    VkDevice          device,
    VkSwapchainKHR    swapchain,
    uint32_t*         pSwapchainImageCount,
    VkImage*          pSwapchainImages);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to query.
- `pSwapchainImageCount` is a pointer to an integer related to the number of presentable images available or queried, as described below.
- `pSwapchainImages` is either `NULL` or a pointer to an array of `VkImage` handles.

If `pSwapchainImages` is `NULL`, then the number of presentable images for `swapchain` is returned in `pSwapchainImageCount`. Otherwise, `pSwapchainImageCount` **must** point to a variable set by the application to the number of elements in the `pSwapchainImages` array, and on return the variable is overwritten with the number of structures actually written to `pSwapchainImages`. If the value of `pSwapchainImageCount` is less than the number of presentable images for `swapchain`, at most `pSwapchainImageCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available presentable images were returned.

Valid Usage (Implicit)

- VUID-vkGetSwapchainImagesKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetSwapchainImagesKHR-swapchain-parameter `swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkGetSwapchainImagesKHR-pSwapchainImageCount-parameter `pSwapchainImageCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetSwapchainImagesKHR-pSwapchainImages-parameter
If the value referenced by `pSwapchainImageCount` is not 0, and `pSwapchainImages` is not `NULL`, `pSwapchainImages` **must** be a valid pointer to an array of `pSwapchainImageCount` `VkImage` handles
- VUID-vkGetSwapchainImagesKHR-swapchain-parent `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

NOTE

By knowing all presentable images used in the swapchain, the application can create command buffers that reference these images prior to entering its main rendering loop. However, command buffers are not allowed to reference presentable images created with `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT` until their indices have been returned from `vkAcquireNextImageKHR` at least once.

Images returned by `vkGetSwapchainImagesKHR` are fully backed by memory before they are passed to the application, as if they are each bound completely and contiguously to a single `VkDeviceMemory` object, unless the swapchain is created with the `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT` flag. All presentable images are initially in the `VK_IMAGE_LAYOUT_UNDEFINED` layout, thus before using presentable images, the application **must** transition them to a valid layout for the intended use.

Further, the lifetime of presentable images is controlled by the implementation, so applications **must** not destroy a presentable image. See `vkDestroySwapchainKHR` for further details on the lifetime of presentable images.

Images **can** also be created by using `vkCreateImage` with `VkImageSwapchainCreateInfoKHR` and bound to swapchain memory using `vkBindImageMemory2` with `VkBindImageMemorySwapchainInfoKHR`. These images **can** be used anywhere swapchain images are used, and are useful in logical devices with multiple physical devices to create peer memory bindings of swapchain memory. These images and bindings have no effect on what memory is presented. Unlike images retrieved from `vkGetSwapchainImagesKHR`, these images **must** be destroyed with `vkDestroyImage`.

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_KHR_swapchain
VkResult vkAcquireNextImageKHR(
    VkDevice           device,
    VkSwapchainKHR     swapchain,
    uint64_t           timeout,
    VkSemaphore        semaphore,
    VkFence             fence,
    uint32_t*          pImageIndex);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the non-retired swapchain from which an image is being acquired.
- `timeout` specifies how long the function waits, in nanoseconds, if no image is available.
- `semaphore` is `VK_NULL_HANDLE` or a semaphore to signal.

- `fence` is `VK_NULL_HANDLE` or a fence to signal.
- `pImageIndex` is a pointer to a `uint32_t` in which the index of the next image to use (i.e. an index into the array of images returned by `vkGetSwapchainImagesKHR`) is returned.

If the `swapchain` has been created with the `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT` flag, the image whose index is returned in `pImageIndex` will be fully backed by memory before this call returns to the application, as if it is bound completely and contiguously to a single `VkDeviceMemory` object.

Valid Usage

- VUID-vkAcquireNextImageKHR-swapchain-01285
`swapchain` **must** not be in the retired state
- VUID-vkAcquireNextImageKHR-semaphore-01286
If `semaphore` is not `VK_NULL_HANDLE`, it **must** be unsignaled
- VUID-vkAcquireNextImageKHR-semaphore-01779
If `semaphore` is not `VK_NULL_HANDLE`, it **must** not have any uncompleted signal or wait operations pending
- VUID-vkAcquireNextImageKHR-fence-01287
If `fence` is not `VK_NULL_HANDLE`, `fence` **must** be unsignaled
- VUID-vkAcquireNextImageKHR-fence-10066
If `fence` is not `VK_NULL_HANDLE`, `fence` **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-vkAcquireNextImageKHR-semaphore-01780
`semaphore` and `fence` **must** not both be equal to `VK_NULL_HANDLE`
- VUID-vkAcquireNextImageKHR-surface-07783
If `forward progress` cannot be guaranteed for the `surface` used to create the `swapchain` member of `pAcquireInfo`, `timeout` **must** not be `UINT64_MAX`
- VUID-vkAcquireNextImageKHR-semaphore-03265
`semaphore` **must** have a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_BINARY`

Valid Usage (Implicit)

- VUID-vkAcquireNextImageKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkAcquireNextImageKHR-swapchain-parameter
`swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkAcquireNextImageKHR-semaphore-parameter
If `semaphore` is not `VK_NULL_HANDLE`, `semaphore` **must** be a valid `VkSemaphore` handle
- VUID-vkAcquireNextImageKHR-fence-parameter
If `fence` is not `VK_NULL_HANDLE`, `fence` **must** be a valid `VkFence` handle
- VUID-vkAcquireNextImageKHR-pImageIndex-parameter

`pImageIndex` **must** be a valid pointer to a `uint32_t` value

- `VUID-vkAcquireNextImageKHR-swapchain-parent`
`swapchain` **must** have been created, allocated, or retrieved from `device`
- `VUID-vkAcquireNextImageKHR-semaphore-parent`
If `semaphore` is a valid handle, it **must** have been created, allocated, or retrieved from `device`
- `VUID-vkAcquireNextImageKHR-fence-parent`
If `fence` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized
- Host access to `semaphore` **must** be externally synchronized
- Host access to `fence` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`
- `VK_TIMEOUT`
- `VK_NOT_READY`
- `VK_SUBOPTIMAL_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_OUT_OF_DATE_KHR`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT`

If an image is acquired successfully, `vkAcquireNextImageKHR` **must** either return `VK_SUCCESS` or `VK_SUBOPTIMAL_KHR`. The implementation **may** return `VK_SUBOPTIMAL_KHR` if the swapchain no longer matches the surface properties exactly, but **can** still be used for presentation.

When successful, `vkAcquireNextImageKHR` acquires a presentable image from `swapchain` that an application **can** use, and sets `pImageIndex` to the index of that image within the swapchain. The presentation engine **may** not have finished reading from the image at the time it is acquired, so the application **must** use `semaphore` and/or `fence` to ensure that the image layout and contents are not modified until the presentation engine reads have completed. Once `vkAcquireNextImageKHR`

successfully acquires an image, the semaphore signal operation referenced by `semaphore`, if not `VK_NULL_HANDLE`, and the fence signal operation referenced by `fence`, if not `VK_NULL_HANDLE`, are submitted for execution. If `vkAcquireNextImageKHR` does not successfully acquire an image, `semaphore` and `fence` are unaffected. The order in which images are acquired is implementation-dependent, and **may** be different than the order the images were presented.

If `timeout` is zero, then `vkAcquireNextImageKHR` does not wait, and will either successfully acquire an image, or fail and return `VK_NOT_READY` if no image is available.

If the specified timeout period expires before an image is acquired, `vkAcquireNextImageKHR` returns `VK_TIMEOUT`. If `timeout` is `UINT64_MAX`, the timeout period is treated as infinite, and `vkAcquireNextImageKHR` will block until an image is acquired or an error occurs.

Let `S` be the number of images in `swapchain`. If `swapchain` is created with `VkSwapchainPresentModesCreateInfoEXT`, let `M` be the maximum of the values in `VkSurfaceCapabilitiesKHR::minImageCount` when queried with each present mode in `VkSwapchainPresentModesCreateInfoEXT::pPresentModes` in `VkSurfacePresentModeEXT`. Otherwise, let `M` be the value of `VkSurfaceCapabilitiesKHR::minImageCount` without a `VkSurfacePresentModeEXT` as part of the query input.

`vkAcquireNextImageKHR` **should** not be called if the number of images that the application has currently acquired is greater than `S-M`. If `vkAcquireNextImageKHR` is called when the number of images that the application has currently acquired is less than or equal to `S-M`, `vkAcquireNextImageKHR` **must** return in finite time with an allowed `VkResult` code.

NOTE

Returning a result in finite time guarantees that the implementation cannot deadlock an application, or suspend its execution indefinitely with correct API usage. Acquiring too many images at once may block indefinitely, which is covered by valid usage when attempting to use `UINT64_MAX`. For example, a scenario here is when a compositor holds on to images which are currently being presented, and there are not any vacant images left to be acquired.

If the swapchain images no longer match native surface properties, either `VK_SUBOPTIMAL_KHR` or `VK_ERROR_OUT_OF_DATE_KHR` **must** be returned. If `VK_ERROR_OUT_OF_DATE_KHR` is returned, no image is acquired and attempts to present previously acquired images to the swapchain will also fail with `VK_ERROR_OUT_OF_DATE_KHR`. Applications need to create a new swapchain for the surface to continue presenting if `VK_ERROR_OUT_OF_DATE_KHR` is returned.

NOTE

`VK_SUBOPTIMAL_KHR` **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain in this state, or to re-create the swapchain to better match the platform surface properties.

If device loss occurs (see [Lost Device](#)) before the timeout has expired, `vkAcquireNextImageKHR` **must** return in finite time with either one of the allowed success codes, or `VK_ERROR_DEVICE_LOST`.

If `semaphore` is not `VK_NULL_HANDLE`, the semaphore **must** be unsignaled, with no signal or wait operations pending. It will become signaled when the application **can** use the image.

NOTE

Use of **semaphore** allows rendering operations to be recorded and submitted before the presentation engine has completed its use of the image.

If **fence** is not equal to **VK_NULL_HANDLE**, the fence **must** be unsignaled, with no signal operations pending. It will become signaled when the application **can** use the image.

NOTE

Applications **should** not rely on **vkAcquireNextImageKHR** blocking in order to meter their rendering speed. The implementation **may** return from this function immediately regardless of how many presentation requests are queued, and regardless of when queued presentation requests will complete relative to the call. Instead, applications **can** use **fence** to meter their frame generation work to match the presentation rate.

An application **must** wait until either the **semaphore** or **fence** is signaled before accessing the image's data.

NOTE

When the presentable image will be accessed by some stage S, the recommended idiom for ensuring correct synchronization is:

- The **VkSubmitInfo** used to submit the image layout transition for execution includes **vkAcquireNextImageKHR::semaphore** in its **pWaitSemaphores** member, with the corresponding element of **pWaitDstStageMask** including S.
- The **synchronization command** that performs any necessary image layout transition includes S in both the **srcStageMask** and **dstStageMask**.

After a successful return, the image indicated by **pImageIndex** and its data will be unmodified compared to when it was presented.

NOTE

Exclusive ownership of presentable images corresponding to a swapchain created with **VK_SHARING_MODE_EXCLUSIVE** as defined in **Resource Sharing** is not altered by a call to **vkAcquireNextImageKHR**. That means upon the first acquisition from such a swapchain presentable images are not owned by any queue family, while at subsequent acquisitions the presentable images remain owned by the queue family the image was previously presented on.

The possible return values for **vkAcquireNextImageKHR** depend on the **timeout** provided:

- **VK_SUCCESS** is returned if an image became available.
- **VK_ERROR_SURFACE_LOST_KHR** is returned if the surface becomes no longer available.
- **VK_NOT_READY** is returned if **timeout** is zero and no image was available.
- **VK_TIMEOUT** is returned if **timeout** is greater than zero and less than **UINT64_MAX**, and no image became available within the time allowed.
- **VK_SUBOPTIMAL_KHR** is returned if an image became available, and the swapchain no longer matches the surface properties exactly, but **can** still be used to present to the surface successfully.

NOTE

This **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain indefinitely or temporarily in this state, or to re-create the swapchain to better match the platform surface properties.

- `VK_ERROR_OUT_OF_DATE_KHR` is returned if the surface has changed in such a way that it is no longer compatible with the swapchain, and further presentation requests using the swapchain will fail. Applications **must** query the new surface properties and recreate their swapchain if they wish to continue presenting to the surface.

If the native surface and presented image sizes no longer match, presentation **may** fail unless the swapchain is created with a non-zero value in `VkSwapchainPresentScalingCreateInfoEXT::scalingBehavior`. If presentation does succeed, the mapping from the presented image to the native surface is defined by the `VkSwapchainPresentScalingCreateInfoEXT` structure if provided. Otherwise it is implementation-defined. It is the application's responsibility to detect surface size changes and react appropriately. If presentation fails because of a mismatch in the surface and presented image sizes, a `VK_ERROR_OUT_OF_DATE_KHR` error will be returned.

NOTE

For example, consider a 4x3 window/surface that gets resized to be 3x4 (taller than wider). On some window systems, the portion of the window/surface that was previously and still is visible (the 3x3 part) will contain the same contents as before, while the remaining parts of the window will have undefined contents. Other window systems **may** squash/stretch the image to fill the new window size without any undefined contents, or apply some other mapping.

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
VkResult vkAcquireNextImage2KHR(
    VkDevice                                device,
    const VkAcquireNextImageInfoKHR*       pAcquireInfo,
    uint32_t*                               pImageIndex);
```

- `device` is the device associated with `swapchain`.
- `pAcquireInfo` is a pointer to a `VkAcquireNextImageInfoKHR` structure containing parameters of the acquire.
- `pImageIndex` is a pointer to a `uint32_t` value specifying the index of the next image to use.

If the `swapchain` has been created with the `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT` flag, the image whose index is returned in `pImageIndex` will be fully backed by memory before this call returns to the application.

Valid Usage

- VUID-vkAcquireNextImage2KHR-surface-07784

If **forward progress** cannot be guaranteed for the **surface** used to create **swapchain**, the **timeout** member of **pAcquireInfo** **must** not be **UINT64_MAX**

Valid Usage (Implicit)

- VUID-vkAcquireNextImage2KHR-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkAcquireNextImage2KHR-pAcquireInfo-parameter
pAcquireInfo **must** be a valid pointer to a valid **VkAcquireNextImageInfoKHR** structure
- VUID-vkAcquireNextImage2KHR-pImageIndex-parameter
pImageIndex **must** be a valid pointer to a **uint32_t** value

Return Codes

Success

- **VK_SUCCESS**
- **VK_TIMEOUT**
- **VK_NOT_READY**
- **VK_SUBOPTIMAL_KHR**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_DEVICE_LOST**
- **VK_ERROR_OUT_OF_DATE_KHR**
- **VK_ERROR_SURFACE_LOST_KHR**
- **VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT**

The **VkAcquireNextImageInfoKHR** structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkAcquireNextImageInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint64_t           timeout;
    VkSemaphore         semaphore;
    VkFence             fence;
    uint32_t           deviceMask;
} VkAcquireNextImageInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **swapchain** is a non-retired swapchain from which an image is acquired.
- **timeout** specifies how long the function waits, in nanoseconds, if no image is available.
- **semaphore** is [VK_NULL_HANDLE](#) or a semaphore to signal.
- **fence** is [VK_NULL_HANDLE](#) or a fence to signal.
- **deviceMask** is a mask of physical devices for which the swapchain image will be ready to use when the semaphore or fence is signaled.

If [vkAcquireNextImageKHR](#) is used, the device mask is considered to include all physical devices in the logical device.

NOTE

[vkAcquireNextImage2KHR](#) signals at most one semaphore, even if the application requests waiting for multiple physical devices to be ready via the **deviceMask**. However, only a single physical device **can** wait on that semaphore, since the semaphore becomes unsignaled when the wait succeeds. For other physical devices to wait for the image to be ready, it is necessary for the application to submit semaphore signal operation(s) to that first physical device to signal additional semaphore(s) after the wait succeeds, which the other physical device(s) **can** wait upon.

Valid Usage

- VUID-VkAcquireNextImageInfoKHR-swapchain-01675
swapchain **must** not be in the retired state
- VUID-VkAcquireNextImageInfoKHR-semaphore-01288
If **semaphore** is not [VK_NULL_HANDLE](#), it **must** be unsignaled
- VUID-VkAcquireNextImageInfoKHR-semaphore-01781
If **semaphore** is not [VK_NULL_HANDLE](#), it **must** not have any uncompleted signal or wait operations pending
- VUID-VkAcquireNextImageInfoKHR-fence-01289

If **fence** is not `VK_NULL_HANDLE`, **fence** **must** be unsigned

- VUID-VkAcquireNextImageInfoKHR-fence-10067

If **fence** is not `VK_NULL_HANDLE`, **fence** **must** not be associated with any other queue command that has not yet completed execution on that queue

- VUID-VkAcquireNextImageInfoKHR-semaphore-01782
semaphore and **fence** **must** not both be equal to `VK_NULL_HANDLE`
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01290
deviceMask **must** be a valid device mask
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01291
deviceMask **must** not be zero
- VUID-VkAcquireNextImageInfoKHR-semaphore-03266
semaphore **must** have a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_BINARY`

Valid Usage (Implicit)

- VUID-VkAcquireNextImageInfoKHR-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_ACQUIRE_NEXT_IMAGE_INFO_KHR`
- VUID-VkAcquireNextImageInfoKHR-pNext-pNext
pNext **must** be `NULL`
- VUID-VkAcquireNextImageInfoKHR-swapchain-parameter
swapchain **must** be a valid `VkSwapchainKHR` handle
- VUID-VkAcquireNextImageInfoKHR-semaphore-parameter
If **semaphore** is not `VK_NULL_HANDLE`, **semaphore** **must** be a valid `VkSemaphore` handle
- VUID-VkAcquireNextImageInfoKHR-fence-parameter
If **fence** is not `VK_NULL_HANDLE`, **fence** **must** be a valid `VkFence` handle
- VUID-VkAcquireNextImageInfoKHR-commonparent
Each of **fence**, **semaphore**, and **swapchain** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to **swapchain** **must** be externally synchronized
- Host access to **semaphore** **must** be externally synchronized
- Host access to **fence** **must** be externally synchronized

After queueing all rendering commands and transitioning the image to the correct layout, to queue an image for presentation, call:

```
// Provided by VK_KHR_swapchain
VkResult vkQueuePresentKHR(
    VkQueue queue,
    const VkPresentInfoKHR* pPresentInfo);
```

- **queue** is a queue that is capable of presentation to the target surface's platform on the same device as the image's swapchain.
- **pPresentInfo** is a pointer to a **VkPresentInfoKHR** structure specifying parameters of the presentation.

NOTE There is no requirement for an application to present images in the same order that they were acquired - applications can arbitrarily present any image that is currently acquired.

NOTE The origin of the native orientation of the surface coordinate system is not specified in the Vulkan specification; it depends on the platform. For most platforms the origin is by default upper-left, meaning the pixel of the presented **VkImage** at coordinates (0,0) would appear at the upper left pixel of the platform surface (assuming **VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR**, and the display standing the right way up).

The result codes **VK_ERROR_OUT_OF_DATE_KHR** and **VK_SUBOPTIMAL_KHR** have the same meaning when returned by **vkQueuePresentKHR** as they do when returned by **vkAcquireNextImageKHR**. If any **swapchain** member of **pPresentInfo** was created with **VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT**, **VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT** will be returned if that swapchain does not have exclusive full-screen access, possibly for implementation-specific reasons outside of the application's control. If multiple swapchains are presented, the result code is determined by applying the following rules in order:

- If the device is lost, **VK_ERROR_DEVICE_LOST** is returned.
- If any of the target surfaces are no longer available the error **VK_ERROR_SURFACE_LOST_KHR** is returned.
- If any of the presents would have a result of **VK_ERROR_OUT_OF_DATE_KHR** if issued separately then **VK_ERROR_OUT_OF_DATE_KHR** is returned.
- If any of the presents would have a result of **VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT** if issued separately then **VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT** is returned.
- If any of the presents would have a result of **VK_SUBOPTIMAL_KHR** if issued separately then **VK_SUBOPTIMAL_KHR** is returned.
- Otherwise **VK_SUCCESS** is returned.

Any writes to memory backing the images referenced by the **pImageIndices** and **pSwapchains** members of **pPresentInfo**, that are available before **vkQueuePresentKHR** is executed, are automatically made visible to the read access performed by the presentation engine. This automatic visibility operation for an image happens-after the semaphore signal operation, and happens-before the presentation engine accesses the image.

Presentation is a read-only operation that will not affect the content of the presentable images. Upon reacquiring the image and transitioning it away from the `VK_IMAGE_LAYOUT_PRESENT_SRC_KHR` layout, the contents will be the same as they were prior to transitioning the image to the present source layout and presenting it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

Calls to `vkQueuePresentKHR` **may** block, but **must** return in finite time. The processing of the presentation happens in issue order with other queue operations, but semaphores **must** be used to ensure that prior rendering and other commands in the specified queue complete before the presentation begins. The presentation command itself does not delay processing of subsequent commands on the queue. However, presentation requests sent to a particular queue are always performed in order. Exact presentation timing is controlled by the semantics of the presentation engine and native platform in use.

If an image is presented to a swapchain created from a display surface, the mode of the associated display will be updated, if necessary, to match the mode specified when creating the display surface. The mode switch and presentation of the specified image will be performed as one atomic operation.

Queueing an image for presentation defines a set of *queue operations*, including waiting on the semaphores and submitting a presentation request to the presentation engine. However, the scope of this set of queue operations does not include the actual processing of the image by the presentation engine.

If `vkQueuePresentKHR` fails to enqueue the corresponding set of queue operations, it **may** return `VK_ERROR_OUT_OF_HOST_MEMORY` or `VK_ERROR_OUT_OF_DEVICE_MEMORY`. If it does, the implementation **must** ensure that the state and contents of any resources or synchronization primitives referenced is unaffected by the call or its failure.

If `vkQueuePresentKHR` fails in such a way that the implementation is unable to make that guarantee, the implementation **must** return `VK_ERROR_DEVICE_LOST`.

However, if the presentation request is rejected by the presentation engine with an error `VK_ERROR_OUT_OF_DATE_KHR`, `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT`, or `VK_ERROR_SURFACE_LOST_KHR`, the set of queue operations are still considered to be enqueued and thus any semaphore wait operation specified in `VkPresentInfoKHR` will execute when the corresponding queue operation is complete.

`vkQueuePresentKHR` releases the acquisition of the images referenced by `imageIndices`. The queue family corresponding to the queue `vkQueuePresentKHR` is executed on **must** have ownership of the presented images as defined in [Resource Sharing](#). `vkQueuePresentKHR` does not alter the queue family ownership, but the presented images **must** not be used again before they have been reacquired using `vkAcquireNextImageKHR`.

NOTE

The application **can** continue to present any acquired images from a retired swapchain as long as the swapchain has not entered a state that causes `vkQueuePresentKHR` to return `VK_ERROR_OUT_OF_DATE_KHR`.

Valid Usage

- VUID-vkQueuePresentKHR-pSwapchains-01292
Each element of `pSwapchains` member of `pPresentInfo` **must** be a swapchain that is created for a surface for which presentation is supported from `queue` as determined using a call to `vkGetPhysicalDeviceSurfaceSupportKHR`
- VUID-vkQueuePresentKHR-pSwapchains-01293
If more than one member of `pSwapchains` was created from a display surface, all display surfaces referenced that refer to the same display **must** use the same display mode
- VUID-vkQueuePresentKHR-pWaitSemaphores-01294
When a semaphore wait operation referring to a binary semaphore defined by the elements of the `pWaitSemaphores` member of `pPresentInfo` executes on `queue`, there **must** be no other queues waiting on the same semaphore
- VUID-vkQueuePresentKHR-pWaitSemaphores-03267
All elements of the `pWaitSemaphores` member of `pPresentInfo` **must** be created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_BINARY`
- VUID-vkQueuePresentKHR-pWaitSemaphores-03268
All elements of the `pWaitSemaphores` member of `pPresentInfo` **must** reference a semaphore signal operation that has been submitted for execution and any `semaphore signal operations` on which it depends **must** have also been submitted for execution

Valid Usage (Implicit)

- VUID-vkQueuePresentKHR-queue-parameter
`queue` **must** be a valid `VkQueue` handle
- VUID-vkQueuePresentKHR-pPresentInfo-parameter
`pPresentInfo` **must** be a valid pointer to a valid `VkPresentInfoKHR` structure

Host Synchronization

- Host access to `queue` **must** be externally synchronized
- Host access to `pPresentInfo->pWaitSemaphores[]` **must** be externally synchronized
- Host access to `pPresentInfo->pSwapchains[]` **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	Any	-

Return Codes

Success

- `VK_SUCCESS`
- `VK_SUBOPTIMAL_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_OUT_OF_DATE_KHR`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT`

The `VkPresentInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain
typedef struct VkPresentInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           waitSemaphoreCount;
    const VkSemaphore* pWaitSemaphores;
    uint32_t           swapchainCount;
    const VkSwapchainKHR* pSwapchains;
    const uint32_t*     pImageIndices;
    VkResult*          pResults;
} VkPresentInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `waitSemaphoreCount` is the number of semaphores to wait for before issuing the present request. The number **may** be zero.
- `pWaitSemaphores` is `NULL` or a pointer to an array of `VkSemaphore` objects with `waitSemaphoreCount` entries, and specifies the semaphores to wait for before issuing the present request.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pSwapchains` is a pointer to an array of `VkSwapchainKHR` objects with `swapchainCount` entries.
- `pImageIndices` is a pointer to an array of indices into the array of each swapchain's presentable images, with `swapchainCount` entries. Each entry in this array identifies the image to present on the corresponding entry in the `pSwapchains` array.
- `pResults` is a pointer to an array of `VkResult` typed elements with `swapchainCount` entries. Applications that do not need per-swapchain results **can** use `NULL` for `pResults`. If non-`NULL`, each entry in `pResults` will be set to the `VkResult` for presenting the swapchain corresponding to the

same index in `pSwapchains`.

Before an application **can** present an image, the image's layout **must** be transitioned to the `VK_IMAGE_LAYOUT_PRESENT_SRC_KHR` layout, or for a shared presentable image the `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR` layout.

NOTE

When transitioning the image to `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR` or `VK_IMAGE_LAYOUT_PRESENT_SRC_KHR`, there is no need to delay subsequent processing, or perform any visibility operations (as `vkQueuePresentKHR` performs automatic visibility operations). To achieve this, the `dstAccessMask` member of the `VkImageMemoryBarrier` **should** be `0`, and the `dstStageMask` parameter **should** be `VK_PIPELINE_STAGE_BOTTOM_OF_PIPE_BIT`.

Valid Usage

- VUID-VkPresentInfoKHR-pSwapchain-09231
Elements of `pSwapchain` **must** be unique
- VUID-VkPresentInfoKHR-pImageIndices-01430
Each element of `pImageIndices` **must** be the index of a presentable image acquired from the swapchain specified by the corresponding element of the `pSwapchains` array, and the presented image subresource **must** be in the `VK_IMAGE_LAYOUT_PRESENT_SRC_KHR` or `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR` layout at the time the operation is executed on a `VkDevice`
- VUID-VkPresentInfoKHR-pNext-06235
If a `VkPresentIdKHR` structure is included in the `pNext` chain, and the `presentId` feature is not enabled, each `presentIds` entry in that structure **must** be `NULL`
- VUID-VkPresentInfoKHR-swapchainMaintenance1-10158
If the `swapchainMaintenance1` feature is not enabled, then the `pNext` chain **must** not include a `VkSwapchainPresentFenceInfoEXT` structure
- VUID-VkPresentInfoKHR-pSwapchains-09199
If any element of the `pSwapchains` array has been created with `VkSwapchainPresentModesCreateInfoEXT`, all of the elements of this array **must** be created with `VkSwapchainPresentModesCreateInfoEXT`

Valid Usage (Implicit)

- VUID-VkPresentInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_INFO_KHR`
- VUID-VkPresentInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDeviceGroupPresentInfoKHR`, `VkDisplayPresentInfoKHR`, `VkFrameBoundaryEXT`, `VkPresentFrameTokenGGP`, `VkPresentIdKHR`, `VkPresentRegionsKHR`, `VkPresentTimesInfoGOOGLE`, `VkSwapchainPresentFenceInfoEXT`, or `VkSwapchainPresentModeInfoEXT`

- VUID-VkPresentInfoKHR-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique
- VUID-VkPresentInfoKHR-pWaitSemaphores-parameter
If **waitSemaphoreCount** is not 0, **pWaitSemaphores** **must** be a valid pointer to an array of **waitSemaphoreCount** valid **VkSemaphore** handles
- VUID-VkPresentInfoKHR-pSwapchains-parameter
pSwapchains **must** be a valid pointer to an array of **swapchainCount** valid **VkSwapchainKHR** handles
- VUID-VkPresentInfoKHR-pImageIndices-parameter
pImageIndices **must** be a valid pointer to an array of **swapchainCount** **uint32_t** values
- VUID-VkPresentInfoKHR-pResults-parameter
If **pResults** is not **NULL**, **pResults** **must** be a valid pointer to an array of **swapchainCount** **VkResult** values
- VUID-VkPresentInfoKHR-swapchainCount-arraylength
swapchainCount **must** be greater than 0
- VUID-VkPresentInfoKHR-commonparent
Both of the elements of **pSwapchains**, and the elements of **pWaitSemaphores** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same **VkDevice**

When the **VK_KHR_incremental_present** extension is enabled, additional fields **can** be specified that allow an application to specify that only certain rectangular regions of the presentable images of a swapchain are changed. This is an optimization hint that a presentation engine **may** use to only update the region of a surface that is actually changing. The application still **must** ensure that all pixels of a presented image contain the desired values, in case the presentation engine ignores this hint. An application **can** provide this hint by adding a **VkPresentRegionsKHR** structure to the **pNext** chain of the **VkPresentInfoKHR** structure.

The **VkPresentRegionsKHR** structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionsKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkPresentRegionKHR* pRegions;
} VkPresentRegionsKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **swapchainCount** is the number of swapchains being presented to by this command.
- **pRegions** is **NULL** or a pointer to an array of **VkPresentRegionKHR** elements with **swapchainCount** entries. If not **NULL**, each element of **pRegions** contains the region that has changed since the last

present to the swapchain in the corresponding entry in the `VkPresentInfoKHR::pSwapchains` array.

Valid Usage

- VUID-VkPresentRegionsKHR-swapchainCount-01260
`swapchainCount` **must** be the same value as `VkPresentInfoKHR::swapchainCount`, where `VkPresentInfoKHR` is included in the `pNext` chain of this `VkPresentRegionsKHR` structure

Valid Usage (Implicit)

- VUID-VkPresentRegionsKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_REGIONS_KHR`
- VUID-VkPresentRegionsKHR-pRegions-parameter
If `pRegions` is not `NULL`, `pRegions` **must** be a valid pointer to an array of `swapchainCount` valid `VkPresentRegionKHR` structures
- VUID-VkPresentRegionsKHR-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0

For a given image and swapchain, the region to present is specified by the `VkPresentRegionKHR` structure, which is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionKHR {
    uint32_t          rectangleCount;
    const VkRectLayerKHR* pRectangles;
} VkPresentRegionKHR;
```

- `rectangleCount` is the number of rectangles in `pRectangles`, or zero if the entire image has changed and should be presented.
- `pRectangles` is either `NULL` or a pointer to an array of `VkRectLayerKHR` structures. The `VkRectLayerKHR` structure is the framebuffer coordinates, plus layer, of a portion of a presentable image that has changed and **must** be presented. If non-`NULL`, each entry in `pRectangles` is a rectangle of the given image that has changed since the last image was presented to the given swapchain. The rectangles **must** be specified relative to `VkSurfaceCapabilitiesKHR::currentTransform`, regardless of the swapchain's `preTransform`. The presentation engine will apply the `preTransform` transformation to the rectangles, along with any further transformation it applies to the image content.

Valid Usage (Implicit)

- VUID-VkPresentRegionKHR-pRectangles-parameter
If `rectangleCount` is not 0, and `pRectangles` is not `NULL`, `pRectangles` **must** be a valid pointer to an array of `rectangleCount` valid `VkRectLayerKHR` structures

The `VkRectLayerKHR` structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkRectLayerKHR {
    VkOffset2D    offset;
    VkExtent2D    extent;
    uint32_t      layer;
} VkRectLayerKHR;
```

- `offset` is the origin of the rectangle, in pixels.
- `extent` is the size of the rectangle, in pixels.
- `layer` is the layer of the image. For images with only one layer, the value of `layer` **must** be 0.

Some platforms allow the size of a surface to change, and then scale the pixels of the image to fit the surface. `VkRectLayerKHR` specifies pixels of the swapchain's image(s), which will be constant for the life of the swapchain.

Valid Usage

- VUID-VkRectLayerKHR-offset-04864
The sum of `offset` and `extent`, after being transformed according to the `preTransform` member of the `VkSwapchainCreateInfoKHR` structure, **must** be no greater than the `imageExtent` member of the `VkSwapchainCreateInfoKHR` structure passed to `vkCreateSwapchainKHR`
- VUID-VkRectLayerKHR-layer-01262
`layer` **must** be less than the `imageArrayLayers` member of the `VkSwapchainCreateInfoKHR` structure passed to `vkCreateSwapchainKHR`

When the `VK_KHR_display_swapchain` extension is enabled, additional fields **can** be specified when presenting an image to a swapchain by setting `VkPresentInfoKHR::pNext` to point to a `VkDisplayPresentInfoKHR` structure.

The `VkDisplayPresentInfoKHR` structure is defined as:

```
// Provided by VK_KHR_display_swapchain
typedef struct VkDisplayPresentInfoKHR {
    VkStructureType    sType;
    const void*         pNext;
    VkRect2D            srcRect;
    VkRect2D            dstRect;
    VkBool32            persistent;
} VkDisplayPresentInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- **srcRect** is a rectangular region of pixels to present. It **must** be a subset of the image being presented. If **VkDisplayPresentInfoKHR** is not specified, this region will be assumed to be the entire presentable image.
- **dstRect** is a rectangular region within the visible region of the swapchain's display mode. If **VkDisplayPresentInfoKHR** is not specified, this region will be assumed to be the entire visible region of the swapchain's mode. If the specified rectangle is a subset of the display mode's visible region, content from display planes below the swapchain's plane will be visible outside the rectangle. If there are no planes below the swapchain's, the area outside the specified rectangle will be black. If portions of the specified rectangle are outside of the display's visible region, pixels mapping only to those portions of the rectangle will be discarded.
- **persistent**: If this is **VK_TRUE**, the display engine will enable buffered mode on displays that support it. This allows the display engine to stop sending content to the display until a new image is presented. The display will instead maintain a copy of the last presented image. This allows less power to be used, but **may** increase presentation latency. If **VkDisplayPresentInfoKHR** is not specified, persistent mode will not be used.

If the extent of the **srcRect** and **dstRect** are not equal, the presented pixels will be scaled accordingly.

Valid Usage

- VUID-VkDisplayPresentInfoKHR-srcRect-01257
srcRect **must** specify a rectangular region that is a subset of the image being presented
- VUID-VkDisplayPresentInfoKHR-dstRect-01258
dstRect **must** specify a rectangular region that is a subset of the **visibleRegion** parameter of the display mode the swapchain being presented uses
- VUID-VkDisplayPresentInfoKHR-persistentContent-01259
If the **persistentContent** member of the **VkDisplayPropertiesKHR** structure returned by **vkGetPhysicalDeviceDisplayPropertiesKHR** for the display the present operation targets is **VK_FALSE**, then **persistent** **must** be **VK_FALSE**

Valid Usage (Implicit)

- VUID-VkDisplayPresentInfoKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_DISPLAY_PRESENT_INFO_KHR**

If the **pNext** chain of **VkPresentInfoKHR** includes a **VkDeviceGroupPresentInfoKHR** structure, then that structure includes an array of device masks and a device group present mode.

The **VkDeviceGroupPresentInfoKHR** structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkDeviceGroupPresentInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 swapchainCount;
    const uint32_t*          pDeviceMasks;
    VkDeviceGroupPresentModeFlagBitsKHR mode;
} VkDeviceGroupPresentInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is zero or the number of elements in `pDeviceMasks`.
- `pDeviceMasks` is a pointer to an array of device masks, one for each element of `VkPresentInfoKHR::pSwapchains`.
- `mode` is a `VkDeviceGroupPresentModeFlagBitsKHR` value specifying the device group present mode that will be used for this present.

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`, then each element of `pDeviceMasks` selects which instance of the swapchain image is presented. Each element of `pDeviceMasks` **must** have exactly one bit set, and the corresponding physical device **must** have a presentation engine as reported by `VkDeviceGroupPresentCapabilitiesKHR`.

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR`, then each element of `pDeviceMasks` selects which instance of the swapchain image is presented. Each element of `pDeviceMasks` **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its `VkDeviceGroupPresentCapabilitiesKHR::presentMask`.

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR`, then each element of `pDeviceMasks` selects which instances of the swapchain image are component-wise summed and the sum of those images is presented. If the sum in any component is outside the representable range, the value of that component is undefined. Each element of `pDeviceMasks` **must** have a value for which all set bits are set in one of the elements of `VkDeviceGroupPresentCapabilitiesKHR::presentMask`.

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR`, then each element of `pDeviceMasks` selects which instance(s) of the swapchain images are presented. For each bit set in each element of `pDeviceMasks`, the corresponding physical device **must** have a presentation engine as reported by `VkDeviceGroupPresentCapabilitiesKHR`.

If `VkDeviceGroupPresentInfoKHR` is not provided or `swapchainCount` is zero then the masks are considered to be 1. If `VkDeviceGroupPresentInfoKHR` is not provided, `mode` is considered to be `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`.

Valid Usage

- VUID-VkDeviceGroupPresentInfoKHR-swapchainCount-01297

`swapchainCount` **must** equal 0 or `VkPresentInfoKHR::swapchainCount`

- VUID-VkDeviceGroupPresentInfoKHR-mode-01298

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`, then each element of `pDeviceMasks` **must** have exactly one bit set, and the corresponding element of `VkDeviceGroupPresentCapabilitiesKHR::presentMask` **must** be non-zero

- VUID-VkDeviceGroupPresentInfoKHR-mode-01299

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR`, then each element of `pDeviceMasks` **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its `VkDeviceGroupPresentCapabilitiesKHR::presentMask`

- VUID-VkDeviceGroupPresentInfoKHR-mode-01300

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR`, then each element of `pDeviceMasks` **must** have a value for which all set bits are set in one of the elements of `VkDeviceGroupPresentCapabilitiesKHR::presentMask`

- VUID-VkDeviceGroupPresentInfoKHR-mode-01301

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR`, then for each bit set in each element of `pDeviceMasks`, the corresponding element of `VkDeviceGroupPresentCapabilitiesKHR::presentMask` **must** be non-zero

- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-01302

The value of each element of `pDeviceMasks` **must** be equal to the device mask passed in `VkAcquireNextImageInfoKHR::deviceMask` when the image index was last acquired

- VUID-VkDeviceGroupPresentInfoKHR-mode-01303

`mode` **must** have exactly one bit set, and that bit **must** have been included in `VkDeviceGroupSwapchainCreateInfoKHR::modes`

Valid Usage (Implicit)

- VUID-VkDeviceGroupPresentInfoKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_INFO_KHR`

- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-parameter

If `swapchainCount` is not 0, `pDeviceMasks` **must** be a valid pointer to an array of `swapchainCount` `uint32_t` values

- VUID-VkDeviceGroupPresentInfoKHR-mode-parameter

`mode` **must** be a valid `VkDeviceGroupPresentModeFlagBitsKHR` value

When the `VK_GOOGLE_display_timing` extension is enabled, additional fields **can** be specified that allow an application to specify the earliest time that an image should be displayed. This allows an application to avoid stutter that is caused by an image being displayed earlier than planned. Such stuttering can occur with both fixed and variable-refresh-rate displays, because stuttering occurs when the geometry is not correctly positioned for when the image is displayed. An application **can** instruct the presentation engine that an image should not be displayed earlier than a specified time by adding a `VkPresentTimesInfoGOOGLE` structure to the `pNext` chain of the `VkPresentInfoKHR` structure.

The `VkPresentTimesInfoGOOGLE` structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkPresentTimesInfoGOOGLE {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkPresentTimeGOOGLE* pTimes;
} VkPresentTimesInfoGOOGLE;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pTimes` is `NULL` or a pointer to an array of `VkPresentTimeGOOGLE` elements with `swapchainCount` entries. If not `NULL`, each element of `pTimes` contains the earliest time to present the image corresponding to the entry in the `VkPresentInfoKHR::pImageIndices` array.

Valid Usage

- VUID-VkPresentTimesInfoGOOGLE-swapchainCount-01247
`swapchainCount` **must** be the same value as `VkPresentInfoKHR::swapchainCount`, where `VkPresentInfoKHR` is included in the `pNext` chain of this `VkPresentTimesInfoGOOGLE` structure

Valid Usage (Implicit)

- VUID-VkPresentTimesInfoGOOGLE-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_TIMES_INFO_GOOGLE`
- VUID-VkPresentTimesInfoGOOGLE-pTimes-parameter
If `pTimes` is not `NULL`, `pTimes` **must** be a valid pointer to an array of `swapchainCount` `VkPresentTimeGOOGLE` structures
- VUID-VkPresentTimesInfoGOOGLE-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0

The `VkPresentTimeGOOGLE` structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkPresentTimeGOOGLE {
    uint32_t    presentID;
    uint64_t    desiredPresentTime;
} VkPresentTimeGOOGLE;
```

- `presentID` is an application-provided identification value, that **can** be used with the results of `vkGetPastPresentationTimingGOOGLE`, in order to uniquely identify this present. In order to be useful to the application, it **should** be unique within some period of time that is meaningful to

the application.

- **desiredPresentTime** specifies that the image given **should** not be displayed to the user any earlier than this time. **desiredPresentTime** is a time in nanoseconds, relative to a monotonically-increasing clock (e.g. **CLOCK_MONOTONIC** (see `clock_gettime(2)`) on Android and Linux). A value of zero specifies that the presentation engine **may** display the image at any time. This is useful when the application desires to provide **presentID**, but does not need a specific **desiredPresentTime**.

The **VkPresentIdKHR** structure is defined as:

```
// Provided by VK_KHR_present_id
typedef struct VkPresentIdKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const uint64_t*     pPresentIds;
} VkPresentIdKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **swapchainCount** is the number of swapchains being presented to the **vkQueuePresentKHR** command.
- **pPresentIds** is **NULL** or a pointer to an array of **uint64_t** with **swapchainCount** entries. If not **NULL**, each non-zero value in **pPresentIds** specifies the present id to be associated with the presentation of the swapchain with the same index in the **vkQueuePresentKHR** call.

For applications to be able to reference specific presentation events queued by a call to **vkQueuePresentKHR**, an identifier needs to be associated with them. When the **presentId** feature is enabled, applications **can** include the **VkPresentIdKHR** structure in the **pNext** chain of the **VkPresentInfoKHR** structure to supply identifiers.

Each **VkSwapchainKHR** has a **presentId** associated with it. This value is initially zero when the **VkSwapchainKHR** is created.

When a **VkPresentIdKHR** structure with a non-**NULL** **pPresentIds** is included in the **pNext** chain of a **VkPresentInfoKHR** structure, each **pSwapchains** entry has a **presentId** associated in the **pPresentIds** array at the same index as the swapchain in the **pSwapchains** array. If this **presentId** is non-zero, then the application **can** later use this value to refer to that image presentation. A value of zero indicates that this presentation has no associated **presentId**. A non-zero **presentId** **must** be greater than any non-zero **presentId** passed previously by the application for the same swapchain.

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the **presentId** value, but implementations **should** make this as close as possible to the presentation of the first pixel in the new image to the user.

Valid Usage

- VUID-VkPresentIdKHR-swapchainCount-04998
`swapchainCount` **must** be the same value as `VkPresentInfoKHR::swapchainCount`, where this `VkPresentIdKHR` is in the `pNext` chain of the `VkPresentInfoKHR` structure
- VUID-VkPresentIdKHR-presentIds-04999
Each `presentIds` entry **must** be greater than any previous `presentIds` entry passed for the associated `pSwapchains` entry

Valid Usage (Implicit)

- VUID-VkPresentIdKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_ID_KHR`
- VUID-VkPresentIdKHR-pPresentIds-parameter
If `pPresentIds` is not `NULL`, `pPresentIds` **must** be a valid pointer to an array of `swapchainCount uint64_t` values
- VUID-VkPresentIdKHR-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0

When the `presentWait` feature is enabled, an application **can** wait for an image to be presented to the user by first specifying a `presentId` for the target presentation by adding a `VkPresentIdKHR` structure to the `pNext` chain of the `VkPresentInfoKHR` structure and then waiting for that presentation to complete by calling:

```
// Provided by VK_KHR_present_wait
VkResult vkWaitForPresentKHR(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    uint64_t          presentId,
    uint64_t          timeout);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the non-retired swapchain on which an image was queued for presentation.
- `presentId` is the presentation `presentId` to wait for.
- `timeout` is the timeout period in units of nanoseconds. `timeout` is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer than one nanosecond, and **may** be longer than the requested period.

`vkWaitForPresentKHR` waits for the `presentId` associated with `swapchain` to be increased in value so that it is at least equal to `presentId`.

For `VK_PRESENT_MODE_MAILBOX_KHR` (or other present mode where images may be replaced in the presentation queue) any wait of this type associated with such an image **must** be signaled no later

than a wait associated with the replacing image would be signaled.

When the presentation has completed, the `presentId` associated with the related `pSwapchains` entry will be increased in value so that it is at least equal to the value provided in the `VkPresentIdKHR` structure.

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the `presentId` value, but implementations **should** make this as close as possible to the presentation of the first pixel in the next image being presented to the user.

The call to `vkWaitForPresentKHR` will block until either the `presentId` associated with `swapchain` is greater than or equal to `presentId`, or `timeout` nanoseconds passes. When the swapchain becomes `OUT_OF_DATE`, the call will either return `VK_SUCCESS` (if the image was delivered to the presentation engine and may have been presented to the user) or will return early with status `VK_ERROR_OUT_OF_DATE_KHR` (if the image was not presented to the user).

As an exception to the normal rules for objects which are externally synchronized, the `swapchain` passed to `vkWaitForPresentKHR` **may** be simultaneously used by other threads in calls to functions other than `vkDestroySwapchainKHR`. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage

- VUID-vkWaitForPresentKHR-swapchain-04997
`swapchain` **must** not be in the retired state
- VUID-vkWaitForPresentKHR-presentWait-06234
The `presentWait` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkWaitForPresentKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkWaitForPresentKHR-swapchain-parameter
`swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkWaitForPresentKHR-swapchain-parent
`swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`
- `VK_TIMEOUT`
- `VK_SUBOPTIMAL_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_OUT_OF_DATE_KHR`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT`

When the `VK_GGP_frame_token` extension is enabled, a Google Games Platform frame token **can** be specified when presenting an image to a swapchain by adding a `VkPresentFrameTokenGGP` structure to the `pNext` chain of the `VkPresentInfoKHR` structure.

The `VkPresentFrameTokenGGP` structure is defined as:

```
// Provided by VK_GGP_frame_token
typedef struct VkPresentFrameTokenGGP {
    VkStructureType    sType;
    const void*        pNext;
    GgpFrameToken      frameToken;
} VkPresentFrameTokenGGP;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `frameToken` is the Google Games Platform frame token.

Valid Usage

- VUID-VkPresentFrameTokenGGP-frameToken-02680
`frameToken` **must** be a valid `GgpFrameToken`

Valid Usage (Implicit)

- VUID-VkPresentFrameTokenGGP-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_FRAME_TOKEN_GGP`

The `VkSwapchainPresentModeInfoEXT` structure is defined as:

```
// Provided by VK_EXT_swapchain_maintenance1
typedef struct VkSwapchainPresentModeInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             swapchainCount;
    const VkPresentModeKHR* pPresentModes;
} VkSwapchainPresentModeInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pPresentModes` is a list of presentation modes with `swapchainCount` entries.

If the `pNext` chain of `VkPresentInfoKHR` includes a `VkSwapchainPresentModeInfoEXT` structure, then that structure defines the presentation modes used for the current and subsequent presentation operations.

When the application changes present modes with `VkSwapchainPresentModeInfoEXT`, images that have already been queued for presentation will continue to be presented according to the previous present mode. The current image being queued for presentation and subsequent images will be presented according to the new present mode. The behavior during the transition between the two modes is defined as follows.

- Transition from `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR` to `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR`: the presentation engine updates the shared presentable image according to the behavior of `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR`.
- Transition from `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR` to `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR`: the presentation engine **may** update the shared presentable image or defer that to its regular refresh cycle, according to the behavior of `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR`.
- Transition between `VK_PRESENT_MODE_FIFO_KHR` and `VK_PRESENT_MODE_FIFO_RELAXED_KHR`: Images continue to be appended to the same FIFO queue, and the behavior with respect to waiting for vertical blanking period will follow the new mode for current and subsequent images.
- Transition from `VK_PRESENT_MODE_IMMEDIATE_KHR` to `VK_PRESENT_MODE_FIFO_KHR` or `VK_PRESENT_MODE_FIFO_RELAXED_KHR` or `VK_PRESENT_MODE_FIFO_LATEST_READY_EXT` : As all prior present requests in the `VK_PRESENT_MODE_IMMEDIATE_KHR` mode are applied immediately, there are no outstanding present operations in this mode, and current and subsequent images are appended to the FIFO queue and presented according to the new mode.
- Transition from `VK_PRESENT_MODE_MAILBOX_KHR` to `VK_PRESENT_MODE_FIFO_KHR` or `VK_PRESENT_MODE_FIFO_RELAXED_KHR` or `VK_PRESENT_MODE_FIFO_LATEST_READY_EXT` : Presentation in FIFO modes require waiting for the next vertical blanking period, with `VK_PRESENT_MODE_MAILBOX_KHR` allowing the pending present operation to be replaced by a new one. In this case, the current present operation will replace the pending present operation and

is applied according to the new mode.

- Transition from `VK_PRESENT_MODE_FIFO_KHR` or `VK_PRESENT_MODE_FIFO_RELAXED_KHR` or `VK_PRESENT_MODE_FIFO_LATEST_READY_EXT` to `VK_PRESENT_MODE_IMMEDIATE_KHR` or `VK_PRESENT_MODE_MAILBOX_KHR`: If the FIFO queue is empty, presentation is done according to the behavior of the new mode. If there are present operations in the FIFO queue, once the last present operation is performed based on the respective vertical blanking period, the current and subsequent updates are applied according to the new mode.
- Transition between `VK_PRESENT_MODE_FIFO_KHR` or `VK_PRESENT_MODE_FIFO_RELAXED_KHR`, and `VK_PRESENT_MODE_FIFO_LATEST_READY_EXT`: Images continue to be appended to the same FIFO queue, and the behavior with respect to waiting for vertical blanking period and dequeuing requests will follow the new mode for current and subsequent images.
- The behavior during transition between any other present modes, if possible, is implementation defined.

Valid Usage

- VUID-VkSwapchainPresentModeInfoEXT-swapchainCount-07760
`swapchainCount` **must** be equal to `VkPresentInfoKHR::swapchainCount`
- VUID-VkSwapchainPresentModeInfoEXT-pPresentModes-07761
Each entry in `pPresentModes` **must** be a presentation mode specified in `VkSwapchainPresentModesCreateInfoEXT::pPresentModes` when creating the entry's corresponding swapchain

Valid Usage (Implicit)

- VUID-VkSwapchainPresentModeInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_MODE_INFO_EXT`
- VUID-VkSwapchainPresentModeInfoEXT-pPresentModes-parameter
`pPresentModes` **must** be a valid pointer to an array of `swapchainCount` valid `VkPresentModeKHR` values
- VUID-VkSwapchainPresentModeInfoEXT-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0

The `VkSwapchainPresentFenceInfoEXT` structure is defined as:

```
// Provided by VK_EXT_swapchain_maintenance1
typedef struct VkSwapchainPresentFenceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkFence*      pFences;
} VkSwapchainPresentFenceInfoEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **swapchainCount** is the number of swapchains being presented to by this command.
- **pFences** is a list of fences with **swapchainCount** entries. Each entry **must** be **VK_NULL_HANDLE** or the handle of a fence to signal when the relevant operations on the associated swapchain have completed.

The set of *queue operations* defined by queuing an image for presentation, as well as operations performed by the presentation engine access the payloads of objects associated with the presentation operation. The associated objects include:

- The swapchain image, its implicitly bound memory, and any other resources bound to that memory.
- The wait semaphores specified when queuing the image for presentation.

The application **can** provide a fence that the implementation will signal when all such queue operations have completed and the presentation engine has taken a reference to the payload of any objects it accesses as part of the present operation. For all binary wait semaphores imported by the presentation engine using the equivalent of reference transference, as described in [Importing Semaphore Payloads](#), this fence **must** not signal until all such semaphore payloads have been reset by the presentation engine.

The application **can** destroy the wait semaphores associated with a given presentation operation when at least one of the associated fences is signaled, and **can** destroy the swapchain when the fences associated with all past presentation requests referring to that swapchain have signaled.

Fences associated with presentations to the same swapchain on the same **VkQueue** **must** be signaled in the same order as the present operations.

To specify a fence for each swapchain in a present operation, include the **VkSwapchainPresentFenceInfoEXT** structure in the **pNext** chain of the **VkPresentInfoKHR** structure.

Valid Usage

- VUID-VkSwapchainPresentFenceInfoEXT-swapchainCount-07757
swapchainCount **must** be equal to **VkPresentInfoKHR::swapchainCount**
- VUID-VkSwapchainPresentFenceInfoEXT-pFences-07758
Each element of **pFences** that is not **VK_NULL_HANDLE** **must** be unsignaled
- VUID-VkSwapchainPresentFenceInfoEXT-pFences-07759
Each element of **pFences** that is not **VK_NULL_HANDLE** **must** not be associated with any other queue command that has not yet completed execution on that queue

Valid Usage (Implicit)

- VUID-VkSwapchainPresentFenceInfoEXT-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_FENCE_INFO_EXT`

- VUID-VkSwapchainPresentFenceInfoEXT-pFences-parameter
`pFences` **must** be a valid pointer to an array of `swapchainCount` valid `VkFence` handles
- VUID-VkSwapchainPresentFenceInfoEXT-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0

To release images previously acquired through `vkAcquireNextImage2KHR` or `vkAcquireNextImageKHR`, call:

```
// Provided by VK_EXT_swapchain_maintenance1
VkResult vkReleaseSwapchainImagesEXT(
    VkDevice device,
    const VkReleaseSwapchainImagesInfoEXT* pReleaseInfo);
```

- `device` is the device associated with `VkReleaseSwapchainImagesInfoEXT::swapchain`.
- `pReleaseInfo` is a pointer to a `VkReleaseSwapchainImagesInfoEXT` structure containing parameters of the release.

Only images that are not in use by the device **can** be released.

Releasing images is a read-only operation that will not affect the content of the released images. Upon reacquiring the image, the image contents and its layout will be the same as they were prior to releasing it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

NOTE

This functionality is useful during swapchain recreation, where acquired images from the old swapchain can be released instead of presented.

Valid Usage

- VUID-vkReleaseSwapchainImagesEXT-swapchainMaintenance1-10159
Feature `swapchainMaintenance1` **must** be enabled

Valid Usage (Implicit)

- VUID-vkReleaseSwapchainImagesEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkReleaseSwapchainImagesEXT-pReleaseInfo-parameter
`pReleaseInfo` **must** be a valid pointer to a valid `VkReleaseSwapchainImagesInfoEXT` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_SURFACE_LOST_KHR`

The `VkReleaseSwapchainImagesInfoEXT` structure is defined as:

```
// Provided by VK_EXT_swapchain_maintenance1
typedef struct VkReleaseSwapchainImagesInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint32_t           imageIndexCount;
    const uint32_t*    pImageIndices;
} VkReleaseSwapchainImagesInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is a swapchain to which images are being released.
- `imageIndexCount` is the number of image indices to be released.
- `pImageIndices` is a pointer to an array of indices into the array of `swapchain`'s presentable images, with `imageIndexCount` entries.

Valid Usage

- VUID-VkReleaseSwapchainImagesInfoEXT-pImageIndices-07785
Each element of `pImageIndices` **must** be the index of a presentable image acquired from the swapchain specified by `swapchain`
- VUID-VkReleaseSwapchainImagesInfoEXT-pImageIndices-07786
All uses of presentable images identified by elements of `pImageIndices` **must** have completed execution

Valid Usage (Implicit)

- VUID-VkReleaseSwapchainImagesInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RELEASE_SWAPCHAIN_IMAGES_INFO_EXT`
- VUID-VkReleaseSwapchainImagesInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkReleaseSwapchainImagesInfoEXT-swapchain-parameter

`swapchain` **must** be a valid `VkSwapchainKHR` handle

- VUID-VkReleaseSwapchainImagesInfoEXT-pImageIndices-parameter
`pImageIndices` **must** be a valid pointer to an array of `imageIndexCount` `uint32_t` values
- VUID-VkReleaseSwapchainImagesInfoEXT-imageIndexCount-arraylength
`imageIndexCount` **must** be greater than `0`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

34.11. HDR Metadata

This section describes how to improve color reproduction of content to better reproduce colors as seen on the display used to originally optimize the content.

To provide HDR metadata to an implementation, call:

```
// Provided by VK_EXT_hdr_metadata
void vkSetHdrMetadataEXT(
    VkDevice          device,
    uint32_t          swapchainCount,
    const VkSwapchainKHR* pSwapchains,
    const VkHdrMetadataEXT* pMetadata);
```

- `device` is the logical device where the swapchain(s) were created.
- `swapchainCount` is the number of swapchains included in `pSwapchains`.
- `pSwapchains` is a pointer to an array of `swapchainCount` `VkSwapchainKHR` handles.
- `pMetadata` is a pointer to an array of `swapchainCount` `VkHdrMetadataEXT` structures.

The metadata will be applied to the specified `VkSwapchainKHR` objects at the next `vkQueuePresentKHR` call using that `VkSwapchainKHR` object. The metadata will persist until a subsequent `vkSetHdrMetadataEXT` changes it.

Valid Usage (Implicit)

- VUID-vkSetHdrMetadataEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkSetHdrMetadataEXT-pSwapchains-parameter
`pSwapchains` **must** be a valid pointer to an array of `swapchainCount` valid `VkSwapchainKHR` handles
- VUID-vkSetHdrMetadataEXT-pMetadata-parameter
`pMetadata` **must** be a valid pointer to an array of `swapchainCount` valid `VkHdrMetadataEXT`

structures

- VUID-vkSetHdrMetadataEXT-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0
- VUID-vkSetHdrMetadataEXT-pSwapchains-parent
Each element of `pSwapchains` **must** have been created, allocated, or retrieved from `device`

The `VkHdrMetadataEXT` structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkHdrMetadataEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkXYColorEXT       displayPrimaryRed;
    VkXYColorEXT       displayPrimaryGreen;
    VkXYColorEXT       displayPrimaryBlue;
    VkXYColorEXT       whitePoint;
    float              maxLuminance;
    float              minLuminance;
    float              maxContentLightLevel;
    float              maxFrameAverageLightLevel;
} VkHdrMetadataEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displayPrimaryRed` is a `VkXYColorEXT` structure specifying the red primary of the display used to optimize the content
- `displayPrimaryGreen` is a `VkXYColorEXT` structure specifying the green primary of the display used to optimize the content
- `displayPrimaryBlue` is a `VkXYColorEXT` structure specifying the blue primary of the display used to optimize the content
- `whitePoint` is a `VkXYColorEXT` structure specifying the white-point of the display used to optimize the content
- `maxLuminance` is the maximum luminance of the display used to optimize the content in nits
- `minLuminance` is the minimum luminance of the display used to optimize the content in nits
- `maxContentLightLevel` is the value in nits of the desired luminance for the brightest pixels in the displayed image.
- `maxFrameAverageLightLevel` is the value in nits of the average luminance of the frame which has the brightest average luminance anywhere in the content.

If any of the above values are unknown, they **can** be set to 0.

NOTE

The meta-data provided here is intended to be used as defined in the SMPTE 2086, CTA 861.3 and CIE 15:2004 specifications. The validity and use of this data is outside

the scope of Vulkan.

Valid Usage (Implicit)

- VUID-VkHdrMetadataEXT-sType-sType
sType must be `VK_STRUCTURE_TYPE_HDR_METADATA_EXT`
- VUID-VkHdrMetadataEXT-pNext-pNext
pNext must be `NULL` or a pointer to a valid instance of `VkHdrVividDynamicMetadataHUAWEI`
- VUID-VkHdrMetadataEXT-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique

When `hdrVivid` feature is enabled, HDR Vivid dynamic metadata **can** be set to control the reproduction of content by including the `VkHdrVividDynamicMetadataHUAWEI` in the **pNext** chain of `VkHdrMetadataEXT`.

The `VkHdrVividDynamicMetadataHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_hdr_vivid
typedef struct VkHdrVividDynamicMetadataHUAWEI {
    VkStructureType    sType;
    const void*        pNext;
    size_t             dynamicMetadataSize;
    const void*        pDynamicMetadata;
} VkHdrVividDynamicMetadataHUAWEI;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **dynamicMetadataSize** is the size in bytes of the dynamic metadata.
- **pDynamicMetadata** is a pointer to the dynamic metadata.

NOTE

The HDR Vivid metadata is intended to be used as defined in the T/UWA 005.1-2022 specification. The validity and use of this data is outside the scope of Vulkan.

Valid Usage (Implicit)

- VUID-VkHdrVividDynamicMetadataHUAWEI-sType-sType
sType must be `VK_STRUCTURE_TYPE_HDR_VIVID_DYNAMIC_METADATA_HUAWEI`
- VUID-VkHdrVividDynamicMetadataHUAWEI-pDynamicMetadata-parameter
pDynamicMetadata must be a valid pointer to an array of **dynamicMetadataSize** bytes
- VUID-VkHdrVividDynamicMetadataHUAWEI-dynamicMetadataSize-arraylength
dynamicMetadataSize must be greater than 0

The `VkXYColorEXT` structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkXYColorEXT {
    float    x;
    float    y;
} VkXYColorEXT;
```

- `x` is the x chromaticity coordinate.
- `y` is the y chromaticity coordinate.

Chromaticity coordinates are as specified in CIE 15:2004 “Calculation of chromaticity coordinates” (Section 7.3) and are limited to between 0 and 1 for real colors.

34.12. Lag Control

Some implementations support extensions to reduce display latency and control the swapchain present interval, as described in the remainder of this section.

34.12.1. Anti-Lag

The `VK_AMD_anti_lag` extension lowers latency between receiving input and displaying on the screen. It adds a command to indicate when input is being processed for a frame, and when that frame’s images are presented.

To lower latency, call:

```
// Provided by VK_AMD_anti_lag
void vkAntiLagUpdateAMD(
    VkDevice                                device,
    const VkAntiLagDataAMD*                 pData);
```

- `device` is the logical device
- `pData` is a pointer to a `VkAntiLagDataAMD` structure containing latency reduction parameters.

This command should be executed immediately before the application processes user input. If `pData` is not `NULL` and `VkAntiLagDataAMD::presentationInfo` is not `NULL`, this command **should** be executed again before `vkQueuePresentKHR`, with `pPresentationInfo` set to matching values.

Valid Usage

- VUID-vkAntiLagUpdateAMD-antiLag-10061
The `antiLag` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkAntiLagUpdateAMD-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkAntiLagUpdateAMD-pData-parameter
pData **must** be a valid pointer to a valid [VkAntiLagDataAMD](#) structure

The [VkAntiLagDataAMD](#) structure is defined as:

```
// Provided by VK_AMD_anti_lag
typedef struct VkAntiLagDataAMD {
    VkStructureType          sType;
    const void*              pNext;
    VkAntiLagModeAMD         mode;
    uint32_t                 maxFPS;
    const VkAntiLagPresentationInfoAMD* pPresentationInfo;
} VkAntiLagDataAMD;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **mode** is a [VkAntiLagModeAMD](#) value specifying the anti-lag status.
- **maxFPS** is the framerate limit, in frames per second, used by the application. This limit will be imposed if anti-lag is enabled. If the application tries to render faster, the framerate will be reduced to match this limit. A value of 0 will disable the limit.
- **pPresentationInfo** is a pointer to a [VkAntiLagPresentationInfoAMD](#) structure containing information about the application stage.

This structure specifies anti-lag parameters.

Valid Usage (Implicit)

- VUID-VkAntiLagDataAMD-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_ANTI_LAG_DATA_AMD**
- VUID-VkAntiLagDataAMD-mode-parameter
mode **must** be a valid [VkAntiLagModeAMD](#) value
- VUID-VkAntiLagDataAMD-pPresentationInfo-parameter
If **pPresentationInfo** is not **NULL**, **pPresentationInfo** **must** be a valid pointer to a valid [VkAntiLagPresentationInfoAMD](#) structure

Possible values of [VkAntiLagDataAMD::mode](#), specifying the anti-lag status, are:

```
// Provided by VK_AMD_anti_lag
typedef enum VkAntiLagModeAMD {
    VK_ANTI_LAG_MODE_DRIVER_CONTROL_AMD = 0,
    VK_ANTI_LAG_MODE_ON_AMD = 1,
    VK_ANTI_LAG_MODE_OFF_AMD = 2,
} VkAntiLagModeAMD;
```

- `VK_ANTI_LAG_MODE_DRIVER_CONTROL_AMD` specifies that anti-lag will be enabled or disabled depending on driver settings.
- `VK_ANTI_LAG_MODE_ON_AMD` specifies that anti-lag will be enabled.
- `VK_ANTI_LAG_MODE_OFF_AMD` specifies that anti-lag will be disabled.

The `VkAntiLagPresentationInfoAMD` structure is defined as:

```
// Provided by VK_AMD_anti_lag
typedef struct VkAntiLagPresentationInfoAMD {
    VkStructureType    sType;
    void*              pNext;
    VkAntiLagStageAMD  stage;
    uint64_t           frameIndex;
} VkAntiLagPresentationInfoAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stage` is a `VkAntiLagStageAMD` value specifying the current application stage.
- `frameIndex` is set just before the application processes input data (`VK_ANTI_LAG_STAGE_INPUT_AMD`). The same `frameIndex` value **should** be set before the frame with current input data will be presented by `vkQueuePresentKHR` (`VK_ANTI_LAG_STAGE_PRESENT_AMD`). This **should** be done for each frame.

This structure specifies information about the presentation stage for which anti-lag parameters are being set.

Valid Usage (Implicit)

- VUID-VkAntiLagPresentationInfoAMD-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ANTI_LAG_PRESENTATION_INFO_AMD`
- VUID-VkAntiLagPresentationInfoAMD-stage-parameter
`stage` **must** be a valid `VkAntiLagStageAMD` value

Possible values of `VkAntiLagPresentationInfoAMD::stage`, specifying the current application stage, are:

```
// Provided by VK_AMD_anti_lag
typedef enum VkAntiLagStageAMD {
    VK_ANTI_LAG_STAGE_INPUT_AMD = 0,
    VK_ANTI_LAG_STAGE_PRESENT_AMD = 1,
} VkAntiLagStageAMD;
```

- `VK_ANTI_LAG_STAGE_INPUT_AMD` specifies the stage before processing input.
- `VK_ANTI_LAG_STAGE_PRESENT_AMD` specifies the stage before `vkQueuePresentKHR`.

34.12.2. Latency Reduction

To enable or disable low latency mode on a swapchain, call:

```
// Provided by VK_NV_low_latency2
VkResult vkSetLatencySleepModeNV(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    const VkLatencySleepModeInfoNV* pSleepModeInfo);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to enable or disable low latency mode on.
- `pSleepModeInfo` is `NULL` or a pointer to a `VkLatencySleepModeInfoNV` structure specifying the parameters of the latency sleep mode.

If `pSleepModeInfo` is `NULL`, `vkSetLatencySleepModeNV` will disable low latency mode, low latency boost, and set the minimum present interval previously specified by `VkLatencySleepModeInfoNV` to zero on `swapchain`. As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to `vkSetLatencySleepModeNV` **may** be simultaneously used by other threads in calls to functions other than `vkDestroySwapchainKHR`. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage (Implicit)

- VUID-vkSetLatencySleepModeNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkSetLatencySleepModeNV-swapchain-parameter `swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkSetLatencySleepModeNV-pSleepModeInfo-parameter `pSleepModeInfo` **must** be a valid pointer to a valid `VkLatencySleepModeInfoNV` structure
- VUID-vkSetLatencySleepModeNV-swapchain-parent `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`

The `VkLatencySleepModeInfoNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySleepModeInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           lowLatencyMode;
    VkBool32           lowLatencyBoost;
    uint32_t           minimumIntervalUs;
} VkLatencySleepModeInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `lowLatencyMode` is the toggle to enable or disable low latency mode.
- `lowLatencyBoost` allows an application to hint to the GPU to increase performance to provide additional latency savings at a cost of increased power consumption.
- `minimumIntervalUs` is the microseconds between `vkQueuePresentKHR` calls for a given swapchain that `vkLatencySleepNV` will enforce.

If `lowLatencyMode` is `VK_FALSE`, `lowLatencyBoost` will still hint to the GPU to increase its power state and `vkLatencySleepNV` will still enforce `minimumIntervalUs` between `vkQueuePresentKHR` calls.

Valid Usage (Implicit)

- VUID-VkLatencySleepModeInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_SLEEP_MODE_INFO_NV`

To provide the synchronization primitive used to delay host CPU work for lower latency rendering, call:

```
// Provided by VK_NV_low_latency2
VkResult vkLatencySleepNV(
    VkDevice                device,
    VkSwapchainKHR          swapchain,
    const VkLatencySleepInfoNV* pSleepInfo);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the swapchain to delay associated CPU work based on **VkLatencySubmissionPresentIdNV** submissions.
- **pSleepInfo** is a pointer to a **VkLatencySleepInfoNV** structure specifying the parameters of the latency sleep.

vkLatencySleepNV returns immediately. Applications **should** use **vkWaitSemaphores** with **pSleepInfo->signalSemaphore** to delay host CPU work. CPU work refers to application work done before presenting which includes but is not limited to: input sampling, simulation, command buffer recording, command buffer submission, and present submission. It is recommended to call this function before input sampling. When using this function, it **should** be called exactly once between presents.

Valid Usage (Implicit)

- VUID-vkLatencySleepNV-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkLatencySleepNV-swapchain-parameter
swapchain **must** be a valid **VkSwapchainKHR** handle
- VUID-vkLatencySleepNV-pSleepInfo-parameter
pSleepInfo **must** be a valid pointer to a valid **VkLatencySleepInfoNV** structure
- VUID-vkLatencySleepNV-swapchain-parent
swapchain **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**

Failure

None

The **VkLatencySleepInfoNV** structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySleepInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkSemaphore        signalSemaphore;
    uint64_t           value;
} VkLatencySleepInfoNV;
```

- **sType** is a **VkStructureType** value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `signalSemaphore` is a semaphore that is signaled to indicate that the application **should** resume input sampling work.
- `value` is the value that `signalSemaphore` is set to for resuming sampling work.

Valid Usage

- VUID-VkLatencySleepInfoNV-signalSemaphore-09361
`signalSemaphore` **must** be a timeline semaphore

Valid Usage (Implicit)

- VUID-VkLatencySleepInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_SLEEP_INFO_NV`
- VUID-VkLatencySleepInfoNV-signalSemaphore-parameter
`signalSemaphore` **must** be a valid `VkSemaphore` handle

An application **can** provide timestamps at various stages of its frame generation work by calling:

```
// Provided by VK_NV_low_latency2
void vkSetLatencyMarkerNV(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    const VkSetLatencyMarkerInfoNV* pLatencyMarkerInfo);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to capture timestamps on.
- `pSetLatencyMarkerInfo` is a pointer to a `VkSetLatencyMarkerInfoNV` structure specifying the parameters of the marker to set.

At the beginning and end of simulation and render threads and beginning and end of `vkQueuePresentKHR` calls, `vkSetLatencyMarkerNV` **can** be called to provide timestamps for the application's reference. These timestamps are returned with a call to `vkGetLatencyTimingsNV` alongside driver provided timestamps at various points of interest with regards to latency within the application. As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to `vkSetLatencyMarkerNV` **may** be simultaneously used by other threads in calls to functions other than `vkDestroySwapchainKHR`. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage (Implicit)

- VUID-vkSetLatencyMarkerNV-device-parameter
`device` **must** be a valid `VkDevice` handle

- VUID-vkSetLatencyMarkerNV-swapchain-parameter
swapchain **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkSetLatencyMarkerNV-pLatencyMarkerInfo-parameter
pLatencyMarkerInfo **must** be a valid pointer to a valid [VkSetLatencyMarkerInfoNV](#) structure
- VUID-vkSetLatencyMarkerNV-swapchain-parent
swapchain **must** have been created, allocated, or retrieved from **device**

The [VkSetLatencyMarkerInfoNV](#) structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkSetLatencyMarkerInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentID;
    VkLatencyMarkerNV  marker;
} VkSetLatencyMarkerInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **presentID** is an application provided value that is used to associate the timestamp with a [vkQueuePresentKHR](#) command using [VkPresentIdKHR::pPresentIds](#) for a given present.
- **marker** is the type of timestamp to be recorded.

Valid Usage (Implicit)

- VUID-VkSetLatencyMarkerInfoNV-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_SET_LATENCY_MARKER_INFO_NV**
- VUID-VkSetLatencyMarkerInfoNV-marker-parameter
marker **must** be a valid [VkLatencyMarkerNV](#) value

The [VkLatencyMarkerNV](#) enum is defined as:

```
// Provided by VK_NV_low_latency2
typedef enum VkLatencyMarkerNV {
    VK_LATENCY_MARKER_SIMULATION_START_NV = 0,
    VK_LATENCY_MARKER_SIMULATION_END_NV = 1,
    VK_LATENCY_MARKER_RENDERSUBMIT_START_NV = 2,
    VK_LATENCY_MARKER_RENDERSUBMIT_END_NV = 3,
    VK_LATENCY_MARKER_PRESENT_START_NV = 4,
    VK_LATENCY_MARKER_PRESENT_END_NV = 5,
    VK_LATENCY_MARKER_INPUT_SAMPLE_NV = 6,
    VK_LATENCY_MARKER_TRIGGER_FLASH_NV = 7,
    VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_START_NV = 8,
    VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_END_NV = 9,
    VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_START_NV = 10,
    VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_END_NV = 11,
} VkLatencyMarkerNV;
```

The members of the [VkLatencyMarkerNV](#) are used as arguments for [vkSetLatencyMarkerNV](#) in the use cases described below:

- [VK_LATENCY_MARKER_SIMULATION_START_NV](#) **should** be called at the start of the simulation execution each frame, but after the call to [vkLatencySleepNV](#).
- [VK_LATENCY_MARKER_SIMULATION_END_NV](#) **should** be called at the end of the simulation execution each frame.
- [VK_LATENCY_MARKER_RENDERSUBMIT_START_NV](#) **should** be called at the beginning of the render submission execution each frame. This **should** be wherever Vulkan API calls are made and **must** not span into asynchronous rendering.
- [VK_LATENCY_MARKER_RENDERSUBMIT_END_NV](#) **should** be called at the end of the render submission execution each frame.
- [VK_LATENCY_MARKER_PRESENT_START_NV](#) **should** be called just before [vkQueuePresentKHR](#).
- [VK_LATENCY_MARKER_PRESENT_END_NV](#) **should** be called when [vkQueuePresentKHR](#) returns.
- [VK_LATENCY_MARKER_INPUT_SAMPLE_NV](#) **should** be called just before the application gathers input data.
- [VK_LATENCY_MARKER_TRIGGER_FLASH_NV](#) **should** be called anywhere between [VK_LATENCY_MARKER_SIMULATION_START_NV](#) and [VK_LATENCY_MARKER_SIMULATION_END_NV](#) whenever a left mouse click occurs.

To get an array containing the newest collected latency data, call:

```
// Provided by VK_NV_low_latency2
void vkGetLatencyTimingsNV(
    VkDevice                device,
    VkSwapchainKHR          swapchain,
    VkGetLatencyMarkerInfoNV* pLatencyMarkerInfo);
```

- [device](#) is the device associated with [swapchain](#).

- `swapchain` is the swapchain to return data from.
- `pGetLatencyMarkerInfo` is a pointer to a `VkGetLatencyMarkerInfoNV` structure specifying the parameters for returning latency information.

The timings returned by `vkGetLatencyTimingsNV` contain the timestamps requested from `vkSetLatencyMarkerNV` and additional implementation-specific markers defined in `VkLatencyTimingsFrameReportNV`.

Valid Usage (Implicit)

- VUID-vkGetLatencyTimingsNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetLatencyTimingsNV-swapchain-parameter `swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkGetLatencyTimingsNV-pLatencyMarkerInfo-parameter `pLatencyMarkerInfo` **must** be a valid pointer to a `VkGetLatencyMarkerInfoNV` structure
- VUID-vkGetLatencyTimingsNV-swapchain-parent `swapchain` **must** have been created, allocated, or retrieved from `device`

The `VkGetLatencyMarkerInfoNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkGetLatencyMarkerInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           timingCount;
    VkLatencyTimingsFrameReportNV* pTimings;
} VkGetLatencyMarkerInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is either `NULL` or a pointer to a structure extending this structure.
- `timingCount` is an integer related to the number of previous frames of latency data available or queried, as described below.
- `pTimings` is either `NULL` or a pointer to an array of `VkLatencyTimingsFrameReportNV` structures.

If `pTimings` is `NULL` then the maximum number of queryable frame data is returned in `timingCount`. Otherwise, `timingCount` **must** be set by the application to the number of elements in the `pTimings` array, and on return the variable is overwritten with the number of values actually written to `pTimings`. The elements of `pTimings` are arranged in the order they were requested in, with the oldest data in the first entry.

Valid Usage (Implicit)

- VUID-VkGetLatencyMarkerInfoNV-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_GET_LATENCY_MARKER_INFO_NV`

- `VUID-VkGetLatencyMarkerInfoNV-pTimings-parameter`

If `timingCount` is not 0, and `pTimings` is not NULL, `pTimings` **must** be a valid pointer to an array of `timingCount` `VkLatencyTimingsFrameReportNV` structures

The `VkLatencyTimingsFrameReportNV` structure describes latency data returned by `vkGetLatencyTimingsNV`

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencyTimingsFrameReportNV {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentID;
    uint64_t           inputSampleTimeUs;
    uint64_t           simStartTimeUs;
    uint64_t           simEndTimeUs;
    uint64_t           renderSubmitStartTimeUs;
    uint64_t           renderSubmitEndTimeUs;
    uint64_t           presentStartTimeUs;
    uint64_t           presentEndTimeUs;
    uint64_t           driverStartTimeUs;
    uint64_t           driverEndTimeUs;
    uint64_t           osRenderQueueStartTimeUs;
    uint64_t           osRenderQueueEndTimeUs;
    uint64_t           gpuRenderStartTimeUs;
    uint64_t           gpuRenderEndTimeUs;
} VkLatencyTimingsFrameReportNV;
```

The members of the `VkLatencyTimingsFrameReportNV` structure describe the following:

- `presentID` is the application provided value that is used to associate the timestamp with a `vkQueuePresentKHR` command using `VkPresentIdKHR::pPresentIds` for a given present.
- `simStartTimeUs` is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_SIMULATION_START_NV`.
- `simEndTimeUs` is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_SIMULATION_END_NV`.
- `renderStartTimeUs` is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_RENDERSUBMIT_START_NV`.
- `renderEndTimeUs` is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_RENDERSUBMIT_END_NV`.
- `presentStartTimeUs` is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_PRESENT_START_NV`.
- `presentEndTimeUs` is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_PRESENT_END_NV`.
- `driverStartTimeUs` is the timestamp written when the first `vkQueueSubmit` for the frame is called.

- `driverEndTimeUs` is the timestamp written when the final `vkQueueSubmit` hands off from the Vulkan Driver.
- `osRenderQueueStartTimeUs` is the timestamp written when the final `vkQueueSubmit` hands off from the Vulkan Driver.
- `osRenderQueueEndTimeUs` is the timestamp written when the first submission reaches the GPU.
- `gpuRenderStartTimeUs` is the timestamp written when the first submission reaches the GPU.
- `gpuRenderEndTimeUs` is the timestamp written when the final submission finishes on the GPU for the frame.

Valid Usage (Implicit)

- VUID-VkLatencyTimingsFrameReportNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_TIMINGS_FRAME_REPORT_NV`

The `VkLatencySubmissionPresentIdNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySubmissionPresentIdNV {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentID;
} VkLatencySubmissionPresentIdNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentID` is used to associate the `vkQueueSubmit` with the `presentID` used for a given `vkQueuePresentKHR` via `VkPresentIdKHR::pPresentIds`.

For any submission to be tracked with low latency mode pacing, it needs to be associated with other submissions in a given present. To associate a submission with `presentID` for low latency mode, the `pNext` chain of `vkQueueSubmit` **must** include a `VkLatencySubmissionPresentIdNV` structure.

Valid Usage (Implicit)

- VUID-VkLatencySubmissionPresentIdNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_SUBMISSION_PRESENT_ID_NV`

An application can mark a queue as Out of Band to indicate that all `vkQueueSubmit` calls on this queue are ignored for latency evaluation by calling:

```
// Provided by VK_NV_low_latency2
void vkQueueNotifyOutOfBandNV(
    VkQueue queue,
    const VkOutOfBandQueueTypeInfoNV* pQueueTypeInfo);
```

- **queue** is the `VkQueue` to be marked as out of band.
- **pQueueTypeInfo** is a pointer to a `VkOutOfBandQueueTypeInfoNV` structure specifying the queue type.

Valid Usage (Implicit)

- VUID-vkQueueNotifyOutOfBandNV-queue-parameter **queue** **must** be a valid `VkQueue` handle
- VUID-vkQueueNotifyOutOfBandNV-pQueueTypeInfo-parameter **pQueueTypeInfo** **must** be a valid pointer to a valid `VkOutOfBandQueueTypeInfoNV` structure

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	Any	-

The `VkOutOfBandQueueTypeInfoNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkOutOfBandQueueTypeInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkOutOfBandQueueTypeNV queueType;
} VkOutOfBandQueueTypeInfoNV;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **queueType** describes the usage of the queue to be marked as out of band.

Valid Usage (Implicit)

- VUID-VkOutOfBandQueueTypeInfoNV-sType-sType **sType** **must** be `VK_STRUCTURE_TYPE_OUT_OF_BAND_QUEUE_TYPE_INFO_NV`
- VUID-VkOutOfBandQueueTypeInfoNV-queueType-parameter

queueType must be a valid [VkOutOfBandQueueTypeNV](#) value

The [VkOutOfBandQueueTypeNV](#) enum is defined as:

```
// Provided by VK_NV_low_latency2
typedef enum VkOutOfBandQueueTypeNV {
    VK_OUT_OF_BAND_QUEUE_TYPE_RENDER_NV = 0,
    VK_OUT_OF_BAND_QUEUE_TYPE_PRESENT_NV = 1,
} VkOutOfBandQueueTypeNV;
```

The members of the [VkOutOfBandQueueTypeNV](#) are used to describe the queue type in [VkOutOfBandQueueTypeInfoNV](#) as described below:

- [VK_OUT_OF_BAND_QUEUE_TYPE_RENDER_NV](#) indicates that work will be submitted to this queue.
- [VK_OUT_OF_BAND_QUEUE_TYPE_PRESENT_NV](#) indicates that this queue will be presented from.

To allow low latency mode to be used by a swapchain, add a [VkSwapchainLatencyCreateInfoNV](#) structure to the **pNext** chain of [VkSwapchainCreateInfoKHR](#).

The [VkSwapchainLatencyCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkSwapchainLatencyCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           latencyModeEnable;
} VkSwapchainLatencyCreateInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **lowLatencyModeEnable** indicates if the swapchain created will utilize low latency mode.

Valid Usage (Implicit)

- VUID-VkSwapchainLatencyCreateInfoNV-sType-sType
sType must be [VK_STRUCTURE_TYPE_SWAPCHAIN_LATENCY_CREATE_INFO_NV](#)

The [VkLatencySurfaceCapabilitiesNV](#) structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySurfaceCapabilitiesNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           presentModeCount;
    VkPresentModeKHR*  pPresentModes;
} VkLatencySurfaceCapabilitiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeCount` is the number of presentation modes provided.
- `pPresentModes` is list of presentation modes optimized for use with low latency mode with `presentModeCount` entries.

If `pPresentModes` is `NULL`, then the number of present modes that are optimized for use with low latency mode returned in `presentModeCount`. Otherwise, `presentModeCount` **must** be set by the application to the number of elements in the `pPresentModes` array, and on return the variable is overwritten with the number of values actually written to `pPresentModes`. If the value of `presentModeCount` is less than the number of optimized present modes, at most `presentModeCount` values will be written to `pPresentModes`.

Valid Usage (Implicit)

- VUID-VkLatencySurfaceCapabilitiesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_SURFACE_CAPABILITIES_NV`
- VUID-VkLatencySurfaceCapabilitiesNV-pPresentModes-parameter
If `presentModeCount` is not 0, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `presentModeCount` `VkPresentModeKHR` values

34.13. Present Barrier

The `VK_NV_present_barrier` extension allows applications to synchronize corresponding presentation requests across multiple swapchains using the *present barrier*. A swapchain is said to be using the *present barrier* if the swapchain is created by adding a `VkSwapchainPresentBarrierCreateInfoNV` structure to the `pNext` chain of the `VkSwapchainCreateInfoKHR` structure, and setting `VkSwapchainPresentBarrierCreateInfoNV::presentBarrierEnable` to true.

A set of corresponding presentation requests is defined as exactly one queued presentation request associated with each swapchain using the present barrier, whether or not that queued request has executed. A given presentation request is added, when created by calling `vkQueuePresentKHR` and specifying a swapchain using the present barrier, either to the oldest existing set of corresponding requests for which there is no existing member associated with the request's swapchain, or to a new set of corresponding requests if no such set exists.

A set of corresponding requests is said to be *full* when it contains one request from each swapchain using the present barrier. Queued presentation of an image to a swapchain using the *present barrier* is *deferred* by the implementation until the set of corresponding requests is full, and the visibility operations associated with all requests in that set, as described by [vkQueuePresentKHR](#), have completed.

Additionally, the set of swapchains using the present barrier can be in the same process, or different processes running under the same operating system. And if the required synchronization hardware is connected and correctly configured, this extension also supports applications to synchronize corresponding presentation requests using the *present barrier* across distributed systems. However, the configuration mechanism of the required hardware is outside the scope of the Vulkan specification and this extension.

The [VkSwapchainPresentBarrierCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_present_barrier
typedef struct VkSwapchainPresentBarrierCreateInfoNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentBarrierEnable;
} VkSwapchainPresentBarrierCreateInfoNV;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentBarrierEnable` is a boolean value indicating a request for using the *present barrier*.

If the `pNext` chain of [VkSwapchainCreateInfoKHR](#) does not include this structure, the default value for `presentBarrierEnable` is `VK_FALSE`, meaning the swapchain does not request to use the present barrier. Additionally, when recreating a swapchain that was using the present barrier, and the `pNext` chain of [VkSwapchainCreateInfoKHR](#) does not include this structure, it means the swapchain will stop using the present barrier.

Valid Usage (Implicit)

- VUID-VkSwapchainPresentBarrierCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_BARRIER_CREATE_INFO_NV`

Chapter 35. Deferred Host Operations

Certain Vulkan commands are inherently expensive for the host CPU to execute. It is often desirable to offload such work onto background threads, and to parallelize the work across multiple CPUs. The concept of *deferred operations* allows applications and drivers to coordinate the execution of expensive host commands using an application-managed thread pool.

The [VK_KHR_deferred_host_operations](#) extension defines the infrastructure and usage patterns for *deferrable commands*, but does not specify any commands as deferrable. This is left to additional dependent extensions. Commands **must** not be deferred unless the deferral is specifically allowed by another extension which depends on [VK_KHR_deferred_host_operations](#). This specification will refer to such extensions as *deferral extensions*.

35.1. Requesting Deferral

When an application requests an operation deferral, the implementation **may** defer the operation. When deferral is requested and the implementation defers any operation, the implementation **must** return [VK_OPERATION_DEFERRED_KHR](#) as the success code if no errors occurred. When deferral is requested, the implementation **should** defer the operation when the workload is significant, however if the implementation chooses not to defer any of the requested operations and instead executes all of them immediately, the implementation **must** return [VK_OPERATION_NOT_DEFERRED_KHR](#) as the success code if no errors occurred.

A deferred operation is created *complete* with an initial result value of [VK_SUCCESS](#). The deferred operation becomes *pending* when an operation has been successfully deferred with that deferred operation object.

A deferred operation is considered pending until the deferred operation completes. A pending deferred operation becomes *complete* when it has been fully executed by one or more threads. Pending deferred operations will never complete until they are *joined* by an application thread, using [vkDeferredOperationJoinKHR](#). Applications **can** join multiple threads to the same deferred operation, enabling concurrent execution of subtasks within that operation.

The application **can** query the status of a [VkDeferredOperationKHR](#) using the [vkGetDeferredOperationMaxConcurrencyKHR](#) or [vkGetDeferredOperationResultKHR](#) commands.

Parameters to the command requesting a deferred operation **may** be accessed by the implementation at any time until the deferred operation enters the complete state. The application **must** obey the following rules while a deferred operation is pending:

- Externally synchronized parameters **must** not be accessed.
- Pointer parameters **must** not be modified (e.g. reallocated/freed).
- The contents of pointer parameters which **may** be read by the command **must** not be modified.
- The contents of pointer parameters which **may** be written by the command **must** not be read.
- Vulkan object parameters **must** not be passed as externally synchronized parameters to any other command.

When the deferred operation is complete, the application **should** call [vkGetDeferredOperationResultKHR](#) to obtain the [VkResult](#) indicating success or failure of the operation. The [VkResult](#) value returned will be one of the values that the command requesting the deferred operation is able to return. Writes to output parameters of the requesting command will happen-before the deferred operation is complete.

When a deferral is requested for a command, the implementation **may** perform memory management operations on the allocator supplied to [vkCreateDeferredOperationKHR](#) for the deferred operation object, as described in the [Memory Allocation](#) chapter. Such allocations **must** occur on the thread which requests deferral.

If an allocator was supplied for the deferred command at the time of the deferral request, then the implementation **may** perform memory management operations on this allocator during the execution of [vkDeferredOperationJoinKHR](#). These operations **may** occur concurrently and **may** be performed by any joined thread. The application **must** ensure that the supplied allocator is able to operate correctly under these conditions.

35.2. Deferred Host Operations API

The [VkDeferredOperationKHR](#) handle is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDeferredOperationKHR)
```

This handle refers to a tracking structure which manages the execution state for a deferred command.

To construct the tracking object for a deferred command, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkCreateDeferredOperationKHR(
    VkDevice device,
    const VkAllocationCallbacks* pAllocator,
    VkDeferredOperationKHR* pDeferredOperation);
```

- [device](#) is the device which owns [operation](#).
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.
- [pDeferredOperation](#) is a pointer to a handle in which the created [VkDeferredOperationKHR](#) is returned.

Valid Usage (Implicit)

- VUID-vkCreateDeferredOperationKHR-device-parameter [device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkCreateDeferredOperationKHR-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- `VOID-vkCreateDeferredOperationKHR-pDeferredOperation-parameter`
`pDeferredOperation` **must** be a valid pointer to a `VkDeferredOperationKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

To assign a thread to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkDeferredOperationJoinKHR(
    VkDevice          device,
    VkDeferredOperationKHR operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation that the calling thread should work on.

The `vkDeferredOperationJoinKHR` command will execute a portion of the deferred operation on the calling thread.

The return value will be one of the following:

- A return value of `VK_SUCCESS` indicates that `operation` is complete. The application **should** use `vkGetDeferredOperationResultKHR` to retrieve the result of `operation`.
- A return value of `VK_THREAD_DONE_KHR` indicates that the deferred operation is not complete, but there is no work remaining to assign to threads. Future calls to `vkDeferredOperationJoinKHR` are not necessary and will simply harm performance. This situation **may** occur when other threads executing `vkDeferredOperationJoinKHR` are about to complete `operation`, and the implementation is unable to partition the workload any further.
- A return value of `VK_THREAD_IDLE_KHR` indicates that the deferred operation is not complete, and there is no work for the thread to do at the time of the call. This situation **may** occur if the operation encounters a temporary reduction in parallelism. By returning `VK_THREAD_IDLE_KHR`, the implementation is signaling that it expects that more opportunities for parallelism will emerge as execution progresses, and that future calls to `vkDeferredOperationJoinKHR` **can** be beneficial. In the meantime, the application **can** perform other work on the calling thread.

Implementations **must** guarantee forward progress by enforcing the following invariants:

1. If only one thread has invoked `vkDeferredOperationJoinKHR` on a given operation, that thread

must execute the operation to completion and return `VK_SUCCESS`.

2. If multiple threads have concurrently invoked `vkDeferredOperationJoinKHR` on the same operation, then at least one of them **must** complete the operation and return `VK_SUCCESS`.

Valid Usage (Implicit)

- VUID-vkDeferredOperationJoinKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDeferredOperationJoinKHR-operation-parameter
`operation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkDeferredOperationJoinKHR-operation-parent
`operation` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_THREAD_DONE_KHR`
- `VK_THREAD_IDLE_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

When a deferred operation is completed, the application **can** destroy the tracking object by calling:

```
// Provided by VK_KHR_deferred_host_operations
void vkDestroyDeferredOperationKHR(
    VkDevice                                device,
    VkDeferredOperationKHR                  operation,
    const VkAllocationCallbacks*            pAllocator);
```

- `device` is the device which owns `operation`.
- `operation` is the completed operation to be destroyed.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyDeferredOperationKHR-operation-03434
If `VkAllocationCallbacks` were provided when `operation` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDeferredOperationKHR-operation-03435

If no `VkAllocationCallbacks` were provided when `operation` was created, `pAllocator` **must** be `NULL`

- `VUID-vkDestroyDeferredOperationKHR-operation-03436`
`operation` **must** be completed

Valid Usage (Implicit)

- `VUID-vkDestroyDeferredOperationKHR-device-parameter`
`device` **must** be a valid `VkDevice` handle
- `VUID-vkDestroyDeferredOperationKHR-operation-parameter`
If `operation` is not `VK_NULL_HANDLE`, `operation` **must** be a valid `VkDeferredOperationKHR` handle
- `VUID-vkDestroyDeferredOperationKHR-pAllocator-parameter`
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- `VUID-vkDestroyDeferredOperationKHR-operation-parent`
If `operation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `operation` **must** be externally synchronized

To query the number of additional threads that can usefully be joined to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
uint32_t vkGetDeferredOperationMaxConcurrencyKHR(
    VkDevice          device,
    VkDeferredOperationKHR operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation to be queried.

The returned value is the maximum number of threads that can usefully execute a deferred operation concurrently, reported for the state of the deferred operation at the point this command is called. This value is intended to be used to better schedule work onto available threads. Applications **can** join any number of threads to the deferred operation and expect it to eventually complete, though excessive joins **may** return `VK_THREAD_DONE_KHR` immediately, performing no useful work.

If `operation` is complete, `vkGetDeferredOperationMaxConcurrencyKHR` returns zero.

If `operation` is currently joined to any threads, the value returned by this command **may**

immediately be out of date.

If **operation** is pending, implementations **must** not return zero unless at least one thread is currently executing `vkDeferredOperationJoinKHR` on **operation**. If there are such threads, the implementation **should** return an estimate of the number of additional threads which it could profitably use.

Implementations **may** return $2^{32}-1$ to indicate that the maximum concurrency is unknown and cannot be easily derived. Implementations **may** return values larger than the maximum concurrency available on the host CPU. In these situations, an application **should** clamp the return value rather than oversubscribing the machine.

NOTE

The recommended usage pattern for applications is to query this value once, after deferral, and schedule no more than the specified number of threads to join the operation. Each time a joined thread receives `VK_THREAD_IDLE_KHR`, the application should schedule an additional join at some point in the future, but is not required to do so.

Valid Usage (Implicit)

- VUID-vkGetDeferredOperationMaxConcurrencyKHR-device-parameter **device** **must** be a valid `VkDevice` handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parameter **operation** **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parent **operation** **must** have been created, allocated, or retrieved from **device**

The `vkGetDeferredOperationResultKHR` function is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkGetDeferredOperationResultKHR(
    VkDevice          device,
    VkDeferredOperationKHR operation);
```

- **device** is the device which owns **operation**.
- **operation** is the operation whose deferred result is being queried.

If no command has been deferred on **operation**, `vkGetDeferredOperationResultKHR` returns `VK_SUCCESS`.

If the deferred operation is pending, `vkGetDeferredOperationResultKHR` returns `VK_NOT_READY`.

If the deferred operation is complete, it returns the appropriate return value from the original command. This value **must** be one of the `VkResult` values which could have been returned by the original command if the operation had not been deferred.

Valid Usage (Implicit)

- VUID-vkGetDeferredOperationResultKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeferredOperationResultKHR-operation-parameter **operation** **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkGetDeferredOperationResultKHR-operation-parent **operation** **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**
- **VK_NOT_READY**

Failure

None

Chapter 36. Private Data

The private data extension provides a way for users to associate arbitrary application-defined data with Vulkan objects. This association is accomplished by storing 64-bit unsigned integers of application-defined data in private data slots. A private data slot represents a storage allocation for one data item for each child object of the device.

An application **can** reserve private data slots at device creation. To reserve private data slots, insert a `VkDevicePrivateDataCreateInfo` in the `pNext` chain in `VkDeviceCreateInfo` before device creation. Multiple `VkDevicePrivateDataCreateInfo` structures **can** be chained together, and the sum of the requested slots will be reserved. This is an exception to the specified valid usage for [structure pointer chains](#). Reserving slots in this manner is not strictly necessary but it **may** improve performance.

Private data slots are represented by `VkPrivateDataSlot` handles:

```
// Provided by VK_VERSION_1_3
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPrivateDataSlot)
```

or the equivalent

```
// Provided by VK_EXT_private_data
typedef VkPrivateDataSlot VkPrivateDataSlotEXT;
```

To create a private data slot, call:

```
// Provided by VK_VERSION_1_3
VkResult vkCreatePrivateDataSlot(
    VkDevice                                device,
    const VkPrivateDataSlotCreateInfo*      pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkPrivateDataSlot*                      pPrivateDataSlot);
```

or the equivalent command

```
// Provided by VK_EXT_private_data
VkResult vkCreatePrivateDataSlotEXT(
    VkDevice                                device,
    const VkPrivateDataSlotCreateInfo*      pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkPrivateDataSlot*                      pPrivateDataSlot);
```

- `device` is the logical device associated with the creation of the object(s) holding the private data slot.

- `pCreateInfo` is a pointer to a `VkPrivateDataSlotCreateInfo`
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pPrivateDataSlot` is a pointer to a `VkPrivateDataSlot` handle in which the resulting private data slot is returned

Valid Usage

- VUID-vkCreatePrivateDataSlot-privateData-04564
The `privateData` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreatePrivateDataSlot-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreatePrivateDataSlot-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkPrivateDataSlotCreateInfo` structure
- VUID-vkCreatePrivateDataSlot-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreatePrivateDataSlot-pPrivateDataSlot-parameter
`pPrivateDataSlot` **must** be a valid pointer to a `VkPrivateDataSlot` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkPrivateDataSlotCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPrivateDataSlotCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkPrivateDataSlotCreateFlags flags;
} VkPrivateDataSlotCreateInfo;
```

or the equivalent

```
// Provided by VK_EXT_private_data
typedef VkPrivateDataSlotCreateInfo VkPrivateDataSlotCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.

Valid Usage (Implicit)

- VUID-VkPrivateDataSlotCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRIVATE_DATA_SLOT_CREATE_INFO`
- VUID-VkPrivateDataSlotCreateInfo-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPrivateDataSlotCreateInfo-flags-zero bitmask
`flags` **must** be `0`

```
// Provided by VK_VERSION_1_3
typedef VkFlags VkPrivateDataSlotCreateFlags;
```

or the equivalent

```
// Provided by VK_EXT_private_data
typedef VkPrivateDataSlotCreateFlags VkPrivateDataSlotCreateFlagsEXT;
```

`VkPrivateDataSlotCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

To destroy a private data slot, call:

```
// Provided by VK_VERSION_1_3
void vkDestroyPrivateDataSlot(
    VkDevice                device,
    VkPrivateDataSlot        privateDataSlot,
    const VkAllocationCallbacks* pAllocator);
```

or the equivalent command

```
// Provided by VK_EXT_private_data
void vkDestroyPrivateDataSlotEXT(
    VkDevice                                device,
    VkPrivateDataSlot                       privateDataSlot,
    const VkAllocationCallbacks*            pAllocator);
```

- **device** is the logical device associated with the creation of the object(s) holding the private data slot.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **privateDataSlot** is the private data slot to destroy.

Valid Usage

- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04062
If **VkAllocationCallbacks** were provided when **privateDataSlot** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04063
If no **VkAllocationCallbacks** were provided when **privateDataSlot** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyPrivateDataSlot-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parameter
If **privateDataSlot** is not **VK_NULL_HANDLE**, **privateDataSlot** **must** be a valid **VkPrivateDataSlot** handle
- VUID-vkDestroyPrivateDataSlot-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parent
If **privateDataSlot** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **privateDataSlot** **must** be externally synchronized

To store application-defined data in a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
VkResult vkSetPrivateData(
    VkDevice          device,
    VkObjectType      objectType,
    uint64_t          objectHandle,
    VkPrivateDataSlot privateDataSlot,
    uint64_t          data);
```

or the equivalent command

```
// Provided by VK_EXT_private_data
VkResult vkSetPrivateDataEXT(
    VkDevice          device,
    VkObjectType      objectType,
    uint64_t          objectHandle,
    VkPrivateDataSlot privateDataSlot,
    uint64_t          data);
```

- **device** is the device that created the object.
- **objectType** is a [VkObjectType](#) specifying the type of object to associate data with.
- **objectHandle** is a handle to the object to associate data with.
- **privateDataSlot** is a handle to a [VkPrivateDataSlot](#) specifying location of private data storage.
- **data** is application-defined data to associate the object with. This data will be stored at **privateDataSlot**.

Valid Usage

- VUID-vkSetPrivateData-objectHandle-04016
objectHandle must be **device** or a child of **device**
- VUID-vkSetPrivateData-objectHandle-04017
objectHandle must be a valid handle to an object of type **objectType**

Valid Usage (Implicit)

- VUID-vkSetPrivateData-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkSetPrivateData-objectType-parameter
objectType must be a valid [VkObjectType](#) value
- VUID-vkSetPrivateData-privateDataSlot-parameter
privateDataSlot must be a valid [VkPrivateDataSlot](#) handle
- VUID-vkSetPrivateData-privateDataSlot-parent
privateDataSlot must have been created, allocated, or retrieved from **device**

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

To retrieve application-defined data from a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
void vkGetPrivateData(
    VkDevice                device,
    VkObjectType            objectType,
    uint64_t               objectHandle,
    VkPrivateDataSlot       privateDataSlot,
    uint64_t*               pData);
```

or the equivalent command

```
// Provided by VK_EXT_private_data
void vkGetPrivateDataEXT(
    VkDevice                device,
    VkObjectType            objectType,
    uint64_t               objectHandle,
    VkPrivateDataSlot       privateDataSlot,
    uint64_t*               pData);
```

- `device` is the device that created the object
- `objectType` is a `VkObjectType` specifying the type of object data is associated with.
- `objectHandle` is a handle to the object data is associated with.
- `privateDataSlot` is a handle to a `VkPrivateDataSlot` specifying location of private data pointer storage.
- `pData` is a pointer to specify where application-defined data is returned. `0` will be written in the absence of a previous call to `vkSetPrivateData` using the object specified by `objectHandle`.

NOTE

Due to platform details on Android, implementations might not be able to reliably return `0` from calls to `vkGetPrivateData` for `VkSwapchainKHR` objects on which `vkSetPrivateData` has not previously been called. This erratum is exclusive to the Android platform and objects of type `VkSwapchainKHR`.

Valid Usage

- VUID-vkGetPrivateData-objectType-04018

objectHandle **must** be **device** or a child of **device**

- VUID-vkGetPrivateData-objectHandle-09498

objectHandle **must** be a valid handle to an object of type **objectType**

Valid Usage (Implicit)

- VUID-vkGetPrivateData-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkGetPrivateData-objectType-parameter
objectType **must** be a valid **VkObjectType** value
- VUID-vkGetPrivateData-privateDataSlot-parameter
privateDataSlot **must** be a valid **VkPrivateDataSlot** handle
- VUID-vkGetPrivateData-pData-parameter
pData **must** be a valid pointer to a **uint64_t** value
- VUID-vkGetPrivateData-privateDataSlot-parent
privateDataSlot **must** have been created, allocated, or retrieved from **device**

Chapter 37. Acceleration Structures

37.1. Acceleration Structures

Acceleration structures are data structures used by the implementation to efficiently manage scene geometry as it is [traversed during a ray tracing query](#). The application is responsible for managing acceleration structure objects (see [Acceleration Structures](#)), including allocation, destruction, executing builds or updates, and synchronizing resources used during ray tracing queries.

There are two types of acceleration structures, *top level acceleration structures* and *bottom level acceleration structures*.

An acceleration structure is considered to be constructed if an [acceleration structure build command](#) or [copy command](#) has been executed with the given acceleration structure as the destination.

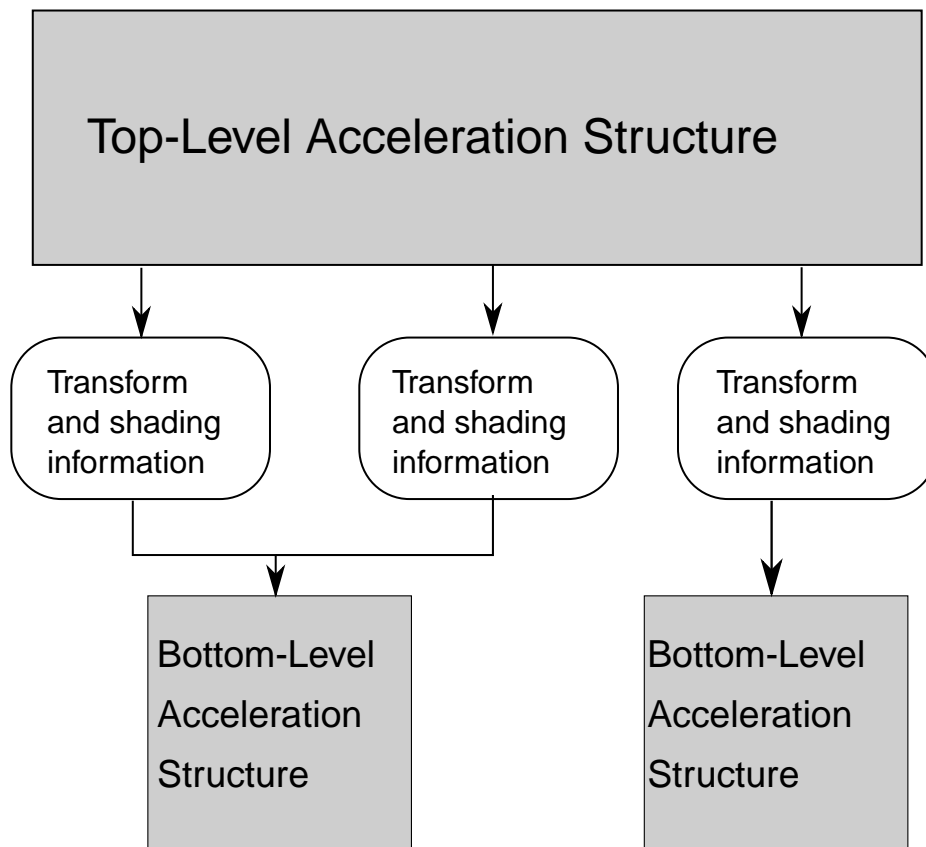

Figure 27. Acceleration Structure

Caption

The diagram shows the relationship between top and bottom level acceleration structures.

37.1.1. Geometry

Geometries refer to a triangle or axis-aligned bounding box.

37.1.2. Top Level Acceleration Structures

Opaque acceleration structure for an array of instances. The descriptor or device address referencing this is the starting point for traversal.

The top level acceleration structure takes a reference to any bottom level acceleration structure referenced by its instances. Those bottom level acceleration structure objects **must** be valid when the top level acceleration structure is accessed.

37.1.3. Bottom Level Acceleration Structures

Opaque acceleration structure for an array of geometries.

37.1.4. Acceleration Structure Update Rules

The API defines two types of operations to produce acceleration structures from geometry:

- A *build* operation is used to construct an acceleration structure.
- An *update* operation is used to modify an existing acceleration structure.

An update operation imposes certain constraints on the input, in exchange for considerably faster execution. When performing an update, the application is required to provide a full description of the acceleration structure, but is prohibited from changing anything other than instance definitions, transform matrices, and vertex or AABB positions. All other aspects of the description **must** exactly match the one from the original build.

More precisely, the application **must** not use an update operation to do any of the following:

- Change primitives or instances from *active* to *inactive*, or vice versa (as defined in [Inactive Primitives and Instances](#)).
- Change the index or vertex formats of triangle geometry.
- Change triangle geometry transform pointers from null to non-null or vice versa.
- Change the number of geometries or instances in the structure.
- Change the geometry flags for any geometry in the structure.
- Change the number of vertices or primitives for any geometry in the structure.

If the original acceleration structure was built using opacity micromaps and `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT` was set in `flags`, the application **must** provide the corresponding micromap information to the update operation. The application is prohibited from changing anything other than the specific opacity values assigned to the triangles.

More precisely, the application **must** not use an update operation to do any of the following:

- Remove micromaps or `VkOpacityMicromapSpecialIndexEXT` values from a geometry which previously had them, or vice versa.
- Change between use of `VkOpacityMicromapSpecialIndexEXT` values and explicit micro-map

triangles.

- Change the subdivision level or format of the micromap triangle associated with any acceleration-structure triangle.

If the original acceleration structure was built using opacity micromaps and `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT` was set in `flags`, the application **must** provide a micromap to the update operation.

If the original acceleration structure was built using opacity micromaps and neither opacity micromap update flag is set the application **must** provide the original micromap to the update operation.

If the original acceleration structure was built using displacement micromaps and `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_NV` was set in `flags`, the application **must** provide a displacement micromap to the update operation.

If the original acceleration structure was built using displacement micromaps and the displacement micromap update flag is not set the application **must** provide the original micromap to the update operation.

37.1.5. Inactive Primitives and Instances

Acceleration structures allow the use of particular input values to signal *inactive* primitives or instances.

An *inactive* triangle is one for which the first (X) component of any vertex is NaN. If any other vertex component is NaN, and the first is not, the behavior is undefined. If the vertex format does not have a NaN representation, then all triangles are considered active.

An *inactive* instance is one whose acceleration structure reference is 0.

An *inactive* AABB is one for which the minimum X coordinate is NaN. If any other component is NaN, and the first is not, the behavior is undefined.

In the above definitions, “NaN” refers to any type of NaN. Signaling, non-signaling, quiet, loud, or otherwise.

An inactive object is considered invisible to all rays, and **should** not be represented in the acceleration structure. Implementations **should** ensure that the presence of inactive objects does not seriously degrade traversal performance.

Inactive objects are counted in the auto-generated index sequences which are provided to shaders via `InstanceId` and `PrimitiveId` SPIR-V decorations. This allows objects in the scene to change freely between the active and inactive states, without affecting the layout of any arrays which are being indexed using the ID values.

Any transition between the active and inactive states requires a full acceleration structure rebuild. Applications **must** not perform an acceleration structure update where an object is active in the source acceleration structure but would be inactive in the destination, or vice versa.

37.1.6. Degenerate Primitives and Instances

Degenerate primitives and instances behave differently to [inactive primitives and instances](#), and are defined as:

- triangles that have one or more vertices whose respective (X), (Y), (Z) components are identical, or have three vertices that have at least two of the (X), (Y), or (Z) components identical, therefore forming a line or point. Degenerate triangles do not generate any intersections.
- AABBs whose `minX=maxX`, `minY=maxY`, and `minZ=maxZ`. Degenerate AABBs **may** invoke the intersection shader.
- instances that reference bottom level acceleration structures that contain no active primitives. When building an acceleration structure, implementations **should** treat degenerate instances as though they are a point at the instance origin, specified by `VkAccelerationStructureInstanceKHR::transform`.

Unlike *inactive* primitives and instances, *degenerate* primitives and instances **may** transition from the degenerate to the non-degenerate state, or vice versa, when performing an acceleration structure update.

If an acceleration structure is built without `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureInfoNV::flags` or `VkAccelerationStructureBuildGeometryInfoKHR::flags`, degenerate primitives **may** be discarded. Primitives that are defined with the same index value for more than one vertex **can** always be discarded.

