to update, in units of bytes.
- **pValues** is a pointer to an array of **size** bytes containing the new push constant values.

When a command buffer begins recording, all push constant values are undefined. Reads of undefined push constant values by the executing shader return undefined values.

Push constant values **can** be updated incrementally, causing shader stages in **stageFlags** to read the new data from **pValues** for push constants modified by this command, while still reading the previous data for push constants not modified by this command. When a **bound pipeline command** is issued, the bound pipeline's layout **must** be compatible with the layouts used to set the values of all push constants in the pipeline layout's push constant ranges, as described in **Pipeline Layout Compatibility**. Binding a pipeline with a layout that is not compatible with the push constant layout does not disturb the push constant values.

NOTE

As **stageFlags** needs to include all flags the relevant push constant ranges were created with, any flags that are not supported by the queue family that the **VkCommandPool** used to allocate **commandBuffer** was created on are ignored.

Valid Usage

- VUID-vkCmdPushConstants-offset-01795
For each byte in the range specified by **offset** and **size** and for each shader stage in **stageFlags**, there **must** be a push constant range in **layout** that includes that byte and that stage
- VUID-vkCmdPushConstants-offset-01796
For each byte in the range specified by **offset** and **size** and for each push constant range that overlaps that byte, **stageFlags** **must** include all stages in that push constant range's **VkPushConstantRange::stageFlags**
- VUID-vkCmdPushConstants-offset-00368
offset **must** be a multiple of 4

- VUID-vkCmdPushConstants-size-00369
size must be a multiple of 4
- VUID-vkCmdPushConstants-offset-00370
offset must be less than `VkPhysicalDeviceLimits::maxPushConstantsSize`
- VUID-vkCmdPushConstants-size-00371
size must be less than or equal to `VkPhysicalDeviceLimits::maxPushConstantsSize` minus **offset**

Valid Usage (Implicit)

- VUID-vkCmdPushConstants-commandBuffer-parameter
commandBuffer must be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushConstants-layout-parameter
layout must be a valid `VkPipelineLayout` handle
- VUID-vkCmdPushConstants-stageFlags-parameter
stageFlags must be a valid combination of `VkShaderStageFlagBits` values
- VUID-vkCmdPushConstants-stageFlags-requiredbitmask
stageFlags must not be 0
- VUID-vkCmdPushConstants-pValues-parameter
pValues must be a valid pointer to an array of **size** bytes
- VUID-vkCmdPushConstants-commandBuffer-recording
commandBuffer must be in the `recording state`
- VUID-vkCmdPushConstants-commandBuffer-cmdpool
The `VkCommandPool` that **commandBuffer** was allocated from **must** support graphics, or compute operations
- VUID-vkCmdPushConstants-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdPushConstants-size-arraylength
size must be greater than 0
- VUID-vkCmdPushConstants-commonparent
Both of **commandBuffer**, and **layout must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to **commandBuffer must** be externally synchronized
- Host access to the `VkCommandPool` that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

Alternatively, to update push constants, call:

```
// Provided by VK_KHR_maintenance6
void vkCmdPushConstants2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkPushConstantsInfoKHR*       pPushConstantsInfo);
```

- `commandBuffer` is the command buffer in which the push constant update will be recorded.
- `pPushConstantsInfo` is a pointer to a `VkPushConstantsInfoKHR` structure.

Valid Usage (Implicit)

- VUID-vkCmdPushConstants2KHR-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushConstants2KHR-pPushConstantsInfo-parameter `pPushConstantsInfo` **must** be a valid pointer to a valid `VkPushConstantsInfoKHR` structure
- VUID-vkCmdPushConstants2KHR-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdPushConstants2KHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdPushConstants2KHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

The `VkPushConstantsInfoKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance6
typedef struct VkPushConstantsInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkPipelineLayout    layout;
    VkShaderStageFlags stageFlags;
    uint32_t            offset;
    uint32_t            size;
    const void*        pValues;
} VkPushConstantsInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `layout` is the pipeline layout used to program the push constant updates. If the `dynamicPipelineLayout` feature is enabled, `layout` **can** be `VK_NULL_HANDLE` and the layout **must** be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`
- `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages that will use the push constants in the updated range.
- `offset` is the start offset of the push constant range to update, in units of bytes.
- `size` is the size of the push constant range to update, in units of bytes.
- `pValues` is a pointer to an array of `size` bytes containing the new push constant values.

Valid Usage

- VUID-VkPushConstantsInfoKHR-offset-01795
For each byte in the range specified by `offset` and `size` and for each shader stage in `stageFlags`, there **must** be a push constant range in `layout` that includes that byte and that stage
- VUID-VkPushConstantsInfoKHR-offset-01796
For each byte in the range specified by `offset` and `size` and for each push constant range that overlaps that byte, `stageFlags` **must** include all stages in that push constant range's `VkPushConstantRange::stageFlags`
- VUID-VkPushConstantsInfoKHR-offset-00368

offset **must** be a multiple of 4

- VUID-VkPushConstantsInfoKHR-size-00369

size **must** be a multiple of 4

- VUID-VkPushConstantsInfoKHR-offset-00370

offset **must** be less than `VkPhysicalDeviceLimits::maxPushConstantsSize`

- VUID-VkPushConstantsInfoKHR-size-00371

size **must** be less than or equal to `VkPhysicalDeviceLimits::maxPushConstantsSize` minus **offset**

- VUID-VkPushConstantsInfoKHR-None-09495

If the `dynamicPipelineLayout` feature is not enabled, **layout** **must** be a valid `VkPipelineLayout` handle

- VUID-VkPushConstantsInfoKHR-layout-09496

If **layout** is `VK_NULL_HANDLE`, the **pNext** chain **must** include a valid `VkPipelineLayoutCreateInfo` structure

Valid Usage (Implicit)

- VUID-VkPushConstantsInfoKHR-sType-sType

sType **must** be `VK_STRUCTURE_TYPE_PUSH_CONSTANTS_INFO_KHR`

- VUID-VkPushConstantsInfoKHR-pNext-pNext

pNext **must** be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`

- VUID-VkPushConstantsInfoKHR-sType-unique

The **sType** value of each struct in the **pNext** chain **must** be unique

- VUID-VkPushConstantsInfoKHR-layout-parameter

If **layout** is not `VK_NULL_HANDLE`, **layout** **must** be a valid `VkPipelineLayout` handle

- VUID-VkPushConstantsInfoKHR-stageFlags-parameter

stageFlags **must** be a valid combination of `VkShaderStageFlagBits` values

- VUID-VkPushConstantsInfoKHR-stageFlags-requiredbitmask

stageFlags **must** not be 0

- VUID-VkPushConstantsInfoKHR-pValues-parameter

pValues **must** be a valid pointer to an array of **size** bytes

- VUID-VkPushConstantsInfoKHR-size-arraylength

size **must** be greater than 0

14.3. Physical Storage Buffer Access

To query a 64-bit buffer device address value through which buffer memory **can** be accessed in a shader, call:

```
// Provided by VK_VERSION_1_2
VkDeviceAddress vkGetBufferDeviceAddress(
    VkDevice device,
    const VkBufferDeviceAddressInfo* pInfo);
```

or the equivalent command

```
// Provided by VK_KHR_buffer_device_address
VkDeviceAddress vkGetBufferDeviceAddressKHR(
    VkDevice device,
    const VkBufferDeviceAddressInfo* pInfo);
```

or the equivalent command

```
// Provided by VK_EXT_buffer_device_address
VkDeviceAddress vkGetBufferDeviceAddressEXT(
    VkDevice device,
    const VkBufferDeviceAddressInfo* pInfo);
```

- **device** is the logical device that the buffer was created on.
- **pInfo** is a pointer to a [VkBufferDeviceAddressInfo](#) structure specifying the buffer to retrieve an address for.

The 64-bit return value is an address of the start of **pInfo->buffer**. The address range starting at this value and whose size is the size of the buffer **can** be used in a shader to access the memory bound to that buffer, using the [SPV_KHR_physical_storage_buffer](#) extension or the equivalent [SPV_EXT_physical_storage_buffer](#) extension and the [PhysicalStorageBuffer](#) storage class. For example, this value **can** be stored in a uniform buffer, and the shader **can** read the value from the uniform buffer and use it to do a dependent read/write to this buffer. A value of zero is reserved as a “null” pointer and **must** not be returned as a valid buffer device address. All loads, stores, and atomics in a shader through [PhysicalStorageBuffer](#) pointers **must** access addresses in the address range of some buffer.

If the buffer was created with a non-zero value of [VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress](#) or [VkBufferDeviceAddressCreateInfoEXT::deviceAddress](#), the return value will be the same address that was returned at capture time.

The returned address **must** satisfy the alignment requirement specified by [VkMemoryRequirements::alignment](#) for the buffer in [VkBufferDeviceAddressInfo::buffer](#).

If multiple [VkBuffer](#) objects are bound to overlapping ranges of [VkDeviceMemory](#), implementations **may** return address ranges which overlap. In this case, it is ambiguous which [VkBuffer](#) is associated with any given device address. For purposes of valid usage, if multiple [VkBuffer](#) objects **can** be attributed to a device address, a [VkBuffer](#) is selected such that valid usage passes, if it exists.

Valid Usage

- VUID-vkGetBufferDeviceAddress-bufferDeviceAddress-03324
The `bufferDeviceAddress` or `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddress` feature **must** be enabled
- VUID-vkGetBufferDeviceAddress-device-03325
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` or `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetBufferDeviceAddress-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetBufferDeviceAddress-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkBufferDeviceAddressInfo` structure

The `VkBufferDeviceAddressInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkBufferDeviceAddressInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            buffer;
} VkBufferDeviceAddressInfo;
```

or the equivalent

```
// Provided by VK_KHR_buffer_device_address
typedef VkBufferDeviceAddressInfo VkBufferDeviceAddressInfoKHR;
```

or the equivalent

```
// Provided by VK_EXT_buffer_device_address
typedef VkBufferDeviceAddressInfo VkBufferDeviceAddressInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` specifies the buffer whose address is being queried.

Valid Usage

- VUID-VkBufferDeviceAddressInfo-buffer-02600

If **buffer** is non-sparse and was not created with the **VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT** flag, then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object

- VUID-VkBufferDeviceAddressInfo-buffer-02601

buffer **must** have been created with **VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT**

Valid Usage (Implicit)

- VUID-VkBufferDeviceAddressInfo-sType-sType

sType **must** be **VK_STRUCTURE_TYPE_BUFFER_DEVICE_ADDRESS_INFO**

- VUID-VkBufferDeviceAddressInfo-pNext-pNext

pNext **must** be **NULL**

- VUID-VkBufferDeviceAddressInfo-buffer-parameter

buffer **must** be a valid **VkBuffer** handle

To query a 64-bit buffer opaque capture address, call:

```
// Provided by VK_VERSION_1_2
uint64_t vkGetBufferOpaqueCaptureAddress(
    VkDevice          device,
    const VkBufferDeviceAddressInfo* pInfo);
```

or the equivalent command

```
// Provided by VK_KHR_buffer_device_address
uint64_t vkGetBufferOpaqueCaptureAddressKHR(
    VkDevice          device,
    const VkBufferDeviceAddressInfo* pInfo);
```

- **device** is the logical device that the buffer was created on.
- **pInfo** is a pointer to a **VkBufferDeviceAddressInfo** structure specifying the buffer to retrieve an address for.

The 64-bit return value is an opaque capture address of the start of **pInfo->buffer**.

If the buffer was created with a non-zero value of **VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress** the return value **must** be the same address.

Valid Usage

- VUID-vkGetBufferOpaqueCaptureAddress-None-03326
The `bufferDeviceAddress` feature **must** be enabled
- VUID-vkGetBufferOpaqueCaptureAddress-device-03327
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetBufferOpaqueCaptureAddress-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetBufferOpaqueCaptureAddress-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkBufferDeviceAddressInfo` structure

The `VkStridedDeviceAddressRegionKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkStridedDeviceAddressRegionKHR {
    VkDeviceAddress    deviceAddress;
    VkDeviceSize       stride;
    VkDeviceSize       size;
} VkStridedDeviceAddressRegionKHR;
```

- `deviceAddress` is the device address (as returned by the `vkGetBufferDeviceAddress` command) at which the region starts, or zero if the region is unused.
- `stride` is the byte stride between consecutive elements.
- `size` is the size in bytes of the region starting at `deviceAddress`.

Valid Usage

- VUID-VkStridedDeviceAddressRegionKHR-size-04631
If `size` is not zero, all addresses between `deviceAddress` and `deviceAddress + size - 1` **must** be in the buffer device address range of the same buffer
- VUID-VkStridedDeviceAddressRegionKHR-stride-04632
If `size` is not zero, `stride` **must** be less than or equal to the size of the buffer from which `deviceAddress` was queried

14.4. Descriptor Buffers

If the `descriptorBuffer` feature is enabled, an alternative way to specify descriptor sets is via buffers, rather than descriptor set objects.

14.4.1. Putting Descriptors in Memory

Commands are provided to retrieve descriptor data, and also to locate where in memory that data **must** be written to match the given descriptor set layout.

To determine the amount of memory needed to store all descriptors with a given layout, call:

```
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorSetLayoutSizeEXT(
    VkDevice                device,
    VkDescriptorSetLayout    layout,
    VkDeviceSize*           pLayoutSizeInBytes);
```

- **device** is the logical device that gets the size.
- **layout** is the descriptor set layout being queried.
- **pLayoutSizeInBytes** is a pointer to **VkDeviceSize** where the size in bytes will be written.

The size of a descriptor set layout will be at least as large as the sum total of the size of all descriptors in the layout, and **may** be larger. This size represents the amount of memory that will be required to store all of the descriptors for this layout in memory, when placed according to the layout's offsets as obtained by **vkGetDescriptorSetLayoutBindingOffsetEXT**.

If any **binding** in **layout** is **VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT**, the returned size includes space for the maximum **descriptorCount** descriptors as declared for that **binding**. To compute the required size of a descriptor set with a **VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT**:

$$\text{size} = \text{offset} + \text{descriptorSize} \times \text{variableDescriptorCount}$$

where **offset** is obtained by **vkGetDescriptorSetLayoutBindingOffsetEXT** and **descriptorSize** is the size of the relevant descriptor as obtained from **VkPhysicalDeviceDescriptorBufferPropertiesEXT**, and **variableDescriptorCount** is the equivalent of **VkDescriptorSetVariableDescriptorCountAllocateInfo::pDescriptorCounts**. For **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK**, **variableDescriptorCount** is the size in bytes for the inline uniform block, and **descriptorSize** is 1.

If **VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSingleArray** is **VK_FALSE** and the variable descriptor type is **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER**, **variableDescriptorCount** is always considered to be the upper bound.

Valid Usage

- VUID-vkGetDescriptorSetLayoutSizeEXT-None-08011
The **descriptorBuffer** feature **must** be enabled
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-08012
layout **must** have been created with the

Valid Usage (Implicit)

- VUID-vkGetDescriptorSetLayoutSizeEXT-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-parameter **layout** must be a valid [VkDescriptorSetLayout](#) handle
- VUID-vkGetDescriptorSetLayoutSizeEXT-pLayoutSizeInBytes-parameter **pLayoutSizeInBytes** must be a valid pointer to a [VkDeviceSize](#) value
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-parent **layout** must have been created, allocated, or retrieved from **device**

To get the offset of a binding within a descriptor set layout in memory, call:

```
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorSetLayoutBindingOffsetEXT(
    VkDevice          device,
    VkDescriptorSetLayout layout,
    uint32_t          binding,
    VkDeviceSize*     pOffset);
```

- **device** is the logical device that gets the offset.
- **layout** is the descriptor set layout being queried.
- **binding** is the binding number being queried.
- **pOffset** is a pointer to [VkDeviceSize](#) where the byte offset of the binding will be written.

Each binding in a descriptor set layout is assigned an offset in memory by the implementation. When a shader accesses a resource with that binding, it will access the bound descriptor buffer from that offset to look for its descriptor. This command provides an application with that offset, so that descriptors can be placed in the correct locations. The precise location accessed by a shader for a given descriptor is as follows:

$$\text{location} = \text{bufferAddress} + \text{setOffset} + \text{descriptorOffset} + (\text{arrayElement} \times \text{descriptorSize})$$

where **bufferAddress** and **setOffset** are the base address and offset for the identified descriptor set as specified by [vkCmdBindDescriptorBuffersEXT](#) and [vkCmdSetDescriptorBufferOffsetsEXT](#), **descriptorOffset** is the offset for the binding returned by this command, **arrayElement** is the index into the array specified in the shader, and **descriptorSize** is the size of the relevant descriptor as obtained from [VkPhysicalDeviceDescriptorBufferPropertiesEXT](#). Applications are responsible for placing valid descriptors at the expected location in order for a shader to access it. The overall offset added to **bufferAddress** to calculate **location** must be less than [VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferRange](#) for samplers

and `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange` for resources.

If any `binding` in `layout` is `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, that `binding` **must** have the largest offset of any `binding`.

A descriptor `binding` with type `VK_DESCRIPTOR_TYPE_MUTABLE_VALVE` **can** be used. Any potential types in `VkMutableDescriptorTypeCreateInfoVALVE::pDescriptorTypes` for `binding` share the same offset. If the size of the `mutable descriptor` is larger than the size of a concrete descriptor type being accessed, the padding area is ignored by the implementation.

Valid Usage

- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-None-08013
The `descriptorBuffer` feature **must** be enabled
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-08014
`layout` **must** have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` flag set

Valid Usage (Implicit)

- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-parameter
`layout` **must** be a valid `VkDescriptorSetLayout` handle
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-pOffset-parameter
`pOffset` **must** be a valid pointer to a `VkDeviceSize` value
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-parent
`layout` **must** have been created, allocated, or retrieved from `device`

To get descriptor data to place in a buffer, call:

```
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorEXT(
    VkDevice device,
    const VkDescriptorGetInfoEXT* pDescriptorInfo,
    size_t dataSize,
    void* pDescriptor);
```

- `device` is the logical device that gets the descriptor.
- `pDescriptorInfo` is a pointer to a `VkDescriptorGetInfoEXT` structure specifying the parameters of the descriptor to get.
- `dataSize` is the amount of the descriptor data to get in bytes.

- `pDescriptor` is a pointer to an application-allocated buffer where the descriptor will be written.

The size of the data for each descriptor type is determined by the value in `VkPhysicalDeviceDescriptorBufferPropertiesEXT`. This value also defines the stride in bytes for arrays of that descriptor type.

If the `VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSingleArray` property is `VK_FALSE` the implementation requires an array of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptors to be written into a descriptor buffer as an array of image descriptors, immediately followed by an array of sampler descriptors. Applications **must** write the first `VkPhysicalDeviceDescriptorBufferPropertiesEXT::sampledImageDescriptorSize` bytes of the data returned through `pDescriptor` to the first array, and the remaining `VkPhysicalDeviceDescriptorBufferPropertiesEXT::samplerDescriptorSize` bytes of the data to the second array. For variable-sized descriptor bindings of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptors, the two arrays each have a size equal to the upper bound `descriptorCount` of that binding.

A descriptor obtained by this command references the underlying `VkImageView` or `VkSampler`, and these objects **must** not be destroyed before the last time a descriptor is dynamically accessed. For descriptor types which consume an address instead of an object, the underlying `VkBuffer` is referenced instead.

Valid Usage

- VUID-vkGetDescriptorEXT-None-08015
The `descriptorBuffer` feature **must** be enabled
- VUID-vkGetDescriptorEXT-dataSize-08125
If `pDescriptorInfo->type` is not `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` or `pDescriptorInfo->data.pCombinedImageSampler` has an `imageView` member that was not created with a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain, `dataSize` **must** equal the size of a descriptor of type `VkDescriptorGetInfoEXT::type` determined by the value in `VkPhysicalDeviceDescriptorBufferPropertiesEXT`, or determined by `VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT::combinedImageSamplerDescriptorSize` if `pDescriptorInfo` specifies a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` whose `VkSampler` was created with `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` set
- VUID-vkGetDescriptorEXT-descriptorType-09469
If `pDescriptorInfo->type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` and `pDescriptorInfo->data.pCombinedImageSampler` has an `imageView` member that was created with a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain, `dataSize` **must** equal the size of `VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSize` times `VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount`
- VUID-vkGetDescriptorEXT-pDescriptorInfo-09507
If `pDescriptorInfo->type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` and it has a `imageView` that is `VK_NULL_HANDLE` then `dataSize` **must** be equal to the size of `VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSize`

Valid Usage (Implicit)

- VUID-vkGetDescriptorEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDescriptorEXT-pDescriptorInfo-parameter
`pDescriptorInfo` **must** be a valid pointer to a valid `VkDescriptorGetInfoEXT` structure
- VUID-vkGetDescriptorEXT-pDescriptor-parameter
`pDescriptor` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkGetDescriptorEXT-dataSize-arraylength
`dataSize` **must** be greater than `0`

Information about the descriptor to get is passed in a `VkDescriptorGetInfoEXT` structure:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorGetInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDescriptorType    type;
    VkDescriptorDataEXT data;
} VkDescriptorGetInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is the type of descriptor to get.
- `data` is a structure containing the information needed to get the descriptor.

Valid Usage

- VUID-VkDescriptorGetInfoEXT-type-08018
`type` **must** not be `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`
- VUID-VkDescriptorGetInfoEXT-type-08019
If `type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the `pCombinedImageSampler->sampler` member of `data` **must** be a `VkSampler` created on `device`
- VUID-VkDescriptorGetInfoEXT-type-08020
If `type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the `pCombinedImageSampler->imageView` member of `data` **must** be a `VkImageView` created on `device`, or `VK_NULL_HANDLE`
- VUID-VkDescriptorGetInfoEXT-type-08021
If `type` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `pInputAttachmentImage->imageView` member of `data` **must** be a `VkImageView` created on `device`
- VUID-VkDescriptorGetInfoEXT-type-08022

If `type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and if `pSampledImage` is not `NULL`, the `pSampledImage->imageView` member of `data` **must** be a `VkImageView` created on `device`, or `VK_NULL_HANDLE`

- VUID-VkDescriptorGetInfoEXT-type-08023

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and if `pStorageImage` is not `NULL`, the `pStorageImage->imageView` member of `data` **must** be a `VkImageView` created on `device`, or `VK_NULL_HANDLE`

- VUID-VkDescriptorGetInfoEXT-type-08024

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, `pUniformTexelBuffer` is not `NULL` and `pUniformTexelBuffer->address` is not zero, `pUniformTexelBuffer->address` **must** be an address within a `VkBuffer` created on `device`

- VUID-VkDescriptorGetInfoEXT-type-08025

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `pStorageTexelBuffer` is not `NULL` and `pStorageTexelBuffer->address` is not zero, `pStorageTexelBuffer->address` **must** be an address within a `VkBuffer` created on `device`

- VUID-VkDescriptorGetInfoEXT-type-08026

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `pUniformBuffer` is not `NULL` and `pUniformBuffer->address` is not zero, `pUniformBuffer->address` **must** be an address within a `VkBuffer` created on `device`

- VUID-VkDescriptorGetInfoEXT-type-08027

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `pStorageBuffer` is not `NULL` and `pStorageBuffer->address` is not zero, `pStorageBuffer->address` **must** be an address within a `VkBuffer` created on `device`

- VUID-VkDescriptorGetInfoEXT-type-09427

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, `pUniformBuffer` is not `NULL`, the number of texel buffer elements given by $(\lceil pUniformBuffer->range / (\text{texel block size}) \rceil \times (\text{texels per block}))$ where texel block size and texels per block are as defined in the [Compatible Formats](#) table for `pUniformBuffer->format`, **must** be less than or equal to `VkPhysicalDeviceLimits::maxTexelBufferElements`

- VUID-VkDescriptorGetInfoEXT-type-09428

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `pStorageBuffer` is not `NULL`, the number of texel buffer elements given by $(\lceil pStorageBuffer->range / (\text{texel block size}) \rceil \times (\text{texels per block}))$ where texel block size and texels per block are as defined in the [Compatible Formats](#) table for `pStorageBuffer->format`, **must** be less than or equal to `VkPhysicalDeviceLimits::maxTexelBufferElements`

- VUID-VkDescriptorGetInfoEXT-type-08028

If `type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` and `accelerationStructure` is not `0`, `accelerationStructure` **must** contain the address of a `VkAccelerationStructureKHR` created on `device`

- VUID-VkDescriptorGetInfoEXT-type-08029

If `type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` and `accelerationStructure` is not `0`, `accelerationStructure` **must** contain the handle of a `VkAccelerationStructureNV` created on `device`, returned by `vkGetAccelerationStructureHandleNV`

Valid Usage (Implicit)

- VUID-VkDescriptorGetInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_GET_INFO_EXT`
- VUID-VkDescriptorGetInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDescriptorGetInfoEXT-type-parameter
`type` **must** be a valid `VkDescriptorType` value
- VUID-VkDescriptorGetInfoEXT-pSampler-parameter
If `type` is `VK_DESCRIPTOR_TYPE_SAMPLER`, the `pSampler` member of `data` **must** be a valid pointer to a valid `VkSampler` handle
- VUID-VkDescriptorGetInfoEXT-pCombinedImageSampler-parameter
If `type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the `pCombinedImageSampler` member of `data` **must** be a valid pointer to a valid `VkDescriptorImageInfo` structure
- VUID-VkDescriptorGetInfoEXT-pInputAttachmentImage-parameter
If `type` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `pInputAttachmentImage` member of `data` **must** be a valid pointer to a valid `VkDescriptorImageInfo` structure
- VUID-VkDescriptorGetInfoEXT-pSampledImage-parameter
If `type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and if `pSampledImage` is not `NULL`, the `pSampledImage` member of `data` **must** be a valid pointer to a valid `VkDescriptorImageInfo` structure
- VUID-VkDescriptorGetInfoEXT-pStorageImage-parameter
If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and if `pStorageImage` is not `NULL`, the `pStorageImage` member of `data` **must** be a valid pointer to a valid `VkDescriptorImageInfo` structure
- VUID-VkDescriptorGetInfoEXT-pUniformTexelBuffer-parameter
If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, and if `pUniformTexelBuffer` is not `NULL`, the `pUniformTexelBuffer` member of `data` **must** be a valid pointer to a valid `VkDescriptorAddressInfoEXT` structure
- VUID-VkDescriptorGetInfoEXT-pStorageTexelBuffer-parameter
If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, and if `pStorageTexelBuffer` is not `NULL`, the `pStorageTexelBuffer` member of `data` **must** be a valid pointer to a valid `VkDescriptorAddressInfoEXT` structure
- VUID-VkDescriptorGetInfoEXT-pUniformBuffer-parameter
If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, and if `pUniformBuffer` is not `NULL`, the `pUniformBuffer` member of `data` **must** be a valid pointer to a valid `VkDescriptorAddressInfoEXT` structure
- VUID-VkDescriptorGetInfoEXT-pStorageBuffer-parameter
If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, and if `pStorageBuffer` is not `NULL`, the `pStorageBuffer` member of `data` **must** be a valid pointer to a valid `VkDescriptorAddressInfoEXT` structure

Data describing the descriptor is passed in a `VkDescriptorDataEXT` structure:

```
// Provided by VK_EXT_descriptor_buffer
typedef union VkDescriptorDataEXT {
    const VkSampler*                pSampler;
    const VkDescriptorImageInfo*    pCombinedImageSampler;
    const VkDescriptorImageInfo*    pInputAttachmentImage;
    const VkDescriptorImageInfo*    pSampledImage;
    const VkDescriptorImageInfo*    pStorageImage;
    const VkDescriptorAddressInfoEXT* pUniformTexelBuffer;
    const VkDescriptorAddressInfoEXT* pStorageTexelBuffer;
    const VkDescriptorAddressInfoEXT* pUniformBuffer;
    const VkDescriptorAddressInfoEXT* pStorageBuffer;
    VkDeviceAddress                 accelerationStructure;
} VkDescriptorDataEXT;
```

- `pSampler` is a pointer to a `VkSampler` handle specifying the parameters of a `VK_DESCRIPTOR_TYPE_SAMPLER` descriptor.
- `pCombinedImageSampler` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor.
- `pInputAttachmentImage` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` descriptor.
- `pSampledImage` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` descriptor.
- `pStorageImage` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` descriptor.
- `pUniformTexelBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor.
- `pStorageTexelBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor.
- `pUniformBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` descriptor.
- `pStorageBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` descriptor.
- `accelerationStructure` is the address of a `VkAccelerationStructureKHR` specifying the parameters of a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` descriptor , or a `VkAccelerationStructureNV` handle specifying the parameters of a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` descriptor.

If the `nullDescriptor` feature is enabled, `pSampledImage`, `pStorageImage`, `pUniformTexelBuffer`, `pStorageTexelBuffer`, `pUniformBuffer`, and `pStorageBuffer` **can** each be `NULL`. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded.

If the `nullDescriptor` feature is enabled, `accelerationStructure` **can** be `0`. A null acceleration structure descriptor results in the miss shader being invoked.

Valid Usage

- VUID-VkDescriptorDataEXT-type-08030
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, and `pUniformBuffer->address` is the address of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkDescriptorDataEXT-type-08031
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, and `pStorageBuffer->address` is the address of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkDescriptorDataEXT-type-08032
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, and `pUniformTexelBuffer->address` is the address of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkDescriptorDataEXT-type-08033
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, and `pStorageTexelBuffer->address` is the address of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkDescriptorDataEXT-type-08034
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and the `nullDescriptor` feature is not enabled, `pCombinedImageSampler->imageView` **must** not be `VK_NULL_HANDLE`
- VUID-VkDescriptorDataEXT-type-08035
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and the `nullDescriptor` feature is not enabled, `pSampledImage` **must** not be `NULL` and `pSampledImage->imageView` **must** not be `VK_NULL_HANDLE`
- VUID-VkDescriptorDataEXT-type-08036
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and the `nullDescriptor` feature is not enabled, `pStorageImage` **must** not be `NULL` and `pStorageImage->imageView` **must** not be `VK_NULL_HANDLE`
- VUID-VkDescriptorDataEXT-type-08037
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, and the `nullDescriptor` feature is not enabled, `pUniformTexelBuffer` **must** not be `NULL`
- VUID-VkDescriptorDataEXT-type-08038
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, and the `nullDescriptor` feature is not enabled, `pStorageTexelBuffer` **must** not be `NULL`
- VUID-VkDescriptorDataEXT-type-08039
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, and the `nullDescriptor` feature is not enabled, `pUniformBuffer` **must** not be `NULL`
- VUID-VkDescriptorDataEXT-type-08040
If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, and the `nullDescriptor` feature is not enabled, `pStorageBuffer` **must** not be `NULL`
- VUID-VkDescriptorDataEXT-type-08041

If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, and the `nullDescriptor` feature is not enabled, `accelerationStructure` **must** not be 0

- VUID-VkDescriptorDataEXT-type-08042

If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, and the `nullDescriptor` feature is not enabled, `accelerationStructure` **must** not be 0

Data describing a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is passed in a `VkDescriptorAddressInfoEXT` structure:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorAddressInfoEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceAddress     address;
    VkDeviceSize        range;
    VkFormat            format;
} VkDescriptorAddressInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `address` is either 0 or a device address at an offset in a buffer, where the base address can be queried from `vkGetBufferDeviceAddress`.
- `range` is the size in bytes of the buffer or buffer view used by the descriptor.
- `format` is the format of the data elements in the buffer view and is ignored for buffers.

Valid Usage

- VUID-VkDescriptorAddressInfoEXT-None-09508

If `address` is not zero, and the descriptor is of type `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, then `format` **must** not be `VK_FORMAT_UNDEFINED`

- VUID-VkDescriptorAddressInfoEXT-address-08043

If the `nullDescriptor` feature is not enabled, `address` **must** not be zero

- VUID-VkDescriptorAddressInfoEXT-nullDescriptor-08938

If `address` is zero, `range` **must** be `VK_WHOLE_SIZE`

- VUID-VkDescriptorAddressInfoEXT-nullDescriptor-08939

If `address` is not zero, `range` **must** not be `VK_WHOLE_SIZE`

- VUID-VkDescriptorAddressInfoEXT-None-08044

If `address` is not zero, `address` **must** be a valid device address at an offset within a `VkBuffer`

- VUID-VkDescriptorAddressInfoEXT-range-08045

`range` **must** be less than or equal to the size of the buffer containing `address` minus the

offset of `address` from the base address of the buffer

- VUID-VkDescriptorAddressInfoEXT-range-08940
`range` **must** not be zero

Valid Usage (Implicit)

- VUID-VkDescriptorAddressInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_ADDRESS_INFO_EXT`
- VUID-VkDescriptorAddressInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDescriptorAddressInfoEXT-format-parameter
`format` **must** be a valid `VkFormat` value

If the `nullDescriptor` feature is enabled, `address` **can** be zero. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded.

Immutable samplers specified in a descriptor set layout through `pImmutableSamplers` **must** be provided by applications when obtaining descriptor data. Immutable samplers written in a descriptor buffer **must** have identical parameters to the immutable samplers in the descriptor set layout that consumes the sampler.

NOTE

If the descriptor set layout was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, there is no buffer backing for the immutable sampler, so this requirement does not exist. The implementation handles allocation of these descriptors internally.

NOTE

As descriptors are now in regular memory, drivers cannot hide copies of immutable samplers that end up in descriptor sets from the application. As such, applications are required to provide these samplers as if they were not provided immutably.

14.4.2. Binding Descriptor Buffers

Descriptor buffers have their own separate binding point on the command buffer, with buffers bound using `vkCmdBindDescriptorBuffersEXT`. `vkCmdSetDescriptorBufferOffsetsEXT` assigns pairs of buffer binding indices and buffer offsets to the same binding point on the command buffer as `vkCmdBindDescriptorSets`, allowing subsequent `bound pipeline commands` to use the specified descriptor buffers. Bindings applied via `vkCmdBindDescriptorSets` **cannot** exist simultaneously with those applied via calls to `vkCmdSetDescriptorBufferOffsetsEXT` or `vkCmdBindDescriptorBufferEmbeddedSamplersEXT`, as calls to `vkCmdSetDescriptorBufferOffsetsEXT` or `vkCmdBindDescriptorBufferEmbeddedSamplersEXT` invalidate any bindings by previous calls to `vkCmdBindDescriptorSets` and vice-versa.

To bind descriptor buffers to a command buffer, call:

```
// Provided by VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBuffersEXT(
    VkCommandBuffer                commandBuffer,
    uint32_t                       bufferCount,
    const VkDescriptorBufferBindingInfoEXT* pBindingInfos);
```

- `commandBuffer` is the command buffer that the descriptor buffers will be bound to.
- `bufferCount` is the number of elements in the `pBindingInfos` array.
- `pBindingInfos` is a pointer to an array of `VkDescriptorBufferBindingInfoEXT` structures.

`vkCmdBindDescriptorBuffersEXT` causes any offsets previously set by `vkCmdSetDescriptorBufferOffsetsEXT` that use the bindings numbered `[0.. bufferCount-1]` to be no longer valid for subsequent bound pipeline commands. Any previously bound buffers at binding points greater than or equal to `bufferCount` are unbound.

Valid Usage

- VUID-vkCmdBindDescriptorBuffersEXT-None-08047
The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdBindDescriptorBuffersEXT-maxSamplerDescriptorBufferBindings-08048
There **must** be no more than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferBindings` descriptor buffers containing sampler descriptor data bound
- VUID-vkCmdBindDescriptorBuffersEXT-maxResourceDescriptorBufferBindings-08049
There **must** be no more than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferBindings` descriptor buffers containing resource descriptor data bound
- VUID-vkCmdBindDescriptorBuffersEXT-None-08050
There **must** be no more than 1 descriptor buffer bound that was created with the `VK_BUFFER_USAGE_PUSH_DESCRIPTOR_BUFFER_BIT_EXT` bit set
- VUID-vkCmdBindDescriptorBuffersEXT-bufferCount-08051
`bufferCount` **must** be less than or equal to `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings`
- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08052
For any element of `pBindingInfos`, if the buffer from which `address` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08053
For any element of `pBindingInfos`, the buffer from which `address` was queried **must** have been created with the `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` bit set if it contains sampler descriptor data
- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08054
For any element of `pBindingInfos`, the buffer from which `address` was queried **must** have

been created with the `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` bit set if it contains resource descriptor data

- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08055

For any element of `pBindingInfos`, `usage` **must** match the buffer from which `address` was queried

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-parameter
`pBindingInfos` **must** be a valid pointer to an array of `bufferCount` valid `VkDescriptorBufferBindingInfoEXT` structures
- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdBindDescriptorBuffersEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindDescriptorBuffersEXT-bufferCount-arraylength
`bufferCount` **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

Data describing a descriptor buffer binding is passed in a `VkDescriptorBufferBindingInfoEXT` structure:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorBufferBindingInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceAddress       address;
    VkBufferUsageFlags    usage;
} VkDescriptorBufferBindingInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `address` is a `VkDeviceAddress` specifying the device address defining the descriptor buffer to be bound.
- `usage` is a bitmask of `VkBufferUsageFlagBits` specifying the `VkBufferCreateInfo::usage` for the buffer from which `address` was queried.

If the `pNext` chain includes a `VkBufferUsageFlags2CreateInfoKHR` structure, `VkBufferUsageFlags2CreateInfoKHR::usage` from that structure is used instead of `usage` from this structure.

Valid Usage

- VUID-VkDescriptorBufferBindingInfoEXT-None-09499
If the `pNext` chain does not include a `VkBufferUsageFlags2CreateInfoKHR` structure, `usage` **must** be a valid combination of `VkBufferUsageFlagBits` values
- VUID-VkDescriptorBufferBindingInfoEXT-None-09500
If the `pNext` chain does not include a `VkBufferUsageFlags2CreateInfoKHR` structure, `usage` **must** not be 0
- VUID-VkDescriptorBufferBindingInfoEXT-bufferlessPushDescriptors-08056
If `VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors` is `VK_FALSE`, and `usage` contains `VK_BUFFER_USAGE_PUSH_DESCRIPTOR_BUFFER_BIT_EXT`, then the `pNext` chain **must** include a `VkDescriptorBufferBindingPushDescriptorBufferHandleEXT` structure
- VUID-VkDescriptorBufferBindingInfoEXT-address-08057
`address` **must** be aligned to `VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment`
- VUID-VkDescriptorBufferBindingInfoEXT-usage-08122
If `usage` includes `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`, `address` **must** be an address within a valid buffer that was created with `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-VkDescriptorBufferBindingInfoEXT-usage-08123
If `usage` includes `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`, `address` **must** be an address within a valid buffer that was created with `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-VkDescriptorBufferBindingInfoEXT-usage-08124

If **usage** includes **VK_BUFFER_USAGE_PUSH_DESCRIPTOR_BUFFER_BIT_EXT**, **address** **must** be an address within a valid buffer that was created with **VK_BUFFER_USAGE_PUSH_DESCRIPTOR_BUFFER_BIT_EXT**

Valid Usage (Implicit)

- VUID-VkDescriptorBufferBindingInfoEXT-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_INFO_EXT**
- VUID-VkDescriptorBufferBindingInfoEXT-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkBufferUsageFlags2CreateInfoKHR** or **VkDescriptorBufferBindingPushDescriptorBufferHandleEXT**
- VUID-VkDescriptorBufferBindingInfoEXT-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique

When the **VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors** property is **VK_FALSE**, the **VkBuffer** handle of the buffer for push descriptors is passed in a **VkDescriptorBufferBindingPushDescriptorBufferHandleEXT** structure:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorBufferBindingPushDescriptorBufferHandleEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            buffer;
} VkDescriptorBufferBindingPushDescriptorBufferHandleEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **buffer** is the **VkBuffer** handle of the buffer for push descriptors.

Valid Usage

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-bufferlessPushDescriptors-08059
VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors **must** be **VK_FALSE**

Valid Usage (Implicit)

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_PUSH_DESCRIPTOR_BUFFER_HANDLE_EXT**

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-buffer-parameter **buffer** **must** be a valid [VkBuffer](#) handle

To set descriptor buffer offsets in a command buffer, call:

```
// Provided by VK_EXT_descriptor_buffer
void vkCmdSetDescriptorBufferOffsetsEXT(
    VkCommandBuffer                commandBuffer,
    VkPipelineBindPoint            pipelineBindPoint,
    VkPipelineLayout               layout,
    uint32_t                      firstSet,
    uint32_t                      setCount,
    const uint32_t*                pBufferIndices,
    const VkDeviceSize*            pOffsets);
```

- **commandBuffer** is the command buffer in which the descriptor buffer offsets will be set.
- **pipelineBindPoint** is a [VkPipelineBindPoint](#) indicating the type of the pipeline that will use the descriptors.
- **layout** is a [VkPipelineLayout](#) object used to program the bindings.
- **firstSet** is the number of the first set to be bound.
- **setCount** is the number of elements in the **pBufferIndices** and **pOffsets** arrays.
- **pBufferIndices** is a pointer to an array of indices into the descriptor buffer binding points set by [vkCmdBindDescriptorBuffersEXT](#).
- **pOffsets** is a pointer to an array of [VkDeviceSize](#) offsets to apply to the bound descriptor buffers.

[vkCmdSetDescriptorBufferOffsetsEXT](#) binds **setCount** pairs of descriptor buffers, specified by indices into the binding points bound using [vkCmdBindDescriptorBuffersEXT](#), and buffer offsets to set numbers `[firstSet..firstSet+descriptorSetCount-1]` for subsequent [bound pipeline commands](#) set by **pipelineBindPoint**. Set `[firstSet + i]` is bound to the descriptor buffer at binding **pBufferIndices**[i] at an offset of **pOffsets**[i]. Any bindings that were previously applied via these sets, or calls to [vkCmdBindDescriptorSets](#), are no longer valid. Other sets will also be invalidated upon calling this command if **layout** differs from the pipeline layout used to bind those other sets, as described in [Pipeline Layout Compatibility](#).

After binding descriptors, applications **can** modify descriptor memory either by performing writes on the host or with device commands. When descriptor memory is updated with device commands, visibility for the shader stage accessing a descriptor is ensured with the [VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT_EXT](#) access flag. Implementations **must** not access resources referenced by these descriptors unless they are dynamically accessed by shaders. Descriptors bound with this call **can** be undefined if they are not dynamically accessed by shaders.

Implementations **may** read descriptor data for any statically accessed descriptor if the **binding** in **layout** is not declared with the [VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT](#) flag. If the **binding** in **layout** is declared with [VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT](#),

implementations **must** not read descriptor data that is not dynamically accessed.

Applications **must** ensure that any descriptor which the implementation **may** read **must** be in-bounds of the underlying descriptor buffer binding.

NOTE

Applications can freely decide how large a variable descriptor buffer binding is, so it may not be safe to read such descriptor payloads statically. The intention of these rules is to allow implementations to speculatively prefetch descriptor payloads where feasible.

Dynamically accessing a resource through descriptor data from an unbound region of a [sparse partially-resident buffer](#) will result in invalid descriptor data being read, and therefore undefined behavior.

NOTE

For descriptors written by the host, visibility is implied through the automatic visibility operation on queue submit, and there is no need to consider [VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT](#). Explicit synchronization for descriptors is only required when descriptors are updated on the device.

NOTE

The requirements above imply that all descriptor bindings have been defined with the equivalent of [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#), [VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT](#) and [VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT](#), but enabling those features is not required to get this behavior.

Valid Usage

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08061

The offsets in [pOffsets](#) **must** be aligned to [VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment](#)

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08063

The offsets in [pOffsets](#) **must** be small enough such that any descriptor binding referenced by [layout](#) without the [VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT](#) flag computes a valid address inside the underlying [VkBuffer](#)

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08126

The offsets in [pOffsets](#) **must** be small enough such that any location accessed by a shader as a sampler descriptor **must** be within [VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferRange](#) of the sampler descriptor buffer binding

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08127

The offsets in [pOffsets](#) **must** be small enough such that any location accessed by a shader as a resource descriptor **must** be within [VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange](#) of the resource descriptor buffer binding

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-08064

Each element of [pBufferIndices](#) **must** be less than

VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-08065
Each element of `pBufferIndices` **must** reference a valid descriptor buffer binding set by a previous call to `vkCmdBindDescriptorBuffersEXT` in `commandBuffer`
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-08066
The sum of `firstSet` and `setCount` **must** be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-09006
The `VkDescriptorSetLayout` for each set from `firstSet` to `firstSet + setCount` when `layout` was created **must** have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-None-08060
The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pipelineBindPoint-08067
`pipelineBindPoint` **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-layout-parameter
`layout` **must** be a valid `VkPipelineLayout` handle
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-parameter
`pBufferIndices` **must** be a valid pointer to an array of `setCount` `uint32_t` values
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-parameter
`pOffsets` **must** be a valid pointer to an array of `setCount` `VkDeviceSize` values
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-setCount-arraylength
`setCount` **must** be greater than 0
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commonparent
Both of `commandBuffer`, and `layout` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

Alternatively, to set descriptor buffer offsets in a command buffer, call:

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
void vkCmdSetDescriptorBufferOffsets2EXT(
    VkCommandBuffer                commandBuffer,
    const VkSetDescriptorBufferOffsetsInfoEXT* pSetDescriptorBufferOffsetsInfo);
```

- `commandBuffer` is the command buffer in which the descriptor buffer offsets will be set.
- `pSetDescriptorBufferOffsetsInfo` is a pointer to a `VkSetDescriptorBufferOffsetsInfoEXT` structure.

Valid Usage

- VUID-vkCmdSetDescriptorBufferOffsets2EXT-descriptorBuffer-09470
The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-pSetDescriptorBufferOffsetsInfo-09471
Each bit in `pSetDescriptorBufferOffsetsInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-pSetDescriptorBufferOffsetsInfo-parameter
`pSetDescriptorBufferOffsetsInfo` **must** be a valid pointer to a valid `VkSetDescriptorBufferOffsetsInfoEXT` structure
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

The `VkSetDescriptorBufferOffsetsInfoEXT` structure is defined as:

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
typedef struct VkSetDescriptorBufferOffsetsInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkShaderStageFlags   stageFlags;
    VkPipelineLayout      layout;
    uint32_t             firstSet;
    uint32_t             setCount;
    const uint32_t*       pBufferIndices;
    const VkDeviceSize*   pOffsets;
} VkSetDescriptorBufferOffsetsInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages the descriptor sets will be bound to
- `layout` is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, `layout` can be `VK_NULL_HANDLE` and the layout **must** be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`
- `firstSet` is the number of the first set to be bound.

- `setCount` is the number of elements in the `pBufferIndices` and `pOffsets` arrays.
- `pBufferIndices` is a pointer to an array of indices into the descriptor buffer binding points set by `vkCmdBindDescriptorBuffersEXT`.
- `pOffsets` is a pointer to an array of `VkDeviceSize` offsets to apply to the bound descriptor buffers.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`.

Valid Usage

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08061
The offsets in `pOffsets` **must** be aligned to `VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08063
The offsets in `pOffsets` **must** be small enough such that any descriptor binding referenced by `layout` without the `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` flag computes a valid address inside the underlying `VkBuffer`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08126
The offsets in `pOffsets` **must** be small enough such that any location accessed by a shader as a sampler descriptor **must** be within `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferRange` of the sampler descriptor buffer binding
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08127
The offsets in `pOffsets` **must** be small enough such that any location accessed by a shader as a resource descriptor **must** be within `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange` of the resource descriptor buffer binding
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pBufferIndices-08064
Each element of `pBufferIndices` **must** be less than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pBufferIndices-08065
Each element of `pBufferIndices` **must** reference a valid descriptor buffer binding set by a previous call to `vkCmdBindDescriptorBuffersEXT` in `commandBuffer`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-08066
The sum of `firstSet` and `setCount` **must** be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-09006
The `VkDescriptorSetLayout` for each set from `firstSet` to `firstSet + setCount` when `layout` was created **must** have been created with the

VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT bit set

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-None-09495
If the `dynamicPipelineLayout` feature is not enabled, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-layout-09496
If `layout` is `VK_NULL_HANDLE`, the `pNext` chain **must** include a valid `VkPipelineLayoutCreateInfo` structure

Valid Usage (Implicit)

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SET_DESCRIPTOR_BUFFER_OFFSETS_INFO_EXT`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-stageFlags-parameter
`stageFlags` **must** be a valid combination of `VkShaderStageFlagBits` values
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-stageFlags-requiredbitmask
`stageFlags` **must** not be `0`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-layout-parameter
If `layout` is not `VK_NULL_HANDLE`, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pBufferIndices-parameter
`pBufferIndices` **must** be a valid pointer to an array of `setCount` `uint32_t` values
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-parameter
`pOffsets` **must** be a valid pointer to an array of `setCount` `VkDeviceSize` values
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-setCount-arraylength
`setCount` **must** be greater than `0`

To bind an embedded immutable sampler set to a command buffer, call:

```
// Provided by VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBufferEmbeddedSamplersEXT(
    VkCommandBuffer                commandBuffer,
    VkPipelineBindPoint            pipelineBindPoint,
    VkPipelineLayout               layout,
    uint32_t                       set);
```

- `commandBuffer` is the command buffer that the embedded immutable samplers will be bound to.
- `pipelineBindPoint` is a `VkPipelineBindPoint` indicating the type of the pipeline that will use the embedded immutable samplers.

- `layout` is a `VkPipelineLayout` object used to program the bindings.
- `set` is the number of the set to be bound.

`vkCmdBindDescriptorBufferEmbeddedSamplersEXT` binds the embedded immutable samplers in `set` of `layout` to `set` for the command buffer for subsequent `bound pipeline commands` set by `pipelineBindPoint`. Any previous binding to this set by `vkCmdSetDescriptorBufferOffsetsEXT` or this command is overwritten. Any sets that were last bound by a call to `vkCmdBindDescriptorSets` are invalidated upon calling this command. Other sets will also be invalidated upon calling this command if `layout` differs from the pipeline layout used to bind those other sets, as described in [Pipeline Layout Compatibility](#).

Valid Usage

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-set-08070
The `VkDescriptorSetLayout` at index `set` when `layout` was created **must** have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT` bit set
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-set-08071
`set` **must** be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-None-08068
The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-pipelineBindPoint-08069
`pipelineBindPoint` **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-layout-parameter
`layout` **must** be a valid `VkPipelineLayout` handle
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commonparent
Both of `commandBuffer`, and `layout` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

Alternatively, to bind an embedded immutable sampler set to a command buffer, call:

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBufferEmbeddedSamplers2EXT(
    VkCommandBuffer          commandBuffer,
    const VkBindDescriptorBufferEmbeddedSamplersInfoEXT*
    pBindDescriptorBufferEmbeddedSamplersInfo);
```

- `commandBuffer` is the command buffer that the embedded immutable samplers will be bound to.
- `pBindDescriptorBufferEmbeddedSamplersInfo` is a pointer to a `VkBindDescriptorBufferEmbeddedSamplersInfoEXT` structure.

Valid Usage

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-descriptorBuffer-09472
The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-pBindDescriptorBufferEmbeddedSamplersInfo-09473
Each bit in `pBindDescriptorBufferEmbeddedSamplersInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-parameter-`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-pBindDescriptorBufferEmbeddedSamplersInfo-parameter-`pBindDescriptorBufferEmbeddedSamplersInfo` **must** be a valid pointer to a valid

`VkBindDescriptorBufferEmbeddedSamplersInfoEXT` structure

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute	State

The `VkBindDescriptorBufferEmbeddedSamplersInfoEXT` structure is defined as:

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
typedef struct VkBindDescriptorBufferEmbeddedSamplersInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkShaderStageFlags stageFlags;
    VkPipelineLayout    layout;
    uint32_t            set;
} VkBindDescriptorBufferEmbeddedSamplersInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages that will use the embedded immutable samplers.
- `layout` is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, `layout` **can** be `VK_NULL_HANDLE` and the layout **must** be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`
- `set` is the number of the set to be bound.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`.

Valid Usage

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-set-08070
The `VkDescriptorSetLayout` at index `set` when `layout` was created **must** have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT` bit set
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-set-08071
`set` **must** be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-None-09495
If the `dynamicPipelineLayout` feature is not enabled, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-layout-09496
If `layout` is `VK_NULL_HANDLE`, the `pNext` chain **must** include a valid `VkPipelineLayoutCreateInfo` structure

Valid Usage (Implicit)

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_DESCRIPTOR_BUFFER_EMBEDDED_SAMPLERS_INFO_EXT`
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-stageFlags-parameter
`stageFlags` **must** be a valid combination of `VkShaderStageFlagBits` values
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-stageFlags-requiredbitmask
`stageFlags` **must** not be `0`
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-layout-parameter
If `layout` is not `VK_NULL_HANDLE`, `layout` **must** be a valid `VkPipelineLayout` handle

14.4.3. Updating Descriptor Buffers

Updates to descriptor data in buffers **can** be performed by any operation on either the host or device that **can** access memory.

Descriptor buffer reads **can** be synchronized using `VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT_EXT` in the relevant shader stage.

14.4.4. Push Descriptors With Descriptor Buffers

If the `descriptorBufferPushDescriptors` feature is enabled, push descriptors **can** be used with descriptor buffers in the same way as with descriptor sets.

The `VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferLessPushDescriptors` property indicates whether the implementation requires a buffer to back push descriptors. If the property is `VK_FALSE` then before recording any push descriptors the application **must** bind exactly 1 descriptor buffer that was created with the `VK_BUFFER_USAGE_PUSH_DESCRIPTOR_BUFFER_BIT_EXT` bit set. When this buffer is bound any previously recorded push descriptors that are required for a subsequent command **must** be recorded again.

14.4.5. Capture and Replay

In a similar way to `bufferDeviceAddressCaptureReplay`, the `descriptorBufferCaptureReplay` feature allows the creation of opaque handles for objects at capture time that **can** be passed into object creation calls in a future replay, causing descriptors to be created with the same data. The opaque memory address for any memory used by these resources **must** have been captured using `vkGetDeviceMemoryOpaqueCaptureAddress` and be replayed using `VkMemoryOpaqueCaptureAddressAllocateInfo`.

To get the opaque descriptor data for a buffer, call:

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetBufferOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkBufferCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a `VkBufferCaptureDescriptorDataInfoEXT` structure specifying the buffer.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-None-08072
The `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pData-08073
`pData` **must** point to a buffer that is at least `VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferCaptureReplayDescriptorDataSize` bytes in size
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-device-08074
If `device` was created with multiple physical devices, then the

`bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pInfo-parameter `pInfo` **must** be a valid pointer to a valid `VkBufferCaptureDescriptorDataInfoEXT` structure
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pData-parameter `pData` **must** be a pointer value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

Information about the buffer to get descriptor buffer capture data for is passed in a `VkBufferCaptureDescriptorDataInfoEXT` structure:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkBufferCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            buffer;
} VkBufferCaptureDescriptorDataInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the `VkBuffer` handle of the buffer to get opaque capture data for.

Valid Usage

- VUID-VkBufferCaptureDescriptorDataInfoEXT-buffer-08075 `buffer` **must** have been created with `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkBufferCreateInfo::flags`

Valid Usage (Implicit)

- VUID-VkBufferCaptureDescriptorDataInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
- VUID-VkBufferCaptureDescriptorDataInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkBufferCaptureDescriptorDataInfoEXT-buffer-parameter
`buffer` **must** be a valid `VkBuffer` handle

To get the opaque capture descriptor data for an image, call:

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetImageOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkImageCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a `VkImageCaptureDescriptorDataInfoEXT` structure specifying the image.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-None-08076
The `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pData-08077
`pData` **must** point to a buffer that is at least `VkPhysicalDeviceDescriptorBufferPropertiesEXT::imageCaptureReplayDescriptorDataSize` bytes in size
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-device-08078
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkImageCaptureDescriptorDataInfoEXT` structure
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pData-parameter
`pData` **must** be a pointer value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

Information about the image to get descriptor buffer capture data for is passed in a `VkImageCaptureDescriptorDataInfoEXT` structure:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkImageCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
} VkImageCaptureDescriptorDataInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the `VkImage` handle of the image to get opaque capture data for.

Valid Usage

- VUID-VkImageCaptureDescriptorDataInfoEXT-image-08079

`image` **must** have been created with `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkImageCreateInfo::flags`

Valid Usage (Implicit)

- VUID-VkImageCaptureDescriptorDataInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
- VUID-VkImageCaptureDescriptorDataInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageCaptureDescriptorDataInfoEXT-image-parameter
`image` **must** be a valid `VkImage` handle

To get the opaque capture descriptor data for an image view, call:

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetImageViewOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkImageViewCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- **device** is the logical device that gets the data.
- **pInfo** is a pointer to a [VkImageViewCaptureDescriptorDataInfoEXT](#) structure specifying the image view.
- **pData** is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-None-08080
The **descriptorBufferCaptureReplay** feature **must** be enabled
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pData-08081
pData **must** point to a buffer that is at least [VkPhysicalDeviceDescriptorBufferPropertiesEXT::imageViewCaptureReplayDescriptorDataSize](#) bytes in size
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-device-08082
If **device** was created with multiple physical devices, then the **bufferDeviceAddressMultiDevice** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pInfo-parameter
pInfo **must** be a valid pointer to a valid [VkImageViewCaptureDescriptorDataInfoEXT](#) structure
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pData-parameter
pData **must** be a pointer value

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**

Information about the image view to get descriptor buffer capture data for is passed in a `VkImageViewCaptureDescriptorDataInfoEXT` structure:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkImageViewCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImageView        imageView;
} VkImageViewCaptureDescriptorDataInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageView` is the `VkImageView` handle of the image view to get opaque capture data for.

Valid Usage

- VUID-VkImageViewCaptureDescriptorDataInfoEXT-imageView-08083

`imageView` **must** have been created with `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkImageViewCreateInfo::flags`

Valid Usage (Implicit)

- VUID-VkImageViewCaptureDescriptorDataInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
- VUID-VkImageViewCaptureDescriptorDataInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageViewCaptureDescriptorDataInfoEXT-imageView-parameter
`imageView` **must** be a valid `VkImageView` handle

To get the opaque capture descriptor data for a sampler, call:

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetSamplerOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkSamplerCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a `VkSamplerCaptureDescriptorDataInfoEXT` structure specifying the sampler.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-None-08084
The `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pData-08085
`pData` **must** point to a buffer that is at least `VkPhysicalDeviceDescriptorBufferPropertiesEXT::samplerCaptureReplayDescriptorDataSize` bytes in size
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-device-08086
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkSamplerCaptureDescriptorDataInfoEXT` structure
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pData-parameter
`pData` **must** be a pointer value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

Information about the sampler to get descriptor buffer capture data for is passed in a `VkSamplerCaptureDescriptorDataInfoEXT` structure:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkSamplerCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkSampler           sampler;
} VkSamplerCaptureDescriptorDataInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sampler` is the `VkSampler` handle of the sampler to get opaque capture data for.

Valid Usage

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sampler-08087
`sampler` **must** have been created with `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkSamplerCreateInfo::flags`

Valid Usage (Implicit)

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SAMPLER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
- VUID-VkSamplerCaptureDescriptorDataInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sampler-parameter
`sampler` **must** be a valid `VkSampler` handle

To get the opaque capture descriptor data for an acceleration structure, call:

```
// Provided by VK_EXT_descriptor_buffer with VK_KHR_acceleration_structure or
VK_NV_ray_tracing
VkResult vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkAccelerationStructureCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a `VkAccelerationStructureCaptureDescriptorDataInfoEXT` structure specifying the acceleration structure.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-None-08088
The `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pData-08089
`pData` **must** point to a buffer that is at least `VkPhysicalDeviceDescriptorBufferPropertiesEXT::accelerationStructureCaptureReplayDescriptorDataSize` bytes in size
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-device-08090

If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pInfo-parameter `pInfo` **must** be a valid pointer to a valid `VkAccelerationStructureCaptureDescriptorDataInfoEXT` structure
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pData-parameter `pData` **must** be a pointer value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

Information about the acceleration structure to get descriptor buffer capture data for is passed in a `VkAccelerationStructureCaptureDescriptorDataInfoEXT` structure:

```
// Provided by VK_EXT_descriptor_buffer with VK_KHR_acceleration_structure or
VK_NV_ray_tracing
typedef struct VkAccelerationStructureCaptureDescriptorDataInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureKHR accelerationStructure;
    VkAccelerationStructureNV accelerationStructureNV;
} VkAccelerationStructureCaptureDescriptorDataInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructure` is the `VkAccelerationStructureKHR` handle of the acceleration structure to get opaque capture data for.
- `accelerationStructureNV` is the `VkAccelerationStructureNV` handle of the acceleration structure to get opaque capture data for.

Valid Usage

- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-08091
If `accelerationStructure` is not `VK_NULL_HANDLE` then `accelerationStructure` **must** have been created with `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkAccelerationStructureCreateInfoKHR::createFlags`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-08092
If `accelerationStructureNV` is not `VK_NULL_HANDLE` then `accelerationStructureNV` **must** have been created with `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkAccelerationStructureCreateInfoNV::info.flags`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-08093
If `accelerationStructure` is not `VK_NULL_HANDLE` then `accelerationStructureNV` **must** be `VK_NULL_HANDLE`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-08094
If `accelerationStructureNV` is not `VK_NULL_HANDLE` then `accelerationStructure` **must** be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-parameter
If `accelerationStructure` is not `VK_NULL_HANDLE`, `accelerationStructure` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-parameter
If `accelerationStructureNV` is not `VK_NULL_HANDLE`, `accelerationStructureNV` **must** be a valid `VkAccelerationStructureNV` handle
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-commonparent
Both of `accelerationStructure`, and `accelerationStructureNV` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkOpaqueCaptureDescriptorDataCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    const void*        opaqueCaptureDescriptorData;
} VkOpaqueCaptureDescriptorDataCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `opaqueCaptureDescriptorData` is a pointer to an application-allocated buffer containing opaque capture data retrieved using `vkGetBufferOpaqueCaptureDescriptorDataEXT`, `vkGetImageOpaqueCaptureDescriptorDataEXT`, `vkGetImageViewOpaqueCaptureDescriptorDataEXT`, `vkGetSamplerOpaqueCaptureDescriptorDataEXT`, or `vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT`.

During replay, opaque descriptor capture data **can** be specified by adding a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure to the relevant `pNext` chain of a `VkBufferCreateInfo`, `VkImageCreateInfo`, `VkImageViewCreateInfo`, `VkSamplerCreateInfo`, `VkAccelerationStructureCreateInfoNV` or `VkAccelerationStructureCreateInfoKHR` structure.

Valid Usage (Implicit)

- VUID-VkOpaqueCaptureDescriptorDataCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_OPAQUE_CAPTURE_DESCRIPTOR_DATA_CREATE_INFO_EXT`
- VUID-VkOpaqueCaptureDescriptorDataCreateInfoEXT-opaqueCaptureDescriptorData-parameter
`opaqueCaptureDescriptorData` **must** be a pointer value

Chapter 15. Shader Interfaces

When a pipeline is created, the set of shaders specified in the corresponding `VkPipelineCreateInfo` structure are implicitly linked at a number of different interfaces.

- [Shader Input and Output Interface](#)
- [Vertex Input Interface](#)
- [Fragment Output Interface](#)
- [Fragment Tile Image Interface](#)
- [Fragment Input Attachment Interface](#)
- [Ray Tracing Pipeline Interface](#)
- [Shader Resource Interface](#)
- [Geometry Shader Passthrough](#)

This chapter describes valid uses for a set of SPIR-V decorations. Any other use of one of these decorations is invalid, with the exception that, when using SPIR-V versions 1.4 and earlier: `Block`, `BufferBlock`, `Offset`, `ArrayStride`, and `MatrixStride` can also decorate types and type members used by variables in the `Private` and `Function` storage classes.

NOTE

In this chapter, there are references to SPIR-V terms such as the `MeshNV` execution model. These terms will appear even in a build of the specification which does not support any extensions. This is as intended, since these terms appear in the unified SPIR-V specification without such qualifiers.

15.1. Shader Input and Output Interfaces

When multiple stages are present in a pipeline, the outputs of one stage form an interface with the inputs of the next stage. When such an interface involves a shader, shader outputs are matched against the inputs of the next stage, and shader inputs are matched against the outputs of the previous stage.

All the variables forming the shader input and output *interfaces* are listed as operands to the `OpEntryPoint` instruction and are declared with the `Input` or `Output` storage classes, respectively, in the SPIR-V module. These generally form the interfaces between consecutive shader stages, regardless of any non-shader stages between the consecutive shader stages.

There are two classes of variables that **can** be matched between shader stages, built-in variables and user-defined variables. Each class has a different set of matching criteria.

`Output` variables of a shader stage have undefined values until the shader writes to them or uses the `Initializer` operand when declaring the variable.

15.1.1. Built-in Interface Block

Shader `built-in` variables meeting the following requirements define the *built-in interface block*.

They **must**

- be explicitly declared (there are no implicit built-ins),
- be identified with a **BuiltIn** decoration,
- form object types as described in the **Built-in Variables** section, and
- be declared in a block whose top-level members are the built-ins.

There **must** be no more than one built-in interface block per shader per interface , except for the mesh output interface where there **must** be at most one built-in interface block decorated with the **PerPrimitiveEXT** decoration and at most one built-in interface block without this decoration .

Built-ins **must** not have any **Location** or **Component** decorations.

15.1.2. User-defined Variable Interface

The non-built-in variables listed by **OpEntryPoint** with the **Input** or **Output** storage class form the *user-defined variable interface*. These **must** have **numeric type** or, recursively, composite types of such types. If an implementation supports **storageInputOutput16**, components **can** have a width of 16 bits. These variables **must** be identified with a **Location** decoration and **can** also be identified with a **Component** decoration.

15.1.3. Interface Matching

An output variable, block, or structure member in a given shader stage has an interface match with an input variable, block, or structure member in a subsequent shader stage if they both adhere to the following conditions:

- They have equivalent decorations, other than:
 - **XfbBuffer**, **XfbStride**, **Offset**, and **Stream**
 - one is not decorated with **Component** and the other is declared with a **Component** of 0
 - **Interpolation decorations**
 - **RelaxedPrecision** if one is an input variable and the other an output variable
- Their types match as follows:
 - if the input is declared in a tessellation control or geometry shader as an **OpTypeArray** with an **Element Type** equivalent to the **OpType*** declaration of the output, and neither is a structure member; or
 - if the **maintenance4** feature is enabled, they are declared as **OpTypeVector** variables, and the output has a **Component Count** value higher than that of the input but the same **Component Type**; or
 - if the output is declared in a mesh shader as an **OpTypeArray** with an **Element Type** equivalent to the **OpType*** declaration of the input, and neither is a structure member; or
 - if the input is decorated with **PerVertexKHR**, and is declared in a fragment shader as an **OpTypeArray** with an **Element Type** equivalent to the **OpType*** declaration of the output, and neither the input nor the output is a structure member; or

- if in any other case they are declared with an equivalent **OpType*** declaration.
- If both are structures and every member has an interface match.

NOTE

The word “structure” above refers to both variables that have an **OpTypeStruct** type and interface blocks (which are also declared as **OpTypeStruct**).

If the pipeline is compiled as separate graphics pipeline libraries and the **graphicsPipelineLibraryIndependentInterpolationDecoration** limit is not supported, matches are not found if the **interpolation decorations** differ between the last **pre-rasterization shader stage** and the fragment shader stage.

All input variables and blocks **must** have an interface match in the preceding shader stage, except for built-in variables in fragment shaders. Shaders **can** declare and write to output variables that are not declared or read by the subsequent stage.

Matching rules for *passthrough geometry shaders* are slightly different and are described in the **Passthrough Interface Matching** section.

The value of an input variable is undefined if the preceding stage does not write to a matching output variable, as described above.

15.1.4. Location Assignment

This section describes **Location** assignments for user-defined variables and how many **Location** slots are consumed by a given user-variable type. **As mentioned above**, some inputs and outputs have an additional level of arrayness relative to other shader inputs and outputs. This outer array level is removed from the type before considering how many **Location** slots the type consumes.

The **Location** value specifies an interface slot comprised of a 32-bit four-component vector conveyed between stages. The **Component** specifies **word components** within these vector **Location** slots. Only types with widths of 16, 32 or 64 are supported in shader interfaces.

Inputs and outputs of the following types consume a single interface **Location**:

- 16-bit scalar and vector types, and
- 32-bit scalar and vector types, and
- 64-bit scalar and 2-component vector types.

64-bit three- and four-component vectors consume two consecutive **Location** slots.

If a declared input or output is an array of size n and each element takes m **Location** slots, it will be assigned $m \times n$ consecutive **Location** slots starting with the specified **Location**.

If the declared input or output is an $n \times m$ 16-, 32- or 64-bit matrix, it will be assigned multiple **Location** slots starting with the specified **Location**. The number of **Location** slots assigned for each matrix will be the same as for an n -element array of m -component vectors.

An **OpVariable** with a structure type that is not a block **must** be decorated with a **Location**.

When an **OpVariable** with a structure type (either block or non-block) is decorated with a **Location**, the members in the structure type **must** not be decorated with a **Location**. The **OpVariable**'s members are assigned consecutive **Location** slots in declaration order, starting from the first member, which is assigned the **Location** decoration from the **OpVariable**.

When a block-type **OpVariable** is declared without a **Location** decoration, each member in its structure type **must** be decorated with a **Location**. Types nested deeper than the top-level members **must** not have **Location** decorations.

The **Location** slots consumed by block and structure members are determined by applying the rules above in a depth-first traversal of the instantiated members as though the structure or block member were declared as an input or output variable of the same type.

Any two inputs listed as operands on the same **OpEntryPoint** **must** not be assigned the same **Location** slot and **Component** word, either explicitly or implicitly. Any two outputs listed as operands on the same **OpEntryPoint** **must** not be assigned the same **Location** slot and **Component** word, either explicitly or implicitly.

The number of input and output **Location** slots available for a shader input or output interface is limited, and dependent on the shader stage as described in [Shader Input and Output Locations](#). All variables in both the [built-in interface block](#) and the [user-defined variable interface](#) count against these limits. Each effective **Location** **must** have a value less than the number of **Location** slots available for the given interface, as specified in the “Locations Available” column in [Shader Input and Output Locations](#).

Table 19. Shader Input and Output Locations

Shader Interface	Locations Available
vertex input	<code>maxVertexInputAttributes</code>
vertex output	<code>maxVertexOutputComponents</code> / 4
tessellation control input	<code>maxTessellationControlPerVertexInputComponents</code> / 4
tessellation control output	<code>maxTessellationControlPerVertexOutputComponents</code> / 4
tessellation evaluation input	<code>maxTessellationEvaluationInputComponents</code> / 4
tessellation evaluation output	<code>maxTessellationEvaluationOutputComponents</code> / 4
geometry input	<code>maxGeometryInputComponents</code> / 4
geometry output	<code>maxGeometryOutputComponents</code> / 4
fragment input	<code>maxFragmentInputComponents</code> / 4
fragment output	<code>maxFragmentOutputAttachments</code>
mesh output	<code>maxMeshOutputComponents</code> / 4
cluster culling output	<code>maxOutputClusterCount</code>

15.1.5. Component Assignment

The **Component** decoration allows the **Location** to be more finely specified for scalars and vectors, down to the individual **Component** word within a **Location** slot that are consumed. The **Component** word within a **Location** are 0, 1, 2, and 3. A variable or block member starting at **Component** N will consume **Component** words N, N+1, N+2, ... up through its size. For 16-, and 32-bit types, it is invalid if this sequence of **Component** words gets larger than 3. A scalar 64-bit type will consume two of these **Component** words in sequence, and a two-component 64-bit vector type will consume all four **Component** words available within a **Location**. A three- or four-component 64-bit vector type **must** not specify a non-zero **Component** decoration. A three-component 64-bit vector type will consume all four **Component** words of the first **Location** and **Component** 0 and 1 of the second **Location**. This leaves **Component** 2 and 3 available for other component-qualified declarations.

A scalar or two-component 64-bit data type **must** not specify a **Component** decoration of 1 or 3. A **Component** decoration **must** not be specified for any type that is not a scalar or vector.

A four-component 64-bit data type will consume all four **Component** words of the first **Location** and all four **Component** words of the second **Location**.

15.2. Vertex Input Interface

When the vertex stage is present in a pipeline, the vertex shader input variables form an interface with the vertex input attributes. The vertex shader input variables are matched by the **Location** and **Component** decorations to the vertex input attributes specified in the **pVertexInputState** member of the **VkGraphicsPipelineCreateInfo** structure.

The vertex shader input variables listed by **OpEntryPoint** with the **Input** storage class form the *vertex input interface*. These variables **must** be identified with a **Location** decoration and **can** also be identified with a **Component** decoration.

For the purposes of interface matching: variables declared without a **Component** decoration are considered to have a **Component** decoration of zero. The number of available vertex input **Location** slots is given by the **maxVertexInputAttributes** member of the **VkPhysicalDeviceLimits** structure.

See [Attribute Location and Component Assignment](#) for details.

All vertex shader inputs declared as above **must** have a corresponding attribute and binding in the pipeline.

15.3. Fragment Output Interface

When the fragment stage is present in a pipeline, the fragment shader outputs form an interface with the output attachments defined by a **render pass instance**. The fragment shader output variables are matched by the **Location** and **Component** decorations to specified color attachments.

The fragment shader output variables listed by **OpEntryPoint** with the **Output** storage class form the *fragment output interface*. These variables **must** be identified with a **Location** decoration. They **can** also be identified with a **Component** decoration and/or an **Index** decoration. For the purposes of interface matching: variables declared without a **Component** decoration are considered to have a

Component decoration of zero, and variables declared without an **Index** decoration are considered to have an **Index** decoration of zero.

A fragment shader output variable identified with a **Location** decoration of i is associated with the color attachment indicated by `VkRenderingInfo::pColorAttachments[i]`. When using render pass objects, it is associated with the color attachment indicated by `VkSubpassDescription::pColorAttachments[i]`. Values are written to those attachments after passing through the blending unit as described in [Blending](#), if enabled. Locations are consumed as described in [Location Assignment](#). The number of available fragment output **Location** slots is given by the `maxFragmentOutputAttachments` member of the `VkPhysicalDeviceLimits` structure.

If the `dynamicRenderingLocalRead` feature is supported, fragment output locations **can** be remapped when using dynamic rendering.

To set the fragment output location mappings during rendering, call:

```
// Provided by VK_KHR_dynamic_rendering_local_read
void vkCmdSetRenderingAttachmentLocationsKHR(
    VkCommandBuffer                commandBuffer,
    const VkRenderingAttachmentLocationInfoKHR* pLocationInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pLocationInfo` is a `VkRenderingAttachmentLocationInfoKHR` structure indicating the new mappings.