37.1.7. Building Acceleration Structures

To build an acceleration structure call:

```
// Provided by VK_NV_ray_tracing
void vkCmdBuildAccelerationStructureNV(
    VkCommandBuffer                commandBuffer,
    const VkAccelerationStructureInfoNV* pInfo,
    VkBuffer                       instanceData,
    VkDeviceSize                   instanceOffset,
    VkBool32                       update,
    VkAccelerationStructureNV      dst,
    VkAccelerationStructureNV      src,
    VkBuffer                       scratch,
    VkDeviceSize                   scratchOffset);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` contains the shared information for the acceleration structure's structure.
- `instanceData` is the buffer containing an array of `VkAccelerationStructureInstanceKHR` structures defining acceleration structures. This parameter **must** be `NULL` for bottom level acceleration structures.
- `instanceOffset` is the offset in bytes (relative to the start of `instanceData`) at which the instance data is located.

- **update** specifies whether to update the **dst** acceleration structure with the data in **src**.
- **dst** is a pointer to the target acceleration structure for the build.
- **src** is a pointer to an existing acceleration structure that is to be used to update the **dst** acceleration structure.
- **scratch** is the **VkBuffer** that will be used as scratch memory for the build.
- **scratchOffset** is the offset in bytes relative to the start of **scratch** that will be used as a scratch memory.

Accesses to **dst**, **src**, and **scratch** **must** be **synchronized** with the **VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR** pipeline stage and an **access type** of **VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR** or **VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR**.

Valid Usage

- VUID-vkCmdBuildAccelerationStructureNV-geometryCount-02241
geometryCount **must** be less than or equal to **VkPhysicalDeviceRayTracingPropertiesNV::maxGeometryCount**
- VUID-vkCmdBuildAccelerationStructureNV-dst-02488
dst **must** have been created with compatible **VkAccelerationStructureInfoNV** where **VkAccelerationStructureInfoNV::type** and **VkAccelerationStructureInfoNV::flags** are identical, **VkAccelerationStructureInfoNV::instanceCount** and **VkAccelerationStructureInfoNV::geometryCount** for **dst** are greater than or equal to the build size and each geometry in **VkAccelerationStructureInfoNV::pGeometries** for **dst** has greater than or equal to the number of vertices, indices, and AABBs
- VUID-vkCmdBuildAccelerationStructureNV-update-02489
If **update** is **VK_TRUE**, **src** **must** not be **VK_NULL_HANDLE**
- VUID-vkCmdBuildAccelerationStructureNV-update-02490
If **update** is **VK_TRUE**, **src** **must** have previously been constructed with **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_NV** set in **VkAccelerationStructureInfoNV::flags** in the original build
- VUID-vkCmdBuildAccelerationStructureNV-update-02491
If **update** is **VK_FALSE**, the **size** member of the **VkMemoryRequirements** structure returned from a call to **vkGetAccelerationStructureMemoryRequirementsNV** with **VkAccelerationStructureMemoryRequirementsInfoNV::accelerationStructure** set to **dst** and **VkAccelerationStructureMemoryRequirementsInfoNV::type** set to **VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV** **must** be less than or equal to the size of **scratch** minus **scratchOffset**
- VUID-vkCmdBuildAccelerationStructureNV-update-02492
If **update** is **VK_TRUE**, the **size** member of the **VkMemoryRequirements** structure returned from a call to **vkGetAccelerationStructureMemoryRequirementsNV** with **VkAccelerationStructureMemoryRequirementsInfoNV::accelerationStructure** set to **dst** and **VkAccelerationStructureMemoryRequirementsInfoNV::type** set to **VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV** **must** be less than or equal to the size of **scratch** minus **scratchOffset**

- VUID-vkCmdBuildAccelerationStructureNV-scratch-03522
scratch **must** have been created with **VK_BUFFER_USAGE_RAY_TRACING_BIT_NV** usage flag
- VUID-vkCmdBuildAccelerationStructureNV-instanceData-03523
If **instanceData** is not **VK_NULL_HANDLE**, **instanceData** **must** have been created with **VK_BUFFER_USAGE_RAY_TRACING_BIT_NV** usage flag
- VUID-vkCmdBuildAccelerationStructureNV-accelerationStructureReference-03786
Each **VkAccelerationStructureInstanceKHR::accelerationStructureReference** value in **instanceData** **must** be a valid device address containing a value obtained from **vkGetAccelerationStructureHandleNV**
- VUID-vkCmdBuildAccelerationStructureNV-update-03524
If **update** is **VK_TRUE**, then objects that were previously active **must** not be made inactive as per **Inactive Primitives and Instances**
- VUID-vkCmdBuildAccelerationStructureNV-update-03525
If **update** is **VK_TRUE**, then objects that were previously inactive **must** not be made active as per **Inactive Primitives and Instances**
- VUID-vkCmdBuildAccelerationStructureNV-update-03526
If **update** is **VK_TRUE**, the **src** and **dst** objects **must** either be the same object or not have any **memory aliasing**
- VUID-vkCmdBuildAccelerationStructureNV-dst-07787
dst **must** be bound completely and contiguously to a single **VkDeviceMemory** object via **vkBindAccelerationStructureMemoryNV**

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructureNV-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdBuildAccelerationStructureNV-pInfo-parameter
pInfo **must** be a valid pointer to a valid **VkAccelerationStructureInfoNV** structure
- VUID-vkCmdBuildAccelerationStructureNV-instanceData-parameter
If **instanceData** is not **VK_NULL_HANDLE**, **instanceData** **must** be a valid **VkBuffer** handle
- VUID-vkCmdBuildAccelerationStructureNV-dst-parameter
dst **must** be a valid **VkAccelerationStructureNV** handle
- VUID-vkCmdBuildAccelerationStructureNV-src-parameter
If **src** is not **VK_NULL_HANDLE**, **src** **must** be a valid **VkAccelerationStructureNV** handle
- VUID-vkCmdBuildAccelerationStructureNV-scratch-parameter
scratch **must** be a valid **VkBuffer** handle
- VUID-vkCmdBuildAccelerationStructureNV-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdBuildAccelerationStructureNV-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support compute operations

- VUID-vkCmdBuildAccelerationStructureNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructureNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructureNV-commonparent
Each of `commandBuffer`, `dst`, `instanceData`, `scratch`, and `src` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

To build acceleration structures call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresKHR(
    VkCommandBuffer          commandBuffer,
    uint32_t                 infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkAccelerationStructureBuildRangeInfoKHR* const* ppBuildRangeInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build. It specifies the number of the `pInfos` structures and `ppBuildRangeInfos` pointers that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` `VkAccelerationStructureBuildGeometryInfoKHR` structures defining the geometry used to build each acceleration structure.
- `ppBuildRangeInfos` is a pointer to an array of `infoCount` pointers to arrays of `VkAccelerationStructureBuildRangeInfoKHR` structures. Each `ppBuildRangeInfos[i]` is a pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos[i]`.

The `vkCmdBuildAccelerationStructuresKHR` command provides the ability to initiate multiple

acceleration structures builds, however there is no ordering or synchronization implied between any of the individual acceleration structure builds.

NOTE

This means that an application **cannot** build a top-level acceleration structure in the same `vkCmdBuildAccelerationStructuresKHR` call as the associated bottom-level or instance acceleration structures are being built. There also **cannot** be any memory aliasing between any acceleration structure memories or scratch memories being used by any of the builds.

Accesses to the acceleration structure scratch buffers as identified by the `VkAccelerationStructureBuildGeometryInfoKHR::scratchData` buffer device addresses **must** be **synchronized** with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an **access type** of `(VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR | VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR)`. Accesses to each `VkAccelerationStructureBuildGeometryInfoKHR::srcAccelerationStructure` and `VkAccelerationStructureBuildGeometryInfoKHR::dstAccelerationStructure` **must** be **synchronized** with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an **access type** of `VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR` or `VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR`, as appropriate.

Accesses to other input buffers as identified by any used values of `VkAccelerationStructureGeometryMotionTrianglesDataNV::vertexData`, `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData`, `VkAccelerationStructureGeometryTrianglesDataKHR::indexData`, `VkAccelerationStructureGeometryTrianglesDataKHR::transformData`, `VkAccelerationStructureGeometryAabbsDataKHR::data`, and `VkAccelerationStructureGeometryInstancesDataKHR::data` **must** be **synchronized** with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an **access type** of `VK_ACCESS_SHADER_READ_BIT`.

Valid Usage

- VUID-vkCmdBuildAccelerationStructuresKHR-accelerationStructure-08923
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdBuildAccelerationStructuresKHR-mode-04628
The `mode` member of each element of `pInfos` **must** be a valid `VkBuildAccelerationStructureModeKHR` value
- VUID-vkCmdBuildAccelerationStructuresKHR-srcAccelerationStructure-04629
If the `srcAccelerationStructure` member of any element of `pInfos` is not `VK_NULL_HANDLE`, the `srcAccelerationStructure` member **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-04630
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** not be `VK_NULL_HANDLE`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03403
The `srcAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03698
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03800
The `dstAccelerationStructure` member of any element of `pInfos` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03699
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03700
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03663
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, `inactive primitives` in its `srcAccelerationStructure` member **must** not be made active
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03664
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, `active primitives` in its `srcAccelerationStructure` member **must** not be made `inactive`
- VUID-vkCmdBuildAccelerationStructuresKHR-None-03407
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03701
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any other element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03702
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstAccelerationStructure` member of any other element of `pInfos`, which is accessed by

this command

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03703

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03704

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03705

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03706

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03667

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` in the build

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03668

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same `VkAccelerationStructureKHR`, or not have any `memory aliasing`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03758

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03759

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03760

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `type` member **must** have the same

value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03761

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `geometryType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03762

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03763

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.vertexFormat` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03764

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.maxVertex` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03765

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.indexType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03766

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was `NULL` when `srcAccelerationStructure` was last built, then it **must** be `NULL`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03767

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or

`ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was not `NULL` when `srcAccelerationStructure` was last built, then it **must** not be `NULL`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03768

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then the value of each index referenced **must** be the same as the corresponding index value when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-primitiveCount-03769

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, the `primitiveCount` member of its corresponding `VkAccelerationStructureBuildRangeInfoKHR` structure **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03801

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the corresponding `ppBuildRangeInfos[i][j].primitiveCount` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03707

For each element of `pInfos`, the `buffer` used to create its `dstAccelerationStructure` member **must** be bound to device memory

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03708

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` the `buffer` used to create its `srcAccelerationStructure` member **must** be bound to device memory

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03709

For each element of `pInfos`, the `buffer` used to create each acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` **must** be bound to device memory

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03671

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where `N` is given by the `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03672

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, all addresses

between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where N is given by the `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresKHR-geometry-03673

The buffers from which the buffer device addresses for all of the `geometry.triangles.vertexData`, `geometry.triangles.indexData`, `geometry.triangles.transformData`, `geometry.aabbs.data`, and `geometry.instances.data` members of all `pInfos[i].pGeometries` and `pInfos[i].ppGeometries` are queried **must** have been created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03674

The buffer from which the buffer device address `pInfos[i].scratchData.deviceAddress` is queried **must** have been created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03802

For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a valid device address obtained from `vkGetBufferDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03803

For each element of `pInfos`, if `scratchData.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03710

For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of `VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03804

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be a valid device address obtained from `vkGetBufferDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03805

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.vertexData.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03711

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be aligned to the size in bytes of the smallest component of the format in `vertexFormat`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03806

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be a valid device address obtained from `vkGetBufferDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03807
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, if `geometry.triangles.indexData.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03712
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and with `geometry.triangles.indexType` not equal to `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be aligned to the size in bytes of the type in `indexType`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03808
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be a valid device address obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03809
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03810
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03811
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be a valid device address obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03812
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, if `geometry.aabbs.data.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03714
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03715
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_FALSE`, `geometry.instances.data.deviceAddress` **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03716
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, `geometry.instances.data.deviceAddress` **must** be aligned to 8 bytes

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03717
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, each element of `geometry.instances.data.deviceAddress` in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03813
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `geometry.instances.data.deviceAddress` **must** be a valid device address obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03814
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.instances.data.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-06707
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `VkAccelerationStructureInstanceKHR::accelerationStructureReference` value in `geometry.instances.data.deviceAddress` **must** be a valid device address containing a value obtained from `vkGetAccelerationStructureDeviceAddressKHR` or 0
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-09547
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10126
For each `pInfos[i]`, `dstAccelerationStructure` **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::size` greater than or equal to either:
 - the memory size required by the build operation, as returned by `vkGetAccelerationStructureBuildSizesKHR` with `pBuildInfo = pInfos[i]` and with each element of the `pMaxPrimitiveCounts` array greater than or equal to the equivalent `ppBuildRangeInfos[i][j].primitiveCount` values for `j` in `[0, pInfos[i].geometryCount)` or,
 - the result of querying the corresponding `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, if updating a compacted acceleration structure
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-03676
Each element of `ppBuildRangeInfos[i]` **must** be a valid pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-parameter
`pInfos` **must** be a valid pointer to an array of `infoCount` valid `VkAccelerationStructureBuildGeometryInfoKHR` structures

- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-parameter `ppBuildRangeInfos` **must** be a valid pointer to an array of `infoCount` `VkAccelerationStructureBuildRangeInfoKHR` structures
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdBuildAccelerationStructuresKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresKHR-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresKHR-infoCount-arraylength
`infoCount` **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

To build acceleration structures with some parameters sourced on the device call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresIndirectKHR(
    VkCommandBuffer                commandBuffer,
    uint32_t                       infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkDeviceAddress*         pIndirectDeviceAddresses,
    const uint32_t*                pIndirectStrides,
    const uint32_t* const*         ppMaxPrimitiveCounts);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build.

- `pInfos` is a pointer to an array of `infoCount` `VkAccelerationStructureBuildGeometryInfoKHR` structures defining the geometry used to build each acceleration structure.
- `pIndirectDeviceAddresses` is a pointer to an array of `infoCount` buffer device addresses which point to `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos[i]`.
- `pIndirectStrides` is a pointer to an array of `infoCount` byte strides between elements of `pIndirectDeviceAddresses`.
- `ppMaxPrimitiveCounts` is a pointer to an array of `infoCount` pointers to arrays of `pInfos[i].geometryCount` values indicating the maximum number of primitives that will be built by this command for each geometry.

Accesses to acceleration structures, scratch buffers, vertex buffers, index buffers, and instance buffers **must** be synchronized as with `vkCmdBuildAccelerationStructuresKHR`.

Accesses to any element of `pIndirectDeviceAddresses` **must** be `synchronized` with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an access type of `VK_ACCESS_INDIRECT_COMMAND_READ_BIT`.

Valid Usage

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-accelerationStructureIndirectBuild-03650
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureIndirectBuild` feature **must** be enabled
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-mode-04628
The `mode` member of each element of `pInfos` **must** be a valid `VkBuildAccelerationStructureModeKHR` value
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-srcAccelerationStructure-04629
If the `srcAccelerationStructure` member of any element of `pInfos` is not `VK_NULL_HANDLE`, the `srcAccelerationStructure` member **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-04630
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** not be `VK_NULL_HANDLE`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03403
The `srcAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03698
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03800

The `dstAccelerationStructure` member of any element of `pInfos` **must** be a valid `VkAccelerationStructureKHR` handle

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03699

For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03700

For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03663

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, `inactive` primitives in its `srcAccelerationStructure` member **must** not be made active

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03664

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, active primitives in its `srcAccelerationStructure` member **must** not be made `inactive`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-None-03407

The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03701

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any other element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03702

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstAccelerationStructure` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03703

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03704

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData`

member of any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03705

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03706

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03667

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` in the build

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03668

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same `VkAccelerationStructureKHR`, or not have any `memory aliasing`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03758

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03759

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03760

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `type` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03761

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `geometryType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03762

For each element of `pInfos`, if its `mode` member is

VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03763

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.vertexFormat member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03764

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.maxVertex member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03765

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.indexType member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03766

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was NULL when srcAccelerationStructure was last built, then it **must** be NULL

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03767

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was not NULL when srcAccelerationStructure was last built, then it **must** not be NULL

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03768

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, then the value of each index

referenced **must** be the same as the corresponding index value when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-primitiveCount-03769

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, the `primitiveCount` member of its corresponding `VkAccelerationStructureBuildRangeInfoKHR` structure **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03801

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the corresponding `ppMaxPrimitiveCounts[i][j]` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03707

For each element of `pInfos`, the `buffer` used to create its `dstAccelerationStructure` member **must** be bound to device memory

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03708

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` the `buffer` used to create its `srcAccelerationStructure` member **must** be bound to device memory

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03709

For each element of `pInfos`, the `buffer` used to create each acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` **must** be bound to device memory

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03671

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where N is given by the `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03672

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where N is given by the `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-geometry-03673

The buffers from which the buffer device addresses for all of the `geometry.triangles.vertexData`, `geometry.triangles.indexData`, `geometry.triangles.transformData`, `geometry.aabbs.data`, and `geometry.instances.data` members of all `pInfos[i].pGeometries` and `pInfos[i].ppGeometries` are queried **must** have

been created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03674
The buffer from which the buffer device address `pInfos[i].scratchData.deviceAddress` is queried **must** have been created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03802
For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a valid device address obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03803
For each element of `pInfos`, if `scratchData.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03710
For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of `VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03804
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be a valid device address obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03805
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.vertexData.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03711
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be aligned to the size in bytes of the smallest component of the format in `vertexFormat`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03806
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be a valid device address obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03807
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, if `geometry.triangles.indexData.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03712
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and with `geometry.triangles.indexType` not equal to `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be aligned to

the size in bytes of the type in `indexType`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03808
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be a valid device address obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03809
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03810
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03811
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be a valid device address obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03812
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, if `geometry.aabbs.data.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03714
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03715
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_FALSE`, `geometry.instances.data.deviceAddress` **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03716
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, `geometry.instances.data.deviceAddress` **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03717
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, each element of `geometry.instances.data.deviceAddress` in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03813
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `geometry.instances.data.deviceAddress` **must** be a valid device address obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03814

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.instances.data.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-06707

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `VkAccelerationStructureInstanceKHR::accelerationStructureReference` value in `geometry.instances.data.deviceAddress` **must** be a valid device address containing a value obtained from `vkGetAccelerationStructureDeviceAddressKHR` or `0`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-09547

`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03645

For any element of `pIndirectDeviceAddresses`, if the buffer from which it was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03646

For any element of `pIndirectDeviceAddresses[i]`, all device addresses between `pIndirectDeviceAddresses[i]` and `pIndirectDeviceAddresses[i] + (pInfos[i].geometryCount × pIndirectStrides[i]) - 1` **must** be in the buffer device address range of the same buffer

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03647

For any element of `pIndirectDeviceAddresses`, the buffer from which it was queried **must** have been created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` bit set

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03648

Each element of `pIndirectDeviceAddresses` **must** be a multiple of 4

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-03787

Each element of `pIndirectStrides` **must** be a multiple of 4

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03651

Each `VkAccelerationStructureBuildRangeInfoKHR` structure referenced by any element of `pIndirectDeviceAddresses` **must** be a valid `VkAccelerationStructureBuildRangeInfoKHR` structure

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03652

`pInfos[i].dstAccelerationStructure` **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::size` greater than or equal to the memory size required by the build operation, as returned by `vkGetAccelerationStructureBuildSizesKHR` with `pBuildInfo = pInfos[i]` and `pMaxPrimitiveCounts = ppMaxPrimitiveCounts[i]`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-03653

Each `ppMaxPrimitiveCounts[i][j]` **must** be greater than or equal to the `primitiveCount` value specified by the `VkAccelerationStructureBuildRangeInfoKHR` structure located at `pIndirectDeviceAddresses[i] + (j × pIndirectStrides[i])`

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-parameter **pInfos** **must** be a valid pointer to an array of **infoCount** valid [VkAccelerationStructureBuildGeometryInfoKHR](#) structures
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-parameter **pIndirectDeviceAddresses** **must** be a valid pointer to an array of **infoCount** [VkDeviceAddress](#) values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-parameter **pIndirectStrides** **must** be a valid pointer to an array of **infoCount** [uint32_t](#) values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-parameter **ppMaxPrimitiveCounts** **must** be a valid pointer to an array of **infoCount** [uint32_t](#) values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-cmdpool The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support compute operations
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-renderpass This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-videocoding This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-infoCount-arraylength **infoCount** **must** be greater than 0

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

The `VkAccelerationStructureBuildGeometryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildGeometryInfoKHR {
    VkStructureType                sType;
    const void*                    pNext;
    VkAccelerationStructureTypeKHR type;
    VkBuildAccelerationStructureFlagsKHR flags;
    VkBuildAccelerationStructureModeKHR mode;
    VkAccelerationStructureKHR     srcAccelerationStructure;
    VkAccelerationStructureKHR     dstAccelerationStructure;
    uint32_t                       geometryCount;
    const VkAccelerationStructureGeometryKHR* pGeometries;
    const VkAccelerationStructureGeometryKHR* ppGeometries;
    VkDeviceOrHostAddressKHR       scratchData;
} VkAccelerationStructureBuildGeometryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a `VkAccelerationStructureTypeKHR` value specifying the type of acceleration structure being built.
- `flags` is a bitmask of `VkBuildAccelerationStructureFlagBitsKHR` specifying additional parameters of the acceleration structure.
- `mode` is a `VkBuildAccelerationStructureModeKHR` value specifying the type of operation to perform.
- `srcAccelerationStructure` is a pointer to an existing acceleration structure that is to be used to update the `dstAccelerationStructure` acceleration structure when `mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`.
- `dstAccelerationStructure` is a pointer to the target acceleration structure for the build.
- `geometryCount` specifies the number of geometries that will be built into `dstAccelerationStructure`.
- `pGeometries` is a pointer to an array of `VkAccelerationStructureGeometryKHR` structures.
- `ppGeometries` is a pointer to an array of pointers to `VkAccelerationStructureGeometryKHR` structures.
- `scratchData` is the device or host address to memory that will be used as scratch memory for the build.

Only one of `pGeometries` or `ppGeometries` can be a valid pointer, the other must be `NULL`. Each element of the non-`NULL` array describes the data used to build each acceleration structure geometry.

The index of each element of the `pGeometries` or `ppGeometries` members of `VkAccelerationStructureBuildGeometryInfoKHR` is used as the *geometry index* during ray traversal. The geometry index is available in ray shaders via the `RayGeometryIndexKHR` built-in, and is used to

determine hit and intersection shaders executed during traversal. The geometry index is available to ray queries via the `OpRayQueryGetIntersectionGeometryIndexKHR` instruction.

Setting `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in `flags` indicates that this build is a motion top level acceleration structure. A motion top level uses instances of format `VkAccelerationStructureMotionInstanceNV` if `VkAccelerationStructureGeometryInstancesDataKHR::arrayOfPointers` is `VK_FALSE`.

If `VkAccelerationStructureGeometryInstancesDataKHR::arrayOfPointers` is `VK_TRUE`, the pointer for each element of the array of instance pointers consists of 4 bits of `VkAccelerationStructureMotionInstanceTypeNV` in the low 4 bits of the pointer identifying the type of structure at the pointer. The device address accessed is the value in the array with the low 4 bits set to zero. The structure at the pointer is one of `VkAccelerationStructureInstanceKHR`, `VkAccelerationStructureMatrixMotionInstanceNV` or `VkAccelerationStructureSRTMotionInstanceNV`, depending on the type value encoded in the low 4 bits.

A top level acceleration structure with either motion instances or vertex motion in its instances **must** set `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in `flags`.

Members `srcAccelerationStructure` and `dstAccelerationStructure` **may** be the same or different for an update operation (when `mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`). If they are the same, the update happens in-place. Otherwise, the target acceleration structure is updated and the source is not modified.

Valid Usage

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03654
`type` **must** not be `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-03788
If `geometryCount` is not 0, exactly one of `pGeometries` or `ppGeometries` **must** be a valid pointer, the other **must** be `NULL`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03789
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** be `VK_GEOMETRY_TYPE_INSTANCES_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03790
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, `geometryCount` **must** be 1
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03791
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** not be `VK_GEOMETRY_TYPE_INSTANCES_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03792
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` then the `geometryType` member of each geometry in either `pGeometries` or `ppGeometries` **must** be the same
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03793
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` then `geometryCount` **must** be

less than or equal to [VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxGeometryCount](#)

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03794
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` and the `geometryType` member of either `pGeometries` or `ppGeometries` is `VK_GEOMETRY_TYPE_AABBS_KHR`, the total number of AABBs in all geometries **must** be less than or equal to [VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPrimitiveCount](#)
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03795
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` and the `geometryType` member of either `pGeometries` or `ppGeometries` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the total number of triangles in all geometries **must** be less than or equal to [VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPrimitiveCount](#)
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-03796
If `flags` has the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR` bit set, then it **must** not have the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR` bit set
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-dstAccelerationStructure-04927
If `dstAccelerationStructure` was created with `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV` set in [VkAccelerationStructureCreateInfoKHR::flags](#), `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` **must** be set in `flags`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-04928
If `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` is set in `flags`, `dstAccelerationStructure` **must** have been created with `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV` set in [VkAccelerationStructureCreateInfoKHR::flags](#)
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-04929
If `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` is set in `flags`, `type` **must** not be `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-07334
If `flags` has the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT` bit set then it **must** not have the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT` bit set

Valid Usage (Implicit)

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_GEOMETRY_INFO_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-parameter
`type` **must** be a valid [VkAccelerationStructureTypeKHR](#) value
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-parameter
`flags` **must** be a valid combination of [VkBuildAccelerationStructureFlagBitsKHR](#) values

- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-parameter`
If `geometryCount` is not 0, and `pGeometries` is not `NULL`, `pGeometries` **must** be a valid pointer to an array of `geometryCount` valid `VkAccelerationStructureGeometryKHR` structures
- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-ppGeometries-parameter`
If `geometryCount` is not 0, and `ppGeometries` is not `NULL`, `ppGeometries` **must** be a valid pointer to an array of `geometryCount` valid pointers to valid `VkAccelerationStructureGeometryKHR` structures
- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-commonparent`
Both of `dstAccelerationStructure`, and `srcAccelerationStructure` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkBuildAccelerationStructureModeKHR` enumeration is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkBuildAccelerationStructureModeKHR {
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR = 0,
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR = 1,
} VkBuildAccelerationStructureModeKHR;
```

- `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR` specifies that the destination acceleration structure will be built using the specified geometries.
- `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` specifies that the destination acceleration structure will be built using data in a source acceleration structure, updated by the specified geometries.

The `VkDeviceOrHostAddressKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkDeviceOrHostAddressKHR {
    VkDeviceAddress    deviceAddress;
    void*              hostAddress;
} VkDeviceOrHostAddressKHR;
```

- `deviceAddress` is a buffer device address as returned by the `vkGetBufferDeviceAddressKHR` command.
- `hostAddress` is a host memory address.

The `VkDeviceOrHostAddressConstKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkDeviceOrHostAddressConstKHR {
    VkDeviceAddress    deviceAddress;
    const void*        hostAddress;
} VkDeviceOrHostAddressConstKHR;
```

- **deviceAddress** is a buffer device address as returned by the [vkGetBufferDeviceAddressKHR](#) command.
- **hostAddress** is a const host memory address.

The [VkAccelerationStructureGeometryKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkGeometryTypeKHR        geometryType;
    VkAccelerationStructureGeometryDataKHR geometry;
    VkGeometryFlagsKHR        flags;
} VkAccelerationStructureGeometryKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **geometryType** describes which type of geometry this [VkAccelerationStructureGeometryKHR](#) refers to.
- **geometry** is a [VkAccelerationStructureGeometryDataKHR](#) union describing the geometry data for the relevant geometry type.
- **flags** is a bitmask of [VkGeometryFlagBitsKHR](#) values describing additional properties of how the geometry should be built.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryKHR-sType-sType
sType must be [VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_KHR](#)
- VUID-VkAccelerationStructureGeometryKHR-pNext-pNext
pNext must be **NULL**
- VUID-VkAccelerationStructureGeometryKHR-geometryType-parameter
geometryType must be a valid [VkGeometryTypeKHR](#) value
- VUID-VkAccelerationStructureGeometryKHR-triangles-parameter
If **geometryType** is [VK_GEOMETRY_TYPE_TRIANGLES_KHR](#), the **triangles** member of **geometry must** be a valid [VkAccelerationStructureGeometryTrianglesDataKHR](#) structure
- VUID-VkAccelerationStructureGeometryKHR-aabbs-parameter
If **geometryType** is [VK_GEOMETRY_TYPE_AABBS_KHR](#), the **aabbs** member of **geometry must** be a

valid [VkAccelerationStructureGeometryAabbsDataKHR](#) structure

- VUID-VkAccelerationStructureGeometryKHR-instances-parameter

If `geometryType` is `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the `instances` member of `geometry` **must** be a valid [VkAccelerationStructureGeometryInstancesDataKHR](#) structure

- VUID-VkAccelerationStructureGeometryKHR-flags-parameter

`flags` **must** be a valid combination of [VkGeometryFlagBitsKHR](#) values

The [VkAccelerationStructureGeometryDataKHR](#) union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkAccelerationStructureGeometryDataKHR {
    VkAccelerationStructureGeometryTrianglesDataKHR    triangles;
    VkAccelerationStructureGeometryAabbsDataKHR        aabbs;
    VkAccelerationStructureGeometryInstancesDataKHR    instances;
} VkAccelerationStructureGeometryDataKHR;
```

- `triangles` is a [VkAccelerationStructureGeometryTrianglesDataKHR](#) structure.
- `aabbs` is a [VkAccelerationStructureGeometryAabbsDataKHR](#) structure.
- `instances` is a [VkAccelerationStructureGeometryInstancesDataKHR](#) structure.

The [VkAccelerationStructureGeometryTrianglesDataKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryTrianglesDataKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkFormat                 vertexFormat;
    VkDeviceOrHostAddressConstKHR vertexData;
    VkDeviceSize             vertexStride;
    uint32_t                 maxVertex;
    VkIndexType              indexType;
    VkDeviceOrHostAddressConstKHR indexData;
    VkDeviceOrHostAddressConstKHR transformData;
} VkAccelerationStructureGeometryTrianglesDataKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexFormat` is the [VkFormat](#) of each vertex element.
- `vertexData` is a device or host address to memory containing vertex data for this geometry.
- `maxVertex` is the number of vertices in `vertexData` minus one.
- `vertexStride` is the stride in bytes between each vertex.
- `indexType` is the [VkIndexType](#) of each index element.

- **indexData** is a device or host address to memory containing index data for this geometry.
- **transformData** is a device or host address to memory containing an optional reference to a [VkTransformMatrixKHR](#) structure describing a transformation from the space in which the vertices in this geometry are described to the space in which the acceleration structure is defined.

NOTE

Unlike the stride for vertex buffers in [VkVertexInputBindingDescription](#) for graphics pipelines which must not exceed **maxVertexInputBindingStride**, **vertexStride** for acceleration structure geometry is instead restricted to being a 32-bit value.

Valid Usage

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03735
vertexStride **must** be a multiple of the size in bytes of the smallest component of **vertexFormat**
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03819
vertexStride **must** be less than or equal to $2^{32}-1$
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-03797
The **format** **features** of **vertexFormat** **must** contain **VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR**
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-03798
indexType **must** be **VK_INDEX_TYPE_UINT16**, **VK_INDEX_TYPE_UINT32**, or **VK_INDEX_TYPE_NONE_KHR**

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_TRIANGLES_DATA_KHR**
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkAccelerationStructureGeometryMotionTrianglesDataNV](#), [VkAccelerationStructureTrianglesDisplacementMicromapNV](#), or [VkAccelerationStructureTrianglesOpacityMicromapEXT](#)
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-parameter
vertexFormat **must** be a valid [VkFormat](#) value
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-parameter
indexType **must** be a valid [VkIndexType](#) value

The [VkAccelerationStructureGeometryMotionTrianglesDataNV](#) structure is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureGeometryMotionTrianglesDataNV {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceOrHostAddressConstKHR vertexData;
} VkAccelerationStructureGeometryMotionTrianglesDataNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **vertexData** is a pointer to vertex data for this geometry at time 1.0

If **VkAccelerationStructureGeometryMotionTrianglesDataNV** is included in the **pNext** chain of a **VkAccelerationStructureGeometryTrianglesDataKHR** structure, the basic vertex positions are used for the position of the triangles in the geometry at time 0.0 and the **vertexData** in **VkAccelerationStructureGeometryMotionTrianglesDataNV** is used for the vertex positions at time 1.0, with positions linearly interpolated at intermediate times.

Indexing for **VkAccelerationStructureGeometryMotionTrianglesDataNV vertexData** is equivalent to the basic vertex position data.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryMotionTrianglesDataNV-sType-sType **must** be **VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_MOTION_TRIANGLES_DATA_NV**

The **VkAccelerationStructureTrianglesOpacityMicromapEXT** structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkAccelerationStructureTrianglesOpacityMicromapEXT {
    VkStructureType          sType;
    void*                    pNext;
    VkIndexType              indexType;
    VkDeviceOrHostAddressConstKHR indexBuffer;
    VkDeviceSize             indexStride;
    uint32_t                 baseTriangle;
    uint32_t                 usageCountsCount;
    const VkMicromapUsageEXT* pUsageCounts;
    const VkMicromapUsageEXT* const* ppUsageCounts;
    VkMicromapEXT            micromap;
} VkAccelerationStructureTrianglesOpacityMicromapEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **indexType** is the type of triangle indices used when indexing this micromap

- `indexBuffer` is the address containing the triangle indices
- `indexStride` is the byte stride between triangle indices
- `baseTriangle` is the base value added to the non-negative triangle indices
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of `VkMicromapUsageEXT` structures.
- `ppUsageCounts` is a pointer to an array of pointers to `VkMicromapUsageEXT` structures.
- `micromap` is the handle to the micromap object to include in this geometry

If `VkAccelerationStructureTrianglesOpacityMicromapEXT` is included in the `pNext` chain of a `VkAccelerationStructureGeometryTrianglesDataKHR` structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from `indexBuffer` using `indexType` and `indexStride`. If that value is the unsigned cast of one of the values from `VkOpacityMicromapSpecialIndexEXT` then that triangle behaves as described for that special value in `Ray Opacity Micromap`. Otherwise that triangle uses the opacity micromap information from `micromap` at that index plus `baseTriangle`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total count used to build this geometry. For a given `format` and `subdivisionLevel` the number of triangles in this geometry matching those values after indirection and special index handling **must** be equal to the sum of matching `count` provided.

If `micromap` is `VK_NULL_HANDLE`, then every value read from `indexBuffer` **must** be one of the values in `VkOpacityMicromapSpecialIndexEXT`.

Valid Usage

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-07335
Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_OPACITY_MICROMAP_EXT`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-parameter
`indexType` **must** be a valid `VkIndexType` value
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-parameter
If `usageCountsCount` is not 0, and `pUsageCounts` is not `NULL`, `pUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` `VkMicromapUsageEXT` structures
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-ppUsageCounts-parameter
If `usageCountsCount` is not 0, and `ppUsageCounts` is not `NULL`, `ppUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid pointers to `VkMicromapUsageEXT` structures

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-micromap-parameter
If **micromap** is not [VK_NULL_HANDLE](#), **micromap** **must** be a valid [VkMicromapEXT](#) handle

The [VkOpacityMicromapSpecialIndexEXT](#) enumeration is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkOpacityMicromapSpecialIndexEXT {
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT = -1,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_EXT = -2,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_EXT = -3,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_EXT = -4,
} VkOpacityMicromapSpecialIndexEXT;
```

- [VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT](#) specifies that the entire triangle is fully transparent.
- [VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_EXT](#) specifies that the entire triangle is fully opaque.
- [VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_EXT](#) specifies that the entire triangle is unknown-transparent.
- [VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_EXT](#) specifies that the entire triangle is unknown-opaque.

The [VkAccelerationStructureTrianglesDisplacementMicromapNV](#) structure is defined as:

```
// Provided by VK_NV_displacement_micromap
typedef struct VkAccelerationStructureTrianglesDisplacementMicromapNV {
    VkStructureType          sType;
    void*                    pNext;
    VkFormat                 displacementBiasAndScaleFormat;
    VkFormat                 displacementVectorFormat;
    VkDeviceOrHostAddressConstKHR displacementBiasAndScaleBuffer;
    VkDeviceSize             displacementBiasAndScaleStride;
    VkDeviceOrHostAddressConstKHR displacementVectorBuffer;
    VkDeviceSize             displacementVectorStride;
    VkDeviceOrHostAddressConstKHR displacedMicromapPrimitiveFlags;
    VkDeviceSize             displacedMicromapPrimitiveFlagsStride;
    VkIndexType              indexType;
    VkDeviceOrHostAddressConstKHR indexBuffer;
    VkDeviceSize             indexStride;
    uint32_t                 baseTriangle;
    uint32_t                 usageCountsCount;
    const VkMicromapUsageEXT* pUsageCounts;
    const VkMicromapUsageEXT* const* ppUsageCounts;
    VkMicromapEXT            micromap;
} VkAccelerationStructureTrianglesDisplacementMicromapNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displacementBiasAndScaleFormat` is the format of displacement bias and scale used in this displacement micromap reference.
- `displacementVectorFormat` is the format of displacement vector used in this displacement micromap reference.
- `displacementBiasAndScaleBuffer` is the address containing the bias and scale.
- `displacementBiasAndScaleStride` is the byte stride between bias and scale values.
- `displacementVectorBuffer` is the address containing the displacement vector values.
- `displacementVectorStride` is the byte stride between displacement vector values.
- `displacedMicromapPrimitiveFlags` is the address containing the primitive flags.
- `displacedMicromapPrimitiveFlagsStride` is the byte stride between primitive flag values.
- `indexType` is the type of triangle indices used when indexing this micromap.
- `indexBuffer` is the address containing the triangle indices.
- `indexStride` is the byte stride between triangle indices.
- `baseTriangle` is the base value added to the non-negative triangle indices.
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of `VkMicromapUsageEXT` structures.
- `ppUsageCounts` is a pointer to an array of pointers to `VkMicromapUsageEXT` structures.
- `micromap` is the handle to the micromap object to include in this geometry.

If `VkAccelerationStructureTrianglesDisplacementMicromapNV` is included in the `pNext` chain of a `VkAccelerationStructureGeometryTrianglesDataKHR` structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from `indexBuffer` using `indexType` and `indexStride`. That triangle uses the displacement micromap information from `micromap` at that index plus `baseTriangle`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total count used to build this geometry. For a given `format` and `subdivisionLevel` the number of triangles in this geometry matching those values after indirection **must** be equal to the sum of matching `count` provided.

Valid Usage

- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementBiasAndScaleFormat-09501
`displacementBiasAndScaleFormat` **must** not be `VK_FORMAT_UNDEFINED`
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-

displacementVectorFormat-09502

`displacementVectorFormat` **must** not be `VK_FORMAT_UNDEFINED`

- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-pUsageCounts-07992
Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-sType-sType **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_DISPLACEMENT_MICROMAP_NV`
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementBiasAndScaleFormat-parameter
`displacementBiasAndScaleFormat` **must** be a valid `VkFormat` value
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementVectorFormat-parameter
`displacementVectorFormat` **must** be a valid `VkFormat` value
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-indexType-parameter
`indexType` **must** be a valid `VkIndexType` value
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-pUsageCounts-parameter
If `usageCountsCount` is not 0, and `pUsageCounts` is not `NULL`, `pUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` `VkMicromapUsageEXT` structures
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-ppUsageCounts-parameter
If `usageCountsCount` is not 0, and `ppUsageCounts` is not `NULL`, `ppUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid pointers to `VkMicromapUsageEXT` structures
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-micromap-parameter
If `micromap` is not `VK_NULL_HANDLE`, `micromap` **must** be a valid `VkMicromapEXT` handle

The `VkTransformMatrixKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkTransformMatrixKHR {
    float    matrix[3][4];
} VkTransformMatrixKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkTransformMatrixKHR VkTransformMatrixNV;
```

- `matrix` is a 3x4 row-major affine transformation matrix.

Valid Usage

- VUID-VkTransformMatrixKHR-matrix-03799
The first three columns of **matrix** **must** define an invertible 3x3 matrix

The **VkAccelerationStructureGeometryAabbsDataKHR** structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryAabbsDataKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceOrHostAddressConstKHR data;
    VkDeviceSize         stride;
} VkAccelerationStructureGeometryAabbsDataKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **data** is a device or host address to memory containing **VkAabbPositionsKHR** structures containing position data for each axis-aligned bounding box in the geometry.
- **stride** is the stride in bytes between each entry in **data**. The stride **must** be a multiple of 8.

Valid Usage

- VUID-VkAccelerationStructureGeometryAabbsDataKHR-stride-03545
stride **must** be a multiple of 8
- VUID-VkAccelerationStructureGeometryAabbsDataKHR-stride-03820
stride **must** be less than or equal to $2^{32}-1$

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryAabbsDataKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_AABBS_DATA_KHR**
- VUID-VkAccelerationStructureGeometryAabbsDataKHR-pNext-pNext
pNext **must** be **NULL**

The **VkAabbPositionsKHR** structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAabbPositionsKHR {
    float    minX;
    float    minY;
    float    minZ;
    float    maxX;
    float    maxY;
    float    maxZ;
} VkAabbPositionsKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkAabbPositionsKHR VkAabbPositionsNV;
```

- **minX** is the x position of one opposing corner of a bounding box.
- **minY** is the y position of one opposing corner of a bounding box.
- **minZ** is the z position of one opposing corner of a bounding box.
- **maxX** is the x position of the other opposing corner of a bounding box.
- **maxY** is the y position of the other opposing corner of a bounding box.
- **maxZ** is the z position of the other opposing corner of a bounding box.

Valid Usage

- VUID-VkAabbPositionsKHR-minX-03546
minX must be less than or equal to **maxX**
- VUID-VkAabbPositionsKHR-minY-03547
minY must be less than or equal to **maxY**
- VUID-VkAabbPositionsKHR-minZ-03548
minZ must be less than or equal to **maxZ**

The **VkAccelerationStructureGeometryInstancesDataKHR** structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryInstancesDataKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32            arrayOfPointers;
    VkDeviceOrHostAddressConstKHR    data;
} VkAccelerationStructureGeometryInstancesDataKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `arrayOfPointers` specifies whether `data` is used as an array of addresses or just an array.
- `data` is either the address of an array of device or host addresses referencing individual `VkAccelerationStructureInstanceKHR` structures or packed motion instance information as described in `motion instances` if `arrayOfPointers` is `VK_TRUE`, or the address of an array of `VkAccelerationStructureInstanceKHR` or `VkAccelerationStructureMotionInstanceNV` structures. Addresses and `VkAccelerationStructureInstanceKHR` structures are tightly packed. `VkAccelerationStructureMotionInstanceNV` structures have a stride of 160 bytes.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryInstancesDataKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_INSTANCES_DATA_KHR`
- VUID-VkAccelerationStructureGeometryInstancesDataKHR-pNext-pNext
`pNext` **must** be `NULL`

Acceleration structure instances **can** be built into top-level acceleration structures. Each acceleration structure instance is a separate entry in the top-level acceleration structure which includes all the geometry of a bottom-level acceleration structure at a transformed location. Multiple instances **can** point to the same bottom level acceleration structure.

An acceleration structure instance is defined by the structure:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureInstanceKHR {
    VkTransformMatrixKHR    transform;
    uint32_t                instanceCustomIndex:24;
    uint32_t                mask:8;
    uint32_t                instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR flags:8;
    uint64_t                accelerationStructureReference;
} VkAccelerationStructureInstanceKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkAccelerationStructureInstanceKHR VkAccelerationStructureInstanceNV;
```

- `transform` is a `VkTransformMatrixKHR` structure describing a transformation to be applied to the acceleration structure.
- `instanceCustomIndex` is a 24-bit application-specified index value accessible to ray shaders in the `InstanceCustomIndexKHR` built-in.
- `mask` is an 8-bit visibility mask for the geometry. The instance **may** only be hit if `Cull Mask & instance.mask != 0`

- `instanceShaderBindingTableRecordOffset` is a 24-bit offset used in calculating the hit shader binding table index.
- `flags` is an 8-bit mask of `VkGeometryInstanceFlagBitsKHR` values to apply to this instance.
- `accelerationStructureReference` is either :
 - a device address containing the value obtained from `vkGetAccelerationStructureDeviceAddressKHR` or `vkGetAccelerationStructureHandleNV` (used by device operations which reference acceleration structures) or,
 - a `VkAccelerationStructureKHR` object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this struct produces the correct layout with existing compilers. The intended bit pattern is for the following:

- `instanceCustomIndex` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceCustomIndex` occupies the 24 least significant bits of that memory
 - `mask` occupies the 8 most significant bits of that memory
- `instanceShaderBindingTableRecordOffset` and `flags` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceShaderBindingTableRecordOffset` occupies the 24 least significant bits of that memory
 - `flags` occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureInstanceKHR-flags-parameter
`flags` **must** be a valid combination of `VkGeometryInstanceFlagBitsKHR` values

Possible values of `flags` in the instance modifying the behavior of that instance are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryInstanceFlagBitsKHR {
    VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR = 0x00000001,
    VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR = 0x00000002,
    VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR = 0x00000004,
    VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR = 0x00000008,
    // Provided by VK_EXT_opacity_micromap
    VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_EXT = 0x00000010,
    // Provided by VK_EXT_opacity_micromap
    VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT = 0x00000020,
    VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR =
VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_TRIANGLE_CULL_DISABLE_BIT_NV =
VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_NV =
VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_NV =
VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_NV =
VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR,
} VkGeometryInstanceFlagBitsKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkGeometryInstanceFlagBitsKHR VkGeometryInstanceFlagBitsNV;
```

- `VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR` disables face culling for this instance.
- `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` indicates that the [facing determination](#) for geometry in this instance is inverted. Because the facing is determined in object space, an instance transform does not change the winding, but a geometry transform does.
- `VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR` causes this instance to act as though `VK_GEOMETRY_OPAQUE_BIT_KHR` were specified on all geometries referenced by this instance. This behavior **can** be overridden by the SPIR-V `NoOpaqueKHR` ray flag.
- `VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR` causes this instance to act as though `VK_GEOMETRY_OPAQUE_BIT_KHR` were not specified on all geometries referenced by this instance. This behavior **can** be overridden by the SPIR-V `OpaqueKHR` ray flag.

`VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR` and `VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR` **must** not be used in the same flag.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkGeometryInstanceFlagsKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkGeometryInstanceFlagsKHR VkGeometryInstanceFlagsNV;
```

VkGeometryInstanceFlagsKHR is a bitmask type for setting a mask of zero or more **VkGeometryInstanceFlagBitsKHR**.

Acceleration structure motion instances **can** be built into top-level acceleration structures. Each acceleration structure instance is a separate entry in the top-level acceleration structure which includes all the geometry of a bottom-level acceleration structure at a transformed location including a type of motion and parameters to determine the motion of the instance over time.

An acceleration structure motion instance is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureMotionInstanceNV {
    VkAccelerationStructureMotionInstanceTypeNV    type;
    VkAccelerationStructureMotionInstanceFlagsNV    flags;
    VkAccelerationStructureMotionInstanceDataNV    data;
} VkAccelerationStructureMotionInstanceNV;
```

- **type** is a **VkAccelerationStructureMotionInstanceTypeNV** enumerant identifying which type of motion instance this is and which type of the union is valid.
- **flags** is currently unused, but is required to keep natural alignment of **data**.
- **data** is a **VkAccelerationStructureMotionInstanceDataNV** containing motion instance data for this instance.

NOTE

If writing this other than with a standard C compiler, note that the final structure should be 152 bytes in size.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMotionInstanceNV-type-parameter
type **must** be a valid **VkAccelerationStructureMotionInstanceTypeNV** value
- VUID-VkAccelerationStructureMotionInstanceNV-flags-zero-bitmask
flags **must** be 0
- VUID-VkAccelerationStructureMotionInstanceNV-static-instance-parameter
If **type** is **VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_STATIC_NV**, the **staticInstance** member of **data** **must** be a valid **VkAccelerationStructureInstanceKHR** structure

- VUID-VkAccelerationStructureMotionInstanceNV-matrixMotionInstance-parameter
If `type` is `VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_MATRIX_MOTION_NV`, the `matrixMotionInstance` member of `data` **must** be a valid `VkAccelerationStructureMatrixMotionInstanceNV` structure
- VUID-VkAccelerationStructureMotionInstanceNV-srtMotionInstance-parameter
If `type` is `VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_SRT_MOTION_NV`, the `srtMotionInstance` member of `data` **must** be a valid `VkAccelerationStructureSRTMotionInstanceNV` structure

Acceleration structure motion instance is defined by the union:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef union VkAccelerationStructureMotionInstanceDataNV {
    VkAccelerationStructureInstanceKHR          staticInstance;
    VkAccelerationStructureMatrixMotionInstanceNV matrixMotionInstance;
    VkAccelerationStructureSRTMotionInstanceNV  srtMotionInstance;
} VkAccelerationStructureMotionInstanceDataNV;
```

- `staticInstance` is a `VkAccelerationStructureInstanceKHR` structure containing data for a static instance.
- `matrixMotionInstance` is a `VkAccelerationStructureMatrixMotionInstanceNV` structure containing data for a matrix motion instance.
- `srtMotionInstance` is a `VkAccelerationStructureSRTMotionInstanceNV` structure containing data for an SRT motion instance.

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef VkFlags VkAccelerationStructureMotionInstanceFlagsNV;
```

`VkAccelerationStructureMotionInstanceFlagsNV` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkAccelerationStructureMotionInstanceTypeNV` enumeration is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef enum VkAccelerationStructureMotionInstanceTypeNV {
    VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_STATIC_NV = 0,
    VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_MATRIX_MOTION_NV = 1,
    VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_SRT_MOTION_NV = 2,
} VkAccelerationStructureMotionInstanceTypeNV;
```

- `VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_STATIC_NV` specifies that the instance is a static instance with no instance motion.
- `VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_MATRIX_MOTION_NV` specifies that the instance is a motion instance with motion specified by interpolation between two matrices.

- `VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_SRT_MOTION_NV` specifies that the instance is a motion instance with motion specified by interpolation in the SRT decomposition.

An acceleration structure matrix motion instance is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureMatrixMotionInstanceNV {
    VkTransformMatrixKHR    transformT0;
    VkTransformMatrixKHR    transformT1;
    uint32_t                instanceCustomIndex:24;
    uint32_t                mask:8;
    uint32_t                instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR flags:8;
    uint64_t                accelerationStructureReference;
} VkAccelerationStructureMatrixMotionInstanceNV;
```

- `transformT0` is a `VkTransformMatrixKHR` structure describing a transformation to be applied to the acceleration structure at time 0.
- `transformT1` is a `VkTransformMatrixKHR` structure describing a transformation to be applied to the acceleration structure at time 1.
- `instanceCustomIndex` is a 24-bit application-specified index value accessible to ray shaders in the `InstanceCustomIndexKHR` built-in.
- `mask` is an 8-bit visibility mask for the geometry. The instance **may** only be hit if `Cull Mask & instance.mask != 0`
- `instanceShaderBindingTableRecordOffset` is a 24-bit offset used in calculating the hit shader binding table index.
- `flags` is an 8-bit mask of `VkGeometryInstanceFlagBitsKHR` values to apply to this instance.
- `accelerationStructureReference` is either:
 - a device address containing the value obtained from `vkGetAccelerationStructureDeviceAddressKHR` or `vkGetAccelerationStructureHandleNV` (used by device operations which reference acceleration structures) or,
 - a `VkAccelerationStructureKHR` object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this struct produces the correct layout with existing compilers. The intended bit pattern is for the following:

- `instanceCustomIndex` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceCustomIndex` occupies the 24 least significant bits of that memory
 - `mask` occupies the 8 most significant bits of that memory
- `instanceShaderBindingTableRecordOffset` and `flags` occupy the same memory as if a single `uint32_t` was specified in their place

- `instanceShaderBindingTableRecordOffset` occupies the 24 least significant bits of that memory
- `flags` occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

The transform for a matrix motion instance at a point in time is derived by component-wise linear interpolation of the two transforms. That is, for a `time` in [0,1] the resulting transform is

$$\text{transformT0} \times (1 - \text{time}) + \text{transformT1} \times \text{time}$$

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMatrixMotionInstanceNV-flags-parameter
`flags` **must** be a valid combination of `VkGeometryInstanceFlagBitsKHR` values

An acceleration structure SRT motion instance is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureSRTMotionInstanceNV {
    VkSRTDataNV          transformT0;
    VkSRTDataNV          transformT1;
    uint32_t              instanceCustomIndex:24;
    uint32_t              mask:8;
    uint32_t              instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR flags:8;
    uint64_t              accelerationStructureReference;
} VkAccelerationStructureSRTMotionInstanceNV;
```

- `transformT0` is a `VkSRTDataNV` structure describing a transformation to be applied to the acceleration structure at time 0.
- `transformT1` is a `VkSRTDataNV` structure describing a transformation to be applied to the acceleration structure at time 1.
- `instanceCustomIndex` is a 24-bit application-specified index value accessible to ray shaders in the `InstanceCustomIndexKHR` built-in.
- `mask` is an 8-bit visibility mask for the geometry. The instance **may** only be hit if `Cull Mask & instance.mask != 0`
- `instanceShaderBindingTableRecordOffset` is a 24-bit offset used in calculating the hit shader binding table index.
- `flags` is an 8-bit mask of `VkGeometryInstanceFlagBitsKHR` values to apply to this instance.
- `accelerationStructureReference` is either:
 - a device address containing the value obtained from `vkGetAccelerationStructureDeviceAddressKHR` or `vkGetAccelerationStructureHandleNV`

(used by device operations which reference acceleration structures) or,

- a [VkAccelerationStructureKHR](#) object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this struct produces the correct layout with existing compilers. The intended bit pattern is for the following:

- `instanceCustomIndex` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceCustomIndex` occupies the 24 least significant bits of that memory
 - `mask` occupies the 8 most significant bits of that memory
- `instanceShaderBindingTableRecordOffset` and `flags` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceShaderBindingTableRecordOffset` occupies the 24 least significant bits of that memory
 - `flags` occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

The transform for a SRT motion instance at a point in time is derived from component-wise linear interpolation of the two SRT transforms. That is, for a `time` in [0,1] the resulting transform is

$$\text{transformT0} \times (1 - \text{time}) + \text{transformT1} \times \text{time}$$

Valid Usage (Implicit)

- VUID-VkAccelerationStructureSRTMotionInstanceNV-flags-parameter
`flags` **must** be a valid combination of [VkGeometryInstanceFlagBitsKHR](#) values

An acceleration structure SRT transform is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkSRTDataNV {
    float    sx;
    float    a;
    float    b;
    float    pvx;
    float    sy;
    float    c;
    float    pvy;
    float    sz;
    float    pvz;
    float    qx;
    float    qy;
    float    qz;
    float    qw;
    float    tx;
    float    ty;
    float    tz;
} VkSRTDataNV;
```

- **sx** is the x component of the scale of the transform
- **a** is one component of the shear for the transform
- **b** is one component of the shear for the transform
- **pvx** is the x component of the pivot point of the transform
- **sy** is the y component of the scale of the transform
- **c** is one component of the shear for the transform
- **py** is the y component of the pivot point of the transform
- **sz** is the z component of the scale of the transform
- **pz** is the z component of the pivot point of the transform
- **qx** is the x component of the rotation quaternion
- **qy** is the y component of the rotation quaternion
- **qz** is the z component of the rotation quaternion
- **qw** is the w component of the rotation quaternion
- **tx** is the x component of the post-rotation translation
- **ty** is the y component of the post-rotation translation
- **tz** is the z component of the post-rotation translation

This transform decomposition consists of three elements. The first is a matrix *S*, consisting of a scale, shear, and translation, usually used to define the pivot point of the following rotation. This matrix is constructed from the parameters above by:

$$S = \begin{pmatrix} sx & a & b & pvx \\ 0 & sy & c & pvy \\ 0 & 0 & sz & pvz \end{pmatrix}$$

The rotation quaternion is defined as:

$$R = [qx, qy, qz, qw]$$

This is a rotation around a conceptual normalized axis [ax, ay, az] of amount **theta** such that:

$$[qx, qy, qz] = \sin(\text{theta}/2) \times [ax, ay, az]$$

and

$$qw = \cos(\text{theta}/2)$$

Finally, the transform has a translation T constructed from the parameters above by:

$$T = \begin{pmatrix} 1 & 0 & 0 & tx \\ 0 & 1 & 0 & ty \\ 0 & 0 & 1 & tz \end{pmatrix}$$

The effective derived transform is then given by

$$T \times R \times S$$

VkAccelerationStructureBuildRangeInfoKHR is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildRangeInfoKHR {
    uint32_t    primitiveCount;
    uint32_t    primitiveOffset;
    uint32_t    firstVertex;
    uint32_t    transformOffset;
} VkAccelerationStructureBuildRangeInfoKHR;
```

- **primitiveCount** defines the number of primitives for a corresponding acceleration structure geometry.
- **primitiveOffset** defines an offset in bytes into the memory where primitive data is defined.
- **firstVertex** is the index of the first vertex to build from for triangle geometry.
- **transformOffset** defines an offset in bytes into the memory where a transform matrix is defined.

The primitive count and primitive offset are interpreted differently depending on the **VkGeometryTypeKHR** used:

- For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `primitiveCount` is the number of triangles to be built, where each triangle is treated as 3 vertices.
 - If the geometry uses indices, `primitiveCount × 3` indices are consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::indexData`, starting at an offset of `primitiveOffset`. The value of `firstVertex` is added to the index values before fetching vertices.
 - If the geometry does not use indices, `primitiveCount × 3` vertices are consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData`, starting at an offset of `primitiveOffset + VkAccelerationStructureGeometryTrianglesDataKHR::vertexStride × firstVertex`.
 - If `VkAccelerationStructureGeometryTrianglesDataKHR::transformData` is not `NULL`, a single `VkTransformMatrixKHR` structure is consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::transformData`, at an offset of `transformOffset`. This matrix describes a transformation from the space in which the vertices for all triangles in this geometry are described to the space in which the acceleration structure is defined.
- For geometries of type `VK_GEOMETRY_TYPE_AABBS_KHR`, `primitiveCount` is the number of axis-aligned bounding boxes. `primitiveCount` `VkAabbPositionsKHR` structures are consumed from `VkAccelerationStructureGeometryAabbsDataKHR::data`, starting at an offset of `primitiveOffset`.
- For geometries of type `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `primitiveCount` is the number of acceleration structures. `primitiveCount` `VkAccelerationStructureInstanceKHR` or `VkAccelerationStructureMotionInstanceNV` structures are consumed from `VkAccelerationStructureGeometryInstancesDataKHR::data`, starting at an offset of `primitiveOffset`.

Valid Usage

- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03656
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry uses indices, the offset `primitiveOffset` from `VkAccelerationStructureGeometryTrianglesDataKHR::indexData` **must** be a multiple of the element size of `VkAccelerationStructureGeometryTrianglesDataKHR::indexType`
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03657
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry does not use indices, the offset `primitiveOffset` from `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData` **must** be a multiple of the component size of `VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat`
- VUID-VkAccelerationStructureBuildRangeInfoKHR-transformOffset-03658
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the offset `transformOffset` from `VkAccelerationStructureGeometryTrianglesDataKHR::transformData` **must** be a multiple of 16
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03659
For geometries of type `VK_GEOMETRY_TYPE_AABBS_KHR`, the offset `primitiveOffset` from `VkAccelerationStructureGeometryAabbsDataKHR::data` **must** be a multiple of 8

- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03660
For geometries of type `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the offset `primitiveOffset` from `VkAccelerationStructureGeometryInstancesDataKHR::data` **must** be a multiple of 16

37.1.8. Copying Acceleration Structures

An additional command exists for copying acceleration structures without updating their contents. The acceleration structure object **can** be compacted in order to improve performance. Before copying, an application **must** query the size of the resulting acceleration structure.

To query acceleration structure size parameters call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdWriteAccelerationStructuresPropertiesKHR(
    VkCommandBuffer                commandBuffer,
    uint32_t                       accelerationStructureCount,
    const VkAccelerationStructureKHR* pAccelerationStructures,
    VkQueryType                    queryType,
    VkQueryPool                    queryPool,
    uint32_t                       firstQuery);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `accelerationStructureCount` is the count of acceleration structures for which to query the property.
- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a `VkQueryType` value specifying the type of queries managed by the pool.
- `queryPool` is the query pool that will manage the results of the query.
- `firstQuery` is the first query index within the query pool that will contain the `accelerationStructureCount` number of results.

Accesses to any of the acceleration structures listed in `pAccelerationStructures` **must** be `synchronized` with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` pipeline stage or the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage, and an access type of `VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR`.

- If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, then the value written out is the number of bytes required by a compacted acceleration structure.
- If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`, then the value written out is the number of bytes required by a serialized acceleration structure.

Valid Usage

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructure-08924
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature

must be enabled

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-02493
queryPool **must** have been created with a **queryType** matching **queryType**
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-02494
The queries identified by **queryPool** and **firstQuery** **must** be *unavailable*
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-buffer-03736
The **buffer** used to create each acceleration structure in **pAccelerationStructures** **must** be bound to device memory
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-query-04880
The sum of **firstQuery** plus **accelerationStructureCount** **must** be less than or equal to the number of queries in **queryPool**
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-04964
All acceleration structures in **pAccelerationStructures** **must** have been built prior to the execution of this command
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructures-03431
All acceleration structures in **pAccelerationStructures** **must** have been built with **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR** if **queryType** is **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR**
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryType-06742
queryType **must** be **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR**,
VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR,
VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, or
VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR

Valid Usage (Implicit)

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parameter
pAccelerationStructures **must** be a valid pointer to an array of **accelerationStructureCount** valid **VkAccelerationStructureKHR** handles
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryType-parameter
queryType **must** be a valid **VkQueryType** value
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-parameter
queryPool **must** be a valid **VkQueryPool** handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support compute operations

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructureCount-arraylength
`accelerationStructureCount` **must** be greater than 0
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commonparent
Each of `commandBuffer`, `queryPool`, and the elements of `pAccelerationStructures` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

To query acceleration structure size parameters call:

```
// Provided by VK_NV_ray_tracing
void vkCmdWriteAccelerationStructuresPropertiesNV(
    VkCommandBuffer          commandBuffer,
    uint32_t                 accelerationStructureCount,
    const VkAccelerationStructureNV* pAccelerationStructures,
    VkQueryType              queryType,
    VkQueryPool              queryPool,
    uint32_t                 firstQuery);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `accelerationStructureCount` is the count of acceleration structures for which to query the property.
- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a `VkQueryType` value specifying the type of queries managed by the pool.

- `queryPool` is the query pool that will manage the results of the query.
- `firstQuery` is the first query index within the query pool that will contain the `accelerationStructureCount` number of results.

Accesses to any of the acceleration structures listed in `pAccelerationStructures` **must** be `synchronized` with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an access type of `VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR`.

Valid Usage

- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryPool-03755
`queryPool` **must** have been created with a `queryType` matching `queryType`
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryPool-03756
The queries identified by `queryPool` and `firstQuery` **must** be *unavailable*
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-accelerationStructure-03757
`accelerationStructure` **must** be bound completely and contiguously to a single `VkDeviceMemory` object via `vkBindAccelerationStructureMemoryNV`
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-04958
All acceleration structures in `pAccelerationStructures` **must** have been built prior to the execution of this command
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-06215
All acceleration structures in `pAccelerationStructures` **must** have been built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR` if `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV`
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryType-06216
`queryType` **must** be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV`

Valid Usage (Implicit)

- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-parameter
`pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid `VkAccelerationStructureNV` handles
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryType-parameter
`queryType` **must** be a valid `VkQueryType` value
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations

- `VOID-vkCmdWriteAccelerationStructuresPropertiesNV-renderpass`
This command **must** only be called outside of a render pass instance
- `VOID-vkCmdWriteAccelerationStructuresPropertiesNV-videocoding`
This command **must** only be called outside of a video coding scope
- `VOID-vkCmdWriteAccelerationStructuresPropertiesNV-accelerationStructureCount-arraylength`
`accelerationStructureCount` **must** be greater than 0
- `VOID-vkCmdWriteAccelerationStructuresPropertiesNV-commonparent`
Each of `commandBuffer`, `queryPool`, and the elements of `pAccelerationStructures` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

To copy an acceleration structure call:

```
// Provided by VK_NV_ray_tracing
void vkCmdCopyAccelerationStructureNV(
    VkCommandBuffer          commandBuffer,
    VkAccelerationStructureNV dst,
    VkAccelerationStructureNV src,
    VkCopyAccelerationStructureModeKHR mode);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `dst` is the target acceleration structure for the copy.
- `src` is the source acceleration structure for the copy.
- `mode` is a `VkCopyAccelerationStructureModeKHR` value specifying additional operations to perform during the copy.

Accesses to `src` and `dst` must be synchronized with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` pipeline stage or the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage, and an access type of `VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR` or `VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR` as appropriate.

Valid Usage

- VUID-vkCmdCopyAccelerationStructureNV-mode-03410
`mode` must be `VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR` or `VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR`
- VUID-vkCmdCopyAccelerationStructureNV-src-04963
The source acceleration structure `src` must have been constructed prior to the execution of this command
- VUID-vkCmdCopyAccelerationStructureNV-src-03411
If `mode` is `VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR`, `src` must have been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR` in the build
- VUID-vkCmdCopyAccelerationStructureNV-buffer-03718
The `buffer` used to create `src` must be bound to device memory
- VUID-vkCmdCopyAccelerationStructureNV-buffer-03719
The `buffer` used to create `dst` must be bound to device memory
- VUID-vkCmdCopyAccelerationStructureNV-dst-07791
The range of memory backing `dst` that is accessed by this command must not overlap the memory backing `src` that is accessed by this command
- VUID-vkCmdCopyAccelerationStructureNV-dst-07792
`dst` must be bound completely and contiguously to a single `VkDeviceMemory` object via `vkBindAccelerationStructureMemoryNV`

Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureNV-commandBuffer-parameter
`commandBuffer` must be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyAccelerationStructureNV-dst-parameter
`dst` must be a valid `VkAccelerationStructureNV` handle
- VUID-vkCmdCopyAccelerationStructureNV-src-parameter
`src` must be a valid `VkAccelerationStructureNV` handle
- VUID-vkCmdCopyAccelerationStructureNV-mode-parameter
`mode` must be a valid `VkCopyAccelerationStructureModeKHR` value
- VUID-vkCmdCopyAccelerationStructureNV-commandBuffer-recording
`commandBuffer` must be in the `recording state`
- VUID-vkCmdCopyAccelerationStructureNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from must support compute

operations

- VUID-vkCmdCopyAccelerationStructureNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyAccelerationStructureNV-commonparent
Each of **commandBuffer**, **dst**, and **src** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

To copy an acceleration structure call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyAccelerationStructureKHR(
    VkCommandBuffer          commandBuffer,
    const VkCopyAccelerationStructureInfoKHR* pInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pInfo** is a pointer to a **VkCopyAccelerationStructureInfoKHR** structure defining the copy operation.

This command copies the **pInfo->src** acceleration structure to the **pInfo->dst** acceleration structure in the manner specified by **pInfo->mode**.

Accesses to **pInfo->src** and **pInfo->dst** **must** be **synchronized** with the **VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR** **pipeline stage** or the **VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR** **pipeline stage**, and an **access type** of **VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR** or **VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR** as appropriate.

Valid Usage

- VUID-vkCmdCopyAccelerationStructureKHR-accelerationStructure-08925
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdCopyAccelerationStructureKHR-buffer-03737
The `buffer` used to create `pInfo->src` **must** be bound to device memory
- VUID-vkCmdCopyAccelerationStructureKHR-buffer-03738
The `buffer` used to create `pInfo->dst` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyAccelerationStructureKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyAccelerationStructureInfoKHR` structure
- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdCopyAccelerationStructureKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

The `VkCopyAccelerationStructureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyAccelerationStructureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureKHR src;
    VkAccelerationStructureKHR dst;
    VkCopyAccelerationStructureModeKHR mode;
} VkCopyAccelerationStructureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the source acceleration structure for the copy.
- `dst` is the target acceleration structure for the copy.
- `mode` is a `VkCopyAccelerationStructureModeKHR` value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyAccelerationStructureInfoKHR-mode-03410
`mode` **must** be `VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR` or `VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR`
- VUID-VkCopyAccelerationStructureInfoKHR-src-04963
The source acceleration structure `src` **must** have been constructed prior to the execution of this command
- VUID-VkCopyAccelerationStructureInfoKHR-src-03411
If `mode` is `VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR`, `src` **must** have been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACT_BIT_KHR` in the build
- VUID-VkCopyAccelerationStructureInfoKHR-buffer-03718
The `buffer` used to create `src` **must** be bound to device memory
- VUID-VkCopyAccelerationStructureInfoKHR-buffer-03719
The `buffer` used to create `dst` **must** be bound to device memory
- VUID-VkCopyAccelerationStructureInfoKHR-dst-07791
The range of memory backing `dst` that is accessed by this command **must** not overlap the memory backing `src` that is accessed by this command

Valid Usage (Implicit)

- VUID-VkCopyAccelerationStructureInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_ACCELERATION_STRUCTURE_INFO_KHR`
- VUID-VkCopyAccelerationStructureInfoKHR-pNext-pNext

pNext must be NULL

- VUID-VkCopyAccelerationStructureInfoKHR-src-parameter
src must be a valid [VkAccelerationStructureKHR](#) handle
- VUID-VkCopyAccelerationStructureInfoKHR-dst-parameter
dst must be a valid [VkAccelerationStructureKHR](#) handle
- VUID-VkCopyAccelerationStructureInfoKHR-mode-parameter
mode must be a valid [VkCopyAccelerationStructureModeKHR](#) value
- VUID-VkCopyAccelerationStructureInfoKHR-commonparent
Both of **dst**, and **src** must have been created, allocated, or retrieved from the same [VkDevice](#)

Possible values of **mode** specifying additional operations to perform during the copy, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkCopyAccelerationStructureModeKHR {
    VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR = 0,
    VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR = 1,
    // Provided by VK_KHR_acceleration_structure
    VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR = 2,
    // Provided by VK_KHR_acceleration_structure
    VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR = 3,
    // Provided by VK_NV_ray_tracing
    VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_NV =
VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR,
    // Provided by VK_NV_ray_tracing
    VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_NV =
VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR,
} VkCopyAccelerationStructureModeKHR;
```

or the equivalent

```
// Provided by VK_NV_ray_tracing
typedef VkCopyAccelerationStructureModeKHR VkCopyAccelerationStructureModeNV;
```

- **VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR** creates a direct copy of the acceleration structure specified in **src** into the one specified by **dst**. The **dst** acceleration structure must have been created with the same parameters as **src**. If **src** contains references to other acceleration structures, **dst** will reference the same acceleration structures.
- **VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR** creates a more compact version of an acceleration structure **src** into **dst**. The acceleration structure **dst** must have been created with a size at least as large as that returned by [vkCmdWriteAccelerationStructuresPropertiesNV](#) , [vkCmdWriteAccelerationStructuresPropertiesKHR](#), or [vkWriteAccelerationStructuresPropertiesKHR](#) after the build of the acceleration structure specified by **src**. If **src** contains references to other acceleration structures, **dst** will reference

the same acceleration structures.

- `VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR` serializes the acceleration structure to a semi-opaque format which can be reloaded on a compatible implementation.
- `VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR` deserializes the semi-opaque serialization format in the buffer to the acceleration structure.

To copy an acceleration structure to device memory call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyAccelerationStructureToMemoryKHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyAccelerationStructureToMemoryInfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is an a pointer to a `VkCopyAccelerationStructureToMemoryInfoKHR` structure defining the copy operation.

Accesses to `pInfo->src` must be synchronized with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` pipeline stage or the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage, and an access type of `VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR`. Accesses to the buffer indicated by `pInfo->dst.deviceAddress` must be synchronized with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` pipeline stage or the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage, and an and an access type of `VK_ACCESS_TRANSFER_WRITE_BIT`.

This command produces the same results as `vkCopyAccelerationStructureToMemoryKHR`, but writes its result to a device address, and is executed on the device rather than the host. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either `vkCmdCopyMemoryToAccelerationStructureKHR` or `vkCopyMemoryToAccelerationStructureKHR`.

The defined header structure for the serialized data consists of:

- `VK_UUID_SIZE` bytes of data matching `VkPhysicalDeviceIDProperties::driverUUID`
- `VK_UUID_SIZE` bytes of data identifying the compatibility for comparison using `vkGetDeviceAccelerationStructureCompatibilityKHR`
- A 64-bit integer of the total size matching the value queried using `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`
- A 64-bit integer of the deserialized size to be passed in to `VkAccelerationStructureCreateInfoKHR::size`
- A 64-bit integer of the count of the number of acceleration structure handles following. This value matches the value queried using `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`. This will be zero for a bottom-level acceleration structure. For top-level acceleration structures this number is implementation-dependent; the number of and ordering of the handles may not match the

instance descriptions which were used to build the acceleration structure.

The corresponding handles matching the values returned by [vkGetAccelerationStructureDeviceAddressKHR](#) or [vkGetAccelerationStructureHandleNV](#) are tightly packed in the buffer following the count. The application is expected to store a mapping between those handles and the original application-generated bottom-level acceleration structures to provide when deserializing. The serialized data is written to the buffer (or read from the buffer) according to the host endianness.

Valid Usage

- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-accelerationStructure-08926
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure](#) feature **must** be enabled
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-03739
[pInfo->dst.deviceAddress](#) **must** be a valid device address for a buffer bound to device memory
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-03740
[pInfo->dst.deviceAddress](#) **must** be aligned to 256 bytes
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-03741
If the buffer pointed to by [pInfo->dst.deviceAddress](#) is non-sparse then it **must** be bound completely and contiguously to a single [VkDeviceMemory](#) object
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-None-03559
The [buffer](#) used to create [pInfo->src](#) **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-parameter [commandBuffer](#) **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-parameter [pInfo](#) **must** be a valid pointer to a valid [VkCopyAccelerationStructureToMemoryInfoKHR](#) structure
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-recording [commandBuffer](#) **must** be in the [recording state](#)
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-cmdpool
The [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support compute operations
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyAccelerationStructureToMemoryInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureKHR src;
    VkDeviceOrHostAddressKHR dst;
    VkCopyAccelerationStructureModeKHR mode;
} VkCopyAccelerationStructureToMemoryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the source acceleration structure for the copy
- `dst` is the device or host address to memory which is the target for the copy
- `mode` is a `VkCopyAccelerationStructureModeKHR` value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-04959
The source acceleration structure `src` **must** have been constructed prior to the execution of this command
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-dst-03561
The memory pointed to by `dst` **must** be at least as large as the serialization size of `src`, as reported by `vkWriteAccelerationStructuresPropertiesKHR` or `vkCmdWriteAccelerationStructuresPropertiesKHR` with a query type of `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-03412
`mode` **must** be `VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR`

Valid Usage (Implicit)

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_ACCELERATION_STRUCTURE_TO_MEMORY_INFO_KHR`
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-parameter
`src` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-parameter
`mode` **must** be a valid `VkCopyAccelerationStructureModeKHR` value

To copy device memory to an acceleration structure call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyMemoryToAccelerationStructureKHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyMemoryToAccelerationStructureInfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a `VkCopyMemoryToAccelerationStructureInfoKHR` structure defining the copy operation.

Accesses to `pInfo->dst` **must** be `synchronized` with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` `pipeline stage` or the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` `pipeline stage`, and an `access type` of `VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR`. Accesses to the buffer indicated by `pInfo->src.deviceAddress` **must** be `synchronized` with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` `pipeline stage` or the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` `pipeline stage`, and an `access type` of `VK_ACCESS_TRANSFER_READ_BIT`.

This command can accept acceleration structures produced by either `vkCmdCopyAccelerationStructureToMemoryKHR` or `vkCopyAccelerationStructureToMemoryKHR`.

The structure provided as input to `deserialize` is as described in `vkCmdCopyAccelerationStructureToMemoryKHR`, with any acceleration structure handles filled in with the newly-queried handles to bottom level acceleration structures created before deserialization. These do not need to be built at `deserialize` time, but **must** be created.

Valid Usage

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-accelerationStructure-08927
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-03742
`pInfo->src.deviceAddress` **must** be a valid device address for a buffer bound to device memory
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-03743
`pInfo->src.deviceAddress` **must** be aligned to 256 bytes
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-03744
If the buffer pointed to by `pInfo->src.deviceAddress` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-buffer-03745
The `buffer` used to create `pInfo->dst` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMemoryToAccelerationStructureInfoKHR` structure
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

The `VkCopyMemoryToAccelerationStructureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyMemoryToAccelerationStructureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceOrHostAddressConstKHR src;
    VkAccelerationStructureKHR dst;
    VkCopyAccelerationStructureModeKHR mode;
} VkCopyMemoryToAccelerationStructureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the device or host address to memory containing the source data for the copy.
- `dst` is the target acceleration structure for the copy.
- `mode` is a `VkCopyAccelerationStructureModeKHR` value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-src-04960
The source memory pointed to by `src` **must** contain data previously serialized using `vkCmdCopyAccelerationStructureToMemoryKHR`, potentially modified to relocate acceleration structure references as described in that command
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-mode-03413
`mode` **must** be `VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR`
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-pInfo-03414
The data in `src` **must** have a format compatible with the destination physical device as returned by `vkGetDeviceAccelerationStructureCompatibilityKHR`
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-03746
`dst` **must** have been created with a `size` greater than or equal to that used to serialize the data in `src`

Valid Usage (Implicit)

- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_MEMORY_TO_ACCELERATION_STRUCTURE_INFO_KHR`
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-parameter
`dst` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-mode-parameter

mode **must** be a valid [VkCopyAccelerationStructureModeKHR](#) value

To check if a serialized acceleration structure is compatible with the current device call:

```
// Provided by VK_KHR_acceleration_structure
void vkGetDeviceAccelerationStructureCompatibilityKHR(
    VkDevice device,
    const VkAccelerationStructureVersionInfoKHR* pVersionInfo,
    VkAccelerationStructureCompatibilityKHR* pCompatibility);
```

- **device** is the device to check the version against.
- **pVersionInfo** is a pointer to a [VkAccelerationStructureVersionInfoKHR](#) structure specifying version information to check against the device.
- **pCompatibility** is a pointer to a [VkAccelerationStructureCompatibilityKHR](#) value in which compatibility information is returned.

Valid Usage

- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-accelerationStructure-08928
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure](#) feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-pVersionInfo-parameter
pVersionInfo **must** be a valid pointer to a valid [VkAccelerationStructureVersionInfoKHR](#) structure
- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-pCompatibility-parameter
pCompatibility **must** be a valid pointer to a [VkAccelerationStructureCompatibilityKHR](#) value

The [VkAccelerationStructureVersionInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureVersionInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const uint8_t*     pVersionData;
} VkAccelerationStructureVersionInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pVersionData` is a pointer to the version header of an acceleration structure as defined in `vkCmdCopyAccelerationStructureToMemoryKHR`

NOTE

`pVersionData` is a *pointer* to an array of $2 \times \text{VK_UUID_SIZE}$ `uint8_t` values instead of two `VK_UUID_SIZE` arrays as the expected use case for this member is to be pointed at the header of a previously serialized acceleration structure (via `vkCmdCopyAccelerationStructureToMemoryKHR` or `vkCopyAccelerationStructureToMemoryKHR`) that is loaded in memory. Using arrays would necessitate extra memory copies of the UUIDs.

Valid Usage (Implicit)

- `VUID-VkAccelerationStructureVersionInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_VERSION_INFO_KHR`
- `VUID-VkAccelerationStructureVersionInfoKHR-pNext-pNext`
`pNext` **must** be `NULL`
- `VUID-VkAccelerationStructureVersionInfoKHR-pVersionData-parameter`
`pVersionData` **must** be a valid pointer to an array of $2 \times \text{VK_UUID_SIZE}$ `uint8_t` values

Possible values of `pCompatibility` returned by `vkGetDeviceAccelerationStructureCompatibilityKHR` are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureCompatibilityKHR {
    VK_ACCELERATION_STRUCTURE_COMPATIBILITY_COMPATIBLE_KHR = 0,
    VK_ACCELERATION_STRUCTURE_COMPATIBILITY_INCOMPATIBLE_KHR = 1,
} VkAccelerationStructureCompatibilityKHR;
```

- `VK_ACCELERATION_STRUCTURE_COMPATIBILITY_COMPATIBLE_KHR` if the `pVersionData` version acceleration structure is compatible with `device`.
- `VK_ACCELERATION_STRUCTURE_COMPATIBILITY_INCOMPATIBLE_KHR` if the `pVersionData` version acceleration structure is not compatible with `device`.

37.2. Host Acceleration Structure Operations

Implementations are also required to provide host implementations of the acceleration structure operations if the `accelerationStructureHostCommands` feature is enabled:

- `vkBuildAccelerationStructuresKHR` corresponding to `vkCmdBuildAccelerationStructuresKHR`
- `vkCopyAccelerationStructureKHR` corresponding to `vkCmdCopyAccelerationStructureKHR`
- `vkCopyAccelerationStructureToMemoryKHR` corresponding to `vkCmdCopyAccelerationStructureToMemoryKHR`

vkCmdCopyAccelerationStructureToMemoryKHR

- [vkCopyMemoryToAccelerationStructureKHR](#) corresponding to
[vkCmdCopyMemoryToAccelerationStructureKHR](#)
- [vkWriteAccelerationStructuresPropertiesKHR](#) corresponding to
[vkCmdWriteAccelerationStructuresPropertiesKHR](#)

These commands are functionally equivalent to their device counterparts, except that they are executed on the host timeline, rather than being enqueued into command buffers.

All acceleration structures used by the host commands **must** be bound to host-visible memory, and all input data for acceleration structure builds **must** be referenced using host addresses instead of device addresses. Applications are not required to map acceleration structure memory when using the host commands.

NOTE

The [vkBuildAccelerationStructuresKHR](#) and [vkCmdBuildAccelerationStructuresKHR](#) **may** use different algorithms, and thus are not required to produce identical structures. The structures produced by these two commands **may** exhibit different memory footprints or traversal performance, but should strive to be similar where possible.

Apart from these details, the host and device operations are interchangeable. For example, an application **can** use [vkBuildAccelerationStructuresKHR](#) to build a structure, compact it on the device using [vkCmdCopyAccelerationStructureKHR](#), and serialize the result using [vkCopyAccelerationStructureToMemoryKHR](#).

NOTE

For efficient execution, acceleration structures manipulated using these commands should always be bound to host cached memory, as the implementation may need to repeatedly read and write this memory during the execution of the command.

To build acceleration structures on the host, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkBuildAccelerationStructuresKHR(
    VkDevice                device,
    VkDeferredOperationKHR  deferredOperation,
    uint32_t                infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkAccelerationStructureBuildRangeInfoKHR* const* ppBuildRangeInfos);
```

- `device` is the `VkDevice` for which the acceleration structures are being built.
- `deferredOperation` is an optional [VkDeferredOperationKHR](#) to request deferral for this command.
- `infoCount` is the number of acceleration structures to build. It specifies the number of the `pInfos` structures and `ppBuildRangeInfos` pointers that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` [VkAccelerationStructureBuildGeometryInfoKHR](#) structures defining the geometry used to build each acceleration structure.

- `ppBuildRangeInfos` is a pointer to an array of `infoCount` pointers to arrays of `VkAccelerationStructureBuildRangeInfoKHR` structures. Each `ppBuildRangeInfos[i]` is a pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos[i]`.

This command fulfills the same task as `vkCmdBuildAccelerationStructuresKHR` but is executed by the host.

The `vkBuildAccelerationStructuresKHR` command provides the ability to initiate multiple acceleration structures builds, however there is no ordering or synchronization implied between any of the individual acceleration structure builds.

NOTE

This means that an application **cannot** build a top-level acceleration structure in the same `vkBuildAccelerationStructuresKHR` call as the associated bottom-level or instance acceleration structures are being built. There also **cannot** be any memory aliasing between any acceleration structure memories or scratch memories being used by any of the builds.

Valid Usage

- VUID-vkBuildAccelerationStructuresKHR-accelerationStructureHostCommands-03581
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkBuildAccelerationStructuresKHR-mode-04628
The `mode` member of each element of `pInfos` **must** be a valid `VkBuildAccelerationStructureModeKHR` value
- VUID-vkBuildAccelerationStructuresKHR-srcAccelerationStructure-04629
If the `srcAccelerationStructure` member of any element of `pInfos` is not `VK_NULL_HANDLE`, the `srcAccelerationStructure` member **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkBuildAccelerationStructuresKHR-pInfos-04630
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** not be `VK_NULL_HANDLE`
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03403
The `srcAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03698
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03800
The `dstAccelerationStructure` member of any element of `pInfos` **must** be a valid `VkAccelerationStructureKHR` handle

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03699
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03700
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03663
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, `inactive primitives` in its `srcAccelerationStructure` member **must** not be made active
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03664
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, `active primitives` in its `srcAccelerationStructure` member **must** not be made `inactive`
- VUID-vkBuildAccelerationStructuresKHR-None-03407
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03701
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any other element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03702
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstAccelerationStructure` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03703
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-scratchData-03704
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-scratchData-03705

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` (including the same element), which is accessed by this command

- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03706

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`, which is accessed by this command

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03667

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` in the build

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03668

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same `VkAccelerationStructureKHR`, or not have any `memory aliasing`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03758

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03759

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03760

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `type` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03761

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `geometryType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03762

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `flags` member **must** have the same value which was specified

when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03763

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.vertexFormat` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03764

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.maxVertex` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03765

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.indexType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03766

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was `NULL` when `srcAccelerationStructure` was last built, then it **must** be `NULL`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03767

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was not `NULL` when `srcAccelerationStructure` was last built, then it **must** not be `NULL`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03768

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then the value of each index referenced **must** be the same as the corresponding index value when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-primitiveCount-03769

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, the `primitiveCount` member of its corresponding `VkAccelerationStructureBuildRangeInfoKHR` structure **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03801

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the corresponding `ppBuildRangeInfos[i][j].primitiveCount` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10126

For each `pInfos[i]`, `dstAccelerationStructure` **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::size` greater than or equal to either:

- the memory size required by the build operation, as returned by `vkGetAccelerationStructureBuildSizesKHR` with `pBuildInfo = pInfos[i]` and with each element of the `pMaxPrimitiveCounts` array greater than or equal to the equivalent `ppBuildRangeInfos[i][j].primitiveCount` values for `j` in `[0, pInfos[i].geometryCount)` or,
- the result of querying the corresponding `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, if updating a compacted acceleration structure

- VUID-vkBuildAccelerationStructuresKHR-ppBuildRangeInfos-03676

Each element of `ppBuildRangeInfos[i]` **must** be a valid pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures

- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-03678

Any previous deferred operation that was associated with `deferredOperation` **must** be complete

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03722

For each element of `pInfos`, the `buffer` used to create its `dstAccelerationStructure` member **must** be bound to host-visible device memory

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03723

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` the `buffer` used to create its `srcAccelerationStructure` member **must** be bound to host-visible device memory

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03724

For each element of `pInfos`, the `buffer` used to create each acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` **must** be bound to host-visible device memory

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03725

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, all addresses between `pInfos[i].scratchData.hostAddress` and `pInfos[i].scratchData.hostAddress + N - 1` **must** be valid host memory, where `N` is given by the `buildScratchSize` member of the

`VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03726
If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, all addresses between `pInfos[i].scratchData.hostAddress` and `pInfos[i].scratchData.hostAddress + N - 1` **must** be valid host memory, where N is given by the `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03771
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.hostAddress` **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03772
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.hostAddress` **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03773
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.hostAddress` is not 0, it **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03774
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.hostAddress` **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03775
For each element of `pInfos`, the `buffer` used to create its `dstAccelerationStructure` member **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03776
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` the `buffer` used to create its `srcAccelerationStructure` member **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03777
For each element of `pInfos`, the `buffer` used to create each acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03778
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `geometry.instances.data.hostAddress` **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03779

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `VkAccelerationStructureInstanceKHR::accelerationStructureReference` value in `geometry.instances.data.hostAddress` **must** be a valid `VkAccelerationStructureKHR` object

- VUID-vkBuildAccelerationStructuresKHR-pInfos-04930

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` set, each `accelerationStructureReference` in any structure in `VkAccelerationStructureMotionInstanceNV` value in `geometry.instances.data.hostAddress` **must** be a valid `VkAccelerationStructureKHR` object

Valid Usage (Implicit)

- VUID-vkBuildAccelerationStructuresKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkBuildAccelerationStructuresKHR-pInfos-parameter
`pInfos` **must** be a valid pointer to an array of `infoCount` valid `VkAccelerationStructureBuildGeometryInfoKHR` structures
- VUID-vkBuildAccelerationStructuresKHR-ppBuildRangeInfos-parameter
`ppBuildRangeInfos` **must** be a valid pointer to an array of `infoCount` `VkAccelerationStructureBuildRangeInfoKHR` structures
- VUID-vkBuildAccelerationStructuresKHR-infoCount-arraylength
`infoCount` **must** be greater than 0
- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

To copy or compact an acceleration structure on the host, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyAccelerationStructureKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyAccelerationStructureInfoKHR* pInfo);
```

- **device** is the device which owns the acceleration structures.
- **deferredOperation** is an optional [VkDeferredOperationKHR](#) to [request deferral](#) for this command.
- **pInfo** is a pointer to a [VkCopyAccelerationStructureInfoKHR](#) structure defining the copy operation.

This command fulfills the same task as [vkCmdCopyAccelerationStructureKHR](#) but is executed by the host.

Valid Usage

- VUID-vkCopyAccelerationStructureKHR-accelerationStructureHostCommands-03582
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands](#) feature **must** be enabled
- VUID-vkCopyAccelerationStructureKHR-deferredOperation-03678
Any previous deferred operation that was associated with **deferredOperation** **must** be complete
- VUID-vkCopyAccelerationStructureKHR-buffer-03727
The **buffer** used to create **pInfo->src** **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureKHR-buffer-03728
The **buffer** used to create **pInfo->dst** **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureKHR-buffer-03780
The **buffer** used to create **pInfo->src** **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyAccelerationStructureKHR-buffer-03781
The **buffer** used to create **pInfo->dst** **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyAccelerationStructureKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCopyAccelerationStructureKHR-deferredOperation-parameter
If **deferredOperation** is not [VK_NULL_HANDLE](#), **deferredOperation** **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkCopyAccelerationStructureKHR-pInfo-parameter

pInfo **must** be a valid pointer to a valid [VkCopyAccelerationStructureInfoKHR](#) structure

- VUID-vkCopyAccelerationStructureKHR-deferredOperation-parent

If **deferredOperation** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**
- **VK_OPERATION_DEFERRED_KHR**
- **VK_OPERATION_NOT_DEFERRED_KHR**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**

To copy host accessible memory to an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyMemoryToAccelerationStructureKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyMemoryToAccelerationStructureInfoKHR* pInfo);
```

- **device** is the device which owns **pInfo->dst**.
- **deferredOperation** is an optional [VkDeferredOperationKHR](#) to [request deferral](#) for this command.
- **pInfo** is a pointer to a [VkCopyMemoryToAccelerationStructureInfoKHR](#) structure defining the copy operation.

This command fulfills the same task as [vkCmdCopyMemoryToAccelerationStructureKHR](#) but is executed by the host.

This command can accept acceleration structures produced by either [vkCmdCopyAccelerationStructureToMemoryKHR](#) or [vkCopyAccelerationStructureToMemoryKHR](#).

Valid Usage

- VUID-vkCopyMemoryToAccelerationStructureKHR-accelerationStructureHostCommands-03583
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands](#) feature **must** be enabled
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-03678

Any previous deferred operation that was associated with `deferredOperation` **must** be complete

- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-03729
`pInfo->src.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-03750
`pInfo->src.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyMemoryToAccelerationStructureKHR-buffer-03730
The `buffer` used to create `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMemoryToAccelerationStructureKHR-buffer-03782
The `buffer` used to create `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyMemoryToAccelerationStructureKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMemoryToAccelerationStructureInfoKHR` structure
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

To copy an acceleration structure to host accessible memory, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyAccelerationStructureToMemoryKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyAccelerationStructureToMemoryInfoKHR* pInfo);
```

- `device` is the device which owns `pInfo->src`.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to request deferral for this command.
- `pInfo` is a pointer to a `VkCopyAccelerationStructureToMemoryInfoKHR` structure defining the copy operation.

This command fulfills the same task as `vkCmdCopyAccelerationStructureToMemoryKHR` but is executed by the host.

This command produces the same results as `vkCmdCopyAccelerationStructureToMemoryKHR`, but writes its result directly to a host pointer, and is executed on the host rather than the device. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either `vkCmdCopyMemoryToAccelerationStructureKHR` or `vkCopyMemoryToAccelerationStructureKHR`.

Valid Usage

- VUID-vkCopyAccelerationStructureToMemoryKHR-accelerationStructureHostCommands-03584
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-03678
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyAccelerationStructureToMemoryKHR-buffer-03731
The `buffer` used to create `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03732
`pInfo->dst.hostAddress` **must** be a valid host pointer
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03751
`pInfo->dst.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyAccelerationStructureToMemoryKHR-buffer-03783
The `buffer` used to create `pInfo->src` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyAccelerationStructureToMemoryKHR-device-parameter
`device` **must** be a valid `VkDevice` handle

- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyAccelerationStructureToMemoryInfoKHR` structure
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

To query acceleration structure size parameters on the host, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkWriteAccelerationStructuresPropertiesKHR(
    VkDevice                device,
    uint32_t                accelerationStructureCount,
    const VkAccelerationStructureKHR* pAccelerationStructures,
    VkQueryType             queryType,
    size_t                  dataSize,
    void*                   pData,
    size_t                  stride);
```

- `device` is the device which owns the acceleration structures in `pAccelerationStructures`.
- `accelerationStructureCount` is the count of acceleration structures for which to query the property.
- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a `VkQueryType` value specifying the property to be queried.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written.
- `stride` is the stride in bytes between results for individual queries within `pData`.

This command fulfills the same task as [vkCmdWriteAccelerationStructuresPropertiesKHR](#) but is executed by the host.

Valid Usage

- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructureHostCommands-03585
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands](#) feature **must** be enabled
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-04964
All acceleration structures in [pAccelerationStructures](#) **must** have been built prior to the execution of this command
- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructures-03431
All acceleration structures in [pAccelerationStructures](#) **must** have been built with [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR](#) if [queryType](#) is [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR](#)
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06742
[queryType](#) **must** be [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR](#), [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR](#), [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR](#), or [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR](#)
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03448
If [queryType](#) is [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR](#), then [stride](#) **must** be a multiple of the size of [VkDeviceSize](#)
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03449
If [queryType](#) is [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR](#), then [pData](#) **must** point to a [VkDeviceSize](#)
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03450
If [queryType](#) is [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR](#), then [stride](#) **must** be a multiple of the size of [VkDeviceSize](#)
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03451
If [queryType](#) is [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR](#), then [pData](#) **must** point to a [VkDeviceSize](#)
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06731
If [queryType](#) is [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR](#), then [stride](#) **must** be a multiple of the size of [VkDeviceSize](#)
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06732
If [queryType](#) is [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR](#), then [pData](#) **must** point to a [VkDeviceSize](#)
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06733
If [queryType](#) is [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR](#), then [stride](#) **must** be a multiple of the size of [VkDeviceSize](#)

- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06734
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`, then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-dataSize-03452
`dataSize` **must** be greater than or equal to `accelerationStructureCount*stride`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03733
The `buffer` used to create each acceleration structure in `pAccelerationStructures` **must** be bound to host-visible device memory
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03784
The `buffer` used to create each acceleration structure in `pAccelerationStructures` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkWriteAccelerationStructuresPropertiesKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parameter
`pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid `VkAccelerationStructureKHR` handles
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-parameter
`queryType` **must** be a valid `VkQueryType` value
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructureCount-arraylength
`accelerationStructureCount` **must** be greater than 0
- VUID-vkWriteAccelerationStructuresPropertiesKHR-dataSize-arraylength
`dataSize` **must** be greater than 0
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parent
Each element of `pAccelerationStructures` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

Chapter 38. Micromap

38.1. Micromaps

Acceleration structures store and organize geometry for ray tracing, but in some cases it is beneficial to include some information within the geometry, particularly for triangles. A *micromap* organizes this data around a map of values corresponding to subdivided microtriangles which can be added to a triangle geometry when building a *bottom level acceleration structure*.

An *opacity micromap* is a type of micromap which stores information to control intersection opacity as described in [Ray Opacity Micromap](#).

A *displacement micromap* is a type of micromap which stores information to displace sub-triangle vertices as described in [Displacement Micromap](#).

A micromap is considered to be constructed if a [micromap build command](#) or [copy command](#) has been executed with the given acceleration structure as the destination.

38.1.1. Building Micromaps

To build micromaps call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdBuildMicromapsEXT(
    VkCommandBuffer          commandBuffer,
    uint32_t                 infoCount,
    const VkMicromapBuildInfoEXT* pInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of micromaps to build. It specifies the number of the `pInfos` structures that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` `VkMicromapBuildInfoEXT` structures defining the data used to build each micromap.

The `vkCmdBuildMicromapsEXT` command provides the ability to initiate multiple micromaps builds, however there is no ordering or synchronization implied between any of the individual micromap builds.

NOTE

This means that there **cannot** be any memory aliasing between any micromap memories or scratch memories being used by any of the builds.

Accesses to the micromap scratch buffers as identified by the `VkMicromapBuildInfoEXT::scratchData` buffer device addresses **must** be [synchronized](#) with the `VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT` pipeline stage and an access type of (`VK_ACCESS_2_MICROMAP_READ_BIT_EXT` | `VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT`). Accesses to `VkMicromapBuildInfoEXT::dstMicromap` **must** be [synchronized](#) with the

VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT.

Accesses to other input buffers as identified by any used values of `VkMicromapBuildInfoEXT::data` or `VkMicromapBuildInfoEXT::triangleArray` **must** be **synchronized** with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_SHADER_READ_BIT.

Valid Usage

- VUID-vkCmdBuildMicromapsEXT-pInfos-07461
For each `pInfos[i]`, `dstMicromap` **must** have been created with a value of `VkMicromapCreateInfoEXT::size` greater than or equal to the memory size required by the build operation, as returned by `vkGetMicromapBuildSizesEXT` with `pBuildInfo = pInfos[i]`
- VUID-vkCmdBuildMicromapsEXT-mode-07462
The `mode` member of each element of `pInfos` **must** be a valid `VkBuildMicromapModeEXT` value
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-07463
The `dstMicromap` member of any element of `pInfos` **must** be a valid `VkMicromapEXT` handle
- VUID-vkCmdBuildMicromapsEXT-pInfos-07464
For each element of `pInfos` its `type` member **must** match the value of `VkMicromapCreateInfoEXT::type` when its `dstMicromap` was created
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-07465
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstMicromap` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-07466
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command
- VUID-vkCmdBuildMicromapsEXT-scratchData-07467
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildMicromapsEXT-pInfos-07508
For each element of `pInfos`, the `buffer` used to create its `dstMicromap` member **must** be bound to device memory
- VUID-vkCmdBuildMicromapsEXT-pInfos-07509
If `pInfos[i].mode` is `VK_BUILD_MICROMAP_MODE_BUILD_EXT`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where N is given by the

`buildScratchSize` member of the `VkMicromapBuildSizesInfoEXT` structure returned from a call to `vkGetMicromapBuildSizesEXT` with an identical `VkMicromapBuildInfoEXT` structure and primitive count

- VUID-vkCmdBuildMicromapsEXT-data-07510
The buffers from which the buffer device addresses for all of the `data` and `triangleArray` members of all `pInfos[i]` are queried **must** have been created with the `VK_BUFFER_USAGE_MICROMAP_BUILD_INPUT_READ_ONLY_BIT_EXT` usage flag
- VUID-vkCmdBuildMicromapsEXT-pInfos-07511
For each element of `pInfos[i]` the buffer from which the buffer device address `pInfos[i].scratchData.deviceAddress` is queried **must** have been created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag
- VUID-vkCmdBuildMicromapsEXT-pInfos-07512
For each element of `pInfos`, its `scratchData.deviceAddress`, `data.deviceAddress`, and `triangleArray.deviceAddress` members **must** be valid device addresses obtained from `vkGetBufferDeviceAddress`
- VUID-vkCmdBuildMicromapsEXT-pInfos-07513
For each element of `pInfos`, if `scratchData.deviceAddress`, `data.deviceAddress`, or `triangleArray.deviceAddress` is the address of a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBuildMicromapsEXT-pInfos-07514
For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of `VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment`
- VUID-vkCmdBuildMicromapsEXT-pInfos-07515
For each element of `pInfos`, its `triangleArray.deviceAddress` and `data.deviceAddress` members **must** be a multiple of `256`

Valid Usage (Implicit)

- VUID-vkCmdBuildMicromapsEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBuildMicromapsEXT-pInfos-parameter
`pInfos` **must** be a valid pointer to an array of `infoCount` valid `VkMicromapBuildInfoEXT` structures
- VUID-vkCmdBuildMicromapsEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBuildMicromapsEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdBuildMicromapsEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildMicromapsEXT-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdBuildMicromapsEXT-infoCount-arraylength
infoCount **must** be greater than 0

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

Formats which **can** be set in **VkMicromapUsageEXT::format** and **VkMicromapTriangleEXT::format** for micromap builds, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkOpacityMicromapFormatEXT {
    VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT = 1,
    VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT = 2,
} VkOpacityMicromapFormatEXT;
```

- **VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT** indicates that the given micromap format has one bit per subtriangle encoding either fully opaque or fully transparent.
- **VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT** indicates that the given micromap format has two bits per subtriangle encoding four modes which can be interpreted as described in [ray traversal](#).

NOTE For compactness, these values are stored as 16-bit in some structures.

Formats which **can** be set in **VkMicromapUsageEXT::format** and **VkMicromapTriangleEXT::format** for micromap builds, are:

```
// Provided by VK_NV_displacement_micromap
typedef enum VkDisplacementMicromapFormatNV {
    VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV = 1,
    VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV = 2,
    VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV = 3,
} VkDisplacementMicromapFormatNV;
```

- `VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV` indicates that the given micromap format encodes 64 micro-triangles worth of displacements in 64 bytes as described in [Displacement Micromap Encoding](#).
- `VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV` indicates that the given micromap format encodes 256 micro-triangles worth of displacements in 128 bytes as described in [Displacement Micromap Encoding](#).
- `VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV` indicates that the given micromap format encodes 1024 micro-triangles worth of displacements in 128 bytes as described in [Displacement Micromap Encoding](#).

NOTE For compactness, these values are stored as 16-bit in some structures.

The `VkMicromapBuildInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapBuildInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkMicromapTypeEXT        type;
    VkBuildMicromapFlagsEXT  flags;
    VkBuildMicromapModeEXT   mode;
    VkMicromapEXT            dstMicromap;
    uint32_t                 usageCountsCount;
    const VkMicromapUsageEXT* pUsageCounts;
    const VkMicromapUsageEXT* ppUsageCounts;
    VkDeviceOrHostAddressConstKHR data;
    VkDeviceOrHostAddressKHR    scratchData;
    VkDeviceOrHostAddressConstKHR triangleArray;
    VkDeviceSize               triangleArrayStride;
} VkMicromapBuildInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a `VkMicromapTypeEXT` value specifying the type of micromap being built.
- `flags` is a bitmask of `VkBuildMicromapFlagBitsEXT` specifying additional parameters of the micromap.
- `mode` is a `VkBuildMicromapModeEXT` value specifying the type of operation to perform.
- `dstMicromap` is a pointer to the target micromap for the build.
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of `VkMicromapUsageEXT` structures.
- `ppUsageCounts` is a pointer to an array of pointers to `VkMicromapUsageEXT` structures.
- `data` is the device or host address to memory which contains the data for the micromap.

- `scratchData` is the device or host address to memory that will be used as scratch memory for the build.
- `triangleArray` is the device or host address to memory containing the `VkMicromapTriangleEXT` data
- `triangleArrayStride` is the stride in bytes between each element of `triangleArray`

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total counts used to build each micromap. Each element contains a `count` which is the number of micromap triangles of that `format` and `subdivisionLevel` contained in the micromap. Multiple elements with the same `format` and `subdivisionLevel` are allowed and the total count for that `format` and `subdivisionLevel` is the sum of the `count` for each element.

Each micromap triangle refers to one element in `triangleArray` which contains the `format` and `subdivisionLevel` for that particular triangle as well as a `dataOffset` in bytes which is the location relative to `data` where that triangle's micromap data begins. The data at `triangleArray` is laid out as a 4 byte unsigned integer for the `dataOffset` followed by a 2 byte unsigned integer for the subdivision level then a 2 byte unsigned integer for the format. In practice, compilers compile `VkMicromapTriangleEXT` to match this pattern.

For opacity micromaps, the data at `data` is packed as either one bit per element for `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT` or two bits per element for `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT` and is packed from LSB to MSB in each byte. The data at each index in those bytes is interpreted as discussed in [Ray Opacity Micromap](#).

For displacement micromaps, the data at `data` is interpreted as discussed in [Displacement Micromap Encoding](#).

Valid Usage

- VUID-VkMicromapBuildInfoEXT-pUsageCounts-07516
Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`
- VUID-VkMicromapBuildInfoEXT-type-07517
If `type` is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` the `format` member of `VkMicromapUsageEXT` **must** be a valid value from `VkOpacityMicromapFormatEXT`
- VUID-VkMicromapBuildInfoEXT-type-07518
If `type` is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` the `format` member of `VkMicromapTriangleEXT` **must** be a valid value from `VkOpacityMicromapFormatEXT`
- VUID-VkMicromapBuildInfoEXT-type-08704
If `type` is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` the `format` member of `VkMicromapUsageEXT` **must** be a valid value from `VkDisplacementMicromapFormatNV`
- VUID-VkMicromapBuildInfoEXT-type-08705
If `type` is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` the `format` member of `VkMicromapTriangleEXT` **must** be a valid value from `VkDisplacementMicromapFormatNV`

Valid Usage (Implicit)

- VUID-VkMicromapBuildInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MICROMAP_BUILD_INFO_EXT`
- VUID-VkMicromapBuildInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMicromapBuildInfoEXT-type-parameter
`type` **must** be a valid `VkMicromapTypeEXT` value
- VUID-VkMicromapBuildInfoEXT-flags-parameter
`flags` **must** be a valid combination of `VkBuildMicromapFlagBitsEXT` values
- VUID-VkMicromapBuildInfoEXT-pUsageCounts-parameter
If `usageCountsCount` is not `0`, and `pUsageCounts` is not `NULL`, `pUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` `VkMicromapUsageEXT` structures
- VUID-VkMicromapBuildInfoEXT-ppUsageCounts-parameter
If `usageCountsCount` is not `0`, and `ppUsageCounts` is not `NULL`, `ppUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid pointers to `VkMicromapUsageEXT` structures

The `VkBuildMicromapModeEXT` enumeration is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkBuildMicromapModeEXT {
    VK_BUILD_MICROMAP_MODE_BUILD_EXT = 0,
} VkBuildMicromapModeEXT;
```

- `VK_BUILD_MICROMAP_MODE_BUILD_EXT` specifies that the destination micromap will be built using the specified data.

The `VkMicromapUsageEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapUsageEXT {
    uint32_t    count;
    uint32_t    subdivisionLevel;
    uint32_t    format;
} VkMicromapUsageEXT;
```

- `count` is the number of triangles in the usage format defined by the `subdivisionLevel` and `format` below in the micromap
- `subdivisionLevel` is the subdivision level of this usage format
- `format` is the format of this usage format

Valid Usage

- VUID-VkMicromapUsageEXT-format-07519
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` then `format` **must** be `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT` or `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT`
- VUID-VkMicromapUsageEXT-format-07520
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` and `format` is `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT` then `subdivisionLevel` **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity2StateSubdivisionLevel`
- VUID-VkMicromapUsageEXT-format-07521
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` and `format` is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT` then `subdivisionLevel` **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity4StateSubdivisionLevel`
- VUID-VkMicromapUsageEXT-format-08706
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` then `format` **must** be `VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV`, `VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV` or `VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV`
- VUID-VkMicromapUsageEXT-subdivisionLevel-08707
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` then `subdivisionLevel` **must** be less than or equal to `VkPhysicalDeviceDisplacementMicromapPropertiesNV::maxDisplacementMicromapSubdivisionLevel`

The `format` is interpreted based on the `type` of the micromap using it.

The `VkMicromapTriangleEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapTriangleEXT {
    uint32_t    dataOffset;
    uint16_t    subdivisionLevel;
    uint16_t    format;
} VkMicromapTriangleEXT;
```

- `dataOffset` is the offset in bytes of the start of the data for this triangle. This is a byte aligned value.
- `subdivisionLevel` is the subdivision level of this triangle
- `format` is the format of this triangle

Valid Usage

- VUID-VkMicromapTriangleEXT-format-07522
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` then `format` **must** be `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT` or `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT`
- VUID-VkMicromapTriangleEXT-format-07523
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` and `format` is `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT` then `subdivisionLevel` **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity2StateSubdivisionLevel`
- VUID-VkMicromapTriangleEXT-format-07524
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` and `format` is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT` then `subdivisionLevel` **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity4StateSubdivisionLevel`
- VUID-VkMicromapTriangleEXT-format-08708
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` then `format` **must** be `VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV`, `VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV` or `VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV`
- VUID-VkMicromapTriangleEXT-subdivisionLevel-08709
If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` then `subdivisionLevel` **must** be less than or equal to `VkPhysicalDeviceDisplacementMicromapPropertiesNV::maxDisplacementMicromapSubdivisionLevel`

The `format` is interpreted based on the `type` of the micromap using it.

38.1.2. Copying Micromaps

An additional command exists for copying micromaps without updating their contents. Before copying, an application **must** query the size of the resulting micromap.

To query micromap size parameters call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdWriteMicromapsPropertiesEXT(
    VkCommandBuffer                commandBuffer,
    uint32_t                       micromapCount,
    const VkMicromapEXT*           pMicromaps,
    VkQueryType                    queryType,
    VkQueryPool                   queryPool,
    uint32_t                       firstQuery);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `micromapCount` is the count of micromaps for which to query the property.
- `pMicromaps` is a pointer to an array of existing previously built micromaps.
- `queryType` is a `VkQueryType` value specifying the type of queries managed by the pool.
- `queryPool` is the query pool that will manage the results of the query.
- `firstQuery` is the first query index within the query pool that will contain the `micromapCount` number of results.

Accesses to any of the micromaps listed in `pMicromaps` **must** be `synchronized` with the `VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT` pipeline stage and an access type of `VK_ACCESS_2_MICROMAP_READ_BIT_EXT`.

- If `queryType` is `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT`, then the value written out is the number of bytes required by a serialized micromap.
- If `queryType` is `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT`, then the value written out is the number of bytes required by a compacted micromap.

Valid Usage

- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-07525
`queryPool` **must** have been created with a `queryType` matching `queryType`
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-07526
The queries identified by `queryPool` and `firstQuery` **must** be *unavailable*
- VUID-vkCmdWriteMicromapsPropertiesEXT-buffer-07527
The `buffer` used to create each micromap in `pMicromaps` **must** be bound to device memory
- VUID-vkCmdWriteMicromapsPropertiesEXT-query-07528
The sum of `query` plus `micromapCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-07501
All micromaps in `pMicromaps` **must** have been constructed prior to the execution of this command
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-07502
All micromaps in `pMicromaps` **must** have been constructed with `VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT` if `queryType` is `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT`
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryType-07503
`queryType` **must** be `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT` or `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT`

Valid Usage (Implicit)

- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-parameter
`pMicromaps` **must** be a valid pointer to an array of `micromapCount` valid `VkMicromapEXT` handles
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryType-parameter
`queryType` **must** be a valid `VkQueryType` value
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdWriteMicromapsPropertiesEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteMicromapsPropertiesEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdWriteMicromapsPropertiesEXT-micromapCount-arraylength
`micromapCount` **must** be greater than 0
- VUID-vkCmdWriteMicromapsPropertiesEXT-commonparent
Each of `commandBuffer`, `queryPool`, and the elements of `pMicromaps` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

To copy a micromap call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMicromapEXT(
    VkCommandBuffer                      commandBuffer,
    const VkCopyMicromapInfoEXT*        pInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pInfo** is a pointer to a [VkCopyMicromapInfoEXT](#) structure defining the copy operation.

This command copies the **pInfo->src** micromap to the **pInfo->dst** micromap in the manner specified by **pInfo->mode**.

Accesses to **pInfo->src** and **pInfo->dst** **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT](#) pipeline stage and an [access type](#) of [VK_ACCESS_2_MICROMAP_READ_BIT_EXT](#) or [VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT](#) as appropriate.

Valid Usage

- VUID-vkCmdCopyMicromapEXT-buffer-07529
The **buffer** used to create **pInfo->src** **must** be bound to device memory
- VUID-vkCmdCopyMicromapEXT-buffer-07530
The **buffer** used to create **pInfo->dst** **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMicromapEXT-commandBuffer-parameter
commandBuffer **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyMicromapEXT-pInfo-parameter
pInfo **must** be a valid pointer to a valid [VkCopyMicromapInfoEXT](#) structure
- VUID-vkCmdCopyMicromapEXT-commandBuffer-recording
commandBuffer **must** be in the [recording state](#)
- VUID-vkCmdCopyMicromapEXT-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support compute operations
- VUID-vkCmdCopyMicromapEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMicromapEXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally

synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

The `VkCopyMicromapInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMicromapInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkMicromapEXT      src;
    VkMicromapEXT      dst;
    VkCopyMicromapModeEXT mode;
} VkCopyMicromapInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the source micromap for the copy.
- `dst` is the target micromap for the copy.
- `mode` is a `VkCopyMicromapModeEXT` value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMicromapInfoEXT-mode-07531
`mode` **must** be `VK_COPY_MICROMAP_MODE_COMPACT_EXT` or `VK_COPY_MICROMAP_MODE_CLONE_EXT`
- VUID-VkCopyMicromapInfoEXT-src-07532
The source acceleration structure `src` **must** have been constructed prior to the execution of this command
- VUID-VkCopyMicromapInfoEXT-mode-07533
If `mode` is `VK_COPY_MICROMAP_MODE_COMPACT_EXT`, `src` **must** have been constructed with `VK_BUILD_MICROMAP_ALLOW_COMPACT_BIT_EXT` in the build
- VUID-VkCopyMicromapInfoEXT-buffer-07534
The `buffer` used to create `src` **must** be bound to device memory
- VUID-VkCopyMicromapInfoEXT-buffer-07535
The `buffer` used to create `dst` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-VkCopyMicromapInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_MICROMAP_INFO_EXT`
- VUID-VkCopyMicromapInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyMicromapInfoEXT-src-parameter
`src` **must** be a valid `VkMicromapEXT` handle
- VUID-VkCopyMicromapInfoEXT-dst-parameter
`dst` **must** be a valid `VkMicromapEXT` handle
- VUID-VkCopyMicromapInfoEXT-mode-parameter
`mode` **must** be a valid `VkCopyMicromapModeEXT` value
- VUID-VkCopyMicromapInfoEXT-commonparent
Both of `dst`, and `src` **must** have been created, allocated, or retrieved from the same `VkDevice`

Possible values of `mode` specifying additional operations to perform during the copy, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkCopyMicromapModeEXT {
    VK_COPY_MICROMAP_MODE_CLONE_EXT = 0,
    VK_COPY_MICROMAP_MODE_SERIALIZE_EXT = 1,
    VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT = 2,
    VK_COPY_MICROMAP_MODE_COMPACT_EXT = 3,
} VkCopyMicromapModeEXT;
```

- `VK_COPY_MICROMAP_MODE_CLONE_EXT` creates a direct copy of the micromap specified in `src` into the one specified by `dst`. The `dst` micromap **must** have been created with the same parameters as `src`.
- `VK_COPY_MICROMAP_MODE_SERIALIZE_EXT` serializes the micromap to a semi-opaque format which can be reloaded on a compatible implementation.
- `VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT` deserializes the semi-opaque serialization format in the buffer to the micromap.
- `VK_COPY_MICROMAP_MODE_COMPACT_EXT` creates a more compact version of a micromap `src` into `dst`. The micromap `dst` **must** have been created with a size at least as large as that returned by `vkCmdWriteMicromapsPropertiesEXT` after the build of the micromap specified by `src`.

To copy a micromap to device memory call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMicromapToMemoryEXT(
    VkCommandBuffer                      commandBuffer,
    const VkCopyMicromapToMemoryInfoEXT* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is an a pointer to a `VkCopyMicromapToMemoryInfoEXT` structure defining the copy operation.

Accesses to `pInfo->src` **must** be `synchronized` with the `VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT` pipeline stage and an access type of `VK_ACCESS_2_MICROMAP_READ_BIT_EXT`. Accesses to the buffer indicated by `pInfo->dst.deviceAddress` **must** be synchronized with the `VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT` pipeline stage and an access type of `VK_ACCESS_TRANSFER_WRITE_BIT`.

This command produces the same results as `vkCopyMicromapToMemoryEXT`, but writes its result to a device address, and is executed on the device rather than the host. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either `vkCmdCopyMemoryToMicromapEXT` or `vkCopyMemoryToMicromapEXT`.

The defined header structure for the serialized data consists of:

- `VK_UUID_SIZE` bytes of data matching `VkPhysicalDeviceIDProperties::driverUUID`
- `VK_UUID_SIZE` bytes of data identifying the compatibility for comparison using `vkGetDeviceMicromapCompatibilityEXT` The serialized data is written to the buffer (or read from the buffer) according to the host endianness.

Valid Usage

- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07536
`pInfo->dst.deviceAddress` **must** be a valid device address for a buffer bound to device memory
- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07537
`pInfo->dst.deviceAddress` **must** be aligned to 256 bytes
- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07538
If the buffer pointed to by `pInfo->dst.deviceAddress` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyMicromapToMemoryEXT-buffer-07539
The `buffer` used to create `pInfo->src` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMicromapToMemoryInfoEXT` structure
- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdCopyMicromapToMemoryEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMicromapToMemoryEXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMicromapToMemoryInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkMicromapEXT      src;
    VkDeviceOrHostAddressKHR dst;
    VkCopyMicromapModeEXT mode;
} VkCopyMicromapToMemoryInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the source micromap for the copy
- `dst` is the device or host address to memory which is the target for the copy
- `mode` is a `VkCopyMicromapModeEXT` value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMicromapToMemoryInfoEXT-src-07540
The source micromap **src** **must** have been constructed prior to the execution of this command
- VUID-VkCopyMicromapToMemoryInfoEXT-dst-07541
The memory pointed to by **dst** **must** be at least as large as the serialization size of **src**, as reported by [vkWriteMicromapsPropertiesEXT](#) or [vkCmdWriteMicromapsPropertiesEXT](#) with a query type of [VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT](#)
- VUID-VkCopyMicromapToMemoryInfoEXT-mode-07542
mode **must** be [VK_COPY_MICROMAP_MODE_SERIALIZE_EXT](#)

Valid Usage (Implicit)

- VUID-VkCopyMicromapToMemoryInfoEXT-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_COPY_MICROMAP_TO_MEMORY_INFO_EXT](#)
- VUID-VkCopyMicromapToMemoryInfoEXT-pNext-pNext
pNext **must** be NULL
- VUID-VkCopyMicromapToMemoryInfoEXT-src-parameter
src **must** be a valid [VkMicromapEXT](#) handle
- VUID-VkCopyMicromapToMemoryInfoEXT-mode-parameter
mode **must** be a valid [VkCopyMicromapModeEXT](#) value

To copy device memory to a micromap call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMemoryToMicromapEXT(
    VkCommandBuffer                      commandBuffer,
    const VkCopyMemoryToMicromapInfoEXT* pInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pInfo** is a pointer to a [VkCopyMemoryToMicromapInfoEXT](#) structure defining the copy operation.

Accesses to **pInfo->dst** **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT](#) pipeline stage and an access type of [VK_ACCESS_2_MICROMAP_READ_BIT_EXT](#). Accesses to the buffer indicated by **pInfo->src.deviceAddress** **must** be synchronized with the [VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT](#) pipeline stage and an access type of [VK_ACCESS_TRANSFER_READ_BIT](#).

This command can accept micromaps produced by either [vkCmdCopyMicromapToMemoryEXT](#) or [vkCopyMicromapToMemoryEXT](#).

Valid Usage

- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07543
`pInfo->src.deviceAddress` **must** be a valid device address for a buffer bound to device memory
- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07544
`pInfo->src.deviceAddress` **must** be aligned to 256 bytes
- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07545
If the buffer pointed to by `pInfo->src.deviceAddress` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyMemoryToMicromapEXT-buffer-07546
The `buffer` used to create `pInfo->dst` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMemoryToMicromapInfoEXT` structure
- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdCopyMemoryToMicromapEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToMicromapEXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

The `VkCopyMemoryToMicromapInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMemoryToMicromapInfoEXT {
    VkStructureType           sType;
    const void*               pNext;
    VkDeviceOrHostAddressConstKHR src;
    VkMicromapEXT             dst;
    VkCopyMicromapModeEXT     mode;
} VkCopyMemoryToMicromapInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the device or host address to memory containing the source data for the copy.
- `dst` is the target micromap for the copy.
- `mode` is a `VkCopyMicromapModeEXT` value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMemoryToMicromapInfoEXT-src-07547
The source memory pointed to by `src` **must** contain data previously serialized using `vkCmdCopyMicromapToMemoryEXT`
- VUID-VkCopyMemoryToMicromapInfoEXT-mode-07548
`mode` **must** be `VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT`
- VUID-VkCopyMemoryToMicromapInfoEXT-src-07549
The data in `src` **must** have a format compatible with the destination physical device as returned by `vkGetDeviceMicromapCompatibilityEXT`
- VUID-VkCopyMemoryToMicromapInfoEXT-dst-07550
`dst` **must** have been created with a `size` greater than or equal to that used to serialize the data in `src`

Valid Usage (Implicit)

- VUID-VkCopyMemoryToMicromapInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_MEMORY_TO_MICROMAP_INFO_EXT`
- VUID-VkCopyMemoryToMicromapInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyMemoryToMicromapInfoEXT-dst-parameter
`dst` **must** be a valid `VkMicromapEXT` handle
- VUID-VkCopyMemoryToMicromapInfoEXT-mode-parameter
`mode` **must** be a valid `VkCopyMicromapModeEXT` value

To check if a serialized micromap is compatible with the current device call:

```
// Provided by VK_EXT_opacity_micromap
void vkGetDeviceMicromapCompatibilityEXT(
    VkDevice device,
    const VkMicromapVersionInfoEXT* pVersionInfo,
    VkAccelerationStructureCompatibilityKHR* pCompatibility);
```

- `device` is the device to check the version against.
- `pVersionInfo` is a pointer to a `VkMicromapVersionInfoEXT` structure specifying version information to check against the device.
- `pCompatibility` is a pointer to a `VkAccelerationStructureCompatibilityKHR` value in which compatibility information is returned.

Valid Usage

- VUID-vkGetDeviceMicromapCompatibilityEXT-micromap-07551
The `micromap` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceMicromapCompatibilityEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeviceMicromapCompatibilityEXT-pVersionInfo-parameter
`pVersionInfo` **must** be a valid pointer to a valid `VkMicromapVersionInfoEXT` structure
- VUID-vkGetDeviceMicromapCompatibilityEXT-pCompatibility-parameter
`pCompatibility` **must** be a valid pointer to a `VkAccelerationStructureCompatibilityKHR` value

The `VkMicromapVersionInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapVersionInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    const uint8_t*     pVersionData;
} VkMicromapVersionInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pVersionData` is a pointer to the version header of a micromap as defined in `vkCmdCopyMicromapToMemoryEXT`

NOTE

`pVersionData` is a *pointer* to an array of $2 \times \text{VK_UUID_SIZE}$ `uint8_t` values instead of two `VK_UUID_SIZE` arrays as the expected use case for this member is to be pointed at the header of a previously serialized micromap (via `vkCmdCopyMicromapToMemoryEXT` or `vkCopyMicromapToMemoryEXT`) that is loaded in memory. Using arrays would necessitate extra memory copies of the UUIDs.

Valid Usage (Implicit)

- VUID-VkMicromapVersionInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MICROMAP_VERSION_INFO_EXT`
- VUID-VkMicromapVersionInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMicromapVersionInfoEXT-pVersionData-parameter
`pVersionData` **must** be a valid pointer to an array of $2 \times \text{VK_UUID_SIZE}$ `uint8_t` values

38.2. Host Micromap Operations

Implementations are also required to provide host implementations of the micromap operations if the `micromapHostCommands` feature is enabled:

- `vkBuildMicromapsEXT` corresponding to `vkCmdBuildMicromapsEXT`
- `vkCopyMicromapEXT` corresponding to `vkCmdCopyMicromapEXT`
- `vkCopyMicromapToMemoryEXT` corresponding to `vkCmdCopyMicromapToMemoryEXT`
- `vkCopyMemoryToMicromapEXT` corresponding to `vkCmdCopyMemoryToMicromapEXT`
- `vkWriteMicromapsPropertiesEXT` corresponding to `vkCmdWriteMicromapsPropertiesEXT`

These commands are functionally equivalent to their device counterparts, except that they are executed on the host timeline, rather than being enqueued into command buffers.

All micromaps used by the host commands **must** be bound to host-visible memory, and all input

data for micromap builds **must** be referenced using host addresses instead of device addresses. Applications are not required to map micromap memory when using the host commands.

NOTE

The `vkBuildMicromapsEXT` and `vkCmdBuildMicromapsEXT` **may** use different algorithms, and thus are not required to produce identical structures.

Apart from these details, the host and device operations are interchangeable.

NOTE

For efficient execution, micromaps manipulated using these commands should always be bound to host cached memory, as the implementation may need to repeatedly read and write this memory during the execution of the command.

To build micromaps on the host, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkBuildMicromapsEXT(
    VkDevice          device,
    VkDeferredOperationKHR deferredOperation,
    uint32_t          infoCount,
    const VkMicromapBuildInfoEXT* pInfos);
```

- `device` is the `VkDevice` for which the micromaps are being built.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to request deferral for this command.
- `infoCount` is the number of micromaps to build. It specifies the number of the `pInfos` that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` `VkMicromapBuildInfoEXT` structures defining the geometry used to build each micromap.

This command fulfills the same task as `vkCmdBuildMicromapsEXT` but is executed by the host.

The `vkBuildMicromapsEXT` command provides the ability to initiate multiple micromaps builds, however there is no ordering or synchronization implied between any of the individual micromap builds.

NOTE

This means that there **cannot** be any memory aliasing between any micromap memories or scratch memories being used by any of the builds.

Valid Usage

- VUID-vkBuildMicromapsEXT-pInfos-07461

For each `pInfos[i]`, `dstMicromap` **must** have been created with a value of `VkMicromapCreateInfoEXT::size` greater than or equal to the memory size required by the build operation, as returned by `vkGetMicromapBuildSizesEXT` with `pBuildInfo = pInfos[i]`

- VUID-vkBuildMicromapsEXT-mode-07462
The **mode** member of each element of **pInfos** **must** be a valid **VkBuildMicromapModeEXT** value
- VUID-vkBuildMicromapsEXT-dstMicromap-07463
The **dstMicromap** member of any element of **pInfos** **must** be a valid **VkMicromapEXT** handle
- VUID-vkBuildMicromapsEXT-pInfos-07464
For each element of **pInfos** its **type** member **must** match the value of **VkMicromapCreateInfoEXT::type** when its **dstMicromap** was created
- VUID-vkBuildMicromapsEXT-dstMicromap-07465
The range of memory backing the **dstMicromap** member of any element of **pInfos** that is accessed by this command **must** not overlap the memory backing the **dstMicromap** member of any other element of **pInfos**, which is accessed by this command
- VUID-vkBuildMicromapsEXT-dstMicromap-07466
The range of memory backing the **dstMicromap** member of any element of **pInfos** that is accessed by this command **must** not overlap the memory backing the **scratchData** member of any element of **pInfos** (including the same element), which is accessed by this command
- VUID-vkBuildMicromapsEXT-scratchData-07467
The range of memory backing the **scratchData** member of any element of **pInfos** that is accessed by this command **must** not overlap the memory backing the **scratchData** member of any other element of **pInfos**, which is accessed by this command
- VUID-vkBuildMicromapsEXT-pInfos-07552
For each element of **pInfos**, the **buffer** used to create its **dstMicromap** member **must** be bound to host-visible device memory
- VUID-vkBuildMicromapsEXT-pInfos-07553
For each element of **pInfos**, all referenced addresses of **pInfos[i].data.hostAddress** **must** be valid host memory
- VUID-vkBuildMicromapsEXT-pInfos-07554
For each element of **pInfos**, all referenced addresses of **pInfos[i].triangleArray.hostAddress** **must** be valid host memory
- VUID-vkBuildMicromapsEXT-micromapHostCommands-07555
The **VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands** feature **must** be enabled
- VUID-vkBuildMicromapsEXT-pInfos-07556
If **pInfos[i].mode** is **VK_BUILD_MICROMAP_MODE_BUILD_EXT**, all addresses between **pInfos[i].scratchData.hostAddress** and **pInfos[i].scratchData.hostAddress + N - 1** **must** be valid host memory, where **N** is given by the **buildScratchSize** member of the **VkMicromapBuildSizesInfoEXT** structure returned from a call to **vkGetMicromapBuildSizesEXT** with an identical **VkMicromapBuildInfoEXT** structure and primitive count
- VUID-vkBuildMicromapsEXT-pInfos-07557
For each element of **pInfos**, the **buffer** used to create its **dstMicromap** member **must** be

bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkBuildMicromapsEXT-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkBuildMicromapsEXT-deferredOperation-parameter
If **deferredOperation** is not [VK_NULL_HANDLE](#), **deferredOperation** **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkBuildMicromapsEXT-pInfos-parameter
pInfos **must** be a valid pointer to an array of **infoCount** valid [VkMicromapBuildInfoEXT](#) structures
- VUID-vkBuildMicromapsEXT-infoCount-arraylength
infoCount **must** be greater than 0
- VUID-vkBuildMicromapsEXT-deferredOperation-parent
If **deferredOperation** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)
- [VK_OPERATION_DEFERRED_KHR](#)
- [VK_OPERATION_NOT_DEFERRED_KHR](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)

To copy or compact a micromap on the host, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMicromapEXT(
    VkDevice                                device,
    VkDeferredOperationKHR                  deferredOperation,
    const VkCopyMicromapInfoEXT*            pInfo);
```

- **device** is the device which owns the micromaps.
- **deferredOperation** is an optional [VkDeferredOperationKHR](#) to [request deferral](#) for this command.
- **pInfo** is a pointer to a [VkCopyMicromapInfoEXT](#) structure defining the copy operation.

This command fulfills the same task as [vkCmdCopyMicromapEXT](#) but is executed by the host.

Valid Usage

- VUID-vkCopyMicromapEXT-deferredOperation-03678
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMicromapEXT-buffer-07558
The `buffer` used to create `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapEXT-buffer-07559
The `buffer` used to create `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapEXT-micromapHostCommands-07560
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkCopyMicromapEXT-buffer-07561
The `buffer` used to create `pInfo->src` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyMicromapEXT-buffer-07562
The `buffer` used to create `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyMicromapEXT-device-parameter
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkCopyMicromapEXT-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkCopyMicromapEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid [VkCopyMicromapInfoEXT](#) structure
- VUID-vkCopyMicromapEXT-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

To copy host accessible memory to a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMemoryToMicromapEXT(
    VkDevice                                device,
    VkDeferredOperationKHR                  deferredOperation,
    const VkCopyMemoryToMicromapInfoEXT*    pInfo);
```

- `device` is the device which owns `pInfo->dst`.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to request deferral for this command.
- `pInfo` is a pointer to a `VkCopyMemoryToMicromapInfoEXT` structure defining the copy operation.

This command fulfills the same task as `vkCmdCopyMemoryToMicromapEXT` but is executed by the host.

This command can accept micromaps produced by either `vkCmdCopyMicromapToMemoryEXT` or `vkCopyMicromapToMemoryEXT`.

Valid Usage

- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-03678
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMemoryToMicromapEXT-pInfo-07563
`pInfo->src.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMemoryToMicromapEXT-pInfo-07564
`pInfo->src.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyMemoryToMicromapEXT-buffer-07565
The `buffer` used to create `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMemoryToMicromapEXT-micromapHostCommands-07566
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkCopyMemoryToMicromapEXT-buffer-07567
The `buffer` used to create `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyMemoryToMicromapEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCopyMemoryToMicromapEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMemoryToMicromapInfoEXT` structure
- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

To copy a micromap to host accessible memory, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMicromapToMemoryEXT(
    VkDevice                                device,
    VkDeferredOperationKHR                  deferredOperation,
    const VkCopyMicromapToMemoryInfoEXT*    pInfo);
```

- `device` is the device which owns `pInfo->src`.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to request deferral for this command.
- `pInfo` is a pointer to a `VkCopyMicromapToMemoryInfoEXT` structure defining the copy operation.

This command fulfills the same task as `vkCmdCopyMicromapToMemoryEXT` but is executed by the host.

This command produces the same results as `vkCmdCopyMicromapToMemoryEXT`, but writes its

result directly to a host pointer, and is executed on the host rather than the device. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either [vkCmdCopyMemoryToMicromapEXT](#) or [vkCopyMemoryToMicromapEXT](#).

Valid Usage

- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-03678
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMicromapToMemoryEXT-buffer-07568
The `buffer` used to create `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapToMemoryEXT-pInfo-07569
`pInfo->dst.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMicromapToMemoryEXT-pInfo-07570
`pInfo->dst.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyMicromapToMemoryEXT-micromapHostCommands-07571
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkCopyMicromapToMemoryEXT-buffer-07572
The `buffer` used to create `pInfo->src` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyMicromapToMemoryEXT-device-parameter
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkCopyMicromapToMemoryEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid [VkCopyMicromapToMemoryInfoEXT](#) structure
- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

To query micromap size parameters on the host, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkWriteMicromapsPropertiesEXT(
    VkDevice          device,
    uint32_t          micromapCount,
    const VkMicromapEXT* pMicromaps,
    VkQueryType        queryType,
    size_t             dataSize,
    void*              pData,
    size_t             stride);
```

- `device` is the device which owns the micromaps in `pMicromaps`.
- `micromapCount` is the count of micromaps for which to query the property.
- `pMicromaps` is a pointer to an array of existing previously built micromaps.
- `queryType` is a `VkQueryType` value specifying the property to be queried.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written.
- `stride` is the stride in bytes between results for individual queries within `pData`.

This command fulfills the same task as `vkCmdWriteMicromapsPropertiesEXT` but is executed by the host.

Valid Usage

- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-07501
All micromaps in `pMicromaps` **must** have been constructed prior to the execution of this command
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-07502
All micromaps in `pMicromaps` **must** have been constructed with `VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT` if `queryType` is `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT`
- VUID-vkWriteMicromapsPropertiesEXT-queryType-07503
`queryType` **must** be `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT` or `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT`
- VUID-vkWriteMicromapsPropertiesEXT-queryType-10071
If `queryType` is `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT` or `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT` then `stride` **must** be a multiple of the size of `VkDeviceSize`

- VUID-vkWriteMicromapsPropertiesEXT-queryType-10072
If `queryType` is `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT` or `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT` then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteMicromapsPropertiesEXT-dataSize-07576
`dataSize` **must** be greater than or equal to `micromapCount*stride`
- VUID-vkWriteMicromapsPropertiesEXT-buffer-07577
The `buffer` used to create each micromap in `pMicromaps` **must** be bound to host-visible device memory
- VUID-vkWriteMicromapsPropertiesEXT-micromapHostCommands-07578
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkWriteMicromapsPropertiesEXT-buffer-07579
The `buffer` used to create each micromap in `pMicromaps` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkWriteMicromapsPropertiesEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-parameter
`pMicromaps` **must** be a valid pointer to an array of `micromapCount` valid `VkMicromapEXT` handles
- VUID-vkWriteMicromapsPropertiesEXT-queryType-parameter
`queryType` **must** be a valid `VkQueryType` value
- VUID-vkWriteMicromapsPropertiesEXT-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkWriteMicromapsPropertiesEXT-micromapCount-arraylength
`micromapCount` **must** be greater than 0
- VUID-vkWriteMicromapsPropertiesEXT-dataSize-arraylength
`dataSize` **must** be greater than 0
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-parent
Each element of `pMicromaps` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

38.2.1. Displacement Micromap

A displacement micromap in an acceleration structure includes information in the [VkAccelerationStructureTrianglesDisplacementMicromapNV](#) to define a base triangle and displacement directions then uses displacement information encoded in the micromap to apply to those values to generate the final position.

Displacement Base Triangle

If [displacementBiasAndScaleBuffer](#) is provided the bias and scale are fetched from that buffer. If [displacementBiasAndScaleBuffer](#) is zero the bias and scale are assumed to be 0.0 and 1.0, respectively.

Given an input position from the geometry, the base position and displacement vector used by the displacement are computed by:

$$\text{basePosition} = \text{inputPosition} + \text{displacementVector} \times \text{bias}$$
$$\text{baseDisplacementVector} = \text{displacementVector} \times \text{scale}$$

The parameters of each micro-vertex are derived from a combination of the base triangle parameters extracted from the bottom-level acceleration structure, the barycentrics of that micro-vertex, and the displacement value fetched from the displacement micromap corresponding to that micro-vertex.

$$\text{microVertexBasePosition} = \text{lerp}(\text{basePositions}, \text{microVertexBarycentrics})$$
$$\text{microVertexDisplacementVector} = \text{lerp}(\text{displacementVectors}, \text{microVertexBarycentrics})$$
$$\text{microVertexDisplacedPosition} = \text{microVertexBasePosition} + \text{microVertexDisplacementVector} \times \text{micromapDisplacementValue}$$

Displacement Micromap Encoding

Displacement amounts are stored in displacement blocks, each covering a triangular region of microvertices. Depending on the subdivision level and encoding format, one or more displacement blocks combine to store all displacement values for a given displacement micromap.

Displacement blocks are organized along a space filling curve within a displacement micromap if more than one block is required, then micro-vertices are organized along the same space filling curve within a displacement micromap.

The space-filling curve is purely hierarchical with recursive splitting, similar to that for opacity micromaps but operating on vertices instead of triangles. To maintain that the hierarchical ordering is contiguous while keeping continuous winding, some triangles are flipped and wound differently.

The [VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV](#) format is an uncompressed, packed format which covers 64 microtriangles (subdivision level 3) in a block. The block contains 45 displacement values encoded as 11 bit unorm values and stored tightly packed in the vertex order described above, occupying 495 bits. This is followed by 15 unused bits then 2 reserved bits which

must be 0. If this block is used to store displacement for a subdivision level below 3 the later unused values are ignored.

Section	Field	Entries	Bits per entry	Starting bit offset
Displacement amounts	Vertex 0 - 44	45	11	0
Unused		1	15	495
Reserved	Must be 0	1	2	510

The `VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV` and `VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV` formats store displacements in a compressed form to save space. Both formats use the same compression algorithm, differing in the number of bits used in the different fields.

The compression algorithm works by starting with fully specified anchor vertices, then for each level, predicting the value for the displacement and encoding the correction for that value, using fewer bits for each level of subdivision.

When adding a vertex in the recursive subdivision process between two adjacent displacement values, the predicted value is given by the rounded average of the two adjacent values as integers:

$$\text{prediction} = (A + B + 1) / 2$$

The decoded value after applying the correction is given by:

$$\text{decoded} = \text{prediction} + (\text{SignExtend}(\text{correction}) \ll \text{shift})$$

where correction is given by the corrections field for a given level and micro vertex and shift is given by the shifts field indexed from the level then by 4 values, selected from interior or the 3 edges in vertex order in that order.

The bit encoding for `VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV`

Section	Field	Entries	Bits per entry	Starting bit offset
Anchors	Vertex 0 - 2	3	11	0
Corrections	Level 1	3	11	33
	Level 2	9	11	66
	Level 3	30	10	165
	Level 4	108	5	465
Unused		1	1	1005
Shifts	Level 4	4	3	1006
	Level 3	4	1	1018
Reserved	Must be 0	1	2	1022

The bit encoding for `VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV`

Section	Field	Entries	Bits per entry	Starting bit offset
Anchors	Vertex 0 - 2	3	11	0
Corrections	Level 1	3	11	33
	Level 2	9	8	66
	Level 3	30	4	138
	Level 4	108	2	258
	Level 5	408	1	474
Unused		1	88	882
Shifts	Level 5	4	4	970
	Level 4	4	4	986
	Level 3	4	3	1002
	Level 2	4	2	1014
Reserved	Must be 0	1	2	1022

Chapter 39. Ray Traversal

The ray traversal process identifies and handles intersections between a ray and geometries in an acceleration structure.

Ray traversal cannot be started by a Vulkan API command directly - a shader **must** execute `OpRayQueryProceedKHR` or a `pipeline trace ray` instruction. When the `rayTracingPipeline` feature is enabled, `OpTraceRayKHR` **can** be used for `ray tracing` in a `ray tracing pipeline`. When the `rayQuery` feature is enabled, `OpRayQueryProceedKHR` **can** be used in any shader stage.

39.1. Ray Intersection Candidate Determination

Once tracing begins, rays are first tested against instances in a top-level acceleration structure. A ray that intersects an instance will be transformed into the space of the instance to continue traversal within that instance; therefore the transform matrix stored in the instance **must** be invertible.

In case multiple instances are intersected by a ray, the ray transformation into the space of the instance is invariant under the order in which these instances are encountered in the top-level acceleration structure.

NOTE

Applying multiple forward and reverse transforms to a ray to transition from one instance to another could result in accumulated errors. Thus an implementation should behave as if the ray is transformed from the origin for each instance independently.

Next, rays are tested against geometries in a bottom-level acceleration structure to determine if a hit occurred between them, initially based only on their geometric properties (i.e. their vertices). The implementation performs similar operations to that of rasterization, but with the effective viewport determined by the parameters of the ray, and the geometry transformed into a space determined by that viewport.

The vertices of each primitive are transformed from acceleration structure space \mathbf{as} to ray space \mathbf{r} according to the ray origin and direction as follows:

$$\begin{pmatrix} x_r \\ y_r \\ z_r \end{pmatrix} = \begin{pmatrix} a_x^2(1-c) + c & a_x a_y(1-c) - s a_z & a_x a_z(1-c) + s a_y \\ a_x a_y(1-c) + s a_z & a_y^2(1-c) + c & a_y a_z(1-c) - s a_x \\ a_x a_z(1-c) - s a_y & a_y a_z(1-c) + s a_x & a_z^2(1-c) + c \end{pmatrix} \begin{pmatrix} x_{as} - o_x \\ y_{as} - o_y \\ z_{as} - o_z \end{pmatrix}$$

\mathbf{a} is the axis of rotation from the unnormalized ray direction vector \mathbf{d} to the axis vector \mathbf{k} :

$$\mathbf{a} = \begin{cases} \frac{\mathbf{d} \times \mathbf{k}}{\|\mathbf{d} \times \mathbf{k}\|} & \text{if } \|\mathbf{d} \times \mathbf{k}\| \neq 0 \\ \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix} & \text{if } \|\mathbf{d} \times \mathbf{k}\| = 0 \end{cases}$$

s and c are the sine and cosine of the angle of rotation about \mathbf{a} from \mathbf{d} to \mathbf{k} :

$$c = \frac{\mathbf{d} \cdot \mathbf{k}}{\|\mathbf{d}\|}$$

$$s = \sqrt{1 - c^2}$$

\mathbf{k} is the unit vector:

$$\mathbf{k} = \begin{pmatrix} 0 \\ 0 \\ -1 \end{pmatrix}$$

\mathbf{o} and \mathbf{d} are the ray origin and unnormalized direction, respectively; the vector described by x_{as} , y_{as} , and z_{as} is any position in acceleration structure space; and the vector described by x_r , y_r , and z_r is the same position in ray space.

An *intersection candidate* is a unique point of intersection between a ray and a geometric primitive. For any primitive that has within its bounds a position $\mathbf{x}_y \mathbf{z}_{as}$ such that

$$\begin{aligned} x_r &= 0 \\ y_r &= 0 \\ t_{min} &< -\frac{z_r}{\|\mathbf{d}\|} < t_{max} && \text{if the primitive is a triangle,} \\ t_{min} &\leq -\frac{z_r}{\|\mathbf{d}\|} \leq t_{max} && \text{otherwise} \end{aligned}$$

(where $t = -\frac{z_r}{\|\mathbf{d}\|}$), an intersection candidate exists.

Triangle primitive bounds consist of all points on the plane formed by the three vertices and within the bounds of the edges between the vertices, subject to the watertightness constraints below. AABB primitive bounds consist of all points within an implementation-defined bound which includes the specified box.

NOTE

The bounds of the AABB including all points internal to the bound implies that a ray started within the AABB will hit that AABB.

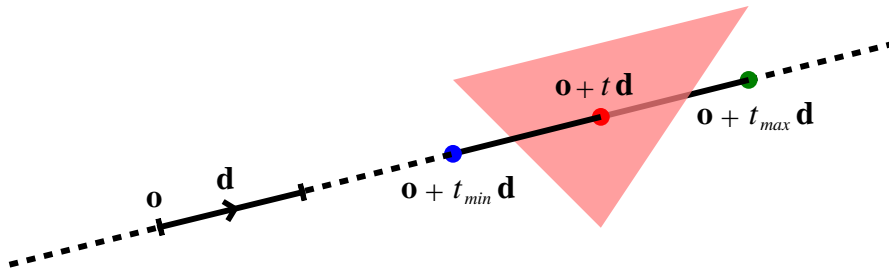

Figure 28. Ray intersection candidate

The determination of this condition is performed in an implementation specific manner, and **may** be performed with floating-point operations. Due to the complexity and number of operations involved, inaccuracies are expected, particularly as the scale of values involved begins to diverge.

Implementations **should** take efforts to maintain as much precision as possible.

NOTE

One very common case is when geometries are close to each other at some distance from the origin in acceleration structure space, where an effect similar to “z-fighting” is likely to be observed. Applications can mitigate this by ensuring their detailed geometries remain close to the origin.

Another likely case is when the origin of a ray is set to a position on a previously intersected surface, and its t_{\min} is zero or near zero; an intersection may be detected on the emitting surface. This case can usually be mitigated by offsetting t_{\min} slightly.

For a motion primitive or a motion instance, the positions for intersection are evaluated at the time specified in the **time** parameter to **OpTraceRayMotionNV** by interpolating between the two endpoints as specified for the given motion type. If a motion acceleration structure is traced with **OpTraceRayKHR**, it behaves as a **OpTraceRayMotionNV** with **time** of 0.0.

In the case of AABB geometries, implementations **may** increase their size in an acceleration structure in order to mitigate precision issues. This **may** result in false positive intersections being reported to the application.

For triangle intersection candidates, the b and c **barycentric coordinates** on the triangle where the above condition is met are made available to future shading. If the ray was traced with a **pipeline trace ray** instruction, these values are available as a vector of 2 32-bit floating-point values in the **HitAttributeKHR** storage class.

Once an intersection candidate is determined, it proceeds through the following operations, in order:

1. **Ray Intersection Culling**
2. **Ray Intersection Confirmation**
3. **Ray Closest Hit Determination**
4. **Ray Result Determination**

The sections below describe the exact details of these tests. There is no ordering guarantee between operations performed on different intersection candidates.

39.1.1. Watertightness

For a set of triangles with identical transforms, within a single instance:

- Any set of two or more triangles where all triangles have one vertex with an identical position value, that vertex is a *shared vertex*.
- Any set of two triangles with two shared vertices that were specified in the same **winding order** in each triangle have a *shared edge* defined by those vertices.

A *closed fan* is a set of three or more triangles where:

- All triangles in the set have the same shared vertex as one of their vertices.

- All edges that include the above vertex are shared edges.
- All above shared edges are shared by exactly two triangles from the set.
- No two triangles in the set intersect, except at shared edges.
- Every triangle in the set is joined to every other triangle in the set by a series of the above shared edges.

Implementations **should** not double-hit or miss when a ray intersects a shared edge, or a shared vertex of a closed fan.

39.2. Ray Intersection Culling

Candidate intersections go through several phases of culling before confirmation as an actual hit. There is no particular ordering dependency between the different culling operations.

39.2.1. Ray Primitive Culling

If the `rayTraversalPrimitiveCulling` or `rayQuery` features are enabled, the `SkipTrianglesKHR` and `SkipAABBsKHR` ray flags **can** be specified when tracing a ray. `SkipTrianglesKHR` and `SkipAABBsKHR` are mutually exclusive. `SkipTrianglesKHR` is also mutually exclusive with `CullBackFacingTrianglesKHR` and `CullFrontFacingTrianglesKHR`.

If `SkipTrianglesKHR` was included in the `Ray Flags` operand of the ray trace instruction, and the intersection is with a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs. If `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR` was included in the pipeline, traversal with `pipeline trace ray` instructions will all behave as if `SkipTrianglesKHR` was included in their `Ray Flags` operand.

If `SkipAABBsKHR` was included in the `Ray Flags` operand of the ray trace instruction, and the intersection is with an AABB primitive, the intersection is dropped, and no further processing of this intersection occurs. If `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR` was included in the pipeline, traversal with `pipeline trace ray` instructions will all behave as if `SkipAABBsKHR` was included in their `Ray Flags` operand.

39.2.2. Ray Mask Culling

Instances **can** be made invisible to particular rays based on the value of `VkAccelerationStructureInstanceKHR::mask` used to add that instance to a top-level acceleration structure, and the `Cull Mask` parameter used to trace the ray.

For the instance which is intersected, if `mask & Cull Mask == 0`, the intersection is dropped, and no further processing occurs.

39.2.3. Ray Face Culling

As in `polygon rasterization`, one of the stages of ray traversal is to determine if a triangle primitive is back- or front-facing, and primitives **can** be culled based on that facing.

If the intersection candidate is with an AABB primitive, this operation is skipped.

Determination

When a ray intersects a triangle primitive, the order that vertices are specified for the polygon affects whether the ray intersects the front or back face. Front or back facing is determined in the same way as they are for [rasterization](#), based on the sign of the polygon's area but using the ray space coordinates instead of framebuffer coordinates. One way to compute this area is:

$$a = -\frac{1}{2} \sum_{i=0}^{n-1} x_r^i y_r^{i+1} - x_r^{i+1} y_r^i$$

where x_r^i and y_r^i are the x and y [ray space coordinates](#) of the i th vertex of the n -vertex polygon (vertices are numbered starting at zero for the purposes of this computation) and $i + 1$ is $(i + 1) \bmod n$.

By default, if a is negative then the intersection is with the front face of the triangle, otherwise it is with the back face. If `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` is included in `VkAccelerationStructureInstanceKHR::flags` for the instance containing the intersected triangle, this determination is reversed. Additionally, if a is 0, the intersection candidate is treated as not intersecting with any face, irrespective of the sign.

NOTE

In a left-handed coordinate system, an intersection will be with the front face of a triangle if the vertices of the triangle, as defined in index order, appear from the ray's perspective in a clockwise rotation order. `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` was previously annotated as `VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR` because of this.

If the ray was traced with a [pipeline trace ray](#) instruction, the `HitKindKHR` built-in is set to `HitKindFrontFacingTriangleKHR` if the intersection is with front-facing geometry, and `HitKindBackFacingTriangleKHR` if the intersection is with back-facing geometry, for shader stages considering this intersection.

If the ray was traced with `OpRayQueryProceedKHR`, `OpRayQueryGetIntersectionFrontFaceKHR` will return true for intersection candidates with front faces, or false for back faces.

Culling

If `CullBackFacingTrianglesKHR` was included in the `Ray Flags` parameter of the ray trace instruction, and the intersection is determined as with the back face of a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs.

If `CullFrontFacingTrianglesKHR` was included in the `Ray Flags` parameter of the ray trace instruction, and the intersection is determined as with the front face of a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs.

This culling is disabled if `VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR` was included in `VkAccelerationStructureInstanceKHR::flags` for the instance which the intersected geometry belongs to.

Intersection candidates that have not intersected with any face ($a == 0$) are unconditionally culled, irrespective of ray flags and geometry instance flags.

The `CullBackFacingTrianglesKHR` and `CullFrontFacingTrianglesKHR` Ray Flags are mutually exclusive.

39.2.4. Ray Opacity Culling

Each geometry in the acceleration structure **may** be considered either opaque or not. Opaque geometries continue through traversal as normal, whereas non-opaque geometries need to be either confirmed or discarded by shader code. Intersection candidates **can** also be culled based on their opacity.

Determination

Each individual intersection candidate is initially determined as opaque if `VK_GEOMETRY_OPAQUE_BIT_KHR` was included in the `VkGeometryNV::flags` or `VkAccelerationStructureGeometryKHR::flags` when the geometry it intersected with was built, otherwise it is considered non-opaque.

If the geometry includes an opacity micromap, the opacity of the intersection at this point is instead derived as described in [Ray Opacity Micromap](#).

If the intersection candidate was generated by an [intersection shader](#), the intersection is initially considered to have opacity matching the AABB candidate that it was generated from.

However, this opacity can be overridden when it is built into an instance. Setting `VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR` in `VkAccelerationStructureInstanceKHR::flags` will force all geometries in the instance to be considered opaque. Similarly, setting `VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR` will force all geometries in the instance to be considered non-opaque.

This can again be overridden by including `OpaqueKHR` or `NoOpaqueKHR` in the Ray Flags parameter when tracing a ray. `OpaqueKHR` forces all geometries to behave as if they are opaque, regardless of their build parameters. Similarly, `NoOpaqueKHR` forces all geometries to behave as if they are non-opaque.

If the ray was traced with `OpRayQueryProceedKHR`, to determine the opacity of AABB intersection candidates, `OpRayQueryGetIntersectionCandidateAABBOpaqueKHR` **can** be used. This instruction will return `true` for opaque intersection candidates, and `false` for non-opaque intersection candidates.

Culling

If `CullOpaqueKHR` is included in the Ray Flags parameter when tracing a ray, an intersection with a geometry that is considered opaque is dropped, and no further processing occurs.

If `CullNoOpaqueKHR` is included in the Ray Flags parameter when tracing a ray, an intersection with a geometry that is considered non-opaque is dropped, and no further processing occurs.

The `OpaqueKHR`, `NoOpaqueKHR`, `CullOpaqueKHR`, and `CullNoOpaqueKHR` Ray Flags are mutually exclusive.

39.2.5. Ray Opacity Micromap

A `VK_GEOMETRY_TYPE_TRIANGLES_KHR` geometry in the acceleration structure **may** have an opacity micromap associated with it to give finer-grained opacity information.

If the intersection candidate is with a geometry with an associated opacity micromap and `VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT` is not set in its instance then the micromap is used to determine geometry opacity instead of the `VK_GEOMETRY_OPAQUE_BIT_KHR` flag in the geometry.

The opacity information in the micromap object is accessed using the candidate intersection u and v coordinates. The integer u and v are computed from $\lceil u \rceil + \lceil v \rceil$, clamping $\lceil u \rceil$ as needed to keep the sum less than or equal to $1 \ll \text{subdivisionlevel}$. These values are mapped into a linear index with a space filling curve which is defined recursively by traversing into the sub-triangle nearest vertex 0, then the middle triangle with ordering flipped, then nearest vertex 1 then nearest vertex 2.

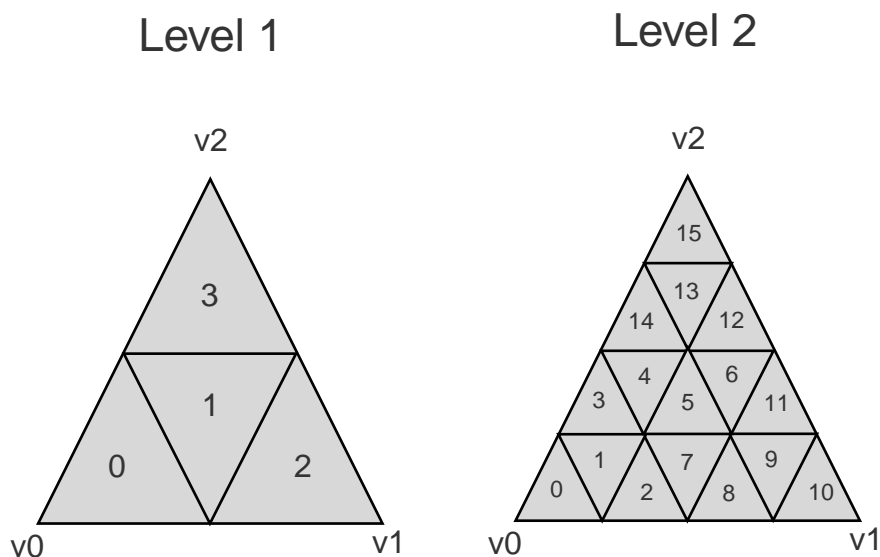

Figure 29. Example ordering for micromap data

NOTE

This encoding is spatially coherent, purely hierarchical, and allows a bit-parallel conversion between barycentric address and index values.

See the appendix for reference code implementing this mapping.

The result of the opacity micromap lookup and operations is to treat the intersection as opaque, non-opaque, or ignored. The interpretation of the values depends on `VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_EXT` in the instance of the candidate intersection or `ForceOpacityMicromap2StateEXT` ray flags on the ray. If either is set, the opacity micromap information is interpreted in 2 state override mode. If the result of the micromap lookup is to treat the intersection candidate as ignored, no further processing of that candidate is done.

If the associated opacity micromap has format `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT`, each element of the micromap is represented by a single bit at the index derived above.

If the associated opacity micromap has format `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT`, each element is represented by a two bit value at the index derived above.

4 State value	2 State value	Special index value	2 State override	Result
0	0	VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT	Y	Ignored
0	0	VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT	N	Ignored
1	1	VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_EXT	Y	Opaque
1	1	VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_EXT	N	Opaque
2		VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_EXT	Y	Ignored
2		VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_EXT	N	Non-opaque
3		VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_EXT	Y	Opaque
3		VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_EXT	N	Non-opaque

39.3. Ray Intersection Confirmation

Depending on the opacity of intersected geometry and whether it is a triangle or an AABB, candidate intersections are further processed to determine the eventual hit result. Candidates generated from AABB intersections run through the same confirmation process as triangle hits.

39.3.1. AABB Intersection Candidates

For an intersection candidate with an AABB geometry generated by [Ray Intersection Candidate Determination](#), shader code is executed to determine whether any hits should be reported to the traversal infrastructure; no further processing of this intersection candidate occurs. The occurrence of an AABB intersection candidate does not guarantee the ray intersects the primitive bounds. To avoid propagating false intersections the application **should** verify the intersection candidate before reporting any hits and only report intersections within the bounds of the AABB. Reporting an intersection outside the AABB either through the implementation giving a conservative bound or reporting a t out of range is legal but **may** result in unpredictable closest hit

results.

If the ray was traced with a [pipeline trace ray](#) instruction, an [intersection shader](#) is invoked from the [Shader Binding Table](#) according to the [specified indexing](#) for the intersected geometry. If this shader calls `OpReportIntersectionKHR`, a new intersection candidate is generated as described [below](#). If the intersection shader is `VK_SHADER_UNUSED_KHR` (which is only allowed for a zero shader group) then no further processing of the intersection candidate occurs.

Each new candidate generated as a result of this processing is a generated intersection candidate from the intersection with AABB geometry, with a `t` value equal to the `Hit` parameter of the `OpReportIntersectionKHR` instruction. The new generated candidate is then independently run through [Ray Intersection Confirmation](#) as a [generated intersection](#).

If the ray was traced with `OpRayQueryProceedKHR`, control is returned to the shader which executed `OpRayQueryProceedKHR`, returning `true`. The resulting ray query has a candidate intersection type of `RayQueryCandidateIntersectionAABBKHR`. `OpRayQueryGenerateIntersectionKHR` **can** be called to commit a new intersection candidate with committed intersection type of `RayQueryCommittedIntersectionGeneratedKHR`. Further ray query processing **can** be continued by executing `OpRayQueryProceedKHR` with the same ray query, or intersection **can** be terminated with `OpRayQueryTerminateKHR`. Unlike rays traced with a [pipeline trace ray](#) instruction, candidates generated in this way skip generated intersection candidate confirmation; applications **should** make this determination before generating the intersection.

This operation **may** be executed multiple times for the same intersection candidate.

39.3.2. Triangle and Generated Intersection Candidates

For triangle and [generated intersection candidates](#), additional shader code **may** be executed based on the intersection's opacity.

If the intersection is opaque, the candidate is immediately confirmed as a valid hit and passes to the next stage of processing.

For non-opaque intersection candidates, shader code is executed to determine whether a hit occurred or not.

If the ray was traced with a [pipeline trace ray](#) instruction, an [any-hit shader](#) is invoked from the [Shader Binding Table](#) according to the specified indexing. If this shader calls `OpIgnoreIntersectionKHR`, the candidate is dropped and no further processing of the candidate occurs. If the [any-hit shader](#) identified is `VK_SHADER_UNUSED_KHR`, the candidate is immediately confirmed as a valid hit and passes to the next stage of processing.

If the ray was traced with `OpRayQueryProceedKHR`, control is returned to the shader which executed `OpRayQueryProceedKHR`, returning `true`. As only triangle candidates participate in this operation with ray queries, the resulting candidate intersection type is always `RayQueryCandidateIntersectionTriangleKHR`. `OpRayQueryConfirmIntersectionKHR` **can** be called on the ray query to confirm the candidate as a hit with committed intersection type of `RayQueryCommittedIntersectionTriangleKHR`. Further ray query processing **can** be continued by executing `OpRayQueryProceedKHR` with the same ray query, or intersection **can** be terminated with `OpRayQueryTerminateKHR`. If `OpRayQueryConfirmIntersectionKHR` has not been executed, the candidate is

dropped and no further processing of the candidate occurs.

This operation **may** be executed multiple times for the same intersection candidate unless `VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR` was specified for the intersected geometry.

39.4. Ray Closest Hit Determination

Unless the ray was traced with the `TerminateOnFirstHitKHR` ray flag, the implementation **must** track the closest confirmed hit until all geometries have been tested and either confirmed or dropped.

After an intersection candidate is confirmed, its t value is compared to t_{\max} to determine which intersection is closer, where t is the parametric distance along the ray at which the intersection occurred.

- If $t < t_{\max}$, t_{\max} is set to t and the candidate is set as the current closest hit.
- If $t > t_{\max}$, the candidate is dropped and no further processing of that candidate occurs.
- If $t = t_{\max}$, the candidate **may** be set as the current closest hit or dropped.

If `TerminateOnFirstHitKHR` was included in the `Ray Flags` used to trace the ray, once the first hit is confirmed, the ray trace is terminated.

39.5. Ray Result Determination

Once all candidates have finished processing the prior stages, or if the ray is forcibly terminated, the final result of the ray trace is determined.

If a closest hit result was identified by [Ray Closest Hit Determination](#), a closest hit has occurred, otherwise the final result is a miss.

For rays traced with `pipeline trace ray` instructions which **can** invoke a closest hit shader, if a closest hit result was identified, a `closest hit shader` is invoked from the `Shader Binding Table` according to the `specified indexing` for the intersected geometry. Control returns to the shader that executed the `pipeline trace ray` instruction once this shader returns. This shader is skipped if either the ray flags included `SkipClosestHitShaderKHR`, or if the `closest hit shader` identified is `VK_SHADER_UNUSED_KHR`.

For rays traced with a `pipeline trace ray` instruction where no hit result was identified, the `miss shader` identified by the `Miss Index` parameter of the instruction is invoked. Control returns to the shader that executed the `pipeline trace ray` instruction once this shader returns. This shader is skipped if the miss shader identified is `VK_SHADER_UNUSED_KHR`.

If the ray was traced with `OpRayQueryProceedKHR`, control is returned to the shader which executed `OpRayQueryProceedKHR`, returning `false`. If a closest hit was identified by [Ray Closest Hit Determination](#), the ray query will now have a committed intersection type of `RayQueryCommittedIntersectionGeneratedKHR` or `RayQueryCommittedIntersectionTriangleKHR`. If no closest hit was identified, the committed intersection type will be `RayQueryCommittedIntersectionNoneKHR`.

No further processing of a ray query occurs after this result is determined.

Chapter 40. Ray Tracing

Ray tracing uses a separate rendering pipeline from both the graphics and compute pipelines (see [Ray Tracing Pipeline](#)).

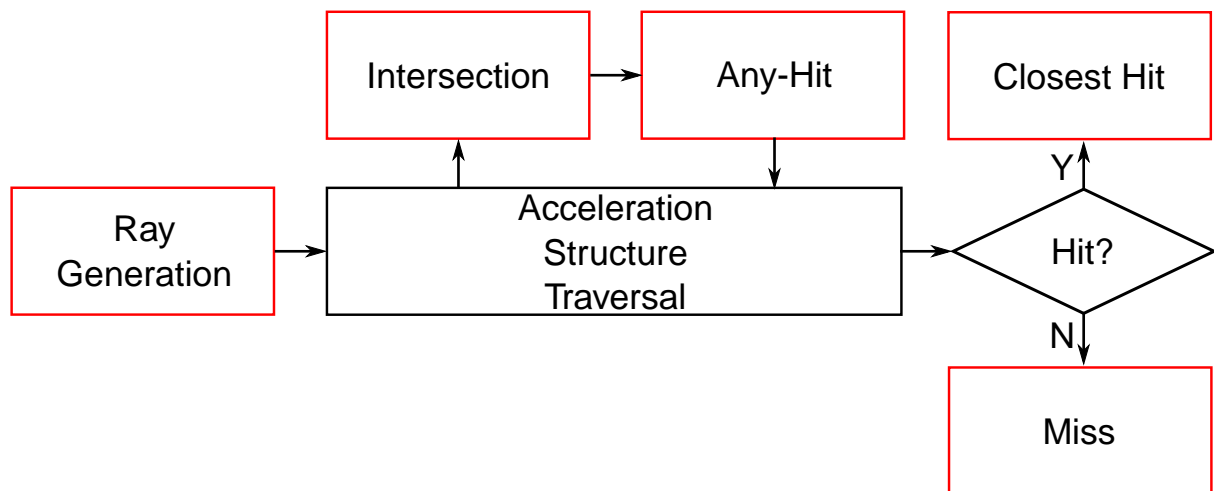

Figure 30. Ray tracing pipeline execution

Caption

Interaction between the different shader stages in the ray tracing pipeline

Within the ray tracing pipeline, a [pipeline trace ray](#) instruction **can** be called to perform a [ray traversal](#) that invokes the various ray tracing shader stages during its execution. The relationship between the ray tracing pipeline object and the geometries present in the acceleration structure traversed is passed into the ray tracing command in a [VkBuffer](#) object known as a *shader binding table*. [OpExecuteCallableKHR](#) can also be used in ray tracing pipelines to invoke a [callable shader](#).

During execution, control alternates between scheduling and other operations. The scheduling functionality is implementation-specific and is responsible for workload execution. The shader stages are programmable. [Traversal](#), which refers to the process of traversing acceleration structures to find potential intersections of rays with geometry, is fixed function.

The programmable portions of the pipeline are exposed in a single-ray programming model, with each invocation handling one ray at a time. Memory operations **can** be synchronized using standard memory barriers. The [Workgroup](#) scope and variables with a storage class of [Workgroup](#) **must** not be used in the ray tracing pipeline.

40.1. Shader Call Instructions

A *shader call* is an instruction which **may** cause execution to continue elsewhere by creating one or more invocations that execute a different shader stage.

The following table lists all shader call instructions and which stages each one **can** directly call.

Instruction	Intersection	Any-Hit	Closest Hit	Miss	Callable
OpTraceRayKHR	X	X	X	X	
OpTraceRayMotionNV	X	X	X	X	
OpReportIntersectionKHR		X			
OpExecuteCallableKHR					X
OpHitObjectTraceRayNV	X	X			
OpHitObjectTraceRayMotionNV	X	X			
OpHitObjectExecuteShaderNV			X	X	

The invocations created by shader call instructions are grouped into subgroups by the implementation. Those subgroups **may** be unrelated to the subgroup of the parent invocation.

Pipeline trace ray instructions **can** be used recursively; invoked shaders **can** themselves execute pipeline trace ray instructions, to a maximum depth defined by the `maxRecursionDepth` or `maxRayRecursionDepth` limit.

Shaders directly invoked from the API always have a recursion depth of 0; each shader executed by a pipeline trace ray instruction has a recursion depth one higher than the recursion depth of the shader which invoked it. Applications **must** not invoke a shader with a recursion depth greater than the value of `maxRecursionDepth` or `maxPipelineRayRecursionDepth` specified in the pipeline.

There is no explicit recursion limit for other shader call instructions which may recurse (e.g. `OpExecuteCallableKHR`) but there is an upper bound determined by the [stack size](#).

An *invocation repack instruction* is a ray tracing instruction where the implementation **may** change the set of invocations that are executing. When a repack instruction is encountered, the invocation is suspended and a new invocation begins and executes the instruction. After executing the repack instruction (which **may** result in other ray tracing shader stages executing) the new invocation ends and the original invocation is resumed, but it **may** be resumed in a different subgroup or at a different `SubgroupLocalInvocationId` within the same subgroup. When a subset of invocations in a subgroup execute the invocation repack instruction, those that do not execute it remain in the same subgroup at the same `SubgroupLocalInvocationId`.

The `OpTraceRayKHR`, `OpTraceRayMotionNV`, `OpReorderThreadWithHintNV`, `OpReorderThreadWithHitObjectNV`, `OpReportIntersectionKHR`, and `OpExecuteCallableKHR` instructions are invocation repack instructions.

The invocations that are executing before a shader call instruction, after the instruction, or are created by the instruction, are [shader-call-related](#).

If the implementation changes the composition of subgroups, the values of `SubgroupSize`, `SubgroupLocalInvocationId`, `SMIDNV`, `WarpIDNV`, and builtin variables that are derived from them (`SubgroupEqMask`, `SubgroupGeMask`, `SubgroupGtMask`, `SubgroupLeMask`, `SubgroupLtMask`) **must** be changed accordingly by the invocation repack instruction. The application **must** use [Volatile semantics](#) on

these **BuiltIn** variables when used in the ray generation, closest hit, miss, intersection, and callable shaders. Similarly, the application **must** use **Volatile** semantics on any **RayTmaxKHR** decorated **BuiltIn** used in an intersection shader.

Subgroup operations are permitted in the programmable ray tracing shader stages. However, shader call instructions place a bound on where results of subgroup instructions or subgroup-scoped instructions that execute the dynamic instance of that instruction are potentially valid. For example, care **must** be taken when using the result of a ballot operation that was computed before an invocation repack instruction, after that repack instruction. The ballot **may** be incorrect as the set of invocations could have changed.

NOTE While the **SubgroupSize** built-in is required to be declared **Volatile**, its value will never change unless **VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT** is set on pipeline creation, as without that bit set, its value is required to match that of **VkPhysicalDeviceSubgroupProperties::subgroupSize**.

For clock operations, the value of a **Subgroup** scoped **OpReadClockKHR** read before the dynamic instance of a repack instruction **should** not be compared to the result of that clock instruction after the repack instruction.

When a ray tracing shader executes a dynamic instance of an invocation repack instruction which results in another ray tracing shader being invoked, their instructions are related by **shader-call-order**.

For ray tracing invocations that are **shader-call-related**:

- **memory operations** on **StorageBuffer**, **Image**, and **ShaderRecordBufferKHR** storage classes **can** be synchronized using the **ShaderCallKHR** scope.
- the **CallableDataKHR**, **IncomingCallableDataKHR**, **RayPayloadKHR**, **HitAttributeKHR**, and **IncomingRayPayloadKHR** storage classes are **system-synchronized** and no application availability and visibility operations are required.
- memory operations within a single invocation before and after the shader call instruction are ordered by **program-order** and do not require explicit synchronization.

40.2. Ray Tracing Commands

Ray tracing commands provoke work in the ray tracing pipeline. Ray tracing commands are recorded into a command buffer and when executed by a queue will produce work that executes according to the currently bound ray tracing pipeline. A ray tracing pipeline **must** be bound to a command buffer before any ray tracing commands are recorded in that command buffer.

To dispatch ray tracing use:

```
// Provided by VK_NV_ray_tracing
void vkCmdTraceRaysNV(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 raygenShaderBindingTableBuffer,
    VkDeviceSize             raygenShaderBindingOffset,
    VkBuffer                 missShaderBindingTableBuffer,
    VkDeviceSize             missShaderBindingOffset,
    VkDeviceSize             missShaderBindingStride,
    VkBuffer                 hitShaderBindingTableBuffer,
    VkDeviceSize             hitShaderBindingOffset,
    VkDeviceSize             hitShaderBindingStride,
    VkBuffer                 callableShaderBindingTableBuffer,
    VkDeviceSize             callableShaderBindingOffset,
    VkDeviceSize             callableShaderBindingStride,
    uint32_t                 width,
    uint32_t                 height,
    uint32_t                 depth);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `raygenShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the ray generation shader stage.
- `raygenShaderBindingOffset` is the offset in bytes (relative to `raygenShaderBindingTableBuffer`) of the ray generation shader being used for the trace.
- `missShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the miss shader stage.
- `missShaderBindingOffset` is the offset in bytes (relative to `missShaderBindingTableBuffer`) of the miss shader being used for the trace.
- `missShaderBindingStride` is the size in bytes of each shader binding table record in `missShaderBindingTableBuffer`.
- `hitShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the hit shader stages.
- `hitShaderBindingOffset` is the offset in bytes (relative to `hitShaderBindingTableBuffer`) of the hit shader group being used for the trace.
- `hitShaderBindingStride` is the size in bytes of each shader binding table record in `hitShaderBindingTableBuffer`.
- `callableShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the callable shader stage.
- `callableShaderBindingOffset` is the offset in bytes (relative to `callableShaderBindingTableBuffer`) of the callable shader being used for the trace.
- `callableShaderBindingStride` is the size in bytes of each shader binding table record in `callableShaderBindingTableBuffer`.
- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.

- **depth** is depth of the ray trace query dimensions.

When the command is executed, a ray generation group of **width** × **height** × **depth** rays is assembled.

Valid Usage

- VUID-vkCmdTraceRaysNV-magFilter-04553
If a **VkSampler** created with **magFilter** or **minFilter** equal to **VK_FILTER_LINEAR**, **reductionMode** equal to **VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE**, and **compareEnable** equal to **VK_FALSE** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT**
- VUID-vkCmdTraceRaysNV-magFilter-09598
If a **VkSampler** created with **magFilter** or **minFilter** equal to **VK_FILTER_LINEAR** and **reductionMode** equal to either **VK_SAMPLER_REDUCTION_MODE_MIN** or **VK_SAMPLER_REDUCTION_MODE_MAX** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT**
- VUID-vkCmdTraceRaysNV-mipmapMode-04770
If a **VkSampler** created with **mipmapMode** equal to **VK_SAMPLER_MIPMAP_MODE_LINEAR**, **reductionMode** equal to **VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE**, and **compareEnable** equal to **VK_FALSE** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT**
- VUID-vkCmdTraceRaysNV-mipmapMode-09599
If a **VkSampler** created with **mipmapMode** equal to **VK_SAMPLER_MIPMAP_MODE_LINEAR** and **reductionMode** equal to either **VK_SAMPLER_REDUCTION_MODE_MIN** or **VK_SAMPLER_REDUCTION_MODE_MAX** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT**
- VUID-vkCmdTraceRaysNV-unnormalizedCoordinates-09635
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **levelCount** and **layerCount** **must** be 1
- VUID-vkCmdTraceRaysNV-unnormalizedCoordinates-09636
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **viewType** **must** be **VK_IMAGE_VIEW_TYPE_1D** or **VK_IMAGE_VIEW_TYPE_2D**
- VUID-vkCmdTraceRaysNV-None-06479
If a **VkImageView** is sampled with **depth comparison**, the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT**
- VUID-vkCmdTraceRaysNV-None-02691
If a **VkImageView** is accessed using atomic operations as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT**

- VUID-vkCmdTraceRaysNV-None-07888
If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`
- VUID-vkCmdTraceRaysNV-None-02692
If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-vkCmdTraceRaysNV-None-02693
If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-vkCmdTraceRaysNV-filterCubic-02694
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysNV-filterCubicMinmax-02695
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysNV-cubicRangeClamp-09212
If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`
- VUID-vkCmdTraceRaysNV-reductionMode-09213
Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`
- VUID-vkCmdTraceRaysNV-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`
- VUID-vkCmdTraceRaysNV-flags-02696
Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`
- VUID-vkCmdTraceRaysNV-OpTypeImage-07027
For any `VkImageView` being written as a storage image where the image format field of

the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysNV-OpTypeImage-07028

For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysNV-OpTypeImage-07029

For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysNV-OpTypeImage-07030

Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysNV-None-08600

For each set n that is statically used by a `bound shader`, a descriptor set **must** have been bound to n at the same pipeline bind point, with a `VkPipelineLayout` that is compatible for set n , with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` array used to create the current `VkShaderEXT`, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysNV-None-08601

For each push constant that is statically used by a `bound shader`, a push constant value **must** have been set for the same pipeline bind point, with a `VkPipelineLayout` that is compatible for push constants, with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` array used to create the current `VkShaderEXT`, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysNV-None-10068

For each array of resources that is used by a `bound shader`, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysNV-maintenance4-08602

If the `maintenance4` feature is not enabled, then for each push constant that is statically used by a `bound shader`, a push constant value **must** have been set for the same pipeline bind point, with a `VkPipelineLayout` that is compatible for push constants, with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` and `VkPushConstantRange` arrays used to create the current `VkShaderEXT`, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysNV-None-08114

Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid as described by [descriptor validity](#) if they are statically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdTraceRaysNV-None-08115

If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified

via `vkCmdBindDescriptorSets`, the bound `VkPipeline` **must** have been created without `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdTraceRaysNV-None-08116
Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdTraceRaysNV-None-08604
Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysNV-None-08117
If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdSetDescriptorBufferOffsetsEXT`, the bound `VkPipeline` **must** have been created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdTraceRaysNV-None-08119
If a descriptor is dynamically used with a `VkPipeline` created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysNV-None-08605
If a descriptor is dynamically used with a `VkShaderEXT` created with a `VkDescriptorSetLayout` that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysNV-None-08606
If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysNV-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the `VkPipeline` object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysNV-None-08609
If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must** not be used to sample from any `VkImage` with a `VkImageView` of the type `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, `VK_IMAGE_VIEW_TYPE_2D_ARRAY` or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`, in any shader stage
- VUID-vkCmdTraceRaysNV-None-08610
If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*`

instructions with **ImplicitLod**, **Dref** or **Proj** in their name, in any shader stage

- VUID-vkCmdTraceRaysNV-None-08611

If the **VkPipeline** object bound to the pipeline bind point used by this command or any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a **VkSampler** object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V **OpImageSample*** or **OpImageSparseSample*** instructions that includes a LOD bias or any offset values, in any shader stage

- VUID-vkCmdTraceRaysNV-None-08607

If the **shaderObject** feature is enabled, either a valid pipeline **must** be bound to the pipeline bind point used by this command, or a valid combination of valid and **VK_NULL_HANDLE** shader objects **must** be bound to every supported shader stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysNV-uniformBuffers-06935

If any stage of the **VkPipeline** object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT** or **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT** for **uniformBuffers**, and the **robustBufferAccess** feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysNV-None-08612

If the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysNV-storageBuffers-06936

If any stage of the **VkPipeline** object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT** or **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT** for **storageBuffers**, and the **robustBufferAccess** feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysNV-None-08613

If the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysNV-commandBuffer-02707

If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, any resource accessed by **bound shaders** **must** not be a protected resource

- VUID-vkCmdTraceRaysNV-None-06550

If a **bound shader** accesses a **VkSampler** or **VkImageView** object that enables **sampler Y_C B_{C_R} conversion**, that object **must** only be used with **OpImageSample*** or **OpImageSparseSample*** instructions

- VUID-vkCmdTraceRaysNV-ConstOffset-06551
If a [bound shader](#) accesses a [VkSampler](#) or [VkImageView](#) object that enables [sampler Y'C_BC_R conversion](#), that object **must** not use the [ConstOffset](#) and [Offset](#) operands
- VUID-vkCmdTraceRaysNV-viewType-07752
If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#) **must** match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)
- VUID-vkCmdTraceRaysNV-format-07753
If a [VkImageView](#) is accessed as a result of this command, then the [numeric type](#) of the image view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must** match
- VUID-vkCmdTraceRaysNV-OpImageWrite-08795
If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM_KHR](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdTraceRaysNV-OpImageWrite-08796
If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM_KHR](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have four components
- VUID-vkCmdTraceRaysNV-OpImageWrite-04469
If a [VkBufferView](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdTraceRaysNV-SampledType-04470
If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64
- VUID-vkCmdTraceRaysNV-SampledType-04471
If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdTraceRaysNV-SampledType-04472
If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64
- VUID-vkCmdTraceRaysNV-SampledType-04473
If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdTraceRaysNV-sparseImageInt64Atomics-04474
If the [sparseImageInt64Atomics](#) feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command
- VUID-vkCmdTraceRaysNV-sparseImageInt64Atomics-04475

If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command

- VUID-vkCmdTraceRaysNV-OpImageWeightedSampleQCOM-06971

If `OpImageWeightedSampleQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`

- VUID-vkCmdTraceRaysNV-OpImageWeightedSampleQCOM-06972

If `OpImageWeightedSampleQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`

- VUID-vkCmdTraceRaysNV-OpImageBoxFilterQCOM-06973

If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`

- VUID-vkCmdTraceRaysNV-OpImageBlockMatchSSDQCOM-06974

If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysNV-OpImageBlockMatchSADQCOM-06975

If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysNV-OpImageBlockMatchSADQCOM-06976

If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`

- VUID-vkCmdTraceRaysNV-OpImageWeightedSampleQCOM-06977

If `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdTraceRaysNV-OpImageWeightedSampleQCOM-06978

If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-09215

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdTraceRaysNV-None-07288
Any shader invocation executed by this command **must** `terminate`
- VUID-vkCmdTraceRaysNV-None-09600
If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, the image subresource identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdTraceRaysNV-None-03429
Any shader group handle referenced by this call **must** have been queried from the currently bound ray tracing pipeline
- VUID-vkCmdTraceRaysNV-None-09458
If the bound ray tracing pipeline state was created with the `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` dynamic state enabled then `vkCmdSetRayTracingPipelineStackSizeKHR` **must** have been called in the current command buffer prior to this trace command
- VUID-vkCmdTraceRaysNV-commandBuffer-04624
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdTraceRaysNV-maxRecursionDepth-03625
This command **must** not cause a pipeline trace ray instruction to be executed from a shader invocation with a `recursion depth` greater than the value of `maxRecursionDepth` used to create the bound ray tracing pipeline
- VUID-vkCmdTraceRaysNV-raygenShaderBindingTableBuffer-04042
If `raygenShaderBindingTableBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdTraceRaysNV-raygenShaderBindingOffset-02455
`raygenShaderBindingOffset` **must** be less than the size of `raygenShaderBindingTableBuffer`
- VUID-vkCmdTraceRaysNV-raygenShaderBindingOffset-02456
`raygenShaderBindingOffset` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysNV-missShaderBindingTableBuffer-04043
If `missShaderBindingTableBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdTraceRaysNV-missShaderBindingOffset-02457
`missShaderBindingOffset` **must** be less than the size of `missShaderBindingTableBuffer`

- VUID-vkCmdTraceRaysNV-missShaderBindingOffset-02458
`missShaderBindingOffset` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysNV-hitShaderBindingTableBuffer-04044
If `hitShaderBindingTableBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdTraceRaysNV-hitShaderBindingOffset-02459
`hitShaderBindingOffset` **must** be less than the size of `hitShaderBindingTableBuffer`
- VUID-vkCmdTraceRaysNV-hitShaderBindingOffset-02460
`hitShaderBindingOffset` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysNV-callableShaderBindingTableBuffer-04045
If `callableShaderBindingTableBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdTraceRaysNV-callableShaderBindingOffset-02461
`callableShaderBindingOffset` **must** be less than the size of `callableShaderBindingTableBuffer`
- VUID-vkCmdTraceRaysNV-callableShaderBindingOffset-02462
`callableShaderBindingOffset` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysNV-missShaderBindingStride-02463
`missShaderBindingStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupHandleSize`
- VUID-vkCmdTraceRaysNV-hitShaderBindingStride-02464
`hitShaderBindingStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupHandleSize`
- VUID-vkCmdTraceRaysNV-callableShaderBindingStride-02465
`callableShaderBindingStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupHandleSize`
- VUID-vkCmdTraceRaysNV-missShaderBindingStride-02466
`missShaderBindingStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxShaderGroupStride`
- VUID-vkCmdTraceRaysNV-hitShaderBindingStride-02467
`hitShaderBindingStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxShaderGroupStride`
- VUID-vkCmdTraceRaysNV-callableShaderBindingStride-02468
`callableShaderBindingStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxShaderGroupStride`
- VUID-vkCmdTraceRaysNV-width-02469
`width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0]`
- VUID-vkCmdTraceRaysNV-height-02470
`height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1]`

- VUID-vkCmdTraceRaysNV-depth-02471
`depth` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2]`

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdTraceRaysNV-raygenShaderBindingTableBuffer-parameter
`raygenShaderBindingTableBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdTraceRaysNV-missShaderBindingTableBuffer-parameter
If `missShaderBindingTableBuffer` is not `VK_NULL_HANDLE`, `missShaderBindingTableBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdTraceRaysNV-hitShaderBindingTableBuffer-parameter
If `hitShaderBindingTableBuffer` is not `VK_NULL_HANDLE`, `hitShaderBindingTableBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdTraceRaysNV-callableShaderBindingTableBuffer-parameter
If `callableShaderBindingTableBuffer` is not `VK_NULL_HANDLE`, `callableShaderBindingTableBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdTraceRaysNV-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdTraceRaysNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdTraceRaysNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdTraceRaysNV-commonparent
Each of `callableShaderBindingTableBuffer`, `commandBuffer`, `hitShaderBindingTableBuffer`, `missShaderBindingTableBuffer`, and `raygenShaderBindingTableBuffer` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

To dispatch ray tracing use:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysKHR(
    VkCommandBuffer                commandBuffer,
    const VkStridedDeviceAddressRegionKHR* pRaygenShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pMissShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pHitShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pCallableShaderBindingTable,
    uint32_t                        width,
    uint32_t                        height,
    uint32_t                        depth);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pRaygenShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the ray generation shader stage.
- `pMissShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the miss shader stage.
- `pHitShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the hit shader stage.
- `pCallableShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the callable shader stage.
- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.
- `depth` is depth of the ray trace query dimensions.

When the command is executed, a ray generation group of `width × height × depth` rays is assembled.

Valid Usage

- VUID-vkCmdTraceRaysKHR-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdTraceRaysKHR-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdTraceRaysKHR-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdTraceRaysKHR-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdTraceRaysKHR-unnormalizedCoordinates-09635
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdTraceRaysKHR-unnormalizedCoordinates-09636
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`
- VUID-vkCmdTraceRaysKHR-None-06479
If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`
- VUID-vkCmdTraceRaysKHR-None-02691
If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`
- VUID-vkCmdTraceRaysKHR-None-07888
If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`
- VUID-vkCmdTraceRaysKHR-None-02692
If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-vkCmdTraceRaysKHR-None-02693
If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of

VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY

- VUID-vkCmdTraceRaysKHR-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdTraceRaysKHR-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdTraceRaysKHR-cubicRangeClamp-09212

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`

- VUID-vkCmdTraceRaysKHR-reductionMode-09213

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`

- VUID-vkCmdTraceRaysKHR-selectableCubicWeights-09214

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`

- VUID-vkCmdTraceRaysKHR-flags-02696

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`

- VUID-vkCmdTraceRaysKHR-OpTypeImage-07027

For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysKHR-OpTypeImage-07028

For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysKHR-OpTypeImage-07029

For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysKHR-OpTypeImage-07030

Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdTraceRaysKHR-None-08600

For each set n that is statically used by a [bound shader](#), a descriptor set **must** have been bound to n at the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for set n , with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) array used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysKHR-None-08601

For each push constant that is statically used by a [bound shader](#), a push constant value **must** have been set for the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for push constants, with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) array used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysKHR-None-10068

For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysKHR-maintenance4-08602

If the [maintenance4](#) feature is not enabled, then for each push constant that is statically used by a [bound shader](#), a push constant value **must** have been set for the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for push constants, with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) and [VkPushConstantRange](#) arrays used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysKHR-None-08114

Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid as described by [descriptor validity](#) if they are statically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysKHR-None-08115

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysKHR-None-08116

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysKHR-None-08604

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysKHR-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdTraceRaysKHR-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysKHR-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysKHR-None-08606
If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysKHR-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysKHR-None-08609
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used to sample from any [VkImage](#) with a [VkImageView](#) of the type [VK_IMAGE_VIEW_TYPE_3D](#), [VK_IMAGE_VIEW_TYPE_CUBE](#), [VK_IMAGE_VIEW_TYPE_1D_ARRAY](#), [VK_IMAGE_VIEW_TYPE_2D_ARRAY](#) or [VK_IMAGE_VIEW_TYPE_CUBE_ARRAY](#), in any shader stage
- VUID-vkCmdTraceRaysKHR-None-08610
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V [OpImageSample*](#) or [OpImageSparseSample*](#) instructions with [ImplicitLod](#), [Dref](#) or [Proj](#) in their name, in any shader stage
- VUID-vkCmdTraceRaysKHR-None-08611
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V [OpImageSample*](#) or [OpImageSparseSample*](#) instructions that includes a LOD bias or any offset values, in any shader stage
- VUID-vkCmdTraceRaysKHR-None-08607
If the [shaderObject](#) feature is enabled, either a valid pipeline **must** be bound to the pipeline bind point used by this command, or a valid combination of valid and [VK_NULL_HANDLE](#) shader objects **must** be bound to every supported shader stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysKHR-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-None-08613

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-commandBuffer-02707

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource

- VUID-vkCmdTraceRaysKHR-None-06550

If a [bound shader](#) accesses a [VkSampler](#) or [VkImageView](#) object that enables [sampler Y'C_BC_R conversion](#), that object **must** only be used with [OpImageSample*](#) or [OpImageSparseSample*](#) instructions

- VUID-vkCmdTraceRaysKHR-ConstOffset-06551

If a [bound shader](#) accesses a [VkSampler](#) or [VkImageView](#) object that enables [sampler Y'C_BC_R conversion](#), that object **must** not use the [ConstOffset](#) and [Offset](#) operands

- VUID-vkCmdTraceRaysKHR-viewType-07752

If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#) **must** match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdTraceRaysKHR-format-07753

If a [VkImageView](#) is accessed as a result of this command, then the [numeric type](#) of the image view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must** match

- VUID-vkCmdTraceRaysKHR-OpImageWrite-08795

If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdTraceRaysKHR-OpImageWrite-08796

If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components

- VUID-vkCmdTraceRaysKHR-OpImageWrite-04469

If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdTraceRaysKHR-SampledType-04470

If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdTraceRaysKHR-SampledType-04471

If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdTraceRaysKHR-SampledType-04472

If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdTraceRaysKHR-SampledType-04473

If a `VkBufferView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdTraceRaysKHR-sparseImageInt64Atomics-04474

If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command

- VUID-vkCmdTraceRaysKHR-sparseImageInt64Atomics-04475

If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command

- VUID-vkCmdTraceRaysKHR-OpImageWeightedSampleQCOM-06971

If `OpImageWeightedSampleQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`

- VUID-vkCmdTraceRaysKHR-OpImageWeightedSampleQCOM-06972

If `OpImageWeightedSampleQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`

- VUID-vkCmdTraceRaysKHR-OpImageBoxFilterQCOM-06973
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchSSDQCOM-06974
If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdTraceRaysKHR-OpImageWeightedSampleQCOM-06977
If `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdTraceRaysKHR-OpImageWeightedSampleQCOM-06978
If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdTraceRaysKHR-None-07288
Any shader invocation executed by this command **must** `terminate`
- VUID-vkCmdTraceRaysKHR-None-09600

If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, the image subresource identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdTraceRaysKHR-None-03429

Any shader group handle referenced by this call **must** have been queried from the currently bound ray tracing pipeline

- VUID-vkCmdTraceRaysKHR-None-09458

If the bound ray tracing pipeline state was created with the `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` dynamic state enabled then `vkCmdSetRayTracingPipelineStackSizeKHR` **must** have been called in the current command buffer prior to this trace command

- VUID-vkCmdTraceRaysKHR-maxPipelineRayRecursionDepth-03679

This command **must** not cause a shader call instruction to be executed from a shader invocation with a `recursion depth` greater than the value of `maxPipelineRayRecursionDepth` used to create the bound ray tracing pipeline

- VUID-vkCmdTraceRaysKHR-commandBuffer-03635

`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdTraceRaysKHR-size-04023

The `size` member of `pRayGenShaderBindingTable` **must** be equal to its `stride` member

- VUID-vkCmdTraceRaysKHR-pRayGenShaderBindingTable-03680

If the buffer from which `pRayGenShaderBindingTable->deviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdTraceRaysKHR-pRayGenShaderBindingTable-03681

The buffer from which the `pRayGenShaderBindingTable->deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag

- VUID-vkCmdTraceRaysKHR-pRayGenShaderBindingTable-03682

`pRayGenShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`

- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-03683

If the buffer from which `pMissShaderBindingTable->deviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-03684

The buffer from which the `pMissShaderBindingTable->deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag

- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-03685

`pMissShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`

- VUID-vkCmdTraceRaysKHR-stride-03686

`pMissShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`

- VUID-vkCmdTraceRaysKHR-stride-04029

`pMissShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-03687

If the buffer from which `pHitShaderBindingTable->deviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-03688

The buffer from which the `pHitShaderBindingTable->deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-03689

`pHitShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`

- VUID-vkCmdTraceRaysKHR-stride-03690

`pHitShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`

- VUID-vkCmdTraceRaysKHR-stride-04035

`pHitShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`

- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-03691

If the buffer from which `pCallableShaderBindingTable->deviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-03692

The buffer from which the `pCallableShaderBindingTable->deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag

- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-03693

`pCallableShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`

- VUID-vkCmdTraceRaysKHR-stride-03694

`pCallableShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`

- VUID-vkCmdTraceRaysKHR-stride-04041

`pCallableShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`

- VUID-vkCmdTraceRaysKHR-flags-03696

If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, `pHitShaderBindingTable->deviceAddress` **must** not be zero

- VUID-vkCmdTraceRaysKHR-flags-03697

If the currently bound ray tracing pipeline was created with `flags` that included

VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR,
pHitShaderBindingTable->deviceAddress **must** not be zero

- VUID-vkCmdTraceRaysKHR-flags-03511

If the currently bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR, the shader group handle identified by pMissShaderBindingTable->deviceAddress **must** not be zero

- VUID-vkCmdTraceRaysKHR-flags-03512

If the currently bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR, entries in the table identified by pHitShaderBindingTable->deviceAddress accessed as a result of this command in order to execute an any-hit shader **must** not be zero

- VUID-vkCmdTraceRaysKHR-flags-03513

If the currently bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR, entries in the table identified by pHitShaderBindingTable->deviceAddress accessed as a result of this command in order to execute a closest hit shader **must** not be zero

- VUID-vkCmdTraceRaysKHR-flags-03514

If the currently bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR, entries in the table identified by pHitShaderBindingTable->deviceAddress accessed as a result of this command in order to execute an intersection shader **must** not be zero

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-04735

Any non-zero hit shader group entries in the table identified by pHitShaderBindingTable->deviceAddress accessed by this call from a geometry with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR **must** have been created with VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-04736

Any non-zero hit shader group entries in the table identified by pHitShaderBindingTable->deviceAddress accessed by this call from a geometry with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR **must** have been created with VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR

- VUID-vkCmdTraceRaysKHR-width-03638

width **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]

- VUID-vkCmdTraceRaysKHR-height-03639

height **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]

- VUID-vkCmdTraceRaysKHR-depth-03640

depth **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]

- VUID-vkCmdTraceRaysKHR-width-03641

width × height × depth **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayDispatchInvocationCount

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdTraceRaysKHR-pRaygenShaderBindingTable-parameter
`pRaygenShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-parameter
`pMissShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-parameter
`pHitShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-parameter
`pCallableShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdTraceRaysKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdTraceRaysKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

When invocation mask image usage is enabled in the bound ray tracing pipeline, the pipeline uses

an invocation mask image specified by the command:

```
// Provided by VK_HUAWEI_invocation_mask
void vkCmdBindInvocationMaskHUAWEI(
    VkCommandBuffer          commandBuffer,
    VkImageView              imageView,
    VkImageLayout             imageLayout);
```

- `commandBuffer` is the command buffer into which the command will be recorded
- `imageView` is an image view handle specifying the invocation mask image `imageView` **may** be `VK_NULL_HANDLE`, which is equivalent to specifying a view of an image filled with ones value.
- `imageLayout` is the layout that the image subresources accessible from `imageView` will be in when the invocation mask image is accessed

Valid Usage

- VUID-vkCmdBindInvocationMaskHUAWEI-None-04976
The `invocationMask` feature **must** be enabled
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04977
If `imageView` is not `VK_NULL_HANDLE`, it **must** be a valid `VkImageView` handle of type `VK_IMAGE_VIEW_TYPE_2D`
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04978
If `imageView` is not `VK_NULL_HANDLE`, it **must** have a format of `VK_FORMAT_R8_UINT`
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04979
If `imageView` is not `VK_NULL_HANDLE`, it **must** have been created with `VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI` set
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04980
If `imageView` is not `VK_NULL_HANDLE`, `imageLayout` **must** be `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdBindInvocationMaskHUAWEI-width-04981
Thread mask image resolution **must** match the `width` and `height` in `vkCmdTraceRaysKHR`
- VUID-vkCmdBindInvocationMaskHUAWEI-None-04982
Each element in the invocation mask image **must** have the value `0` or `1`. The value `1` means the invocation is active
- VUID-vkCmdBindInvocationMaskHUAWEI-depth-04983
`depth` in `vkCmdTraceRaysKHR` **must** be `1`

Valid Usage (Implicit)

- VUID-vkCmdBindInvocationMaskHUAWEI-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-parameter
If `imageView` is not `VK_NULL_HANDLE`, `imageView` **must** be a valid `VkImageView` handle

- VUID-vkCmdBindInvocationMaskHUAWEI-imageLayout-parameter
`imageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdBindInvocationMaskHUAWEI-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBindInvocationMaskHUAWEI-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdBindInvocationMaskHUAWEI-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBindInvocationMaskHUAWEI-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindInvocationMaskHUAWEI-commonparent
Both of `commandBuffer`, and `imageView` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	State

To dispatch ray tracing, with some parameters sourced on the device, use:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysIndirectKHR(
    VkCommandBuffer                      commandBuffer,
    const VkStridedDeviceAddressRegionKHR* pRaygenShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pMissShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pHitShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pCallableShaderBindingTable,
    VkDeviceAddress                      indirectDeviceAddress);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pRaygenShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader

binding table data for the ray generation shader stage.

- `pMissShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the miss shader stage.
- `pHitShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the hit shader stage.
- `pCallableShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the callable shader stage.
- `indirectDeviceAddress` is a buffer device address which is a pointer to a `VkTraceRaysIndirectCommandKHR` structure containing the trace ray parameters.

`vkCmdTraceRaysIndirectKHR` behaves similarly to `vkCmdTraceRaysKHR` except that the ray trace query dimensions are read by the device from `indirectDeviceAddress` during execution.

Valid Usage

- VUID-vkCmdTraceRaysIndirectKHR-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-unnormalizedCoordinates-09635
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdTraceRaysIndirectKHR-unnormalizedCoordinates-09636

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdTraceRaysIndirectKHR-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdTraceRaysIndirectKHR-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdTraceRaysIndirectKHR-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdTraceRaysIndirectKHR-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdTraceRaysIndirectKHR-cubicRangeClamp-09212

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`

- VUID-vkCmdTraceRaysIndirectKHR-reductionMode-09213

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`

- VUID-vkCmdTraceRaysIndirectKHR-selectableCubicWeights-09214

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`

- VUID-vkCmdTraceRaysIndirectKHR-flags-02696

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`

- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07027

For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07028

For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07029

For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07030

Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-None-08600

For each set n that is statically used by a `bound shader`, a descriptor set **must** have been bound to n at the same pipeline bind point, with a `VkPipelineLayout` that is compatible for set n , with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` array used to create the current `VkShaderEXT`, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-08601

For each push constant that is statically used by a `bound shader`, a push constant value **must** have been set for the same pipeline bind point, with a `VkPipelineLayout` that is compatible for push constants, with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` array used to create the current `VkShaderEXT`, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-10068

For each array of resources that is used by a `bound shader`, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysIndirectKHR-maintenance4-08602

If the `maintenance4` feature is not enabled, then for each push constant that is statically used by a `bound shader`, a push constant value **must** have been set for the same pipeline bind point, with a `VkPipelineLayout` that is compatible for push constants, with the

[VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) and [VkPushConstantRange](#) arrays used to create the current [VkShaderEXT](#) , as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-08114
Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid as described by [descriptor validity](#) if they are statically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdTraceRaysIndirectKHR-None-08115
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdTraceRaysIndirectKHR-None-08116
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdTraceRaysIndirectKHR-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysIndirectKHR-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdTraceRaysIndirectKHR-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysIndirectKHR-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysIndirectKHR-None-08606
If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysIndirectKHR-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysIndirectKHR-None-08609
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any

`VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must** not be used to sample from any `VkImage` with a `VkImageView` of the type `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, `VK_IMAGE_VIEW_TYPE_2D_ARRAY` or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`, in any shader stage

- VUID-vkCmdTraceRaysIndirectKHR-None-08610

If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name, in any shader stage

- VUID-vkCmdTraceRaysIndirectKHR-None-08611

If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values, in any shader stage

- VUID-vkCmdTraceRaysIndirectKHR-None-08607

If the `shaderObject` feature is enabled, either a valid pipeline **must** be bound to the pipeline bind point used by this command, or a valid combination of valid and `VK_NULL_HANDLE` shader objects **must** be bound to every supported shader stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysIndirectKHR-uniformBuffers-06935

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-None-08612

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-storageBuffers-06936

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-None-08613

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage

corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-02707

If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, any resource accessed by **bound shaders** **must** not be a protected resource

- VUID-vkCmdTraceRaysIndirectKHR-None-06550

If a **bound shader** accesses a **VkSampler** or **VkImageView** object that enables **sampler Y'C_BC_R conversion**, that object **must** only be used with **OpImageSample*** or **OpImageSparseSample*** instructions

- VUID-vkCmdTraceRaysIndirectKHR-ConstOffset-06551

If a **bound shader** accesses a **VkSampler** or **VkImageView** object that enables **sampler Y'C_BC_R conversion**, that object **must** not use the **ConstOffset** and **Offset** operands

- VUID-vkCmdTraceRaysIndirectKHR-viewType-07752

If a **VkImageView** is accessed as a result of this command, then the image view's **viewType** **must** match the **Dim** operand of the **OpTypeImage** as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdTraceRaysIndirectKHR-format-07753

If a **VkImageView** is accessed as a result of this command, then the **numeric type** of the image view's **format** and the **Sampled Type** operand of the **OpTypeImage** **must** match

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-08795

If a **VkImageView** created with a format other than **VK_FORMAT_A8_UNORM_KHR** is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-08796

If a **VkImageView** created with the format **VK_FORMAT_A8_UNORM_KHR** is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have four components

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-04469

If a **VkBufferView** is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04470

If a **VkImageView** with a **VkFormat** that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04471

If a **VkImageView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04472

If a **VkBufferView** with a **VkFormat** that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction

must have a **Width** of 64

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04473

If a **VkBufferView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdTraceRaysIndirectKHR-sparseImageInt64Atomics-04474

If the **sparseImageInt64Atomics** feature is not enabled, **VkImage** objects created with the **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdTraceRaysIndirectKHR-sparseImageInt64Atomics-04475

If the **sparseImageInt64Atomics** feature is not enabled, **VkBuffer** objects created with the **VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWeightedSampleQCOM-06971

If **OpImageWeightedSampleQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWeightedSampleQCOM-06972

If **OpImageWeightedSampleQCOM** uses a **VkImageView** as a sample weight image as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBoxFilterQCOM-06973

If **OpImageBoxFilterQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchSSDQCOM-06974

If **OpImageBlockMatchSSDQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchSADQCOM-06975

If **OpImageBlockMatchSADQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchSADQCOM-06976

If **OpImageBlockMatchSADQCOM** or **OpImageBlockMatchSSDQCOM** is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail **integer texel coordinate validation**

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWeightedSampleQCOM-06977

If **OpImageWeightedSampleQCOM**, **OpImageBoxFilterQCOM**, **OpImageBlockMatchWindowSSDQCOM**, **OpImageBlockMatchWindowSADQCOM**, **OpImageBlockMatchGatherSSDQCOM**, **OpImageBlockMatchGatherSADQCOM**, **OpImageBlockMatchSSDQCOM**, or **OpImageBlockMatchSADQCOM** uses a **VkSampler** as a result of this command, then the sampler **must** have been created with **VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWeightedSampleQCOM-06978
If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdTraceRaysIndirectKHR-None-07288
Any shader invocation executed by this command **must** `terminate`
- VUID-vkCmdTraceRaysIndirectKHR-None-09600
If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, the image subresource identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdTraceRaysIndirectKHR-None-03429
Any shader group handle referenced by this call **must** have been queried from the currently bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirectKHR-None-09458
If the bound ray tracing pipeline state was created with the `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` dynamic state enabled then `vkCmdSetRayTracingPipelineStackSizeKHR` **must** have been called in the current command buffer prior to this trace command
- VUID-vkCmdTraceRaysIndirectKHR-maxPipelineRayRecursionDepth-03679
This command **must** not cause a shader call instruction to be executed from a shader invocation with a `recursion depth` greater than the value of `maxPipelineRayRecursionDepth` used to create the bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-03635
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdTraceRaysIndirectKHR-size-04023
The `size` member of `pRayGenShaderBindingTable` **must** be equal to its `stride` member

- VUID-vkCmdTraceRaysIndirectKHR-pRayGenShaderBindingTable-03680
If the buffer from which `pRayGenShaderBindingTable->deviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdTraceRaysIndirectKHR-pRayGenShaderBindingTable-03681
The buffer from which the `pRayGenShaderBindingTable->deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag
- VUID-vkCmdTraceRaysIndirectKHR-pRayGenShaderBindingTable-03682
`pRayGenShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-03683
If the buffer from which `pMissShaderBindingTable->deviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-03684
The buffer from which the `pMissShaderBindingTable->deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-03685
`pMissShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-03686
`pMissShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-04029
`pMissShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-03687
If the buffer from which `pHitShaderBindingTable->deviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-03688
The buffer from which the `pHitShaderBindingTable->deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-03689
`pHitShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-03690
`pHitShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-04035
`pHitShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-03691

If the buffer from which `pCallableShaderBindingTable->deviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-03692
The buffer from which the `pCallableShaderBindingTable->deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-03693
`pCallableShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-03694
`pCallableShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-04041
`pCallableShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysIndirectKHR-flags-03696
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, `pHitShaderBindingTable->deviceAddress` **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03697
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, `pHitShaderBindingTable->deviceAddress` **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03511
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`, the shader group handle identified by `pMissShaderBindingTable->deviceAddress` **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03512
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute an any-hit shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03513
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute a closest hit shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03514
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute an intersection shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-04735

Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR`

- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-04736

Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`

- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03632

If the buffer from which `indirectDeviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03633

The buffer from which `indirectDeviceAddress` was queried **must** have been created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` bit set

- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03634

`indirectDeviceAddress` **must** be a multiple of 4

- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03636

All device addresses between `indirectDeviceAddress` and `indirectDeviceAddress + sizeof(VkTraceRaysIndirectCommandKHR) - 1` **must** be in the buffer device address range of the same buffer

- VUID-vkCmdTraceRaysIndirectKHR-rayTracingPipelineTraceRaysIndirect-03637

The `rayTracingPipelineTraceRaysIndirect` feature **must** be enabled

- VUID-vkCmdTraceRaysIndirectKHR-rayTracingMotionBlurPipelineTraceRaysIndirect-04951

If the bound ray tracing pipeline was created with `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV`

`VkPhysicalDeviceRayTracingMotionBlurFeaturesNV::rayTracingMotionBlurPipelineTraceRaysIndirect` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdTraceRaysIndirectKHR-pRaygenShaderBindingTable-parameter

`pRaygenShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-parameter

`pMissShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-parameter

`pHitShaderBindingTable` **must** be a valid pointer to a valid

[VkStridedDeviceAddressRegionKHR](#) structure

- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-parameter [pCallableShaderBindingTable](#) **must** be a valid pointer to a valid [VkStridedDeviceAddressRegionKHR](#) structure
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-recording [commandBuffer](#) **must** be in the [recording state](#)
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-cmdpool
The [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support compute operations
- VUID-vkCmdTraceRaysIndirectKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysIndirectKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to [commandBuffer](#) **must** be externally synchronized
- Host access to the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

The [VkTraceRaysIndirectCommandKHR](#) structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkTraceRaysIndirectCommandKHR {
    uint32_t    width;
    uint32_t    height;
    uint32_t    depth;
} VkTraceRaysIndirectCommandKHR;
```

- [width](#) is the width of the ray trace query dimensions.
- [height](#) is height of the ray trace query dimensions.
- [depth](#) is depth of the ray trace query dimensions.

The members of [VkTraceRaysIndirectCommandKHR](#) have the same meaning as the similarly named

parameters of [vkCmdTraceRaysKHR](#).

Valid Usage

- VUID-VkTraceRaysIndirectCommandKHR-width-03638
`width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]`
- VUID-VkTraceRaysIndirectCommandKHR-height-03639
`height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]`
- VUID-VkTraceRaysIndirectCommandKHR-depth-03640
`depth` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]`
- VUID-VkTraceRaysIndirectCommandKHR-width-03641
`width × height × depth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayDispatchInvocationCount`

To dispatch ray tracing, with some parameters sourced on the device, use:

```
// Provided by VK_KHR_ray_tracing_maintenance1 with VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysIndirect2KHR(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          indirectDeviceAddress);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `indirectDeviceAddress` is a buffer device address which is a pointer to a [VkTraceRaysIndirectCommand2KHR](#) structure containing the trace ray parameters.

`vkCmdTraceRaysIndirect2KHR` behaves similarly to [vkCmdTraceRaysIndirectKHR](#) except that shader binding table parameters as well as dispatch dimensions are read by the device from `indirectDeviceAddress` during execution.

Valid Usage

- VUID-vkCmdTraceRaysIndirect2KHR-magFilter-04553
If a [VkSampler](#) created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a [VkImageView](#) as a result of this command, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-magFilter-09598
If a [VkSampler](#) created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a [VkImageView](#) as a result of this

command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT**

- VUID-vkCmdTraceRaysIndirect2KHR-mipmapMode-04770

If a **VkSampler** created with **mipmapMode** equal to **VK_SAMPLER_MIPMAP_MODE_LINEAR**, **reductionMode** equal to **VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE**, and **compareEnable** equal to **VK_FALSE** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT**

- VUID-vkCmdTraceRaysIndirect2KHR-mipmapMode-09599

If a **VkSampler** created with **mipmapMode** equal to **VK_SAMPLER_MIPMAP_MODE_LINEAR** and **reductionMode** equal to either **VK_SAMPLER_REDUCTION_MODE_MIN** or **VK_SAMPLER_REDUCTION_MODE_MAX** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT**

- VUID-vkCmdTraceRaysIndirect2KHR-unnormalizedCoordinates-09635

If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **levelCount** and **layerCount** **must** be 1

- VUID-vkCmdTraceRaysIndirect2KHR-unnormalizedCoordinates-09636

If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **viewType** **must** be **VK_IMAGE_VIEW_TYPE_1D** or **VK_IMAGE_VIEW_TYPE_2D**

- VUID-vkCmdTraceRaysIndirect2KHR-None-06479

If a **VkImageView** is sampled with **depth comparison**, the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT**

- VUID-vkCmdTraceRaysIndirect2KHR-None-02691

If a **VkImageView** is accessed using atomic operations as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT**

- VUID-vkCmdTraceRaysIndirect2KHR-None-07888

If a **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's **format features** **must** contain **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT**

- VUID-vkCmdTraceRaysIndirect2KHR-None-02692

If a **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT**

- VUID-vkCmdTraceRaysIndirect2KHR-None-02693

If the **VK_EXT_filter_cubic** extension is not enabled and any **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, it **must** not have a **VkImageViewType** of **VK_IMAGE_VIEW_TYPE_3D**, **VK_IMAGE_VIEW_TYPE_CUBE**, or **VK_IMAGE_VIEW_TYPE_CUBE_ARRAY**

- VUID-vkCmdTraceRaysIndirect2KHR-filterCubic-02694

Any **VkImageView** being sampled with **VK_FILTER_CUBIC_EXT** as a result of this command **must** have a **VkImageViewType** and format that supports cubic filtering, as specified by

VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic returned by
vkGetPhysicalDeviceImageFormatProperties2

- VUID-vkCmdTraceRaysIndirect2KHR-filterCubicMinmax-02695
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysIndirect2KHR-cubicRangeClamp-09212
If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`
- VUID-vkCmdTraceRaysIndirect2KHR-reductionMode-09213
Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`
- VUID-vkCmdTraceRaysIndirect2KHR-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`
- VUID-vkCmdTraceRaysIndirect2KHR-flags-02696
Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07027
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07028
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07029
For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07030
Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-08600

For each set n that is statically used by a [bound shader](#), a descriptor set **must** have been bound to n at the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for set n , with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) array used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08601

For each push constant that is statically used by a [bound shader](#), a push constant value **must** have been set for the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for push constants, with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) array used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-10068

For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysIndirect2KHR-maintenance4-08602

If the [maintenance4](#) feature is not enabled, then for each push constant that is statically used by a [bound shader](#), a push constant value **must** have been set for the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for push constants, with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) and [VkPushConstantRange](#) arrays used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08114

Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid as described by [descriptor validity](#) if they are statically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08115

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08116

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08604

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysIndirect2KHR-None-08117

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysIndirect2KHR-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysIndirect2KHR-None-08606
If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysIndirect2KHR-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysIndirect2KHR-None-08609
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used to sample from any [VkImage](#) with a [VkImageView](#) of the type [VK_IMAGE_VIEW_TYPE_3D](#), [VK_IMAGE_VIEW_TYPE_CUBE](#), [VK_IMAGE_VIEW_TYPE_1D_ARRAY](#), [VK_IMAGE_VIEW_TYPE_2D_ARRAY](#) or [VK_IMAGE_VIEW_TYPE_CUBE_ARRAY](#), in any shader stage
- VUID-vkCmdTraceRaysIndirect2KHR-None-08610
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V [OpImageSample*](#) or [OpImageSparseSample*](#) instructions with [ImplicitLod](#), [Dref](#) or [Proj](#) in their name, in any shader stage
- VUID-vkCmdTraceRaysIndirect2KHR-None-08611
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V [OpImageSample*](#) or [OpImageSparseSample*](#) instructions that includes a LOD bias or any offset values, in any shader stage
- VUID-vkCmdTraceRaysIndirect2KHR-None-08607
If the [shaderObject](#) feature is enabled, either a valid pipeline **must** be bound to the pipeline bind point used by this command, or a valid combination of valid and [VK_NULL_HANDLE](#) shader objects **must** be bound to every supported shader stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysIndirect2KHR-uniformBuffers-06935
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT](#) for [uniformBuffers](#),

and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirect2KHR-None-08612

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirect2KHR-storageBuffers-06936

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirect2KHR-None-08613

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-02707

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by `bound shaders` **must** not be a protected resource

- VUID-vkCmdTraceRaysIndirect2KHR-None-06550

If a `bound shader` accesses a `VkSampler` or `VkImageView` object that enables `sampler Y'CBCR conversion`, that object **must** only be used with `OpImageSample*` or `OpImageSparseSample*` instructions

- VUID-vkCmdTraceRaysIndirect2KHR-ConstOffset-06551

If a `bound shader` accesses a `VkSampler` or `VkImageView` object that enables `sampler Y'CBCR conversion`, that object **must** not use the `ConstOffset` and `Offset` operands

- VUID-vkCmdTraceRaysIndirect2KHR-viewType-07752

If a `VkImageView` is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdTraceRaysIndirect2KHR-format-07753

If a `VkImageView` is accessed as a result of this command, then the `numeric type` of the image view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-08795

If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-08796

If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM_KHR` is accessed using

`OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-04469

If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04470

If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04471

If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04472

If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04473

If a `VkBufferView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdTraceRaysIndirect2KHR-sparseImageInt64Atomics-04474

If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command

- VUID-vkCmdTraceRaysIndirect2KHR-sparseImageInt64Atomics-04475

If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWeightedSampleQCOM-06971

If `OpImageWeightedSampleQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWeightedSampleQCOM-06972

If `OpImageWeightedSampleQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBoxFilterQCOM-06973

If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchSSDQCOM-06974

If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchSADQCOM-06975

If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchSADQCOM-06976

If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWeightedSampleQCOM-06977

If `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWeightedSampleQCOM-06978

If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-09215

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-09216

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-09217

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`

- VUID-vkCmdTraceRaysIndirect2KHR-None-07288

Any shader invocation executed by this command **must** `terminate`

- VUID-vkCmdTraceRaysIndirect2KHR-None-09600

If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, the image subresource identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdTraceRaysIndirect2KHR-None-03429
Any shader group handle referenced by this call **must** have been queried from the currently bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirect2KHR-None-09458
If the bound ray tracing pipeline state was created with the `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` dynamic state enabled then `vkCmdSetRayTracingPipelineStackSizeKHR` **must** have been called in the current command buffer prior to this trace command
- VUID-vkCmdTraceRaysIndirect2KHR-maxPipelineRayRecursionDepth-03679
This command **must** not cause a shader call instruction to be executed from a shader invocation with a `recursion depth` greater than the value of `maxPipelineRayRecursionDepth` used to create the bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-03635
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03632
If the buffer from which `indirectDeviceAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03633
The buffer from which `indirectDeviceAddress` was queried **must** have been created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` bit set
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03634
`indirectDeviceAddress` **must** be a multiple of 4
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03636
All device addresses between `indirectDeviceAddress` and `indirectDeviceAddress + sizeof(VkTraceRaysIndirectCommand2KHR) - 1` **must** be in the buffer device address range of the same buffer
- VUID-vkCmdTraceRaysIndirect2KHR-rayTracingPipelineTraceRaysIndirect2-03637
The `rayTracingPipelineTraceRaysIndirect2` feature **must** be enabled
- VUID-vkCmdTraceRaysIndirect2KHR-rayTracingMotionBlurPipelineTraceRaysIndirect-04951
If the bound ray tracing pipeline was created with `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV` `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV::rayTracingMotionBlurPipelineTraceRaysIndirect` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations

- VUID-vkCmdTraceRaysIndirect2KHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysIndirect2KHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Compute	Action

The `VkTraceRaysIndirectCommand2KHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_maintenance1 with VK_KHR_ray_tracing_pipeline
typedef struct VkTraceRaysIndirectCommand2KHR {
    VkDeviceAddress    raygenShaderRecordAddress;
    VkDeviceSize       raygenShaderRecordSize;
    VkDeviceAddress    missShaderBindingTableAddress;
    VkDeviceSize       missShaderBindingTableSize;
    VkDeviceSize       missShaderBindingTableStride;
    VkDeviceAddress    hitShaderBindingTableAddress;
    VkDeviceSize       hitShaderBindingTableSize;
    VkDeviceSize       hitShaderBindingTableStride;
    VkDeviceAddress    callableShaderBindingTableAddress;
    VkDeviceSize       callableShaderBindingTableSize;
    VkDeviceSize       callableShaderBindingTableStride;
    uint32_t           width;
    uint32_t           height;
    uint32_t           depth;
} VkTraceRaysIndirectCommand2KHR;
```

- `raygenShaderRecordAddress` is a `VkDeviceAddress` of the ray generation shader binding table record used by this command.
- `raygenShaderRecordSize` is a `VkDeviceSize` number of bytes corresponding to the ray generation

shader binding table record at base address `raygenShaderRecordAddress`.

- `missShaderBindingTableAddress` is a `VkDeviceAddress` of the first record in the miss shader binding table used by this command.
- `missShaderBindingTableSize` is a `VkDeviceSize` number of bytes corresponding to the total size of the miss shader binding table at `missShaderBindingTableAddress` that may be accessed by this command.
- `missShaderBindingTableStride` is a `VkDeviceSize` number of bytes between records of the miss shader binding table.
- `hitShaderBindingTableAddress` is a `VkDeviceAddress` of the first record in the hit shader binding table used by this command.
- `hitShaderBindingTableSize` is a `VkDeviceSize` number of bytes corresponding to the total size of the hit shader binding table at `hitShaderBindingTableAddress` that may be accessed by this command.
- `hitShaderBindingTableStride` is a `VkDeviceSize` number of bytes between records of the hit shader binding table.
- `callableShaderBindingTableAddress` is a `VkDeviceAddress` of the first record in the callable shader binding table used by this command.
- `callableShaderBindingTableSize` is a `VkDeviceSize` number of bytes corresponding to the total size of the callable shader binding table at `callableShaderBindingTableAddress` that may be accessed by this command.
- `callableShaderBindingTableStride` is a `VkDeviceSize` number of bytes between records of the callable shader binding table.
- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.
- `depth` is depth of the ray trace query dimensions.

The members of `VkTraceRaysIndirectCommand2KHR` have the same meaning as the similarly named parameters of `vkCmdTraceRaysKHR`.

Indirect shader binding table buffer parameters **must** satisfy the same memory alignment and binding requirements as their counterparts in `vkCmdTraceRaysIndirectKHR` and `vkCmdTraceRaysKHR`.

Valid Usage

- VUID-VkTraceRaysIndirectCommand2KHR-pRayGenShaderBindingTable-03680
If the buffer from which `raygenShaderRecordAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkTraceRaysIndirectCommand2KHR-pRayGenShaderBindingTable-03681
The buffer from which the `raygenShaderRecordAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag
- VUID-VkTraceRaysIndirectCommand2KHR-pRayGenShaderBindingTable-03682

`raygenShaderRecordAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`

- VUID-VkTraceRaysIndirectCommand2KHR-pMissShaderBindingTable-03683
If the buffer from which `missShaderBindingTableAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkTraceRaysIndirectCommand2KHR-pMissShaderBindingTable-03684
The buffer from which the `missShaderBindingTableAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag
- VUID-VkTraceRaysIndirectCommand2KHR-pMissShaderBindingTable-03685
`missShaderBindingTableAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03686
`missShaderBindingTableStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04029
`missShaderBindingTableStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-03687
If the buffer from which `hitShaderBindingTableAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-03688
The buffer from which the `hitShaderBindingTableAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-03689
`hitShaderBindingTableAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03690
`hitShaderBindingTableStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04035
`hitShaderBindingTableStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-VkTraceRaysIndirectCommand2KHR-pCallableShaderBindingTable-03691
If the buffer from which `callableShaderBindingTableAddress` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkTraceRaysIndirectCommand2KHR-pCallableShaderBindingTable-03692
The buffer from which the `callableShaderBindingTableAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag
- VUID-VkTraceRaysIndirectCommand2KHR-pCallableShaderBindingTable-03693
`callableShaderBindingTableAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03694

`callableShaderBindingTableStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`

- VUID-VkTraceRaysIndirectCommand2KHR-stride-04041
`callableShaderBindingTableStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03696
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, `hitShaderBindingTableAddress` **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03697
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, `hitShaderBindingTableAddress` **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03511
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`, the shader group handle identified by `missShaderBindingTableAddress` **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03512
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, entries in the table identified by `hitShaderBindingTableAddress` accessed as a result of this command in order to execute an any-hit shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03513
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, entries in the table identified by `hitShaderBindingTableAddress` accessed as a result of this command in order to execute a closest hit shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03514
If the currently bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, entries in the table identified by `hitShaderBindingTableAddress` accessed as a result of this command in order to execute an intersection shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-04735
Any non-zero hit shader group entries in the table identified by `hitShaderBindingTableAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR`
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-04736
Any non-zero hit shader group entries in the table identified by `hitShaderBindingTableAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`
- VUID-VkTraceRaysIndirectCommand2KHR-width-03638

`width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]`

- VUID-VkTraceRaysIndirectCommand2KHR-height-03639

`height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]`

- VUID-VkTraceRaysIndirectCommand2KHR-depth-03640

`depth` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]`

- VUID-VkTraceRaysIndirectCommand2KHR-width-03641

`width × height × depth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayDispatchInvocationCount`

40.3. Shader Binding Table

A *shader binding table* is a resource which establishes the relationship between the ray tracing pipeline and the acceleration structures that were built for the ray tracing pipeline. It indicates the shaders that operate on each geometry in an acceleration structure. In addition, it contains the resources accessed by each shader, including indices of textures, buffer device addresses, and constants. The application allocates and manages *shader binding tables* as `VkBuffer` objects.

Each entry in the shader binding table consists of `shaderGroupHandleSize` bytes of data, either as queried by `vkGetRayTracingShaderGroupHandlesKHR` to refer to those specified shaders, or all zeros to refer to a zero shader group. A zero shader group behaves as though it is a shader group consisting entirely of `VK_SHADER_UNUSED_KHR`. The remainder of the data specified by the stride is application-visible data that can be referenced by a `ShaderRecordBufferKHR` block in the shader.

The shader binding tables to use in a ray tracing pipeline are passed to the `vkCmdTraceRaysNV`, `vkCmdTraceRaysKHR`, or `vkCmdTraceRaysIndirectKHR` commands. Shader binding tables are read-only in shaders that are executing on the ray tracing pipeline.

Shader variables identified with the `ShaderRecordBufferKHR` storage class are used to access the provided shader binding table. Such variables **must** be:

- typed as `OpTypeStruct`, or an array of this type,
- identified with a `Block` decoration, and
- laid out explicitly using the `Offset`, `ArrayStride`, and `MatrixStride` decorations as specified in [Offset and Stride Assignment](#).

The `Offset` decoration for any member of a `Block`-decorated variable in the `ShaderRecordBufferKHR` storage class **must** not cause the space required for that variable to extend outside the range `[0, maxStorageBufferRange)`.

Accesses to the shader binding table from ray tracing pipelines **must** be `synchronized` with the `VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR` pipeline stage and an access type of `VK_ACCESS_SHADER_READ_BIT`.

NOTE

Because different shader record buffers can be associated with the same shader, a shader variable with `ShaderRecordBufferKHR` storage class will not be dynamically uniform if different invocations of the same shader can reference different data in the shader record buffer, such as if the same shader occurs twice in the shader binding table with a different shader record buffer. In this case, indexing resources based on values in the `ShaderRecordBufferKHR` storage class, the index should be decorated as `NonUniform`.

40.3.1. Indexing Rules

In order to execute the correct shaders and access the correct resources during a ray tracing dispatch, the implementation **must** be able to locate shader binding table entries at various stages of execution. This is accomplished by defining a set of indexing rules that compute shader binding table record positions relative to the buffer's base address in memory. The application **must** organize the contents of the shader binding table's memory in a way that application of the indexing rules will lead to correct records.

Ray Generation Shaders

Only one ray generation shader is executed per ray tracing dispatch.

For `vkCmdTraceRaysKHR`, the location of the ray generation shader is specified by the `pRaygenShaderBindingTable->deviceAddress` parameter—there is no indexing. All data accessed **must** be less than `pRaygenShaderBindingTable->size` bytes from `deviceAddress`. `pRaygenShaderBindingTable->stride` is unused, and **must** be equal to `pRaygenShaderBindingTable->size`.

For `vkCmdTraceRaysNV`, the location of the ray generation shader is specified by the `raygenShaderBindingTableBuffer` and `raygenShaderBindingOffset` parameters—there is no indexing.

Hit Shaders

The base for the computation of intersection, any-hit, and closest hit shader locations is the `instanceShaderBindingTableRecordOffset` value stored with each instance of a top-level acceleration structure (`VkAccelerationStructureInstanceKHR`). This value determines the beginning of the shader binding table records for a given instance.

In the following rule, `geometryIndex` refers to the `geometry index` of the intersected geometry within the instance.

The `sbtRecordOffset` and `sbtRecordStride` values are passed in as parameters to `traceNV()` or `traceRayEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, these correspond to the `SBTOffset` and `SBTStride` parameters to the `pipeline trace ray` instructions.

The result of this computation is then added to `pHitShaderBindingTable->deviceAddress`, a device address passed to `vkCmdTraceRaysKHR`, or `hitShaderBindingOffset`, a base offset passed to `vkCmdTraceRaysNV`.

For `vkCmdTraceRaysKHR`, the complete rule to compute a hit shader binding table record address in the `pHitShaderBindingTable` is:

$$\text{pHitShaderBindingTable->deviceAddress} + \text{pHitShaderBindingTable->stride} \times (\text{instanceShaderBindingTableRecordOffset} + \text{geometryIndex} \times \text{sbtRecordStride} + \text{sbtRecordOffset})$$

All data accessed **must** be less than `pHitShaderBindingTable->size` bytes from the base address.

For `vkCmdTraceRaysNV`, the offset and stride come from direct parameters, so the full rule to compute a hit shader binding table record address in the `hitShaderBindingTableBuffer` is:

$$\text{hitShaderBindingOffset} + \text{hitShaderBindingStride} \times (\text{instanceShaderBindingTableRecordOffset} + \text{geometryIndex} \times \text{sbtRecordStride} + \text{sbtRecordOffset})$$

Miss Shaders

A miss shader is executed whenever a ray query fails to find an intersection for the given scene geometry. Multiple miss shaders **may** be executed throughout a ray tracing dispatch.

The base for the computation of miss shader locations is `pMissShaderBindingTable->deviceAddress`, a device address passed into `vkCmdTraceRaysKHR`, or `missShaderBindingOffset`, a base offset passed into `vkCmdTraceRaysNV`.

The `missIndex` value is passed in as a parameter to `traceNV()` or `traceRayEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, this corresponds to the `MissIndex` parameter to the `pipeline trace ray` instructions.

For `vkCmdTraceRaysKHR`, the complete rule to compute a miss shader binding table record address in the `pMissShaderBindingTable` is:

$$\text{pMissShaderBindingTable->deviceAddress} + \text{pMissShaderBindingTable->stride} \times \text{missIndex}$$

All data accessed **must** be less than `pMissShaderBindingTable->size` bytes from the base address.

For `vkCmdTraceRaysNV`, the offset and stride come from direct parameters, so the full rule to compute a miss shader binding table record address in the `missShaderBindingTableBuffer` is:

$$\text{missShaderBindingOffset} + \text{missShaderBindingStride} \times \text{missIndex}$$

Callable Shaders

A callable shader is executed when requested by a ray tracing shader. Multiple callable shaders **may** be executed throughout a ray tracing dispatch.

The base for the computation of callable shader locations is `pCallableShaderBindingTable-`

>deviceAddress, a device address passed into `vkCmdTraceRaysKHR`, or `callableShaderBindingOffset`, a base offset passed into `vkCmdTraceRaysNV`.

The `sbtRecordIndex` value is passed in as a parameter to `executeCallableNV()` or `executeCallableEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, this corresponds to the `SBTIndex` parameter to the `OpExecuteCallableNV` or `OpExecuteCallableKHR` instruction.

For `vkCmdTraceRaysKHR`, the complete rule to compute a callable shader binding table record address in the `pCallableShaderBindingTable` is:

$$\text{pCallableShaderBindingTable->deviceAddress} + \text{pCallableShaderBindingTable->stride} \times \text{sbtRecordIndex}$$

All data accessed **must** be less than `pCallableShaderBindingTable->size` bytes from the base address.

For `vkCmdTraceRaysNV`, the offset and stride come from direct parameters, so the full rule to compute a callable shader binding table record address in the `callableShaderBindingTableBuffer` is:

$$\text{callableShaderBindingOffset} + \text{callableShaderBindingStride} \times \text{sbtRecordIndex}$$

40.4. Ray Tracing Pipeline Stack

Ray tracing pipelines have a potentially large set of shaders which **may** be invoked in various call chain combinations to perform ray tracing. To store parameters for a given shader execution, an implementation **may** use a stack of data in memory. This stack **must** be sized to the sum of the stack sizes of all shaders in any call chain executed by the application.

If the stack size is not set explicitly, the stack size for a pipeline is:

$$\text{rayGenStackMax} + \min(1, \text{maxPipelineRayRecursionDepth}) \times \max(\text{closestHitStackMax}, \text{missStackMax}, \text{intersectionStackMax} + \text{anyHitStackMax}) + \max(0, \text{maxPipelineRayRecursionDepth} - 1) \times \max(\text{closestHitStackMax}, \text{missStackMax}) + 2 \times \text{callableStackMax}$$

where `rayGenStackMax`, `closestHitStackMax`, `missStackMax`, `anyHitStackMax`, `intersectionStackMax`, and `callableStackMax` are the maximum stack values queried by the respective shader stages for any shaders in any shader groups defined by the pipeline.

This stack size is potentially significant, so an application **may** want to provide a more accurate stack size after pipeline compilation. The value that the application provides is the maximum value of the sum of all shaders in a call chain across all possible call chains, taking into account any application specific knowledge about the properties of the call chains.

NOTE

For example, if an application has two types of closest hit and miss shaders that it can use but the first level of rays will only use the first kind (possibly reflection) and the second level will only use the second kind (occlusion or shadow ray, for

example) then the application can compute the stack size by something similar to:

```
rayGenStack + max(closestHit1Stack, miss1Stack) + max(closestHit2Stack, miss2Stack)
```

This is guaranteed to be no larger than the default stack size computation which assumes that both call levels may be the larger of the two.

40.5. Ray Tracing Capture Replay

In a similar way to [bufferDeviceAddressCaptureReplay](#), the [rayTracingPipelineShaderGroupHandleCaptureReplay](#) feature allows the querying of opaque data which **can** be used in a future replay.

During the capture phase, capture/replay tools are expected to query opaque data for shader group handle replay using [vkGetRayTracingCaptureReplayShaderGroupHandlesKHR](#).

Providing the opaque data during replay, using [VkRayTracingShaderGroupCreateInfoKHR::pShaderGroupCaptureReplayHandle](#) at pipeline creation time, causes the implementation to generate identical shader group handles to those in the capture phase, allowing capture/replay tools to reuse previously recorded shader binding table buffer contents or to obtain the same handles by calling [vkGetRayTracingCaptureReplayShaderGroupHandlesKHR](#) again.

40.6. Ray Tracing Validation

Ray tracing validation **can** help root cause application issues and improve performance. Unlike existing validation layers, ray tracing validation performs checks at an implementation level, which helps identify potential problems that **may** not be caught by the layer.

By enabling the [ray tracing validation feature](#), warnings and errors **can** be delivered straight from a ray tracing implementation to the application through a [messenger callback](#) registered with the implementation, where they **can** be processed through existing application-side debugging or logging systems.

Chapter 41. Memory Decompression

To decompress data between one or more memory regions call:

```
// Provided by VK_NV_memory_decompression
void vkCmdDecompressMemoryNV(
    VkCommandBuffer                commandBuffer,
    uint32_t                      decompressRegionCount,
    const VkDecompressMemoryRegionNV* pDecompressMemoryRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `decompressRegionCount` is the number of memory regions to decompress.
- `pDecompressMemoryRegions` is a pointer to an array of `decompressRegionCount` `VkDecompressMemoryRegionNV` structures specifying decompression parameters.

Each region specified in `pDecompressMemoryRegions` is decompressed from the source to destination region based on the specified decompression method.

Valid Usage

- VUID-vkCmdDecompressMemoryNV-None-07684
The `memoryDecompression` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDecompressMemoryNV-pDecompressMemoryRegions-parameter
`pDecompressMemoryRegions` **must** be a valid pointer to an array of `decompressRegionCount` valid `VkDecompressMemoryRegionNV` structures
- VUID-vkCmdDecompressMemoryNV-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdDecompressMemoryNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdDecompressMemoryNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdDecompressMemoryNV-decompressRegionCount-arraylength
`decompressRegionCount` **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Graphics Compute	Action

The `VkDecompressMemoryRegionNV` structure is defined as:

```
// Provided by VK_NV_memory_decompression
typedef struct VkDecompressMemoryRegionNV {
    VkDeviceAddress    srcAddress;
    VkDeviceAddress    dstAddress;
    VkDeviceSize       compressedSize;
    VkDeviceSize       decompressedSize;
    VkMemoryDecompressionMethodFlagsNV decompressionMethod;
} VkDecompressMemoryRegionNV;
```

- `srcAddress` is the address where compressed data is stored.
- `dstAddress` is the destination address where decompressed data will be written.
- `compressedSize` is the size of compressed data in bytes.
- `decompressedSize` is the size of decompressed data in bytes.
- `decompressionMethod` is a bitmask of `VkMemoryDecompressionMethodFlagBitsNV` with a single bit set specifying the method used to decompress data.

Valid Usage

- VUID-VkDecompressMemoryRegionNV-srcAddress-07685
The `srcAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionNV-srcAddress-07686
The memory in range `srcAddress` and `srcAddress + compressedSize` **must** be valid and bound to a `VkDeviceMemory` object
- VUID-VkDecompressMemoryRegionNV-dstAddress-07687
The `dstAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionNV-decompressionMethod-09395

If `decompressionMethod` is `VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_NV`, then `decompressedSize` **must** be less than or equal to 65536 bytes

- VUID-VkDecompressMemoryRegionNV-dstAddress-07688
The memory in range `dstAddress` and `dstAddress + decompressedSize` **must** be valid and bound to a `VkDeviceMemory` object
- VUID-VkDecompressMemoryRegionNV-decompressedSize-07689
The `decompressedSize` **must** be large enough to hold the decompressed data based on the `decompressionMethod`
- VUID-VkDecompressMemoryRegionNV-decompressionMethod-07690
The `decompressionMethod` **must** have a single bit set
- VUID-VkDecompressMemoryRegionNV-srcAddress-07691
The `srcAddress` to `srcAddress + compressedSize` region **must** not overlap with the `dstAddress` and `dstAddress + decompressedSize` region

Valid Usage (Implicit)

- VUID-VkDecompressMemoryRegionNV-decompressionMethod-parameter
`decompressionMethod` **must** be a valid combination of `VkMemoryDecompressionMethodFlagBitsNV` values
- VUID-VkDecompressMemoryRegionNV-decompressionMethod-requiredbitmask
`decompressionMethod` **must** not be 0

To decompress data between one or more memory regions by specifying decompression parameters indirectly in a buffer, call:

```
// Provided by VK_NV_memory_decompression
void vkCmdDecompressMemoryIndirectCountNV(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          indirectCommandsAddress,
    VkDeviceAddress          indirectCommandsCountAddress,
    uint32_t                 stride);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `indirectCommandsAddress` is the device address containing decompression parameters laid out as an array of `VkDecompressMemoryRegionNV` structures.
- `indirectCommandsCountAddress` is the device address containing the decompression count.
- `stride` is the byte stride between successive sets of decompression parameters located starting from `indirectCommandsAddress`.

Each region specified in `indirectCommandsAddress` is decompressed from the source to destination region based on the specified decompression method.

Valid Usage

- VUID-vkCmdDecompressMemoryIndirectCountNV-None-07692
The `memoryDecompression` feature **must** be enabled
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-07693
If `indirectCommandsAddress` comes from a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-07694
The `VkBuffer` that `indirectCommandsAddress` comes from **must** have been created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` bit set
- VUID-vkCmdDecompressMemoryIndirectCountNV-offset-07695
`offset` **must** be a multiple of 4
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07696
If `indirectCommandsCountAddress` comes from a non-sparse buffer then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07697
The `VkBuffer` that `indirectCommandsCountAddress` comes from **must** have been created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` bit set
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07698
`indirectCommandsCountAddress` **must** be a multiple of 4
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07699
The count stored in `indirectCommandsCountAddress` **must** be less than or equal to `VkPhysicalDeviceMemoryDecompressionPropertiesNV::maxDecompressionIndirectCount`
- VUID-vkCmdDecompressMemoryIndirectCountNV-stride-07700
`stride` **must** be a multiple of 4 and **must** be greater than or equal to `sizeof(VkDecompressMemoryRegionNV)`
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07701
If the count stored in `indirectCommandsCountAddress` is equal to 1, (`offset + sizeof(VkDecompressMemoryRegionNV)`) **must** be less than or equal to the size of the `VkBuffer` that `indirectCommandsAddress` comes from
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07702
If the count stored in `indirectCommandsCountAddress` is greater than 1, `indirectCommandsAddress + sizeof(VkDecompressMemoryRegionNV) + (stride × (count stored in countBuffer - 1))` **must** be less than or equal to the last valid address in the `VkBuffer` that `indirectCommandsAddress` was created from

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryIndirectCountNV-commandBuffer-parameter **commandBuffer** **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdDecompressMemoryIndirectCountNV-commandBuffer-recording **commandBuffer** **must** be in the **recording state**
- VUID-vkCmdDecompressMemoryIndirectCountNV-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support graphics, or compute operations
- VUID-vkCmdDecompressMemoryIndirectCountNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryIndirectCountNV-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Graphics Compute	Action

Bits which **can** be set in **VkDecompressMemoryRegionNV::decompressionMethod** specifying the decompression method to select, or returned in **VkPhysicalDeviceMemoryDecompressionPropertiesNV::decompressionMethods** specifying the available decompression methods are:

```
// Provided by VK_NV_memory_decompression
// Flag bits for VkMemoryDecompressionMethodFlagBitsNV
typedef VkFlags64 VkMemoryDecompressionMethodFlagBitsNV;
static const VkMemoryDecompressionMethodFlagBitsNV
VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_NV = 0x00000001ULL;
```

- **VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_NV** specifies that the GDeflate 1.0 algorithm is used to decompress data.