This command sets the attachment location mappings for subsequent drawing commands, and **must** match the mappings provided to the currently bound pipeline, if one is bound, which **can** be set by chaining `VkRenderingAttachmentLocationInfoKHR` to `VkGraphicsPipelineCreateInfo`.

Until this command is called, mappings in the command buffer state are treated as each color attachment specified in `vkCmdBeginRendering` having a location equal to its index in `VkRenderingInfo::pColorAttachments`. This state is reset whenever `vkCmdBeginRendering` is called.

Valid Usage

- VUID-vkCmdSetRenderingAttachmentLocationsKHR-dynamicRenderingLocalRead-09509 `dynamicRenderingLocalRead` **must** be enabled
- VUID-vkCmdSetRenderingAttachmentLocationsKHR-pLocationInfo-09510 `pLocationInfo->colorAttachmentCount` **must** be equal to the value of `VkRenderingInfo::colorAttachmentCount` used to begin the current render pass instance
- VUID-vkCmdSetRenderingAttachmentLocationsKHR-commandBuffer-09511 The current render pass instance **must** have been started or resumed by `vkCmdBeginRendering` in this `commandBuffer`

Valid Usage (Implicit)

- VUID-vkCmdSetRenderingAttachmentLocationsKHR-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdSetRenderingAttachmentLocationsKHR-pLocationInfo-parameter **pLocationInfo** **must** be a valid pointer to a valid [VkRenderingAttachmentLocationInfoKHR](#) structure
- VUID-vkCmdSetRenderingAttachmentLocationsKHR-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdSetRenderingAttachmentLocationsKHR-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support graphics operations
- VUID-vkCmdSetRenderingAttachmentLocationsKHR-renderpass
This command **must** only be called inside of a render pass instance
- VUID-vkCmdSetRenderingAttachmentLocationsKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	Graphics	State

The [VkRenderingAttachmentLocationInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_dynamic_rendering_local_read
typedef struct VkRenderingAttachmentLocationInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           colorAttachmentCount;
    const uint32_t*     pColorAttachmentLocations;
} VkRenderingAttachmentLocationInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `colorAttachmentCount` is the number of elements in `pColorAttachmentLocations`.
- `pColorAttachmentLocations` is a pointer to an array of `colorAttachmentCount` `uint32_t` values defining remapped locations for color attachments.

This structure allows applications to remap the locations of color attachments to different fragment shader output locations.

Each element of `pColorAttachmentLocations` set to `VK_ATTACHMENT_UNUSED` will be inaccessible to this pipeline as a color attachment; no location will map to it. Each element of `pColorAttachmentLocations` set to any other value will map the specified location value to the color attachment specified in the render pass at the corresponding index in the `pColorAttachmentLocations` array. Any writes to a fragment output location that is not mapped to an attachment **must** be discarded.

If `pColorAttachmentLocations` is `NULL`, it is equivalent to setting each element to its index within the array.

This structure **can** be included in the `pNext` chain of a `VkGraphicsPipelineCreateInfo` structure to set this state for a pipeline. If this structure is not included in the `pNext` chain of `VkGraphicsPipelineCreateInfo`, it is equivalent to specifying this structure with the following properties:

- `colorAttachmentCount` set to `VkPipelineRenderingCreateInfo::colorAttachmentCount`.
- `pColorAttachmentLocations` set to `NULL`.

This structure **can** be included in the `pNext` chain of a `VkCommandBufferInheritanceInfo` structure to specify inherited state from the primary command buffer. If `VkCommandBufferInheritanceInfo::renderPass` is not `VK_NULL_HANDLE`, or `VK_COMMAND_BUFFER_USAGE_RENDER_PASS_CONTINUE_BIT` is not specified in `VkCommandBufferBeginInfo::flags`, members of this structure are ignored. If this structure is not included in the `pNext` chain of `VkCommandBufferInheritanceInfo`, it is equivalent to specifying this structure with the following properties:

- `colorAttachmentCount` set to `VkCommandBufferInheritanceRenderingInfo::colorAttachmentCount`.
- `pColorAttachmentLocations` set to `NULL`.

Valid Usage

- VUID-VkRenderingAttachmentLocationInfoKHR-dynamicRenderingLocalRead-09512
If the `dynamicRenderingLocalRead` feature is not enabled, and `pColorAttachmentLocations` is not `NULL`, each element **must** be the value of its index within the array
- VUID-VkRenderingAttachmentLocationInfoKHR-pColorAttachmentLocations-09513
Elements of `pColorAttachmentLocations` that are not `VK_ATTACHMENT_UNUSED` **must** each be unique
- VUID-VkRenderingAttachmentLocationInfoKHR-colorAttachmentCount-09514
`colorAttachmentCount` **must** be less than or equal to `maxColorAttachments`

- VUID-VkRenderingAttachmentLocationInfoKHR-pColorAttachmentLocations-09515
Each element of `pColorAttachmentLocations` **must** be less than `maxColorAttachments`

Valid Usage (Implicit)

- VUID-VkRenderingAttachmentLocationInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RENDERING_ATTACHMENT_LOCATION_INFO_KHR`

When an active fragment shader invocation finishes, the values of all fragment shader outputs are copied out and used as blend inputs or color attachments writes. If the invocation does not set a value for them, the input values to those blending or color attachment writes are undefined.

Components of the output variables are assigned as described in [Component Assignment](#). Output `Component` words identified as 0, 1, 2, and 3 will be directed to the R, G, B, and A inputs to the blending unit, respectively, or to the output attachment if blending is disabled. If two variables are placed within the same `Location`, they **must** have the same underlying type (floating-point or integer). `Component` words which do not correspond to any fragment shader output will also result in undefined values for blending or color attachment writes.

Fragment outputs identified with an `Index` of zero are directed to the first input of the blending unit associated with the corresponding `Location`. Outputs identified with an `Index` of one are directed to the second input of the corresponding blending unit.

There **must** be no output variable which has the same `Location`, `Component`, and `Index` as any other, either explicitly declared or implied.

Output values written by a fragment shader **must** be declared with either `OpTypeFloat` or `OpTypeInt`, and a `Width` of 32. If `storageInputOutput16` is supported, output values written by a fragment shader **can** be also declared with either `OpTypeFloat` or `OpTypeInt` and a `Width` of 16. Composites of these types are also permitted. If the color attachment has a signed or unsigned normalized fixed-point format, color values are assumed to be floating-point and are converted to fixed-point as described in [Conversion From Floating-Point to Normalized Fixed-Point](#); If the color attachment has an integer format, color values are assumed to be integers and converted to the bit-depth of the target. Any value that cannot be represented in the attachment's format is undefined. For any other attachment format no conversion is performed. If the type of the values written by the fragment shader do not match the format of the corresponding color attachment, the resulting values are undefined for those components.

15.4. Legacy Dithering

The application **can** enable dithering to be applied to the color output of a subpass, by using the `VK_SUBPASS_DESCRIPTION_ENABLE_LEGACY_DITHERING_BIT_EXT` flag. For use in a dynamic render pass, the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag **must** be used. In that case, the pipelines used **must** have been created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`.

When dithering is enabled, the implementation **may** modify the output color value c by one ULP. This modification **must** only depend on the framebuffer coordinates (x_f, y_f) of the sample, as well as

on the value of `c`.

The exact details of the dithering algorithm are unspecified, including the algorithm itself, the formats dithering is applied to, and the stage in which it is applied.

NOTE

This extension is intended only for use by OpenGL emulation layers, and as such the dithering algorithm applied to the subpass **should** be equivalent to the vendor's OpenGL implementation, if any.

15.5. Fragment Tile Image Interface

When a fragment stage is present in a pipeline, the fragment shader tile image variables decorated with `Location` form an interface with the color attachments defined by the render pass instance. The fragment shader tile image variables are matched by `Location` decorations to the color attachments specified in the `pColorAttachments` array of the `VkRenderingInfoKHR` structure describing the render pass instance the fragment shader is executed in.

The fragment shader variables listed by `OpEntryPoint` with the `TileImageEXT` storage class and a decoration of `Location` form the *fragment tile image interface*. These variables **must** be declared with a type of `OpTypeImage`, and a `Dim` operand of `TileImageDataEXT`. The `Component` decoration is not supported for these variables.

Reading from a tile image variable with a `Location` decoration of `i` reads from the color attachment identified by the element of `VkRenderingInfoKHR::pColorAttachments` with a `location` equal to `i`. If the tile image variable is declared as an array of size `N`, it consumes `N` consecutive tile image locations, starting with the index specified. There **must** not be more than one tile image variable with the same `Location` whether explicitly declared or implied by an array declaration. The number of available tile image locations is the same as the number of available fragment output locations as given by the `maxFragmentOutputAttachments` member of the `VkPhysicalDeviceLimits` structure.

The basic data type (floating-point, integer, unsigned integer) of the tile image variable **must** match the basic format of the corresponding color attachment, or the values read from the tile image variables are undefined.

15.6. Fragment Input Attachment Interface

When a fragment stage is present in a pipeline, the fragment shader subpass inputs form an interface with the input attachments of the current subpass. The fragment shader subpass input variables are matched by `InputAttachmentIndex` decorations to the input attachments specified in the `pInputAttachments` array of the `VkSubpassDescription` structure describing the subpass that the fragment shader is executed in.

The fragment shader subpass input variables with the `UniformConstant` storage class and a decoration of `InputAttachmentIndex` that are statically used by `OpEntryPoint` form the *fragment input attachment interface*. These variables **must** be declared with a type of `OpTypeImage`, a `Dim` operand of `SubpassData`, an `Arrayed` operand of 0, and a `Sampled` operand of 2. The `MS` operand of the `OpTypeImage` **must** be 0 if the `samples` field of the corresponding `VkAttachmentDescription` is `VK_SAMPLE_COUNT_1_BIT` and `multisampled-render-to-single-sampled` is not enabled, and 1 otherwise.

A subpass input variable identified with an `InputAttachmentIndex` decoration of i reads from the input attachment indicated by `pInputAttachments[i]` member of `VkSubpassDescription`. If the subpass input variable is declared as an array of size N , it consumes N consecutive input attachments, starting with the index specified. There **must** not be more than one input variable with the same `InputAttachmentIndex` whether explicitly declared or implied by an array declaration per image aspect. A multi-aspect image (e.g. a depth/stencil format) **can** use the same input variable. The number of available input attachment indices is given by the `maxPerStageDescriptorInputAttachments` member of the `VkPhysicalDeviceLimits` structure.

When using dynamic rendering with the `dynamicRenderingLocalRead` feature enabled, a subpass input variable with a `InputAttachmentIndex` decoration of i can be mapped to a color, depth, or stencil attachment.

To set the input attachment index mappings during dynamic rendering, call:

```
// Provided by VK_KHR_dynamic_rendering_local_read
void vkCmdSetRenderingInputAttachmentIndicesKHR(
    VkCommandBuffer                      commandBuffer,
    const VkRenderingInputAttachmentIndexInfoKHR* pInputAttachmentIndexInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInputAttachmentIndexInfo` is a `VkRenderingInputAttachmentIndexInfoKHR` structure indicating the new mappings.

This command sets the input attachment index mappings for subsequent drawing commands, and **must** match the mappings provided to the currently bound pipeline, if one is bound, which **can** be set by chaining `VkRenderingInputAttachmentIndexInfoKHR` to `VkGraphicsPipelineCreateInfo`.

Until this command is called, mappings in the command buffer state are treated as each color attachment specified in `vkCmdBeginRendering` mapping to subpass inputs with a `InputAttachmentIndex` equal to its index in `VkRenderingInfo::pColorAttachments`, and depth/stencil attachments mapping to input attachments without these decorations. This state is reset whenever `vkCmdBeginRendering` is called.

Valid Usage

- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-dynamicRenderingLocalRead-09516
`dynamicRenderingLocalRead` **must** be enabled
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-pInputAttachmentIndexInfo-09517
`pInputAttachmentIndexInfo->colorAttachmentCount` **must** be equal to the value of `VkRenderingInfo::colorAttachmentCount` used to begin the current render pass instance
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-commandBuffer-09518
The current render pass instance **must** have been started or resumed by `vkCmdBeginRendering` in this `commandBuffer`

Valid Usage (Implicit)

- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-pInputAttachmentIndexInfo-parameter **pInputAttachmentIndexInfo** **must** be a valid pointer to a valid [VkRenderingInputAttachmentIndexInfoKHR](#) structure
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support graphics operations
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-renderpass
This command **must** only be called inside of a render pass instance
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	Graphics	State

The [VkRenderingInputAttachmentIndexInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_dynamic_rendering_local_read
typedef struct VkRenderingInputAttachmentIndexInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           colorAttachmentCount;
    const uint32_t*     pColorAttachmentInputIndices;
    const uint32_t*     pDepthInputAttachmentIndex;
    const uint32_t*     pStencilInputAttachmentIndex;
} VkRenderingInputAttachmentIndexInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `colorAttachmentCount` is the number of elements in `pColorAttachmentInputIndices`.
- `pColorAttachmentInputIndices` is a pointer to an array of `colorAttachmentCount` `uint32_t` values defining indices for color attachments to be used as input attachments.
- `pDepthInputAttachmentIndex` is either `NULL`, or a pointer to a `uint32_t` value defining the index for the depth attachment to be used as an input attachment.
- `pStencilInputAttachmentIndex` is either `NULL`, or a pointer to a `uint32_t` value defining the index for the stencil attachment to be used as an input attachment.

This structure allows applications to remap attachments to different input attachment indices.

Each element of `pColorAttachmentInputIndices` set to a value of `VK_ATTACHMENT_UNUSED` indicates that the corresponding attachment will not be used as an input attachment in this pipeline. Any other value in each of those elements will map the corresponding attachment to a `InputAttachmentIndex` value defined in shader code.

If `pColorAttachmentInputIndices` is `NULL`, it is equivalent to setting each element to its index within the array.

If `pDepthInputAttachmentIndex` or `pStencilInputAttachmentIndex` are set to `NULL`, they map to input attachments without a `InputAttachmentIndex` decoration. If they point to a value of `VK_ATTACHMENT_UNUSED`, it indicates that the corresponding attachment will not be used as an input attachment in this pipeline. If they point to any other value it maps the corresponding attachment to a `InputAttachmentIndex` value defined in shader code.

This structure **can** be included in the `pNext` chain of a `VkGraphicsPipelineCreateInfo` structure to set this state for a pipeline. If this structure is not included in the `pNext` chain of `VkGraphicsPipelineCreateInfo`, it is equivalent to specifying this structure with the following properties:

- `colorAttachmentCount` set to `VkPipelineRenderingCreateInfo::colorAttachmentCount`.
- `pColorAttachmentInputIndices` set to `NULL`.
- `pDepthInputAttachmentIndex` set to `NULL`.
- `pStencilInputAttachmentIndex` set to `NULL`.

This structure **can** be included in the `pNext` chain of a `VkCommandBufferInheritanceInfo` structure to specify inherited state from the primary command buffer. If this structure is not included in the `pNext` chain of `VkCommandBufferInheritanceInfo`, it is equivalent to specifying this structure with the following properties:

- `colorAttachmentCount` set to `VkCommandBufferInheritanceRenderingInfo::colorAttachmentCount`.
- `pColorAttachmentInputIndices` set to `NULL`.
- `pDepthInputAttachmentIndex` set to `NULL`.
- `pStencilInputAttachmentIndex` set to `NULL`.

Valid Usage

- VUID-VkRenderingInputAttachmentIndexInfoKHR-dynamicRenderingLocalRead-09519
If the `dynamicRenderingLocalRead` feature is not enabled, and `pColorAttachmentInputIndices` is not `NULL`, each element **must** be `VK_ATTACHMENT_UNUSED`
- VUID-VkRenderingInputAttachmentIndexInfoKHR-dynamicRenderingLocalRead-09520
If the `dynamicRenderingLocalRead` feature is not enabled, `pDepthInputAttachmentIndex` **must** be a valid pointer to a value of `VK_ATTACHMENT_UNUSED`
- VUID-VkRenderingInputAttachmentIndexInfoKHR-dynamicRenderingLocalRead-09521
If the `dynamicRenderingLocalRead` feature is not enabled, `pStencilInputAttachmentIndex` **must** be a valid pointer to a value of `VK_ATTACHMENT_UNUSED`
- VUID-VkRenderingInputAttachmentIndexInfoKHR-pColorAttachmentInputIndices-09522
Elements of `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` **must** each be unique
- VUID-VkRenderingInputAttachmentIndexInfoKHR-pColorAttachmentInputIndices-09523
Elements of `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` **must** not take the same value as the content of `pDepthInputAttachmentIndex`
- VUID-VkRenderingInputAttachmentIndexInfoKHR-pColorAttachmentInputIndices-09524
Elements of `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` **must** not take the same value as the content of `pStencilInputAttachmentIndex`
- VUID-VkRenderingInputAttachmentIndexInfoKHR-colorAttachmentCount-09525
`colorAttachmentCount` **must** be less than or equal to `maxColorAttachments`

Valid Usage (Implicit)

- VUID-VkRenderingInputAttachmentIndexInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RENDERING_INPUT_ATTACHMENT_INDEX_INFO_KHR`
- VUID-VkRenderingInputAttachmentIndexInfoKHR-pColorAttachmentInputIndices-parameter
If `colorAttachmentCount` is not `0`, and `pColorAttachmentInputIndices` is not `NULL`, `pColorAttachmentInputIndices` **must** be a valid pointer to an array of `colorAttachmentCount` `uint32_t` values

- `VOID-VkRenderingInputAttachmentIndexInfoKHR-pDepthInputAttachmentIndex-parameter`
If `pDepthInputAttachmentIndex` is not `NULL`, `pDepthInputAttachmentIndex` **must** be a valid pointer to a valid `uint32_t` value
- `VOID-VkRenderingInputAttachmentIndexInfoKHR-pStencilInputAttachmentIndex-parameter`
If `pStencilInputAttachmentIndex` is not `NULL`, `pStencilInputAttachmentIndex` **must** be a valid pointer to a valid `uint32_t` value

Variables identified with the `InputAttachmentIndex` **must** only be used by a fragment stage. The `numeric format` of the subpass input **must** match the format of the corresponding input attachment, or the values of subpass loads from these variables are undefined. If the framebuffer attachment contains both depth and stencil aspects, the numeric format of the subpass input determines if depth or stencil aspect is accessed by the shader.

See [Input Attachment](#) for more details.

15.6.1. Fragment Input Attachment Compatibility

An input attachment that is statically accessed by a fragment shader **must** be backed by a descriptor that is equivalent to the `VkImageView` in the `VkFramebuffer`, except for `subresourceRange.aspectMask`. The `aspectMask` **must** be equal to the aspect accessed by the shader.

15.7. Ray Tracing Pipeline Interface

Ray tracing pipelines **may** have more stages than other pipelines with multiple instances of each stage and more dynamic interactions between the stages, but still have interface structures that obey the same general rules as interfaces between shader stages in other pipelines. The three types of inter-stage interface variables for ray tracing pipelines are:

- Ray payloads containing data tracked for the entire lifetime of the ray.
- Hit attributes containing data about a specific hit for the duration of its processing.
- Callable data for passing data into and out of a callable shader.

Ray payloads and callable data are used in explicit shader call instructions, so they have an incoming variant to distinguish the parameter passed to the invocation from any other payloads or data being used by subsequent shader call instructions.

An interface structure used between stages **must** match between the stages using it. Specifically:

- The hit attribute structure read in an any-hit or closest hit shader **must** be the same structure as the hit attribute structure written in the corresponding intersection shader in the same hit group.
- The incoming callable data for a callable shader **must** be the same structure as the callable data referenced by the execute callable instruction in the calling shader.
- The ray payload for a shader invoked by a ray tracing command **must** be the same structure for

all shader stages using the payload for that ray.

Any shader with an incoming ray payload, incoming callable data, or hit attribute **must** only declare one variable of that type.

Table 20. Ray Pipeline Shader Interface

Shader Stage	Ray Payload	Incoming Ray Payload	Hit Attribute	Callable Data	Incoming Callable Data
Ray Generation	r/w			r/w	
Intersection			r/w		
Any-Hit		r/w	r		
Closest Hit	r/w	r/w	r	r/w	
Miss	r/w	r/w		r/w	
Callable				r/w	r/w

15.8. Shader Resource Interface

When a shader stage accesses buffer or image resources, as described in the [Resource Descriptors](#) section, the shader resource variables **must** be matched with the [pipeline layout](#) that is provided at pipeline creation time.

The set of shader variables that form the *shader resource interface* for a stage are the variables statically used by that stage's [OpEntryPoint](#) with a storage class of [Uniform](#), [UniformConstant](#), [StorageBuffer](#), or [PushConstant](#). For the fragment shader, this includes the [fragment input attachment interface](#).

The shader resource interface consists of two sub-interfaces: the push constant interface and the descriptor set interface.

15.8.1. Push Constant Interface

The shader variables defined with a storage class of [PushConstant](#) that are statically used by the shader entry points for the pipeline define the *push constant interface*. They **must** be:

- typed as [OpTypeStruct](#),
- identified with a [Block](#) decoration, and
- laid out explicitly using the [Offset](#), [ArrayStride](#), and [MatrixStride](#) decorations as specified in [Offset and Stride Assignment](#).

There **must** be no more than one push constant block statically used per shader entry point.

Each statically used member of a push constant block **must** be placed at an [Offset](#) such that the entire member is entirely contained within the [VkPushConstantRange](#) for each [OpEntryPoint](#) that

uses it, and the `stageFlags` for that range **must** specify the appropriate `VkShaderStageFlagBits` for that stage. The `Offset` decoration for any member of a push constant block **must** not cause the space required for that member to extend outside the range `[0, maxPushConstantsSize)`.

Any member of a push constant block that is declared as an array **must** only be accessed with *dynamically uniform* indices.

15.8.2. Descriptor Set Interface

The *descriptor set interface* is comprised of the shader variables with the storage class of `StorageBuffer`, `Uniform` or `UniformConstant` (including the variables in the [fragment input attachment interface](#)) that are statically used by the shader entry points for the pipeline.

These variables **must** have `DescriptorSet` and `Binding` decorations specified, which are assigned and matched with the `VkDescriptorSetLayout` objects in the pipeline layout as described in [DescriptorSet and Binding Assignment](#).

The `Image Format` of an `OpTypeImage` declaration **must** not be `Unknown`, for variables which are used for `OpImageRead`, `OpImageSparseRead`, or `OpImageWrite` operations, except under the following conditions:

- For `OpImageWrite`, if the image format is listed in the [storage without format](#) list and if the `shaderStorageImageWriteWithoutFormat` feature is enabled and the shader module declares the `StorageImageWriteWithoutFormat` capability.
- For `OpImageWrite`, if the image format supports `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT` and the shader module declares the `StorageImageWriteWithoutFormat` capability.
- For `OpImageRead` or `OpImageSparseRead`, if the image format is listed in the [storage without format](#) list and if the `shaderStorageImageReadWithoutFormat` feature is enabled and the shader module declares the `StorageImageReadWithoutFormat` capability.
- For `OpImageRead` or `OpImageSparseRead`, if the image format supports `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT` and the shader module declares the `StorageImageReadWithoutFormat` capability.
- For `OpImageRead`, if `Dim` is `SubpassData` (indicating a read from an input attachment).

The `Image Format` of an `OpTypeImage` declaration **must** not be `Unknown`, for variables which are used for `OpAtomic*` operations.

Variables identified with the `Uniform` storage class are used to access transparent buffer backed resources. Such variables **must** be:

- typed as `OpTypeStruct`, or an array of this type,
- identified with a `Block` or `BufferBlock` decoration, and
- laid out explicitly using the `Offset`, `ArrayStride`, and `MatrixStride` decorations as specified in [Offset and Stride Assignment](#).

Variables identified with the `StorageBuffer` storage class are used to access transparent buffer

backed resources. Such variables **must** be:

- typed as `OpTypeStruct`, or an array of this type,
- identified with a `Block` decoration, and
- laid out explicitly using the `Offset`, `ArrayStride`, and `MatrixStride` decorations as specified in [Offset and Stride Assignment](#).

The `Offset` decoration for any member of a `Block`-decorated variable in the `Uniform` storage class **must** not cause the space required for that variable to extend outside the range `[0, maxUniformBufferRange)`. The `Offset` decoration for any member of a `Block`-decorated variable in the `StorageBuffer` storage class **must** not cause the space required for that variable to extend outside the range `[0, maxStorageBufferRange)`.

Variables identified with the `Uniform` storage class **can** also be used to access transparent descriptor set backed resources when the variable is assigned to a descriptor set layout binding with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`. In this case the variable **must** be typed as `OpTypeStruct` and **cannot** be aggregated into arrays of that type. Further, the `Offset` decoration for any member of such a variable **must** not cause the space required for that variable to extend outside the range `[0, maxInlineUniformBlockSize)`.

Variables identified with a storage class of `UniformConstant` and a decoration of `InputAttachmentIndex` **must** be declared as described in [Fragment Input Attachment Interface](#).

SPIR-V variables decorated with a descriptor set and binding that identify a [combined image sampler descriptor](#) **can** have a type of `OpTypeImage`, `OpTypeSampler` (`Sampled=1`), or `OpTypeSampledImage`.

When accessing a resource through such a variable, the resource **must** be selected via compile time constant expressions unless features are enabled to allow dynamically uniform or non-uniform expressions, as described below:

- Storage images (except storage texel buffers and input attachments):
 - Dynamically uniform: `shaderStorageImageArrayDynamicIndexing` and `StorageImageArrayDynamicIndexing`
 - Non-uniform: `shaderStorageImageArrayNonUniformIndexing` and `StorageImageArrayNonUniformIndexing`
- Storage texel buffers:
 - Dynamically uniform: `shaderStorageTexelBufferArrayDynamicIndexing` and `StorageTexelBufferArrayDynamicIndexing`
 - Non-uniform: `shaderStorageTexelBufferArrayNonUniformIndexing` and `StorageTexelBufferArrayNonUniformIndexing`
- Input attachments:
 - Dynamically uniform: `shaderInputAttachmentArrayDynamicIndexing` and `InputAttachmentArrayDynamicIndexing`
 - Non-uniform: `shaderInputAttachmentArrayNonUniformIndexing` and `InputAttachmentArrayNonUniformIndexing`

- Sampled images (except uniform texel buffers), samplers and combined image samplers:
 - Dynamically uniform: `shaderSampledImageArrayDynamicIndexing` and `SampledImageArrayDynamicIndexing`
 - Non-uniform: `shaderSampledImageArrayNonUniformIndexing` and `SampledImageArrayNonUniformIndexing`
- Uniform texel buffers:
 - Dynamically uniform: `shaderUniformTexelBufferArrayDynamicIndexing` and `UniformTexelBufferArrayDynamicIndexing`
 - Non-uniform: `shaderUniformTexelBufferArrayNonUniformIndexing` and `UniformTexelBufferArrayNonUniformIndexing`
- Uniform buffers:
 - Dynamically uniform: `shaderUniformBufferArrayDynamicIndexing` and `UniformBufferArrayDynamicIndexing`
 - Non-uniform: `shaderUniformBufferArrayNonUniformIndexing` and `UniformBufferArrayNonUniformIndexing`
- Storage buffers:
 - Dynamically uniform: `shaderStorageBufferArrayDynamicIndexing` and `StorageBufferArrayDynamicIndexing`
 - Non-uniform: `shaderStorageBufferArrayNonUniformIndexing` and `StorageBufferArrayNonUniformIndexing`
- Acceleration structures:
 - Dynamically uniform: Always supported.
 - Non-uniform: Always supported.
- **weight image**:
 - Dynamically uniform: Always supported.
 - Non-uniform: Never supported.
- **Block matching image**:
 - Dynamically uniform: Always supported.
 - Non-uniform: Never supported.

Example 1. Note

Implementations must take care when implementing this if subgroups are not necessarily a subset of the invocation group for their hardware (e.g. if multiple draw calls are packed together). If such an implementation needs uniformity across the subgroup for any resource access, the implementation is responsible for ensuring that indices that are only dynamically uniform across the invocation group still function as expected if they advertise the respective feature.

A combined image sampler in an array that enables sampler $Y'C_B C_R$ conversion or samples a

subsampled image **must** only be indexed by constant integral expressions.

Table 21. Shader Resource and Descriptor Type Correspondence

Resource type	Descriptor Type
sampler	VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER
sampled image	VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER
storage image	VK_DESCRIPTOR_TYPE_STORAGE_IMAGE
combined image sampler	VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER
uniform texel buffer	VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER
storage texel buffer	VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER
uniform buffer	VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC
storage buffer	VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC
input attachment	VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT
inline uniform block	VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK
acceleration structure	VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR or VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV
weight image	VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM
block matching image	VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM

Table 22. Shader Resource and Storage Class Correspondence

Resource type	Storage Class	Type ¹	Decoration(s) ²
sampler	UniformConstant	OpTypeSampler	
sampled image	UniformConstant	OpTypeImage (Sampled=1)	
storage image	UniformConstant	OpTypeImage (Sampled=2)	
combined image sampler	UniformConstant	OpTypeSampledImage OpTypeImage (Sampled=1) OpTypeSampler	
uniform texel buffer	UniformConstant	OpTypeImage (Dim=Buffer, Sampled=1)	
storage texel buffer	UniformConstant	OpTypeImage (Dim=Buffer, Sampled=2)	
uniform buffer	Uniform	OpTypeStruct	Block, Offset, (ArrayStride), (MatrixStride)

Resource type	Storage Class	Type ¹	Decoration(s) ²
storage buffer	Uniform	OpTypeStruct	BufferBlock, Offset, (ArrayStride), (MatrixStride)
	StorageBuffer		Block, Offset, (ArrayStride), (MatrixStride)
input attachment	UniformConstant	OpTypeImage (Dim =SubpassData, Sampled=2)	InputAttachmentIndex
inline uniform block	Uniform	OpTypeStruct	Block, Offset, (ArrayStride), (MatrixStride)
acceleration structure	UniformConstant	OpTypeAccelerationStructureKHR	
sample weight image	UniformConstant	OpTypeImage (Depth=0, Dim =2D, Arrayed=1, MS=0, Sampled=1)	WeightTextureQCOM
block matching image	UniformConstant	OpTypeImage (Depth=0, Dim =2D, Arrayed=0, MS=0, Sampled=1)	BlockMatchTextureQCOM

1

Where **OpTypeImage** is referenced, the **Dim** values **Buffer** and **Subpassdata** are only accepted where they are specifically referenced. They do not correspond to resource types where a generic **OpTypeImage** is specified.

2

In addition to **DescriptorSet** and **Binding**.

15.8.3. DescriptorSet and Binding Assignment

A variable decorated with a **DescriptorSet** decoration of **s** and a **Binding** decoration of **b** indicates that this variable is associated with the **VkDescriptorSetLayoutBinding** that has a **binding** equal to **b** in **pSetLayouts[s]** that was specified in **VkPipelineLayoutCreateInfo**.

DescriptorSet decoration values **must** be between zero and **maxBoundDescriptorSets** minus one, inclusive. **Binding** decoration values **can** be any 32-bit unsigned integer value, as described in **Descriptor Set Layout**. Each descriptor set has its own binding name space.

If the **Binding** decoration is used with an array, the entire array is assigned that binding value. The array **must** be a single-dimensional array and size of the array **must** be no larger than the number of descriptors in the binding. If the array is runtime-sized, then array elements greater than or equal to the size of that binding in the bound descriptor set **must** not be used. If the array is runtime-sized, the **runtimeDescriptorArray** feature **must** be enabled and the **RuntimeDescriptorArray** capability **must** be declared. The index of each element of the array is referred to as the *arrayElement*. For the purposes of interface matching and descriptor set **operations**, if a resource

variable is not an array, it is treated as if it has an arrayElement of zero.

There is a limit on the number of resources of each type that **can** be accessed by a pipeline stage as shown in [Shader Resource Limits](#). The “Resources Per Stage” column gives the limit on the number each type of resource that **can** be statically used for an entry point in any given stage in a pipeline. The “Resource Types” column lists which resource types are counted against the limit. Some resource types count against multiple limits. The `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` descriptor type counts as one individual resource and one for every unique resource limit per descriptor set type that is present in the associated binding’s `VkMutableDescriptorTypeListEXT`. If multiple descriptor types in `VkMutableDescriptorTypeListEXT` map to the same resource limit, only one descriptor is consumed for purposes of computing resource limits.

The pipeline layout **may** include descriptor sets and bindings which are not referenced by any variables statically used by the entry points for the shader stages in the binding’s `stageFlags`.

However, if a variable assigned to a given `DescriptorSet` and `Binding` is statically used by the entry point for a shader stage, the pipeline layout **must** contain a descriptor set layout binding in that descriptor set layout and for that binding number, and that binding’s `stageFlags` **must** include the appropriate `VkShaderStageFlagBits` for that stage. The variable **must** be of a valid resource type determined by its SPIR-V type and storage class, as defined in [Shader Resource and Storage Class Correspondence](#). The descriptor set layout binding **must** be of a corresponding descriptor type, as defined in [Shader Resource and Descriptor Type Correspondence](#).

NOTE

There are no limits on the number of shader variables that can have overlapping set and binding values in a shader; but which resources are [statically used](#) has an impact. If any shader variable identifying a resource is [statically used](#) in a shader, then the underlying descriptor bound at the declared set and binding **must support the declared type in the shader** when the shader executes.

If multiple shader variables are declared with the same set and binding values, and with the same underlying descriptor type, they can all be statically used within the same shader. However, accesses are not automatically synchronized, and [Aliased](#) decorations should be used to avoid data hazards (see [section 2.18.2 Aliasing in the SPIR-V specification](#)).

If multiple shader variables with the same set and binding values are declared in a single shader, but with different declared types, where any of those are not supported by the relevant bound descriptor, that shader can only be executed if the variables with the unsupported type are not statically used.

A noteworthy example of using multiple statically-used shader variables sharing the same descriptor set and binding values is a descriptor of type `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` that has multiple corresponding shader variables in the `UniformConstant` storage class, where some could be `OpTypeImage` (`Sampled=1`), some could be `OpTypeSampler`, and some could be `OpTypeSampledImage`.

Table 23. Shader Resource Limits

Resources per Stage	Resource Types
maxPerStageDescriptorSamplers or maxPerStageDescriptorUpdateAfterBindSamplers	sampler
	combined image sampler
maxPerStageDescriptorSampledImages or maxPerStageDescriptorUpdateAfterBindSampledImages	sampled image
	combined image sampler
	uniform texel buffer
	sample weight image
	block matching image
maxPerStageDescriptorStorageImages or maxPerStageDescriptorUpdateAfterBindStorageImages	storage image
	storage texel buffer
maxPerStageDescriptorUniformBuffers or maxPerStageDescriptorUpdateAfterBindUniformBuffers	uniform buffer
	uniform buffer dynamic
maxPerStageDescriptorStorageBuffers or maxPerStageDescriptorUpdateAfterBindStorageBuffers	storage buffer
	storage buffer dynamic
maxPerStageDescriptorInputAttachments or maxPerStageDescriptorUpdateAfterBindInputAttachments	input attachment ¹
maxPerStageDescriptorInlineUniformBlocks or maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks	inline uniform block
VkPhysicalDeviceRayTracingPropertiesNV::maxDescriptorSetAccelerationStructures or maxPerStageDescriptorAccelerationStructures or maxPerStageDescriptorUpdateAfterBindAccelerationStructures	acceleration structure

1

Input attachments **can** only be used in the fragment shader stage

15.8.4. Offset and Stride Assignment

Certain objects **must** be explicitly laid out using the `Offset`, `ArrayStride`, and `MatrixStride`, as described in [SPIR-V explicit layout validation rules](#). All such layouts also **must** conform to the following requirements.

NOTE

The numeric order of `Offset` decorations does not need to follow member declaration order.

Alignment Requirements

There are different alignment requirements depending on the specific resources and on the

features enabled on the device.

Matrix types are defined in terms of arrays as follows:

- A column-major matrix with C columns and R rows is equivalent to a C element array of vectors with R components.
- A row-major matrix with C columns and R rows is equivalent to an R element array of vectors with C components.

The *scalar alignment* of the type of an **OpTypeStruct** member is defined recursively as follows:

- A scalar of size N has a scalar alignment of N.
- A vector type has a scalar alignment equal to that of its component type.
- An array type has a scalar alignment equal to that of its element type.
- A structure has a scalar alignment equal to the largest scalar alignment of any of its members.
- A matrix type inherits *scalar alignment* from the equivalent array declaration.

The *base alignment* of the type of an **OpTypeStruct** member is defined recursively as follows:

- A scalar has a base alignment equal to its scalar alignment.
- A two-component vector has a base alignment equal to twice its scalar alignment.
- A three- or four-component vector has a base alignment equal to four times its scalar alignment.
- An array has a base alignment equal to the base alignment of its element type.
- A structure has a base alignment equal to the largest base alignment of any of its members. An empty structure has a base alignment equal to the size of the smallest scalar type permitted by the capabilities declared in the SPIR-V module. (e.g., for a 1 byte aligned empty struct in the **StorageBuffer** storage class, **StorageBuffer8BitAccess** or **UniformAndStorageBuffer8BitAccess** **must** be declared in the SPIR-V module.)
- A matrix type inherits *base alignment* from the equivalent array declaration.

The *extended alignment* of the type of an **OpTypeStruct** member is similarly defined as follows:

- A scalar or vector type has an extended alignment equal to its base alignment.
- An array or structure type has an extended alignment equal to the largest extended alignment of any of its members, rounded up to a multiple of 16.
- A matrix type inherits extended alignment from the equivalent array declaration.

A member is defined to *improperly straddle* if either of the following are true:

- It is a vector with total size less than or equal to 16 bytes, and has **Offset** decorations placing its first byte at F and its last byte at L, where $\text{floor}(F / 16) \neq \text{floor}(L / 16)$.
- It is a vector with total size greater than 16 bytes and has its **Offset** decorations placing its first byte at a non-integer multiple of 16.

Standard Buffer Layout

Every member of an `OpTypeStruct` that is required to be explicitly laid out **must** be aligned according to the first matching rule as follows. If the struct is contained in pointer types of multiple storage classes, it **must** satisfy the requirements for every storage class used to reference it.

1. If the `scalarBlockLayout` feature is enabled on the device and the storage class is `Uniform`, `StorageBuffer`, `PhysicalStorageBuffer`, `ShaderRecordBufferKHR`, or `PushConstant` then every member **must** be aligned according to its scalar alignment.
2. If the `workgroupMemoryExplicitLayoutScalarBlockLayout` feature is enabled on the device and the storage class is `Workgroup` then every member **must** be aligned according to its scalar alignment.
3. All vectors **must** be aligned according to their scalar alignment.
4. If the `uniformBufferStandardLayout` feature is not enabled on the device, then any member of an `OpTypeStruct` with a storage class of `Uniform` and a decoration of `Block` **must** be aligned according to its extended alignment.
5. Every other member **must** be aligned according to its base alignment.

NOTE

Even if scalar alignment is supported, it is generally more performant to use the *base alignment*.

The memory layout **must** obey the following rules:

- The `Offset` decoration of any member **must** be a multiple of its alignment.
- Any `ArrayStride` or `MatrixStride` decoration **must** be a multiple of the alignment of the array or matrix as defined above.

If one of the conditions below applies

- The storage class is `Uniform`, `StorageBuffer`, `PhysicalStorageBuffer`, `ShaderRecordBufferKHR`, or `PushConstant`, and the `scalarBlockLayout` feature is not enabled on the device.
- The storage class is `Workgroup`, and either the struct member is not part of a `Block` or the `workgroupMemoryExplicitLayoutScalarBlockLayout` feature is not enabled on the device.
- The storage class is any other storage class.

the memory layout **must** also obey the following rules:

- Vectors **must** not improperly straddle, as defined above.
- The `Offset` decoration of a member **must** not place it between the end of a structure, an array or a matrix and the next multiple of the alignment of that structure, array or matrix.

NOTE

The **std430 layout** in GLSL satisfies these rules for types using the base alignment. The **std140 layout** satisfies the rules for types using the extended alignment.

15.9. Built-In Variables

Built-in variables are accessed in shaders by declaring a variable decorated with a `BuiltIn` SPIR-V decoration. The meaning of each `BuiltIn` decoration is as follows. In the remainder of this section,

the name of a built-in is used interchangeably with a term equivalent to a variable decorated with that particular built-in. Built-ins that represent integer values **can** be declared as either signed or unsigned 32-bit integers.

As mentioned above, some inputs and outputs have an additional level of arrayness relative to other shader inputs and outputs. This level of arrayness is not included in the type descriptions below, but **must** be included when declaring the built-in.

Any two **Input** storage class **OpVariable** declarations listed as operands on the same **OpEntryPoint** **must** not have the same **BuiltIn** decoration. Any two **Output** storage class **OpVariable** declarations listed as operands on the same **OpEntryPoint** **must** not have the same **BuiltIn** decoration.

BaryCoordKHR

The **BaryCoordKHR** decoration **can** be used to decorate a fragment shader input variable. This variable will contain a three-component floating-point vector with barycentric weights that indicate the location of the fragment relative to the screen-space locations of vertices of its primitive, obtained using perspective interpolation.

Valid Usage

- VUID-BaryCoordKHR-BaryCoordKHR-04154
The **BaryCoordKHR** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordKHR-BaryCoordKHR-04155
The variable decorated with **BaryCoordKHR** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordKHR-BaryCoordKHR-04156
The variable decorated with **BaryCoordKHR** **must** be declared as a three-component vector of 32-bit floating-point values

BaryCoordNoPerspAMD

The **BaryCoordNoPerspAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using linear interpolation at the fragment's center. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordNoPerspAMD-BaryCoordNoPerspAMD-04157
The **BaryCoordNoPerspAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordNoPerspAMD-BaryCoordNoPerspAMD-04158
The variable decorated with **BaryCoordNoPerspAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordNoPerspAMD-BaryCoordNoPerspAMD-04159
The variable decorated with **BaryCoordNoPerspAMD** **must** be declared as a two-component vector of 32-bit floating-point values

BaryCoordNoPerspKHR

The **BaryCoordNoPerspKHR** decoration **can** be used to decorate a fragment shader input variable. This variable will contain a three-component floating-point vector with barycentric weights that indicate the location of the fragment relative to the screen-space locations of vertices of its primitive, obtained using linear interpolation.

Valid Usage

- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04160
The **BaryCoordNoPerspKHR** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04161
The variable decorated with **BaryCoordNoPerspKHR** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04162
The variable decorated with **BaryCoordNoPerspKHR** **must** be declared as a three-component vector of 32-bit floating-point values

BaryCoordNoPerspCentroidAMD

The **BaryCoordNoPerspCentroidAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using linear interpolation at the centroid. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordNoPerspCentroidAMD-BaryCoordNoPerspCentroidAMD-04163
The **BaryCoordNoPerspCentroidAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordNoPerspCentroidAMD-BaryCoordNoPerspCentroidAMD-04164
The variable decorated with **BaryCoordNoPerspCentroidAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordNoPerspCentroidAMD-BaryCoordNoPerspCentroidAMD-04165
The variable decorated with **BaryCoordNoPerspCentroidAMD** **must** be declared as a three-component vector of 32-bit floating-point values

BaryCoordNoPerspSampleAMD

The **BaryCoordNoPerspSampleAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using linear interpolation at each covered sample. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordNoPerspSampleAMD-BaryCoordNoPerspSampleAMD-04166
The **BaryCoordNoPerspSampleAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordNoPerspSampleAMD-BaryCoordNoPerspSampleAMD-04167
The variable decorated with **BaryCoordNoPerspSampleAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordNoPerspSampleAMD-BaryCoordNoPerspSampleAMD-04168
The variable decorated with **BaryCoordNoPerspSampleAMD** **must** be declared as a two-component vector of 32-bit floating-point values

BaryCoordPullModelAMD

The **BaryCoordPullModelAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain (1/W, 1/I, 1/J) evaluated at the fragment center and **can** be used to calculate gradients and then interpolate I, J, and W at any desired sample location.

Valid Usage

- VUID-BaryCoordPullModelAMD-BaryCoordPullModelAMD-04169
The **BaryCoordPullModelAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordPullModelAMD-BaryCoordPullModelAMD-04170
The variable decorated with **BaryCoordPullModelAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordPullModelAMD-BaryCoordPullModelAMD-04171
The variable decorated with **BaryCoordPullModelAMD** **must** be declared as a three-component vector of 32-bit floating-point values

BaryCoordSmoothAMD

The **BaryCoordSmoothAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at the fragment's center. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordSmoothAMD-BaryCoordSmoothAMD-04172
The **BaryCoordSmoothAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordSmoothAMD-BaryCoordSmoothAMD-04173
The variable decorated with **BaryCoordSmoothAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordSmoothAMD-BaryCoordSmoothAMD-04174
The variable decorated with **BaryCoordSmoothAMD** **must** be declared as a two-component vector of 32-bit floating-point values

BaryCoordSmoothCentroidAMD

The **BaryCoordSmoothCentroidAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at the centroid. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordSmoothCentroidAMD-BaryCoordSmoothCentroidAMD-04175
The **BaryCoordSmoothCentroidAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordSmoothCentroidAMD-BaryCoordSmoothCentroidAMD-04176
The variable decorated with **BaryCoordSmoothCentroidAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordSmoothCentroidAMD-BaryCoordSmoothCentroidAMD-04177
The variable decorated with **BaryCoordSmoothCentroidAMD** **must** be declared as a two-component vector of 32-bit floating-point values

BaryCoordSmoothSampleAMD

The **BaryCoordSmoothSampleAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at each covered sample. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordSmoothSampleAMD-BaryCoordSmoothSampleAMD-04178
The **BaryCoordSmoothSampleAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordSmoothSampleAMD-BaryCoordSmoothSampleAMD-04179
The variable decorated with **BaryCoordSmoothSampleAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordSmoothSampleAMD-BaryCoordSmoothSampleAMD-04180
The variable decorated with **BaryCoordSmoothSampleAMD** **must** be declared as a two-component vector of 32-bit floating-point values

BaseInstance

Decorating a variable with the **BaseInstance** built-in will make that variable contain the integer value corresponding to the first instance that was passed to the command that invoked the current vertex shader invocation. **BaseInstance** is the **firstInstance** parameter to a *direct drawing command* or the **firstInstance** member of a structure consumed by an *indirect drawing command*.

Valid Usage

- VUID-BaseInstance-BaseInstance-04181
The **BaseInstance** decoration **must** be used only within the **Vertex Execution Model**
- VUID-BaseInstance-BaseInstance-04182
The variable decorated with **BaseInstance** **must** be declared using the **Input Storage Class**
- VUID-BaseInstance-BaseInstance-04183
The variable decorated with **BaseInstance** **must** be declared as a scalar 32-bit integer value

BaseVertex

Decorating a variable with the **BaseVertex** built-in will make that variable contain the integer value corresponding to the first vertex or vertex offset that was passed to the command that invoked the current vertex shader invocation. For *non-indexed drawing commands*, this variable is the **firstVertex** parameter to a *direct drawing command* or the **firstVertex** member of the structure consumed by an *indirect drawing command*. For *indexed drawing commands*, this variable is the **vertexOffset** parameter to a *direct drawing command* or the **vertexOffset** member of the structure consumed by an *indirect drawing command*.

Valid Usage

- VUID-BaseVertex-BaseVertex-04184
The **BaseVertex** decoration **must** be used only within the **Vertex Execution Model**
- VUID-BaseVertex-BaseVertex-04185
The variable decorated with **BaseVertex** **must** be declared using the **Input Storage Class**
- VUID-BaseVertex-BaseVertex-04186
The variable decorated with **BaseVertex** **must** be declared as a scalar 32-bit integer value

ClipDistance

Decorating a variable with the **ClipDistance** built-in decoration will make that variable contain the mechanism for controlling user clipping. **ClipDistance** is an array such that the i^{th} element of the array specifies the clip distance for plane i . A clip distance of 0 means the vertex is on the plane, a positive distance means the vertex is inside the clip half-space, and a negative distance means the vertex is outside the clip half-space.

NOTE The array variable decorated with **ClipDistance** is explicitly sized by the shader.

NOTE In the last **pre-rasterization shader stage**, these values will be linearly interpolated across the primitive and the portion of the primitive with interpolated distances less than 0 will be considered outside the clip volume. If **ClipDistance** is then used by a fragment shader, **ClipDistance** contains these linearly interpolated values.

Valid Usage

- VUID-ClipDistance-ClipDistance-04187
The `ClipDistance` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `Vertex`, `Fragment`, `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model`
- VUID-ClipDistance-ClipDistance-04188
The variable decorated with `ClipDistance` within the `MeshEXT`, `MeshNV`, or `Vertex Execution Model` **must** be declared using the `Output Storage Class`
- VUID-ClipDistance-ClipDistance-04189
The variable decorated with `ClipDistance` within the `Fragment Execution Model` **must** be declared using the `Input Storage Class`
- VUID-ClipDistance-ClipDistance-04190
The variable decorated with `ClipDistance` within the `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model` **must** not be declared in a `Storage Class` other than `Input` or `Output`
- VUID-ClipDistance-ClipDistance-04191
The variable decorated with `ClipDistance` **must** be declared as an array of 32-bit floating-point values

ClipDistancePerViewNV

Decorating a variable with the `ClipDistancePerViewNV` built-in decoration will make that variable contain the per-view clip distances. The per-view clip distances have the same semantics as `ClipDistance`.

Valid Usage

- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04192
The `ClipDistancePerViewNV` decoration **must** be used only within the `MeshNV Execution Model`
- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04193
The variable decorated with `ClipDistancePerViewNV` **must** be declared using the `Output Storage Class`
- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04194
The variable decorated with `ClipDistancePerViewNV` **must** also be decorated with the `PerViewNV` decoration
- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04195
The variable decorated with `ClipDistancePerViewNV` **must** be declared as a two-dimensional array of 32-bit floating-point values

ClusterIDHUAWEI

The `ClusterIDHUAWEI` decoration can be used to decorate a cluster culling shader output variable, this variable will contain an integer value that specifies the id of cluster being rendered by this drawing command. When Cluster Culling Shader enable, `ClusterIDHUAWEI` will replace `gl_DrawID` pass to vertex shader for cluster-related information fetching.

Valid Usage

- VUID-ClusterIDHUAWEI-ClusterIDHUAWEI-07797
The `ClusterIDHUAWEI` decoration **must** be used only within the `ClusterCullingHUAWEI Execution Model`
- VUID-ClusterIDHUAWEI-ClusterIDHUAWEI-07798
The variable decorated with `ClusterIDHUAWEI` **must** be declared as a scalar 32-bit integer value

ClusterShadingRateHUAWEI

The `ClusterShadingRateHUAWEI` decoration can be used to decorate a cluster culling shader output variable. This variable will contain an integer value specifying the shading rate of a rendering cluster.

Valid Usage

- VUID-ClusterShadingRateHUAWEI-ClusterShadingRateHUAWEI-09448
The `ClusterShadingRateHUAWEI` decoration **must** be used only within the `ClusterCullingHUAWEI Execution Model`
- VUID-ClusterShadingRateHUAWEI-ClusterShadingRateHUAWEI-09449
The variable decorated with `ClusterShadingRateHUAWEI` **must** be declared as a scalar 32-bit integer value

CullDistance

Decorating a variable with the `CullDistance` built-in decoration will make that variable contain the mechanism for controlling user culling. If any member of this array is assigned a negative value for all vertices belonging to a primitive, then the primitive is discarded before rasterization.

NOTE

In fragment shaders, the values of the `CullDistance` array are linearly interpolated across each primitive.

NOTE

If `CullDistance` decorates an input variable, that variable will contain the corresponding value from the `CullDistance` decorated output variable from the previous shader stage.

Valid Usage

- VUID-CullDistance-CullDistance-04196
The `CullDistance` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `Vertex`, `Fragment`, `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model`
- VUID-CullDistance-CullDistance-04197
The variable decorated with `CullDistance` within the `MeshEXT`, `MeshNV` or `Vertex Execution`

Model **must** be declared using the **Output Storage Class**

- VUID-CullDistance-CullDistance-04198

The variable decorated with **CullDistance** within the **Fragment Execution Model** **must** be declared using the **Input Storage Class**

- VUID-CullDistance-CullDistance-04199

The variable decorated with **CullDistance** within the **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model** **must** not be declared using a **Storage Class** other than **Input** or **Output**

- VUID-CullDistance-CullDistance-04200

The variable decorated with **CullDistance** **must** be declared as an array of 32-bit floating-point values

CullDistancePerViewNV

Decorating a variable with the **CullDistancePerViewNV** built-in decoration will make that variable contain the per-view cull distances. The per-view cull distances have the same semantics as **CullDistance**.

Valid Usage

- VUID-CullDistancePerViewNV-CullDistancePerViewNV-04201

The **CullDistancePerViewNV** decoration **must** be used only within the **MeshNV Execution Model**

- VUID-CullDistancePerViewNV-CullDistancePerViewNV-04202

The variable decorated with **CullDistancePerViewNV** **must** be declared using the **Output Storage Class**

- VUID-CullDistancePerViewNV-CullDistancePerViewNV-04203

The variable decorated with **CullDistancePerViewNV** **must** also be decorated with the **PerViewNV** decoration

- VUID-CullDistancePerViewNV-CullDistancePerViewNV-04204

The variable decorated with **CullDistancePerViewNV** **must** be declared as a two-dimensional array of 32-bit floating-point values

CullPrimitiveEXT

Decorating a variable with the **CullPrimitiveEXT** built-in decoration will make that variable contain the culling state of output primitives. If the per-primitive boolean value is **true**, the primitive will be culled, if it is **false** it will not be culled.

Valid Usage

- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07034

The **CullPrimitiveEXT** decoration **must** be used only within the **MeshEXT Execution Model**

- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07035

The variable decorated with **CullPrimitiveEXT** **must** be declared using the **Output Storage Class**

- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07036
The variable decorated with **CullPrimitiveEXT** **must** be declared as an array of boolean values
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07037
The size of the array decorated with **CullPrimitiveEXT** **must** match the value specified by **OutputPrimitivesEXT**
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07038
The variable decorated with **CullPrimitiveEXT** within the **MeshEXT Execution Model** **must** also be decorated with the **PerPrimitiveEXT** decoration

CullMaskKHR

A variable decorated with the **CullMaskKHR** decoration will specify the cull mask of the ray being processed. The value is given by the **Cull Mask** parameter passed into one of the **OpTrace*** instructions.

Valid Usage

- VUID-CullMaskKHR-CullMaskKHR-06735
The **CullMaskKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**
- VUID-CullMaskKHR-CullMaskKHR-06736
The variable decorated with **CullMaskKHR** **must** be declared using the **Input Storage Class**
- VUID-CullMaskKHR-CullMaskKHR-06737
The variable decorated with **CullMaskKHR** **must** be declared as a scalar 32-bit integer value

CurrentRayTimeNV

A variable decorated with the **CurrentRayTimeNV** decoration contains the time value passed in to **OpTraceRayMotionNV** which called this shader.

Valid Usage

- VUID-CurrentRayTimeNV-CurrentRayTimeNV-04942
The **CurrentRayTimeNV** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**
- VUID-CurrentRayTimeNV-CurrentRayTimeNV-04943
The variable decorated with **CurrentRayTimeNV** **must** be declared using the **Input Storage Class**
- VUID-CurrentRayTimeNV-CurrentRayTimeNV-04944
The variable decorated with **CurrentRayTimeNV** **must** be declared as a scalar 32-bit floating-point value

DeviceIndex

The **DeviceIndex** decoration **can** be applied to a shader input which will be filled with the device index of the physical device that is executing the current shader invocation. This value will be in the range $[0, \max(1, \text{physicalDeviceCount})]$, where `physicalDeviceCount` is the **physicalDeviceCount** member of **VkDeviceGroupDeviceCreateInfo**.

Valid Usage

- VUID-DeviceIndex-DeviceIndex-04205
The variable decorated with **DeviceIndex** **must** be declared using the **Input Storage Class**
- VUID-DeviceIndex-DeviceIndex-04206
The variable decorated with **DeviceIndex** **must** be declared as a scalar 32-bit integer value

DrawIndex

Decorating a variable with the **DrawIndex** built-in will make that variable contain the integer value corresponding to the zero-based index of the draw that invoked the current task, mesh, or vertex shader invocation. For *indirect drawing commands*, **DrawIndex** begins at zero and increments by one for each draw executed. The number of draws is given by the **drawCount** parameter. For *direct drawing commands*, if **vkCmdDrawMultiEXT** or **vkCmdDrawMultiIndexedEXT** is used, this variable contains the integer value corresponding to the zero-based index of the draw. Otherwise **DrawIndex** is always zero. **DrawIndex** is dynamically uniform.

When task or mesh shaders are used, only the first active stage will have proper access to the variable. The value read by other stages is undefined.

Valid Usage

- VUID-DrawIndex-DrawIndex-04207
The **DrawIndex** decoration **must** be used only within the **Vertex**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**
- VUID-DrawIndex-DrawIndex-04208
The variable decorated with **DrawIndex** **must** be declared using the **Input Storage Class**
- VUID-DrawIndex-DrawIndex-04209
The variable decorated with **DrawIndex** **must** be declared as a scalar 32-bit integer value

FirstIndexHUAWEI

The **FirstIndexHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this indexed mode specific variable will contain an integer value that specifies the base index within the index buffer corresponding to a cluster.

Valid Usage

- VUID-FirstIndexHUAWEI-FirstIndexHUAWEI-07799

The **FirstIndexHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**

- VUID-FirstIndexHUAWEI-FirstIndexHUAWEI-07800

The variable decorated with **FirstIndexHUAWEI** **must** be declared as a scalar 32-bit integer value

FragCoord

Decorating a variable with the **FragCoord** built-in decoration will make that variable contain the framebuffer coordinate $(x, y, z, \frac{1}{w})$ of the fragment being processed. The (x,y) coordinate (0,0) is the upper left corner of the upper left pixel in the framebuffer.

When **Sample Shading** is enabled, the x and y components of **FragCoord** reflect the location of one of the samples corresponding to the shader invocation.

Otherwise, the x and y components of **FragCoord** reflect the location of the center of the fragment.

The z component of **FragCoord** is the interpolated depth value of the primitive.

The w component is the interpolated $\frac{1}{w}$.

The **Centroid** interpolation decoration is ignored, but allowed, on **FragCoord**.

Valid Usage

- VUID-FragCoord-FragCoord-04210

The **FragCoord** decoration **must** be used only within the **Fragment Execution Model**

- VUID-FragCoord-FragCoord-04211

The variable decorated with **FragCoord** **must** be declared using the **Input Storage Class**

- VUID-FragCoord-FragCoord-04212

The variable decorated with **FragCoord** **must** be declared as a four-component vector of 32-bit floating-point values

FragDepth

To have a shader supply a fragment-depth value, the shader **must** declare the **DepthReplacing** execution mode. Such a shader's fragment-depth value will come from the variable decorated with the **FragDepth** built-in decoration.

This value will be used for any subsequent depth testing performed by the implementation or writes to the depth attachment. See [fragment shader depth replacement](#) for details.

Valid Usage

- VUID-FragDepth-FragDepth-04213

The **FragDepth** decoration **must** be used only within the **Fragment Execution Model**

- VUID-FragDepth-FragDepth-04214
The variable decorated with **FragDepth must** be declared using the **Output Storage Class**
- VUID-FragDepth-FragDepth-04215
The variable decorated with **FragDepth must** be declared as a scalar 32-bit floating-point value
- VUID-FragDepth-FragDepth-04216
If the shader dynamically writes to the variable decorated with **FragDepth**, the **DepthReplacing Execution Mode must** be declared

FirstInstanceHUAWEI

The **FirstInstanceHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this variable will contain an integer value that specifies the instance ID of the first instance to draw.

Valid Usage

- VUID-FirstInstanceHUAWEI-FirstInstanceHUAWEI-07801
The **FirstInstanceHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**
- VUID-FirstInstanceHUAWEI-FirstInstanceHUAWEI-07802
The variable decorated with **FirstInstanceHUAWEI must** be declared as a scalar 32-bit integer value

FirstVertexHUAWEI

The **FirstVertexHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this non-indexed mode specific variable will contain an integer value that specifies the index of the first vertex in a cluster to draw.

Valid Usage

- VUID-FirstVertexHUAWEI-FirstVertexHUAWEI-07803
The **FirstVertexHUAWEI** decoration **must** be used only within the **FirstVertexHUAWEI Execution Model**
- VUID-FirstVertexHUAWEI-FirstVertexHUAWEI-07804
The variable decorated with **FirstVertexHUAWEI must** be declared as a scalar 32-bit integer value

FragInvocationCountEXT

Decorating a variable with the **FragInvocationCountEXT** built-in decoration will make that variable contain the maximum number of fragment shader invocations for the fragment, as determined by **minSampleShading**.

If **Sample Shading** is not enabled, **FragInvocationCountEXT** will be filled with a value of 1.

Valid Usage

- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04217
The **FragInvocationCountEXT** decoration **must** be used only within the **Fragment Execution Model**
- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04218
The variable decorated with **FragInvocationCountEXT** **must** be declared using the **Input Storage Class**
- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04219
The variable decorated with **FragInvocationCountEXT** **must** be declared as a scalar 32-bit integer value

FragSizeEXT

Decorating a variable with the **FragSizeEXT** built-in decoration will make that variable contain the dimensions in pixels of the **area** that the fragment covers for that invocation.

If fragment density map is not enabled, **FragSizeEXT** will be filled with a value of (1,1).

Valid Usage

- VUID-FragSizeEXT-FragSizeEXT-04220
The **FragSizeEXT** decoration **must** be used only within the **Fragment Execution Model**
- VUID-FragSizeEXT-FragSizeEXT-04221
The variable decorated with **FragSizeEXT** **must** be declared using the **Input Storage Class**
- VUID-FragSizeEXT-FragSizeEXT-04222
The variable decorated with **FragSizeEXT** **must** be declared as a two-component vector of 32-bit integer values

FragStencilRefEXT

Decorating a variable with the **FragStencilRefEXT** built-in decoration will make that variable contain the new stencil reference value for all samples covered by the fragment. This value will be used as the stencil reference value used in stencil testing.

To write to **FragStencilRefEXT**, a shader **must** declare the **StencilRefReplacingEXT** execution mode. If a shader declares the **StencilRefReplacingEXT** execution mode and there is an execution path through the shader that does not set **FragStencilRefEXT**, then the fragment's stencil reference value is undefined for executions of the shader that take that path.

Only the least significant **s** bits of the integer value of the variable decorated with **FragStencilRefEXT** are considered for stencil testing, where **s** is the number of bits in the stencil framebuffer attachment, and higher order bits are discarded.

See [fragment shader stencil reference replacement](#) for more details.

Valid Usage

- VUID-FragStencilRefEXT-FragStencilRefEXT-04223
The **FragStencilRefEXT** decoration **must** be used only within the **Fragment Execution Model**
- VUID-FragStencilRefEXT-FragStencilRefEXT-04224
The variable decorated with **FragStencilRefEXT** **must** be declared using the **Output Storage Class**
- VUID-FragStencilRefEXT-FragStencilRefEXT-04225
The variable decorated with **FragStencilRefEXT** **must** be declared as a scalar integer value

FragmentSizeNV

Decorating a variable with the **FragmentSizeNV** built-in decoration will make that variable contain the width and height of the fragment.

Valid Usage

- VUID-FragmentSizeNV-FragmentSizeNV-04226
The **FragmentSizeNV** decoration **must** be used only within the **Fragment Execution Model**
- VUID-FragmentSizeNV-FragmentSizeNV-04227
The variable decorated with **FragmentSizeNV** **must** be declared using the **Input Storage Class**
- VUID-FragmentSizeNV-FragmentSizeNV-04228
The variable decorated with **FragmentSizeNV** **must** be declared as a two-component vector of 32-bit integer values

FrontFacing

Decorating a variable with the **FrontFacing** built-in decoration will make that variable contain whether the fragment is front or back facing. This variable is non-zero if the current fragment is considered to be part of a **front-facing** polygon primitive or of a non-polygon primitive and is zero if the fragment is considered to be part of a back-facing polygon primitive.

Valid Usage

- VUID-FrontFacing-FrontFacing-04229
The **FrontFacing** decoration **must** be used only within the **Fragment Execution Model**
- VUID-FrontFacing-FrontFacing-04230
The variable decorated with **FrontFacing** **must** be declared using the **Input Storage Class**
- VUID-FrontFacing-FrontFacing-04231
The variable decorated with **FrontFacing** **must** be declared as a boolean value

FullyCoveredEXT

Decorating a variable with the **FullyCoveredEXT** built-in decoration will make that variable

indicate whether the [fragment area](#) is fully covered by the generating primitive. This variable is non-zero if conservative rasterization is enabled and the current fragment area is fully covered by the generating primitive, and is zero if the fragment is not covered or partially covered, or conservative rasterization is disabled.

Valid Usage

- VUID-FullyCoveredEXT-FullyCoveredEXT-04232
The [FullyCoveredEXT](#) decoration **must** be used only within the [Fragment Execution Model](#)
- VUID-FullyCoveredEXT-FullyCoveredEXT-04233
The variable decorated with [FullyCoveredEXT](#) **must** be declared using the [Input Storage Class](#)
- VUID-FullyCoveredEXT-FullyCoveredEXT-04234
The variable decorated with [FullyCoveredEXT](#) **must** be declared as a boolean value
- VUID-FullyCoveredEXT-conservativeRasterizationPostDepthCoverage-04235
If [VkPhysicalDeviceConservativeRasterizationPropertiesEXT::conservativeRasterizationPostDepthCoverage](#) is not supported the [PostDepthCoverage Execution Mode](#) **must** not be declared, when a variable with the [FullyCoveredEXT](#) decoration is declared

GlobalInvocationId

Decorating a variable with the [GlobalInvocationId](#) built-in decoration will make that variable contain the location of the current invocation within the global workgroup. Each component is equal to the index of the local workgroup multiplied by the size of the local workgroup plus [LocalInvocationId](#).

Valid Usage

- VUID-GlobalInvocationId-GlobalInvocationId-04236
The [GlobalInvocationId](#) decoration **must** be used only within the [GLCompute](#), [MeshEXT](#), [TaskEXT](#), [MeshNV](#), or [TaskNV Execution Model](#)
- VUID-GlobalInvocationId-GlobalInvocationId-04237
The variable decorated with [GlobalInvocationId](#) **must** be declared using the [Input Storage Class](#)
- VUID-GlobalInvocationId-GlobalInvocationId-04238
The variable decorated with [GlobalInvocationId](#) **must** be declared as a three-component vector of 32-bit integer values

HelperInvocation

Decorating a variable with the [HelperInvocation](#) built-in decoration will make that variable contain whether the current invocation is a helper invocation. This variable is non-zero if the current fragment being shaded is a helper invocation and zero otherwise. A helper invocation is an invocation of the shader that is produced to satisfy internal requirements such as the generation of derivatives.

NOTE

It is very likely that a helper invocation will have a value of `SampleMask` fragment shader input value that is zero.

Valid Usage

- VUID-HelperInvocation-HelperInvocation-04239
The `HelperInvocation` decoration **must** be used only within the `Fragment Execution Model`
- VUID-HelperInvocation-HelperInvocation-04240
The variable decorated with `HelperInvocation` **must** be declared using the `Input Storage Class`
- VUID-HelperInvocation-HelperInvocation-04241
The variable decorated with `HelperInvocation` **must** be declared as a boolean value

HitKindKHR

A variable decorated with the `HitKindKHR` decoration will describe the intersection that triggered the execution of the current shader. The values are determined by the intersection shader. For user-defined intersection shaders this is the value that was passed to the “Hit Kind” operand of `OpReportIntersectionKHR`. For triangle intersection candidates, this will be one of `HitKindFrontFacingTriangleKHR` or `HitKindBackFacingTriangleKHR`.

Valid Usage

- VUID-HitKindKHR-HitKindKHR-04242
The `HitKindKHR` decoration **must** be used only within the `AnyHitKHR` or `ClosestHitKHR Execution Model`
- VUID-HitKindKHR-HitKindKHR-04243
The variable decorated with `HitKindKHR` **must** be declared using the `Input Storage Class`
- VUID-HitKindKHR-HitKindKHR-04244
The variable decorated with `HitKindKHR` **must** be declared as a scalar 32-bit integer value

HitTNV

A variable decorated with the `HitTNV` decoration is equivalent to a variable decorated with the `RayTmaxKHR` decoration.

Valid Usage

- VUID-HitTNV-HitTNV-04245
The `HitTNV` decoration **must** be used only within the `AnyHitNV` or `ClosestHitNV Execution Model`
- VUID-HitTNV-HitTNV-04246
The variable decorated with `HitTNV` **must** be declared using the `Input Storage Class`
- VUID-HitTNV-HitTNV-04247

The variable decorated with **HitTNV** **must** be declared as a scalar 32-bit floating-point value

HitTriangleVertexPositionsKHR

A variable decorated with the **HitTriangleVertexPositionsKHR** decoration will specify the object space vertices of the triangle at the current intersection in application-provided order. The positions returned are transformed by the geometry transform, which is performed at standard **floating-point** precision, but without a specifically defined order of floating-point operations to perform the matrix multiplication.

Valid Usage

- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08747
The **HitTriangleVertexPositionsKHR** decoration **must** be used only within the **AnyHitKHR** or **ClosestHitKHR Execution Model**
- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08748
The variable decorated with **HitTriangleVertexPositionsKHR** **must** be declared using the **Input Storage Class**
- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08749
The variable decorated with **HitTriangleVertexPositionsKHR** **must** be declared as an array of three vectors of three 32-bit float values
- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08750
The variable decorated with **HitTriangleVertexPositionsKHR** **must** be used only if the value of **HitKindKHR** is **HitKindFrontFacingTriangleKHR** or **HitKindBackFacingTriangleKHR**
- VUID-HitTriangleVertexPositionsKHR-None-08751
The acceleration structure corresponding to the current intersection **must** have been built with **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR**

IncomingRayFlagsKHR

A variable with the **IncomingRayFlagsKHR** decoration will contain the ray flags passed in to the trace call that invoked this particular shader. Setting pipeline flags on the ray tracing pipeline **must** not cause any corresponding flags to be set in variables with this decoration.

Valid Usage

- VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04248
The **IncomingRayFlagsKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**
- VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04249
The variable decorated with **IncomingRayFlagsKHR** **must** be declared using the **Input Storage Class**
- VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04250
The variable decorated with **IncomingRayFlagsKHR** **must** be declared as a scalar 32-bit

integer value

IndexCountHUAWEI

The `IndexCountHUAWEI` decoration can be used to decorate a cluster culling shader output variable, this indexed mode specific variable will contain an integer value that specifies the number of indexed vertices in a cluster to draw.

Valid Usage

- VUID-IndexCountHUAWEI-IndexCountHUAWEI-07805
The `IndexCountHUAWEI` decoration **must** be used only within the `ClusterCullingHUAWEI Execution Model`
- VUID-IndexCountHUAWEI-IndexCountHUAWEI-07806
The variable decorated with `IndexCountHUAWEI` **must** be declared as a scalar 32-bit integer value

InstanceCountHUAWEI

The `InstanceCountHUAWEI` decoration can be used to decorate a cluster culling shader output variable, this variable will contain an integer value that specifies the number of instance to draw in a cluster.

Valid Usage

- VUID-InstanceCountHUAWEI-InstanceCountHUAWEI-07807
The `InstanceCountHUAWEI` decoration **must** be used only within the `ClusterCullingHUAWEI Execution Model`
- VUID-InstanceCountHUAWEI-InstanceCountHUAWEI-07808
The variable decorated with `InstanceCountHUAWEI` **must** be declared as a scalar 32-bit integer value

InstanceCustomIndexKHR

A variable decorated with the `InstanceCustomIndexKHR` decoration will contain the application-defined value of the instance that intersects the current ray. This variable contains the value that was specified in `VkAccelerationStructureInstanceKHR::instanceCustomIndex` for the current acceleration structure instance in the lower 24 bits and the upper 8 bits will be zero.

Valid Usage

- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04251
The `InstanceCustomIndexKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR Execution Model`
- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04252
The variable decorated with `InstanceCustomIndexKHR` **must** be declared using the `Input`

Storage Class

- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04253

The variable decorated with **InstanceCustomIndexKHR** **must** be declared as a scalar 32-bit integer value

InstanceId

Decorating a variable in an intersection, any-hit, or closest hit shader with the **InstanceId** decoration will make that variable contain the index of the instance that intersects the current ray.

Valid Usage

- VUID-InstanceId-InstanceId-04254

The **InstanceId** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model**

- VUID-InstanceId-InstanceId-04255

The variable decorated with **InstanceId** **must** be declared using the **Input Storage Class**

- VUID-InstanceId-InstanceId-04256

The variable decorated with **InstanceId** **must** be declared as a scalar 32-bit integer value

InvocationId

Decorating a variable with the **InvocationId** built-in decoration will make that variable contain the index of the current shader invocation in a geometry shader, or the index of the output patch vertex in a tessellation control shader.

In a geometry shader, the index of the current shader invocation ranges from zero to the number of **instances** declared in the shader minus one. If the instance count of the geometry shader is one or is not specified, then **InvocationId** will be zero.

Valid Usage

- VUID-InvocationId-InvocationId-04257

The **InvocationId** decoration **must** be used only within the **TessellationControl** or **Geometry Execution Model**

- VUID-InvocationId-InvocationId-04258

The variable decorated with **InvocationId** **must** be declared using the **Input Storage Class**

- VUID-InvocationId-InvocationId-04259

The variable decorated with **InvocationId** **must** be declared as a scalar 32-bit integer value

InvocationsPerPixelNV

Decorating a variable with the **InvocationsPerPixelNV** built-in decoration will make that variable contain the maximum number of fragment shader invocations per pixel, as derived from the

effective shading rate for the fragment. If a primitive does not fully cover a pixel, the number of fragment shader invocations for that pixel **may** be less than the value of `InvocationsPerPixelNV`. If the shading rate indicates a fragment covering multiple pixels, then `InvocationsPerPixelNV` will be one.

Valid Usage

- VUID-InvocationsPerPixelNV-InvocationsPerPixelNV-04260
The `InvocationsPerPixelNV` decoration **must** be used only within the `Fragment Execution Model`
- VUID-InvocationsPerPixelNV-InvocationsPerPixelNV-04261
The variable decorated with `InvocationsPerPixelNV` **must** be declared using the `Input Storage Class`
- VUID-InvocationsPerPixelNV-InvocationsPerPixelNV-04262
The variable decorated with `InvocationsPerPixelNV` **must** be declared as a scalar 32-bit integer value

InstanceIndex

Decorating a variable in a vertex shader with the `InstanceIndex` built-in decoration will make that variable contain the index of the instance that is being processed by the current vertex shader invocation. `InstanceIndex` begins at the `firstInstance` parameter to `vkCmdDraw` or `vkCmdDrawIndexed` or at the `firstInstance` member of a structure consumed by `vkCmdDrawIndirect` or `vkCmdDrawIndexedIndirect`.

Valid Usage

- VUID-InstanceIndex-InstanceIndex-04263
The `InstanceIndex` decoration **must** be used only within the `Vertex Execution Model`
- VUID-InstanceIndex-InstanceIndex-04264
The variable decorated with `InstanceIndex` **must** be declared using the `Input Storage Class`
- VUID-InstanceIndex-InstanceIndex-04265
The variable decorated with `InstanceIndex` **must** be declared as a scalar 32-bit integer value

LaunchIdKHR

A variable decorated with the `LaunchIdKHR` decoration will specify the index of the work item being processed. One work item is generated for each of the `width × height × depth` items dispatched by a `vkCmdTraceRaysKHR` or `vkCmdTraceRaysNV` command. All shader invocations inherit the same value for variables decorated with `LaunchIdKHR`.

Valid Usage

- VUID-LaunchIdKHR-LaunchIdKHR-04266
The `LaunchIdKHR` decoration **must** be used only within the `RayGenerationKHR`,

IntersectionKHR, AnyHitKHR, ClosestHitKHR, MissKHR, or CallableKHR Execution Model

- VUID-LaunchIdKHR-LaunchIdKHR-04267
The variable decorated with **LaunchIdKHR** **must** be declared using the **Input Storage Class**
- VUID-LaunchIdKHR-LaunchIdKHR-04268
The variable decorated with **LaunchIdKHR** **must** be declared as a three-component vector of 32-bit integer values

LaunchSizeKHR

A variable decorated with the **LaunchSizeKHR** decoration will contain the **width**, **height**, and **depth** dimensions passed to the **vkCmdTraceRaysKHR** or **vkCmdTraceRaysNV** command that initiated this shader execution. The **width** is in the first component, the **height** is in the second component, and the **depth** is in the third component.

Valid Usage

- VUID-LaunchSizeKHR-LaunchSizeKHR-04269
The **LaunchSizeKHR** decoration **must** be used only within the **RayGenerationKHR, IntersectionKHR, AnyHitKHR, ClosestHitKHR, MissKHR, or CallableKHR Execution Model**
- VUID-LaunchSizeKHR-LaunchSizeKHR-04270
The variable decorated with **LaunchSizeKHR** **must** be declared using the **Input Storage Class**
- VUID-LaunchSizeKHR-LaunchSizeKHR-04271
The variable decorated with **LaunchSizeKHR** **must** be declared as a three-component vector of 32-bit integer values

Layer

Decorating a variable with the **Layer** built-in decoration will make that variable contain the select layer of a multi-layer framebuffer attachment.

In a mesh, vertex, tessellation evaluation, or geometry shader, any variable decorated with **Layer** can be written with the framebuffer layer index to which the primitive produced by that shader will be directed.

The last active **pre-rasterization shader stage** (in pipeline order) controls the **Layer** that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the **Layer**.

If the last active **pre-rasterization shader stage** shader entry point's interface does not include a variable decorated with **Layer**, then the first layer is used. If a **pre-rasterization shader stage** shader entry point's interface includes a variable decorated with **Layer**, it **must** write the same value to **Layer** for all output vertices of a given primitive. If the **Layer** value is less than 0 or greater than or equal to the number of layers in the framebuffer, then primitives **may** still be rasterized, fragment shaders **may** be executed, and the framebuffer values for all layers are undefined. In a mesh shader this also applies when the **Layer** value is greater than or equal to the **maxMeshOutputLayers** limit.

If a variable with the **Layer** decoration is also decorated with **ViewportRelativeNV**, then the

ViewportIndex is added to the layer that is used for rendering and that is made available in the fragment shader.

If the shader writes to a variable decorated **ViewportMaskNV**, then the layer selected has a different value for each viewport a primitive is rendered to.

In a fragment shader, a variable decorated with **Layer** contains the layer index of the primitive that the fragment invocation belongs to.

Valid Usage

- VUID-Layer-Layer-04272
The **Layer** decoration **must** be used only within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationEvaluation**, **Geometry**, or **Fragment Execution Model**
- VUID-Layer-Layer-04273
If the **shaderOutputLayer** feature is not enabled then the **Layer** decoration **must** be used only within the **Geometry** or **Fragment Execution Model**
- VUID-Layer-Layer-04274
The variable decorated with **Layer** within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationEvaluation**, or **Geometry Execution Model** **must** be declared using the **Output Storage Class**
- VUID-Layer-Layer-04275
The variable decorated with **Layer** within the **Fragment Execution Model** **must** be declared using the **Input Storage Class**
- VUID-Layer-Layer-04276
The variable decorated with **Layer** **must** be declared as a scalar 32-bit integer value
- VUID-Layer-Layer-07039
The variable decorated with **Layer** within the **MeshEXT Execution Model** **must** also be decorated with the **PerPrimitiveEXT** decoration

LayerPerViewNV

Decorating a variable with the **LayerPerViewNV** built-in decoration will make that variable contain the per-view layer information. The per-view layer has the same semantics as **Layer**, for each view.

Valid Usage

- VUID-LayerPerViewNV-LayerPerViewNV-04277
The **LayerPerViewNV** decoration **must** be used only within the **MeshNV Execution Model**
- VUID-LayerPerViewNV-LayerPerViewNV-04278
The variable decorated with **LayerPerViewNV** **must** be declared using the **Output Storage Class**
- VUID-LayerPerViewNV-LayerPerViewNV-04279
The variable decorated with **LayerPerViewNV** **must** also be decorated with the **PerViewNV**

decoration

- VUID-LayerPerViewNV-LayerPerViewNV-04280

The variable decorated with **LayerPerViewNV** **must** be declared as an array of scalar 32-bit integer values

LocalInvocationId

Decorating a variable with the **LocalInvocationId** built-in decoration will make that variable contain the location of the current cluster culling, task, mesh, or compute shader invocation within the local workgroup. Each component ranges from zero through to the size of the workgroup in that dimension minus one.

NOTE

If the size of the workgroup in a particular dimension is one, then the **LocalInvocationId** in that dimension will be zero. If the workgroup is effectively two-dimensional, then **LocalInvocationId.z** will be zero. If the workgroup is effectively one-dimensional, then both **LocalInvocationId.y** and **LocalInvocationId.z** will be zero.

Valid Usage

- VUID-LocalInvocationId-LocalInvocationId-04281

The **LocalInvocationId** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**

- VUID-LocalInvocationId-LocalInvocationId-04282

The variable decorated with **LocalInvocationId** **must** be declared using the **Input Storage Class**

- VUID-LocalInvocationId-LocalInvocationId-04283

The variable decorated with **LocalInvocationId** **must** be declared as a three-component vector of 32-bit integer values

LocalInvocationIndex

Decorating a variable with the **LocalInvocationIndex** built-in decoration will make that variable contain a one-dimensional representation of **LocalInvocationId**. This is computed as:

```
LocalInvocationIndex =  
    LocalInvocationId.z * WorkgroupSize.x * WorkgroupSize.y +  
    LocalInvocationId.y * WorkgroupSize.x +  
    LocalInvocationId.x;
```

Valid Usage

- VUID-LocalInvocationIndex-LocalInvocationIndex-04284

The **LocalInvocationIndex** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**

- VUID-LocalInvocationIndex-LocalInvocationIndex-04285

The variable decorated with **LocalInvocationIndex** **must** be declared using the **Input Storage Class**

- VUID-LocalInvocationIndex-LocalInvocationIndex-04286

The variable decorated with **LocalInvocationIndex** **must** be declared as a scalar 32-bit integer value

MeshViewCountNV

Decorating a variable with the **MeshViewCountNV** built-in decoration will make that variable contain the number of views processed by the current mesh or task shader invocations.

Valid Usage

- VUID-MeshViewCountNV-MeshViewCountNV-04287

The **MeshViewCountNV** decoration **must** be used only within the **MeshNV** or **TaskNV Execution Model**

- VUID-MeshViewCountNV-MeshViewCountNV-04288

The variable decorated with **MeshViewCountNV** **must** be declared using the **Input Storage Class**

- VUID-MeshViewCountNV-MeshViewCountNV-04289

The variable decorated with **MeshViewCountNV** **must** be declared as a scalar 32-bit integer value

MeshViewIndicesNV

Decorating a variable with the **MeshViewIndicesNV** built-in decoration will make that variable contain the mesh view indices. The mesh view indices is an array of values where each element holds the view number of one of the views being processed by the current mesh or task shader invocations. The values of array elements with indices greater than or equal to **MeshViewCountNV** are undefined. If the value of **MeshViewIndicesNV[i]** is *j*, then any outputs decorated with **PerViewNV** will take on the value of array element *i* when processing primitives for view index *j*.

Valid Usage

- VUID-MeshViewIndicesNV-MeshViewIndicesNV-04290

The **MeshViewIndicesNV** decoration **must** be used only within the **MeshNV** or **TaskNV Execution Model**

- VUID-MeshViewIndicesNV-MeshViewIndicesNV-04291

The variable decorated with **MeshViewIndicesNV** **must** be declared using the **Input Storage Class**

- VUID-MeshViewIndicesNV-MeshViewIndicesNV-04292

The variable decorated with **MeshViewIndicesNV** **must** be declared as an array of scalar 32-bit integer values

NumSubgroups

Decorating a variable with the **NumSubgroups** built-in decoration will make that variable contain the number of subgroups in the local workgroup.

Valid Usage

- VUID-NumSubgroups-NumSubgroups-04293
The **NumSubgroups** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**
- VUID-NumSubgroups-NumSubgroups-04294
The variable decorated with **NumSubgroups** **must** be declared using the **Input Storage Class**
- VUID-NumSubgroups-NumSubgroups-04295
The variable decorated with **NumSubgroups** **must** be declared as a scalar 32-bit integer value

NumWorkgroups

Decorating a variable with the **NumWorkgroups** built-in decoration will make that variable contain the number of local workgroups that are part of the dispatch that the invocation belongs to. Each component is equal to the values of the workgroup count parameters passed into the dispatching commands.

Valid Usage

- VUID-NumWorkgroups-NumWorkgroups-04296
The **NumWorkgroups** decoration **must** be used only within the **GLCompute**, **MeshEXT**, or **TaskEXT Execution Model**
- VUID-NumWorkgroups-NumWorkgroups-04297
The variable decorated with **NumWorkgroups** **must** be declared using the **Input Storage Class**
- VUID-NumWorkgroups-NumWorkgroups-04298
The variable decorated with **NumWorkgroups** **must** be declared as a three-component vector of 32-bit integer values

ObjectRayDirectionKHR

A variable decorated with the **ObjectRayDirectionKHR** decoration will specify the direction of the ray being processed, in object space.

Valid Usage

- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04299
The **ObjectRayDirectionKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04300
The variable decorated with **ObjectRayDirectionKHR** **must** be declared using the **Input**

Storage Class

- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04301

The variable decorated with **ObjectRayDirectionKHR** **must** be declared as a three-component vector of 32-bit floating-point values

ObjectRayOriginKHR

A variable decorated with the **ObjectRayOriginKHR** decoration will specify the origin of the ray being processed, in object space.

Valid Usage

- VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04302
The **ObjectRayOriginKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04303
The variable decorated with **ObjectRayOriginKHR** **must** be declared using the **Input Storage Class**
- VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04304
The variable decorated with **ObjectRayOriginKHR** **must** be declared as a three-component vector of 32-bit floating-point values

ObjectToWorldKHR

A variable decorated with the **ObjectToWorldKHR** decoration will contain the current object-to-world transformation matrix, which is determined by the instance of the current intersection.

Valid Usage

- VUID-ObjectToWorldKHR-ObjectToWorldKHR-04305
The **ObjectToWorldKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-ObjectToWorldKHR-ObjectToWorldKHR-04306
The variable decorated with **ObjectToWorldKHR** **must** be declared using the **Input Storage Class**
- VUID-ObjectToWorldKHR-ObjectToWorldKHR-04307
The variable decorated with **ObjectToWorldKHR** **must** be declared as a matrix with four columns of three-component vectors of 32-bit floating-point values

PatchVertices

Decorating a variable with the **PatchVertices** built-in decoration will make that variable contain the number of vertices in the input patch being processed by the shader. In a Tessellation Control Shader, this is the same as the `name:patchControlPoints` member of [VkPipelineTessellationStateCreateInfo](#). In a Tessellation Evaluation Shader, **PatchVertices** is equal to the tessellation control output patch size. When the same shader is used in different

pipelines where the patch sizes are configured differently, the value of the `PatchVertices` variable will also differ.

Valid Usage

- VUID-PatchVertices-PatchVertices-04308
The `PatchVertices` decoration **must** be used only within the `TessellationControl` or `TessellationEvaluation Execution Model`
- VUID-PatchVertices-PatchVertices-04309
The variable decorated with `PatchVertices` **must** be declared using the `Input Storage Class`
- VUID-PatchVertices-PatchVertices-04310
The variable decorated with `PatchVertices` **must** be declared as a scalar 32-bit integer value

PointCoord

Decorating a variable with the `PointCoord` built-in decoration will make that variable contain the coordinate of the current fragment within the point being rasterized, normalized to the size of the point with origin in the upper left corner of the point, as described in [Basic Point Rasterization](#). If the primitive the fragment shader invocation belongs to is not a point, then the variable decorated with `PointCoord` contains an undefined value.

NOTE Depending on how the point is rasterized, `PointCoord` **may** never reach (0,0) or (1,1).

Valid Usage

- VUID-PointCoord-PointCoord-04311
The `PointCoord` decoration **must** be used only within the `Fragment Execution Model`
- VUID-PointCoord-PointCoord-04312
The variable decorated with `PointCoord` **must** be declared using the `Input Storage Class`
- VUID-PointCoord-PointCoord-04313
The variable decorated with `PointCoord` **must** be declared as a two-component vector of 32-bit floating-point values

PointSize

Decorating a variable with the `PointSize` built-in decoration will make that variable contain the size of point primitives or the final rasterization of polygons if `polygon mode` is `VK_POLYGON_MODE_POINT` when `VkPhysicalDeviceMaintenance5PropertiesKHR::polygonModePointSize` is set to `VK_TRUE`. The value written to the variable decorated with `PointSize` by the last [pre-rasterization shader stage](#) in the pipeline is used as the framebuffer-space size of points produced by rasterization. If `maintenance5` is enabled and a value is not written to a variable decorated with `PointSize`, a value of 1.0 is used as the size of points.

NOTE When `PointSize` decorates a variable in the `Input Storage Class`, it contains the data written to the output variable decorated with `PointSize` from the previous shader

stage.

Valid Usage

- VUID-PointSize-PointSize-04314
The **PointSize** decoration **must** be used only within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model**
- VUID-PointSize-PointSize-04315
The variable decorated with **PointSize** within the **MeshEXT**, **MeshNV**, or **Vertex Execution Model** **must** be declared using the **Output Storage Class**
- VUID-PointSize-PointSize-04316
The variable decorated with **PointSize** within the **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model** **must** not be declared using a **Storage Class** other than **Input** or **Output**
- VUID-PointSize-PointSize-04317
The variable decorated with **PointSize** **must** be declared as a scalar 32-bit floating-point value

Position

Decorating a variable with the **Position** built-in decoration will make that variable contain the position of the current vertex. In the last **pre-rasterization shader stage**, the value of the variable decorated with **Position** is used in subsequent primitive assembly, clipping, and rasterization operations.

NOTE

When **Position** decorates a variable in the **Input Storage Class**, it contains the data written to the output variable decorated with **Position** from the previous shader stage.

Valid Usage

- VUID-Position-Position-04318
The **Position** decoration **must** be used only within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model**
- VUID-Position-Position-04319
The variable decorated with **Position** within the **MeshEXT**, **MeshNV**, or **Vertex Execution Model** **must** be declared using the **Output Storage Class**
- VUID-Position-Position-04320
The variable decorated with **Position** within the **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model** **must** not be declared using a **Storage Class** other than **Input** or **Output**
- VUID-Position-Position-04321
The variable decorated with **Position** **must** be declared as a four-component vector of 32-bit floating-point values

PositionPerViewNV

Decorating a variable with the `PositionPerViewNV` built-in decoration will make that variable contain the position of the current vertex, for each view.

Elements of the array correspond to views in a multiview subpass, and those elements corresponding to views in the view mask of the subpass the shader is compiled against will be used as the position value for those views. For the final [pre-rasterization shader stage](#) in the pipeline, values written to an output variable decorated with `PositionPerViewNV` are used in subsequent primitive assembly, clipping, and rasterization operations, as with `Position`. `PositionPerViewNV` output in an earlier [pre-rasterization shader stage](#) is available as an input in the subsequent [pre-rasterization shader stage](#).

If a shader is compiled against a subpass that has the `VK_SUBPASS_DESCRIPTION_PER_VIEW_POSITION_X_ONLY_BIT_NVX` bit set, then the position values for each view **must** not differ in any component other than the X component. If the values do differ, one will be chosen in an implementation-dependent manner.

Valid Usage

- VUID-PositionPerViewNV-PositionPerViewNV-04322
The `PositionPerViewNV` decoration **must** be used only within the `MeshNV`, `Vertex`, `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model`
- VUID-PositionPerViewNV-PositionPerViewNV-04323
The variable decorated with `PositionPerViewNV` within the `Vertex`, or `MeshNV Execution Model` **must** be declared using the `Output Storage Class`
- VUID-PositionPerViewNV-PositionPerViewNV-04324
The variable decorated with `PositionPerViewNV` within the `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model` **must** not be declared using a `Storage Class` other than `Input` or `Output`
- VUID-PositionPerViewNV-PositionPerViewNV-04325
The variable decorated with `PositionPerViewNV` **must** be declared as an array of four-component vector of 32-bit floating-point values with at least as many elements as the maximum view in the subpass's view mask plus one
- VUID-PositionPerViewNV-PositionPerViewNV-04326
The array variable decorated with `PositionPerViewNV` **must** only be indexed by a constant or specialization constant

PrimitiveCountNV

Decorating a variable with the `PrimitiveCountNV` decoration will make that variable contain the primitive count. The primitive count specifies the number of primitives in the output mesh produced by the mesh shader that will be processed by subsequent pipeline stages.

Valid Usage

- VUID-PrimitiveCountNV-PrimitiveCountNV-04327

The **PrimitiveCountNV** decoration **must** be used only within the **MeshNV Execution Model**

- VUID-PrimitiveCountNV-PrimitiveCountNV-04328

The variable decorated with **PrimitiveCountNV** **must** be declared using the **Output Storage Class**

- VUID-PrimitiveCountNV-PrimitiveCountNV-04329

The variable decorated with **PrimitiveCountNV** **must** be declared as a scalar 32-bit integer value

PrimitiveId

Decorating a variable with the **PrimitiveId** built-in decoration will make that variable contain the index of the current primitive.

The index of the first primitive generated by a drawing command is zero, and the index is incremented after every individual point, line, or triangle primitive is processed.

For triangles drawn as points or line segments (see **Polygon Mode**), the primitive index is incremented only once, even if multiple points or lines are eventually drawn.

Variables decorated with **PrimitiveId** are reset to zero between each instance drawn.

Restarting a primitive topology using primitive restart has no effect on the value of variables decorated with **PrimitiveId**.

In tessellation control and tessellation evaluation shaders, it will contain the index of the patch within the current set of rendering primitives that corresponds to the shader invocation.

In a geometry shader, it will contain the number of primitives presented as input to the shader since the current set of rendering primitives was started.

In a fragment shader, it will contain the primitive index written by the mesh shader if a mesh shader is present, or the primitive index written by the geometry shader if a geometry shader is present, or with the value that would have been presented as input to the geometry shader had it been present.

In an intersection, any-hit, or closest hit shader, it will contain the index within the geometry of the triangle or bounding box being processed.

NOTE

When the **PrimitiveId** decoration is applied to an output variable in the mesh shader or geometry shader, the resulting value is seen through the **PrimitiveId** decorated input variable in the fragment shader.

The fragment shader using **PrimitiveId** will need to declare either the **MeshShadingNV**, **MeshShadingEXT**, **Geometry** or **Tessellation** capability to satisfy the requirement SPIR-V has to use **PrimitiveId**.

Valid Usage

- VUID-PrimitiveId-PrimitiveId-04330

The **PrimitiveId** decoration **must** be used only within the **MeshEXT**, **MeshNV**, **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, **TessellationControl**, **TessellationEvaluation**, **Geometry**, or **Fragment Execution Model**

- VUID-PrimitiveId-Fragment-04331
If pipeline contains both the **Fragment** and **Geometry Execution Model** and a variable decorated with **PrimitiveId** is read from **Fragment** shader, then the **Geometry** shader **must** write to the output variables decorated with **PrimitiveId** in all execution paths
- VUID-PrimitiveId-Fragment-04332
If pipeline contains both the **Fragment** and **MeshEXT** or **MeshNV Execution Model** and a variable decorated with **PrimitiveId** is read from **Fragment** shader, then the **MeshEXT** or **MeshNV** shader **must** write to the output variables decorated with **PrimitiveId** in all execution paths
- VUID-PrimitiveId-Fragment-04333
If **Fragment Execution Model** contains a variable decorated with **PrimitiveId**, then either the **MeshShadingEXT**, **MeshShadingNV**, **Geometry** or **Tessellation** capability **must** also be declared
- VUID-PrimitiveId-PrimitiveId-04334
The variable decorated with **PrimitiveId** within the **TessellationControl**, **TessellationEvaluation**, **Fragment**, **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model** **must** be declared using the **Input Storage Class**
- VUID-PrimitiveId-PrimitiveId-04335
The variable decorated with **PrimitiveId** within the **Geometry Execution Model** **must** be declared using the **Input** or **Output Storage Class**
- VUID-PrimitiveId-PrimitiveId-04336
The variable decorated with **PrimitiveId** within the **MeshEXT** or **MeshNV Execution Model** **must** be declared using the **Output Storage Class**
- VUID-PrimitiveId-PrimitiveId-04337
The variable decorated with **PrimitiveId** **must** be declared as a scalar 32-bit integer value
- VUID-PrimitiveId-PrimitiveId-07040
The variable decorated with **PrimitiveId** within the **MeshEXT Execution Model** **must** also be decorated with the **PerPrimitiveEXT** decoration

PrimitiveIndicesNV

Decorating a variable with the **PrimitiveIndicesNV** decoration will make that variable contain the output array of vertex index values. Depending on the output primitive type declared using the execution mode, the indices are split into groups of one (**OutputPoints**), two (**OutputLinesNV**), or three (**OutputTrianglesNV**) indices and each group generates a primitive.

Valid Usage

- VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04338
The **PrimitiveIndicesNV** decoration **must** be used only within the **MeshNV Execution Model**
- VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04339
The variable decorated with **PrimitiveIndicesNV** **must** be declared using the **Output Storage**

Class

- VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04340
The variable decorated with **PrimitiveIndicesNV** **must** be declared as an array of scalar 32-bit integer values
- VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04341
All index values of the array decorated with **PrimitiveIndicesNV** **must** be in the range [0, N-1], where N is the value specified by the **OutputVertices Execution Mode**
- VUID-PrimitiveIndicesNV-OutputPoints-04342
If the **Execution Mode** is **OutputPoints**, then the array decorated with **PrimitiveIndicesNV** **must** be the size of the value specified by **OutputPrimitivesNV**
- VUID-PrimitiveIndicesNV-OutputLinesNV-04343
If the **Execution Mode** is **OutputLinesNV**, then the array decorated with **PrimitiveIndicesNV** **must** be the size of two times the value specified by **OutputPrimitivesNV**
- VUID-PrimitiveIndicesNV-OutputTrianglesNV-04344
If the **Execution Mode** is **OutputTrianglesNV**, then the array decorated with **PrimitiveIndicesNV** **must** be the size of three times the value specified by **OutputPrimitivesNV**

PrimitivePointIndicesEXT

Decorating a variable with the **PrimitivePointIndicesEXT** decoration will make that variable contain the output array of vertex index values for point primitives.

Valid Usage

- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07041
The **PrimitivePointIndicesEXT** decoration **must** be used only within the **MeshEXT Execution Model**
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07042
The **PrimitivePointIndicesEXT** decoration **must** be used with the **OutputPoints Execution Mode**
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07043
The variable decorated with **PrimitivePointIndicesEXT** **must** be declared using the **Output Storage Class**
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07044
The variable decorated with **PrimitivePointIndicesEXT** **must** be declared as an array of scalar 32-bit integer values
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07045
All index values of the array decorated with **PrimitivePointIndicesEXT** **must** be in the range [0, N-1], where N is the value specified by the **OutputVertices Execution Mode**
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07046
The size of the array decorated with **PrimitivePointIndicesEXT** **must** match the value specified by **OutputPrimitivesEXT**

PrimitiveLineIndicesEXT

Decorating a variable with the `PrimitiveLineIndicesEXT` decoration will make that variable contain the output array of vertex index values for line primitives.

Valid Usage

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07047
The `PrimitiveLineIndicesEXT` decoration **must** be used only within the `MeshEXT Execution Model`
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07048
The `PrimitiveLineIndicesEXT` decoration **must** be used with the `OutputLinesEXT Execution Mode`
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07049
The variable decorated with `PrimitiveLineIndicesEXT` **must** be declared using the `Output Storage Class`
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07050
The variable decorated with `PrimitiveLineIndicesEXT` **must** be declared as an array of two component vector 32-bit integer values
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07051
All index values of the array decorated with `PrimitiveLineIndicesEXT` **must** be in the range `[0, N-1]`, where N is the value specified by the `OutputVertices Execution Mode`
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07052
The size of the array decorated with `PrimitiveLineIndicesEXT` **must** match the value specified by `OutputPrimitivesEXT`

PrimitiveTriangleIndicesEXT

Decorating a variable with the `PrimitiveTriangleIndicesEXT` decoration will make that variable contain the output array of vertex index values for triangle primitives.

Valid Usage

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07053
The `PrimitiveTriangleIndicesEXT` decoration **must** be used only within the `MeshEXT Execution Model`
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07054
The `PrimitiveTriangleIndicesEXT` decoration **must** be used with the `OutputTrianglesEXT Execution Mode`
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07055
The variable decorated with `PrimitiveTriangleIndicesEXT` **must** be declared using the `Output Storage Class`
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07056
The variable decorated with `PrimitiveTriangleIndicesEXT` **must** be declared as an array of three component vector 32-bit integer values

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07057
All index values of the array decorated with **PrimitiveTriangleIndicesEXT** **must** be in the range [0, N-1], where N is the value specified by the **OutputVertices Execution Mode**
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07058
The size of the array decorated with **PrimitiveTriangleIndicesEXT** **must** match the value specified by **OutputPrimitivesEXT**

PrimitiveShadingRateKHR

Decorating a variable with the **PrimitiveShadingRateKHR** built-in decoration will make that variable contain the **primitive fragment shading rate**.

The value written to the variable decorated with **PrimitiveShadingRateKHR** by the last **pre-rasterization shader stage** in the pipeline is used as the **primitive fragment shading rate**. Outputs in previous shader stages are ignored.

If the last active **pre-rasterization shader stage** shader entry point's interface does not include a variable decorated with **PrimitiveShadingRateKHR**, then it is as if the shader specified a fragment shading rate value of 0, indicating a horizontal and vertical rate of 1 pixel.

If a shader has **PrimitiveShadingRateKHR** in the output interface and there is an execution path through the shader that does not write to it, its value is undefined for executions of the shader that take that path.

Valid Usage

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04484
The **PrimitiveShadingRateKHR** decoration **must** be used only within the **MeshEXT**, **MeshNV**, **Vertex**, or **Geometry Execution Model**
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04485
The variable decorated with **PrimitiveShadingRateKHR** **must** be declared using the **Output Storage Class**
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04486
The variable decorated with **PrimitiveShadingRateKHR** **must** be declared as a scalar 32-bit integer value
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04487
The value written to **PrimitiveShadingRateKHR** **must** include no more than one of **Vertical2Pixels** and **Vertical4Pixels**
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04488
The value written to **PrimitiveShadingRateKHR** **must** include no more than one of **Horizontal2Pixels** and **Horizontal4Pixels**
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04489
The value written to **PrimitiveShadingRateKHR** **must** not have any bits set other than those defined by **Fragment Shading Rate Flags** enumerants in the SPIR-V specification
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-07059
The variable decorated with **PrimitiveShadingRateKHR** within the **MeshEXT Execution Model**

must also be decorated with the `PerPrimitiveEXT` decoration

RayGeometryIndexKHR

A variable decorated with the `RayGeometryIndexKHR` decoration will contain the `geometry index` for the acceleration structure geometry currently being shaded.

Valid Usage

- VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04345
The `RayGeometryIndexKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR Execution Model`
- VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04346
The variable decorated with `RayGeometryIndexKHR` **must** be declared using the `Input Storage Class`
- VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04347
The variable decorated with `RayGeometryIndexKHR` **must** be declared as a scalar 32-bit integer value

RayTmaxKHR

A variable decorated with the `RayTmaxKHR` decoration will contain the parametric t_{\max} value of the ray being processed. The value is independent of the space in which the ray origin and direction exist. The value is initialized to the parameter passed into the `pipeline trace ray` instruction.

The t_{\max} value changes throughout the lifetime of the ray that produced the intersection. In the closest hit shader, the value reflects the closest distance to the intersected primitive. In the any-hit shader, it reflects the distance to the primitive currently being intersected. In the intersection shader, it reflects the distance to the closest primitive intersected so far or the initial value. The value can change in the intersection shader after calling `OpReportIntersectionKHR` if the corresponding any-hit shader does not ignore the intersection. In a miss shader, the value is identical to the parameter passed into the `pipeline trace ray` instruction.

Valid Usage

- VUID-RayTmaxKHR-RayTmaxKHR-04348
The `RayTmaxKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, or `MissKHR Execution Model`
- VUID-RayTmaxKHR-RayTmaxKHR-04349
The variable decorated with `RayTmaxKHR` **must** be declared using the `Input Storage Class`
- VUID-RayTmaxKHR-RayTmaxKHR-04350
The variable decorated with `RayTmaxKHR` **must** be declared as a scalar 32-bit floating-point value

RayTminKHR

A variable decorated with the **RayTminKHR** decoration will contain the parametric t_{\min} value of the ray being processed. The value is independent of the space in which the ray origin and direction exist. The value is the parameter passed into the **pipeline trace ray** instruction.

The t_{\min} value remains constant for the duration of the ray query.

Valid Usage

- VUID-RayTminKHR-RayTminKHR-04351
The **RayTminKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**
- VUID-RayTminKHR-RayTminKHR-04352
The variable decorated with **RayTminKHR** **must** be declared using the **Input Storage Class**
- VUID-RayTminKHR-RayTminKHR-04353
The variable decorated with **RayTminKHR** **must** be declared as a scalar 32-bit floating-point value

SampleId

Decorating a variable with the **SampleId** built-in decoration will make that variable contain the **coverage index** for the current fragment shader invocation. **SampleId** ranges from zero to the number of samples in the framebuffer minus one. If a fragment shader entry point's interface includes an input variable decorated with **SampleId**, **Sample Shading** is considered enabled with a **minSampleShading** value of 1.0.

Valid Usage

- VUID-SampleId-SampleId-04354
The **SampleId** decoration **must** be used only within the **Fragment Execution Model**
- VUID-SampleId-SampleId-04355
The variable decorated with **SampleId** **must** be declared using the **Input Storage Class**
- VUID-SampleId-SampleId-04356
The variable decorated with **SampleId** **must** be declared as a scalar 32-bit integer value

SampleMask

Decorating a variable with the **SampleMask** built-in decoration will make any variable contain the **sample mask** for the current fragment shader invocation.

A variable in the **Input** storage class decorated with **SampleMask** will contain a bitmask of the set of samples covered by the primitive generating the fragment during rasterization. It has a sample bit set if and only if the sample is considered covered for this fragment shader invocation. **SampleMask[]** is an array of integers. Bits are mapped to samples in a manner where bit B of mask M (**SampleMask[M]**) corresponds to sample $32 \times M + B$.

A variable in the **Output** storage class decorated with **SampleMask** is an array of integers forming a bit array in a manner similar to an input variable decorated with **SampleMask**, but where each bit represents coverage as computed by the shader. This computed **SampleMask** is combined with the generated coverage mask in the **multisample coverage** operation.

Variables decorated with **SampleMask** **must** be either an unsized array, or explicitly sized to be no larger than the implementation-dependent maximum sample-mask (as an array of 32-bit elements), determined by the maximum number of samples.

If a fragment shader entry point's interface includes an output variable decorated with **SampleMask**, the sample mask will be undefined for any array elements of any fragment shader invocations that fail to assign a value. If a fragment shader entry point's interface does not include an output variable decorated with **SampleMask**, the sample mask has no effect on the processing of a fragment.

Valid Usage

- VUID-SampleMask-SampleMask-04357
The **SampleMask** decoration **must** be used only within the **Fragment Execution Model**
- VUID-SampleMask-SampleMask-04358
The variable decorated with **SampleMask** **must** be declared using the **Input** or **Output Storage Class**
- VUID-SampleMask-SampleMask-04359
The variable decorated with **SampleMask** **must** be declared as an array of 32-bit integer values

SamplePosition

Decorating a variable with the **SamplePosition** built-in decoration will make that variable contain the sub-pixel position of the sample being shaded. The top left of the pixel is considered to be at coordinate (0,0) and the bottom right of the pixel is considered to be at coordinate (1,1).

If the render pass has a fragment density map attachment, the variable will instead contain the sub-fragment position of the sample being shaded. The top left of the fragment is considered to be at coordinate (0,0) and the bottom right of the fragment is considered to be at coordinate (1,1) for any fragment area.

If a fragment shader entry point's interface includes an input variable decorated with **SamplePosition**, **Sample Shading** is considered enabled with a **minSampleShading** value of 1.0.

If the current pipeline uses **custom sample locations** the value of any variable decorated with the **SamplePosition** built-in decoration is undefined.

Valid Usage

- VUID-SamplePosition-SamplePosition-04360
The **SamplePosition** decoration **must** be used only within the **Fragment Execution Model**

- VUID-SamplePosition-SamplePosition-04361
The variable decorated with **SamplePosition** **must** be declared using the **Input Storage Class**
- VUID-SamplePosition-SamplePosition-04362
The variable decorated with **SamplePosition** **must** be declared as a two-component vector of 32-bit floating-point values

ShadingRateKHR

Decorating a variable with the **ShadingRateKHR** built-in decoration will make that variable contain the **fragment shading rate** for the current fragment invocation.

Valid Usage

- VUID-ShadingRateKHR-ShadingRateKHR-04490
The **ShadingRateKHR** decoration **must** be used only within the **Fragment Execution Model**
- VUID-ShadingRateKHR-ShadingRateKHR-04491
The variable decorated with **ShadingRateKHR** **must** be declared using the **Input Storage Class**
- VUID-ShadingRateKHR-ShadingRateKHR-04492
The variable decorated with **ShadingRateKHR** **must** be declared as a scalar 32-bit integer value

SMCountNV

Decorating a variable with the **SMCountNV** built-in decoration will make that variable contain the number of SMs on the device.

Valid Usage

- VUID-SMCountNV-SMCountNV-04363
The variable decorated with **SMCountNV** **must** be declared using the **Input Storage Class**
- VUID-SMCountNV-SMCountNV-04364
The variable decorated with **SMCountNV** **must** be declared as a scalar 32-bit integer value

SMIDNV

Decorating a variable with the **SMIDNV** built-in decoration will make that variable contain the ID of the SM on which the current shader invocation is running. This variable is in the range [0, **SMCountNV**-1].

Valid Usage

- VUID-SMIDNV-SMIDNV-04365
The variable decorated with **SMIDNV** **must** be declared using the **Input Storage Class**
- VUID-SMIDNV-SMIDNV-04366

The variable decorated with **SMIDNV** **must** be declared as a scalar 32-bit integer value

SubgroupId

Decorating a variable with the **SubgroupId** built-in decoration will make that variable contain the index of the subgroup within the local workgroup. This variable is in range [0, **NumSubgroups**-1].

Valid Usage

- VUID-SubgroupId-SubgroupId-04367
The **SubgroupId** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**
- VUID-SubgroupId-SubgroupId-04368
The variable decorated with **SubgroupId** **must** be declared using the **Input Storage Class**
- VUID-SubgroupId-SubgroupId-04369
The variable decorated with **SubgroupId** **must** be declared as a scalar 32-bit integer value

SubgroupEqMask

Decorating a variable with the **SubgroupEqMask** builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bit corresponding to the **SubgroupLocalInvocationId** is set in the variable decorated with **SubgroupEqMask**. All other bits are set to zero.

SubgroupEqMaskKHR is an alias of **SubgroupEqMask**.

Valid Usage

- VUID-SubgroupEqMask-SubgroupEqMask-04370
The variable decorated with **SubgroupEqMask** **must** be declared using the **Input Storage Class**
- VUID-SubgroupEqMask-SubgroupEqMask-04371
The variable decorated with **SubgroupEqMask** **must** be declared as a four-component vector of 32-bit integer values

SubgroupGeMask

Decorating a variable with the **SubgroupGeMask** builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations greater than or equal to **SubgroupLocalInvocationId** through **SubgroupSize**-1 are set in the variable decorated with **SubgroupGeMask**. All other bits are set to zero.

SubgroupGeMaskKHR is an alias of **SubgroupGeMask**.

Valid Usage

- VUID-SubgroupGeMask-SubgroupGeMask-04372

The variable decorated with **SubgroupGeMask** **must** be declared using the **Input Storage Class**

- VUID-SubgroupGeMask-SubgroupGeMask-04373

The variable decorated with **SubgroupGeMask** **must** be declared as a four-component vector of 32-bit integer values

SubgroupGtMask

Decorating a variable with the **SubgroupGtMask** builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations greater than **SubgroupLocalInvocationId** through **SubgroupSize-1** are set in the variable decorated with **SubgroupGtMask**. All other bits are set to zero.

SubgroupGtMaskKHR is an alias of **SubgroupGtMask**.

Valid Usage

- VUID-SubgroupGtMask-SubgroupGtMask-04374

The variable decorated with **SubgroupGtMask** **must** be declared using the **Input Storage Class**

- VUID-SubgroupGtMask-SubgroupGtMask-04375

The variable decorated with **SubgroupGtMask** **must** be declared as a four-component vector of 32-bit integer values

SubgroupLeMask

Decorating a variable with the **SubgroupLeMask** builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations less than or equal to **SubgroupLocalInvocationId** are set in the variable decorated with **SubgroupLeMask**. All other bits are set to zero.

SubgroupLeMaskKHR is an alias of **SubgroupLeMask**.

Valid Usage

- VUID-SubgroupLeMask-SubgroupLeMask-04376

The variable decorated with **SubgroupLeMask** **must** be declared using the **Input Storage Class**

- VUID-SubgroupLeMask-SubgroupLeMask-04377

The variable decorated with **SubgroupLeMask** **must** be declared as a four-component vector of 32-bit integer values

SubgroupLtMask

Decorating a variable with the **SubgroupLtMask** builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations less than **SubgroupLocalInvocationId** are set in the variable decorated with

SubgroupLtMask. All other bits are set to zero.

SubgroupLtMaskKHR is an alias of **SubgroupLtMask**.

Valid Usage

- VUID-SubgroupLtMask-SubgroupLtMask-04378
The variable decorated with **SubgroupLtMask** **must** be declared using the **Input Storage Class**
- VUID-SubgroupLtMask-SubgroupLtMask-04379
The variable decorated with **SubgroupLtMask** **must** be declared as a four-component vector of 32-bit integer values

SubgroupLocalInvocationId

Decorating a variable with the **SubgroupLocalInvocationId** builtin decoration will make that variable contain the index of the invocation within the subgroup. This variable is in range $[0, \text{SubgroupSize}-1]$.

If **VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT** is specified, or if **module** declares SPIR-V version 1.6 or higher, and the local workgroup size in the X dimension of the **stage** is a multiple of **SubgroupSize**, full subgroups are enabled for that pipeline stage. When full subgroups are enabled, subgroups **must** be launched with all invocations active, i.e., there is an active invocation with **SubgroupLocalInvocationId** for each value in range $[0, \text{SubgroupSize}-1]$.

NOTE

There is no direct relationship between **SubgroupLocalInvocationId** and **LocalInvocationId** or **LocalInvocationIndex**. If the pipeline or shader object was created with full subgroups applications can compute their own local invocation index to serve the same purpose:

$$\text{index} = \text{SubgroupLocalInvocationId} + \text{SubgroupId} \times \text{SubgroupSize}$$

If full subgroups are not enabled, some subgroups may be dispatched with inactive invocations that do not correspond to a local workgroup invocation, making the value of index unreliable.

NOTE

VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT and **VK_SHADER_CREATE_REQUIRE_FULL_SUBGROUPS_BIT_EXT** are effectively deprecated when compiling SPIR-V 1.6 shaders, as this behavior is the default for Vulkan with SPIR-V 1.6. This is more aligned with developer expectations, and avoids applications unexpectedly breaking in the future.

Valid Usage

- VUID-SubgroupLocalInvocationId-SubgroupLocalInvocationId-04380
The variable decorated with **SubgroupLocalInvocationId** **must** be declared using the **Input Storage Class**

- VUID-SubgroupLocalInvocationId-SubgroupLocalInvocationId-04381

The variable decorated with **SubgroupLocalInvocationId** **must** be declared as a scalar 32-bit integer value

SubgroupSize

Decorating a variable with the **SubgroupSize** builtin decoration will make that variable contain the implementation-dependent **number of invocations in a subgroup**. This value **must** be a power-of-two integer.

If the pipeline was created with the **VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT** flag set, or the shader object was created with the **VK_SHADER_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT_EXT** flag set, or the SPIR-V module is at least version 1.6, the **SubgroupSize** decorated variable will contain the subgroup size for each subgroup that gets dispatched. This value **must** be between **minSubgroupSize** and **maxSubgroupSize** and **must** be uniform with **subgroup scope**. The value **may** vary across a single draw call, and for fragment shaders **may** vary across a single primitive. In compute dispatches, **SubgroupSize** **must** be uniform with **command scope**.

If the pipeline was created with a chained **VkPipelineShaderStageRequiredSubgroupSizeCreateInfo** structure, or the shader object was created with a chained **VkShaderRequiredSubgroupSizeCreateInfoEXT** structure, the **SubgroupSize** decorated variable will match **requiredSubgroupSize**.

If SPIR-V module is less than version 1.6 and the pipeline was not created with the **VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT** flag set and no **VkPipelineShaderStageRequiredSubgroupSizeCreateInfo** structure was chained, and the shader was not created with the **VK_SHADER_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT_EXT** flag set and no **VkShaderRequiredSubgroupSizeCreateInfoEXT** structure was chained, the variable decorated with **SubgroupSize** will match **subgroupSize**.

The maximum number of invocations that an implementation can support per subgroup is 128.

NOTE

The old behavior for **SubgroupSize** is considered deprecated as certain compute algorithms cannot be easily implemented without the guarantees of **VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT** and **VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT**.

Valid Usage

- VUID-SubgroupSize-SubgroupSize-04382

The variable decorated with **SubgroupSize** **must** be declared using the **Input Storage Class**

- VUID-SubgroupSize-SubgroupSize-04383

The variable decorated with **SubgroupSize** **must** be declared as a scalar 32-bit integer value

TaskCountNV

Decorating a variable with the **TaskCountNV** decoration will make that variable contain the task count. The task count specifies the number of subsequent mesh shader workgroups that get generated upon completion of the task shader.

Valid Usage

- VUID-TaskCountNV-TaskCountNV-04384
The **TaskCountNV** decoration **must** be used only within the **TaskNV Execution Model**
- VUID-TaskCountNV-TaskCountNV-04385
The variable decorated with **TaskCountNV** **must** be declared using the **Output Storage Class**
- VUID-TaskCountNV-TaskCountNV-04386
The variable decorated with **TaskCountNV** **must** be declared as a scalar 32-bit integer value

TessCoord

Decorating a variable with the **TessCoord** built-in decoration will make that variable contain the three-dimensional (u,v,w) barycentric coordinate of the tessellated vertex within the patch. u, v, and w are in the range [0,1] and vary linearly across the primitive being subdivided. For the tessellation modes of **Quads** or **Isolines**, the third component is always zero.

Valid Usage

- VUID-TessCoord-TessCoord-04387
The **TessCoord** decoration **must** be used only within the **TessellationEvaluation Execution Model**
- VUID-TessCoord-TessCoord-04388
The variable decorated with **TessCoord** **must** be declared using the **Input Storage Class**
- VUID-TessCoord-TessCoord-04389
The variable decorated with **TessCoord** **must** be declared as a three-component vector of 32-bit floating-point values

TessLevelOuter

Decorating a variable with the **TessLevelOuter** built-in decoration will make that variable contain the outer tessellation levels for the current patch.

In tessellation control shaders, the variable decorated with **TessLevelOuter** **can** be written to, controlling the tessellation factors for the resulting patch. These values are used by the tessellator to control primitive tessellation and **can** be read by tessellation evaluation shaders.

In tessellation evaluation shaders, the variable decorated with **TessLevelOuter** **can** read the values written by the tessellation control shader.

Valid Usage

- VUID-TessLevelOuter-TessLevelOuter-04390
The `TessLevelOuter` decoration **must** be used only within the `TessellationControl` or `TessellationEvaluation` Execution Model
- VUID-TessLevelOuter-TessLevelOuter-04391
The variable decorated with `TessLevelOuter` within the `TessellationControl` Execution Model **must** be declared using the `Output Storage Class`
- VUID-TessLevelOuter-TessLevelOuter-04392
The variable decorated with `TessLevelOuter` within the `TessellationEvaluation` Execution Model **must** be declared using the `Input Storage Class`
- VUID-TessLevelOuter-TessLevelOuter-04393
The variable decorated with `TessLevelOuter` **must** be declared as an array of size four, containing 32-bit floating-point values

TessLevelInner

Decorating a variable with the `TessLevelInner` built-in decoration will make that variable contain the inner tessellation levels for the current patch.

In tessellation control shaders, the variable decorated with `TessLevelInner` **can** be written to, controlling the tessellation factors for the resulting patch. These values are used by the tessellator to control primitive tessellation and **can** be read by tessellation evaluation shaders.

In tessellation evaluation shaders, the variable decorated with `TessLevelInner` **can** read the values written by the tessellation control shader.

Valid Usage

- VUID-TessLevelInner-TessLevelInner-04394
The `TessLevelInner` decoration **must** be used only within the `TessellationControl` or `TessellationEvaluation` Execution Model
- VUID-TessLevelInner-TessLevelInner-04395
The variable decorated with `TessLevelInner` within the `TessellationControl` Execution Model **must** be declared using the `Output Storage Class`
- VUID-TessLevelInner-TessLevelInner-04396
The variable decorated with `TessLevelInner` within the `TessellationEvaluation` Execution Model **must** be declared using the `Input Storage Class`
- VUID-TessLevelInner-TessLevelInner-04397
The variable decorated with `TessLevelInner` **must** be declared as an array of size two, containing 32-bit floating-point values

VertexCountHUAWEI

The `VertexCountHUAWEI` decoration can be used to decorate a cluster culling shader output

variable, this non-indexed mode specific variable will contain an integer value that specifies the number of vertices in a cluster to draw.

Valid Usage

- VUID-VertexCountHUAWEI-VertexCountHUAWEI-07809
The `VertexCountHUAWEI` decoration **must** be used only within the `ClusterCullingHUAWEI Execution Model`
- VUID-VertexCountHUAWEI-VertexCountHUAWEI-07810
The variable decorated with `VertexCountHUAWEI` **must** be declared as a scalar 32-bit integer value

VertexIndex

Decorating a variable with the `VertexIndex` built-in decoration will make that variable contain the index of the vertex that is being processed by the current vertex shader invocation. For non-indexed draws, this variable begins at the `firstVertex` parameter to `vkCmdDraw` or the `firstVertex` member of a structure consumed by `vkCmdDrawIndirect` and increments by one for each vertex in the draw. For indexed draws, its value is the content of the index buffer for the vertex plus the `vertexOffset` parameter to `vkCmdDrawIndexed` or the `vertexOffset` member of the structure consumed by `vkCmdDrawIndexedIndirect`.

NOTE | `VertexIndex` starts at the same starting value for each instance.

Valid Usage

- VUID-VertexIndex-VertexIndex-04398
The `VertexIndex` decoration **must** be used only within the `Vertex Execution Model`
- VUID-VertexIndex-VertexIndex-04399
The variable decorated with `VertexIndex` **must** be declared using the `Input Storage Class`
- VUID-VertexIndex-VertexIndex-04400
The variable decorated with `VertexIndex` **must** be declared as a scalar 32-bit integer value

VertexOffsetHUAWEI

The `VertexOffsetHUAWEI` decoration can be used to decorate a cluster culling shader output variable, this indexed mode specific variable will contain an integer value that specifies an offset value added to the vertex index of a cluster before indexing into the vertex buffer.

Valid Usage

- VUID-VertexOffsetHUAWEI-VertexOffsetHUAWEI-07811
The `VertexOffsetHUAWEI` decoration **must** be used only within the `ClusterCullingHUAWEI Execution Model`
- VUID-VertexOffsetHUAWEI-VertexOffsetHUAWEI-07812

The variable decorated with `VertexOffsetHUAWEI` **must** be declared as a scalar 32-bit integer value

ViewIndex

The `ViewIndex` decoration **can** be applied to a shader input which will be filled with the index of the view that is being processed by the current shader invocation.

If multiview is enabled in the render pass, this value will be the index of one of the bits set in the view mask of the subpass the pipeline is compiled against. If multiview is not enabled in the render pass, this value will be zero.

Valid Usage

- VUID-ViewIndex-ViewIndex-04401

The `ViewIndex` decoration **must** be used only within the `MeshEXT`, `Vertex`, `Geometry`, `TessellationControl`, `TessellationEvaluation` or `Fragment Execution Model`

- VUID-ViewIndex-ViewIndex-04402

The variable decorated with `ViewIndex` **must** be declared using the `Input Storage Class`

- VUID-ViewIndex-ViewIndex-04403

The variable decorated with `ViewIndex` **must** be declared as a scalar 32-bit integer value

ViewportIndex

Decorating a variable with the `ViewportIndex` built-in decoration will make that variable contain the index of the viewport.

In a mesh, vertex, tessellation evaluation, or geometry shader, the variable decorated with `ViewportIndex` can be written to with the viewport index to which the primitive produced by that shader will be directed.

The selected viewport index is used to select the viewport transform, scissor rectangle, and exclusive scissor rectangle.

The last active *pre-rasterization shader stage* (in pipeline order) controls the `ViewportIndex` that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the `ViewportIndex`.

If the last active *pre-rasterization shader stage* shader entry point's interface does not include a variable decorated with `ViewportIndex`, and if `multiviewPerViewViewports` is not enabled, then the first viewport is used. If a *pre-rasterization shader stage* shader entry point's interface includes a variable decorated with `ViewportIndex`, it **must** write the same value to `ViewportIndex` for all output vertices of a given primitive.

In a fragment shader, the variable decorated with `ViewportIndex` contains the viewport index of the primitive that the fragment invocation belongs to.

If `multiviewPerViewViewports` is enabled, and if the last active *pre-rasterization shader stage* shader entry point's interface does not include a variable decorated with `ViewportIndex`, then the

value of **ViewIndex** is used as an index to select the viewport transform and scissor rectangle, and the value of **ViewportIndex** in the fragment shader is undefined:.

Valid Usage

- VUID-ViewportIndex-ViewportIndex-04404
The **ViewportIndex** decoration **must** be used only within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationEvaluation**, **Geometry**, or **Fragment Execution Model**
- VUID-ViewportIndex-ViewportIndex-04405
If the **shaderOutputViewportIndex** feature is not enabled then the **ViewportIndex** decoration **must** be used only within the **Geometry** or **Fragment Execution Model**
- VUID-ViewportIndex-ViewportIndex-04406
The variable decorated with **ViewportIndex** within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationEvaluation**, or **Geometry Execution Model** **must** be declared using the **Output Storage Class**
- VUID-ViewportIndex-ViewportIndex-04407
The variable decorated with **ViewportIndex** within the **Fragment Execution Model** **must** be declared using the **Input Storage Class**
- VUID-ViewportIndex-ViewportIndex-04408
The variable decorated with **ViewportIndex** **must** be declared as a scalar 32-bit integer value
- VUID-ViewportIndex-ViewportIndex-07060
The variable decorated with **ViewportIndex** within the **MeshEXT Execution Model** **must** also be decorated with the **PerPrimitiveEXT** decoration

ViewportMaskNV

Decorating a variable with the **ViewportMaskNV** built-in decoration will make that variable contain the viewport mask.

In a mesh, vertex, tessellation evaluation, or geometry shader, the variable decorated with **ViewportMaskNV** can be written to with the mask of which viewports the primitive produced by that shader will be directed.

The **ViewportMaskNV** variable **must** be an array that has $\lceil \text{VkPhysicalDeviceLimits::maxViewports} / 32 \rceil$ elements. When a shader writes to this variable, bit B of element M controls whether a primitive is emitted to viewport $32 \times M + B$. The viewports indicated by the mask are used to select the viewport transform, scissor rectangle, and exclusive scissor rectangle that a primitive will be transformed by.

The last active *pre-rasterization shader stage* (in pipeline order) controls the **ViewportMaskNV** that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the **ViewportMaskNV**. When **ViewportMaskNV** is written by the final *pre-rasterization shader stage*, any variable decorated with **ViewportIndex** in the fragment shader will have the index of the viewport that was used in generating that fragment.

If a *pre-rasterization shader stage* shader entry point's interface includes a variable decorated

with `ViewportMaskNV`, it **must** write the same value to `ViewportMaskNV` for all output vertices of a given primitive.

Valid Usage

- VUID-ViewportMaskNV-ViewportMaskNV-04409
The `ViewportMaskNV` decoration **must** be used only within the `Vertex`, `MeshNV`, `TessellationEvaluation`, or `Geometry Execution Model`
- VUID-ViewportMaskNV-ViewportMaskNV-04410
The variable decorated with `ViewportMaskNV` **must** be declared using the `Output Storage Class`
- VUID-ViewportMaskNV-ViewportMaskNV-04411
The variable decorated with `ViewportMaskNV` **must** be declared as an array of 32-bit integer values

`ViewportMaskPerViewNV`

Decorating a variable with the `ViewportMaskPerViewNV` built-in decoration will make that variable contain the mask of viewports primitives are broadcast to, for each view.

The value written to an element of `ViewportMaskPerViewNV` in the last `pre-rasterization shader stage` is a bitmask indicating which viewports the primitive will be directed to. The primitive will be broadcast to the viewport corresponding to each non-zero bit of the bitmask, and that viewport index is used to select the viewport transform, scissor rectangle, and exclusive scissor rectangle, for each view. The same values **must** be written to all vertices in a given primitive, or else the set of viewports used for that primitive is undefined.

Elements of the array correspond to views in a multiview subpass, and those elements corresponding to views in the view mask of the subpass the shader is compiled against will be used as the viewport mask value for those views. `ViewportMaskPerViewNV` output in an earlier `pre-rasterization shader stage` is not available as an input in the subsequent `pre-rasterization shader stage`.

Although `ViewportMaskNV` is an array, `ViewportMaskPerViewNV` is not a two-dimensional array. Instead, `ViewportMaskPerViewNV` is limited to 32 viewports.

Valid Usage

- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04412
The `ViewportMaskPerViewNV` decoration **must** be used only within the `Vertex`, `MeshNV`, `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model`
- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04413
The variable decorated with `ViewportMaskPerViewNV` **must** be declared using the `Output Storage Class`
- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04414
The variable decorated with `ViewportMaskPerViewNV` **must** be declared as an array of 32-bit

integer values

- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04415
The array decorated with **ViewportMaskPerViewNV** **must** be a size less than or equal to 32
- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04416
The array decorated with **ViewportMaskPerViewNV** **must** be a size greater than the maximum view in the subpass's view mask
- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04417
The array variable decorated with **ViewportMaskPerViewNV** **must** only be indexed by a constant or specialization constant

WarpsPerSMNV

Decorating a variable with the **WarpsPerSMNV** built-in decoration will make that variable contain the maximum number of warps executing on a SM.

Valid Usage

- VUID-WarpsPerSMNV-WarpsPerSMNV-04418
The variable decorated with **WarpsPerSMNV** **must** be declared using the **Input Storage Class**
- VUID-WarpsPerSMNV-WarpsPerSMNV-04419
The variable decorated with **WarpsPerSMNV** **must** be declared as a scalar 32-bit integer value

WarpIDNV

Decorating a variable with the **WarpIDNV** built-in decoration will make that variable contain the ID of the warp on a SM on which the current shader invocation is running. This variable is in the range [0, **WarpsPerSMNV**-1].

Valid Usage

- VUID-WarpIDNV-WarpIDNV-04420
The variable decorated with **WarpIDNV** **must** be declared using the **Input Storage Class**
- VUID-WarpIDNV-WarpIDNV-04421
The variable decorated with **WarpIDNV** **must** be declared as a scalar 32-bit integer value

WorkgroupId

Decorating a variable with the **WorkgroupId** built-in decoration will make that variable contain the global workgroup that the current invocation is a member of. Each component ranges from a base value to a base + count value, based on the parameters passed into the dispatching commands.

Valid Usage

- VUID-WorkgroupId-WorkgroupId-04422

The **WorkgroupId** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**

- VUID-WorkgroupId-WorkgroupId-04423

The variable decorated with **WorkgroupId** **must** be declared using the **Input Storage Class**

- VUID-WorkgroupId-WorkgroupId-04424

The variable decorated with **WorkgroupId** **must** be declared as a three-component vector of 32-bit integer values

WorkgroupSize

NOTE

SPIR-V 1.6 deprecated **WorkgroupSize** in favor of using the **LocalSizeId** Execution Mode instead. Support for **LocalSizeId** was added with **VK_KHR_maintenance4** and promoted to core in Version 1.3.

Decorating an object with the **WorkgroupSize** built-in decoration will make that object contain the dimensions of a local workgroup. If an object is decorated with the **WorkgroupSize** decoration, this takes precedence over any **LocalSize** or **LocalSizeId** execution mode.

Valid Usage

- VUID-WorkgroupSize-WorkgroupSize-04425

The **WorkgroupSize** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**

- VUID-WorkgroupSize-WorkgroupSize-04426

The variable decorated with **WorkgroupSize** **must** be a specialization constant or a constant

- VUID-WorkgroupSize-WorkgroupSize-04427

The variable decorated with **WorkgroupSize** **must** be declared as a three-component vector of 32-bit integer values

WorldRayDirectionKHR

A variable decorated with the **WorldRayDirectionKHR** decoration will specify the direction of the ray being processed, in world space. The value is the parameter passed into the **pipeline trace ray** instruction.

Valid Usage

- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04428

The **WorldRayDirectionKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**

- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04429

The variable decorated with **WorldRayDirectionKHR** **must** be declared using the **Input Storage Class**

- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04430

The variable decorated with **WorldRayDirectionKHR** **must** be declared as a three-component vector of 32-bit floating-point values

WorldRayOriginKHR

A variable decorated with the **WorldRayOriginKHR** decoration will specify the origin of the ray being processed, in world space. The value is the parameter passed into the [pipeline trace ray](#) instruction.

Valid Usage

- VUID-WorldRayOriginKHR-WorldRayOriginKHR-04431
The **WorldRayOriginKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**
- VUID-WorldRayOriginKHR-WorldRayOriginKHR-04432
The variable decorated with **WorldRayOriginKHR** **must** be declared using the **Input Storage Class**
- VUID-WorldRayOriginKHR-WorldRayOriginKHR-04433
The variable decorated with **WorldRayOriginKHR** **must** be declared as a three-component vector of 32-bit floating-point values

WorldToObjectKHR

A variable decorated with the **WorldToObjectKHR** decoration will contain the current world-to-object transformation matrix, which is determined by the instance of the current intersection.

Valid Usage

- VUID-WorldToObjectKHR-WorldToObjectKHR-04434
The **WorldToObjectKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-WorldToObjectKHR-WorldToObjectKHR-04435
The variable decorated with **WorldToObjectKHR** **must** be declared using the **Input Storage Class**
- VUID-WorldToObjectKHR-WorldToObjectKHR-04436
The variable decorated with **WorldToObjectKHR** **must** be declared as a matrix with four columns of three-component vectors of 32-bit floating-point values

CoreCountARM

Decorating a variable with the **CoreCountARM** built-in decoration will make that variable contain the number of cores on the device.

Valid Usage

- VUID-CoreCountARM-CoreCountARM-07595

The variable decorated with **CoreCountARM** must be declared using the **Input Storage Class**

- VUID-CoreCountARM-CoreCountARM-07596

The variable decorated with **CoreCountARM** must be declared as a scalar 32-bit integer value

CoreMaxIDARM

Decorating a variable with the **CoreMaxIDARM** built-in decoration will make that variable contain the max ID of any shader core on the device on which the current shader invocation is running.

Valid Usage

- VUID-CoreMaxIDARM-CoreMaxIDARM-07597

The variable decorated with **CoreMaxIDARM** must be declared using the **Input Storage Class**

- VUID-CoreMaxIDARM-CoreMaxIDARM-07598

The variable decorated with **CoreMaxIDARM** must be declared as a scalar 32-bit integer value

CoreIDARM

Decorating a variable with the **CoreIDARM** built-in decoration will make that variable contain the ID of the core on which the current shader invocation is running. This variable is in the range [0, **CoreMaxIDARM**].

Valid Usage

- VUID-CoreIDARM-CoreIDARM-07599

The variable decorated with **CoreIDARM** must be declared using the **Input Storage Class**

- VUID-CoreIDARM-CoreIDARM-07600

The variable decorated with **CoreIDARM** must be declared as a scalar 32-bit integer value

WarpMaxIDARM

Decorating a variable with the **WarpMaxIDARM** built-in decoration will make that variable contain the maximum warp ID for the core on which the current invocation is running.

Valid Usage

- VUID-WarpMaxIDARM-WarpMaxIDARM-07601

The variable decorated with **WarpMaxIDARM** must be declared using the **Input Storage Class**

- VUID-WarpMaxIDARM-WarpMaxIDARM-07602

The variable decorated with **WarpMaxIDARM** must be declared as a scalar 32-bit integer value

WarpIDARM

Decorating a variable with the **WarpIDARM** built-in decoration will make that variable contain the ID of the warp on a core on which the current shader invocation is running. This variable is in the range [0, **WarpMaxIDARM**].

Valid Usage

- VUID-WarpIDARM-WarpIDARM-07603
The variable decorated with **WarpIDARM** **must** be declared using the **Input Storage Class**
- VUID-WarpIDARM-WarpIDARM-07604
The variable decorated with **WarpIDARM** **must** be declared as a scalar 32-bit integer value

CoalescedInputCountAMD

Decorating a variable with the **CoalescedInputCountAMD** built-in decoration will make that variable contain the number of node dispatches that the implementation coalesced into the input for the current shader. This variable will take a value in the range [1, arraySize), where arraySize is the maximum size of the input payload array for the shader.

Valid Usage

- VUID-CoalescedInputCountAMD-CoalescedInputCountAMD-09172
The variable decorated with **CoalescedInputCountAMD** **must** be declared using the **Input Storage Class**
- VUID-CoalescedInputCountAMD-CoalescedInputCountAMD-09173
If a variable is decorated with **CoalescedInputCountAMD**, the **CoalescingAMD** execution mode **must** be declared
- VUID-CoalescedInputCountAMD-CoalescedInputCountAMD-09174
The variable decorated with **CoalescedInputCountAMD** **must** be declared as a scalar 32-bit integer value

ShaderIndexAMD

Decorating a variable with the **ShaderIndexAMD** built-in decoration will make that variable contain the index of the shader specified when it was compiled, either via **VkPipelineShaderStageNodeCreateInfoAMD::index** or by the **ShaderIndexAMD** execution mode.

Valid Usage

- VUID-ShaderIndexAMD-ShaderIndexAMD-09175
The variable decorated with **ShaderIndexAMD** **must** be declared using the **Input Storage Class**
- VUID-ShaderIndexAMD-ShaderIndexAMD-09176
The variable decorated with **ShaderIndexAMD** **must** be declared as a scalar 32-bit integer value

Chapter 16. Image Operations

16.1. Image Operations Overview

Vulkan Image Operations are operations performed by those SPIR-V Image Instructions which take an `OpTypeImage` (representing a `VkImageView`) or `OpTypeSampledImage` (representing a (`VkImageView`, `VkSampler`) pair). Read, write, and atomic operations also take texel coordinates as operands, and return a value based on a neighborhood of texture elements (*texels*) within the image. Query operations return properties of the bound image or of the lookup itself. The “Depth” operand of `OpTypeImage` is ignored.

NOTE

Texel is a term which is a combination of the words texture and element. Early interactive computer graphics supported texture operations on textures, a small subset of the image operations on images described here. The discrete samples remain essentially equivalent, however, so we retain the historical term texel to refer to them.

Image Operations include the functionality of the following SPIR-V Image Instructions:

- `OpImageSample*` and `OpImageSparseSample*` read one or more neighboring texels of the image, and `filter` the texel values based on the state of the sampler.
 - Instructions with `ImplicitLod` in the name `determine` the LOD used in the sampling operation based on the coordinates used in neighboring fragments.
 - Instructions with `ExplicitLod` in the name `determine` the LOD used in the sampling operation based on additional coordinates.
 - Instructions with `Proj` in the name apply homogeneous `projection` to the coordinates.
- `OpImageFetch` and `OpImageSparseFetch` return a single texel of the image. No sampler is used.
- `OpImage*Gather` and `OpImageSparse*Gather` read neighboring texels and `return a single component` of each.
- `OpImageRead` (and `OpImageSparseRead`) and `OpImageWrite` read and write, respectively, a texel in the image. No sampler is used.
- `OpImageSampleFootprintNV` identifies and returns information about the set of texels in the image that would be accessed by an equivalent `OpImageSample*` instruction.
- `OpImage*Dref*` instructions apply `depth comparison` on the texel values.
- `OpImageSparse*` instructions additionally return a `sparse residency` code.
- `OpImageQuerySize`, `OpImageQuerySizeLod`, `OpImageQueryLevels`, and `OpImageQuerySamples` return properties of the image descriptor that would be accessed. The image itself is not accessed.
- `OpImageQueryLod` returns the LOD parameters that would be used in a sample operation. The actual operation is not performed.
- `OpImageWeightedSampleQCOM` reads a 2D neighborhood of texels and computes a weighted average using weight values from a separate weight texture.
- `opImageBlockMatchSADQCOM` and `opTextureBlockMatchSSD` compare 2D neighborhoods of texels from

two textures.

- `OpImageBoxFilterQCOM` reads a 2D neighborhood of texels and computes a weighted average of the texels.
- `opImageBlockMatchWindowSADQCOM` and `opImageBlockMatchWindowSSDQCOM` compare 2D neighborhoods of texels from two textures with the comparison repeated across a window region in the target texture.
- `opImageBlockMatchGatherSADQCOM` and `opImageBlockMatchWindowSSDQCOM` compares four 2D neighborhoods of texels from a target texture with a single 2D neighborhood in the reference texture. The R component of each comparison is gathered and returned in the output.

16.1.1. Texel Coordinate Systems

Images are addressed by *texel coordinates*. There are three *texel coordinate systems*:

- normalized texel coordinates [0.0, 1.0]
- unnormalized texel coordinates [0.0, width / height / depth)
- integer texel coordinates [0, width / height / depth)

SPIR-V `OpImageFetch`, `OpImageSparseFetch`, `OpImageRead`, `OpImageSparseRead`, `opImageBlockMatchSADQCOM`, `opImageBlockMatchSSDQCOM`, `opImageBlockMatchWindowSADQCOM`, `opImageBlockMatchWindowSSDQCOM`, and `OpImageWrite` instructions use integer texel coordinates.

Other image instructions **can** use either normalized or unnormalized texel coordinates (selected by the `unnormalizedCoordinates` state of the sampler used in the instruction), but there are **limitations** on what operations, image state, and sampler state is supported. Normalized coordinates are logically **converted** to unnormalized as part of image operations, and **certain steps** are only performed on normalized coordinates. The array layer coordinate is always treated as unnormalized even when other coordinates are normalized.

Normalized texel coordinates are referred to as (s,t,r,q,a), with the coordinates having the following meanings:

- s: Coordinate in the first dimension of an image.
- t: Coordinate in the second dimension of an image.
- r: Coordinate in the third dimension of an image.
 - (s,t,r) are interpreted as a direction vector for Cube images.
- q: Fourth coordinate, for homogeneous (projective) coordinates.
- a: Coordinate for array layer.

The coordinates are extracted from the SPIR-V operand based on the dimensionality of the image variable and type of instruction. For **Proj** instructions, the components are in order (s, [t,] [r,] q), with t and r being conditionally present based on the **Dim** of the image. For non-**Proj** instructions, the coordinates are (s [t,] [r,] [a]), with t and r being conditionally present based on the **Dim** of the image and a being conditionally present based on the **Arrayed** property of the image. Projective image instructions are not supported on **Arrayed** images.

Unnormalized texel coordinates are referred to as (u,v,w,a), with the coordinates having the following meanings:

- u: Coordinate in the first dimension of an image.
- v: Coordinate in the second dimension of an image.
- w: Coordinate in the third dimension of an image.
- a: Coordinate for array layer.

Only the u and v coordinates are directly extracted from the SPIR-V operand, because only 1D and 2D (non-**Arrayed**) dimensionalities support unnormalized coordinates. The components are in order (u [v]), with v being conditionally present when the dimensionality is 2D. When normalized coordinates are converted to unnormalized coordinates, all four coordinates are used.

Integer texel coordinates are referred to as (i,j,k,l,n), with the coordinates having the following meanings:

- i: Coordinate in the first dimension of an image.
- j: Coordinate in the second dimension of an image.
- k: Coordinate in the third dimension of an image.
- l: Coordinate for array layer.
- n: Index of the sample within the texel.

They are extracted from the SPIR-V operand in order (i [j] [k] [l] [n]), with j and k conditionally present based on the **Dim** of the image, and l conditionally present based on the **Arrayed** property of the image. n is conditionally present and is taken from the **Sample** image operand.

If an accessed image was created from a view using **VkImageViewSlicedCreateInfoEXT** and accessed through a **VK_DESCRIPTOR_TYPE_STORAGE_IMAGE** descriptor, then the value of k is incremented by **VkImageViewSlicedCreateInfoEXT::sliceOffset**, giving $k \leftarrow \text{sliceOffset} + k$. The image's accessible range in the third dimension is $k < \text{sliceOffset} + \text{sliceCount}$. If **VkImageViewSlicedCreateInfoEXT::sliceCount** is **VK_REMAINING_3D_SLICES_EXT**, the range is inherited from the image's depth extent as specified by **Image Mip Level Sizing**.

For all coordinate types, unused coordinates are assigned a value of zero.

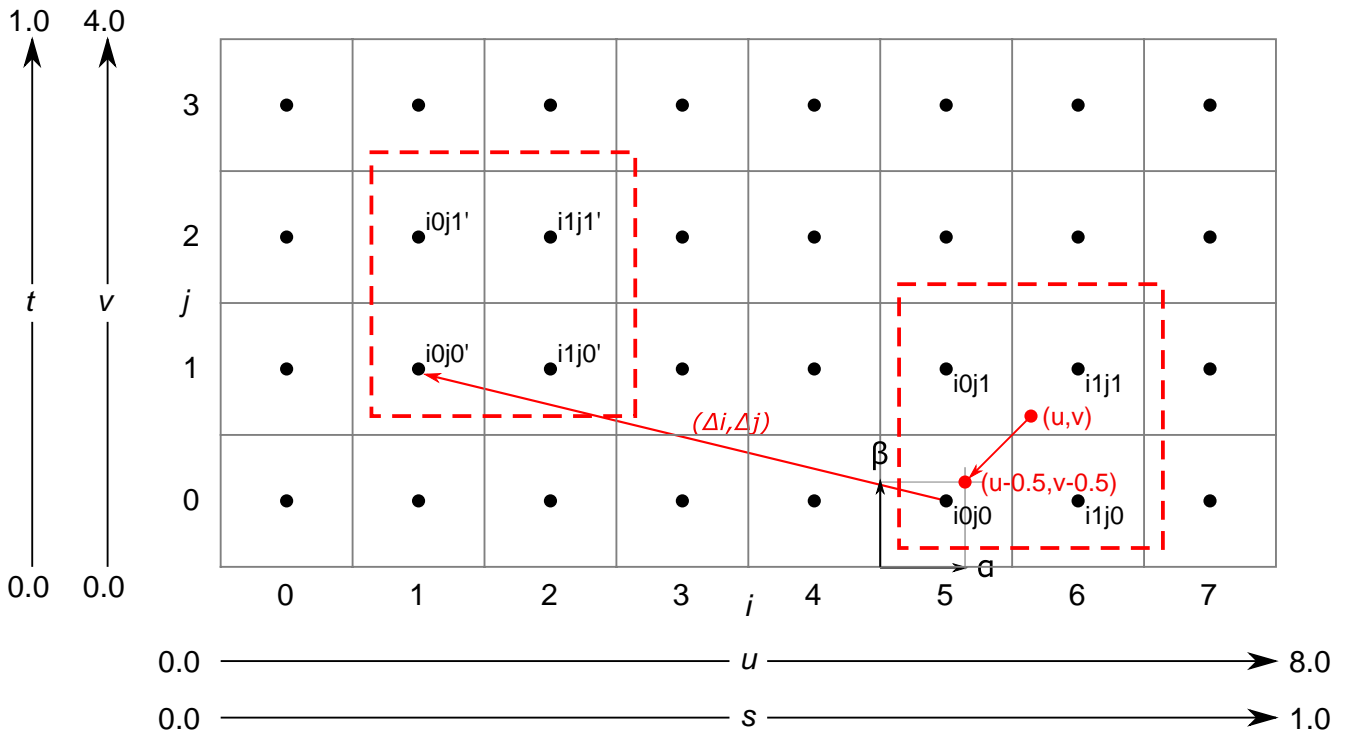

Figure 3. Texel Coordinate Systems, Linear Filtering

The Texel Coordinate Systems - For the example shown of an 8×4 texel two dimensional image.

- Normalized texel coordinates:
 - The s coordinate goes from 0.0 to 1.0.
 - The t coordinate goes from 0.0 to 1.0.
- Unnormalized texel coordinates:
 - The u coordinate within the range 0.0 to 8.0 is within the image, otherwise it is outside the image.
 - The v coordinate within the range 0.0 to 4.0 is within the image, otherwise it is outside the image.
- Integer texel coordinates:
 - The i coordinate within the range 0 to 7 addresses texels within the image, otherwise it is outside the image.
 - The j coordinate within the range 0 to 3 addresses texels within the image, otherwise it is outside the image.
- Also shown for linear filtering:
 - Given the unnormalized coordinates (u,v), the four texels selected are i_0j_0 , i_1j_0 , i_0j_1 , and i_1j_1 .
 - The fractions α and β .
 - Given the offset Δ_i and Δ_j , the four texels selected by the offset are i_0j_0' , i_1j_0' , i_0j_1' , and i_1j_1' .

NOTE

For formats with reduced-resolution components, Δ_i and Δ_j are relative to the resolution of the highest-resolution component, and therefore may be divided by two relative to the unnormalized coordinate space of the lower-resolution components.

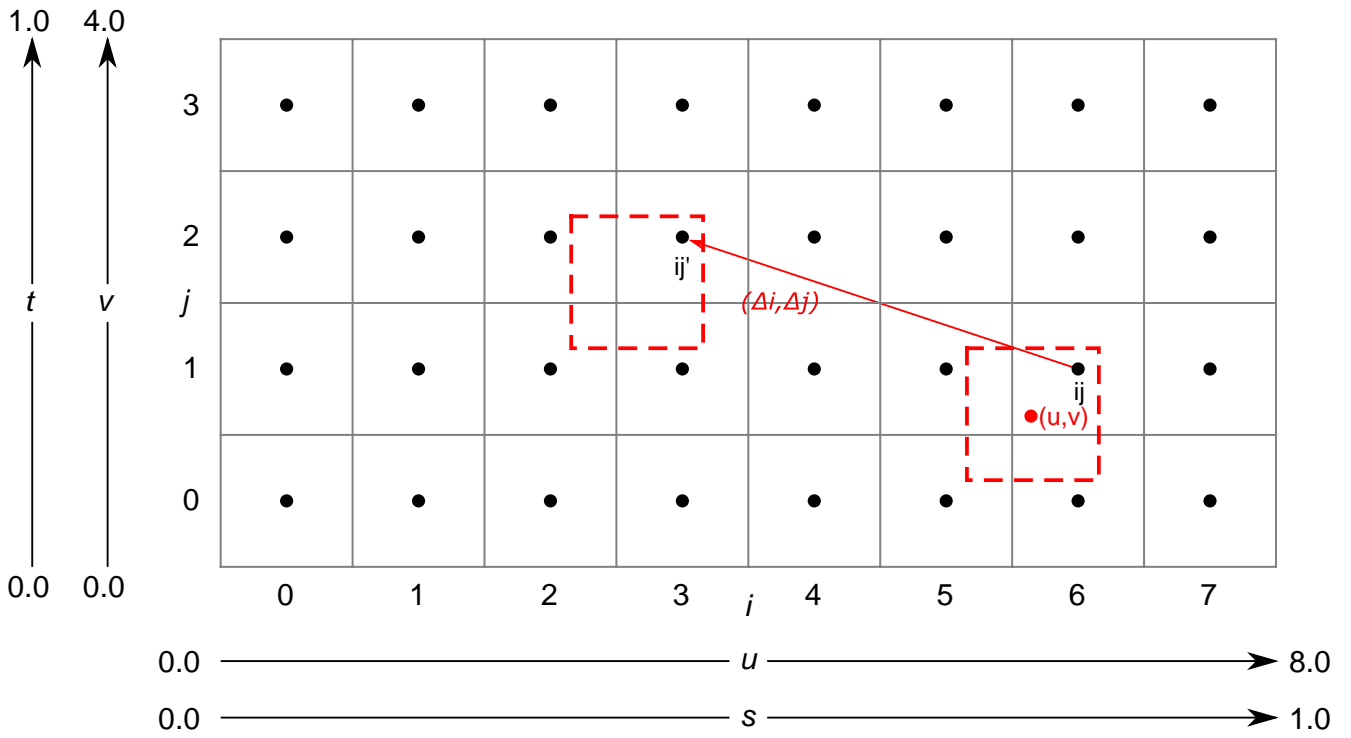

Figure 4. Texel Coordinate Systems, Nearest Filtering

The Texel Coordinate Systems - For the example shown of an 8×4 texel two dimensional image.

- Texel coordinates as above. Also shown for nearest filtering:
 - Given the unnormalized coordinates (u,v), the texel selected is ij.
 - Given the offset Δ_i and Δ_j , the texel selected by the offset is ij'.

For corner-sampled images, the texel samples are located at the grid intersections instead of the texel centers.

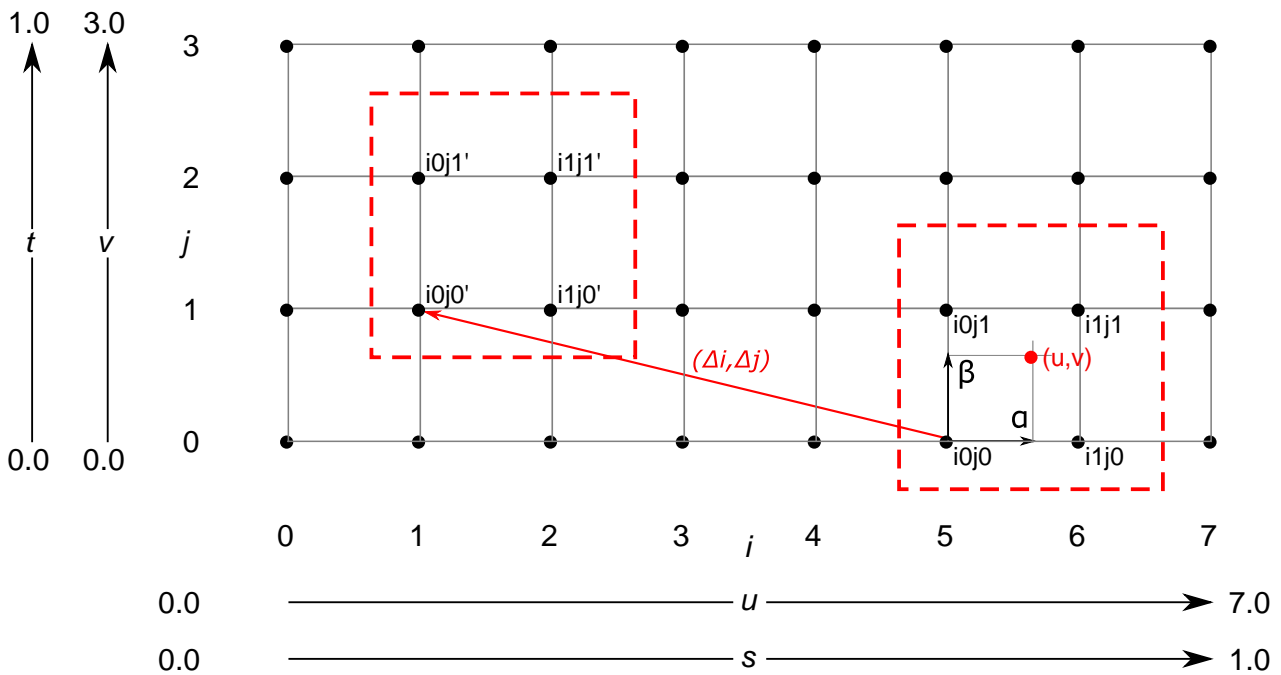

Figure 5. Texel Coordinate Systems, Corner Sampling

16.2. Conversion Formulas

16.2.1. RGB to Shared Exponent Conversion

An RGB color (red, green, blue) is transformed to a shared exponent color (red_{shared}, green_{shared}, blue_{shared}, exp_{shared}) as follows:

First, the components (red, green, blue) are clamped to (red_{clamped}, green_{clamped}, blue_{clamped}) as:

$$\text{red}_{\text{clamped}} = \max(0, \min(\text{sharedexp}_{\text{max}}, \text{red}))$$

$$\text{green}_{\text{clamped}} = \max(0, \min(\text{sharedexp}_{\text{max}}, \text{green}))$$

$$\text{blue}_{\text{clamped}} = \max(0, \min(\text{sharedexp}_{\text{max}}, \text{blue}))$$

where:

$$N = 9$$

number of mantissa bits per component

$$B = 15$$

exponent bias

$$E_{\text{max}} = 31$$

maximum possible biased exponent value

$$\text{sharedexp}_{\text{max}} = \frac{(2^N - 1)}{2^N} \times 2^{(E_{\text{max}} - B)}$$

NOTE

NaN, if supported, is handled as in

[IEEE 754-2008](#) `minNum()` and `maxNum()`. This results in any NaN being mapped to zero.

The largest clamped component, max_{clamped} is determined:

$$\text{max}_{\text{clamped}} = \max(\text{red}_{\text{clamped}}, \text{green}_{\text{clamped}}, \text{blue}_{\text{clamped}})$$

A preliminary shared exponent exp' is computed:

$$\text{exp}' = \begin{cases} \lfloor \log_2(\text{max}_{\text{clamped}}) \rfloor + (B + 1) & \text{for } \text{max}_{\text{clamped}} > 2^{-(B+1)} \\ 0 & \text{for } \text{max}_{\text{clamped}} \leq 2^{-(B+1)} \end{cases}$$

The shared exponent exp_{shared} is computed:

$$\text{max}_{\text{shared}} = \lfloor \frac{\text{max}_{\text{clamped}}}{2^{(\text{exp}' - B - N)}} + \frac{1}{2} \rfloor$$

$$\text{exp}_{\text{shared}} = \begin{cases} \text{exp}' & \text{for } 0 \leq \text{max}_{\text{shared}} < 2^N \\ \text{exp}' + 1 & \text{for } \text{max}_{\text{shared}} = 2^N \end{cases}$$

Finally, three integer values in the range 0 to 2^N are computed:

$$\begin{aligned} red_{shared} &= \lfloor \frac{red_{clamped}}{2^{(exp_{shared} - B - N)}} + \frac{1}{2} \rfloor \\ green_{shared} &= \lfloor \frac{green_{clamped}}{2^{(exp_{shared} - B - N)}} + \frac{1}{2} \rfloor \\ blue_{shared} &= \lfloor \frac{blue_{clamped}}{2^{(exp_{shared} - B - N)}} + \frac{1}{2} \rfloor \end{aligned}$$

16.2.2. Shared Exponent to RGB

A shared exponent color (red_{shared} , $green_{shared}$, $blue_{shared}$, exp_{shared}) is transformed to an RGB color (red , $green$, $blue$) as follows:

$$red = red_{shared} \times 2^{(exp_{shared} - B - N)}$$

$$green = green_{shared} \times 2^{(exp_{shared} - B - N)}$$

$$blue = blue_{shared} \times 2^{(exp_{shared} - B - N)}$$

where:

$N = 9$ (number of mantissa bits per component)

$B = 15$ (exponent bias)

16.3. Texel Input Operations

Texel input instructions are SPIR-V image instructions that read from an image. *Texel input operations* are a set of steps that are performed on state, coordinates, and texel values while processing a texel input instruction, and which are common to some or all texel input instructions. They include the following steps, which are performed in the listed order:

- Validation operations
 - Instruction/Sampler/Image validation
 - Coordinate validation
 - Sparse validation
 - Layout validation
- Format conversion
- Texel replacement

- Depth comparison
- Conversion to RGBA
- Component swizzle
- Chroma reconstruction
- Y'C_BC_R conversion

For texel input instructions involving multiple texels (for sampling or gathering), these steps are applied for each texel that is used in the instruction. Depending on the type of image instruction, other steps are conditionally performed between these steps or involving multiple coordinate or texel values.

If [Chroma Reconstruction](#) is implicit, [Texel Filtering](#) instead takes place during chroma reconstruction, before [sampler Y'C_BC_R conversion](#) occurs.

The operations described in [block matching](#) and [weight image sampling](#) are performed before [Conversion to RGBA](#) and [Component swizzle](#).

16.3.1. Texel Input Validation Operations

Texel input validation operations inspect instruction/image/sampler state or coordinates, and in certain circumstances cause the texel value to be replaced or become undefined. There are a series of validations that the texel undergoes.

Instruction/Sampler/Image View Validation

There are a number of cases where a SPIR-V instruction **can** mismatch with the sampler, the image view, or both, and a number of further cases where the sampler **can** mismatch with the image view. In such cases the value of the texel returned is undefined.

These cases include:

- The sampler `borderColor` is an integer type and the image view `format` is not one of the [VkFormat](#) integer types or a stencil component of a depth/stencil format.
- The sampler `borderColor` is a float type and the image view `format` is not one of the [VkFormat](#) float types or a depth component of a depth/stencil format.
- The sampler `borderColor` is one of the opaque black colors (`VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK` or `VK_BORDER_COLOR_INT_OPAQUE_BLACK`) and the image view [VkComponentSwizzle](#) for any of the [VkComponentMapping](#) components is not the [identity swizzle](#), and [VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::borderColorSwizzleFromImage](#) feature is not enabled, and [VkSamplerBorderColorComponentMappingCreateInfoEXT](#) is not specified.
- [VkSamplerBorderColorComponentMappingCreateInfoEXT::components](#), if specified, has a component swizzle that does not match the component swizzle of the image view, and either component swizzle is not a form of identity swizzle.
- [VkSamplerBorderColorComponentMappingCreateInfoEXT::srgb](#), if specified, does not match the sRGB encoding of the image view.
- The sampler `borderColor` is a custom color (`VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or

VK_BORDER_COLOR_INT_CUSTOM_EXT) and the supplied `VkSamplerCustomBorderColorCreateInfoEXT::customBorderColor` is outside the bounds of the values representable in the image view's `format`.

- The sampler `borderColor` is a custom color (`VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`) and the image view `VkComponentSwizzle` for any of the `VkComponentMapping` components is not the `identity swizzle`, and `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::borderColorSwizzleFromImage` feature is not enabled, and `VkSamplerBorderColorComponentMappingCreateInfoEXT` is not specified.
- The `VkImageLayout` of any subresource in the image view does not match the `VkDescriptorImageInfo::imageLayout` used to write the image descriptor.
- The SPIR-V Image Format is not `compatible` with the image view's `format`.
- The sampler `unnormalizedCoordinates` is `VK_TRUE` and any of the `limitations of unnormalized coordinates` are violated.
- The sampler was created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` and the image was not created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.
- The sampler was not created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` and the image was created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.
- The sampler was created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` and is used with a function that is not `OpImageSampleImplicitLod` or `OpImageSampleExplicitLod`, or is used with operands `Offset` or `ConstOffsets`.
- The SPIR-V instruction is one of the `OpImage*Dref*` instructions and the sampler `compareEnable` is `VK_FALSE`
- The SPIR-V instruction is not one of the `OpImage*Dref*` instructions and the sampler `compareEnable` is `VK_TRUE`
- The SPIR-V instruction is one of the `OpImage*Dref*` instructions, the image view `format` is one of the depth/stencil formats, and the image view aspect is not `VK_IMAGE_ASPECT_DEPTH_BIT`.
- The SPIR-V instruction's image variable's properties are not compatible with the image view:
 - If the image view's `viewType` is one of `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY` then the instruction **must** have `Arrayed` = 1. Otherwise the instruction **must** have `Arrayed` = 0.
 - If the image was created with `VkImageCreateInfo::samples` equal to `VK_SAMPLE_COUNT_1_BIT`, the instruction **must** have `MS` = 0.
 - If the image was created with `VkImageCreateInfo::samples` not equal to `VK_SAMPLE_COUNT_1_BIT`, the instruction **must** have `MS` = 1.
 - If the `Sampled Type` of the `OpTypeImage` does not match the `SPIR-V Type`.
 - If the `signedness of any read or sample operation` does not match the signedness of the image's format.
- If the image was created with `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV`, the sampler addressing modes **must** only use a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.
- The SPIR-V instruction is `OpImageSampleFootprintNV` with `Dim` = 2D and `addressModeU` or

`addressModeV` in the sampler is not `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.

- The SPIR-V instruction is `OpImageSampleFootprintNV` with `Dim = 3D` and `addressModeU`, `addressModeV`, or `addressModeW` in the sampler is not `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.
- The sampler was created with a specified `VkSamplerCustomBorderColorCreateInfoEXT::format` which does not match the `VkFormat` of the image view(s) it is sampling.
- The sampler is sampling an image view of `VK_FORMAT_B4G4R4A4_UNORM_PACK16`, `VK_FORMAT_B5G6R5_UNORM_PACK16`, or `VK_FORMAT_B5G5R5A1_UNORM_PACK16` format without a specified `VkSamplerCustomBorderColorCreateInfoEXT::format`.

Only `OpImageSample*` and `OpImageSparseSample*` **can** be used with a sampler or image view that enables `sampler Y'CBCR conversion`.

`OpImageFetch`, `OpImageSparseFetch`, `OpImage*Gather`, and `OpImageSparse*Gather` **must** not be used with a sampler or image view that enables `sampler Y'CBCR conversion`.

The `ConstOffset` and `Offset` operands **must** not be used with a sampler or image view that enables `sampler Y'CBCR conversion`.

If the underlying `VkImage` format has an X component in its format description, undefined values are read from those bits.

NOTE

If the `VkImage` format and `VkImageView` format are the same, these bits will be unused by format conversion and this will have no effect. However, if the `VkImageView` format is different, then some bits of the result may be undefined. For example, when a `VK_FORMAT_R10X6_UNORM_PACK16` `VkImage` is sampled via a `VK_FORMAT_R16_UNORM` `VkImageView`, the low 6 bits of the value before format conversion are undefined and format conversion may return a range of different values.

NOTE

Some implementations will return undefined values in the case where a sampler uses a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT`, the sampler is used with operands `Offset`, `ConstOffset`, or `ConstOffsets`, and the value of the offset is larger than or equal to the corresponding width, height, or depth of any accessed image level.

This behavior was not tested prior to Vulkan conformance test suite version 1.3.8.0. Affected implementations will have a conformance test waiver for this issue.

Integer Texel Coordinate Validation

Integer texel coordinates are validated against the size of the image level, and the number of layers and number of samples in the image. For SPIR-V instructions that use integer texel coordinates, this is performed directly on the integer coordinates. For instructions that use normalized or unnormalized texel coordinates, this is performed on the coordinates that result after `conversion` to integer texel coordinates.

If the integer texel coordinates do not satisfy all of the conditions

$$0 \leq i < w_s$$

$$0 \leq j < h_s$$

$$0 \leq k < d_s$$

$$0 \leq l < \text{layers}$$

$$0 \leq n < \text{samples}$$

where:

w_s = width of the image level

h_s = height of the image level

d_s = depth of the image level

layers = number of layers in the image

samples = number of samples per texel in the image

then the texel fails integer texel coordinate validation.

There are four cases to consider:

1. Valid Texel Coordinates

- If the texel coordinates pass validation (that is, the coordinates lie within the image), then the texel value comes from the value in image memory.

2. Border Texel

- If the texel coordinates fail validation, and
- If the read is the result of an image sample instruction or image gather instruction, and
- If the image is not a cube image, or if a sampler created with `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT` is used,

then the texel is a border texel and [texel replacement](#) is performed.

3. Invalid Texel

- If the texel coordinates fail validation, and
- If the read is the result of an image fetch instruction, image read instruction, or atomic instruction,

then the texel is an invalid texel and [texel replacement](#) is performed.

4. Cube Map Edge or Corner

Otherwise the texel coordinates lie beyond the edges or corners of the selected cube map face, and [Cube map edge handling](#) is performed.

Cube Map Edge Handling

If the texel coordinates lie beyond the edges or corners of the selected cube map face (as described in the prior section), the following steps are performed. Note that this does not occur when using `VK_FILTER_NEAREST` filtering within a mip level, since `VK_FILTER_NEAREST` is treated as using `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.

- Cube Map Edge Texel
 - If the texel lies beyond the selected cube map face in either only *i* or only *j*, then the coordinates (*i*,*j*) and the array layer *l* are transformed to select the adjacent texel from the appropriate neighboring face.
- Cube Map Corner Texel
 - If the texel lies beyond the selected cube map face in both *i* and *j*, then there is no unique neighboring face from which to read that texel. The texel **should** be replaced by the average of the three values of the adjacent texels in each incident face. However, implementations **may** replace the cube map corner texel by other methods. The methods are subject to the constraint that for linear filtering if the three available texels have the same value, the resulting filtered texel **must** have that value, and for cubic filtering if the twelve available samples have the same value, the resulting filtered texel **must** have that value.

Sparse Validation

If the texel reads from an unbound region of a sparse image, the texel is a *sparse unbound texel*, and processing continues with [texel replacement](#).

Layout Validation

If all planes of a *disjoint multi-planar* image are not in the same [image layout](#), the image **must** not be sampled with [sampler Y'C_BC_R conversion](#) enabled.

16.3.2. Format Conversion

Texels undergo a format conversion from the [VkFormat](#) of the image view to a vector of either floating-point or signed or unsigned integer components, with the number of components based on the number of components present in the format.

- Color formats have one, two, three, or four components, according to the format.
- Depth/stencil formats are one component. The depth or stencil component is selected by the `aspectMask` of the image view.

Each component is converted based on its type and size (as defined in the [Format Definition](#) section for each `VkFormat`), using the appropriate equations in [16-Bit Floating-Point Numbers](#), [Unsigned 11-Bit Floating-Point Numbers](#), [Unsigned 10-Bit Floating-Point Numbers](#), [Fixed-Point Data Conversion](#), and [Shared Exponent to RGB](#). Signed integer components smaller than 32 bits are sign-extended.

If the image view format is sRGB, the color components are first converted as if they are UNORM, and then sRGB to linear conversion is applied to the R, G, and B components as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#). The A component, if present, is unchanged.

If `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableYDegamma` is equal to `VK_TRUE`, then sRGB to linear conversion is applied to the G component as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#). If `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableCbCrDegamma` is equal to `VK_TRUE`, then sRGB to linear conversion is applied to the R and B components as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#). The A component, if present, is unchanged.

If the image view format is block-compressed, then the texel value is first decoded, then converted based on the type and number of components defined by the compressed format.

16.3.3. Texel Replacement

A texel is replaced if it is one (and only one) of:

- a border texel,
- an invalid texel, or
- a sparse unbound texel.

Border texels are replaced with a value based on the image format and the `borderColor` of the sampler. The border color is:

Table 24. Border Color B, Custom Border Color `VkSamplerCustomBorderColorCreateInfoEXT::customBorderColor U`

Sampler <code>borderColor</code>	Corresponding Border Color
<code>VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK</code>	$[B_r, B_g, B_b, B_a] = [0.0, 0.0, 0.0, 0.0]$
<code>VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK</code>	$[B_r, B_g, B_b, B_a] = [0.0, 0.0, 0.0, 1.0]$
<code>VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE</code>	$[B_r, B_g, B_b, B_a] = [1.0, 1.0, 1.0, 1.0]$
<code>VK_BORDER_COLOR_INT_TRANSPARENT_BLACK</code>	$[B_r, B_g, B_b, B_a] = [0, 0, 0, 0]$
<code>VK_BORDER_COLOR_INT_OPAQUE_BLACK</code>	$[B_r, B_g, B_b, B_a] = [0, 0, 0, 1]$

Sampler <code>borderColor</code>	Corresponding Border Color
<code>VK_BORDER_COLOR_INT_OPAQUE_WHITE</code>	$[B_r, B_g, B_b, B_a] = [1, 1, 1, 1]$
<code>VK_BORDER_COLOR_FLOAT_CUSTOM_EXT</code>	$[B_r, B_g, B_b, B_a] = [U_r, U_g, U_b, U_a]$
<code>VK_BORDER_COLOR_INT_CUSTOM_EXT</code>	$[B_r, B_g, B_b, B_a] = [U_r, U_g, U_b, U_a]$

The custom border color (U) **may** be rounded by implementations prior to texel replacement, but the error introduced by such a rounding **must** not exceed one ULP of the image's `format`.

NOTE

The names `VK_BORDER_COLOR_*_TRANSPARENT_BLACK`, `VK_BORDER_COLOR_*_OPAQUE_BLACK`, and `VK_BORDER_COLOR_*_OPAQUE_WHITE` are meant to describe which components are zeros and ones in the vocabulary of compositing, and are not meant to imply that the numerical value of `VK_BORDER_COLOR_INT_OPAQUE_WHITE` is a saturating value for integers.

This is substituted for the texel value by replacing the number of components in the image format

Table 25. Border Texel Components After Replacement

Texel Aspect or Format	Component Assignment
Depth aspect	$D = B_r$
Stencil aspect	$S = B_r^\dagger$
One component color format	$\text{Color}_r = B_r$
Two component color format	$[\text{Color}_r, \text{Color}_g] = [B_r, B_g]$
Three component color format	$[\text{Color}_r, \text{Color}_g, \text{Color}_b] = [B_r, B_g, B_b]$
Four component color format	$[\text{Color}_r, \text{Color}_g, \text{Color}_b, \text{Color}_a] = [B_r, B_g, B_b, B_a]$
Single component alpha format	$[\text{Color}_r, \text{Color}_g, \text{Color}_b, \text{Color}_a] = [0, 0, 0, B_a]$

$\dagger S = B_g$ **may** be substituted as the replacement method by the implementation when `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_INT_CUSTOM_EXT` and `VkSamplerCustomBorderColorCreateInfoEXT::format` is `VK_FORMAT_UNDEFINED`. Implementations **should** use $S = B_r$ as the replacement method.

The value returned by a read of an invalid texel is undefined, unless that read operation is from a buffer resource and the `robustBufferAccess` feature is enabled. In that case, an invalid texel is replaced as described by the `robustBufferAccess` feature. If the access is to an image resource and the x, y, z, or layer coordinate validation fails and the `robustImageAccess` feature is enabled, then zero **must** be returned for the R, G, and B components, if present. Either zero or one **must** be returned for the A component, if present. If the `robustImageAccess2` feature is enabled, zero values **must** be returned. If only the sample index was invalid, the values returned are undefined.

Additionally, if the `robustImageAccess` feature is enabled, but the `robustImageAccess2` feature is not, any invalid texels **may** be expanded to four components prior to texel replacement. This means that components not present in the image format may be replaced with 0 or may undergo [conversion to RGBA](#) as normal.

Loads from a null descriptor return a four component color value of all zeros. However, for storage images and storage texel buffers using an explicit SPIR-V Image Format, loads from a null descriptor **may** return an alpha value of 1 (float or integer, depending on format) if the format does not include alpha.

If the `VkPhysicalDeviceSparseProperties::residencyNonResidentStrict` property is `VK_TRUE`, a sparse unbound texel is replaced with 0 or 0.0 values for integer and floating-point components of the image format, respectively.

If `residencyNonResidentStrict` is `VK_FALSE`, the value of the sparse unbound texel is undefined.

16.3.4. Depth Compare Operation

If the image view has a depth/stencil format, the depth component is selected by the `aspectMask`, and the operation is an `OpImage*Dref*` instruction, a depth comparison is performed. The result is 1.0 if the comparison evaluates to true, and 0.0 otherwise. This value replaces the depth component D.

The compare operation is selected by the `VkCompareOp` value set by `VkSamplerCreateInfo::compareOp`. The reference value from the SPIR-V operand D_{ref} and the texel depth value D_{tex} are used as the *reference* and *test* values, respectively, in that operation.

If the image being sampled has an unsigned normalized fixed-point format, then D_{ref} is clamped to [0,1] before the compare operation.

16.3.5. Conversion to RGBA

The texel is expanded from one, two, or three components to four components based on the image base color:

Table 26. Texel Color After Conversion To RGBA

Texel Aspect or Format	RGBA Color
Depth aspect	$[Color_r, Color_g, Color_b, Color_a] = [D, 0, 0, one]$
Stencil aspect	$[Color_r, Color_g, Color_b, Color_a] = [S, 0, 0, one]$
One component color format	$[Color_r, Color_g, Color_b, Color_a] = [Color_r, 0, 0, one]$
Two component color format	$[Color_r, Color_g, Color_b, Color_a] = [Color_r, Color_g, 0, one]$
Three component color format	$[Color_r, Color_g, Color_b, Color_a] = [Color_r, Color_g, Color_b, one]$
Four component color format	$[Color_r, Color_g, Color_b, Color_a] = [Color_r, Color_g, Color_b, Color_a]$
One alpha component color format	$[Color_r, Color_g, Color_b, Color_a] = [0, 0, 0, Color_a]$

where `one` = 1.0f for floating-point formats and depth aspects, and `one` = 1 for integer formats and stencil aspects.

16.3.6. Component Swizzle

All texel input instructions apply a *swizzle* based on:

- the `VkComponentSwizzle` enums in the `components` member of the `VkImageViewCreateInfo` structure for the image being read if `sampler Y'CBCR conversion` is not enabled, and
- the `VkComponentSwizzle` enums in the `components` member of the `VkSamplerYcbcrConversionCreateInfo` structure for the `sampler Y'CBCR conversion` if `sampler Y'CBCR conversion` is enabled.

The swizzle **can** rearrange the components of the texel, or substitute zero or one for any components. It is defined as follows for each color component:

$$Color'_{component} = \begin{cases} Color_r & \text{for RED swizzle} \\ Color_g & \text{for GREEN swizzle} \\ Color_b & \text{for BLUE swizzle} \\ Color_a & \text{for ALPHA swizzle} \\ 0 & \text{for ZERO swizzle} \\ one & \text{for ONE swizzle} \\ identity & \text{for IDENTITY swizzle} \end{cases}$$

where:

$$one = \begin{cases} 1.0f & \text{for floating-point components} \\ 1 & \text{for integer components} \end{cases}$$

$$identity = \begin{cases} Color_r & \text{for } component = r \\ Color_g & \text{for } component = g \\ Color_b & \text{for } component = b \\ Color_a & \text{for } component = a \end{cases}$$

If the border color is one of the `VK_BORDER_COLOR_*_OPAQUE_BLACK` enums and the `VkComponentSwizzle` is not the `identity swizzle` for all components, the value of the texel after swizzle is undefined.

If the image view has a depth/stencil format and the `VkComponentSwizzle` is `VK_COMPONENT_SWIZZLE_ONE`, and `VkPhysicalDeviceMaintenance5PropertiesKHR::depthStencilSwizzleOneSupport` is not `VK_TRUE`, the value of the texel after swizzle is undefined.

16.3.7. Sparse Residency

`OpImageSparse*` instructions return a structure which includes a *residency code* indicating whether any texels accessed by the instruction are sparse unbound texels. This code **can** be interpreted by the `OpImageSparseTexelsResident` instruction which converts the residency code to a boolean value.

16.3.8. Chroma Reconstruction

In some color models, the color representation is defined in terms of monochromatic light intensity (often called “luma”) and color differences relative to this intensity, often called “chroma”. It is common for color models other than RGB to represent the chroma components at lower spatial resolution than the luma component. This approach is used to take advantage of the eye’s lower

spatial sensitivity to color compared with its sensitivity to brightness. Less commonly, the same approach is used with additive color, since the green component dominates the eye's sensitivity to light intensity and the spatial sensitivity to color introduced by red and blue is lower.

Lower-resolution components are “downsampled” by resizing them to a lower spatial resolution than the component representing luminance. This process is also commonly known as “chroma subsampling”. There is one luminance sample in each texture texel, but each chrominance sample may be shared among several texels in one or both texture dimensions.

- “_444” formats do not spatially downsample chroma values compared with luma: there are unique chroma samples for each texel.
- “_422” formats have downsampling in the x dimension (corresponding to u or s coordinates): they are sampled at half the resolution of luma in that dimension.
- “_420” formats have downsampling in the x dimension (corresponding to u or s coordinates) and the y dimension (corresponding to v or t coordinates): they are sampled at half the resolution of luma in both dimensions.

The process of reconstructing a full color value for texture access involves accessing both chroma and luma values at the same location. To generate the color accurately, the values of the lower-resolution components at the location of the luma samples are reconstructed from the lower-resolution sample locations, an operation known here as “chroma reconstruction” irrespective of the actual color model.

The location of the chroma samples relative to the luma coordinates is determined by the `xChromaOffset` and `yChromaOffset` members of the `VkSamplerYcbcrConversionCreateInfo` structure used to create the sampler $Y'C_B C_R$ conversion.

The following diagrams show the relationship between unnormalized (u,v) coordinates and (i,j) integer texel positions in the luma component (shown in black, with circles showing integer sample positions) and the texel coordinates of reduced-resolution chroma components, shown as crosses in red.

NOTE

If the chroma values are reconstructed at the locations of the luma samples by means of interpolation, chroma samples from outside the image bounds are needed; these are determined according to [Wrapping Operation](#). These diagrams represent this by showing the bounds of the “chroma texel” extending beyond the image bounds, and including additional chroma sample positions where required for interpolation. The limits of a sample for `NEAREST` sampling is shown as a grid.

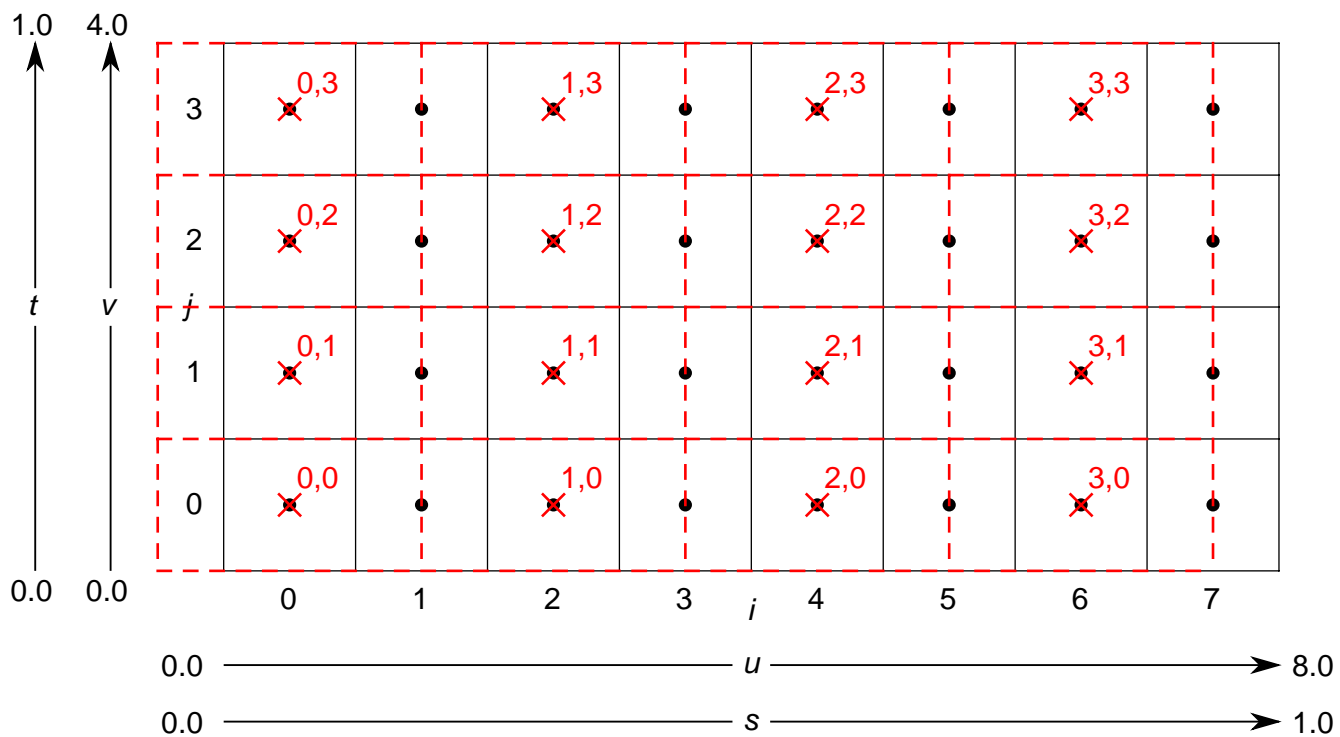

Figure 6. 422 downsampling, $xChromaOffset=COSITED_EVEN$

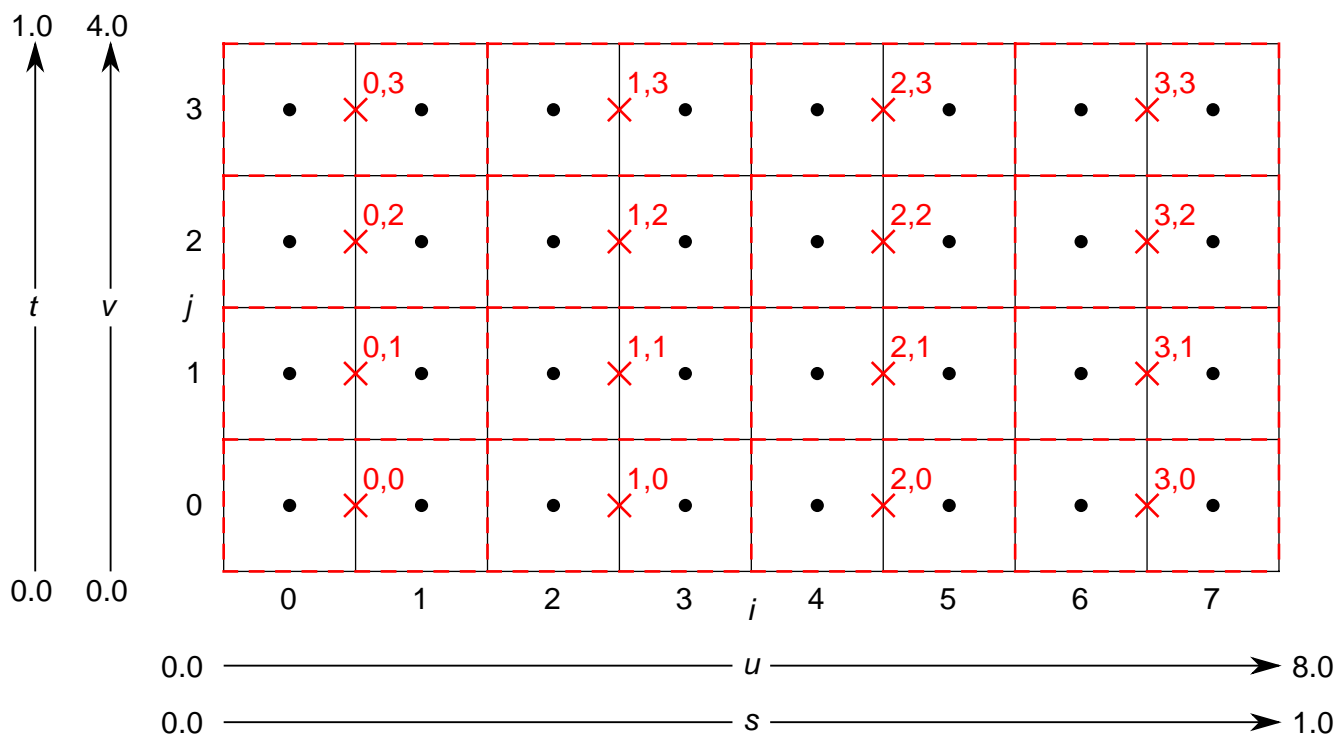

Figure 7. 422 downsampling, $xChromaOffset=MIDPOINT$

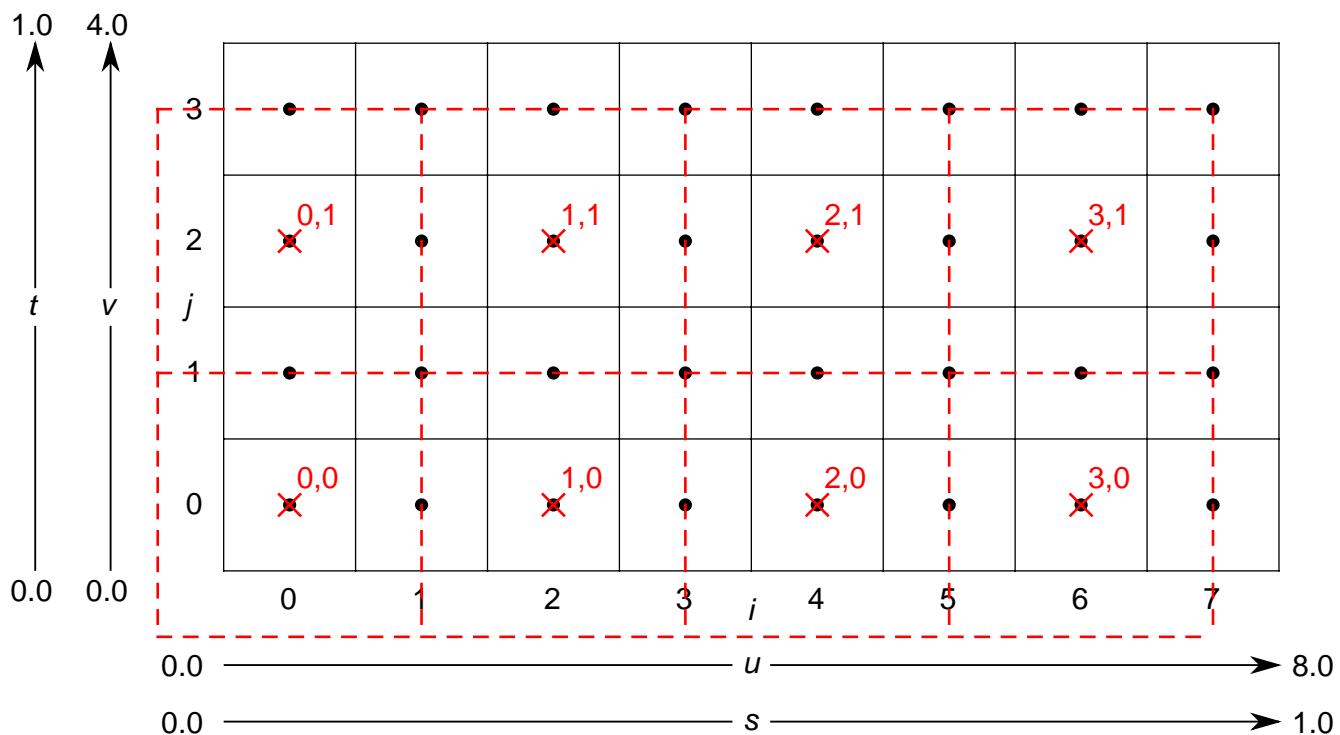

Figure 8. 420 downsampling, $x\text{ChromaOffset}=\text{COSITED_EVEN}$, $y\text{ChromaOffset}=\text{COSITED_EVEN}$

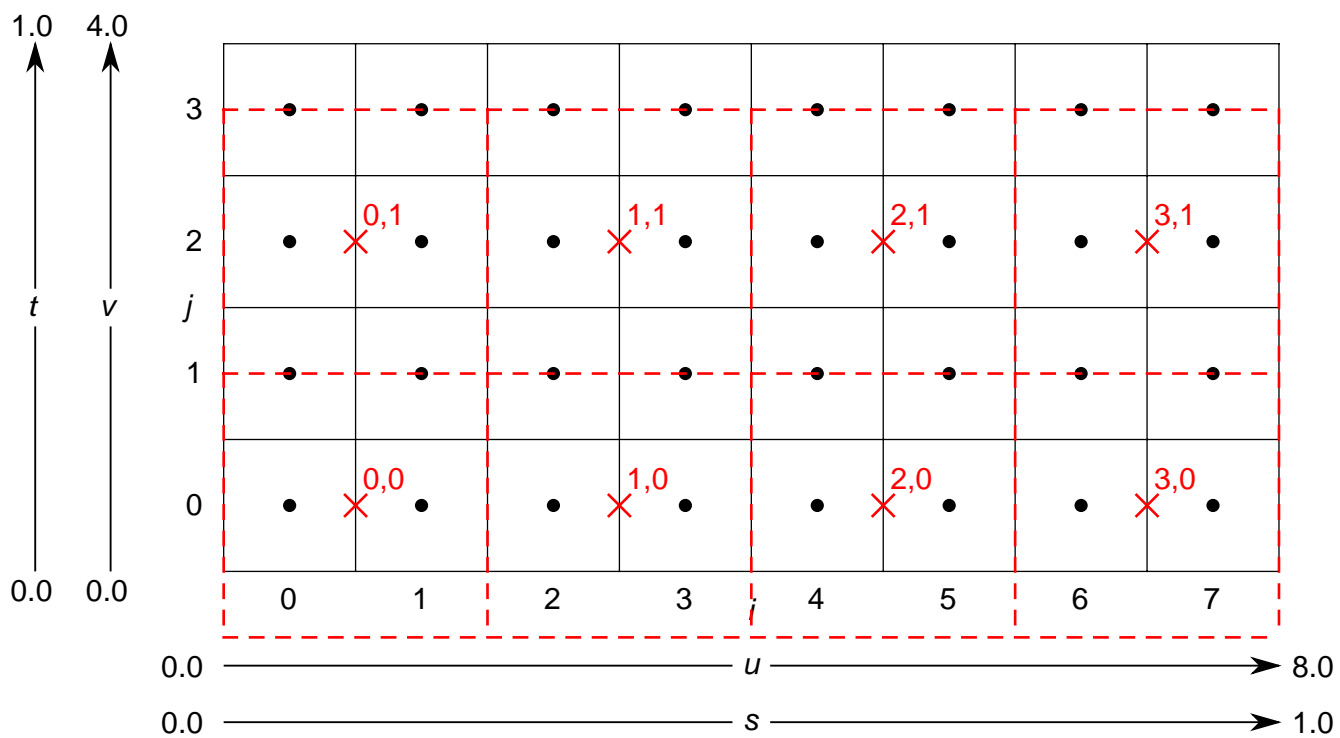

Figure 9. 420 downsampling, $x\text{ChromaOffset}=\text{MIDPOINT}$, $y\text{ChromaOffset}=\text{COSITED_EVEN}$

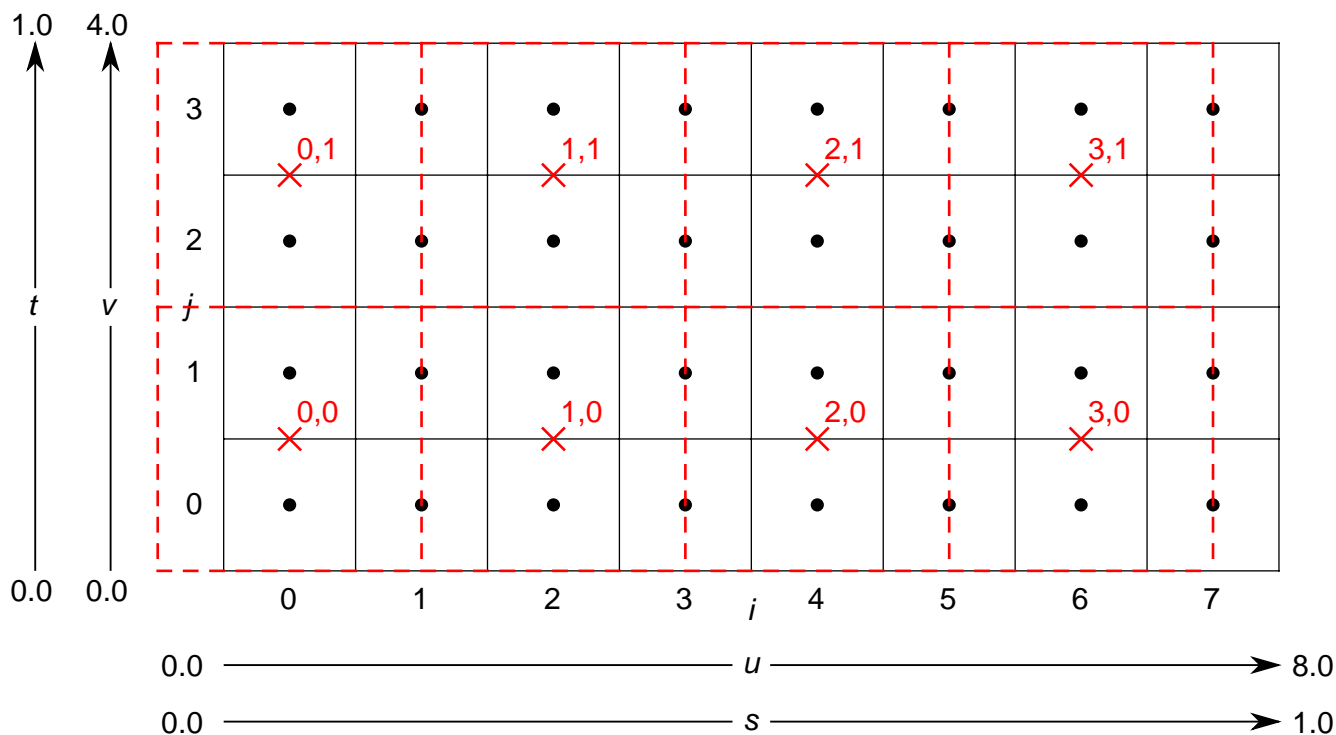

Figure 10. 420 downsampling, $xChromaOffset=COSITED_EVEN$, $yChromaOffset=MIDPOINT$

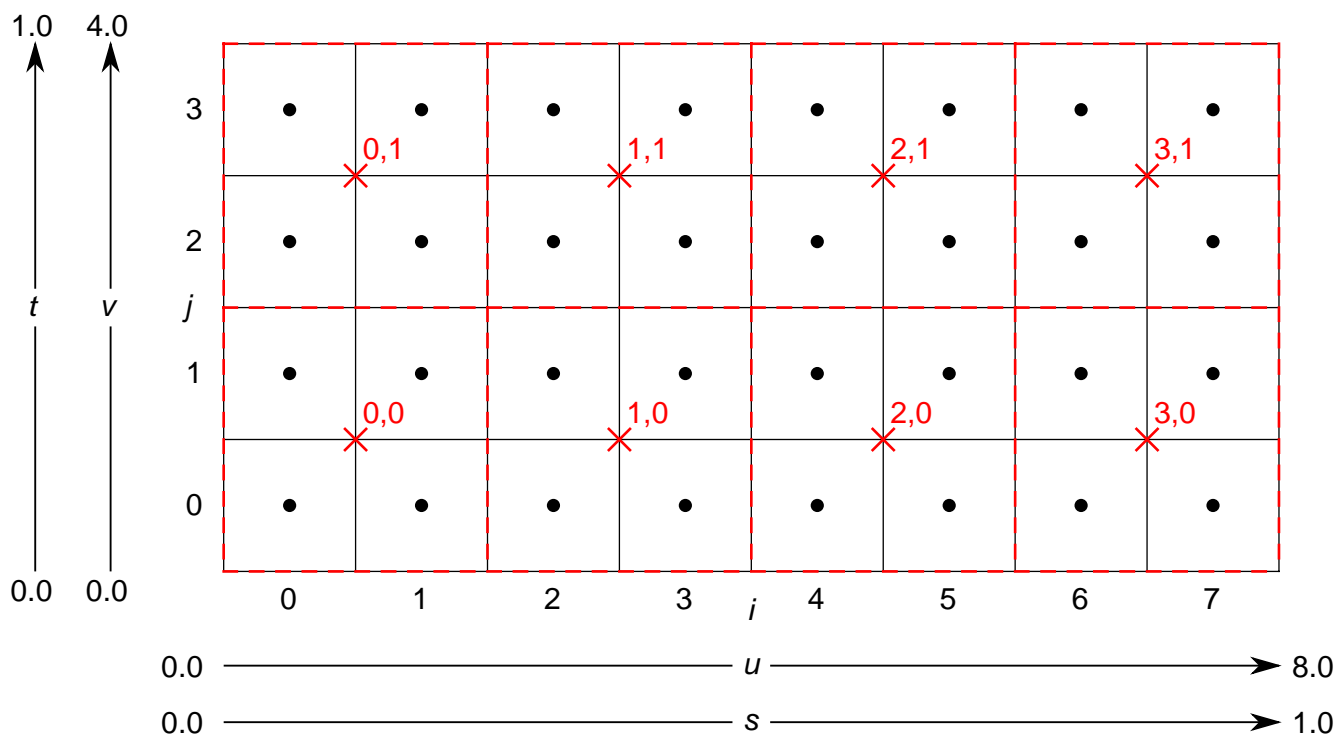

Figure 11. 420 downsampling, $xChromaOffset=MIDPOINT$, $yChromaOffset=MIDPOINT$

Reconstruction is implemented in one of two ways:

If the format of the image that is to be sampled sets `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT`, or the `VkSamplerYcbcrConversionCreateInfo`'s `forceExplicitReconstruction` is `VK_TRUE`, reconstruction is performed as an explicit step independent of filtering, described in the [Explicit Reconstruction](#) section.

If the format of the image that is to be sampled does not set `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT` and if the

`VkSamplerYcbcrConversionCreateInfo`'s `forceExplicitReconstruction` is `VK_FALSE`, reconstruction is performed as an implicit part of filtering prior to color model conversion, with no separate post-conversion texel filtering step, as described in the [Implicit Reconstruction](#) section.

Explicit Reconstruction

- If the `chromaFilter` member of the `VkSamplerYcbcrConversionCreateInfo` structure is `VK_FILTER_NEAREST`:
 - If the format's R and B components are reduced in resolution in just width by a factor of two relative to the G component (i.e. this is a “_422” format), the $\tau_{ijk}[level]$ values accessed by [texel filtering](#) are reconstructed as follows:

$$\begin{aligned}\tau_R'(i, j) &= \tau_R(\lfloor i \times 0.5 \rfloor, j)[level] \\ \tau_B'(i, j) &= \tau_B(\lfloor i \times 0.5 \rfloor, j)[level]\end{aligned}$$

- If the format's R and B components are reduced in resolution in width and height by a factor of two relative to the G component (i.e. this is a “_420” format), the $\tau_{ijk}[level]$ values accessed by [texel filtering](#) are reconstructed as follows:

$$\begin{aligned}\tau_R'(i, j) &= \tau_R(\lfloor i \times 0.5 \rfloor, \lfloor j \times 0.5 \rfloor)[level] \\ \tau_B'(i, j) &= \tau_B(\lfloor i \times 0.5 \rfloor, \lfloor j \times 0.5 \rfloor)[level]\end{aligned}$$

NOTE

`xChromaOffset` and `yChromaOffset` have no effect if `chromaFilter` is `VK_FILTER_NEAREST` for explicit reconstruction.

- If the `chromaFilter` member of the `VkSamplerYcbcrConversionCreateInfo` structure is `VK_FILTER_LINEAR`:
 - If the format's R and B components are reduced in resolution in just width by a factor of two relative to the G component (i.e. this is a “_422” format):
 - If `xChromaOffset` is `VK_CHROMA_LOCATION_COSITED_EVEN`:

$$\tau_{RB}'(i, j) = \begin{cases} \tau_{RB}(\lfloor i \times 0.5 \rfloor, j)[level], & 0.5 \times i = \lfloor 0.5 \times i \rfloor \\ 0.5 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor, j)[level] + \\ 0.5 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor + 1, j)[level], & 0.5 \times i \neq \lfloor 0.5 \times i \rfloor \end{cases}$$

- If `xChromaOffset` is `VK_CHROMA_LOCATION_MIDPOINT`:

$$\tau_{RB}'(i, j) = \begin{cases} 0.25 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor - 1, j)[level] + \\ 0.75 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor, j)[level], & 0.5 \times i = \lfloor 0.5 \times i \rfloor \\ 0.75 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor, j)[level] + \\ 0.25 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor + 1, j)[level], & 0.5 \times i \neq \lfloor 0.5 \times i \rfloor \end{cases}$$

- If the format's R and B components are reduced in resolution in width and height by a factor of two relative to the G component (i.e. this is a “_420” format), a similar relationship applies. Due to the number of options, these formulae are expressed more concisely as follows:

$$\begin{aligned}
i_{RB} &= \begin{cases} 0.5 \times (i) & \text{xChromaOffset=COSITED_EVEN} \\ 0.5 \times (i - 0.5) & \text{xChromaOffset=MIDPOINT} \end{cases} \\
j_{RB} &= \begin{cases} 0.5 \times (j) & \text{yChromaOffset=COSITED_EVEN} \\ 0.5 \times (j - 0.5) & \text{yChromaOffset=MIDPOINT} \end{cases} \\
i_{floor} &= \lfloor i_{RB} \rfloor \\
j_{floor} &= \lfloor j_{RB} \rfloor \\
i_{frac} &= i_{RB} - i_{floor} \\
j_{frac} &= j_{RB} - j_{floor}
\end{aligned}$$

$$\begin{aligned}
\tau_{RB}'(i, j) &= \tau_{RB}(i_{floor}, j_{floor})[level] \times (1 - i_{frac}) \times (1 - j_{frac}) + \\
&\quad \tau_{RB}(1 + i_{floor}, j_{floor})[level] \times (i_{frac}) \times (1 - j_{frac}) + \\
&\quad \tau_{RB}(i_{floor}, 1 + j_{floor})[level] \times (1 - i_{frac}) \times (j_{frac}) + \\
&\quad \tau_{RB}(1 + i_{floor}, 1 + j_{floor})[level] \times (i_{frac}) \times (j_{frac})
\end{aligned}$$

NOTE

In the case where the texture itself is bilinearly interpolated as described in [Texel Filtering](#), thus requiring four full-color samples for the filtering operation, and where the reconstruction of these samples uses bilinear interpolation in the chroma components due to `chromaFilter=VK_FILTER_LINEAR`, up to nine chroma samples may be required, depending on the sample location.

Implicit Reconstruction

Implicit reconstruction takes place by the samples being interpolated, as required by the filter settings of the sampler, except that `chromaFilter` takes precedence for the chroma samples.

If `chromaFilter` is `VK_FILTER_NEAREST`, an implementation **may** behave as if `xChromaOffset` and `yChromaOffset` were both `VK_CHROMA_LOCATION_MIDPOINT`, irrespective of the values set.

NOTE

This will not have any visible effect if the locations of the luma samples coincide with the location of the samples used for rasterization.

The sample coordinates are adjusted by the downsample factor of the component (such that, for example, the sample coordinates are divided by two if the component has a downsample factor of two relative to the luma component):

$$\begin{aligned}
u_{RB}'(422/420) &= \begin{cases} 0.5 \times (u + 0.5), & \text{xChromaOffset=COSITED_EVEN} \\ 0.5 \times u, & \text{xChromaOffset=MIDPOINT} \end{cases} \\
v_{RB}'(420) &= \begin{cases} 0.5 \times (v + 0.5), & \text{yChromaOffset=COSITED_EVEN} \\ 0.5 \times v, & \text{yChromaOffset=MIDPOINT} \end{cases}
\end{aligned}$$

16.3.9. Sampler Y'C_BC_R Conversion

Sampler Y'C_BC_R conversion performs the following operations, which an implementation **may** combine into a single mathematical operation:

- [Sampler Y'C_BC_R Range Expansion](#)
- [Sampler Y'C_BC_R Model Conversion](#)

Sampler Y'C_BC_R Range Expansion

Sampler Y'C_BC_R range expansion is applied to color component values after all texel input operations which are not specific to sampler Y'C_BC_R conversion. For example, the input values to this stage have been converted using the normal [format conversion](#) rules.

The input values to this stage may have been converted using sRGB to linear conversion if [ycbcrDegamma](#) is enabled.

Sampler Y'C_BC_R range expansion is not applied if [ycbcrModel](#) is [VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY](#). That is, the shader receives the vector C'_{rgba} as output by the Component Swizzle stage without further modification.

For other values of [ycbcrModel](#), range expansion is applied to the texel component values output by the [Component Swizzle](#) defined by the [components](#) member of [VkSamplerYcbcrConversionCreateInfo](#). Range expansion applies independently to each component of the image. For the purposes of range expansion and Y'C_BC_R model conversion, the R and B components contain color difference (chroma) values and the G component contains luma. The A component is not modified by sampler Y'C_BC_R range expansion.

The range expansion to be applied is defined by the [ycbcrRange](#) member of the [VkSamplerYcbcrConversionCreateInfo](#) structure:

- If [ycbcrRange](#) is [VK_SAMPLER_YCBCR_RANGE_ITU_FULL](#), the following transformations are applied:

$$\begin{aligned} Y' &= C'_{rgba}[G] \\ C_B &= C'_{rgba}[B] - \frac{2^{(n-1)}}{(2^n) - 1} \\ C_R &= C'_{rgba}[R] - \frac{2^{(n-1)}}{(2^n) - 1} \end{aligned}$$

NOTE

These formulae correspond to the “full range” encoding in the “Quantization schemes” chapter of the [Khronos Data Format Specification](#).

Should any future amendments be made to the ITU specifications from which these equations are derived, the formulae used by Vulkan **may** also be updated to maintain parity.

- If [ycbcrRange](#) is [VK_SAMPLER_YCBCR_RANGE_ITU_NARROW](#), the following transformations are applied:

$$Y' = \frac{C'_{rgba}[G] \times (2^n - 1) - 16 \times 2^{n-8}}{219 \times 2^{n-8}}$$

$$C_B = \frac{C'_{rgba}[B] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}}$$

$$C_R = \frac{C'_{rgba}[R] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}}$$

NOTE

These formulae correspond to the “narrow range” encoding in the “Quantization schemes” chapter of the [Khronos Data Format Specification](#).

- n is the bit-depth of the components in the format.

The precision of the operations performed during range expansion **must** be at least that of the source format.

An implementation **may** clamp the results of these range expansion operations such that Y' falls in the range $[0,1]$, and/or such that C_B and C_R fall in the range $[-0.5,0.5]$.

Sampler Y'C_BC_R Model Conversion

The range-expanded values are converted between color models, according to the color model conversion specified in the `ycbcrModel` member:

VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY

The color components are not modified by the color model conversion since they are assumed already to represent the desired color model in which the shader is operating; Y'C_BC_R range expansion is also ignored.

VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY

The color components are not modified by the color model conversion and are assumed to be treated as though in Y'C_BC_R form both in memory and in the shader; Y'C_BC_R range expansion is applied to the components as for other Y'C_BC_R models, with the vector (C_R,Y',C_B,A) provided to the shader.

VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709

The color components are transformed from a Y'C_BC_R representation to an R'G'B' representation as described in the “BT.709 Y'C_BC_R conversion” section of the [Khronos Data Format Specification](#).

VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601

The color components are transformed from a Y'C_BC_R representation to an R'G'B' representation as described in the “BT.601 Y'C_BC_R conversion” section of the [Khronos Data Format Specification](#).

VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020

The color components are transformed from a Y'C_BC_R representation to an R'G'B' representation as described in the “BT.2020 Y'C_BC_R conversion” section of the [Khronos Data Format Specification](#).

In this operation, each output component is dependent on each input component.

An implementation **may** clamp the R'G'B' results of these conversions to the range [0,1].

The precision of the operations performed during model conversion **must** be at least that of the source format.

The alpha component is not modified by these model conversions.

NOTE

Sampling operations in a non-linear color space can introduce color and intensity shifts at sharp transition boundaries. To avoid this issue, the technically precise color correction sequence described in the “Introduction to Color Conversions” chapter of the [Khronos Data Format Specification](#) may be performed as follows:

- Calculate the [unnormalized texel coordinates](#) corresponding to the desired sample position.
- For a [minFilter](#) or [magFilter](#) of [VK_FILTER_NEAREST](#):
 1. Calculate (i,j) for the sample location as described under the “nearest filtering” formulae in [\(u,v,w,a\) to \(i,j,k,l,n\) Transformation and Array Layer Selection](#)
 2. Calculate the normalized texel coordinates corresponding to these integer coordinates.
 3. Sample using [sampler Y'C_BC_R conversion](#) at this location.
- For a [minFilter](#) or [magFilter](#) of [VK_FILTER_LINEAR](#):
 1. Calculate $(i_{[0,1]},j_{[0,1]})$ for the sample location as described under the “linear filtering” formulae in [\(u,v,w,a\) to \(i,j,k,l,n\) Transformation and Array Layer Selection](#)
 2. Calculate the normalized texel coordinates corresponding to these integer coordinates.
 3. Sample using [sampler Y'C_BC_R conversion](#) at each of these locations.
 4. Convert the non-linear A'R'G'B' outputs of the Y'C_BC_R conversions to linear ARGB values as described in the “Transfer Functions” chapter of the [Khronos Data Format Specification](#).
 5. Interpolate the linear ARGB values using the α and β values described in the “linear filtering” section of [\(u,v,w,a\) to \(i,j,k,l,n\) Transformation and Array Layer Selection](#) and the equations in [Texel Filtering](#).

The additional calculations and, especially, additional number of sampling operations in the [VK_FILTER_LINEAR](#) case can be expected to have a performance impact compared with using the outputs directly. Since the variations from “correct” results are subtle for most content, the application author should determine whether a more costly implementation is strictly necessary.

If [chromaFilter](#), and [minFilter](#) or [magFilter](#) are both [VK_FILTER_NEAREST](#), these operations are redundant and sampling using [sampler Y'C_BC_R conversion](#) at the desired sample coordinates will produce the “correct” results without further processing.

16.4. Texel Output Operations

Texel output instructions are SPIR-V image instructions that write to an image. *Texel output operations* are a set of steps that are performed on state, coordinates, and texel values while processing a texel output instruction, and which are common to some or all texel output instructions. They include the following steps, which are performed in the listed order:

- [Validation operations](#)
 - [Format validation](#)
 - [Type validation](#)
 - [Coordinate validation](#)
 - [Sparse validation](#)
- [Texel output format conversion](#)

16.4.1. Texel Output Validation Operations

Texel output validation operations inspect instruction/image state or coordinates, and in certain circumstances cause the write to have no effect. There are a series of validations that the texel undergoes.

Texel Format Validation

If the image format of the `OpTypeImage` is not [compatible](#) with the `VkImageView`'s `format`, the write causes the contents of the image's memory to become undefined.

Texel Type Validation

If the `Sampled Type` of the `OpTypeImage` does not match the [SPIR-V Type](#), the write causes the value of the texel to become undefined. For integer types, if the [signedness of the access](#) does not match the signedness of the accessed resource, the write causes the value of the texel to become undefined.

16.4.2. Integer Texel Coordinate Validation

The integer texel coordinates are validated according to the same rules as for texel input [coordinate validation](#).

If the texel fails integer texel coordinate validation, then the write has no effect.

16.4.3. Sparse Texel Operation

If the texel attempts to write to an unbound region of a sparse image, the texel is a sparse unbound texel. In such a case, if the `VkPhysicalDeviceSparseProperties::residencyNonResidentStrict` property is `VK_TRUE`, the sparse unbound texel write has no effect. If `residencyNonResidentStrict` is `VK_FALSE`, the write **may** have a side effect that becomes visible to other accesses to unbound texels in any resource, but will not be visible to any device memory allocated by the application.

16.4.4. Texel Output Format Conversion

If the image format is sRGB, a linear to sRGB conversion is applied to the R, G, and B components as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#). The A component, if present, is unchanged.

Texels then undergo a format conversion from the floating-point, signed, or unsigned integer type of the texel data to the [VkFormat](#) of the image view. If the number of components in the texel data is larger than the number of components in the format, additional components are discarded.

Each component is converted based on its type and size (as defined in the [Format Definition](#) section for each [VkFormat](#)). Floating-point outputs are converted as described in [Floating-Point Format Conversions](#) and [Fixed-Point Data Conversion](#). Integer outputs are converted such that their value is preserved. The converted value of any integer that cannot be represented in the target format is undefined.

If the [VkImageView](#) format has an X component in its format description, undefined values are written to those bits.

If the underlying [VkImage](#) format has an X component in its format description, undefined values are also written to those bits, even if result format conversion produces a valid value for those bits because the [VkImageView](#) format is different.

16.5. Normalized Texel Coordinate Operations

If the image sampler instruction provides normalized texel coordinates, some of the following operations are performed.

16.5.1. Projection Operation

For [Proj](#) image operations, the normalized texel coordinates (s,t,r,q,a) and (if present) the D_{ref} coordinate are transformed as follows:

$$\begin{aligned} s &= \frac{s}{q}, && \text{for 1D, 2D, or 3D image} \\ t &= \frac{t}{q}, && \text{for 2D or 3D image} \\ r &= \frac{r}{q}, && \text{for 3D image} \\ D_{ref} &= \frac{D_{ref}}{q}, && \text{if provided} \end{aligned}$$

16.5.2. Derivative Image Operations

Derivatives are used for LOD selection. These derivatives are either implicit (in an [ImplicitLod](#) image instruction in a mesh, task, compute, or fragment shader) or explicit (provided explicitly by shader to the image instruction in any shader).

For implicit derivatives image instructions, the derivatives of texel coordinates are calculated in the same manner as [derivative operations](#). That is:

$$\begin{array}{lll} \partial s / \partial x = dPdx(s), & \partial s / \partial y = dPdy(s), & \text{for 1D, 2D, Cube, or 3D image} \\ \partial t / \partial x = dPdx(t), & \partial t / \partial y = dPdy(t), & \text{for 2D, Cube, or 3D image} \\ \partial r / \partial x = dPdx(r), & \partial r / \partial y = dPdy(r), & \text{for Cube or 3D image} \end{array}$$

Partial derivatives not defined above for certain image dimensionalities are set to zero.

For explicit LOD image instructions, if the **optional** SPIR-V operand **Grad** is provided, then the operand values are used for the derivatives. The number of components present in each derivative for a given image dimensionality matches the number of partial derivatives computed above.

If the **optional** SPIR-V operand **Lod** is provided, then derivatives are set to zero, the cube map derivative transformation is skipped, and the scale factor operation is skipped. Instead, the floating-point scalar coordinate is directly assigned to λ_{base} as described in [LOD Operation](#).

If the image or sampler object used by an implicit derivative image instruction is not uniform across the quad and **quadDivergentImplicitLod** is not supported, then the derivative and LOD values are undefined. Implicit derivatives are well-defined when the image and sampler and control flow are uniform across the quad, even if they diverge between different quads.

If **quadDivergentImplicitLod** is supported, then derivatives and implicit LOD values are well-defined even if the image or sampler object are not uniform within a quad. The derivatives are computed as specified above, and the implicit LOD calculation proceeds for each shader invocation using its respective image and sampler object.

16.5.3. Cube Map Face Selection and Transformations

For cube map image instructions, the (s,t,r) coordinates are treated as a direction vector (r_x, r_y, r_z). The direction vector is used to select a cube map face. The direction vector is transformed to a per-face texel coordinate system ($s_{\text{face}}, t_{\text{face}}$). The direction vector is also used to transform the derivatives to per-face derivatives.

16.5.4. Cube Map Face Selection

The direction vector selects one of the cube map's faces based on the largest magnitude coordinate direction (the major axis direction). Since two or more coordinates **can** have identical magnitude, the implementation **must** have rules to disambiguate this situation.

The rules **should** have as the first rule that r_z wins over r_y and r_x , and the second rule that r_y wins over r_x . An implementation **may** choose other rules, but the rules **must** be deterministic and depend only on (r_x, r_y, r_z).

The layer number (corresponding to a cube map face), the coordinate selections for s_c , t_c , r_c , and the selection of derivatives, are determined by the major axis direction as specified in the following two tables.

Table 27. Cube Map Face and Coordinate Selection

Major Axis Direction	Layer Number	Cube Map Face	s_c	t_c	r_c
$+r_x$	0	Positive X	$-r_z$	$-r_y$	r_x
$-r_x$	1	Negative X	$+r_z$	$-r_y$	r_x
$+r_y$	2	Positive Y	$+r_x$	$+r_z$	r_y
$-r_y$	3	Negative Y	$+r_x$	$-r_z$	r_y
$+r_z$	4	Positive Z	$+r_x$	$-r_y$	r_z
$-r_z$	5	Negative Z	$-r_x$	$-r_y$	r_z

Table 28. Cube Map Derivative Selection

Major Axis Direction	$\partial s_c / \partial x$	$\partial s_c / \partial y$	$\partial t_c / \partial x$	$\partial t_c / \partial y$	$\partial r_c / \partial x$	$\partial r_c / \partial y$
$+r_x$	$-\partial r_z / \partial x$	$-\partial r_z / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$
$-r_x$	$+\partial r_z / \partial x$	$+\partial r_z / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$-\partial r_x / \partial x$	$-\partial r_x / \partial y$
$+r_y$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$	$+\partial r_z / \partial x$	$+\partial r_z / \partial y$	$+\partial r_y / \partial x$	$+\partial r_y / \partial y$
$-r_y$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$	$-\partial r_z / \partial x$	$-\partial r_z / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$
$+r_z$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$+\partial r_z / \partial x$	$+\partial r_z / \partial y$
$-r_z$	$-\partial r_x / \partial x$	$-\partial r_x / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$-\partial r_z / \partial x$	$-\partial r_z / \partial y$

16.5.5. Cube Map Coordinate Transformation

$$s_{face} = \frac{1}{2} \times \frac{s_c}{|r_c|} + \frac{1}{2}$$

$$t_{face} = \frac{1}{2} \times \frac{t_c}{|r_c|} + \frac{1}{2}$$

16.5.6. Cube Map Derivative Transformation

The partial derivatives of the [Cube Map Coordinate Transformations](#) can be computed as:

$$\begin{aligned} \frac{\partial s_{face}}{\partial x} &= \frac{\partial}{\partial x} \left(\frac{1}{2} \times \frac{s_c}{|r_c|} + \frac{1}{2} \right) \\ &= \frac{1}{2} \times \frac{\partial}{\partial x} \left(\frac{s_c}{|r_c|} \right) \\ &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial s_c / \partial x - s_c \times \partial r_c / \partial x}{(r_c)^2} \right) \end{aligned}$$

The other derivatives are simplified similarly, resulting in

$$\begin{aligned}\frac{\partial s_{face}}{\partial y} &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial s_c / \partial y - s_c \times \partial r_c / \partial y}{(r_c)^2} \right) \\ \frac{\partial t_{face}}{\partial x} &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial t_c / \partial x - t_c \times \partial r_c / \partial x}{(r_c)^2} \right) \\ \frac{\partial t_{face}}{\partial y} &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial t_c / \partial y - t_c \times \partial r_c / \partial y}{(r_c)^2} \right)\end{aligned}$$

16.5.7. Scale Factor Operation, LOD Operation and Image Level(s) Selection

LOD selection **can** be either explicit (provided explicitly by the image instruction) or implicit (determined from a scale factor calculated from the derivatives). The LOD **must** be computed with `mipmapPrecisionBits` of accuracy.

Scale Factor Operation

The magnitude of the derivatives are calculated by:

$$m_{ux} = |\partial s / \partial x| \times w_{base}$$

$$m_{vx} = |\partial t / \partial x| \times h_{base}$$

$$m_{wx} = |\partial r / \partial x| \times d_{base}$$

$$m_{uy} = |\partial s / \partial y| \times w_{base}$$

$$m_{vy} = |\partial t / \partial y| \times h_{base}$$

$$m_{wy} = |\partial r / \partial y| \times d_{base}$$

where:

$$\partial t / \partial x = \partial t / \partial y = 0 \text{ (for 1D images)}$$

$$\partial r / \partial x = \partial r / \partial y = 0 \text{ (for 1D, 2D or Cube images)}$$

and:

$$w_{base} = \text{image.w}$$

$$h_{\text{base}} = \text{image.h}$$

$$d_{\text{base}} = \text{image.d}$$

(for the `baseMipLevel`, from the image descriptor).

For corner-sampled images, the w_{base} , h_{base} , and d_{base} are instead:

$$w_{\text{base}} = \text{image.w} - 1$$

$$h_{\text{base}} = \text{image.h} - 1$$

$$d_{\text{base}} = \text{image.d} - 1$$

A point sampled in screen space has an elliptical footprint in texture space. The minimum and maximum scale factors (ρ_{min} , ρ_{max}) **should** be the minor and major axes of this ellipse.

The *scale factors* ρ_x and ρ_y , calculated from the magnitude of the derivatives in x and y, are used to compute the minimum and maximum scale factors.

ρ_x and ρ_y **may** be approximated with functions f_x and f_y , subject to the following constraints:

f_x is continuous and monotonically increasing in each of m_{ux} , m_{vx} , and m_{wx}
 f_y is continuous and monotonically increasing in each of m_{uy} , m_{vy} , and m_{wy}

$$\begin{aligned} \max(|m_{ux}|, |m_{vx}|, |m_{wx}|) \leq f_x \leq \sqrt{2}(|m_{ux}| + |m_{vx}| + |m_{wx}|) \\ \max(|m_{uy}|, |m_{vy}|, |m_{wy}|) \leq f_y \leq \sqrt{2}(|m_{uy}| + |m_{vy}| + |m_{wy}|) \end{aligned}$$

The minimum and maximum scale factors (ρ_{min} , ρ_{max}) are determined by:

$$\rho_{\text{max}} = \max(\rho_x, \rho_y)$$

$$\rho_{\text{min}} = \min(\rho_x, \rho_y)$$

The ratio of anisotropy is determined by:

$$\eta = \min(\rho_{\text{max}}/\rho_{\text{min}}, \text{max}_{\text{Aniso}})$$

where:

$\text{sampler.max}_{\text{Aniso}} = \text{maxAnisotropy}$ (from sampler descriptor)

$\text{limits.max}_{\text{Aniso}} = \text{maxSamplerAnisotropy}$ (from physical device limits)

$\text{max}_{\text{Aniso}} = \min(\text{sampler.max}_{\text{Aniso}}, \text{limits.max}_{\text{Aniso}})$

If $\rho_{\max} = \rho_{\min} = 0$, then all the partial derivatives are zero, the fragment's footprint in texel space is a point, and η **should** be treated as 1. If $\rho_{\max} \neq 0$ and $\rho_{\min} = 0$ then all partial derivatives along one axis are zero, the fragment's footprint in texel space is a line segment, and η **should** be treated as $\text{max}_{\text{Aniso}}$. However, anytime the footprint is small in texel space the implementation **may** use a smaller value of η , even when ρ_{\min} is zero or close to zero. If either `VkPhysicalDeviceFeatures::samplerAnisotropy` or `VkSamplerCreateInfo::anisotropyEnable` are `VK_FALSE`, $\text{max}_{\text{Aniso}}$ is set to 1.

If $\eta = 1$, sampling is isotropic. If $\eta > 1$, sampling is anisotropic.

The sampling rate (N) is derived as:

$$N = \lceil \eta \rceil$$

An implementation **may** round N up to the nearest supported sampling rate. An implementation **may** use the value of N as an approximation of η .

LOD Operation

The LOD parameter λ is computed as follows:

$$\lambda_{\text{base}}(x, y) = \begin{cases} \text{shaderOp.Lod} & \text{(from optional SPIR-V operand)} \\ \log_2\left(\frac{\rho_{\max}}{\eta}\right) & \text{otherwise} \end{cases}$$
$$\lambda'(x, y) = \lambda_{\text{base}} + \text{clamp}(\text{sampler.bias} + \text{shaderOp.bias}, -\text{maxSamplerLodBias}, \text{maxSamplerLodBias})$$
$$\lambda = \begin{cases} \text{lod}_{\max}, & \lambda' > \text{lod}_{\max} \\ \lambda', & \text{lod}_{\min} \leq \lambda' \leq \text{lod}_{\max} \\ \text{lod}_{\min}, & \lambda' < \text{lod}_{\min} \\ \text{undefined}, & \text{lod}_{\min} > \text{lod}_{\max} \end{cases}$$

where:

$\text{sampler.bias} = \text{mipLodBias}$ (from sampler descriptor)

$\text{shaderOp.bias} = \begin{cases} \text{Bias} & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases}$

$\text{sampler.lod}_{\min} = \text{minLod}$ (from sampler descriptor)

$\text{shaderOp.lod}_{\min} = \begin{cases} \text{MinLod} & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases}$

$\text{lod}_{\min} = \max(\text{sampler.lod}_{\min}, \text{shaderOp.lod}_{\min})$

$\text{lod}_{\max} = \text{maxLod}$ (from sampler descriptor)

and maxSamplerLodBias is the value of the `VkPhysicalDeviceLimits` feature `maxSamplerLodBias`.

Image Level(s) Selection

The image level(s) d , d_{hi} , and d_{lo} which texels are read from are determined by an image-level parameter d_l , which is computed based on the LOD parameter, as follows:

$$d_l = \begin{cases} nearest(d'), & \text{mipmapMode is VK_SAMPLER_MIPMAP_MODE_NEAREST} \\ d', & \text{otherwise} \end{cases}$$

where:

$$d' = \max(level_{base} + \text{clamp}(\lambda, 0, q), minLod_{imageView})$$

$$nearest(d') = \begin{cases} [d' + 0.5] - 1, & \text{preferred} \\ [d' + 0.5], & \text{alternative} \end{cases}$$

and:

$$\begin{aligned} minLod_{imageView} &= \begin{cases} minLodFloat_{imageView}, & \text{preferred} \\ minLodInteger_{imageView}, & \text{alternative} \end{cases} \\ level_{base} &= baseMipLevel \\ q &= levelCount - 1 \end{aligned}$$

`baseMipLevel` and `levelCount` are taken from the `subresourceRange` of the image view.

`minLod_{imageView}` **must** be less or equal to `level_{base} + q`.

If the sampler's `mipmapMode` is `VK_SAMPLER_MIPMAP_MODE_NEAREST`, then the level selected is $d = d_l$.

If the sampler's `mipmapMode` is `VK_SAMPLER_MIPMAP_MODE_LINEAR`, two neighboring levels are selected:

$$\begin{aligned} d_{hi} &= \lfloor d_l \rfloor \\ d_{lo} &= \min(d_{hi} + 1, level_{base} + q) \\ \delta &= d_l - d_{hi} \end{aligned}$$

δ is the fractional value, quantized to the number of `mipmap precision bits`, used for `linear filtering` between levels.

16.5.8. (s,t,r,q,a) to (u,v,w,a) Transformation

The normalized texel coordinates are scaled by the image level dimensions and the array layer is selected.

This transformation is performed once for each level used in `filtering` (either d , or d_{hi} and d_{lo}).

$$\begin{aligned}
u(x, y) &= s(x, y) \times width_{scale} + \Delta_i \\
v(x, y) &= \begin{cases} 0 & \text{for 1D images} \\ t(x, y) \times height_{scale} + \Delta_j & \text{otherwise} \end{cases} \\
w(x, y) &= \begin{cases} 0 & \text{for 2D or Cube images} \\ r(x, y) \times depth_{scale} + \Delta_k & \text{otherwise} \end{cases} \\
a(x, y) &= \begin{cases} a(x, y) & \text{for array images} \\ 0 & \text{otherwise} \end{cases}
\end{aligned}$$

where:

$$width_{scale} = width_{level}$$

$$height_{scale} = height_{level}$$

$$depth_{scale} = depth_{level}$$

for conventional images, and:

$$width_{scale} = width_{level} - 1$$

$$height_{scale} = height_{level} - 1$$

$$depth_{scale} = depth_{level} - 1$$

for corner-sampled images.

and where (Δ_i , Δ_j , Δ_k) are taken from the image instruction if it includes a **ConstOffset** or **Offset** operand, otherwise they are taken to be zero.

Operations then proceed to Unnormalized Texel Coordinate Operations.

16.6. Unnormalized Texel Coordinate Operations

16.6.1. (u,v,w,a) to (i,j,k,l,n) Transformation and Array Layer Selection

The unnormalized texel coordinates are transformed to integer texel coordinates relative to the selected mipmap level.

The layer index l is computed as:

$$l = \text{clamp}(\text{RNE}(a), 0, \text{layerCount} - 1) + \text{baseArrayLayer}$$

where **layerCount** is the number of layers in the image subresource range of the image view, **baseArrayLayer** is the first layer from the subresource range, and where:

$$\text{RNE}(a) = \begin{cases} \text{roundTiesToEven}(a) & \text{preferred, from IEEE Std 754-2008 Floating-Point Arithmetic} \\ \lfloor a + 0.5 \rfloor & \text{alternative} \end{cases}$$

The sample index n is assigned the value 0.

Nearest filtering (**VK_FILTER_NEAREST**) computes the integer texel coordinates that the unnormalized coordinates lie within:

$$\begin{aligned} i &= \lfloor u + \text{shift} \rfloor \\ j &= \lfloor v + \text{shift} \rfloor \\ k &= \lfloor w + \text{shift} \rfloor \end{aligned}$$

where:

$$\text{shift} = 0.0$$

for conventional images, and:

$$\text{shift} = 0.5$$

for corner-sampled images.

Linear filtering (**VK_FILTER_LINEAR**) computes a set of neighboring coordinates which bound the unnormalized coordinates. The integer texel coordinates are combinations of i_0 or i_1 , j_0 or j_1 , k_0 or k_1 , as well as weights α , β , and γ .

$$\begin{aligned} i_0 &= \lfloor u - \text{shift} \rfloor \\ i_1 &= i_0 + 1 \\ j_0 &= \lfloor v - \text{shift} \rfloor \\ j_1 &= j_0 + 1 \\ k_0 &= \lfloor w - \text{shift} \rfloor \\ k_1 &= k_0 + 1 \end{aligned}$$

$$\alpha = \text{frac}(u - \text{shift})$$

$$\beta = \text{frac}(v - \text{shift})$$

$$\gamma = \text{frac}(w - \text{shift})$$

where:

shift = 0.5

for conventional images, and:

shift = 0.0

for corner-sampled images, and where:

$$\text{frac}(x) = x - \lfloor x \rfloor$$

where the number of fraction bits retained is specified by `VkPhysicalDeviceLimits::subTexelPrecisionBits`.

Cubic filtering (`VK_FILTER_CUBIC_EXT`) computes a set of neighboring coordinates which bound the unnormalized coordinates. The integer texel coordinates are combinations of i_0, i_1, i_2 or i_3, j_0, j_1, j_2 or j_3, k_0, k_1, k_2 or k_3 , as well as weights α, β , and γ .

$$i_0 = \lfloor u - \frac{3}{2} \rfloor \quad i_1 = i_0 + 1 \quad i_2 = i_1 + 1 \quad i_3 = i_2 + 1$$

$$j_0 = \lfloor v - \frac{3}{2} \rfloor \quad j_1 = j_0 + 1 \quad j_2 = j_1 + 1 \quad j_3 = j_2 + 1$$

$$k_0 = \lfloor w - \frac{3}{2} \rfloor \quad k_1 = k_0 + 1 \quad k_2 = k_1 + 1 \quad k_3 = k_2 + 1$$

$$\alpha = \text{frac}\left(u - \frac{1}{2}\right)$$

$$\beta = \text{frac}\left(v - \frac{1}{2}\right)$$

$$\gamma = \text{frac}\left(w - \frac{1}{2}\right)$$

where:

$$\text{frac}(x) = x - \lfloor x \rfloor$$

where the number of fraction bits retained is specified by `VkPhysicalDeviceLimits::subTexelPrecisionBits`.

16.7. Integer Texel Coordinate Operations

Integer texel coordinate operations **may** supply a LOD which texels are to be read from or written to using the optional SPIR-V operand `Lod`. If the `Lod` is provided then it **must** be an integer.

The image level selected is:

$$d = level_{base} + \begin{cases} Lod & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases}$$

If d does not lie in the range $[baseMipLevel, baseMipLevel + levelCount)$ or d is less than $minLodInteger_{imageView}$, then any values fetched are zero if the `robustImageAccess2` feature is enabled, otherwise are undefined, and any writes (if supported) are discarded.

16.8. Image Sample Operations

16.8.1. Wrapping Operation

If the used sampler was created without `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT`, Cube images ignore the wrap modes specified in the sampler. Instead, if `VK_FILTER_NEAREST` is used within a mip level then `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE` is used, and if `VK_FILTER_LINEAR` is used within a mip level then sampling at the edges is performed as described earlier in the [Cube map edge handling](#) section.

The first integer texel coordinate i is transformed based on the `addressModeU` parameter of the sampler.

$$i = \begin{cases} i \bmod size & \text{for repeat} \\ (size - 1) - \text{mirror}((i \bmod (2 \times size)) - size) & \text{for mirrored repeat} \\ \text{clamp}(i, 0, size - 1) & \text{for clamp to edge} \\ \text{clamp}(i, -1, size) & \text{for clamp to border} \\ \text{clamp}(\text{mirror}(i), 0, size - 1) & \text{for mirror clamp to edge} \end{cases}$$

where:

$$\text{mirror}(n) = \begin{cases} n & \text{for } n \geq 0 \\ -(1 + n) & \text{otherwise} \end{cases}$$

j (for 2D and Cube image) and k (for 3D image) are similarly transformed based on the `addressModeV` and `addressModeW` parameters of the sampler, respectively.

16.8.2. Texel Gathering

SPIR-V instructions with `Gather` in the name return a vector derived from 4 texels in the base level of the image view. The rules for the `VK_FILTER_LINEAR` minification filter are applied to identify the four selected texels. Each texel is then converted to an RGBA value according to [conversion to RGBA](#) and then [swizzled](#). A four-component vector is then assembled by taking the component indicated by the `Component` value in the instruction from the swizzled color value of the four texels. If the operation does not use the `ConstOffsets` image operand then the four texels form the 2×2 rectangle used for texture filtering:

$$\begin{aligned}
\tau[R] &= \tau_{i_0 j_1}[level_{base}][comp] \\
\tau[G] &= \tau_{i_1 j_1}[level_{base}][comp] \\
\tau[B] &= \tau_{i_1 j_0}[level_{base}][comp] \\
\tau[A] &= \tau_{i_0 j_0}[level_{base}][comp]
\end{aligned}$$

If the operation does use the **ConstOffsets** image operand then the offsets allow a custom filter to be defined:

$$\begin{aligned}
\tau[R] &= \tau_{i_0 j_0 + \Delta_0}[level_{base}][comp] \\
\tau[G] &= \tau_{i_0 j_0 + \Delta_1}[level_{base}][comp] \\
\tau[B] &= \tau_{i_0 j_0 + \Delta_2}[level_{base}][comp] \\
\tau[A] &= \tau_{i_0 j_0 + \Delta_3}[level_{base}][comp]
\end{aligned}$$

where:

$$\tau[level_{base}][comp] = \begin{cases} \tau[level_{base}][R], & \text{for } comp = 0 \\ \tau[level_{base}][G], & \text{for } comp = 1 \\ \tau[level_{base}][B], & \text{for } comp = 2 \\ \tau[level_{base}][A], & \text{for } comp = 3 \end{cases}$$

comp from SPIR-V operand Component

OpImage*Gather must not be used on a sampled image with **sampler Y'C_BC_R conversion** enabled.

If $level_{base} < \text{minLodInteger}_{\text{imageView}}$, then any values fetched are zero if **robustImageAccess2** is enabled. Otherwise values are undefined.

16.8.3. Texel Filtering

Texel filtering is first performed for each level (either d or d_{hi} and d_{lo}).

If λ is less than or equal to zero, the texture is said to be *magnified*, and the filter mode within a mip level is selected by the **magFilter** in the sampler. If λ is greater than zero, the texture is said to be *minified*, and the filter mode within a mip level is selected by the **minFilter** in the sampler.

Texel Nearest Filtering

Within a mip level, **VK_FILTER_NEAREST** filtering selects a single value using the (i, j, k) texel coordinates, with all texels taken from layer l.

$$\tau[level] = \begin{cases} \tau_{ijk}[level], & \text{for 3D image} \\ \tau_{ij}[level], & \text{for 2D or Cube image} \\ \tau_i[level], & \text{for 1D image} \end{cases}$$

Texel Linear Filtering

Within a mip level, **VK_FILTER_LINEAR** filtering combines 8 (for 3D), 4 (for 2D or Cube), or 2 (for 1D)

texel values, together with their linear weights. The linear weights are derived from the fractions computed earlier:

$$\begin{aligned}w_{i_0} &= (1 - \alpha) \\w_{i_1} &= (\alpha) \\w_{j_0} &= (1 - \beta) \\w_{j_1} &= (\beta) \\w_{k_0} &= (1 - \gamma) \\w_{k_1} &= (\gamma)\end{aligned}$$

The values of multiple texels, together with their weights, are combined to produce a filtered value.

The `VkSamplerReductionModeCreateInfo::reductionMode` **can** control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, a weighted average is computed:

$$\begin{aligned}\tau_{3D} &= \sum_{k=k_0}^{k_1} \sum_{j=j_0}^{j_1} \sum_{i=i_0}^{i_1} (w_i)(w_j)(w_k)\tau_{ijk} \\ \tau_{2D} &= \sum_{j=j_0}^{j_1} \sum_{i=i_0}^{i_1} (w_i)(w_j)\tau_{ij} \\ \tau_{1D} &= \sum_{i=i_0}^{i_1} (w_i)\tau_i\end{aligned}$$

However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above set of multiple texels, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the set of texels with non-zero weights.

Texel Cubic Filtering

Within a mip level, `VK_FILTER_CUBIC_EXT`, filtering computes a weighted average of 64 (for 3D), 16 (for 2D), or 4 (for 1D) texel values, together with their Catmull-Rom, Zero Tangent Cardinal, B-Spline, or Mitchell-Netravali weights as specified by `VkSamplerCubicWeightsCreateInfoQCOM`.

Catmull-Rom weights specified by `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM` are derived from the fractions computed earlier.

$$\begin{bmatrix} w_{i_0} & w_{i_1} & w_{i_2} & w_{i_3} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & \alpha & \alpha^2 & \alpha^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -1 & 0 & 1 & 0 \\ 2 & -5 & 4 & -1 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{j_0} & w_{j_1} & w_{j_2} & w_{j_3} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & \beta & \beta^2 & \beta^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -1 & 0 & 1 & 0 \\ 2 & -5 & 4 & -1 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{k_0} & w_{k_1} & w_{k_2} & w_{k_3} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & \gamma & \gamma^2 & \gamma^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -1 & 0 & 1 & 0 \\ 2 & -5 & 4 & -1 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

Zero Tangent Cardinal weights specified by `VK_CUBIC_FILTER_WEIGHTS_ZERO_TANGENT_CARDINAL_QCOM` are derived from the fractions computed earlier.

$$\begin{bmatrix} w_{i_0} & w_{i_1} & w_{i_2} & w_{i_3} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & \alpha & \alpha^2 & \alpha^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -2 & 0 & 2 & 0 \\ 4 & -4 & 2 & -2 \\ -2 & 2 & -2 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{j_0} & w_{j_1} & w_{j_2} & w_{j_3} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & \beta & \beta^2 & \beta^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -2 & 0 & 2 & 0 \\ 4 & -4 & 2 & -2 \\ -2 & 2 & -2 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{k_0} & w_{k_1} & w_{k_2} & w_{k_3} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & \gamma & \gamma^2 & \gamma^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -2 & 0 & 2 & 0 \\ 4 & -4 & 2 & -2 \\ -2 & 2 & -2 & 1 \end{bmatrix}$$

B-Spline weights specified by `VK_CUBIC_FILTER_WEIGHTS_B_SPLINE_QCOM` are derived from the fractions computed earlier.

$$\begin{bmatrix} w_{i_0} & w_{i_1} & w_{i_2} & w_{i_3} \end{bmatrix} = \frac{1}{6} \begin{bmatrix} 1 & \alpha & \alpha^2 & \alpha^3 \end{bmatrix} \begin{bmatrix} 1 & 4 & 1 & 0 \\ -3 & 0 & 3 & 0 \\ 3 & -6 & 3 & 0 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{j_0} & w_{j_1} & w_{j_2} & w_{j_3} \end{bmatrix} = \frac{1}{6} \begin{bmatrix} 1 & \beta & \beta^2 & \beta^3 \end{bmatrix} \begin{bmatrix} 1 & 4 & 1 & 0 \\ -3 & 0 & 3 & 0 \\ 3 & -6 & 3 & 0 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{k_0} & w_{k_1} & w_{k_2} & w_{k_3} \end{bmatrix} = \frac{1}{6} \begin{bmatrix} 1 & \gamma & \gamma^2 & \gamma^3 \end{bmatrix} \begin{bmatrix} 1 & 4 & 1 & 0 \\ -3 & 0 & 3 & 0 \\ 3 & -6 & 3 & 0 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

Mitchell-Netravali weights specified by `VK_CUBIC_FILTER_WEIGHTS_MITCHELL_NETRAVALI_QCOM` are derived from the fractions computed earlier.

$$\begin{bmatrix} w_{i_0} & w_{i_1} & w_{i_2} & w_{i_3} \end{bmatrix} = \frac{1}{18} \begin{bmatrix} 1 & \alpha & \alpha^2 & \alpha^3 \end{bmatrix} \begin{bmatrix} 1 & 16 & 1 & 0 \\ -9 & 0 & 9 & 0 \\ 15 & -36 & 27 & -6 \\ -7 & 21 & -21 & 7 \end{bmatrix}$$

$$\begin{bmatrix} w_{j_0} & w_{j_1} & w_{j_2} & w_{j_3} \end{bmatrix} = \frac{1}{18} \begin{bmatrix} 1 & \beta & \beta^2 & \beta^3 \end{bmatrix} \begin{bmatrix} 1 & 16 & 1 & 0 \\ -9 & 0 & 9 & 0 \\ 15 & -36 & 27 & -6 \\ -7 & 21 & -21 & 7 \end{bmatrix}$$

$$\begin{bmatrix} w_{k_0} & w_{k_1} & w_{k_2} & w_{k_3} \end{bmatrix} = \frac{1}{18} \begin{bmatrix} 1 & \gamma & \gamma^2 & \gamma^3 \end{bmatrix} \begin{bmatrix} 1 & 16 & 1 & 0 \\ -9 & 0 & 9 & 0 \\ 15 & -36 & 27 & -6 \\ -7 & 21 & -21 & 7 \end{bmatrix}$$

The values of multiple texels, together with their weights, are combined to produce a filtered value.

The `VkSamplerReductionModeCreateInfo::reductionMode` can control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE` or `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`, a weighted average is computed:

$$\tau_{3D} = \sum_{k=j_0}^{k_3} \sum_{j=j_0}^{j_3} \sum_{i=i_0}^{i_3} (w_i)(w_j)(w_k)\tau_{ijk}$$

$$\tau_{2D} = \sum_{j=j_0}^{j_3} \sum_{i=i_0}^{i_3} (w_i)(w_j)\tau_{ij}$$

$$\tau_{1D} = \sum_{i=i_0}^{i_3} (w_i)\tau_i$$

However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above set of multiple texels, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the set of texels with non-zero weights.

Texel Range Clamp

When `reductionMode` is `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`, the weighted average is clamped to be within the component-wise minimum and maximum of the set of texels with non-zero weights.

Texel Mipmap Filtering

`VK_SAMPLER_MIPMAP_MODE_NEAREST` filtering returns the value of a single mipmap level,

$$\tau = \tau[d].$$

`VK_SAMPLER_MIPMAP_MODE_LINEAR` filtering combines the values of multiple mipmap levels ($\tau[hi]$ and

$\tau[lo]$), together with their linear weights.

The linear weights are derived from the fraction computed earlier:

$$\begin{aligned}w_{hi} &= (1 - \delta) \\w_{lo} &= (\delta)\end{aligned}$$

The values of multiple mipmap levels, together with their weights, are combined to produce a final filtered value.

The `VkSamplerReductionModeCreateInfo::reductionMode` can control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, a weighted average is computed:

$$\tau = (w_{hi})\tau[hi] + (w_{lo})\tau[lo]$$

However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above values, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the values with non-zero weights.

Texel Anisotropic Filtering

Anisotropic filtering is enabled by the `anisotropyEnable` in the sampler. When enabled, the image filtering scheme accounts for a degree of anisotropy.

The particular scheme for anisotropic texture filtering is implementation-dependent. Implementations **should** consider the `magFilter`, `minFilter` and `mipmapMode` of the sampler to control the specifics of the anisotropic filtering scheme used. In addition, implementations **should** consider `minLod` and `maxLod` of the sampler.

NOTE

For historical reasons, vendor implementations of anisotropic filtering interpret these sampler parameters in different ways, particularly in corner cases such as `magFilter`, `minFilter` of `NEAREST` or `maxAnisotropy` equal to 1.0. Applications should not expect consistent behavior in such cases, and should use anisotropic filtering only with parameters which are expected to give a quality improvement relative to `LINEAR` filtering.

The following describes one particular approach to implementing anisotropic filtering for the 2D Image case; implementations **may** choose other methods:

Given a `magFilter`, `minFilter` of `VK_FILTER_LINEAR` and a `mipmapMode` of `VK_SAMPLER_MIPMAP_MODE_NEAREST`:

Instead of a single isotropic sample, N isotropic samples are sampled within the image footprint of the image level d to approximate an anisotropic filter. The sum $\tau_{2D_{\text{Daniso}}}$ is defined using the single isotropic $\tau_{2D}(u,v)$ at level d .

$$\tau_{2D_{Daniso}} = \frac{1}{N} \sum_{i=1}^N \tau_{2D} \left(u \left(x - \frac{1}{2} + \frac{i}{N+1}, y \right), v \left(x - \frac{1}{2} + \frac{i}{N+1}, y \right) \right), \quad \text{when } \rho_x > \rho_y$$

$$\tau_{2D_{Daniso}} = \frac{1}{N} \sum_{i=1}^N \tau_{2D} \left(u \left(x, y - \frac{1}{2} + \frac{i}{N+1} \right), v \left(x, y - \frac{1}{2} + \frac{i}{N+1} \right) \right), \quad \text{when } \rho_y \geq \rho_x$$

When `VkSamplerReductionModeCreateInfo::reductionMode` is `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, the above summation is used. However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above values, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the values with non-zero weights.

16.9. Texel Footprint Evaluation

The SPIR-V instruction `OpImageSampleFootprintNV` evaluates the set of texels from a single mip level that would be accessed during a `texel filtering` operation. In addition to the inputs that would be accepted by an equivalent `OpImageSample*` instruction, `OpImageSampleFootprintNV` accepts two additional inputs. The `Granularity` input is an integer identifying the size of texel groups used to evaluate the footprint. Each bit in the returned footprint mask corresponds to an aligned block of texels whose size is given by the following table:

Table 29. Texel Footprint Granularity Values

Granularity	Dim = 2D	Dim = 3D
0	unsupported	unsupported
1	2x2	2x2x2
2	4x2	unsupported
3	4x4	4x4x2
4	8x4	unsupported
5	8x8	unsupported
6	16x8	unsupported
7	16x16	unsupported
8	unsupported	unsupported
9	unsupported	unsupported
10	unsupported	16x16x16
11	64x64	32x16x16
12	128x64	32x32x16
13	128x128	32x32x32
14	256x128	64x32x32
15	256x256	unsupported

The `Coarse` input is used to select between the two mip levels that **may** be accessed during texel

filtering when using a `mipmapMode` of `VK_SAMPLER_MIPMAP_MODE_LINEAR`. When filtering between two mip levels, a `Coarse` value of `true` requests the footprint in the lower-resolution mip level (higher level number), while `false` requests the footprint in the higher-resolution mip level. If texel filtering would access only a single mip level, the footprint in that level would be returned when `Coarse` is `false`; an empty footprint would be returned when `Coarse` is `true`.

The footprint for `OpImageSampleFootprintNV` is returned in a structure with six members:

- The first member is a boolean value that is true if the texel filtering operation would access only a single mip level.
- The second member is a two- or three-component integer vector holding the footprint anchor location. For two-dimensional images, the returned components are in units of eight texel groups. For three-dimensional images, the returned components are in units of four texel groups.
- The third member is a two- or three-component integer vector holding a footprint offset relative to the anchor. All returned components are in units of texel groups.
- The fourth member is a two-component integer vector mask, which holds a bitfield identifying the set of texel groups in an 8x8 or 4x4x4 neighborhood relative to the anchor and offset.
- The fifth member is an integer identifying the mip level containing the footprint identified by the anchor, offset, and mask.
- The sixth member is an integer identifying the granularity of the returned footprint.

For footprints in two-dimensional images (`Dim2D`), the mask returned by `OpImageSampleFootprintNV` indicates whether each texel group in a 8x8 local neighborhood of texel groups would have one or more texels accessed during texel filtering. In the mask, the texel group with local group coordinates (lgx, lgy) is considered covered if and only if

$$0 \neq ((mask.x + (mask.y << 32)) \& (1 << (lgy \times 8 + lgx)))$$

where:

- $0 \leq lgx < 8$ and $0 \leq lgy < 8$; and
- `mask` is the returned two-component mask.

The local group with coordinates (lgx, lgy) in the mask is considered covered if and only if the texel filtering operation would access one or more texels τ_{ij} in the returned mip level where:

$$\begin{aligned} i0 &= \begin{cases} gran.x \times (8 \times anchor.x + lgx), & \text{if } lgx + offset.x < 8 \\ gran.x \times (8 \times (anchor.x - 1) + lgx), & \text{otherwise} \end{cases} \\ i1 &= i0 + gran.x - 1 \\ j0 &= \begin{cases} gran.y \times (8 \times anchor.y + lgy), & \text{if } lgy + offset.y < 8 \\ gran.y \times (8 \times (anchor.y - 1) + lgy), & \text{otherwise} \end{cases} \\ j1 &= j0 + gran.y - 1 \end{aligned}$$

and

- $i0 \leq i \leq i1$ and $j0 \leq j \leq j1$;
- *gran* is a two-component vector holding the width and height of the texel group identified by the granularity;
- *anchor* is the returned two-component anchor vector; and
- *offset* is the returned two-component offset vector.

For footprints in three-dimensional images (**Dim3D**), the mask returned by **OpImageSampleFootprintNV** indicates whether each texel group in a 4x4x4 local neighborhood of texel groups would have one or more texels accessed during texel filtering. In the mask, the texel group with local group coordinates (*lgx*, *lgy*, *lgz*), is considered covered if and only if:

$$0 \neq ((mask.x + (mask.y << 32)) \& (1 < (lgz \times 16 + lgy \times 4 + lgx)))$$

where:

- $0 \leq lgx < 4$, $0 \leq lgy < 4$, and $0 \leq lgz < 4$; and
- *mask* is the returned two-component mask.

The local group with coordinates (*lgx*, *lgy*, *lgz*) in the mask is considered covered if and only if the texel filtering operation would access one or more texels τ_{ijk} in the returned mip level where:

$$\begin{aligned} i0 &= \begin{cases} gran.x \times (4 \times anchor.x + lgx), & \text{if } lgx + offset.x < 4 \\ gran.x \times (4 \times (anchor.x - 1) + lgx), & \text{otherwise} \end{cases} \\ i1 &= i0 + gran.x - 1 \\ j0 &= \begin{cases} gran.y \times (4 \times anchor.y + lgy), & \text{if } lgy + offset.y < 4 \\ gran.y \times (4 \times (anchor.y - 1) + lgy), & \text{otherwise} \end{cases} \\ j1 &= j0 + gran.y - 1 \\ k0 &= \begin{cases} gran.z \times (4 \times anchor.z + lgz), & \text{if } lgz + offset.z < 4 \\ gran.z \times (4 \times (anchor.z - 1) + lgz), & \text{otherwise} \end{cases} \\ k1 &= k0 + gran.z - 1 \end{aligned}$$

and

- $i0 \leq i \leq i1$, $j0 \leq j \leq j1$, $k0 \leq k \leq k1$;
- *gran* is a three-component vector holding the width, height, and depth of the texel group identified by the granularity;
- *anchor* is the returned three-component anchor vector; and
- *offset* is the returned three-component offset vector.

If the sampler used by **OpImageSampleFootprintNV** enables anisotropic texel filtering via **anisotropyEnable**, it is possible that the set of texel groups accessed in a mip level may be too large to be expressed using an 8x8 or 4x4x4 mask using the granularity requested in the instruction. In this case, the implementation uses a texel group larger than the requested granularity. When a larger texel group size is used, **OpImageSampleFootprintNV** returns an integer granularity value that **can** be interpreted in the same manner as the granularity value provided to the instruction to

determine the texel group size used. If anisotropic texel filtering is disabled in the sampler, or if an anisotropic footprint can be represented as an 8x8 or 4x4x4 mask with the requested granularity, `OpImageSampleFootprintNV` will use the requested granularity as-is and return a granularity value of zero.

`OpImageSampleFootprintNV` supports only two- and three-dimensional image accesses (`Dim2D` and `Dim3D`), and the footprint returned is undefined if a sampler uses an addressing mode other than `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.

16.10. Weight Image Sampling

The SPIR-V instruction `OpImageWeightedSampleQCOM` specifies a texture sampling operation involving two images: the *sampled image* and the *weight image*. It is similar to bilinear filtering except more than 2x2 texels may participate in the filter and the filter weights are application-specified rather than computed by fixed-function hardware. The weight image view defines a 2D kernel weights used during sampling.

The `OpImageWeightedSampleQCOM` support normalized or unnormalized texel coordinates. In addition to the inputs that would be accepted by an equivalent `OpImageSample*` instruction, `OpImageWeightedSampleQCOM` accepts a `weight` input that specifies the view of a sample weight image

The input `weight` **must** be a view of a 2D or 1D image with `mipLevels` equal to 1, `samples` equal to `VK_SAMPLE_COUNT_1_BIT`, created with an identity swizzle, and created with `usage` that includes `VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM`. The `VkImageViewSampleWeightCreateInfoQCOM` specifies additional parameters of the view: `filterCenter`, `filterSize`, and `numPhases`. described in more detail below.

The `weight` input **must** be bound using a `sample weight image` descriptor type. The `weight` view defines a filtering kernel that is a region of view's subresource range. The kernel spans a region from integer texel coordinate (0,0) to (`filterSize.x-1`, `filterSize.y-1`). It is valid for the view's subresource to have dimensions larger than the kernel but the texels with integer coordinates greater than (`filterSize.width-1`, `filterSize.height-1`) are ignored by weight sampling. The value returned by queries `OpImageQuerySize`, `OpImageQuerySizeLod`, `OpImageQueryLevels`, and `OpImageQuerySamples` return for a weight image is undefined.

`filterCenter` designates an integer texel coordinate within the filter kernel as being the 'center' of the kernel. The center **must** be in the range (0,0) to (`filterSize.x-1`, `filterSize.y-1`). `numPhases` describes the number of filter phases used to provide sub-pixel filtering. Both are described in more detail below.

16.10.1. Weight Image Layout

The weight image specifies filtering kernel weight values. A 2D image view can be used to specify a 2D matrix of filter weights. For separable filters, a 1D image view can be used to specify the horizontal and vertical weights.

2D Non-Separable Weight Filters

A 2D image view defined with `VkImageViewSampleWeightCreateInfoQCOM` describes a 2D matrix

(`filterSize.width` × `filterSize.height`) of weight elements with filter’s center point at `filterCenter`. Note that `filterSize` can be smaller than the view’s subresource, but the filter will always be located starting at integer texel coordinate (0,0).

The following figure illustrates a 2D convolution filter having `filterSize` of (4,3) and `filterCenter` at (1, 1).

(0,0)	(1,0)	(2,0)	(3,0)
(0,1)	<i>origin</i>	(2,1)	(3,1)
(0,2)	(1,2)	(2,2)	(3,2)

2D Convolution Filter

Figure 12. 2D Convolution Filter

For a 2D weight filter, the phases are stored as layers of a 2D array image. The width and height of the view’s subresource range **must** be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension`. The layers are stored in horizontal phase major order. Expressed as a formula, the layer index for each filter phase is computed as:

```
layerIndex(horizPhase,vertPhase,horizPhaseCount) = (vertPhase * horizPhaseCount) +
horizPhase
```

1D Separable Weight Filters

A separable weight filter is a 2D filter that can be specified by two 1D filters in the x and y directions such that their product yields the 2D filter. The following example shows a 2D filter and its associated separable 1D horizontal and vertical filters.

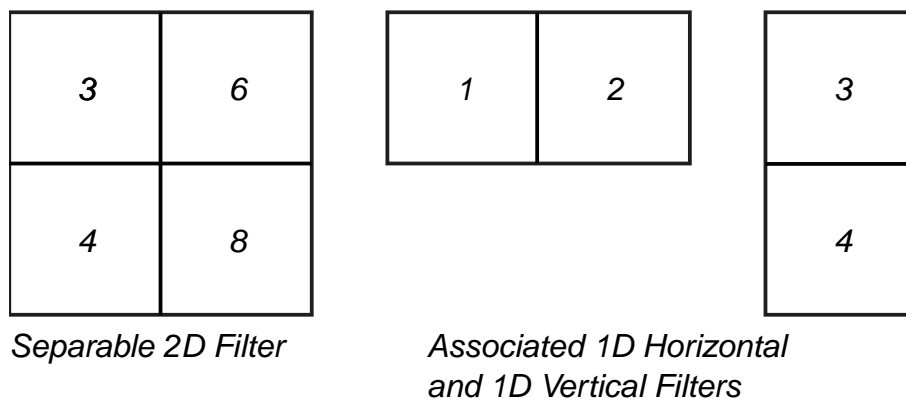

Figure 13. Separable 2D Convolution Filter

A 1D array image view defined with [VkImageViewSampleWeightCreateInfoQCOM](#) and with `layerCount` equal to '2' describes a separable weight filter. The horizontal weights are specified in slice '0' and the vertical weights in slice '1'. The `filterSize` and `filterCenter` specify the size and origin of the of the horizontal and vertical filters. For many use cases, 1D separable filters can offer a performance advantage over 2D filters.

For a 1D separable weight filter, the phases are arranged into a 1D array image with two layers. The horizontal weights are stored in layer 0 and the vertical weights in layer 1. Within each layer of the 1D array image, the weights are arranged into groups of 4, and then arranged by phase. Expressed as a formula, the 1D texel offset for each weight within each layer is computed as:

```
// Let horizontal weights have a weightIndex of [0, filterSize.width - 1]
// Let vertical weights have a weightIndex of [0, filterSize.height - 1]
// Let phaseCount be the number of phases in either the vertical or horizontal
// direction.

texelOffset(phaseIndex, weightIndex, phaseCount) = (phaseCount * 4 * (weightIndex / 4))
+ (phaseIndex * 4) + (weightIndex % 4)
```

16.10.2. Weight Sampling Phases

When using weight image sampling, the texture coordinates may not align with a texel center in the sampled image. In this case, the filter weights can be adjusted based on the subpixel location. This is termed “subpixel filtering” to indicate that the origin of the filter lies at a subpixel location other than the texel center. Conceptually, this means that the weight filter is positioned such that filter taps do not align with sampled texels exactly. In such a case, modified filter weights may be needed to adjust for the off-center filter taps. Unlike bilinear filtering where the subpixel weights are computed by the implementation, subpixel weight image sampling requires that the per-phase filter weights are pre-computed by the application and stored in an array where each slice of the array is a “filter phase”. The array is indexed by the implementation based on subpixel positioning. Rather than a single 2D kernel of filter weights, the application provides an array of kernels, one set

of filter weights per phase.

The number of phases are restricted by following requirements, which apply to both separable and non-separable filters:

- The number of phases in the vertical direction, $\text{phaseCount}_{\text{vert}}$, **must** be a power of two (i.e., 1, 2, 4, etc.).
- The number of phases in the horizontal direction $\text{phaseCount}_{\text{horiz}}$, **must** equal $\text{phaseCount}_{\text{vert}}$.
- The total number of phases, $\text{phaseCount}_{\text{vert}} \times \text{phaseCount}_{\text{horiz}}$, **must** be less than or equal to [VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterPhases](#).

16.10.3. Weight Sampler Parameters

Weight sampling requires [VkSamplerCreateInfo](#) `addressModeU` and `addressModeV` **must** be [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#) or [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER](#). If [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER](#) is used, then the border color **must** be [VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK](#).

16.10.4. Weight Sampling Operation

The 2D unnormalized texel coordinates (u, v) are transformed by *filterCenter* to specify coordinates i_0, j_0 .

$$\begin{aligned} i_0 &= \lfloor u - \text{filterCenter}_x \rfloor \\ j_0 &= \lfloor v - \text{filterCenter}_y \rfloor \end{aligned}$$

where *filterCenter* is specified by [VkImageViewSampleWeightCreateInfoQCOM::filterCenter](#).

Two sets of neighboring integer 2D texel coordinates are generated. The first set is used for selecting texels from the sampled image τ and the second set used for selecting texels from the weight image w . The first set of neighboring coordinates are combinations of i_0 to $i_{\text{filterWidth}-1}$ and j_0 to $j_{\text{filterHeight}-1}$. The second set of neighboring coordinates are combinations of k_0 to $k_{\text{filterWidth}-1}$ and l_0 to $l_{\text{filterHeight}-1}$. The first and second sets each contain $(\text{filterWidth} \times \text{filterHeight})$ of pairs of (i, j) and (k, l) coordinates respectively.

$$\begin{aligned} \{i_q\}_{q=0}^{\text{filterWidth}-1} &= i_0 + q \\ \{j_q\}_{q=0}^{\text{filterHeight}-1} &= j_0 + q \\ \{k_q\}_{q=0}^{\text{filterWidth}-1} &= q \\ \{l_q\}_{q=0}^{\text{filterHeight}-1} &= q \end{aligned}$$

where *filterWidth* and *filterHeight* are specified by [VkImageViewSampleWeightCreateInfoQCOM::filterSize](#).

Each of the generated integer coordinates (i_q, j_q) is transformed by [texture wrapping operation](#),

followed by [integer texel coordinate validation](#), If any coordinate fails coordinate validation, it is a Border Texel and [texel replacement](#) is performed.

The phase index ψ is computed from the fraction bits of the unnormalized 2D texel coordinates:

$$\begin{aligned} phaseCount_h &= phaseCount_v = \sqrt{numPhases} \\ hPhase &= \lfloor \text{frac}(u) \times phaseCount_h \rfloor \\ vPhase &= \lfloor \text{frac}(v) \times phaseCount_v \rfloor \\ \psi &= (vPhase \times phaseCount_h) + hPhase \end{aligned}$$

where the number of fraction bits retained is $\log_2(numPhases)$ specified by [VkImageViewSampleWeightCreateInfoQCOM::numPhases](#)

Each pair of texel coordinates (i, j) in the first set selects a single texel value τ_{ij} from the sampled image. Each pair of texel coordinates (k, l) in the second set, combined with phaseIndex ψ , selects a single weight from the weight image $w(k, l, \psi)$.

$$w(k, l, \psi) = \begin{cases} w_{kl}[\psi] & (\psi \text{ as layer index}) \text{ for 2D array view (non-separable filter)} \\ weight_h \times weight_v & \text{for 1D array view (separable filter)} \end{cases}$$

If w is a 2D array view, then non-separable filtering is specified, and integer coordinates (k, l) are used to select texels from layer ψ of w . If w is a 1D array view, then separable filtering is specified and integer coordinates (k, l) are transformed to (k_{packed}, l_{packed}) , and used to select horizontal weight ($weight_h$) and vertical weight ($weight_v$) texels from layer 0 and layer 1 of w respectively.

$$k_{packed} = (phaseCount_h \times 4 \times \lfloor k / 4 \rfloor) + (hPhase \times 4) + (k \% 4)$$

$$l_{packed} = (phaseCount_v \times 4 \times \lfloor l / 4 \rfloor) + (vPhase \times 4) + (l \% 4)$$

$$weight_h = w_{k_{packed}}[0] \quad \text{(horizontal weights packed in layer 0)}$$

$$weight_v = w_{l_{packed}}[1] \quad \text{(vertical weights packed in layer 1)}$$

Where $\%$ refers to the integer modulo operator.

The values of multiple texels, together with their weights, are combined to produce a filtered value.

$$\tau_{weightSampling} = \sum_{\substack{j = j_0 \\ l = l_0}}^{j_{blockHeight} - 1} \sum_{\substack{i = i_0 \\ k = k_0}}^{i_{blockWidth} - 1} w(k, l, \psi) \tau_{ij}$$

When [VkSamplerReductionModeCreateInfo::reductionMode](#) is [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE](#), the above summation is used. However, if the reduction mode is [VK_SAMPLER_REDUCTION_MODE_MIN](#) or [VK_SAMPLER_REDUCTION_MODE_MAX](#), the process operates on the above values, computing a component-wise minimum or maximum of the texels with non-zero weights. If the reduction mode is [VK_SAMPLER_REDUCTION_MODE_MIN](#) or

`VK_SAMPLER_REDUCTION_MODE_MAX`, each $w(k, l, \psi)$ weight **must** be equal to 0.0 or 1.0, otherwise the undefined values are returned.

Finally, the operations described in [Conversion to RGBA](#) and [Component swizzle](#) are performed and the final result is returned to the shader.

16.11. Block Matching

The SPIR-V instruction `OpImageBlockMatchSAD` and `OpImageBlockMatchSSD` specify texture block matching operations where a block or region of texels within a *target image* is compared with a same-sized region a *reference image*. The instructions make use of two image views: the *target view* and the *reference view*. The target view and reference view can be the same view, allowing block matching of two blocks within a single image.

Similar to an equivalent `OpImageFetch` instruction, `OpImageBlockMatchSAD` and `OpImageBlockMatchSSD` specify an *image* and an integer texel *coordinate* which describes the bottom-left texel of the target block. There are three additional inputs. The *reference* and *refCoordinate* specifies bottom-left texel of the reference block. The *blockSize* specifies the integer width and height of the target and reference blocks to be compared, and **must** not be greater than `VkPhysicalDeviceImageProcessingPropertiesQCOM.maxBlockMatchRegion`.

`OpImageBlockMatchWindowSAD` and `OpImageBlockMatchWindowSSD` take the same input parameters as the corresponding non-window instructions. The block matching comparison is performed for all pixel values within a 2D window whose dimensions are specified in the sampler.

16.11.1. Block Matching Sampler Parameters

For `OpImageBlockMatchSAD` and `OpImageBlockMatchSSD`, the input *sampler* **must** be created with *addressModeU* and *addressModeV*, equal to `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`, or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` with `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`. The input *sampler* **must** be created with *unnormalizedCoordinates* equal to `VK_TRUE`. The input *sampler* **must** be created with *components* equal to `VK_COMPONENT_SWIZZLE_IDENTITY`.

For `OpImageBlockMatchWindowSAD` and `OpImageBlockMatchWindowSSD` instructions, the *target* sampler **must** have been created with `VkSamplerBlockMatchWindowCreateInfoQCOM` in the *pNext* chain.

For `OpImageBlockMatchWindowSAD`, `OpImageBlockMatchWindowSSD`, `OpImageBlockMatchGatherSAD`, or `OpImageBlockMatchGatherSSD` instructions, the input *sampler* **must** be created with *addressModeU* and *addressModeV*, equal to `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` with `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`.

Other sampler states are ignored.

16.11.2. Block Matching Operation

Block matching SPIR-V instructions `OpImageBlockMatchSAD` and `OpImageBlockMatchSSD` specify two sets of 2D integer texel coordinates: target coordinates (u, v) and reference coordinates (s, t) .

The coordinates define the bottom-left texel of the target block (i_0, j_0) and the reference block (k_0, l_0) .

$$i_0 = u$$

$$j_0 = v$$

$$k_0 = s$$

$$l_0 = t$$

For the target block, a set of neighboring integer texel coordinates are generated. The neighboring coordinates are combinations of i_0 to $i_{blockWidth-1}$ and j_0 to $j_{blockHeight-1}$. The set is of size $blockWidth \times blockHeight$.

$$\{i_q\}_{q=0}^{q=blockWidth-1} = i_0 + q$$

$$\{j_q\}_{q=0}^{q=blockHeight-1} = j_0 + q$$

where $blockWidth$ and $blockHeight$ is specified by the **blockSize** operand.

If any target integer texel coordinate (i, j) in the set fails [integer texel coordinate validation](#), then the texel is an invalid texel and [texel replacement](#) is performed.

Similarly for the reference block, a set of neighboring integer texel coordinates are generated.

$$\{k_q\}_{q=0}^{q=blockWidth-1} = k_0 + q$$

$$\{l_q\}_{q=0}^{q=blockHeight-1} = l_0 + q$$

Each reference texel coordinate (k, l) in the set **must** not fail [integer texel coordinate validation](#). To avoid undefined behavior, application shader should guarantee that the reference block is fully within the bounds of the reference image.

Each pair of texel coordinates (i, j) in the set selects a single texel value from the target image τ_{ij} . Each pair of texel coordinates (k, l) in the set selects a single texel value from the reference image v_{kl} .

The difference between target and reference texel values is summed to compute a difference metric. The **opTextureBlockMatchSAD** computes the sum of absolute differences.

$$\tau_{SAD} = \sum_{\substack{j=j_0 \\ l=l_0}}^{j_{blockHeight}-1} \sum_{\substack{i=i_0 \\ k=k_0}}^{i_{blockWidth}-1} |v_{kl} - \tau_{ij}|$$

The **opImageBlockMatchSSD** computes the sum of the squared differences.

$$\tau_{SSD} = \sum_{\substack{j = j_0 \\ l = l_0}}^{j_{blockHeight} - 1} \sum_{\substack{i = i_0 \\ k = k_0}}^{i_{blockWidth} - 1} |v_{kl} - \tau_{ij}|^2$$

When `VkSamplerReductionModeCreateInfo::reductionMode` is `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, the above summation is used. However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above values, computing a component-wise minimum or maximum of $|v_{kl} - \tau_{ij}|$, respectively. For τ_{SAD} , the minimum or maximum difference is computed and for τ_{SSD} , the square of the minimum or maximum is computed.

Finally, the operations described in [Conversion to RGBA](#) and [Component swizzle](#) are performed and the final result is returned to the shader. The component swizzle is specified by the *target image* descriptor; any swizzle specified by the *reference image* descriptor is ignored.

Block Matching Window Operation

Window block matching SPIR-V instructions `opImageBlockMatchWindowSAD` and `opImageBlockMatchWindowSSD` specify two sets of 2D integer texel coordinates: target coordinates (u, v) and reference coordinates (s, t) . The [block matching operation](#) is performed repeatedly, for multiple sets of target integer coordinates within the specified window. These instructions effectively search a region or “window” within the target texture and identify the window coordinates where the minimum or maximum error metric is found. These instructions only support single component image formats.

The target coordinates are combinations of coordinates from (u, v) to $(u + windowWidth - 1, v + windowHeight - 1)$ where `windowHeight` and `windowWidth` are specified by `VkSamplerBlockMatchWindowCreateInfoQCOM::windowExtent`. At each target coordinate, a [block matching operation](#) is performed, resulting in a difference metric. The reference coordinate (s, t) is fixed. The block matching operation is repeated $windowWidth \times windowHeight$ times.

The resulting minimum or maximum error is returned in the R component of the output. The integer window coordinates (x, y) are returned in the G and B components of the output. The A component is 0. The minimum or maximum behavior is selected by `VkSamplerBlockMatchWindowCreateInfoQCOM::windowCompareMode`.

The following pseudocode describes the operation `opImageBlockMatchWindowSAD`. The pseudocode for `opImageBlockMatchWindowSSD` follows an identical pattern.

```
vec4 opImageBlockMatchGatherSAD( sampler2D target,
                                uvec2 targetCoord,
                                sampler2D reference,
                                uvec2 refCoord,
                                uvec2 blocksize) {
    // Two parameters are sourced from the VkSampler associated with
    // `target`:
    //   compareMode (which can be either `MIN` or `MAX`)
```

```

//      uvec2 window (which defines the search window)

minSAD = INF;
maxSAD = -INF;
uvec2 minCoord;
uvec2 maxCoord;

for (uint x=0, x<window.width; x++) {
    for (uint y=0; y<window.height; y++) {
        float SAD = textureBlockMatchSAD(target,
                                          targetCoord + uvec2(x, y),
                                          reference,
                                          refCoord,
                                          blocksize).x;

        if (SAD < minSAD) {
            minSAD = SAD;
            minCoord = uvec2(x,y);
        }
        if (SAD > maxSAD) {
            maxSAD = SAD;
            maxCoord = uvec2(x,y);
        }
    }
}
if (compareMode==MIN) {
    return vec4(minSAD, minCoord.x, minCoord.y, 0.0);
} else {
    return vec4(maxSAD, maxCoord.x, maxCoord.y, 0.0);
}
}

```

Block Matching Gather Operation

Block matching Gather SPIR-V instructions `opImageBlockMatchGatherSAD` and `opImageBlockMatchGatherSSD` specify two sets of 2D integer texel coordinates: target coordinates (u, v) and reference coordinates (s, t) .

These instructions perform the [block matching operation](#) 4 times, using integer target coordinates (u, v) , $(u + 1, v)$, $(u + 2, v)$, and $(u + 3, v)$. The R component from each of those 4 operations is gathered and returned in the R, G, B, and A components of the output respectively. For each block match operation, the reference coordinate is (s, t) . For each block match operation, only the R component of the target and reference images are compared. The following pseudocode describes the operation `opImageBlockMatchGatherSAD`. The pseudocode for `opImageBlockMatchGatherSSD` follows an identical pattern.

```

vec4 opImageBlockMatchGatherSAD(sampler2D target,
                                uvec2 targetCoord,
                                sampler2D reference,
                                uvec2 refCoord,

```

```

                                uvec2 blocksize) {
    vec4 out;
    for (uint x=0, x<4; x++) {
        float SAD = textureBlockMatchSAD(target,
                                          targetCoord + uvec2(x, 0),
                                          reference,
                                          refCoord,
                                          blocksize).x;

        if (x == 0) {
            out.x = SAD;
        }
        if (x == 1) {
            out.y = SAD;
        }
        if (x == 2) {
            out.z = SAD;
        }
        if (x == 3) {
            out.w = SAD;
        }
    }
    return out;
}

```

16.12. Box Filter Sampling

The SPIR-V instruction `OpImageBoxFilterQCOM` specifies texture box filtering operation where a weighted average of a region of texels is computed, with the weights proportional to the coverage of each of the texels.

In addition to the inputs that would be accepted by an equivalent `OpImageSample*` instruction, `OpImageBoxFilterQCOM` accepts one additional input, `boxSize` which specifies the width and height in texels of the region to be averaged.

The figure below shows an example of using `OpImageBoxFilterQCOM` to sample from a 8×4 texel two-dimensional image, with unnormalized texture coordinates (4.125, 2.625) and `boxSize` of (2.75, 2.25). The filter will read 12 texel values and compute a weights based portion of each texel covered by the box.

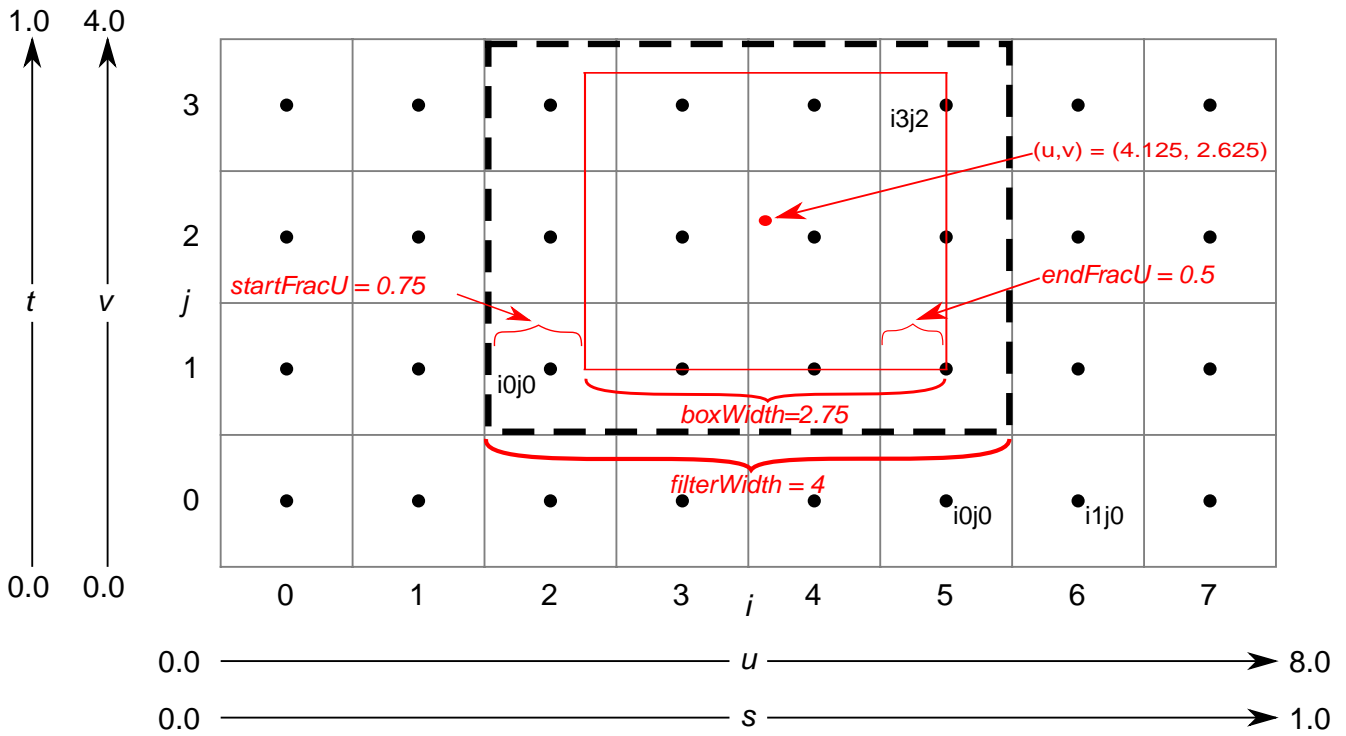

Figure 14. Box Filter Sampling Example

If **boxSize** has height and width both equal to 1.0, then this instruction will behave as traditional bilinear filtering. The **boxSize** parameter **must** be greater than or equal to 1.0 and **must** not be greater than `VkPhysicalDeviceImageProcessingPropertiesQCOM.maxBoxFilterBlockSize`.

16.12.1. Box Filter Sampler Parameters

The input **sampler** **must** be created with **addressModeU** and **addressModeV**, equal to `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`, or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` with `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`.

16.12.2. Box Filter Operation

The 2D unnormalized texel coordinates (u, v) are transformed by **boxSize** to specify integer texel coordinates (i_0, j_0) of the bottom left texel for the filter.

$$i_0 = \lfloor u - \frac{\text{boxWidth}}{2} \rfloor$$

$$j_0 = \lfloor v - \frac{\text{boxHeight}}{2} \rfloor$$

where **boxWidth** and **boxHeight** are specified by the code:(x,y) components of the **boxSize** operand.

The filter dimensions ($\text{filterWidth} \times \text{filterHeight}$) are computed from the fractional portion of the (u, v) coordinates and the **boxSize**.

$$startFracU = \text{frac}\left(u - \frac{boxWidth}{2}\right)$$

$$startFracV = \text{frac}\left(v - \frac{boxHeight}{2}\right)$$

$$endFracU = \text{frac}(startFracU + boxWidth)$$

$$endFracV = \text{frac}(startFracV + boxHeight)$$

$$filterWidth = \lceil startFracU + boxWidth \rceil$$

$$filterHeight = \lceil startFracV + boxHeight \rceil$$

where the number of fraction bits retained by $\text{frac}()$ is specified by `VkPhysicalDeviceLimits::subTexelPrecisionBits`.

A set of neighboring integer texel coordinates are generated. The neighboring coordinates are combinations of i_0 to $i_{filterWidth-1}$ and j_0 to $j_{filterHeight-1}$, with i_0, j_0 being the top-left coordinate of this set. The set is of size $(filterWidth \times filterHeight)$.

$$\{i_q\}_{q=0}^{q=filterWidth-1} = i_0 + q$$

$$\{j_q\}_{q=0}^{q=filterHeight-1} = j_0 + q$$

Each of the generated integer coordinates (i_q, j_q) is transformed by [texture wrapping operation](#), followed by [integer texel coordinate validation](#). If any coordinate fails coordinate validation, it is a Border Texel and [texel replacement](#) is performed.

Horizontal weights $horizWeight_0$ to $horizWeight_{boxWidth-1}$ and vertical weights $vertWeight_0$ to $vertWeight_{boxHeight-1}$ are computed. Texels that are fully covered by the box will have a horizontal and vertical weight of 1. Texels partially covered by the box will have will have a reduced weights proportional to the coverage.

$$horizWeight_i = \begin{cases} (1 - startFracU), & \text{for}(i = 0) \\ (endFracU), & \text{for}(i = filterWidth - 1) \text{ and } (endFracU \neq 0) \\ (1), & \text{otherwise} \end{cases}$$

$$vertWeight_j = \begin{cases} (1 - startFracV), & \text{for}(j = 0) \\ (endFracV), & \text{for}(j = filterHeight - 1) \text{ and } (endFracV \neq 0) \\ (1), & \text{otherwise} \end{cases}$$

The values of multiple texels, together with their horizontal and vertical weights, are combined to produce a box filtered value.

$$\tau_{boxFilter} = \frac{1}{boxHeight \times boxWidth} \sum_{j=j_0}^{j_{filterHeight}-1} \sum_{i=i_0}^{i_{filterWidth}-1} (horizWeight_i)(vertWeight_j)\tau_{ij}$$

When `VkSamplerReductionModeCreateInfo::reductionMode` is `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, the above summation is used. However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above values, computing a component-wise minimum or maximum of the texels.

16.13. Image Operation Steps

Each step described in this chapter is performed by a subset of the image instructions:

- Texel Input Validation Operations, Format Conversion, Texel Replacement, Conversion to RGBA, and Component Swizzle: Performed by all instructions except `OpImageWrite`.
- Depth Comparison: Performed by `OpImage*Dref` instructions.
- All Texel output operations: Performed by `OpImageWrite`.
- Projection: Performed by all `OpImage*Proj` instructions.
- Derivative Image Operations, Cube Map Operations, Scale Factor Operation, LOD Operation and Image Level(s) Selection, and Texel Anisotropic Filtering: Performed by all `OpImageSample*` and `OpImageSparseSample*` instructions.
- (s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and (u,v,w,a) to (i,j,k,l,n) Transformation And Array Layer Selection: Performed by all `OpImageSample`, `OpImageSparseSample`, and `OpImage*Gather` instructions.
- Texel Gathering: Performed by `OpImage*Gather` instructions.
- Texel Footprint Evaluation: Performed by `OpImageSampleFootprint` instructions.
- Texel Filtering: Performed by all `OpImageSample*` and `OpImageSparseSample*` instructions.
- Sparse Residency: Performed by all `OpImageSparse*` instructions.
- (s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and Weight Image Sampling: Performed by `OpImageWeightedSample*` instructions.
- (s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and Block Matching: Performed by `OpImageBlockMatch*` instructions.
- (s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and Box Filter Sampling: Performed by `OpImageBoxFilter*` instructions.

16.14. Image Query Instructions

16.14.1. Image Property Queries

`OpImageQuerySize`, `OpImageQuerySizeLod`, `OpImageQueryLevels`, and `OpImageQuerySamples` query properties of the image descriptor that would be accessed by a shader image operation. They return 0 if the bound descriptor is a null descriptor.

`OpImageQuerySizeLod` returns the size of the image level identified by the `Level of Detail` operand. If that level does not exist in the image, and the descriptor is not null, then the value returned is undefined.

16.14.2. LOD Query

`OpImageQueryLod` returns the Lod parameters that would be used in an image operation with the given image and coordinates. If the descriptor that would be accessed is a null descriptor then (0,0) is returned. Otherwise, the steps described in this chapter are performed as if for `OpImageSampleImplicitLod`, up to [Scale Factor Operation](#), [LOD Operation](#) and [Image Level\(s\) Selection](#). The return value is the vector $(\lambda', d_l - \text{level}_{\text{base}})$. These values **may** be subject to implementation-specific maxima and minima for very large, out-of-range values.

Chapter 17. Fragment Density Map Operations

17.1. Fragment Density Map Operations Overview

When a fragment is generated in a render pass that has a fragment density map attachment, its area is determined by the properties of the local framebuffer region that the fragment occupies. The framebuffer is divided into a uniform grid of these local regions, and their fragment area property is derived from the density map with the following operations:

- [Fetch density value](#)
 - [Component swizzle](#)
 - [Component mapping](#)
- [Fragment area conversion](#)
 - [Fragment area filter](#)
 - [Fragment area clamp](#)

17.2. Fetch Density Value

Each local framebuffer region at center coordinate (x,y) fetches a texel from the fragment density map.

First, the local framebuffer region center coordinate (x,y) is offset by the value specified in [VkSubpassFragmentDensityMapOffsetEndInfoQCOM](#). If no offset is specified, then the default offset (0,0) is used. The offsetted coordinate (x',y') is computed as follows:

$$\begin{aligned}x' &= \text{clamp}(x + p\text{FragmentDensityOffsets}[\text{layer}]_x, 0, \text{framebuffer}_{\text{width}} - 1) \\y' &= \text{clamp}(y + p\text{FragmentDensityOffsets}[\text{layer}]_y, 0, \text{framebuffer}_{\text{height}} - 1)\end{aligned}$$

The offsetted coordinate (x',y') fetches a texel from the fragment density map at integer coordinates:

$$i = \lfloor \frac{x'}{\text{fragmentDensityTexelSize}_{\text{width}}} \rfloor$$

$$j = \lfloor \frac{y'}{\text{fragmentDensityTexelSize}_{\text{height}}} \rfloor$$

Where the size of each region in the framebuffer is:

$$\text{fragmentDensityTexelSize}'_{\text{width}} = 2^{\lfloor \log_2(\frac{\text{framebuffer}_{\text{width}}}{\text{fragmentDensityMap}_{\text{width}}}) \rfloor}$$

$$fragmentDensityTexelSize_{height}' = 2^{\lceil \log_2(\frac{framebuffer_{height}}{fragmentDensityMap_{height}}) \rceil}$$

This region is subject to the limits in `VkPhysicalDeviceFragmentDensityMapPropertiesEXT` and therefore the final region size is clamped:

$$fragmentDensityTexelSize_{width} = \text{clamp}(fragmentDensityTexelSize_{width}', minFragmentDensityTexelSize_{width}, maxFragmentDensityTexelSize_{width})$$

$$fragmentDensityTexelSize_{height} = \text{clamp}(fragmentDensityTexelSize_{height}', minFragmentDensityTexelSize_{height}, maxFragmentDensityTexelSize_{height})$$

When multiview is enabled for the render pass and the fragment density map attachment view was created with `layerCount` greater than 1, the layer used for offsets and for fetching from the fragment density map is:

$$layer = baseArrayLayer + ViewIndex$$

Otherwise:

$$layer = baseArrayLayer$$

The texel fetched from the density map at (i,j,layer) is next converted to density with the following operations.

17.2.1. Component Swizzle

The `components` member of `VkImageViewCreateInfo` is applied to the fetched texel as defined in [Image component swizzle](#).

17.2.2. Component Mapping

The swizzled texel's components are mapped to a density value:

$$densityValue_{xy} = (C'_r, C'_g)$$

17.3. Fragment Area Conversion

Fragment area for the framebuffer region is undefined if the density fetched is not a normalized floating-point value greater than 0.0. Otherwise, the fetched fragment area for that region is derived as:

$$fragmentArea_{wh} = \frac{1.0}{densityValue_{xy}}$$

17.3.1. Fragment Area Filter

Optionally, the implementation **may** fetch additional density map texels in an implementation defined window around (i,j). The texels follow the standard conversion steps up to and including [fragment area conversion](#).

A single fetched fragment area for the framebuffer region is chosen by the implementation and **must** have an area between the *min* and *max* areas of the fetched set.

17.3.2. Fragment Area Clamp

The implementation **may** clamp the fetched fragment area to one that it supports. The clamped fragment area **must** have a size less than or equal to the original fetched value. Implementations **may** vary the supported set of fragment areas per framebuffer region. Fragment area (1,1) **must** always be in the supported set.

NOTE

For example, if the fetched fragment area is (1,4) but the implementation only supports areas of {(1,1),(2,2)}, it could choose to clamp the area to (2,2) since it has the same size as (1,4). While this would produce fragments that have lower quality strictly in the x-axis, the overall density is maintained.

The clamped fragment area is assigned to the corresponding framebuffer region.

Chapter 18. Queries

Queries provide a mechanism to return information about the processing of a sequence of Vulkan commands. Query operations are asynchronous, and as such, their results are not returned immediately. Instead, their results, and their availability status are stored in a [Query Pool](#). The state of these queries **can** be read back on the host, or copied to a buffer object on the device.

The supported query types are [Occlusion Queries](#), [Pipeline Statistics Queries](#), [Result Status Queries](#), [Video Encode Feedback Queries](#) and [Timestamp Queries](#). [Performance Queries](#) are supported if the associated extension is available. [Transform Feedback Queries](#) are supported if the associated extension is available. [Intel Performance Queries](#) are supported if the associated extension is available. [Mesh Shader Queries](#) are supported if the associated extension is available.

Several additional queries with specific purposes associated with ray tracing are available if the corresponding extensions are supported, as described for [VkQueryType](#).

18.1. Query Pools

Queries are managed using *query pool* objects. Each query pool is a collection of a specific number of queries of a particular type.

Query pools are represented by [VkQueryPool](#) handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkQueryPool)
```

To create a query pool, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateQueryPool(
    VkDevice                                device,
    const VkQueryPoolCreateInfo*            pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkQueryPool*                            pQueryPool);
```

- [device](#) is the logical device that creates the query pool.
- [pCreateInfo](#) is a pointer to a [VkQueryPoolCreateInfo](#) structure containing the number and type of queries to be managed by the pool.
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.
- [pQueryPool](#) is a pointer to a [VkQueryPool](#) handle in which the resulting query pool object is returned.

Valid Usage

- VUID-vkCreateQueryPool-device-09663

`device` **must** support at least one queue family with one of the `VK_QUEUE_VIDEO_ENCODE_BIT_KHR`, `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` capabilities

Valid Usage (Implicit)

- VUID-vkCreateQueryPool-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateQueryPool-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkQueryPoolCreateInfo` structure
- VUID-vkCreateQueryPool-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateQueryPool-pQueryPool-parameter
`pQueryPool` **must** be a valid pointer to a `VkQueryPool` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkQueryPoolCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkQueryPoolCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkQueryPoolCreateFlags flags;
    VkQueryType         queryType;
    uint32_t            queryCount;
    VkQueryPipelineStatisticFlags pipelineStatistics;
} VkQueryPoolCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `queryType` is a `VkQueryType` value specifying the type of queries managed by the pool.
- `queryCount` is the number of queries managed by the pool.

- `pipelineStatistics` is a bitmask of `VkQueryPipelineStatisticFlagBits` specifying which counters will be returned in queries on the new pool, as described below in [Pipeline Statistics Queries](#).

`pipelineStatistics` is ignored if `queryType` is not `VK_QUERY_TYPE_PIPELINE_STATISTICS`.

Valid Usage

- VUID-VkQueryPoolCreateInfo-queryType-00791
If the `pipelineStatisticsQuery` feature is not enabled, `queryType` **must** not be `VK_QUERY_TYPE_PIPELINE_STATISTICS`
- VUID-VkQueryPoolCreateInfo-meshShaderQueries-07068
If the `meshShaderQueries` feature is not enabled, `queryType` **must** not be `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT`
- VUID-VkQueryPoolCreateInfo-meshShaderQueries-07069
If the `meshShaderQueries` feature is not enabled, and `queryType` is `VK_QUERY_TYPE_PIPELINE_STATISTICS`, `pipelineStatistics` **must** not contain `VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT` or `VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT`
- VUID-VkQueryPoolCreateInfo-queryType-00792
If `queryType` is `VK_QUERY_TYPE_PIPELINE_STATISTICS`, `pipelineStatistics` **must** be a valid combination of `VkQueryPipelineStatisticFlagBits` values
- VUID-VkQueryPoolCreateInfo-queryType-09534
If `queryType` is `VK_QUERY_TYPE_PIPELINE_STATISTICS`, `pipelineStatistics` **must** not be zero
- VUID-VkQueryPoolCreateInfo-queryType-03222
If `queryType` is `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the `pNext` chain **must** include a `VkQueryPoolPerformanceCreateInfoKHR` structure
- VUID-VkQueryPoolCreateInfo-queryCount-02763
`queryCount` **must** be greater than 0
- VUID-VkQueryPoolCreateInfo-queryType-07133
If `queryType` is `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then the `pNext` chain **must** include a `VkVideoProfileInfoKHR` structure with `videoCodecOperation` specifying an encode operation
- VUID-VkQueryPoolCreateInfo-queryType-07906
If `queryType` is `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then the `pNext` chain **must** include a `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR` structure
- VUID-VkQueryPoolCreateInfo-queryType-07907
If `queryType` is `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, and the `pNext` chain includes a `VkVideoProfileInfoKHR` structure and a `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR` structure, then `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags` **must** not contain any bits that are not set in `VkVideoEncodeCapabilitiesKHR::supportedEncodeFeedbackFlags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the `video profile` described by `VkVideoProfileInfoKHR` and its `pNext` chain

Valid Usage (Implicit)

- VUID-VkQueryPoolCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_QUERY_POOL_CREATE_INFO`
- VUID-VkQueryPoolCreateInfo-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkQueryPoolPerformanceCreateInfoKHR`, `VkQueryPoolPerformanceQueryCreateInfoINTEL`, `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR`, `VkVideoDecodeAV1ProfileInfoKHR`, `VkVideoDecodeH264ProfileInfoKHR`, `VkVideoDecodeH265ProfileInfoKHR`, `VkVideoDecodeUsageInfoKHR`, `VkVideoEncodeH264ProfileInfoKHR`, `VkVideoEncodeH265ProfileInfoKHR`, `VkVideoEncodeUsageInfoKHR`, or `VkVideoProfileInfoKHR`
- VUID-VkQueryPoolCreateInfo-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkQueryPoolCreateInfo-flags-zerobitmask
`flags` **must** be 0
- VUID-VkQueryPoolCreateInfo-queryType-parameter
`queryType` **must** be a valid `VkQueryType` value

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryPoolCreateFlags;
```

`VkQueryPoolCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkQueryPoolPerformanceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkQueryPoolPerformanceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t            queueFamilyIndex;
    uint32_t            counterIndexCount;
    const uint32_t*     pCounterIndices;
} VkQueryPoolPerformanceCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueFamilyIndex` is the queue family index to create this performance query pool for.
- `counterIndexCount` is the length of the `pCounterIndices` array.
- `pCounterIndices` is a pointer to an array of indices into the `vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR::pCounters` to enable

in this performance query pool.