```
// Provided by VK_NV_memory_decompression  
typedef VkFlags64 VkMemoryDecompressionMethodFlagsNV;
```

`VkMemoryDecompressionMethodFlagsNV` is a bitmask type for specifying a mask of one or more `VkMemoryDecompressionMethodFlagBitsNV`:

Chapter 42. Video Coding

Vulkan implementations **may** expose one or more queue families supporting video coding operations. These operations are performed by recording them into a command buffer within a [video coding scope](#), and submitting them to queues with compatible video coding capabilities.

The Vulkan video functionalities are designed to be made available through a set of APIs built on top of each other, consisting of:

- A core API providing common video coding functionalities,
- APIs providing codec-independent video decode and video encode related functionalities, respectively,
- Additional codec-specific APIs built on top of those.

This chapter details the fundamental components and operations of these.

42.1. Video Picture Resources

In the context of video coding, multidimensional arrays of image data that **can** be used as the source or target of video coding operations are referred to as *video picture resources*. They **may** store additional metadata that includes implementation-private information used during the execution of video coding operations, as discussed later.

Video picture resources are backed by [VkImage](#) objects. Individual subregions of [VkImageView](#) objects created from such resources **can** be used as [decode output pictures](#), [encode input pictures](#), [reconstructed pictures](#), and/or [reference pictures](#).

The parameters of a video picture resource are specified using a [VkVideoPictureResourceInfoKHR](#) structure.

The [VkVideoPictureResourceInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoPictureResourceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkOffset2D         codedOffset;
    VkExtent2D         codedExtent;
    uint32_t           baseArrayLayer;
    VkImageView         imageViewBinding;
} VkVideoPictureResourceInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [codedOffset](#) is the offset in texels of the image subregion to use.
- [codedExtent](#) is the size in pixels of the coded image data.

- `baseArrayLayer` is the array layer of the image view specified in `imageViewBinding` to use as the video picture resource.
- `imageViewBinding` is an image view representing the video picture resource.

The image subresource referred to by such a structure is defined as the image array layer index specified in `baseArrayLayer` relative to the image subresource range the image view specified in `imageViewBinding` was created with.

The meaning of the `codedOffset` and `codedExtent` depends on the command and context the video picture resource is used in, as well as on the used `video profile` and corresponding codec-specific semantics, as described later.

A video picture resource is uniquely defined by the image subresource referred to by an instance of this structure, together with the `codedOffset` and `codedExtent` members that identify the image subregion within the image subresource referenced corresponding to the video picture resource according to the particular codec-specific semantics.

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used `video profile`. As a result, given an effective image subregion corresponding to a video picture resource, the actual image subregion accessed **may** be larger than that as it **may** include additional padding texels due to the picture access granularity. Any writes performed by video coding operations to such padding texels will result in undefined texel values.

Two video picture resources match if they refer to the same image subresource and they specify identical `codedOffset` and `codedExtent` values.

Valid Usage

- VUID-VkVideoPictureResourceInfoKHR-baseArrayLayer-07175
`baseArrayLayer` **must** be less than the `VkImageViewCreateInfo::subresourceRange.layerCount` specified when the image view `imageViewBinding` was created

Valid Usage (Implicit)

- VUID-VkVideoPictureResourceInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_PICTURE_RESOURCE_INFO_KHR`
- VUID-VkVideoPictureResourceInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkVideoPictureResourceInfoKHR-imageViewBinding-parameter
`imageViewBinding` **must** be a valid `VkImageView` handle

42.2. Decoded Picture Buffer

An integral part of video coding pipelines is the reconstruction of pictures from a compressed video bitstream. A *reconstructed picture* is a [video picture resource](#) resulting from this process.

Such reconstructed pictures **can** be used as *reference pictures* in subsequent video coding operations to provide predictions of the values of samples of subsequently decoded or encoded pictures. The correct use of such reconstructed pictures as reference pictures is driven by the video compression standard, the implementation, and the application-specific use cases.

The list of reference pictures used to provide such predictions within a single video coding operation is referred to as the list of *active reference pictures*.

The *decoded picture buffer (DPB)* is an indexed data structure that maintains the set of reference pictures available to be used in video coding operations. Individual indexed entries of the DPB are referred to as the *decoded picture buffer (DPB) slots*. The range of valid DPB slot indices is between zero and $N-1$, where N is the capacity of the DPB. Each DPB slot **can** refer to a reference picture containing a *video frame* or **can** refer to up to two reference pictures containing the top and/or bottom *fields* that, when both present, together represent a full *video frame*.

In Vulkan, the state and the backing store of the DPB is separated as follows:

- The state of individual DPB slots is maintained by [video session](#) objects.
- The backing store of DPB slots is provided by subregions of [VkImage](#) objects used as [video picture resources](#).

In addition, the implementation **may** also maintain opaque metadata associated with DPB slots, including:

- *Reference picture metadata* corresponding to the video picture resource associated with the DPB slot.

Such metadata **may** be stored by the implementation as part of the DPB slot state maintained by the video session, or as part of the video picture resource backing the DPB slot.

Any metadata stored in the video picture resources backing DPB slots are independent of the video session used to store it, hence such video picture resources **can** be shared with other video sessions. Correspondingly, any metadata that is dependent on the video session will always be stored as part of the DPB slot state maintained by that video session.

The responsibility of managing the DPB is split between the application and the implementation as follows:

- The application maintains the association between [DPB slot](#) indices and corresponding [video picture resources](#).
- The implementation maintains global and per-slot opaque [reference picture metadata](#).

In addition, the application is also responsible for managing the mapping between the codec-specific picture IDs and DPB slots, and any other codec-specific states unless otherwise specified.

42.2.1. DPB Slot States

At a given time, each DPB slot is either in *active* or *inactive* state. Initially, all DPB slots managed by a [video session](#) are in *inactive* state.

A DPB slot **can** be *activated* by using it as the target of picture reconstruction in a video coding operation with the reconstructed picture requested to be set up as a reference picture, according to the codec-specific semantics, changing its state to *active* and associating it with a *picture reference* to the [reconstructed pictures](#).

Some video coding standards allow multiple picture references to be associated with a single DPB slot. In this case the state of the individual picture references **can** be independently updated.

NOTE

As an example, H.264 decoding allows associating a separate top field and bottom field picture with the same DPB slot.

As part of reference picture setup, the implementation **may** also generate [reference picture metadata](#). Such reference picture metadata is specific to each picture reference associated with the DPB slot.

If such a video coding operation completes successfully, the activated DPB slot will have a *valid picture reference* and the [reconstructed picture](#) is associated with the DPB slot. This is true even if the DPB slot is used as the target of a picture reconstruction that only sets up a top field or bottom field reference picture and thus does not yet refer to a complete frame. However, if any data provided as input to such a video coding operation is not compliant with the video compression standard used, that video coding operation **may** complete unsuccessfully, in which case the activated DPB slot will have an *invalid picture reference*. This is true even if the DPB slot previously had a valid picture reference to a top field or bottom field reference picture, but the reconstruction of the other field corresponding to the DPB slot failed.

The application **can** use [queries](#) to get feedback about the outcome of video coding operations and use the resulting [VkQueryResultStatusKHR](#) value to determine whether the video coding operation completed successfully (result status is positive) or unsuccessfully (result status is negative).

Using a [reference picture](#) associated with a DPB slot that has an *invalid picture reference* as an [active reference picture](#) in subsequent video coding operations is legal, however, the contents of the outputs of such operations are undefined, and any DPB slots activated by such video coding operations will also have an *invalid picture reference*. This is true even if such video coding operations **may** otherwise complete successfully.

A DPB slot **can** also be *deactivated* by the application, changing its state to *inactive* and invalidating any picture references and [reference picture metadata](#) associated with the DPB slot.

If an already active DPB slot is used as the target of picture reconstruction in a video coding operation, but the decoded picture is not requested to be set up as a reference picture, according to the codec-specific semantics, no reference picture setup happens and the corresponding picture reference and [reference picture metadata](#) is invalidated within the DPB slot. If the DPB slot no longer has any associated picture references after such an operation, the DPB slot is implicitly deactivated.

If an already active DPB slot is used as the target of picture reconstruction when decoding a field picture that is not marked as reference, then the behavior is as follows:

- If the DPB slot is currently associated with a frame, then the DPB slot is deactivated.
- If the DPB slot is not currently associated with a top field picture and the decoded picture is a top field picture, or if the DPB slot is not currently associated with a bottom field picture and the decoded picture is a bottom field picture, then the other field picture association of the DPB slot, if any, is not disturbed.
- If the DPB slot is currently associated with a top field picture and the decoded picture is a top field picture, or if the DPB slot is currently associated with a bottom field picture and the decoded picture is a bottom field picture, then that picture association is invalidated, without disturbing the other field picture association, if any. If the DPB slot no longer has any associated picture references after such an operation, the DPB slot is implicitly deactivated.

A DPB slot **can** be activated with a new frame even if it is already active. In this case all previous associations of the DPB slots with [reference pictures](#) are replaced with an association with the [reconstructed picture](#) used to activate it.

If an already active DPB slot is activated with a reconstructed field picture, then the behavior is as follows:

- If the DPB slot is currently associated with a frame, then that association is replaced with an association with the reconstructed field picture used to activate it.
- If the DPB slot is not currently associated with a top field picture and the DPB slot is activated with a top field picture, or if the DPB slot is not currently associated with a bottom field picture and the DPB slot is activated with a bottom field picture, then the DPB slot is associated with the reconstructed field picture used to activate it, without disturbing the other field picture association, if any.
- If the DPB slot is currently associated with a top field picture and the DPB slot is activated with a new top field picture, or if the DPB slot is currently associated with a bottom field picture and the DPB slot is activated with a new bottom field picture, then that association is replaced with an association with the reconstructed field picture used to activate it, without disturbing the other field picture association, if any.

42.3. Video Profiles

The `VkVideoProfileInfoKHR` structure is defined as follows:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoProfileInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoCodecOperationFlagsKHR videoCodecOperation;
    VkVideoChromaSubsamplingFlagsKHR chromaSubsampling;
    VkVideoComponentBitDepthFlagsKHR lumaBitDepth;
    VkVideoComponentBitDepthFlagsKHR chromaBitDepth;
} VkVideoProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoCodecOperation` is a `VkVideoCodecOperationFlagBitsKHR` value specifying a video codec operation.
- `chromaSubsampling` is a bitmask of `VkVideoChromaSubsamplingFlagBitsKHR` specifying video chroma subsampling information.
- `lumaBitDepth` is a bitmask of `VkVideoComponentBitDepthFlagBitsKHR` specifying video luma bit depth information.
- `chromaBitDepth` is a bitmask of `VkVideoComponentBitDepthFlagBitsKHR` specifying video chroma bit depth information.

Video profiles are provided as input to video capability queries such as `vkGetPhysicalDeviceVideoCapabilitiesKHR` or `vkGetPhysicalDeviceVideoFormatPropertiesKHR`, as well as when creating resources to be used by video coding operations such as images, buffers, query pools, and video sessions.

The full description of a video profile is specified by an instance of this structure, and the codec-specific and auxiliary structures provided in its `pNext` chain.

When this structure is specified as an input parameter to `vkGetPhysicalDeviceVideoCapabilitiesKHR`, or through the `pProfiles` member of a `VkVideoProfileListInfoKHR` structure in the `pNext` chain of the input parameter of a query command such as `vkGetPhysicalDeviceVideoFormatPropertiesKHR` or `vkGetPhysicalDeviceImageFormatProperties2`, the following error codes indicate specific causes of the failure of the query operation:

- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR` indicates that the requested video picture layout (e.g. through the `pictureLayout` member of a `VkVideoDecodeH264ProfileInfoKHR` structure included in the `pNext` chain of `VkVideoProfileInfoKHR`) is not supported.
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR` indicates that a video profile operation specified by `videoCodecOperation` is not supported.
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR` indicates that video format parameters specified by `chromaSubsampling`, `lumaBitDepth`, or `chromaBitDepth` are not supported.
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR` indicates that the codec-specific parameters corresponding to the video codec operation are not supported.

Valid Usage

- VUID-VkVideoProfileInfoKHR-chromaSubsampling-07013
`chromaSubsampling` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-lumaBitDepth-07014
`lumaBitDepth` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-chromaSubsampling-07015
If `chromaSubsampling` is not `VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR`, then `chromaBitDepth` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07179
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH264ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07180
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH265ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-09256
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeAV1ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07181
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH264ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07182
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH265ProfileInfoKHR` structure

Valid Usage (Implicit)

- VUID-VkVideoProfileInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_PROFILE_INFO_KHR`
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-parameter
`videoCodecOperation` **must** be a valid `VkVideoCodecOperationFlagBitsKHR` value
- VUID-VkVideoProfileInfoKHR-chromaSubsampling-parameter
`chromaSubsampling` **must** be a valid combination of `VkVideoChromaSubsamplingFlagBitsKHR` values
- VUID-VkVideoProfileInfoKHR-chromaSubsampling-requiredbitmask
`chromaSubsampling` **must** not be 0
- VUID-VkVideoProfileInfoKHR-lumaBitDepth-parameter
`lumaBitDepth` **must** be a valid combination of `VkVideoComponentBitDepthFlagBitsKHR` values
- VUID-VkVideoProfileInfoKHR-lumaBitDepth-requiredbitmask
`lumaBitDepth` **must** not be 0

- VUID-VkVideoProfileInfoKHR-chromaBitDepth-parameter
chromaBitDepth **must** be a valid combination of [VkVideoComponentBitDepthFlagBitsKHR](#) values

Possible values of [VkVideoProfileInfoKHR::videoCodecOperation](#), specifying the type of video coding operation and video compression standard used by a video profile, are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCodecOperationFlagBitsKHR {
    VK_VIDEO_CODEC_OPERATION_NONE_KHR = 0,
    // Provided by VK_KHR_video_encode_h264
    VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR = 0x00010000,
    // Provided by VK_KHR_video_encode_h265
    VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR = 0x00020000,
    // Provided by VK_KHR_video_decode_h264
    VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_decode_h265
    VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_video_decode_av1
    VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR = 0x00000004,
} VkVideoCodecOperationFlagBitsKHR;
```

- **VK_VIDEO_CODEC_OPERATION_NONE_KHR** indicates no support for any video codec operations.
- **VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR** specifies support for [H.264 decode operations](#).
- **VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR** specifies support for [H.265 decode operations](#).
- **VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR** specifies support for [AV1 decode operations](#).
- **VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR** specifies support for [H.264 encode operations](#).
- **VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR** specifies support for [H.265 encode operations](#).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCodecOperationFlagsKHR;
```

VkVideoCodecOperationFlagsKHR is a bitmask type for setting a mask of zero or more [VkVideoCodecOperationFlagBitsKHR](#).

The video format chroma subsampling is defined with the following enums:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoChromaSubsamplingFlagBitsKHR {
    VK_VIDEO_CHROMA_SUBSAMPLING_INVALID_KHR = 0,
    VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR = 0x00000001,
    VK_VIDEO_CHROMA_SUBSAMPLING_420_BIT_KHR = 0x00000002,
    VK_VIDEO_CHROMA_SUBSAMPLING_422_BIT_KHR = 0x00000004,
    VK_VIDEO_CHROMA_SUBSAMPLING_444_BIT_KHR = 0x00000008,
} VkVideoChromaSubsamplingFlagBitsKHR;
```

- **VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR** specifies that the format is monochrome.
- **VK_VIDEO_CHROMA_SUBSAMPLING_420_BIT_KHR** specified that the format is 4:2:0 chroma subsampled, i.e. the two chroma components are sampled horizontally and vertically at half the sample rate of the luma component.
- **VK_VIDEO_CHROMA_SUBSAMPLING_422_BIT_KHR** - the format is 4:2:2 chroma subsampled, i.e. the two chroma components are sampled horizontally at half the sample rate of luma component.
- **VK_VIDEO_CHROMA_SUBSAMPLING_444_BIT_KHR** - the format is 4:4:4 chroma sampled, i.e. all three components of the Y'C_BC_R format are sampled at the same rate, thus there is no chroma subsampling.

Chroma subsampling is described in more detail in the [Chroma Reconstruction](#) section.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoChromaSubsamplingFlagsKHR;
```

VkVideoChromaSubsamplingFlagsKHR is a bitmask type for setting a mask of zero or more **VkVideoChromaSubsamplingFlagBitsKHR**.

Possible values for the video format component bit depth are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoComponentBitDepthFlagBitsKHR {
    VK_VIDEO_COMPONENT_BIT_DEPTH_INVALID_KHR = 0,
    VK_VIDEO_COMPONENT_BIT_DEPTH_8_BIT_KHR = 0x00000001,
    VK_VIDEO_COMPONENT_BIT_DEPTH_10_BIT_KHR = 0x00000004,
    VK_VIDEO_COMPONENT_BIT_DEPTH_12_BIT_KHR = 0x00000010,
} VkVideoComponentBitDepthFlagBitsKHR;
```

- **VK_VIDEO_COMPONENT_BIT_DEPTH_8_BIT_KHR** specifies a component bit depth of 8 bits.
- **VK_VIDEO_COMPONENT_BIT_DEPTH_10_BIT_KHR** specifies a component bit depth of 10 bits.
- **VK_VIDEO_COMPONENT_BIT_DEPTH_12_BIT_KHR** specifies a component bit depth of 12 bits.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoComponentBitDepthFlagsKHR;
```

`VkVideoComponentBitDepthFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoComponentBitDepthFlagBitsKHR`.

Additional information about the video decode use case **can** be provided by adding a `VkVideoDecodeUsageInfoKHR` structure to the `pNext` chain of `VkVideoProfileInfoKHR`.

The `VkVideoDecodeUsageInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeUsageInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkVideoDecodeUsageFlagsKHR  videoUsageHints;
} VkVideoDecodeUsageInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoUsageHints` is a bitmask of `VkVideoDecodeUsageFlagBitsKHR` specifying hints about the intended use of the video decode profile.

Valid Usage (Implicit)

- VUID-VkVideoDecodeUsageInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_USAGE_INFO_KHR`
- VUID-VkVideoDecodeUsageInfoKHR-videoUsageHints-parameter
`videoUsageHints` **must** be a valid combination of `VkVideoDecodeUsageFlagBitsKHR` values

The following bits **can** be specified in `VkVideoDecodeUsageInfoKHR::videoUsageHints` as a hint about the video decode use case:

```
// Provided by VK_KHR_video_decode_queue
typedef enum VkVideoDecodeUsageFlagBitsKHR {
    VK_VIDEO_DECODE_USAGE_DEFAULT_KHR = 0,
    VK_VIDEO_DECODE_USAGE_TRANSCODING_BIT_KHR = 0x00000001,
    VK_VIDEO_DECODE_USAGE_OFFLINE_BIT_KHR = 0x00000002,
    VK_VIDEO_DECODE_USAGE_STREAMING_BIT_KHR = 0x00000004,
} VkVideoDecodeUsageFlagBitsKHR;
```

- `VK_VIDEO_DECODE_USAGE_TRANSCODING_BIT_KHR` specifies that video decoding is intended to be used in conjunction with video encoding to transcode a video bitstream with the same and/or different codecs.
- `VK_VIDEO_DECODE_USAGE_OFFLINE_BIT_KHR` specifies that video decoding is intended to be used to consume a local video bitstream.
- `VK_VIDEO_DECODE_USAGE_STREAMING_BIT_KHR` specifies that video decoding is intended to be used to

consume a video bitstream received as a continuous flow over network.

NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular use case.

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeUsageFlagsKHR;
```

`VkVideoDecodeUsageFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoDecodeUsageFlagBitsKHR`.

Additional information about the video encode use case **can** be provided by adding a `VkVideoEncodeUsageInfoKHR` structure to the `pNext` chain of `VkVideoProfileInfoKHR`.

The `VkVideoEncodeUsageInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeUsageInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkVideoEncodeUsageFlagsKHR videoUsageHints;
    VkVideoEncodeContentFlagsKHR videoContentHints;
    VkVideoEncodeTuningModeKHR tuningMode;
} VkVideoEncodeUsageInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoUsageHints` is a bitmask of `VkVideoEncodeUsageFlagBitsKHR` specifying hints about the intended use of the video encode profile.
- `videoContentHints` is a bitmask of `VkVideoEncodeContentFlagBitsKHR` specifying hints about the content to be encoded using the video encode profile.
- `tuningMode` is a `VkVideoEncodeTuningModeKHR` value specifying the tuning mode to use when encoding with the video profile.

Valid Usage (Implicit)

- VUID-VkVideoEncodeUsageInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_USAGE_INFO_KHR`
- VUID-VkVideoEncodeUsageInfoKHR-videoUsageHints-parameter
`videoUsageHints` **must** be a valid combination of `VkVideoEncodeUsageFlagBitsKHR` values
- VUID-VkVideoEncodeUsageInfoKHR-videoContentHints-parameter
`videoContentHints` **must** be a valid combination of `VkVideoEncodeContentFlagBitsKHR`

values

- VUID-VkVideoEncodeUsageInfoKHR-tuningMode-parameter

If **tuningMode** is not 0, **tuningMode** **must** be a valid [VkVideoEncodeTuningModeKHR](#) value

The following bits **can** be specified in [VkVideoEncodeUsageInfoKHR::videoUsageHints](#) as a hint about the video encode use case:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeUsageFlagBitsKHR {
    VK_VIDEO_ENCODE_USAGE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_USAGE_TRANSCODING_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_USAGE_STREAMING_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_USAGE_RECORDING_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_USAGE_CONFERENCING_BIT_KHR = 0x00000008,
} VkVideoEncodeUsageFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_USAGE_TRANSCODING_BIT_KHR](#) specifies that video encoding is intended to be used in conjunction with video decoding to transcode a video bitstream with the same and/or different codecs.
- [VK_VIDEO_ENCODE_USAGE_STREAMING_BIT_KHR](#) specifies that video encoding is intended to be used to produce a video bitstream that is expected to be sent as a continuous flow over network.
- [VK_VIDEO_ENCODE_USAGE_RECORDING_BIT_KHR](#) specifies that video encoding is intended to be used for real-time recording for offline consumption.
- [VK_VIDEO_ENCODE_USAGE_CONFERENCING_BIT_KHR](#) specifies that video encoding is intended to be used in a video conferencing scenario.

NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular use case.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeUsageFlagsKHR;
```

[VkVideoEncodeUsageFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeUsageFlagBitsKHR](#).

The following bits **can** be specified in [VkVideoEncodeUsageInfoKHR::videoContentHints](#) as a hint about the encoded video content:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeContentFlagBitsKHR {
    VK_VIDEO_ENCODE_CONTENT_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_CONTENT_CAMERA_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_CONTENT_DESKTOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_CONTENT_RENDERED_BIT_KHR = 0x00000004,
} VkVideoEncodeContentFlagBitsKHR;
```

- **VK_VIDEO_ENCODE_CONTENT_CAMERA_BIT_KHR** specifies that video encoding is intended to be used to encode camera content.
- **VK_VIDEO_ENCODE_CONTENT_DESKTOP_BIT_KHR** specifies that video encoding is intended to be used to encode desktop content.
- **VK_VIDEO_ENCODE_CONTENT_RENDERED_BIT_KHR** specified that video encoding is intended to be used to encode rendered (e.g. game) content.

NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular content type.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeContentFlagsKHR;
```

VkVideoEncodeContentFlagsKHR is a bitmask type for setting a mask of zero or more **VkVideoEncodeContentFlagBitsKHR**.

Possible video encode tuning mode values are as follows:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeTuningModeKHR {
    VK_VIDEO_ENCODE_TUNING_MODE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_TUNING_MODE_HIGH_QUALITY_KHR = 1,
    VK_VIDEO_ENCODE_TUNING_MODE_LOW_LATENCY_KHR = 2,
    VK_VIDEO_ENCODE_TUNING_MODE_ULTRA_LOW_LATENCY_KHR = 3,
    VK_VIDEO_ENCODE_TUNING_MODE_LOSSLESS_KHR = 4,
} VkVideoEncodeTuningModeKHR;
```

- **VK_VIDEO_ENCODE_TUNING_MODE_DEFAULT_KHR** specifies the default tuning mode.
- **VK_VIDEO_ENCODE_TUNING_MODE_HIGH_QUALITY_KHR** specifies that video encoding is tuned for high quality. When using this tuning mode, the implementation **may** compromise the latency of video encoding operations to improve quality.
- **VK_VIDEO_ENCODE_TUNING_MODE_LOW_LATENCY_KHR** specifies that video encoding is tuned for low latency. When using this tuning mode, the implementation **may** compromise quality to increase the performance and lower the latency of video encode operations.

- `VK_VIDEO_ENCODE_TUNING_MODE_ULTRA_LOW_LATENCY_KHR` specifies that video encoding is tuned for ultra-low latency. When using this tuning mode, the implementation **may** compromise quality to maximize the performance and minimize the latency of video encoding operations.
- `VK_VIDEO_ENCODE_TUNING_MODE_LOSSLESS_KHR` specifies that video encoding is tuned for lossless encoding. When using this tuning mode, video encode operations produce lossless output.

The `VkVideoProfileListInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoProfileListInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             profileCount;
    const VkVideoProfileInfoKHR* pProfiles;
} VkVideoProfileListInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `profileCount` is the number of elements in the `pProfiles` array.
- `pProfiles` is a pointer to an array of `VkVideoProfileInfoKHR` structures.

NOTE

Video transcoding is an example of a use case that necessitates the specification of multiple profiles in various contexts.

When the application provides a video decode profile and one or more video encode profiles in the profile list, the implementation ensures that any capabilities returned or resources created are suitable for the video transcoding use cases without the need for manual data transformations.

Valid Usage

- VUID-VkVideoProfileListInfoKHR-pProfiles-06813
`pProfiles` **must** not contain more than one element whose `videoCodecOperation` member specifies a decode operation

Valid Usage (Implicit)

- VUID-VkVideoProfileListInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_PROFILE_LIST_INFO_KHR`
- VUID-VkVideoProfileListInfoKHR-pProfiles-parameter
If `profileCount` is not 0, `pProfiles` **must** be a valid pointer to an array of `profileCount` valid `VkVideoProfileInfoKHR` structures

42.4. Video Capabilities

42.4.1. Video Coding Capabilities

To query video coding capabilities for a specific video profile, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetPhysicalDeviceVideoCapabilitiesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkVideoProfileInfoKHR* pVideoProfile,
    VkVideoCapabilitiesKHR*    pCapabilities);
```

- **physicalDevice** is the physical device from which to query the video decode or encode capabilities.
- **pVideoProfile** is a pointer to a [VkVideoProfileInfoKHR](#) structure.
- **pCapabilities** is a pointer to a [VkVideoCapabilitiesKHR](#) structure in which the capabilities are returned.

If the [video profile](#) described by **pVideoProfile** is supported by the implementation, then this command returns **VK_SUCCESS** and **pCapabilities** is filled with the capabilities supported with the specified video profile. Otherwise, one of the [video-profile-specific error codes](#) are returned.

Valid Usage

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07183
If **pVideoProfile->videoCodecOperation** specifies a decode operation, then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeCapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07184
If **pVideoProfile->videoCodecOperation** is **VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR**, then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeH264CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07185
If **pVideoProfile->videoCodecOperation** is **VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR**, then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeH265CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-09257
If **pVideoProfile->videoCodecOperation** is **VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR**, then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeAV1CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07186
If **pVideoProfile->videoCodecOperation** specifies an encode operation, then the **pNext** chain of **pCapabilities** **must** include a [VkVideoEncodeCapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07187
If **pVideoProfile->videoCodecOperation** is **VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR**,

then the **pNext** chain of **pCapabilities** **must** include a [VkVideoEncodeH264CapabilitiesKHR](#) structure

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07188

If **pVideoProfile->videoCodecOperation** is **VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR**, then the **pNext** chain of **pCapabilities** **must** include a [VkVideoEncodeH265CapabilitiesKHR](#) structure

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-parameter **pVideoProfile** **must** be a valid pointer to a valid [VkVideoProfileInfoKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pCapabilities-parameter **pCapabilities** **must** be a valid pointer to a [VkVideoCapabilitiesKHR](#) structure

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR**
- **VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR**
- **VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR**
- **VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR**

The [VkVideoCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoCapabilitiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkVideoCapabilityFlagsKHR flags;
    VkDeviceSize          minBitstreamBufferOffsetAlignment;
    VkDeviceSize          minBitstreamBufferSizeAlignment;
    VkExtent2D            pictureAccessGranularity;
    VkExtent2D            minCodedExtent;
    VkExtent2D            maxCodedExtent;
    uint32_t              maxDpbSlots;
    uint32_t              maxActiveReferencePictures;
    VkExtensionProperties  stdHeaderVersion;
} VkVideoCapabilitiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of **VkVideoCapabilityFlagBitsKHR** specifying capability flags.
- **minBitstreamBufferOffsetAlignment** is the minimum alignment for bitstream buffer offsets.
- **minBitstreamBufferSizeAlignment** is the minimum alignment for bitstream buffer range sizes.
- **pictureAccessGranularity** is the granularity at which image access to video picture resources happen.
- **minCodedExtent** is the minimum width and height of the coded frames.
- **maxCodedExtent** is the maximum width and height of the coded frames.
- **maxDpbSlots** is the maximum number of **DPB slots** supported by a single video session.
- **maxActiveReferencePictures** is the maximum number of **active reference pictures** a single video coding operation **can** use.
- **stdHeaderVersion** is a **VkExtensionProperties** structure reporting the Video Std header name and version supported for the video profile.

NOTE

It is common for video compression standards to allow using all reference pictures associated with active DPB slots as active reference pictures, hence for video decode profiles the values returned in **maxDpbSlots** and **maxActiveReferencePictures** are often equal. Similarly, in case of video decode profiles supporting field pictures the value of **maxActiveReferencePictures** often equals **maxDpbSlots** × 2.

Valid Usage (Implicit)

- VUID-VkVideoCapabilitiesKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_VIDEO_CAPABILITIES_KHR**
- VUID-VkVideoCapabilitiesKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkVideoDecodeAV1CapabilitiesKHR**,

VkVideoDecodeCapabilitiesKHR, VkVideoDecodeH264CapabilitiesKHR, VkVideoDecodeH265CapabilitiesKHR, VkVideoEncodeCapabilitiesKHR, VkVideoEncodeH264CapabilitiesKHR, or VkVideoEncodeH265CapabilitiesKHR

- VUID-VkVideoCapabilitiesKHR-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique

Bits which **can** be set in **VkVideoCapabilitiesKHR::flags** are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCapabilityFlagBitsKHR {
    VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR = 0x00000001,
    VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR = 0x00000002,
} VkVideoCapabilityFlagBitsKHR;
```

- **VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR** indicates that video sessions support producing and consuming protected content.
- **VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR** indicates that the **video picture resources** associated with the **DPB slots** of a video session **can** be backed by separate **VkImage** objects. If this capability flag is not present, then all DPB slots of a video session **must** be associated with video picture resources backed by the same **VkImage** object (e.g. using different layers of the same image).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCapabilityFlagsKHR;
```

VkVideoCapabilityFlagsKHR is a bitmask type for setting a mask of zero or more **VkVideoCapabilityFlagBitsKHR**.

42.4.2. Video Format Capabilities

To enumerate the supported output, input and DPB image formats and corresponding capabilities for a specific video profile, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetPhysicalDeviceVideoFormatPropertiesKHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceVideoFormatInfoKHR* pVideoFormatInfo,
    uint32_t* pVideoFormatPropertyCount,
    VkVideoFormatPropertiesKHR* pVideoFormatProperties);
```

- **physicalDevice** is the physical device from which to query the video format properties.
- **pVideoFormatInfo** is a pointer to a **VkPhysicalDeviceVideoFormatInfoKHR** structure specifying the usage and video profiles for which supported image formats and capabilities are returned.
- **pVideoFormatPropertyCount** is a pointer to an integer related to the number of video format

properties available or queried, as described below.

- `pVideoFormatProperties` is a pointer to an array of `VkVideoFormatPropertiesKHR` structures in which supported image formats and capabilities are returned.

If `pVideoFormatProperties` is `NULL`, then the number of video format properties supported for the given `physicalDevice` is returned in `pVideoFormatPropertyCount`. Otherwise, `pVideoFormatPropertyCount` **must** point to a variable set by the application to the number of elements in the `pVideoFormatProperties` array, and on return the variable is overwritten with the number of values actually written to `pVideoFormatProperties`. If the value of `pVideoFormatPropertyCount` is less than the number of video format properties supported, at most `pVideoFormatPropertyCount` values will be written to `pVideoFormatProperties`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available values were returned.

Video format properties are always queried with respect to a specific set of video profiles. These are specified by chaining the `VkVideoProfileListInfoKHR` structure to `pVideoFormatInfo`.

For most use cases, the images are used by a single video session and a single video profile is provided. For a use case such as video transcoding, where a decode session output image **can** be used as encode input in one or more encode sessions, multiple video profiles corresponding to the video sessions that will share the image **must** be provided.

If any of the [video profiles](#) specified via `VkVideoProfileListInfoKHR::pProfiles` are not supported, then this command returns one of the [video-profile-specific error codes](#). Furthermore, if `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` includes any image usage flags not supported by the specified video profiles, then this command returns `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`.

This command also returns `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR` if `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` does not include the appropriate flags as dictated by the decode capability flags returned in `VkVideoDecodeCapabilitiesKHR::flags` for any of the profiles specified in the `VkVideoProfileListInfoKHR` structure provided in the `pNext` chain of `pVideoFormatInfo`.

If the decode capability flags include `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR` but not `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR`, then in order to query video format properties for decode DPB and output usage, `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` **must** include both `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` and `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`. Otherwise, the call will fail with `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`.

If the decode capability flags include `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR` but not `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR`, then in order to query video format properties for decode DPB usage, `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` **must** include `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, but not `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`. Otherwise, the call will fail with `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`. Similarly, to query video format properties for decode output usage, `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` **must** include `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, but not `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`. Otherwise, the call will fail with `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`.

The `imageUsage` member of the `VkPhysicalDeviceVideoFormatInfoKHR` structure specifies the expected video usage flags that the returned video formats **must** support. Correspondingly, the `imageUsageFlags` member of each `VkVideoFormatPropertiesKHR` structure returned will contain at least the same set of image usage flags.

If the implementation supports using video input, output, or DPB images of a particular format in operations other than video decode/encode then the `imageUsageFlags` member of the corresponding `VkVideoFormatPropertiesKHR` structure returned will include additional image usage flags indicating that.

NOTE

For most use cases, only decode or encode related usage flags are going to be specified. For a use case such as transcode, if the image were to be shared between decode and encode session(s), then both decode and encode related usage flags **can** be set.

Multiple `VkVideoFormatPropertiesKHR` entries **may** be returned with the same `format` member with different `componentMapping`, `imageType`, or `imageTiling` values, as described later.

In addition, a different set of `VkVideoFormatPropertiesKHR` entries **may** be returned depending on the `imageUsage` member of the `VkPhysicalDeviceVideoFormatInfoKHR` structure, even for the same set of video profiles, for example, based on whether encode input, encode DPB, decode output, and/or decode DPB usage is requested.

The application **can** select the parameters returned in the `VkVideoFormatPropertiesKHR` entries and use compatible parameters when creating the input, output, and DPB images. The implementation will report all image creation and usage flags that are valid for images used with the requested video profiles but applications **should** create images only with those that are necessary for the particular use case.

Before creating an image, the application **can** obtain the complete set of supported image format features by calling `vkGetPhysicalDeviceImageFormatProperties2` using parameters derived from the members of one of the reported `VkVideoFormatPropertiesKHR` entries and adding the same `VkVideoProfileListInfoKHR` structure to the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2`.

The following applies to all `VkVideoFormatPropertiesKHR` entries returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR`:

- `vkGetPhysicalDeviceFormatProperties2` **must** succeed when called with `VkVideoFormatPropertiesKHR::format`
- If `VkVideoFormatPropertiesKHR::imageTiling` is `VK_IMAGE_TILING_OPTIMAL`, then the `optimalTilingFeatures` returned by `vkGetPhysicalDeviceFormatProperties2` **must** include all format features required by the image usage flags reported in `VkVideoFormatPropertiesKHR::imageUsageFlags` for the format, as indicated in the [Format Feature Dependent Usage Flags](#) section.
- If `VkVideoFormatPropertiesKHR::imageTiling` is `VK_IMAGE_TILING_LINEAR`, then the `linearTilingFeatures` returned by `vkGetPhysicalDeviceFormatProperties2` **must** include all format features required by the image usage flags reported in `VkVideoFormatPropertiesKHR::imageUsageFlags` for the format, as indicated in the [Format Feature Dependent Usage Flags](#)

section.

- `vkGetPhysicalDeviceImageFormatProperties2` **must** succeed when called with a `VkPhysicalDeviceImageFormatInfo2` structure containing the following information:
 - The `pNext` chain including the same `VkVideoProfileListInfoKHR` structure used to call `vkGetPhysicalDeviceVideoFormatPropertiesKHR`.
 - `format` set to the value of `VkVideoFormatPropertiesKHR::format`.
 - `type` set to the value of `VkVideoFormatPropertiesKHR::imageType`.
 - `tiling` set to the value of `VkVideoFormatPropertiesKHR::imageTiling`.
 - `usage` set to the value of `VkVideoFormatPropertiesKHR::imageUsageFlags`.
 - `flags` set to the value of `VkVideoFormatPropertiesKHR::imageCreateFlags`.

The `componentMapping` member of `VkVideoFormatPropertiesKHR` defines the ordering of the Y'C_BC_R color channels from the perspective of the video codec operations specified in `VkVideoProfileListInfoKHR`. For example, if the implementation produces video decode output with the format `VK_FORMAT_G8_B8R8_2PLANE_420_UNORM` where the blue and red chrominance channels are swapped then the `componentMapping` member of the corresponding `VkVideoFormatPropertiesKHR` structure will have the following member values:

```
components.r = VK_COMPONENT_SWIZZLE_B;      // Cb component
components.g = VK_COMPONENT_SWIZZLE_IDENTITY; // Y component
components.b = VK_COMPONENT_SWIZZLE_R;      // Cr component
components.a = VK_COMPONENT_SWIZZLE_IDENTITY; // unused, defaults to 1.0
```

Valid Usage

- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pNext-06812
The `pNext` chain of `pVideoFormatInfo` **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-physicalDevice-parameter-`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatInfo-parameter-`pVideoFormatInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceVideoFormatInfoKHR` structure
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatPropertyCount-parameter-`pVideoFormatPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatProperties-parameter-
If the value referenced by `pVideoFormatPropertyCount` is not 0, and `pVideoFormatProperties`

is not `NULL`, `pVideoFormatProperties` **must** be a valid pointer to an array of `pVideoFormatPropertyCount` `VkVideoFormatPropertiesKHR` structures

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR`

The `VkPhysicalDeviceVideoFormatInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkPhysicalDeviceVideoFormatInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkImageUsageFlags  imageUsage;
} VkPhysicalDeviceVideoFormatInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageUsage` is a bitmask of `VkImageUsageFlagBits` specifying the intended usage of the video images.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoFormatInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_FORMAT_INFO_KHR`
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkVideoProfileListInfoKHR`
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-imageUsage-parameter

imageUsage must be a valid combination of [VkImageUsageFlagBits](#) values

- VUID-VkPhysicalDeviceVideoFormatInfoKHR-imageUsage-requiredbitmask

imageUsage must not be 0

The [VkVideoFormatPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoFormatPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkFormat            format;
    VkComponentMapping  componentMapping;
    VkImageCreateFlags  imageCreateFlags;
    VkImageType         imageType;
    VkImageTiling       imageTiling;
    VkImageUsageFlags   imageUsageFlags;
} VkVideoFormatPropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **format** is a [VkFormat](#) that specifies the format that **can** be used with the specified video profiles and image usages.
- **componentMapping** defines the color channel order used for the format. **format** along with **componentMapping** describe how the color channels are ordered when producing video decoder output or are expected to be ordered in video encoder input, when applicable. If the **format** reported does not require component swizzling then all members of **componentMapping** will be set to `VK_COMPONENT_SWIZZLE_IDENTITY`.
- **imageCreateFlags** is a bitmask of [VkImageCreateFlagBits](#) specifying the supported image creation flags for the format.
- **imageType** is a [VkImageType](#) that specifies the image type the format **can** be used with.
- **imageTiling** is a [VkImageTiling](#) that specifies the image tiling the format **can** be used with.
- **imageUsageFlags** is a bitmask of [VkImageUsageFlagBits](#) specifying the supported image usage flags for the format.

Valid Usage (Implicit)

- VUID-VkVideoFormatPropertiesKHR-sType-sType
sType must be `VK_STRUCTURE_TYPE_VIDEO_FORMAT_PROPERTIES_KHR`
- VUID-VkVideoFormatPropertiesKHR-pNext-pNext
pNext must be `NULL`

42.5. Video Sessions

Video sessions are objects that represent and maintain the state needed to perform video decode or encode operations using a specific video profile.

In case of video encode profiles this includes the current [rate control](#) configuration and the currently set [video encode quality level](#).

Video sessions are represented by `VkVideoSessionKHR` handles:

```
// Provided by VK_KHR_video_queue
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkVideoSessionKHR)
```

42.5.1. Creating a Video Session

To create a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkCreateVideoSessionKHR(
    VkDevice                                device,
    const VkVideoSessionCreateInfoKHR*      pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkVideoSessionKHR*                      pVideoSession);
```

- `device` is the logical device that creates the video session.
- `pCreateInfo` is a pointer to a [VkVideoSessionCreateInfoKHR](#) structure containing parameters to be used to create the video session.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pVideoSession` is a pointer to a [VkVideoSessionKHR](#) handle in which the resulting video session object is returned.

The resulting video session object is said to be created with the video codec operation specified in `pCreateInfo->pVideoProfile->videoCodecOperation`.

The name and version of the codec-specific Video Std header to be used with the video session is specified by the [VkExtensionProperties](#) structure pointed to by `pCreateInfo->pStdHeaderVersion`. If a non-existent or unsupported Video Std header version is specified in `pCreateInfo->pStdHeaderVersion->specVersion`, then this command returns `VK_ERROR_VIDEO_STD_VERSION_NOT_SUPPORTED_KHR`.

Video session objects are created in *uninitialized* state. In order to transition the video session into *initial* state, the application **must** issue a [vkCmdControlVideoCodingKHR](#) command with [VkVideoCodingControlInfoKHR::flags](#) including `VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR`.

Video session objects also maintain the [state](#) of the DPB. The number of DPB slots usable with the created video session is specified in `pCreateInfo->maxDpbSlots`, and each slot is initially in the

inactive state.

Each DPB slot maintained by the created video session **can** refer to a reference picture representing a video frame.

In addition, if the `videoCodecOperation` member of the `VkVideoProfileInfoKHR` structure pointed to by `pCreateInfo->pVideoProfile` is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pictureLayout` member of the `VkVideoDecodeH264ProfileInfoKHR` structure provided in the `VkVideoProfileInfoKHR::pNext` chain is not `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR`, then the created video session supports *interlaced* frames and each DPB slot maintained by the created video session **can** instead refer to separate top field and bottom field reference pictures that together **can** represent a full video frame. In this case, it is up to the application, driven by the video content, whether it associates any individual DPB slot with separate top and/or bottom field pictures or a single picture representing a full frame.

The created video session **can** be used to perform video coding operations using video frames up to the maximum size specified in `pCreateInfo->maxCodedExtent`. The minimum frame size allowed is implicitly derived from `VkVideoCapabilitiesKHR::minCodedExtent`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pCreateInfo->pVideoProfile`. Accordingly, the created video session is said to be created with a `minCodedExtent` equal to that.

In case of video session objects created with a video encode operation, implementations **may** return the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

NOTE	Applications should not rely on the <code>VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR</code> error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.
-------------	--

Valid Usage (Implicit)

- `VUID-vkCreateVideoSessionKHR-device-parameter`
`device` **must** be a valid `VkDevice` handle
- `VUID-vkCreateVideoSessionKHR-pCreateInfo-parameter`
`pCreateInfo` **must** be a valid pointer to a valid `VkVideoSessionCreateInfoKHR` structure
- `VUID-vkCreateVideoSessionKHR-pAllocator-parameter`
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- `VUID-vkCreateVideoSessionKHR-pVideoSession-parameter`
`pVideoSession` **must** be a valid pointer to a `VkVideoSessionKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_VIDEO_STD_VERSION_NOT_SUPPORTED_KHR`
- `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR`

The `VkVideoSessionCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           queueFamilyIndex;
    VkVideoSessionCreateFlagsKHR flags;
    const VkVideoProfileInfoKHR* pVideoProfile;
    VkFormat            pictureFormat;
    VkExtent2D          maxCodedExtent;
    VkFormat            referencePictureFormat;
    uint32_t            maxDpbSlots;
    uint32_t            maxActiveReferencePictures;
    const VkExtensionProperties* pStdHeaderVersion;
} VkVideoSessionCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueFamilyIndex` is the index of the queue family the created video session will be used with.
- `flags` is a bitmask of `VkVideoSessionCreateFlagBitsKHR` specifying creation flags.
- `pVideoProfile` is a pointer to a `VkVideoProfileInfoKHR` structure specifying the video profile the created video session will be used with.
- `pictureFormat` is the image format the created video session will be used with. If `pVideoProfile->videoCodecOperation` specifies a decode operation, then `pictureFormat` is the image format of `decode output pictures` usable with the created video session. If `pVideoProfile->videoCodecOperation` specifies an encode operation, then `pictureFormat` is the image format of `encode input pictures` usable with the created video session.
- `maxCodedExtent` is the maximum width and height of the coded frames the created video session will be used with.
- `referencePictureFormat` is the image format of `reference pictures` stored in the `DPB` the created

video session will be used with.

- **maxDpbSlots** is the maximum number of **DPB Slots** that **can** be used with the created video session.
- **maxActiveReferencePictures** is the maximum number of **active reference pictures** that **can** be used in a single video coding operation using the created video session.
- **pStdHeaderVersion** is a pointer to a **VkExtensionProperties** structure requesting the Video Std header version to use for the **videoCodecOperation** specified in **pVideoProfile**.

Valid Usage

- VUID-VkVideoSessionCreateInfoKHR-protectedMemory-07189
If the **protectedMemory** feature is not enabled or if **VkVideoCapabilitiesKHR::flags** does not include **VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the video profile specified by **pVideoProfile**, then **flags** **must** not include **VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR**
- VUID-VkVideoSessionCreateInfoKHR-flags-08371
If **flags** includes **VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR**, then **videoMaintenance1** **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-04845
pVideoProfile **must** be a **supported video profile**
- VUID-VkVideoSessionCreateInfoKHR-maxDpbSlots-04847
maxDpbSlots **must** be less than or equal to **VkVideoCapabilitiesKHR::maxDpbSlots**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the video profile specified by **pVideoProfile**
- VUID-VkVideoSessionCreateInfoKHR-maxActiveReferencePictures-04849
maxActiveReferencePictures **must** be less than or equal to **VkVideoCapabilitiesKHR::maxActiveReferencePictures**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the video profile specified by **pVideoProfile**
- VUID-VkVideoSessionCreateInfoKHR-maxDpbSlots-04850
If either **maxDpbSlots** or **maxActiveReferencePictures** is **0**, then both **must** be **0**
- VUID-VkVideoSessionCreateInfoKHR-maxCodedExtent-04851
maxCodedExtent **must** be between **VkVideoCapabilitiesKHR::minCodedExtent** and **VkVideoCapabilitiesKHR::maxCodedExtent**, inclusive, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the video profile specified by **pVideoProfile**
- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-04852
If **pVideoProfile->videoCodecOperation** specifies a decode operation and **maxActiveReferencePictures** is greater than **0**, then **referencePictureFormat** **must** be one of the supported decode DPB formats, as returned by **vkGetPhysicalDeviceVideoFormatPropertiesKHR** in **VkVideoFormatPropertiesKHR::format** when called with the **imageUsage** member of its **pVideoFormatInfo** parameter containing **VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR**, and with a **VkVideoProfileListInfoKHR** structure specified in the **pNext** chain of its **pVideoFormatInfo** parameter whose **pProfiles**

member contains an element matching `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-06814

If `pVideoProfile->videoCodecOperation` specifies an encode operation and `maxActiveReferencePictures` is greater than 0, then `referencePictureFormat` **must** be one of the supported decode DPB formats, as returned by then `referencePictureFormat` **must** be one of the supported encode DPB formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-04853

If `pVideoProfile->videoCodecOperation` specifies a decode operation, then `pictureFormat` **must** be one of the supported decode output formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-04854

If `pVideoProfile->videoCodecOperation` specifies an encode operation, then `pictureFormat` **must** be one of the supported encode input formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-07190

`pStdHeaderVersion->extensionName` **must** match `VkVideoCapabilitiesKHR::stdHeaderVersion.extensionName`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-07191

`pStdHeaderVersion->specVersion` **must** be less than or equal to `VkVideoCapabilitiesKHR::stdHeaderVersion.specVersion`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-08251

If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pNext` chain of this structure includes a `VkVideoEncodeH264SessionCreateInfoKHR` structure, then its `maxLevelIdc` member **must** be less than or equal to `VkVideoEncodeH264CapabilitiesKHR::maxLevelIdc`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified in `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-08252

If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of this structure includes a `VkVideoEncodeH265SessionCreateInfoKHR` structure, then its `maxLevelIdc` member **must**

be less than or equal to `VkVideoEncodeH265CapabilitiesKHR::maxLevelIdc`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified in `pVideoProfile`

Valid Usage (Implicit)

- `VUID-VkVideoSessionCreateInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_SESSION_CREATE_INFO_KHR`
- `VUID-VkVideoSessionCreateInfoKHR-pNext-pNext`
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeH264SessionCreateInfoKHR` or `VkVideoEncodeH265SessionCreateInfoKHR`
- `VUID-VkVideoSessionCreateInfoKHR-sType-unique`
The `sType` value of each struct in the `pNext` chain **must** be unique
- `VUID-VkVideoSessionCreateInfoKHR-flags-parameter`
`flags` **must** be a valid combination of `VkVideoSessionCreateFlagBitsKHR` values
- `VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-parameter`
`pVideoProfile` **must** be a valid pointer to a valid `VkVideoProfileInfoKHR` structure
- `VUID-VkVideoSessionCreateInfoKHR-pictureFormat-parameter`
`pictureFormat` **must** be a valid `VkFormat` value
- `VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-parameter`
`referencePictureFormat` **must** be a valid `VkFormat` value
- `VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-parameter`
`pStdHeaderVersion` **must** be a valid pointer to a valid `VkExtensionProperties` structure

Bits which **can** be set in `VkVideoSessionCreateInfoKHR::flags` are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoSessionCreateFlagBitsKHR {
    VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_video_maintenance1
    VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR = 0x00000004,
} VkVideoSessionCreateFlagBitsKHR;
```

- `VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR` specifies that the video session uses protected video content.
- `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR` specifies that the implementation is allowed to **override** video session parameters and other codec-specific encoding parameters to optimize video encode operations based on the use case information specified in the **video profile** and the used **video encode quality level**.

NOTE

Not

specifying

`VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR` does not guarantee that the implementation will not do any codec-specific parameter overrides, as certain overrides are necessary for the correct operation of the video encoder implementation due to limitations to the available encoding tools on that implementation. This flag, however, enables the implementation to apply further optimizing overrides.

- `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR` specifies that queries within video coding scopes using the created video session are [executed inline](#) with video coding operations.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoSessionCreateFlagsKHR;
```

`VkVideoSessionCreateFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoSessionCreateFlagBitsKHR`.

42.5.2. Destroying a Video Session

To destroy a video session, call:

```
// Provided by VK_KHR_video_queue
void vkDestroyVideoSessionKHR(
    VkDevice                device,
    VkVideoSessionKHR       videoSession,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the video session.
- `videoSession` is the video session to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyVideoSessionKHR-videoSession-07192
All submitted commands that refer to `videoSession` **must** have completed execution
- VUID-vkDestroyVideoSessionKHR-videoSession-07193
If `VkAllocationCallbacks` were provided when `videoSession` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyVideoSessionKHR-videoSession-07194
If no `VkAllocationCallbacks` were provided when `videoSession` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyVideoSessionKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyVideoSessionKHR-videoSession-parameter
If `videoSession` is not `VK_NULL_HANDLE`, `videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-vkDestroyVideoSessionKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyVideoSessionKHR-videoSession-parent
If `videoSession` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `videoSession` **must** be externally synchronized

42.5.3. Video Session Memory Association

After creating a video session object, and before the object **can** be used to record video coding operations into command buffers using it, the application **must** allocate and bind device memory to the video session. Device memory is allocated separately (see [Device Memory](#)) and then associated with the video session.

Video sessions **may** have multiple memory bindings identified by unique unsigned integer values. Appropriate device memory **must** be bound to each such memory binding before using the video session to record command buffer commands with it.

To determine the memory requirements for a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetVideoSessionMemoryRequirementsKHR(
    VkDevice                device,
    VkVideoSessionKHR       videoSession,
    uint32_t*               pMemoryRequirementsCount,
    VkVideoSessionMemoryRequirementsKHR* pMemoryRequirements);
```

- `device` is the logical device that owns the video session.
- `videoSession` is the video session to query.
- `pMemoryRequirementsCount` is a pointer to an integer related to the number of memory binding requirements available or queried, as described below.
- `pMemoryRequirements` is `NULL` or a pointer to an array of

`VkVideoSessionMemoryRequirementsKHR` structures in which the memory binding requirements of the video session are returned.

If `pMemoryRequirements` is `NULL`, then the number of memory bindings required for the video session is returned in `pMemoryRequirementsCount`. Otherwise, `pMemoryRequirementsCount` **must** point to a variable set by the application to the number of elements in the `pMemoryRequirements` array, and on return the variable is overwritten with the number of memory binding requirements actually written to `pMemoryRequirements`. If `pMemoryRequirementsCount` is less than the number of memory bindings required for the video session, then at most `pMemoryRequirementsCount` elements will be written to `pMemoryRequirements`, and `VK_INCOMPLETE` will be returned, instead of `VK_SUCCESS`, to indicate that not all required memory binding requirements were returned.

Valid Usage (Implicit)

- VUID-vkGetVideoSessionMemoryRequirementsKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetVideoSessionMemoryRequirementsKHR-videoSession-parameter `videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-vkGetVideoSessionMemoryRequirementsKHR-pMemoryRequirementsCount-parameter `pMemoryRequirementsCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetVideoSessionMemoryRequirementsKHR-pMemoryRequirements-parameter
If the value referenced by `pMemoryRequirementsCount` is not `0`, and `pMemoryRequirements` is not `NULL`, `pMemoryRequirements` **must** be a valid pointer to an array of `pMemoryRequirementsCount` `VkVideoSessionMemoryRequirementsKHR` structures
- VUID-vkGetVideoSessionMemoryRequirementsKHR-videoSession-parent `videoSession` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

None

The `VkVideoSessionMemoryRequirementsKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionMemoryRequirementsKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryBindIndex;
    VkMemoryRequirements memoryRequirements;
} VkVideoSessionMemoryRequirementsKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memoryBindIndex** is the index of the memory binding.
- **memoryRequirements** is a [VkMemoryRequirements](#) structure in which the requested memory binding requirements for the binding index specified by **memoryBindIndex** are returned.

Valid Usage (Implicit)

- VUID-VkVideoSessionMemoryRequirementsKHR-sType-sType
sType must be **VK_STRUCTURE_TYPE_VIDEO_SESSION_MEMORY_REQUIREMENTS_KHR**
- VUID-VkVideoSessionMemoryRequirementsKHR-pNext-pNext
pNext must be **NULL**

To attach memory to a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkBindVideoSessionMemoryKHR(
    VkDevice                device,
    VkVideoSessionKHR       videoSession,
    uint32_t                bindSessionMemoryInfoCount,
    const VkBindVideoSessionMemoryInfoKHR* pBindSessionMemoryInfos);
```

- **device** is the logical device that owns the video session.
- **videoSession** is the video session to be bound with device memory.
- **bindSessionMemoryInfoCount** is the number of elements in **pBindSessionMemoryInfos**.
- **pBindSessionMemoryInfos** is a pointer to an array of **bindSessionMemoryInfoCount** [VkBindVideoSessionMemoryInfoKHR](#) structures specifying memory regions to be bound to specific memory bindings of the video session.

The valid usage statements below refer to the [VkMemoryRequirements](#) structure corresponding to a specific element of **pBindSessionMemoryInfos**, which is defined as follows:

- If the **memoryBindIndex** member of the element of **pBindSessionMemoryInfos** in question matches the **memoryBindIndex** member of one of the elements returned in **pMemoryRequirements** when [vkGetVideoSessionMemoryRequirementsKHR](#) is called with the same **videoSession** and with

`pMemoryRequirementsCount` equal to `bindSessionMemoryInfoCount`, then the `memoryRequirements` member of that element of `pMemoryRequirements` is the `VkMemoryRequirements` structure corresponding to the element of `pBindSessionMemoryInfos` in question.

- Otherwise the element of `pBindSessionMemoryInfos` in question is said to not have a corresponding `VkMemoryRequirements` structure.

Valid Usage

- VUID-vkBindVideoSessionMemoryKHR-videoSession-07195
The memory binding of `videoSession` identified by the `memoryBindIndex` member of any element of `pBindSessionMemoryInfos` **must** not already be backed by a memory object
- VUID-vkBindVideoSessionMemoryKHR-memoryBindIndex-07196
The `memoryBindIndex` member of each element of `pBindSessionMemoryInfos` **must** be unique within `pBindSessionMemoryInfos`
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07197
Each element of `pBindSessionMemoryInfos` **must** have a corresponding `VkMemoryRequirements` structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07198
If an element of `pBindSessionMemoryInfos` has a corresponding `VkMemoryRequirements` structure, then the `memory` member of that element of `pBindSessionMemoryInfos` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the corresponding `VkMemoryRequirements` structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07199
If an element of `pBindSessionMemoryInfos` has a corresponding `VkMemoryRequirements` structure, then the `memoryOffset` member of that element of `pBindSessionMemoryInfos` **must** be an integer multiple of the `alignment` member of the corresponding `VkMemoryRequirements` structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07200
If an element of `pBindSessionMemoryInfos` has a corresponding `VkMemoryRequirements` structure, then the `memorySize` member of that element of `pBindSessionMemoryInfos` **must** equal the `size` member of the corresponding `VkMemoryRequirements` structure

Valid Usage (Implicit)

- VUID-vkBindVideoSessionMemoryKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkBindVideoSessionMemoryKHR-videoSession-parameter
`videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-parameter
`pBindSessionMemoryInfos` **must** be a valid pointer to an array of `bindSessionMemoryInfoCount` valid `VkBindVideoSessionMemoryInfoKHR` structures
- VUID-vkBindVideoSessionMemoryKHR-bindSessionMemoryInfoCount-arraylength
`bindSessionMemoryInfoCount` **must** be greater than 0

- VUID-vkBindVideoSessionMemoryKHR-videoSession-parent **videoSession** **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **videoSession** **must** be externally synchronized

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**

The **VkBindVideoSessionMemoryInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkBindVideoSessionMemoryInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           memoryBindIndex;
    VkDeviceMemory      memory;
    VkDeviceSize        memoryOffset;
    VkDeviceSize        memorySize;
} VkBindVideoSessionMemoryInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memoryBindIndex** is the memory binding index to bind memory to.
- **memory** is the allocated device memory to be bound to the video session's memory binding with index **memoryBindIndex**.
- **memoryOffset** is the start offset of the region of **memory** which is to be bound.
- **memorySize** is the size in bytes of the region of **memory**, starting from **memoryOffset** bytes, to be bound.

Valid Usage

- VUID-VkBindVideoSessionMemoryInfoKHR-memoryOffset-07201 **memoryOffset** **must** be less than the size of **memory**
- VUID-VkBindVideoSessionMemoryInfoKHR-memorySize-07202

`memorySize` **must** be less than or equal to the size of `memory` minus `memoryOffset`

Valid Usage (Implicit)

- `VUID-VkBindVideoSessionMemoryInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_VIDEO_SESSION_MEMORY_INFO_KHR`
- `VUID-VkBindVideoSessionMemoryInfoKHR-pNext-pNext`
`pNext` **must** be `NULL`
- `VUID-VkBindVideoSessionMemoryInfoKHR-memory-parameter`
`memory` **must** be a valid `VkDeviceMemory` handle

42.6. Video Profile Compatibility

Resources and query pools used with a particular video session **must** be compatible with the `video profile` the video session was created with.

A `VkBuffer` is compatible with a video profile if it was created with the `VkBufferCreateInfo::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing an element matching the `VkVideoProfileInfoKHR` structure chain describing the video profile, and `VkBufferCreateInfo::usage` including at least one bit specific to video coding usage.

- `VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR`
- `VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR`
- `VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`
- `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR`

A `VkBuffer` is also compatible with a video profile if it was created with `VkBufferCreateInfo::flags` including `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`.

A `VkImage` is compatible with a video profile if it was created with the `VkImageCreateInfo::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing an element matching the `VkVideoProfileInfoKHR` structure chain describing the video profile, and `VkImageCreateInfo::usage` including at least one bit specific to video coding usage.

- `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`

A `VkImage` is also compatible with a video profile if all of the following conditions are true for the `VkImageCreateInfo` structure the image was created with:

- `VkImageCreateInfo::flags` included `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`.
- The list of `VkVideoFormatPropertiesKHR` structures, obtained by calling `vkGetPhysicalDeviceVideoFormatPropertiesKHR` with `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` equal to the `VkImageCreateInfo::usage` the image was created with and the `VkPhysicalDeviceVideoFormatInfoKHR::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing a single array element specifying the `VkVideoProfileInfoKHR` structure chain describing the video profile in question, contains an element for which all of the following conditions are true with respect to the `VkImageCreateInfo` structure the image was created with:
 - `VkImageCreateInfo::format` equals `VkVideoFormatPropertiesKHR::format`.
 - `VkImageCreateInfo::flags` only contains `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and/or bits also set in `VkVideoFormatPropertiesKHR::imageCreateFlags`.

NOTE

Specifying `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` when creating `decode output pictures` or `encode input pictures` is always supported when `videoMaintenance1` is enabled, regardless of the supported `VkImageCreateFlags` reported in `VkVideoFormatPropertiesKHR::imageCreateFlags`. Accordingly, implementations **should** not report `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` in `VkVideoFormatPropertiesKHR::imageCreateFlags` for any video format.

- `VkImageCreateInfo::imageType` equals `VkVideoFormatPropertiesKHR::imageType`.
- `VkImageCreateInfo::tiling` equals `VkVideoFormatPropertiesKHR::imageTiling`.
- `VkImageCreateInfo::usage` only contains bits also set in `VkVideoFormatPropertiesKHR::imageUsageFlags`, or `VkImageCreateInfo::flags` includes `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT`.

NOTE

While some of these rules allow creating buffer or image resources that **may** be compatible with any video profile, applications **should** still prefer to include the specific video profiles the buffer or image resource is expected to be used with (through a `VkVideoProfileListInfoKHR` structure included in the `pNext` chain of the corresponding create info structure) whenever the information about the complete set of video profiles is available at resource creation time, to enable the implementation to optimize the created resource for the specific use case. In the absence of that information, the implementation **may** have to make conservative decisions about the memory requirements or representation of the resource.

A `VkImageView` is compatible with a video profile if the `VkImage` it was created from is also compatible with that video profile.

A `VkQueryPool` is compatible with a video profile if it was created with the `VkQueryPoolCreateInfo::pNext` chain including a `VkVideoProfileInfoKHR` structure chain describing the same video profile, and `VkQueryPoolCreateInfo::queryType` having one of the following values:

- `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`
- `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`

42.7. Video Session Parameters

Video session parameters objects **can** store preprocessed codec-specific parameters used with a compatible video session, and enable reducing the number of parameters needed to be provided and processed by the implementation while recording video coding operations into command buffers.

Parameters stored in such objects are *immutable* to facilitate the concurrent use of the stored parameters in multiple threads. At the same time, new parameters **can** be added to existing objects using the [vkUpdateVideoSessionParametersKHR](#) command.

In order to support concurrent use of the stored immutable parameters while also allowing the video session parameters object to be extended with new parameters, each video session parameters object maintains an *update sequence counter* that is set to 0 at object creation time and **must** be incremented by each subsequent update operation.

Certain video sequences that adhere to particular video compression standards permit updating previously supplied parameters. If a parameter update is necessary, the application has the following options:

- Cache the set of parameters on the application side and create a new video session parameters object adding all the parameters with appropriate changes, as necessary; or
- Create a new video session parameters object providing only the updated parameters and the previously used object as the template, which ensures that parameters not specified at creation time will be copied unmodified from the template object.

The actual types of parameters that **can** be stored and the capacity for individual parameter types, and the methods of initializing, updating, and referring to individual parameters are specific to the video codec operation the video session parameters object was created with.

- For [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#) these are defined in the [H.264 Decode Parameter Sets](#) section.
- For [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#) these are defined in the [H.265 Decode Parameter Sets](#) section.
- For [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#) these are defined in the [AV1 Decode Parameter Sets](#) section.
- For [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#) these are defined in the [H.264 Encode Parameter Sets](#) section.
- For [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#) these are defined in the [H.265 Encode Parameter Sets](#) section.

Video session parameters objects created with an encode operation are further specialized based on the [video encode quality level](#) the video session parameters are used with, as implementations **may** apply different sets of [parameter overrides](#) depending on the used quality level. This enables implementations to store the potentially optimized set of parameters in these objects, further limiting the necessary processing required while recording video encode operations into command buffers.

Video session parameters are represented by `VkVideoSessionParametersKHR` handles:

```
// Provided by VK_KHR_video_queue
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkVideoSessionParametersKHR)
```

42.7.1. Creating Video Session Parameters

To create a video session parameters object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkCreateVideoSessionParametersKHR(
    VkDevice device,
    const VkVideoSessionParametersCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkVideoSessionParametersKHR* pVideoSessionParameters);
```

- `device` is the logical device that creates the video session parameters object.
- `pCreateInfo` is a pointer to `VkVideoSessionParametersCreateInfoKHR` structure containing parameters to be used to create the video session parameters object.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pVideoSessionParameters` is a pointer to a `VkVideoSessionParametersKHR` handle in which the resulting video session parameters object is returned.

The resulting video session parameters object is said to be created with the video codec operation `pCreateInfo->videoSession` was created with.

Video session parameters objects created with an encode operation are always created with respect to a [video encode quality level](#). By default, the created video session parameters objects are created with quality level zero, unless otherwise specified by including a `VkVideoEncodeQualityLevelInfoKHR` structure in the `pCreateInfo->pNext` chain, in which case the video session parameters object is created with the quality level specified in `VkVideoEncodeQualityLevelInfoKHR::qualityLevel`.

If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then it will be used as a template for constructing the new video session parameters object. This happens by first adding any parameters according to the additional creation parameters provided in the `pCreateInfo->pNext` chain, followed by adding any parameters from the template object that have a key that does not match the key of any of the already added parameters.

For video session parameters objects created with an encode operation, the template object specified in `pCreateInfo->videoSessionParametersTemplate` **must** have been created with the same [video encode quality level](#) as the newly created object.

NOTE

This means that codec-specific parameters stored in video session parameters objects **can** only be reused across different video encode quality levels by re-specifying them, as previously created video session parameters against other

quality levels **cannot** be used as template because the original codec-specific parameters (before the implementation **may** have applied [parameter overrides](#)) **may** no longer be available in them for the purposes of constructing the derived object.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH264SequenceParameterSet` structures representing [H.264 SPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id`.
- `StdVideoH264PictureParameterSet` structures representing [H.264 PPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id` and `pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH265VideoParameterSet` structures representing [H.265 VPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `vps_video_parameter_set_id`.
- `StdVideoH265SequenceParameterSet` structures representing [H.265 SPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet`

entries specified in `pParametersAddInfo->pStdSPSs` are added first;

- If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id` and `sps_seq_parameter_set_id`.
- `StdVideoH265PictureParameterSet` structures representing [H.265 PPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the created video session parameters object will contain a single [AV1 sequence header](#) represented by a `StdVideoAV1SequenceHeader` structure specified through the `pStdSequenceHeader` member of the `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain. As such video session parameters objects **can** only contain a single [AV1 sequence header](#), it is not possible to use a previously created object as a template or subsequently update the created video session parameters object.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH264SequenceParameterSet` structures representing [H.264 SPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id`.
- `StdVideoH264PictureParameterSet` structures representing [H.264 PPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same

seq_parameter_set_id and pic_parameter_set_id.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH265VideoParameterSet` structures representing [H.265 VPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `vps_video_parameter_set_id`.
- `StdVideoH265SequenceParameterSet` structures representing [H.265 SPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id` and `sps_seq_parameter_set_id`.
- `StdVideoH265PictureParameterSet` structures representing [H.265 PPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id`.

In case of video session parameters objects created with a video encode operation, implementations **may** return the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

NOTE

Applications **should** not rely on the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.

Valid Usage (Implicit)

- `VUID-vkCreateVideoSessionParametersKHR-device-parameter`
`device` **must** be a valid `VkDevice` handle
- `VUID-vkCreateVideoSessionParametersKHR-pCreateInfo-parameter`
`pCreateInfo` **must** be a valid pointer to a valid `VkVideoSessionParametersCreateInfoKHR` structure
- `VUID-vkCreateVideoSessionParametersKHR-pAllocator-parameter`
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- `VUID-vkCreateVideoSessionParametersKHR-pVideoSessionParameters-parameter`
`pVideoSessionParameters` **must** be a valid pointer to a `VkVideoSessionParametersKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR`

The `VkVideoSessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionParametersCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoSessionParametersCreateFlagsKHR flags;
    VkVideoSessionParametersKHR videoSessionParametersTemplate;
    VkVideoSessionKHR videoSession;
} VkVideoSessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `videoSessionParametersTemplate` is `VK_NULL_HANDLE` or a valid handle to a `VkVideoSessionParametersKHR` object used as a template for constructing the new video session parameters object.

- `videoSession` is the video session object against which the video session parameters object is going to be created.

Limiting values are defined below that are referenced by the relevant valid usage statements of this structure.

- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then let `StdVideoH264SequenceParameterSet` `spsAddList[]` be the list of `H.264 SPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it with `seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then let `StdVideoH264PictureParameterSet` `ppsAddList[]` be the list of `H.264 PPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it with `seq_parameter_set_id` or `pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then let `StdVideoH265VideoParameterSet` `vpsAddList[]` be the list of `H.265 VPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added to `vpsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it with `vps_video_parameter_set_id` not matching any of the entries already in `vpsAddList` is added to `vpsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then let `StdVideoH265SequenceParameterSet` `spsAddList[]` be the list of `H.265 SPS` entries to add to the created video session parameters object, defined as follows:

- If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
- If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it with `sps_video_parameter_set_id` or `sps_seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then let `StdVideoH265PictureParameterSet ppsAddList[]` be the list of `H.265 PPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, or `pps_pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.
- If `videoSession` was created with an encode operation, then let `uint32_t qualityLevel` be the `video encode quality level` of the created video session parameters object, defined as follows:
 - If the `pNext` chain of this structure includes a `VkVideoEncodeQualityLevelInfoKHR` structure, then `qualityLevel` is equal to `VkVideoEncodeQualityLevelInfoKHR::qualityLevel`.
 - Otherwise `qualityLevel` is `0`
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then let `StdVideoH264SequenceParameterSet spsAddList[]` be the list of `H.264 SPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it with `seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then let `StdVideoH264PictureParameterSet ppsAddList[]` be the list of `H.264 PPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in

pParametersAddInfo->pStdPPSs are added to ppsAddList;

- If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH264PictureParameterSet entry stored in it with seq_parameter_set_id or pic_parameter_set_id not matching any of the entries already in ppsAddList is added to ppsAddList.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then let StdVideoH265VideoParameterSet vpsAddList[] be the list of H.265 VPS entries to add to the created video session parameters object, defined as follows:
 - If the pParametersAddInfo member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH265VideoParameterSet entries specified in pParametersAddInfo->pStdVPSs are added to vpsAddList;
 - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265VideoParameterSet entry stored in it with vps_video_parameter_set_id not matching any of the entries already in vpsAddList is added to vpsAddList.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then let StdVideoH265SequenceParameterSet spsAddList[] be the list of H.265 SPS entries to add to the created video session parameters object, defined as follows:
 - If the pParametersAddInfo member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH265SequenceParameterSet entries specified in pParametersAddInfo->pStdSPSs are added to spsAddList;
 - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265SequenceParameterSet entry stored in it with sps_video_parameter_set_id or sps_seq_parameter_set_id not matching any of the entries already in spsAddList is added to spsAddList.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then let StdVideoH265PictureParameterSet ppsAddList[] be the list of H.265 PPS entries to add to the created video session parameters object, defined as follows:
 - If the pParametersAddInfo member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH265PictureParameterSet entries specified in pParametersAddInfo->pStdPPSs are added to ppsAddList;
 - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265PictureParameterSet entry stored in it with sps_video_parameter_set_id, pps_seq_parameter_set_id, or pps_pic_parameter_set_id not matching any of the entries already in ppsAddList is added to ppsAddList.

Valid Usage

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-04855
If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, it **must** have been created against `videoSession`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-08310
If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE` and `videoSession` was created with an encode operation, then `qualityLevel` **must** equal the `video encode quality` level `videoSessionParametersTemplate` was created with
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07203
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07204
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07205
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07206
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07207
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of elements of `vpsAddList` **must** be less than or equal to the `maxStdVPSCount` specified in the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07208
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07209
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of elements of `ppsAddList`

must be less than or equal to the `maxStdPPSCount` specified in the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-09258

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then `videoSessionParametersTemplate` **must** be `VK_NULL_HANDLE`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-09259

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07210

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04839

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04840

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07211

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04841

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of elements of `vpsAddList` **must** be less than or equal to the `maxStdVPSCount` specified in the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04842

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04843

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-08319

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then `num_tile_columns_minus1` **must** be less than `VkVideoEncodeH265CapabilitiesKHR::maxTiles.width`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with, for each element of `ppsAddList`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-08320

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then `num_tile_rows_minus1` **must** be less than `VkVideoEncodeH265CapabilitiesKHR::maxTiles.height`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with, for each element of `ppsAddList`

Valid Usage (Implicit)

- VUID-VkVideoSessionParametersCreateInfoKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_CREATE_INFO_KHR`

- VUID-VkVideoSessionParametersCreateInfoKHR-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoDecodeAV1SessionParametersCreateInfoKHR`, `VkVideoDecodeH264SessionParametersCreateInfoKHR`, `VkVideoDecodeH265SessionParametersCreateInfoKHR`, `VkVideoEncodeH264SessionParametersCreateInfoKHR`, `VkVideoEncodeH265SessionParametersCreateInfoKHR`, or `VkVideoEncodeQualityLevelInfoKHR`

- VUID-VkVideoSessionParametersCreateInfoKHR-sType-unique

The `sType` value of each struct in the `pNext` chain **must** be unique

- VUID-VkVideoSessionParametersCreateInfoKHR-flags-zerobitmask

`flags` **must** be 0

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-parameter

If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, `videoSessionParametersTemplate` **must** be a valid `VkVideoSessionParametersKHR` handle

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-parameter

`videoSession` **must** be a valid `VkVideoSessionKHR` handle

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-parent

If `videoSessionParametersTemplate` is a valid handle, it **must** have been created, allocated,

or retrieved from `videoSession`

- VUID-VkVideoSessionParametersCreateInfoKHR-commonparent

Both of `videoSession`, and `videoSessionParametersTemplate` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoSessionParametersCreateFlagsKHR;
```

`VkVideoSessionParametersCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

42.7.2. Destroying Video Session Parameters

To destroy a video session parameters object, call:

```
// Provided by VK_KHR_video_queue
void vkDestroyVideoSessionParametersKHR(
    VkDevice device,
    VkVideoSessionParametersKHR videoSessionParameters,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the video session parameters object.
- `videoSessionParameters` is the video session parameters object to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07212
All submitted commands that refer to `videoSessionParameters` **must** have completed execution
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07213
If `VkAllocationCallbacks` were provided when `videoSessionParameters` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07214
If no `VkAllocationCallbacks` were provided when `videoSessionParameters` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyVideoSessionParametersKHR-device-parameter
`device` **must** be a valid `VkDevice` handle

- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-parameter
If `videoSessionParameters` is not `VK_NULL_HANDLE`, `videoSessionParameters` **must** be a valid `VkVideoSessionParametersKHR` handle
- VUID-vkDestroyVideoSessionParametersKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-parent
If `videoSessionParameters` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `videoSessionParameters` **must** be externally synchronized

42.7.3. Updating Video Session Parameters

To update video session parameters object with new parameters, call:

```
// Provided by VK_KHR_video_queue
VkResult vkUpdateVideoSessionParametersKHR(
    VkDevice          device,
    VkVideoSessionParametersKHR videoSessionParameters,
    const VkVideoSessionParametersUpdateInfoKHR* pUpdateInfo);
```

- `device` is the logical device that updates the video session parameters.
- `videoSessionParameters` is the video session parameters object to update.
- `pUpdateInfo` is a pointer to a `VkVideoSessionParametersUpdateInfoKHR` structure specifying the parameter update information.

After a successful call to this command, the `update sequence counter` of `videoSessionParameters` is changed to the value specified in `pUpdateInfo->updateSequenceCount`.

NOTE

As each update issued to a video session parameters object needs to specify the next available update sequence count value, concurrent updates of the same video session parameters object are inherently disallowed. However, recording video coding operations to command buffers referring to parameters previously added to the video session parameters object is allowed, even if there is a concurrent update in progress adding some new entries to the object.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The H.264 SPS entries specified in `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdSPSs`.
- The H.264 PPS entries specified in `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdPPSs`.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The H.265 VPS entries specified in `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdVPSs`.
- The H.265 SPS entries specified in `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdSPSs`.
- The H.265 PPS entries specified in `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdPPSs`.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The H.264 SPS entries specified in `VkVideoEncodeH264SessionParametersAddInfoKHR::pStdSPSs`.
- The H.264 PPS entries specified in `VkVideoEncodeH264SessionParametersAddInfoKHR::pStdPPSs`.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The H.265 VPS entries specified in `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdVPSs`.
- The H.265 SPS entries specified in `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdSPSs`.
- The H.265 PPS entries specified in `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs`.

In case of video session parameters objects created with a video encode operation, implementations **may** return the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

NOTE Applications **should** not rely on the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR`

error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.

Valid Usage

- VUID-vkUpdateVideoSessionParametersKHR-pUpdateInfo-07215
`pUpdateInfo->updateSequenceCount` **must** equal the current `update sequence counter` of `videoSessionParameters` plus one
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07216
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching any of the elements of `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdSPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07217
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of `StdVideoH264SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoDecodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH264SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07218
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264PictureParameterSet` entry with both `seq_parameter_set_id` and `pic_parameter_set_id` matching any of the elements of `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdPPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07219
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of `StdVideoH264PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoDecodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH264SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07220
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching any of the elements of `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdVPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07221
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of `StdVideoH265VideoParameterSet` entries already stored in it plus the value of the `stdVPSCount` member of the `VkVideoDecodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdVPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07222
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265SequenceParameterSet` entry with both `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching any of the elements of `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdSPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07223
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of `StdVideoH265SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoDecodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07224
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` all matching any of the elements of `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdPPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07225
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of `StdVideoH265PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoDecodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-09260
`videoSessionParameters` **must** not have been created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07226
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes

a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching any of the elements of `VkVideoEncodeH264SessionParametersAddInfoKHR::pStdSPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06441

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of `StdVideoH264SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoEncodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH264SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07227

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264PictureParameterSet` entry with both `seq_parameter_set_id` and `pic_parameter_set_id` matching any of the elements of `VkVideoEncodeH264SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06442

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of `StdVideoH264PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoEncodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH264SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07228

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching any of the elements of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdVPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06443

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of `StdVideoH265VideoParameterSet` entries already stored in it plus the value of the `stdVPSCount` member of the `VkVideoEncodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdVPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07229

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes

a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265SequenceParameterSet` entry with both `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching any of the elements of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdSPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06444

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of `StdVideoH265SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoEncodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07230

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` all matching any of the elements of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06445

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of `StdVideoH265PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoEncodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-08321

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `num_tile_columns_minus1` **must** be less than `VkVideoEncodeH265CapabilitiesKHR::maxTiles.width`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSessionParameters` was created with, for each element of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-08322

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `num_tile_rows_minus1` **must** be less than `VkVideoEncodeH265CapabilitiesKHR::maxTiles.height`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSessionParameters` was created with, for each element of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs`

Valid Usage (Implicit)

- VUID-vkUpdateVideoSessionParametersKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-parameter **videoSessionParameters** **must** be a valid [VkVideoSessionParametersKHR](#) handle
- VUID-vkUpdateVideoSessionParametersKHR-pUpdateInfo-parameter **pUpdateInfo** **must** be a valid pointer to a valid [VkVideoSessionParametersUpdateInfoKHR](#) structure
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-parent **videoSessionParameters** **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR](#)

The [VkVideoSessionParametersUpdateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionParametersUpdateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           updateSequenceCount;
} VkVideoSessionParametersUpdateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **updateSequenceCount** is the new [update sequence count](#) to set for the video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoSessionParametersUpdateInfoKHR-sType-sType **sType** **must** be [VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_UPDATE_INFO_KHR](#)
- VUID-VkVideoSessionParametersUpdateInfoKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either

NULL or a pointer to a valid instance of
VkVideoDecodeH264SessionParametersAddInfoKHR,
VkVideoDecodeH265SessionParametersAddInfoKHR,
VkVideoEncodeH264SessionParametersAddInfoKHR, or
VkVideoEncodeH265SessionParametersAddInfoKHR

- VUID-VkVideoSessionParametersUpdateInfoKHR-sType-unique
The sType value of each struct in the pNext chain **must** be unique

42.8. Video Coding Scope

Applications **can** record video coding commands for a video session only within a video coding scope.

To begin a video coding scope, call:

```
// Provided by VK_KHR_video_queue
void vkCmdBeginVideoCodingKHR(
    VkCommandBuffer                commandBuffer,
    const VkVideoBeginCodingInfoKHR* pBeginInfo);
```

- **commandBuffer** is the command buffer in which to record the command.
- **pBeginInfo** is a pointer to a [VkVideoBeginCodingInfoKHR](#) structure specifying the parameters of the video coding scope, including the video session and video session parameters object to use.

After beginning a video coding scope, the video session object specified in **pBeginInfo->videoSession** is *bound* to the command buffer, and the command buffer is ready to record video coding operations. Similarly, if **pBeginInfo->videoSessionParameters** is not **VK_NULL_HANDLE**, it is also *bound* to the command buffer, and video coding operations **can** refer to the codec-specific parameters stored in it.

This command also establishes the set of *bound reference picture resources* that **can** be used as [reconstructed pictures](#) or [reference pictures](#) within the video coding scope. Each element of this set consists of a [video picture resource](#) and the [DPB slot](#) index associated with it, if there is one.

The set of bound reference picture resources is immutable within a video coding scope, however, the DPB slot index associated with any of the bound reference picture resources **can** change during the video coding scope in response to video coding operations.

The [VkVideoReferenceSlotInfoKHR](#) structures provided as the elements of **pBeginInfo->pReferenceSlots** are interpreted by this command as follows:

- If **slotIndex** is non-negative and **pPictureResource** is not **NULL**, then the [video picture resource](#) defined by the [VkVideoPictureResourceInfoKHR](#) structure pointed to by **pPictureResource** is added to the set of bound reference picture resources and is associated with the DPB slot index specified in **slotIndex**.
- If **slotIndex** is non-negative and **pPictureResource** is **NULL**, then the DPB slot with index **slotIndex**

is **deactivated** by this command.

- If **slotIndex** is negative and **pPictureResource** is not **NULL**, then the **video picture resource** defined by the **VkVideoPictureResourceInfoKHR** structure pointed to by **pPictureResource** is added to the set of bound reference picture resources without an associated DPB slot. Such a picture resource **can** be subsequently used as a **reconstructed picture** to associate it with a DPB slot.
- If **slotIndex** is negative and **pPictureResource** is **NULL**, then the element is ignored.

NOTE

It is possible for multiple bound reference picture resources to be associated with the same DPB slot index, or for a single bound reference picture to refer to multiple separate reference pictures. For example, in case of an **H.264 decode profile** with **interlaced frame support** a single DPB slot can refer to two separate pictures for the top and bottom fields. Depending on the picture layout used by the **H.264 decode profile**, the following special cases **may** arise:

- If the picture layout is **VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR**, then the top and bottom field pictures are physically co-located in the same video picture resource with even scanlines corresponding to the top field and odd scanlines corresponding to the bottom field, respectively.
- If the picture layout is **VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR**, then the top and bottom field pictures are stored in separate video picture resources (in separate subregions of the same image layer, in separate layers of the same image, or in entirely separate images), hence two elements of **VkVideoBeginCodingInfoKHR::pReferenceSlots** **can** contain the same **slotIndex** but specify different video picture resources in their **pPictureResource** members.

All non-negative **slotIndex** values specified in the elements of **pBeginInfo->pReferenceSlots** **must** identify DPB slots of the video session that are in the **active state** at the time this command is executed on the device.

NOTE

The application does not have to specify an entry in **pBeginInfo->pReferenceSlots** corresponding to all active DPB slots of the video session, but only for those which are intended to be used in the video coding scope. This way the application can avoid any potential runtime cost associated with binding the corresponding picture resources to the command buffer.

In case of a video encode session, the application is also responsible for providing information about the current **rate control state** configured for the video session by including an instance of the **VkVideoEncodeRateControlInfoKHR** structure in the **pNext** chain of **pBeginInfo**. If no **VkVideoEncodeRateControlInfoKHR** is included, then the presence of an empty **VkVideoEncodeRateControlInfoKHR** structure is implied which indicates that the current **rate control mode** is **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR**. The specified state **must match** the effective rate control state configured for the video session at the time the recorded command is executed on the device.

NOTE

Including an instance of the **VkVideoEncodeRateControlInfoKHR** structure in the

`pNext` chain of `pBeginInfo` does not change the rate control state configured for the video session, but only specifies the expected rate control state configured at the time the recorded command is executed on the device which allows the implementation to have information about the configured rate control state at command buffer recording time. In order to change the current rate control state of a video session, the application has to issue an appropriate `vkCmdControlVideoCodingKHR` command as described in the [Video Coding Control](#) and [Rate Control State](#) sections.

Valid Usage

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07231
The `VkCommandPool` that `commandBuffer` was allocated from **must** support the video codec operation `pBeginInfo->videoSession` was created with, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`
- VUID-vkCmdBeginVideoCodingKHR-None-07232
There **must** be no `active` queries
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07233
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pBeginInfo->videoSession` **must** not have been created with `VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR`
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07234
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pBeginInfo->videoSession` **must** have been created with `VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR`
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07235
If `commandBuffer` is an unprotected command buffer, `protectedNoFault` is not supported, and the `pPictureResource` member of any element of `pBeginInfo->pReferenceSlots` is not `NULL`, then `pPictureResource->imageViewBinding` for that element **must** not specify an image view created from a protected image
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07236
If `commandBuffer` is a protected command buffer `protectedNoFault` is not supported, and the `pPictureResource` member of any element of `pBeginInfo->pReferenceSlots` is not `NULL`, then `pPictureResource->imageViewBinding` for that element **must** specify an image view created from a protected image
- VUID-vkCmdBeginVideoCodingKHR-slotIndex-07239
If the `slotIndex` member of any element of `pBeginInfo->pReferenceSlots` is not negative, then it **must** specify the index of a DPB slot that is in the `active` state in `pBeginInfo->videoSession` at the time the command is executed on the device
- VUID-vkCmdBeginVideoCodingKHR-pPictureResource-07265
Each video picture resource specified by any non-`NULL` `pPictureResource` member specified in the elements of `pBeginInfo->pReferenceSlots` for which `slotIndex` is not negative **must** `match` one of the video picture resources currently associated with the DPB slot index of

`pBeginInfo->videoSession` specified by `slotIndex` at the time the command is executed on the device

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08253

If `pBeginInfo->videoSession` was created with a video encode operation and the `pNext` chain of `pBeginInfo` does not include an instance of the `VkVideoEncodeRateControlInfoKHR` structure, then the `rate control mode` configured for `pBeginInfo->videoSession` at the time the command is executed on the device **must** be `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR`

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08254

If `pBeginInfo->videoSession` was created with a video encode operation and the `pNext` chain of `pBeginInfo` includes an instance of the `VkVideoEncodeRateControlInfoKHR` structure, then it **must match** the rate control state configured for `pBeginInfo->videoSession` at the time the command is executed on the device

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08255

If `pBeginInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, and `VkVideoEncodeH264CapabilitiesKHR::requiresGopRemainingFrames` is `VK_TRUE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the `pBeginInfo->videoSession` was created with, then the `pNext` chain of `pBeginInfo` **must** include an instance of the `VkVideoEncodeH264GopRemainingFrameInfoKHR` with its `useGopRemainingFrames` member set to `VK_TRUE`

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08256

If `pBeginInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, and `VkVideoEncodeH265CapabilitiesKHR::requiresGopRemainingFrames` is `VK_TRUE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the `pBeginInfo->videoSession` was created with, then the `pNext` chain of `pBeginInfo` **must** include an instance of the `VkVideoEncodeH265GopRemainingFrameInfoKHR` with its `useGopRemainingFrames` member set to `VK_TRUE`

Valid Usage (Implicit)

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-parameter

`pBeginInfo` **must** be a valid pointer to a valid `VkVideoBeginCodingInfoKHR` structure

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-recording

`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support decode, or encode

operations

- VUID-vkCmdBeginVideoCodingKHR-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdBeginVideoCodingKHR-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdBeginVideoCodingKHR-bufferlevel

commandBuffer **must** be a primary **VkCommandBuffer**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Outside	Decode Encode	Action State

The **VkVideoBeginCodingInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoBeginCodingInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoBeginCodingFlagsKHR flags;
    VkVideoSessionKHR        videoSession;
    VkVideoSessionParametersKHR videoSessionParameters;
    uint32_t                 referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
} VkVideoBeginCodingInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **videoSession** is the video session object to be bound for the processing of the video commands.
- **videoSessionParameters** is **VK_NULL_HANDLE** or a handle of a **VkVideoSessionParametersKHR** object to be used for the processing of the video commands. If **VK_NULL_HANDLE**, then no video session parameters object is bound for the duration of the video coding scope.

- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is a pointer to an array of `VkVideoReferenceSlotInfoKHR` structures specifying the information used to determine the set of `bound reference picture resources` for the video coding scope and their initial association with `DPB slot` indices.

Limiting values are defined below that are referenced by the relevant valid usage statements of this structure.

- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of `codedOffsetGranularity` are 0.
 - If `videoSession` was created with an `H.264 decode profile` with a `VkVideoDecodeH264ProfileInfoKHR::pictureLayout` of `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`, then `codedOffsetGranularity` is equal to `VkVideoDecodeH264CapabilitiesKHR::fieldOffsetGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for that video profile.

Valid Usage

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07237
`videoSession` **must** have memory bound to all of its memory bindings returned by `vkGetVideoSessionMemoryRequirementsKHR` for `videoSession`
- VUID-VkVideoBeginCodingInfoKHR-slotIndex-04856
Each non-negative `VkVideoReferenceSlotInfoKHR::slotIndex` specified in the elements of `pReferenceSlots` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when `videoSession` was created
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07238
Each video picture resource corresponding to any non-NULL `pPictureResource` member specified in the elements of `pReferenceSlots` **must** be `unique` within `pReferenceSlots`
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07240
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** be `compatible` with the video profile `videoSession` was created with
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07241
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then the format of the image view specified in `pPictureResource->imageViewBinding` for that element **must** match the `VkVideoSessionCreateInfoKHR::referencePictureFormat` `videoSession` was created with
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07242
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then its `codedOffset` member **must** be an integer multiple of `codedOffsetGranularity`
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07243
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then its `codedExtent` member **must** be between `minCodedExtent` and `maxCodedExtent`, inclusive,

`videoSession` was created with

- VUID-VkVideoBeginCodingInfoKHR-flags-07244

If `VkVideoCapabilitiesKHR::flags` does not include `VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with, then `pPictureResource->imageViewBinding` of all elements of `pReferenceSlots` with a non-NULL `pPictureResource` member **must** specify image views created from the same image

- VUID-VkVideoBeginCodingInfoKHR-slotIndex-07245

If `videoSession` was created with a decode operation and the `slotIndex` member of any element of `pReferenceSlots` is not negative, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** have been created with `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`

- VUID-VkVideoBeginCodingInfoKHR-slotIndex-07246

If `videoSession` was created with an encode operation and the `slotIndex` member of any element of `pReferenceSlots` is not negative, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** have been created with `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07247

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07248

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`

- VUID-VkVideoBeginCodingInfoKHR-videoSession-09261

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07249

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07250

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`

- VUID-VkVideoBeginCodingInfoKHR-videoSessionParameters-04857

If `videoSessionParameters` is not `VK_NULL_HANDLE`, it **must** have been created with `videoSession` specified in `VkVideoSessionParametersCreateInfoKHR::videoSession`

Valid Usage (Implicit)

- VUID-VkVideoBeginCodingInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_BEGIN_CODING_INFO_KHR`
- VUID-VkVideoBeginCodingInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeH264GopRemainingFrameInfoKHR`, `VkVideoEncodeH264RateControlInfoKHR`, `VkVideoEncodeH265GopRemainingFrameInfoKHR`, `VkVideoEncodeH265RateControlInfoKHR`, or `VkVideoEncodeRateControlInfoKHR`
- VUID-VkVideoBeginCodingInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkVideoBeginCodingInfoKHR-flags-zero bitmask
`flags` **must** be `0`
- VUID-VkVideoBeginCodingInfoKHR-videoSession-parameter
`videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-VkVideoBeginCodingInfoKHR-videoSessionParameters-parameter
If `videoSessionParameters` is not `VK_NULL_HANDLE`, `videoSessionParameters` **must** be a valid `VkVideoSessionParametersKHR` handle
- VUID-VkVideoBeginCodingInfoKHR-pReferenceSlots-parameter
If `referenceSlotCount` is not `0`, `pReferenceSlots` **must** be a valid pointer to an array of `referenceSlotCount` valid `VkVideoReferenceSlotInfoKHR` structures
- VUID-VkVideoBeginCodingInfoKHR-videoSessionParameters-parent
If `videoSessionParameters` is a valid handle, it **must** have been created, allocated, or retrieved from `videoSession`
- VUID-VkVideoBeginCodingInfoKHR-commonparent
Both of `videoSession`, and `videoSessionParameters` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoBeginCodingFlagsKHR;
```

`VkVideoBeginCodingFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkVideoReferenceSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoReferenceSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    int32_t                  slotIndex;
    const VkVideoPictureResourceInfoKHR* pPictureResource;
} VkVideoReferenceSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `slotIndex` is the index of the `DPB slot` or a negative integer value.
- `pPictureResource` is `NULL` or a pointer to a `VkVideoPictureResourceInfoKHR` structure describing the `video picture resource` associated with the DPB slot index specified by `slotIndex`.

Valid Usage (Implicit)

- VUID-VkVideoReferenceSlotInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_REFERENCE_SLOT_INFO_KHR`
- VUID-VkVideoReferenceSlotInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoDecodeAV1DpbSlotInfoKHR`, `VkVideoDecodeH264DpbSlotInfoKHR`, `VkVideoDecodeH265DpbSlotInfoKHR`, `VkVideoEncodeH264DpbSlotInfoKHR`, or `VkVideoEncodeH265DpbSlotInfoKHR`
- VUID-VkVideoReferenceSlotInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkVideoReferenceSlotInfoKHR-pPictureResource-parameter
If `pPictureResource` is not `NULL`, `pPictureResource` **must** be a valid pointer to a valid `VkVideoPictureResourceInfoKHR` structure

To end a video coding scope, call:

```
// Provided by VK_KHR_video_queue
void vkCmdEndVideoCodingKHR(
    VkCommandBuffer          commandBuffer,
    const VkVideoEndCodingInfoKHR* pEndCodingInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pEndCodingInfo` is a pointer to a `VkVideoEndCodingInfoKHR` structure specifying the parameters for ending the video coding scope.

After ending a video coding scope, the video session object, the optional video session parameters object, and all `reference picture resources` previously bound by the corresponding `vkCmdBeginVideoCodingKHR` command are *unbound*.

Valid Usage

- VUID-vkCmdEndVideoCodingKHR-None-07251
There **must** be no **active** queries

Valid Usage (Implicit)

- VUID-vkCmdEndVideoCodingKHR-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdEndVideoCodingKHR-pEndCodingInfo-parameter
pEndCodingInfo **must** be a valid pointer to a valid **VkVideoEndCodingInfoKHR** structure
- VUID-vkCmdEndVideoCodingKHR-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdEndVideoCodingKHR-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support decode, or encode operations
- VUID-vkCmdEndVideoCodingKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdEndVideoCodingKHR-videocoding
This command **must** only be called inside of a video coding scope
- VUID-vkCmdEndVideoCodingKHR-bufferlevel
commandBuffer **must** be a primary **VkCommandBuffer**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	Decode Encode	Action State

The **VkVideoEndCodingInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoEndCodingInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoEndCodingFlagsKHR flags;
} VkVideoEndCodingInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.

Valid Usage (Implicit)

- VUID-VkVideoEndCodingInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_END_CODING_INFO_KHR`
- VUID-VkVideoEndCodingInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkVideoEndCodingInfoKHR-flags-zero bitmask
`flags` **must** be 0

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoEndCodingFlagsKHR;
```

`VkVideoEndCodingFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

42.9. Video Coding Control

To apply dynamic controls to the currently bound video session object, call:

```
// Provided by VK_KHR_video_queue
void vkCmdControlVideoCodingKHR(
    VkCommandBuffer          commandBuffer,
    const VkVideoCodingControlInfoKHR* pCodingControlInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pCodingControlInfo` is a pointer to a `VkVideoCodingControlInfoKHR` structure specifying the control parameters.

The control parameters provided in this call are applied to the video session at the time the command executes on the device and are in effect until a subsequent call to this command with the same video session bound changes the corresponding control parameters.

A newly created video session **must** be reset before performing video coding operations using it by including `VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR` in `pCodingControlInfo->flags`. The reset operation also returns all DPB slots of the video session to the `inactive state`. Correspondingly, any DPB slot index associated with the `bound reference picture resources` is removed.

For encode sessions, the reset operation returns `rate control` configuration to implementation default settings and sets the `video encode quality level` to zero.

After video coding operations are performed using a video session, the reset operation **can** be used to return the video session to the same *initial* state as after the reset of a newly created video session. This **can** be used, for example, when different video sequences are needed to be processed with the same video session object.

If `pCodingControlInfo->flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, then the command replaces the `rate control` configuration maintained by the video session with the configuration specified in the `VkVideoEncodeRateControlInfoKHR` structure included in the `pCodingControlInfo->pNext` chain.

If `pCodingControlInfo->flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR`, then the command changes the current `video encode quality level` to the value specified in the `qualityLevel` member of the `VkVideoEncodeQualityLevelInfoKHR` structure included in the `pCodingControlInfo->pNext` chain.

Valid Usage

- VUID-vkCmdControlVideoCodingKHR-flags-07017

If `pCodingControlInfo->flags` does not include `VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR`, then the bound video session **must** not be in `uninitialized` state at the time the command is executed on the device

- VUID-vkCmdControlVideoCodingKHR-pCodingControlInfo-08243

If the bound video session was not created with an encode operation, then `pCodingControlInfo->flags` **must** not include `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR` or `VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkCmdControlVideoCodingKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdControlVideoCodingKHR-pCodingControlInfo-parameter
`pCodingControlInfo` **must** be a valid pointer to a valid `VkVideoCodingControlInfoKHR` structure
- VUID-vkCmdControlVideoCodingKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdControlVideoCodingKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support decode, or encode

operations

- VUID-vkCmdControlVideoCodingKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdControlVideoCodingKHR-videocoding
This command **must** only be called inside of a video coding scope
- VUID-vkCmdControlVideoCodingKHR-bufferlevel
`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	Decode Encode	Action

The `VkVideoCodingControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoCodingControlInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkVideoCodingControlFlagsKHR flags;
} VkVideoCodingControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoCodingControlFlagsKHR` specifying control flags.

Valid Usage

- VUID-VkVideoCodingControlInfoKHR-flags-07018
If `flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeRateControlInfoKHR` structure
- VUID-VkVideoCodingControlInfoKHR-flags-08349
If `flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR`, then the `pNext`

chain **must** include a [VkVideoEncodeQualityLevelInfoKHR](#) structure

Valid Usage (Implicit)

- VUID-VkVideoCodingControlInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_VIDEO_CODING_CONTROL_INFO_KHR](#)
- VUID-VkVideoCodingControlInfoKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either [NULL](#) or a pointer to a valid instance of [VkVideoEncodeH264RateControlInfoKHR](#), [VkVideoEncodeH265RateControlInfoKHR](#), [VkVideoEncodeQualityLevelInfoKHR](#), or [VkVideoEncodeRateControlInfoKHR](#)
- VUID-VkVideoCodingControlInfoKHR-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique
- VUID-VkVideoCodingControlInfoKHR-flags-parameter
flags **must** be a valid combination of [VkVideoCodingControlFlagBitsKHR](#) values
- VUID-VkVideoCodingControlInfoKHR-flags-requiredbitmask
flags **must** not be 0

Bits which **can** be set in [VkVideoCodingControlInfoKHR::flags](#), specifying the video coding control parameters to be modified, are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCodingControlFlagBitsKHR {
    VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR = 0x00000004,
} VkVideoCodingControlFlagBitsKHR;
```

- [VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR](#) indicates a request for the bound video session to be reset before other coding control parameters are applied.
- [VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR](#) indicates that the coding control parameters include video encode rate control parameters (see [VkVideoEncodeRateControlInfoKHR](#)).
- [VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR](#) indicates that the coding control parameters include video encode quality level parameters (see [VkVideoEncodeQualityLevelInfoKHR](#)).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCodingControlFlagsKHR;
```

[VkVideoCodingControlFlagsKHR](#) is a bitmask type for setting a mask of zero or more

42.10. Inline Queries

If a video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, beginning queries using commands such as `vkCmdBeginQuery` within a video coding scope is not allowed. Instead, queries are executed inline by including an instance of the `VkVideoInlineQueryInfoKHR` structure in the `pNext` chain of the parameters of one of the video coding commands, with its `queryPool` member set to a valid `VkQueryPool` handle.

The `VkVideoInlineQueryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_maintenance1
typedef struct VkVideoInlineQueryInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkQueryPool         queryPool;
    uint32_t            firstQuery;
    uint32_t            queryCount;
} VkVideoInlineQueryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queryPool` is `VK_NULL_HANDLE` or a valid handle to a `VkQueryPool` object that will manage the results of the queries.
- `firstQuery` is the query index within the query pool that will contain the query results for the first video coding operation. The query results of subsequent video coding operations will be contained by subsequent query indices.
- `queryCount` is the number of queries to execute.

NOTE

In practice, if `queryPool` is not `VK_NULL_HANDLE`, then `queryCount` will always have to match the number of video coding operations issued by the video coding command this structure is specified to, meaning that using inline queries in a video coding command will always execute a query for each issued video coding operation.

This structure **can** be included in the `pNext` chain of the input parameter structure of video coding commands.

- In the `pNext` chain of the `pDecodeInfo` parameter of the `vkCmdDecodeVideoKHR` command to execute a query for each video decode operation issued by the command.
- In the `pNext` chain of the `pEncodeInfo` parameter of the `vkCmdEncodeVideoKHR` command to execute a query for each video encode operation issued by the command.

Valid Usage

- VUID-VkVideoInlineQueryInfoKHR-queryPool-08372
If `queryPool` is not `VK_NULL_HANDLE`, then `firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-VkVideoInlineQueryInfoKHR-queryPool-08373
If `queryPool` is not `VK_NULL_HANDLE`, then the sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`

Valid Usage (Implicit)

- VUID-VkVideoInlineQueryInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_INLINE_QUERY_INFO_KHR`
- VUID-VkVideoInlineQueryInfoKHR-queryPool-parameter
If `queryPool` is not `VK_NULL_HANDLE`, `queryPool` **must** be a valid `VkQueryPool` handle

42.11. Video Decode Operations

Video decode operations consume compressed video data from a video bitstream buffer and zero or more reference pictures, and produce a *decode output picture* and an optional *reconstructed picture*.

NOTE

Such decode output pictures can be shared with the *Decoded Picture Buffer*, and can also be used as the *input* of video encode operations, with graphics or compute operations, or with *Window System Integration* APIs, depending on the capabilities of the implementation.

Video decode operations **may** access the following resources in the `VK_PIPELINE_STAGE_2_VIDEO_DECODE_BIT_KHR` stage:

- The source video bitstream buffer range and the image subregions corresponding to the list of *active reference pictures* with access `VK_ACCESS_2_VIDEO_DECODE_READ_BIT_KHR`.
- The image subregions corresponding to the target *decode output picture* and *reconstructed picture* with access `VK_ACCESS_2_VIDEO_DECODE_WRITE_BIT_KHR`.

The image subresource of each *video picture resource* accessed by the video decode operation is specified using a corresponding `VkVideoPictureResourceInfoKHR` structure. Each such image subresource **must** be in the appropriate image layout as follows:

- If the image subresource is used in the video decode operation only as *decode output picture*, then it **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR` layout.
- If the image subresource is used in the video decode operation both as *decode output picture* and *reconstructed picture*, then it **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout.
- If the image subresource is used in the video decode operation only as *reconstructed picture*,

then it **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout.

- If the image subresource is used in the video decode operation as a [reference picture](#), then it **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout.

A video decode operation **may** complete unsuccessfully. In this case the [decode output picture](#) will have undefined contents. Similarly, if [reference picture setup](#) is requested, the [reconstructed picture](#) will also have undefined contents, and the activated DPB slot will have an [invalid picture reference](#).

42.11.1. Codec-Specific Semantics

The following aspects of video decode operations are codec-specific:

- The interpretation of the contents of the source video bitstream buffer range.
- The construction and interpretation of the list of [active reference pictures](#) and the interpretation of the picture data referred to by the corresponding image subregions.
- The construction and interpretation of information related to the [decode output picture](#) and the generation of picture data to the corresponding image subregion.
- The decision on [reference picture setup](#).
- The construction and interpretation of information related to the optional [reconstructed picture](#) and the generation of picture data to the corresponding image subregion.

These codec-specific behaviors are defined for each video codec operation separately.

- If the used video codec operation is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the codec-specific aspects of the video decoding process are performed as defined in the [H.264 Decode Operations](#) section.
- If the used video codec operation is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the codec-specific aspects of the video decoding process are performed as defined in the [H.265 Decode Operations](#) section.
- If the used video codec operation is `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the codec-specific aspects of the video decoding process are performed as defined in the [AV1 Decode Operations](#) section.

42.11.2. Video Decode Operation Steps

Each video decode operation performs the following steps in the `VK_PIPELINE_STAGE_2_VIDEO_DECODE_BIT_KHR` stage:

1. Reads the encoded video data from the source video bitstream buffer range.
2. Performs picture reconstruction of the encoded video data according to the [codec-specific semantics](#), applying any prediction data read from the [active reference pictures](#) in the process;
3. Writes the decoded picture data to the [decode output picture](#), and optionally to the [reconstructed picture](#), if one is specified and is different from the decode output picture, according to the [codec-specific semantics](#);

4. If [reference picture setup](#) is requested, the [DPB slot index](#) specified in the [reconstructed picture information](#) is [activated](#) with the [reconstructed picture](#).

When [reconstructed picture information](#) is provided, the specified [DPB slot](#) index is associated with the corresponding [bound reference picture resource](#), indifferent of whether [reference picture setup](#) is requested.

42.11.3. Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specifying a decode operation, the [VkVideoDecodeCapabilitiesKHR](#) structure **must** be included in the [pNext](#) chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve capabilities specific to video decoding.

The [VkVideoDecodeCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeCapabilitiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkVideoDecodeCapabilityFlagsKHR flags;
} VkVideoDecodeCapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkVideoDecodeCapabilityFlagBitsKHR](#) describing the supported video decoding capabilities.

Valid Usage (Implicit)

- VUID-VkVideoDecodeCapabilitiesKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_VIDEO_DECODE_CAPABILITIES_KHR](#)

Bits which **may** be set in [VkVideoDecodeCapabilitiesKHR::flags](#), indicating the decoding capabilities supported, are:

```
// Provided by VK_KHR_video_decode_queue
typedef enum VkVideoDecodeCapabilityFlagBitsKHR {
    VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR = 0x00000001,
    VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR = 0x00000002,
} VkVideoDecodeCapabilityFlagBitsKHR;
```

- [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR](#) indicates support for using the same video picture resource as the [reconstructed picture](#) and [decode output picture](#) in a video decode operation.

- `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR` indicates support for using distinct video picture resources as the [reconstructed picture](#) and [decode output picture](#) in a video decode operation.

NOTE

Some video profiles allow using distinct video picture resources as the reconstructed picture and decode output picture in specific video decode operations even when the video decode profile does not support `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR`. Even if the implementation only reports coincide, the decode output picture for [film grain](#) enabled frames must be a different video picture resource from the reconstructed picture because film grain is applied outside of the coding loop.

Implementations are only **required** to support one of `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR` and `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR`. Accordingly, applications **should** handle both cases to maximize portability.

NOTE

If both `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR` and `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR` are supported, an application can choose to create separate images for decode DPB and decode output. E.g. in cases when linear tiling is preferred (and supported) for the decode output picture and the DPB requires optimal tiling, this avoids the need for a separate copy at the expense of additional memory bandwidth requirements during decoding.

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeCapabilityFlagsKHR;
```

`VkVideoDecodeCapabilityFlagsKHR` is a bitmask type for setting a mask of zero or more [VkVideoDecodeCapabilityFlagBitsKHR](#).

42.11.4. Video Decode Commands

To launch video decode operations, call:

```
// Provided by VK_KHR_video_decode_queue
void vkCmdDecodeVideoKHR(
    VkCommandBuffer                commandBuffer,
    const VkVideoDecodeInfoKHR*    pDecodeInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pDecodeInfo` is a pointer to a [VkVideoDecodeInfoKHR](#) structure specifying the parameters of the video decode operations.

Each call issues one or more video decode operations. The implicit parameter `opCount` corresponds to the number of video decode operations issued by the command. After calling this command, the

active query index of each active query is incremented by `opCount`.

Currently each call to this command results in the issue of a single video decode operation.

If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then this command will execute a query for each video decode operation issued by it.

Active Reference Picture Information

The list of active reference pictures used by a video decode operation is a list of image subregions used as the source of reference picture data and related parameters, and is derived from the `VkVideoReferenceSlotInfoKHR` structures provided as the elements of the `pDecodeInfo->pReferenceSlots` array. For each element of `pDecodeInfo->pReferenceSlots`, one or more elements are added to the active reference picture list, as defined by the codec-specific semantics. Each element of this list contains the following information:

- The image subregion within the image subresource referred to by the video picture resource used as the reference picture.
- The DPB slot index the reference picture is associated with.
- The codec-specific reference information related to the reference picture.

Reconstructed Picture Information

Information related to the optional reconstructed picture used by a video decode operation is derived from the `VkVideoReferenceSlotInfoKHR` structure pointed to by `pDecodeInfo->pSetupReferenceSlot`, if not `NULL`, as defined by the codec-specific semantics, and consists of the following:

- The image subregion within the image subresource referred to by the video picture resource used as the reconstructed picture.
- The DPB slot index to use for picture reconstruction.
- The codec-specific reference information related to the reconstructed picture.

Specifying a valid `VkVideoReferenceSlotInfoKHR` structure in `pDecodeInfo->pSetupReferenceSlot` is always required, unless the video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlot` equal to zero. However, the DPB slot identified by `pDecodeInfo->pSetupReferenceSlot->slotIndex` is only activated with the reconstructed picture specified in `pDecodeInfo->pSetupReferenceSlot->pPictureResource` if reference picture setup is requested according to the codec-specific semantics.

If reconstructed picture information is specified, and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` refers to a video picture resource different than that of the decode output picture, but reference picture setup is not requested, the contents of the video picture resource corresponding to the reconstructed picture will be undefined after the video decode operation.

NOTE

Some implementations may always output the reconstructed picture or use it as temporary storage during the video decode operation even when the reconstructed

picture is not marked for future reference.

Decode Output Picture Information

Information related to the [decode output picture](#) used by a video decode operation is derived from `pDecodeInfo->dstPictureResource` and any codec-specific parameters provided in the `pDecodeInfo->pNext` chain, as defined by the [codec-specific semantics](#), and consists of the following:

- The image subregion within the image subresource [referred](#) to by the [video picture resource](#) used as the decode output picture.
- The codec-specific picture information related to the decode output picture.

Several limiting values are defined below that are referenced by the relevant valid usage statements of this command.

- Let `uint32_t activeReferencePictureCount` be the size of the list of active reference pictures used by the video decode operation. Unless otherwise defined, `activeReferencePictureCount` is set to the value of `pDecodeInfo->referenceSlotCount`.
 - If the bound video session was created with an [H.264 decode profile](#), then let `activeReferencePictureCount` be the value of `pDecodeInfo->referenceSlotCount` plus the number of elements of the `pDecodeInfo->pReferenceSlots` array that have a [VkVideoDecodeH264DpbSlotInfoKHR](#) structure included in their `pNext` chain with both `pStdReferenceInfo->flags.top_field_flag` and `pStdReferenceInfo->flags.bottom_field_flag` set.

NOTE

This means that the elements of `pDecodeInfo->pReferenceSlots` that include both a top and bottom field reference are counted as two separate active reference pictures, as described in the [active reference picture list construction rules for H.264 decode operations](#).

- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of `codedOffsetGranularity` are 0.
 - If the bound video session was created with an [H.264 decode profile](#) with a `VkVideoDecodeH264ProfileInfoKHR::pictureLayout` of `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`, then `codedOffsetGranularity` is equal to `VkVideoDecodeH264CapabilitiesKHR::fieldOffsetGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for that video profile.
- Let `uint32_t dpbFrameUseCount[]` be an array of size `maxDpbSlots`, where `maxDpbSlots` is the `VkVideoSessionCreateInfoKHR::maxDpbSlots` the bound video session was created with, with each element indicating the number of times a frame associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the array be 0.
 - If `pDecodeInfo->pSetupReferenceSlot` is not NULL, then `dpbFrameUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If the bound video

session object was created with an [H.264 decode profile](#), then `dpbFrameUseCount[i]` is decremented by one if either `pStdReferenceInfo->flags.top_field_flag` or `pStdReferenceInfo->flags.bottom_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain.

- For each element of `pDecodeInfo->pReferenceSlots`, `dpbFrameUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the corresponding element. If the bound video session object was created with an [H.264 decode profile](#), then `dpbFrameUseCount[i]` is decremented by one if either `pStdReferenceInfo->flags.top_field_flag` or `pStdReferenceInfo->flags.bottom_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pNext` chain of the corresponding element of `pDecodeInfo->pReferenceSlots`.
- Let `uint32_t dpbTopFieldUseCount[]` and `uint32_t dpbBottomFieldUseCount[]` be arrays of size `maxDpbSlots`, where `maxDpbSlots` is the [VkVideoSessionCreateInfoKHR::maxDpbSlots](#) the bound video session was created with, with each element indicating the number of times the top field or the bottom field, respectively, associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the arrays be `0`.
 - If the bound video session object was created with an [H.264 decode profile](#) and `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then perform the following:
 - If `pStdReferenceInfo->flags.top_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain, then `dpbTopFieldUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`.
 - If `pStdReferenceInfo->flags.bottom_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain, then `dpbBottomFieldUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`.
 - If the bound video session object was created with an [H.264 decode profile](#), then perform the following for each element of `pDecodeInfo->pReferenceSlots`:
 - If `pStdReferenceInfo->flags.top_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pNext` chain of the element, then `dpbTopFieldUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the element.
 - If `pStdReferenceInfo->flags.bottom_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pNext` chain of the element, then `dpbBottomFieldUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the element.

Valid Usage

- VUID-vkCmdDecodeVideoKHR-None-08249
The bound video session **must** have been created with a decode operation
- VUID-vkCmdDecodeVideoKHR-None-07011
The bound video session **must** not be in [uninitialized](#) state at the time the command is

executed on the device

- VUID-vkCmdDecodeVideoKHR-opCount-07134

For each **active** query, the **active query index** corresponding to the query type of that query plus **opCount** **must** be less than or equal to the **last activatable query index** corresponding to the query type of that query plus one

- VUID-vkCmdDecodeVideoKHR-pNext-08365

If the bound video session was created with **VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR**, and the **pNext** chain of **pDecodeInfo** includes a **VkVideoInlineQueryInfoKHR** structure with its **queryPool** member specifying a valid **VkQueryPool** handle, then **VkVideoInlineQueryInfoKHR::queryCount** **must** equal **opCount**

- VUID-vkCmdDecodeVideoKHR-pNext-08366

If the bound video session was created with **VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR**, and the **pNext** chain of **pDecodeInfo** includes a **VkVideoInlineQueryInfoKHR** structure with its **queryPool** member specifying a valid **VkQueryPool** handle, then all the queries used by the command, as specified by the **VkVideoInlineQueryInfoKHR** structure, **must** be *unavailable*

- VUID-vkCmdDecodeVideoKHR-queryType-08367

If the bound video session was created with **VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR**, then the **queryType** used to create the **queryPool** specified in the **VkVideoInlineQueryInfoKHR** structure included in the **pNext** chain of **pDecodeInfo** **must** be **VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR**

- VUID-vkCmdDecodeVideoKHR-queryPool-08368

If the bound video session was created with **VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR**, then the **queryPool** specified in the **VkVideoInlineQueryInfoKHR** structure included in the **pNext** chain of **pDecodeInfo** **must** have been created with a **VkVideoProfileInfoKHR** structure included in the **pNext** chain of **VkQueryPoolCreateInfo** identical to the one specified in **VkVideoSessionCreateInfoKHR::pVideoProfile** the bound video session was created with

- VUID-vkCmdDecodeVideoKHR-queryType-08369

If the bound video session was created with **VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR**, and the **queryType** used to create the **queryPool** specified in the **VkVideoInlineQueryInfoKHR** structure included in the **pNext** chain of **pDecodeInfo** is **VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR**, then the **VkCommandPool** that **commandBuffer** was allocated from **must** have been created with a queue family index that supports **result status queries**, as indicated by **VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport**

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07135

pDecodeInfo->srcBuffer **must** be **compatible** with the video profile the bound video session was created with

- VUID-vkCmdDecodeVideoKHR-commandBuffer-07136

If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, then **pDecodeInfo->srcBuffer** **must** not be a protected buffer

- VUID-vkCmdDecodeVideoKHR-commandBuffer-07137

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pDecodeInfo->srcBuffer` **must** be a protected buffer

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07138

`pDecodeInfo->srcBufferOffset` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferOffsetAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07139

`pDecodeInfo->srcBufferRange` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferSizeAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07140

If `pDecodeInfo->pSetupReferenceSlot` is not `NULL` and `VkVideoDecodeCapabilitiesKHR::flags` does not include `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the video picture resources specified by `pDecodeInfo->dstPictureResource` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** not match

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07141

If `pDecodeInfo->pSetupReferenceSlot` is not `NULL` and none of the following is true:

- `VkVideoDecodeCapabilitiesKHR::flags` includes `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with
- the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` and `VkVideoDecodeAV1ProfileInfoKHR::filmGrainSupport` set to `VK_TRUE`, and `film grain` is enabled for the decoded picture

then the video picture resources specified by `pDecodeInfo->dstPictureResource` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** match

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07142

`pDecodeInfo->dstPictureResource.imageViewBinding` **must** be compatible with the video profile the bound video session was created with

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07143

The format of `pDecodeInfo->dstPictureResource.imageViewBinding` **must** match the `VkVideoSessionCreateInfoKHR::pictureFormat` the bound video session was created with

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07144

`pDecodeInfo->dstPictureResource.codedOffset` **must** be an integer multiple of `codedOffsetGranularity`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07145

`pDecodeInfo->dstPictureResource.codedExtent` **must** be between `minCodedExtent` and `maxCodedExtent`, inclusive, the bound video session was created with

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07146
`pDecodeInfo->dstPictureResource.imageViewBinding` **must** have been created with `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07147
 If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pDecodeInfo->dstPictureResource.imageViewBinding` **must** not have been created from a protected image
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07148
 If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pDecodeInfo->dstPictureResource.imageViewBinding` **must** have been created from a protected image
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-08376
`pDecodeInfo->pSetupReferenceSlot` **must** not be `NULL` unless the bound video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlots` equal to zero
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07170
 If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `pDecodeInfo->pSetupReferenceSlot->slotIndex` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07173
 If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `pDecodeInfo->pSetupReferenceSlot->pPictureResource->codedOffset` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07149
 If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** `match` one of the `bound reference picture resource`
- VUID-vkCmdDecodeVideoKHR-activeReferencePictureCount-07150
`activeReferencePictureCount` **must** be less than or equal to the `VkVideoSessionCreateInfoKHR::maxActiveReferencePictures` specified when the bound video session was created
- VUID-vkCmdDecodeVideoKHR-slotIndex-07256
 The `slotIndex` member of each element of `pDecodeInfo->pReferenceSlots` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created
- VUID-vkCmdDecodeVideoKHR-codedOffset-07257
 The `codedOffset` member of the `VkVideoPictureResourceInfoKHR` structure pointed to by the `pPictureResource` member of each element of `pDecodeInfo->pReferenceSlots` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07151
 The `pPictureResource` member of each element of `pDecodeInfo->pReferenceSlots` **must** `match` one of the `bound reference picture resource` associated with the DPB slot index specified in the `slotIndex` member of that element
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07264
 Each video picture resource corresponding to the `pPictureResource` member specified in the elements of `pDecodeInfo->pReferenceSlots` **must** be `unique` within `pDecodeInfo-`

>pReferenceSlots

- VUID-vkCmdDecodeVideoKHR-dpbFrameUseCount-07176
All elements of `dpbFrameUseCount` **must** be less than or equal to 1
- VUID-vkCmdDecodeVideoKHR-dpbTopFieldUseCount-07177
All elements of `dpbTopFieldUseCount` **must** be less than or equal to 1
- VUID-vkCmdDecodeVideoKHR-dpbBottomFieldUseCount-07178
All elements of `dpbBottomFieldUseCount` **must** be less than or equal to 1
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07252
If `pDecodeInfo->pSetupReferenceSlot` is `NULL` or `pDecodeInfo->pSetupReferenceSlot->pPictureResource` does not `refer` to the same image subresource as `pDecodeInfo->dstPictureResource`, then the image subresource `referred` to by `pDecodeInfo->dstPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR` layout at the time the video decode operation is executed on the device
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07253
If `pDecodeInfo->pSetupReferenceSlot` is not `NULL` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` `refers` to the same image subresource as `pDecodeInfo->dstPictureResource`, then the image subresource `referred` to by `pDecodeInfo->dstPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout at the time the video decode operation is executed on the device
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07254
If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the image subresource `referred` to by `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout at the time the video decode operation is executed on the device
- VUID-vkCmdDecodeVideoKHR-pPictureResource-07255
The image subresource `referred` to by the `pPictureResource` member of each element of `pDecodeInfo->pReferenceSlots` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout at the time the video decode operation is executed on the device
- VUID-vkCmdDecodeVideoKHR-pNext-07152
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain of `pDecodeInfo` **must** include a `VkVideoDecodeH264PictureInfoKHR` structure
- VUID-vkCmdDecodeVideoKHR-None-07258
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` but was not created with `interlaced frame support`, then the `decode output picture` **must** represent a frame
- VUID-vkCmdDecodeVideoKHR-pSliceOffsets-07153
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then all elements of the `pSliceOffsets` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`
- VUID-vkCmdDecodeVideoKHR-StdVideoH264SequenceParameterSet-07154
If the bound video session was created with the video codec operation

VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH264SequenceParameterSet entry with seq_parameter_set_id matching StdVideoDecodeH264PictureInfo::seq_parameter_set_id that is provided in the pStdPictureInfo member of the VkVideoDecodeH264PictureInfoKHR structure included in the pNext chain of pDecodeInfo

- VUID-vkCmdDecodeVideoKHR-StdVideoH264PictureParameterSet-07155

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH264PictureParameterSet entry with seq_parameter_set_id and pic_parameter_set_id matching StdVideoDecodeH264PictureInfo::seq_parameter_set_id and StdVideoDecodeH264PictureInfo::pic_parameter_set_id, respectively, that are provided in the pStdPictureInfo member of the VkVideoDecodeH264PictureInfoKHR structure included in the pNext chain of pDecodeInfo

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07156

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and pDecodeInfo->pSetupReferenceSlot is not NULL, then the pNext chain of pDecodeInfo->pSetupReferenceSlot **must** include a VkVideoDecodeH264DpbSlotInfoKHR structure

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07259

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR but was not created with interlaced frame support, and pDecodeInfo->pSetupReferenceSlot is not NULL, then the reconstructed picture **must** represent a frame

- VUID-vkCmdDecodeVideoKHR-pNext-07157

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the pNext chain of each element of pDecodeInfo->pReferenceSlots **must** include a VkVideoDecodeH264DpbSlotInfoKHR structure

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07260

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR but was not created with interlaced frame support, then each active reference picture corresponding to the elements of pDecodeInfo->pReferenceSlots **must** represent a frame

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07261

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, pDecodeInfo->pSetupReferenceSlot is not NULL, and the decode output picture represents a frame, then the reconstructed picture **must** also represent a frame

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07262

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, pDecodeInfo->pSetupReferenceSlot is not NULL, and the decode output picture represents a top field, then the reconstructed picture **must** also represent a top field

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07263

If the bound video session was created with the video codec operation

VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, pDecodeInfo->pSetupReferenceSlot is not NULL, and the decode output picture represents a bottom field, then the reconstructed picture **must** also represent a bottom field

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07266

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and an active reference picture corresponding to any element of pDecodeInfo->pReferenceSlots represents a frame, then the DPB slot index of the bound video session specified by the slotIndex member of that element **must** be currently associated with a frame picture matching the video picture resource specified by the pPictureResource member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07267

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and an active reference picture corresponding to any element of pDecodeInfo->pReferenceSlots represents a top field, then the DPB slot index of the bound video session specified by the slotIndex member of that element **must** be currently associated with a top field picture matching the video picture resource specified by the pPictureResource member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07268

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and an active reference picture corresponding to any element of pDecodeInfo->pReferenceSlots represents a bottom field, then the DPB slot index of the bound video session specified by the slotIndex member of that element **must** be currently associated with a bottom field picture matching the video picture resource specified by the pPictureResource member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pNext-07158

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the pNext chain of pDecodeInfo **must** include a VkVideoDecodeH265PictureInfoKHR structure

- VUID-vkCmdDecodeVideoKHR-pSliceSegmentOffsets-07159

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then all elements of the pSliceSegmentOffsets member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** be less than pDecodeInfo->srcBufferRange

- VUID-vkCmdDecodeVideoKHR-StdVideoH265VideoParameterSet-07160

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH265VideoParameterSet entry with vps_video_parameter_set_id matching StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id that is provided in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo

- VUID-vkCmdDecodeVideoKHR-StdVideoH265SequenceParameterSet-07161

If the bound video session was created with the video codec operation

VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH265SequenceParameterSet entry with sps_video_parameter_set_id and sps_seq_parameter_set_id matching StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id and StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id, respectively, that are provided in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo

- VUID-vkCmdDecodeVideoKHR-StdVideoH265PictureParameterSet-07162

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH265PictureParameterSet entry with sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id matching StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id, StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id, and StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id, respectively, that are provided in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07163

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and pDecodeInfo->pSetupReferenceSlot is not NULL, then the pNext chain of pDecodeInfo->pSetupReferenceSlot **must** include a VkVideoDecodeH265DpbSlotInfoKHR structure

- VUID-vkCmdDecodeVideoKHR-pNext-07164

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the pNext chain of each element of pDecodeInfo->pReferenceSlots **must** include a VkVideoDecodeH265DpbSlotInfoKHR structure

- VUID-vkCmdDecodeVideoKHR-filmGrainSupport-09248

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR and VkVideoDecodeAV1ProfileInfoKHR::filmGrainSupport set to VK_FALSE, then film grain **must** not be enabled for the decoded picture

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-09249

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, pDecodeInfo->pSetupReferenceSlot is not NULL, and film grain is enabled for the decoded picture, then the video picture resources specified by pDecodeInfo->dstPictureResource and pDecodeInfo->pSetupReferenceSlot->pPictureResource **must** not match

- VUID-vkCmdDecodeVideoKHR-pNext-09250

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the pNext chain of pDecodeInfo **must** include a VkVideoDecodeAV1PictureInfoKHR structure

- VUID-vkCmdDecodeVideoKHR-frameHeaderOffset-09251

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the frameHeaderOffset member of the

[VkVideoDecodeAV1PictureInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#) **must** be less than the minimum of [pDecodeInfo->srcBufferRange](#)

- VUID-vkCmdDecodeVideoKHR-pTileOffsets-09253
If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#), then all elements of the [pTileOffsets](#) member of the [VkVideoDecodeAV1PictureInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#) **must** be less than [pDecodeInfo->srcBufferRange](#)
- VUID-vkCmdDecodeVideoKHR-pTileOffsets-09252
If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#), then for each element *i* of the [pTileOffsets](#) and [pTileSizes](#) members of the [VkVideoDecodeAV1PictureInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#) the sum of [pTileOffsets\[i\]](#) and [pTileSizes\[i\]](#) **must** be less than or equal to [pDecodeInfo->srcBufferRange](#)
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-09254
If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#) and [pDecodeInfo->pSetupReferenceSlot](#) is not NULL, then the [pNext](#) chain of [pDecodeInfo->pSetupReferenceSlot](#) **must** include a [VkVideoDecodeAV1DpbSlotInfoKHR](#) structure
- VUID-vkCmdDecodeVideoKHR-pNext-09255
If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#), then the [pNext](#) chain of each element of [pDecodeInfo->pReferenceSlots](#) **must** include a [VkVideoDecodeAV1DpbSlotInfoKHR](#) structure
- VUID-vkCmdDecodeVideoKHR-referenceNameSlotIndices-09262
If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#), then each element of the [referenceNameSlotIndices](#) array member of the [VkVideoDecodeAV1PictureInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#) **must** either be negative or **must** equal the [slotIndex](#) member of one of the elements of [pDecodeInfo->pReferenceSlots](#)
- VUID-vkCmdDecodeVideoKHR-slotIndex-09263
If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#), then the [slotIndex](#) member of each element of [pDecodeInfo->pReferenceSlots](#) **must** equal one of the elements of the [referenceNameSlotIndices](#) array member of the [VkVideoDecodeAV1PictureInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#)

Valid Usage (Implicit)

- VUID-vkCmdDecodeVideoKHR-commandBuffer-parameter [commandBuffer](#) **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-parameter [pDecodeInfo](#) **must** be a valid pointer to a valid [VkVideoDecodeInfoKHR](#) structure
- VUID-vkCmdDecodeVideoKHR-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdDecodeVideoKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support decode operations
- VUID-vkCmdDecodeVideoKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecodeVideoKHR-videocoding
This command **must** only be called inside of a video coding scope
- VUID-vkCmdDecodeVideoKHR-bufferlevel
`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	Decode	Action

The `VkVideoDecodeInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoDecodeFlagsKHR    flags;
    VkBuffer                  srcBuffer;
    VkDeviceSize              srcBufferOffset;
    VkDeviceSize              srcBufferRange;
    VkVideoPictureResourceInfoKHR dstPictureResource;
    const VkVideoReferenceSlotInfoKHR* pSetupReferenceSlot;
    uint32_t                  referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
} VkVideoDecodeInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.

- `srcBuffer` is the source video bitstream buffer to read the encoded bitstream from.
- `srcBufferOffset` is the starting offset in bytes from the start of `srcBuffer` to read the encoded bitstream from.
- `srcBufferRange` is the size in bytes of the encoded bitstream to decode from `srcBuffer`, starting from `srcBufferOffset`.
- `dstPictureResource` is the video picture resource to use as the [decode output picture](#).
- `pSetupReferenceSlot` is `NULL` or a pointer to a [VkVideoReferenceSlotInfoKHR](#) structure specifying the [reconstructed picture information](#).
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is `NULL` or a pointer to an array of [VkVideoReferenceSlotInfoKHR](#) structures describing the DPB slots and corresponding [reference picture](#) resources to use in this video decode operation (the set of [active reference pictures](#)).

Valid Usage

- VUID-VkVideoDecodeInfoKHR-srcBuffer-07165
`srcBuffer` **must** have been created with `VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR` set
- VUID-VkVideoDecodeInfoKHR-srcBufferOffset-07166
`srcBufferOffset` **must** be less than the size of `srcBuffer`
- VUID-VkVideoDecodeInfoKHR-srcBufferRange-07167
`srcBufferRange` **must** be less than or equal to the size of `srcBuffer` minus `srcBufferOffset`
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07168
If `pSetupReferenceSlot` is not `NULL`, then its `slotIndex` member **must** not be negative
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07169
If `pSetupReferenceSlot` is not `NULL`, then its `pPictureResource` **must** not be `NULL`
- VUID-VkVideoDecodeInfoKHR-slotIndex-07171
The `slotIndex` member of each element of `pReferenceSlots` **must** not be negative
- VUID-VkVideoDecodeInfoKHR-pPictureResource-07172
The `pPictureResource` member of each element of `pReferenceSlots` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkVideoDecodeInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_INFO_KHR`
- VUID-VkVideoDecodeInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of [VkVideoDecodeAV1PictureInfoKHR](#), [VkVideoDecodeH264PictureInfoKHR](#), [VkVideoDecodeH265PictureInfoKHR](#), or [VkVideoInlineQueryInfoKHR](#)
- VUID-VkVideoDecodeInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique

- VUID-VkVideoDecodeInfoKHR-flags-zero bitmask
flags must be 0
- VUID-VkVideoDecodeInfoKHR-srcBuffer-parameter
srcBuffer must be a valid [VkBuffer](#) handle
- VUID-VkVideoDecodeInfoKHR-dstPictureResource-parameter
dstPictureResource must be a valid [VkVideoPictureResourceInfoKHR](#) structure
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-parameter
If **pSetupReferenceSlot** is not NULL, **pSetupReferenceSlot must** be a valid pointer to a valid [VkVideoReferenceSlotInfoKHR](#) structure
- VUID-VkVideoDecodeInfoKHR-pReferenceSlots-parameter
If **referenceSlotCount** is not 0, **pReferenceSlots must** be a valid pointer to an array of **referenceSlotCount** valid [VkVideoReferenceSlotInfoKHR](#) structures

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeFlagsKHR;
```

VkVideoDecodeFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

42.12. H.264 Decode Operations

Video decode operations using an [H.264 decode profile](#) can be used to decode elementary video stream sequences compliant to the [ITU-T H.264 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 8 of the [ITU-T H.264 Specification](#) as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The **StdVideoH264SequenceParameterSet** structure corresponding to the [active SPS](#) specifying the [H.264 sequence parameter set](#).
 - The **StdVideoH264PictureParameterSet** structure corresponding to the [active PPS](#) specifying the [H.264 picture parameter set](#).
 - The **StdVideoDecodeH264PictureInfo** structure specifying the [H.264 picture information](#).
 - The **StdVideoDecodeH264ReferenceInfo** structures specifying the [H.264 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The contents of the provided video bitstream buffer range are interpreted as defined in the [H.264 Decode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [active reference pictures](#),

decode output picture, and optional reconstructed picture is accessed as defined in the H.264 Decode Picture Data Access section.

- The decision on reference picture setup is made according to the parameters specified in the H.264 picture information.

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the ITU-T H.264 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete unsuccessfully.

42.12.1. H.264 Decode Bitstream Data Access

If the target decode output picture is a frame, then the video bitstream buffer range **should** contain a VCL NAL unit comprised of the slice headers and data of a picture representing an entire frame, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the ITU-T H.264 Specification, respectively.

If the target decode output picture is a field, then the video bitstream buffer range should contain a VCL NAL unit comprised of the slice headers and data of a picture representing a field, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the ITU-T H.264 Specification, respectively.

The offsets provided in `VkVideoDecodeH264PictureInfoKHR::pSliceOffsets` **should** specify the starting offsets corresponding to each slice header within the video bitstream buffer range.

42.12.2. H.264 Decode Picture Data Access

The effective `imageOffset` and `imageExtent` corresponding to a decode output picture, reference picture, or reconstructed picture used in video decode operations with an H.264 decode profile are defined as follows:

- `imageOffset` is `(codedOffset.x,codedOffset.y)` and `imageExtent` is `(codedExtent.width, codedExtent.height)`, if the picture represents a frame.
- `imageOffset` is `(codedOffset.x,codedOffset.y)` and `imageExtent` is `(codedExtent.width, codedExtent.height)`, if the picture represents a field and the picture layout of the used H.264 decode profile is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR`.
- `imageOffset` is `(codedOffset.x,codedOffset.y)` and `imageExtent` is `(codedExtent.width, codedExtent.height / 2)`, if the picture represents a field and the picture layout of the used H.264 decode profile is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.

Where `codedOffset` and `codedExtent` are the members of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

However, accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile. This means that the complete image subregion accessed by video coding operations using an H.264 decode profile for the video

picture resource is defined as the set of texels within the coordinate range:

$([startX, endX), [startY, endY))$

Where:

- `startX` equals `imageOffset.x` rounded down to the nearest integer multiple of `pictureAccessGranularity.width`;
- `endX` equals `imageOffset.x + imageExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `startY` equals `imageOffset.y` rounded down to the nearest integer multiple of `pictureAccessGranularity.height`;
- `endY` equals `imageOffset.y + imageExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure.

In case of video decode operations using an `H.264 decode profile`, any access to a picture at the coordinates (x, y) , as defined by the [ITU-T H.264 Specification](#), is an access to the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates specified below:

- (x, y) , if the accessed picture represents a frame.
- $(x, y \times 2)$, if the accessed picture represents a top field and the picture layout of the used `H.264 decode profile` is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR`.
- $(x, y \times 2 + 1)$, if the accessed picture represents a bottom field and the picture layout of the used `H.264 decode profile` is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR`.
- (x, y) , if the accessed picture represents a top field and the picture layout of the used `H.264 decode profile` is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.
- $(codedOffset.x + x, codedOffset.y + y)$, if the accessed picture represents a bottom field and the picture layout of the used `H.264 decode profile` is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.

Where `codedOffset` is the member of the corresponding `VkVideoPictureResourceInfoKHR` structure.

42.12.3. H.264 Decode Profile

A video profile supporting H.264 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and adding a `VkVideoDecodeH264ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeH264ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264ProfileInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    StdVideoH264ProfileIdc    stdProfileIdc;
    VkVideoDecodeH264PictureLayoutFlagBitsKHR pictureLayout;
} VkVideoDecodeH264ProfileInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **stdProfileIdc** is a [StdVideoH264ProfileIdc](#) value specifying the H.264 codec profile IDC, as defined in section A.2 of the [ITU-T H.264 Specification](#).
- **pictureLayout** is a [VkVideoDecodeH264PictureLayoutFlagBitsKHR](#) value specifying the picture layout used by the H.264 video sequence to be decoded.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264ProfileInfoKHR-sType-sType **sType must** be [VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PROFILE_INFO_KHR](#)
- VUID-VkVideoDecodeH264ProfileInfoKHR-pictureLayout-parameter If **pictureLayout** is not **0**, **pictureLayout must** be a valid [VkVideoDecodeH264PictureLayoutFlagBitsKHR](#) value

The H.264 video decode picture layout flags are defined as follows:

```
// Provided by VK_KHR_video_decode_h264
typedef enum VkVideoDecodeH264PictureLayoutFlagBitsKHR {
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR = 0,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR =
0x00000001,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR =
0x00000002,
} VkVideoDecodeH264PictureLayoutFlagBitsKHR;
```

- [VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR](#) specifies support for progressive content. This flag has the value **0**.
- [VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR](#) specifies support for or use of a picture layout for interlaced content where all lines belonging to the top field are decoded to the even-numbered lines within the picture resource, and all lines belonging to the bottom field are decoded to the odd-numbered lines within the picture resource.
- [VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR](#) specifies support for or use of a picture layout for interlaced content where all lines belonging to a field are grouped together in a single image subregion, and the two fields comprising the frame **can** be stored in

separate image subregions of the same image subresource or in separate image subresources.

```
// Provided by VK_KHR_video_decode_h264
typedef VkFlags VkVideoDecodeH264PictureLayoutFlagsKHR;
```

`VkVideoDecodeH264PictureLayoutFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoDecodeH264PictureLayoutFlagBitsKHR`.

42.12.4. H.264 Decode Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities for an H.264 decode profile, the `VkVideoCapabilitiesKHR::pNext` chain **must** include a `VkVideoDecodeH264CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoDecodeH264CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoH264LevelIdc maxLevelIdc;
    VkOffset2D          fieldOffsetGranularity;
} VkVideoDecodeH264CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevelIdc` is a `StdVideoH264LevelIdc` value indicating the maximum H.264 level supported by the profile, where enum constant `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifies H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#).
- `fieldOffsetGranularity` is the minimum alignment for `VkVideoPictureResourceInfoKHR::codedOffset` specified for a video picture resource when using the picture layout `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264CapabilitiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_CAPABILITIES_KHR`

42.12.5. H.264 Decode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` **can** contain the following types of parameters:

H.264 Sequence Parameter Sets (SPS)

Represented by `StdVideoH264SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `seq_parameter_set_id` is used as the key of the SPS entry;
- `level_idc` is one of the enum constants `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifying the H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#);
- if `flags.seq_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `seq_scaling_list_present_flag[i]` as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#);
 - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
 - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then `pSequenceParameterSetVui` is a pointer to a `StdVideoH264SequenceParameterSetVui` structure that is interpreted as follows:
 - `reserved1` is used only for padding purposes and is otherwise ignored;
 - `flags.colour_description_present_flag` is interpreted as the value of `colour_description_present_flag`, as defined in section E.2.1 of the [ITU-T H.264 Specification](#);

NOTE

The name of `colour_description_present_flag` was misspelled in the Video Std header.

- if `flags.nal_hrd_parameters_present_flag` or `flags.vcl_hrd_parameters_present_flag` is set, then the `StdVideoH264HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `reserved1` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoH264HrdParameters` are interpreted as defined in section E.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSetVui` are interpreted as defined in section E.2.1 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSet` are interpreted as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#).

H.264 Picture Parameter Sets (PPS)

Represented by `StdVideoH264PictureParameterSet` structures and interpreted as follows:

- the pair constructed from `seq_parameter_set_id` and `pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pic_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `pic_scaling_list_present_flag[i]` as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#);
 - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
 - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264PictureParameterSet` are interpreted as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#).

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxStdSPSCount;
    uint32_t                 maxStdPPSCount;
    const VkVideoDecodeH264SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoDecodeH264SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdSPSCount` is the maximum number of [H.264 SPS](#) entries the created `VkVideoSessionParametersKHR` **can** contain.
- `maxStdPPSCount` is the maximum number of [H.264 PPS](#) entries the created `VkVideoSessionParametersKHR` **can** contain.
- `pParametersAddInfo` is `NULL` or a pointer to a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure specifying H.264 parameters to add upon object creation.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264SessionParametersCreateInfoKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR`

- `VOID-VkVideoDecodeH264SessionParametersCreateInfoKHR-pParametersAddInfo-parameter`

If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` **must** be a valid pointer to a valid `VkVideoDecodeH264SessionParametersAddInfoKHR` structure

The `VkVideoDecodeH264SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersAddInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 stdSPSCount;
    const StdVideoH264SequenceParameterSet* pStdSPSs;
    uint32_t                 stdPPSCount;
    const StdVideoH264PictureParameterSet* pStdPPSs;
} VkVideoDecodeH264SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH264SequenceParameterSet` structures describing the `H.264 SPS` entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH264PictureParameterSet` structures describing the `H.264 PPS` entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a `video session parameters` object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the `video session parameters` object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

Valid Usage

- `VOID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04825`

The `seq_parameter_set_id` member of each `StdVideoH264SequenceParameterSet` structure

specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`

- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04826

The pair constructed from the `seq_parameter_set_id` and `pic_parameter_set_id` members of each `StdVideoH264PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdSPSs-parameter
If `stdSPSCount` is not 0, `pStdSPSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH264SequenceParameterSet` values
- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdPPSs-parameter
If `stdPPSCount` is not 0, `pStdPPSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH264PictureParameterSet` values

42.12.6. H.264 Decoding Parameters

The `VkVideoDecodeH264PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264PictureInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoDecodeH264PictureInfo* pStdPictureInfo;
    uint32_t           sliceCount;
    const uint32_t*     pSliceOffsets;
} VkVideoDecodeH264PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a `StdVideoDecodeH264PictureInfo` structure specifying [H.264 picture information](#).
- `sliceCount` is the number of elements in `pSliceOffsets`.
- `pSliceOffsets` is a pointer to an array of `sliceCount` offsets specifying the start offset of the slices of the picture within the video bitstream buffer range specified in `VkVideoDecodeInfoKHR`.

This structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR` to specify the codec-specific picture information for an [H.264 decode operation](#).

Decode Output Picture Information

When this structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR`, the information related to the `decode output picture` is defined as follows:

- If `pStdPictureInfo->flags.field_pic_flag` is not set, then the picture represents a frame.
- If `pStdPictureInfo->flags.field_pic_flag` is set, then the picture represents a field. Specifically:
 - If `pStdPictureInfo->flags.bottom_field_flag` is not set, then the picture represents the top field of the frame.
 - If `pStdPictureInfo->flags.bottom_field_flag` is set, then the picture represents the bottom field of the frame.
- The image subregion used is determined according to the [H.264 Decode Picture Data Access](#) section.
- The decode output picture is associated with the [H.264 picture information](#) provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoDecodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `flags.is_intra` as defined in section 3.73 of the [ITU-T H.264 Specification](#);
- `flags.is_reference` as defined in section 3.136 of the [ITU-T H.264 Specification](#);
- `flags.complementary_field_pair` as defined in section 3.35 of the [ITU-T H.264 Specification](#);
- `seq_parameter_set_id` and `pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- all other members are interpreted as defined in section 7.4.3 of the [ITU-T H.264 Specification](#).

Reference picture setup is controlled by the value of `StdVideoDecodeH264PictureInfo::flags.is_reference`. If it is set and a `reconstructed picture` is specified, then the latter is used as the target of picture reconstruction to `activate` the `DPB slot` specified in `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoDecodeH264PictureInfo::flags.is_reference` is not set, but a `reconstructed picture` is specified, then the corresponding picture reference associated with the `DPB slot` is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The members of the `StdVideoDecodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active SPS* is the `SPS` identified by the key specified in `StdVideoDecodeH264PictureInfo::seq_parameter_set_id`.
- The *active PPS* is the `PPS` identified by the key specified by the pair constructed from

`StdVideoDecodeH264PictureInfo::seq_parameter_set_id` and `StdVideoDecodeH264PictureInfo::pic_parameter_set_id`.

Valid Usage (Implicit)

- `VUID-VkVideoDecodeH264PictureInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PICTURE_INFO_KHR`
- `VUID-VkVideoDecodeH264PictureInfoKHR-pStdPictureInfo-parameter`
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeH264PictureInfo` value
- `VUID-VkVideoDecodeH264PictureInfoKHR-pSliceOffsets-parameter`
`pSliceOffsets` **must** be a valid pointer to an array of `sliceCount uint32_t` values
- `VUID-VkVideoDecodeH264PictureInfoKHR-sliceCount-arraylength`
`sliceCount` **must** be greater than 0

The `VkVideoDecodeH264DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264DpbSlotInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoDecodeH264ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeH264DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoDecodeH264ReferenceInfo` structure specifying [H.264 reference information](#).

This structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [H.264 decode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots`, one or two elements are added to the list of [active reference pictures](#) used by the video decode operation for each element of `VkVideoDecodeInfoKHR::pReferenceSlots` as follows:

- If neither `pStdReferenceInfo->flags.top_field_flag` nor `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture is added as a frame reference to the list of active reference pictures.
- If `pStdReferenceInfo->flags.top_field_flag` is set, then the picture is added as a top field reference to the list of active reference pictures.
- If `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture is added as a bottom

field reference to the list of active reference pictures.

- For each added reference picture, the corresponding image subregion used is determined according to the [H.264 Decode Picture Data Access](#) section.
- Each added reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoDecodeInfoKHR::pReferenceSlots`.
- Each added reference picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

NOTE

When both the top and bottom field of an interlaced frame currently associated with a DPB slot is intended to be used as an active reference picture and both fields are stored in the same image subregion (which is the case when using `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR` which stores the two fields at even and odd scanlines of the same image subregion), both references have to be provided through a single `VkVideoReferenceSlotInfoKHR` structure that has both `flags.top_field_flag` and `flags.bottom_field_flag` set in the `StdVideoDecodeH264ReferenceInfo` structure pointed to by the `pStdReferenceInfo` member of the `VkVideoDecodeH264DpbSlotInfoKHR` structure included in the corresponding `VkVideoReferenceSlotInfoKHR` structure's `pNext` chain. However, this approach can only be used when both fields are stored in the same image subregion. If that is not the case (e.g. when using `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR` which requires separate `codedOffset` values for the two fields and also allows storing the two fields of a frame in separate image layers or entirely separate images), then a separate `VkVideoReferenceSlotInfoKHR` structure needs to be provided for referencing the two fields, each only setting one of `flags.top_field_flag` or `flags.bottom_field_flag`, and providing the appropriate video picture resource information in `VkVideoReferenceSlotInfoKHR::pPictureResource`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, the information related to the [reconstructed picture](#) is defined as follows:

- If neither `pStdReferenceInfo->flags.top_field_flag` nor `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture represents a frame.
- If `pStdReferenceInfo->flags.top_field_flag` is set, then the picture represents a field, specifically, the top field of the frame.
- If `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture represents a field, specifically, the bottom field of the frame.
- The image subregion used is determined according to the [H.264 Decode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

Std Reference Information

The members of the `StdVideoDecodeH264ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.top_field_flag` is used to indicate whether the reference is used as top field reference;
- `flags.bottom_field_flag` is used to indicate whether the reference is used as bottom field reference;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.2.5.1 of the [ITU-T H.264 Specification](#);
- `flags.is_non_existing` is used to indicate whether the picture is marked as “non-existing” as defined in section 8.2.5.2 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 8.2 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- `VUID-VkVideoDecodeH264DpbSlotInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoDecodeH264DpbSlotInfoKHR-pStdReferenceInfo-parameter`
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeH264ReferenceInfo` value

42.12.7. H.264 Decode Requirements

This section describes the **required** H.264 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 53. Required *Video Std Header Versions*

Video Std Header Name	Version
<code>vulkan_video_codec_h264std_decode</code>	1.0.0

Table 54. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹
<code>VkVideoCapabilitiesKHR</code>		
<code>flags</code>	-	min
<code>minBitstreamBufferOffsetAlignment</code>	4096	max
<code>minBitstreamBufferSizeAlignment</code>	4096	max
<code>pictureAccessGranularity</code>	(64,64)	max

Video Capability	Requirement	Requirement Type ¹
minCodedExtent	-	max
maxCodedExtent	-	min
maxDpbSlots	0	min
maxActiveReferencePictures	0	min
VkVideoDecodeCapabilitiesKHR		
flags	VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR	min
VkVideoDecodeH264CapabilitiesKHR		
maxLevelIdc	STD_VIDEO_H264_LEVEL_IDC_1_0	min
fieldOffsetGranularity	(0,0) except for profiles using VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR	implementation-dependent

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

42.13. H.265 Decode Operations

Video decode operations using an [H.265 decode profile](#) can be used to decode elementary video stream sequences compliant to the [ITU-T H.265 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 8 of [ITU-T H.265 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The `StdVideoH265VideoParameterSet` structure corresponding to the [active VPS](#) specifying the [H.265 video parameter set](#).

- The `StdVideoH265SequenceParameterSet` structure corresponding to the `active SPS` specifying the `H.265 sequence parameter set`.
- The `StdVideoH265PictureParameterSet` structure corresponding to the `active PPS` specifying the `H.265 picture parameter set`.
- The `StdVideoDecodeH265PictureInfo` structure specifying the `H.265 picture information`.
- The `StdVideoDecodeH265ReferenceInfo` structures specifying the `H.265 reference information` corresponding to the optional `reconstructed picture` and any `active reference pictures`.
- The contents of the provided video bitstream buffer range are interpreted as defined in the `H.265 Decode Bitstream Data Access` section.
- Picture data in the `video picture resources` corresponding to the used `active reference pictures`, `decode output picture`, and optional `reconstructed picture` is accessed as defined in the `H.265 Decode Picture Data Access` section.
- The decision on `reference picture setup` is made according to the parameters specified in the `H.265 picture information`.

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the `ITU-T H.265 Specification`, as described above, and the `DPB slots` associated with the `active reference pictures` all refer to `valid picture references`, then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete `unsuccessfully`.

42.13.1. H.265 Decode Bitstream Data Access

The video bitstream buffer range **should** contain a VCL NAL unit comprised of the slice segment headers and data of a picture representing a frame, as defined in sections 7.3.6 and 7.3.8, and this data is interpreted as defined in sections 7.4.7 and 7.4.9 of the `ITU-T H.265 Specification`, respectively.

The offsets provided in `VkVideoDecodeH265PictureInfoKHR::pSliceSegmentOffsets` **should** specify the starting offsets corresponding to each slice segment header within the video bitstream buffer range.

42.13.2. H.265 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used `video profile`. Accordingly, the complete image subregion of a `decode output picture`, `reference picture`, or `reconstructed picture` accessed by video coding operations using an `H.265 decode profile` is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of

`pictureAccessGranularity.width` and clamped to the width of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;

- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;

Where `codedExtent` is the member of the [VkVideoPictureResourceInfoKHR](#) structure corresponding to the picture.

In case of video decode operations using an [H.265 decode profile](#), any access to a picture at the coordinates (x,y), as defined by the [ITU-T H.265 Specification](#), is an access to the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure at the texel coordinates (x,y).

42.13.3. H.265 Decode Profile

A video profile supporting H.265 video decode operations is specified by setting [VkVideoProfileInfoKHR::videoCodecOperation](#) to `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and adding a [VkVideoDecodeH265ProfileInfoKHR](#) structure to the [VkVideoProfileInfoKHR::pNext](#) chain.

The [VkVideoDecodeH265ProfileInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoH265ProfileIdc stdProfileIdc;
} VkVideoDecodeH265ProfileInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a [StdVideoH265ProfileIdc](#) value specifying the H.265 codec profile IDC, as defined in section A.3 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265ProfileInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PROFILE_INFO_KHR`

42.13.4. H.265 Decode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [H.265 decode profile](#), the [VkVideoCapabilitiesKHR::pNext](#) chain **must** include a [VkVideoDecodeH265CapabilitiesKHR](#) structure that will be filled with the profile-specific capabilities.

The [VkVideoDecodeH265CapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoH265LevelIdc maxLevelIdc;
} VkVideoDecodeH265CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevelIdc` is a `StdVideoH265LevelIdc` value indicating the maximum H.265 level supported by the profile, where enum constant `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifies H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265CapabilitiesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_CAPABILITIES_KHR`

42.13.5. H.265 Decode Parameter Sets

`Video session parameters` objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` can contain the following types of parameters:

H.265 Video Parameter Sets (VPS)

Represented by `StdVideoH265VideoParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- `vps_video_parameter_set_id` is used as the key of the VPS entry;
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `vps_max_latency_increase_plus1`, `vps_max_dec_pic_buffering_minus1`, and `vps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `reserved` is used only for padding purposes and is otherwise ignored;
 - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to

`fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);

- `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
 - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265VideoParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

H.265 Sequence Parameter Sets (SPS)

Represented by `StdVideoH265SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- the pair constructed from `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` is used as the key of the SPS entry;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted

as follows:

- `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `sps_max_latency_increase_plus1`, `sps_max_dec_pic_buffering_minus1`, and `sps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.sps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
 - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- `pShortTermRefPicSet` is a pointer to an array of `num_short_term_ref_pic_sets` number of `StdVideoH265ShortTermRefPicSet` structures where each element is interpreted as follows:
 - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
 - `used_by_curr_pic_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `use_delta_flag` is a bitmask where bit index `i` corresponds to `use_delta_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `used_by_curr_pic_s0_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s0_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `used_by_curr_pic_s1_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s1_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ShortTermRefPicSet` are interpreted as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
- if `flags.long_term_ref_pics_present_flag` is set then the `StdVideoH265LongTermRefPicsSps` structure pointed to by `pLongTermRefPicsSps` is interpreted as follows:
 - `used_by_curr_pic_lt_sps_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_lt_sps_flag[i]` as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265LongTermRefPicsSps` are interpreted as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then the `StdVideoH265SequenceParameterSetVui`

structure pointed to by `pSequenceParameterSetVui` is interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- all other members of `pSequenceParameterSetVui` are interpreted as defined in section E.3.1 of the [ITU-T H.265 Specification](#);
- if `flags.sps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265SequenceParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

H.265 Picture Parameter Sets (PPS)

Represented by `StdVideoH265PictureParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- the triplet constructed from `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
 - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- if `flags.pps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265PictureParameterSet` are interpreted as defined in section 7.4.3.3 of the [ITU-T H.265 Specification](#).

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxStdVPSCount;
    uint32_t                 maxStdSPSCount;
    uint32_t                 maxStdPPSCount;
    const VkVideoDecodeH265SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoDecodeH265SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdVPSCount` is the maximum number of `H.265 VPS` entries the created `VkVideoSessionParametersKHR` can contain.

- `maxStdSPSCount` is the maximum number of [H.265 SPS](#) entries the created `VkVideoSessionParametersKHR` **can** contain.
- `maxStdPPSCount` is the maximum number of [H.265 PPS](#) entries the created `VkVideoSessionParametersKHR` **can** contain.
- `pParametersAddInfo` is `NULL` or a pointer to a [VkVideoDecodeH265SessionParametersAddInfoKHR](#) structure specifying H.265 parameters to add upon object creation.

Valid Usage (Implicit)

- `VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_CREATE_INFO_KHR`
- `VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-pParametersAddInfo-parameter`
If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` **must** be a valid pointer to a valid [VkVideoDecodeH265SessionParametersAddInfoKHR](#) structure

The `VkVideoDecodeH265SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265SessionParametersAddInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           stdVPSCount;
    const StdVideoH265VideoParameterSet* pStdVPSS;
    uint32_t           stdSPSCount;
    const StdVideoH265SequenceParameterSet* pStdSPSS;
    uint32_t           stdPPSCount;
    const StdVideoH265PictureParameterSet* pStdPPSS;
} VkVideoDecodeH265SessionParametersAddInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdVPSCount` is the number of elements in the `pStdVPSS` array.
- `pStdVPSS` is a pointer to an array of `StdVideoH265VideoParameterSet` structures describing the [H.265 VPS](#) entries to add.
- `stdSPSCount` is the number of elements in the `pStdSPSS` array.
- `pStdSPSS` is a pointer to an array of `StdVideoH265SequenceParameterSet` structures describing the [H.265 SPS](#) entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSS` array.
- `pStdPPSS` is a pointer to an array of `StdVideoH265PictureParameterSet` structures describing the [H.265 PPS](#) entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a `video session parameters` object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the `video session parameters` object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

Valid Usage

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04833
The `vps_video_parameter_set_id` member of each `StdVideoH265VideoParameterSet` structure specified in the elements of `pStdVPSS` **must** be unique within `pStdVPSS`
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04834
The pair constructed from the `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` members of each `StdVideoH265SequenceParameterSet` structure specified in the elements of `pStdSPSS` **must** be unique within `pStdSPSS`
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04835
The triplet constructed from the `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` members of each `StdVideoH265PictureParameterSet` structure specified in the elements of `pStdPPSS` **must** be unique within `pStdPPSS`

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdVPSS-parameter
If `stdVPSCount` is not 0, `pStdVPSS` **must** be a valid pointer to an array of `stdVPSCount` `StdVideoH265VideoParameterSet` values
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdSPSS-parameter
If `stdSPSCount` is not 0, `pStdSPSS` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` values
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdPPSS-parameter
If `stdPPSCount` is not 0, `pStdPPSS` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` values

42.13.6. H.265 Decoding Parameters

The `VkVideoDecodeH265PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265PictureInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    const StdVideoDecodeH265PictureInfo* pStdPictureInfo;
    uint32_t              sliceSegmentCount;
    const uint32_t*       pSliceSegmentOffsets;
} VkVideoDecodeH265PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a `StdVideoDecodeH265PictureInfo` structure specifying [H.265 picture information](#).
- `sliceSegmentCount` is the number of elements in `pSliceSegmentOffsets`.
- `pSliceSegmentOffsets` is a pointer to an array of `sliceSegmentCount` offsets specifying the start offset of the slice segments of the picture within the video bitstream buffer range specified in [VkVideoDecodeInfoKHR](#).

This structure is specified in the `pNext` chain of the [VkVideoDecodeInfoKHR](#) structure passed to [vkCmdDecodeVideoKHR](#) to specify the codec-specific picture information for an [H.265 decode operation](#).

Decode Output Picture Information

When this structure is specified in the `pNext` chain of the [VkVideoDecodeInfoKHR](#) structure passed to [vkCmdDecodeVideoKHR](#), the information related to the [decode output picture](#) is defined as follows:

- The image subregion used is determined according to the [H.265 Decode Picture Data Access](#) section.
- The decode output picture is associated with the [H.265 picture information](#) provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoDecodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `reserved` is used only for padding purposes and is otherwise ignored;
- `flags.IrapPicFlag` as defined in section 3.73 of the [ITU-T H.265 Specification](#);
- `flags.IdrPicFlag` as defined in section 3.67 of the [ITU-T H.265 Specification](#);
- `flags.IsReference` as defined in section 3.132 of the [ITU-T H.265 Specification](#);
- `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- `PicOrderCntVal` as defined in section 8.3.1 of the [ITU-T H.265 Specification](#);
- `NumBitsForSTRefPicSetInSlice` is the number of bits used in `st_ref_pic_set` when

`short_term_ref_pic_set_sps_flag` is 0, or 0 otherwise, as defined in sections 7.4.7 and 7.4.8 of the [ITU-T H.265 Specification](#);

- `NumDeltaPocsOfRefRpsIdx` is the value of `NumDeltaPocs[RefRpsIdx]` when `short_term_ref_pic_set_sps_flag` is 1, or 0 otherwise, as defined in sections 7.4.7 and 7.4.8 of the [ITU-T H.265 Specification](#);
- `RefPicSetStCurrBefore`, `RefPicSetStCurrAfter`, and `RefPicSetLtCurr` are interpreted as defined in section 8.3.2 of the [ITU-T H.265 Specification](#) where each element of these arrays either identifies an [active reference picture](#) using its [DPB slot](#) index or contains the value `STD_VIDEO_H265_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
- all other members are interpreted as defined in section 8.3.2 of the [ITU-T H.265 Specification](#).

Reference picture setup is controlled by the value of `StdVideoDecodeH265PictureInfo::flags.IsReference`. If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the corresponding [DPB slot](#). If `StdVideoDecodeH265PictureInfo::flags.IsReference` is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The members of the `StdVideoDecodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active VPS* is the [VPS](#) identified by the key specified in `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`.
- The *active SPS* is the [SPS](#) identified by the key specified by the pair constructed from `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`.
- The *active PPS* is the [PPS](#) identified by the key specified by the triplet constructed from `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id`.

Valid Usage (Implicit)

- `VUID-VkVideoDecodeH265PictureInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PICTURE_INFO_KHR`
- `VUID-VkVideoDecodeH265PictureInfoKHR-pStdPictureInfo-parameter`
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeH265PictureInfo` value
- `VUID-VkVideoDecodeH265PictureInfoKHR-pSliceSegmentOffsets-parameter`
`pSliceSegmentOffsets` **must** be a valid pointer to an array of `sliceSegmentCount` `uint32_t` values
- `VUID-VkVideoDecodeH265PictureInfoKHR-sliceSegmentCount-arraylength`
`sliceSegmentCount` **must** be greater than 0

The `VkVideoDecodeH265DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265DpbSlotInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    const StdVideoDecodeH265ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeH265DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoDecodeH265ReferenceInfo` structure specifying reference picture information described in section 8.3 of the [ITU-T H.265 Specification](#).

This structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [H.265 decode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots`, one element is added to the list of [active reference pictures](#) used by the video decode operation for each element of `VkVideoDecodeInfoKHR::pReferenceSlots` as follows:

- The image subregion used is determined according to the [H.265 Decode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoDecodeInfoKHR::pReferenceSlots`.
- The reference picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [H.265 Decode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

Std Reference Information

The members of the `StdVideoDecodeH265ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `flags.unused_for_reference` is used to indicate whether the picture is marked as “unused for reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- all other members are interpreted as defined in section 8.3 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- `VUID-VkVideoDecodeH265DpbSlotInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoDecodeH265DpbSlotInfoKHR-pStdReferenceInfo-parameter`
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeH265ReferenceInfo` value

42.13.7. H.265 Decode Requirements

This section describes the **required** H.265 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 55. Required *Video Std Header Versions*

Video Std Header Name	Version
<code>vulkan_video_codec_h265std_decode</code>	1.0.0

Table 56. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹
VkVideoCapabilitiesKHR		
<code>flags</code>	-	min
<code>minBitstreamBufferOffsetAlignment</code>	4096	max
<code>minBitstreamBufferSizeAlignment</code>	4096	max
<code>pictureAccessGranularity</code>	(64,64)	max
<code>minCodedExtent</code>	-	max
<code>maxCodedExtent</code>	-	min
<code>maxDpbSlots</code>	0	min
<code>maxActiveReferencePictures</code>	0	min
VkVideoDecodeCapabilitiesKHR		

Video Capability	Requirement	Requirement Type ¹
flags	VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR	min
VkVideoDecodeH265CapabilitiesKHR		
maxLevelIdc	STD_VIDEO_H265_LEVEL_IDC_1_0	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

42.14. AV1 Decode Operations

Video decode operations using an [AV1 decode profile](#) can be used to decode elementary video stream sequences compliant with the [AV1 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 7 of the [AV1 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The `StdVideoAV1SequenceHeader` structure stored in the bound video session parameters object specifying the [active sequence header](#).
 - The `StdVideoDecodeAV1PictureInfo` structure specifying the [AV1 picture information](#).
 - The `StdVideoDecodeAV1ReferenceInfo` structures specifying the [AV1 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The contents of the provided video bitstream buffer range are interpreted as defined in the [AV1 Decode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [active reference pictures](#), [decode output picture](#), and optional [reconstructed picture](#) is accessed as defined in the [AV1 Decode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [AV1 picture information](#).

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the [AV1 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete [unsuccessfully](#).

42.14.1. AV1 Decode Bitstream Data Access

The video bitstream buffer range **should** contain one or more frame OBUs, comprised of a frame header OBU and tile group OBU, that together represent an entire frame, as defined in sections 5.10, 5.9, and 5.11, and this data is interpreted as defined in sections 6.9, 6.8, and 6.10 of the [AV1 Specification](#), respectively.

The offset specified in [VkVideoDecodeAV1PictureInfoKHR::frameHeaderOffset](#) **should** specify the starting offset of the frame header OBU of the frame.

NOTE

When the tiles of the frame are encoded into multiple tile groups, each frame OBU has a separate frame header OBU but their content is expected to match per the requirements of the [AV1 Specification](#). Accordingly, the offset specified in [frameHeaderOffset](#) **can** be the offset of any of the otherwise identical frame header OBUs when multiple tile groups are present.

The offsets and sizes provided in [VkVideoDecodeAV1PictureInfoKHR::pTileOffsets](#) and [VkVideoDecodeAV1PictureInfoKHR::pTileSizes](#), respectively, **should** specify the starting offsets and sizes corresponding to each tile within the video bitstream buffer range.

42.14.2. AV1 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by [VkVideoCapabilitiesKHR::pictureAccessGranularity](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used [video profile](#). Accordingly, the complete image subregion of a [decode output picture](#), [reference picture](#), or [reconstructed picture](#) accessed by video coding operations using an [AV1 decode profile](#) is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;

Where `codedExtent` is the member of the [VkVideoPictureResourceInfoKHR](#) structure corresponding

to the picture.

In case of video decode operations using an [AV1 decode profile](#), any access to a picture at the coordinates (x,y), as defined by the [AV1 Specification](#), is an access to the image subresource referred to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure at the texel coordinates (x,y).

42.14.3. AV1 Reference Names and Semantics

Individual reference frames used in the decoding process have different semantics, as defined in section 6.10.24 of the [AV1 Specification](#). The AV1 semantics associated with a reference picture are indicated by the corresponding enumeration constant defined in the Video Std enumeration type [StdVideoAV1ReferenceName](#):

- [STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME](#) identifies the reference used for intra coding ([INTRA_FRAME](#)), as defined in sections 2 and 7.11.2 of the [AV1 Specification](#).
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 7.11.3 of the [AV1 Specification](#):
 - [STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME](#) identifies the [LAST_FRAME](#) reference
 - [STD_VIDEO_AV1_REFERENCE_NAME_LAST2_FRAME](#) identifies the [LAST2_FRAME](#) reference
 - [STD_VIDEO_AV1_REFERENCE_NAME_LAST3_FRAME](#) identifies the [LAST3_FRAME](#) reference
 - [STD_VIDEO_AV1_REFERENCE_NAME_GOLDEN_FRAME](#) identifies the [GOLDEN_FRAME](#) reference
 - [STD_VIDEO_AV1_REFERENCE_NAME_BWDREF_FRAME](#) identifies the [BWDREF_FRAME](#) reference
 - [STD_VIDEO_AV1_REFERENCE_NAME_ALTREF2_FRAME](#) identifies the [ALTREF2_FRAME](#) reference
 - [STD_VIDEO_AV1_REFERENCE_NAME_ALTREF_FRAME](#) identifies the [ALTREF_FRAME](#) reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

42.14.4. AV1 Decode Profile

A video profile supporting AV1 video decode operations is specified by setting [VkVideoProfileInfoKHR::videoCodecOperation](#) to [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#) and adding a [VkVideoDecodeAV1ProfileInfoKHR](#) structure to the [VkVideoProfileInfoKHR::pNext](#) chain.

The [VkVideoDecodeAV1ProfileInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoAV1Profile  stdProfile;
    VkBool32           filmGrainSupport;
} VkVideoDecodeAV1ProfileInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfile` is a `StdVideoAV1Profile` value specifying the AV1 codec profile, as defined in section A.2 of the [AV1 Specification](#).
- `filmGrainSupport` specifies whether AV1 film grain, as defined in section 7.8.3 of the [AV1 Specification](#), **can** be used with the video profile. When this member is `VK_TRUE`, video session objects created against the video profile will be able to decode pictures that have [film grain](#) enabled.

NOTE

Enabling `filmGrainSupport` **may** increase the memory requirements of video sessions and/or video picture resources on some implementations.

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1ProfileInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_PROFILE_INFO_KHR`

42.14.5. AV1 Decode Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities for an [AV1 decode profile](#), the `VkVideoCapabilitiesKHR::pNext` chain **must** include a `VkVideoDecodeAV1CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoDecodeAV1CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoAV1Level    maxLevel;
} VkVideoDecodeAV1CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevel` is a `StdVideoAV1Level` value specifying the maximum AV1 level supported by the profile, as defined in section A.3 of the [AV1 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1CapabilitiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_CAPABILITIES_KHR`

42.14.6. AV1 Decode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` contain a single instance of the following parameter set:

AV1 Sequence Header

Represented by `StdVideoAV1SequenceHeader` structures and interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- the `StdVideoAV1ColorConfig` structure pointed to by `pColorConfig` is interpreted as follows:
 - `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
 - all other members of `StdVideoAV1ColorConfig` are interpreted as defined in section 6.4.2 of the [AV1 Specification](#);
- if `flags.timing_info_present_flag` is set, then the `StdVideoAV1TimingInfo` structure pointed to by `pTimingInfo` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoAV1TimingInfo` are interpreted as defined in section 6.4.3 of the [AV1 Specification](#);
- all other members of `StdVideoAV1SequenceHeader` are interpreted as defined in section 6.4 of the [AV1 Specification](#).

When a video session parameters object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure specifying the contents of the object.

The `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1SessionParametersCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoAV1SequenceHeader* pStdSequenceHeader;
} VkVideoDecodeAV1SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdSequenceHeader` is a pointer to a `StdVideoAV1SequenceHeader` structure describing the [AV1 sequence header](#) entry to store in the created object.

NOTE | As AV1 video session parameters objects will only ever contain a single AV1

sequence header, this has to be specified at object creation time and such video session parameters objects cannot be updated using the [vkUpdateVideoSessionParametersKHR](#) command. When a new AV1 sequence header is decoded from the input video bitstream the application needs to create a new video session parameters object to store it.

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1SessionParametersCreateInfoKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_SESSION_PARAMETERS_CREATE_INFO_KHR`
- VUID-VkVideoDecodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-parameter **must** be a valid pointer to a valid `StdVideoAV1SequenceHeader` value

42.14.7. AV1 Decoding Parameters

The `VkVideoDecodeAV1PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1PictureInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoDecodeAV1PictureInfo* pStdPictureInfo;
    int32_t             referenceNameSlotIndices
[VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR];
    uint32_t            frameHeaderOffset;
    uint32_t            tileCount;
    const uint32_t*     pTileOffsets;
    const uint32_t*     pTileSizes;
} VkVideoDecodeAV1PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a `StdVideoDecodeAV1PictureInfo` structure specifying [AV1 picture information](#).
- `referenceNameSlotIndices` is an array of seven (`VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR`, which is equal to the Video Std definition `STD_VIDEO_AV1_REFS_PER_FRAME`) signed integer values specifying the index of the [DPB slot](#) or a negative integer value for each [AV1 reference name](#) used for inter coding. In particular, the DPB slot index for the AV1 reference name `frame` is specified in `referenceNameSlotIndices[frame - STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME]`.
- `frameHeaderOffset` is the byte offset of the AV1 frame header OBU, as defined in section 5.9 of the [AV1 Specification](#), within the video bitstream buffer range specified in `VkVideoDecodeInfoKHR`.
- `tileCount` is the number of elements in `pTileOffsets` and `pTileSizes`.
- `pTileOffsets` is a pointer to an array of `tileCount` integers specifying the byte offset of the tiles of

the picture within the video bitstream buffer range specified in [VkVideoDecodeInfoKHR](#).

- [pTileSizes](#) is a pointer to an array of [tileCount](#) integers specifying the byte size of the tiles of the picture within the video bitstream buffer range specified in [VkVideoDecodeInfoKHR](#).

This structure is specified in the [pNext](#) chain of the [VkVideoDecodeInfoKHR](#) structure passed to [vkCmdDecodeVideoKHR](#) to specify the codec-specific picture information for an [AV1 decode operation](#).

Decode Output Picture Information

When this structure is specified in the [pNext](#) chain of the [VkVideoDecodeInfoKHR](#) structure passed to [vkCmdDecodeVideoKHR](#), the information related to the [decode output picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Decode Picture Data Access](#) section.
- The decode output picture is associated with the [AV1 picture information](#) provided in [pStdPictureInfo](#).

Std Picture Information

The members of the [StdVideoDecodeAV1PictureInfo](#) structure pointed to by [pStdPictureInfo](#) are interpreted as follows:

- [flags.reserved](#), [reserved1](#), and [reserved2](#) are used only for padding purposes and are otherwise ignored;
- [flags.apply_grain](#) indicates that film grain is enabled for the decoded picture, as defined in section 6.8.20 of the [AV1 Specification](#);
- [tg_start](#) and [tg_end](#) are interpreted as defined in section 6.10.1 of the [AV1 Specification](#);
- [OrderHint](#), [OrderHints](#), and [expectedFrameId](#) are interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- the [StdVideoAV1TileInfo](#) structure pointed to by [pTileInfo](#) is interpreted as follows:
 - [flags.reserved](#) and [reserved1](#) are used only for padding purposes and are otherwise ignored;
 - [pMiColStarts](#) is a pointer to an array of [TileCols](#) number of unsigned integers that corresponds to [MiColStarts](#) defined in section 6.8.14 of the [AV1 Specification](#);
 - [pMiRowStarts](#) is a pointer to an array of [TileRows](#) number of unsigned integers that corresponds to [MiRowStarts](#) defined in section 6.8.14 of the [AV1 Specification](#);
 - [pWidthInSbsMinus1](#) is a pointer to an array of [TileCols](#) number of unsigned integers that corresponds to [width_in_sbs_minus_1](#) defined in section 6.8.14 of the [AV1 Specification](#);
 - [pHeightInSbsMinus1](#) is a pointer to an array of [TileRows](#) number of unsigned integers that corresponds to [height_in_sbs_minus_1](#) defined in section 6.8.14 of the [AV1 Specification](#);
 - all other members of [StdVideoAV1TileInfo](#) are interpreted as defined in section 6.8.14 of the [AV1 Specification](#);
- the [StdVideoAV1Quantization](#) structure pointed to by [pQuantization](#) is interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- all other members of `StdVideoAV1Quantization` are interpreted as defined in section 6.8.11 of the [AV1 Specification](#);
- if `flags.segmentation_enabled` is set, then the `StdVideoAV1Segmentation` structure pointed to by `pSegmentation` is interpreted as follows:
 - the elements of `FeatureEnabled` are bitmasks where bit index j of element i corresponds to `FeatureEnabled[i][j]` as defined in section 6.8.13 of the [AV1 Specification](#);
 - `FeatureData` is interpreted as defined in section 6.8.13 of the [AV1 Specification](#);
- the `StdVideoAV1LoopFilter` structure pointed to by `pLoopFilter` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - `update_ref_delta` is a bitmask where bit index i is interpreted as the value of `update_ref_delta` corresponding to element i of `loop_filter_ref_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);
 - `update_mode_delta` is a bitmask where bit index i is interpreted as the value of `update_mode_delta` corresponding to element i of `loop_filter_mode_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);
 - all other members of `StdVideoAV1LoopFilter` are interpreted as defined in section 6.8.10 of the [AV1 Specification](#);
- if `flags.enable_cdef` is set in the [active sequence header](#), then the members of the `StdVideoAV1CDEF` structure pointed to by `pCDEF` are interpreted as follows:
 - `cdef_y_sec_strength` and `cdef_uv_sec_strength` are the bitstream values of the corresponding syntax elements defined in section 5.9.19 of the [AV1 Specification](#);
 - all other members of `StdVideoAV1CDEF` are interpreted as defined in section 6.10.14 of the [AV1 Specification](#);
- the `StdVideoAV1LoopRestoration` structure pointed to by `pLoopRestoration` is interpreted as follows:
 - `LoopRestorationSize[plane]` is interpreted as $\log_2(\text{size}) - 5$, where `size` is the value of `LoopRestorationSize[plane]` as defined in section 6.10.15 of the [AV1 Specification](#).
 - all other members of `StdVideoAV1LoopRestoration` are defined as in section 6.10.15 of the [AV1 Specification](#);
- the members of the `StdVideoAV1GlobalMotion` structure provided in `global_motion` are interpreted as defined in section 7.10 of the [AV1 Specification](#);
- if `flags.film_grain_params_present` is set in the [active sequence header](#), then the `StdVideoAV1FilmGrain` structure pointed to by `pFilmGrain` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoAV1FilmGrain` are interpreted as defined in section 6.8.20 of the [AV1 Specification](#);
- all other members are interpreted as defined in section 6.8 of the [AV1 Specification](#).

When [film grain is enabled](#) for the decoded frame, the `flags.update_grain` and

`film_grain_params_ref_idx` values specified in `StdVideoAV1FilmGrain` are ignored by AV1 decode operations and the `load_grain_params` function, as defined in section 6.8.20 of the [AV1 Specification](#), is not executed. Instead, the application is responsible for specifying the effective film grain parameters for the frame in `StdVideoAV1FilmGrain`.

When [film grain is enabled](#) for the decoded frame, the application is required to specify a different decode output picture resource in `VkVideoDecodeInfoKHR::dstPictureResource` compared to the reconstructed picture specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->pPictureResource` even if the implementation does not report support for `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR` in `VkVideoDecodeCapabilitiesKHR::flags` for the video decode profile.

Reference picture setup is controlled by the value of `StdVideoDecodeAV1PictureInfo::refresh_frame_flags`. If it is not zero and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoDecodeAV1PictureInfo::refresh_frame_flags` is zero, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The *active sequence header* is the [AV1 sequence header](#) stored in the bound video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1PictureInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_PICTURE_INFO_KHR`
- VUID-VkVideoDecodeAV1PictureInfoKHR-pStdPictureInfo-parameter
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeAV1PictureInfo` value
- VUID-VkVideoDecodeAV1PictureInfoKHR-pTileOffsets-parameter
`pTileOffsets` **must** be a valid pointer to an array of `tileCount uint32_t` values
- VUID-VkVideoDecodeAV1PictureInfoKHR-pTileSizes-parameter
`pTileSizes` **must** be a valid pointer to an array of `tileCount uint32_t` values
- VUID-VkVideoDecodeAV1PictureInfoKHR-tileCount-arraylength
`tileCount` **must** be greater than 0

The `VkVideoDecodeAV1DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1DpbSlotInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    const StdVideoDecodeAV1ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeAV1DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoDecodeAV1ReferenceInfo` structure specifying [AV1 reference information](#).

This structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [AV1 decode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots`, one element is added to the list of [active reference pictures](#) used by the video decode operation for each element of `VkVideoDecodeInfoKHR::pReferenceSlots` as follows:

- The image subregion used is determined according to the [AV1 Decode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoDecodeInfoKHR::pReferenceSlots`.
- The reference picture is associated with the [AV1 reference information](#) provided in `pStdReferenceInfo`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Decode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [AV1 reference information](#) provided in `pStdReferenceInfo`.

Std Reference Information

The members of the `StdVideoDecodeAV1ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.disable_frame_end_update_cdf` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `flags.segmentation_enabled` is interpreted as defined in section 6.8.13 of the [AV1 Specification](#);
- `frame_type` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);

NOTE

The `frame_type` member is defined with the type `uint8_t`, but it takes the same

values defined in the `StdVideoAV1FrameType` enumeration type as `StdVideoDecodeAV1PictureInfo::frame_type`.

- `RefFrameSignBias` is a bitmask where bit index `i` corresponds to `RefFrameSignBias[i]` as defined in section 6.8.2 of the [AV1 Specification](#);
- `OrderHint` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `SavedOrderHints` is interpreted as defined in section 7.20 of the [AV1 Specification](#).

NOTE

When the AV1 reference information is provided for the reconstructed picture, certain parameters (e.g. `frame_type`) are specified both in the [AV1 picture information](#) and in the AV1 reference information. This is necessary because unlike the AV1 picture information, which is only used for the purposes of the video decode operation in question, the AV1 reference information specified for the reconstructed picture **may** be associated with the activated DPB slot, meaning that some implementations **may** maintain it as part of the [reference picture metadata](#) corresponding to the video picture resource associated with the DPB slot. When the AV1 reference information is provided for an active reference picture, the specified parameters correspond to the parameters specified when the DPB slot was activated (set up) with the reference picture, as usual, in order to communicate these parameters for implementations that do not maintain any subset of these parameters as part of the DPB slot's [reference picture metadata](#).

Valid Usage (Implicit)

- `VUID-VkVideoDecodeAV1DpbSlotInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoDecodeAV1DpbSlotInfoKHR-pStdReferenceInfo-parameter`
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeAV1ReferenceInfo` value

42.14.8. AV1 Decode Requirements

This section describes the **required** AV1 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 57. Required [Video Std Header Versions](#)

Video Std Header Name	Version
<code>vulkan_video_codec_av1std_decode</code>	1.0.0

Table 58. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹
VkVideoCapabilitiesKHR		
flags	-	min
minBitstreamBufferOffsetAlignment	4096	max
minBitstreamBufferSizeAlignment	4096	max
pictureAccessGranularity	(64,64)	max
minCodedExtent	-	max
maxCodedExtent	-	min
maxDpbSlots	0	min
maxActiveReferencePictures	0	min
VkVideoDecodeCapabilitiesKHR		
flags	VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR	min
VkVideoDecodeAV1CapabilitiesKHR		
maxLevel	STD_VIDEO_AV1_LEVEL_2_0	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

42.15. Video Encode Operations

Video encode operations consume an *encode input picture* and zero or more reference pictures, and produce compressed video data to a video bitstream buffer and an optional [reconstructed picture](#).

NOTE

Such encode input pictures can be used as the [output](#) of video decode operations, with graphics or compute operations, or with [Window System Integration](#) APIs, depending on the capabilities of the implementation.

Video encode operations **may** access the following resources in the `VK_PIPELINE_STAGE_2_VIDEO_ENCODE_BIT_KHR` stage:

- The image subregions corresponding to the source [encode input picture](#) and [active reference pictures](#) with access `VK_ACCESS_2_VIDEO_ENCODE_READ_BIT_KHR`.
- The destination video bitstream buffer range and the optional [reconstructed picture](#) with access

VK_ACCESS_2_VIDEO_ENCODE_WRITE_BIT_KHR.

The image subresource of each [video picture resource](#) accessed by the video encode operation is specified using a corresponding [VkVideoPictureResourceInfoKHR](#) structure. Each such image subresource **must** be in the appropriate image layout as follows:

- If the image subresource is used in the video encode operation as an [encode input picture](#), then it **must** be in the [VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR](#) layout.
- If the image subresource is used in the video encode operation as a [reconstructed picture](#) or [reference picture](#), then it **must** be in the [VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR](#) layout.

A video encode operation **may** complete unsuccessfully. In this case the target video bitstream buffer will have undefined contents. Similarly, if [reference picture setup](#) is requested, the [reconstructed-picture](#) will also have undefined contents, and the activated DPB slot will have an [invalid picture reference](#).

If a video encode operation completes successfully and the codec-specific parameters provided by the application adhere to the syntactic and semantic requirements defined in the corresponding video compression standard, then the target video bitstream buffer will contain compressed video data after the execution of the video encode operation according to the respective [codec-specific semantics](#).

42.15.1. Codec-Specific Semantics

The following aspects of video encode operations are codec-specific:

- The compressed video data written to the target video bitstream buffer range.
- The construction and interpretation of the list of [active reference pictures](#) and the interpretation of the picture data referred to by the corresponding image subregions.
- The construction and interpretation of information related to the [encode input picture](#) and the interpretation of the picture data referred to by the corresponding image subregion.
- The decision on [reference picture setup](#).
- The construction and interpretation of information related to the optional [reconstructed picture](#) and the generation of picture data to the corresponding image subregion.
- Certain aspects of [rate control](#).

These codec-specific behaviors are defined for each video codec operation separately.

- If the used video codec operation is [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#), then the codec-specific aspects of the video encoding process are performed as defined in the [H.264 Encode Operations](#) section.
- If the used video codec operation is [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the codec-specific aspects of the video encoding process are performed as defined in the [H.265 Encode Operations](#) section.

Video Encode Parameter Overrides

Implementations supporting video encode operations for any particular video codec operation often support only a subset of the available encoding tools defined by the corresponding video compression standards. Accordingly, certain implementation-dependent limitations **may** apply to codec-specific parameters provided through the structures defined in the Video Std headers corresponding to the used video codec operation.

Exposing all of these restrictions on particular codec-specific parameter values or combinations thereof in the form of application-queryable capabilities is impractical, hence this specification allows implementations to *override* the value of any of the codec-specific parameters, unless otherwise specified, as long as all of the following conditions are met:

- If the application-provided codec-specific parameters adhere to the syntactic and semantic requirements and rules defined by the used video compression standard, and thus would be usable to produce a video bitstream compliant with that standard, then the codec-specific parameters resulting from the process of implementation overrides **must** also adhere to the same requirements and rules, and any video bitstream produced using the overridden parameters **must** also be compliant.
- The overridden codec-specific parameter values **must** not have an impact on the codec-independent behaviors defined for video encode operations.
- The implementation **must** not override any codec-specific parameters specified to a command that **may** cause application-provided codec-specific parameters specified to subsequent commands to no longer adhere to the semantic requirements and rules defined by the used video compression standard, unless the implementation also overrides those parameters to adhere to any such requirements and rules.
- The overridden codec-specific parameter values **must** not have an impact on the codec-specific picture data access semantics.
- The overridden codec-specific parameter values **may** change the contents of the codec-specific bitstream elements produced by video encode operations or otherwise retrieved by the application (e.g. using the [vkGetEncodedVideoSessionParametersKHR](#) command) but **must** still adhere to the codec-specific semantics defined for that video codec operation, including, but not limited to, the number, type, and order of the encoded codec-specific bitstream elements.

Besides codec-specific parameter overrides performed for implementation-dependent reasons, applications **can** enable the implementation to apply additional [optimizing overrides](#) that **may** improve the efficiency or performance of video encoding operations. However, implementations **must** meet the conditions listed above even in case of such optimizing overrides.

NOTE

Unless the application opts in for optimizing overrides, implementations are not expected to override any of the codec-specific parameters, except when such overrides are necessary for the correct operation of video encoder implementation due to limitations to the available encoding tools on that implementation.

42.15.2. Video Encode Operation Steps

Each video encode operation performs the following steps in the

VK_PIPELINE_STAGE_2_VIDEO_ENCODE_BIT_KHR stage:

1. Reads the input picture data from the [encode input picture](#);
2. Determine derived encoding quality parameters according to the [codec-specific semantics](#) and the current [rate control](#) state;
3. Compresses the input picture data according to the [codec-specific semantics](#), applying any prediction data read from the [active reference pictures](#) and rate control restrictions in the process;
4. Writes the encoded bitstream data to the destination video bitstream buffer range;
5. Performs picture reconstruction of the encoded video data according to the [codec-specific semantics](#), applying any prediction data read from the [active reference pictures](#) in the process, if a [reconstructed picture](#) is specified and [reference picture setup](#) is requested;
6. If [reference picture setup](#) is requested, the [DPB slot index](#) specified in the [reconstructed picture information](#) is [activated](#) with the [reconstructed picture](#);
7. Writes the reconstructed picture data to the [reconstructed picture](#), if one is specified, according to the [codec-specific semantics](#).

When [reconstructed picture information](#) is provided, the specified [DPB slot](#) index is associated with the corresponding [bound reference picture resource](#), indifferent of whether [reference picture setup](#) is requested.

42.15.3. Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specifying an encode operation, the [VkVideoEncodeCapabilitiesKHR](#) structure **must** be included in the [pNext](#) chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve capabilities specific to video encoding.

The [VkVideoEncodeCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeCapabilityFlagsKHR    flags;
    VkVideoEncodeRateControlModeFlagsKHR    rateControlModes;
    uint32_t            maxRateControlLayers;
    uint64_t            maxBitrate;
    uint32_t            maxQualityLevels;
    VkExtent2D          encodeInputPictureGranularity;
    VkVideoEncodeFeedbackFlagsKHR    supportedEncodeFeedbackFlags;
} VkVideoEncodeCapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.

- **flags** is a bitmask of [VkVideoEncodeCapabilityFlagBitsKHR](#) describing supported encoding features.
- **rateControlModes** is a bitmask of [VkVideoEncodeRateControlModeFlagBitsKHR](#) indicating supported [rate control modes](#).
- **maxRateControlLayers** indicates the maximum number of [rate control layers](#) supported.
- **maxBitrate** indicates the maximum supported bitrate.
- **maxQualityLevels** indicates the number of discrete [video encode quality levels](#) supported. Implementations **must** support at least one quality level.
- **encodeInputPictureGranularity** indicates the granularity at which [encode input picture](#) data is encoded and **may** indicate a texel granularity up to the size of the largest supported codec-specific coding block. This capability does not impose any valid usage constraints on the application, however, depending on the contents of the encode input picture, it **may** have effects on the encoded bitstream, as described in more detail below.
- **supportedEncodeFeedbackFlags** is a bitmask of [VkVideoEncodeFeedbackFlagBitsKHR](#) values specifying the supported flags for [video encode feedback queries](#).

Implementations **must** include support for at least [VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR](#) and [VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR](#) in **supportedEncodeFeedbackFlags**.

encodeInputPictureGranularity provides information about the way [encode input picture](#) data is used as input to video encode operations. In particular, some implementations **may** not be able to limit the set of texels used to encode the output video bitstream to the image subregion specified in the [VkVideoPictureResourceInfoKHR](#) structure corresponding to the encode input picture (i.e. to the resolution of the image data to encode specified in its **codedExtent** member).

NOTE

For example, the application requests the coded extent to be 1920x1080, but the implementation is only able to source the encode input picture data at the granularity of the codec-specific coding block size which is 16x16 pixels (or as otherwise indicated in **encodeInputPictureGranularity**). In this example, the content is horizontally aligned with the coding block size, but not vertically aligned with it. Thus encoding of the last row of coding blocks will be impacted by the contents of the input image at texel rows 1080 to 1087 (the latter being the next row which is vertically aligned with the coding block size, assuming a zero-based texel row index).

If **codedExtent** rounded up to the next integer multiple of **encodeInputPictureGranularity** is greater than the extent of the image subresource specified for the [encode input picture](#), then the texel values corresponding to texel coordinates outside of the bounds of the image subresource **may** be undefined. However, implementations **should** use well-defined default values for such texels in order to maximize the encoding efficiency for the last coding block row/column, and/or to ensure consistent encoding results across repeated encoding of the same input content. Nonetheless, the values used for such texels **must** not have an effect on whether the video encode operation produces a compliant bitstream, and **must** not have any other effects on the encoded picture data beyond what **may** otherwise result from using these texel values as input to any compression algorithm, as defined in the used video compression standard.

NOTE

While not required, it is generally a good practice for applications to make sure that the image subresource used for the encode input picture has an extent that is an integer multiple of the codec-specific coding block size (or at least `encodeInputPictureGranularity`) and that this padding area is filled with known values in order to improve encoding efficiency, portability, and reproducibility.

Valid Usage (Implicit)

- VUID-VkVideoEncodeCapabilitiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_CAPABILITIES_KHR`

Bits which **may** be set in `VkVideoEncodeCapabilitiesKHR::flags`, indicating the encoding tools supported, are:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeCapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR =
0x00000001,
    VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR =
0x00000002,
} VkVideoEncodeCapabilityFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR` indicates that the implementation supports the use of `VkVideoEncodeInfoKHR::precedingExternallyEncodedBytes`.
- `VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR` indicates that the implementation is able to detect and report when the destination video bitstream buffer range provided by the application is not sufficiently large to fit the encoded bitstream data produced by a video encode operation by reporting the `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` query result status code.

NOTE

Some implementations **may** not be able to reliably detect insufficient bitstream buffer range conditions in all situations. Such implementations will not report support for the `VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR` encode capability flag for the video profile, but **may** still report the `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` query result status code in certain cases. Applications **should** always check for the specific query result status code `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` even when this encode capability flag is not supported by the implementation for the video profile in question. However, applications **must** not assume that a different negative query result status code indicating an unsuccessful completion of a video encode operation is not the result of an insufficient bitstream buffer condition unless this encode capability flag is supported.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeCapabilityFlagsKHR;
```

`VkVideoEncodeCapabilityFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeCapabilityFlagBitsKHR`.

42.15.4. Video Encode Quality Levels

Implementations **can** support more than one video encode quality levels for a video encode profile, which control the number and type of implementation-specific encoding tools and algorithms utilized in the encoding process.

NOTE

Generally, using higher video encode quality levels **may** produce higher quality video streams at the cost of additional processing time. However, as the final quality of an encoded picture depends on the contents of the [encode input picture](#), the contents of the [active reference pictures](#), the codec-specific encode parameters, and the particular implementation-specific tools used corresponding to the individual video encode quality levels, there are no guarantees that using a higher video encode quality level will always produce a higher quality encoded picture for any given set of inputs.

To query properties for a specific video encode quality level supported by a video encode profile, call:

```
// Provided by VK_KHR_video_encode_queue
VkResult vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR* pQualityLevelInfo,
    VkVideoEncodeQualityLevelPropertiesKHR* pQualityLevelProperties);
```

- `physicalDevice` is the physical device to query the video encode quality level properties for.
- `pQualityLevelInfo` is a pointer to a `VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR` structure specifying the video encode profile and quality level to query properties for.
- `pQualityLevelProperties` is a pointer to a `VkVideoEncodeQualityLevelPropertiesKHR` structure in which the properties are returned.

Valid Usage

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-08257

If `pQualityLevelInfo->pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of `pQualityLevelProperties` **must** include a `VkVideoEncodeH264QualityLevelPropertiesKHR` structure

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-

08258

If `pQualityLevelInfo->pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of `pQualityLevelProperties` **must** include a `VkVideoEncodeH265QualityLevelPropertiesKHR` structure

Valid Usage (Implicit)

- `VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-physicalDevice-parameter`
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- `VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-parameter`
`pQualityLevelInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR` structure
- `VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelProperties-parameter`
`pQualityLevelProperties` **must** be a valid pointer to a `VkVideoEncodeQualityLevelPropertiesKHR` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR`

The `VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const VkVideoProfileInfoKHR* pVideoProfile;
    uint32_t           qualityLevel;
} VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pVideoProfile` is a pointer to a `VkVideoProfileInfoKHR` structure specifying the video profile to query the video encode quality level properties for.
- `qualityLevel` is the video encode quality level to query properties for.

Valid Usage

- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-08259 `pVideoProfile` **must** be a `supported video profile`
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-08260 `pVideoProfile->videoCodecOperation` **must** specify an encode operation
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-qualityLevel-08261 `qualityLevel` **must** be less than `VkVideoEncodeCapabilitiesKHR::maxQualityLevels`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified in `pVideoProfile`

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR`
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pNext-pNext `pNext` **must** be `NULL`
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-parameter `pVideoProfile` **must** be a valid pointer to a valid `VkVideoProfileInfoKHR` structure

The `VkVideoEncodeQualityLevelPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeRateControlModeFlagBitsKHR preferredRateControlMode;
    uint32_t            preferredRateControlLayerCount;
} VkVideoEncodeQualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlMode` is a `VkVideoEncodeRateControlModeFlagBitsKHR` value indicating the preferred `rate control mode` to use with the video encode quality level.
- `preferredRateControlLayerCount` indicates the preferred number of `rate control layers` to use

with the video encode quality level.

Valid Usage (Implicit)

- VUID-VkVideoEncodeQualityLevelPropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_PROPERTIES_KHR`
- VUID-VkVideoEncodeQualityLevelPropertiesKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeH264QualityLevelPropertiesKHR` or `VkVideoEncodeH265QualityLevelPropertiesKHR`
- VUID-VkVideoEncodeQualityLevelPropertiesKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique

The `VkVideoEncodeQualityLevelInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           qualityLevel;
} VkVideoEncodeQualityLevelInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `qualityLevel` is the used video encode quality level.

This structure **can** be specified in the following places:

- In the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` to specify the video encode quality level to use for a video session parameters object created for a video encode session. If no instance of this structure is included in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR`, then the video session parameters object is created with a video encode quality level of zero.
- In the `pNext` chain of `VkVideoCodingControlInfoKHR` to change the video encode quality level state of the bound video session.

Valid Usage

- VUID-VkVideoEncodeQualityLevelInfoKHR-qualityLevel-08311
`qualityLevel` **must** be less than `VkVideoEncodeCapabilitiesKHR::maxQualityLevels`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile

Valid Usage (Implicit)

- VUID-VkVideoEncodeQualityLevelInfoKHR-sType-sType
sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR

42.15.5. Retrieving Encoded Session Parameters

Any codec-specific parameters stored in video session parameters objects **may** need to be separately encoded and included in the final video bitstream data, depending on the used video compression standard. In such cases the application **must** call the [vkGetEncodedVideoSessionParametersKHR](#) command to retrieve the encoded parameter data from the used video session parameters object in order to be able to produce a compliant video bitstream.

NOTE

This is needed because implementations **may** have changed some of the codec-specific parameters stored in the video session parameters object, as defined in the [Video Encode Parameter Overrides](#) section. In addition, the [vkGetEncodedVideoSessionParametersKHR](#) command enables the application to retrieve the encoded parameter data without having to encode these codec-specific parameters manually.

Encoded parameter data **can** be retrieved from a video session parameters object created with a video encode operation using the command:

```
// Provided by VK_KHR_video_encode_queue
VkResult vkGetEncodedVideoSessionParametersKHR(
    VkDevice device,
    const VkVideoEncodeSessionParametersGetInfoKHR* pVideoSessionParametersInfo,
    VkVideoEncodeSessionParametersFeedbackInfoKHR* pFeedbackInfo,
    size_t* pDataSize,
    void* pData);
```

- **device** is the logical device that owns the video session parameters object.
- **pVideoSessionParametersInfo** is a pointer to a [VkVideoEncodeSessionParametersGetInfoKHR](#) structure specifying the parameters of the encoded parameter data to retrieve.
- **pFeedbackInfo** is either **NULL** or a pointer to a [VkVideoEncodeSessionParametersFeedbackInfoKHR](#) structure in which feedback about the requested parameter data is returned.
- **pDataSize** is a pointer to a **size_t** value related to the amount of encode parameter data returned, as described below.
- **pData** is either **NULL** or a pointer to a buffer to write the encoded parameter data to.

If **pData** is **NULL**, then the size of the encoded parameter data, in bytes, that **can** be retrieved is returned in **pDataSize**. Otherwise, **pDataSize** **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by **pData**, and on return the variable is overwritten with the

number of bytes actually written to `pData`. If `pDataSize` is less than the size of the encoded parameter data that **can** be retrieved, then no data will be written to `pData`, zero will be written to `pDataSize`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that no encoded parameter data was returned.

If `pFeedbackInfo` is not `NULL` then the members of the `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure and any additional structures included in its `pNext` chain that are applicable to the video session parameters object specified in `pVideoSessionParametersInfo->videoSessionParameters` will be filled with feedback about the requested parameter data on all successful calls to this command.

NOTE

This includes the cases when `pData` is `NULL` or when `VK_INCOMPLETE` is returned by the command, and enables the application to determine whether the implementation `overrode` any of the requested video session parameters without actually needing to retrieve the encoded parameter data itself.

Valid Usage

- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08359
`pVideoSessionParametersInfo->videoSessionParameters` **must** have been created with an encode operation
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08262
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of `pVideoSessionParametersInfo` **must** include a `VkVideoEncodeH264SessionParametersGetInfoKHR` structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08263
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then for the `VkVideoEncodeH264SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdSPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching `VkVideoEncodeH264SessionParametersGetInfoKHR::stdSPSId`
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08264
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then for the `VkVideoEncodeH264SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdPPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH264PictureParameterSet` entry with `seq_parameter_set_id` and `pic_parameter_set_id` matching `VkVideoEncodeH264SessionParametersGetInfoKHR::stdSPSId` and `VkVideoEncodeH264SessionParametersGetInfoKHR::stdPPSId`, respectively
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08265
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of

`pVideoSessionParametersInfo` **must** include a `VkVideoEncodeH265SessionParametersGetInfoKHR` structure

- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08266
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then for the `VkVideoEncodeH265SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdVPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching `VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId`
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08267
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then for the `VkVideoEncodeH265SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdSPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265SequenceParameterSet` entry with `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching `VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId` and `VkVideoEncodeH265SessionParametersGetInfoKHR::stdSPSId`, respectively
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08268
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then for the `VkVideoEncodeH265SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdPPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` matching `VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId`, `VkVideoEncodeH265SessionParametersGetInfoKHR::stdSPSId`, and `VkVideoEncodeH265SessionParametersGetInfoKHR::stdPPSId`, respectively

Valid Usage (Implicit)

- VUID-vkGetEncodedVideoSessionParametersKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-parameter
`pVideoSessionParametersInfo` **must** be a valid pointer to a valid `VkVideoEncodeSessionParametersGetInfoKHR` structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pFeedbackInfo-parameter
If `pFeedbackInfo` is not `NULL`, `pFeedbackInfo` **must** be a valid pointer to a `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pDataSize-parameter
`pDataSize` **must** be a valid pointer to a `size_t` value

- VUID-vkGetEncodedVideoSessionParametersKHR-pData-parameter
If the value referenced by `pDataSize` is not 0, and `pData` is not `NULL`, `pData` **must** be a valid pointer to an array of `pDataSize` bytes

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkVideoEncodeSessionParametersGetInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoSessionParametersKHR    videoSessionParameters;
} VkVideoEncodeSessionParametersGetInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoSessionParameters` is the `VkVideoSessionParametersKHR` object to retrieve encoded parameter data from.

Depending on the used video encode operation, additional codec-specific structures **may** need to be included in the `pNext` chain of this structure to identify the specific video session parameters to retrieve encoded parameter data for, as described in the corresponding sections.

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_GET_INFO_KHR`
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeH264SessionParametersGetInfoKHR` or `VkVideoEncodeH265SessionParametersGetInfoKHR`
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-videoSessionParameters-parameter

`videoSessionParameters` **must** be a valid `VkVideoSessionParametersKHR` handle

The `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasOverrides;
} VkVideoEncodeSessionParametersFeedbackInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hasOverrides` indicates whether any of the requested parameter data were `overridden` by the implementation.

Depending on the used video encode operation, additional codec-specific structures **can** be included in the `pNext` chain of this structure to capture codec-specific feedback information about the requested parameter data, as described in the corresponding sections.

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_FEEDBACK_INFO_KHR`
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeH264SessionParametersFeedbackInfoKHR` or `VkVideoEncodeH265SessionParametersFeedbackInfoKHR`
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique

42.15.6. Video Encode Commands

To launch video encode operations, call:

```
// Provided by VK_KHR_video_encode_queue
void vkCmdEncodeVideoKHR(
    VkCommandBuffer          commandBuffer,
    const VkVideoEncodeInfoKHR* pEncodeInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pEncodeInfo` is a pointer to a `VkVideoEncodeInfoKHR` structure specifying the parameters of the

video encode operations.

Each call issues one or more video encode operations. The implicit parameter `opCount` corresponds to the number of video encode operations issued by the command. After calling this command, the `active query index` of each `active` query is incremented by `opCount`.

Currently each call to this command results in the issue of a single video encode operation.

If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR` and the `pNext` chain of `pEncodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then this command will execute a query for each video encode operation issued by it.

Active Reference Picture Information

The list of `active reference pictures` used by a video encode operation is a list of image subregions used as the source of `reference picture` data and related parameters, and is derived from the `VkVideoReferenceSlotInfoKHR` structures provided as the elements of the `pEncodeInfo->pReferenceSlots` array. For each element of `pEncodeInfo->pReferenceSlots`, one or more elements are added to the active reference picture list, as defined by the `codec-specific semantics`. Each element of this list contains the following information:

- The image subregion within the image subresource `referred` to by the `video picture resource` used as the reference picture.
- The `DPB slot` index the reference picture is associated with.
- The codec-specific reference information related to the reference picture.

Reconstructed Picture Information

Information related to the optional `reconstructed picture` used by a video encode operation is derived from the `VkVideoReferenceSlotInfoKHR` structure pointed to by `pEncodeInfo->pSetupReferenceSlot`, if not `NULL`, as defined by the `codec-specific semantics`, and consists of the following:

- The image subregion within the image subresource `referred` to by the `video picture resource` used as the reconstructed picture.
- The `DPB slot` index to use for picture reconstruction.
- The codec-specific reference information related to the reconstructed picture.

Specifying a valid `VkVideoReferenceSlotInfoKHR` structure in `pEncodeInfo->pSetupReferenceSlot` is always required, unless the video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlot` equal to zero. However, the DPB slot identified by `pEncodeInfo->pSetupReferenceSlot->slotIndex` is only `activated` with the `reconstructed picture` specified in `pEncodeInfo->pSetupReferenceSlot->pPictureResource` if reference picture setup is requested according to the `codec-specific semantics`.

If reconstructed picture information is specified, but reference picture setup is not requested, according to the codec-specific semantics, the contents of the `video picture resource` corresponding to the reconstructed picture will be undefined after the video encode operation.

NOTE

Some implementations may always output the reconstructed picture or use it as temporary storage during the video encode operation even when the reconstructed picture is not marked for future reference.

Encode Input Picture Information

Information related to the [encode input picture](#) used by a video encode operation is derived from `pEncodeInfo->srcPictureResource` and any codec-specific parameters provided in the `pEncodeInfo->pNext` chain, as defined by the [codec-specific semantics](#), and consists of the following:

- The image subregion within the image subresource [referred](#) to by the [video picture resource](#) used as the encode input picture.
- The codec-specific picture information related to the encoded picture.

Several limiting values are defined below that are referenced by the relevant valid usage statements of this command.

- Let `uint32_t activeReferencePictureCount` be the size of the list of active reference pictures used by the video encode operation. Unless otherwise defined, `activeReferencePictureCount` is set to the value of `pEncodeInfo->referenceSlotCount`.
- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of `codedOffsetGranularity` are 0.
- Let `uint32_t dpbFrameUseCount[]` be an array of size `maxDpbSlots`, where `maxDpbSlots` is the `VkVideoSessionCreateInfoKHR::maxDpbSlots` the bound video session was created with, with each element indicating the number of times a frame associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the array be 0.
 - If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `dpbFrameUseCount[i]` is incremented by one, where `i` equals `pEncodeInfo->pSetupReferenceSlot->slotIndex`.
 - For each element of `pEncodeInfo->pReferenceSlots`, `dpbFrameUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the corresponding element.
- Let `VkExtent2D maxCodingBlockSize` be the maximum codec-specific coding block size that **may** be used by the video encode operation.
 - If the bound video session object was created with an [H.264 encode profile](#), then let `maxCodingBlockSize` be equal to the size of an H.264 macroblock, i.e. {16,16}.
 - If the bound video session object was created with an [H.265 encode profile](#), then let `maxCodingBlockSize` be equal to the maximum H.265 coding block size that **may** be used by the video encode operation derived as the maximum of the CTB sizes corresponding to the `VkVideoEncodeH265CtbSizeFlagBitsKHR` bits set in `VkVideoEncodeH265CapabilitiesKHR::ctbSizes`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with.
 - Otherwise, `maxCodingBlockSize` is undefined.
- If `maxCodingBlockSize` is defined, then let `VkExtent2D minCodingBlockExtent` be the coded extent of

the `encode input picture` expressed in terms of codec-specific coding blocks, assuming the maximum size of such coding blocks, as defined by `maxCodingBlockSize`, calculated from the value of the `codedExtent` member of `pEncodeInfo->srcPictureResource` as follows:

- `minCodingBlockExtent.width = (codedExtent.width
maxCodingBlockSize.width - 1) / maxCodingBlockSize.width`
- `minCodingBlockExtent.height = (codedExtent.height
maxCodingBlockSize.height - 1) / maxCodingBlockSize.height`
- If the bound video session object was created with an `H.264 encode profile`, then:
 - Let `StdVideoH264PictureType h264PictureType` be the picture type of the encoded picture set to the value of `pStdPictureInfo->primary_pic_type` specified in the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain.
 - Let `StdVideoH264PictureType h264L0PictureTypes[]` and `StdVideoH264PictureType h264L1PictureTypes[]` be the picture types of the reference pictures in the L0 and L1 reference lists, respectively. If `pStdPictureInfo->pRefLists` specified in the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain is not `NULL`, then for each reference index specified in the elements of the `pStdPictureInfo->pRefLists->RefPicList0` and `pStdPictureInfo->pRefLists->RefPicList1` arrays, if the reference index is not `STD_VIDEO_H264_NO_REFERENCE_PICTURE`, `pStdReferenceInfo->primary_pic_type` is added to `h264L0PictureTypes` or `h264L1PictureTypes`, respectively, where `pStdReferenceInfo` is the member of the `VkVideoEncodeH264DpbSlotInfoKHR` structure included in the `pNext` chain of the element of `pEncodeInfo->pReferenceSlots` for which `slotIndex` equals the reference index in question.
- If the bound video session object was created with an `H.265 encode profile`, then:
 - Let `StdVideoH265PictureType h265PictureType` be the picture type of the encoded picture set to the value of `pStdPictureInfo->pic_type` specified in the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain.
 - Let `StdVideoH265PictureType h265L0PictureTypes[]` and `StdVideoH265PictureType h265L1PictureTypes[]` be the picture types of the reference pictures in the L0 and L1 reference lists, respectively. If `pStdPictureInfo->pRefLists` specified in the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain is not `NULL`, then for each reference index specified in the elements of the `pStdPictureInfo->pRefLists->RefPicList0` and `pStdPictureInfo->pRefLists->RefPicList1` arrays, if the reference index is not `STD_VIDEO_H265_NO_REFERENCE_PICTURE`, `pStdReferenceInfo->pic_type` is added to `h265L0PictureTypes` or `h265L1PictureTypes`, respectively, where `pStdReferenceInfo` is the member of the `VkVideoEncodeH265DpbSlotInfoKHR` structure included in the `pNext` chain of the element of `pEncodeInfo->pReferenceSlots` for which `slotIndex` equals the reference index in question.

Valid Usage

- VUID-vkCmdEncodeVideoKHR-None-08250
The bound video session **must** have been created with an encode operation
- VUID-vkCmdEncodeVideoKHR-None-07012
The bound video session **must** not be in `uninitialized` state at the time the command is

executed on the device

- VUID-vkCmdEncodeVideoKHR-None-08318

The bound video session parameters object **must** have been created with the currently set [video encode quality level](#) for the bound video session at the time the command is executed on the device

- VUID-vkCmdEncodeVideoKHR-opCount-07174

For each [active](#) query, the [active query index](#) corresponding to the query type of that query plus [opCount](#) **must** be less than or equal to the [last activatable query index](#) corresponding to the query type of that query plus one

- VUID-vkCmdEncodeVideoKHR-pNext-08360

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), and the [pNext](#) chain of [pEncodeInfo](#) includes a [VkVideoInlineQueryInfoKHR](#) structure with its [queryPool](#) member specifying a valid [VkQueryPool](#) handle, then [VkVideoInlineQueryInfoKHR::queryCount](#) **must** equal [opCount](#)

- VUID-vkCmdEncodeVideoKHR-pNext-08361

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), and the [pNext](#) chain of [pEncodeInfo](#) includes a [VkVideoInlineQueryInfoKHR](#) structure with its [queryPool](#) member specifying a valid [VkQueryPool](#) handle, then all the queries used by the command, as specified by the [VkVideoInlineQueryInfoKHR](#) structure, **must** be *unavailable*

- VUID-vkCmdEncodeVideoKHR-queryType-08362

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), then the [queryType](#) used to create the [queryPool](#) specified in the [VkVideoInlineQueryInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) **must** be [VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR](#) or [VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR](#)

- VUID-vkCmdEncodeVideoKHR-queryPool-08363

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), then the [queryPool](#) specified in the [VkVideoInlineQueryInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) **must** have been created with a [VkVideoProfileInfoKHR](#) structure included in the [pNext](#) chain of [VkQueryPoolCreateInfo](#) identical to the one specified in [VkVideoSessionCreateInfoKHR::pVideoProfile](#) the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-queryType-08364

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), and the [queryType](#) used to create the [queryPool](#) specified in the [VkVideoInlineQueryInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) is [VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR](#), then the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** have been created with a queue family index that supports [result status queries](#), as indicated by [VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport](#)

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08201

[pEncodeInfo->dstBuffer](#) **must** be [compatible](#) with the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-commandBuffer-08202
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pEncodeInfo->dstBuffer` **must** not be a protected buffer
- VUID-vkCmdEncodeVideoKHR-commandBuffer-08203
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pEncodeInfo->dstBuffer` **must** be a protected buffer
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08204
`pEncodeInfo->dstBufferOffset` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferOffsetAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08205
`pEncodeInfo->dstBufferRange` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferSizeAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08206
`pEncodeInfo->srcPictureResource.imageViewBinding` **must** be `compatible` with the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08207
The format of `pEncodeInfo->srcPictureResource.imageViewBinding` **must** match the `VkVideoSessionCreateInfoKHR::pictureFormat` the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08208
`pEncodeInfo->srcPictureResource.codedOffset` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08209
`pEncodeInfo->srcPictureResource.codedExtent` **must** be between `minCodedExtent` and `maxCodedExtent`, inclusive, the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08210
`pEncodeInfo->srcPictureResource.imageViewBinding` **must** have been created with `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`
- VUID-vkCmdEncodeVideoKHR-commandBuffer-08211
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pEncodeInfo->srcPictureResource.imageViewBinding` **must** not have been created from a protected image
- VUID-vkCmdEncodeVideoKHR-commandBuffer-08212
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pEncodeInfo->srcPictureResource.imageViewBinding` **must** have been created from a protected image
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08377
`pEncodeInfo->pSetupReferenceSlot` **must** not be `NULL` unless the bound video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlots` equal to zero
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08213

If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pEncodeInfo->pSetupReferenceSlot->slotIndex` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08214

If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pEncodeInfo->pSetupReferenceSlot->pPictureResource->codedOffset` **must** be an integer multiple of `codedOffsetGranularity`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08215

If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pEncodeInfo->pSetupReferenceSlot->pPictureResource` **must match** one of the `bound reference picture resource`

- VUID-vkCmdEncodeVideoKHR-activeReferencePictureCount-08216

`activeReferencePictureCount` **must** be less than or equal to the `VkVideoSessionCreateInfoKHR::maxActiveReferencePictures` specified when the bound video session was created

- VUID-vkCmdEncodeVideoKHR-slotIndex-08217

The `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created

- VUID-vkCmdEncodeVideoKHR-codedOffset-08218

The `codedOffset` member of the `VkVideoPictureResourceInfoKHR` structure pointed to by the `pPictureResource` member of each element of `pEncodeInfo->pReferenceSlots` **must** be an integer multiple of `codedOffsetGranularity`

- VUID-vkCmdEncodeVideoKHR-pPictureResource-08219

The `pPictureResource` member of each element of `pEncodeInfo->pReferenceSlots` **must match** one of the `bound reference picture resource` associated with the DPB slot index specified in the `slotIndex` member of that element

- VUID-vkCmdEncodeVideoKHR-pPictureResource-08220

Each video picture resource corresponding to the `pPictureResource` member specified in the elements of `pEncodeInfo->pReferenceSlots` **must** be `unique` within `pEncodeInfo->pReferenceSlots`

- VUID-vkCmdEncodeVideoKHR-dpbFrameUseCount-08221

All elements of `dpbFrameUseCount` **must** be less than or equal to `1`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08222

The image subresource `referred` to by `pEncodeInfo->srcPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR` layout at the time the video encode operation is executed on the device

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08223

If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the image subresource `referred` to by `pEncodeInfo->pSetupReferenceSlot->pPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR` layout at the time the video encode operation is executed on the device

- VUID-vkCmdEncodeVideoKHR-pPictureResource-08224

The image subresource `referred` to by the `pPictureResource` member of each element of `pEncodeInfo->pReferenceSlots` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR` layout

at the time the video encode operation is executed on the device

- VUID-vkCmdEncodeVideoKHR-pNext-08225

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeH264PictureInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-StdVideoH264SequenceParameterSet-08226

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching `StdVideoEncodeH264PictureInfo::seq_parameter_set_id` that is provided in the `pStdPictureInfo` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-StdVideoH264PictureParameterSet-08227

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH264PictureParameterSet` entry with `seq_parameter_set_id` and `pic_parameter_set_id` matching `StdVideoEncodeH264PictureInfo::seq_parameter_set_id` and `StdVideoEncodeH264PictureInfo::pic_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08228

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` **must** include a `VkVideoEncodeH264DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pNext-08229

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of each element of `pEncodeInfo->pReferenceSlots` **must** include a `VkVideoEncodeH264DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-constantQp-08269

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then `VkVideoEncodeH264NaluSliceInfoKHR::constantQp` **must** be zero for each element of the `pNaluSliceEntries` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-constantQp-08270

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the current `rate control mode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then `VkVideoEncodeH264NaluSliceInfoKHR::constantQp` **must** be between `VkVideoEncodeH264CapabilitiesKHR::minQp` and `VkVideoEncodeH264CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, for each element of the `pNaluSliceEntries` member

of the [VkVideoEncodeH264PictureInfoKHR](#) structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-constantQp-08271

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and [VkVideoEncodeH264CapabilitiesKHR::flags](#) does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR`, as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with, then [VkVideoEncodeH264NaluSliceInfoKHR::constantQp](#) **must** have the same value for each element of the `pNaluSliceEntries` member of the [VkVideoEncodeH264PictureInfoKHR](#) structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-naluSliceEntryCount-08302

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `naluSliceEntryCount` member of the [VkVideoEncodeH264PictureInfoKHR](#) structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.width` multiplied by `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-naluSliceEntryCount-08312

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and [VkVideoEncodeH264CapabilitiesKHR::flags](#) does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR`, as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with, then the `naluSliceEntryCount` member of the [VkVideoEncodeH264PictureInfoKHR](#) structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-pNext-08352

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a [VkVideoEncodeH264PictureInfoKHR](#) structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then [VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists](#) **must** not be `NULL`

- VUID-vkCmdEncodeVideoKHR-pNext-08339

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a [VkVideoEncodeH264PictureInfoKHR](#) structure, and [VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists](#) is not `NULL`, then each element of the `RefPicList0` and `RefPicList1` array members of the [StdVideoEncodeH264ReferenceListsInfo](#) structure pointed to by [VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists](#) **must** either be `STD_VIDEO_H264_NO_REFERENCE_PICTURE` or **must** equal the `slotIndex` member of one of the elements of `pEncodeInfo->pReferenceSlots`

- VUID-vkCmdEncodeVideoKHR-pNext-08353

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a [VkVideoEncodeH264PictureInfoKHR](#) structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then the `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** equal one of the elements of the `RefPicList0` or `RefPicList1` array

members of the `StdVideoEncodeH264ReferenceListsInfo` structure pointed to by `VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists`

- VUID-vkCmdEncodeVideoKHR-maxPPictureL0ReferenceCount-08340

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::maxPPictureL0ReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h264PictureType` and each element of `h264L0PictureTypes` and `h264L1PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_P`

- VUID-vkCmdEncodeVideoKHR-maxBPictureL0ReferenceCount-08341

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::maxBPictureL0ReferenceCount` and `VkVideoEncodeH264CapabilitiesKHR::maxL1ReferenceCount` are both zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h264PictureType` and each element of `h264L0PictureTypes` and `h264L1PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-flags-08342

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then each element of `h264L0PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-flags-08343

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then each element of `h264L1PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-pNext-08230

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeH265PictureInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-StdVideoH265VideoParameterSet-08231

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id` that is provided in the `pStdPictureInfo` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-StdVideoH265SequenceParameterSet-08232

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the bound video session parameters

object **must** contain a `StdVideoH265SequenceParameterSet` entry with `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-StdVideoH265PictureParameterSet-08233

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` matching `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoEncodeH265PictureInfo::pps_pic_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08234

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` **must** include a `VkVideoEncodeH265DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pNext-08235

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of each element of `pEncodeInfo->pReferenceSlots` **must** include a `VkVideoEncodeH265DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-constantQp-08272

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then `VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp` **must** be zero for each element of the `pNaluSliceSegmentEntries` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-constantQp-08273

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the current `rate control mode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then `VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp` **must** be between `VkVideoEncodeH265CapabilitiesKHR::minQp` and `VkVideoEncodeH265CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, for each element of the `pNaluSliceSegmentEntries` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-constantQp-08274

If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp` **must** have the same value for each element of the `pNaluSliceSegmentEntries` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-naluSliceSegmentEntryCount-08307

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `naluSliceSegmentEntryCount` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.width` multiplied by `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-naluSliceSegmentEntryCount-08313

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `naluSliceSegmentEntryCount` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-pNext-08354

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH265PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists` **must** not be `NULL`

- VUID-vkCmdEncodeVideoKHR-pNext-08344

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH265PictureInfoKHR` structure, and `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists` is not `NULL`, then each element of the `RefPicList0` and `RefPicList1` array members of the `StdVideoEncodeH265ReferenceListsInfo` structure pointed to by `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists` **must** either be `STD_VIDEO_H265_NO_REFERENCE_PICTURE` or **must** equal the `slotIndex` member of one of the elements of `pEncodeInfo->pReferenceSlots`

- VUID-vkCmdEncodeVideoKHR-pNext-08355

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH265PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then the `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** equal one of the elements of the `RefPicList0` or `RefPicList1` array members of the `StdVideoEncodeH265ReferenceListsInfo` structure pointed to by `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists`

- VUID-vkCmdEncodeVideoKHR-maxPPictureL0ReferenceCount-08345
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::maxPPictureL0ReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h265PictureType` and each element of `h265L0PictureTypes` and `h265L1PictureTypes` **must** not be `STD_VIDEO_H265_PICTURE_TYPE_P`
- VUID-vkCmdEncodeVideoKHR-maxBPictureL0ReferenceCount-08346
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::maxBPictureL0ReferenceCount` and `VkVideoEncodeH265CapabilitiesKHR::maxL1ReferenceCount` are both zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h265PictureType` and each element of `h265L0PictureTypes` and `h265L1PictureTypes` **must** not be `STD_VIDEO_H265_PICTURE_TYPE_B`
- VUID-vkCmdEncodeVideoKHR-flags-08347
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then each element of `h265L0PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`
- VUID-vkCmdEncodeVideoKHR-flags-08348
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then each element of `h265L1PictureTypes` **must** not be `STD_VIDEO_H265_PICTURE_TYPE_B`

Valid Usage (Implicit)

- VUID-vkCmdEncodeVideoKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-parameter
`pEncodeInfo` **must** be a valid pointer to a valid `VkVideoEncodeInfoKHR` structure
- VUID-vkCmdEncodeVideoKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdEncodeVideoKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support encode operations
- VUID-vkCmdEncodeVideoKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdEncodeVideoKHR-videocoding

This command **must** only be called inside of a video coding scope

- VUID-vkCmdEncodeVideoKHR-bufferlevel
`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	Encode	Action

The `VkVideoEncodeInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkVideoEncodeFlagsKHR       flags;
    VkBuffer                    dstBuffer;
    VkDeviceSize                dstBufferOffset;
    VkDeviceSize                dstBufferRange;
    VkVideoPictureResourceInfoKHR srcPictureResource;
    const VkVideoReferenceSlotInfoKHR* pSetupReferenceSlot;
    uint32_t                    referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
    uint32_t                    precedingExternallyEncodedBytes;
} VkVideoEncodeInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `dstBuffer` is the destination video bitstream buffer to write the encoded bitstream to.
- `dstBufferOffset` is the starting offset in bytes from the start of `dstBuffer` to write the encoded bitstream to.
- `dstBufferRange` is the maximum bitstream size in bytes that **can** be written to `dstBuffer`, starting from `dstBufferOffset`.

- `srcPictureResource` is the video picture resource to use as the [encode input picture](#).
- `pSetupReferenceSlot` is `NULL` or a pointer to a [VkVideoReferenceSlotInfoKHR](#) structure specifying the [reconstructed picture information](#).
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is `NULL` or a pointer to an array of [VkVideoReferenceSlotInfoKHR](#) structures describing the DPB slots and corresponding [reference picture](#) resources to use in this video encode operation (the set of [active reference pictures](#)).
- `precedingExternallyEncodedBytes` is the number of bytes externally encoded by the application to the video bitstream and is used to update the internal state of the implementation's [rate control](#) algorithm to account for the bitrate budget consumed by these externally encoded bytes.

Valid Usage

- VUID-VkVideoEncodeInfoKHR-dstBuffer-08236
`dstBuffer` **must** have been created with `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR` set
- VUID-VkVideoEncodeInfoKHR-dstBufferOffset-08237
`dstBufferOffset` **must** be less than the size of `dstBuffer`
- VUID-VkVideoEncodeInfoKHR-dstBufferRange-08238
`dstBufferRange` **must** be less than or equal to the size of `dstBuffer` minus `dstBufferOffset`
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-08239
If `pSetupReferenceSlot` is not `NULL`, then its `slotIndex` member **must** not be negative
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-08240
If `pSetupReferenceSlot` is not `NULL`, then its `pPictureResource` **must** not be `NULL`
- VUID-VkVideoEncodeInfoKHR-slotIndex-08241
The `slotIndex` member of each element of `pReferenceSlots` **must** not be negative
- VUID-VkVideoEncodeInfoKHR-pPictureResource-08242
The `pPictureResource` member of each element of `pReferenceSlots` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkVideoEncodeInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_INFO_KHR`
- VUID-VkVideoEncodeInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of [VkVideoEncodeH264PictureInfoKHR](#), [VkVideoEncodeH265PictureInfoKHR](#), or [VkVideoInlineQueryInfoKHR](#)
- VUID-VkVideoEncodeInfoKHR-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkVideoEncodeInfoKHR-flags-zero bitmask
`flags` **must** be 0
- VUID-VkVideoEncodeInfoKHR-dstBuffer-parameter

`dstBuffer` **must** be a valid `VkBuffer` handle

- VUID-VkVideoEncodeInfoKHR-srcPictureResource-parameter
`srcPictureResource` **must** be a valid `VkVideoPictureResourceInfoKHR` structure
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-parameter
If `pSetupReferenceSlot` is not `NULL`, `pSetupReferenceSlot` **must** be a valid pointer to a valid `VkVideoReferenceSlotInfoKHR` structure
- VUID-VkVideoEncodeInfoKHR-pReferenceSlots-parameter
If `referenceSlotCount` is not `0`, `pReferenceSlots` **must** be a valid pointer to an array of `referenceSlotCount` valid `VkVideoReferenceSlotInfoKHR` structures

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeFlagsKHR;
```

`VkVideoEncodeFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

42.16. Video Encode Rate Control

The size of the encoded bitstream data produced by video encode operations is a function of the following set of constraints:

- The capabilities of the compression algorithms defined and employed by the used video compression standard;
- Restrictions imposed by the selected `video profile` according to the rules defined by the used video compression standard;
- Further restrictions imposed by the `capabilities` supported by the implementation for the selected `video profile`;
- The image data in the `encode input picture` and the set of `active reference pictures` (as these affect the effectiveness of the compression algorithms employed by the video encode operations);
- The set of codec-specific and codec-independent encoding parameters provided by the application.

These also inherently define the set of decoder capabilities required for reconstructing and processing the picture data in the encoded bitstream.

Video coding uses *bitrate* as the quantitative metric associated with encoded bitstream data size which expresses the rate at which video bitstream data **can** be transferred or processed, measured in number of bits per second. This bitrate is both a function of the encoded bitstream data size of the encoded pictures as well as the *frame rate* used by the video sequence.

Rate control algorithms are used by video encode operations to enable adjusting encoding parameters to achieve a target bitrate, or otherwise directly or indirectly control the bitrate of the generated video bitstream data. These algorithms are usually not defined by the used video

compression standard, although some video compression standards do provide non-normative guidelines for implementations.

Accordingly, this specification does not mandate implementations to produce identical encoded bitstream data outputs in response to video encode operations, however, it does define a set of codec-independent and codec-specific parameters that enable the application to control the behavior of the rate control algorithms supported by the implementation. Some of these parameters guarantee certain implementation behavior while others provide guidance for implementations to apply various rate control heuristics.

NOTE

Applications need to make sure that they configure rate control parameters appropriately and that they follow the promises made to the implementation through parameters providing guidance for the implementation's rate control algorithms and heuristics in order to be able to get the desired rate control behavior and to be able to hit the set bitrate targets. In addition, the behavior of rate control may also differ across implementations even if the capabilities of the used video profile match between those implementations. This may happen due to implementations applying different rate control algorithms or heuristics internally, and thus even the same set of guidance parameter values may have different effects on the rate control behavior across implementations.

42.16.1. Rate Control Modes

After a video session is reset to the [initial state](#), the default behavior and parameters of video encode rate control are entirely implementation-dependent and the application **cannot** affect the bitrate or quality parameters of the encoded bitstream data produced by video encode operations unless the application changes the rate control configuration of the video session, as described in the [Video Coding Control](#) section.

For each supported [video profile](#), the implementation **may** expose a set of *rate control modes* that are available for use by the application when encoding bitstreams targeting that video profile. These modes allow using different rate control algorithms that fall into one of the following two categories:

1. Per-operation rate control
2. Stream-level rate control

In case of *per-operation rate control*, the bitrate of the generated video bitstream data is indirectly controlled by quality, size, or other encoding parameters specified by the application for each individual video encode operation.

In case of *stream-level rate control*, the application **can** directly specify target bitrates besides other encoding parameters to control the behavior of the rate control algorithm used by the implementation across multiple video encode operations.

The rate control modes are defined with the following enums:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeRateControlModeFlagBitsKHR {
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR = 0x00000004,
} VkVideoEncodeRateControlModeFlagBitsKHR;
```

- **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR** specifies the use of implementation-specific rate control.
- **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR** specifies that rate control is disabled and the application will specify per-operation rate control parameters controlling the encoding quality. In this mode implementations will encode pictures independently of the output bitrate of prior video encode operations.
 - When using an [H.264 encode profile](#), implementations will use the QP value specified in [VkVideoEncodeH264NaluSliceInfoKHR::constantQp](#) to control the quality of the encoded picture.
 - When using an [H.265 encode profile](#), implementations will use the QP value specified in [VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp](#) to control the quality of the encoded picture.
- **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR** specifies the use of constant bitrate (CBR) rate control mode. In this mode the implementation will attempt to produce the encoded bitstream at a constant bitrate while conforming to the constraints of other rate control parameters.
- **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR** specifies the use of variable bitrate (VBR) rate control mode. In this mode the implementation will produce the encoded bitstream at a variable bitrate according to the constraints of other rate control parameters.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeRateControlModeFlagsKHR;
```

VkVideoEncodeRateControlModeFlagsKHR is a bitmask type for setting a mask of zero or more [VkVideoEncodeRateControlModeFlagBitsKHR](#).

42.16.2. Leaky Bucket Model

Video encoding implementations use the *leaky bucket model* for stream-level rate control. The leaky bucket is a concept referring to the interface between the video encoder and the consumer (for example, a network connection), where the video encoder produces encoded bitstream data corresponding to the encoded pictures and adds them in the leaky bucket while its content are drained by the consumer.

Analogously, a similar leaky bucket is considered to exist at the input interface of a video decoder, into which encoded bitstream data is continuously added and is subsequently consumed by the video decoder. It is desirable to avoid overflowing or underflowing this leaky bucket because:

- In case of an underflow, the video decoder will be unable to consume encoded bitstream data in order to decode pictures (and optionally display them).
- In case of an overflow, the leaky bucket will be unable to accommodate more encoded bitstream data and such data **may** need to be thrown away, leading to the loss of the corresponding encoded pictures.

These requirements **can** be satisfied by imposing various constraints on the encoder-side leaky bucket to avoid its overflow or underflow, depending on the used rate control algorithm and codec parameters. However, enumerating these constraints is outside the scope of this specification.

The term *virtual buffer* is often used as an alternative to refer to the leaky bucket.

This virtual buffer model is defined by the following parameters:

- The bitrate (**R**) at which the encoded bitstream is expected to be processed.
- The size (**B**) of the virtual buffer.
- The initial occupancy (**F**) of the virtual buffer.

In this model the virtual buffer is used to smooth out fluctuations in the bitrate of the encoded bitstream over time without experiencing buffer overflow or underflow, as long as the bitrate of the encoded stream does not diverge from the target bitrate for extended periods of time.

This buffering **may** inherently impose a processing delay, as the goal of the model is to enable decoders maintain a consistent processing rate of an encoded bitstream with varying data rate.

The initial or start-up delay (**D**) is computed as:

$$D = F / R$$

NOTE

Applications need to configure the virtual buffer with sufficient size to avoid or minimize buffer overflows and underflows while also keeping it small enough to meet their latency goals.

42.16.3. Rate Control Layers

Some video compression standards and [video profiles](#) allow associating encoded pictures with specific *video coding layers*. The name, identification, and semantics associated with such video coding layers are defined by the corresponding video compression standards.

Analogously, stream-level rate control **can** be configured to use one or more *rate control layers*:

- When a single rate control layer is configured, it is applied to all encoded pictures, regardless of the picture's video coding layer. In this case the distribution of the available bitrate budget across video coding layers is implementation-dependent.
- When multiple rate control layers are configured, each rate control layer is applied to the corresponding video coding layer, i.e. only across encoded pictures pertaining to the corresponding video coding layer.

Individual rate control layers are identified using *layer indices* between zero and **N-1**, where **N** is the number of active rate control layers.

Rate control layers are only applicable when using [stream-level rate control modes](#).

42.16.4. Rate Control State

Rate control state is maintained by the implementation in the [video session](#) objects and its parameters are specified using an instance of the `VkVideoEncodeRateControlInfoKHR` structure. The complete rate control state of a video session is defined by the following set of parameters:

- The values of the members of the `VkVideoEncodeRateControlInfoKHR` structure used to configure the rate control state.
- The values of the members of any `VkVideoEncodeRateControlLayerInfoKHR` structures specified in `VkVideoEncodeRateControlInfoKHR::pLayers` used to configure the state of individual [rate control layers](#).
- If the video session was created with an [H.264 encode profile](#):
 - The values of the members of the `VkVideoEncodeH264RateControlInfoKHR` structure, if one is specified in the `pNext` chain of the `VkVideoEncodeRateControlInfoKHR` used to configure the rate control state.
 - The values of the members of any `VkVideoEncodeH264RateControlLayerInfoKHR` structures included in the `pNext` chain of a `VkVideoEncodeRateControlLayerInfoKHR` structure used to configure the state of a rate control layer.
- If the video session was created with an [H.265 encode profile](#):
 - The values of the members of the `VkVideoEncodeH265RateControlInfoKHR` structure, if one is specified in the `pNext` chain of the `VkVideoEncodeRateControlInfoKHR` used to configure the rate control state.
 - The values of the members of any `VkVideoEncodeH265RateControlLayerInfoKHR` structures included in the `pNext` chain of a `VkVideoEncodeRateControlLayerInfoKHR` structure used to configure the state of a rate control layer.

Two rate control states match if all the parameters listed above match between them.

The `VkVideoEncodeRateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeRateControlInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkVideoEncodeRateControlFlagsKHR flags;
    VkVideoEncodeRateControlModeFlagBitsKHR rateControlMode;
    uint32_t                    layerCount;
    const VkVideoEncodeRateControlLayerInfoKHR* pLayers;
    uint32_t                    virtualBufferSizeInMs;
    uint32_t                    initialVirtualBufferSizeInMs;
} VkVideoEncodeRateControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `rateControlMode` is a `VkVideoEncodeRateControlModeFlagBitsKHR` value specifying the `rate control mode`.
- `layerCount` specifies the number of `rate control layers` to use.
- `pLayers` is a pointer to an array of `layerCount` `VkVideoEncodeRateControlLayerInfoKHR` structures, each specifying the rate control configuration of the corresponding rate control layer.
- `virtualBufferSizeInMs` is the size in milliseconds of the virtual buffer used by the implementation's rate control algorithm for the `leaky bucket model`, with respect to the average bitrate of the stream calculated by summing the values of the `averageBitrate` members of the elements of the `pLayers` array.
- `initialVirtualBufferSizeInMs` is the initial occupancy in milliseconds of the virtual buffer used by the implementation's rate control algorithm for the `leaky bucket model`.

If `layerCount` is zero then the values of `virtualBufferSizeInMs` and `initialVirtualBufferSizeInMs` are ignored.

This structure **can** be specified in the following places:

- In the `pNext` chain of `VkVideoBeginCodingInfoKHR` to specify the current rate control state expected to be configured when beginning a `video coding scope`.
- In the `pNext` chain of `VkVideoCodingControlInfoKHR` to change the rate control configuration of the bound video session.

Including this structure in the `pNext` chain of `VkVideoCodingControlInfoKHR` and including `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR` in `VkVideoCodingControlInfoKHR::flags` enables updating the rate control configuration of the bound video session. This replaces the entire rate control configuration of the bound video session and **may** reset the state of all enabled rate control layers to an initial state according to the codec-specific rate control semantics defined in the corresponding sections listed below.

When `layerCount` is greater than one, multiple `rate control layers` are configured, and each rate control layer is applied to the corresponding video coding layer identified by the index of the corresponding element of `pLayer`.

- If the video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then this index specifies the H.264 temporal layer ID of the video coding layer the rate control layer is applied to.
- If the video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then this index specifies the H.265 temporal ID of the video coding layer the rate control layer is applied to.

Additional structures providing codec-specific rate control parameters **can** be included in the `pNext` chain of `VkVideoCodingControlInfoKHR` depending on the `video profile` the bound video session was

created. For further details see:

- [Video Coding Control](#)
- [H.264 Encode Rate Control](#)
- [H.265 Encode Rate Control](#)

The new rate control configuration takes effect when the corresponding [vkCmdControlVideoCodingKHR](#) is executed on the device, and only impacts video encode operations that follow in execution order.

Valid Usage

- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08248
If `rateControlMode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then `layerCount` **must** be 0
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08275
If `rateControlMode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR`, then `layerCount` **must** be greater than 0
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08244
If `rateControlMode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR`, then it **must** specify one of the bits included in [VkVideoEncodeCapabilitiesKHR::rateControlModes](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08245
`layerCount` member **must** be less than or equal to [VkVideoEncodeCapabilitiesKHR::maxRateControlLayers](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-08276
For each element of `pLayers`, its `averageBitrate` member **must** be between 1 and [VkVideoEncodeCapabilitiesKHR::maxBitrate](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-08277
For each element of `pLayers`, its `maxBitrate` member **must** be between 1 and [VkVideoEncodeCapabilitiesKHR::maxBitrate](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08356
If `rateControlMode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR`, then for each element of `pLayers`, its `averageBitrate` member **must** equal its `maxBitrate` member
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08278
If `rateControlMode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR`, then for each element of `pLayers`, its `averageBitrate` member **must** be less than or equal to its `maxBitrate` member
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08357
If `layerCount` is not zero, then `virtualBufferSizeInMs` **must** be greater than zero
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08358

If `layerCount` is not zero, then `initialVirtualBufferSizeInMs` **must** be less than or equal to `virtualBufferSizeInMs`

- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-07022

If the `videoCodecOperation` of the used video profile is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain this structure is included in also includes an instance of the `VkVideoEncodeH264RateControlInfoKHR` structure, and `layerCount` is greater than 1, then `layerCount` **must** equal `VkVideoEncodeH264RateControlInfoKHR::temporalLayerCount`

- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-07025

If the `videoCodecOperation` of the used video profile is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain this structure is included in also includes an instance of the `VkVideoEncodeH265RateControlInfoKHR` structure, and `layerCount` is greater than 1, then `layerCount` **must** equal `VkVideoEncodeH265RateControlInfoKHR::subLayerCount`

Valid Usage (Implicit)

- VUID-VkVideoEncodeRateControlInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_INFO_KHR`

- VUID-VkVideoEncodeRateControlInfoKHR-flags-zero bitmask
`flags` **must** be 0

- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-parameter

If `rateControlMode` is not 0, `rateControlMode` **must** be a valid `VkVideoEncodeRateControlModeFlagBitsKHR` value

- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-parameter

If `layerCount` is not 0, `pLayers` **must** be a valid pointer to an array of `layerCount` valid `VkVideoEncodeRateControlLayerInfoKHR` structures

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeRateControlFlagsKHR;
```

`VkVideoEncodeRateControlFlagsKHR` is a bitmask type for setting a mask, but currently reserved for future use.