Valid Usage

- VUID-VkQueryPoolPerformanceCreateInfoKHR-queueFamilyIndex-03236
`queueFamilyIndex` **must** be a valid queue family index of the device
- VUID-VkQueryPoolPerformanceCreateInfoKHR-performanceCounterQueryPools-03237
The `performanceCounterQueryPools` feature **must** be enabled
- VUID-VkQueryPoolPerformanceCreateInfoKHR-pCounterIndices-03321
Each element of `pCounterIndices` **must** be in the range of counters reported by `vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR` for the queue family specified in `queueFamilyIndex`

Valid Usage (Implicit)

- VUID-VkQueryPoolPerformanceCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_CREATE_INFO_KHR`
- VUID-VkQueryPoolPerformanceCreateInfoKHR-pCounterIndices-parameter
`pCounterIndices` **must** be a valid pointer to an array of `counterIndexCount` `uint32_t` values
- VUID-VkQueryPoolPerformanceCreateInfoKHR-counterIndexCount-arraylength
`counterIndexCount` **must** be greater than 0

To query the number of passes required to query a performance query pool on a physical device, call:

```
// Provided by VK_KHR_performance_query
void vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkQueryPoolPerformanceCreateInfoKHR* pPerformanceQueryCreateInfo,
    uint32_t*                  pNumPasses);
```

- `physicalDevice` is the handle to the physical device whose queue family performance query counter properties will be queried.
- `pPerformanceQueryCreateInfo` is a pointer to a `VkQueryPoolPerformanceCreateInfoKHR` of the performance query that is to be created.
- `pNumPasses` is a pointer to an integer related to the number of passes required to query the performance query pool, as described below.

The `pPerformanceQueryCreateInfo` member `VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex` **must** be a queue family of `physicalDevice`. The number of passes required to capture the counters specified in the `pPerformanceQueryCreateInfo` member `VkQueryPoolPerformanceCreateInfoKHR::pCounters` is returned in `pNumPasses`.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-physicalDevice-parameter
`physicalDevice` **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-pPerformanceQueryCreateInfo-parameter
`pPerformanceQueryCreateInfo` **must** be a valid pointer to a valid [VkQueryPoolPerformanceCreateInfoKHR](#) structure
- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-pNumPasses-parameter
`pNumPasses` **must** be a valid pointer to a `uint32_t` value

To destroy a query pool, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyQueryPool(
    VkDevice          device,
    VkQueryPool       queryPool,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the query pool.
- `queryPool` is the query pool to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyQueryPool-queryPool-00793
All submitted commands that refer to `queryPool` **must** have completed execution
- VUID-vkDestroyQueryPool-queryPool-00794
If `VkAllocationCallbacks` were provided when `queryPool` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyQueryPool-queryPool-00795
If no `VkAllocationCallbacks` were provided when `queryPool` was created, `pAllocator` **must** be `NULL`

NOTE

Applications **can** verify that `queryPool` **can** be destroyed by checking that `vkGetQueryPoolResults()` without the `VK_QUERY_RESULT_PARTIAL_BIT` flag returns `VK_SUCCESS` for all queries that are used in command buffers submitted for execution.

Valid Usage (Implicit)

- VUID-vkDestroyQueryPool-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyQueryPool-queryPool-parameter
If `queryPool` is not `VK_NULL_HANDLE`, `queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkDestroyQueryPool-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyQueryPool-queryPool-parent
If `queryPool` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `queryPool` **must** be externally synchronized

Possible values of `VkQueryPoolCreateInfo::queryType`, specifying the type of queries managed by the pool, are:

```

// Provided by VK_VERSION_1_0
typedef enum VkQueryType {
    VK_QUERY_TYPE_OCCLUSION = 0,
    VK_QUERY_TYPE_PIPELINE_STATISTICS = 1,
    VK_QUERY_TYPE_TIMESTAMP = 2,
    // Provided by VK_KHR_video_queue
    VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR = 1000023000,
    // Provided by VK_EXT_transform_feedback
    VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT = 1000028004,
    // Provided by VK_KHR_performance_query
    VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR = 1000116000,
    // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR = 1000150000,
    // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR = 1000150001,
    // Provided by VK_NV_ray_tracing
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV = 1000165000,
    // Provided by VK_INTEL_performance_query
    VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL = 1000210000,
    // Provided by VK_KHR_video_encode_queue
    VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR = 1000299000,
    // Provided by VK_EXT_mesh_shader
    VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT = 1000328000,
    // Provided by VK_EXT_primitives_generated_query
    VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT = 1000382000,
    // Provided by VK_KHR_ray_tracing_maintenance1
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR =
1000386000,
    // Provided by VK_KHR_ray_tracing_maintenance1
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR = 1000386001,
    // Provided by VK_EXT_opacity_micromap
    VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT = 1000396000,
    // Provided by VK_EXT_opacity_micromap
    VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT = 1000396001,
} VkQueryType;

```

- `VK_QUERY_TYPE_OCCLUSION` specifies an [occlusion query](#).
- `VK_QUERY_TYPE_PIPELINE_STATISTICS` specifies a [pipeline statistics query](#).
- `VK_QUERY_TYPE_TIMESTAMP` specifies a [timestamp query](#).
- `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` specifies a [performance query](#).
- `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` specifies a [transform feedback query](#).
- `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` specifies a [primitives generated query](#).
- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR` specifies a [acceleration structure size query](#) for use with `vkCmdWriteAccelerationStructuresPropertiesKHR` or `vkWriteAccelerationStructuresPropertiesKHR`.
- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR` specifies a [serialization](#)

acceleration structure size query.

- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR` specifies an acceleration structure size query for use with `vkCmdWriteAccelerationStructuresPropertiesKHR` or `vkWriteAccelerationStructuresPropertiesKHR`.
- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR` specifies a serialization acceleration structure pointer count query.
- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV` specifies an acceleration structure size query for use with `vkCmdWriteAccelerationStructuresPropertiesNV`.
- `VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL` specifies a Intel performance query.
- `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` specifies a result status query.
- `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR` specifies a video encode feedback query.
- `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT` specifies a generated mesh primitives query.

18.2. Query Operation

The operation of queries is controlled by the commands `vkCmdBeginQuery`, `vkCmdEndQuery`, `vkCmdBeginQueryIndexedEXT`, `vkCmdEndQueryIndexedEXT`, `vkCmdResetQueryPool`, `vkCmdCopyQueryPoolResults`, `vkCmdWriteTimestamp`, and `vkCmdWriteTimestamp2`.

In order for a `VkCommandBuffer` to record query management commands, the queue family for which its `VkCommandPool` was created **must** support the appropriate type of operations (graphics, compute) suitable for the query type of a given query pool.

Each query in a query pool has a status that is either *unavailable* or *available*, and also has state to store the numerical results of a query operation of the type requested when the query pool was created. Resetting a query via `vkCmdResetQueryPool` or `vkResetQueryPool` sets the status to unavailable and makes the numerical results undefined. A query is made available by the operation of `vkCmdEndQuery`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteTimestamp2`, or `vkCmdWriteTimestamp`. Both the availability status and numerical results **can** be retrieved by calling either `vkGetQueryPoolResults` or `vkCmdCopyQueryPoolResults`.

After query pool creation, each query is in an uninitialized state and **must** be reset before it is used. Queries **must** also be reset between uses.

If a logical device includes multiple physical devices, then each command that writes a query **must** execute on a single physical device, and any call to `vkCmdBeginQuery` **must** execute the corresponding `vkCmdEndQuery` command on the same physical device.

To reset a range of queries in a query pool on a queue, call:

```
// Provided by VK_VERSION_1_0
void vkCmdResetQueryPool(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 firstQuery,
    uint32_t                 queryCount);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the handle of the query pool managing the queries being reset.
- `firstQuery` is the initial query index to reset.
- `queryCount` is the number of queries to reset.

When executed on a queue, this command sets the status of query indices [`firstQuery`, `firstQuery` + `queryCount` - 1] to unavailable.

This command defines an execution dependency between other query commands that reference the same query.

The first [synchronization scope](#) includes all commands which reference the queries in `queryPool` indicated by `firstQuery` and `queryCount` that occur earlier in [submission order](#).

The second [synchronization scope](#) includes all commands which reference the queries in `queryPool` indicated by `firstQuery` and `queryCount` that occur later in [submission order](#).

The operation of this command happens after the first scope and happens before the second scope.

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, this command sets the status of query indices [`firstQuery`, `firstQuery` + `queryCount` - 1] to unavailable for each pass of `queryPool`, as indicated by a call to [vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR](#).

NOTE

Because `vkCmdResetQueryPool` resets all the passes of the indicated queries, applications must not record a `vkCmdResetQueryPool` command for a `queryPool` created with `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` in a command buffer that needs to be submitted multiple times as indicated by a call to [vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR](#). Otherwise applications will never be able to complete the recorded queries.

Valid Usage

- VUID-vkCmdResetQueryPool-firstQuery-09436
`firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdResetQueryPool-firstQuery-09437
The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`

- VUID-vkCmdResetQueryPool-None-02841
All queries used by the command **must** not be active
- VUID-vkCmdResetQueryPool-firstQuery-02862
If **queryPool** was created with **VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR**, this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains begin commands for a query from the set of queries [**firstQuery**, **firstQuery** + **queryCount** - 1]

Valid Usage (Implicit)

- VUID-vkCmdResetQueryPool-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdResetQueryPool-queryPool-parameter
queryPool **must** be a valid **VkQueryPool** handle
- VUID-vkCmdResetQueryPool-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdResetQueryPool-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support graphics, compute, decode, encode, or optical flow operations
- VUID-vkCmdResetQueryPool-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdResetQueryPool-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdResetQueryPool-commonparent
Both of **commandBuffer**, and **queryPool** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Graphics Compute Decode Encode Opticalflow	Action

To reset a range of queries in a query pool on the host, call:

```
// Provided by VK_VERSION_1_2
void vkResetQueryPool(
    VkDevice          device,
    VkQueryPool       queryPool,
    uint32_t          firstQuery,
    uint32_t          queryCount);
```

or the equivalent command

```
// Provided by VK_EXT_host_query_reset
void vkResetQueryPoolEXT(
    VkDevice          device,
    VkQueryPool       queryPool,
    uint32_t          firstQuery,
    uint32_t          queryCount);
```

- **device** is the logical device that owns the query pool.
- **queryPool** is the handle of the query pool managing the queries being reset.
- **firstQuery** is the initial query index to reset.
- **queryCount** is the number of queries to reset.

This command sets the status of query indices [**firstQuery**, **firstQuery** + **queryCount** - 1] to unavailable.

If **queryPool** is **VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR** this command sets the status of query indices [**firstQuery**, **firstQuery** + **queryCount** - 1] to unavailable for each pass.

Valid Usage

- VUID-vkResetQueryPool-firstQuery-09436
firstQuery **must** be less than the number of queries in **queryPool**

- VUID-vkResetQueryPool-firstQuery-09437
The sum of **firstQuery** and **queryCount** **must** be less than or equal to the number of queries in **queryPool**
- VUID-vkResetQueryPool-None-02665
The **hostQueryReset** feature **must** be enabled
- VUID-vkResetQueryPool-firstQuery-02741
Submitted commands that refer to the range specified by **firstQuery** and **queryCount** in **queryPool** **must** have completed execution
- VUID-vkResetQueryPool-firstQuery-02742
The range of queries specified by **firstQuery** and **queryCount** in **queryPool** **must** not be in use by calls to **vkGetQueryPoolResults** or **vkResetQueryPool** in other threads

Valid Usage (Implicit)

- VUID-vkResetQueryPool-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkResetQueryPool-queryPool-parameter
queryPool **must** be a valid **VkQueryPool** handle
- VUID-vkResetQueryPool-queryPool-parent
queryPool **must** have been created, allocated, or retrieved from **device**

Once queries are reset and ready for use, query commands **can** be issued to a command buffer. Occlusion queries and pipeline statistics queries count events - drawn samples and pipeline stage invocations, respectively - resulting from commands that are recorded between a **vkCmdBeginQuery** command and a **vkCmdEndQuery** command within a specified command buffer, effectively scoping a set of drawing and/or dispatching commands. Timestamp queries write timestamps to a query pool. Performance queries record performance counters to a query pool.

A query **must** begin and end in the same command buffer, although if it is a primary command buffer, and the **inheritedQueries** feature is enabled, it **can** execute secondary command buffers during the query operation. For a secondary command buffer to be executed while a query is active, it **must** set the **occlusionQueryEnable**, **queryFlags**, and/or **pipelineStatistics** members of **VkCommandBufferInheritanceInfo** to conservative values, as described in the **Command Buffer Recording** section. A query **must** either begin and end inside the same subpass of a render pass instance, or **must** both begin and end outside of a render pass instance (i.e. contain entire render pass instances).

If queries are used while executing a render pass instance that has multiview enabled, the query uses N consecutive query indices in the query pool (starting at **query**) where N is the number of bits set in the view mask in the subpass the query is used in. How the numerical results of the query are distributed among the queries is implementation-dependent. For example, some implementations **may** write each view's results to a distinct query, while other implementations **may** write the total result to the first query and write zero to the other queries. However, the sum of the results in all the queries **must** accurately reflect the total result of the query summed over all views.

Applications **can** sum the results from all the queries to compute the total result.

Queries used with multiview rendering **must** not span subpasses, i.e. they **must** begin and end in the same subpass.

A query **must** either begin and end inside the same video coding scope, or **must** both begin and end outside of a video coding scope and **must** not contain entire video coding scopes.

To begin a query, call:

```
// Provided by VK_VERSION_1_0
void vkCmdBeginQuery(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 query,
    VkQueryControlFlags      flags);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that will manage the results of the query.
- `query` is the query index within the query pool that will contain the results.
- `flags` is a bitmask of `VkQueryControlFlagBits` specifying constraints on the types of queries that **can** be performed.

If the `queryType` of the pool is `VK_QUERY_TYPE_OCCLUSION` and `flags` contains `VK_QUERY_CONTROL_PRECISE_BIT`, an implementation **must** return a result that matches the actual number of samples passed. This is described in more detail in [Occlusion Queries](#).

Calling `vkCmdBeginQuery` is equivalent to calling `vkCmdBeginQueryIndexedEXT` with the `index` parameter set to zero.

After beginning a query, that query is considered *active* within the command buffer it was called in until that same query is ended. Queries active in a primary command buffer when secondary command buffers are executed are considered active for those secondary command buffers.

Furthermore, if the query is started within a video coding scope, the following command buffer states are initialized for the query type:

- The `active_query_index` is set to the value specified by `query`.
- The *last activatable query index* is also set to the value specified by `query`.

Each [video coding operation](#) stores a result to the query corresponding to the current active query index, followed by incrementing the active query index. If the active query index gets incremented past the last activatable query index, issuing any further video coding operations results in undefined behavior.

NOTE

In practice, this means that currently no more than a single video coding operation **must** be issued between a begin and end query pair.

This command defines an execution dependency between other query commands that reference the same query.

The first [synchronization scope](#) includes all commands which reference the queries in [queryPool](#) indicated by [query](#) that occur earlier in [submission order](#).

The second [synchronization scope](#) includes all commands which reference the queries in [queryPool](#) indicated by [query](#) that occur later in [submission order](#).

The operation of this command happens after the first scope and happens before the second scope.

Valid Usage

- VUID-vkCmdBeginQuery-None-00807
All queries used by the command **must** be *unavailable*
- VUID-vkCmdBeginQuery-queryType-02804
The [queryType](#) used to create [queryPool](#) **must** not be [VK_QUERY_TYPE_TIMESTAMP](#)
- VUID-vkCmdBeginQuery-queryType-04728
The [queryType](#) used to create [queryPool](#) **must** not be [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR](#) or [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR](#)
- VUID-vkCmdBeginQuery-queryType-06741
The [queryType](#) used to create [queryPool](#) **must** not be [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR](#) or [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR](#)
- VUID-vkCmdBeginQuery-queryType-04729
The [queryType](#) used to create [queryPool](#) **must** not be [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV](#)
- VUID-vkCmdBeginQuery-queryType-00800
If the [occlusionQueryPrecise](#) feature is not enabled, or the [queryType](#) used to create [queryPool](#) was not [VK_QUERY_TYPE_OCCLUSION](#), [flags](#) **must** not contain [VK_QUERY_CONTROL_PRECISE_BIT](#)
- VUID-vkCmdBeginQuery-query-00802
[query](#) **must** be less than the number of queries in [queryPool](#)
- VUID-vkCmdBeginQuery-queryType-00803
If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_OCCLUSION](#), the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-00804
If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_PIPELINE_STATISTICS](#) and any of the [pipelineStatistics](#) indicate graphics operations, the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-00805
If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_PIPELINE_STATISTICS](#) and any of the [pipelineStatistics](#) indicate compute operations, the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support compute operations

- VUID-vkCmdBeginQuery-commandBuffer-01885
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdBeginQuery-query-00808
If called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdBeginQuery-queryType-07126
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then the `VkCommandPool` that `commandBuffer` was allocated from **must** have been created with a queue family index that supports `result status queries`, as indicated by `VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport`
- VUID-vkCmdBeginQuery-None-07127
If there is a bound video session, then there **must** be no `active` queries
- VUID-vkCmdBeginQuery-None-08370
If there is a bound video session, then it **must** not have been created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`
- VUID-vkCmdBeginQuery-queryType-07128
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` and there is a bound video session, then `queryPool` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo` identical to the one specified in `VkVideoSessionCreateInfoKHR::pVideoProfile` the bound video session was created with
- VUID-vkCmdBeginQuery-queryType-07129
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there **must** be a bound video session
- VUID-vkCmdBeginQuery-queryType-07130
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR` and there is a bound video session, then `queryPool` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo` identical to the one specified in `VkVideoSessionCreateInfoKHR::pVideoProfile` the bound video session was created with
- VUID-vkCmdBeginQuery-queryType-07131
If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there **must** be no bound video session
- VUID-vkCmdBeginQuery-queryPool-01922
`queryPool` **must** have been created with a `queryType` that differs from that of any queries that are `active` within `commandBuffer`
- VUID-vkCmdBeginQuery-queryType-07070
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT` the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-02327
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT`

the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations

- VUID-vkCmdBeginQuery-queryType-02328
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` then `VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackQueries` **must** be supported
- VUID-vkCmdBeginQuery-queryType-06687
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-06688
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` then `primitivesGeneratedQuery` **must** be enabled
- VUID-vkCmdBeginQuery-queryPool-07289
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then the `VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex` `queryPool` was created with **must** equal the queue family index of the `VkCommandPool` that `commandBuffer` was allocated from
- VUID-vkCmdBeginQuery-queryPool-03223
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the **profiling lock** **must** have been held before `vkBeginCommandBuffer` was called on `commandBuffer`
- VUID-vkCmdBeginQuery-queryPool-03224
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR`, the query begin **must** be the first recorded command in `commandBuffer`
- VUID-vkCmdBeginQuery-queryPool-03225
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR`, the begin command **must** not be recorded within a render pass instance
- VUID-vkCmdBeginQuery-queryPool-03226
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and another query pool with a `queryType` `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` has been used within `commandBuffer`, its parent primary command buffer or secondary command buffer recorded within the same parent primary command buffer as `commandBuffer`, the `performanceCounterMultipleQueryPools` feature **must** be enabled
- VUID-vkCmdBeginQuery-None-02863
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains a `vkCmdResetQueryPool` command affecting the same query

Valid Usage (Implicit)

- VUID-vkCmdBeginQuery-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBeginQuery-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdBeginQuery-flags-parameter
`flags` **must** be a valid combination of `VkQueryControlFlagBits` values
- VUID-vkCmdBeginQuery-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBeginQuery-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, compute, decode, or encode operations
- VUID-vkCmdBeginQuery-commonparent
Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	Graphics Compute Decode Encode	Action State

To begin an indexed query, call:

```
// Provided by VK_EXT_transform_feedback
void vkCmdBeginQueryIndexedEXT(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 query,
    VkQueryControlFlags      flags,
    uint32_t                 index);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that will manage the results of the query.
- `query` is the query index within the query pool that will contain the results.
- `flags` is a bitmask of `VkQueryControlFlagBits` specifying constraints on the types of queries that **can** be performed.
- `index` is the query type specific index. When the query type is `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` or `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT`, the index represents the vertex stream.

The `vkCmdBeginQueryIndexedEXT` command operates the same as the `vkCmdBeginQuery` command, except that it also accepts a query type specific `index` parameter.

This command defines an execution dependency between other query commands that reference the same query index.

The first `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` and `index` that occur earlier in `submission order`.

The second `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` and `index` that occur later in `submission order`.

The operation of this command happens after the first scope and happens before the second scope.

Valid Usage

- VUID-vkCmdBeginQueryIndexedEXT-None-00807
All queries used by the command **must** be *unavailable*
- VUID-vkCmdBeginQueryIndexedEXT-queryType-02804
The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_TIMESTAMP`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-04728
The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR` or `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06741
The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR` or `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-04729
The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-00800
If the `occlusionQueryPrecise` feature is not enabled, or the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_OCCLUSION`, `flags` **must** not contain `VK_QUERY_CONTROL_PRECISE_BIT`
- VUID-vkCmdBeginQueryIndexedEXT-query-00802

query **must** be less than the number of queries in **queryPool**

- VUID-vkCmdBeginQueryIndexedEXT-queryType-00803
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_OCCLUSION**, the **VkCommandPool** that **commandBuffer** was allocated from **must** support graphics operations
- VUID-vkCmdBeginQueryIndexedEXT-queryType-00804
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_PIPELINE_STATISTICS** and any of the **pipelineStatistics** indicate graphics operations, the **VkCommandPool** that **commandBuffer** was allocated from **must** support graphics operations
- VUID-vkCmdBeginQueryIndexedEXT-queryType-00805
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_PIPELINE_STATISTICS** and any of the **pipelineStatistics** indicate compute operations, the **VkCommandPool** that **commandBuffer** was allocated from **must** support compute operations
- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-01885
commandBuffer **must** not be a protected command buffer
- VUID-vkCmdBeginQueryIndexedEXT-query-00808
If called within a render pass instance, the sum of **query** and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in **queryPool**
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07126
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR**, then the **VkCommandPool** that **commandBuffer** was allocated from **must** have been created with a queue family index that supports **result status queries**, as indicated by **VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport**
- VUID-vkCmdBeginQueryIndexedEXT-None-07127
If there is a bound video session, then there **must** be no **active** queries
- VUID-vkCmdBeginQueryIndexedEXT-None-08370
If there is a bound video session, then it **must** not have been created with **VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR**
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07128
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR** and there is a bound video session, then **queryPool** **must** have been created with a **VkVideoProfileInfoKHR** structure included in the **pNext** chain of **VkQueryPoolCreateInfo** identical to the one specified in **VkVideoSessionCreateInfoKHR::pVideoProfile** the bound video session was created with
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07129
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR**, then there **must** be a bound video session
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07130
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR** and there is a bound video session, then **queryPool** **must** have been created with a **VkVideoProfileInfoKHR** structure included in the **pNext** chain of **VkQueryPoolCreateInfo** identical to the one specified in **VkVideoSessionCreateInfoKHR::pVideoProfile** the bound video session was created with

- VUID-vkCmdBeginQueryIndexedEXT-queryType-07131
If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there **must** be no bound video session
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-04753
If the `queryPool` was created with the same `queryType` as that of another `active` query within `commandBuffer`, then `index` **must** not match the index used for the active query
- VUID-vkCmdBeginQueryIndexedEXT-queryType-02338
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQueryIndexedEXT-queryType-02339
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` the `index` parameter **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06692
If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` and not `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT`, the `index` **must** be zero
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06689
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06690
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` the `index` parameter **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06691
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` and the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled, the `index` parameter **must** be zero
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06693
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` then `primitivesGeneratedQuery` **must** be enabled
- VUID-vkCmdBeginQueryIndexedEXT-queryType-02341
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` then `VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackQueries` **must** be supported
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07071
The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT`
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-07289
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then the `VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex` `queryPool` was created with **must** equal the queue family index of the `VkCommandPool` that `commandBuffer` was allocated

from

- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03223

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the `profiling lock` **must** have been held before `vkBeginCommandBuffer` was called on `commandBuffer`

- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03224

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR`, the query begin **must** be the first recorded command in `commandBuffer`

- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03225

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR`, the begin command **must** not be recorded within a render pass instance

- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03226

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and another query pool with a `queryType` `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` has been used within `commandBuffer`, its parent primary command buffer or secondary command buffer recorded within the same parent primary command buffer as `commandBuffer`, the `performanceCounterMultipleQueryPools` feature **must** be enabled

- VUID-vkCmdBeginQueryIndexedEXT-None-02863

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains a `vkCmdResetQueryPool` command affecting the same query

Valid Usage (Implicit)

- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdBeginQueryIndexedEXT-queryPool-parameter

`queryPool` **must** be a valid `VkQueryPool` handle

- VUID-vkCmdBeginQueryIndexedEXT-flags-parameter

`flags` **must** be a valid combination of `VkQueryControlFlagBits` values

- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-recording

`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, compute, decode, or encode operations

- VUID-vkCmdBeginQueryIndexedEXT-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdBeginQueryIndexedEXT-commonparent
Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute Decode Encode	Action State

Bits which **can** be set in `vkCmdBeginQuery::flags`, specifying constraints on the types of queries that **can** be performed, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryControlFlagBits {
    VK_QUERY_CONTROL_PRECISE_BIT = 0x00000001,
} VkQueryControlFlagBits;
```

- `VK_QUERY_CONTROL_PRECISE_BIT` specifies the precision of `occlusion queries`.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryControlFlags;
```

`VkQueryControlFlags` is a bitmask type for setting a mask of zero or more `VkQueryControlFlagBits`.

To end a query after the set of desired drawing or dispatching commands is executed, call:

```
// Provided by VK_VERSION_1_0
void vkCmdEndQuery(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 query);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that is managing the results of the query.
- `query` is the query index within the query pool where the result is stored.

The command completes the query in `queryPool` identified by `query`, and marks it as available.

This command defines an execution dependency between other query commands that reference the same query.

The first `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in `submission order`.

The second `synchronization scope` includes only the operation of this command.

Calling `vkCmdEndQuery` is equivalent to calling `vkCmdEndQueryIndexedEXT` with the `index` parameter set to zero.

Valid Usage

- VUID-vkCmdEndQuery-None-01923
All queries used by the command **must** be `active`
- VUID-vkCmdEndQuery-query-00810
`query` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdEndQuery-commandBuffer-01886
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdEndQuery-query-00812
If `vkCmdEndQuery` is called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdEndQuery-queryPool-03227
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one or more of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR`, the `vkCmdEndQuery` **must** be the last recorded command in `commandBuffer`
- VUID-vkCmdEndQuery-queryPool-03228
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one or more of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR`, the `vkCmdEndQuery` **must** not be recorded within a render pass instance
- VUID-vkCmdEndQuery-None-07007
If called within a subpass of a render pass instance, the corresponding `vkCmdBeginQuery*` command **must** have been called previously within the same subpass

Valid Usage (Implicit)

- VUID-vkCmdEndQuery-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdEndQuery-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdEndQuery-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdEndQuery-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, compute, decode, or encode operations
- VUID-vkCmdEndQuery-commonparent
Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	Graphics Compute Decode Encode	Action State

To end an indexed query after the set of desired drawing or dispatching commands is recorded, call:

```
// Provided by VK_EXT_transform_feedback
void vkCmdEndQueryIndexedEXT(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 query,
    uint32_t                 index);
```

- `commandBuffer` is the command buffer into which this command will be recorded.

- `queryPool` is the query pool that is managing the results of the query.
- `query` is the query index within the query pool where the result is stored.
- `index` is the query type specific index.

The command completes the query in `queryPool` identified by `query` and `index`, and marks it as available.

The `vkCmdEndQueryIndexedEXT` command operates the same as the `vkCmdEndQuery` command, except that it also accepts a query type specific `index` parameter.

This command defines an execution dependency between other query commands that reference the same query index.

The first `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in `submission order`.

The second `synchronization scope` includes only the operation of this command.

Valid Usage

- VUID-vkCmdEndQueryIndexedEXT-None-02342
All queries used by the command **must** be `active`
- VUID-vkCmdEndQueryIndexedEXT-query-02343
`query` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-02344
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdEndQueryIndexedEXT-query-02345
If `vkCmdEndQueryIndexedEXT` is called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdEndQueryIndexedEXT-queryType-06694
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` or `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT`, the `index` parameter **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams`
- VUID-vkCmdEndQueryIndexedEXT-queryType-06695
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` and `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT`, the `index` **must** be zero
- VUID-vkCmdEndQueryIndexedEXT-queryType-06696
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` or `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT`, `index` **must** equal the `index` used to begin the query
- VUID-vkCmdEndQueryIndexedEXT-None-07007
If called within a subpass of a render pass instance, the corresponding `vkCmdBeginQuery*` command **must** have been called previously within the same subpass

Valid Usage (Implicit)

- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdEndQueryIndexedEXT-queryPool-parameter **queryPool** **must** be a valid [VkQueryPool](#) handle
- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support graphics, compute, decode, or encode operations
- VUID-vkCmdEndQueryIndexedEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdEndQueryIndexedEXT-commonparent
Both of **commandBuffer**, and **queryPool** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute Decode Encode	Action State

An application **can** retrieve results either by requesting they be written into application-provided memory, or by requesting they be copied into a [VkBuffer](#). In either case, the layout in memory is defined as follows:

- The first query's result is written starting at the first byte requested by the command, and each subsequent query's result begins **stride** bytes later.
- Occlusion queries, pipeline statistics queries, transform feedback queries, primitives generated queries, mesh shader queries, video encode feedback queries, and timestamp queries store results in a tightly packed array of unsigned integers, either 32- or 64-bits as requested by the

command, storing the numerical results and, if requested, the availability status.

- Performance queries store results in a tightly packed array whose type is determined by the `unit` member of the corresponding `VkPerformanceCounterKHR`.
- If `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT` is used, the final element of each query's result is an integer indicating whether the query's result is available, with any non-zero value indicating that it is available.
- If `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` is used, the final element of each query's result is an integer value indicating that status of the query result. Positive values indicate success, negative values indicate failure, and 0 indicates that the result is not yet available. Specific error codes are encoded in the `VkQueryResultStatusKHR` enumeration.
- Occlusion queries write one integer value - the number of samples passed. Pipeline statistics queries write one integer value for each bit that is enabled in the `pipelineStatistics` when the pool is created, and the statistics values are written in bit order starting from the least significant bit. Timestamp queries write one integer value. Performance queries write one `VkPerformanceCounterResultKHR` value for each `VkPerformanceCounterKHR` in the query. Transform feedback queries write two integers; the first integer is the number of primitives successfully written to the corresponding transform feedback buffer and the second is the number of primitives output to the vertex stream, regardless of whether they were successfully captured or not. In other words, if the transform feedback buffer was sized too small for the number of primitives output by the vertex stream, the first integer represents the number of primitives actually written and the second is the number that would have been written if all the transform feedback buffers associated with that vertex stream were large enough. Primitives generated queries write the number of primitives output to the vertex stream, regardless of whether transform feedback is active or not, or whether they were successfully captured by transform feedback or not. This is identical to the second integer of the transform feedback queries if transform feedback is active. Mesh shader queries write a single integer. Video encode feedback queries write one or more integer values for each bit that is enabled in `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags` when the pool is created, and the feedback values are written in bit order starting from the least significant bit, as described [here](#).
- If more than one query is retrieved and `stride` is not at least as large as the size of the array of values corresponding to a single query, the values written to memory are undefined.

To retrieve status and results for a set of queries, call:

```
// Provided by VK_VERSION_1_0
VkResult vkGetQueryPoolResults(
    VkDevice          device,
    VkQueryPool       queryPool,
    uint32_t          firstQuery,
    uint32_t          queryCount,
    size_t            dataSize,
    void*             pData,
    VkDeviceSize       stride,
    VkQueryResultFlags flags);
```

- **device** is the logical device that owns the query pool.
- **queryPool** is the query pool managing the queries containing the desired results.
- **firstQuery** is the initial query index.
- **queryCount** is the number of queries to read.
- **dataSize** is the size in bytes of the buffer pointed to by **pData**.
- **pData** is a pointer to an application-allocated buffer where the results will be written
- **stride** is the stride in bytes between results for individual queries within **pData**.
- **flags** is a bitmask of **VkQueryResultFlagBits** specifying how and when results are returned.

Any results written for a query are written according to [a layout dependent on the query type](#).

If no bits are set in **flags**, and all requested queries are in the available state, results are written as an array of 32-bit unsigned integer values. Behavior when not all queries are available is described [below](#).

If **VK_QUERY_RESULT_WITH_AVAILABILITY_BIT** is set, results for all queries in **queryPool** identified by **firstQuery** and **queryCount** are copied to **pData**, along with an extra availability or status value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available. The size of the availability or status values is 64 bits if **VK_QUERY_RESULT_64_BIT** is set in **flags**. Otherwise, it is 32 bits.

If **VK_QUERY_RESULT_WITH_STATUS_BIT_KHR** is set, results for all queries in **queryPool** identified by **firstQuery** and **queryCount** are copied to **pData**, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

VkQueryResultStatusKHR defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise specified for any of the results of the used query type.

NOTE

If **VK_QUERY_RESULT_WITH_AVAILABILITY_BIT** or **VK_QUERY_RESULT_WITH_STATUS_BIT_KHR** is set, the layout of data in the buffer is a *(result,availability)* or *(result,status)* pair for each query returned, and **stride** is the stride between each pair.

Results for any available query written by this command are final and represent the final result of the query. If **VK_QUERY_RESULT_PARTIAL_BIT** is set, then for any query that is unavailable, an intermediate result between zero and the final result value is written for that query. Otherwise, any result written by this command is undefined.

If **VK_QUERY_RESULT_64_BIT** is set, results and, if returned, availability or status values for all queries are written as an array of 64-bit values. If the **queryPool** was created with

`VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, results for each query are written as an array of the type indicated by `VkPerformanceCounterKHR::storage` for the counter being queried. Otherwise, results and availability or status values are written as an array of 32-bit values. If an unsigned integer query's value overflows the result type, the value **may** either wrap or saturate. If the `maintenance7` feature is enabled, for an unsigned integer query, the 32-bit result value **must** be equal to the 32 least significant bits of the equivalent 64-bit result value. If a signed integer query's value overflows the result type, the value is undefined. If a floating-point query's value is not representable as the result type, the value is undefined.

If `VK_QUERY_RESULT_WAIT_BIT` is set, this command defines an execution dependency with any earlier commands that writes one of the identified queries. The first [synchronization scope](#) includes all instances of `vkCmdEndQuery`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteTimestamp2`, and `vkCmdWriteTimestamp` that reference any query in `queryPool` indicated by `firstQuery` and `queryCount`. The second [synchronization scope](#) includes the host operations of this command.

If `VK_QUERY_RESULT_WAIT_BIT` is not set, `vkGetQueryPoolResults` **may** return `VK_NOT_READY` if there are queries in the unavailable state.

NOTE

Applications **must** take care to ensure that use of the `VK_QUERY_RESULT_WAIT_BIT` bit has the desired effect.

For example, if a query has been used previously and a command buffer records the commands `vkCmdResetQueryPool`, `vkCmdBeginQuery`, and `vkCmdEndQuery` for that query, then the query will remain in the available state until `vkResetQueryPool` is called or the `vkCmdResetQueryPool` command executes on a queue. Applications **can** use fences or events to ensure that a query has already been reset before checking for its results or availability status. Otherwise, a stale value could be returned from a previous use of the query.

The above also applies when `VK_QUERY_RESULT_WAIT_BIT` is used in combination with `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`. In this case, the returned availability status **may** reflect the result of a previous use of the query unless `vkResetQueryPool` is called or the `vkCmdResetQueryPool` command has been executed since the last use of the query.

A similar situation can arise with the `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` flag.

NOTE

Applications **can** double-buffer query pool usage, with a pool per frame, and reset queries at the end of the frame in which they are read.

Valid Usage

- VUID-vkGetQueryPoolResults-firstQuery-09436
`firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkGetQueryPoolResults-firstQuery-09437
The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`

- VUID-vkGetQueryPoolResults-queryCount-09438
If **queryCount** is greater than 1, **stride** **must** not be zero
- VUID-vkGetQueryPoolResults-queryType-09439
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_TIMESTAMP**, **flags** **must** not contain **VK_QUERY_RESULT_PARTIAL_BIT**
- VUID-vkGetQueryPoolResults-queryType-09440
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR**, **flags** **must** not contain **VK_QUERY_RESULT_WITH_AVAILABILITY_BIT**, **VK_QUERY_RESULT_WITH_STATUS_BIT_KHR**, **VK_QUERY_RESULT_PARTIAL_BIT**, or **VK_QUERY_RESULT_64_BIT**
- VUID-vkGetQueryPoolResults-queryType-09441
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR**, the **queryPool** **must** have been recorded once for each pass as retrieved via a call to [vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR](#)
- VUID-vkGetQueryPoolResults-queryType-09442
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR**, then **flags** **must** include **VK_QUERY_RESULT_WITH_STATUS_BIT_KHR**
- VUID-vkGetQueryPoolResults-flags-09443
If **flags** includes **VK_QUERY_RESULT_WITH_STATUS_BIT_KHR**, then it **must** not include **VK_QUERY_RESULT_WITH_AVAILABILITY_BIT**
- VUID-vkGetQueryPoolResults-None-09401
All queries used by the command **must** not be uninitialized
- VUID-vkGetQueryPoolResults-flags-02828
If **VK_QUERY_RESULT_64_BIT** is not set in **flags** and the **queryType** used to create **queryPool** was not **VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR**, then **pData** and **stride** **must** be multiples of 4
- VUID-vkGetQueryPoolResults-flags-00815
If **VK_QUERY_RESULT_64_BIT** is set in **flags** then **pData** and **stride** **must** be multiples of 8
- VUID-vkGetQueryPoolResults-stride-08993
If **VK_QUERY_RESULT_WITH_AVAILABILITY_BIT** is set, **stride** **must** be large enough to contain the unsigned integer representing availability or status in addition to the query result
- VUID-vkGetQueryPoolResults-queryType-03229
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR**, then **pData** and **stride** **must** be multiples of the size of [VkPerformanceCounterResultKHR](#)
- VUID-vkGetQueryPoolResults-queryType-04519
If the **queryType** used to create **queryPool** was **VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR**, then **stride** **must** be large enough to contain the [VkQueryPoolPerformanceCreateInfoKHR::counterIndexCount](#) used to create **queryPool** times the size of [VkPerformanceCounterResultKHR](#)
- VUID-vkGetQueryPoolResults-dataSize-00817
dataSize **must** be large enough to contain the result of each query, as described [here](#)

Valid Usage (Implicit)

- VUID-vkGetQueryPoolResults-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetQueryPoolResults-queryPool-parameter
queryPool **must** be a valid [VkQueryPool](#) handle
- VUID-vkGetQueryPoolResults-pData-parameter
pData **must** be a valid pointer to an array of **dataSize** bytes
- VUID-vkGetQueryPoolResults-flags-parameter
flags **must** be a valid combination of [VkQueryResultFlagBits](#) values
- VUID-vkGetQueryPoolResults-dataSize-arraylength
dataSize **must** be greater than 0
- VUID-vkGetQueryPoolResults-queryPool-parent
queryPool **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)
- [VK_NOT_READY](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_DEVICE_LOST](#)

Bits which **can** be set in [vkGetQueryPoolResults::flags](#) and [vkCmdCopyQueryPoolResults::flags](#), specifying how and when results are returned, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryResultFlagBits {
    VK_QUERY_RESULT_64_BIT = 0x00000001,
    VK_QUERY_RESULT_WAIT_BIT = 0x00000002,
    VK_QUERY_RESULT_WITH_AVAILABILITY_BIT = 0x00000004,
    VK_QUERY_RESULT_PARTIAL_BIT = 0x00000008,
    // Provided by VK_KHR_video_queue
    VK_QUERY_RESULT_WITH_STATUS_BIT_KHR = 0x00000010,
} VkQueryResultFlagBits;
```

- [VK_QUERY_RESULT_64_BIT](#) specifies the results will be written as an array of 64-bit unsigned integer values. If this bit is not set, the results will be written as an array of 32-bit unsigned integer values.

- `VK_QUERY_RESULT_WAIT_BIT` specifies that Vulkan will wait for each query's status to become available before retrieving its results.
- `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT` specifies that the availability status accompanies the results.
- `VK_QUERY_RESULT_PARTIAL_BIT` specifies that returning partial results is acceptable.
- `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` specifies that the last value returned in the query is a `VkQueryResultStatusKHR` value. See [result status query](#) for information on how an application can determine whether the use of this flag bit is supported.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryResultFlags;
```

`VkQueryResultFlags` is a bitmask type for setting a mask of zero or more `VkQueryResultFlagBits`.

Specific status codes that **can** be returned from a query are:

```
// Provided by VK_KHR_video_queue
typedef enum VkQueryResultStatusKHR {
    VK_QUERY_RESULT_STATUS_ERROR_KHR = -1,
    VK_QUERY_RESULT_STATUS_NOT_READY_KHR = 0,
    VK_QUERY_RESULT_STATUS_COMPLETE_KHR = 1,
    // Provided by VK_KHR_video_encode_queue
    VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR = -1000299000,
} VkQueryResultStatusKHR;
```

- `VK_QUERY_RESULT_STATUS_NOT_READY_KHR` indicates that the query result is not yet available.
- `VK_QUERY_RESULT_STATUS_ERROR_KHR` indicates that operations did not complete successfully.
- `VK_QUERY_RESULT_STATUS_COMPLETE_KHR` indicates that operations completed successfully and the query result is available.
- `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` indicates that a video encode operation did not complete successfully due to the destination video bitstream buffer range not being sufficiently large to fit the encoded bitstream data.

To copy query statuses and numerical results directly to buffer memory, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyQueryPoolResults(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 firstQuery,
    uint32_t                 queryCount,
    VkBuffer                  dstBuffer,
    VkDeviceSize              dstOffset,
    VkDeviceSize              stride,
    VkQueryResultFlags       flags);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool managing the queries containing the desired results.
- `firstQuery` is the initial query index.
- `queryCount` is the number of queries. `firstQuery` and `queryCount` together define a range of queries.
- `dstBuffer` is a `VkBuffer` object that will receive the results of the copy command.
- `dstOffset` is an offset into `dstBuffer`.
- `stride` is the stride in bytes between results for individual queries within `dstBuffer`. The required size of the backing memory for `dstBuffer` is determined as described above for `vkGetQueryPoolResults`.
- `flags` is a bitmask of `VkQueryResultFlagBits` specifying how and when results are returned.

Any results written for a query are written according to [a layout dependent on the query type](#).

Results for any query in `queryPool` identified by `firstQuery` and `queryCount` that is available are copied to `dstBuffer`.

If `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT` is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `dstBuffer`, along with an extra availability value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available.

If `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `dstBuffer`, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

`VkQueryResultStatusKHR` defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise

specified for any of the results of the used query type.

Results for any available query written by this command are final and represent the final result of the query. If `VK_QUERY_RESULT_PARTIAL_BIT` is set, then for any query that is unavailable, an intermediate result between zero and the final result value is written for that query. Otherwise, any result written by this command is undefined.

If `VK_QUERY_RESULT_64_BIT` is set, results and availability or status values for all queries are written as an array of 64-bit values. If the `queryPool` was created with `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, results for each query are written as an array of the type indicated by `VkPerformanceCounterKHR::storage` for the counter being queried. Otherwise, results and availability or status values are written as an array of 32-bit values. If an unsigned integer query's value overflows the result type, the value **may** either wrap or saturate. If the `maintenance7` feature is enabled, for an unsigned integer query, the 32-bit result value **must** be equal to the 32 least significant bits of the equivalent 64-bit result value. If a signed integer query's value overflows the result type, the value is undefined. If a floating-point query's value is not representable as the result type, the value is undefined.

This command defines an execution dependency between other query commands that reference the same query.

The first [synchronization scope](#) includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in [submission order](#). If `flags` does not include `VK_QUERY_RESULT_WAIT_BIT`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteTimestamp2`, `vkCmdEndQuery`, and `vkCmdWriteTimestamp` are excluded from this scope.

The second [synchronization scope](#) includes all commands which reference the queries in `queryPool` indicated by `query` that occur later in [submission order](#).

The operation of this command happens after the first scope and happens before the second scope.

`vkCmdCopyQueryPoolResults` is considered to be a transfer operation, and its writes to buffer memory **must** be synchronized using `VK_PIPELINE_STAGE_TRANSFER_BIT` and `VK_ACCESS_TRANSFER_WRITE_BIT` before using the results.

Valid Usage

- VUID-vkCmdCopyQueryPoolResults-firstQuery-09436
`firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdCopyQueryPoolResults-firstQuery-09437
The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdCopyQueryPoolResults-queryCount-09438
If `queryCount` is greater than 1, `stride` **must** not be zero
- VUID-vkCmdCopyQueryPoolResults-queryType-09439
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TIMESTAMP`, `flags` **must** not contain `VK_QUERY_RESULT_PARTIAL_BIT`

- VUID-vkCmdCopyQueryPoolResults-queryType-09440
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, `flags` **must** not contain `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`, `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`, `VK_QUERY_RESULT_PARTIAL_BIT`, or `VK_QUERY_RESULT_64_BIT`
- VUID-vkCmdCopyQueryPoolResults-queryType-09441
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the `queryPool` **must** have been recorded once for each pass as retrieved via a call to `vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR`
- VUID-vkCmdCopyQueryPoolResults-queryType-09442
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then `flags` **must** include `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`
- VUID-vkCmdCopyQueryPoolResults-flags-09443
If `flags` includes `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`, then it **must** not include `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`
- VUID-vkCmdCopyQueryPoolResults-None-09402
All queries used by the command **must** not be uninitialized when the command is executed
- VUID-vkCmdCopyQueryPoolResults-dstOffset-00819
`dstOffset` **must** be less than the size of `dstBuffer`
- VUID-vkCmdCopyQueryPoolResults-flags-00822
If `VK_QUERY_RESULT_64_BIT` is not set in `flags` then `dstOffset` and `stride` **must** be multiples of 4
- VUID-vkCmdCopyQueryPoolResults-flags-00823
If `VK_QUERY_RESULT_64_BIT` is set in `flags` then `dstOffset` and `stride` **must** be multiples of 8
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-00824
`dstBuffer` **must** have enough storage, from `dstOffset`, to contain the result of each query, as described [here](#)
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-00825
`dstBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-00826
If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyQueryPoolResults-queryType-03232
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, `VkPhysicalDevicePerformanceQueryPropertiesKHR::allowCommandBufferQueryCopies` **must** be `VK_TRUE`
- VUID-vkCmdCopyQueryPoolResults-queryType-02734
`vkCmdCopyQueryPoolResults` **must** not be called if the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL`
- VUID-vkCmdCopyQueryPoolResults-None-07429
All queries used by the command **must** not be active

- VUID-vkCmdCopyQueryPoolResults-None-08752

All queries used by the command **must** have been made *available* by prior executed commands

Valid Usage (Implicit)

- VUID-vkCmdCopyQueryPoolResults-commandBuffer-parameter
commandBuffer **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyQueryPoolResults-queryPool-parameter
queryPool **must** be a valid [VkQueryPool](#) handle
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-parameter
dstBuffer **must** be a valid [VkBuffer](#) handle
- VUID-vkCmdCopyQueryPoolResults-flags-parameter
flags **must** be a valid combination of [VkQueryResultFlagBits](#) values
- VUID-vkCmdCopyQueryPoolResults-commandBuffer-recording
commandBuffer **must** be in the [recording state](#)
- VUID-vkCmdCopyQueryPoolResults-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support graphics, or compute operations
- VUID-vkCmdCopyQueryPoolResults-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyQueryPoolResults-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyQueryPoolResults-commonparent
Each of **commandBuffer**, **dstBuffer**, and **queryPool** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Graphics Compute	Action

Rendering operations such as clears, MSAA resolves, attachment load/store operations, and blits **may** count towards the results of queries. This behavior is implementation-dependent and **may** vary depending on the path used within an implementation. For example, some implementations have several types of clears, some of which **may** include vertices and some not.

18.3. Occlusion Queries

Occlusion queries track the number of samples that pass the per-fragment tests for a set of drawing commands. As such, occlusion queries are only available on queue families supporting graphics operations. The application **can** then use these results to inform future rendering decisions. An occlusion query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`, respectively. When an occlusion query begins, the count of passing samples always starts at zero. For each drawing command, the count is incremented as described in [Sample Counting](#). If `flags` does not contain `VK_QUERY_CONTROL_PRECISE_BIT` an implementation **may** generate any non-zero result value for the query if the count of passing samples is non-zero.

Not setting `VK_QUERY_CONTROL_PRECISE_BIT` mode **may** be more efficient on some implementations, and **should** be used where it is sufficient to know a boolean result on whether any samples passed the per-fragment tests. In this case, some implementations **may** only return zero or one, indifferent to the actual number of samples passing the per-fragment tests.

NOTE

Setting `VK_QUERY_CONTROL_PRECISE_BIT` does not guarantee that different implementations return the same number of samples in an occlusion query. Some implementations may kill fragments in the [pre-rasterization shader stage](#), and these killed fragments do not contribute to the final result of the query. It is possible that some implementations generate a zero result value for the query, while others generate a non-zero value.

When an occlusion query finishes, the result for that query is marked as available. The application **can** then either copy the result to a buffer (via `vkCmdCopyQueryPoolResults`) or request it be put into host memory (via `vkGetQueryPoolResults`).

NOTE

If occluding geometry is not drawn first, samples **can** pass the depth test, but still not be visible in a final image.

18.4. Pipeline Statistics Queries

Pipeline statistics queries allow the application to sample a specified set of `VkPipeline` counters. These counters are accumulated by Vulkan for a set of either drawing or dispatching commands while a pipeline statistics query is active. As such, pipeline statistics queries are available on queue families supporting either graphics or compute operations. The availability of pipeline statistics queries is indicated by the `pipelineStatisticsQuery` member of the `VkPhysicalDeviceFeatures` object (see `vkGetPhysicalDeviceFeatures` and `vkCreateDevice` for detecting and requesting this query type on a `VkDevice`).

A pipeline statistics query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`,

respectively. When a pipeline statistics query begins, all statistics counters are set to zero. While the query is active, the pipeline type determines which set of statistics are available, but these **must** be configured on the query pool when it is created. If a statistic counter is issued on a command buffer that does not support the corresponding operation, or the counter corresponds to a shading stage which is missing from any of the pipelines used while the query is active, the value of that counter is undefined after the query has been made available. At least one statistic counter relevant to the operations supported on the recording command buffer **must** be enabled.

Bits which **can** be set in `VkQueryPoolCreateInfo::pipelineStatistics` for query pools and in `VkCommandBufferInheritanceInfo::pipelineStatistics` for secondary command buffers, individually enabling pipeline statistics counters, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryPipelineStatisticFlagBits {
    VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT = 0x00000001,
    VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT = 0x00000002,
    VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT = 0x00000004,
    VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT = 0x00000008,
    VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT = 0x00000010,
    VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT = 0x00000020,
    VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT = 0x00000040,
    VK_QUERY_PIPELINE_STATISTIC_FRAGMENT_SHADER_INVOCATIONS_BIT = 0x00000080,
    VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT = 0x00000100,
    VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT =
0x00000200,
    VK_QUERY_PIPELINE_STATISTIC_COMPUTE_SHADER_INVOCATIONS_BIT = 0x00000400,
    // Provided by VK_EXT_mesh_shader
    VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT = 0x00000800,
    // Provided by VK_EXT_mesh_shader
    VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT = 0x00001000,
    // Provided by VK_HUAWEI_cluster_culling_shader
    VK_QUERY_PIPELINE_STATISTIC_CLUSTER_CULLING_SHADER_INVOCATIONS_BIT_HUAWEI =
0x00002000,
} VkQueryPipelineStatisticFlagBits;
```

- `VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT` specifies that queries managed by the pool will count the number of vertices processed by the `input assembly` stage. Vertices corresponding to incomplete primitives **may** contribute to the count.
- `VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT` specifies that queries managed by the pool will count the number of primitives processed by the `input assembly` stage. If primitive restart is enabled, restarting the primitive topology has no effect on the count. Incomplete primitives **may** be counted.
- `VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT` specifies that queries managed by the pool will count the number of vertex shader invocations. This counter's value is incremented each time a vertex shader is `invoked`.
- `VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT` specifies that queries managed by the pool will count the number of geometry shader invocations. This counter's value is

incremented each time a geometry shader is [invoked](#). In the case of [instanced geometry shaders](#), the geometry shader invocations count is incremented for each separate instanced invocation.

- [VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT](#) specifies that queries managed by the pool will count the number of primitives generated by geometry shader invocations. The counter's value is incremented each time the geometry shader emits a primitive. Restarting primitive topology using the SPIR-V instructions [OpEndPrimitive](#) or [OpEndStreamPrimitive](#) has no effect on the geometry shader output primitives count.
- [VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT](#) specifies that queries managed by the pool will count the number of primitives processed by the [Primitive Clipping](#) stage of the pipeline. The counter's value is incremented each time a primitive reaches the primitive clipping stage.
- [VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT](#) specifies that queries managed by the pool will count the number of primitives output by the [Primitive Clipping](#) stage of the pipeline. The counter's value is incremented each time a primitive passes the primitive clipping stage. The actual number of primitives output by the primitive clipping stage for a particular input primitive is implementation-dependent but **must** satisfy the following conditions:
 - If at least one vertex of the input primitive lies inside the clipping volume, the counter is incremented by one or more.
 - Otherwise, the counter is incremented by zero or more.
- [VK_QUERY_PIPELINE_STATISTIC_FRAGMENT_SHADER_INVOCATIONS_BIT](#) specifies that queries managed by the pool will count the number of fragment shader invocations. The counter's value is incremented each time the fragment shader is [invoked](#).
- [VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT](#) specifies that queries managed by the pool will count the number of patches processed by the tessellation control shader. The counter's value is incremented once for each patch for which a tessellation control shader is [invoked](#).
- [VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT](#) specifies that queries managed by the pool will count the number of invocations of the tessellation evaluation shader. The counter's value is incremented each time the tessellation evaluation shader is [invoked](#).
- [VK_QUERY_PIPELINE_STATISTIC_COMPUTE_SHADER_INVOCATIONS_BIT](#) specifies that queries managed by the pool will count the number of compute shader invocations. The counter's value is incremented every time the compute shader is invoked. Implementations **may** skip the execution of certain compute shader invocations or execute additional compute shader invocations for implementation-dependent reasons as long as the results of rendering otherwise remain unchanged.
- [VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT](#) specifies that queries managed by the pool will count the number of task shader invocations. The counter's value is incremented every time the task shader is invoked.
- [VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT](#) specifies that queries managed by the pool will count the number of mesh shader invocations. The counter's value is incremented every time the mesh shader is invoked.

These values are intended to measure relative statistics on one implementation. Various device architectures will count these values differently. Any or all counters **may** be affected by the issues described in [Query Operation](#).

This counting difference is especially true if the pipeline contains mesh or task shaders, which may affect several of the counters in unexpected ways.

NOTE For example, tile-based rendering devices **may** need to replay the scene multiple times, affecting some of the counts.

If a pipeline has `rasterizerDiscardEnable` enabled, implementations **may** discard primitives after the final [pre-rasterization shader stage](#). As a result, if `rasterizerDiscardEnable` is enabled, the clipping input and output primitives counters **may** not be incremented.

When a pipeline statistics query finishes, the result for that query is marked as available. The application **can** copy the result to a buffer (via `vkCmdCopyQueryPoolResults`), or request it be put into host memory (via `vkGetQueryPoolResults`).

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryPipelineStatisticFlags;
```

`VkQueryPipelineStatisticFlags` is a bitmask type for setting a mask of zero or more [VkQueryPipelineStatisticFlagBits](#).

18.5. Timestamp Queries

Timestamps provide applications with a mechanism for timing the execution of commands. A timestamp is an integer value generated by the `VkPhysicalDevice`. Unlike other queries, timestamps do not operate over a range, and so do not use `vkCmdBeginQuery` or `vkCmdEndQuery`. The mechanism is built around a set of commands that allow the application to tell the `VkPhysicalDevice` to write timestamp values to a [query pool](#) and then either read timestamp values on the host (using `vkGetQueryPoolResults`) or copy timestamp values to a `VkBuffer` (using `vkCmdCopyQueryPoolResults`). The application **can** then compute differences between timestamps to determine execution time.

The number of valid bits in a timestamp value is determined by the `VkQueueFamilyProperties::timestampValidBits` property of the queue on which the timestamp is written. Timestamps are supported on any queue which reports a non-zero value for `timestampValidBits` via `vkGetPhysicalDeviceQueueFamilyProperties`. If the `timestampComputeAndGraphics` limit is `VK_TRUE`, timestamps are supported by every queue family that supports either graphics or compute operations (see [VkQueueFamilyProperties](#)).

The number of nanoseconds it takes for a timestamp value to be incremented by 1 **can** be obtained from `VkPhysicalDeviceLimits::timestampPeriod` after a call to `vkGetPhysicalDeviceProperties`.

To request a timestamp and write the value to memory, call:

```
// Provided by VK_VERSION_1_3
void vkCmdWriteTimestamp2(
    VkCommandBuffer                      commandBuffer,
    VkPipelineStageFlags2                stage,
    VkQueryPool                          queryPool,
    uint32_t                             query);
```

or the equivalent command

```
// Provided by VK_KHR_synchronization2
void vkCmdWriteTimestamp2KHR(
    VkCommandBuffer                      commandBuffer,
    VkPipelineStageFlags2                stage,
    VkQueryPool                          queryPool,
    uint32_t                             query);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `stage` specifies a stage of the pipeline.
- `queryPool` is the query pool that will manage the timestamp.
- `query` is the query within the query pool that will contain the timestamp.

When `vkCmdWriteTimestamp2` is submitted to a queue, it defines an execution dependency on commands that were submitted before it, and writes a timestamp to a query pool.

The first [synchronization scope](#) includes all commands that occur earlier in [submission order](#). The synchronization scope is limited to operations on the pipeline stage specified by `stage`.

The second [synchronization scope](#) includes only the timestamp write operation.

NOTE

Implementations may write the timestamp at any stage that is [logically later](#) than `stage`.

Any timestamp write that [happens-after](#) another timestamp write in the same submission **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. If `VK_KHR_calibrated_timestamps` or `VK_EXT_calibrated_timestamps` is enabled, this extends to timestamp writes across all submissions on the same logical device: any timestamp write that [happens-after](#) another **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. Timestamps written by this command **must** be in the `VK_TIME_DOMAIN_DEVICE_KHR` [time domain](#). If an overflow occurs, the timestamp value **must** wrap back to zero.

NOTE

Comparisons between timestamps should be done between timestamps where they are guaranteed to not decrease. For example, subtracting an older timestamp from a newer one to determine the execution time of a sequence of commands is only a reliable measurement if the two timestamp writes were performed in the same submission, or if the writes were performed on the same logical device and

VK_KHR_calibrated_timestamps or VK_EXT_calibrated_timestamps is enabled.

If `vkCmdWriteTimestamp2` is called while executing a render pass instance that has multiview enabled, the timestamp uses N consecutive query indices in the query pool (starting at `query`) where N is the number of bits set in the view mask of the subpass the command is executed in. The resulting query values are determined by an implementation-dependent choice of one of the following behaviors:

- The first query is a timestamp value and (if more than one bit is set in the view mask) zero is written to the remaining queries. If two timestamps are written in the same subpass, the sum of the execution time of all views between those commands is the difference between the first query written by each command.
- All N queries are timestamp values. If two timestamps are written in the same subpass, the sum of the execution time of all views between those commands is the sum of the difference between corresponding queries written by each command. The difference between corresponding queries **may** be the execution time of a single view.

In either case, the application **can** sum the differences between all N queries to determine the total execution time.

Valid Usage

- VUID-vkCmdWriteTimestamp2-stage-03929
If the `geometryShader` feature is not enabled, **stage must** not contain `VK_PIPELINE_STAGE_2_GEOMETRY_SHADER_BIT`
- VUID-vkCmdWriteTimestamp2-stage-03930
If the `tessellationShader` feature is not enabled, **stage must** not contain `VK_PIPELINE_STAGE_2_TESSELLATION_CONTROL_SHADER_BIT` or `VK_PIPELINE_STAGE_2_TESSELLATION_EVALUATION_SHADER_BIT`
- VUID-vkCmdWriteTimestamp2-stage-03931
If the `conditionalRendering` feature is not enabled, **stage must** not contain `VK_PIPELINE_STAGE_2_CONDITIONAL_RENDERING_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-03932
If the `fragmentDensityMap` feature is not enabled, **stage must** not contain `VK_PIPELINE_STAGE_2_FRAGMENT_DENSITY_PROCESS_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-03933
If the `transformFeedback` feature is not enabled, **stage must** not contain `VK_PIPELINE_STAGE_2_TRANSFORM_FEEDBACK_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-03934
If the `meshShader` feature is not enabled, **stage must** not contain `VK_PIPELINE_STAGE_2_MESH_SHADER_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-03935
If the `taskShader` feature is not enabled, **stage must** not contain `VK_PIPELINE_STAGE_2_TASK_SHADER_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-07316
If neither the `shadingRateImage` or `attachmentFragmentShadingRate` are enabled, **stage must**

not contain `VK_PIPELINE_STAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

- VUID-vkCmdWriteTimestamp2-stage-04957

If the `subpassShading` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_SUBPASS_SHADER_BIT_HUAWEI`

- VUID-vkCmdWriteTimestamp2-stage-04995

If the `invocationMask` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_INVOCATION_MASK_BIT_HUAWEI`

- VUID-vkCmdWriteTimestamp2-stage-07946

If neither the `VK_NV_ray_tracing` extension or `rayTracingPipeline` feature are enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_KHR`

- VUID-vkCmdWriteTimestamp2-synchronization2-03858

The `synchronization2` feature **must** be enabled

- VUID-vkCmdWriteTimestamp2-stage-03859

`stage` **must** only include a single pipeline stage

- VUID-vkCmdWriteTimestamp2-stage-03860

`stage` **must** only include stages valid for the queue family that was used to create the command pool that `commandBuffer` was allocated from

- VUID-vkCmdWriteTimestamp2-queryPool-03861

`queryPool` **must** have been created with a `queryType` of `VK_QUERY_TYPE_TIMESTAMP`

- VUID-vkCmdWriteTimestamp2-timestampValidBits-03863

The command pool's queue family **must** support a non-zero `timestampValidBits`

- VUID-vkCmdWriteTimestamp2-query-04903

`query` **must** be less than the number of queries in `queryPool`

- VUID-vkCmdWriteTimestamp2-None-03864

All queries used by the command **must** be *unavailable*

- VUID-vkCmdWriteTimestamp2-query-03865

If `vkCmdWriteTimestamp2` is called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`

Valid Usage (Implicit)

- VUID-vkCmdWriteTimestamp2-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdWriteTimestamp2-stage-parameter

`stage` **must** be a valid combination of `VkPipelineStageFlagBits2` values

- VUID-vkCmdWriteTimestamp2-queryPool-parameter

`queryPool` **must** be a valid `VkQueryPool` handle

- VUID-vkCmdWriteTimestamp2-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdWriteTimestamp2-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support transfer, graphics, compute, decode, or encode operations

- `VUID-vkCmdWriteTimestamp2-commonparent`
Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	Transfer Graphics Compute Decode Encode	Action

To request a timestamp and write the value to memory, call:

```
// Provided by VK_VERSION_1_0
void vkCmdWriteTimestamp(
    VkCommandBuffer          commandBuffer,
    VkPipelineStageFlagBits  pipelineStage,
    VkQueryPool              queryPool,
    uint32_t                 query);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pipelineStage` is a `VkPipelineStageFlagBits` value, specifying a stage of the pipeline.
- `queryPool` is the query pool that will manage the timestamp.
- `query` is the query within the query pool that will contain the timestamp.

When `vkCmdWriteTimestamp` is submitted to a queue, it defines an execution dependency on commands that were submitted before it, and writes a timestamp to a query pool.

The first `synchronization scope` includes all commands that occur earlier in `submission order`. The synchronization scope is limited to operations on the pipeline stage specified by `pipelineStage`.

The second [synchronization scope](#) includes only the timestamp write operation.

NOTE

Implementations may write the timestamp at any stage that is [logically later](#) than [stage](#).

Any timestamp write that [happens-after](#) another timestamp write in the same submission **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. If [VK_KHR_calibrated_timestamps](#) or [VK_EXT_calibrated_timestamps](#) is enabled, this extends to timestamp writes across all submissions on the same logical device: any timestamp write that [happens-after](#) another **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. Timestamps written by this command **must** be in the [VK_TIME_DOMAIN_DEVICE_KHR time domain](#). If an overflow occurs, the timestamp value **must** wrap back to zero.

NOTE

Comparisons between timestamps should be done between timestamps where they are guaranteed to not decrease. For example, subtracting an older timestamp from a newer one to determine the execution time of a sequence of commands is only a reliable measurement if the two timestamp writes were performed in the same submission, or if the writes were performed on the same logical device and [VK_KHR_calibrated_timestamps](#) or [VK_EXT_calibrated_timestamps](#) is enabled.

If [vkCmdWriteTimestamp](#) is called while executing a render pass instance that has multiview enabled, the timestamp uses N consecutive query indices in the query pool (starting at [query](#)) where N is the number of bits set in the view mask of the subpass the command is executed in. The resulting query values are determined by an implementation-dependent choice of one of the following behaviors:

- The first query is a timestamp value and (if more than one bit is set in the view mask) zero is written to the remaining queries. If two timestamps are written in the same subpass, the sum of the execution time of all views between those commands is the difference between the first query written by each command.
- All N queries are timestamp values. If two timestamps are written in the same subpass, the sum of the execution time of all views between those commands is the sum of the difference between corresponding queries written by each command. The difference between corresponding queries **may** be the execution time of a single view.

In either case, the application **can** sum the differences between all N queries to determine the total execution time.