Rate Control Layer State

The configuration of individual rate control layers is specified using an instance of the `VkVideoEncodeRateControlLayerInfoKHR` structure.

The `VkVideoEncodeRateControlLayerInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeRateControlLayerInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t            averageBitrate;
    uint64_t            maxBitrate;
    uint32_t            frameRateNumerator;
    uint32_t            frameRateDenominator;
} VkVideoEncodeRateControlLayerInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is a pointer to a structure extending this structure.
- **averageBitrate** is the average [bitrate](#) to be targeted by the implementation's rate control algorithm.
- **maxBitrate** is the peak [bitrate](#) to be targeted by the implementation's rate control algorithm.
- **frameRateNumerator** is the numerator of the frame rate assumed by the implementation's rate control algorithm.
- **frameRateDenominator** is the denominator of the frame rate assumed by the implementation's rate control algorithm.

NOTE

The ability of the implementation's rate control algorithm to be able to match the requested average and/or peak bitrates **may** be limited by the set of other codec-independent and codec-specific rate control parameters specified by the application, the input content, as well as the application conforming to the rate control guidance provided to the implementation, as described [earlier](#).

Additional structures providing codec-specific rate control parameters **can** be included in the **pNext** chain of [VkVideoEncodeRateControlLayerInfoKHR](#) depending on the [video profile](#) the bound video session was created with. For further details see:

- [Video Coding Control](#)
- [H.264 Encode Rate Control](#)
- [H.265 Encode Rate Control](#)

Valid Usage

- VUID-VkVideoEncodeRateControlLayerInfoKHR-frameRateNumerator-08350
frameRateNumerator **must** be greater than zero
- VUID-VkVideoEncodeRateControlLayerInfoKHR-frameRateDenominator-08351
frameRateDenominator **must** be greater than zero

Valid Usage (Implicit)

- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-sType
sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_LAYER_INFO_KHR
- VUID-VkVideoEncodeRateControlLayerInfoKHR-pNext-pNext
Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkVideoEncodeH264RateControlLayerInfoKHR or VkVideoEncodeH265RateControlLayerInfoKHR
- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-unique
The sType value of each struct in the pNext chain **must** be unique

42.17. H.264 Encode Operations

Video encode operations using an [H.264 encode profile](#) **can** be used to encode elementary video stream sequences compliant to the [ITU-T H.264 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video encode operation steps](#) with the codec-specific semantics defined in section 8 of the [ITU-T H.264 Specification](#) as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The StdVideoH264SequenceParameterSet structure corresponding to the [active SPS](#) specifying the [H.264 sequence parameter set](#).
 - The StdVideoH264PictureParameterSet structure corresponding to the [active PPS](#) specifying the [H.264 picture parameter set](#).
 - The StdVideoEncodeH264PictureInfo structure specifying the [H.264 picture information](#).
 - The StdVideoEncodeH264SliceHeader structures specifying the [H.264 slice header parameters](#) for each encoded H.264 slice.
 - The StdVideoEncodeH264ReferenceInfo structures specifying the [H.264 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The encoded bitstream data is written to the destination video bitstream buffer range as defined in the [H.264 Encode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [encode input picture](#), [active reference pictures](#), and optional [reconstructed picture](#) is accessed as defined in the [H.264 Encode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [H.264 picture information](#).

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding

sections of the [ITU-T H.264 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete [unsuccessfully](#).

42.17.1. H.264 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the H.264 encode parameters specified in the following Video Std structures:

- [StdVideoH264SequenceParameterSet](#)
- [StdVideoH264PictureParameterSet](#)
- [StdVideoEncodeH264PictureInfo](#)
- [StdVideoEncodeH264SliceHeader](#)
- [StdVideoEncodeH264ReferenceInfo](#)

All such H.264 encode parameter overrides **must** fulfill the conditions defined in the [Video Encode Parameter Overrides](#) section.

In addition, implementations **must** not override any of the following H.264 encode parameters:

- [StdVideoEncodeH264PictureInfo::primary_pic_type](#)
- [StdVideoEncodeH264SliceHeader::slice_type](#)

In case of H.264 encode parameters stored in [video session parameters](#) objects, applications need to use the [vkGetEncodedVideoSessionParametersKHR](#) command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded H.264 parameter sets in the bitstream in order to be able to produce a compliant H.264 video bitstream using the H.264 encode parameters stored in the video session parameters object.

In case of any H.264 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the [VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR](#) [video encode feedback query](#) flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those H.264 encode parameters.

42.17.2. H.264 Encode Bitstream Data Access

Each video encode operation writes one or more VCL NAL units comprising of slice headers and data of the encoded picture, in the format defined in sections 7.3.3 and 7.3.4, according to the semantics defined in sections 7.4.3 and 7.4.4 of the [ITU-T H.264 Specification](#), respectively. The number of VCL NAL units written is specified by [VkVideoEncodeH264PictureInfoKHR::naluSliceEntryCount](#).

In addition, if [VkVideoEncodeH264PictureInfoKHR::generatePrefixNalu](#) is [VK_TRUE](#) for the video encode operation, then an additional prefix NAL unit is written before each VCL NAL unit corresponding to individual slices in the format defined in section 7.3.2.12, according to the semantics defined in section 7.4.2.12 of the [ITU-T H.264 Specification](#), respectively.

42.17.3. H.264 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used `video profile`. Accordingly, the complete image subregion of a `encode input picture`, `reference picture`, or `reconstructed picture` accessed by video coding operations using an `H.264 encode profile` is defined as the set of texels within the coordinate range:

$$([0, \text{endX}), [0, \text{endY}))$$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video encode operations using an `H.264 encode profile`, any access to a picture at the coordinates `(x,y)`, as defined by the `ITU-T H.264 Specification`, is an access to the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates `(x,y)`.

Implementations **may** choose not to access some or all texels within particular `reference pictures` available to a video encode operation (e.g. due to `video encode parameter overrides` restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

42.17.4. H.264 Frame, Picture, and Slice

H.264 pictures are partitioned into slices, as defined in section 6.3 of the `ITU-T H.264 Specification`.

For the purposes of this specification, the H.264 slices comprising a picture are referred to as the *picture partitions* of the picture.

Video encode operations using an `H.264 encode profile` **can** encode slices of different types, as defined in section 7.4.3 of the `ITU-T H.264 Specification`, by specifying the corresponding enumeration constant value in `StdVideoEncodeH264SliceHeader::slice_type` in the `H.264 slice header parameters` from the Video Std enumeration type `StdVideoH264SliceType`:

- `STD_VIDEO_H264_SLICE_TYPE_P` indicates that the slice is a *P slice* as defined in section 3.109 of the `ITU-T H.264 Specification`.
- `STD_VIDEO_H264_SLICE_TYPE_B` indicates that the slice is a *B slice* as defined in section 3.9 of the

[ITU-T H.264 Specification](#).

- `STD_VIDEO_H264_SLICE_TYPE_I` indicates that the slice is an *I slice* as defined in section 3.66 of the [ITU-T H.264 Specification](#).

Pictures constructed from such slices **can** be of different types, as defined in section 7.4.2.4 of the [ITU-T H.264 Specification](#). Video encode operations using an [H.264 encode profile](#) **can** encode pictures of a specific type by specifying the corresponding enumeration constant value in `StdVideoEncodeH264PictureInfo::primary_pic_type` in the [H.264 picture information](#) from the Video Std enumeration type `StdVideoH264PictureType`:

- `STD_VIDEO_H264_PICTURE_TYPE_P` indicates that the picture is a *P picture*. A frame consisting of a P picture is also referred to as a *P frame*.
- `STD_VIDEO_H264_PICTURE_TYPE_B` indicates that the picture is a *B picture*. A frame consisting of a B picture is also referred to as a *B frame*.
- `STD_VIDEO_H264_PICTURE_TYPE_I` indicates that the picture is an *I picture*. A frame consisting of an I picture is also referred to as an *I frame*.
- `STD_VIDEO_H264_PICTURE_TYPE_IDR` indicates that the picture is a special type of I picture called an *IDR picture* as defined in section 3.69 of the [ITU-T H.264 Specification](#). A frame consisting of an IDR picture is also referred to as an *IDR frame*.

42.17.5. H.264 Coding Blocks

H.264 encode supports a single type of coding block called a *macroblock*, as defined in section 3.84 of the [ITU-T H.264 Specification](#).

42.17.6. H.264 Encode Profile

A video profile supporting H.264 video encode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and adding a `VkVideoEncodeH264ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoEncodeH264ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoH264ProfileIdc stdProfileIdc;
} VkVideoEncodeH264ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a `StdVideoH264ProfileIdc` value specifying the H.264 codec profile IDC, as defined in section A.2 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264ProfileInfoKHR-sType-sType
sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PROFILE_INFO_KHR

42.17.7. H.264 Encode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [H.264 encode profile](#), the [VkVideoCapabilitiesKHR::pNext](#) chain **must** include a [VkVideoEncodeH264CapabilitiesKHR](#) structure that will be filled with the profile-specific capabilities.

The [VkVideoEncodeH264CapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeH264CapabilityFlagsKHR flags;
    StdVideoH264LevelIdc maxLevelIdc;
    uint32_t            maxSliceCount;
    uint32_t            maxPPictureL0ReferenceCount;
    uint32_t            maxBPictureL0ReferenceCount;
    uint32_t            maxL1ReferenceCount;
    uint32_t            maxTemporalLayerCount;
    VkBool32            expectDyadicTemporalLayerPattern;
    int32_t             minQp;
    int32_t             maxQp;
    VkBool32            prefersGopRemainingFrames;
    VkBool32            requiresGopRemainingFrames;
    VkVideoEncodeH264StdFlagsKHR stdSyntaxFlags;
} VkVideoEncodeH264CapabilitiesKHR;
```

- sType is a [VkStructureType](#) value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of [VkVideoEncodeH264CapabilityFlagBitsKHR](#) indicating supported H.264 encoding capabilities.
- maxLevelIdc is a [StdVideoH264LevelIdc](#) value indicating the maximum H.264 level supported by the profile, where enum constant [STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>](#) identifies H.264 level <major>.<minor> as defined in section A.3 of the [ITU-T H.264 Specification](#).
- maxSliceCount indicates the maximum number of slices that **can** be encoded for a single picture. Further restrictions **may** apply to the number of slices that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- maxPPictureL0ReferenceCount indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [P pictures](#).

NOTE

As implementations **may override** the reference lists, `maxPPictureL0ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 reference list for P pictures. However, if `maxPPictureL0ReferenceCount` is zero, then the use of P pictures is not allowed.

- `maxBPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for B pictures.
- `maxL1ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of B pictures is supported.

NOTE

As implementations **may override** the reference lists, `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 and L1 reference lists for B pictures. However, if `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` are both zero, then the use of B pictures is not allowed.

- `maxTemporalLayerCount` indicates the maximum number of H.264 temporal layers supported by the implementation.
- `expectDyadicTemporalLayerPattern` indicates that the implementation's rate control algorithms expect the application to use a **dyadic temporal layer pattern** when encoding multiple temporal layers.
- `minQp` indicates the minimum QP value supported.
- `maxQp` indicates the maximum QP value supported.
- `prefersGopRemainingFrames` indicates that the implementation's rate control algorithm prefers the application to specify the number of frames of each type **remaining** in the current **group of pictures** when beginning a **video coding scope**.
- `requiresGopRemainingFrames` indicates that the implementation's rate control algorithm requires the application to specify the number of frames of each type **remaining** in the current **group of pictures** when beginning a **video coding scope**.
- `stdSyntaxFlags` is a bitmask of `VkVideoEncodeH264StdFlagBitsKHR` indicating capabilities related to H.264 syntax elements.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264CapabilitiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_CAPABILITIES_KHR`

Bits which **may** be set in `VkVideoEncodeH264CapabilitiesKHR::flags`, indicating the H.264 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR = 0x00000080,
    VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR = 0x00000100,
} VkVideoEncodeH264CapabilityFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR` indicates whether the implementation **may** be able to generate HRD compliant bitstreams if any of the `nal_hrd_parameters_present_flag` or `vcl_hrd_parameters_present_flag` members of `StdVideoH264SpsVuiFlags` are set to 1 in the [active SPS](#).
- `VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR` indicates that if `StdVideoH264PpsFlags::weighted_pred_flag` is set to 1 or `StdVideoH264PictureParameterSet::weighted_bipred_idc` is set to `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT` in the [active PPS](#) when encoding a [P picture](#) or [B picture](#), respectively, then the implementation is able to internally decide syntax for `pred_weight_table`, as defined in section 7.4.3.2 of the [ITU-T H.264 Specification](#), and the application is not **required** to provide a weight table in the [H.264 slice header parameters](#).
- `VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR` indicates that each slice in a frame with multiple slices may begin or finish at any offset in a macroblock row. If not supported, all slices in the frame **must** begin at the start of a macroblock row (and hence each slice **must** finish at the end of a macroblock row).
- `VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR` indicates that when a frame is encoded with multiple slices, the implementation allows encoding each slice with a different `StdVideoEncodeH264SliceHeader::slice_type` specified in the [H.264 slice header parameters](#). If not supported, all slices of the frame **must** be encoded with the same `slice_type` which corresponds to the picture type of the frame.
- `VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR` indicates support for using a [B frame](#) as L0 reference, as specified in `StdVideoEncodeH264ReferenceListsInfo::RefPicList0` in the [H.264 picture information](#).
- `VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR` indicates support for using a [B frame](#) as L1 reference, as specified in `StdVideoEncodeH264ReferenceListsInfo::RefPicList1` in the [H.264 picture information](#).
- `VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR` indicates support for specifying different QP values in the members of `VkVideoEncodeH264QpKHR`.
- `VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR` indicates support for specifying different constant QP values for each slice.

- `VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR` indicates support for generating prefix NAL units by setting `VkVideoEncodeH264PictureInfoKHR::generatePrefixNalu` to `VK_TRUE`.

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264CapabilityFlagsKHR;
```

`VkVideoEncodeH264CapabilityFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH264CapabilityFlagBitsKHR`.

Bits which **may** be set in `VkVideoEncodeH264CapabilitiesKHR::stdSyntaxFlags`, indicating the capabilities related to the H.264 syntax elements, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264StdFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_STD_QPPRIME_Y_ZERO_TRANSFORM_BYPASS_FLAG_SET_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H264_STD_SCALING_MATRIX_PRESENT_FLAG_SET_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_STD_CHROMA_QP_INDEX_OFFSET_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_STD_SECOND_CHROMA_QP_INDEX_OFFSET_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H264_STD_PIC_INIT_QP_MINUS26_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_EXPLICIT_BIT_KHR = 0x00000080,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_IMPLICIT_BIT_KHR = 0x00000100,
    VK_VIDEO_ENCODE_H264_STD_TRANSFORM_8X8_MODE_FLAG_SET_BIT_KHR = 0x00000200,
    VK_VIDEO_ENCODE_H264_STD_DIRECT_SPATIAL_MV_PRED_FLAG_UNSET_BIT_KHR = 0x00000400,
    VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_UNSET_BIT_KHR = 0x00000800,
    VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_SET_BIT_KHR = 0x00001000,
    VK_VIDEO_ENCODE_H264_STD_DIRECT_8X8_INFERENCE_FLAG_UNSET_BIT_KHR = 0x00002000,
    VK_VIDEO_ENCODE_H264_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR = 0x00004000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_DISABLED_BIT_KHR = 0x00008000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_ENABLED_BIT_KHR = 0x00010000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_PARTIAL_BIT_KHR = 0x00020000,
    VK_VIDEO_ENCODE_H264_STD_SLICE_QP_DELTA_BIT_KHR = 0x00080000,
    VK_VIDEO_ENCODE_H264_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR = 0x00100000,
} VkVideoEncodeH264StdFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H264_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264SpsFlags::separate_colour_plane_flag` in the `SPS` when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_QPPRIME_Y_ZERO_TRANSFORM_BYPASS_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264SpsFlags::qpprime_y_zero_transform_bypass_flag` in the `SPS` when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_SCALING_MATRIX_PRESENT_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided values for `StdVideoH264SpsFlags::seq_scaling_matrix_present_flag` in the `SPS` and `StdVideoH264PpsFlags::pic_scaling_matrix_present_flag` in the `PPS` when any of those values are 1.

- `VK_VIDEO_ENCODE_H264_STD_CHROMA_QP_INDEX_OFFSET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::chroma_qp_index_offset` in the `PPS` when that value is non-zero.
- `VK_VIDEO_ENCODE_H264_STD_SECOND_CHROMA_QP_INDEX_OFFSET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::second_chroma_qp_index_offset` in the `PPS` when that value is non-zero.
- `VK_VIDEO_ENCODE_H264_STD_PIC_INIT_QP_MINUS26_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::pic_init_qp_minus26` in the `PPS` when that value is non-zero.
- `VK_VIDEO_ENCODE_H264_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264PpsFlags::weighted_pred_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_EXPLICIT_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::weighted_bipred_idc` in the `PPS` when that value is `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT`.
- `VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_IMPLICIT_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::weighted_bipred_idc` in the `PPS` when that value is `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_IMPLICIT`.
- `VK_VIDEO_ENCODE_H264_STD_TRANSFORM_8X8_MODE_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264PpsFlags::transform_8x8_mode_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_DIRECT_SPATIAL_MV_PRED_FLAG_UNSET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeaderFlags::direct_spatial_mv_pred_flag` in the `H.264 slice header parameters` when that value is 0.
- `VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_UNSET_BIT_KHR` indicates whether the implementation supports CAVLC entropy coding, as defined in section 9.2 of the [ITU-T H.264 Specification](#), and thus supports using the application-provided value for `StdVideoH264PpsFlags::entropy_coding_mode_flag` in the `PPS` when that value is 0.
- `VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_SET_BIT_KHR` indicates whether the implementation supports CABAC entropy coding, as defined in section 9.3 of the [ITU-T H.264 Specification](#), and thus supports using the application-provided value for `StdVideoH264PpsFlags::entropy_coding_mode_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_DIRECT_8X8_INFERENCE_FLAG_UNSET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264SpsFlags::direct_8x8_inference_flag` in the `SPS` when that value is 0.
- `VK_VIDEO_ENCODE_H264_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH264PpsFlags::constrained_intra_pred_flag` in the `PPS` when that value is 1.

- `VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_DISABLED_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc` in the [H.264 slice header parameters](#) when that value is `STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_DISABLED`.
- `VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_ENABLED_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc` in the [H.264 slice header parameters](#) when that value is `STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_ENABLED`.
- `VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_PARTIAL_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc` in the [H.264 slice header parameters](#) when that value is `STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_PARTIAL`.
- `VK_VIDEO_ENCODE_H264_STD_SLICE_QP_DELTA_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::slice_qp_delta` in the [H.264 slice header parameters](#) when that value is identical across the slices of the encoded frame.
- `VK_VIDEO_ENCODE_H264_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::slice_qp_delta` in the [H.264 slice header parameters](#) when that value is different across the slices of the encoded frame.

These capability flags provide information to the application about specific H.264 syntax element values that the implementation supports without having to [override](#) them and do not otherwise restrict the values that the application **can** specify for any of the mentioned H.264 syntax elements.

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264StdFlagsKHR;
```

`VkVideoEncodeH264StdFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH264StdFlagBitsKHR`.

42.17.8. H.264 Encode Quality Level Properties

When calling `vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR` with `pVideoProfile->videoCodecOperation` specified as `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `VkVideoEncodeH264QualityLevelPropertiesKHR` structure **must** be included in the `pNext` chain of the `VkVideoEncodeQualityLevelPropertiesKHR` structure to retrieve additional video encode quality level properties specific to H.264 encoding.

The `VkVideoEncodeH264QualityLevelPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264QualityLevelPropertiesKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkVideoEncodeH264RateControlFlagsKHR preferredRateControlFlags;
    uint32_t                 preferredGopFrameCount;
    uint32_t                 preferredIdrPeriod;
    uint32_t                 preferredConsecutiveBFrameCount;
    uint32_t                 preferredTemporalLayerCount;
    VkVideoEncodeH264QpKHR   preferredConstantQp;
    uint32_t                 preferredMaxL0ReferenceCount;
    uint32_t                 preferredMaxL1ReferenceCount;
    VkBool32                 preferredStdEntropyCodingModeFlag;
} VkVideoEncodeH264QualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of `VkVideoEncodeH264RateControlFlagBitsKHR` values indicating the preferred flags to use for `VkVideoEncodeH264RateControlInfoKHR::flags`.
- `preferredGopFrameCount` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::gopFrameCount`.
- `preferredIdrPeriod` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::idrPeriod`.
- `preferredConsecutiveBFrameCount` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::consecutiveBFrameCount`.
- `preferredTemporalLayerCount` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::temporalLayerCount`.
- `preferredConstantQp` indicates the preferred values to use for `VkVideoEncodeH264NaluSliceInfoKHR::constantQp` for each picture type when using `rate control mode` `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `preferredMaxL0ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L0.
- `preferredMaxL1ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L1.
- `preferredStdEntropyCodingModeFlag` indicates the preferred value to use for `entropy_coding_mode_flag` in `StdVideoH264PpsFlags`.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264QualityLevelPropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_QUALITY_LEVEL_PROPERTIES_KHR`

42.17.9. H.264 Encode Session

Additional parameters can be specified when creating a video session with an H.264 encode profile by including an instance of the [VkVideoEncodeH264SessionCreateInfoKHR](#) structure in the `pNext` chain of [VkVideoSessionCreateInfoKHR](#).

The [VkVideoEncodeH264SessionCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMaxLevelIdc;
    StdVideoH264LevelIdc maxLevelIdc;
} VkVideoEncodeH264SessionCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMaxLevelIdc` indicates whether the value of `maxLevelIdc` should be used by the implementation. When it is `VK_FALSE`, the implementation ignores the value of `maxLevelIdc` and uses the value of [VkVideoEncodeH264CapabilitiesKHR::maxLevelIdc](#), as reported by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile.
- `maxLevelIdc` is a `StdVideoH264LevelIdc` value specifying the upper bound on the H.264 level for the video bitstreams produced by the created video session, where enum constant `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifies H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_CREATE_INFO_KHR`

42.17.10. H.264 Encode Parameter Sets

[Video session parameters](#) objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` can contain the following types of parameters:

H.264 Sequence Parameter Sets (SPS)

Represented by [StdVideoH264SequenceParameterSet](#) structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `seq_parameter_set_id` is used as the key of the SPS entry;
- `level_idc` is one of the enum constants `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifying

the H.264 level <major>.<minor> as defined in section A.3 of the [ITU-T H.264 Specification](#);

- if `flags.seq_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `seq_scaling_list_present_flag[i]` as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#);
 - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
 - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then `pSequenceParameterSetVui` is a pointer to a `StdVideoH264SequenceParameterSetVui` structure that is interpreted as follows:
 - `reserved1` is used only for padding purposes and is otherwise ignored;
 - `flags.color_description_present_flag` is interpreted as the value of `colour_description_present_flag`, as defined in section E.2.1 of the [ITU-T H.264 Specification](#);

NOTE

The name of `colour_description_present_flag` was misspelled in the Video Std header.

- if `flags.nal_hrd_parameters_present_flag` or `flags.vcl_hrd_parameters_present_flag` is set, then the `StdVideoH264HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `reserved1` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoH264HrdParameters` are interpreted as defined in section E.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSetVui` are interpreted as defined in section E.2.1 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSet` are interpreted as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#).

H.264 Picture Parameter Sets (PPS)

Represented by `StdVideoH264PictureParameterSet` structures and interpreted as follows:

- the pair constructed from `seq_parameter_set_id` and `pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pic_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to

`pic_scaling_list_present_flag[i]` as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#);

- `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
- `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264PictureParameterSet` are interpreted as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#).

Implementations **may** override any of these parameters according to the semantics defined in the [Video Encode Parameter Overrides](#) section before storing the resulting H.264 parameter sets into the video session parameters object. Applications need to use the [vkGetEncodedVideoSessionParametersKHR](#) command to determine whether any implementation overrides happened and to retrieve the encoded H.264 parameter sets in order to be able to produce a compliant H.264 video bitstream.

Such H.264 parameter set overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` [video encode feedback query](#) flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a [video session parameters](#) object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the [VkVideoSessionParametersCreateInfoKHR::pNext](#) chain **must** include a [VkVideoEncodeH264SessionParametersCreateInfoKHR](#) structure specifying the capacity and initial contents of the object.

The [VkVideoEncodeH264SessionParametersCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersCreateInfoKHR {
    VkStructureType              sType;
    const void*                  pNext;
    uint32_t                     maxStdSPSCount;
    uint32_t                     maxStdPPSCount;
    const VkVideoEncodeH264SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoEncodeH264SessionParametersCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdSPSCount` is the maximum number of [H.264 SPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- `maxStdPPSCount` is the maximum number of [H.264 PPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.

- `pParametersAddInfo` is `NULL` or a pointer to a [VkVideoEncodeH264SessionParametersAddInfoKHR](#) structure specifying H.264 parameters to add upon object creation.

Valid Usage (Implicit)

- `VOID-VkVideoEncodeH264SessionParametersCreateInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR`
- `VOID-VkVideoEncodeH264SessionParametersCreateInfoKHR-pParametersAddInfo-parameter`
If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` **must** be a valid pointer to a valid [VkVideoEncodeH264SessionParametersAddInfoKHR](#) structure

The `VkVideoEncodeH264SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersAddInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 stdSPSCount;
    const StdVideoH264SequenceParameterSet* pStdSPSs;
    uint32_t                 stdPPSCount;
    const StdVideoH264PictureParameterSet* pStdPPSs;
} VkVideoEncodeH264SessionParametersAddInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH264SequenceParameterSet` structures describing the [H.264 SPS](#) entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH264PictureParameterSet` structures describing the [H.264 PPS](#) entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the [VkVideoEncodeH264SessionParametersCreateInfoKHR](#) structure specified in the `pNext` chain of [VkVideoSessionParametersCreateInfoKHR](#) used to create a [video session parameters](#) object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of [VkVideoSessionParametersUpdateInfoKHR](#). In this case, if the video codec operation the [video session parameters](#) object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then it defines the set of parameters to add to it

(see [Updating Video Session Parameters](#)).

Valid Usage

- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-None-04837
The `seq_parameter_set_id` member of each `StdVideoH264SequenceParameterSet` structure specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-None-04838
The pair constructed from the `seq_parameter_set_id` and `pic_parameter_set_id` members of each `StdVideoH264PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-pStdSPSs-parameter
If `stdSPSCount` is not 0, and `pStdSPSs` is not NULL, `pStdSPSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH264SequenceParameterSet` values
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-pStdPPSs-parameter
If `stdPPSCount` is not 0, and `pStdPPSs` is not NULL, `pStdPPSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH264PictureParameterSet` values

The `VkVideoEncodeH264SessionParametersGetInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           writeStdSPS;
    VkBool32           writeStdPPS;
    uint32_t           stdSPSId;
    uint32_t           stdPPSId;
} VkVideoEncodeH264SessionParametersGetInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `writeStdSPS` indicates whether the encoded H.264 sequence parameter set identified by `stdSPSId` is requested to be retrieved.
- `writeStdPPS` indicates whether the encoded H.264 picture parameter set identified by the pair constructed from `stdSPSId` and `stdPPSId` is requested to be retrieved.
- `stdSPSId` specifies the H.264 sequence parameter set ID used to identify the retrieved H.264 sequence and/or picture parameter set(s).

- `stdPPSId` specifies the H.264 picture parameter set ID used to identify the retrieved H.264 picture parameter set when `writeStdPPS` is `VK_TRUE`.

When this structure is specified in the `pNext` chain of the `VkVideoEncodeSessionParametersGetInfoKHR` structure passed to `vkGetEncodedVideoSessionParametersKHR`, the command will write encoded parameter data to the output buffer in the following order:

1. The H.264 sequence parameter set identified by `stdSPSId`, if `writeStdSPS` is `VK_TRUE`.
2. The H.264 picture parameter set identified by the pair constructed from `stdSPSId` and `stdPPSId`, if `writeStdPPS` is `VK_TRUE`.

Valid Usage

- VUID-VkVideoEncodeH264SessionParametersGetInfoKHR-writeStdSPS-08279
At least one of `writeStdSPS` and `writeStdPPS` must be `VK_TRUE`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersGetInfoKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_GET_INFO_KHR`

The `VkVideoEncodeH264SessionParametersFeedbackInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasStdSPSOverrides;
    VkBool32           hasStdPPSOverrides;
} VkVideoEncodeH264SessionParametersFeedbackInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hasStdSPSOverrides` indicates whether any of the parameters of the requested H.264 sequence parameter set, if one was requested via `VkVideoEncodeH264SessionParametersGetInfoKHR::writeStdSPS`, were overridden by the implementation.
- `hasStdPPSOverrides` indicates whether any of the parameters of the requested H.264 picture parameter set, if one was requested via `VkVideoEncodeH264SessionParametersGetInfoKHR::writeStdPPS`, were overridden by the implementation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersFeedbackInfoKHR-sType-sType

sType	must	be
VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_FEEDBACK_INFO_KHR		

42.17.11. H.264 Encoding Parameters

The [VkVideoEncodeH264PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 naluSliceEntryCount;
    const VkVideoEncodeH264NaluSliceInfoKHR* pNaluSliceEntries;
    const StdVideoEncodeH264PictureInfo*    pStdPictureInfo;
    VkBool32                 generatePrefixNalu;
} VkVideoEncodeH264PictureInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **naluSliceEntryCount** is the number of elements in **pNaluSliceEntries**.
- **pNaluSliceEntries** is a pointer to an array of **naluSliceEntryCount** [VkVideoEncodeH264NaluSliceInfoKHR](#) structures specifying the parameters of the individual H.264 slices to encode for the input picture.
- **pStdPictureInfo** is a pointer to a [StdVideoEncodeH264PictureInfo](#) structure specifying [H.264 picture information](#).
- **generatePrefixNalu** controls whether prefix NALUs are generated before slice NALUs into the target bitstream, as defined in sections 7.3.2.12 and 7.4.2.12 of the [ITU-T H.264 Specification](#).

This structure is specified in the **pNext** chain of the [VkVideoEncodeInfoKHR](#) structure passed to [vkCmdEncodeVideoKHR](#) to specify the codec-specific picture information for an [H.264 encode operation](#).

Encode Input Picture Information

When this structure is specified in the **pNext** chain of the [VkVideoEncodeInfoKHR](#) structure passed to [vkCmdEncodeVideoKHR](#), the information related to the [encode input picture](#) is defined as follows:

- The image subregion used is determined according to the [H.264 Encode Picture Data Access](#) section.
- The encode input picture is associated with the [H.264 picture information](#) provided in **pStdPictureInfo**.

Std Picture Information

The members of the [StdVideoEncodeH264PictureInfo](#) structure pointed to by **pStdPictureInfo** are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.IdrPicFlag` as defined in section 7.4.1 of the [ITU-T H.264 Specification](#);
- `flags.is_reference` as defined in section 3.136 of the [ITU-T H.264 Specification](#);
- `seq_parameter_set_id` and `pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- `primary_pic_type` as defined in section 7.4.2 of the [ITU-T H.264 Specification](#);
- `PicOrderCnt` as defined in section 8.2 of the [ITU-T H.264 Specification](#);
- `temporal_id` as defined in section G.7.4.1.1 of the [ITU-T H.264 Specification](#);
- if `pRefLists` is not `NULL`, then it is a pointer to a `StdVideoEncodeH264ReferenceListsInfo` structure that is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - `ref_pic_list_modification_flag_l0` and `ref_pic_list_modification_flag_l1` as defined in section 7.4.3.1 of the [ITU-T H.264 Specification](#);
 - `num_ref_idx_l0_active_minus1` and `num_ref_idx_l1_active_minus1` as defined in section 7.4.3 of the [ITU-T H.264 Specification](#);
 - `RefPicList0` and `RefPicList1` as defined in section 8.2.4 of the [ITU-T H.264 Specification](#) where each element of these arrays either identifies an [active reference picture](#) using its [DPB slot](#) index or contains the value `STD_VIDEO_H264_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
 - if `refList0ModOpCount` is not zero, then `pRefList0ModOperations` is a pointer to an array of `refList0ModOpCount` number of `StdVideoEncodeH264RefListModEntry` structures specifying the modification parameters for the reference list L0 as defined in section 7.4.3.1 of the [ITU-T H.264 Specification](#);
 - if `refList1ModOpCount` is not zero, then `pRefList1ModOperations` is a pointer to an array of `refList1ModOpCount` number of `StdVideoEncodeH264RefListModEntry` structures specifying the modification parameters for the reference list L1 as defined in section 7.4.3.1 of the [ITU-T H.264 Specification](#);
 - if `refPicMarkingOpCount` is not zero, then `refPicMarkingOperations` is a pointer to an array of `refPicMarkingOpCount` number of `StdVideoEncodeH264RefPicMarkingEntry` structures specifying the reference picture marking parameters as defined in section 7.4.3.3 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 7.4.3 of the [ITU-T H.264 Specification](#).

Reference picture setup is controlled by the value of `StdVideoEncodeH264PictureInfo::flags.is_reference`. If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pEncodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoEncodeH264PictureInfo::flags.is_reference` is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The members of the `StdVideoEncodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are

used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active SPS* is the [SPS](#) identified by the key specified in `StdVideoEncodeH264PictureInfo::seq_parameter_set_id`.
- The *active PPS* is the [PPS](#) identified by the key specified by the pair constructed from `StdVideoEncodeH264PictureInfo::seq_parameter_set_id` and `StdVideoEncodeH264PictureInfo::pic_parameter_set_id`.

H.264 encoding uses *explicit weighted sample prediction* for a slice, as defined in section 8.4.2.3 of the [ITU-T H.264 Specification](#), if any of the following conditions are true for the active [PPS](#) and the `pStdSliceHeader` member of the corresponding element of `pNaluSliceEntries`:

- `pStdSliceHeader->slice_type` is `STD_VIDEO_H264_SLICE_TYPE_P` and `weighted_pred_flag` is enabled in the active PPS.
- `pStdSliceHeader->slice_type` is `STD_VIDEO_H264_SLICE_TYPE_B` and `weighted_bipred_idc` in the active PPS equals `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT`.

Valid Usage

- VUID-VkVideoEncodeH264PictureInfoKHR-naluSliceEntryCount-08301
`naluSliceEntryCount` **must** be between 1 and `VkVideoEncodeH264CapabilitiesKHR::maxSliceCount`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH264PictureInfoKHR-flags-08304
If `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR`, then `generatePrefixNalu` **must** be `VK_FALSE`
- VUID-VkVideoEncodeH264PictureInfoKHR-flags-08314
If `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR` and the slice corresponding to any element of `pNaluSliceEntries` uses [explicit weighted sample prediction](#), then `VkVideoEncodeH264NaluSliceInfoKHR::pStdSliceHeader->pWeightTable` **must** not be `NULL` for that element of `pNaluSliceEntries`
- VUID-VkVideoEncodeH264PictureInfoKHR-flags-08315
If `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR`, then `VkVideoEncodeH264NaluSliceInfoKHR::pStdSliceHeader->slice_type` **must** be identical for all elements of `pNaluSliceEntries`

Valid Usage (Implicit)

- `VUID-VkVideoEncodeH264PictureInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PICTURE_INFO_KHR`
- `VUID-VkVideoEncodeH264PictureInfoKHR-pNaluSliceEntries-parameter`
`pNaluSliceEntries` **must** be a valid pointer to an array of `naluSliceEntryCount` valid `VkVideoEncodeH264NaluSliceInfoKHR` structures
- `VUID-VkVideoEncodeH264PictureInfoKHR-pStdPictureInfo-parameter`
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoEncodeH264PictureInfo` value
- `VUID-VkVideoEncodeH264PictureInfoKHR-naluSliceEntryCount-arraylength`
`naluSliceEntryCount` **must** be greater than 0

The `VkVideoEncodeH264NaluSliceInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264NaluSliceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    int32_t            constantQp;
    const StdVideoEncodeH264SliceHeader* pStdSliceHeader;
} VkVideoEncodeH264NaluSliceInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantQp` is the QP to use for the slice if the current `rate control mode` configured for the video session is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `pStdSliceHeader` is a pointer to a `StdVideoEncodeH264SliceHeader` structure specifying [H.264 slice header parameters](#) for the slice.

Std Slice Header Parameters

The members of the `StdVideoEncodeH264SliceHeader` structure pointed to by `pStdSliceHeader` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- if `pWeightTable` is not `NULL`, then it is a pointer to a `StdVideoEncodeH264WeightTable` that is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoEncodeH264WeightTable` are interpreted as defined in section 7.4.3.2 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 7.4.3 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264NaluSliceInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_NALU_SLICE_INFO_KHR`
- VUID-VkVideoEncodeH264NaluSliceInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkVideoEncodeH264NaluSliceInfoKHR-pStdSliceHeader-parameter
`pStdSliceHeader` **must** be a valid pointer to a valid `StdVideoEncodeH264SliceHeader` value

The `VkVideoEncodeH264DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264DpbSlotInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoEncodeH264ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeH264DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoEncodeH264ReferenceInfo` structure specifying [H.264 reference information](#).

This structure is specified in the `pNext` chain of `VkVideoEncodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoEncodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [H.264 encode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoEncodeInfoKHR::pReferenceSlots`, one element is added to the list of [active reference pictures](#) used by the video encode operation for each element of `VkVideoEncodeInfoKHR::pReferenceSlots` as follows:

- The image subregion used is determined according to the [H.264 Encode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoEncodeInfoKHR::pReferenceSlots`.
- The reference picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoEncodeInfoKHR::pSetupReferenceSlot`, the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [H.264 Encode Picture Data Access](#)

section.

- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in [VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex](#).
- The reconstructed picture is associated with the [H.264 reference information](#) provided in [pStdReferenceInfo](#).

Std Reference Information

The members of the [StdVideoEncodeH264ReferenceInfo](#) structure pointed to by [pStdReferenceInfo](#) are interpreted as follows:

- [flags.reserved](#) is used only for padding purposes and is otherwise ignored;
- [flags.used_for_long_term_reference](#) is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.2.5.1 of the [ITU-T H.264 Specification](#);
- [primary_pic_type](#) as defined in section 7.4.2 of the [ITU-T H.264 Specification](#);
- [long_term_pic_num](#) and [long_term_frame_idx](#) as defined in section 7.4.3 of the [ITU-T H.264 Specification](#);
- [temporal_id](#) as defined in section G.7.4.1.1 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 8.2 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264DpbSlotInfoKHR-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_DPB_SLOT_INFO_KHR](#)
- VUID-VkVideoEncodeH264DpbSlotInfoKHR-pStdReferenceInfo-parameter [pStdReferenceInfo](#) **must** be a valid pointer to a valid [StdVideoEncodeH264ReferenceInfo](#) value

42.17.12. H.264 Encode Rate Control

Group of Pictures

In case of H.264 encoding it is common practice to follow a regular pattern of different picture types in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

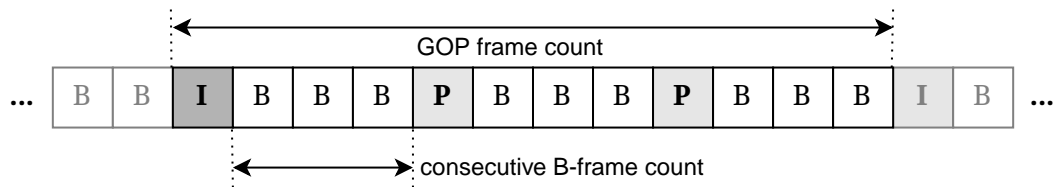

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive B frames between I and/or P frames in display order.

GOPs are further classified as *open* and *closed* GOPs.

Frame types in an open GOP follow each other in display order according to the following algorithm:

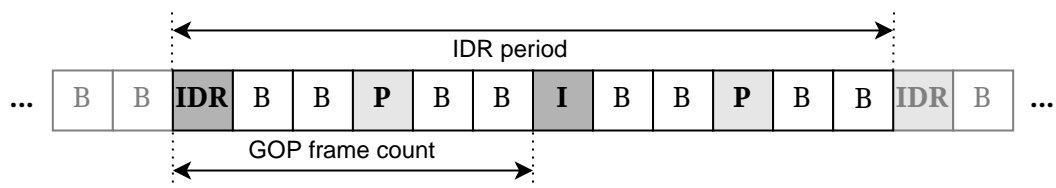

1. The first frame is always an I frame.
2. This is followed by a number of consecutive B frames, as defined above.
3. If the number of frames in the GOP is not reached yet, then the next frame is a P frame and the algorithm continues from step 2.

Text is not SVG - cannot display

Figure 31. H.264 open GOP

In case of a closed GOP, an **IDR frame** is used at a certain period.

Text is not SVG - cannot display

Figure 32. H.264 closed GOP

It is also typical for H.264 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

Flat Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- Each B frame uses the last non-B frame, in display order, as its forward reference, and uses the next non-B frame, in display order, as its backward reference.

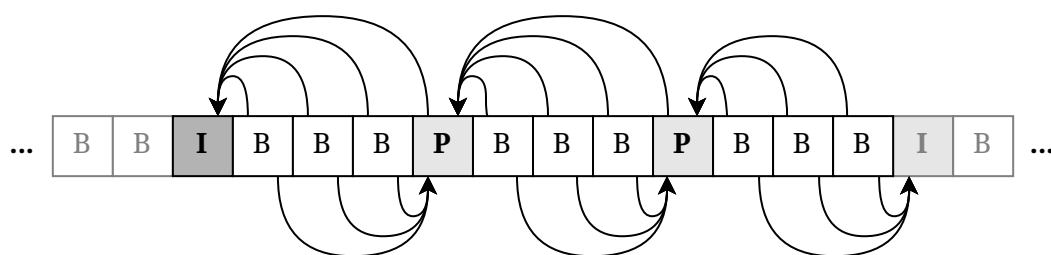

Figure 33. H.264 flat reference pattern

Dyadic Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- The following algorithm is applied to the sequence of consecutive B frames between I and/or P frames in display order:
 1. The B frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
 2. The algorithm is executed recursively for the following frame sequences:
 - The B frames of the original sequence preceding the frame in the middle, if any.
 - The B frames of the original sequence following the frame in the middle, if any.

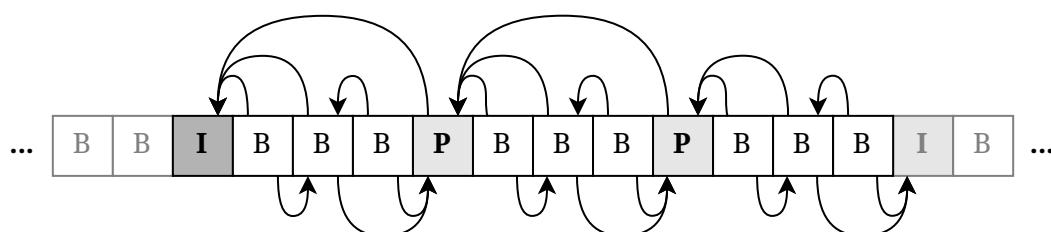

Figure 34. H.264 dyadic reference pattern

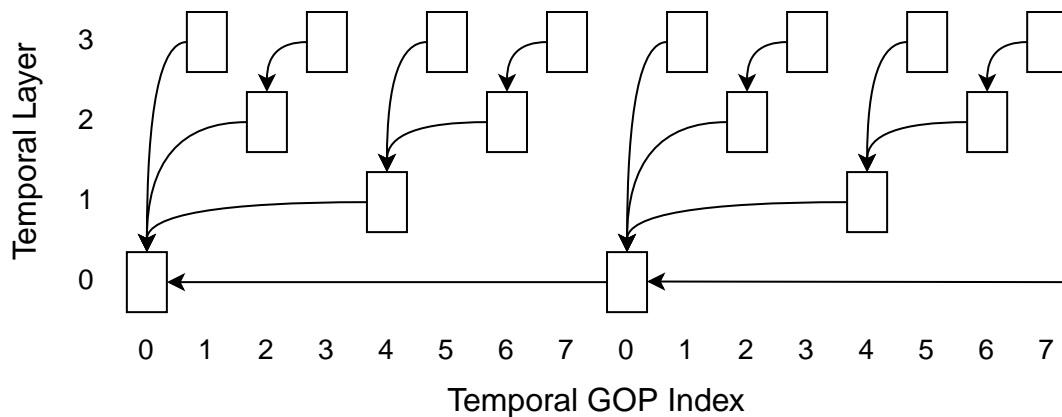

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the picture type of individual encoded pictures is still application-controlled, however, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited, to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an H.264 encode session is used to encode multiple temporal layers, it is also common practice to follow a regular pattern for the H.264 temporal ID for the encoded pictures in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most

common temporal layer pattern used is as follows:

Dyadic Temporal Layer Pattern

- The number of frames in the temporal GOP is 2^{n-1} , where n is the number of temporal layers.
- The i^{th} frame in the temporal GOP uses temporal ID t , if and only if the index of the least significant bit set in i equals $n-t-1$, except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The i^{th} frame in the temporal GOP uses the r^{th} frame as reference, where r is calculated from i by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.

Text is not SVG - cannot display

Figure 35. H.264 dyadic temporal layer pattern

NOTE

Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence B pictures with backward prediction are usually not used.

The `VkVideoEncodeH264RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264RateControlInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoEncodeH264RateControlFlagsKHR flags;
    uint32_t           gopFrameCount;
    uint32_t           idrPeriod;
    uint32_t           consecutiveBFrameCount;
    uint32_t           temporalLayerCount;
} VkVideoEncodeH264RateControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH264RateControlFlagBitsKHR` specifying H.264 rate control flags.
- `gopFrameCount` is the number of frames within a [group of pictures \(GOP\)](#) intended to be used by the application. If it is 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is `UINT32_MAX`, the GOP length is treated as infinite.
- `idrPeriod` is the interval, in terms of number of frames, between two [IDR frames](#) (see [IDR period](#)). If it is 0, the rate control algorithm **may** assume an implementation-dependent IDR period. If it is `UINT32_MAX`, the IDR period is treated as infinite.
- `consecutiveBFrameCount` is the number of consecutive B frames between I and/or P frames within the [GOP](#).
- `temporalLayerCount` specifies the number of H.264 temporal layers that the application intends to use.

When an instance of this structure is included in the `pNext` chain of the `VkVideoCodingControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, and `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, the parameters in this structure are used as guidance for the implementation's rate control algorithm (see [Video Coding Control](#)).

If `flags` includes `VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR`, then the rate control state is reset to an initial state to meet HRD compliance requirements. Otherwise the new rate control state **may** be applied without a reset depending on the implementation and the specified rate control parameters.

NOTE

It would be possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for `consecutiveBFrameCount`, `idrPeriod`, and `gopFrameCount`, but this inferred picture type will not be used by implementations to override the picture type provided to the video encode operation.

Valid Usage

- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08280
If `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR`, then `flags` **must** not contain `VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR`
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08281
If `flags` contains `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR` or `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR`, then it **must** also contain `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR`
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08282
If `flags` contains `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR`, then it **must** not also contain `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR`

- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08283
If `flags` contains `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR`, then `gopFrameCount` **must** be greater than 0
- VUID-VkVideoEncodeH264RateControlInfoKHR-idrPeriod-08284
If `idrPeriod` is not 0, then it **must** be greater than or equal to `gopFrameCount`
- VUID-VkVideoEncodeH264RateControlInfoKHR-consecutiveBFrameCount-08285
If `consecutiveBFrameCount` is not 0, then it **must** be less than `gopFrameCount`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264RateControlInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_RATE_CONTROL_INFO_KHR`
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-parameter
`flags` **must** be a valid combination of `VkVideoEncodeH264RateControlFlagBitsKHR` values

Bits which **can** be set in `VkVideoEncodeH264RateControlInfoKHR::flags`, specifying H.264 rate control flags, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR =
0x00000010,
} VkVideoEncodeH264RateControlFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR` specifies that rate control **should** attempt to produce an HRD compliant bitstream, as defined in annex C of the [ITU-T H.264 Specification](#).
- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR` specifies that the application intends to use a [regular GOP structure](#) according to the parameters specified in the `gopFrameCount`, `idrPeriod`, and `consecutiveBFrameCount` members of the `VkVideoEncodeH264RateControlInfoKHR` structure.
- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR` specifies that the application intends to follow a [flat reference pattern](#) in the GOP.
- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR` specifies that the application intends to follow a [dyadic reference pattern](#) in the GOP.
- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR` specifies that the application intends to follow a [dyadic temporal layer pattern](#).

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264RateControlFlagsKHR;
```

`VkVideoEncodeH264RateControlFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH264RateControlFlagBitsKHR`.

Rate Control Layers

The `VkVideoEncodeH264RateControlLayerInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264RateControlLayerInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkBool32                 useMinQp;
    VkVideoEncodeH264QpKHR   minQp;
    VkBool32                 useMaxQp;
    VkVideoEncodeH264QpKHR   maxQp;
    VkBool32                 useMaxFrameSize;
    VkVideoEncodeH264FrameSizeKHR maxFrameSize;
} VkVideoEncodeH264RateControlLayerInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMinQp` indicates whether the QP values determined by rate control will be clamped to the lower bounds on the QP values specified in `minQp`.
- `minQp` specifies the lower bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when `useMinQp` is `VK_TRUE`.
- `useMaxQp` indicates whether the QP values determined by rate control will be clamped to the upper bounds on the QP values specified in `maxQp`.
- `maxQp` specifies the upper bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when `useMaxQp` is `VK_TRUE`.
- `useMaxFrameSize` indicates whether the implementation's rate control algorithm **should** use the values specified in `maxFrameSize` as the upper bounds on the encoded frame size for each picture type.
- `maxFrameSize` specifies the upper bounds on the encoded frame size, for each picture type, when `useMaxFrameSize` is `VK_TRUE`.

When used, the values in `minQp` and `maxQp` guarantee that the effective QP values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of QP values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak `bitrate` values to be used for the encoded bitstream specified in the

`averageBitrate` and `maxBitrate` members of the `VkVideoEncodeRateControlLayerInfoKHR` structure.

- The upper bounds on the encoded frame size, for each picture type, specified in the `maxFrameSize` member of `VkVideoEncodeH264RateControlLayerInfoKHR`.

NOTE

In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the [Video Encode Rate Control](#) section.

When an instance of this structure is included in the `pNext` chain of a `VkVideoEncodeRateControlLayerInfoKHR` structure specified in one of the elements of the `players` array member of the `VkVideoEncodeRateControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, and the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, it specifies the H.264-specific rate control parameters of the rate control layer corresponding to that element of `players`.

Valid Usage

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08286

If `useMinQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be between `VkVideoEncodeH264CapabilitiesKHR::minQp` and `VkVideoEncodeH264CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMaxQp-08287

If `useMaxQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all be between `VkVideoEncodeH264CapabilitiesKHR::minQp` and `VkVideoEncodeH264CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08288

If `useMinQp` is `VK_TRUE` and `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all specify the same value

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMaxQp-08289

If `useMaxQp` is `VK_TRUE` and `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all specify the same value

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08374

If `useMinQp` and `useMaxQp` are both `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be less than or equal to the respective members of `maxQp`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-sType-sType
sType must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_RATE_CONTROL_LAYER_INFO_KHR`
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-minQp-parameter
minQp must be a valid `VkVideoEncodeH264QpKHR` structure
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-maxQp-parameter
maxQp must be a valid `VkVideoEncodeH264QpKHR` structure
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-maxFrameSize-parameter
maxFrameSize must be a valid `VkVideoEncodeH264FrameSizeKHR` structure

The `VkVideoEncodeH264QpKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264QpKHR {
    int32_t    qpI;
    int32_t    qpP;
    int32_t    qpB;
} VkVideoEncodeH264QpKHR;
```

- **qpI** is the QP to be used for **I** pictures.
- **qpP** is the QP to be used for **P** pictures.
- **qpB** is the QP to be used for **B** pictures.

The `VkVideoEncodeH264FrameSizeKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264FrameSizeKHR {
    uint32_t    frameISize;
    uint32_t    framePSize;
    uint32_t    frameBSize;
} VkVideoEncodeH264FrameSizeKHR;
```

- **frameISize** is the size in bytes to be used for **I** pictures.
- **framePSize** is the size in bytes to be used for **P** pictures.
- **frameBSize** is the size in bytes to be used for **B** pictures.

GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the **group of pictures (GOP)**.

The `VkVideoEncodeH264GopRemainingFrameInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t            gopRemainingI;
    uint32_t            gopRemainingP;
    uint32_t            gopRemainingB;
} VkVideoEncodeH264GopRemainingFrameInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useGopRemainingFrames` indicates whether the implementation's rate control algorithm **should** use the values specified in `gopRemainingI`, `gopRemainingP`, and `gopRemainingB`. If `useGopRemainingFrames` is `VK_FALSE`, then the values of `gopRemainingI`, `gopRemainingP`, and `gopRemainingB` are ignored.
- `gopRemainingI` specifies the number of `I frames` the implementation's rate control algorithm **should** assume to be remaining in the `GOP` prior to executing the video encode operation.
- `gopRemainingP` specifies the number of `P frames` the implementation's rate control algorithm **should** assume to be remaining in the `GOP` prior to executing the video encode operation.
- `gopRemainingB` specifies the number of `B frames` the implementation's rate control algorithm **should** assume to be remaining in the `GOP` prior to executing the video encode operation.

Setting `useGopRemainingFrames` to `VK_TRUE` and including this structure in the `pNext` chain of `VkVideoBeginCodingInfoKHR` is only mandatory if the `VkVideoEncodeH264CapabilitiesKHR::requiresGopRemainingFrames` reported for the used `video profile` is `VK_TRUE`. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a `regular GOP structure`, these values **may** provide additional guidance for the implementation's rate control algorithm.

The `VkVideoEncodeH264CapabilitiesKHR::prefersGopRemainingFrames` capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264GopRemainingFrameInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_GOP_REMAINING_FRAME_INFO_KHR`

42.17.13. H.264 Encode Requirements

This section described the **required** H.264 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 59. Required *Video Std Header Versions*

Video Std Header Name	Version
<code>vulkan_video_codec_h264std_encode</code>	1.0.0

Table 60. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹
VkVideoCapabilitiesKHR		
<code>flags</code>	-	min
<code>minBitstreamBufferOffsetAlignment</code>	4096	max
<code>minBitstreamBufferSizeAlignment</code>	4096	max
<code>pictureAccessGranularity</code>	(64,64)	max
<code>minCodedExtent</code>	-	max
<code>maxCodedExtent</code>	-	min
<code>maxDpbSlots</code>	0	min
<code>maxActiveReferencePictures</code>	0	min
VkVideoEncodeCapabilitiesKHR		
<code>flags</code>	-	min
<code>rateControlModes</code>	-	min
<code>maxBitrate</code>	64000	min
<code>maxQualityLevels</code>	1	min
<code>encodeInputPictureGranularity</code>	(64,64)	max
<code>supportedEncodeFeedbackFlags</code>	<code>VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR</code> <code>VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR</code>	min
VkVideoEncodeH264CapabilitiesKHR		
<code>flags</code>	-	min
<code>maxLevelIdc</code>	<code>STD_VIDEO_H264_LEVEL_IDC_1_0</code>	min

Video Capability	Requirement	Requirement Type ¹
maxSliceCount	1	min
maxPPictureL0ReferenceCount	0	min
maxBPictureL0ReferenceCount	0	min
maxL1ReferenceCount	0	min
maxTemporalLayerCount	1	min
expectDyadicTemporalLayerPattern	-	implementation-dependent
minQp	-	max
maxQp	-	min
prefersGopRemainingFrames	-	implementation-dependent
requiresGopRemainingFrames	-	implementation-dependent
stdSyntaxFlags	-	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

42.18. H.265 Encode Operations

Video encode operations using an [H.265 encode profile](#) **can** be used to encode elementary video stream sequences compliant to the [ITU-T H.265 Specification](#).

NOTE	Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.
-------------	--

This process is performed according to the [video encode operation steps](#) with the codec-specific semantics defined in section 8 of the [ITU-T H.265 Specification](#) as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The `StdVideoH265VideoParameterSet` structure corresponding to the [active VPS](#) specifying the [H.265 video parameter set](#).
 - The `StdVideoH265SequenceParameterSet` structure corresponding to the [active SPS](#) specifying the [H.265 sequence parameter set](#).
 - The `StdVideoH265PictureParameterSet` structure corresponding to the [active PPS](#) specifying

the [H.265 picture parameter set](#).

- The `StdVideoEncodeH265PictureInfo` structure specifying the [H.265 picture information](#).
- The `StdVideoEncodeH265SliceSegmentHeader` structures specifying the [H.265 slice segment header parameters](#) for each encoded H.265 slice segment.
- The `StdVideoEncodeH265ReferenceInfo` structures specifying the [H.265 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The encoded bitstream data is written to the destination video bitstream buffer range as defined in the [H.265 Encode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [encode input picture](#), [active reference pictures](#), and optional [reconstructed picture](#) is accessed as defined in the [H.265 Encode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [H.265 picture information](#).

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the [ITU-T H.265 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete [unsuccessfully](#).

42.18.1. H.265 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the H.265 encode parameters specified in the following Video Std structures:

- `StdVideoH265VideoParameterSet`
- `StdVideoH265SequenceParameterSet`
- `StdVideoH265PictureParameterSet`
- `StdVideoEncodeH265PictureInfo`
- `StdVideoEncodeH265SliceSegmentHeader`
- `StdVideoEncodeH265ReferenceInfo`

All such H.265 encode parameter overrides **must** fulfill the conditions defined in the [Video Encode Parameter Overrides](#) section.

In addition, implementations **must** not override any of the following H.265 encode parameters:

- `StdVideoEncodeH265PictureInfo::pic_type`
- `StdVideoEncodeH265SliceSegmentHeader::slice_type`

In case of H.265 encode parameters stored in [video session parameters](#) objects, applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded H.265 parameter sets in the bitstream in order to be able to produce a compliant H.265 video bitstream using the H.265 encode parameters stored in the video session parameters object.

In case of any H.265 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` video encode feedback query flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those H.265 encode parameters.

42.18.2. H.265 Encode Bitstream Data Access

Each video encode operation writes one or more VCL NAL units comprising of slice segment headers and data of the encoded picture, in the format defined in sections 7.3.6 and 7.3.8, according to the semantics defined in sections 7.4.7 and 7.4.9 of the [ITU-T H.265 Specification](#), respectively. The number of VCL NAL units written is specified by `VkVideoEncodeH265PictureInfoKHR::naluSliceSegmentEntryCount`.

42.18.3. H.265 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile. Accordingly, the complete image subregion of a [encode input picture](#), [reference picture](#), or [reconstructed picture](#) accessed by video coding operations using an [H.265 encode profile](#) is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource [referred](#) to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource [referred](#) to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video encode operations using an [H.265 encode profile](#), any access to a picture at the coordinates (x, y) , as defined by the [ITU-T H.265 Specification](#), is an access to the image subresource [referred](#) to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates (x, y) .

Implementations **may** choose not to access some or all texels within particular [reference pictures](#) available to a video encode operation (e.g. due to [video encode parameter overrides](#) restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

42.18.4. H.265 Frame, Picture, Slice Segments, and Tiles

H.265 pictures consist of one or more slices, slice segments, and tiles, as defined in section 6.3.1 of the [ITU-T H.265 Specification](#).

For the purposes of this specification, the H.265 slice segments comprising a picture are referred to as the *picture partitions* of the picture.

Video encode operations using an [H.265 encode profile](#) **can** encode slice segments of different types, as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#), by specifying the corresponding enumeration constant value in `StdVideoEncodeH265SliceSegmentHeader::slice_type` in the [H.265 slice segment header parameters](#) from the Video Std enumeration type `StdVideoH265SliceType`:

- `STD_VIDEO_H265_SLICE_TYPE_B` indicates that the slice segment is part of a *B slice* as defined in section 3.12 of the [ITU-T H.265 Specification](#).
- `STD_VIDEO_H265_SLICE_TYPE_P` indicates that the slice segment is part of a *P slice* as defined in section 3.111 of the [ITU-T H.265 Specification](#).
- `STD_VIDEO_H265_SLICE_TYPE_I` indicates that the slice segment is part of an *I slice* as defined in section 3.74 of the [ITU-T H.265 Specification](#).

Pictures constructed from such slice segments **can** be of different types, as defined in section 7.4.3.5 of the [ITU-T H.265 Specification](#). Video encode operations using an [H.265 encode profile](#) **can** encode pictures of a specific type by specifying the corresponding enumeration constant value in `StdVideoEncodeH265PictureInfo::pic_type` in the [H.265 picture information](#) from the Video Std enumeration type `StdVideoH265PictureType`:

- `STD_VIDEO_H265_PICTURE_TYPE_P` indicates that the picture is a *P picture*. A frame consisting of a P picture is also referred to as a *P frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_B` indicates that the picture is a *B picture*. A frame consisting of a B picture is also referred to as a *B frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_I` indicates that the picture is an *I picture*. A frame consisting of an I picture is also referred to as an *I frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_IDR` indicates that the picture is a special type of I picture called an *IDR picture* as defined in section 3.67 of the [ITU-T H.265 Specification](#). A frame consisting of an IDR picture is also referred to as an *IDR frame*.

42.18.5. H.265 Coding Blocks

H.265 encode supports two types of coding blocks:

- *Coding tree unit*, as defined in section 3.35 of the [ITU-T H.265 Specification](#).
- *Coding unit*, as defined in section 3.36 of the [ITU-T H.265 Specification](#).

42.18.6. H.265 Encode Profile

A video profile supporting H.265 video encode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and

adding a `VkVideoEncodeH265ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoEncodeH265ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoH265ProfileIdc    stdProfileIdc;
} VkVideoEncodeH265ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a `StdVideoH265ProfileIdc` value specifying the H.265 codec profile IDC, as defined in section A.3 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265ProfileInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PROFILE_INFO_KHR`

42.18.7. H.265 Encode Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities for an [H.265 encode profile](#), the `VkVideoCapabilitiesKHR::pNext` chain **must** include a `VkVideoEncodeH265CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoEncodeH265CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265CapabilitiesKHR {
    VkStructureType           sType;
    void*                     pNext;
    VkVideoEncodeH265CapabilityFlagsKHR flags;
    StdVideoH265LevelIdc      maxLevelIdc;
    uint32_t                  maxSliceSegmentCount;
    VkExtent2D                maxTiles;
    VkVideoEncodeH265CtbSizeFlagsKHR ctbSizes;
    VkVideoEncodeH265TransformBlockSizeFlagsKHR transformBlockSizes;
    uint32_t                  maxPPictureL0ReferenceCount;
    uint32_t                  maxBPictureL0ReferenceCount;
    uint32_t                  maxL1ReferenceCount;
    uint32_t                  maxSubLayerCount;
    VkBool32
expectDyadicTemporalSubLayerPattern;
    int32_t                   minQp;
    int32_t                   maxQp;
    VkBool32                  prefersGopRemainingFrames;
    VkBool32                  requiresGopRemainingFrames;
    VkVideoEncodeH265StdFlagsKHR stdSyntaxFlags;
} VkVideoEncodeH265CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH265CapabilityFlagBitsKHR` indicating supported H.265 encoding capabilities.
- `maxLevelIdc` is a `StdVideoH265LevelIdc` value indicating the maximum H.265 level supported by the profile, where enum constant `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifies H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#).
- `maxSliceSegmentCount` indicates the maximum number of slice segments that **can** be encoded for a single picture. Further restrictions **may** apply to the number of slice segments that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- `maxTiles` indicates the maximum number of H.265 tile columns and rows, as defined in sections 3.175 and 3.176 of the [ITU-T H.265 Specification](#) that **can** be encoded for a single picture. Further restrictions **may** apply to the number of H.265 tiles that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- `ctbSizes` is a bitmask of `VkVideoEncodeH265CtbSizeFlagBitsKHR` describing the supported CTB sizes.
- `transformBlockSizes` is a bitmask of `VkVideoEncodeH265TransformBlockSizeFlagBitsKHR` describing the supported transform block sizes.
- `maxPPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [P pictures](#).

NOTE As implementations **may** [override](#) the reference lists,

`maxPPictureL0ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 reference list for P pictures. However, if `maxPPictureL0ReferenceCount` is zero, then the use of P pictures is not allowed. In case of H.265 encoding, pictures **can** be encoded using only forward prediction even if P pictures are not supported, as the [ITU-T H.265 Specification](#) supports *generalized P & B frames* (also known as low delay B frames) whereas B frames **can** refer to past frames through both the L0 and L1 reference lists.

- `maxBPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [B pictures](#).
- `maxL1ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of [B pictures](#) is supported.

NOTE

As implementations **may** [override](#) the reference lists, `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 and L1 reference lists for B pictures. However, if `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` are both zero, then the use of B pictures is not allowed.

- `maxSubLayerCount` indicates the maximum number of H.265 sub-layers supported by the implementation.
- `expectDyadicTemporalSubLayerPattern` indicates that the implementation's rate control algorithms expect the application to use a [dyadic temporal sub-layer pattern](#) when encoding multiple temporal sub-layers.
- `minQp` indicates the minimum QP value supported.
- `maxQp` indicates the maximum QP value supported.
- `prefersGopRemainingFrames` indicates that the implementation's rate control algorithm prefers the application to specify the number of frames of each type [remaining](#) in the current [group of pictures](#) when beginning a [video coding scope](#).
- `requiresGopRemainingFrames` indicates that the implementation's rate control algorithm requires the application to specify the number of frames of each type [remaining](#) in the current [group of pictures](#) when beginning a [video coding scope](#).
- `stdSyntaxFlags` is a bitmask of [VkVideoEncodeH265StdFlagBitsKHR](#) indicating capabilities related to H.265 syntax elements.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265CapabilitiesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_CAPABILITIES_KHR`

Bits which **may** be set in [VkVideoEncodeH265CapabilitiesKHR::flags](#), indicating the H.265 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR =
0x00000080,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR =
0x00000100,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR =
0x00000200,
} VkVideoEncodeH265CapabilityFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR` indicates if the implementation **may** be able to generate HRD compliant bitstreams if any of the `nal_hrd_parameters_present_flag`, `vcl_hrd_parameters_present_flag`, or `sub_pic_hrd_params_present_flag` members of `StdVideoH265HrdFlags` are set to 1 in the HRD parameters of the `active VPS` or `active SPS`, or if `StdVideoH265SpsVuiFlags::vui_hrd_parameters_present_flag` is set to 1 in the `active SPS`.
- `VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR` indicates that if the `weighted_pred_flag` or the `weighted_bipred_flag` member of `StdVideoH265PpsFlags` is set to 1 in the `active PPS` when encoding a `P picture` or `B picture`, respectively, then the implementation is able to internally decide syntax for `pred_weight_table`, as defined in section 7.4.7.3 of the [ITU-T H.265 Specification](#), and the application is not **required** to provide a weight table in the `H.265 slice segment header parameters`.
- `VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR` indicates that each slice segment in a frame with a single or multiple tiles per slice may begin or finish at any offset in a CTB row. If not supported, all slice segments in such a frame **must** begin at the start of a CTB row (and hence each slice segment **must** finish at the end of a CTB row). Also indicates that each slice segment in a frame with multiple slices per tile may begin or finish at any offset within the enclosing tile's CTB row. If not supported, slice segments in such a frame **must** begin at the start of the enclosing tile's CTB row (and hence each slice segment **must** finish at the end of the enclosing tile's CTB row).
- `VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR` indicates that when a frame is encoded with multiple slice segments, the implementation allows encoding each slice segment with a different `StdVideoEncodeH265SliceSegmentHeader::slice_type` specified in the `H.265 slice segment header parameters`. If not supported, all slice segments of the frame **must** be encoded with the same `slice_type` which corresponds to the picture type of the frame.
- `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR` indicates support for using a `B frame` as L0 reference, as specified in `StdVideoEncodeH265ReferenceListsInfo::RefPicList0` in the `H.265 picture information`.
- `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR` indicates support for using a `B`

frame as L1 reference, as specified in `StdVideoEncodeH265ReferenceListsInfo::RefPicList1` in the [H.265 picture information](#).

- `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR` indicates support for specifying different QP values in the members of [VkVideoEncodeH265QpKHR](#).
- `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR` indicates support for specifying different constant QP values for each slice segment.
- `VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR` indicates if encoding multiple tiles per slice segment, as defined in section 6.3.1 of the [ITU-T H.265 Specification](#), is supported. If this capability flag is not present, then the implementation is only able to encode a single tile for each slice segment.
- `VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR` indicates if encoding multiple slice segments per tile, as defined in section 6.3.1 of the [ITU-T H.265 Specification](#), is supported. If this capability flag is not present, then the implementation is only able to encode a single slice segment for each tile.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265CapabilityFlagsKHR;
```

`VkVideoEncodeH265CapabilityFlagsKHR` is a bitmask type for setting a mask of zero or more [VkVideoEncodeH265CapabilityFlagBitsKHR](#).

Bits which **may** be set in `VkVideoEncodeH265CapabilitiesKHR::stdSyntaxFlags`, indicating the capabilities related to the H.265 syntax elements, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265StdFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR = 0x00000001,

} VkVideoEncodeH265StdFlagBitsKHR;
```

- **VK_VIDEO_ENCODE_H265_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR** indicates whether the implementation supports using the application-provided value for **StdVideoH265SpsFlags::separate_colour_plane_flag** in the **SPS** when that value is 1.
- **VK_VIDEO_ENCODE_H265_STD_SAMPLE_ADAPTIVE_OFFSET_ENABLED_FLAG_SET_BIT_KHR** indicates whether the implementation supports using the application-provided value for **StdVideoH265SpsFlags::sample_adaptive_offset_enabled_flag** in the **SPS** when that value is 1.
- **VK_VIDEO_ENCODE_H265_STD_SCALING_LIST_DATA_PRESENT_FLAG_SET_BIT_KHR** indicates whether the implementation supports using the application-provided value for the **scaling_list_enabled_flag** and **sps_scaling_list_data_present_flag** members of **StdVideoH265SpsFlags** in the **SPS**, and the application-provided value for **StdVideoH265PpsFlags::pps_scaling_list_data_present_flag** in the **PPS** when those values are 1.
- **VK_VIDEO_ENCODE_H265_STD_PCM_ENABLED_FLAG_SET_BIT_KHR** indicates whether the implementation supports using the application-provided value for **StdVideoH265SpsFlags::pcm_enable_flag** in the **SPS** when that value is 1.
- **VK_VIDEO_ENCODE_H265_STD_SPS_TEMPORAL_MVP_ENABLED_FLAG_SET_BIT_KHR** indicates whether the implementation supports using the application-provided value for **StdVideoH265SpsFlags::sps_temporal_mvp_enabled_flag** in the **SPS** when that value is 1.

- `VK_VIDEO_ENCODE_H265_STD_INIT_QP_MINUS26_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PictureParameterSet::init_qp_minus26` in the `PPS` when that value is non-zero.
- `VK_VIDEO_ENCODE_H265_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::weighted_pred_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_WEIGHTED_BIPRED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::weighted_bipred_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_LOG2_PARALLEL_MERGE_LEVEL_MINUS2_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PictureParameterSet::log2_parallel_merge_level_minus2` in the `PPS` when that value is non-zero.
- `VK_VIDEO_ENCODE_H265_STD_SIGN_DATA_HIDING_ENABLED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::sign_data_hiding_enabled_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::transform_skip_enabled_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_UNSET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::transform_skip_enabled_flag` in the `PPS` when that value is 0.
- `VK_VIDEO_ENCODE_H265_STD_PPS_SLICE_CHROMA_QP_OFFSETS_PRESENT_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::pps_slice_chroma_qp_offsets_present_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_TRANSQUANT_BYPASS_ENABLED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::transquant_bypass_enabled_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::constrained_intra_pred_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_ENTROPY_CODING_SYNC_ENABLED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::entropy_coding_sync_enabled_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_DEBLOCKING_FILTER_OVERRIDE_ENABLED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::deblocking_filter_override_enabled_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENTS_ENABLED_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::dependent_slice_segments_enabled_flag` in the `PPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENT_FLAG_SET_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoEncodeH265SliceSegmentHeader::dependent_slice_segment_flag` in the `H.265 slice segment`

[header parameters](#) when that value is 1.

- `VK_VIDEO_ENCODE_H265_STD_SLICE_QP_DELTA_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta` in the [H.265 slice segment header parameters](#) when that value is identical across the slice segments of the encoded frame.
- `VK_VIDEO_ENCODE_H265_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR` indicates whether the implementation supports using the application-provided value for `StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta` in the [H.265 slice segment header parameters](#) when that value is different across the slice segments of the encoded frame.

These capability flags provide information to the application about specific H.265 syntax element values that the implementation supports without having to [override](#) them and do not otherwise restrict the values that the application **can** specify for any of the mentioned H.265 syntax elements.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265StdFlagsKHR;
```

`VkVideoEncodeH265StdFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH265StdFlagBitsKHR`.

Bits which **may** be set in `VkVideoEncodeH265CapabilitiesKHR::ctbSizes`, indicating the CTB sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265CtbSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_64_BIT_KHR = 0x00000004,
} VkVideoEncodeH265CtbSizeFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_KHR` specifies that a CTB size of 16x16 is supported.
- `VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_KHR` specifies that a CTB size of 32x32 is supported.
- `VK_VIDEO_ENCODE_H265_CTB_SIZE_64_BIT_KHR` specifies that a CTB size of 64x64 is supported.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265CtbSizeFlagsKHR;
```

`VkVideoEncodeH265CtbSizeFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH265CtbSizeFlagBitsKHR`.

Implementations **must** support at least one of `VkVideoEncodeH265CtbSizeFlagBitsKHR`.

Bits which **may** be set in `VkVideoEncodeH265CapabilitiesKHR::transformBlockSizes`, indicating the transform block sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265TransformBlockSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_4_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_8_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_16_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_32_BIT_KHR = 0x00000008,
} VkVideoEncodeH265TransformBlockSizeFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_4_BIT_KHR` specifies that a transform block size of 4x4 is supported.
- `VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_8_BIT_KHR` specifies that a transform block size of 8x8 is supported.
- `VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_16_BIT_KHR` specifies that a transform block size of 16x16 is supported.
- `VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_32_BIT_KHR` specifies that a transform block size of 32x32 is supported.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265TransformBlockSizeFlagsKHR;
```

`VkVideoEncodeH265TransformBlockSizeFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH265TransformBlockSizeFlagBitsKHR`.

Implementations **must** support at least one of `VkVideoEncodeH265TransformBlockSizeFlagBitsKHR`.

42.18.8. H.265 Encode Quality Level Properties

When calling `vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR` with `pVideoProfile->videoCodecOperation` specified as `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `VkVideoEncodeH265QualityLevelPropertiesKHR` structure **must** be included in the `pNext` chain of the `VkVideoEncodeQualityLevelPropertiesKHR` structure to retrieve additional video encode quality level properties specific to H.265 encoding.

The `VkVideoEncodeH265QualityLevelPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265QualityLevelPropertiesKHR {
    VkStructureType           sType;
    void*                     pNext;
    VkVideoEncodeH265RateControlFlagsKHR preferredRateControlFlags;
    uint32_t                  preferredGopFrameCount;
    uint32_t                  preferredIdrPeriod;
    uint32_t                  preferredConsecutiveBFrameCount;
    uint32_t                  preferredSubLayerCount;
    VkVideoEncodeH265QpKHR    preferredConstantQp;
    uint32_t                  preferredMaxL0ReferenceCount;
    uint32_t                  preferredMaxL1ReferenceCount;
} VkVideoEncodeH265QualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of `VkVideoEncodeH265RateControlFlagBitsKHR` values indicating the preferred flags to use for `VkVideoEncodeH265RateControlInfoKHR::flags`.
- `preferredGopFrameCount` indicates the preferred value to use for `VkVideoEncodeH265RateControlInfoKHR::gopFrameCount`.
- `preferredIdrPeriod` indicates the preferred value to use for `VkVideoEncodeH265RateControlInfoKHR::idrPeriod`.
- `preferredConsecutiveBFrameCount` indicates the preferred value to use for `VkVideoEncodeH265RateControlInfoKHR::consecutiveBFrameCount`.
- `preferredSubLayerCount` indicates the preferred value to use for `VkVideoEncodeH265RateControlInfoKHR::subLayerCount`.
- `preferredConstantQp` indicates the preferred values to use for `VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp` for each picture type when using rate control mode `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `preferredMaxL0ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L0.
- `preferredMaxL1ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L1.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265QualityLevelPropertiesKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_QUALITY_LEVEL_PROPERTIES_KHR`

42.18.9. H.265 Encode Session

Additional parameters can be specified when creating a video session with an H.265 encode profile by including an instance of the `VkVideoEncodeH265SessionCreateInfoKHR` structure in the `pNext`

chain of [VkVideoSessionCreateInfoKHR](#).

The [VkVideoEncodeH265SessionCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMaxLevelIdc;
    StdVideoH265LevelIdc maxLevelIdc;
} VkVideoEncodeH265SessionCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMaxLevelIdc` indicates whether the value of `maxLevelIdc` should be used by the implementation. When it is `VK_FALSE`, the implementation ignores the value of `maxLevelIdc` and uses the value of [VkVideoEncodeH265CapabilitiesKHR::maxLevelIdc](#), as reported by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile.
- `maxLevelIdc` is a `StdVideoH265LevelIdc` value specifying the upper bound on the H.265 level for the video bitstreams produced by the created video session, where enum constant `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifies H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_CREATE_INFO_KHR`

42.18.10. H.265 Encode Parameter Sets

[Video session parameters](#) objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` can contain the following types of parameters:

H.265 Video Parameter Sets (VPS)

Represented by [StdVideoH265VideoParameterSet](#) structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- `vps_video_parameter_set_id` is used as the key of the VPS entry;
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the [StdVideoH265DecPicBufMgr](#) structure pointed to by `pDecPicBufMgr` correspond to `vps_max_latency_increase_plus1`, `vps_max_dec_pic_buffering_minus1`, and `vps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.1 of the [ITU-T H.265](#)

Specification;

- the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `reserved` is used only for padding purposes and is otherwise ignored;
 - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
 - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265VideoParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

H.265 Sequence Parameter Sets (SPS)

Represented by `StdVideoH265SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- the pair constructed from `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` is used as the key of the SPS entry;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
 - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `sps_max_latency_increase_plus1`, `sps_max_dec_pic_buffering_minus1`, and `sps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.sps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
 - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- `pShortTermRefPicSet` is a pointer to an array of `num_short_term_ref_pic_sets` number of `StdVideoH265ShortTermRefPicSet` structures where each element is interpreted as follows:
 - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
 - `used_by_curr_pic_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `use_delta_flag` is a bitmask where bit index `i` corresponds to `use_delta_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `used_by_curr_pic_s0_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s0_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `used_by_curr_pic_s1_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s1_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ShortTermRefPicSet` are interpreted as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);

- if `flags.long_term_ref_pics_present_flag` is set then the `StdVideoH265LongTermRefPicsSps` structure pointed to by `pLongTermRefPicsSps` is interpreted as follows:
 - `used_by_curr_pic_lt_sps_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_lt_sps_flag[i]` as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265LongTermRefPicsSps` are interpreted as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then the `StdVideoH265SequenceParameterSetVui` structure pointed to by `pSequenceParameterSetVui` is interpreted as follows:
 - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
 - the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);

- all other members of `pSequenceParameterSetVui` are interpreted as defined in section E.3.1 of the [ITU-T H.265 Specification](#);
- if `flags.sps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265SequenceParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

H.265 Picture Parameter Sets (PPS)

Represented by `StdVideoH265PictureParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- the triplet constructed from `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
 - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- if `flags.pps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265PictureParameterSet` are interpreted as defined in section 7.4.3.3 of the [ITU-T H.265 Specification](#).

Implementations **may** override any of these parameters according to the semantics defined in the [Video Encode Parameter Overrides](#) section before storing the resulting H.265 parameter sets into the video session parameters object. Applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened and to retrieve the encoded H.265 parameter sets in order to be able to produce a compliant H.265 video bitstream.

Such H.265 parameter set overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` [video encode feedback query](#) flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a [video session parameters](#) object is created with the codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), the [VkVideoSessionParametersCreateInfoKHR::pNext](#) chain **must** include a [VkVideoEncodeH265SessionParametersCreateInfoKHR](#) structure specifying the capacity and initial contents of the object.

The [VkVideoEncodeH265SessionParametersCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxStdVPSCount;
    uint32_t                 maxStdSPSCount;
    uint32_t                 maxStdPPSCount;
    const VkVideoEncodeH265SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoEncodeH265SessionParametersCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxStdVPSCount](#) is the maximum number of [H.265 VPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- [maxStdSPSCount](#) is the maximum number of [H.265 SPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- [maxStdPPSCount](#) is the maximum number of [H.265 PPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- [pParametersAddInfo](#) is [NULL](#) or a pointer to a [VkVideoEncodeH265SessionParametersAddInfoKHR](#) structure specifying H.265 parameters to add upon object creation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersCreateInfoKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_CREATE_INFO_KHR](#)
- VUID-VkVideoEncodeH265SessionParametersCreateInfoKHR-pParametersAddInfo-parameter
If [pParametersAddInfo](#) is not [NULL](#), [pParametersAddInfo](#) **must** be a valid pointer to a valid [VkVideoEncodeH265SessionParametersAddInfoKHR](#) structure

The [VkVideoEncodeH265SessionParametersAddInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersAddInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 stdVPSCount;
    const StdVideoH265VideoParameterSet* pStdVPSSs;
    uint32_t                 stdSPSCount;
    const StdVideoH265SequenceParameterSet* pStdSPSSs;
    uint32_t                 stdPPSCount;
    const StdVideoH265PictureParameterSet* pStdPPSSs;
} VkVideoEncodeH265SessionParametersAddInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **stdVPSCount** is the number of elements in the **pStdVPSSs** array.
- **pStdVPSSs** is a pointer to an array of [StdVideoH265VideoParameterSet](#) structures describing the [H.265 VPS](#) entries to add.
- **stdSPSCount** is the number of elements in the **pStdSPSSs** array.
- **pStdSPSSs** is a pointer to an array of [StdVideoH265SequenceParameterSet](#) structures describing the [H.265 SPS](#) entries to add.
- **stdPPSCount** is the number of elements in the **pStdPPSSs** array.
- **pStdPPSSs** is a pointer to an array of [StdVideoH265PictureParameterSet](#) structures describing the [H.265 PPS](#) entries to add.

This structure **can** be specified in the following places:

- In the **pParametersAddInfo** member of the [VkVideoEncodeH265SessionParametersCreateInfoKHR](#) structure specified in the **pNext** chain of [VkVideoSessionParametersCreateInfoKHR](#) used to create a [video session parameters](#) object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the **pNext** chain of [VkVideoSessionParametersUpdateInfoKHR](#). In this case, if the video codec operation the [video session parameters](#) object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-sType-sType
sType must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdVPSSs-parameter
If **stdVPSCount** is not `0`, and **pStdVPSSs** is not `NULL`, **pStdVPSSs must** be a valid pointer to an array of **stdVPSCount** [StdVideoH265VideoParameterSet](#) values

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdSPSs-parameter
If `stdSPSCount` is not 0, and `pStdSPSs` is not NULL, `pStdSPSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` values
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdPPSs-parameter
If `stdPPSCount` is not 0, and `pStdPPSs` is not NULL, `pStdPPSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` values

Valid Usage

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06438
The `vps_video_parameter_set_id` member of each `StdVideoH265VideoParameterSet` structure specified in the elements of `pStdVPSs` **must** be unique within `pStdVPSs`
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06439
The pair constructed from the `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` members of each `StdVideoH265SequenceParameterSet` structure specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06440
The triplet constructed from the `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` members of each `StdVideoH265PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

The `VkVideoEncodeH265SessionParametersGetInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           writeStdVPS;
    VkBool32           writeStdSPS;
    VkBool32           writeStdPPS;
    uint32_t           stdVPSId;
    uint32_t           stdSPSId;
    uint32_t           stdPPSId;
} VkVideoEncodeH265SessionParametersGetInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `writeStdVPS` indicates whether the encoded [H.265 video parameter set](#) identified by `stdVPSId` is requested to be retrieved.
- `writeStdSPS` indicates whether the encoded [H.265 sequence parameter set](#) identified by the pair constructed from `stdVPSId` and `stdSPSId` is requested to be retrieved.
- `writeStdPPS` indicates whether the encoded [H.265 picture parameter set](#) identified by the triplet constructed from `stdVPSId`, `stdSPSId`, and `stdPPSId` is requested to be retrieved.

- **stdVPSId** specifies the H.265 video parameter set ID used to identify the retrieved H.265 video, sequence, and/or picture parameter set(s).
- **stdSPSId** specifies the H.265 sequence parameter set ID used to identify the retrieved H.265 sequence and/or picture parameter set(s) when **writeStdSPS** and/or **writeStdPPS** is **VK_TRUE**.
- **stdPPSId** specifies the H.265 picture parameter set ID used to identify the retrieved H.265 picture parameter set when **writeStdPPS** is **VK_TRUE**.

When this structure is specified in the **pNext** chain of the **VkVideoEncodeSessionParametersGetInfoKHR** structure passed to **vkGetEncodedVideoSessionParametersKHR**, the command will write encoded parameter data to the output buffer in the following order:

1. The **H.265 video parameter set** identified by **stdVPSId**, if **writeStdVPS** is **VK_TRUE**.
2. The **H.265 sequence parameter set** identified by the pair constructed from **stdVPSId** and **stdSPSId**, if **writeStdSPS** is **VK_TRUE**.
3. The **H.265 picture parameter set** identified by the triplet constructed from **stdVPSId**, **stdSPSId**, and **stdPPSId**, if **writeStdPPS** is **VK_TRUE**.

Valid Usage

- VUID-VkVideoEncodeH265SessionParametersGetInfoKHR-writeStdVPS-08290
At least one of **writeStdVPS**, **writeStdSPS**, and **writeStdPPS** **must** be **VK_TRUE**

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersGetInfoKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_GET_INFO_KHR**

The **VkVideoEncodeH265SessionParametersFeedbackInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasStdVPSOverrides;
    VkBool32           hasStdSPSOverrides;
    VkBool32           hasStdPPSOverrides;
} VkVideoEncodeH265SessionParametersFeedbackInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **hasStdVPSOverrides** indicates whether any of the parameters of the requested **H.265 video parameter set**, if one was requested via **VkVideoEncodeH265SessionParametersGetInfoKHR**

`::writeStdVPS`, were **overridden** by the implementation.

- `hasStdSPS0overrides` indicates whether any of the parameters of the requested **H.265 sequence parameter set**, if one was requested via `VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdSPS`, were **overridden** by the implementation.
- `hasStdPPS0overrides` indicates whether any of the parameters of the requested **H.265 picture parameter set**, if one was requested via `VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdPPS`, were **overridden** by the implementation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersFeedbackInfoKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_FEEDBACK_INFO_KHR`

42.18.11. H.265 Encoding Parameters

The `VkVideoEncodeH265PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265PictureInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t            naluSliceSegmentEntryCount;
    const VkVideoEncodeH265NaluSliceSegmentInfoKHR* pNaluSliceSegmentEntries;
    const StdVideoEncodeH265PictureInfo* pStdPictureInfo;
} VkVideoEncodeH265PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `naluSliceSegmentEntryCount` is the number of elements in `pNaluSliceSegmentEntries`.
- `pNaluSliceSegmentEntries` is a pointer to an array of `naluSliceSegmentEntryCount` `VkVideoEncodeH265NaluSliceSegmentInfoKHR` structures specifying the parameters of the individual H.265 slice segments to encode for the input picture.
- `pStdPictureInfo` is a pointer to a `StdVideoEncodeH265PictureInfo` structure specifying **H.265 picture information**.

This structure is specified in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to `vkCmdEncodeVideoKHR` to specify the codec-specific picture information for an **H.265 encode operation**.

Encode Input Picture Information

When this structure is specified in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to `vkCmdEncodeVideoKHR`, the information related to the **encode input picture** is defined as follows:

- The image subregion used is determined according to the [H.265 Encode Picture Data Access](#) section.
- The encode input picture is associated with the [H.265 picture information](#) provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoEncodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.is_reference` as defined in section 3.132 of the [ITU-T H.265 Specification](#);
- `flags.IrapPicFlag` as defined in section 3.73 of the [ITU-T H.265 Specification](#);
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `flags.discardable_flag` and `cross_layer_bla_flag` as defined in section F.7.4.7.1 of the [ITU-T H.265 Specification](#);
- `pic_type` as defined in section 7.4.3.5 of the [ITU-T H.265 Specification](#);
- `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- `PicOrderCntVal` as defined in section 8.3.1 of the [ITU-T H.265 Specification](#);
- `TemporalId` as defined in section 7.4.2.2 of the [ITU-T H.265 Specification](#);
- if `pRefLists` is not `NULL`, then it is a pointer to a `StdVideoEncodeH265ReferenceListsInfo` structure that is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - `ref_pic_list_modification_flag_l0` and `ref_pic_list_modification_flag_l1` as defined in section 7.4.7.2 of the [ITU-T H.265 Specification](#);
 - `num_ref_idx_l0_active_minus1` and `num_ref_idx_l1_active_minus1` as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#);
 - `RefPicList0` and `RefPicList1` as defined in section 8.3.4 of the [ITU-T H.265 Specification](#) where each element of these arrays either identifies an [active reference picture](#) using its [DPB slot](#) index or contains the value `STD_VIDEO_H265_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
 - `list_entry_l0` and `list_entry_l1` as defined in section 7.4.7.2 of the [ITU-T H.265 Specification](#);
- if `flags.short_term_ref_pic_set_sps_flag` is set, then the `StdVideoH265ShortTermRefPicSet` structure pointed to by `pShortTermRefPicSet` is interpreted as defined for the elements of the `pShortTermRefPicSet` array specified in [H.265 sequence parameter sets](#).
- if `flags.long_term_ref_pics_present_flag` is set in the [active SPS](#), then the `StdVideoEncodeH265LongTermRefPics` structure pointed to by `pLongTermRefPics` is interpreted as follows:
 - `used_by_curr_pic_lt_flag` is a bitmask where bit index `i` corresponds to

- `used_by_curr_pic_lt_flag[i]` as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoEncodeH265LongTermRefPics` are interpreted as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#);
- all other members are interpreted as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#).

Reference picture setup is controlled by the value of `StdVideoEncodeH265PictureInfo::flags.is_reference`. If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pEncodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoEncodeH265PictureInfo::flags.is_reference` is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The members of the `StdVideoEncodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active VPS* is the [VPS](#) identified by the key specified in `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id`.
- The *active SPS* is the [SPS](#) identified by the key specified by the pair constructed from `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`.
- The *active PPS* is the [PPS](#) identified by the key specified by the triplet constructed from `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoEncodeH265PictureInfo::pps_pic_parameter_set_id`.

H.265 encoding uses *explicit weighted sample prediction* for a slice segment, as defined in section 8.5.3.3.4 of the [ITU-T H.265 Specification](#), if any of the following conditions are true for the active [PPS](#) and the `pStdSliceSegmentHeader` member of the corresponding element of `pNaluSliceSegmentEntries`:

- `pStdSliceSegmentHeader->slice_type` is `STD_VIDEO_H265_SLICE_TYPE_P` and `weighted_pred_flag` is enabled in the active PPS.
- `pStdSliceSegmentHeader->slice_type` is `STD_VIDEO_H265_SLICE_TYPE_B` and `weighted_bipred_flag` is enabled in the active PPS.

The number of H.265 tiles, as defined in section 3.174 of the [ITU-T H.265 Specification](#), is derived from the `num_tile_columns_minus1` and `num_tile_rows_minus1` members of the active [PPS](#) as follows:

$$(\text{num_tile_columns_minus1} + 1) \times (\text{num_tile_rows_minus1} + 1)$$

Valid Usage

- VUID-VkVideoEncodeH265PictureInfoKHR-naluSliceSegmentEntryCount-08306
`naluSliceSegmentEntryCount` **must** be between 1 and `VkVideoEncodeH265CapabilitiesKHR`

`::maxSliceSegmentCount`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile

- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08323
If `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR`, then `naluSliceSegmentEntryCount` **must** be greater than or equal to the number of H.265 tiles in the picture
- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08324
If `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR`, then `naluSliceSegmentEntryCount` **must** be less than or equal to the number of H.265 tiles in the picture
- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08316
If `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR` and the slice segment corresponding to any element of `pNaluSliceSegmentEntries` uses `explicit weighted sample prediction`, then `VkVideoEncodeH265NaluSliceSegmentInfoKHR::pStdSliceSegmentHeader->pWeightTable` **must** not be `NULL` for that element of `pNaluSliceSegmentEntries`
- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08317
If `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR`, then `VkVideoEncodeH265NaluSliceSegmentInfoKHR::pStdSliceSegmentHeader->slice_type` **must** be identical for all elements of `pNaluSliceSegmentEntries`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265PictureInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PICTURE_INFO_KHR`
- VUID-VkVideoEncodeH265PictureInfoKHR-pNaluSliceSegmentEntries-parameter
`pNaluSliceSegmentEntries` **must** be a valid pointer to an array of `naluSliceSegmentEntryCount` valid `VkVideoEncodeH265NaluSliceSegmentInfoKHR` structures
- VUID-VkVideoEncodeH265PictureInfoKHR-pStdPictureInfo-parameter
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoEncodeH265PictureInfo` value
- VUID-VkVideoEncodeH265PictureInfoKHR-naluSliceSegmentEntryCount-arraylength
`naluSliceSegmentEntryCount` **must** be greater than 0

The `VkVideoEncodeH265NaluSliceSegmentInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265NaluSliceSegmentInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    int32_t                  constantQp;
    const StdVideoEncodeH265SliceSegmentHeader* pStdSliceSegmentHeader;
} VkVideoEncodeH265NaluSliceSegmentInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantQp` is the QP to use for the slice segment if the current `rate control mode` configured for the video session is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `pStdSliceSegmentHeader` is a pointer to a `StdVideoEncodeH265SliceSegmentHeader` structure specifying [H.265 slice segment header parameters](#) for the slice segment.

Std Slice Segment Header Parameters

The members of the `StdVideoEncodeH265SliceSegmentHeader` structure pointed to by `pStdSliceSegmentHeader` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- if `pWeightTable` is not `NULL`, then it is a pointer to a `StdVideoEncodeH265WeightTable` that is interpreted as follows:
 - `flags.luma_weight_l0_flag`, `flags.chroma_weight_l0_flag`, `flags.luma_weight_l1_flag`, and `flags.chroma_weight_l1_flag` are bitmasks where bit index `i` corresponds to `luma_weight_l0_flag[i]`, `chroma_weight_l0_flag[i]`, `luma_weight_l1_flag[i]`, and `chroma_weight_l1_flag[i]`, respectively, as defined in section 7.4.7.3 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoEncodeH265WeightTable` are interpreted as defined in section 7.4.7.3 of the [ITU-T H.265 Specification](#);
- all other members are interpreted as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_NALU_SLICE_SEGMENT_INFO_KHR`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-pStdSliceSegmentHeader-parameter
`pStdSliceSegmentHeader` **must** be a valid pointer to a valid `StdVideoEncodeH265SliceSegmentHeader` value

The [VkVideoEncodeH265DpbSlotInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265DpbSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoEncodeH265ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeH265DpbSlotInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a [StdVideoEncodeH265ReferenceInfo](#) structure specifying [H.265 reference information](#).

This structure is specified in the `pNext` chain of [VkVideoEncodeInfoKHR::pSetupReferenceSlot](#), if not `NULL`, and the `pNext` chain of the elements of [VkVideoEncodeInfoKHR::pReferenceSlots](#) to specify the codec-specific reference picture information for an [H.265 encode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of [VkVideoEncodeInfoKHR::pReferenceSlots](#), one element is added to the list of [active reference pictures](#) used by the video encode operation for each element of [VkVideoEncodeInfoKHR::pReferenceSlots](#) as follows:

- The image subregion used is determined according to the [H.265 Encode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of [VkVideoEncodeInfoKHR::pReferenceSlots](#).
- The reference picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of [VkVideoEncodeInfoKHR::pSetupReferenceSlot](#), the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [H.265 Encode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in [VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex](#).
- The reconstructed picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

Std Reference Information

The members of the [StdVideoEncodeH265ReferenceInfo](#) structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `flags.unused_for_reference` is used to indicate whether the picture is marked as “unused for reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `pic_type` as defined in section 7.4.3.5 of the [ITU-T H.265 Specification](#);
- `PicOrderCntVal` as defined in section 8.3.1 of the [ITU-T H.265 Specification](#);
- `TemporalId` as defined in section 7.4.2.2 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- `VUID-VkVideoEncodeH265DpbSlotInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoEncodeH265DpbSlotInfoKHR-pStdReferenceInfo-parameter`
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeH265ReferenceInfo` value

42.18.12. H.265 Encode Rate Control

Group of Pictures

In case of H.265 encoding it is common practice to follow a regular pattern of different picture types in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

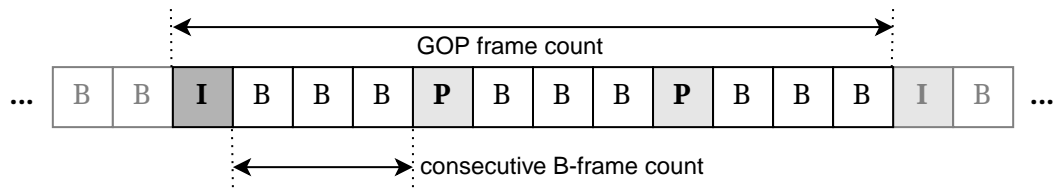

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive B frames between I and/or P frames in display order.

GOPs are further classified as *open* and *closed* GOPs.

Frame types in an open GOP follow each other in display order according to the following algorithm:

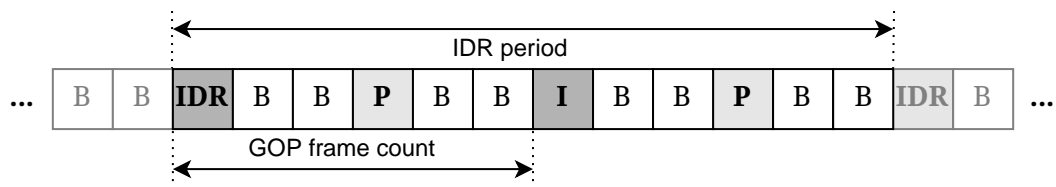

1. The first frame is always an I frame.
2. This is followed by a number of consecutive B frames, as defined above.
3. If the number of frames in the GOP is not reached yet, then the next frame is a P frame and the algorithm continues from step 2.

Text is not SVG - cannot display

Figure 36. H.265 open GOP

In case of a closed GOP, an **IDR frame** is used at a certain period.

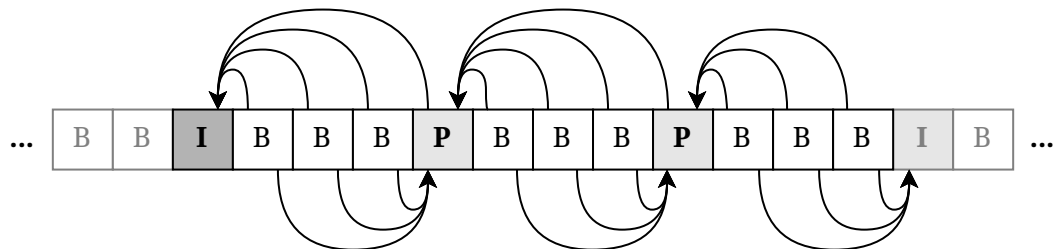

Text is not SVG - cannot display

Figure 37. H.265 closed GOP

It is also typical for H.265 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

Flat Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- Each B frame uses the last non-B frame, in display order, as its forward reference, and uses the next non-B frame, in display order, as its backward reference.

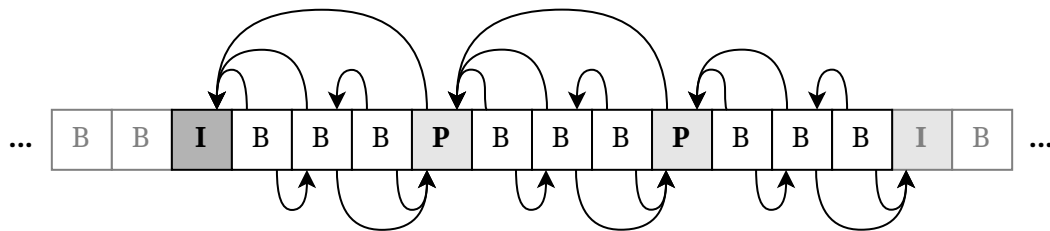

Text is not SVG - cannot display

Figure 38. H.265 flat reference pattern

Dyadic Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.

- The following algorithm is applied to the sequence of consecutive B frames between I and/or P frames in display order:
 1. The B frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
 2. The algorithm is executed recursively for the following frame sequences:
 - The B frames of the original sequence preceding the frame in the middle, if any.
 - The B frames of the original sequence following the frame in the middle, if any.

Text is not SVG - cannot display

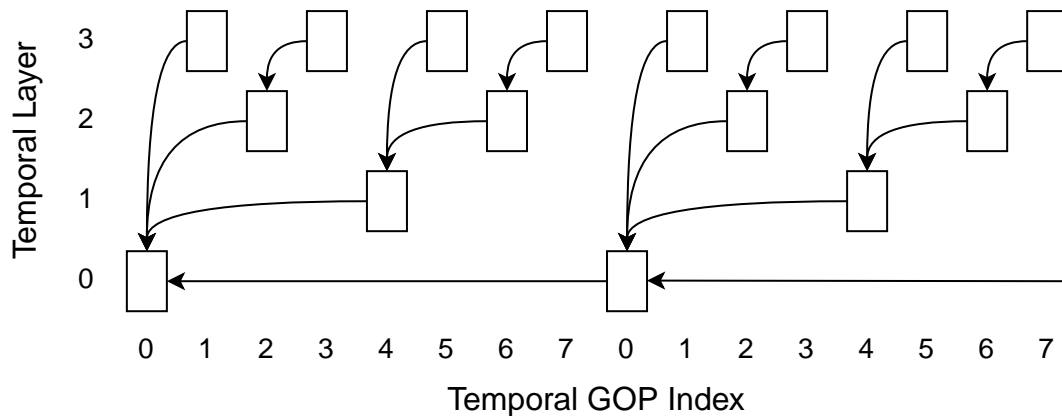

Figure 39. H.265 dyadic reference pattern

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the picture type of individual encoded pictures is still application-controlled, however, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited, to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an H.265 encode session is used to encode multiple temporal sub-layers, it is also common practice to follow a regular pattern for the H.265 temporal ID for the encoded pictures in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most common temporal layer pattern used is as follows:

Dyadic Temporal Sub-Layer Pattern

- The number of frames in the temporal GOP is 2^{n-1} , where n is the number of temporal sub-layers.
- The i^{th} frame in the temporal GOP uses temporal ID t , if and only if the index of the least significant bit set in i equals $n-t-1$, except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The i^{th} frame in the temporal GOP uses the r^{th} frame as reference, where r is calculated from i by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.

Text is not SVG - cannot display

Figure 40. H.265 dyadic temporal sub-layer pattern

NOTE

Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence B pictures with backward prediction are usually not used.

The `VkVideoEncodeH265RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265RateControlInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeH265RateControlFlagsKHR flags;
    uint32_t                  gopFrameCount;
    uint32_t                  idrPeriod;
    uint32_t                  consecutiveBFrameCount;
    uint32_t                  subLayerCount;
} VkVideoEncodeH265RateControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH265RateControlFlagBitsKHR` specifying H.265 rate control flags.
- `gopFrameCount` is the number of frames within a [group of pictures \(GOP\)](#) intended to be used by the application. If it is 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is `UINT32_MAX`, the GOP length is treated as infinite.
- `idrPeriod` is the interval, in terms of number of frames, between two [IDR frames](#) (see [IDR period](#)). If it is 0, the rate control algorithm **may** assume an implementation-dependent IDR period. If it is `UINT32_MAX`, the IDR period is treated as infinite.
- `consecutiveBFrameCount` is the number of consecutive B frames between I and/or P frames within

the [GOP](#).

- `subLayerCount` specifies the number of H.265 sub-layers that the application intends to use.

When an instance of this structure is included in the `pNext` chain of the `VkVideoCodingControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, and `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, the parameters in this structure are used as guidance for the implementation's rate control algorithm (see [Video Coding Control](#)).

If `flags` includes `VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR`, then the rate control state is reset to an initial state to meet HRD compliance requirements. Otherwise the new rate control state **may** be applied without a reset depending on the implementation and the specified rate control parameters.

NOTE

It would be possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for `consecutiveBFrameCount`, `idrPeriod`, and `gopFrameCount`, but this inferred picture type will not be used by implementations to override the picture type provided to the video encode operation.

Valid Usage

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08291
If `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR`, then `flags` **must** not contain `VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR`
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08292
If `flags` contains `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR` or `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR`, then it **must** also contain `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR`
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08293
If `flags` contains `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR`, then it **must** not also contain `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR`
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08294
If `flags` contains `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR`, then `gopFrameCount` **must** be greater than 0
- VUID-VkVideoEncodeH265RateControlInfoKHR-idrPeriod-08295
If `idrPeriod` is not 0, then it **must** be greater than or equal to `gopFrameCount`
- VUID-VkVideoEncodeH265RateControlInfoKHR-consecutiveBFrameCount-08296
If `consecutiveBFrameCount` is not 0, then it **must** be less than `gopFrameCount`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265RateControlInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_INFO_KHR`
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-parameter
`flags` **must** be a valid combination of `VkVideoEncodeH265RateControlFlagBitsKHR` values

Bits which **can** be set in `VkVideoEncodeH265RateControlInfoKHR::flags`, specifying H.265 rate control flags, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_KHR =
    0x00000010,
} VkVideoEncodeH265RateControlFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR` specifies that rate control **should** attempt to produce an HRD compliant bitstream, as defined in annex C of the [ITU-T H.265 Specification](#).
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR` specifies that the application intends to use a [regular GOP structure](#) according to the parameters specified in the `gopFrameCount`, `idrPeriod`, and `consecutiveBFrameCount` members of the `VkVideoEncodeH265RateControlInfoKHR` structure.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR` specifies that the application intends to follow a [flat reference pattern](#) in the GOP.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR` specifies that the application intends to follow a [dyadic reference pattern](#) in the GOP.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_KHR` specifies that the application intends to follow a [dyadic temporal sub-layer pattern](#).

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265RateControlFlagsKHR;
```

`VkVideoEncodeH265RateControlFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH265RateControlFlagBitsKHR`.

Rate Control Layers

The `VkVideoEncodeH265RateControlLayerInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265RateControlLayerInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkBool32             useMinQp;
    VkVideoEncodeH265QpKHR minQp;
    VkBool32             useMaxQp;
    VkVideoEncodeH265QpKHR maxQp;
    VkBool32             useMaxFrameSize;
    VkVideoEncodeH265FrameSizeKHR maxFrameSize;
} VkVideoEncodeH265RateControlLayerInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMinQp` indicates whether the QP values determined by rate control will be clamped to the lower bounds on the QP values specified in `minQp`.
- `minQp` specifies the lower bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when `useMinQp` is `VK_TRUE`.
- `useMaxQp` indicates whether the QP values determined by rate control will be clamped to the upper bounds on the QP values specified in `maxQp`.
- `maxQp` specifies the upper bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when `useMaxQp` is `VK_TRUE`.
- `useMaxFrameSize` indicates whether the implementation's rate control algorithm **should** use the values specified in `maxFrameSize` as the upper bounds on the encoded frame size for each picture type.
- `maxFrameSize` specifies the upper bounds on the encoded frame size, for each picture type, when `useMaxFrameSize` is `VK_TRUE`.

When used, the values in `minQp` and `maxQp` guarantee that the effective QP values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of QP values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak `bitrate` values to be used for the encoded bitstream specified in the `averageBitrate` and `maxBitrate` members of the `VkVideoEncodeRateControlLayerInfoKHR` structure.
- The upper bounds on the encoded frame size, for each picture type, specified in the `maxFrameSize` member of `VkVideoEncodeH265RateControlLayerInfoKHR`.

NOTE

In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the [Video Encode Rate Control](#) section.

When an instance of this structure is included in the `pNext` chain of a

`VkVideoEncodeRateControlLayerInfoKHR` structure specified in one of the elements of the `players` array member of the `VkVideoEncodeRateControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, and the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, it specifies the H.265-specific rate control parameters of the rate control layer corresponding to that element of `players`.

Valid Usage

- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08297
If `useMinQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be between `VkVideoEncodeH265CapabilitiesKHR::minQp` and `VkVideoEncodeH265CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMaxQp-08298
If `useMaxQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all be between `VkVideoEncodeH265CapabilitiesKHR::minQp` and `VkVideoEncodeH265CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08299
If `useMinQp` is `VK_TRUE` and `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all specify the same value
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMaxQp-08300
If `useMaxQp` is `VK_TRUE` and `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all specify the same value
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08375
If `useMinQp` and `useMaxQp` are both `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be less than or equal to the respective members of `maxQp`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_LAYER_INFO_KHR`
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-minQp-parameter
`minQp` **must** be a valid `VkVideoEncodeH265QpKHR` structure
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-maxQp-parameter
`maxQp` **must** be a valid `VkVideoEncodeH265QpKHR` structure
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-maxFrameSize-parameter

`maxFrameSize` **must** be a valid `VkVideoEncodeH265FrameSizeKHR` structure

The `VkVideoEncodeH265QpKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265QpKHR {
    int32_t    qpI;
    int32_t    qpP;
    int32_t    qpB;
} VkVideoEncodeH265QpKHR;
```

- `qpI` is the QP to be used for `I` pictures.
- `qpP` is the QP to be used for `P` pictures.
- `qpB` is the QP to be used for `B` pictures.

The `VkVideoEncodeH265FrameSizeKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265FrameSizeKHR {
    uint32_t    frameISize;
    uint32_t    framePSize;
    uint32_t    frameBSize;
} VkVideoEncodeH265FrameSizeKHR;
```

- `frameISize` is the size in bytes to be used for `I` frames.
- `framePSize` is the size in bytes to be used for `P` frames.
- `frameBSize` is the size in bytes to be used for `B` frames.

GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the `group of pictures (GOP)`.

The `VkVideoEncodeH265GopRemainingFrameInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t           gopRemainingI;
    uint32_t           gopRemainingP;
    uint32_t           gopRemainingB;
} VkVideoEncodeH265GopRemainingFrameInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useGopRemainingFrames` indicates whether the implementation's rate control algorithm **should** use the values specified in `gopRemainingI`, `gopRemainingP`, and `gopRemainingB`. If `useGopRemainingFrames` is `VK_FALSE`, then the values of `gopRemainingI`, `gopRemainingP`, and `gopRemainingB` are ignored.
- `gopRemainingI` specifies the number of `I frames` the implementation's rate control algorithm **should** assume to be remaining in the `GOP` prior to executing the video encode operation.
- `gopRemainingP` specifies the number of `P frames` the implementation's rate control algorithm **should** assume to be remaining in the `GOP` prior to executing the video encode operation.
- `gopRemainingB` specifies the number of `B frames` the implementation's rate control algorithm **should** assume to be remaining in the `GOP` prior to executing the video encode operation.

Setting `useGopRemainingFrames` to `VK_TRUE` and including this structure in the `pNext` chain of `VkVideoBeginCodingInfoKHR` is only mandatory if the `VkVideoEncodeH265CapabilitiesKHR::requiresGopRemainingFrames` reported for the used `video profile` is `VK_TRUE`. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a `regular GOP structure`, these values **may** provide additional guidance for the implementation's rate control algorithm.

The `VkVideoEncodeH265CapabilitiesKHR::prefersGopRemainingFrames` capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265GopRemainingFrameInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_GOP_REMAINING_FRAME_INFO_KHR`

42.18.13. H.265 Encode Requirements

This section described the **required** H.265 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 61. Required *Video Std Header Versions*

Video Std Header Name	Version
<code>vulkan_video_codec_h265std_encode</code>	1.0.0

Table 62. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹

stdSyntaxFlags	-	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

Chapter 43. Optical Flow

43.1. Optical Flow Queues

`VK_NV_optical_flow` adds an optical flow queue type bit `VK_QUEUE_OPTICAL_FLOW_BIT_NV` to `VkQueueFlagBits`. Optical flow operations are supported by queues with an advertised queue capability of `VK_QUEUE_OPTICAL_FLOW_BIT_NV`. As in the case of other queue types, an application **must** use `vkGetPhysicalDeviceQueueFamilyProperties` to query whether the physical device has support for the Optical Flow Queue. When the implementation reports the `VK_QUEUE_OPTICAL_FLOW_BIT_NV` bit for a queue family, it advertises general support for Vulkan queue operations described in [Devices and Queues](#).

43.2. Optical Flow Image Formats

To enumerate the supported image formats for a specific optical flow usage, call:

```
// Provided by VK_NV_optical_flow
VkResult vkGetPhysicalDeviceOpticalFlowImageFormatsNV(
    VkPhysicalDevice          physicalDevice,
    const VkOpticalFlowImageFormatInfoNV* pOpticalFlowImageFormatInfo,
    uint32_t*                 pFormatCount,
    VkOpticalFlowImageFormatPropertiesNV* pImageFormatProperties);
```

- `physicalDevice` is the physical device being queried.
- `pOpticalFlowImageFormatInfo` is a pointer to a `VkOpticalFlowImageFormatInfoNV` structure specifying the optical flow usage for which information is returned.
- `pFormatCount` is a pointer to an integer related to the number of optical flow properties available or queried, as described below.
- `pImageFormatProperties` is a pointer to an array of `VkOpticalFlowImageFormatPropertiesNV` structures in which supported formats and image parameters are returned.

If `pImageFormatProperties` is `NULL`, then the number of optical flow properties supported for the given `physicalDevice` is returned in `pFormatCount`. Otherwise, `pFormatCount` **must** point to a variable set by the application to the number of elements in the `pImageFormatProperties` array, and on return the variable is overwritten with the number of values actually written to `pImageFormatProperties`. If the value of `pFormatCount` is less than the number of optical flow properties supported, at most `pFormatCount` values will be written to `pImageFormatProperties`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available values were returned.

Before creating an image to be used as an optical flow frame, obtain the supported image creation parameters by querying with `vkGetPhysicalDeviceFormatProperties2` and `vkGetPhysicalDeviceImageFormatProperties2` using one of the reported formats and adding `VkOpticalFlowImageFormatInfoNV` to the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2`.

When querying the parameters with `vkGetPhysicalDeviceImageFormatProperties2` for images used

for optical flow operations, the `VkOpticalFlowImageFormatInfoNV::usage` field **must** contain one or more of the bits defined in `VkOpticalFlowUsageFlagBitsNV`.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-pOpticalFlowImageFormatInfo-parameter `pOpticalFlowImageFormatInfo` **must** be a valid pointer to a valid `VkOpticalFlowImageFormatInfoNV` structure
- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-pFormatCount-parameter `pFormatCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-pImageFormatProperties-parameter
If the value referenced by `pFormatCount` is not `0`, and `pImageFormatProperties` is not `NULL`, `pImageFormatProperties` **must** be a valid pointer to an array of `pFormatCount` `VkOpticalFlowImageFormatPropertiesNV` structures

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_EXTENSION_NOT_PRESENT`
- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_FORMAT_NOT_SUPPORTED`

NOTE

`VK_FORMAT_B8G8R8A8_UNORM`, `VK_FORMAT_R8_UNORM` and `VK_FORMAT_G8_B8R8_2PLANE_420_UNORM` are initially supported for images with `optical usage` `VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV`.

`VK_FORMAT_R16G16_SFIXED5_NV` is initially supported for images with `optical flow usage` `VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV`, `VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV` and `VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV`.

`VK_FORMAT_R8_UINT` and `VK_FORMAT_R32_UINT` are initially supported for images with `optical flow usage` `VK_OPTICAL_FLOW_USAGE_COST_BIT_NV`. It is recommended to use `VK_FORMAT_R8_UINT` because of the lower bandwidth.

The `VkOpticalFlowImageFormatInfoNV` structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowImageFormatInfoNV {
    VkStructureType      sType;
    const void*          pNext;
    VkOpticalFlowUsageFlagsNV usage;
} VkOpticalFlowImageFormatInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **usage** is a bitmask of [VkOpticalFlowUsageFlagBitsNV](#) describing the intended optical flow usage of the image.

Valid Usage (Implicit)

- VUID-VkOpticalFlowImageFormatInfoNV-sType-sType
sType must be `VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_INFO_NV`
- VUID-VkOpticalFlowImageFormatInfoNV-usage-parameter
usage must be a valid combination of [VkOpticalFlowUsageFlagBitsNV](#) values
- VUID-VkOpticalFlowImageFormatInfoNV-usage-requiredbitmask
usage must not be `0`

Bits which **can** be set in [VkOpticalFlowImageFormatInfoNV::usage](#), controlling optical flow usage, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowUsageFlagBitsNV {
    VK_OPTICAL_FLOW_USAGE_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_USAGE_COST_BIT_NV = 0x00000008,
    VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV = 0x00000010,
} VkOpticalFlowUsageFlagBitsNV;
```

- **VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV** specifies that the image **can** be used as input or reference frame for an optical flow operation.
- **VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV** specifies that the image **can** be used as output flow vector map for an optical flow operation.
- **VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV** specifies that the image **can** be used as hint flow vector map for an optical flow operation.
- **VK_OPTICAL_FLOW_USAGE_COST_BIT_NV** specifies that the image **can** be used as output cost map for an optical flow operation.
- **VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV** specifies that the image **can** be used as global flow

vector for an optical flow operation.

```
// Provided by VK_NV_optical_flow
typedef VkFlags    VkOpticalFlowUsageFlagsNV;
```

`VkOpticalFlowUsageFlagsNV` is a bitmask type for setting a mask of zero or more `VkOpticalFlowUsageFlagBitsNV`.

The `VkOpticalFlowImageFormatPropertiesNV` structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowImageFormatPropertiesNV {
    VkStructureType    sType;
    const void*        pNext;
    VkFormat            format;
} VkOpticalFlowImageFormatPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is a `VkFormat` that specifies the format that can be used with the specified optical flow image usages.

Valid Usage (Implicit)

- VUID-VkOpticalFlowImageFormatPropertiesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_PROPERTIES_NV`
- VUID-VkOpticalFlowImageFormatPropertiesNV-pNext-pNext
`pNext` **must** be `NULL`

43.3. Optical Flow Session

43.3.1. Optical Flow Session Object

Optical flow session objects are abstracted and represented by `VkOpticalFlowSessionNV` handles:

```
// Provided by VK_NV_optical_flow
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkOpticalFlowSessionNV)
```

Creating an Optical Flow Session

To create an optical flow session object, call:

```
// Provided by VK_NV_optical_flow
VkResult vkCreateOpticalFlowSessionNV(
    VkDevice device,
    const VkOpticalFlowSessionCreateInfoNV* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkOpticalFlowSessionNV* pSession);
```

- **device** is the logical device that creates the optical flow session object.
- **pCreateInfo** is a pointer to a [VkOpticalFlowSessionCreateInfoNV](#) structure containing parameters specifying the creation of the optical flow session.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pSession** is a pointer to a [VkOpticalFlowSessionNV](#) handle specifying the optical flow session object which will be created by this function when it returns **VK_SUCCESS**

Valid Usage (Implicit)

- VUID-vkCreateOpticalFlowSessionNV-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkCreateOpticalFlowSessionNV-pCreateInfo-parameter **pCreateInfo** **must** be a valid pointer to a valid [VkOpticalFlowSessionCreateInfoNV](#) structure
- VUID-vkCreateOpticalFlowSessionNV-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateOpticalFlowSessionNV-pSession-parameter **pSession** **must** be a valid pointer to a [VkOpticalFlowSessionNV](#) handle

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_INITIALIZATION_FAILED**

The [VkOpticalFlowSessionCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowSessionCreateInfoNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           width;
    uint32_t           height;
    VkFormat            imageFormat;
    VkFormat            flowVectorFormat;
    VkFormat            costFormat;
    VkOpticalFlowGridSizeFlagsNV outputGridSize;
    VkOpticalFlowGridSizeFlagsNV hintGridSize;
    VkOpticalFlowPerformanceLevelNV performanceLevel;
    VkOpticalFlowSessionCreateFlagsNV flags;
} VkOpticalFlowSessionCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `width` is the width in pixels of the input or reference frame to be bound to this optical flow session.
- `height` is the height in pixels of the input or reference frame to be bound to this optical flow session.
- `imageFormat` is the `VkFormat` of the input and reference frame to be bound to this optical flow session.
- `flowVectorFormat` is the `VkFormat` of the flow vector maps (output or hint) to be bound to this optical flow session.
- `costFormat` is the `VkFormat` of the cost maps to be bound to this optical flow session.
- `outputGridSize` is exactly one bit of `VkOpticalFlowGridSizeFlagsNV` specifying the grid size of the output flow and cost maps to be bound to this optical flow session. The size of the output flow and cost maps is determined by `VkOpticalFlowSessionCreateInfoNV::width` and `VkOpticalFlowSessionCreateInfoNV::height` divided by `VkOpticalFlowSessionCreateInfoNV::outputGridSize`.
- `hintGridSize` is one exactly bit of `VkOpticalFlowGridSizeFlagsNV` specifying the grid size of the hint flow vector maps to be bound to this optical flow session. The size of the hint maps is determined by `VkOpticalFlowSessionCreateInfoNV::width` and `VkOpticalFlowSessionCreateInfoNV::height` divided by `VkOpticalFlowSessionCreateInfoNV::hintGridSize`.
- `performanceLevel` is the `VkOpticalFlowPerformanceLevelNV` used for this optical flow session.
- `flags` are the `VkOpticalFlowSessionCreateFlagsNV` used for this optical flow session.

Valid Usage

- VUID-VkOpticalFlowSessionCreateInfoNV-width-07581
`width` **must** be greater than or equal to `VkPhysicalDeviceOpticalFlowPropertiesNV::minWidth` and less than or equal to `VkPhysicalDeviceOpticalFlowPropertiesNV::maxWidth`

- VUID-VkOpticalFlowSessionCreateInfoNV-height-07582
height **must** be greater than or equal to `VkPhysicalDeviceOpticalFlowPropertiesNV::minHeight` and less than or equal to `VkPhysicalDeviceOpticalFlowPropertiesNV::maxHeight`
- VUID-VkOpticalFlowSessionCreateInfoNV-imageFormat-07583
imageFormat **must** be one of the formats returned by `vkGetPhysicalDeviceOpticalFlowImageFormatsNV` for `VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV`
- VUID-VkOpticalFlowSessionCreateInfoNV-flowVectorFormat-07584
flowVectorFormat **must** be one of the formats returned by `vkGetPhysicalDeviceOpticalFlowImageFormatsNV` for `VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV`
- VUID-VkOpticalFlowSessionCreateInfoNV-costFormat-07585
costFormat **must** be one of the formats returned by `vkGetPhysicalDeviceOpticalFlowImageFormatsNV` for `VK_OPTICAL_FLOW_USAGE_COST_BIT_NV` if `VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV` is set in flags
- VUID-VkOpticalFlowSessionCreateInfoNV-outputGridSize-07586
outputGridSize **must** be exactly one of the bits reported in `VkPhysicalDeviceOpticalFlowPropertiesNV::supportedOutputGridSizes`
- VUID-VkOpticalFlowSessionCreateInfoNV-hintGridSize-07587
hintGridSize **must** be exactly one of the bits reported in `VkPhysicalDeviceOpticalFlowPropertiesNV::supportedHintGridSizes` if `VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV` is set in flags
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07588
`VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV` **must** not be set in flags if `VkPhysicalDeviceOpticalFlowPropertiesNV::hintSupported` is `VK_FALSE`
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07589
`VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV` **must** not be set in flags if `VkPhysicalDeviceOpticalFlowPropertiesNV::costSupported` is `VK_FALSE`
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07590
`VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV` **must** not be set in flags if `VkPhysicalDeviceOpticalFlowPropertiesNV::globalFlowSupported` is `VK_FALSE`
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07591
`VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV` **must** not be set in flags if `VkPhysicalDeviceOpticalFlowPropertiesNV::maxNumRegionsOfInterest` is 0
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07592
`VK_OPTICAL_FLOW_SESSION_CREATE_BOTH DIRECTIONS_BIT_NV` **must** not be set in flags if `VkPhysicalDeviceOpticalFlowPropertiesNV::bidirectionalFlowSupported` is `VK_FALSE`

Valid Usage (Implicit)

- VUID-VkOpticalFlowSessionCreateInfoNV-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_INFO_NV`
- VUID-VkOpticalFlowSessionCreateInfoNV-pNext-pNext

`pNext` **must** be `NULL` or a pointer to a valid instance of `VkOpticalFlowSessionCreatePrivateDataInfoNV`

- VUID-VkOpticalFlowSessionCreateInfoNV-sType-unique
The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkOpticalFlowSessionCreateInfoNV-imageFormat-parameter
`imageFormat` **must** be a valid `VkFormat` value
- VUID-VkOpticalFlowSessionCreateInfoNV-flowVectorFormat-parameter
`flowVectorFormat` **must** be a valid `VkFormat` value
- VUID-VkOpticalFlowSessionCreateInfoNV-costFormat-parameter
If `costFormat` is not `0`, `costFormat` **must** be a valid `VkFormat` value
- VUID-VkOpticalFlowSessionCreateInfoNV-outputGridSize-parameter
`outputGridSize` **must** be a valid combination of `VkOpticalFlowGridSizeFlagBitsNV` values
- VUID-VkOpticalFlowSessionCreateInfoNV-outputGridSize-requiredbitmask
`outputGridSize` **must** not be `0`
- VUID-VkOpticalFlowSessionCreateInfoNV-hintGridSize-parameter
`hintGridSize` **must** be a valid combination of `VkOpticalFlowGridSizeFlagBitsNV` values
- VUID-VkOpticalFlowSessionCreateInfoNV-performanceLevel-parameter
If `performanceLevel` is not `0`, `performanceLevel` **must** be a valid `VkOpticalFlowPerformanceLevelNV` value
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-parameter
`flags` **must** be a valid combination of `VkOpticalFlowSessionCreateFlagBitsNV` values

The `VkOpticalFlowSessionCreatePrivateDataInfoNV` structure is for NV internal use only and is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowSessionCreatePrivateDataInfoNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           id;
    uint32_t           size;
    const void*        pPrivateData;
} VkOpticalFlowSessionCreatePrivateDataInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `id` is an identifier for data which is passed at a memory location specified in `VkOpticalFlowSessionCreatePrivateDataInfoNV::pPrivateData`.
- `size` is the size of data in bytes which is passed at a memory location specified in `VkOpticalFlowSessionCreatePrivateDataInfoNV::pPrivateData`.
- `pPrivateData` is a pointer to NV internal data.

Valid Usage (Implicit)

- VUID-VkOpticalFlowSessionCreatePrivateDataInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_PRIVATE_DATA_INFO_NV`
- VUID-VkOpticalFlowSessionCreatePrivateDataInfoNV-pPrivateData-parameter
`pPrivateData` **must** be a pointer value

Optical flow vectors are generated block-wise, one vector for each block of NxN pixels (referred to as grid).

Bits which **can** be set in `VkOpticalFlowSessionCreateInfoNV::outputGridSize` and `VkOpticalFlowSessionCreateInfoNV::hintGridSize`, or which are returned in `VkPhysicalDeviceOpticalFlowPropertiesNV::supportedOutputGridSizes` and `VkPhysicalDeviceOpticalFlowPropertiesNV::supportedHintGridSizes` controlling optical flow grid sizes, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowGridSizeFlagBitsNV {
    VK_OPTICAL_FLOW_GRID_SIZE_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_NV = 0x00000008,
} VkOpticalFlowGridSizeFlagBitsNV;
```

- `VK_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_NV` specifies that grid is 1x1 pixel.
- `VK_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_NV` specifies that grid is 2x2 pixel.
- `VK_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_NV` specifies that grid is 4x4 pixel.
- `VK_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_NV` specifies that grid is 8x8 pixel.

```
// Provided by VK_NV_optical_flow
typedef VkFlags    VkOpticalFlowGridSizeFlagsNV;
```

`VkOpticalFlowGridSizeFlagsNV` is a bitmask type for setting a mask of zero or more `VkOpticalFlowGridSizeFlagBitsNV`.

Optical flow exposes performance levels which the application **can** choose based on the desired performance and quality requirement.

The optical flow performance level types are defined with the following:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowPerformanceLevelNV {
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_NV = 1,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_NV = 2,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_NV = 3,
} VkOpticalFlowPerformanceLevelNV;
```

- `VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_NV` is a level with slower performance but higher quality.
- `VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_NV` is a level with medium performance and medium quality.
- `VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_NV` is a preset with higher performance but lower quality.

Bits which **can** be set in `VkOpticalFlowSessionCreateInfoNV::flags`, controlling optical flow session operations, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowSessionCreateFlagBitsNV {
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV = 0x00000008,
    VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV = 0x00000010,
} VkOpticalFlowSessionCreateFlagBitsNV;
```

- `VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV` specifies that a `VkImageView` with external flow vectors will be used as hints in performing the motion search and **must** be bound to `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV`.
- `VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV` specifies that the cost for the forward flow is generated in a `VkImageView` which **must** be bound to `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV`. Additionally, if `VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV` is also set, the cost for backward flow is generated in a `VkImageView` which **must** be bound to `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV`. The cost is the confidence level of the flow vector for each grid in the frame. The Cost implies how (in)accurate the flow vector is. Higher cost value implies the flow vector to be less accurate and vice-versa.
- `VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV` specifies that a global flow vector is estimated from forward flow in a single pixel `VkImageView` which **must** be bound to `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV`.
- `VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV` specifies that regions of interest **can** be specified in `VkOpticalFlowExecuteInfoNV`.
- `VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV` specifies that backward flow is

generated in addition to forward flow which is always generated.

`VkOpticalFlowSessionCreateFlagsNV` is a bitmask type for setting a mask of zero or more `VkOpticalFlowSessionCreateFlagBitsNV`.

```
// Provided by VK_NV_optical_flow
typedef VkFlags    VkOpticalFlowSessionCreateFlagsNV;
```

Destroying an Optical Flow Session

To destroy an optical flow session object, call:

```
// Provided by VK_NV_optical_flow
void vkDestroyOpticalFlowSessionNV(
    VkDevice          device,
    VkOpticalFlowSessionNV session,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the device that was used for the creation of the optical flow session.
- `session` is the optical flow session to be destroyed.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage (Implicit)

- VUID-vkDestroyOpticalFlowSessionNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyOpticalFlowSessionNV-session-parameter `session` **must** be a valid `VkOpticalFlowSessionNV` handle
- VUID-vkDestroyOpticalFlowSessionNV-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyOpticalFlowSessionNV-session-parent
`session` **must** have been created, allocated, or retrieved from `device`

43.3.2. Binding Vulkan Image Views to an Optical Flow Session

To bind a vulkan image to an optical flow session object, call:

```
// Provided by VK_NV_optical_flow
VkResult vkBindOpticalFlowSessionImageNV(
    VkDevice          device,
    VkOpticalFlowSessionNV session,
    VkOpticalFlowSessionBindingPointNV bindingPoint,
    VkImageView        view,
    VkImageLayout      layout);
```

- **device** is the device which owns the optical flow session object **session**.
- **session** is the optical flow session object to which the image view is to be bound.
- **bindingPoint** specifies the binding point **VkOpticalFlowSessionBindingPointNV** to which the image view is bound.
- **view** is a **VkImageView** to be bound.
- layout **must** specify the layout that the image subresources accessible from **view** will be in at the time the optical flow vectors are calculated with **vkCmdOpticalFlowExecuteNV** on a **VkDevice**.

Valid Usage (Implicit)

- VUID-vkBindOpticalFlowSessionImageNV-device-parameter **device must** be a valid **VkDevice** handle
- VUID-vkBindOpticalFlowSessionImageNV-session-parameter **session must** be a valid **VkOpticalFlowSessionNV** handle
- VUID-vkBindOpticalFlowSessionImageNV-bindingPoint-parameter **bindingPoint must** be a valid **VkOpticalFlowSessionBindingPointNV** value
- VUID-vkBindOpticalFlowSessionImageNV-view-parameter
If **view** is not **VK_NULL_HANDLE**, **view must** be a valid **VkImageView** handle
- VUID-vkBindOpticalFlowSessionImageNV-layout-parameter **layout must** be a valid **VkImageLayout** value
- VUID-vkBindOpticalFlowSessionImageNV-session-parent **session must** have been created, allocated, or retrieved from **device**
- VUID-vkBindOpticalFlowSessionImageNV-view-parent
If **view** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_INITIALIZATION_FAILED**

The optical flow session binding points are defined with the following:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowSessionBindingPointNV {
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_INPUT_NV = 1,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_REFERENCE_NV = 2,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV = 3,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_FLOW_VECTOR_NV = 4,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_FLOW_VECTOR_NV = 5,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV = 6,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV = 7,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV = 8,
} VkOpticalFlowSessionBindingPointNV;
```

- `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_INPUT_NV` specifies the binding point for the input frame.
- `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_REFERENCE_NV` specifies the binding point for the input reference frame.
- `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV` specifies the binding point for the optional external hint flow vectors.
- `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_FLOW_VECTOR_NV` specifies the binding point for output flow vectors of default forward flow calculation.
- `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_FLOW_VECTOR_NV` specifies the binding point for the optional output flow vector map of optional backward flow calculation.
- `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV` specifies the binding point for the optional output cost map of default forward flow calculation.
- `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV` specifies the binding point for the optional output cost map of optional backward flow calculation.
- `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV` specifies the binding point for the optional global flow value of default forward flow calculation.

43.3.3. Optical Flow Execution

Default direction of flow estimation is forward which calculates the optical flow from input frame to reference frame. Optionally backward flow estimation can be additionally calculated. An output flow vector (V_x , V_y) means that current pixel (x , y) of input frame can be found at location ($x+V_x$, $y+V_y$) in reference frame. A backward flow vector (V_x , V_y) means that current pixel (x , y) of reference frame can be found at location ($x+V_x$, $y+V_y$) in input frame.

To calculate optical flow vectors from two input frames, call:

```
// Provided by VK_NV_optical_flow
void vkCmdOpticalFlowExecuteNV(
    VkCommandBuffer                      commandBuffer,
    VkOpticalFlowSessionNV              session,
    const VkOpticalFlowExecuteInfoNV*    pExecuteInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **session** is the optical flow session object on which this command is operating.
- **pExecuteInfo** Info is a pointer to a [VkOpticalFlowExecuteInfoNV](#).

Valid Usage (Implicit)

- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-parameter
commandBuffer **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdOpticalFlowExecuteNV-session-parameter
session **must** be a valid [VkOpticalFlowSessionNV](#) handle
- VUID-vkCmdOpticalFlowExecuteNV-pExecuteInfo-parameter
pExecuteInfo **must** be a valid pointer to a valid [VkOpticalFlowExecuteInfoNV](#) structure
- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-recording
commandBuffer **must** be in the [recording state](#)
- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support optical flow operations
- VUID-vkCmdOpticalFlowExecuteNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdOpticalFlowExecuteNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdOpticalFlowExecuteNV-commonparent
Both of **commandBuffer**, and **session** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	Opticalflow	Action

The `VkOpticalFlowExecuteInfoNV` structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowExecuteInfoNV {
    VkStructureType    sType;
    void*              pNext;
    VkOpticalFlowExecuteFlagsNV flags;
    uint32_t           regionCount;
    const VkRect2D*    pRegions;
} VkOpticalFlowExecuteInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` are the `VkOpticalFlowExecuteFlagsNV` used for this command.
- `regionCount` is the number of regions of interest specified in `pRegions`.
- `pRegions` is a pointer to `regionCount` `VkRect2D` regions of interest.

Valid Usage

- VUID-VkOpticalFlowExecuteInfoNV-regionCount-07593
`regionCount` **must** be 0 if `VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV` was not set for `VkOpticalFlowSessionNV` on which this command is operating

Valid Usage (Implicit)

- VUID-VkOpticalFlowExecuteInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_OPTICAL_FLOW_EXECUTE_INFO_NV`
- VUID-VkOpticalFlowExecuteInfoNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkOpticalFlowExecuteInfoNV-flags-parameter
`flags` **must** be a valid combination of `VkOpticalFlowExecuteFlagBitsNV` values
- VUID-VkOpticalFlowExecuteInfoNV-pRegions-parameter
If `regionCount` is not 0, `pRegions` **must** be a valid pointer to an array of `regionCount` `VkRect2D` structures

Bits which **can** be set in `VkOpticalFlowExecuteInfoNV::flags`, controlling optical flow execution, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowExecuteFlagBitsNV {
    VK_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_NV = 0x00000001,
} VkOpticalFlowExecuteFlagBitsNV;
```

- `VK_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_NV` specifies that temporal hints from previously generated flow vectors are not used. If temporal hints are enabled, optical flow vectors from previous `vkCmdOpticalFlowExecuteNV` call are automatically used as hints for the current `vkCmdOpticalFlowExecuteNV` call, to take advantage of temporal correlation in a video sequence. Temporal hints should be disabled if there is a-priori knowledge of no temporal correlation (e.g. a scene change, independent successive frame pairs).

`VkOpticalFlowExecuteFlagsNV` is a bitmask type for setting a mask of zero or more `VkOpticalFlowExecuteFlagBitsNV`.

```
// Provided by VK_NV_optical_flow
typedef VkFlags    VkOpticalFlowExecuteFlagsNV;
```

Chapter 44. Execution Graphs

Execution graphs provide a way for applications to dispatch multiple operations dynamically from a single initial command on the host. To achieve this, a new execution graph pipeline is provided, that links together multiple shaders or pipelines which each describe one or more operations that can be dispatched within the execution graph. Each linked pipeline or shader describes an *execution node* within the graph, which **can** be dispatched dynamically from another shader within the same graph. This allows applications to describe much richer execution topologies at a finer granularity than would typically be possible with API commands alone.

44.1. Pipeline Creation

To create execution graph pipelines, call:

```
// Provided by VK_AMD_shader_enqueue
VkResult vkCreateExecutionGraphPipelinesAMD(
    VkDevice                device,
    VkPipelineCache         pipelineCache,
    uint32_t                createInfoCount,
    const VkExecutionGraphPipelineCreateInfoAMD* pCreateInfos,
    const VkAllocationCallbacks* pAllocator,
    VkPipeline*              pPipelines);
```

- **device** is the logical device that creates the execution graph pipelines.
- **pipelineCache** is either `VK_NULL_HANDLE`, indicating that pipeline caching is disabled; or the handle of a valid `pipeline cache` object, in which case use of that cache is enabled for the duration of the command.
- **createInfoCount** is the length of the **pCreateInfos** and **pPipelines** arrays.
- **pCreateInfos** is a pointer to an array of `VkExecutionGraphPipelineCreateInfoAMD` structures.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pPipelines** is a pointer to an array of `VkPipeline` handles in which the resulting execution graph pipeline objects are returned.

Pipelines are created and returned as described for [Multiple Pipeline Creation](#).

Valid Usage

- VUID-vkCreateExecutionGraphPipelinesAMD-shaderEnqueue-09124
The **shaderEnqueue** **feature** **must** be enabled
- VUID-vkCreateExecutionGraphPipelinesAMD-flags-09125
If the **flags** member of any element of **pCreateInfos** contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and the **basePipelineIndex** member of that same element is not `-1`, **basePipelineIndex** **must** be less than the index into **pCreateInfos** that corresponds to that element

- VUID-vkCreateExecutionGraphPipelinesAMD-X-flags-09126
If the `flags` member of any element of `pCreateInfo`s contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, the base pipeline **must** have been created with the `VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT` flag set
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pipelineCache-09127
If `pipelineCache` was created with `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`, host access to `pipelineCache` **must** be `externally synchronized`
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pNext-09616
If `VkPipelineBinaryInfoKHR::binaryCount` is not 0 for any element of `pCreateInfo`s, `pipelineCache` **must** be `VK_NULL_HANDLE`
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pNext-09617
If a `VkPipelineCreateFlags2CreateInfoKHR` structure with the `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag set is included in the `pNext` chain of any element of `pCreateInfo`s, `pipelineCache` **must** be `VK_NULL_HANDLE`
- VUID-vkCreateExecutionGraphPipelinesAMD-X-binaryCount-09620
If `VkPipelineBinaryInfoKHR::binaryCount` is not 0 for any element of `pCreateInfo`s, `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` **must** not be set in the `flags` of that element
- VUID-vkCreateExecutionGraphPipelinesAMD-X-binaryCount-09621
If `VkPipelineBinaryInfoKHR::binaryCount` is not 0 for any element of `pCreateInfo`s, `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` **must** not be set in the `flags` of that element
- VUID-vkCreateExecutionGraphPipelinesAMD-X-binaryCount-09622
If `VkPipelineBinaryInfoKHR::binaryCount` is not 0 for any element of `pCreateInfo`s, `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT` **must** not be set in the `flags` of that element

Valid Usage (Implicit)

- VUID-vkCreateExecutionGraphPipelinesAMD-X-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pCreateInfo-parameter
`pCreateInfo`s **must** be a valid pointer to an array of `createInfoCount` valid `VkExecutionGraphPipelineCreateInfoAMD-X` structures
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pPipelines-parameter
`pPipelines` **must** be a valid pointer to an array of `createInfoCount` `VkPipeline` handles

- VUID-vkCreateExecutionGraphPipelinesAMD-CreateInfoCount-arraylength
`CreateInfoCount` **must** be greater than 0
- VUID-vkCreateExecutionGraphPipelinesAMD-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from device

Return Codes

Success

- `VK_SUCCESS`
- `VK_PIPELINE_COMPILE_REQUIRED_EXT`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkExecutionGraphPipelineCreateInfoAMD` structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkExecutionGraphPipelineCreateInfoAMD {
    VkStructureType      sType;
    const void*          pNext;
    VkPipelineCreateFlags flags;
    uint32_t             stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    const VkPipelineLibraryCreateInfoKHR* pLibraryInfo;
    VkPipelineLayout      layout;
    VkPipeline            basePipelineHandle;
    int32_t               basePipelineIndex;
} VkExecutionGraphPipelineCreateInfoAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPipelineCreateFlagBits` specifying how the pipeline will be generated.
- `stageCount` is the number of entries in the `pStages` array.
- `pStages` is a pointer to an array of `stageCount` `VkPipelineShaderStageCreateInfo` structures describing the set of the shader stages to be included in the execution graph pipeline.
- `pLibraryInfo` is a pointer to a `VkPipelineLibraryCreateInfoKHR` structure defining pipeline libraries to include.
- `layout` is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline.
- `basePipelineHandle` is a pipeline to derive from

- `basePipelineIndex` is an index into the `pCreateInfo` parameter to use as a pipeline to derive from

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in [Pipeline Derivatives](#).

Each shader stage provided when creating an execution graph pipeline (including those in libraries) is associated with a name and an index, determined by the inclusion or omission of a `VkPipelineShaderStageNodeCreateInfoAMD` structure in its `pNext` chain. For any graphics pipeline libraries, only the name and index of the vertex or mesh shader stage is linked directly to the graph as a node - other shader stages in the pipeline will be executed after those shader stages as normal. Task shaders cannot be included in a graphics pipeline used for a draw node.

In addition to the shader name and index, an internal "node index" is also generated for each node, which can be queried with `vkGetExecutionGraphPipelineNodeIndexAMD`, and is used exclusively for initial dispatch of an execution graph.

Valid Usage

- VUID-VkExecutionGraphPipelineCreateInfoAMD-None-09497
If the `pNext` chain does not include a `VkPipelineCreateFlags2CreateInfoKHR` structure, `flags` **must** be a valid combination of `VkPipelineCreateFlagBits` values
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-07984
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineIndex` is -1, `basePipelineHandle` **must** be a valid execution graph `VkPipeline` handle
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-07985
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` **must** be a valid index into the calling command's `pCreateInfo` parameter
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-07986
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, `basePipelineIndex` **must** be -1 or `basePipelineHandle` **must** be `VK_NULL_HANDLE`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-07987
If a push constant block is declared in a shader, a push constant range in `layout` **must** match the shader stage
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-10069
If a push constant block is declared in a shader, the block must be contained inside the push constant range in `layout` that matches the stage
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-07988
If a `resource variables` is declared in a shader, a descriptor slot in `layout` **must** match the shader stage
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-07990
If a `resource variables` is declared in a shader, and the descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, a descriptor slot in `layout` **must** match the descriptor type

- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-07991
If a [resource variables](#) is declared in a shader as an array, a descriptor slot in [layout](#) **must** match the descriptor count
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-03365
[flags](#) **must** not include [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-03366
[flags](#) **must** not include [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-03367
[flags](#) **must** not include [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-03368
[flags](#) **must** not include [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-03369
[flags](#) **must** not include [VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-03370
[flags](#) **must** not include [VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-03576
[flags](#) **must** not include [VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-04945
[flags](#) **must** not include [VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-09007
If the [VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines](#) is not enabled, [flags](#) **must** not include [VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-09008
If [flags](#) includes [VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV](#), then the [pNext](#) chain **must** include a pointer to a valid instance of [VkComputePipelineIndirectBufferInfoNV](#) specifying the address where the pipeline's metadata will be saved
- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-11007
If [flags](#) includes [VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT](#), then the [VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands](#) feature **must** be enabled
- VUID-VkExecutionGraphPipelineCreateInfoAMDPipelineCreationCacheControl-02875
If the [pipelineCreationCacheControl](#) feature is not enabled, [flags](#) **must** not include [VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT](#) or [VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDStage-09128
The [stage](#) member of any element of [pStages](#) **must** be [VK_SHADER_STAGE_COMPUTE_BIT](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDpStages-09129
The shader code for the entry point identified by each element of [pStages](#) and the rest of

the state identified by this structure **must** adhere to the pipeline linking rules described in the [Shader Interfaces](#) chapter

- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-09130
layout **must** be [consistent](#) with the layout of the shaders specified in **pStages**
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-pLibraryInfo-09131
If **pLibraryInfo** is not **NULL**, each element of its **pLibraries** member **must** have been created with a **layout** that is compatible with the **layout** in this pipeline
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-09132
The number of resources in **layout** accessible to each shader stage that is used by the pipeline **must** be less than or equal to **VkPhysicalDeviceLimits::maxPerStageResources**
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-pLibraryInfo-09133
If **pLibraryInfo** is not **NULL**, each element of **pLibraryInfo->pLibraries** **must** be either a compute pipeline, an execution graph pipeline, or a graphics pipeline
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-pLibraryInfo-10181
If **pLibraryInfo** is not **NULL**, each element of **pLibraryInfo->pLibraries** that is a compute pipeline or a graphics pipeline **must** have been created with **VK_PIPELINE_CREATE_2_EXECUTION_GRAPH_BIT_AMD** set
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-shaderMeshEnqueue-10182
If the **shaderMeshEnqueue** feature is not enabled, and **pLibraryInfo->pLibraries** is not **NULL**, **pLibraryInfo->pLibraries** **must** not contain any graphics pipelines
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-pLibraryInfo-10183
Any element of **pLibraryInfo->pLibraries** identifying a graphics pipeline **must** have been created with [all possible state subsets](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-None-09134
There **must** be no two nodes in the pipeline that share both the same shader name and index, as specified by [VkPipelineShaderStageNodeCreateInfoAMD](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-None-09135
There **must** be no two nodes in the pipeline that share the same shader name and have input payload declarations with different sizes
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-None-09136
There **must** be no two nodes in the pipeline that share the same name but have different execution models
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-CoalescedInputCountAMDLayout-09137
There **must** be no two nodes in the pipeline that share the same name where one includes **CoalescedInputCountAMD** and the other does not
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-StaticNumWorkgroupsAMDLayout-09138
There **must** be no two nodes in the pipeline that share the same name where one includes **StaticNumWorkgroupsAMD** and the other does not
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-PayloadNodeNameAMDLayout-09139
If an output payload declared in any shader in the pipeline has a **PayloadNodeNameAMD** decoration with a **Node Name** that matches the shader name of any other node in the graph, the size of the output payload **must** match the size of the input payload in the matching node

- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-10184

If **flags** does not include **VK_PIPELINE_CREATE_LIBRARY_BIT_KHR**, and an output payload declared in any shader in the pipeline does not have a **PayloadNodeSparseArrayAMD** decoration, there **must** be a node in the graph corresponding to every index from 0 to its **PayloadNodeArraySizeAMD** decoration

Valid Usage (Implicit)

- VUID-VkExecutionGraphPipelineCreateInfoAMD-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_EXECUTION_GRAPH_PIPELINE_CREATE_INFO_AMD**
- VUID-VkExecutionGraphPipelineCreateInfoAMD-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkPipelineCompilerControlCreateInfoAMD** or **VkPipelineCreationFeedbackCreateInfo**
- VUID-VkExecutionGraphPipelineCreateInfoAMD-sType-unique
The **sType** value of each struct in the **pNext** chain **must** be unique
- VUID-VkExecutionGraphPipelineCreateInfoAMD-pStages-parameter
If **stageCount** is not 0, and **pStages** is not **NULL**, **pStages** **must** be a valid pointer to an array of **stageCount** valid **VkPipelineShaderStageCreateInfo** structures
- VUID-VkExecutionGraphPipelineCreateInfoAMD-pLibraryInfo-parameter
If **pLibraryInfo** is not **NULL**, **pLibraryInfo** **must** be a valid pointer to a valid **VkPipelineLibraryCreateInfoKHR** structure
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-parameter
layout **must** be a valid **VkPipelineLayout** handle
- VUID-VkExecutionGraphPipelineCreateInfoAMD-commonparent
Both of **basePipelineHandle**, and **layout** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same **VkDevice**

VK_SHADER_INDEX_UNUSED_AMD is a special shader index used to indicate that the created node does not override the index. In this case, the shader index is determined through other means. It is defined as:

```
#define VK_SHADER_INDEX_UNUSED_AMD    (~0U)
```

The **VkPipelineShaderStageNodeCreateInfoAMD** structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkPipelineShaderStageNodeCreateInfoAMD {
    VkStructureType    sType;
    const void*        pNext;
    const char*        pName;
    uint32_t           index;
} VkPipelineShaderStageNodeCreateInfoAMD;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pName** is the shader name to use when creating a node in an execution graph. If **pName** is **NULL**, the name of the entry point specified in SPIR-V is used as the shader name.
- **index** is the shader index to use when creating a node in an execution graph. If **index** is **VK_SHADER_INDEX_UNUSED_AMD** then the original index is used, either as specified by the **ShaderIndexAMD** execution mode, or **0** if that too is not specified.

When included in the **pNext** chain of a [VkPipelineShaderStageCreateInfo](#) structure, this structure specifies the shader name and shader index of a node when creating an execution graph pipeline. If this structure is omitted, the shader name is set to the name of the entry point in SPIR-V and the shader index is set to **0**.

When dispatching a node from another shader, the name is fixed at pipeline creation, but the index **can** be set dynamically. By associating multiple shaders with the same name but different indexes, applications can dynamically select different nodes to execute. Applications **must** ensure each node has a unique name and index.

NOTE

Shaders with the same name **must** be of the same type - e.g. a compute and graphics shader, or even two compute shaders where one is coalescing and the other is not, cannot share the same name.

Valid Usage (Implicit)

- VUID-VkPipelineShaderStageNodeCreateInfoAMD-sType-sType
sType must be **VK_STRUCTURE_TYPE_PIPELINE_SHADER_STAGE_NODE_CREATE_INFO_AMD**
- VUID-VkPipelineShaderStageNodeCreateInfoAMD-pName-parameter
If **pName** is not **NULL**, **pName must** be a null-terminated UTF-8 string

To query the internal node index for a particular node in an execution graph, call:

```
// Provided by VK_AMD_shader_enqueue
VkResult vkGetExecutionGraphPipelineNodeIndexAMD(
    VkDevice device,
    VkPipeline executionGraph,
    const VkPipelineShaderStageNodeCreateInfoAMD* pNodeInfo,
    uint32_t* pNodeIndex);
```

- `device` is the logical device that `executionGraph` was created on.
- `executionGraph` is the execution graph pipeline to query the internal node index for.
- `pNodeInfo` is a pointer to a `VkPipelineShaderStageNodeCreateInfoAMD` structure identifying the name and index of the node to query.
- `pNodeIndex` is the returned internal node index of the identified node.

Once this function returns, the contents of `pNodeIndex` contain the internal node index of the identified node.

Valid Usage

- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-pNodeInfo-09140
`pNodeInfo->pName` **must** not be `NULL`
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-pNodeInfo-09141
`pNodeInfo->index` **must** not be `VK_SHADER_INDEX_UNUSED_AMD`
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-executionGraph-09142
There **must** be a node in `executionGraph` with a shader name and index equal to `pNodeInfo->pName` and `pNodeInfo->index`

Valid Usage (Implicit)

- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-executionGraph-parameter
`executionGraph` **must** be a valid `VkPipeline` handle
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-pNodeInfo-parameter
`pNodeInfo` **must** be a valid pointer to a valid `VkPipelineShaderStageNodeCreateInfoAMD` structure
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-pNodeIndex-parameter
`pNodeIndex` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-executionGraph-parent
`executionGraph` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

44.2. Initializing Scratch Memory

Implementations **may** need scratch memory to manage dispatch queues or similar when executing a pipeline graph, and this is explicitly managed by the application.

To query the scratch space required to dispatch an execution graph, call:

```
// Provided by VK_AMD_shader_enqueue
VkResult vkGetExecutionGraphPipelineScratchSizeAMD(
    VkDevice          device,
    VkPipeline        executionGraph,
    VkExecutionGraphPipelineScratchSizeAMD* pSizeInfo);
```

- `device` is the logical device that `executionGraph` was created on.
- `executionGraph` is the execution graph pipeline to query the scratch space for.
- `pSizeInfo` is a pointer to a `VkExecutionGraphPipelineScratchSizeAMD` structure that will contain the required scratch size.

After this function returns, information about the scratch space required will be returned in `pSizeInfo`.

Valid Usage (Implicit)

- VUID-vkGetExecutionGraphPipelineScratchSizeAMD-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetExecutionGraphPipelineScratchSizeAMD-executionGraph-parameter `executionGraph` **must** be a valid `VkPipeline` handle
- VUID-vkGetExecutionGraphPipelineScratchSizeAMD-pSizeInfo-parameter `pSizeInfo` **must** be a valid pointer to a `VkExecutionGraphPipelineScratchSizeAMD` structure
- VUID-vkGetExecutionGraphPipelineScratchSizeAMD-executionGraph-parent `executionGraph` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkExecutionGraphPipelineScratchSizeAMD` structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkExecutionGraphPipelineScratchSizeAMD {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        minSize;
    VkDeviceSize        maxSize;
    VkDeviceSize        sizeGranularity;
} VkExecutionGraphPipelineScratchSizeAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minSize` indicates the minimum scratch space required for dispatching the queried execution graph.
- `maxSize` indicates the maximum scratch space that can be used for dispatching the queried execution graph.
- `sizeGranularity` indicates the granularity at which the scratch space can be increased from `minSize`.

Applications **can** use any amount of scratch memory greater than `minSize` for dispatching a graph, however only the values equal to `minSize` + an integer multiple of `sizeGranularity` will be used. Greater values **may** result in higher performance, up to `maxSize` which indicates the most memory that an implementation can use effectively.

Valid Usage (Implicit)

- VUID-VkExecutionGraphPipelineScratchSizeAMD-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXECUTION_GRAPH_PIPELINE_SCRATCH_SIZE_AMD`

To initialize scratch memory for a particular execution graph, call:

```
// Provided by VK_AMD_shader_enqueue
void vkCmdInitializeGraphScratchMemoryAMD(
    VkCommandBuffer          commandBuffer,
    VkPipeline               executionGraph,
    VkDeviceAddress          scratch,
    VkDeviceSize              scratchSize);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `executionGraph` is the execution graph pipeline to initialize the scratch memory for.
- `scratch` is the address of scratch memory to be initialized.
- `scratchSize` is a range in bytes of scratch memory to be initialized.

This command **must** be called before using `scratch` to dispatch the currently bound execution graph pipeline.

Execution of this command **may** modify any memory locations in the range [`scratch`, `scratch + scratchSize`). Accesses to this memory range are performed in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` and `VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT` access flags.

If any portion of `scratch` is modified by any command other than `vkCmdDispatchGraphAMD`, `vkCmdDispatchGraphIndirectAMD`, `vkCmdDispatchGraphIndirectCountAMD`, or `vkCmdInitializeGraphScratchMemoryAMD` with the same execution graph, it **must** be reinitialized for the execution graph again before dispatching against it.

Valid Usage

- VUID-vkCmdInitializeGraphScratchMemoryAMD-scratch-10185
`scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`
- VUID-vkCmdInitializeGraphScratchMemoryAMD-scratchSize-10186
`scratchSize` **must** be greater than or equal to `VkExecutionGraphPipelineScratchSizeAMD::minSize` returned by `vkGetExecutionGraphPipelineScratchSizeAMD` for the currently bound execution graph pipeline
- VUID-vkCmdInitializeGraphScratchMemoryAMD-scratch-09144
`scratch` **must** be a multiple of 64

Valid Usage (Implicit)

- VUID-vkCmdInitializeGraphScratchMemoryAMD-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdInitializeGraphScratchMemoryAMD-executionGraph-parameter
`executionGraph` **must** be a valid `VkPipeline` handle

- VUID-vkCmdInitializeGraphScratchMemoryAMD-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdInitializeGraphScratchMemoryAMD-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdInitializeGraphScratchMemoryAMD-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdInitializeGraphScratchMemoryAMD-bufferlevel
`commandBuffer` **must** be a primary `VkCommandBuffer`
- VUID-vkCmdInitializeGraphScratchMemoryAMD-commonparent
Both of `commandBuffer`, and `executionGraph` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	Graphics Compute	Action

44.3. Dispatching a Graph

Initial dispatch of an execution graph is done from the host in the same way as any other command, and **can** be used in a similar way to compute dispatch commands, with indirect variants available.

To record an execution graph dispatch, call:

```
// Provided by VK_AMD_shader_enqueue
void vkCmdDispatchGraphAMD(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          scratch,
    VkDeviceSize             scratchSize,
    const VkDispatchGraphCountInfoAMD* pCountInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.

- `scratch` is the address of scratch memory to be used.
- `scratchSize` is a range in bytes of scratch memory to be used.
- `pCountInfo` is a host pointer to a `VkDispatchGraphCountInfoAMD` structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in `pCountInfo` are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched. There are no rasterization order guarantees between separately dispatched graphics nodes, though individual primitives within a single dispatch do adhere to rasterization order. Draw calls executed before or after the execution graph also execute relative to each graphics node with respect to rasterization order.

For this command, all device/host pointers in substructures are treated as host pointers and read only during host execution of this command. Once this command returns, no reference to the original pointers is retained.

Execution of this command **may** modify any memory locations in the range [`scratch`, `scratch` + `scratchSize`). Accesses to this memory range are performed in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` and `VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT` access flags.

This command **captures command buffer state** for mesh nodes similarly to draw commands.

Valid Usage

- VUID-vkCmdDispatchGraphAMD-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's **format features must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDispatchGraphAMD-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's **format features must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdDispatchGraphAMD-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's **format features must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDispatchGraphAMD-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or

`VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDispatchGraphAMD-unnormlizedCoordinates-09635
If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdDispatchGraphAMD-unnormlizedCoordinates-09636
If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`
- VUID-vkCmdDispatchGraphAMD-None-06479
If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`
- VUID-vkCmdDispatchGraphAMD-None-02691
If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`
- VUID-vkCmdDispatchGraphAMD-None-07888
If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`
- VUID-vkCmdDispatchGraphAMD-None-02692
If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-vkCmdDispatchGraphAMD-None-02693
If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-vkCmdDispatchGraphAMD-filterCubic-02694
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdDispatchGraphAMD-filterCubicMinmax-02695
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdDispatchGraphAMD-cubicRangeClamp-09212
If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with

`VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`

- VUID-vkCmdDispatchGraphAMD-09213
Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`
- VUID-vkCmdDispatchGraphAMD-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CTMULL_ROM_QCOM`
- VUID-vkCmdDispatchGraphAMD-flags-02696
Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`
- VUID-vkCmdDispatchGraphAMD-OpTypeImage-07027
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphAMD-OpTypeImage-07028
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphAMD-OpTypeImage-07029
For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphAMD-OpTypeImage-07030
Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphAMD-None-08600
For each set n that is statically used by a `bound shader`, a descriptor set **must** have been bound to n at the same pipeline bind point, with a `VkPipelineLayout` that is compatible for set n , with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` array used to create the current `VkShaderEXT`, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDispatchGraphAMD-None-08601
For each push constant that is statically used by a `bound shader`, a push constant value **must** have been set for the same pipeline bind point, with a `VkPipelineLayout` that is compatible for push constants, with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` array used to create the current `VkShaderEXT`, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdDispatchGraphAMD-None-10068
For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchGraphAMD-maintenance4-08602
If the [maintenance4](#) feature is not enabled, then for each push constant that is statically used by a [bound shader](#), a push constant value **must** have been set for the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for push constants, with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) and [VkPushConstantRange](#) arrays used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDispatchGraphAMD-None-08114
Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid as described by [descriptor validity](#) if they are statically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphAMD-None-08115
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphAMD-None-08116
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphAMD-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphAMD-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphAMD-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphAMD-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphAMD-None-08606
If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline

bind point used by this command

- VUID-vkCmdDispatchGraphAMD-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdDispatchGraphAMD-None-08609

If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used to sample from any [VkImage](#) with a [VkImageView](#) of the type [VK_IMAGE_VIEW_TYPE_3D](#), [VK_IMAGE_VIEW_TYPE_CUBE](#), [VK_IMAGE_VIEW_TYPE_1D_ARRAY](#), [VK_IMAGE_VIEW_TYPE_2D_ARRAY](#) or [VK_IMAGE_VIEW_TYPE_CUBE_ARRAY](#), in any shader stage

- VUID-vkCmdDispatchGraphAMD-None-08610

If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V [OpImageSample*](#) or [OpImageSparseSample*](#) instructions with [ImplicitLod](#), [Dref](#) or [Proj](#) in their name, in any shader stage

- VUID-vkCmdDispatchGraphAMD-None-08611

If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V [OpImageSample*](#) or [OpImageSparseSample*](#) instructions that includes a LOD bias or any offset values, in any shader stage

- VUID-vkCmdDispatchGraphAMD-None-08607

If the [shaderObject](#) feature is enabled, either a valid pipeline **must** be bound to the pipeline bind point used by this command, or a valid combination of valid and [VK_NULL_HANDLE](#) shader objects **must** be bound to every supported shader stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdDispatchGraphAMD-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphAMD-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphAMD-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this

command accesses a storage buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphAMD-None-08613
If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphAMD-commandBuffer-02707
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by `bound shaders` **must** not be a protected resource
- VUID-vkCmdDispatchGraphAMD-None-06550
If a `bound shader` accesses a `VkSampler` or `VkImageView` object that enables `sampler Y'CBCR conversion`, that object **must** only be used with `OpImageSample*` or `OpImageSparseSample*` instructions
- VUID-vkCmdDispatchGraphAMD-ConstOffset-06551
If a `bound shader` accesses a `VkSampler` or `VkImageView` object that enables `sampler Y'CBCR conversion`, that object **must** not use the `ConstOffset` and `Offset` operands
- VUID-vkCmdDispatchGraphAMD-viewType-07752
If a `VkImageView` is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)
- VUID-vkCmdDispatchGraphAMD-format-07753
If a `VkImageView` is accessed as a result of this command, then the `numeric type` of the image view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdDispatchGraphAMD-OpImageWrite-08795
If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchGraphAMD-OpImageWrite-08796
If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdDispatchGraphAMD-OpImageWrite-04469
If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchGraphAMD-SampledType-04470
If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdDispatchGraphAMD-SampledType-04471
If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdDispatchGraphAMD-SampledType-04472
If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64
- VUID-vkCmdDispatchGraphAMD-SampledType-04473
If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdDispatchGraphAMD-sparseImageInt64Atomics-04474
If the [sparseImageInt64Atomics](#) feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command
- VUID-vkCmdDispatchGraphAMD-sparseImageInt64Atomics-04475
If the [sparseImageInt64Atomics](#) feature is not enabled, [VkBuffer](#) objects created with the [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command
- VUID-vkCmdDispatchGraphAMD-OpImageWeightedSampleQCOM-06971
If [OpImageWeightedSampleQCOM](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM](#)
- VUID-vkCmdDispatchGraphAMD-OpImageWeightedSampleQCOM-06972
If [OpImageWeightedSampleQCOM](#) uses a [VkImageView](#) as a sample weight image as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM](#)
- VUID-vkCmdDispatchGraphAMD-OpImageBoxFilterQCOM-06973
If [OpImageBoxFilterQCOM](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM](#)
- VUID-vkCmdDispatchGraphAMD-OpImageBlockMatchSSDQCOM-06974
If [OpImageBlockMatchSSDQCOM](#) is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#)
- VUID-vkCmdDispatchGraphAMD-OpImageBlockMatchSADQCOM-06975
If [OpImageBlockMatchSADQCOM](#) is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#)
- VUID-vkCmdDispatchGraphAMD-OpImageBlockMatchSADQCOM-06976
If [OpImageBlockMatchSADQCOM](#) or [OpImageBlockMatchSSDQCOM](#) is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)

- VUID-vkCmdDispatchGraphAMD-X-OpImageWeightedSampleQCOM-06977
If `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageWeightedSampleQCOM-06978
If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDispatchGraphAMD-X-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDispatchGraphAMD-X-None-07288
Any shader invocation executed by this command **must** `terminate`
- VUID-vkCmdDispatchGraphAMD-X-None-09600
If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, the image subresource identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatchGraphAMD-X-commandBuffer-09181
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDispatchGraphAMD-X-commandBuffer-09182
`commandBuffer` **must** be a primary command buffer
- VUID-vkCmdDispatchGraphAMD-X-scratch-10192
`scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`
- VUID-vkCmdDispatchGraphAMD-X-scratchSize-10193
`scratchSize` **must** be greater than or equal to `VkExecutionGraphPipelineScratchSizeAMD-X::minSize` returned by `vkGetExecutionGraphPipelineScratchSizeAMD-X` for the currently bound execution graph

pipeline

- VUID-vkCmdDispatchGraphAMDx-scratch-09184
`scratch` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMDx` or `VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMDx` flag
- VUID-vkCmdDispatchGraphAMDx-scratch-10194
The device memory range [`scratch`,`scratch` `scratchSize`] **must** have been initialized with `vkCmdInitializeGraphScratchMemoryAMDx` using the currently bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command
- VUID-vkCmdDispatchGraphAMDx-maxComputeWorkGroupCount-09186
Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMDx` decoration in the dispatched node or `maxComputeWorkGroupCount`
- VUID-vkCmdDispatchGraphAMDx-maxExecutionGraphShaderPayloadCount-09187
Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads
- VUID-vkCmdDispatchGraphAMDx-NodeMaxPayloadsAMDx-09188
Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMDx` to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each `NodeMaxPayloadsAMDx` decoration separately
- VUID-vkCmdDispatchGraphAMDx-None-10195
If the currently bound execution graph pipeline includes draw nodes, this command **must** be called within a render pass instance that is compatible with the graphics pipeline used to create each of those nodes
- VUID-vkCmdDispatchGraphAMDx-pCountInfo-09145
`pCountInfo->infos` **must** be a host pointer to a memory allocation at least as large as the product of `count` and `stride`
- VUID-vkCmdDispatchGraphAMDx-infos-09146
Host memory locations at indexes in the range [`infos`, `infos` + (`count`*`stride`)), at a granularity of `stride` **must** contain valid `VkDispatchGraphInfoAMDx` structures in the first 24 bytes
- VUID-vkCmdDispatchGraphAMDx-pCountInfo-09147
For each `VkDispatchGraphInfoAMDx` structure in `pCountInfo->infos`, `payloads` **must** be a host pointer to a memory allocation at least as large as the product of `payloadCount` and `payloadStride`
- VUID-vkCmdDispatchGraphAMDx-pCountInfo-09148
For each `VkDispatchGraphInfoAMDx` structure in `pCountInfo->infos`, `nodeIndex` **must** be a valid node index in the currently bound execution graph pipeline, as returned by `vkGetExecutionGraphPipelineNodeIndexAMDx`
- VUID-vkCmdDispatchGraphAMDx-pCountInfo-09149
For each `VkDispatchGraphInfoAMDx` structure in `pCountInfo->infos`, host memory locations at indexes in the range [`payloads`, `payloads` + (`payloadCount` * `payloadStride`)), at a

granularity of `payloadStride` **must** contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphAMD_X-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDispatchGraphAMD_X-pCountInfo-parameter
`pCountInfo` **must** be a valid pointer to a valid `VkDispatchGraphCountInfoAMDX` structure
- VUID-vkCmdDispatchGraphAMD_X-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdDispatchGraphAMD_X-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations
- VUID-vkCmdDispatchGraphAMD_X-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchGraphAMD_X-bufferlevel
`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	Graphics Compute	Action

To record an execution graph dispatch with node and payload parameters read on device, call:

```
// Provided by VK_AMDX_shader_enqueue
void vkCmdDispatchGraphIndirectAMDX(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          scratch,
    VkDeviceSize             scratchSize,
    const VkDispatchGraphCountInfoAMDX* pCountInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.

- `scratch` is the address of scratch memory to be used.
- `scratchSize` is a range in bytes of scratch memory to be used.
- `pCountInfo` is a host pointer to a `VkDispatchGraphCountInfoAMD` structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in `pCountInfo` are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched. There are no rasterization order guarantees between separately dispatched graphics nodes, though individual primitives within a single dispatch do adhere to rasterization order. Draw calls executed before or after the execution graph also execute relative to each graphics node with respect to rasterization order.

For this command, all device/host pointers in substructures are treated as device pointers and read during device execution of this command. The allocation and contents of these pointers only needs to be valid during device execution. All of these addresses will be read in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` access flag.

Execution of this command **may** modify any memory locations in the range [`scratch`, `scratch + scratchSize`). Accesses to this memory range are performed in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` and `VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT` access flags.

This command `captures command buffer state` for mesh nodes similarly to draw commands.

Valid Usage

- VUID-vkCmdDispatchGraphIndirectAMD-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-unnormlizedCoordinates-09635

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDispatchGraphIndirectAMD-unnormlizedCoordinates-09636

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdDispatchGraphIndirectAMD-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdDispatchGraphIndirectAMD-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDispatchGraphIndirectAMD-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDispatchGraphIndirectAMD-cubicRangeClamp-09212
If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-reductionMode-09213
Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`
- VUID-vkCmdDispatchGraphIndirectAMD-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-flags-02696
Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`
- VUID-vkCmdDispatchGraphIndirectAMD-OpTypeImage-07027
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-OpTypeImage-07028
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-OpTypeImage-07029
For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-OpTypeImage-07030
Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-None-08600
For each set n that is statically used by a `bound shader`, a descriptor set **must** have been bound to n at the same pipeline bind point, with a `VkPipelineLayout` that is compatible for set n , with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` array used to create the current `VkShaderEXT`, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-08601
For each push constant that is statically used by a `bound shader`, a push constant value **must** have been set for the same pipeline bind point, with a `VkPipelineLayout` that is compatible for push constants, with the `VkPipelineLayout` used to create the current

[VkPipeline](#) or the [VkDescriptorSetLayout](#) array used to create the current [VkShaderEXT](#) , as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdDispatchGraphIndirectAMD-None-10068
For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchGraphIndirectAMD-maintenance4-08602
If the [maintenance4](#) feature is not enabled, then for each push constant that is statically used by a [bound shader](#), a push constant value **must** have been set for the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for push constants, with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) and [VkPushConstantRange](#) arrays used to create the current [VkShaderEXT](#) , as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-08114
Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid as described by [descriptor validity](#) if they are statically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-08115
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-08116
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphIndirectAMD-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphIndirectAMD-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdDispatchGraphIndirectAMD-None-08606
If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphIndirectAMD-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must not** have been any calls to dynamic state setting commands for any state specified statically in the `VkPipeline` object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatchGraphIndirectAMD-None-08609
If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must not** be used to sample from any `VkImage` with a `VkImageView` of the type `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, `VK_IMAGE_VIEW_TYPE_2D_ARRAY` or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`, in any shader stage
- VUID-vkCmdDispatchGraphIndirectAMD-None-08610
If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must not** be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name, in any shader stage
- VUID-vkCmdDispatchGraphIndirectAMD-None-08611
If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must not** be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values, in any shader stage
- VUID-vkCmdDispatchGraphIndirectAMD-None-08607
If the `shaderObject` feature is enabled, either a valid pipeline **must** be bound to the pipeline bind point used by this command, or a valid combination of valid and `VK_NULL_HANDLE` shader objects **must** be bound to every supported shader stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphIndirectAMD-uniformBuffers-06935
If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must not** access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectAMD-None-08612
If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must not** access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectAMD-storageBuffers-06936
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectAMD-None-08613
If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-02707
If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource
- VUID-vkCmdDispatchGraphIndirectAMD-None-06550
If a [bound shader](#) accesses a [VkSampler](#) or [VkImageView](#) object that enables [sampler YCbCr conversion](#), that object **must** only be used with [OpImageSample*](#) or [OpImageSparseSample*](#) instructions
- VUID-vkCmdDispatchGraphIndirectAMD-ConstOffset-06551
If a [bound shader](#) accesses a [VkSampler](#) or [VkImageView](#) object that enables [sampler YCbCr conversion](#), that object **must** not use the [ConstOffset](#) and [Offset](#) operands
- VUID-vkCmdDispatchGraphIndirectAMD-viewType-07752
If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#) **must** match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)
- VUID-vkCmdDispatchGraphIndirectAMD-format-07753
If a [VkImageView](#) is accessed as a result of this command, then the [numeric type](#) of the image view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must** match
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageWrite-08795
If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM_KHR](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageWrite-08796
If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM_KHR](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have four components
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageWrite-04469
If a [VkBufferView](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchGraphIndirectAMD-SampledType-04470
If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a

result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64

- VUID-vkCmdDispatchGraphIndirectAMD-SampledType-04471

If a **VkImageView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdDispatchGraphIndirectAMD-SampledType-04472

If a **VkBufferView** with a **VkFormat** that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64

- VUID-vkCmdDispatchGraphIndirectAMD-SampledType-04473

If a **VkBufferView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdDispatchGraphIndirectAMD-sparseImageInt64Atomics-04474

If the **sparseImageInt64Atomics** feature is not enabled, **VkImage** objects created with the **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdDispatchGraphIndirectAMD-sparseImageInt64Atomics-04475

If the **sparseImageInt64Atomics** feature is not enabled, **VkBuffer** objects created with the **VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdDispatchGraphIndirectAMD-OpImageWeightedSampleQCOM-06971

If **OpImageWeightedSampleQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectAMD-OpImageWeightedSampleQCOM-06972

If **OpImageWeightedSampleQCOM** uses a **VkImageView** as a sample weight image as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBoxFilterQCOM-06973

If **OpImageBoxFilterQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchSSDQCOM-06974

If **OpImageBlockMatchSSDQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchSADQCOM-06975

If **OpImageBlockMatchSADQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchSADQCOM-06976

If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)

- VUID-vkCmdDispatchGraphIndirectAMD-OpImageWeightedSampleQCOM-06977
If `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, or `OpImageBlockMatchSSDQCOM` uses a [VkSampler](#) as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageWeightedSampleQCOM-06978
If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a [VkSampler](#) as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-07288
Any shader invocation executed by this command **must** [terminate](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-09600
If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, the image subresource identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-09181
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-09182
`commandBuffer` **must** be a primary command buffer
- VUID-vkCmdDispatchGraphIndirectAMD-scratch-10192
`scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`

- VUID-vkCmdDispatchGraphIndirectAMD-scratchSize-10193
`scratchSize` **must** be greater than or equal to `VkExecutionGraphPipelineScratchSizeAMD::minSize` returned by `vkGetExecutionGraphPipelineScratchSizeAMD` for the currently bound execution graph pipeline
- VUID-vkCmdDispatchGraphIndirectAMD-scratch-09184
`scratch` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMD` or `VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMD` flag
- VUID-vkCmdDispatchGraphIndirectAMD-scratch-10194
The device memory range [`scratch`,`scratch` `scratchSize`] **must** have been initialized with `vkCmdInitializeGraphScratchMemoryAMD` using the currently bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command
- VUID-vkCmdDispatchGraphIndirectAMD-maxComputeWorkGroupCount-09186
Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMD` decoration in the dispatched node or `maxComputeWorkGroupCount`
- VUID-vkCmdDispatchGraphIndirectAMD-maxExecutionGraphShaderPayloadCount-09187
Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads
- VUID-vkCmdDispatchGraphIndirectAMD-NodeMaxPayloadsAMD-09188
Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMD` to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each `NodeMaxPayloadsAMD` decoration separately
- VUID-vkCmdDispatchGraphIndirectAMD-None-10195
If the currently bound execution graph pipeline includes draw nodes, this command **must** be called within a render pass instance that is compatible with the graphics pipeline used to create each of those nodes
- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09150
`pCountInfo->infos` **must** be a device pointer to a memory allocation at least as large as the product of `count` and `stride` when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09151
`pCountInfo->infos` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` flag
- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09152
`pCountInfo->infos` **must** be a multiple of `executionGraphDispatchAddressAlignment`
- VUID-vkCmdDispatchGraphIndirectAMD-infos-09153
Device memory locations at indexes in the range [`infos`, `infos` + (`count`*`stride`)), at a granularity of `stride` **must** contain valid `VkDispatchGraphInfoAMD` structures in the first 24 bytes when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09154

For each [VkDispatchGraphInfoAMD](#)X structure in `pCountInfo->infos`, `payloads` **must** be a device pointer to a memory allocation at least as large as the product of `payloadCount` and `payloadStride` when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectAMD-X-pCountInfo-09155

For each [VkDispatchGraphInfoAMD](#)X structure in `pCountInfo->infos`, `payloads` **must** be a device address within a [VkBuffer](#) created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` flag

- VUID-vkCmdDispatchGraphIndirectAMD-X-pCountInfo-09156

For each [VkDispatchGraphInfoAMD](#)X structure in `pCountInfo->infos`, `payloads` **must** be a multiple of `executionGraphDispatchAddressAlignment`

- VUID-vkCmdDispatchGraphIndirectAMD-X-pCountInfo-09157

For each [VkDispatchGraphInfoAMD](#)X structure in `pCountInfo->infos`, `nodeIndex` **must** be a valid node index in the currently bound execution graph pipeline, as returned by [vkGetExecutionGraphPipelineNodeIndexAMD](#)X when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectAMD-X-pCountInfo-09158

For each [VkDispatchGraphInfoAMD](#)X structure in `pCountInfo->infos`, device memory locations at indexes in the range [`payloads`, `payloads` + (`payloadCount` * `payloadStride`)), at a granularity of `payloadStride` **must** contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes when this command is executed on the device

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphIndirectAMD-X-commandBuffer-parameter

`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle

- VUID-vkCmdDispatchGraphIndirectAMD-X-pCountInfo-parameter

`pCountInfo` **must** be a valid pointer to a valid [VkDispatchGraphCountInfoAMD](#)X structure

- VUID-vkCmdDispatchGraphIndirectAMD-X-commandBuffer-recording

`commandBuffer` **must** be in the [recording state](#)

- VUID-vkCmdDispatchGraphIndirectAMD-X-commandBuffer-cmdpool

The [VkCommandPool](#) that `commandBuffer` was allocated from **must** support graphics, or compute operations

- VUID-vkCmdDispatchGraphIndirectAMD-X-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdDispatchGraphIndirectAMD-X-bufferlevel

`commandBuffer` **must** be a primary [VkCommandBuffer](#)

Host Synchronization

- Host access to the [VkCommandPool](#) that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	Graphics Compute	Action

To record an execution graph dispatch with all parameters read on device, call:

```
// Provided by VK_AMD_shader_enqueue
void vkCmdDispatchGraphIndirectCountAMD(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          scratch,
    VkDeviceSize             scratchSize,
    VkDeviceAddress          countInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `scratch` is the address of scratch memory to be used.
- `scratchSize` is a range in bytes of scratch memory to be used.
- `countInfo` is a device address of a `VkDispatchGraphCountInfoAMD` structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in `countInfo` are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched.

For this command, all pointers in substructures are treated as device pointers and read during device execution of this command. The allocation and contents of these pointers only needs to be valid during device execution. All of these addresses will be read in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` access flag.

Execution of this command **may** modify any memory locations in the range [`scratch`,`scratch` + `scratchSize`). Accesses to this memory range are performed in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` and `VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT` access flags.

Valid Usage

- VUID-vkCmdDispatchGraphIndirectCountAMD-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format` `features` **must** contain

VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- VUID-vkCmdDispatchGraphIndirectCountAMD-magFilter-09598

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-mipmapMode-04770

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-unnormalizedCoordinates-09635

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDispatchGraphIndirectCountAMD-unnormalizedCoordinates-09636

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with

VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdDispatchGraphIndirectCountAMD-filterCubic-02694
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdDispatchGraphIndirectCountAMD-filterCubicMinmax-02695
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdDispatchGraphIndirectCountAMD-cubicRangeClamp-09212
If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`
- VUID-vkCmdDispatchGraphIndirectCountAMD-reductionMode-09213
Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`
- VUID-vkCmdDispatchGraphIndirectCountAMD-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`
- VUID-vkCmdDispatchGraphIndirectCountAMD-flags-02696
Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpTypeImage-07027
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpTypeImage-07028
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpTypeImage-07029
For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpTypeImage-07030
Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08600
For each set *n* that is statically used by a [bound shader](#), a descriptor set **must** have been bound to *n* at the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for set *n*, with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) array used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08601
For each push constant that is statically used by a [bound shader](#), a push constant value **must** have been set for the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for push constants, with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) array used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-10068
For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchGraphIndirectCountAMD-maintenance4-08602
If the [maintenance4](#) feature is not enabled, then for each push constant that is statically used by a [bound shader](#), a push constant value **must** have been set for the same pipeline bind point, with a [VkPipelineLayout](#) that is compatible for push constants, with the [VkPipelineLayout](#) used to create the current [VkPipeline](#) or the [VkDescriptorSetLayout](#) and [VkPushConstantRange](#) arrays used to create the current [VkShaderEXT](#), as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08114
Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid as described by [descriptor validity](#) if they are statically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08115
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08116
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this

command

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08606
If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08609
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used to sample from any [VkImage](#) with a [VkImageView](#) of the type [VK_IMAGE_VIEW_TYPE_3D](#), [VK_IMAGE_VIEW_TYPE_CUBE](#), [VK_IMAGE_VIEW_TYPE_1D_ARRAY](#), [VK_IMAGE_VIEW_TYPE_2D_ARRAY](#) or [VK_IMAGE_VIEW_TYPE_CUBE_ARRAY](#), in any shader stage
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08610
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V [OpImageSample*](#) or [OpImageSparseSample*](#) instructions with [ImplicitLod](#), [Dref](#) or [Proj](#) in their name, in any shader stage
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08611
If the [VkPipeline](#) object bound to the pipeline bind point used by this command or any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a [VkSampler](#) object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V [OpImageSample*](#) or [OpImageSparseSample*](#) instructions that includes a LOD bias or any offset values, in any shader stage
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08607
If the [shaderObject](#) feature is enabled, either a valid pipeline **must** be bound to the pipeline bind point used by this command, or a valid combination of valid and [VK_NULL_HANDLE](#) shader objects **must** be bound to every supported shader stage

corresponding to the pipeline bind point used by this command

- VUID-vkCmdDispatchGraphIndirectCountAMD-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectCountAMD-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08613

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-02707

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-06550

If a [bound shader](#) accesses a [VkSampler](#) or [VkImageView](#) object that enables [sampler Y'C_BC_R conversion](#), that object **must** only be used with [OpImageSample*](#) or [OpImageSparseSample*](#) instructions

- VUID-vkCmdDispatchGraphIndirectCountAMD-ConstOffset-06551

If a [bound shader](#) accesses a [VkSampler](#) or [VkImageView](#) object that enables [sampler Y'C_BC_R conversion](#), that object **must** not use the [ConstOffset](#) and [Offset](#) operands

- VUID-vkCmdDispatchGraphIndirectCountAMD-viewType-07752

If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#) **must** match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdDispatchGraphIndirectCountAMD-format-07753

If a [VkImageView](#) is accessed as a result of this command, then the [numeric type](#) of the image view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must** match

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWrite-08795
If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWrite-08796
If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWrite-04469
If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchGraphIndirectCountAMD-SampledType-04470
If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDispatchGraphIndirectCountAMD-SampledType-04471
If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdDispatchGraphIndirectCountAMD-SampledType-04472
If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDispatchGraphIndirectCountAMD-SampledType-04473
If a `VkBufferView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdDispatchGraphIndirectCountAMD-sparseImageInt64Atomics-04474
If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdDispatchGraphIndirectCountAMD-sparseImageInt64Atomics-04475
If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWeightedSampleQCOM-06971
If `OpImageWeightedSampleQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWeightedSampleQCOM-06972
If `OpImageWeightedSampleQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBoxFilterQCOM-06973
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchSSDQCOM-06974
If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWeightedSampleQCOM-06977
If `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWeightedSampleQCOM-06978
If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-07288
Any shader invocation executed by this command **must** `terminate`
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-09600

If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, the image subresource identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-09181
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-09182
`commandBuffer` **must** be a primary command buffer
- VUID-vkCmdDispatchGraphIndirectCountAMD-scratch-10192
`scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`
- VUID-vkCmdDispatchGraphIndirectCountAMD-scratchSize-10193
`scratchSize` **must** be greater than or equal to `VkExecutionGraphPipelineScratchSizeAMD::minSize` returned by `vkGetExecutionGraphPipelineScratchSizeAMD` for the currently bound execution graph pipeline
- VUID-vkCmdDispatchGraphIndirectCountAMD-scratch-09184
`scratch` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMD` or `VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMD` flag
- VUID-vkCmdDispatchGraphIndirectCountAMD-scratch-10194
The device memory range [`scratch`,`scratch` `scratchSize`] **must** have been initialized with `vkCmdInitializeGraphScratchMemoryAMD` using the currently bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command
- VUID-vkCmdDispatchGraphIndirectCountAMD-maxComputeWorkGroupCount-09186
Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMD` decoration in the dispatched node or `maxComputeWorkGroupCount`
- VUID-vkCmdDispatchGraphIndirectCountAMD-maxExecutionGraphShaderPayloadCount-09187
Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads
- VUID-vkCmdDispatchGraphIndirectCountAMD-NodeMaxPayloadsAMD-09188
Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMD` to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each `NodeMaxPayloadsAMD` decoration separately
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-10195
If the currently bound execution graph pipeline includes draw nodes, this command **must** be called within a render pass instance that is compatible with the graphics pipeline used to create each of those nodes
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09159

`countInfo` **must** be a device pointer to a memory allocation containing a valid `VkDispatchGraphCountInfoAMD` structure when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09160
`countInfo` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` flag
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09161
`countInfo` **must** be a multiple of `executionGraphDispatchAddressAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09162
`countInfo->infos` **must** be a device pointer to a memory allocation at least as large as the product of `count` and `stride` when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09163
`countInfo->infos` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` flag
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09164
`countInfo->infos` **must** be a multiple of `executionGraphDispatchAddressAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMD-infos-09165
Device memory locations at indexes in the range `[infos, infos + (count*stride))`, at a granularity of `stride` **must** contain valid `VkDispatchGraphInfoAMD` structures in the first 24 bytes when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09166
For each `VkDispatchGraphInfoAMD` structure in `countInfo->infos`, `payloads` **must** be a device pointer to a memory allocation at least as large as the product of `payloadCount` and `payloadStride` when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09167
For each `VkDispatchGraphInfoAMD` structure in `countInfo->infos`, `payloads` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` flag
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09168
For each `VkDispatchGraphInfoAMD` structure in `countInfo->infos`, `payloads` **must** be a multiple of `executionGraphDispatchAddressAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09169
For each `VkDispatchGraphInfoAMD` structure in `countInfo->infos`, `nodeIndex` **must** be a valid node index in the currently bound execution graph pipeline, as returned by `vkGetExecutionGraphPipelineNodeIndexAMD` when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09170
For each `VkDispatchGraphInfoAMD` structure in `countInfo->infos`, device memory locations at indexes in the range `[payloads, payloads + (payloadCount * payloadStride))`, at a granularity of `payloadStride` **must** contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes when this command is executed on the device

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support graphics, or compute operations
- VUID-vkCmdDispatchGraphIndirectCountAMD-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchGraphIndirectCountAMD-bufferlevel
commandBuffer **must** be a primary [VkCommandBuffer](#)

Host Synchronization

- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	Graphics Compute	Action

The [VkDeviceOrHostAddressConstAMD](#) union is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef union VkDeviceOrHostAddressConstAMD {
    VkDeviceAddress    deviceAddress;
    const void*        hostAddress;
} VkDeviceOrHostAddressConstAMD;
```

- **deviceAddress** is a buffer device address as returned by the [vkGetBufferDeviceAddressKHR](#) command.
- **hostAddress** is a const host memory address.

The [VkDispatchGraphCountInfoAMD](#) structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkDispatchGraphCountInfoAMD {
    uint32_t          count;
    VkDeviceOrHostAddressConstAMDX infos;
    uint64_t          stride;
} VkDispatchGraphCountInfoAMD;
```

- **count** is the number of dispatches to perform.
- **infos** is the device or host address of a flat array of **VkDispatchGraphInfoAMD** structures
- **stride** is the byte stride between successive **VkDispatchGraphInfoAMD** structures in **infos**

Whether **infos** is consumed as a device or host pointer is defined by the command this structure is used in.

The **VkDispatchGraphInfoAMD** structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkDispatchGraphInfoAMD {
    uint32_t          nodeIndex;
    uint32_t          payloadCount;
    VkDeviceOrHostAddressConstAMDX payloads;
    uint64_t          payloadStride;
} VkDispatchGraphInfoAMD;
```

- **nodeIndex** is the index of a node in an execution graph to be dispatched.
- **payloadCount** is the number of payloads to dispatch for the specified node.
- **payloads** is a device or host address pointer to a flat array of payloads with size equal to the product of **payloadCount** and **payloadStride**
- **payloadStride** is the byte stride between successive payloads in **payloads**

Whether **payloads** is consumed as a device or host pointer is defined by the command this structure is used in.

Valid Usage

- VUID-VkDispatchGraphInfoAMD-payloadCount-09171
payloadCount **must** be no greater than **maxExecutionGraphShaderPayloadCount**

44.4. Shader Enqueue

Compute shaders in an execution graph **can** use the **OpInitializeNodePayloadsAMD** to initialize nodes for dispatch. Any node payload initialized in this way will be enqueued for dispatch once the shader is done writing to the payload. As compilers **may** be conservative when making this determination, shaders **can** further call **OpFinalizeNodePayloadsAMD** to guarantee that the payload is

no longer being written.

The **Node Name** operand of the **PayloadNodeNameAMD** decoration on a payload identifies the shader name of the node to be enqueued, and the **Shader Index** operand of **OpInitializeNodePayloadsAMD** identifies the shader index. A node identified in this way is dispatched as described in the following sections.

44.4.1. Compute Nodes

Compute shaders added as nodes to an execution graph are executed differently based on the presence or absence of the **StaticNumWorkgroupsAMD** or **CoalescingAMD** execution modes.

Dispatching a compute shader node that does not declare either the **StaticNumWorkgroupsAMD** or **CoalescingAMD** execution mode will execute a number of workgroups in each dimension specified by the first 12 bytes of the payload, interpreted as a **VkDispatchIndirectCommand**. The same payload will be broadcast to each workgroup in the same dispatch. Additional values in the payload are have no effect on execution.

Dispatching a compute shader node with the **StaticNumWorkgroupsAMD** execution mode will execute workgroups in each dimension according to the **x**, **y**, and **z size** operands to the **StaticNumWorkgroupsAMD** execution mode. The same payload will be broadcast to each workgroup in the same dispatch. Any values in the payload have no effect on execution.

Dispatching a compute shader node with the **CoalescingAMD** execution mode will enqueue a single invocation for execution. Implementations **may** combine multiple such dispatches into the same workgroup, up to the size of the workgroup. The number of invocations coalesced into a given workgroup in this way **can** be queried via the **CoalescedInputCountAMD** built-in. Any values in the payload have no effect on execution.

44.4.2. Mesh Nodes

Graphics pipelines added as nodes to an execution graph are executed in a manner similar to a **vkCmdDrawMeshTasksIndirectEXT**, using the same payloads as compute shaders, but capturing some state from the command buffer.

When an execution graph dispatch is recorded into a command buffer, it captures the following dynamic state for use with draw nodes:

- **VK_DYNAMIC_STATE_VIEWPORT**
- **VK_DYNAMIC_STATE_SCISSOR**
- **VK_DYNAMIC_STATE_LINE_WIDTH**
- **VK_DYNAMIC_STATE_DEPTH_BIAS**
- **VK_DYNAMIC_STATE_BLEND_CONSTANTS**
- **VK_DYNAMIC_STATE_DEPTH_BOUNDS**
- **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT**
- **VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT**

- `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR`

Other state is not captured, and graphics pipelines **must** not be created with other dynamic states when used as a library in an execution graph pipeline.

Chapter 45. Extending Vulkan

New functionality **may** be added to Vulkan via either new extensions or new versions of the core, or new versions of an extension in some cases.

This chapter describes how Vulkan is versioned, how compatibility is affected between different versions, and compatibility rules that are followed by the Vulkan Working Group.

45.1. Instance and Device Functionality

Commands that enumerate instance properties, or that accept a [VkInstance](#) object as a parameter, are considered instance-level functionality.

Commands that dispatch from a [VkDevice](#) object or a child object of a [VkDevice](#), or take any of them as a parameter, are considered device-level functionality. Types defined by a [device extension](#) are also considered device-level functionality.

Commands that dispatch from [VkPhysicalDevice](#), or accept a [VkPhysicalDevice](#) object as a parameter, are considered either instance-level or device-level functionality depending if the functionality is specified by an [instance extension](#) or [device extension](#) respectively.

Additionally, commands that enumerate physical device properties are considered device-level functionality.

NOTE

Applications usually interface to Vulkan using a loader that implements only instance-level functionality, passing device-level functionality to implementations of the full Vulkan API on the system. In some circumstances, as these may be implemented independently, it is possible that the loader and device implementations on a given installation will support different versions. To allow for this and call out when it happens, the Vulkan specification enumerates device and instance level functionality separately - they have [independent version queries](#).

NOTE

Vulkan 1.0 initially specified new physical device enumeration functionality as instance-level, requiring it to be included in an instance extension. As the capabilities of device-level functionality require discovery via physical device enumeration, this led to the situation where many device extensions required an instance extension as well. To alleviate this extra work, [VK_KHR_get_physical_device_properties2](#) (and subsequently Vulkan 1.1) redefined device-level functionality to include physical device enumeration.

45.2. Core Versions

The Vulkan Specification is regularly updated with bug fixes and clarifications. Occasionally new functionality is added to the core and at some point it is expected that there will be a desire to perform a large, breaking change to the API. In order to indicate to developers how and when these changes are made to the specification, and to provide a way to identify each set of changes, the Vulkan API maintains a version number.

45.2.1. Version Numbers

The Vulkan version number comprises four parts indicating the variant, major, minor and patch version of the Vulkan API Specification.

The *variant* indicates the variant of the Vulkan API supported by the implementation. This is always 0 for the Vulkan API.

NOTE

A non-zero variant indicates the API is a variant of the Vulkan API and applications will typically need to be modified to run against it. The variant field was a later addition to the version number, added in version 1.2.175 of the Specification. As Vulkan uses variant 0, this change is fully backwards compatible with the previous version number format for Vulkan implementations. New version number macros have been added for this change and the old macros deprecated. For existing applications using the older format and macros, an implementation with non-zero variant will decode as a very high Vulkan version. The high version number should be detectable by applications performing suitable version checking.

The *major version* indicates a significant change in the API, which will encompass a wholly new version of the specification.

The *minor version* indicates the incorporation of new functionality into the core specification.

The *patch version* indicates bug fixes, clarifications, and language improvements have been incorporated into the specification.

Compatibility guarantees made about versions of the API sharing any of the same version numbers are documented in [Core Versions](#)

The version number is used in several places in the API. In each such use, the version numbers are packed into a 32-bit integer as follows:

- The variant is a 3-bit integer packed into bits 31-29.
- The major version is a 7-bit integer packed into bits 28-22.
- The minor version number is a 10-bit integer packed into bits 21-12.
- The patch version number is a 12-bit integer packed into bits 11-0.

VK_API_VERSION_VARIANT extracts the API variant number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_VARIANT(version) ((uint32_t)(version) >> 29U)
```

VK_API_VERSION_MAJOR extracts the API major version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MAJOR(version) (((uint32_t)(version) >> 22U) & 0x7FU)
```

VK_VERSION_MAJOR extracts the API major version number from a packed version number:

```
// Provided by VK_VERSION_1_0
// VK_VERSION_MAJOR is deprecated, but no reason was given in the API XML
// DEPRECATED: This define is deprecated. VK_API_VERSION_MAJOR should be used instead.
#define VK_VERSION_MAJOR(version) ((uint32_t)(version) >> 22U)
```

VK_API_VERSION_MINOR extracts the API minor version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

VK_VERSION_MINOR extracts the API minor version number from a packed version number:

```
// Provided by VK_VERSION_1_0
// VK_VERSION_MINOR is deprecated, but no reason was given in the API XML
// DEPRECATED: This define is deprecated. VK_API_VERSION_MINOR should be used instead.
#define VK_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

VK_API_VERSION_PATCH extracts the API patch version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

VK_VERSION_PATCH extracts the API patch version number from a packed version number:

```
// Provided by VK_VERSION_1_0
// VK_VERSION_PATCH is deprecated, but no reason was given in the API XML
// DEPRECATED: This define is deprecated. VK_API_VERSION_PATCH should be used instead.
#define VK_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

VK_MAKE_API_VERSION constructs an API version number.

```
// Provided by VK_VERSION_1_0
#define VK_MAKE_API_VERSION(variant, major, minor, patch) \
    (((uint32_t)(variant)) << 29U) | (((uint32_t)(major)) << 22U) | \
    (((uint32_t)(minor)) << 12U) | ((uint32_t)(patch)))
```

- **variant** is the variant number.
- **major** is the major version number.
- **minor** is the minor version number.
- **patch** is the patch version number.

VK_MAKE_VERSION constructs an API version number.

```
// Provided by VK_VERSION_1_0
// VK_MAKE_VERSION is deprecated, but no reason was given in the API XML
// DEPRECATED: This define is deprecated. VK_MAKE_API_VERSION should be used instead.
#define VK_MAKE_VERSION(major, minor, patch) \
    (((uint32_t)(major)) << 22U) | (((uint32_t)(minor)) << 12U) | \
    ((uint32_t)(patch)))
```

- **major** is the major version number.
- **minor** is the minor version number.
- **patch** is the patch version number.

VK_API_VERSION_1_0 returns the API version number for Vulkan 1.0.0.

```
// Provided by VK_VERSION_1_0
// Vulkan 1.0 version number
#define VK_API_VERSION_1_0 VK_MAKE_API_VERSION(0, 1, 0, 0) // Patch version should
always be set to 0
```

VK_API_VERSION_1_1 returns the API version number for Vulkan 1.1.0.

```
// Provided by VK_VERSION_1_1
// Vulkan 1.1 version number
#define VK_API_VERSION_1_1 VK_MAKE_API_VERSION(0, 1, 1, 0) // Patch version should
always be set to 0
```

VK_API_VERSION_1_2 returns the API version number for Vulkan 1.2.0.

```
// Provided by VK_VERSION_1_2
// Vulkan 1.2 version number
#define VK_API_VERSION_1_2 VK_MAKE_API_VERSION(0, 1, 2, 0) // Patch version should
always be set to 0
```

VK_API_VERSION_1_3 returns the API version number for Vulkan 1.3.0.

```
// Provided by VK_VERSION_1_3
// Vulkan 1.3 version number
#define VK_API_VERSION_1_3 VK_MAKE_API_VERSION(0, 1, 3, 0) // Patch version should
always be set to 0
```

45.2.2. Querying Version Support

The version of instance-level functionality can be queried by calling [vkEnumerateInstanceVersion](#).

The version of device-level functionality can be queried by calling [vkGetPhysicalDeviceProperties](#) or [vkGetPhysicalDeviceProperties2](#), and is returned in [VkPhysicalDeviceProperties::apiVersion](#), encoded as described in [Version Numbers](#).

45.3. Layers

When a layer is enabled, it inserts itself into the call chain for Vulkan commands the layer is interested in. Layers **can** be used for a variety of tasks that extend the base behavior of Vulkan beyond what is required by the specification - such as call logging, tracing, validation, or providing additional extensions.

NOTE For example, an implementation is not expected to check that the value of enums used by the application fall within allowed ranges. Instead, a validation layer would do those checks and flag issues. This avoids a performance penalty during production use of the application because those layers would not be enabled in production.

NOTE Vulkan layers **may** wrap object handles (i.e. return a different handle value to the application than that generated by the implementation). This is generally discouraged, as it increases the probability of incompatibilities with new extensions. The validation layers wrap handles in order to track the proper use and destruction of each object. See the [“Architecture of the Vulkan Loader Interfaces”](#) document for additional information.

To query the available layers, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceLayerProperties(
    uint32_t*           pPropertyCount,
    VkLayerProperties*   pProperties);
```

- [pPropertyCount](#) is a pointer to an integer related to the number of layer properties available or queried, as described below.
- [pProperties](#) is either `NULL` or a pointer to an array of [VkLayerProperties](#) structures.

If [pProperties](#) is `NULL`, then the number of layer properties available is returned in [pPropertyCount](#). Otherwise, [pPropertyCount](#) **must** point to a variable set by the application to the number of elements in the [pProperties](#) array, and on return the variable is overwritten with the number of structures actually written to [pProperties](#). If [pPropertyCount](#) is less than the number of layer properties available, at most [pPropertyCount](#) structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

The list of available layers may change at any time due to actions outside of the Vulkan implementation, so two calls to [vkEnumerateInstanceLayerProperties](#) with the same parameters **may** return different results, or retrieve different [pPropertyCount](#) values or [pProperties](#) contents. Once an instance has been created, the layers enabled for that instance will continue to be enabled and

valid for the lifetime of that instance, even if some of them become unavailable for future instances.

Valid Usage (Implicit)

- VUID-vkEnumerateInstanceLayerProperties-pPropertyCount-parameter
`pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateInstanceLayerProperties-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not NULL, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkLayerProperties` structures

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkLayerProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkLayerProperties {
    char        layerName[VK_MAX_EXTENSION_NAME_SIZE];
    uint32_t    specVersion;
    uint32_t    implementationVersion;
    char        description[VK_MAX_DESCRIPTION_SIZE];
} VkLayerProperties;
```

- `layerName` is an array of `VK_MAX_EXTENSION_NAME_SIZE` `char` containing a null-terminated UTF-8 string which is the name of the layer. Use this name in the `ppEnabledLayerNames` array passed in the `VkInstanceCreateInfo` structure to enable this layer for an instance.
- `specVersion` is the Vulkan version the layer was written to, encoded as described in [Version Numbers](#).
- `implementationVersion` is the version of this layer. It is an integer, increasing with backward compatible changes.
- `description` is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which provides additional details that **can** be used by the application to identify the layer.

`VK_MAX_EXTENSION_NAME_SIZE` is the length in `char` values of an array containing a layer or extension name string, as returned in `VkLayerProperties::layerName`, `VkExtensionProperties::extensionName`,

and other queries.

```
#define VK_MAX_EXTENSION_NAME_SIZE    256U
```

`VK_MAX_DESCRIPTION_SIZE` is the length in `char` values of an array containing a string with additional descriptive information about a query, as returned in `VkLayerProperties::description` and other queries.

```
#define VK_MAX_DESCRIPTION_SIZE    256U
```

To enable a layer, the name of the layer **should** be added to the `ppEnabledLayerNames` member of `VkInstanceCreateInfo` when creating a `VkInstance`.

Loader implementations **may** provide mechanisms outside the Vulkan API for enabling specific layers. Layers enabled through such a mechanism are *implicitly enabled*, while layers enabled by including the layer name in the `ppEnabledLayerNames` member of `VkInstanceCreateInfo` are *explicitly enabled*. Implicitly enabled layers are loaded before explicitly enabled layers, such that implicitly enabled layers are closer to the application, and explicitly enabled layers are closer to the driver. Except where otherwise specified, implicitly enabled and explicitly enabled layers differ only in the way they are enabled, and the order in which they are loaded. Explicitly enabling a layer that is implicitly enabled results in this layer being loaded as an implicitly enabled layer; it has no additional effect.

45.3.1. Device Layer Deprecation

Previous versions of this specification distinguished between instance and device layers. Instance layers were only able to intercept commands that operate on `VkInstance` and `VkPhysicalDevice`, except they were not able to intercept `vkCreateDevice`. Device layers were enabled for individual devices when they were created, and could only intercept commands operating on that device or its child objects.

Device-only layers are now deprecated, and this specification no longer distinguishes between instance and device layers. Layers are enabled during instance creation, and are able to intercept all commands operating on that instance or any of its child objects. At the time of deprecation there were no known device-only layers and no compelling reason to create one.

In order to maintain compatibility with implementations released prior to device-layer deprecation, applications **should** still enumerate and enable device layers. The behavior of `vkEnumerateDeviceLayerProperties` and valid usage of the `ppEnabledLayerNames` member of `VkDeviceCreateInfo` maximizes compatibility with applications written to work with the previous requirements.

To enumerate device layers, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceLayerProperties(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pPropertyCount,
    VkLayerProperties*         pProperties);
```

- `physicalDevice` is the physical device that will be queried.
- `pPropertyCount` is a pointer to an integer related to the number of layer properties available or queried.
- `pProperties` is either `NULL` or a pointer to an array of `VkLayerProperties` structures.

If `pProperties` is `NULL`, then the number of layer properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of layer properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

The list of layers enumerated by `vkEnumerateDeviceLayerProperties` **must** be exactly the sequence of layers enabled for the instance. The members of `VkLayerProperties` for each enumerated layer **must** be the same as the properties when the layer was enumerated by `vkEnumerateInstanceLayerProperties`.

NOTE

Due to platform details on Android, `vkEnumerateDeviceLayerProperties` may be called with `physicalDevice` equal to `NULL` during layer discovery. This behavior will only be observed by layer implementations, and not the underlying Vulkan driver.

Valid Usage (Implicit)

- VUID-vkEnumerateDeviceLayerProperties-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkEnumerateDeviceLayerProperties-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateDeviceLayerProperties-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkLayerProperties` structures

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `ppEnabledLayerNames` and `enabledLayerCount` members of `VkDeviceCreateInfo` are deprecated and their values **must** be ignored by implementations. However, for compatibility, only an empty list of layers or a list that exactly matches the sequence enabled at instance creation time are valid, and validation layers **should** issue diagnostics for other cases.

Regardless of the enabled layer list provided in `VkDeviceCreateInfo`, the sequence of layers active for a device will be exactly the sequence of layers enabled when the parent instance was created.

45.4. Extensions

Extensions **may** define new Vulkan commands, structures, and enumerants. For compilation purposes, the interfaces defined by registered extensions, including new structures and enumerants as well as function pointer types for new commands, are defined in the Khronos-supplied `vulkan_core.h` together with the core API. However, commands defined by extensions **may** not be available for static linking - in which case function pointers to these commands **should** be queried at runtime as described in [Command Function Pointers](#). Extensions **may** be provided by layers as well as by a Vulkan implementation.

Because extensions **may** extend or change the behavior of the Vulkan API, extension authors **should** add support for their extensions to the Khronos validation layers. This is especially important for new commands whose parameters have been wrapped by the validation layers. See the [“Architecture of the Vulkan Loader Interfaces”](#) document for additional information.

NOTE

To enable an instance extension, the name of the extension **can** be added to the `ppEnabledExtensionNames` member of `VkInstanceCreateInfo` when creating a `VkInstance`.

To enable a device extension, the name of the extension **can** be added to the `ppEnabledExtensionNames` member of `VkDeviceCreateInfo` when creating a `VkDevice`.

Physical-Device-Level functionality does not have any enabling mechanism and **can** be used as long as the `VkPhysicalDevice` supports the device extension as determined by `vkEnumerateDeviceExtensionProperties`.

Enabling an extension (with no further use of that extension) does not change the behavior of functionality exposed by the core Vulkan API or any other extension, other than making valid the use of the commands, enums and structures defined by that extension.

Valid Usage sections for individual commands and structures do not currently contain which extensions have to be enabled in order to make their use valid, although they might do so in the future. It is defined only in the [Valid Usage for Extensions](#) section.

45.4.1. Instance Extensions

Instance extensions add new [instance-level functionality](#) to the API, outside of the core specification.

To query the available instance extensions, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceExtensionProperties(
    const char*          pLayerName,
    uint32_t*            pPropertyCount,
    VkExtensionProperties* pProperties);
```

- `pLayerName` is either `NULL` or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- `pPropertyCount` is a pointer to an integer related to the number of extension properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of [VkExtensionProperties](#) structures.

When `pLayerName` parameter is `NULL`, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When `pLayerName` is the name of a layer, the instance extensions provided by that layer are returned.

If `pProperties` is `NULL`, then the number of extensions properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of extension properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

Because the list of available layers may change externally between calls to [vkEnumerateInstanceExtensionProperties](#), two calls may retrieve different results if a `pLayerName` is available in one call but not in another. The extensions supported by a layer may also change between two calls, e.g. if the layer implementation is replaced by a different version between those calls.

Implementations **must** not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.

Valid Usage (Implicit)

- VUID-vkEnumerateInstanceExtensionProperties-pLayerName-parameter
If `pLayerName` is not `NULL`, `pLayerName` **must** be a null-terminated UTF-8 string
- VUID-vkEnumerateInstanceExtensionProperties-pPropertyCount-parameter
`pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateInstanceExtensionProperties-pProperties-parameter

If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkExtensionProperties` structures

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_LAYER_NOT_PRESENT`

45.4.2. Device Extensions

Device extensions add new [device-level functionality](#) to the API, outside of the core specification.

To query the extensions available to a given physical device, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceExtensionProperties(
    VkPhysicalDevice          physicalDevice,
    const char*               pLayerName,
    uint32_t*                 pPropertyCount,
    VkExtensionProperties*     pProperties);
```

- `physicalDevice` is the physical device that will be queried.
- `pLayerName` is either `NULL` or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- `pPropertyCount` is a pointer to an integer related to the number of extension properties available or queried, and is treated in the same fashion as the `vkEnumerateInstanceExtensionProperties::pPropertyCount` parameter.
- `pProperties` is either `NULL` or a pointer to an array of `VkExtensionProperties` structures.

When `pLayerName` parameter is `NULL`, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When `pLayerName` is the name of a layer, the device extensions provided by that layer are returned.

Implementations **must** not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.

If `VK_KHR_ray_tracing_pipeline` is advertised as supported by this query, `VK_KHR_pipeline_library` **must** also be supported.

Implementations claiming support for the [Roadmap 2022](#) profile **must** advertise the [VK_KHR_global_priority](#) extension in [pProperties](#).

Implementations claiming support for the [Roadmap 2024](#) profile **must** advertise the following extensions in [pProperties](#):

- [VK_KHR_dynamic_rendering_local_read](#)
- [VK_KHR_load_store_op_none](#)
- [VK_KHR_shader_quad_control](#)
- [VK_KHR_shader_maximal_reconvergence](#)
- [VK_KHR_shader_subgroup_uniform_control_flow](#)
- [VK_KHR_shader_subgroup_rotate](#)
- [VK_KHR_shader_float_controls2](#)
- [VK_KHR_shader_expect_assume](#)
- [VK_KHR_line_rasterization](#)
- [VK_KHR_vertex_attribute_divisor](#)
- [VK_KHR_index_type_uint8](#)
- [VK_KHR_map_memory2](#)
- [VK_KHR_maintenance5](#)
- [VK_KHR_push_descriptor](#)

NOTE

Due to platform details on Android, [vkEnumerateDeviceExtensionProperties](#) may be called with [physicalDevice](#) equal to [NULL](#) during layer discovery. This behavior will only be observed by layer implementations, and not the underlying Vulkan driver.

Valid Usage (Implicit)

- VUID-vkEnumerateDeviceExtensionProperties-physicalDevice-parameter [physicalDevice](#) **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkEnumerateDeviceExtensionProperties-pLayerName-parameter
If [pLayerName](#) is not [NULL](#), [pLayerName](#) **must** be a null-terminated UTF-8 string
- VUID-vkEnumerateDeviceExtensionProperties-pPropertyCount-parameter
[pPropertyCount](#) **must** be a valid pointer to a [uint32_t](#) value
- VUID-vkEnumerateDeviceExtensionProperties-pProperties-parameter
If the value referenced by [pPropertyCount](#) is not 0, and [pProperties](#) is not [NULL](#), [pProperties](#) **must** be a valid pointer to an array of [pPropertyCount](#) [VkExtensionProperties](#) structures

Return Codes

Success

- `VK_SUCCESS`
- `VK_INCOMPLETE`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_LAYER_NOT_PRESENT`

The `VkExtensionProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkExtensionProperties {
    char        extensionName[VK_MAX_EXTENSION_NAME_SIZE];
    uint32_t    specVersion;
} VkExtensionProperties;
```

- `extensionName` is an array of `VK_MAX_EXTENSION_NAME_SIZE` `char` containing a null-terminated UTF-8 string which is the name of the extension.
- `specVersion` is the version of this extension. It is an integer, incremented with backward compatible changes.

Accessing Device-Level Functionality From a `VkPhysicalDevice`

Some device extensions also add support for physical-device-level functionality. Physical-device-level functionality **can** be used, if the required extension is supported as advertised by `vkEnumerateDeviceExtensionProperties` for a given `VkPhysicalDevice`.

Accessing Device-Level Functionality From a `VkDevice`

For commands that are dispatched from a `VkDevice`, or from a child object of a `VkDevice`, device extensions **must** be enabled in `vkCreateDevice`.

45.5. Extension Dependencies

Some extensions are dependent on other extensions, or on specific core API versions, to function. To enable extensions with dependencies, any *required extensions* **must** also be enabled through the same API mechanisms when creating an instance with `vkCreateInstance` or a device with `vkCreateDevice`. Each extension which has such dependencies documents them in the [appendix summarizing that extension](#).

If an extension is supported (as queried by `vkEnumerateInstanceExtensionProperties` or `vkEnumerateDeviceExtensionProperties`), then *required extensions* of that extension **must** also be

supported for the same instance or physical device.

Any device extension that has an instance extension dependency that is not enabled by [vkCreateInstance](#) is considered to be unsupported, hence it **must** not be returned by [vkEnumerateDeviceExtensionProperties](#) for any [VkPhysicalDevice](#) child of the instance. Instance extensions do not have dependencies on device extensions.

If a required extension has been [promoted](#) to another extension or to a core API version, then as a *general* rule, the dependency is also satisfied by the promoted extension or core version. This will be true so long as any features required by the original extension are also required or enabled by the promoted extension or core version. However, in some cases an extension is promoted while making some of its features optional in the promoted extension or core version. In this case, the dependency **may** not be satisfied. The only way to be certain is to look at the descriptions of the original dependency and the promoted version in the [Layers & Extensions](#) and [Core Revisions](#) appendices.

NOTE

There is metadata in [vk.xml](#) describing some aspects of promotion, especially [requires](#), [promotedto](#) and [deprecatedby](#) attributes of `<extension>` tags. However, the metadata does not yet fully describe this scenario. In the future, we may extend the XML schema to describe the full set of extensions and versions satisfying a dependency. As discussed in more detail for [Promotion](#) below, when an extension is promoted it does not mean that a mechanical substitution of an extension API by the corresponding promoted API will work in exactly the same fashion; be supported at runtime; or even exist.

45.6. Compatibility Guarantees (Informative)

This section is marked as informal as there is no binding responsibility on implementations of the Vulkan API - these guarantees are however a contract between the Vulkan Working Group and developers using this Specification.

45.6.1. Core Versions

Each of the [major](#), [minor](#), and [patch versions](#) of the Vulkan specification provide different compatibility guarantees.

Patch Versions

A difference in the patch version indicates that a set of bug fixes or clarifications have been made to the Specification. Informative enums returned by Vulkan commands that will not affect the runtime behavior of a valid application may be added in a patch version (e.g. [VkVendorId](#)).

The specification's patch version is strictly increasing for a given major version of the specification; any change to a specification as described above will result in the patch version being increased by 1. Patch versions are applied to all minor versions, even if a given minor version is not affected by the provoking change.

Specifications with different patch versions but the same major and minor version are *fully*

compatible with each other - such that a valid application written against one will work with an implementation of another.

NOTE

If a patch version includes a bug fix or clarification that could have a significant impact on developer expectations, these will be highlighted in the change log. Generally the Vulkan Working Group tries to avoid these kinds of changes, instead fixing them in either an extension or core version.

Minor Versions

Changes in the minor version of the specification indicate that new functionality has been added to the core specification. This will usually include new interfaces in the header, and **may** also include behavior changes and bug fixes. Core functionality **may** be deprecated in a minor version, but will not be obsoleted or removed.

The specification's minor version is strictly increasing for a given major version of the specification; any change to a specification as described above will result in the minor version being increased by 1. Changes that can be accommodated in a patch version will not increase the minor version.

Specifications with a lower minor version are *backwards compatible* with an implementation of a specification with a higher minor version for core functionality and extensions issued with the KHR vendor tag. Vendor and multi-vendor extensions are not guaranteed to remain functional across minor versions, though in general they are with few exceptions - see [Obsolescence](#) for more information.

Major Versions

A difference in the major version of specifications indicates a large set of changes which will likely include interface changes, behavioral changes, removal of [deprecated functionality](#), and the modification, addition, or replacement of other functionality.

The specification's major version is monotonically increasing; any change to the specification as described above will result in the major version being increased. Changes that can be accommodated in a patch or minor version will not increase the major version.

The Vulkan Working Group intends to only issue a new major version of the Specification in order to realize significant improvements to the Vulkan API that will necessarily require breaking compatibility.

A new major version will likely include a wholly new version of the specification to be issued - which could include an overhaul of the versioning semantics for the minor and patch versions. The patch and minor versions of a specification are therefore not meaningful across major versions. If a major version of the specification includes similar versioning semantics, it is expected that the patch and the minor version will be reset to 0 for that major version.

45.6.2. Extensions

A KHR extension **must** be able to be enabled alongside any other KHR extension, and for any minor

or patch version of the core Specification beyond the minimum version it requires. A multi-vendor extension **should** be able to be enabled alongside any KHR extension or other multi-vendor extension, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension **should** be able to be enabled alongside any KHR extension, multi-vendor extension, or other vendor extension from the same vendor, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension **may** be able to be enabled alongside vendor extensions from another vendor.

The one other exception to this is if a vendor or multi-vendor extension is [made obsolete](#) by either a core version or another extension, which will be highlighted in the [extension appendix](#).

Promotion

Extensions, or features of an extension, **may** be promoted to a new [core version of the API](#), or a newer extension which an equal or greater number of implementors are in favor of.

When extension functionality is promoted, minor changes **may** be introduced, limited to the following:

- Naming
- Non-intrusive parameter changes
- [Feature advertisement/enablement](#)
- Combining structure parameters into larger structures
- Author ID suffixes changed or removed

NOTE

If extension functionality is promoted, there is no guarantee of direct compatibility, however it should require little effort to port code from the original feature to the promoted one.

The Vulkan Working Group endeavors to ensure that larger changes are marked as either [deprecated](#) or [obsoleted](#) as appropriate, and can do so retroactively if necessary.

Extensions that are promoted are listed as being promoted in their extension appendices, with reference to where they were promoted to.

When an extension is promoted, any backwards compatibility aliases which exist in the extension will **not** be promoted.

NOTE

As a hypothetical example, if the [VK_KHR_surface](#) extension were promoted to part of a future core version, the [VK_COLOR_SPACE_SRGB_NONLINEAR_KHR](#) token defined by that extension would be promoted to [VK_COLOR_SPACE_SRGB_NONLINEAR](#). However, the [VK_COLORSPACE_SRGB_NONLINEAR_KHR](#) token aliases [VK_COLOR_SPACE_SRGB_NONLINEAR_KHR](#). The [VK_COLORSPACE_SRGB_NONLINEAR_KHR](#) would not be promoted, because it is a backwards compatibility alias that exists only due to a naming mistake when the extension was initially published.

Deprecation

Extensions **may** be marked as deprecated when the intended use cases either become irrelevant or can be solved in other ways. Generally, a new feature will become available to solve the use case in another extension or core version of the API, but it is not guaranteed.

NOTE

Features that are intended to replace deprecated functionality have no guarantees of compatibility, and applications may require drastic modification in order to make use of the new features.

Extensions that are deprecated are listed as being deprecated in their extension appendices, with an explanation of the deprecation and any features that are relevant.

Obsolescence

Occasionally, an extension will be marked as obsolete if a new version of the core API or a new extension is fundamentally incompatible with it. An obsoleted extension **must** not be used with the extension or core version that obsoleted it.

Extensions that are obsoleted are listed as being obsoleted in their extension appendices, with reference to what they were obsoleted by.

Aliases

When an extension is promoted or deprecated by a newer feature, some or all of its functionality **may** be replicated into the newer feature. Rather than duplication of all the documentation and definitions, the specification instead identifies the identical commands and types as *aliases* of one another. Each alias is mentioned together with the definition it aliases, with the older aliases marked as “equivalents”. Each alias of the same command has identical behavior, and each alias of the same type has identical meaning - they can be used interchangeably in an application with no compatibility issues.

NOTE

For promoted types, the aliased extension type is semantically identical to the new core type. The C99 headers simply `typedef` the older aliases to the promoted types.

For promoted command aliases, however, there are two separate command definitions, due to the fact that the C99 ABI has no way to alias command definitions without resorting to macros. Calling either command will produce identical behavior within the bounds of the specification, and should still invoke the same path in the implementation. Debug tools may use separate commands with different debug behavior; to write the appropriate command name to an output log, for instance.

Special Use Extensions

Some extensions exist only to support a specific purpose or specific class of application. These are referred to as “special use extensions”. Use of these extensions in applications not meeting the special use criteria is not recommended.

Special use cases are restricted, and only those defined below are used to describe extensions:

Table 63. Extension Special Use Cases

Special Use	XML Tag	Full Description
CAD support	cadsupport	Extension is intended to support specialized functionality used by CAD/CAM applications.
D3D support	d3demulation	Extension is intended to support D3D emulation layers, and applications ported from D3D, by adding functionality specific to D3D.
Developer tools	devtools	Extension is intended to support developer tools such as capture-replay libraries.
Debugging tools	debugging	Extension is intended for use by applications when debugging.
OpenGL / ES support	glemulation	Extension is intended to support OpenGL and/or OpenGL ES emulation layers, and applications ported from those APIs, by adding functionality specific to those APIs.

Special use extensions are identified in the metadata for each such extension in the [Layers & Extensions](#) appendix, using the name in the “Special Use” column above.

Special use extensions are also identified in `vk.xml` with the short name in “XML Tag” column above, as described in the “API Extensions (`extension` tag)” section of the [registry schema documentation](#).

Chapter 46. Features

Features advertise additional functionality which **can** be enabled in the API. If a feature is *supported* by a physical device, it **must** be *enabled* when creating a [VkDevice](#) in order to use its associated functionality with that [VkDevice](#). If a feature is *unsupported*, that functionality **cannot** be used with that [VkDevice](#).

NOTE

Features are reported via the basic [VkPhysicalDeviceFeatures](#) structure, as well as the extensible structure [VkPhysicalDeviceFeatures2](#), which was added in the [VK_KHR_get_physical_device_properties2](#) extension and included in Vulkan 1.1. When new features are added in future Vulkan versions or extensions, each extension **should** introduce one new feature structure, if needed. This structure **can** be added to the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure.

For convenience, new core versions of Vulkan **may** introduce new unified feature structures for features promoted from extensions. At the same time, the extension's original feature structure (if any) is also promoted to the core API, and is an alias of the extension's structure. This results in multiple names for the same feature: in the original extension's feature structure and the promoted structure alias, in the unified feature structure. When a feature was implicitly supported and enabled in the extension, but an explicit name was added during promotion, then the extension itself acts as an alias for the feature as listed in the table below.

All aliases of the same feature in the core API **must** be reported consistently: either all **must** be reported as supported, or none of them. When a promoted extension is available, any corresponding feature aliases **must** be supported.

Table 64. Extension Feature Aliases

Extension	Feature(s)
VK_KHR_shader_draw_parameters	shaderDrawParameters
VK_KHR_draw_indirect_count	drawIndirectCount
VK_KHR_sampler_mirror_clamp_to_edge	samplerMirrorClampToEdge
VK_EXT_descriptor_indexing	descriptorIndexing
VK_EXT_sampler_filter_minmax	samplerFilterMinmax
VK_EXT_shader_viewport_index_layer	shaderOutputViewportIndex , shaderOutputLayer

To query supported features, call:

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceFeatures(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceFeatures* pFeatures);
```

- [physicalDevice](#) is the physical device from which to query the supported features.
- [pFeatures](#) is a pointer to a [VkPhysicalDeviceFeatures](#) structure in which the physical device features are returned. For each feature, a value of [VK_TRUE](#) specifies that the feature is supported

on this physical device, and `VK_FALSE` specifies that the feature is not supported.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFeatures-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceFeatures-pFeatures-parameter `pFeatures` **must** be a valid pointer to a `VkPhysicalDeviceFeatures` structure

Fine-grained features used by a logical device **must** be enabled at `VkDevice` creation time. If a feature is enabled that the physical device does not support, `VkDevice` creation will fail and return `VK_ERROR_FEATURE_NOT_PRESENT`.

The fine-grained features are enabled by passing a pointer to the `VkPhysicalDeviceFeatures` structure via the `pEnabledFeatures` member of the `VkDeviceCreateInfo` structure that is passed into the `vkCreateDevice` call. If a member of `pEnabledFeatures` is `VK_TRUE` or `VK_FALSE`, then the device will be created with the indicated feature enabled or disabled, respectively. Features **can** also be enabled by using the `VkPhysicalDeviceFeatures2` structure.

If an application wishes to enable all features supported by a device, it **can** simply pass in the `VkPhysicalDeviceFeatures` structure that was previously returned by `vkGetPhysicalDeviceFeatures`. To disable an individual feature, the application **can** set the desired member to `VK_FALSE` in the same structure. Setting `pEnabledFeatures` to `NULL` and not including a `VkPhysicalDeviceFeatures2` in the `pNext` chain of `VkDeviceCreateInfo` is equivalent to setting all members of the structure to `VK_FALSE`.

NOTE

Some features, such as `robustBufferAccess`, **may** incur a runtime performance cost. Application writers **should** carefully consider the implications of enabling all supported features.