Valid Usage

- VUID-vkCmdWriteTimestamp-pipelineStage-04074
[pipelineStage](#) **must** be a [valid stage](#) for the queue family that was used to create the command pool that [commandBuffer](#) was allocated from
- VUID-vkCmdWriteTimestamp-pipelineStage-04075
If the [geometryShader](#) feature is not enabled, [pipelineStage](#) **must** not be [VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT](#)
- VUID-vkCmdWriteTimestamp-pipelineStage-04076

If the `tessellationShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_TESSELLATION_CONTROL_SHADER_BIT` or `VK_PIPELINE_STAGE_TESSELLATION_EVALUATION_SHADER_BIT`

- VUID-vkCmdWriteTimestamp-pipelineStage-04077

If the `conditionalRendering` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_CONDITIONAL_RENDERING_BIT_EXT`

- VUID-vkCmdWriteTimestamp-pipelineStage-04078

If the `fragmentDensityMap` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT`

- VUID-vkCmdWriteTimestamp-pipelineStage-04079

If the `transformFeedback` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT`

- VUID-vkCmdWriteTimestamp-pipelineStage-04080

If the `meshShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT`

- VUID-vkCmdWriteTimestamp-pipelineStage-07077

If the `taskShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT`

- VUID-vkCmdWriteTimestamp-shadingRateImage-07314

If neither the `shadingRateImage` or `attachmentFragmentShadingRate` are enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

- VUID-vkCmdWriteTimestamp-synchronization2-06489

If the `synchronization2` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_NONE`

- VUID-vkCmdWriteTimestamp-rayTracingPipeline-07943

If neither the `VK_NV_ray_tracing` extension or `rayTracingPipeline` feature are enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR`

- VUID-vkCmdWriteTimestamp-queryPool-01416

`queryPool` **must** have been created with a `queryType` of `VK_QUERY_TYPE_TIMESTAMP`

- VUID-vkCmdWriteTimestamp-timestampValidBits-00829

The command pool's queue family **must** support a non-zero `timestampValidBits`

- VUID-vkCmdWriteTimestamp-query-04904

`query` **must** be less than the number of queries in `queryPool`

- VUID-vkCmdWriteTimestamp-None-00830

All queries used by the command **must** be *unavailable*

- VUID-vkCmdWriteTimestamp-query-00831

If `vkCmdWriteTimestamp` is called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`

Valid Usage (Implicit)

- VUID-vkCmdWriteTimestamp-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdWriteTimestamp-pipelineStage-parameter **pipelineStage** **must** be a valid [VkPipelineStageFlagBits](#) value
- VUID-vkCmdWriteTimestamp-queryPool-parameter **queryPool** **must** be a valid [VkQueryPool](#) handle
- VUID-vkCmdWriteTimestamp-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdWriteTimestamp-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support transfer, graphics, compute, decode, encode, or optical flow operations
- VUID-vkCmdWriteTimestamp-commonparent
Both of **commandBuffer**, and **queryPool** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized

18.6. Performance Queries

Performance queries provide applications with a mechanism for getting performance counter information about the execution of command buffers, render passes, and commands.

Each queue family advertises the performance counters that **can** be queried on a queue of that family via a call to [vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR](#).

Implementations **may** limit access to performance counters based on platform requirements or only to specialized drivers for development purposes.

NOTE This may include no performance counters being enumerated, or a reduced set. Please refer to platform-specific documentation for guidance on any such restrictions.

Performance queries use the existing [vkCmdBeginQuery](#) and [vkCmdEndQuery](#) to control what command buffers, render passes, or commands to get performance information for.

Implementations **may** require multiple passes where the command buffer, render passes, or commands being recorded are the same and are executed on the same queue to record performance counter data. This is achieved by submitting the same batch and providing a [VkPerformanceQuerySubmitInfoKHR](#) structure containing a counter pass index. The number of passes required for a given performance query pool **can** be queried via a call to [vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR](#).

NOTE Command buffers created with `VK_COMMAND_BUFFER_USAGE_ONE_TIME_SUBMIT_BIT` **must** not be re-submitted. Changing command buffer usage bits **may** affect performance. To avoid this, the application **should** re-record any command buffers with the `VK_COMMAND_BUFFER_USAGE_ONE_TIME_SUBMIT_BIT` when multiple counter passes are required.

Performance counter results from a performance query pool **can** be obtained with the command [vkGetQueryPoolResults](#).

The `VkPerformanceCounterResultKHR` union is defined as:

```
// Provided by VK_KHR_performance_query
typedef union VkPerformanceCounterResultKHR {
    int32_t      int32;
    int64_t      int64;
    uint32_t     uint32;
    uint64_t     uint64;
    float        float32;
    double       float64;
} VkPerformanceCounterResultKHR;
```

- `int32` is a 32-bit signed integer value.
- `int64` is a 64-bit signed integer value.
- `uint32` is a 32-bit unsigned integer value.
- `uint64` is a 64-bit unsigned integer value.
- `float32` is a 32-bit floating-point value.
- `float64` is a 64-bit floating-point value.

Performance query results are returned in an array of `VkPerformanceCounterResultKHR` unions

containing the data associated with each counter in the query, stored in the same order as the counters supplied in `pCounterIndices` when creating the performance query. `VkPerformanceCounterKHR::storage` specifies how to parse the counter data.

18.6.1. Profiling Lock

To record and submit a command buffer containing a performance query pool the profiling lock **must** be held. The profiling lock **must** be acquired prior to any call to `vkBeginCommandBuffer` that will be using a performance query pool. The profiling lock **must** be held while any command buffer containing a performance query pool is in the *recording*, *executable*, or *pending state*. To acquire the profiling lock, call:

```
// Provided by VK_KHR_performance_query
VkResult vkAcquireProfilingLockKHR(
    VkDevice device,
    const VkAcquireProfilingLockInfoKHR* pInfo);
```

- `device` is the logical device to profile.
- `pInfo` is a pointer to a `VkAcquireProfilingLockInfoKHR` structure containing information about how the profiling is to be acquired.

Implementations **may** allow multiple actors to hold the profiling lock concurrently.

Valid Usage (Implicit)

- VUID-vkAcquireProfilingLockKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkAcquireProfilingLockKHR-pInfo-parameter `pInfo` **must** be a valid pointer to a valid `VkAcquireProfilingLockInfoKHR` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_TIMEOUT`

The `VkAcquireProfilingLockInfoKHR` structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkAcquireProfilingLockInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkAcquireProfilingLockFlagsKHR flags;
    uint64_t             timeout;
} VkAcquireProfilingLockInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **timeout** indicates how long the function waits, in nanoseconds, if the profiling lock is not available.

Valid Usage (Implicit)

- VUID-VkAcquireProfilingLockInfoKHR-sType-sType
sType must be **VK_STRUCTURE_TYPE_ACQUIRE_PROFILING_LOCK_INFO_KHR**
- VUID-VkAcquireProfilingLockInfoKHR-pNext-pNext
pNext must be **NULL**
- VUID-VkAcquireProfilingLockInfoKHR-flags-zeroBitmask
flags must be **0**

If **timeout** is 0, **vkAcquireProfilingLockKHR** will not block while attempting to acquire the profiling lock. If **timeout** is **UINT64_MAX**, the function will not return until the profiling lock was acquired.

```
// Provided by VK_KHR_performance_query
typedef enum VkAcquireProfilingLockFlagBitsKHR {
} VkAcquireProfilingLockFlagBitsKHR;
```

```
// Provided by VK_KHR_performance_query
typedef VkFlags VkAcquireProfilingLockFlagsKHR;
```

[VkAcquireProfilingLockFlagsKHR](#) is a bitmask type for setting a mask, but is currently reserved for future use.

To release the profiling lock, call:

```
// Provided by VK_KHR_performance_query
void vkReleaseProfilingLockKHR(
    VkDevice device);
```

- **device** is the logical device to cease profiling on.

Valid Usage

- VUID-vkReleaseProfilingLockKHR-device-03235

The profiling lock of **device** **must** have been held via a previous successful call to [vkAcquireProfilingLockKHR](#)

Valid Usage (Implicit)

- VUID-vkReleaseProfilingLockKHR-device-parameter
device **must** be a valid [VkDevice](#) handle

18.7. Transform Feedback Queries

Transform feedback queries track the number of primitives attempted to be written and actually written, by the vertex stream being captured, to a transform feedback buffer. This query is updated during drawing commands while transform feedback is active. The number of primitives actually written will be less than the number attempted to be written if the bound transform feedback buffer size was too small for the number of primitives actually drawn. Primitives are not written beyond the bound range of the transform feedback buffer. A transform feedback query is begun and ended by calling [vkCmdBeginQuery](#) and [vkCmdEndQuery](#), respectively to query for vertex stream zero. [vkCmdBeginQueryIndexedEXT](#) and [vkCmdEndQueryIndexedEXT](#) **can** be used to begin and end transform feedback queries for any supported vertex stream. When a transform feedback query begins, the count of primitives written and primitives needed starts from zero. For each drawing command, the count is incremented as vertex attribute outputs are captured to the transform feedback buffers while transform feedback is active.

When a transform feedback query finishes, the result for that query is marked as available. The application **can** then either copy the result to a buffer (via [vkCmdCopyQueryPoolResults](#)) or request it be put into host memory (via [vkGetQueryPoolResults](#)).

18.8. Primitives Generated Queries

When a generated primitive query for a vertex stream is active, the primitives-generated count is incremented every time a primitive emitted to that stream reaches the transform feedback stage, whether or not transform feedback is active. A primitives generated query is begun and ended by calling [vkCmdBeginQuery](#) and [vkCmdEndQuery](#), respectively to query for vertex stream zero. [vkCmdBeginQueryIndexedEXT](#) and [vkCmdEndQueryIndexedEXT](#) **can** be used to begin and end primitives generated queries for any supported vertex stream. When a primitives generated query begins, the count of primitives generated starts from zero.

When a primitives generated query finishes, the result for that query is marked as available. The application **can** then either copy the result to a buffer (via [vkCmdCopyQueryPoolResults](#)) or request it be put into host memory (via [vkGetQueryPoolResults](#)).

NOTE

The result of this query is typically identical to `VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT`, but the primitives generated query is deterministic, i.e. it must be identical to the number of primitives processed. `VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT` may vary for implementation-dependent reasons, e.g. the same primitive may be processed multiple times for purposes of clipping.

18.9. Mesh Shader Queries

When a generated mesh primitives query is active, the mesh-primitives-generated count is incremented every time a primitive emitted from the mesh shader stage reaches the fragment shader stage. When a generated mesh primitives query begins, the mesh-primitives-generated count starts from zero.

Mesh and task shader pipeline statistics queries function the same way that invocation queries work for other shader stages, counting the number of times the respective shader stage has been run. When the statistics query begins, the invocation counters start from zero.

18.10. Intel Performance Queries

Intel performance queries allow an application to capture performance data for a set of commands. Performance queries are used in a similar way than other types of queries. A main difference with existing queries is that the resulting data should be handed over to a library capable to produce human readable results rather than being read directly by an application.

Prior to creating a performance query pool, initialize the device for performance queries with the call:

```
// Provided by VK_INTEL_performance_query
VkResult vkInitializePerformanceApiINTEL(
    VkDevice device,
    const VkInitializePerformanceApiInfoINTEL* pInitializeInfo);
```

- `device` is the logical device used for the queries.
- `pInitializeInfo` is a pointer to a `VkInitializePerformanceApiInfoINTEL` structure specifying initialization parameters.

Valid Usage (Implicit)

- VUID-vkInitializePerformanceApiINTEL-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkInitializePerformanceApiINTEL-pInitializeInfo-parameter `pInitializeInfo` **must** be a valid pointer to a valid `VkInitializePerformanceApiInfoINTEL` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkInitializePerformanceApiInfoINTEL` structure is defined as :

```
// Provided by VK_INTEL_performance_query
typedef struct VkInitializePerformanceApiInfoINTEL {
    VkStructureType    sType;
    const void*        pNext;
    void*              pUserData;
} VkInitializePerformanceApiInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pUserData` is a pointer for application data.

Valid Usage (Implicit)

- VUID-VkInitializePerformanceApiInfoINTEL-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_INITIALIZE_PERFORMANCE_API_INFO_INTEL`
- VUID-VkInitializePerformanceApiInfoINTEL-pNext-pNext
`pNext` **must** be `NULL`

Once performance query operations have completed, uninitialize the device for performance queries with the call:

```
// Provided by VK_INTEL_performance_query
void vkUninitializePerformanceApiINTEL(
    VkDevice device);
```

- `device` is the logical device used for the queries.

Valid Usage (Implicit)

- VUID-vkUninitializePerformanceApiINTEL-device-parameter
`device` **must** be a valid `VkDevice` handle

Some performance query features of a device can be discovered with the call:

```
// Provided by VK_INTEL_performance_query
VkResult vkGetPerformanceParameterINTEL(
    VkDevice                device,
    VkPerformanceParameterTypeINTEL parameter,
    VkPerformanceValueINTEL* pValue);
```

- **device** is the logical device to query.
- **parameter** is the parameter to query.
- **pValue** is a pointer to a [VkPerformanceValueINTEL](#) structure in which the type and value of the parameter are returned.

Valid Usage (Implicit)

- VUID-vkGetPerformanceParameterINTEL-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetPerformanceParameterINTEL-parameter-parameter **parameter** **must** be a valid [VkPerformanceParameterTypeINTEL](#) value
- VUID-vkGetPerformanceParameterINTEL-pValue-parameter **pValue** **must** be a valid pointer to a [VkPerformanceValueINTEL](#) structure

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_TOO_MANY_OBJECTS**
- **VK_ERROR_OUT_OF_HOST_MEMORY**

Possible values of [vkGetPerformanceParameterINTEL::parameter](#), specifying a performance query feature, are:

```
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceParameterTypeINTEL {
    VK_PERFORMANCE_PARAMETER_TYPE_HW_COUNTERS_SUPPORTED_INTEL = 0,
    VK_PERFORMANCE_PARAMETER_TYPE_STREAM_MARKER_VALID_BITS_INTEL = 1,
} VkPerformanceParameterTypeINTEL;
```

- **VK_PERFORMANCE_PARAMETER_TYPE_HW_COUNTERS_SUPPORTED_INTEL** has a boolean result which tells whether hardware counters can be captured.

- `VK_PERFORMANCE_PARAMETER_TYPE_STREAM_MARKER_VALID_BITS_INTEL` has a 32 bits integer result which tells how many bits can be written into the `VkPerformanceValueINTEL` value.

The `VkPerformanceValueINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceValueINTEL {
    VkPerformanceValueTypeINTEL    type;
    VkPerformanceValueDataINTEL    data;
} VkPerformanceValueINTEL;
```

- `type` is a `VkPerformanceValueTypeINTEL` value specifying the type of the returned data.
- `data` is a `VkPerformanceValueDataINTEL` union specifying the value of the returned data.

Possible values of `VkPerformanceValueINTEL::type`, specifying the type of the data returned in `VkPerformanceValueINTEL::data`, are:

- `VK_PERFORMANCE_VALUE_TYPE_UINT32_INTEL` specifies that unsigned 32-bit integer data is returned in `data.value32`.
- `VK_PERFORMANCE_VALUE_TYPE_UINT64_INTEL` specifies that unsigned 64-bit integer data is returned in `data.value64`.
- `VK_PERFORMANCE_VALUE_TYPE_FLOAT_INTEL` specifies that floating-point data is returned in `data.valueFloat`.
- `VK_PERFORMANCE_VALUE_TYPE_BOOL_INTEL` specifies that `VkBool32` data is returned in `data.valueBool`.
- `VK_PERFORMANCE_VALUE_TYPE_STRING_INTEL` specifies that a pointer to a null-terminated UTF-8 string is returned in `data.valueString`. The pointer is valid for the lifetime of the `device` parameter passed to `vkGetPerformanceParameterINTEL`.

```
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceValueTypeINTEL {
    VK_PERFORMANCE_VALUE_TYPE_UINT32_INTEL = 0,
    VK_PERFORMANCE_VALUE_TYPE_UINT64_INTEL = 1,
    VK_PERFORMANCE_VALUE_TYPE_FLOAT_INTEL = 2,
    VK_PERFORMANCE_VALUE_TYPE_BOOL_INTEL = 3,
    VK_PERFORMANCE_VALUE_TYPE_STRING_INTEL = 4,
} VkPerformanceValueTypeINTEL;
```

The `VkPerformanceValueDataINTEL` union is defined as:

```
// Provided by VK_INTEL_performance_query
typedef union VkPerformanceValueDataINTEL {
    uint32_t      value32;
    uint64_t      value64;
    float         valueFloat;
    VkBool32      valueBool;
    const char*   valueString;
} VkPerformanceValueDataINTEL;
```

- `data.value32` represents 32-bit integer data.
- `data.value64` represents 64-bit integer data.
- `data.valueFloat` represents floating-point data.
- `data.valueBool` represents `VkBool32` data.
- `data.valueString` represents a pointer to a null-terminated UTF-8 string.

The correct member of the union is determined by the associated `VkPerformanceValueTypeINTEL` value.

The `VkQueryPoolPerformanceQueryCreateInfoINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkQueryPoolPerformanceQueryCreateInfoINTEL {
    VkStructureType      sType;
    const void*          pNext;
    VkQueryPoolSamplingModeINTEL performanceCountersSampling;
} VkQueryPoolPerformanceQueryCreateInfoINTEL;
```

```
// Provided by VK_INTEL_performance_query
typedef VkQueryPoolPerformanceQueryCreateInfoINTEL VkQueryPoolCreateInfoINTEL;
```

To create a pool for Intel performance queries, set `VkQueryPoolCreateInfo::queryType` to `VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL` and add a `VkQueryPoolPerformanceQueryCreateInfoINTEL` structure to the `pNext` chain of the `VkQueryPoolCreateInfo` structure.

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `performanceCountersSampling` describe how performance queries should be captured.

Valid Usage (Implicit)

- VUID-VkQueryPoolPerformanceQueryCreateInfoINTEL-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_QUERY_CREATE_INFO_INTEL`
- VUID-VkQueryPoolPerformanceQueryCreateInfoINTEL-performanceCountersSampling-

parameter

`performanceCountersSampling` **must** be a valid `VkQueryPoolSamplingModeINTEL` value

Possible values of `VkQueryPoolPerformanceQueryCreateInfoINTEL::performanceCountersSampling` are:

```
// Provided by VK_INTEL_performance_query
typedef enum VkQueryPoolSamplingModeINTEL {
    VK_QUERY_POOL_SAMPLING_MODE_MANUAL_INTEL = 0,
} VkQueryPoolSamplingModeINTEL;
```

- `VK_QUERY_POOL_SAMPLING_MODE_MANUAL_INTEL` is the default mode in which the application calls `vkCmdBeginQuery` and `vkCmdEndQuery` to record performance data.

To help associate query results with a particular point at which an application emitted commands, markers can be set into the command buffers with the call:

```
// Provided by VK_INTEL_performance_query
VkResult vkCmdSetPerformanceMarkerINTEL(
    VkCommandBuffer          commandBuffer,
    const VkPerformanceMarkerInfoINTEL* pMarkerInfo);
```

The last marker set onto a command buffer before the end of a query will be part of the query result.

Valid Usage (Implicit)

- VUID-vkCmdSetPerformanceMarkerINTEL-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPerformanceMarkerINTEL-pMarkerInfo-parameter `pMarkerInfo` **must** be a valid pointer to a valid `VkPerformanceMarkerInfoINTEL` structure
- VUID-vkCmdSetPerformanceMarkerINTEL-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetPerformanceMarkerINTEL-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, compute, or transfer operations
- VUID-vkCmdSetPerformanceMarkerINTEL-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally

synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute Transfer	Action State

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkPerformanceMarkerInfoINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceMarkerInfoINTEL {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           marker;
} VkPerformanceMarkerInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `marker` is the marker value that will be recorded into the opaque query results.

Valid Usage (Implicit)

- VUID-VkPerformanceMarkerInfoINTEL-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PERFORMANCE_MARKER_INFO_INTEL`
- VUID-VkPerformanceMarkerInfoINTEL-pNext-pNext
`pNext` **must** be `NULL`

When monitoring the behavior of an application within the dataset generated by the entire set of applications running on the system, it is useful to identify draw calls within a potentially huge

amount of performance data. To do so, application can generate stream markers that will be used to trace back a particular draw call with a particular performance data item.

```
// Provided by VK_INTEL_performance_query
VkResult vkCmdSetPerformanceStreamMarkerINTEL(
    VkCommandBuffer          commandBuffer,
    const VkPerformanceStreamMarkerInfoINTEL* pMarkerInfo);
```

- `commandBuffer` is a `VkCommandBuffer` into which a stream marker is added.
- `pMarkerInfo` is a pointer to a `VkPerformanceStreamMarkerInfoINTEL` structure describing the marker to insert.

Valid Usage (Implicit)

- VUID-vkCmdSetPerformanceStreamMarkerINTEL-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPerformanceStreamMarkerINTEL-pMarkerInfo-parameter `pMarkerInfo` **must** be a valid pointer to a valid `VkPerformanceStreamMarkerInfoINTEL` structure
- VUID-vkCmdSetPerformanceStreamMarkerINTEL-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetPerformanceStreamMarkerINTEL-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, compute, or transfer operations
- VUID-vkCmdSetPerformanceStreamMarkerINTEL-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute Transfer	Action State

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkPerformanceStreamMarkerInfoINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceStreamMarkerInfoINTEL {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           marker;
} VkPerformanceStreamMarkerInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `marker` is the marker value that will be recorded into the reports consumed by an external application.

Valid Usage

- VUID-VkPerformanceStreamMarkerInfoINTEL-marker-02735

The value written by the application into `marker` **must** only use the valid bits as reported by `vkGetPerformanceParameterINTEL` with the `VK_PERFORMANCE_PARAMETER_TYPE_STREAM_MARKER_VALID_BITS_INTEL`

Valid Usage (Implicit)

- VUID-VkPerformanceStreamMarkerInfoINTEL-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PERFORMANCE_STREAM_MARKER_INFO_INTEL`
- VUID-VkPerformanceStreamMarkerInfoINTEL-pNext-pNext
`pNext` **must** be `NULL`

Some applications might want to measure the effect of a set of commands with different settings. It is possible to override a particular setting using :

```
// Provided by VK_INTEL_performance_query
VkResult vkCmdSetPerformanceOverrideINTEL(
    VkCommandBuffer                      commandBuffer,
    const VkPerformanceOverrideInfoINTEL* pOverrideInfo);
```

- `commandBuffer` is the command buffer where the override takes place.
- `pOverrideInfo` is a pointer to a `VkPerformanceOverrideInfoINTEL` structure selecting the parameter to override.

Valid Usage

- VUID-vkCmdSetPerformanceOverrideINTEL-pOverrideInfo-02736
`pOverrideInfo` **must** not be used with a `VkPerformanceOverrideTypeINTEL` that is not reported available by `vkGetPerformanceParameterINTEL`

Valid Usage (Implicit)

- VUID-vkCmdSetPerformanceOverrideINTEL-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPerformanceOverrideINTEL-pOverrideInfo-parameter
`pOverrideInfo` **must** be a valid pointer to a valid `VkPerformanceOverrideInfoINTEL` structure
- VUID-vkCmdSetPerformanceOverrideINTEL-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetPerformanceOverrideINTEL-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, compute, or transfer operations
- VUID-vkCmdSetPerformanceOverrideINTEL-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	Graphics Compute Transfer	State

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkPerformanceOverrideInfoINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceOverrideInfoINTEL {
    VkStructureType      sType;
    const void*          pNext;
    VkPerformanceOverrideTypeINTEL type;
    VkBool32             enable;
    uint64_t             parameter;
} VkPerformanceOverrideInfoINTEL;
```

- `type` is the particular `VkPerformanceOverrideTypeINTEL` to set.
- `enable` defines whether the override is enabled.
- `parameter` is a potential required parameter for the override.

Valid Usage (Implicit)

- VUID-VkPerformanceOverrideInfoINTEL-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PERFORMANCE_OVERRIDE_INFO_INTEL`
- VUID-VkPerformanceOverrideInfoINTEL-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPerformanceOverrideInfoINTEL-type-parameter
`type` **must** be a valid `VkPerformanceOverrideTypeINTEL` value

Possible values of `VkPerformanceOverrideInfoINTEL::type`, specifying performance override types,

are:

```
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceOverrideTypeINTEL {
    VK_PERFORMANCE_OVERRIDE_TYPE_NULL_HARDWARE_INTEL = 0,
    VK_PERFORMANCE_OVERRIDE_TYPE_FLUSH_GPU_CACHES_INTEL = 1,
} VkPerformanceOverrideTypeINTEL;
```

- `VK_PERFORMANCE_OVERRIDE_TYPE_NULL_HARDWARE_INTEL` turns all rendering operations into noop.
- `VK_PERFORMANCE_OVERRIDE_TYPE_FLUSH_GPU_CACHES_INTEL` stalls the stream of commands until all previously emitted commands have completed and all caches been flushed and invalidated.

Before submitting command buffers containing performance queries commands to a device queue, the application **must** acquire and set a performance query configuration. The configuration can be released once all command buffers containing performance query commands are not in a pending state.

```
// Provided by VK_INTEL_performance_query
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPerformanceConfigurationINTEL)
```

To acquire a device performance configuration, call:

```
// Provided by VK_INTEL_performance_query
VkResult vkAcquirePerformanceConfigurationINTEL(
    VkDevice device,
    const VkPerformanceConfigurationAcquireInfoINTEL* pAcquireInfo,
    VkPerformanceConfigurationINTEL* pConfiguration);
```

- `device` is the logical device that the performance query commands will be submitted to.
- `pAcquireInfo` is a pointer to a `VkPerformanceConfigurationAcquireInfoINTEL` structure, specifying the performance configuration to acquire.
- `pConfiguration` is a pointer to a `VkPerformanceConfigurationINTEL` handle in which the resulting configuration object is returned.

Valid Usage (Implicit)

- VUID-vkAcquirePerformanceConfigurationINTEL-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkAcquirePerformanceConfigurationINTEL-pAcquireInfo-parameter `pAcquireInfo` **must** be a valid pointer to a valid `VkPerformanceConfigurationAcquireInfoINTEL` structure
- VUID-vkAcquirePerformanceConfigurationINTEL-pConfiguration-parameter `pConfiguration` **must** be a valid pointer to a `VkPerformanceConfigurationINTEL` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkPerformanceConfigurationAcquireInfoINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceConfigurationAcquireInfoINTEL {
    VkStructureType          sType;
    const void*              pNext;
    VkPerformanceConfigurationTypeINTEL  type;
} VkPerformanceConfigurationAcquireInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is one of the `VkPerformanceConfigurationTypeINTEL` type of performance configuration that will be acquired.

Valid Usage (Implicit)

- VUID-VkPerformanceConfigurationAcquireInfoINTEL-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PERFORMANCE_CONFIGURATION_ACQUIRE_INFO_INTEL`
- VUID-VkPerformanceConfigurationAcquireInfoINTEL-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPerformanceConfigurationAcquireInfoINTEL-type-parameter
`type` **must** be a valid `VkPerformanceConfigurationTypeINTEL` value

Possible values of `VkPerformanceConfigurationAcquireInfoINTEL::type`, specifying performance configuration types, are:

```
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceConfigurationTypeINTEL {
    VK_PERFORMANCE_CONFIGURATION_TYPE_COMMAND_QUEUE_METRICS_DISCOVERY_ACTIVATED_INTEL
= 0,
} VkPerformanceConfigurationTypeINTEL;
```

To set a performance configuration, call:

```
// Provided by VK_INTEL_performance_query
VkResult vkQueueSetPerformanceConfigurationINTEL(
    VkQueue queue,
    VkPerformanceConfigurationINTEL configuration);
```

- **queue** is the queue on which the configuration will be used.
- **configuration** is the configuration to use.

Valid Usage (Implicit)

- VUID-vkQueueSetPerformanceConfigurationINTEL-queue-parameter **queue** **must** be a valid [VkQueue](#) handle
- VUID-vkQueueSetPerformanceConfigurationINTEL-configuration-parameter **configuration** **must** be a valid [VkPerformanceConfigurationINTEL](#) handle
- VUID-vkQueueSetPerformanceConfigurationINTEL-commonparent Both of **configuration**, and **queue** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	Any	-

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_TOO_MANY_OBJECTS**
- **VK_ERROR_OUT_OF_HOST_MEMORY**

To release a device performance configuration, call:

```
// Provided by VK_INTEL_performance_query
VkResult vkReleasePerformanceConfigurationINTEL(
    VkDevice device,
    VkPerformanceConfigurationINTEL configuration);
```

- **device** is the device associated to the configuration object to release.

- `configuration` is the configuration object to release.

Valid Usage

- VUID-vkReleasePerformanceConfigurationINTEL-configuration-02737
`configuration` **must** not be released before all command buffers submitted while the configuration was set are in `pending state`

Valid Usage (Implicit)

- VUID-vkReleasePerformanceConfigurationINTEL-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkReleasePerformanceConfigurationINTEL-configuration-parameter
If `configuration` is not `VK_NULL_HANDLE`, `configuration` **must** be a valid `VkPerformanceConfigurationINTEL` handle
- VUID-vkReleasePerformanceConfigurationINTEL-configuration-parent
If `configuration` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `configuration` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

18.11. Result Status Queries

Result status queries serve a single purpose: allowing the application to determine whether a set of operations have completed successfully or not, as indicated by the `VkQueryResultStatusKHR` value written when retrieving the result of a query using the `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` flag.

Unlike other query types, result status queries do not track or maintain any other data beyond the completion status, thus no other data is written when retrieving their results.

Support for result status queries is indicated by `VkQueueFamilyQueryResultStatusPropertiesKHR`

`::queryResultStatusSupport` , as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` for the queue family in question.

18.12. Video Encode Feedback Queries

Video encode feedback queries allow the application to capture feedback values generated by video encode operations. As such, video encode feedback queries are available on queue families supporting video encode operations. The availability of individual video encode feedback values is indicated by the bits of `VkVideoEncodeCapabilitiesKHR::supportedEncodeFeedbackFlags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the `video profile` the queries are intended to be used with.

The set of enabled video encode feedback values **must** be configured on the query pool when it is created using the `encodeFeedbackFlags` member of the `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR` included in the `pNext` chain of `VkQueryPoolCreateInfo`.

The `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkQueryPoolVideoEncodeFeedbackCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoEncodeFeedbackFlagsKHR    encodeFeedbackFlags;
} VkQueryPoolVideoEncodeFeedbackCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `encodeFeedbackFlags` is a bitmask of `VkVideoEncodeFeedbackFlagBitsKHR` values specifying the set of enabled video encode feedback values captured by queries of the new pool.

Valid Usage (Implicit)

- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_QUERY_POOL_VIDEO_ENCODE_FEEDBACK_CREATE_INFO_KHR`
- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-encodeFeedbackFlags-parameter
`encodeFeedbackFlags` **must** be a valid combination of `VkVideoEncodeFeedbackFlagBitsKHR` values
- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-encodeFeedbackFlags-requiredbitmask
`encodeFeedbackFlags` **must** not be `0`

Bits which **can** be set in `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags` for video encode feedback query pools are:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeFeedbackFlagBitsKHR {
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR = 0x00000004,
} VkVideoEncodeFeedbackFlagBitsKHR;
```

- **VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR** specifies that queries managed by the pool will capture the byte offset of the bitstream data written by the video encode operation to the bitstream buffer specified in **VkVideoEncodeInfoKHR::dstBuffer** relative to the offset specified in **VkVideoEncodeInfoKHR::dstBufferOffset**. For the first video encode operation issued by any **video encode command**, this value will always be zero, meaning that bitstream data is always written to the buffer specified in **VkVideoEncodeInfoKHR::dstBuffer** starting from the offset specified in **VkVideoEncodeInfoKHR::dstBufferOffset**.
- **VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR** specifies that queries managed by the pool will capture the number of bytes written by the video encode operation to the bitstream buffer specified in **VkVideoEncodeInfoKHR::dstBuffer**.
- **VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR** specifies that queries managed by the pool will capture a boolean value indicating that the data written to the bitstream buffer specified in **VkVideoEncodeInfoKHR::dstBuffer** contains **overridden parameters**.

When retrieving the results of video encode feedback queries, the values corresponding to each enabled video encode feedback are written in the order of the bits defined above, followed by an optional value indicating availability or result status if **VK_QUERY_RESULT_WITH_AVAILABILITY_BIT** or **VK_QUERY_RESULT_WITH_STATUS_BIT_KHR** is specified, respectively.

If the result status of a video encode feedback query is negative, then the results of all enabled video encode feedback values will be undefined.

NOTE

Thus it is recommended that applications always specify **VK_QUERY_RESULT_WITH_STATUS_BIT_KHR** when retrieving the results of video encode feedback queries and ignore such undefined video encode feedback values for any **unsuccessfully** completed video encode operations.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeFeedbackFlagsKHR;
```

VkVideoEncodeFeedbackFlagsKHR is a bitmask type for setting a mask of zero or more **VkVideoEncodeFeedbackFlagBitsKHR**.

Chapter 19. Clear Commands

19.1. Clearing Images Outside a Render Pass Instance

Color and depth/stencil images **can** be cleared outside a render pass instance using [vkCmdClearColorImage](#) or [vkCmdClearDepthStencilImage](#), respectively. These commands are only allowed outside of a render pass instance.

To clear one or more subranges of a color image, call:

```
// Provided by VK_VERSION_1_0
void vkCmdClearColorImage(
    VkCommandBuffer          commandBuffer,
    VkImage                  image,
    VkImageLayout             imageLayout,
    const VkClearColorValue* pColor,
    uint32_t                  rangeCount,
    const VkImageSubresourceRange* pRanges);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `image` is the image to be cleared.
- `imageLayout` specifies the current layout of the image subresource ranges to be cleared, and **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`.
- `pColor` is a pointer to a [VkClearColorValue](#) structure containing the values that the image subresource ranges will be cleared to (see [Clear Values](#) below).
- `rangeCount` is the number of image subresource range structures in `pRanges`.
- `pRanges` is a pointer to an array of [VkImageSubresourceRange](#) structures describing a range of mipmap levels, array layers, and aspects to be cleared, as described in [Image Views](#).

Each specified range in `pRanges` is cleared to the value specified by `pColor`.

Valid Usage

- VUID-vkCmdClearColorImage-image-01993
The [format features](#) of `image` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`
- VUID-vkCmdClearColorImage-image-00002
`image` **must** have been created with `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-vkCmdClearColorImage-image-01545
`image` **must** not use any of the [formats that require a sampler Y'C_BC_R conversion](#)
- VUID-vkCmdClearColorImage-image-00003
If `image` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdClearColorImage-imageLayout-00004
`imageLayout` **must** specify the layout of the image subresource ranges of `image` specified in `pRanges` at the time this command is executed on a `VkDevice`
- VUID-vkCmdClearColorImage-imageLayout-01394
`imageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdClearColorImage-aspectMask-02498
The `VkImageSubresourceRange::aspectMask` members of the elements of the `pRanges` array **must** each only include `VK_IMAGE_ASPECT_COLOR_BIT`
- VUID-vkCmdClearColorImage-baseMipLevel-01470
The `VkImageSubresourceRange::baseMipLevel` members of the elements of the `pRanges` array **must** each be less than the `mipLevels` specified in `VkImageCreateInfo` when `image` was created
- VUID-vkCmdClearColorImage-pRanges-01692
For each `VkImageSubresourceRange` element of `pRanges`, if the `levelCount` member is not `VK_REMAINING_MIP_LEVELS`, then `baseMipLevel` + `levelCount` **must** be less than or equal to the `mipLevels` specified in `VkImageCreateInfo` when `image` was created
- VUID-vkCmdClearColorImage-baseArrayLayer-01472
The `VkImageSubresourceRange::baseArrayLayer` members of the elements of the `pRanges` array **must** each be less than the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created
- VUID-vkCmdClearColorImage-pRanges-01693
For each `VkImageSubresourceRange` element of `pRanges`, if the `layerCount` member is not `VK_REMAINING_ARRAY_LAYERS`, then `baseArrayLayer` + `layerCount` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created
- VUID-vkCmdClearColorImage-image-00007
`image` **must** not have a compressed or depth/stencil format
- VUID-vkCmdClearColorImage-pColor-04961
`pColor` **must** be a valid pointer to a `VkClearColorValue` union
- VUID-vkCmdClearColorImage-commandBuffer-01805
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `image` **must** not be a protected image
- VUID-vkCmdClearColorImage-commandBuffer-01806
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, **must** not be an unprotected image
- VUID-vkCmdClearColorImage-image-09678
If `image`'s format has components other than R and G, it **must** not have a 64-bit component width

Valid Usage (Implicit)

- VUID-vkCmdClearColorImage-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdClearColorImage-image-parameter
`image` **must** be a valid `VkImage` handle
- VUID-vkCmdClearColorImage-imageLayout-parameter
`imageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdClearColorImage-pRanges-parameter
`pRanges` **must** be a valid pointer to an array of `rangeCount` valid `VkImageSubresourceRange` structures
- VUID-vkCmdClearColorImage-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdClearColorImage-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdClearColorImage-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdClearColorImage-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdClearColorImage-rangeCount-arraylength
`rangeCount` **must** be greater than 0
- VUID-vkCmdClearColorImage-commonparent
Both of `commandBuffer`, and `image` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Graphics Compute	Action

To clear one or more subranges of a depth/stencil image, call:

```
// Provided by VK_VERSION_1_0
void vkCmdClearDepthStencilImage(
    VkCommandBuffer          commandBuffer,
    VkImage                  image,
    VkImageLayout             imageLayout,
    const VkClearDepthStencilValue* pDepthStencil,
    uint32_t                  rangeCount,
    const VkImageSubresourceRange* pRanges);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `image` is the image to be cleared.
- `imageLayout` specifies the current layout of the image subresource ranges to be cleared, and **must** be `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`.
- `pDepthStencil` is a pointer to a `VkClearDepthStencilValue` structure containing the values that the depth and stencil image subresource ranges will be cleared to (see [Clear Values](#) below).
- `rangeCount` is the number of image subresource range structures in `pRanges`.
- `pRanges` is a pointer to an array of `VkImageSubresourceRange` structures describing a range of mipmap levels, array layers, and aspects to be cleared, as described in [Image Views](#).

Valid Usage

- VUID-vkCmdClearDepthStencilImage-image-01994
The [format features](#) of `image` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`
- VUID-vkCmdClearDepthStencilImage-pRanges-02658
If the `aspect` member of any element of `pRanges` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, and `image` was created with [separate stencil usage](#), `VK_IMAGE_USAGE_TRANSFER_DST_BIT` **must** have been included in the `VkImageStencilUsageCreateInfo::stencilUsage` used to create `image`
- VUID-vkCmdClearDepthStencilImage-pRanges-02659
If the `aspect` member of any element of `pRanges` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, and `image` was not created with [separate stencil usage](#), `VK_IMAGE_USAGE_TRANSFER_DST_BIT` **must** have been included in the `VkImageCreateInfo::usage` used to create `image`
- VUID-vkCmdClearDepthStencilImage-pRanges-02660
If the `aspect` member of any element of `pRanges` includes `VK_IMAGE_ASPECT_DEPTH_BIT`, `VK_IMAGE_USAGE_TRANSFER_DST_BIT` **must** have been included in the `VkImageCreateInfo::usage` used to create `image`
- VUID-vkCmdClearDepthStencilImage-image-00010
If `image` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdClearDepthStencilImage-imageLayout-00011
`imageLayout` **must** specify the layout of the image subresource ranges of `image` specified in `pRanges` at the time this command is executed on a `VkDevice`
- VUID-vkCmdClearDepthStencilImage-imageLayout-00012

`imageLayout` **must** be either of `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`

- VUID-vkCmdClearDepthStencilImage-aspectMask-02824

The `VkImageSubresourceRange::aspectMask` member of each element of the `pRanges` array **must** not include bits other than `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`

- VUID-vkCmdClearDepthStencilImage-image-02825

If the `image`'s format does not have a stencil component, then the `VkImageSubresourceRange::aspectMask` member of each element of the `pRanges` array **must** not include the `VK_IMAGE_ASPECT_STENCIL_BIT` bit

- VUID-vkCmdClearDepthStencilImage-image-02826

If the `image`'s format does not have a depth component, then the `VkImageSubresourceRange::aspectMask` member of each element of the `pRanges` array **must** not include the `VK_IMAGE_ASPECT_DEPTH_BIT` bit

- VUID-vkCmdClearDepthStencilImage-baseMipLevel-01474

The `VkImageSubresourceRange::baseMipLevel` members of the elements of the `pRanges` array **must** each be less than the `mipLevels` specified in `VkImageCreateInfo` when `image` was created

- VUID-vkCmdClearDepthStencilImage-pRanges-01694

For each `VkImageSubresourceRange` element of `pRanges`, if the `levelCount` member is not `VK_REMAINING_MIP_LEVELS`, then `baseMipLevel + levelCount` **must** be less than or equal to the `mipLevels` specified in `VkImageCreateInfo` when `image` was created

- VUID-vkCmdClearDepthStencilImage-baseArrayLayer-01476

The `VkImageSubresourceRange::baseArrayLayer` members of the elements of the `pRanges` array **must** each be less than the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created

- VUID-vkCmdClearDepthStencilImage-pRanges-01695

For each `VkImageSubresourceRange` element of `pRanges`, if the `layerCount` member is not `VK_REMAINING_ARRAY_LAYERS`, then `baseArrayLayer + layerCount` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created

- VUID-vkCmdClearDepthStencilImage-image-00014

`image` **must** have a depth/stencil format

- VUID-vkCmdClearDepthStencilImage-commandBuffer-01807

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `image` **must** not be a protected image

- VUID-vkCmdClearDepthStencilImage-commandBuffer-01808

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `image` **must** not be an unprotected image

Valid Usage (Implicit)

- VUID-vkCmdClearDepthStencilImage-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdClearDepthStencilImage-image-parameter
image **must** be a valid [VkImage](#) handle
- VUID-vkCmdClearDepthStencilImage-imageLayout-parameter
imageLayout **must** be a valid [VkImageLayout](#) value
- VUID-vkCmdClearDepthStencilImage-pDepthStencil-parameter
pDepthStencil **must** be a valid pointer to a valid [VkClearDepthStencilValue](#) structure
- VUID-vkCmdClearDepthStencilImage-pRanges-parameter
pRanges **must** be a valid pointer to an array of **rangeCount** valid [VkImageSubresourceRange](#) structures
- VUID-vkCmdClearDepthStencilImage-commandBuffer-recording
commandBuffer **must** be in the [recording state](#)
- VUID-vkCmdClearDepthStencilImage-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support graphics operations
- VUID-vkCmdClearDepthStencilImage-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdClearDepthStencilImage-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdClearDepthStencilImage-rangeCount-arraylength
rangeCount **must** be greater than 0
- VUID-vkCmdClearDepthStencilImage-commonparent
Both of **commandBuffer**, and **image** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Graphics	Action

Clears outside render pass instances are treated as transfer operations for the purposes of memory barriers.

19.2. Clearing Images Inside a Render Pass Instance

To clear one or more regions of color and depth/stencil attachments inside a render pass instance, call:

```
// Provided by VK_VERSION_1_0
void vkCmdClearAttachments(
    VkCommandBuffer          commandBuffer,
    uint32_t                 attachmentCount,
    const VkClearAttachment* pAttachments,
    uint32_t                 rectCount,
    const VkClearRect*       pRects);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `attachmentCount` is the number of entries in the `pAttachments` array.
- `pAttachments` is a pointer to an array of `VkClearAttachment` structures defining the attachments to clear and the clear values to use.
- `rectCount` is the number of entries in the `pRects` array.
- `pRects` is a pointer to an array of `VkClearRect` structures defining regions within each selected attachment to clear.

If the render pass has a [fragment density map attachment](#), clears follow the [operations of fragment density maps](#) as if each clear region was a primitive which generates fragments. The clear color is applied to all pixels inside each fragment's area regardless if the pixels lie outside of the clear region. Clears **may** have a different set of supported fragment areas than draws.

Unlike other [clear commands](#), `vkCmdClearAttachments` is not a transfer command. It performs its operations in [rasterization order](#). For color attachments, the operations are executed as color attachment writes, by the `VK_PIPELINE_STAGE_COLOR_ATTACHMENT_OUTPUT_BIT` stage. For depth/stencil attachments, the operations are executed as [depth writes](#) and [stencil writes](#) by the `VK_PIPELINE_STAGE_EARLY_FRAGMENT_TESTS_BIT` and `VK_PIPELINE_STAGE_LATE_FRAGMENT_TESTS_BIT` stages.

`vkCmdClearAttachments` is not affected by the bound pipeline state.

NOTE	It is generally preferable to clear attachments by using the <code>VK_ATTACHMENT_LOAD_OP_CLEAR</code> load operation at the start of rendering, as it is more efficient on some implementations.
-------------	--

If any attachment's `aspectMask` to be cleared is not backed by an image view, the clear has no effect on that aspect.

If an attachment being cleared refers to an image view created with an `aspectMask` equal to one of `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT` or `VK_IMAGE_ASPECT_PLANE_2_BIT`, it is considered to be `VK_IMAGE_ASPECT_COLOR_BIT` for purposes of this command, and **must** be cleared with the `VK_IMAGE_ASPECT_COLOR_BIT` aspect as specified by [image view creation](#).

Valid Usage

- VUID-vkCmdClearAttachments-aspectMask-07884

If the current render pass instance does not use dynamic rendering, and the `aspectMask` member of any element of `pAttachments` contains `VK_IMAGE_ASPECT_DEPTH_BIT`, the current subpass instance's depth-stencil attachment **must** be either `VK_ATTACHMENT_UNUSED` or the attachment `format` **must** contain a depth component

- VUID-vkCmdClearAttachments-aspectMask-07885

If the current render pass instance does not use dynamic rendering, and the `aspectMask` member of any element of `pAttachments` contains `VK_IMAGE_ASPECT_STENCIL_BIT`, the current subpass instance's depth-stencil attachment **must** be either `VK_ATTACHMENT_UNUSED` or the attachment `format` **must** contain a stencil component

- VUID-vkCmdClearAttachments-aspectMask-07271

If the `aspectMask` member of any element of `pAttachments` contains `VK_IMAGE_ASPECT_COLOR_BIT`, the `colorAttachment` **must** be a valid color attachment index in the current render pass instance

- VUID-vkCmdClearAttachments-rect-02682

The `rect` member of each element of `pRects` **must** have an `extent.width` greater than 0

- VUID-vkCmdClearAttachments-rect-02683

The `rect` member of each element of `pRects` **must** have an `extent.height` greater than 0

- VUID-vkCmdClearAttachments-pRects-00016

The rectangular region specified by each element of `pRects` **must** be contained within the render area of the current render pass instance

- VUID-vkCmdClearAttachments-pRects-06937

The layers specified by each element of `pRects` **must** be contained within every attachment that `pAttachments` refers to, i.e. for each element of `pRects`, `VkClearRect::baseArrayLayer` + `VkClearRect::layerCount` **must** be less than or equal to the number of layers rendered to in the current render pass instance

- VUID-vkCmdClearAttachments-layerCount-01934

The `layerCount` member of each element of `pRects` **must** not be 0

- VUID-vkCmdClearAttachments-commandBuffer-02504

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, each attachment to be cleared **must** not be a protected image

- VUID-vkCmdClearAttachments-commandBuffer-02505

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, each attachment to be cleared **must** not be an unprotected image

- VUID-vkCmdClearAttachments-baseArrayLayer-00018

If the render pass instance this is recorded in uses multiview, then `baseArrayLayer` **must** be zero and `layerCount` **must** be one

- VUID-vkCmdClearAttachments-colorAttachment-09503

The `colorAttachment` member of each element of `pAttachments` **must** not identify a color attachment that is currently mapped to `VK_ATTACHMENT_UNUSED` in `commandBuffer` via `VkRenderingAttachmentLocationInfoKHR`

- VUID-vkCmdClearAttachments-aspectMask-09298

If the subpass this is recorded in performs an external format resolve, the **aspectMask** member of any element of **pAttachments** **must** not include **VK_IMAGE_ASPECT_PLANE_i_BIT** for any index *i*

- VUID-vkCmdClearAttachments-None-09679

If the attachment format has components other than R and G, it **must** not have a 64-bit component width

Valid Usage (Implicit)

- VUID-vkCmdClearAttachments-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdClearAttachments-pAttachments-parameter
pAttachments **must** be a valid pointer to an array of **attachmentCount** valid **VkClearAttachment** structures
- VUID-vkCmdClearAttachments-pRects-parameter
pRects **must** be a valid pointer to an array of **rectCount** **VkClearRect** structures
- VUID-vkCmdClearAttachments-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdClearAttachments-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support graphics operations
- VUID-vkCmdClearAttachments-renderpass
This command **must** only be called inside of a render pass instance
- VUID-vkCmdClearAttachments-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdClearAttachments-attachmentCount-arraylength
attachmentCount **must** be greater than 0
- VUID-vkCmdClearAttachments-rectCount-arraylength
rectCount **must** be greater than 0

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	Graphics	Action

The `VkClearRect` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkClearRect {
    VkRect2D    rect;
    uint32_t    baseArrayLayer;
    uint32_t    layerCount;
} VkClearRect;
```

- `rect` is the two-dimensional region to be cleared.
- `baseArrayLayer` is the first layer to be cleared.
- `layerCount` is the number of layers to clear.

The layers [`baseArrayLayer`, `baseArrayLayer` + `layerCount`) counting from the base layer of the attachment image view are cleared.

The `VkClearAttachment` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkClearAttachment {
    VkImageAspectFlags    aspectMask;
    uint32_t              colorAttachment;
    VkClearColorValue     clearColor;
} VkClearAttachment;
```

- `aspectMask` is a mask selecting the color, depth and/or stencil aspects of the attachment to be cleared.
- `colorAttachment` is only meaningful if `VK_IMAGE_ASPECT_COLOR_BIT` is set in `aspectMask`, in which case it is an index into the currently bound color attachments.
- `clearValue` is the color or depth/stencil value to clear the attachment to, as described in [Clear Values](#) below.

Valid Usage

- VUID-VkClearAttachment-aspectMask-00019

If `aspectMask` includes `VK_IMAGE_ASPECT_COLOR_BIT`, it **must** not include

VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT

- VUID-VkClearAttachment-aspectMask-00020
aspectMask **must** not include VK_IMAGE_ASPECT_METADATA_BIT
- VUID-VkClearAttachment-aspectMask-02246
aspectMask **must** not include VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT for any index *i*

Valid Usage (Implicit)

- VUID-VkClearAttachment-aspectMask-parameter
aspectMask **must** be a valid combination of VkImageAspectFlagBits values
- VUID-VkClearAttachment-aspectMask-requiredbitmask
aspectMask **must** not be 0

19.3. Clear Values

The VkClearColorValue structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef union VkClearColorValue {
    float        float32[4];
    int32_t      int32[4];
    uint32_t     uint32[4];
} VkClearColorValue;
```

- float32 are the color clear values when the format of the image or attachment is one of the numeric formats with a numeric type that is floating-point. Floating-point values are automatically converted to the format of the image, with the clear value being treated as linear if the image is sRGB.
- int32 are the color clear values when the format of the image or attachment has a numeric type that is signed integer (SINT). Signed integer values are converted to the format of the image by casting to the smaller type (with negative 32-bit values mapping to negative values in the smaller type). If the integer clear value is not representable in the target type (e.g. would overflow in conversion to that type), the clear value is undefined.
- uint32 are the color clear values when the format of the image or attachment has a numeric type that is unsigned integer (UINT). Unsigned integer values are converted to the format of the image by casting to the integer type with fewer bits.

The four array elements of the clear color map to R, G, B, and A components of image formats, in order.

If the image has more than one sample, the same value is written to all samples for any pixels being cleared.

If the image or attachment format has a 64-bit component width, the first 2 array elements of each

of the arrays above are reinterpreted as a single 64-bit element for the R component. The next 2 array elements are used in the same way for the G component. In other words, the union behaves as if it had the following additional members:

```
double float64[2];
int64_t int64[2];
uint64_t uint64[2];
```

The `VkClearDepthStencilValue` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkClearDepthStencilValue {
    float        depth;
    uint32_t     stencil;
} VkClearDepthStencilValue;
```

- `depth` is the clear value for the depth aspect of the depth/stencil attachment. It is a floating-point value which is automatically converted to the attachment's format.
- `stencil` is the clear value for the stencil aspect of the depth/stencil attachment. It is a 32-bit integer value which is converted to the attachment's format by taking the appropriate number of LSBs.

Valid Usage

- VUID-VkClearDepthStencilValue-depth-00022
Unless the `VK_EXT_depth_range_unrestricted` extension is enabled `depth` **must** be between `0.0` and `1.0`, inclusive

The `VkClearColorValue` union is defined as:

```
// Provided by VK_VERSION_1_0
typedef union VkClearColorValue {
    VkClearColorValue    color;
    VkClearDepthStencilValue    depthStencil;
} VkClearColorValue;
```

- `color` specifies the color image clear values to use when clearing a color image or attachment.
- `depthStencil` specifies the depth and stencil clear values to use when clearing a depth/stencil image or attachment.

This union is used where part of the API requires either color or depth/stencil clear values, depending on the attachment, and defines the initial clear values in the `VkRenderPassBeginInfo` structure.

19.4. Filling Buffers

To clear buffer data, call:

```
// Provided by VK_VERSION_1_0
void vkCmdFillBuffer(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 dstBuffer,
    VkDeviceSize             dstOffset,
    VkDeviceSize             size,
    uint32_t                 data);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `dstBuffer` is the buffer to be filled.
- `dstOffset` is the byte offset into the buffer at which to start filling, and **must** be a multiple of 4.
- `size` is the number of bytes to fill, and **must** be either a multiple of 4, or `VK_WHOLE_SIZE` to fill the range from `offset` to the end of the buffer. If `VK_WHOLE_SIZE` is used and the remaining size of the buffer is not a multiple of 4, then the nearest smaller multiple is used.
- `data` is the 4-byte word written repeatedly to the buffer to fill `size` bytes of data. The data word is written to memory according to the host endianness.

`vkCmdFillBuffer` is treated as a “transfer” operation for the purposes of synchronization barriers. The `VK_BUFFER_USAGE_TRANSFER_DST_BIT` **must** be specified in `usage` of `VkBufferCreateInfo` in order for the buffer to be compatible with `vkCmdFillBuffer`.

Valid Usage

- VUID-vkCmdFillBuffer-dstOffset-00024
`dstOffset` **must** be less than the size of `dstBuffer`
- VUID-vkCmdFillBuffer-dstOffset-00025
`dstOffset` **must** be a multiple of 4
- VUID-vkCmdFillBuffer-size-00026
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be greater than 0
- VUID-vkCmdFillBuffer-size-00027
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`
- VUID-vkCmdFillBuffer-size-00028
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be a multiple of 4
- VUID-vkCmdFillBuffer-dstBuffer-00029
`dstBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-vkCmdFillBuffer-apiVersion-07894
If the `VK_KHR_maintenance1` extension is not enabled and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, the `VkCommandPool` that `commandBuffer` was allocated

from **must** support graphics or compute operations

- VUID-vkCmdFillBuffer-dstBuffer-00031

If **dstBuffer** is non-sparse then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object

- VUID-vkCmdFillBuffer-commandBuffer-01811

If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, **dstBuffer** **must** not be a protected buffer

- VUID-vkCmdFillBuffer-commandBuffer-01812

If **commandBuffer** is a protected command buffer and **protectedNoFault** is not supported, **dstBuffer** **must** not be an unprotected buffer

Valid Usage (Implicit)

- VUID-vkCmdFillBuffer-commandBuffer-parameter

commandBuffer **must** be a valid **VkCommandBuffer** handle

- VUID-vkCmdFillBuffer-dstBuffer-parameter

dstBuffer **must** be a valid **VkBuffer** handle

- VUID-vkCmdFillBuffer-commandBuffer-recording

commandBuffer **must** be in the **recording state**

- VUID-vkCmdFillBuffer-commandBuffer-cmdpool

The **VkCommandPool** that **commandBuffer** was allocated from **must** support transfer, graphics or compute operations

- VUID-vkCmdFillBuffer-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdFillBuffer-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdFillBuffer-commonparent

Both of **commandBuffer**, and **dstBuffer** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized

- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

19.5. Updating Buffers

To update buffer data inline in a command buffer, call:

```
// Provided by VK_VERSION_1_0
void vkCmdUpdateBuffer(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 dstBuffer,
    VkDeviceSize             dstOffset,
    VkDeviceSize             dataSize,
    const void*              pData);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `dstBuffer` is a handle to the buffer to be updated.
- `dstOffset` is the byte offset into the buffer to start updating, and **must** be a multiple of 4.
- `dataSize` is the number of bytes to update, and **must** be a multiple of 4.
- `pData` is a pointer to the source data for the buffer update, and **must** be at least `dataSize` bytes in size.

`dataSize` **must** be less than or equal to 65536 bytes. For larger updates, applications **can** use buffer to buffer [copies](#).

NOTE

Buffer updates performed with `vkCmdUpdateBuffer` first copy the data into command buffer memory when the command is recorded (which requires additional storage and may incur an additional allocation), and then copy the data from the command buffer into `dstBuffer` when the command is executed on a device.

The additional cost of this functionality compared to [buffer to buffer copies](#) means it is only recommended for very small amounts of data, and is why it is limited to only 65536 bytes.

Applications **can** work around this by issuing multiple `vkCmdUpdateBuffer` commands to different ranges of the same buffer, but it is strongly recommended that they **should** not.

The source data is copied from `pData` to the command buffer when the command is called.

`vkCmdUpdateBuffer` is only allowed outside of a render pass. This command is treated as a “transfer” operation for the purposes of synchronization barriers. The `VK_BUFFER_USAGE_TRANSFER_DST_BIT` **must** be specified in `usage` of `VkBufferCreateInfo` in order for the buffer to be compatible with `vkCmdUpdateBuffer`.

Valid Usage

- VUID-vkCmdUpdateBuffer-dstOffset-00032
`dstOffset` **must** be less than the size of `dstBuffer`
- VUID-vkCmdUpdateBuffer-dataSize-00033
`dataSize` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`
- VUID-vkCmdUpdateBuffer-dstBuffer-00034
`dstBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-vkCmdUpdateBuffer-dstBuffer-00035
If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdUpdateBuffer-dstOffset-00036
`dstOffset` **must** be a multiple of 4
- VUID-vkCmdUpdateBuffer-dataSize-00037
`dataSize` **must** be less than or equal to 65536
- VUID-vkCmdUpdateBuffer-dataSize-00038
`dataSize` **must** be a multiple of 4
- VUID-vkCmdUpdateBuffer-commandBuffer-01813
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdUpdateBuffer-commandBuffer-01814
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer

Valid Usage (Implicit)

- VUID-vkCmdUpdateBuffer-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdUpdateBuffer-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdUpdateBuffer-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkCmdUpdateBuffer-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdUpdateBuffer-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support transfer, graphics, or compute operations

- VUID-vkCmdUpdateBuffer-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdUpdateBuffer-vidcoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdUpdateBuffer-dataSize-arraylength
dataSize **must** be greater than 0
- VUID-vkCmdUpdateBuffer-commonparent
Both of **commandBuffer**, and **dstBuffer** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

NOTE

The **pData** parameter was of type **uint32_t*** instead of **void*** prior to version 1.0.19 of the Specification and **VK_HEADER_VERSION** 19 of the **Vulkan Header Files**. This was a historical anomaly, as the source data may be of other types.

Chapter 20. Copy Commands

An application **can** copy buffer and image data using several methods described in this chapter, depending on the type of data transfer.

All copy commands are treated as “transfer” operations for the purposes of synchronization barriers.

All copy commands that have a source format with an X component in its format description read undefined values from those bits.

All copy commands that have a destination format with an X component in its format description write undefined values to those bits.

20.1. Copying Data Between Buffers

To copy data between buffer objects, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyBuffer(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 srcBuffer,
    VkBuffer                 dstBuffer,
    uint32_t                 regionCount,
    const VkBufferCopy*      pRegions);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **srcBuffer** is the source buffer.
- **dstBuffer** is the destination buffer.
- **regionCount** is the number of regions to copy.
- **pRegions** is a pointer to an array of **VkBufferCopy** structures specifying the regions to copy.

Each source region specified by **pRegions** is copied from the source buffer to the destination region of the destination buffer. If any of the specified regions in **srcBuffer** overlaps in memory with any of the specified regions in **dstBuffer**, values read from those overlapping regions are undefined.

Valid Usage

- VUID-vkCmdCopyBuffer-commandBuffer-01822
If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, **srcBuffer** **must** not be a protected buffer
- VUID-vkCmdCopyBuffer-commandBuffer-01823
If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, **dstBuffer** **must** not be a protected buffer
- VUID-vkCmdCopyBuffer-commandBuffer-01824

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer

- VUID-vkCmdCopyBuffer-srcOffset-00113
The `srcOffset` member of each element of `pRegions` **must** be less than the size of `srcBuffer`
- VUID-vkCmdCopyBuffer-dstOffset-00114
The `dstOffset` member of each element of `pRegions` **must** be less than the size of `dstBuffer`
- VUID-vkCmdCopyBuffer-size-00115
The `size` member of each element of `pRegions` **must** be less than or equal to the size of `srcBuffer` minus `srcOffset`
- VUID-vkCmdCopyBuffer-size-00116
The `size` member of each element of `pRegions` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`
- VUID-vkCmdCopyBuffer-pRegions-00117
The union of the source regions, and the union of the destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-vkCmdCopyBuffer-srcBuffer-00118
`srcBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag
- VUID-vkCmdCopyBuffer-srcBuffer-00119
If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyBuffer-dstBuffer-00120
`dstBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-vkCmdCopyBuffer-dstBuffer-00121
If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

Valid Usage (Implicit)

- VUID-vkCmdCopyBuffer-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyBuffer-srcBuffer-parameter
`srcBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdCopyBuffer-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdCopyBuffer-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferCopy` structures
- VUID-vkCmdCopyBuffer-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdCopyBuffer-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support transfer, graphics, or compute operations

- VUID-vkCmdCopyBuffer-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBuffer-vidcoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyBuffer-regionCount-arraylength
regionCount **must** be greater than 0
- VUID-vkCmdCopyBuffer-commonparent
Each of **commandBuffer**, **dstBuffer**, and **srcBuffer** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

The **VkBufferCopy** structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferCopy {
    VkDeviceSize    srcOffset;
    VkDeviceSize    dstOffset;
    VkDeviceSize    size;
} VkBufferCopy;
```

- **srcOffset** is the starting offset in bytes from the start of **srcBuffer**.
- **dstOffset** is the starting offset in bytes from the start of **dstBuffer**.
- **size** is the number of bytes to copy.

Valid Usage

- VUID-VkBufferCopy-size-01988
The **size** **must** be greater than 0

A more extensible version of the copy buffer command is defined below.

To copy data between buffer objects, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyBuffer2(
    VkCommandBuffer                      commandBuffer,
    const VkCopyBufferInfo2*            pCopyBufferInfo);
```

or the equivalent command

```
// Provided by VK_KHR_copy_commands2
void vkCmdCopyBuffer2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyBufferInfo2*            pCopyBufferInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyBufferInfo` is a pointer to a [VkCopyBufferInfo2](#) structure describing the copy parameters.

Each source region specified by `pCopyBufferInfo->pRegions` is copied from the source buffer to the destination region of the destination buffer. If any of the specified regions in `pCopyBufferInfo->srcBuffer` overlaps in memory with any of the specified regions in `pCopyBufferInfo->dstBuffer`, values read from those overlapping regions are undefined.

Valid Usage

- VUID-vkCmdCopyBuffer2-commandBuffer-01822
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer2-commandBuffer-01823
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer2-commandBuffer-01824
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer

Valid Usage (Implicit)

- VUID-vkCmdCopyBuffer2-commandBuffer-parameter
`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyBuffer2-pCopyBufferInfo-parameter
`pCopyBufferInfo` **must** be a valid pointer to a valid [VkCopyBufferInfo2](#) structure
- VUID-vkCmdCopyBuffer2-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdCopyBuffer2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support transfer, graphics, or compute operations
- VUID-vkCmdCopyBuffer2-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBuffer2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

The `VkCopyBufferInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyBufferInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            srcBuffer;
    VkBuffer            dstBuffer;
    uint32_t            regionCount;
    const VkBufferCopy2* pRegions;
} VkCopyBufferInfo2;
```

or the equivalent

```
// Provided by VK_KHR_copy_commands2
typedef VkCopyBufferInfo2 VkCopyBufferInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcBuffer` is the source buffer.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkBufferCopy2` structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyBufferInfo2-srcOffset-00113
The `srcOffset` member of each element of `pRegions` **must** be less than the size of `srcBuffer`
- VUID-VkCopyBufferInfo2-dstOffset-00114
The `dstOffset` member of each element of `pRegions` **must** be less than the size of `dstBuffer`
- VUID-VkCopyBufferInfo2-size-00115
The `size` member of each element of `pRegions` **must** be less than or equal to the size of `srcBuffer` minus `srcOffset`
- VUID-VkCopyBufferInfo2-size-00116
The `size` member of each element of `pRegions` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`
- VUID-VkCopyBufferInfo2-pRegions-00117
The union of the source regions, and the union of the destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-VkCopyBufferInfo2-srcBuffer-00118
`srcBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag
- VUID-VkCopyBufferInfo2-srcBuffer-00119
If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyBufferInfo2-dstBuffer-00120
`dstBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-VkCopyBufferInfo2-dstBuffer-00121
If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

Valid Usage (Implicit)

- VUID-VkCopyBufferInfo2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_BUFFER_INFO_2`
- VUID-VkCopyBufferInfo2-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyBufferInfo2-srcBuffer-parameter
`srcBuffer` **must** be a valid `VkBuffer` handle

- VUID-VkCopyBufferInfo2-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkCopyBufferInfo2-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferCopy2` structures
- VUID-VkCopyBufferInfo2-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-VkCopyBufferInfo2-commonparent
Both of `dstBuffer`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkBufferCopy2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkBufferCopy2 {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize        srcOffset;
    VkDeviceSize        dstOffset;
    VkDeviceSize        size;
} VkBufferCopy2;
```

or the equivalent

```
// Provided by VK_KHR_copy_commands2
typedef VkBufferCopy2 VkBufferCopy2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcOffset` is the starting offset in bytes from the start of `srcBuffer`.
- `dstOffset` is the starting offset in bytes from the start of `dstBuffer`.
- `size` is the number of bytes to copy.

Valid Usage

- VUID-VkBufferCopy2-size-01988
The `size` **must** be greater than 0

Valid Usage (Implicit)

- VUID-VkBufferCopy2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_COPY_2`

- VUID-VkBufferCopy2-pNext-pNext
pNext must be **NULL**

20.2. Copying Data Between Images

To copy data between image objects, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyImage(
    VkCommandBuffer          commandBuffer,
    VkImage                  srcImage,
    VkImageLayout            srcImageLayout,
    VkImage                  dstImage,
    VkImageLayout            dstImageLayout,
    uint32_t                 regionCount,
    const VkImageCopy*       pRegions);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **srcImage** is the source image.
- **srcImageLayout** is the current layout of the source image subresource.
- **dstImage** is the destination image.
- **dstImageLayout** is the current layout of the destination image subresource.
- **regionCount** is the number of regions to copy.
- **pRegions** is a pointer to an array of **VkImageCopy** structures specifying the regions to copy.

Each source region specified by **pRegions** is copied from the source image to the destination region of the destination image. If any of the specified regions in **srcImage** overlaps in memory with any of the specified regions in **dstImage**, values read from those overlapping regions are undefined.

Multi-planar images **can** only be copied on a per-plane basis, and the subresources used in each region when copying to or from such images **must** specify only one plane, though different regions **can** specify different planes. When copying planes of multi-planar images, the format considered is the **compatible format for that plane**, rather than the format of the multi-planar image.

If the format of the destination image has a different **block extent** than the source image (e.g. one is a compressed format), the offset and extent for each of the regions specified is **scaled according to the block extents of each format** to match in size. Copy regions for each image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Image data **can** be copied between images with different image types. If one image is **VK_IMAGE_TYPE_3D** and the other image is **VK_IMAGE_TYPE_2D** with multiple layers, then each slice is copied to or from a different layer; **depth** slices in the 3D image correspond to **layerCount** layers in the 2D image, with an effective **depth** of **1** used for the 2D image. If **maintenance5** is enabled, all other combinations are allowed and function as if 1D images are 2D images with a height of 1. Otherwise,

other combinations of image types are disallowed.

Valid Usage

- VUID-vkCmdCopyImage-commandBuffer-01825
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImage-commandBuffer-01826
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyImage-commandBuffer-01827
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdCopyImage-pRegions-00124
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-vkCmdCopyImage-srcImage-01995
The `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`
- VUID-vkCmdCopyImage-srcImageLayout-00128
`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-vkCmdCopyImage-srcImageLayout-01917
`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdCopyImage-srcImage-09460
If `srcImage` and `dstImage` are the same, and any elements of `pRegions` contains the `srcSubresource` and `dstSubresource` with matching `mipLevel` and overlapping array layers, then the `srcImageLayout` and `dstImageLayout` **must** be `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`
- VUID-vkCmdCopyImage-dstImage-01996
The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`
- VUID-vkCmdCopyImage-dstImageLayout-00133
`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-vkCmdCopyImage-dstImageLayout-01395
`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdCopyImage-srcImage-01548
If the `VkFormat` of each of `srcImage` and `dstImage` is not a *multi-planar format*, the `VkFormat` of each of `srcImage` and `dstImage` **must** be *size-compatible*
- VUID-vkCmdCopyImage-None-01549
In a copy to or from a plane of a *multi-planar image*, the `VkFormat` of the image and plane

must be compatible according to [the description of compatible planes](#) for the plane being copied

- VUID-vkCmdCopyImage-srcImage-09247

If the [VkFormat](#) of each of [srcImage](#) and [dstImage](#) is a [compressed image format](#), the formats **must** have the same texel block extent

- VUID-vkCmdCopyImage-srcImage-00136

The sample count of [srcImage](#) and [dstImage](#) **must** match

- VUID-vkCmdCopyImage-srcOffset-01783

The [srcOffset](#) and [extent](#) members of each element of [pRegions](#) **must** respect the image transfer granularity requirements of [commandBuffer](#)'s command pool's queue family, as described in [VkQueueFamilyProperties](#)

- VUID-vkCmdCopyImage-dstOffset-01784

The [dstOffset](#) and [extent](#) members of each element of [pRegions](#) **must** respect the image transfer granularity requirements of [commandBuffer](#)'s command pool's queue family, as described in [VkQueueFamilyProperties](#)

- VUID-vkCmdCopyImage-srcImage-01551

If neither [srcImage](#) nor [dstImage](#) has a [multi-planar image format](#) then for each element of [pRegions](#), [srcSubresource.aspectMask](#) and [dstSubresource.aspectMask](#) **must** match

- VUID-vkCmdCopyImage-srcImage-08713

If [srcImage](#) has a [multi-planar image format](#), then for each element of [pRegions](#), [srcSubresource.aspectMask](#) **must** be a single valid [multi-planar aspect mask](#) bit

- VUID-vkCmdCopyImage-dstImage-08714

If [dstImage](#) has a [multi-planar image format](#), then for each element of [pRegions](#), [dstSubresource.aspectMask](#) **must** be a single valid [multi-planar aspect mask](#) bit

- VUID-vkCmdCopyImage-srcImage-01556

If [srcImage](#) has a [multi-planar image format](#) and the [dstImage](#) does not have a multi-planar image format, then for each element of [pRegions](#), [dstSubresource.aspectMask](#) **must** be [VK_IMAGE_ASPECT_COLOR_BIT](#)

- VUID-vkCmdCopyImage-dstImage-01557

If [dstImage](#) has a [multi-planar image format](#) and the [srcImage](#) does not have a multi-planar image format, then for each element of [pRegions](#), [srcSubresource.aspectMask](#) **must** be [VK_IMAGE_ASPECT_COLOR_BIT](#)

- VUID-vkCmdCopyImage-apiVersion-07932

If the [VK_KHR_maintenance1](#) extension is not enabled, or [VkPhysicalDeviceProperties::apiVersion](#) is less than Vulkan 1.1, and either [srcImage](#) or [dstImage](#) is of type [VK_IMAGE_TYPE_3D](#), then for each element of [pRegions](#), [srcSubresource.baseArrayLayer](#) and [dstSubresource.baseArrayLayer](#) **must** both be 0, and [srcSubresource.layerCount](#) and [dstSubresource.layerCount](#) **must** both be 1

- VUID-vkCmdCopyImage-srcImage-04443

If [srcImage](#) is of type [VK_IMAGE_TYPE_3D](#), then for each element of [pRegions](#), [srcSubresource.baseArrayLayer](#) **must** be 0 and [srcSubresource.layerCount](#) **must** be 1

- VUID-vkCmdCopyImage-dstImage-04444

If [dstImage](#) is of type [VK_IMAGE_TYPE_3D](#), then for each element of [pRegions](#),

`dstSubresource.baseArrayLayer` **must** be 0 and `dstSubresource.layerCount` **must** be 1

- VUID-vkCmdCopyImage-aspectMask-00142
For each element of `pRegions`, `srcSubresource.aspectMask` **must** specify aspects present in `srcImage`
- VUID-vkCmdCopyImage-aspectMask-00143
For each element of `pRegions`, `dstSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-vkCmdCopyImage-srcOffset-00144
For each element of `pRegions`, `srcOffset.x` and `(extent.width + srcOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdCopyImage-srcOffset-00145
For each element of `pRegions`, `srcOffset.y` and `(extent.height + srcOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdCopyImage-srcImage-00146
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.y` **must** be 0 and `extent.height` **must** be 1
- VUID-vkCmdCopyImage-srcOffset-00147
If `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcOffset.z` and `(extent.depth + srcOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdCopyImage-srcImage-01785
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.z` **must** be 0 and `extent.depth` **must** be 1
- VUID-vkCmdCopyImage-dstImage-01786
If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.z` **must** be 0 and `extent.depth` **must** be 1
- VUID-vkCmdCopyImage-srcImage-01787
If `srcImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `srcOffset.z` **must** be 0
- VUID-vkCmdCopyImage-dstImage-01788
If `dstImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `dstOffset.z` **must** be 0
- VUID-vkCmdCopyImage-apiVersion-07933
If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `srcImage` and `dstImage` **must** have the same `VkImageType`
- VUID-vkCmdCopyImage-apiVersion-08969
If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` **must** be 1
- VUID-vkCmdCopyImage-srcImage-07743

If `srcImage` and `dstImage` have a different `VkImageType`, and `maintenance5` is not enabled, one **must** be `VK_IMAGE_TYPE_3D` and the other **must** be `VK_IMAGE_TYPE_2D`

- VUID-vkCmdCopyImage-srcImage-08793

If `srcImage` and `dstImage` have the same `VkImageType`, for each element of `pRegions`, if neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` members of `srcSubresource` or `dstSubresource` **must** match

- VUID-vkCmdCopyImage-srcImage-08794

If `srcImage` and `dstImage` have the same `VkImageType`, and one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member **must** be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

- VUID-vkCmdCopyImage-srcImage-01790

If `srcImage` and `dstImage` are both of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` **must** be 1

- VUID-vkCmdCopyImage-srcImage-01791

If `srcImage` is of type `VK_IMAGE_TYPE_2D`, and `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `srcSubresource.layerCount`

- VUID-vkCmdCopyImage-dstImage-01792

If `dstImage` is of type `VK_IMAGE_TYPE_2D`, and `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `dstSubresource.layerCount`

- VUID-vkCmdCopyImage-dstOffset-00150

For each element of `pRegions`, `dstOffset.x` and $(\text{extent.width} + \text{dstOffset.x})$ **must** both be greater than or equal to 0 and less than or equal to the width of the specified `dstSubresource` of `dstImage`

- VUID-vkCmdCopyImage-dstOffset-00151

For each element of `pRegions`, `dstOffset.y` and $(\text{extent.height} + \text{dstOffset.y})$ **must** both be greater than or equal to 0 and less than or equal to the height of the specified `dstSubresource` of `dstImage`

- VUID-vkCmdCopyImage-dstImage-00152

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.y` **must** be 0 and `extent.height` **must** be 1

- VUID-vkCmdCopyImage-dstOffset-00153

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstOffset.z` and $(\text{extent.depth} + \text{dstOffset.z})$ **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `dstSubresource` of `dstImage`

- VUID-vkCmdCopyImage-pRegions-07278

For each element of `pRegions`, `srcOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-pRegions-07279

For each element of `pRegions`, `srcOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-pRegions-07280

For each element of `pRegions`, `srcOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-pRegions-07281

For each element of `pRegions`, `dstOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyImage-pRegions-07282

For each element of `pRegions`, `dstOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyImage-pRegions-07283

For each element of `pRegions`, `dstOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyImage-srcImage-01728

For each element of `pRegions`, if the sum of `srcOffset.x` and `extent.width` does not equal the width of the subresource specified by `srcSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-srcImage-01729

For each element of `pRegions`, if the sum of `srcOffset.y` and `extent.height` does not equal the height of the subresource specified by `srcSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-srcImage-01730

For each element of `pRegions`, if the sum of `srcOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-dstImage-01732

For each element of `pRegions`, if the sum of `dstOffset.x` and `extent.width` does not equal the width of the subresource specified by `dstSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyImage-dstImage-01733

For each element of `pRegions`, if the sum of `dstOffset.y` and `extent.height` does not equal the height of the subresource specified by `dstSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyImage-dstImage-01734

For each element of `pRegions`, if the sum of `dstOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `dstSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyImage-aspect-06662

If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `srcImage` was not created with `separate stencil usage`, `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` **must** have been included in the `VkImageCreateInfo::usage` used to create `srcImage`

- VUID-vkCmdCopyImage-aspect-06663

If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `dstImage` was not created with `separate stencil usage`,

`VK_IMAGE_USAGE_TRANSFER_DST_BIT` **must** have been included in the `VkImageCreateInfo::usage` used to create `dstImage`

- VUID-vkCmdCopyImage-aspect-06664

If the `aspect` member of any element of `pRegions` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, and `srcImage` was created with `separate stencil usage`, `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` **must** have been included in the `VkImageStencilUsageCreateInfo::stencilUsage` used to create `srcImage`

- VUID-vkCmdCopyImage-aspect-06665

If the `aspect` member of any element of `pRegions` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, and `dstImage` was created with `separate stencil usage`, `VK_IMAGE_USAGE_TRANSFER_DST_BIT` **must** have been included in the `VkImageStencilUsageCreateInfo::stencilUsage` used to create `dstImage`

- VUID-vkCmdCopyImage-srcImage-07966

If `srcImage` is non-sparse then the image or the specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdCopyImage-srcSubresource-07967

The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created

- VUID-vkCmdCopyImage-srcSubresource-07968

If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer + srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created

- VUID-vkCmdCopyImage-srcImage-07969

`srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- VUID-vkCmdCopyImage-dstImage-07966

If `dstImage` is non-sparse then the image or the specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdCopyImage-dstSubresource-07967

The `dstSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created

- VUID-vkCmdCopyImage-dstSubresource-07968

If `dstSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `dstSubresource.baseArrayLayer + dstSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created

- VUID-vkCmdCopyImage-dstImage-07969

`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

Valid Usage (Implicit)

- VUID-vkCmdCopyImage-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyImage-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-vkCmdCopyImage-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdCopyImage-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-vkCmdCopyImage-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdCopyImage-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkImageCopy` structures
- VUID-vkCmdCopyImage-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyImage-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support transfer, graphics, or compute operations
- VUID-vkCmdCopyImage-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImage-vidcoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyImage-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-vkCmdCopyImage-commonparent
Each of `commandBuffer`, `dstImage`, and `srcImage` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

The `VkImageCopy` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageCopy {
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D               srcOffset;
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D               dstOffset;
    VkExtent3D               extent;
} VkImageCopy;
```

- `srcSubresource` and `dstSubresource` are `VkImageSubresourceLayers` structures specifying the image subresources of the images used for the source and destination image data, respectively.
- `srcOffset` and `dstOffset` select the initial `x`, `y`, and `z` offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the image to copy in `width`, `height` and `depth`.

Valid Usage

- VUID-VkImageCopy-apiVersion-07940
If the `VK_KHR_sampler_ycbcr_conversion` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, the `aspectMask` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy-apiVersion-07941
If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, the `layerCount` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy-extent-06668
`extent.width` **must** not be 0
- VUID-VkImageCopy-extent-06669
`extent.height` **must** not be 0
- VUID-VkImageCopy-extent-06670
`extent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkImageCopy-srcSubresource-parameter
`srcSubresource` **must** be a valid `VkImageSubresourceLayers` structure
- VUID-VkImageCopy-dstSubresource-parameter
`dstSubresource` **must** be a valid `VkImageSubresourceLayers` structure

The `VkImageSubresourceLayers` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresourceLayers {
    VkImageAspectFlags    aspectMask;
    uint32_t              mipLevel;
    uint32_t              baseArrayLayer;
    uint32_t              layerCount;
} VkImageSubresourceLayers;
```

- `aspectMask` is a combination of `VkImageAspectFlagBits`, selecting the color, depth and/or stencil aspects to be copied.
- `mipLevel` is the mipmap level to copy
- `baseArrayLayer` and `layerCount` are the starting layer and number of layers to copy.

Valid Usage

- VUID-VkImageSubresourceLayers-aspectMask-00167
If `aspectMask` contains `VK_IMAGE_ASPECT_COLOR_BIT`, it **must** not contain either of `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-VkImageSubresourceLayers-aspectMask-00168
`aspectMask` **must** not contain `VK_IMAGE_ASPECT_METADATA_BIT`
- VUID-VkImageSubresourceLayers-aspectMask-02247
`aspectMask` **must** not include `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` for any index *i*
- VUID-VkImageSubresourceLayers-layerCount-09243
If the `maintenance5` feature is not enabled, `layerCount` **must** not be `VK_REMAINING_ARRAY_LAYERS`
- VUID-VkImageSubresourceLayers-layerCount-01700
If `layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, it **must** be greater than 0

Valid Usage (Implicit)

- VUID-VkImageSubresourceLayers-aspectMask-parameter
`aspectMask` **must** be a valid combination of `VkImageAspectFlagBits` values
- VUID-VkImageSubresourceLayers-aspectMask-requiredbitmask

`aspectMask` **must** not be 0

A more extensible version of the copy image command is defined below.

To copy data between image objects, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyImage2(
    VkCommandBuffer                      commandBuffer,
    const VkCopyImageInfo2*             pCopyImageInfo);
```

or the equivalent command

```
// Provided by VK_KHR_copy_commands2
void vkCmdCopyImage2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyImageInfo2*             pCopyImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyImageInfo` is a pointer to a [VkCopyImageInfo2](#) structure describing the copy parameters.

This command is functionally identical to [vkCmdCopyImage](#), but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdCopyImage2-commandBuffer-01825
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImage2-commandBuffer-01826
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyImage2-commandBuffer-01827
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image

Valid Usage (Implicit)

- VUID-vkCmdCopyImage2-commandBuffer-parameter
`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyImage2-pCopyImageInfo-parameter
`pCopyImageInfo` **must** be a valid pointer to a valid [VkCopyImageInfo2](#) structure
- VUID-vkCmdCopyImage2-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdCopyImage2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support transfer, graphics, or compute operations
- VUID-vkCmdCopyImage2-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImage2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

The `VkCopyImageInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyImageInfo2 {
    VkStructureType      sType;
    const void*          pNext;
    VkImage              srcImage;
    VkImageLayout        srcImageLayout;
    VkImage              dstImage;
    VkImageLayout        dstImageLayout;
    uint32_t             regionCount;
    const VkImageCopy2*  pRegions;
} VkCopyImageInfo2;
```

or the equivalent

```
// Provided by VK_KHR_copy_commands2
typedef VkCopyImageInfo2 VkCopyImageInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcImage` is the source image.
- `srcImageLayout` is the current layout of the source image subresource.
- `dstImage` is the destination image.
- `dstImageLayout` is the current layout of the destination image subresource.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkImageCopy2` structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyImageInfo2-pRegions-00124
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-VkCopyImageInfo2-srcImage-01995
The `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`
- VUID-VkCopyImageInfo2-srcImageLayout-00128
`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkCopyImageInfo2-srcImageLayout-01917
`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-VkCopyImageInfo2-srcImage-09460
If `srcImage` and `dstImage` are the same, and any elements of `pRegions` contains the `srcSubresource` and `dstSubresource` with matching `mipLevel` and overlapping array layers, then the `srcImageLayout` and `dstImageLayout` **must** be `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`
- VUID-VkCopyImageInfo2-dstImage-01996
The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`
- VUID-VkCopyImageInfo2-dstImageLayout-00133
`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkCopyImageInfo2-dstImageLayout-01395
`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-VkCopyImageInfo2-srcImage-01548
If the `VkFormat` of each of `srcImage` and `dstImage` is not a *multi-planar format*, the `VkFormat` of each of `srcImage` and `dstImage` **must** be *size-compatible*
- VUID-VkCopyImageInfo2-None-01549
In a copy to or from a plane of a *multi-planar image*, the `VkFormat` of the image and plane **must** be compatible according to *the description of compatible planes* for the plane being

copied

- VUID-VkCopyImageInfo2-srcImage-09247
If the `VkFormat` of each of `srcImage` and `dstImage` is a `compressed image format`, the formats **must** have the same texel block extent
- VUID-VkCopyImageInfo2-srcImage-00136
The sample count of `srcImage` and `dstImage` **must** match
- VUID-VkCopyImageInfo2-srcOffset-01783
The `srcOffset` and `extent` members of each element of `pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in `VkQueueFamilyProperties`
- VUID-VkCopyImageInfo2-dstOffset-01784
The `dstOffset` and `extent` members of each element of `pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in `VkQueueFamilyProperties`
- VUID-VkCopyImageInfo2-srcImage-01551
If neither `srcImage` nor `dstImage` has a `multi-planar image format` then for each element of `pRegions`, `srcSubresource.aspectMask` and `dstSubresource.aspectMask` **must** match
- VUID-VkCopyImageInfo2-srcImage-08713
If `srcImage` has a `multi-planar image format`, then for each element of `pRegions`, `srcSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-VkCopyImageInfo2-dstImage-08714
If `dstImage` has a `multi-planar image format`, then for each element of `pRegions`, `dstSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-VkCopyImageInfo2-srcImage-01556
If `srcImage` has a `multi-planar image format` and the `dstImage` does not have a multi-planar image format, then for each element of `pRegions`, `dstSubresource.aspectMask` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`
- VUID-VkCopyImageInfo2-dstImage-01557
If `dstImage` has a `multi-planar image format` and the `srcImage` does not have a multi-planar image format, then for each element of `pRegions`, `srcSubresource.aspectMask` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`
- VUID-VkCopyImageInfo2-apiVersion-07932
If the `VK_KHR_maintenance1` extension is not enabled, or `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and either `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` and `dstSubresource.baseArrayLayer` **must** both be 0, and `srcSubresource.layerCount` and `dstSubresource.layerCount` **must** both be 1
- VUID-VkCopyImageInfo2-srcImage-04443
If `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` **must** be 0 and `srcSubresource.layerCount` **must** be 1
- VUID-VkCopyImageInfo2-dstImage-04444
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstSubresource.baseArrayLayer` **must** be 0 and `dstSubresource.layerCount` **must** be 1

- VUID-VkCopyImageInfo2-aspectMask-00142
For each element of `pRegions`, `srcSubresource.aspectMask` **must** specify aspects present in `srcImage`
- VUID-VkCopyImageInfo2-aspectMask-00143
For each element of `pRegions`, `dstSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-VkCopyImageInfo2-srcOffset-00144
For each element of `pRegions`, `srcOffset.x` and `(extent.width + srcOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `srcSubresource` of `srcImage`
- VUID-VkCopyImageInfo2-srcOffset-00145
For each element of `pRegions`, `srcOffset.y` and `(extent.height + srcOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `srcSubresource` of `srcImage`
- VUID-VkCopyImageInfo2-srcImage-00146
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.y` **must** be `0` and `extent.height` **must** be `1`
- VUID-VkCopyImageInfo2-srcOffset-00147
If `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcOffset.z` and `(extent.depth + srcOffset.z)` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `srcSubresource` of `srcImage`
- VUID-VkCopyImageInfo2-srcImage-01785
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.z` **must** be `0` and `extent.depth` **must** be `1`
- VUID-VkCopyImageInfo2-dstImage-01786
If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.z` **must** be `0` and `extent.depth` **must** be `1`
- VUID-VkCopyImageInfo2-srcImage-01787
If `srcImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `srcOffset.z` **must** be `0`
- VUID-VkCopyImageInfo2-dstImage-01788
If `dstImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `dstOffset.z` **must** be `0`
- VUID-VkCopyImageInfo2-apiVersion-07933
If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `srcImage` and `dstImage` **must** have the same `VkImageType`
- VUID-VkCopyImageInfo2-apiVersion-08969
If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` **must** be `1`
- VUID-VkCopyImageInfo2-srcImage-07743
If `srcImage` and `dstImage` have a different `VkImageType`, and `maintenance5` is not enabled,

one **must** be `VK_IMAGE_TYPE_3D` and the other **must** be `VK_IMAGE_TYPE_2D`

- VUID-VkCopyImageInfo2-srcImage-08793

If `srcImage` and `dstImage` have the same `VkImageType`, for each element of `pRegions`, if neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` members of `srcSubresource` or `dstSubresource` **must** match

- VUID-VkCopyImageInfo2-srcImage-08794

If `srcImage` and `dstImage` have the same `VkImageType`, and one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member **must** be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

- VUID-VkCopyImageInfo2-srcImage-01790

If `srcImage` and `dstImage` are both of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` **must** be 1

- VUID-VkCopyImageInfo2-srcImage-01791

If `srcImage` is of type `VK_IMAGE_TYPE_2D`, and `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `srcSubresource.layerCount`

- VUID-VkCopyImageInfo2-dstImage-01792

If `dstImage` is of type `VK_IMAGE_TYPE_2D`, and `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `dstSubresource.layerCount`

- VUID-VkCopyImageInfo2-dstOffset-00150

For each element of `pRegions`, `dstOffset.x` and $(\text{extent.width} + \text{dstOffset.x})$ **must** both be greater than or equal to 0 and less than or equal to the width of the specified `dstSubresource` of `dstImage`

- VUID-VkCopyImageInfo2-dstOffset-00151

For each element of `pRegions`, `dstOffset.y` and $(\text{extent.height} + \text{dstOffset.y})$ **must** both be greater than or equal to 0 and less than or equal to the height of the specified `dstSubresource` of `dstImage`

- VUID-VkCopyImageInfo2-dstImage-00152

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.y` **must** be 0 and `extent.height` **must** be 1

- VUID-VkCopyImageInfo2-dstOffset-00153

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstOffset.z` and $(\text{extent.depth} + \text{dstOffset.z})$ **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `dstSubresource` of `dstImage`

- VUID-VkCopyImageInfo2-pRegions-07278

For each element of `pRegions`, `srcOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageInfo2-pRegions-07279

For each element of `pRegions`, `srcOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageInfo2-pRegions-07280

For each element of `pRegions`, `srcOffset.z` **must** be a multiple of the `texel block extent`

depth of the `VkFormat` of `srcImage`

- VUID-VkCopyImageInfo2-pRegions-07281

For each element of `pRegions`, `dstOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyImageInfo2-pRegions-07282

For each element of `pRegions`, `dstOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyImageInfo2-pRegions-07283

For each element of `pRegions`, `dstOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-VkCopyImageInfo2-srcImage-01728

For each element of `pRegions`, if the sum of `srcOffset.x` and `extent.width` does not equal the width of the subresource specified by `srcSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageInfo2-srcImage-01729

For each element of `pRegions`, if the sum of `srcOffset.y` and `extent.height` does not equal the height of the subresource specified by `srcSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageInfo2-srcImage-01730

For each element of `pRegions`, if the sum of `srcOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageInfo2-dstImage-01732

For each element of `pRegions`, if the sum of `dstOffset.x` and `extent.width` does not equal the width of the subresource specified by `dstSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyImageInfo2-dstImage-01733

For each element of `pRegions`, if the sum of `dstOffset.y` and `extent.height` does not equal the height of the subresource specified by `dstSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyImageInfo2-dstImage-01734

For each element of `pRegions`, if the sum of `dstOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `dstSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-VkCopyImageInfo2-aspect-06662

If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `srcImage` was not created with `separate stencil usage`, `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` **must** have been included in the `VkImageCreateInfo::usage` used to create `srcImage`

- VUID-VkCopyImageInfo2-aspect-06663

If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `dstImage` was not created with `separate stencil usage`, `VK_IMAGE_USAGE_TRANSFER_DST_BIT` **must** have been included in the `VkImageCreateInfo`

::usage used to create dstImage

- VUID-VkCopyImageInfo2-aspect-06664

If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and srcImage was created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_SRC_BIT **must** have been included in the VkImageStencilUsageCreateInfo::stencilUsage used to create srcImage

- VUID-VkCopyImageInfo2-aspect-06665

If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and dstImage was created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_DST_BIT **must** have been included in the VkImageStencilUsageCreateInfo::stencilUsage used to create dstImage

- VUID-VkCopyImageInfo2-srcImage-07966

If srcImage is non-sparse then the image or the specified disjoint plane **must** be bound completely and contiguously to a single VkDeviceMemory object

- VUID-VkCopyImageInfo2-srcSubresource-07967

The srcSubresource.mipLevel member of each element of pRegions **must** be less than the mipLevels specified in VkImageCreateInfo when srcImage was created

- VUID-VkCopyImageInfo2-srcSubresource-07968

If srcSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, srcSubresource.baseArrayLayer + srcSubresource.layerCount of each element of pRegions **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when srcImage was created

- VUID-VkCopyImageInfo2-srcImage-07969

srcImage **must** not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-VkCopyImageInfo2-dstImage-07966

If dstImage is non-sparse then the image or the specified disjoint plane **must** be bound completely and contiguously to a single VkDeviceMemory object

- VUID-VkCopyImageInfo2-dstSubresource-07967

The dstSubresource.mipLevel member of each element of pRegions **must** be less than the mipLevels specified in VkImageCreateInfo when dstImage was created

- VUID-VkCopyImageInfo2-dstSubresource-07968

If dstSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, dstSubresource.baseArrayLayer + dstSubresource.layerCount of each element of pRegions **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when dstImage was created

- VUID-VkCopyImageInfo2-dstImage-07969

dstImage **must** not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

Valid Usage (Implicit)

- VUID-VkCopyImageInfo2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_IMAGE_INFO_2`
- VUID-VkCopyImageInfo2-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyImageInfo2-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-VkCopyImageInfo2-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyImageInfo2-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-VkCopyImageInfo2-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyImageInfo2-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkImageCopy2` structures
- VUID-VkCopyImageInfo2-regionCount-arraylength
`regionCount` **must** be greater than `0`
- VUID-VkCopyImageInfo2-commonparent
Both of `dstImage`, and `srcImage` **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkImageCopy2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkImageCopy2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D         srcOffset;
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D         dstOffset;
    VkExtent3D         extent;
} VkImageCopy2;
```

or the equivalent

```
// Provided by VK_KHR_copy_commands2
typedef VkImageCopy2 VkImageCopy2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcSubresource` and `dstSubresource` are `VkImageSubresourceLayers` structures specifying the image subresources of the images used for the source and destination image data, respectively.
- `srcOffset` and `dstOffset` select the initial `x`, `y`, and `z` offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the image to copy in `width`, `height` and `depth`.

Valid Usage

- VUID-VkImageCopy2-apiVersion-07940
If the `VK_KHR_sampler_ycbcr_conversion` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, the `aspectMask` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy2-apiVersion-07941
If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, the `layerCount` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy2-extent-06668
`extent.width` **must** not be 0
- VUID-VkImageCopy2-extent-06669
`extent.height` **must** not be 0
- VUID-VkImageCopy2-extent-06670
`extent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkImageCopy2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_COPY_2`
- VUID-VkImageCopy2-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageCopy2-srcSubresource-parameter
`srcSubresource` **must** be a valid `VkImageSubresourceLayers` structure
- VUID-VkImageCopy2-dstSubresource-parameter
`dstSubresource` **must** be a valid `VkImageSubresourceLayers` structure

20.3. Copying Data Between Buffers and Images

Data **can** be copied between buffers and images, enabling applications to load and store data between images and application-defined offsets in buffer memory.

When copying between a buffer and an image, texels in the image and bytes in the buffer are accessed as follows.

Texels at each coordinate (x,y,z,layer) in the image subresource are accessed, where:

x is in the range [`imageOffset.x`, `imageOffset.x + imageExtent.width`),

y is in the range [`imageOffset.y`, `imageOffset.y + imageExtent.height`),

z is in the range [`imageOffset.z`, `imageOffset.z + imageExtent.depth`),

layer is in the range [`eq`][`imageSubresource.baseArrayLayer`, `imageSubresource.baseArrayLayer + imageSubresource.layerCount`)

For each (x,y,z,layer) coordinate in the image, bytes in the buffer are accessed at offsets in the range [`texelOffset`, `texelOffset + blockSize`), where:

$$\text{texelOffset} = \text{bufferOffset} + ((x - \text{imageOffset.x}) / \text{blockWidth} \times \text{blockSize}) + ((y - \text{imageOffset.y}) / \text{blockHeight} \times \text{rowExtent}) + ((z - \text{imageOffset.z}) / \text{blockDepth} \times \text{sliceExtent}) + ((\text{layer} - \text{imageSubresource.baseArrayLayer}) \times \text{layerExtent})$$
$$\text{rowExtent} = \lceil \max(\text{bufferRowLength}, \text{imageExtent.width}) / \text{blockWidth} \rceil \times \text{blockSize}$$
$$\text{sliceExtent} = \lceil \max(\text{bufferImageHeight}, \text{imageExtent.height}) / \text{blockHeight} \rceil \times \text{rowExtent}$$
$$\text{layerExtent} = \lceil \text{imageExtent.depth} / \text{blockDepth} \rceil \times \text{sliceExtent}$$

and where `blockSize`, `blockWidth`, `blockHeight`, and `blockDepth` are the [texel block size and extents](#) of the image's format.

Image Rotation Addressing

If a rotation is specified by [VkCopyCommandTransformInfoQCOM](#), the 2D region of the image being addressed is rotated around the offset, and texels at each coordinate (x',y',z',layer) are accessed in the image subresource instead, where:

- If `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` is specified, no rotation is performed:

x' is in the same range as x

y' is in the same range as y

- If `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR` is specified

x' is in the range $[imageOffset.x - imageExtent.height, imageOffset.x)$

y' is in the range $[imageOffset.y, imageOffset.y + imageExtent.width)$

- If `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` is specified:

x' is in the range $[imageOffset.x - imageExtent.width, imageOffset.x)$

y' is in the range $[imageOffset.y - imageExtent.height, imageOffset.y)$

- If `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` is specified:

x' is in the range $[imageOffset.x, imageOffset.x + imageExtent.height)$

y' is in the range $[imageOffset.y - imageExtent.width, imageOffset.y)$

Buffer addressing calculations are unaffected by this rotation.

When copying between a buffer and the depth or stencil aspect of an image, data in the buffer is assumed to be laid out as separate planes rather than interleaved. Addressing calculations are thus performed for a different format than the base image, according to the aspect, as described in the following table:

Table 30. Depth/Stencil Aspect Copy Table

Base Format	Depth Aspect Format	Stencil Aspect Format
<code>VK_FORMAT_D16_UNORM</code>	<code>VK_FORMAT_D16_UNORM</code>	-
<code>VK_FORMAT_X8_D24_UNORM_PACK32</code>	<code>VK_FORMAT_X8_D24_UNORM_PACK32</code>	-
<code>VK_FORMAT_D32_SFLOAT</code>	<code>VK_FORMAT_D32_SFLOAT</code>	-
<code>VK_FORMAT_S8_UINT</code>	-	<code>VK_FORMAT_S8_UINT</code>
<code>VK_FORMAT_D16_UNORM_S8_UINT</code>	<code>VK_FORMAT_D16_UNORM</code>	<code>VK_FORMAT_S8_UINT</code>
<code>VK_FORMAT_D24_UNORM_S8_UINT</code>	<code>VK_FORMAT_X8_D24_UNORM_PACK32</code>	<code>VK_FORMAT_S8_UINT</code>
<code>VK_FORMAT_D32_SFLOAT_S8_UINT</code>	<code>VK_FORMAT_D32_SFLOAT</code>	<code>VK_FORMAT_S8_UINT</code>

When copying between a buffer and any plane of a [multi-planar image](#), addressing calculations are performed using the [compatible format for that plane](#), rather than the format of the multi-planar image.

Each texel block is copied from one resource to the other according to the above addressing equations.

To copy data from a buffer object to an image object, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyBufferToImage(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 srcBuffer,
    VkImage                 dstImage,
    VkImageLayout            dstImageLayout,
    uint32_t                 regionCount,
    const VkBufferImageCopy* pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcBuffer` is the source buffer.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkBufferImageCopy` structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source buffer to the destination region of the destination image according to the [addressing calculations](#) for each resource. If any of the specified regions in `srcBuffer` overlaps in memory with any of the specified regions in `dstImage`, values read from those overlapping regions are undefined. If any region accesses a depth aspect in `dstImage` and the `VK_EXT_depth_range_unrestricted` extension is not enabled, values copied from `srcBuffer` outside of the range [0,1] will be written as undefined values to the destination image.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-vkCmdCopyBufferToImage-dstImage-07966
If `dstImage` is non-sparse then the image or the specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyBufferToImage-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-vkCmdCopyBufferToImage-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer + imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-vkCmdCopyBufferToImage-dstImage-07969
`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- VUID-vkCmdCopyBufferToImage-imageSubresource-07970
The image region specified by each element of **pRegions** **must** be contained within the specified **imageSubresource** of **dstImage**
- VUID-vkCmdCopyBufferToImage-imageSubresource-07971
For each element of **pRegions**, **imageOffset.x** and **(imageExtent.width + imageOffset.x)** **must** both be greater than or equal to **0** and less than or equal to the width of the specified **imageSubresource** of **dstImage**
- VUID-vkCmdCopyBufferToImage-imageSubresource-07972
For each element of **pRegions**, **imageOffset.y** and **(imageExtent.height + imageOffset.y)** **must** both be greater than or equal to **0** and less than or equal to the height of the specified **imageSubresource** of **dstImage**
- VUID-vkCmdCopyBufferToImage-dstImage-07973
dstImage **must** have a sample count equal to **VK_SAMPLE_COUNT_1_BIT**
- VUID-vkCmdCopyBufferToImage-commandBuffer-01828
If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, **srcBuffer** **must** not be a protected buffer
- VUID-vkCmdCopyBufferToImage-commandBuffer-01829
If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, **dstImage** **must** not be a protected image
- VUID-vkCmdCopyBufferToImage-commandBuffer-01830
If **commandBuffer** is a protected command buffer and **protectedNoFault** is not supported, **dstImage** **must** not be an unprotected image
- VUID-vkCmdCopyBufferToImage-commandBuffer-07737
If the queue family used to create the **VkCommandPool** which **commandBuffer** was allocated from does not support **VK_QUEUE_GRAPHICS_BIT** or **VK_QUEUE_COMPUTE_BIT**, the **bufferOffset** member of any element of **pRegions** **must** be a multiple of **4**
- VUID-vkCmdCopyBufferToImage-imageOffset-07738
The **imageOffset** and **imageExtent** members of each element of **pRegions** **must** respect the image transfer granularity requirements of **commandBuffer**'s command pool's queue family, as described in **VkQueueFamilyProperties**
- VUID-vkCmdCopyBufferToImage-commandBuffer-07739
If the queue family used to create the **VkCommandPool** which **commandBuffer** was allocated from does not support **VK_QUEUE_GRAPHICS_BIT**, for each element of **pRegions**, the **aspectMask** member of **imageSubresource** **must** not be **VK_IMAGE_ASPECT_DEPTH_BIT** or **VK_IMAGE_ASPECT_STENCIL_BIT**
- VUID-vkCmdCopyBufferToImage-pRegions-00171
srcBuffer **must** be large enough to contain all buffer locations that are accessed according to **Buffer and Image Addressing**, for each element of **pRegions**
- VUID-vkCmdCopyBufferToImage-pRegions-00173
The union of all source regions, and the union of all destination regions, specified by the elements of **pRegions**, **must** not overlap in memory
- VUID-vkCmdCopyBufferToImage-srcBuffer-00174

`srcBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag

- VUID-vkCmdCopyBufferToImage-dstImage-01997

The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`

- VUID-vkCmdCopyBufferToImage-srcBuffer-00176

If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdCopyBufferToImage-dstImage-00177

`dstImage` **must** have been created with `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag

- VUID-vkCmdCopyBufferToImage-dstImageLayout-00180

`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`

- VUID-vkCmdCopyBufferToImage-dstImageLayout-01396

`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`

- VUID-vkCmdCopyBufferToImage-pRegions-07931

If `VK_EXT_depth_range_unrestricted` is not enabled, for each element of `pRegions` whose `imageSubresource` contains a depth aspect, the data in `srcBuffer` **must** be in the range [0,1]

- VUID-vkCmdCopyBufferToImage-dstImage-07979

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1

- VUID-vkCmdCopyBufferToImage-imageOffset-09104

For each element of `pRegions`, `imageOffset.z` and $(\text{imageExtent.depth} + \text{imageOffset.z})$ **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `dstImage`

- VUID-vkCmdCopyBufferToImage-dstImage-07980

If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1

- VUID-vkCmdCopyBufferToImage-dstImage-07274

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyBufferToImage-imageOffset-10051

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyBufferToImage-dstImage-07275

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyBufferToImage-imageOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-07276
For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-00207
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10053
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10054
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10055
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-00208
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10056
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10057
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyBufferToImage-imageOffset-10058
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-00209
For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageSubresource-09105
For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-07981
If `dstImage` has a `multi-planar image format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-vkCmdCopyBufferToImage-dstImage-07983
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1
- VUID-vkCmdCopyBufferToImage-bufferRowLength-09106
For each element of `pRegions`, `bufferRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-bufferImageHeight-09107
For each element of `pRegions`, `bufferImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-bufferRowLength-09108
For each element of `pRegions`, `bufferRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `dstImage` **must** be less than or equal to $2^{31}-1$
- VUID-vkCmdCopyBufferToImage-dstImage-07975
If `dstImage` does not have either a depth/stencil format or a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the `texel block size`
- VUID-vkCmdCopyBufferToImage-dstImage-07976
If `dstImage` has a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in `Compatible Formats of Planes of Multi-Planar Formats`
- VUID-vkCmdCopyBufferToImage-dstImage-07978
If `dstImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-vkCmdCopyBufferToImage-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyBufferToImage-srcBuffer-parameter
`srcBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdCopyBufferToImage-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-vkCmdCopyBufferToImage-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdCopyBufferToImage-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferImageCopy` structures
- VUID-vkCmdCopyBufferToImage-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdCopyBufferToImage-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support transfer, graphics, or compute operations
- VUID-vkCmdCopyBufferToImage-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBufferToImage-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyBufferToImage-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-vkCmdCopyBufferToImage-commonparent
Each of `commandBuffer`, `dstImage`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

To copy data from an image object to a buffer object, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyImageToBuffer(
    VkCommandBuffer          commandBuffer,
    VkImage                  srcImage,
    VkImageLayout             srcImageLayout,
    VkBuffer                  dstBuffer,
    uint32_t                  regionCount,
    const VkBufferImageCopy* pRegions);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **srcImage** is the source image.
- **srcImageLayout** is the layout of the source image subresources for the copy.
- **dstBuffer** is the destination buffer.
- **regionCount** is the number of regions to copy.
- **pRegions** is a pointer to an array of **VkBufferImageCopy** structures specifying the regions to copy.

Each source region specified by **pRegions** is copied from the source image to the destination region of the destination buffer according to the [addressing calculations](#) for each resource. If any of the specified regions in **srcImage** overlaps in memory with any of the specified regions in **dstBuffer**, values read from those overlapping regions are undefined.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-vkCmdCopyImageToBuffer-srcImage-07966
If **srcImage** is non-sparse then the image or the specified *disjoint* plane **must** be bound completely and contiguously to a single **VkDeviceMemory** object
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07967
The **imageSubresource.mipLevel** member of each element of **pRegions** **must** be less than the **mipLevels** specified in **VkImageCreateInfo** when **srcImage** was created
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07968
If **imageSubresource.layerCount** is not **VK_REMAINING_ARRAY_LAYERS**, **imageSubresource.baseArrayLayer** + **imageSubresource.layerCount** of each element of **pRegions** **must** be less than or equal to the **arrayLayers** specified in **VkImageCreateInfo** when **srcImage** was created
- VUID-vkCmdCopyImageToBuffer-srcImage-07969
srcImage **must** not have been created with **flags** containing **VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT**
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07970
The image region specified by each element of **pRegions** **must** be contained within the

specified `imageSubresource` of `srcImage`

- VUID-vkCmdCopyImageToBuffer-imageSubresource-07971
For each element of `pRegions`, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `imageSubresource` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07972
For each element of `pRegions`, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `imageSubresource` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-07973
`srcImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-vkCmdCopyImageToBuffer-commandBuffer-01831
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImageToBuffer-commandBuffer-01832
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyImageToBuffer-commandBuffer-01833
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer
- VUID-vkCmdCopyImageToBuffer-commandBuffer-07746
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4
- VUID-vkCmdCopyImageToBuffer-imageOffset-07747
The `imageOffset` and `imageExtent` members of each element of `pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in `VkQueueFamilyProperties`
- VUID-vkCmdCopyImageToBuffer-pRegions-00183
`dstBuffer` **must** be large enough to contain all buffer locations that are accessed according to `Buffer and Image Addressing`, for each element of `pRegions`
- VUID-vkCmdCopyImageToBuffer-pRegions-00184
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-vkCmdCopyImageToBuffer-srcImage-00186
`srcImage` **must** have been created with `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag
- VUID-vkCmdCopyImageToBuffer-srcImage-01998
The `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`
- VUID-vkCmdCopyImageToBuffer-dstBuffer-00191
`dstBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-vkCmdCopyImageToBuffer-dstBuffer-00192

If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdCopyImageToBuffer-srcImageLayout-00189
`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-vkCmdCopyImageToBuffer-srcImageLayout-01397
`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdCopyImageToBuffer-srcImage-07979
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1
- VUID-vkCmdCopyImageToBuffer-imageOffset-09104
For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-07980
If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1
- VUID-vkCmdCopyImageToBuffer-srcImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-07276
For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImageToBuffer-srcImage-00207
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10053
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10054
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10055
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-00208
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10056
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10057
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10058
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-00209
For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImageToBuffer-imageSubresource-09105
For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-07981
If `srcImage` has a `multi-planar image format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-vkCmdCopyImageToBuffer-srcImage-07983
If `srcImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1
- VUID-vkCmdCopyImageToBuffer-bufferRowLength-09106
For each element of `pRegions`, `bufferRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-bufferImageHeight-09107
For each element of `pRegions`, `bufferImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-bufferRowLength-09108
For each element of `pRegions`, `bufferRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `srcImage` **must** be less than or equal to $2^{31}-1$
- VUID-vkCmdCopyImageToBuffer-srcImage-07975
If `srcImage` does not have either a depth/stencil format or a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the `texel block size`
- VUID-vkCmdCopyImageToBuffer-srcImage-07976
If `srcImage` has a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in `Compatible Formats of Planes of Multi-Planar Formats`
- VUID-vkCmdCopyImageToBuffer-srcImage-07978
If `srcImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-vkCmdCopyImageToBuffer-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyImageToBuffer-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-vkCmdCopyImageToBuffer-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdCopyImageToBuffer-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdCopyImageToBuffer-pRegions-parameter

pRegions **must** be a valid pointer to an array of **regionCount** valid **VkBufferImageCopy** structures

- VUID-vkCmdCopyImageToBuffer-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdCopyImageToBuffer-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support transfer, graphics, or compute operations
- VUID-vkCmdCopyImageToBuffer-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImageToBuffer-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyImageToBuffer-regionCount-arraylength
regionCount **must** be greater than 0
- VUID-vkCmdCopyImageToBuffer-commonparent
Each of **commandBuffer**, **dstBuffer**, and **srcImage** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

For both **vkCmdCopyBufferToImage** and **vkCmdCopyImageToBuffer**, each element of **pRegions** is a structure defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferImageCopy {
    VkDeviceSize          bufferOffset;
    uint32_t              bufferRowLength;
    uint32_t              bufferImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D             imageOffset;
    VkExtent3D             imageExtent;
} VkBufferImageCopy;
```

- **bufferOffset** is the offset in bytes from the start of the buffer object where the image data is copied from or to.
- **bufferRowLength** and **bufferImageHeight** specify in texels a subregion of a larger two- or three-dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the **imageExtent**.
- **imageSubresource** is a [VkImageSubresourceLayers](#) used to specify the specific image subresources of the image used for the source or destination image data.
- **imageOffset** selects the initial **x**, **y**, **z** offsets in texels of the sub-region of the source or destination image data.
- **imageExtent** is the size in texels of the image to copy in **width**, **height** and **depth**.

Valid Usage

- VUID-VkBufferImageCopy-bufferRowLength-09101
bufferRowLength must be 0, or greater than or equal to the **width** member of **imageExtent**
- VUID-VkBufferImageCopy-bufferImageHeight-09102
bufferImageHeight must be 0, or greater than or equal to the **height** member of **imageExtent**
- VUID-VkBufferImageCopy-aspectMask-09103
The **aspectMask** member of **imageSubresource must** only have a single bit set
- VUID-VkBufferImageCopy-imageExtent-06659
imageExtent.width must not be 0
- VUID-VkBufferImageCopy-imageExtent-06660
imageExtent.height must not be 0
- VUID-VkBufferImageCopy-imageExtent-06661
imageExtent.depth must not be 0

Valid Usage (Implicit)

- VUID-VkBufferImageCopy-imageSubresource-parameter
imageSubresource must be a valid [VkImageSubresourceLayers](#) structure

More extensible versions of the commands to copy between buffers and images are defined below.

To copy data from a buffer object to an image object, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyBufferToImage2(
    VkCommandBuffer                      commandBuffer,
    const VkCopyBufferToImageInfo2*     pCopyBufferToImageInfo);
```

or the equivalent command

```
// Provided by VK_KHR_copy_commands2
void vkCmdCopyBufferToImage2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyBufferToImageInfo2*     pCopyBufferToImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyBufferToImageInfo` is a pointer to a [VkCopyBufferToImageInfo2](#) structure describing the copy parameters.

This command is functionally identical to [vkCmdCopyBufferToImage](#), but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdCopyBufferToImage2-commandBuffer-01828
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBufferToImage2-commandBuffer-01829
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyBufferToImage2-commandBuffer-01830
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdCopyBufferToImage2-commandBuffer-07737
If the queue family used to create the [VkCommandPool](#) which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `bufferOffset` member of any element of `pCopyBufferToImageInfo->pRegions` **must** be a multiple of 4
- VUID-vkCmdCopyBufferToImage2-imageOffset-07738
The `imageOffset` and `imageExtent` members of each element of `pCopyBufferToImageInfo->pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in [VkQueueFamilyProperties](#)
- VUID-vkCmdCopyBufferToImage2-commandBuffer-07739
If the queue family used to create the [VkCommandPool](#) which `commandBuffer` was allocated

from does not support `VK_QUEUE_GRAPHICS_BIT`, for each element of `pCopyBufferToImageInfo->pRegions`, the `aspectMask` member of `imageSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`

Valid Usage (Implicit)

- `VUID-vkCmdCopyBufferToImage2-commandBuffer-parameter`
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- `VUID-vkCmdCopyBufferToImage2-pCopyBufferToImageInfo-parameter`
`pCopyBufferToImageInfo` **must** be a valid pointer to a valid `VkCopyBufferToImageInfo2` structure
- `VUID-vkCmdCopyBufferToImage2-commandBuffer-recording`
`commandBuffer` **must** be in the `recording` state
- `VUID-vkCmdCopyBufferToImage2-commandBuffer-cmdpool`
The `VkCommandPool` that `commandBuffer` was allocated from **must** support transfer, graphics, or compute operations
- `VUID-vkCmdCopyBufferToImage2-renderpass`
This command **must** only be called outside of a render pass instance
- `VUID-vkCmdCopyBufferToImage2-videocoding`
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

The `VkCopyBufferToImageInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyBufferToImageInfo2 {
    VkStructureType      sType;
    const void*          pNext;
    VkBuffer              srcBuffer;
    VkImage               dstImage;
    VkImageLayout         dstImageLayout;
    uint32_t              regionCount;
    const VkBufferImageCopy2* pRegions;
} VkCopyBufferToImageInfo2;
```

or the equivalent

```
// Provided by VK_KHR_copy_commands2
typedef VkCopyBufferToImageInfo2 VkCopyBufferToImageInfo2KHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **srcBuffer** is the source buffer.
- **dstImage** is the destination image.
- **dstImageLayout** is the layout of the destination image subresources for the copy.
- **regionCount** is the number of regions to copy.
- **pRegions** is a pointer to an array of **VkBufferImageCopy2** structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyBufferToImageInfo2-pRegions-04565
The image region specified by each element of **pRegions** that does not contain **VkCopyCommandTransformInfoQCOM** in its **pNext** chain **must** be contained within the specified **imageSubresource** of **dstImage**
- VUID-VkCopyBufferToImageInfo2KHR-pRegions-04554
If the image region specified by each element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, the **rotated destination region** **must** be contained within **dstImage**
- VUID-VkCopyBufferToImageInfo2KHR-pRegions-04555
If any element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, then **dstImage** **must** have a 1x1x1 **texel block extent**
- VUID-VkCopyBufferToImageInfo2KHR-pRegions-06203
If any element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, then **dstImage** **must** be of type **VK_IMAGE_TYPE_2D**
- VUID-VkCopyBufferToImageInfo2KHR-pRegions-06204

If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `dstImage` **must** not have a `multi-planar format`

- VUID-VkCopyBufferToImageInfo2-pRegions-00171
`srcBuffer` **must** be large enough to contain all buffer locations that are accessed according to `Buffer and Image Addressing`, for each element of `pRegions`
- VUID-VkCopyBufferToImageInfo2-pRegions-00173
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-VkCopyBufferToImageInfo2-srcBuffer-00174
`srcBuffer` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag
- VUID-VkCopyBufferToImageInfo2-dstImage-01997
The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`
- VUID-VkCopyBufferToImageInfo2-srcBuffer-00176
If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyBufferToImageInfo2-dstImage-00177
`dstImage` **must** have been created with `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-VkCopyBufferToImageInfo2-dstImageLayout-00180
`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkCopyBufferToImageInfo2-dstImageLayout-01396
`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-VkCopyBufferToImageInfo2-pRegions-07931
If `VK_EXT_depth_range_unrestricted` is not enabled, for each element of `pRegions` whose `imageSubresource` contains a depth aspect, the data in `srcBuffer` **must** be in the range [0,1]
- VUID-VkCopyBufferToImageInfo2-dstImage-07966
If `dstImage` is non-sparse then the image or the specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyBufferToImageInfo2-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkCopyBufferToImageInfo2-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkCopyBufferToImageInfo2-dstImage-07969
`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkCopyBufferToImageInfo2-dstImage-07973

`dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`

- VUID-VkCopyBufferToImageInfo2-dstImage-07979

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1

- VUID-VkCopyBufferToImageInfo2-imageOffset-09104

For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-07980

If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1

- VUID-VkCopyBufferToImageInfo2-dstImage-07274

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10051

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-07275

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10052

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-07276

For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-00207

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10053

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal

to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10054

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10055

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-00208

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10056

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10057

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10058

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-00209

For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageSubresource-09105

For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-07981

If `dstImage` has a `multi-planar image format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit

- VUID-VkCopyBufferToImageInfo2-dstImage-07983

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1

- VUID-VkCopyBufferToImageInfo2-bufferRowLength-09106
For each element of `pRegions`, `bufferRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-bufferImageHeight-09107
For each element of `pRegions`, `bufferImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-bufferRowLength-09108
For each element of `pRegions`, `bufferRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `dstImage` **must** be less than or equal to $2^{31}-1$
- VUID-VkCopyBufferToImageInfo2-dstImage-07975
If `dstImage` does not have either a depth/stencil format or a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the `texel block size`
- VUID-VkCopyBufferToImageInfo2-dstImage-07976
If `dstImage` has a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in `Compatible Formats of Planes of Multi-Planar Formats`
- VUID-VkCopyBufferToImageInfo2-dstImage-07978
If `dstImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4
- VUID-VkCopyBufferToImageInfo2-pRegions-06223
For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `imageSubresource` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-pRegions-06224
For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `imageSubresource` of `dstImage`

Valid Usage (Implicit)

- VUID-VkCopyBufferToImageInfo2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_BUFFER_TO_IMAGE_INFO_2`
- VUID-VkCopyBufferToImageInfo2-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyBufferToImageInfo2-srcBuffer-parameter
`srcBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkCopyBufferToImageInfo2-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle

- VUID-VkCopyBufferToImageInfo2-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyBufferToImageInfo2-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferImageCopy2` structures
- VUID-VkCopyBufferToImageInfo2-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-VkCopyBufferToImageInfo2-commonparent
Both of `dstImage`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

To copy data from an image object to a buffer object, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyImageToBuffer2(
    VkCommandBuffer                      commandBuffer,
    const VkCopyImageToBufferInfo2*     pCopyImageToBufferInfo);
```

or the equivalent command

```
// Provided by VK_KHR_copy_commands2
void vkCmdCopyImageToBuffer2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyImageToBufferInfo2*     pCopyImageToBufferInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyImageToBufferInfo` is a pointer to a `VkCopyImageToBufferInfo2` structure describing the copy parameters.

This command is functionally identical to `vkCmdCopyImageToBuffer`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01831
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01832
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01833
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-07746
If the queue family used to create the [VkCommandPool](#) which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `bufferOffset` member of any element of `pCopyImageToBufferInfo->pRegions` **must** be a multiple of 4
- VUID-vkCmdCopyImageToBuffer2-imageOffset-07747
The `imageOffset` and `imageExtent` members of each element of `pCopyImageToBufferInfo->pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in [VkQueueFamilyProperties](#)

Valid Usage (Implicit)

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-parameter
`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyImageToBuffer2-pCopyImageToBufferInfo-parameter
`pCopyImageToBufferInfo` **must** be a valid pointer to a valid [VkCopyImageToBufferInfo2](#) structure
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-recording
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-cmdpool
The [VkCommandPool](#) that `commandBuffer` was allocated from **must** support transfer, graphics, or compute operations
- VUID-vkCmdCopyImageToBuffer2-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImageToBuffer2-encoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the [VkCommandPool](#) that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Transfer Graphics Compute	Action

The `VkCopyImageToBufferInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyImageToBufferInfo2 {
    VkStructureType      sType;
    const void*          pNext;
    VkImage              srcImage;
    VkImageLayout        srcImageLayout;
    VkBuffer              dstBuffer;
    uint32_t             regionCount;
    const VkBufferImageCopy2* pRegions;
} VkCopyImageToBufferInfo2;
```

or the equivalent

```
// Provided by VK_KHR_copy_commands2
typedef VkCopyImageToBufferInfo2 VkCopyImageToBufferInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkBufferImageCopy2` structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyImageToBufferInfo2-pRegions-04566
The image region specified by each element of `pRegions` that does not contain `VkCopyCommandTransformInfoQCOM` in its `pNext` chain **must** be contained within the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToBufferInfo2KHR-pRegions-04557
If the image region specified by each element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, the `rotated source region` **must** be contained within `srcImage`
- VUID-VkCopyImageToBufferInfo2KHR-pRegions-04558
If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `srcImage` **must** have a 1x1x1 `texel block extent`
- VUID-VkCopyImageToBufferInfo2KHR-pRegions-06205
If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `srcImage` **must** be of type `VK_IMAGE_TYPE_2D`

- VUID-VkCopyImageToBufferInfo2KHR-pRegions-06206
If any element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, then **srcImage** **must** not have a **multi-planar format**
- VUID-VkCopyImageToBufferInfo2-pRegions-00183
dstBuffer **must** be large enough to contain all buffer locations that are accessed according to **Buffer and Image Addressing**, for each element of **pRegions**
- VUID-VkCopyImageToBufferInfo2-pRegions-00184
The union of all source regions, and the union of all destination regions, specified by the elements of **pRegions**, **must** not overlap in memory
- VUID-VkCopyImageToBufferInfo2-srcImage-00186
srcImage **must** have been created with **VK_IMAGE_USAGE_TRANSFER_SRC_BIT** usage flag
- VUID-VkCopyImageToBufferInfo2-srcImage-01998
The **format features** of **srcImage** **must** contain **VK_FORMAT_FEATURE_TRANSFER_SRC_BIT**
- VUID-VkCopyImageToBufferInfo2-dstBuffer-00191
dstBuffer **must** have been created with **VK_BUFFER_USAGE_TRANSFER_DST_BIT** usage flag
- VUID-VkCopyImageToBufferInfo2-dstBuffer-00192
If **dstBuffer** is non-sparse then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object
- VUID-VkCopyImageToBufferInfo2-srcImageLayout-00189
srcImageLayout **must** specify the layout of the image subresources of **srcImage** specified in **pRegions** at the time this command is executed on a **VkDevice**
- VUID-VkCopyImageToBufferInfo2-srcImageLayout-01397
srcImageLayout **must** be **VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR**, **VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL**, or **VK_IMAGE_LAYOUT_GENERAL**
- VUID-VkCopyImageToBufferInfo2-srcImage-07966
If **srcImage** is non-sparse then the image or the specified *disjoint* plane **must** be bound completely and contiguously to a single **VkDeviceMemory** object
- VUID-VkCopyImageToBufferInfo2-imageSubresource-07967
The **imageSubresource.mipLevel** member of each element of **pRegions** **must** be less than the **mipLevels** specified in **VkImageCreateInfo** when **srcImage** was created
- VUID-VkCopyImageToBufferInfo2-imageSubresource-07968
If **imageSubresource.layerCount** is not **VK_REMAINING_ARRAY_LAYERS**, **imageSubresource.baseArrayLayer** + **imageSubresource.layerCount** of each element of **pRegions** **must** be less than or equal to the **arrayLayers** specified in **VkImageCreateInfo** when **srcImage** was created
- VUID-VkCopyImageToBufferInfo2-srcImage-07969
srcImage **must** not have been created with **flags** containing **VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT**
- VUID-VkCopyImageToBufferInfo2-srcImage-07973
srcImage **must** have a sample count equal to **VK_SAMPLE_COUNT_1_BIT**
- VUID-VkCopyImageToBufferInfo2-srcImage-07979

If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1

- VUID-VkCopyImageToBufferInfo2-imageOffset-09104

For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-srcImage-07980

If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1

- VUID-VkCopyImageToBufferInfo2-srcImage-07274

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-imageOffset-10051

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-srcImage-07275

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-imageOffset-10052

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-srcImage-07276

For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-srcImage-00207

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-imageOffset-10053

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-imageOffset-10054
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-imageOffset-10055
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-srcImage-00208
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-imageOffset-10056
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-imageOffset-10057
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-imageOffset-10058
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-srcImage-00209
For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-imageSubresource-09105
For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `srcImage`
- VUID-VkCopyImageToBufferInfo2-srcImage-07981
If `srcImage` has a `multi-planar image format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-VkCopyImageToBufferInfo2-srcImage-07983
If `srcImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1

- VUID-VkCopyImageToBufferInfo2-bufferRowLength-09106
For each element of `pRegions`, `bufferRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-bufferImageHeight-09107
For each element of `pRegions`, `bufferImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-bufferRowLength-09108
For each element of `pRegions`, `bufferRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `srcImage` **must** be less than or equal to $2^{31}-1$
- VUID-VkCopyImageToBufferInfo2-srcImage-07975
If `srcImage` does not have either a depth/stencil format or a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the `texel block size`
- VUID-VkCopyImageToBufferInfo2-srcImage-07976
If `srcImage` has a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in `Compatible Formats of Planes of Multi-Planar Formats`
- VUID-VkCopyImageToBufferInfo2-srcImage-07978
If `srcImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4
- VUID-VkCopyImageToBufferInfo2-imageOffset-00197
For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-imageOffset-00198
For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `imageSubresource` of `srcImage`

Valid Usage (Implicit)

- VUID-VkCopyImageToBufferInfo2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_IMAGE_TO_BUFFER_INFO_2`
- VUID-VkCopyImageToBufferInfo2-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyImageToBufferInfo2-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-VkCopyImageToBufferInfo2-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyImageToBufferInfo2-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle

- VUID-VkCopyImageToBufferInfo2-pRegions-parameter
pRegions **must** be a valid pointer to an array of **regionCount** valid **VkBufferImageCopy2** structures
- VUID-VkCopyImageToBufferInfo2-regionCount-arraylength
regionCount **must** be greater than 0
- VUID-VkCopyImageToBufferInfo2-commonparent
Both of **dstBuffer**, and **srcImage** **must** have been created, allocated, or retrieved from the same **VkDevice**

For both **vkCmdCopyBufferToImage2** and **vkCmdCopyImageToBuffer2**, each element of **pRegions** is a structure defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkBufferImageCopy2 {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceSize          bufferOffset;
    uint32_t              bufferRowLength;
    uint32_t              bufferImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D            imageOffset;
    VkExtent3D            imageExtent;
} VkBufferImageCopy2;
```

or the equivalent

```
// Provided by VK_KHR_copy_commands2
typedef VkBufferImageCopy2 VkBufferImageCopy2KHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **bufferOffset** is the offset in bytes from the start of the buffer object where the image data is copied from or to.
- **bufferRowLength** and **bufferImageHeight** specify in texels a subregion of a larger two- or three-dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the **imageExtent**.
- **imageSubresource** is a **VkImageSubresourceLayers** used to specify the specific image subresources of the image used for the source or destination image data.
- **imageOffset** selects the initial **x**, **y**, **z** offsets in texels of the sub-region of the source or destination image data.
- **imageExtent** is the size in texels of the image to copy in **width**, **height** and **depth**.

This structure is functionally identical to [VkBufferImageCopy](#), but adds [sType](#) and [pNext](#) parameters, allowing it to be more easily extended.

Valid Usage

- VUID-VkBufferImageCopy2-bufferRowLength-09101
[bufferRowLength](#) **must** be 0, or greater than or equal to the [width](#) member of [imageExtent](#)
- VUID-VkBufferImageCopy2-bufferImageHeight-09102
[bufferImageHeight](#) **must** be 0, or greater than or equal to the [height](#) member of [imageExtent](#)
- VUID-VkBufferImageCopy2-aspectMask-09103
The [aspectMask](#) member of [imageSubresource](#) **must** only have a single bit set
- VUID-VkBufferImageCopy2-imageExtent-06659
[imageExtent.width](#) **must** not be 0
- VUID-VkBufferImageCopy2-imageExtent-06660
[imageExtent.height](#) **must** not be 0
- VUID-VkBufferImageCopy2-imageExtent-06661
[imageExtent.depth](#) **must** not be 0

Valid Usage (Implicit)

- VUID-VkBufferImageCopy2-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_BUFFER_IMAGE_COPY_2](#)
- VUID-VkBufferImageCopy2-pNext-pNext
[pNext](#) **must** be [NULL](#) or a pointer to a valid instance of [VkCopyCommandTransformInfoQCOM](#)
- VUID-VkBufferImageCopy2-sType-unique
The [sType](#) value of each struct in the [pNext](#) chain **must** be unique
- VUID-VkBufferImageCopy2-imageSubresource-parameter
[imageSubresource](#) **must** be a valid [VkImageSubresourceLayers](#) structure

The [VkCopyCommandTransformInfoQCOM](#) structure is defined as:

```
// Provided by VK_QCOM_rotated_copy_commands
typedef struct VkCopyCommandTransformInfoQCOM {
    VkStructureType    sType;
    const void*        pNext;
    VkSurfaceTransformFlagBitsKHR transform;
} VkCopyCommandTransformInfoQCOM;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.

- `transform` is a `VkSurfaceTransformFlagBitsKHR` value describing the transform to be applied.

Including this structure in the `pNext` chain of `VkBufferImageCopy2` defines a rotation to be performed when copying between an image and a buffer. Including this structure in the `pNext` chain of `VkBlitImageInfo2` defines a rotation to be performed when blitting between two images. If this structure is not specified in either case, the implementation behaves as if it was specified with a `transform` equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`.

Specifying a transform for a copy between an image and a buffer [rotates the region accessed in the image around the offset](#). Specifying a transform for a blit performs a similar transform as described in [Image Blits with Scaling and Rotation](#).

Rotations other than `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` **can** only be specified for single-plane 2D images with a 1x1x1 [texel block extent](#).

Valid Usage

- VUID-VkCopyCommandTransformInfoQCOM-transform-04560
`transform` **must** be `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`

Valid Usage (Implicit)

- VUID-VkCopyCommandTransformInfoQCOM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_COMMAND_TRANSFORM_INFO_QCOM`

The following commands can be used to copy between host memory and images.

To copy data from host memory to an image object, call:

```
// Provided by VK_EXT_host_image_copy
VkResult vkCopyMemoryToImageEXT(
    VkDevice device,
    const VkCopyMemoryToImageInfoEXT* pCopyMemoryToImageInfo);
```

- `device` is the device which owns `pCopyMemoryToImageInfo->dstImage`.
- `pCopyMemoryToImageInfo` is a pointer to a `VkCopyMemoryToImageInfoEXT` structure describing the copy parameters.

This command is functionally similar to `vkCmdCopyBufferToImage2`, except it is executed on the host and reads from host memory instead of a buffer. The memory of `pCopyMemoryToImageInfo->dstImage` is accessed by the host as if [coherent](#).

NOTE

Because queue submissions [automatically make host memory visible to the device](#), there would not be a need for a memory barrier before using the results of this copy

operation on the device.

Valid Usage (Implicit)

- VUID-vkCopyMemoryToImageEXT-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkCopyMemoryToImageEXT-pCopyMemoryToImageInfo-parameter **pCopyMemoryToImageInfo** must be a valid pointer to a valid [VkCopyMemoryToImageInfoEXT](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_MEMORY_MAP_FAILED](#)

The [VkCopyMemoryToImageInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_host_image_copy
typedef struct VkCopyMemoryToImageInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkHostImageCopyFlagsEXT flags;
    VkImage             dstImage;
    VkImageLayout       dstImageLayout;
    uint32_t            regionCount;
    const VkMemoryToImageCopyEXT* pRegions;
} VkCopyMemoryToImageInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkHostImageCopyFlagBitsEXT](#) values describing additional copy parameters.
- **dstImage** is the destination image.
- **dstImageLayout** is the layout of the destination image subresources for the copy.
- **regionCount** is the number of regions to copy.
- **pRegions** is a pointer to an array of [VkMemoryToImageCopyEXT](#) structures specifying the

regions to copy.

`vkCopyMemoryToImageEXT` does not check whether the device memory associated with `dstImage` is currently in use before performing the copy. The application **must** guarantee that any previously submitted command that reads from or writes to the copy regions has completed before the host performs the copy.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-VkCopyMemoryToImageInfoEXT-dstImage-09109
If `dstImage` is sparse then all memory ranges accessed by the copy command **must** be bound as described in [Binding Resource Memory](#)
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-09111
If the stencil aspect of `dstImage` is accessed, and `dstImage` was not created with [separate stencil usage](#), `dstImage` **must** have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageCreateInfo::usage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-09112
If the stencil aspect of `dstImage` is accessed, and `dstImage` was created with [separate stencil usage](#), `dstImage` **must** have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageStencilUsageCreateInfo::stencilUsage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-09113
If non-stencil aspects of `dstImage` are accessed, `dstImage` **must** have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageCreateInfo::usage`
- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-09114
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, the `x`, `y`, and `z` members of the `imageOffset` member of each element of `pRegions` **must** be 0
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-09115
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, the `imageExtent` member of each element of `pRegions` **must** equal the extents of `dstImage` identified by `imageSubresource`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07966
If `dstImage` is non-sparse then the image or the specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created

- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07969
`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07970
The image region specified by each element of `pRegions` **must** be contained within the specified `imageSubresource` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07971
For each element of `pRegions`, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `imageSubresource` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07972
For each element of `pRegions`, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `imageSubresource` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07973
`dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07979
If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be `0` and `imageExtent.height` **must** be `1`
- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-09104
For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `imageSubresource` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07980
If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be `0` and `imageExtent.depth` **must** be `1`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07276
For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-00207
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-10053
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-10054
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-10055
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-00208
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-10056
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-10057
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-10058
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-00209
For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-09105
For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07981
If `dstImage` has a `multi-planar image format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07983
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1
- VUID-VkCopyMemoryToImageInfoEXT-memoryRowLength-09106
For each element of `pRegions`, `memoryRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-memoryImageHeight-09107
For each element of `pRegions`, `memoryImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfoEXT-memoryRowLength-09108
For each element of `pRegions`, `memoryRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `dstImage` **must** be less than or equal to $2^{31}-1$
- VUID-VkCopyMemoryToImageInfoEXT-dstImageLayout-09059
`dstImageLayout` **must** specify the current layout of the image subresources of `dstImage` specified in `pRegions`
- VUID-VkCopyMemoryToImageInfoEXT-dstImageLayout-09060
`dstImageLayout` **must** be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyPropertiesEXT::pCopyDstLayouts`
- VUID-VkCopyMemoryToImageInfoEXT-flags-09393
If `flags` includes `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, for each region in `pRegions`, `memoryRowLength` and `memoryImageHeight` **must** both be 0

Valid Usage (Implicit)

- VUID-VkCopyMemoryToImageInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_MEMORY_TO_IMAGE_INFO_EXT`
- VUID-VkCopyMemoryToImageInfoEXT-pNext-pNext

pNext must be **NULL**

- VUID-VkCopyMemoryToImageInfoEXT-flags-parameter
flags must be a valid combination of **VkHostImageCopyFlagBitsEXT** values
- VUID-VkCopyMemoryToImageInfoEXT-dstImage-parameter
dstImage must be a valid **VkImage** handle
- VUID-VkCopyMemoryToImageInfoEXT-dstImageLayout-parameter
dstImageLayout must be a valid **VkImageLayout** value
- VUID-VkCopyMemoryToImageInfoEXT-pRegions-parameter
pRegions must be a valid pointer to an array of **regionCount** valid **VkMemoryToImageCopyEXT** structures
- VUID-VkCopyMemoryToImageInfoEXT-regionCount-arraylength
regionCount must be greater than 0

Each element of **VkCopyMemoryToImageInfoEXT::pRegions** is a structure defined as:

```
// Provided by VK_EXT_host_image_copy
typedef struct VkMemoryToImageCopyEXT {
    VkStructureType      sType;
    const void*          pNext;
    const void*          pHostPointer;
    uint32_t             memoryRowLength;
    uint32_t             memoryImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D           imageOffset;
    VkExtent3D           imageExtent;
} VkMemoryToImageCopyEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pHostPointer** is the host memory address which is the source of the copy.
- **memoryRowLength** and **memoryImageHeight** specify in texels a subregion of a larger two- or three-dimensional image in host memory, and control the addressing calculations. If either of these values is zero, that aspect of the host memory is considered to be tightly packed according to the **imageExtent**.
- **imageSubresource** is a **VkImageSubresourceLayers** used to specify the specific image subresources of the image used for the source or destination image data.
- **imageOffset** selects the initial **x**, **y**, **z** offsets in texels of the sub-region of the destination image data.
- **imageExtent** is the size in texels of the image to copy in **width**, **height** and **depth**.

This structure is functionally similar to **VkBufferImageCopy2**, except it defines host memory as the source of copy instead of a buffer. In particular, the same data packing rules and restrictions as that structure apply here as well.

Valid Usage

- VUID-VkMemoryToImageCopyEXT-pHostPointer-09061
`pHostPointer` **must** point to memory that is large enough to contain all memory locations that are accessed according to [Buffer and Image Addressing](#), for each element of `pRegions`
- VUID-VkMemoryToImageCopyEXT-pRegions-09062
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-VkMemoryToImageCopyEXT-memoryRowLength-09101
`memoryRowLength` **must** be 0, or greater than or equal to the `width` member of `imageExtent`
- VUID-VkMemoryToImageCopyEXT-memoryImageHeight-09102
`memoryImageHeight` **must** be 0, or greater than or equal to the `height` member of `imageExtent`
- VUID-VkMemoryToImageCopyEXT-aspectMask-09103
The `aspectMask` member of `imageSubresource` **must** only have a single bit set
- VUID-VkMemoryToImageCopyEXT-imageExtent-06659
`imageExtent.width` **must** not be 0
- VUID-VkMemoryToImageCopyEXT-imageExtent-06660
`imageExtent.height` **must** not be 0
- VUID-VkMemoryToImageCopyEXT-imageExtent-06661
`imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkMemoryToImageCopyEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_TO_IMAGE_COPY_EXT`
- VUID-VkMemoryToImageCopyEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMemoryToImageCopyEXT-pHostPointer-parameter
`pHostPointer` **must** be a pointer value
- VUID-VkMemoryToImageCopyEXT-imageSubresource-parameter
`imageSubresource` **must** be a valid [VkImageSubresourceLayers](#) structure

To copy data from an image object to host memory, call:

```
// Provided by VK_EXT_host_image_copy
VkResult vkCopyImageToMemoryEXT(
    VkDevice                                device,
    const VkCopyImageToMemoryInfoEXT*      pCopyImageToMemoryInfo);
```

- `device` is the device which owns `pCopyImageToMemoryInfo->srcImage`.

- `pCopyImageToMemoryInfo` is a pointer to a `VkCopyImageToMemoryInfoEXT` structure describing the copy parameters.

This command is functionally similar to `vkCmdCopyImageToBuffer2`, except it is executed on the host and writes to host memory instead of a buffer. The memory of `pCopyImageToMemoryInfo->srcImage` is accessed by the host as if `coherent`.

NOTE

If the device has written to the image memory, it is not automatically made available to the host. Before this copy command can be called, a memory barrier for this image **must** have been issued on the device with the second `synchronization scope` including `VK_PIPELINE_STAGE_HOST_BIT` and `VK_ACCESS_HOST_READ_BIT`.

Valid Usage (Implicit)

- VUID-vkCopyImageToMemoryEXT-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkCopyImageToMemoryEXT-pCopyImageToMemoryInfo-parameter `pCopyImageToMemoryInfo` **must** be a valid pointer to a valid `VkCopyImageToMemoryInfoEXT` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_MEMORY_MAP_FAILED`

The `VkCopyImageToMemoryInfoEXT` structure is defined as:

```
// Provided by VK_EXT_host_image_copy
typedef struct VkCopyImageToMemoryInfoEXT {
    VkStructureType           sType;
    const void*               pNext;
    VkHostImageCopyFlagsEXT   flags;
    VkImage                   srcImage;
    VkImageLayout              srcImageLayout;
    uint32_t                  regionCount;
    const VkImageToMemoryCopyEXT* pRegions;
} VkCopyImageToMemoryInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkHostImageCopyFlagBitsEXT` values describing additional copy parameters.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkImageToMemoryCopyEXT` structures specifying the regions to copy.

`vkCopyImageToMemoryEXT` does not check whether the device memory associated with `srcImage` is currently in use before performing the copy. The application **must** guarantee that any previously submitted command that writes to the copy regions has completed before the host performs the copy.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09109
If `srcImage` is sparse then all memory ranges accessed by the copy command **must** be bound as described in [Binding Resource Memory](#)
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09111
If the stencil aspect of `srcImage` is accessed, and `srcImage` was not created with [separate stencil usage](#), `srcImage` **must** have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageCreateInfo::usage`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09112
If the stencil aspect of `srcImage` is accessed, and `srcImage` was created with [separate stencil usage](#), `srcImage` **must** have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageStencilUsageCreateInfo::stencilUsage`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09113
If non-stencil aspects of `srcImage` are accessed, `srcImage` **must** have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageCreateInfo::usage`
- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-09114
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, the `x`, `y`, and `z` members of the `imageOffset` member of each element of `pRegions` **must** be 0
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09115
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, the `imageExtent` member of each element of `pRegions` **must** equal the extents of `srcImage` identified by `imageSubresource`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07966
If `srcImage` is non-sparse then the image or the specified *disjoint* plane **must** be bound

completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer + imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07969
`srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07970
The image region specified by each element of `pRegions` **must** be contained within the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07971
For each element of `pRegions`, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07972
For each element of `pRegions`, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07973
`srcImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07979
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be `0` and `imageExtent.height` **must** be `1`
- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-09104
For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07980
If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be `0` and `imageExtent.depth` **must** be `1`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal

to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07276
For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-00207
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-10053
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-10054
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-10055
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-srcImage-00208
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-10056

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-10057

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-10058

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-00209

For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-09105

For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `srcImage`

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07981

If `srcImage` has a `multi-planar image format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07983

If `srcImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1

- VUID-VkCopyImageToMemoryInfoEXT-memoryRowLength-09106

For each element of `pRegions`, `memoryRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfoEXT-memoryImageHeight-09107

For each element of `pRegions`, `memoryImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfoEXT-memoryRowLength-09108

For each element of `pRegions`, `memoryRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `srcImage` **must** be less than or equal to $2^{31}-1$

- VUID-VkCopyImageToMemoryInfoEXT-srcImageLayout-09064

`srcImageLayout` **must** specify the current layout of the image subresources of `srcImage` specified in `pRegions`

- VUID-VkCopyImageToMemoryInfoEXT-srcImageLayout-09065

`srcImageLayout` **must** be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyPropertiesEXT::pCopySrcLayouts`

- VUID-VkCopyImageToMemoryInfoEXT-flags-09394

If `flags` includes `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, for each region in `pRegions`, `memoryRowLength` and `memoryImageHeight` **must** both be 0

Valid Usage (Implicit)

- `VUID-VkCopyImageToMemoryInfoEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_IMAGE_TO_MEMORY_INFO_EXT`
- `VUID-VkCopyImageToMemoryInfoEXT-pNext-pNext`
`pNext` **must** be `NULL`
- `VUID-VkCopyImageToMemoryInfoEXT-flags-parameter`
`flags` **must** be a valid combination of `VkHostImageCopyFlagBitsEXT` values
- `VUID-VkCopyImageToMemoryInfoEXT-srcImage-parameter`
`srcImage` **must** be a valid `VkImage` handle
- `VUID-VkCopyImageToMemoryInfoEXT-srcImageLayout-parameter`
`srcImageLayout` **must** be a valid `VkImageLayout` value
- `VUID-VkCopyImageToMemoryInfoEXT-pRegions-parameter`
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkImageToMemoryCopyEXT` structures
- `VUID-VkCopyImageToMemoryInfoEXT-regionCount-arraylength`
`regionCount` **must** be greater than 0

Each element of `VkCopyImageToMemoryInfoEXT::pRegions` is a structure defined as:

```
// Provided by VK_EXT_host_image_copy
typedef struct VkImageToMemoryCopyEXT {
    VkStructureType    sType;
    const void*        pNext;
    void*              pHostPointer;
    uint32_t            memoryRowLength;
    uint32_t            memoryImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D          imageOffset;
    VkExtent3D          imageExtent;
} VkImageToMemoryCopyEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pHostPointer` is the host memory address which is the destination of the copy.