To query supported features defined by the core or extensions, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceFeatures2(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceFeatures2* pFeatures);
```

or the equivalent command

```
// Provided by VK_KHR_get_physical_device_properties2
void vkGetPhysicalDeviceFeatures2KHR(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceFeatures2* pFeatures);
```

- `physicalDevice` is the physical device from which to query the supported features.

- `pFeatures` is a pointer to a `VkPhysicalDeviceFeatures2` structure in which the physical device features are returned.

Each structure in `pFeatures` and its `pNext` chain contains members corresponding to fine-grained features. Each structure in `pFeatures` and its `pNext` chain contains `VkBool32` members corresponding to fine-grained features. Each such member is returned with a `VK_TRUE` value indicating that feature is supported on this physical device, or a `VK_FALSE` value indicating it is unsupported.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFeatures2-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceFeatures2-pFeatures-parameter
`pFeatures` **must** be a valid pointer to a `VkPhysicalDeviceFeatures2` structure

The `VkPhysicalDeviceFeatures2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceFeatures2 {
    VkStructureType    sType;
    void*              pNext;
    VkPhysicalDeviceFeatures  features;
} VkPhysicalDeviceFeatures2;
```

or the equivalent

```
// Provided by VK_KHR_get_physical_device_properties2
typedef VkPhysicalDeviceFeatures2 VkPhysicalDeviceFeatures2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `features` is a `VkPhysicalDeviceFeatures` structure describing the fine-grained features of the Vulkan 1.0 API.

The `pNext` chain of this structure is used to extend the structure with features defined by extensions. This structure **can** be used in `vkGetPhysicalDeviceFeatures2` or **can** be included in the `pNext` chain of a `VkDeviceCreateInfo` structure, in which case it controls which features are enabled on the device in lieu of `pEnabledFeatures`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFeatures2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2`

The `VkPhysicalDeviceFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceFeatures {
    VkBool32    robustBufferAccess;
    VkBool32    fullDrawIndexUint32;
    VkBool32    imageCubeArray;
    VkBool32    independentBlend;
    VkBool32    geometryShader;
    VkBool32    tessellationShader;
    VkBool32    sampleRateShading;
    VkBool32    dualSrcBlend;
    VkBool32    logicOp;
    VkBool32    multiDrawIndirect;
    VkBool32    drawIndirectFirstInstance;
    VkBool32    depthClamp;
    VkBool32    depthBiasClamp;
    VkBool32    fillModeNonSolid;
    VkBool32    depthBounds;
    VkBool32    wideLines;
    VkBool32    largePoints;
    VkBool32    alphaToOne;
    VkBool32    multiViewport;
    VkBool32    samplerAnisotropy;
    VkBool32    textureCompressionETC2;
    VkBool32    textureCompressionASTC_LDR;
    VkBool32    textureCompressionBC;
    VkBool32    occlusionQueryPrecise;
    VkBool32    pipelineStatisticsQuery;
    VkBool32    vertexPipelineStoresAndAtomics;
    VkBool32    fragmentStoresAndAtomics;
    VkBool32    shaderTessellationAndGeometryPointSize;
    VkBool32    shaderImageGatherExtended;
    VkBool32    shaderStorageImageExtendedFormats;
    VkBool32    shaderStorageImageMultisample;
    VkBool32    shaderStorageImageReadWithoutFormat;
    VkBool32    shaderStorageImageWriteWithoutFormat;
    VkBool32    shaderUniformBufferArrayDynamicIndexing;
    VkBool32    shaderSampledImageArrayDynamicIndexing;
    VkBool32    shaderStorageBufferArrayDynamicIndexing;
    VkBool32    shaderStorageImageArrayDynamicIndexing;
    VkBool32    shaderClipDistance;
    VkBool32    shaderCullDistance;
    VkBool32    shaderFloat64;
    VkBool32    shaderInt64;
    VkBool32    shaderInt16;
    VkBool32    shaderResourceResidency;
    VkBool32    shaderResourceMinLod;
    VkBool32    sparseBinding;
    VkBool32    sparseResidencyBuffer;
```

```

VkBool32    sparseResidencyImage2D;
VkBool32    sparseResidencyImage3D;
VkBool32    sparseResidency2Samples;
VkBool32    sparseResidency4Samples;
VkBool32    sparseResidency8Samples;
VkBool32    sparseResidency16Samples;
VkBool32    sparseResidencyAliased;
VkBool32    variableMultisampleRate;
VkBool32    inheritedQueries;
} VkPhysicalDeviceFeatures;

```

This structure describes the following features:

- **robustBufferAccess** specifies that accesses to buffers are bounds-checked against the range of the buffer descriptor (as determined by **VkDescriptorBufferInfo::range**, **VkBufferViewCreateInfo::range**, or the size of the buffer). Out of bounds accesses **must** not cause application termination, and the effects of shader loads, stores, and atomics **must** conform to an implementation-dependent behavior as described below.

- A buffer access is considered to be out of bounds if any of the following are true:

- The pointer was formed by **OpImageTexelPointer** and the coordinate is less than zero or greater than or equal to the number of whole elements in the bound range.
- The pointer was not formed by **OpImageTexelPointer** and the object pointed to is not wholly contained within the bound range. This includes accesses performed via *variable pointers* where the buffer descriptor being accessed cannot be statically determined. Uninitialized pointers and pointers equal to **OpConstantNull** are treated as pointing to a zero-sized object, so all accesses through such pointers are considered to be out of bounds. Buffer accesses through buffer device addresses are not bounds-checked.
- If the **VkPhysicalDeviceCooperativeMatrixFeaturesNV::cooperativeMatrixRobustBufferAccess** feature is not enabled, then accesses using **OpCooperativeMatrixLoadNV** and **OpCooperativeMatrixStoreNV** **may** not be bounds-checked.
- If the **VkPhysicalDeviceCooperativeMatrixFeaturesKHR::cooperativeMatrixRobustBufferAccess** feature is not enabled, then accesses using **OpCooperativeMatrixLoadKHR** and **OpCooperativeMatrixStoreKHR** **may** not be bounds-checked.

NOTE

If a SPIR-V **OpLoad** instruction loads a structure and the tail end of the structure is out of bounds, then all members of the structure are considered out of bounds even if the members at the end are not statically used.

- If **robustBufferAccess2** is not enabled and any buffer access is determined to be out of bounds, then any other access of the same type (load, store, or atomic) to the same buffer that accesses an address less than 16 bytes away from the out of bounds address **may** also be considered out of bounds.
- If the access is a load that reads from the same memory locations as a prior store in the same shader invocation, with no other intervening accesses to the same memory

locations in that shader invocation, then the result of the load **may** be the value stored by the store instruction, even if the access is out of bounds. If the load is **Volatile**, then an out of bounds load **must** return the appropriate out of bounds value.

- Accesses to descriptors written with a **VK_NULL_HANDLE** resource or view are not considered to be out of bounds. Instead, each type of descriptor access defines a specific behavior for accesses to a null descriptor.
- Out-of-bounds buffer loads will return any of the following values:
 - If the access is to a uniform buffer and **robustBufferAccess2** is enabled, loads of offsets between the end of the descriptor range and the end of the descriptor range rounded up to a multiple of **robustUniformBufferAccessSizeAlignment** bytes **must** return either zero values or the contents of the memory at the offset being loaded. Loads of offsets past the descriptor range rounded up to a multiple of **robustUniformBufferAccessSizeAlignment** bytes **must** return zero values.
 - If the access is to a storage buffer and **robustBufferAccess2** is enabled, loads of offsets between the end of the descriptor range and the end of the descriptor range rounded up to a multiple of **robustStorageBufferAccessSizeAlignment** bytes **must** return either zero values or the contents of the memory at the offset being loaded. Loads of offsets past the descriptor range rounded up to a multiple of **robustStorageBufferAccessSizeAlignment** bytes **must** return zero values. Similarly, stores to addresses between the end of the descriptor range and the end of the descriptor range rounded up to a multiple of **robustStorageBufferAccessSizeAlignment** bytes **may** be discarded.
 - Non-atomic accesses to storage buffers that are a multiple of 32 bits **may** be decomposed into 32-bit accesses that are individually bounds-checked.
 - If the access is to an index buffer and **robustBufferAccess2** is enabled, zero values **must** be returned.
 - If the access is to a uniform texel buffer or storage texel buffer and **robustBufferAccess2** is enabled, zero values **must** be returned, and then **Conversion to RGBA** is applied based on the buffer view's format.
 - Values from anywhere within the memory range(s) bound to the buffer (possibly including bytes of memory past the end of the buffer, up to the end of the bound range).
 - Zero values, or (0,0,0,x) vectors for vector reads where x is a valid value represented in the type of the vector components and **may** be any of:
 - 0, 1, or the maximum representable positive integer value, for signed or unsigned integer components
 - 0.0 or 1.0, for floating-point components
- Out-of-bounds writes **may** modify values within the memory range(s) bound to the buffer, but **must** not modify any other memory.
 - If **robustBufferAccess2** is enabled, out of bounds writes **must** not modify any memory.
- Out-of-bounds atomics **may** modify values within the memory range(s) bound to the buffer, but **must** not modify any other memory, and return an undefined value.
 - If **robustBufferAccess2** is enabled, out of bounds atomics **must** not modify any memory, and return an undefined value.

- If `robustBufferAccess2` is disabled, vertex input attributes are considered out of bounds if the offset of the attribute in the bound vertex buffer range plus the size of the attribute is greater than either:

- `vertexBufferRangeSize`, if `bindingStride == 0`; or
- `(vertexBufferRangeSize - (vertexBufferRangeSize % bindingStride))`

where `vertexBufferRangeSize` is the byte size of the memory range bound to the vertex buffer binding and `bindingStride` is the byte stride of the corresponding vertex input binding. Further, if any vertex input attribute using a specific vertex input binding is out of bounds, then all vertex input attributes using that vertex input binding for that vertex shader invocation are considered out of bounds.

- If a vertex input attribute is out of bounds, it will be assigned one of the following values:
 - Values from anywhere within the memory range(s) bound to the buffer, converted according to the format of the attribute.
 - Zero values, format converted according to the format of the attribute.
 - Zero values, or (0,0,0,x) vectors, as described above.

- If `robustBufferAccess2` is enabled, vertex input attributes are considered out of bounds if the offset of the attribute in the bound vertex buffer range plus the size of the attribute is greater than the byte size of the memory range bound to the vertex buffer binding.

- If a vertex input attribute is out of bounds, the `raw data` extracted are zero values, and missing G, B, or A components are `filled with (0,0,1)`.

- If `robustBufferAccess` is not enabled, applications **must** not perform out of bounds accesses except under the conditions enabled by the `pipelineRobustness` feature .

- `fullDrawIndexUint32` specifies the full 32-bit range of indices is supported for indexed draw calls when using a `VkIndexType` of `VK_INDEX_TYPE_UINT32`. `maxDrawIndexedIndexValue` is the maximum index value that **may** be used (aside from the primitive restart index, which is always $2^{32}-1$ when the `VkIndexType` is `VK_INDEX_TYPE_UINT32`). If this feature is supported, `maxDrawIndexedIndexValue` **must** be $2^{32}-1$; otherwise it **must** be no smaller than $2^{24}-1$. See `maxDrawIndexedIndexValue`.
- `imageCubeArray` specifies whether image views with a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY` **can** be created, and that the corresponding `SampledCubeArray` and `ImageCubeArray` SPIR-V capabilities **can** be used in shader code.
- `independentBlend` specifies whether the `VkPipelineColorBlendAttachmentState` settings are controlled independently per-attachment. If this feature is not enabled, the `VkPipelineColorBlendAttachmentState` settings for all color attachments **must** be identical. Otherwise, a different `VkPipelineColorBlendAttachmentState` **can** be provided for each bound color attachment.
- `geometryShader` specifies whether geometry shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_GEOMETRY_BIT` and `VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT` enum values **must** not be used. This also specifies whether shader modules **can** declare the `Geometry` capability.
- `tessellationShader` specifies whether tessellation control and evaluation shaders are supported.

If this feature is not enabled, the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`, `VK_PIPELINE_STAGE_TESSELLATION_CONTROL_SHADER_BIT`, `VK_PIPELINE_STAGE_TESSELLATION_EVALUATION_SHADER_BIT`, and `VK_STRUCTURE_TYPE_PIPELINE_TESSELLATION_STATE_CREATE_INFO` enum values **must** not be used. This also specifies whether shader modules **can** declare the `Tessellation` capability.

- `sampleRateShading` specifies whether `Sample Shading` and multisample interpolation are supported. If this feature is not enabled, the `sampleShadingEnable` member of the `VkPipelineMultisampleStateCreateInfo` structure **must** be `VK_FALSE` and the `minSampleShading` member is ignored. This also specifies whether shader modules **can** declare the `SampleRateShading` capability.
- `dualSrcBlend` specifies whether blend operations which take two sources are supported. If this feature is not enabled, the `VK_BLEND_FACTOR_SRC1_COLOR`, `VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR`, `VK_BLEND_FACTOR_SRC1_ALPHA`, and `VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA` enum values **must** not be used as source or destination blending factors. See [Dual-Source Blending](#).
- `logicOp` specifies whether logic operations are supported. If this feature is not enabled, the `logicOpEnable` member of the `VkPipelineColorBlendStateCreateInfo` structure **must** be `VK_FALSE`, and the `logicOp` member is ignored.
- `multiDrawIndirect` specifies whether multiple draw indirect is supported. If this feature is not enabled, the `drawCount` parameter to the `vkCmdDrawIndirect` and `vkCmdDrawIndexedIndirect` commands **must** be 0 or 1. The `maxDrawIndirectCount` member of the `VkPhysicalDeviceLimits` structure **must** also be 1 if this feature is not supported. See `maxDrawIndirectCount`.
- `drawIndirectFirstInstance` specifies whether indirect drawing calls support the `firstInstance` parameter. If this feature is not enabled, the `firstInstance` member of all `VkDrawIndirectCommand` and `VkDrawIndexedIndirectCommand` structures that are provided to the `vkCmdDrawIndirect` and `vkCmdDrawIndexedIndirect` commands **must** be 0.
- `depthClamp` specifies whether depth clamping is supported. If this feature is not enabled, the `depthClampEnable` member of the `VkPipelineRasterizationStateCreateInfo` structure **must** be `VK_FALSE`. Otherwise, setting `depthClampEnable` to `VK_TRUE` will enable depth clamping.
- `depthBiasClamp` specifies whether depth bias clamping is supported. If this feature is not enabled, the `depthBiasClamp` member of the `VkPipelineRasterizationStateCreateInfo` structure **must** be 0.0 unless the `VK_DYNAMIC_STATE_DEPTH_BIAS` dynamic state is enabled, in which case the `depthBiasClamp` parameter to `vkCmdSetDepthBias` **must** be 0.0.
- `fillModeNonSolid` specifies whether point and wireframe fill modes are supported. If this feature is not enabled, the `VK_POLYGON_MODE_POINT` and `VK_POLYGON_MODE_LINE` enum values **must** not be used.
- `depthBounds` specifies whether depth bounds tests are supported. If this feature is not enabled, the `depthBoundsTestEnable` member of the `VkPipelineDepthStencilStateCreateInfo` structure **must** be `VK_FALSE` unless the `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` dynamic state is enabled, in which case the `depthBoundsTestEnable` parameter to `vkCmdSetDepthBoundsTestEnable` **must** be `VK_FALSE`. When `depthBoundsTestEnable` is `VK_FALSE`, the `minDepthBounds` and `maxDepthBounds` members of the `VkPipelineDepthStencilStateCreateInfo` structure are ignored.
- `widelines` specifies whether lines with width other than 1.0 are supported. If this feature is not

enabled, the `lineWidth` member of the `VkPipelineRasterizationStateCreateInfo` structure **must** be 1.0 unless the `VK_DYNAMIC_STATE_LINE_WIDTH` dynamic state is enabled, in which case the `lineWidth` parameter to `vkCmdSetLineWidth` **must** be 1.0. When this feature is supported, the range and granularity of supported line widths are indicated by the `lineWidthRange` and `lineWidthGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.

- `largePoints` specifies whether points with size greater than 1.0 are supported. If this feature is not enabled, only a point size of 1.0 written by a shader is supported. The range and granularity of supported point sizes are indicated by the `pointSizeRange` and `pointSizeGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.
- `alphaToOne` specifies whether the implementation is able to replace the alpha value of the fragment shader color output in the `Multisample Coverage` fragment operation. If this feature is not enabled, then the `alphaToOneEnable` member of the `VkPipelineMultisampleStateCreateInfo` structure **must** be `VK_FALSE`. Otherwise setting `alphaToOneEnable` to `VK_TRUE` will enable alpha-to-one behavior.
- `multiViewport` specifies whether more than one viewport is supported. If this feature is not enabled:
 - The `viewportCount` and `scissorCount` members of the `VkPipelineViewportStateCreateInfo` structure **must** be 1.
 - The `firstViewport` and `viewportCount` parameters to the `vkCmdSetViewport` command **must** be 0 and 1, respectively.
 - The `firstScissor` and `scissorCount` parameters to the `vkCmdSetScissor` command **must** be 0 and 1, respectively.
 - The `exclusiveScissorCount` member of the `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure **must** be 0 or 1.
 - The `firstExclusiveScissor` and `exclusiveScissorCount` parameters to the `vkCmdSetExclusiveScissorNV` command **must** be 0 and 1, respectively.
- `samplerAnisotropy` specifies whether anisotropic filtering is supported. If this feature is not enabled, the `anisotropyEnable` member of the `VkSamplerCreateInfo` structure **must** be `VK_FALSE`.
- `textureCompressionETC2` specifies whether all of the ETC2 and EAC compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:
 - `VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK`
 - `VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK`
 - `VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK`
 - `VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK`
 - `VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK`
 - `VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK`
 - `VK_FORMAT_EAC_R11_UNORM_BLOCK`
 - `VK_FORMAT_EAC_R11_SNORM_BLOCK`

- `VK_FORMAT_EAC_R11G11_UNORM_BLOCK`
- `VK_FORMAT_EAC_R11G11_SNORM_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

- `textureCompressionASTC_LDR` specifies whether all of the ASTC LDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:

- `VK_FORMAT_ASTC_4x4_UNORM_BLOCK`
- `VK_FORMAT_ASTC_4x4_SRGB_BLOCK`
- `VK_FORMAT_ASTC_5x4_UNORM_BLOCK`
- `VK_FORMAT_ASTC_5x4_SRGB_BLOCK`
- `VK_FORMAT_ASTC_5x5_UNORM_BLOCK`
- `VK_FORMAT_ASTC_5x5_SRGB_BLOCK`
- `VK_FORMAT_ASTC_6x5_UNORM_BLOCK`
- `VK_FORMAT_ASTC_6x5_SRGB_BLOCK`
- `VK_FORMAT_ASTC_6x6_UNORM_BLOCK`
- `VK_FORMAT_ASTC_6x6_SRGB_BLOCK`
- `VK_FORMAT_ASTC_8x5_UNORM_BLOCK`
- `VK_FORMAT_ASTC_8x5_SRGB_BLOCK`
- `VK_FORMAT_ASTC_8x6_UNORM_BLOCK`
- `VK_FORMAT_ASTC_8x6_SRGB_BLOCK`
- `VK_FORMAT_ASTC_8x8_UNORM_BLOCK`
- `VK_FORMAT_ASTC_8x8_SRGB_BLOCK`
- `VK_FORMAT_ASTC_10x5_UNORM_BLOCK`
- `VK_FORMAT_ASTC_10x5_SRGB_BLOCK`
- `VK_FORMAT_ASTC_10x6_UNORM_BLOCK`
- `VK_FORMAT_ASTC_10x6_SRGB_BLOCK`
- `VK_FORMAT_ASTC_10x8_UNORM_BLOCK`
- `VK_FORMAT_ASTC_10x8_SRGB_BLOCK`
- `VK_FORMAT_ASTC_10x10_UNORM_BLOCK`
- `VK_FORMAT_ASTC_10x10_SRGB_BLOCK`
- `VK_FORMAT_ASTC_12x10_UNORM_BLOCK`
- `VK_FORMAT_ASTC_12x10_SRGB_BLOCK`

- `VK_FORMAT_ASTC_12x12_UNORM_BLOCK`
- `VK_FORMAT_ASTC_12x12_SRGB_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

- `textureCompressionBC` specifies whether all of the BC compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:

- `VK_FORMAT_BC1_RGB_UNORM_BLOCK`
- `VK_FORMAT_BC1_RGB_SRGB_BLOCK`
- `VK_FORMAT_BC1_RGBA_UNORM_BLOCK`
- `VK_FORMAT_BC1_RGBA_SRGB_BLOCK`
- `VK_FORMAT_BC2_UNORM_BLOCK`
- `VK_FORMAT_BC2_SRGB_BLOCK`
- `VK_FORMAT_BC3_UNORM_BLOCK`
- `VK_FORMAT_BC3_SRGB_BLOCK`
- `VK_FORMAT_BC4_UNORM_BLOCK`
- `VK_FORMAT_BC4_SNORM_BLOCK`
- `VK_FORMAT_BC5_UNORM_BLOCK`
- `VK_FORMAT_BC5_SNORM_BLOCK`
- `VK_FORMAT_BC6H_UFLOAT_BLOCK`
- `VK_FORMAT_BC6H_SFLOAT_BLOCK`
- `VK_FORMAT_BC7_UNORM_BLOCK`
- `VK_FORMAT_BC7_SRGB_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

- `occlusionQueryPrecise` specifies whether occlusion queries returning actual sample counts are supported. Occlusion queries are created in a `VkQueryPool` by specifying the `queryType` of `VK_QUERY_TYPE_OCCLUSION` in the `VkQueryPoolCreateInfo` structure which is passed to `vkCreateQueryPool`. If this feature is enabled, queries of this type **can** enable `VK_QUERY_CONTROL_PRECISE_BIT` in the `flags` parameter to `vkCmdBeginQuery`. If this feature is not supported, the implementation supports only boolean occlusion queries. When any samples are passed, boolean queries will return a non-zero result value, otherwise a result value of zero is returned. When this feature is enabled and `VK_QUERY_CONTROL_PRECISE_BIT` is set, occlusion queries will report the actual number of samples passed.
- `pipelineStatisticsQuery` specifies whether the pipeline statistics queries are supported. If this

feature is not enabled, queries of type `VK_QUERY_TYPE_PIPELINE_STATISTICS` **cannot** be created, and none of the `VkQueryPipelineStatisticFlagBits` bits **can** be set in the `pipelineStatistics` member of the `VkQueryPoolCreateInfo` structure.

- `vertexPipelineStoresAndAtomics` specifies whether storage buffers and images support stores and atomic operations in the vertex, tessellation, and geometry shader stages. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by these stages in shader modules **must** be decorated with the `NonWritable` decoration (or the `readonly` memory qualifier in GLSL).
- `fragmentStoresAndAtomics` specifies whether storage buffers and images support stores and atomic operations in the fragment shader stage. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by the fragment stage in shader modules **must** be decorated with the `NonWritable` decoration (or the `readonly` memory qualifier in GLSL).
- `shaderTessellationAndGeometryPointSize` specifies whether the `PointSize` built-in decoration is available in the tessellation control, tessellation evaluation, and geometry shader stages. If this feature is not enabled, members decorated with the `PointSize` built-in decoration **must** not be read from or written to and all points written from a tessellation or geometry shader will have a size of 1.0. This also specifies whether shader modules **can** declare the `TessellationPointSize` capability for tessellation control and evaluation shaders, or if the shader modules **can** declare the `GeometryPointSize` capability for geometry shaders. An implementation supporting this feature **must** also support one or both of the `tessellationShader` or `geometryShader` features.
- `shaderImageGatherExtended` specifies whether the extended set of image gather instructions are available in shader code. If this feature is not enabled, the `OpImage*Gather` instructions do not support the `Offset` and `ConstOffsets` operands. This also specifies whether shader modules **can** declare the `ImageGatherExtended` capability.
- `shaderStorageImageExtendedFormats` specifies whether all the “storage image extended formats” below are supported; if this feature is supported, then the `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT` **must** be supported in `optimalTilingFeatures` for the following formats:
 - `VK_FORMAT_R16G16_SFLOAT`
 - `VK_FORMAT_B10G11R11_UFLOAT_PACK32`
 - `VK_FORMAT_R16_SFLOAT`
 - `VK_FORMAT_R16G16B16A16_UNORM`
 - `VK_FORMAT_A2B10G10R10_UNORM_PACK32`
 - `VK_FORMAT_R16G16_UNORM`
 - `VK_FORMAT_R8G8_UNORM`
 - `VK_FORMAT_R16_UNORM`
 - `VK_FORMAT_R8_UNORM`
 - `VK_FORMAT_R16G16B16A16_SNORM`
 - `VK_FORMAT_R16G16_SNORM`
 - `VK_FORMAT_R8G8_SNORM`
 - `VK_FORMAT_R16_SNORM`

- `VK_FORMAT_R8_SNORM`
- `VK_FORMAT_R16G16_SINT`
- `VK_FORMAT_R8G8_SINT`
- `VK_FORMAT_R16_SINT`
- `VK_FORMAT_R8_SINT`
- `VK_FORMAT_A2B10G10R10_UINT_PACK32`
- `VK_FORMAT_R16G16_UINT`
- `VK_FORMAT_R8G8_UINT`
- `VK_FORMAT_R16_UINT`
- `VK_FORMAT_R8_UINT`

NOTE

`shaderStorageImageExtendedFormats` feature only adds a guarantee of format support, which is specified for the whole physical device. Therefore enabling or disabling the feature via `vkCreateDevice` has no practical effect.

To query for additional properties, or if the feature is not supported, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats, as usual rules allow.

`VK_FORMAT_R32G32_UINT`, `VK_FORMAT_R32G32_SINT`, and `VK_FORMAT_R32G32_SFLOAT` from `StorageImageExtendedFormats` SPIR-V capability, are already covered by core Vulkan [mandatory format support](#).

- `shaderStorageImageMultisample` specifies whether multisampled storage images are supported. If this feature is not enabled, images that are created with a `usage` that includes `VK_IMAGE_USAGE_STORAGE_BIT` **must** be created with `samples` equal to `VK_SAMPLE_COUNT_1_BIT`. This also specifies whether shader modules **can** declare the `StorageImageMultisample` and `ImageMSArray` capabilities.
- `shaderStorageImageReadWithoutFormat` specifies whether storage images and storage texel buffers require a format qualifier to be specified when reading. `shaderStorageImageReadWithoutFormat` applies only to formats listed in the [storage without format](#) list.
- `shaderStorageImageWriteWithoutFormat` specifies whether storage images and storage texel buffers require a format qualifier to be specified when writing. `shaderStorageImageWriteWithoutFormat` applies only to formats listed in the [storage without format](#) list.
- `shaderUniformBufferArrayDynamicIndexing` specifies whether arrays of uniform buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `UniformBufferArrayDynamicIndexing` capability.

- **shaderSampledImageArrayDynamicIndexing** specifies whether arrays of samplers or sampled images **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_SAMPLER**, **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER**, or **VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE** **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the **SampledImageArrayDynamicIndexing** capability.
- **shaderStorageBufferArrayDynamicIndexing** specifies whether arrays of storage buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER** or **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC** **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the **StorageBufferArrayDynamicIndexing** capability.
- **shaderStorageImageArrayDynamicIndexing** specifies whether arrays of storage images **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_STORAGE_IMAGE** **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the **StorageImageArrayDynamicIndexing** capability.
- **shaderClipDistance** specifies whether clip distances are supported in shader code. If this feature is not enabled, any members decorated with the **ClipDistance** built-in decoration **must** not be read from or written to in shader modules. This also specifies whether shader modules **can** declare the **ClipDistance** capability.
- **shaderCullDistance** specifies whether cull distances are supported in shader code. If this feature is not enabled, any members decorated with the **CullDistance** built-in decoration **must** not be read from or written to in shader modules. This also specifies whether shader modules **can** declare the **CullDistance** capability.
- **shaderFloat64** specifies whether 64-bit floats (doubles) are supported in shader code. If this feature is not enabled, 64-bit floating-point types **must** not be used in shader code. This also specifies whether shader modules **can** declare the **Float64** capability. Declaring and using 64-bit floats is enabled for all storage classes that SPIR-V allows with the **Float64** capability.
- **shaderInt64** specifies whether 64-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 64-bit integer types **must** not be used in shader code. This also specifies whether shader modules **can** declare the **Int64** capability. Declaring and using 64-bit integers is enabled for all storage classes that SPIR-V allows with the **Int64** capability.
- **shaderInt16** specifies whether 16-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 16-bit integer types **must** not be used in shader code. This also specifies whether shader modules **can** declare the **Int16** capability. However, this only enables a subset of the storage classes that SPIR-V allows for the **Int16** SPIR-V capability: Declaring and using 16-bit integers in the **Private**, **Workgroup** (for non-Block variables), and **Function** storage classes is enabled, while declaring them in the interface storage classes (e.g., **UniformConstant**, **Uniform**, **StorageBuffer**, **Input**, **Output**, and **PushConstant**) is not enabled.
- **shaderResourceResidency** specifies whether image operations that return resource residency information are supported in shader code. If this feature is not enabled, the **OpImageSparse***

instructions **must** not be used in shader code. This also specifies whether shader modules **can** declare the `SparseResidency` capability. The feature requires at least one of the `sparseResidency*` features to be supported.

- `shaderResourceMinLod` specifies whether image operations specifying the minimum resource LOD are supported in shader code. If this feature is not enabled, the `MinLod` image operand **must** not be used in shader code. This also specifies whether shader modules **can** declare the `MinLod` capability.
- `sparseBinding` specifies whether resource memory **can** be managed at opaque sparse block level instead of at the object level. If this feature is not enabled, resource memory **must** be bound only on a per-object basis using the `vkBindBufferMemory` and `vkBindImageMemory` commands. In this case, buffers and images **must** not be created with `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` and `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` set in the `flags` member of the `VkBufferCreateInfo` and `VkImageCreateInfo` structures, respectively. Otherwise resource memory **can** be managed as described in [Sparse Resource Features](#).
- `sparseResidencyBuffer` specifies whether the device **can** access partially resident buffers. If this feature is not enabled, buffers **must** not be created with `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkBufferCreateInfo` structure.
- `sparseResidencyImage2D` specifies whether the device **can** access partially resident 2D images with 1 sample per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_1_BIT` **must** not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.
- `sparseResidencyImage3D` specifies whether the device **can** access partially resident 3D images. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_3D` **must** not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.
- `sparseResidency2Samples` specifies whether the physical device **can** access partially resident 2D images with 2 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_2_BIT` **must** not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.
- `sparseResidency4Samples` specifies whether the physical device **can** access partially resident 2D images with 4 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_4_BIT` **must** not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.
- `sparseResidency8Samples` specifies whether the physical device **can** access partially resident 2D images with 8 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_8_BIT` **must** not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.
- `sparseResidency16Samples` specifies whether the physical device **can** access partially resident 2D images with 16 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_16_BIT` **must** not be created with

`VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.

- `sparseResidencyAliased` specifies whether the physical device **can** correctly access data aliased into multiple locations. If this feature is not enabled, the `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` and `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` enum values **must** not be used in `flags` members of the `VkBufferCreateInfo` and `VkImageCreateInfo` structures, respectively.
- `variableMultisampleRate` specifies whether all pipelines that will be bound to a command buffer during a subpass which uses no attachments **must** have the same value for `VkPipelineMultisampleStateCreateInfo::rasterizationSamples`. If set to `VK_TRUE`, the implementation supports variable multisample rates in a subpass which uses no attachments. If set to `VK_FALSE`, then all pipelines bound in such a subpass **must** have the same multisample rate. This has no effect in situations where a subpass uses any attachments.
- `inheritedQueries` specifies whether a secondary command buffer **may** be executed while a query is active.

The `VkPhysicalDeviceVulkan11Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan11Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer16BitAccess;
    VkBool32           uniformAndStorageBuffer16BitAccess;
    VkBool32           storagePushConstant16;
    VkBool32           storageInputOutput16;
    VkBool32           multiview;
    VkBool32           multiviewGeometryShader;
    VkBool32           multiviewTessellationShader;
    VkBool32           variablePointersStorageBuffer;
    VkBool32           variablePointers;
    VkBool32           protectedMemory;
    VkBool32           samplerYcbcrConversion;
    VkBool32           shaderDrawParameters;
} VkPhysicalDeviceVulkan11Features;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageBuffer16BitAccess` specifies whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StorageBuffer16BitAccess` capability.
- `uniformAndStorageBuffer16BitAccess` specifies whether objects in the `Uniform` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is

not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `UniformAndStorageBuffer16BitAccess` capability.

- `storagePushConstant16` specifies whether objects in the `PushConstant` storage class **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StoragePushConstant16` capability.
- `storageInputOutput16` specifies whether objects in the `Input` and `Output` storage classes **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StorageInputOutput16` capability.
- `multiview` specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass **must** always be zero.
- `multiviewGeometryShader` specifies whether the implementation supports multiview rendering within a render pass, with `geometry shaders`. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a geometry shader.
- `multiviewTessellationShader` specifies whether the implementation supports multiview rendering within a render pass, with `tessellation shaders`. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include any tessellation shaders.
- `variablePointersStorageBuffer` specifies whether the implementation supports the SPIR-V `VariablePointersStorageBuffer` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_variable_pointers` extension or the `VariablePointersStorageBuffer` capability.
- `variablePointers` specifies whether the implementation supports the SPIR-V `VariablePointers` capability. When this feature is not enabled, shader modules **must** not declare the `VariablePointers` capability.
- `protectedMemory` specifies whether `protected memory` is supported.
- `samplerYcbcrConversion` specifies whether the implementation supports `sampler Y'CBCR conversion`. If `samplerYcbcrConversion` is `VK_FALSE`, sampler Y'C_BC_R conversion is not supported, and samplers using sampler Y'C_BC_R conversion **must** not be used.
- `shaderDrawParameters` specifies whether the implementation supports the SPIR-V `DrawParameters` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_shader_draw_parameters` extension or the `DrawParameters` capability.

If the `VkPhysicalDeviceVulkan11Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVulkan11Features` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan11Features-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_1_FEATURES`

The `VkPhysicalDeviceVulkan12Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan12Features {
    VkStructureType    sType;
    void*              pNext;

    VkBool32      subgroupBroadcastDynamicId;
} VkPhysicalDeviceVulkan12Features;

```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **samplerMirrorClampToEdge** indicates whether the implementation supports the **VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE** sampler address mode. If this feature is not enabled, the **VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE** sampler address mode **must** not be used.
- **drawIndirectCount** indicates whether the implementation supports the **vkCmdDrawIndirectCount** and **vkCmdDrawIndexedIndirectCount** functions. If this feature is not enabled, these functions **must** not be used.
- **storageBuffer8BitAccess** indicates whether objects in the **StorageBuffer**, **ShaderRecordBufferKHR**, or **PhysicalStorageBuffer** storage class with the **Block** decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the **StorageBuffer8BitAccess** capability.
- **uniformAndStorageBuffer8BitAccess** indicates whether objects in the **Uniform** storage class with the **Block** decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the **UniformAndStorageBuffer8BitAccess** capability.
- **storagePushConstant8** indicates whether objects in the **PushConstant** storage class **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the **StoragePushConstant8** capability.
- **shaderBufferInt64Atomics** indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on buffers.
- **shaderSharedInt64Atomics** indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on shared and payload memory.
- **shaderFloat16** indicates whether 16-bit floats (halves) are supported in shader code. This also indicates whether shader modules **can** declare the **Float16** capability. However, this only enables a subset of the storage classes that SPIR-V allows for the **Float16** SPIR-V capability: Declaring and using 16-bit floats in the **Private**, **Workgroup** (for non-Block variables), and **Function** storage classes is enabled, while declaring them in the interface storage classes (e.g., **UniformConstant**, **Uniform**, **StorageBuffer**, **Input**, **Output**, and **PushConstant**) is not enabled.
- **shaderInt8** indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules **can** declare the **Int8** capability. However, this only enables a subset of the storage classes that SPIR-V allows for the **Int8** SPIR-V capability: Declaring and using 8-bit integers in the **Private**, **Workgroup** (for non-Block variables), and **Function** storage classes is enabled, while declaring them in the interface storage classes (e.g.,

`UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.

- `descriptorIndexing` indicates whether the implementation supports the minimum set of descriptor indexing features as described in the [Feature Requirements](#) section. Enabling the `descriptorIndexing` member when `vkCreateDevice` is called does not imply the other minimum descriptor indexing features are also enabled. Those other descriptor indexing features **must** be enabled individually as needed by the application.
- `shaderInputAttachmentArrayDynamicIndexing` indicates whether arrays of input attachments **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayDynamicIndexing` capability.
- `shaderUniformTexelBufferArrayDynamicIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayDynamicIndexing` capability.
- `shaderStorageTexelBufferArrayDynamicIndexing` indicates whether arrays of storage texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayDynamicIndexing` capability.
- `shaderUniformBufferArrayNonUniformIndexing` indicates whether arrays of uniform buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformBufferArrayNonUniformIndexing` capability.
- `shaderSampledImageArrayNonUniformIndexing` indicates whether arrays of samplers or sampled images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `SampledImageArrayNonUniformIndexing` capability.
- `shaderStorageBufferArrayNonUniformIndexing` indicates whether arrays of storage buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageBufferArrayNonUniformIndexing` capability.
- `shaderStorageImageArrayNonUniformIndexing` indicates whether arrays of storage images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled,

resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageImageArrayNonUniformIndexing` capability.

- `shaderInputAttachmentArrayNonUniformIndexing` indicates whether arrays of input attachments **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayNonUniformIndexing` capability.
- `shaderUniformTexelBufferArrayNonUniformIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayNonUniformIndexing` capability.
- `shaderStorageTexelBufferArrayNonUniformIndexing` indicates whether arrays of storage texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayNonUniformIndexing` capability.
- `descriptorBindingUniformBufferUpdateAfterBind` indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`.
- `descriptorBindingSampledImageUpdateAfterBind` indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`.
- `descriptorBindingStorageImageUpdateAfterBind` indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`.
- `descriptorBindingStorageBufferUpdateAfterBind` indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`.
- `descriptorBindingUniformTexelBufferUpdateAfterBind` indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`.
- `descriptorBindingStorageTexelBufferUpdateAfterBind` indicates whether the implementation

supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.

- `descriptorBindingUpdateUnusedWhilePending` indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` **must** not be used.
- `descriptorBindingPartiallyBound` indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` **must** not be used.
- `descriptorBindingVariableDescriptorCount` indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` **must** not be used.
- `runtimeDescriptorArray` indicates whether the implementation supports the SPIR-V `RuntimeDescriptorArray` capability. If this feature is not enabled, descriptors **must** not be declared in runtime arrays.
- `samplerFilterMinmax` indicates whether the implementation supports a minimum set of required formats supporting min/max filtering as defined by the `filterMinmaxSingleComponentFormats` property minimum requirements. If this feature is not enabled, then `VkSamplerReductionModeCreateInfo` **must** only use `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`.
- `scalarBlockLayout` indicates that the implementation supports the layout of resource blocks in shaders using `scalar alignment`.
- `imagelessFramebuffer` indicates that the implementation supports specifying the image view for attachments at render pass begin time via `VkRenderPassAttachmentBeginInfo`.
- `uniformBufferStandardLayout` indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See `Standard Buffer Layout`.
- `shaderSubgroupExtendedTypes` is a boolean specifying whether subgroup operations can use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in `group operations` with `subgroup scope`, if the implementation supports the types.
- `separateDepthStencilLayouts` indicates whether the implementation supports a `VkImageMemoryBarrier` for a depth/stencil image with only one of `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` set, and whether `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL`, or `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL` can be used.
- `hostQueryReset` indicates that the implementation supports resetting queries from the host with `vkResetQueryPool`.
- `timelineSemaphore` indicates whether semaphores created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE` are supported.
- `bufferDeviceAddress` indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from `vkGetBufferDeviceAddress`.
- `bufferDeviceAddressCaptureReplay` indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.

- `bufferDeviceAddressMultiDevice` indicates that the implementation supports the `bufferDeviceAddress`, `rayTracingPipeline` and `rayQuery` features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses **must** not be queried on a logical device created with more than one physical device.
- `vulkanMemoryModel` indicates whether shader modules **can** declare the `VulkanMemoryModel` capability.
- `vulkanMemoryModelDeviceScope` indicates whether the Vulkan Memory Model can use `Device` scope synchronization. This also indicates whether shader modules **can** declare the `VulkanMemoryModelDeviceScope` capability.
- `vulkanMemoryModelAvailabilityVisibilityChains` indicates whether the Vulkan Memory Model can use `availability and visibility chains` with more than one element.
- `shaderOutputViewportIndex` indicates whether the implementation supports the `ShaderViewportIndex` SPIR-V capability enabling variables decorated with the `ViewportIndex` built-in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not enabled, the `ViewportIndex` built-in decoration **must** not be used on outputs in mesh, vertex or tessellation evaluation shaders.
- `shaderOutputLayer` indicates whether the implementation supports the `ShaderLayer` SPIR-V capability enabling variables decorated with the `Layer` built-in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not enabled, the `Layer` built-in decoration **must** not be used on outputs in mesh, vertex or tessellation evaluation shaders.
- If `subgroupBroadcastDynamicId` is `VK_TRUE`, the “Id” operand of `OpGroupNonUniformBroadcast` **can** be dynamically uniform within a subgroup, and the “Index” operand of `OpGroupNonUniformQuadBroadcast` **can** be dynamically uniform within the derivative group. If it is `VK_FALSE`, these operands **must** be constants.

If the `VkPhysicalDeviceVulkan12Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVulkan12Features` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan12Features-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_2_FEATURES`

The `VkPhysicalDeviceVulkan13Features` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceVulkan13Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustImageAccess;
    VkBool32           inlineUniformBlock;
    VkBool32           descriptorBindingInlineUniformBlockUpdateAfterBind;
    VkBool32           pipelineCreationCacheControl;
    VkBool32           privateData;
    VkBool32           shaderDemoteToHelperInvocation;
    VkBool32           shaderTerminateInvocation;
    VkBool32           subgroupSizeControl;
    VkBool32           computeFullSubgroups;
    VkBool32           synchronization2;
    VkBool32           textureCompressionASTC_HDR;
    VkBool32           shaderZeroInitializeWorkgroupMemory;
    VkBool32           dynamicRendering;
    VkBool32           shaderIntegerDotProduct;
    VkBool32           maintenance4;
} VkPhysicalDeviceVulkan13Features;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **robustImageAccess** indicates whether image accesses are tightly bounds-checked against the dimensions of the image view. [Invalid texels](#) resulting from out of bounds image loads will be replaced as described in [Texel Replacement](#), with either (0,0,1) or (0,0,0) values inserted for missing G, B, or A components based on the format.
- **inlineUniformBlock** indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK** **must** not be used.
- **descriptorBindingInlineUniformBlockUpdateAfterBind** indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, **VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT** **must** not be used with **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK**.
- **pipelineCreationCacheControl** indicates that the implementation supports:
 - The following **can** be used in **Vk*PipelineCreateInfo::flags**:
 - **VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT**
 - **VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT**
 - The following **can** be used in **VkPipelineCacheCreateInfo::flags**:
 - **VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT**
- **privateData** indicates whether the implementation supports private data. See [Private Data](#).

- `shaderDemoteToHelperInvocation` indicates whether the implementation supports the SPIR-V `DemoteToHelperInvocationEXT` capability.
- `shaderTerminateInvocation` specifies whether the implementation supports SPIR-V modules that use the `SPV_KHR_terminate_invocation` extension.
- `subgroupSizeControl` indicates whether the implementation supports controlling shader subgroup sizes via the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag and the `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure.
- `computeFullSubgroups` indicates whether the implementation supports requiring full subgroups in compute, mesh, or task shaders via the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag.
- `synchronization2` indicates whether the implementation supports the new set of synchronization commands introduced in `VK_KHR_synchronization2`.
- `textureCompressionASTC_HDR` indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:
 - `VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

- `shaderZeroInitializeWorkgroupMemory` specifies whether the implementation supports initializing a variable in Workgroup storage class.
- `dynamicRendering` specifies that the implementation supports dynamic render pass instances using the `vkCmdBeginRendering` command.
- `shaderIntegerDotProduct` specifies whether shader modules **can** declare the

`DotProductInputAllKHR`, `DotProductInput4x8BitKHR`, `DotProductInput4x8BitPackedKHR` and `DotProductKHR` capabilities.

- `maintenance4` indicates that the implementation supports the following:
 - The application **may** destroy a `VkPipelineLayout` object immediately after using it to create another object.
 - `LocalSizeId` **can** be used as an alternative to `LocalSize` to specify the local workgroup size with specialization constants.
 - Images created with identical creation parameters will always have the same alignment requirements.
 - The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.
 - Push constants do not have to be initialized before they are dynamically accessed.
 - The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.

If the `VkPhysicalDeviceVulkan13Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVulkan13Features` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan13Features-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_3_FEATURES`

The `VkPhysicalDeviceVariablePointersFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceVariablePointersFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           variablePointersStorageBuffer;
    VkBool32           variablePointers;
} VkPhysicalDeviceVariablePointersFeatures;
```

```
// Provided by VK_VERSION_1_1
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointerFeatures;
```

or the equivalent

```
// Provided by VK_KHR_variable_pointers
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointersFeaturesKHR;
```

```
// Provided by VK_KHR_variable_pointers
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointerFeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **variablePointersStorageBuffer** specifies whether the implementation supports the SPIR-V **VariablePointersStorageBuffer** capability. When this feature is not enabled, shader modules **must** not declare the **SPV_KHR_variable_pointers** extension or the **VariablePointersStorageBuffer** capability.
- **variablePointers** specifies whether the implementation supports the SPIR-V **VariablePointers** capability. When this feature is not enabled, shader modules **must** not declare the **VariablePointers** capability.

If the **VkPhysicalDeviceVariablePointersFeatures** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceVariablePointersFeatures** **can** also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage

- VUID-VkPhysicalDeviceVariablePointersFeatures-variablePointers-01431
If **variablePointers** is enabled then **variablePointersStorageBuffer** **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVariablePointersFeatures-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VARIABLE_POINTERS_FEATURES**

The **VkPhysicalDeviceMultiviewFeatures** structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiview;
    VkBool32           multiviewGeometryShader;
    VkBool32           multiviewTessellationShader;
} VkPhysicalDeviceMultiviewFeatures;
```

or the equivalent

```
// Provided by VK_KHR_multiview
typedef VkPhysicalDeviceMultiviewFeatures VkPhysicalDeviceMultiviewFeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **multiview** specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass **must** always be zero.
- **multiviewGeometryShader** specifies whether the implementation supports multiview rendering within a render pass, with [geometry shaders](#). If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a geometry shader.
- **multiviewTessellationShader** specifies whether the implementation supports multiview rendering within a render pass, with [tessellation shaders](#). If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include any tessellation shaders.

If the [VkPhysicalDeviceMultiviewFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceMultiviewFeatures](#) **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage

- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewGeometryShader-00580
If **multiviewGeometryShader** is enabled then **multiview** **must** also be enabled
- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewTessellationShader-00581
If **multiviewTessellationShader** is enabled then **multiview** **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewFeatures-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_FEATURES`

The `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_atomic_float
typedef struct VkPhysicalDeviceShaderAtomicFloatFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferFloat32Atomics;
    VkBool32           shaderBufferFloat32AtomicAdd;
    VkBool32           shaderBufferFloat64Atomics;
    VkBool32           shaderBufferFloat64AtomicAdd;
    VkBool32           shaderSharedFloat32Atomics;
    VkBool32           shaderSharedFloat32AtomicAdd;
    VkBool32           shaderSharedFloat64Atomics;
    VkBool32           shaderSharedFloat64AtomicAdd;
    VkBool32           shaderImageFloat32Atomics;
    VkBool32           shaderImageFloat32AtomicAdd;
    VkBool32           sparseImageFloat32Atomics;
    VkBool32           sparseImageFloat32AtomicAdd;
} VkPhysicalDeviceShaderAtomicFloatFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBufferFloat32Atomics` indicates whether shaders **can** perform 32-bit floating-point load, store and exchange atomic operations on storage buffers.
- `shaderBufferFloat32AtomicAdd` indicates whether shaders **can** perform 32-bit floating-point add atomic operations on storage buffers.
- `shaderBufferFloat64Atomics` indicates whether shaders **can** perform 64-bit floating-point load, store and exchange atomic operations on storage buffers.
- `shaderBufferFloat64AtomicAdd` indicates whether shaders **can** perform 64-bit floating-point add atomic operations on storage buffers.
- `shaderSharedFloat32Atomics` indicates whether shaders **can** perform 32-bit floating-point load, store and exchange atomic operations on shared and payload memory.
- `shaderSharedFloat32AtomicAdd` indicates whether shaders **can** perform 32-bit floating-point add atomic operations on shared and payload memory.
- `shaderSharedFloat64Atomics` indicates whether shaders **can** perform 64-bit floating-point load, store and exchange atomic operations on shared and payload memory.
- `shaderSharedFloat64AtomicAdd` indicates whether shaders **can** perform 64-bit floating-point add atomic operations on shared and payload memory.
- `shaderImageFloat32Atomics` indicates whether shaders **can** perform 32-bit floating-point load,

store and exchange atomic image operations.

- `shaderImageFloat32AtomicAdd` indicates whether shaders **can** perform 32-bit floating-point add atomic image operations.
- `sparseImageFloat32Atomics` indicates whether 32-bit floating-point load, store and exchange atomic operations **can** be used on sparse images.
- `sparseImageFloat32AtomicAdd` indicates whether 32-bit floating-point add atomic operations **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloatFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT_FEATURES_EXT`

The `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_atomic_float2
typedef struct VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferFloat16Atomics;
    VkBool32           shaderBufferFloat16AtomicAdd;
    VkBool32           shaderBufferFloat16AtomicMinMax;
    VkBool32           shaderBufferFloat32AtomicMinMax;
    VkBool32           shaderBufferFloat64AtomicMinMax;
    VkBool32           shaderSharedFloat16Atomics;
    VkBool32           shaderSharedFloat16AtomicAdd;
    VkBool32           shaderSharedFloat16AtomicMinMax;
    VkBool32           shaderSharedFloat32AtomicMinMax;
    VkBool32           shaderSharedFloat64AtomicMinMax;
    VkBool32           shaderImageFloat32AtomicMinMax;
    VkBool32           sparseImageFloat32AtomicMinMax;
} VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBufferFloat16Atomics` indicates whether shaders **can** perform 16-bit floating-point load, store, and exchange atomic operations on storage buffers.

- `shaderBufferFloat16AtomicAdd` indicates whether shaders **can** perform 16-bit floating-point add atomic operations on storage buffers.
- `shaderBufferFloat16AtomicMinMax` indicates whether shaders **can** perform 16-bit floating-point min and max atomic operations on storage buffers.
- `shaderBufferFloat32AtomicMinMax` indicates whether shaders **can** perform 32-bit floating-point min and max atomic operations on storage buffers.
- `shaderBufferFloat64AtomicMinMax` indicates whether shaders **can** perform 64-bit floating-point min and max atomic operations on storage buffers.
- `shaderSharedFloat16Atomics` indicates whether shaders **can** perform 16-bit floating-point load, store and exchange atomic operations on shared and payload memory.
- `shaderSharedFloat16AtomicAdd` indicates whether shaders **can** perform 16-bit floating-point add atomic operations on shared and payload memory.
- `shaderSharedFloat16AtomicMinMax` indicates whether shaders **can** perform 16-bit floating-point min and max atomic operations on shared and payload memory.
- `shaderSharedFloat32AtomicMinMax` indicates whether shaders **can** perform 32-bit floating-point min and max atomic operations on shared and payload memory.
- `shaderSharedFloat64AtomicMinMax` indicates whether shaders **can** perform 64-bit floating-point min and max atomic operations on shared and payload memory.
- `shaderImageFloat32AtomicMinMax` indicates whether shaders **can** perform 32-bit floating-point min and max atomic image operations.
- `sparseImageFloat32AtomicMinMax` indicates whether 32-bit floating-point min and max atomic operations **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT_2_FEATURES_EXT`

The `VkPhysicalDeviceShaderAtomicInt64Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderAtomicInt64Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferInt64Atomics;
    VkBool32           shaderSharedInt64Atomics;
} VkPhysicalDeviceShaderAtomicInt64Features;
```

or the equivalent

```
// Provided by VK_KHR_shader_atomic_int64
typedef VkPhysicalDeviceShaderAtomicInt64Features
VkPhysicalDeviceShaderAtomicInt64FeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderBufferInt64Atomics** indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on buffers.
- **shaderSharedInt64Atomics** indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on shared and payload memory.

If the [VkPhysicalDeviceShaderAtomicInt64Features](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceShaderAtomicInt64Features](#) **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicInt64Features-sType-sType
sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_INT64_FEATURES**

The [VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_image_atomic_int64
typedef struct VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderImageInt64Atomics;
    VkBool32           sparseImageInt64Atomics;
} VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderImageInt64Atomics` indicates whether shaders **can** support 64-bit unsigned and signed integer atomic operations on images.
- `sparseImageInt64Atomics` indicates whether 64-bit integer atomics **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicInt64FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderAtomicInt64FeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_IMAGE_ATOMIC_INT64_FEATURES_EXT`

The `VkPhysicalDevice8BitStorageFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDevice8BitStorageFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer8BitAccess;
    VkBool32           uniformAndStorageBuffer8BitAccess;
    VkBool32           storagePushConstant8;
} VkPhysicalDevice8BitStorageFeatures;
```

or the equivalent

```
// Provided by VK_KHR_8bit_storage
typedef VkPhysicalDevice8BitStorageFeatures VkPhysicalDevice8BitStorageFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageBuffer8BitAccess` indicates whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `StorageBuffer8BitAccess` capability.

- `uniformAndStorageBuffer8BitAccess` indicates whether objects in the `Uniform` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `UniformAndStorageBuffer8BitAccess` capability.
- `storagePushConstant8` indicates whether objects in the `PushConstant` storage class **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `StoragePushConstant8` capability.

If the `VkPhysicalDevice8BitStorageFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevice8BitStorageFeatures` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevice8BitStorageFeatures-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_8BIT_STORAGE_FEATURES`

The `VkPhysicalDevice16BitStorageFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevice16BitStorageFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer16BitAccess;
    VkBool32           uniformAndStorageBuffer16BitAccess;
    VkBool32           storagePushConstant16;
    VkBool32           storageInputOutput16;
} VkPhysicalDevice16BitStorageFeatures;
```

or the equivalent

```
// Provided by VK_KHR_16bit_storage
typedef VkPhysicalDevice16BitStorageFeatures VkPhysicalDevice16BitStorageFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageBuffer16BitAccess` specifies whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StorageBuffer16BitAccess` capability.

- `uniformAndStorageBuffer16BitAccess` specifies whether objects in the `Uniform` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `UniformAndStorageBuffer16BitAccess` capability.
- `storagePushConstant16` specifies whether objects in the `PushConstant` storage class **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StoragePushConstant16` capability.
- `storageInputOutput16` specifies whether objects in the `Input` and `Output` storage classes **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StorageInputOutput16` capability.

If the `VkPhysicalDevice16BitStorageFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevice16BitStorageFeatures` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevice16BitStorageFeatures-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_16BIT_STORAGE_FEATURES`

The `VkPhysicalDeviceShaderFloat16Int8Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderFloat16Int8Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat16;
    VkBool32           shaderInt8;
} VkPhysicalDeviceShaderFloat16Int8Features;
```

or the equivalent

```
// Provided by VK_KHR_shader_float16_int8
typedef VkPhysicalDeviceShaderFloat16Int8Features
VkPhysicalDeviceShaderFloat16Int8FeaturesKHR;
```

```
// Provided by VK_KHR_shader_float16_int8
typedef VkPhysicalDeviceShaderFloat16Int8Features
VkPhysicalDeviceFloat16Int8FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloat16` indicates whether 16-bit floats (halves) are supported in shader code. This also indicates whether shader modules **can** declare the `Float16` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Float16` SPIR-V capability: Declaring and using 16-bit floats in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.
- `shaderInt8` indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules **can** declare the `Int8` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Int8` SPIR-V capability: Declaring and using 8-bit integers in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.

If the `VkPhysicalDeviceShaderFloat16Int8Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderFloat16Int8Features` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderFloat16Int8Features-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FLOAT16_INT8_FEATURES`

The `VkPhysicalDeviceShaderClockFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_clock
typedef struct VkPhysicalDeviceShaderClockFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupClock;
    VkBool32           shaderDeviceClock;
} VkPhysicalDeviceShaderClockFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupClock` indicates whether shaders **can** perform `Subgroup` scoped clock reads.
- `shaderDeviceClock` indicates whether shaders **can** perform `Device` scoped clock reads.

If the `VkPhysicalDeviceShaderClockFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderClockFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderClockFeaturesKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CLOCK_FEATURES_KHR`

The `VkPhysicalDeviceSamplerYcbcrConversionFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSamplerYcbcrConversionFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           samplerYcbcrConversion;
} VkPhysicalDeviceSamplerYcbcrConversionFeatures;
```

or the equivalent

```
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkPhysicalDeviceSamplerYcbcrConversionFeatures
VkPhysicalDeviceSamplerYcbcrConversionFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `samplerYcbcrConversion` specifies whether the implementation supports `sampler Y'CBCR conversion`. If `samplerYcbcrConversion` is `VK_FALSE`, sampler Y'C_BC_R conversion is not supported, and samplers using sampler Y'C_BC_R conversion must not be used.

If the `VkPhysicalDeviceSamplerYcbcrConversionFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSamplerYcbcrConversionFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSamplerYcbcrConversionFeatures-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLER_YCBCR_CONVERSION_FEATURES`

The `VkPhysicalDeviceProtectedMemoryFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceProtectedMemoryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           protectedMemory;
} VkPhysicalDeviceProtectedMemoryFeatures;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `protectedMemory` specifies whether `protected memory` is supported.

If the `VkPhysicalDeviceProtectedMemoryFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceProtectedMemoryFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProtectedMemoryFeatures-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROTECTED_MEMORY_FEATURES`

The `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           advancedBlendCoherentOperations;
} VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `advancedBlendCoherentOperations` specifies whether blending using `advanced blend operations` is guaranteed to execute atomically and in `primitive order`. If this is `VK_TRUE`, `VK_ACCESS_COLOR_ATTACHMENT_READ_NONCOHERENT_BIT_EXT` is treated the same as `VK_ACCESS_COLOR_ATTACHMENT_READ_BIT`, and advanced blending needs no additional synchronization over basic blending. If this is `VK_FALSE`, then memory dependencies are

required to guarantee order between two advanced blending operations that occur on the same sample.

If the `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BLEND_OPERATION_ADVANCED_FEATURES_EXT`

The `VkPhysicalDeviceConditionalRenderingFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_conditional_rendering
typedef struct VkPhysicalDeviceConditionalRenderingFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           conditionalRendering;
    VkBool32           inheritedConditionalRendering;
} VkPhysicalDeviceConditionalRenderingFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `conditionalRendering` specifies whether conditional rendering is supported.
- `inheritedConditionalRendering` specifies whether a secondary command buffer **can** be executed while conditional rendering is active in the primary command buffer.

If the `VkPhysicalDeviceConditionalRenderingFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceConditionalRenderingFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceConditionalRenderingFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CONDITIONAL_RENDERING_FEATURES_EXT`

The `VkPhysicalDeviceShaderDrawParametersFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceShaderDrawParametersFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderDrawParameters;
} VkPhysicalDeviceShaderDrawParametersFeatures;
```

```
// Provided by VK_VERSION_1_1
typedef VkPhysicalDeviceShaderDrawParametersFeatures
VkPhysicalDeviceShaderDrawParameterFeatures;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderDrawParameters** specifies whether the implementation supports the SPIR-V **DrawParameters** capability. When this feature is not enabled, shader modules **must** not declare the **SPV_KHR_shader_draw_parameters** extension or the **DrawParameters** capability.

If the **VkPhysicalDeviceShaderDrawParametersFeatures** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceShaderDrawParametersFeatures** **can** also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderDrawParametersFeatures-sType-sType
sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_DRAW_PARAMETERS_FEATURES**

The **VkPhysicalDeviceMeshShaderFeaturesNV** structure is defined as:

```
// Provided by VK_NV_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           taskShader;
    VkBool32           meshShader;
} VkPhysicalDeviceMeshShaderFeaturesNV;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- `taskShader` specifies whether task shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_TASK_BIT_NV` and `VK_PIPELINE_STAGE_TASK_SHADER_BIT_NV` enum values **must** not be used.
- `meshShader` specifies whether mesh shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_MESH_BIT_NV` and `VK_PIPELINE_STAGE_MESH_SHADER_BIT_NV` enum values **must** not be used.

If the `VkPhysicalDeviceMeshShaderFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMeshShaderFeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderFeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_NV`

The `VkPhysicalDeviceMeshShaderFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           taskShader;
    VkBool32           meshShader;
    VkBool32           multiviewMeshShader;
    VkBool32           primitiveFragmentShadingRateMeshShader;
    VkBool32           meshShaderQueries;
} VkPhysicalDeviceMeshShaderFeaturesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `taskShader` specifies whether task shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_TASK_BIT_EXT` and `VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT` enum values **must** not be used.
- `meshShader` specifies whether mesh shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_MESH_BIT_EXT` and `VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT` enum values **must** not be used.
- `multiviewMeshShader` specifies whether the implementation supports `multiview` rendering within a render pass, with mesh shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a mesh shader.
- `primitiveFragmentShadingRateMeshShader` indicates that the implementation supports the `primitive fragment shading rate` in mesh shaders.
- `meshShaderQueries` indicates that the implementation supports creating query pools using the

VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT query type and statistic queries containing the VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT and VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT flags

If the `VkPhysicalDeviceMeshShaderFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMeshShaderFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

The corresponding features of the `VkPhysicalDeviceMeshShaderFeaturesNV` structure **must** match those in `VkPhysicalDeviceMeshShaderFeaturesEXT`.

Valid Usage

- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-multiviewMeshShader-07032
If `multiviewMeshShader` is enabled then `VkPhysicalDeviceMultiviewFeaturesKHR::multiview` **must** also be enabled
- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-primitiveFragmentShadingRateMeshShader-07033
If `primitiveFragmentShadingRateMeshShader` is enabled then `VkPhysicalDeviceFragmentShadingRateFeaturesKHR::primitiveFragmentShadingRate` **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_EXT`

The `VkPhysicalDeviceMemoryDecompressionFeaturesNV` structure is defined as:

```
// Provided by VK_NV_memory_decompression
typedef struct VkPhysicalDeviceMemoryDecompressionFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryDecompression;
} VkPhysicalDeviceMemoryDecompressionFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryDecompression` indicates whether memory decompression is supported.

If the `VkPhysicalDeviceMemoryDecompressionFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to

indicate whether each corresponding feature is supported. `VkPhysicalDeviceMemoryDecompressionFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceMemoryDecompressionFeaturesNV-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_DECOMPRESSION_FEATURES_NV`

The `VkPhysicalDeviceDescriptorIndexingFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDescriptorIndexingFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderInputAttachmentArrayDynamicIndexing;
    VkBool32           shaderUniformTexelBufferArrayDynamicIndexing;
    VkBool32           shaderStorageTexelBufferArrayDynamicIndexing;
    VkBool32           shaderUniformBufferArrayNonUniformIndexing;
    VkBool32           shaderSampledImageArrayNonUniformIndexing;
    VkBool32           shaderStorageBufferArrayNonUniformIndexing;
    VkBool32           shaderStorageImageArrayNonUniformIndexing;
    VkBool32           shaderInputAttachmentArrayNonUniformIndexing;
    VkBool32           shaderUniformTexelBufferArrayNonUniformIndexing;
    VkBool32           shaderStorageTexelBufferArrayNonUniformIndexing;
    VkBool32           descriptorBindingUniformBufferUpdateAfterBind;
    VkBool32           descriptorBindingSampledImageUpdateAfterBind;
    VkBool32           descriptorBindingStorageImageUpdateAfterBind;
    VkBool32           descriptorBindingStorageBufferUpdateAfterBind;
    VkBool32           descriptorBindingUniformTexelBufferUpdateAfterBind;
    VkBool32           descriptorBindingStorageTexelBufferUpdateAfterBind;
    VkBool32           descriptorBindingUpdateUnusedWhilePending;
    VkBool32           descriptorBindingPartiallyBound;
    VkBool32           descriptorBindingVariableDescriptorCount;
    VkBool32           runtimeDescriptorArray;
} VkPhysicalDeviceDescriptorIndexingFeatures;
```

or the equivalent

```
// Provided by VK_EXT_descriptor_indexing
typedef VkPhysicalDeviceDescriptorIndexingFeatures
VkPhysicalDeviceDescriptorIndexingFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `shaderInputAttachmentArrayDynamicIndexing` indicates whether arrays of input attachments **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayDynamicIndexing` capability.
- `shaderUniformTexelBufferArrayDynamicIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayDynamicIndexing` capability.
- `shaderStorageTexelBufferArrayDynamicIndexing` indicates whether arrays of storage texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayDynamicIndexing` capability.
- `shaderUniformBufferArrayNonUniformIndexing` indicates whether arrays of uniform buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformBufferArrayNonUniformIndexing` capability.
- `shaderSampledImageArrayNonUniformIndexing` indicates whether arrays of samplers or sampled images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `SampledImageArrayNonUniformIndexing` capability.
- `shaderStorageBufferArrayNonUniformIndexing` indicates whether arrays of storage buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageBufferArrayNonUniformIndexing` capability.
- `shaderStorageImageArrayNonUniformIndexing` indicates whether arrays of storage images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageImageArrayNonUniformIndexing` capability.
- `shaderInputAttachmentArrayNonUniformIndexing` indicates whether arrays of input attachments **can** be indexed by non-uniform integer expressions in shader code. If this feature is not

enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayNonUniformIndexing` capability.

- `shaderUniformTexelBufferArrayNonUniformIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayNonUniformIndexing` capability.
- `shaderStorageTexelBufferArrayNonUniformIndexing` indicates whether arrays of storage texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayNonUniformIndexing` capability.
- `descriptorBindingUniformBufferUpdateAfterBind` indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`.
- `descriptorBindingSampledImageUpdateAfterBind` indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`.
- `descriptorBindingStorageImageUpdateAfterBind` indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`.
- `descriptorBindingStorageBufferUpdateAfterBind` indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`.
- `descriptorBindingUniformTexelBufferUpdateAfterBind` indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`.
- `descriptorBindingStorageTexelBufferUpdateAfterBind` indicates whether the implementation supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.
- `descriptorBindingUpdateUnusedWhilePending` indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` **must** not be used.

- `descriptorBindingPartiallyBound` indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` **must** not be used.
- `descriptorBindingVariableDescriptorCount` indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` **must** not be used.
- `runtimeDescriptorArray` indicates whether the implementation supports the SPIR-V `RuntimeDescriptorArray` capability. If this feature is not enabled, descriptors **must** not be declared in runtime arrays.

If the `VkPhysicalDeviceDescriptorIndexingFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDescriptorIndexingFeatures` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorIndexingFeatures-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_FEATURES`

The `VkPhysicalDeviceCopyMemoryIndirectFeaturesNV` structure is defined as:

```
// Provided by VK_NV_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indirectCopy;
} VkPhysicalDeviceCopyMemoryIndirectFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indirectCopy` indicates whether `indirect copies` are supported.

If the `VkPhysicalDeviceCopyMemoryIndirectFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCopyMemoryIndirectFeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCopyMemoryIndirectFeaturesNV-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_FEATURES_NV

The `VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_vertex_attribute_divisor
typedef struct VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexAttributeInstanceRateDivisor;
    VkBool32           vertexAttributeInstanceRateZeroDivisor;
} VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR;
```

or the equivalent

```
// Provided by VK_EXT_vertex_attribute_divisor
typedef VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR
VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **vertexAttributeInstanceRateDivisor** specifies whether vertex attribute fetching may be repeated in the case of instanced rendering.
- **vertexAttributeInstanceRateZeroDivisor** specifies whether a zero value for `VkVertexInputBindingDivisorDescriptionEXT::divisor` is supported.

If the `VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR` structure is included in the **pNext** chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR` **can** also be used in the **pNext** chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR-sType-sType
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_FEATURES_KHR

The `VkPhysicalDeviceASTCDecodeFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_astc_decode_mode
typedef struct VkPhysicalDeviceASTCDecodeFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           decodeModeSharedExponent;
} VkPhysicalDeviceASTCDecodeFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **decodeModeSharedExponent** indicates whether the implementation supports decoding ASTC compressed formats to `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32` internal precision.

If the [VkPhysicalDeviceASTCDecodeFeaturesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceASTCDecodeFeaturesEXT](#) **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceASTCDecodeFeaturesEXT-sType-sType
sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ASTC_DECODE_FEATURES_EXT`

The [VkPhysicalDeviceTransformFeedbackFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           transformFeedback;
    VkBool32           geometryStreams;
} VkPhysicalDeviceTransformFeedbackFeaturesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **transformFeedback** indicates whether the implementation supports transform feedback and shader modules **can** declare the [TransformFeedback](#) capability.
- **geometryStreams** indicates whether the implementation supports the [GeometryStreams](#) SPIR-V capability.

If the [VkPhysicalDeviceTransformFeedbackFeaturesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to

indicate whether each corresponding feature is supported. `VkPhysicalDeviceTransformFeedbackFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceTransformFeedbackFeaturesEXT-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_FEATURES_EXT`

The `VkPhysicalDeviceVulkanMemoryModelFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkanMemoryModelFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vulkanMemoryModel;
    VkBool32           vulkanMemoryModelDeviceScope;
    VkBool32           vulkanMemoryModelAvailabilityVisibilityChains;
} VkPhysicalDeviceVulkanMemoryModelFeatures;
```

or the equivalent

```
// Provided by VK_KHR_vulkan_memory_model
typedef VkPhysicalDeviceVulkanMemoryModelFeatures
VkPhysicalDeviceVulkanMemoryModelFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vulkanMemoryModel` indicates whether shader modules can declare the `VulkanMemoryModel` capability.
- `vulkanMemoryModelDeviceScope` indicates whether the Vulkan Memory Model can use `Device` scope synchronization. This also indicates whether shader modules can declare the `VulkanMemoryModelDeviceScope` capability.
- `vulkanMemoryModelAvailabilityVisibilityChains` indicates whether the Vulkan Memory Model can use `availability and visibility chains` with more than one element.

If the `VkPhysicalDeviceVulkanMemoryModelFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVulkanMemoryModelFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkanMemoryModelFeatures-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_MEMORY_MODEL_FEATURES

The `VkPhysicalDeviceInlineUniformBlockFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           inlineUniformBlock;
    VkBool32           descriptorBindingInlineUniformBlockUpdateAfterBind;
} VkPhysicalDeviceInlineUniformBlockFeatures;
```

or the equivalent

```
// Provided by VK_EXT_inline_uniform_block
typedef VkPhysicalDeviceInlineUniformBlockFeatures
VkPhysicalDeviceInlineUniformBlockFeaturesEXT;
```

This structure describes the following features:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- inlineUniformBlock indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` **must** not be used.
- descriptorBindingInlineUniformBlockUpdateAfterBind indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`.

If the `VkPhysicalDeviceInlineUniformBlockFeatures` structure is included in the pNext chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceInlineUniformBlockFeatures` **can** also be used in the pNext chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInlineUniformBlockFeatures-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_FEATURES

The `VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV` structure is defined as:

```
// Provided by VK_NV_representative_fragment_test
typedef struct VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           representativeFragmentTest;
} VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `representativeFragmentTest` indicates whether the implementation supports the representative fragment test. See [Representative Fragment Test](#).

If the `VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_REPRESENTATIVE_FRAGMENT_TEST_FEATURES_NV`

The `VkPhysicalDeviceExclusiveScissorFeaturesNV` structure is defined as:

```
// Provided by VK_NV_scissor_exclusive
typedef struct VkPhysicalDeviceExclusiveScissorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           exclusiveScissor;
} VkPhysicalDeviceExclusiveScissorFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `exclusiveScissor` indicates that the implementation supports the exclusive scissor test.

See [Exclusive Scissor Test](#) for more information.

If the `VkPhysicalDeviceExclusiveScissorFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExclusiveScissorFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExclusiveScissorFeaturesNV-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXCLUSIVE_SCISSOR_FEATURES_NV`

The `VkPhysicalDeviceCornerSampledImageFeaturesNV` structure is defined as:

```
// Provided by VK_NV_corner_sampled_image
typedef struct VkPhysicalDeviceCornerSampledImageFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cornerSampledImage;
} VkPhysicalDeviceCornerSampledImageFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cornerSampledImage` specifies whether images can be created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV`. See [Corner-Sampled Images](#).

If the `VkPhysicalDeviceCornerSampledImageFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCornerSampledImageFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCornerSampledImageFeaturesNV-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CORNER_SAMPLED_IMAGE_FEATURES_NV`

The `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_compute_shader_derivatives
typedef struct VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           computeDerivativeGroupQuads;
    VkBool32           computeDerivativeGroupLinear;
} VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR;
```

or the equivalent

```
// Provided by VK_NV_compute_shader_derivatives
typedef VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR
VkPhysicalDeviceComputeShaderDerivativesFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `computeDerivativeGroupQuads` indicates that the implementation supports the `ComputeDerivativeGroupQuadsKHR` SPIR-V capability.
- `computeDerivativeGroupLinear` indicates that the implementation supports the `ComputeDerivativeGroupLinearKHR` SPIR-V capability.

See [Quad shader scope](#) for more information.

If the `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMPUTE_SHADER_DERIVATIVES_FEATURES_KHR`

The `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_fragment_shader_barycentric
typedef struct VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShaderBarycentric;
} VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR;
```

or the equivalent

```
// Provided by VK_NV_fragment_shader_barycentric
typedef VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR
VkPhysicalDeviceFragmentShaderBarycentricFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentShaderBarycentric` indicates that the implementation supports the `BaryCoordKHR` and `BaryCoordNoPerspKHR` SPIR-V fragment shader built-ins and supports the `PerVertexKHR` SPIR-V decoration on fragment shader input variables.

See [Barycentric Interpolation](#) for more information.

If the `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_FEATURES_KHR`

The `VkPhysicalDeviceShaderImageFootprintFeaturesNV` structure is defined as:

```
// Provided by VK_NV_shader_image_footprint
typedef struct VkPhysicalDeviceShaderImageFootprintFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageFootprint;
} VkPhysicalDeviceShaderImageFootprintFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageFootprint` specifies whether the implementation supports the `ImageFootprintNV` SPIR-V capability.

See [Texel Footprint Evaluation](#) for more information.

If the `VkPhysicalDeviceShaderImageFootprintFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderImageFootprintFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderImageFootprintFeaturesNV-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_IMAGE_FOOTPRINT_FEATURES_NV`

The `VkPhysicalDeviceShadingRateImageFeaturesNV` structure is defined as:

```
// Provided by VK_NV_shading_rate_image
typedef struct VkPhysicalDeviceShadingRateImageFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shadingRateImage;
    VkBool32           shadingRateCoarseSampleOrder;
} VkPhysicalDeviceShadingRateImageFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shadingRateImage` indicates that the implementation supports the use of a shading rate image to derive an effective shading rate for fragment processing. It also indicates that the implementation supports the `ShadingRateNV` SPIR-V execution mode.
- `shadingRateCoarseSampleOrder` indicates that the implementation supports an application-configurable ordering of coverage samples in fragments larger than one pixel.

See [Shading Rate Image](#) for more information.

If the `VkPhysicalDeviceShadingRateImageFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShadingRateImageFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShadingRateImageFeaturesNV-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADING_RATE_IMAGE_FEATURES_NV

The `VkPhysicalDeviceFragmentDensityMapFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceFragmentDensityMapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMap;
    VkBool32           fragmentDensityMapDynamic;
    VkBool32           fragmentDensityMapNonSubsampledImages;
} VkPhysicalDeviceFragmentDensityMapFeaturesEXT;
```

This structure describes the following features:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- fragmentDensityMap specifies whether the implementation supports render passes with a fragment density map attachment. If this feature is not enabled and the pNext chain of `VkRenderPassCreateInfo` includes a `VkRenderPassFragmentDensityMapCreateInfoEXT` structure, fragmentDensityMapAttachment **must** be `VK_ATTACHMENT_UNUSED`.
- fragmentDensityMapDynamic specifies whether the implementation supports dynamic fragment density map image views. If this feature is not enabled, `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT` **must** not be included in `VkImageViewCreateInfo::flags`.
- fragmentDensityMapNonSubsampledImages specifies whether the implementation supports regular non-subsampled image attachments with fragment density map render passes. If this feature is not enabled, render passes with a `fragment density map attachment` **must** only have `subsampled attachments` bound.

If the `VkPhysicalDeviceFragmentDensityMapFeaturesEXT` structure is included in the pNext chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentDensityMapFeaturesEXT` **can** also be used in the pNext chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMapFeaturesEXT-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_FEATURES_EXT`

The `VkPhysicalDeviceFragmentDensityMap2FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_density_map2
typedef struct VkPhysicalDeviceFragmentDensityMap2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMapDeferred;
} VkPhysicalDeviceFragmentDensityMap2FeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityMapDeferred` specifies whether the implementation supports deferred reads of fragment density map image views. If this feature is not enabled, `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT` **must** not be included in `VkImageViewCreateInfo::flags`.

If the `VkPhysicalDeviceFragmentDensityMap2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentDensityMap2FeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMap2FeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_2_FEATURES_EXT`

The `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_fragment_density_map_offset
typedef struct VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMapOffset;
} VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityMapOffset` specifies whether the implementation supports `fragment density map offsets`

If the `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_OFFSET_FEATURES_QCOM`

The `VkPhysicalDeviceInvocationMaskFeaturesHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_invocation_mask
typedef struct VkPhysicalDeviceInvocationMaskFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           invocationMask;
} VkPhysicalDeviceInvocationMaskFeaturesHUAWEI;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `invocationMask` indicates that the implementation supports the use of an invocation mask image to optimize the ray dispatch.

If the `VkPhysicalDeviceInvocationMaskFeaturesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceInvocationMaskFeaturesHUAWEI` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceInvocationMaskFeaturesHUAWEI-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INVOCATION_MASK_FEATURES_HUAWEI`

The `VkPhysicalDeviceScalarBlockLayoutFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceScalarBlockLayoutFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           scalarBlockLayout;
} VkPhysicalDeviceScalarBlockLayoutFeatures;
```

or the equivalent

```
// Provided by VK_EXT_scalar_block_layout
typedef VkPhysicalDeviceScalarBlockLayoutFeatures
VkPhysicalDeviceScalarBlockLayoutFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **scalarBlockLayout** indicates that the implementation supports the layout of resource blocks in shaders using [scalar alignment](#).

If the [VkPhysicalDeviceScalarBlockLayoutFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceScalarBlockLayoutFeatures](#) **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceScalarBlockLayoutFeatures-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SCALAR_BLOCK_LAYOUT_FEATURES](#)

The [VkPhysicalDeviceUniformBufferStandardLayoutFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceUniformBufferStandardLayoutFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           uniformBufferStandardLayout;
} VkPhysicalDeviceUniformBufferStandardLayoutFeatures;
```

or the equivalent

```
// Provided by VK_KHR_uniform_buffer_standard_layout
typedef VkPhysicalDeviceUniformBufferStandardLayoutFeatures
VkPhysicalDeviceUniformBufferStandardLayoutFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **uniformBufferStandardLayout** indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See [Standard Buffer Layout](#).

If the [VkPhysicalDeviceUniformBufferStandardLayoutFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceUniformBufferStandardLayoutFeatures](#) **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceUniformBufferStandardLayoutFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_UNIFORM_BUFFER_STANDARD_LAYOUT_FEATURES](#)

The [VkPhysicalDeviceDepthClipEnableFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_depth_clip_enable
typedef struct VkPhysicalDeviceDepthClipEnableFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClipEnable;
} VkPhysicalDeviceDepthClipEnableFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **depthClipEnable** indicates that the implementation supports setting the depth clipping operation explicitly via the [VkPipelineRasterizationDepthClipStateCreateInfoEXT](#) pipeline state. Otherwise depth clipping is only enabled when [VkPipelineRasterizationStateCreateInfo::depthClampEnable](#) is [VK_FALSE](#).

If the [VkPhysicalDeviceDepthClipEnableFeaturesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported.

`VkPhysicalDeviceDepthClipEnableFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClipEnableFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLIP_ENABLE_FEATURES_EXT`

The `VkPhysicalDeviceMemoryPriorityFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_memory_priority
typedef struct VkPhysicalDeviceMemoryPriorityFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryPriority;
} VkPhysicalDeviceMemoryPriorityFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryPriority` indicates that the implementation supports memory priorities specified at memory allocation time via `VkMemoryPriorityAllocateInfoEXT`.

If the `VkPhysicalDeviceMemoryPriorityFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMemoryPriorityFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryPriorityFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PRIORITY_FEATURES_EXT`

The `VkPhysicalDeviceBufferDeviceAddressFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceBufferDeviceAddressFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           bufferDeviceAddress;
    VkBool32           bufferDeviceAddressCaptureReplay;
    VkBool32           bufferDeviceAddressMultiDevice;
} VkPhysicalDeviceBufferDeviceAddressFeatures;
```

or the equivalent

```
// Provided by VK_KHR_buffer_device_address
typedef VkPhysicalDeviceBufferDeviceAddressFeatures
VkPhysicalDeviceBufferDeviceAddressFeaturesKHR;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **bufferDeviceAddress** indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from **vkGetBufferDeviceAddress**.
- **bufferDeviceAddressCaptureReplay** indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.
- **bufferDeviceAddressMultiDevice** indicates that the implementation supports the **bufferDeviceAddress**, **rayTracingPipeline** and **rayQuery** features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses **must** not be queried on a logical device created with more than one physical device.

NOTE

bufferDeviceAddressMultiDevice exists to allow certain legacy platforms to be able to support **bufferDeviceAddress** without needing to support shared GPU virtual addresses for multi-device configurations.

See **vkGetBufferDeviceAddress** for more information.

If the **VkPhysicalDeviceBufferDeviceAddressFeatures** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceBufferDeviceAddressFeatures** **can** also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBufferDeviceAddressFeatures-sType-sType
sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BUFFER_DEVICE_ADDRESS_FEATURES**

The `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_buffer_device_address
typedef struct VkPhysicalDeviceBufferDeviceAddressFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           bufferDeviceAddress;
    VkBool32           bufferDeviceAddressCaptureReplay;
    VkBool32           bufferDeviceAddressMultiDevice;
} VkPhysicalDeviceBufferDeviceAddressFeaturesEXT;
```

```
// Provided by VK_EXT_buffer_device_address
typedef VkPhysicalDeviceBufferDeviceAddressFeaturesEXT
VkPhysicalDeviceBufferAddressFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bufferDeviceAddress` indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from `vkGetBufferDeviceAddressEXT`.
- `bufferDeviceAddressCaptureReplay` indicates that the implementation supports saving and reusing buffer addresses, e.g. for trace capture and replay.
- `bufferDeviceAddressMultiDevice` indicates that the implementation supports the `bufferDeviceAddress` feature for logical devices created with multiple physical devices. If this feature is not supported, buffer addresses **must** not be queried on a logical device created with more than one physical device.

If the `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

NOTE

The `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure has the same members as the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure, but the functionality indicated by the members is expressed differently. The features indicated by the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure requires additional flags to be passed at memory allocation time, and the capture and replay mechanism is built around opaque capture addresses for buffer and memory objects.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBufferDeviceAddressFeaturesEXT-sType-sType

sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BUFFER_DEVICE_ADDRESS_FEATURES_EXT`

The `VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV` structure is defined as:

```
// Provided by VK_NV_dedicated_allocation_image_aliasing
typedef struct VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dedicatedAllocationImageAliasing;
} VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **dedicatedAllocationImageAliasing** indicates that the implementation supports aliasing of compatible image objects on a dedicated allocation.

If the `VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV` structure is included in the **pNext** chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV` can also be used in the **pNext** chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEDICATED_ALLOCATION_IMAGE_ALIASING_FEATURES_NV`

The `VkPhysicalDeviceImagelessFramebufferFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceImagelessFramebufferFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imagelessFramebuffer;
} VkPhysicalDeviceImagelessFramebufferFeatures;
```

or the equivalent

```
// Provided by VK_KHR_imageless_framebuffer
typedef VkPhysicalDeviceImagelessFramebufferFeatures
VkPhysicalDeviceImagelessFramebufferFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imagelessFramebuffer` indicates that the implementation supports specifying the image view for attachments at render pass begin time via `VkRenderPassAttachmentBeginInfo`.

If the `VkPhysicalDeviceImagelessFramebufferFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceImagelessFramebufferFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImagelessFramebufferFeatures-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGELESS_FRAMEBUFFER_FEATURES`

The `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_shader_interlock
typedef struct VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShaderSampleInterlock;
    VkBool32           fragmentShaderPixelInterlock;
    VkBool32           fragmentShaderShadingRateInterlock;
} VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentShaderSampleInterlock` indicates that the implementation supports the `FragmentShaderSampleInterlockEXT` SPIR-V capability.
- `fragmentShaderPixelInterlock` indicates that the implementation supports the `FragmentShaderPixelInterlockEXT` SPIR-V capability.
- `fragmentShaderShadingRateInterlock` indicates that the implementation supports the `FragmentShaderShadingRateInterlockEXT` SPIR-V capability.

If the `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_INTERLOCK_FEATURES_EXT`

The `VkPhysicalDeviceCooperativeMatrixFeaturesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrix;
    VkBool32           cooperativeMatrixRobustBufferAccess;
} VkPhysicalDeviceCooperativeMatrixFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrix` indicates that the implementation supports the `CooperativeMatrixNV` SPIR-V capability.
- `cooperativeMatrixRobustBufferAccess` indicates that the implementation supports robust buffer access for SPIR-V `OpCooperativeMatrixLoadNV` and `OpCooperativeMatrixStoreNV` instructions.

If the `VkPhysicalDeviceCooperativeMatrixFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCooperativeMatrixFeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixFeaturesNV-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_FEATURES_NV`

The `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrix;
    VkBool32           cooperativeMatrixRobustBufferAccess;
} VkPhysicalDeviceCooperativeMatrixFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrix` indicates that the implementation supports the `CooperativeMatrixKHR` SPIR-V capability.
- `cooperativeMatrixRobustBufferAccess` indicates that the implementation supports robust buffer access for SPIR-V `OpCooperativeMatrixLoadKHR` and `OpCooperativeMatrixStoreKHR` instructions.

If the `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_FEATURES_KHR`

The `VkPhysicalDeviceCooperativeMatrix2FeaturesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix2
typedef struct VkPhysicalDeviceCooperativeMatrix2FeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrixWorkgroupScope;
    VkBool32           cooperativeMatrixFlexibleDimensions;
    VkBool32           cooperativeMatrixReductions;
    VkBool32           cooperativeMatrixConversions;
    VkBool32           cooperativeMatrixPerElementOperations;
    VkBool32           cooperativeMatrixTensorAddressing;
    VkBool32           cooperativeMatrixBlockLoads;
} VkPhysicalDeviceCooperativeMatrix2FeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixWorkgroupScope` indicates that the implementation supports workgroup scope cooperative matrices.
- `cooperativeMatrixFlexibleDimensions` indicates that the implementation supports cooperative matrix sizes that are a multiple of the granularity advertised in `VkCooperativeMatrixFlexibleDimensionsPropertiesNV`.
- `cooperativeMatrixReductions` indicates that the implementation supports the `CooperativeMatrixReductionsNV` SPIR-V capability. This allows performing (row, column, 2x2, or all element) reductions on matrices.
- `cooperativeMatrixConversions` indicates that the implementation supports the `CooperativeMatrixConversionsNV` SPIR-V capability. This allows converting accumulator matrices to A or B matrices.
- `cooperativeMatrixPerElementOperations` indicates that the implementation supports the `CooperativeMatrixPerElementOperationsNV` SPIR-V capability. This allows performing element-wise operations on matrix elements using a callback function.
- `cooperativeMatrixTensorAddressing` indicates that the implementation supports the `TensorAddressingNV` and `CooperativeMatrixTensorAddressingNV` SPIR-V capabilities. This allows using tensor layout and tensor view types for matrix loads and stores.
- `cooperativeMatrixBlockLoads` indicates that the implementation supports the `CooperativeMatrixBlockLoadsNV` SPIR-V capability. This allows setting block size for loads and using a callback function to decode block elements.

If the `VkPhysicalDeviceCooperativeMatrix2FeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCooperativeMatrix2FeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrix2FeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_2_FEATURES_NV`

The `VkPhysicalDeviceYcbcrImageArraysFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_ycbcr_image_arrays
typedef struct VkPhysicalDeviceYcbcrImageArraysFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           ycbcrImageArrays;
} VkPhysicalDeviceYcbcrImageArraysFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **ycbcrImageArrays** indicates that the implementation supports creating images with a format that requires [Y'C_BC_R conversion](#) and has multiple array layers.

If the [VkPhysicalDeviceYcbcrImageArraysFeaturesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceYcbcrImageArraysFeaturesEXT](#) **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceYcbcrImageArraysFeaturesEXT-sType-sType **sType must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_IMAGE_ARRAYS_FEATURES_EXT](#)

The [VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupExtendedTypes;
} VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures;
```

or the equivalent

```
// Provided by VK_KHR_shader_subgroup_extended_types
typedef VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures
VkPhysicalDeviceShaderSubgroupExtendedTypesFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderSubgroupExtendedTypes** is a boolean specifying whether subgroup operations can use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in [group operations](#) with [subgroup scope](#), if the implementation supports the types.

If the [VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures](#) **can** also be used in the **pNext** chain of

[VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_EXTENDED_TYPES_FEATURES`

The `VkPhysicalDeviceHostQueryResetFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceHostQueryResetFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hostQueryReset;
} VkPhysicalDeviceHostQueryResetFeatures;
```

or the equivalent

```
// Provided by VK_EXT_host_query_reset
typedef VkPhysicalDeviceHostQueryResetFeatures
VkPhysicalDeviceHostQueryResetFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hostQueryReset` indicates that the implementation supports resetting queries from the host with `vkResetQueryPool`.

If the `VkPhysicalDeviceHostQueryResetFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceHostQueryResetFeatures` **can** also be used in the `pNext` chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHostQueryResetFeatures-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HOST_QUERY_RESET_FEATURES`

The `VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL` structure is defined as:

```
// Provided by VK_INTEL_shader_integer_functions2
typedef struct VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderIntegerFunctions2;
} VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderIntegerFunctions2` indicates that the implementation supports the `IntegerFunctions2INTEL` SPIR-V capability.

If the `VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INTEGER_FUNCTIONS_2_FEATURES_INTEL`

The `VkPhysicalDeviceCoverageReductionModeFeaturesNV` structure is defined as:

```
// Provided by VK_NV_coverage_reduction_mode
typedef struct VkPhysicalDeviceCoverageReductionModeFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           coverageReductionMode;
} VkPhysicalDeviceCoverageReductionModeFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `coverageReductionMode` indicates whether the implementation supports coverage reduction modes. See [Coverage Reduction](#).

If the `VkPhysicalDeviceCoverageReductionModeFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported.

`VkPhysicalDeviceCoverageReductionModeFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCoverageReductionModeFeaturesNV-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COVERAGE_REDUCTION_MODE_FEATURES_NV`

The `VkPhysicalDeviceTimelineSemaphoreFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           timelineSemaphore;
} VkPhysicalDeviceTimelineSemaphoreFeatures;
```

or the equivalent

```
// Provided by VK_KHR_timeline_semaphore
typedef VkPhysicalDeviceTimelineSemaphoreFeatures
VkPhysicalDeviceTimelineSemaphoreFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `timelineSemaphore` indicates whether semaphores created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE` are supported.

If the `VkPhysicalDeviceTimelineSemaphoreFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceTimelineSemaphoreFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceTimelineSemaphoreFeatures-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_FEATURES`

The `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` structure is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           screenBufferImport;
} VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX;
```

The members of the `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` structure describe the following features:

- `screenBufferImport` indicates whether QNX Screen buffer import functionality is supported. If `screenBufferImport` is `VK_TRUE`, `VkDeviceMemory` supports importing `_screen_buffer` from applications. In this case, the application is responsible for the resource management of the `_screen_buffer`.

Table 65. Functionality Supported for QNX Screen Buffer Features

Features	Functionality
<code>screenBufferImport</code>	<code>VkImportScreenBufferInfoQNX</code>
Always supported ¹	<code>vkGetScreenBufferPropertiesQNX</code> , <code>VkScreenBufferPropertiesQNX</code> , <code>VkScreenBufferFormatPropertiesQNX</code> , <code>VkExternalFormatQNX</code>

1

Functionality in this row is always available.

The [Functionality supported for QNX Screen buffer features](#) table summarizes the functionality enabled by the `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` structure. Each entry in the body of the table summarizes the functionality that **can** be used when the given features are supported and enabled. This summarizes Valid Usage statements that are added elsewhere in this specification.

If the `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_SCREEN_BUFFER_FEATURES_QNX`

The `VkPhysicalDeviceIndexTypeUint8FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_index_type_uint8
typedef struct VkPhysicalDeviceIndexTypeUint8FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indexTypeUint8;
} VkPhysicalDeviceIndexTypeUint8FeaturesKHR;
```

or the equivalent

```
// Provided by VK_EXT_index_type_uint8
typedef VkPhysicalDeviceIndexTypeUint8FeaturesKHR
VkPhysicalDeviceIndexTypeUint8FeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **indexTypeUint8** indicates that **VK_INDEX_TYPE_UINT8_KHR** can be used with [vkCmdBindIndexBuffer2KHR](#) and [vkCmdBindIndexBuffer](#).

If the [VkPhysicalDeviceIndexTypeUint8FeaturesKHR](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceIndexTypeUint8FeaturesKHR](#) **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceIndexTypeUint8FeaturesKHR-sType-sType
sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INDEX_TYPE_UINT8_FEATURES_KHR**

The [VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_primitive_topology_list_restart
typedef struct VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           primitiveTopologyListRestart;
    VkBool32           primitiveTopologyPatchListRestart;
} VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitiveTopologyListRestart` indicates that list type primitives, `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY` and `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, **can** use the primitive restart index value in index buffers.
- `primitiveTopologyPatchListRestart` indicates that the `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` topology **can** use the primitive restart index value in index buffers.

If the `VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVE_TOPOLOGY_LIST_RESTART_FEATURES_EXT`

The `VkPhysicalDeviceShaderSMBuiltinsFeaturesNV` structure is defined as:

```
// Provided by VK_NV_shader_sm_builtins
typedef struct VkPhysicalDeviceShaderSMBuiltinsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSMBuiltins;
} VkPhysicalDeviceShaderSMBuiltinsFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSMBuiltins` indicates whether the implementation supports the SPIR-V `ShaderSMBuiltinsNV` capability.

If the `VkPhysicalDeviceShaderSMBuiltinsFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderSMBuiltinsFeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSMBuiltinsFeaturesNV-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_FEATURES_NV

The `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           separateDepthStencilLayouts;
} VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures;
```

or the equivalent

```
// Provided by VK_KHR_separate_depth_stencil_layouts
typedef VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures
VkPhysicalDeviceSeparateDepthStencilLayoutsFeaturesKHR;
```

This structure describes the following feature:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- separateDepthStencilLayouts indicates whether the implementation supports a `VkImageMemoryBarrier` for a depth/stencil image with only one of `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` set, and whether `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL`, or `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL` can be used.

If the `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` structure is included in the pNext chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` can also be used in the pNext chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures-sType-sType
sType **must** be
VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SEPARATE_DEPTH_STENCIL_LAYOUTS_FEATURES

The `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineExecutableInfo;
} VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineExecutableInfo` indicates that the implementation supports reporting properties and statistics about the pipeline executables associated with a compiled pipeline.

If the `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_EXECUTABLE_PROPERTIES_FEATURES_KHR`

The `VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderDemoteToHelperInvocation;
} VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures;
```

or the equivalent

```
// Provided by VK_EXT_shader_demote_to_helper_invocation
typedef VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures
VkPhysicalDeviceShaderDemoteToHelperInvocationFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderDemoteToHelperInvocation` indicates whether the implementation supports the SPIR-V `DemoteToHelperInvocationEXT` capability.

If the `VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_DEMOTE_TO_HELPER_INVOCATION_FEATURES`

The `VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_texel_buffer_alignment
typedef struct VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           texelBufferAlignment;
} VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `texelBufferAlignment` indicates whether the implementation uses more specific alignment requirements advertised in `VkPhysicalDeviceTexelBufferAlignmentProperties` rather than `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`.

If the `VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_FEATURES_EXT`

The `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_attachment_feedback_loop_dynamic_state
typedef struct VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           attachmentFeedbackLoopDynamicState;
} VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **attachmentFeedbackLoopDynamicState** specifies whether dynamic feedback loops are supported.

If the **VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT** **can** also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT-sType-sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ATTACHMENT_FEEDBACK_LOOP_DYNAMIC_STATE_FEATURES_EXT**

The **VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT** structure is defined as:

```
// Provided by VK_EXT_legacy_vertex_attributes
typedef struct VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           legacyVertexAttributes;
} VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **legacyVertexAttributes** specifies whether compatibility features for vertex attributes are supported when using dynamic vertex input state.

If the **VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT** **can** also be used in the **pNext** chain of

[VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LEGACY_VERTEX_ATTRIBUTES_FEATURES_EXT`

The `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTextureCompressionASTCHDRFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureCompressionASTC_HDR;
} VkPhysicalDeviceTextureCompressionASTCHDRFeatures;
```

or the equivalent

```
// Provided by VK_EXT_texture_compression_astc_hdr
typedef VkPhysicalDeviceTextureCompressionASTCHDRFeatures
VkPhysicalDeviceTextureCompressionASTCHDRFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `textureCompressionASTC_HDR` indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in [optimalTilingFeatures](#) for the following formats:
 - `VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK`

- `VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` can be used to check for supported properties of individual formats as normal.

If the `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceTextureCompressionASTCHDRFeatures-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXTURE_COMPRESSION_ASTC_HDR_FEATURES`

The `VkPhysicalDeviceLineRasterizationFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_line_rasterization
typedef struct VkPhysicalDeviceLineRasterizationFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rectangularLines;
    VkBool32           bresenhamLines;
    VkBool32           smoothLines;
    VkBool32           stippledRectangularLines;
    VkBool32           stippledBresenhamLines;
    VkBool32           stippledSmoothLines;
} VkPhysicalDeviceLineRasterizationFeaturesKHR;
```

or the equivalent

```
// Provided by VK_EXT_line_rasterization
typedef VkPhysicalDeviceLineRasterizationFeaturesKHR
VkPhysicalDeviceLineRasterizationFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rectangularLines` indicates whether the implementation supports `rectangular line rasterization`.

- `bresenhamLines` indicates whether the implementation supports [Bresenham-style line rasterization](#).
- `smoothLines` indicates whether the implementation supports [smooth line rasterization](#).
- `stippledRectangularLines` indicates whether the implementation supports [stippled line rasterization](#) with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_KHR` lines.
- `stippledBresenhamLines` indicates whether the implementation supports [stippled line rasterization](#) with `VK_LINE_RASTERIZATION_MODE_BRESENHAM_KHR` lines.
- `stippledSmoothLines` indicates whether the implementation supports [stippled line rasterization](#) with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH_KHR` lines.

If the `VkPhysicalDeviceLineRasterizationFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceLineRasterizationFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceLineRasterizationFeaturesKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_FEATURES_KHR`

The `VkPhysicalDeviceSubgroupSizeControlFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subgroupSizeControl;
    VkBool32           computeFullSubgroups;
} VkPhysicalDeviceSubgroupSizeControlFeatures;
```

or the equivalent

```
// Provided by VK_EXT_subgroup_size_control
typedef VkPhysicalDeviceSubgroupSizeControlFeatures
VkPhysicalDeviceSubgroupSizeControlFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subgroupSizeControl` indicates whether the implementation supports controlling shader subgroup sizes via the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag

and the [VkPipelineShaderStageRequiredSubgroupSizeCreateInfo](#) structure.

- `computeFullSubgroups` indicates whether the implementation supports requiring full subgroups in `compute`, `mesh`, or `task` shaders via the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag.

If the [VkPhysicalDeviceSubgroupSizeControlFeatures](#) structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceSubgroupSizeControlFeatures](#) can also be used in the `pNext` chain of [VkDeviceCreateInfo](#) to selectively enable these features.

NOTE

The [VkPhysicalDeviceSubgroupSizeControlFeaturesEXT](#) structure was added in version 2 of the [VK_EXT_subgroup_size_control](#) extension. Version 1 implementations of this extension will not fill out the features structure but applications may assume that both `subgroupSizeControl` and `computeFullSubgroups` are supported if the extension is supported. (See also the [Feature Requirements](#) section.) Applications are advised to add a [VkPhysicalDeviceSubgroupSizeControlFeaturesEXT](#) structure to the `pNext` chain of [VkDeviceCreateInfo](#) to enable the features regardless of the version of the extension supported by the implementation. If the implementation only supports version 1, it will safely ignore the [VkPhysicalDeviceSubgroupSizeControlFeaturesEXT](#) structure.

Vulkan 1.3 implementations always support the features structure.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupSizeControlFeatures-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_FEATURES`

The [VkPhysicalDeviceCoherentMemoryFeaturesAMD](#) structure is defined as:

```
// Provided by VK_AMD_device_coherent_memory
typedef struct VkPhysicalDeviceCoherentMemoryFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceCoherentMemory;
} VkPhysicalDeviceCoherentMemoryFeaturesAMD;
```

This structure describes the following feature:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceCoherentMemory` indicates that the implementation supports [device coherent memory](#).

If the [VkPhysicalDeviceCoherentMemoryFeaturesAMD](#) structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to

indicate whether each corresponding feature is supported. `VkPhysicalDeviceCoherentMemoryFeaturesAMD` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCoherentMemoryFeaturesAMD-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COHERENT_MEMORY_FEATURES_AMD`

The `VkPhysicalDeviceAccelerationStructureFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructureFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           accelerationStructure;
    VkBool32           accelerationStructureCaptureReplay;
    VkBool32           accelerationStructureIndirectBuild;
    VkBool32           accelerationStructureHostCommands;
    VkBool32           descriptorBindingAccelerationStructureUpdateAfterBind;
} VkPhysicalDeviceAccelerationStructureFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructure` indicates whether the implementation supports the acceleration structure functionality. See [Acceleration Structures](#).
- `accelerationStructureCaptureReplay` indicates whether the implementation supports saving and reusing acceleration structure device addresses, e.g. for trace capture and replay.
- `accelerationStructureIndirectBuild` indicates whether the implementation supports indirect acceleration structure build commands, e.g. [vkCmdBuildAccelerationStructuresIndirectKHR](#).
- `accelerationStructureHostCommands` indicates whether the implementation supports host side acceleration structure commands, e.g. [vkBuildAccelerationStructuresKHR](#), [vkCopyAccelerationStructureKHR](#), [vkCopyAccelerationStructureToMemoryKHR](#), [vkCopyMemoryToAccelerationStructureKHR](#), [vkWriteAccelerationStructuresPropertiesKHR](#).
- `descriptorBindingAccelerationStructureUpdateAfterBind` indicates whether the implementation supports updating acceleration structure descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`.

If the `VkPhysicalDeviceAccelerationStructureFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceAccelerationStructureFeaturesKHR` can also be used in the `pNext` chain of

[VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAccelerationStructureFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_FEATURES_KHR`

The `VkPhysicalDeviceRayTracingPipelineFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelineFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingPipeline;
    VkBool32           rayTracingPipelineShaderGroupHandleCaptureReplay;
    VkBool32           rayTracingPipelineShaderGroupHandleCaptureReplayMixed;
    VkBool32           rayTracingPipelineTraceRaysIndirect;
    VkBool32           rayTraversalPrimitiveCulling;
} VkPhysicalDeviceRayTracingPipelineFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingPipeline` indicates whether the implementation supports the ray tracing pipeline functionality. See [Ray Tracing](#).
- `rayTracingPipelineShaderGroupHandleCaptureReplay` indicates whether the implementation supports saving and reusing shader group handles, e.g. for trace capture and replay.
- `rayTracingPipelineShaderGroupHandleCaptureReplayMixed` indicates whether the implementation supports reuse of shader group handles being arbitrarily mixed with creation of non-reused shader group handles. If this is `VK_FALSE`, all reused shader group handles **must** be specified before any non-reused handles **may** be created.
- `rayTracingPipelineTraceRaysIndirect` indicates whether the implementation supports indirect ray tracing commands, e.g. `vkCmdTraceRaysIndirectKHR`.
- `rayTraversalPrimitiveCulling` indicates whether the implementation supports [primitive culling during ray traversal](#).

If the `VkPhysicalDeviceRayTracingPipelineFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRayTracingPipelineFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage

- VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03575
If `rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is `VK_TRUE`, `rayTracingPipelineShaderGroupHandleCaptureReplay` **must** also be `VK_TRUE`

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_FEATURES_KHR`

The `VkPhysicalDeviceRayQueryFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_query
typedef struct VkPhysicalDeviceRayQueryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayQuery;
} VkPhysicalDeviceRayQueryFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayQuery` indicates whether the implementation supports ray query (`OpRayQueryProceedKHR`) functionality.

If the `VkPhysicalDeviceRayQueryFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRayQueryFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayQueryFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_QUERY_FEATURES_KHR`

The `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_maintenance1
typedef struct VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingMaintenance1;
    VkBool32           rayTracingPipelineTraceRaysIndirect2;
} VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingMaintenance1` indicates that the implementation supports the following:
 - The `CullMaskKHR` SPIR-V builtin using the `SPV_KHR_ray_cull_mask` SPIR-V extension.
 - Additional acceleration structure property queries: `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR` and `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`.
 - A new access flag `VK_ACCESS_2_SHADER_BINDING_TABLE_READ_BIT_KHR`.
 - A new pipeline stage flag bit `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR`
- `rayTracingPipelineTraceRaysIndirect2` indicates whether the implementation supports the extended indirect ray tracing command `vkCmdTraceRaysIndirect2KHR`.

If the `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR-sType-sType `must` be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_MAINTENANCE_1_FEATURES_KHR`

The `VkPhysicalDeviceVideoMaintenance1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_maintenance1
typedef struct VkPhysicalDeviceVideoMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoMaintenance1;
} VkPhysicalDeviceVideoMaintenance1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoMaintenance1` indicates that the implementation supports the following:
 - The new buffer creation flag `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`.
 - The new image creation flag `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`.
 - The new video session creation flag `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`.

If the `VkPhysicalDeviceVideoMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVideoMaintenance1FeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoMaintenance1FeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_MAINTENANCE_1_FEATURES_KHR`

The `VkPhysicalDeviceExtendedDynamicStateFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state
typedef struct VkPhysicalDeviceExtendedDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState;
} VkPhysicalDeviceExtendedDynamicStateFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `extendedDynamicState` indicates that the implementation supports the following dynamic states:
 - `VK_DYNAMIC_STATE_CULL_MODE`
 - `VK_DYNAMIC_STATE_FRONT_FACE`
 - `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY`
 - `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT`
 - `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT`
 - `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE`
 - `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE`

- `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE`
- `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP`
- `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE`
- `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE`
- `VK_DYNAMIC_STATE_STENCIL_OP`

If the `VkPhysicalDeviceExtendedDynamicStateFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExtendedDynamicStateFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceExtendedDynamicStateFeaturesEXT-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_FEATURES_EXT`

The `VkPhysicalDeviceExtendedDynamicState2FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state2
typedef struct VkPhysicalDeviceExtendedDynamicState2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState2;
    VkBool32           extendedDynamicState2LogicOp;
    VkBool32           extendedDynamicState2PatchControlPoints;
} VkPhysicalDeviceExtendedDynamicState2FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `extendedDynamicState2` indicates that the implementation supports the following dynamic states:
 - `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE`
 - `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE`
 - `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE`
- `extendedDynamicState2LogicOp` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_LOGIC_OP_EXT`
- `extendedDynamicState2PatchControlPoints` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT`

If the `VkPhysicalDeviceExtendedDynamicState2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExtendedDynamicState2FeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicState2FeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_2_FEATURES_EXT`

The `VkPhysicalDeviceExtendedDynamicState3FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state3
typedef struct VkPhysicalDeviceExtendedDynamicState3FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState3TessellationDomainOrigin;
    VkBool32           extendedDynamicState3DepthClampEnable;
    VkBool32           extendedDynamicState3PolygonMode;
    VkBool32           extendedDynamicState3RasterizationSamples;
    VkBool32           extendedDynamicState3SampleMask;
    VkBool32           extendedDynamicState3AlphaToCoverageEnable;
    VkBool32           extendedDynamicState3AlphaToOneEnable;
    VkBool32           extendedDynamicState3LogicOpEnable;
    VkBool32           extendedDynamicState3ColorBlendEnable;
    VkBool32           extendedDynamicState3ColorBlendEquation;
    VkBool32           extendedDynamicState3ColorWriteMask;
    VkBool32           extendedDynamicState3RasterizationStream;
    VkBool32           extendedDynamicState3ConservativeRasterizationMode;
    VkBool32           extendedDynamicState3ExtraPrimitiveOverestimationSize;
    VkBool32           extendedDynamicState3DepthClipEnable;
    VkBool32           extendedDynamicState3SampleLocationsEnable;
    VkBool32           extendedDynamicState3ColorBlendAdvanced;
    VkBool32           extendedDynamicState3ProvokingVertexMode;
    VkBool32           extendedDynamicState3LineRasterizationMode;
    VkBool32           extendedDynamicState3LineStippleEnable;
    VkBool32           extendedDynamicState3DepthClipNegativeOneToOne;
    VkBool32           extendedDynamicState3ViewportWScalingEnable;
    VkBool32           extendedDynamicState3ViewportSwizzle;
    VkBool32           extendedDynamicState3CoverageToColorEnable;
    VkBool32           extendedDynamicState3CoverageToColorLocation;
    VkBool32           extendedDynamicState3CoverageModulationMode;
    VkBool32           extendedDynamicState3CoverageModulationTableEnable;
    VkBool32           extendedDynamicState3CoverageModulationTable;
    VkBool32           extendedDynamicState3CoverageReductionMode;
    VkBool32           extendedDynamicState3RepresentativeFragmentTestEnable;
    VkBool32           extendedDynamicState3ShadingRateImageEnable;
} VkPhysicalDeviceExtendedDynamicState3FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `extendedDynamicState3TessellationDomainOrigin` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT`
- `extendedDynamicState3DepthClampEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT`

- `extendedDynamicState3PolygonMode` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_POLYGON_MODE_EXT`
- `extendedDynamicState3RasterizationSamples` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT`
- `extendedDynamicState3SampleMask` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT`
- `extendedDynamicState3AlphaToCoverageEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT`
- `extendedDynamicState3AlphaToOneEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT`
- `extendedDynamicState3LogicOpEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT`
- `extendedDynamicState3ColorBlendEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT`
- `extendedDynamicState3ColorBlendEquation` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`
- `extendedDynamicState3ColorWriteMask` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`
- `extendedDynamicState3RasterizationStream` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT`
- `extendedDynamicState3ConservativeRasterizationMode` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT`
- `extendedDynamicState3ExtraPrimitiveOverestimationSize` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT`
- `extendedDynamicState3DepthClipEnable` indicates that the implementation supports the following dynamic state:

- `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT`
- `extendedDynamicState3SampleLocationsEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT`
- `extendedDynamicState3ColorBlendAdvanced` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT`
- `extendedDynamicState3ProvokingVertexMode` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT`
- `extendedDynamicState3LineRasterizationMode` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT`
- `extendedDynamicState3LineStippleEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT`
- `extendedDynamicState3DepthClipNegativeOneToOne` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT`
- `extendedDynamicState3ViewportWScalingEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV`
- `extendedDynamicState3ViewportSwizzle` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV`
- `extendedDynamicState3CoverageToColorEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV`
- `extendedDynamicState3CoverageToColorLocation` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV`
- `extendedDynamicState3CoverageModulationMode` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV`
- `extendedDynamicState3CoverageModulationTableEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV`
- `extendedDynamicState3CoverageModulationTable` indicates that the implementation supports the

following dynamic state:

- `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV`
- `extendedDynamicState3CoverageReductionMode` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV`
- `extendedDynamicState3RepresentativeFragmentTestEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV`
- `extendedDynamicState3ShadingRateImageEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV`

If the `VkPhysicalDeviceExtendedDynamicState3FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExtendedDynamicState3FeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceExtendedDynamicState3FeaturesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_3_FEATURES_EXT`

The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCommands;
} VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceGeneratedCommands` indicates whether the implementation supports functionality to generate commands on the device. See [Device-Generated Commands](#).

If the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV` **can** also be used in the `pNext` chain of

[VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_NV`

The `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands_compute
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCompute;
    VkBool32           deviceGeneratedComputePipelines;
    VkBool32           deviceGeneratedComputeCaptureReplay;
} VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV;
```

This structure describes the following features:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceGeneratedCompute` indicates whether the implementation supports functionality to generate dispatch commands and push constants for the compute pipeline on the device. See [Device-Generated Commands](#).
- `deviceGeneratedComputePipelines` indicates whether the implementation supports functionality to generate commands to bind compute pipelines on the device. See [Device-Generated Commands](#).
- `deviceGeneratedComputeCaptureReplay` indicates whether the implementation supports functionality to capture compute pipeline address and reuse later for replay in [Device-Generated Commands](#).

If the `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV` structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV` **can** also be used in the `pNext` chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_COMPUTE_FEATURES_NV`

The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCommands;
    VkBool32           dynamicGeneratedPipelineLayout;
} VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceGeneratedCommands` indicates whether the implementation supports functionality to generate commands on the device.
- `dynamicGeneratedPipelineLayout` indicates the implementation allows the `pipelineLayout` member of `VkIndirectCommandsLayoutCreateInfoEXT` to be `VK_NULL_HANDLE` and `VkPipelineLayoutCreateInfo` can be chained off those structures' `pNext` instead.

If the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_EXT`

The `VkPhysicalDeviceDiagnosticsConfigFeaturesNV` structure is defined as:

```
// Provided by VK_NV_device_diagnostics_config
typedef struct VkPhysicalDeviceDiagnosticsConfigFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           diagnosticsConfig;
} VkPhysicalDeviceDiagnosticsConfigFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `diagnosticsConfig` indicates whether the implementation supports the ability to configure diagnostic tools.

If the `VkPhysicalDeviceDiagnosticsConfigFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDiagnosticsConfigFeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDiagnosticsConfigFeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DIAGNOSTICS_CONFIG_FEATURES_NV`

The `VkPhysicalDeviceDeviceMemoryReportFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_device_memory_report
typedef struct VkPhysicalDeviceDeviceMemoryReportFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceMemoryReport;
} VkPhysicalDeviceDeviceMemoryReportFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceMemoryReport` indicates whether the implementation supports the ability to register device memory report callbacks.

If the `VkPhysicalDeviceDeviceMemoryReportFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDeviceMemoryReportFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceMemoryReportFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_MEMORY_REPORT_FEATURES_EXT`

The `VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_global_priority
typedef struct VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           globalPriorityQuery;
} VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR;
```

or the equivalent

```
// Provided by VK_EXT_global_priority_query
typedef VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR
VkPhysicalDeviceGlobalPriorityQueryFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `globalPriorityQuery` indicates whether the implementation supports the ability to query global queue priorities.

If the `VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GLOBAL_PRIORITY_QUERY_FEATURES_KHR`

The `VkPhysicalDevicePipelineCreationCacheControlFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDevicePipelineCreationCacheControlFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineCreationCacheControl;
} VkPhysicalDevicePipelineCreationCacheControlFeatures;
```

or the equivalent

```
// Provided by VK_EXT_pipeline_creation_cache_control
typedef VkPhysicalDevicePipelineCreationCacheControlFeatures
VkPhysicalDevicePipelineCreationCacheControlFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pipelineCreationCacheControl** indicates that the implementation supports:
 - The following **can** be used in **Vk*PipelineCreateInfo::flags**:
 - **VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT**
 - **VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT**
 - The following **can** be used in **VkPipelineCacheCreateInfo::flags**:
 - **VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT**

If the **VkPhysicalDevicePipelineCreationCacheControlFeatures** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDevicePipelineCreationCacheControlFeatures** **can** also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineCreationCacheControlFeatures-sType-sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_CREATION_CACHE_CONTROL_FEATURES**

The **VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures** structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderZeroInitializeWorkgroupMemory;
} VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures;
```

or the equivalent

```
// Provided by VK_KHR_zero_initialize_workgroup_memory
typedef VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures
VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderZeroInitializeWorkgroupMemory` specifies whether the implementation supports initializing a variable in Workgroup storage class.

If the `VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ZERO_INITIALIZE_WORKGROUP_MEMORY_FEATURES`

The `VkPhysicalDevicePrivateDataFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDevicePrivateDataFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           privateData;
} VkPhysicalDevicePrivateDataFeatures;
```

or the equivalent

```
// Provided by VK_EXT_private_data
typedef VkPhysicalDevicePrivateDataFeatures VkPhysicalDevicePrivateDataFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `privateData` indicates whether the implementation supports private data. See [Private Data](#).

If the `VkPhysicalDevicePrivateDataFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePrivateDataFeatures` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePrivateDataFeatures-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIVATE_DATA_FEATURES

The `VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_subgroup_uniform_control_flow
typedef struct VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupUniformControlFlow;
} VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR;
```

This structure describes the following feature:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- shaderSubgroupUniformControlFlow specifies whether the implementation supports the shader execution mode `SubgroupUniformControlFlowKHR`

If the `VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR` structure is included in the pNext chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR` **can** also be used in the pNext chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_UNIFORM_CONTROL_FLOW_FEATURES_KHR

The `VkPhysicalDeviceRobustness2FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_robustness2
typedef struct VkPhysicalDeviceRobustness2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustBufferAccess2;
    VkBool32           robustImageAccess2;
    VkBool32           nullDescriptor;
} VkPhysicalDeviceRobustness2FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `robustBufferAccess2` indicates whether buffer accesses are tightly bounds-checked against the range of the descriptor. Uniform buffers **must** be bounds-checked to the range of the descriptor, where the range is rounded up to a multiple of `robustUniformBufferAccessSizeAlignment`. Storage buffers **must** be bounds-checked to the range of the descriptor, where the range is rounded up to a multiple of `robustStorageBufferAccessSizeAlignment`. Out of bounds buffer loads will return zero values, and `image load, sample, and atomic operations` from texel buffers will have (0,0,1) values `inserted for missing G, B, or A components` based on the format.
- `robustImageAccess2` indicates whether image accesses are tightly bounds-checked against the dimensions of the image view. Out of bounds `image load, sample, and atomic operations` from images will return zero values, with (0,0,1) values `inserted for missing G, B, or A components` based on the format.
- `nullDescriptor` indicates whether descriptors **can** be written with a `VK_NULL_HANDLE` resource or view, which are considered valid to access and act as if the descriptor were bound to nothing.

If the `VkPhysicalDeviceRobustness2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRobustness2FeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage

- VUID-VkPhysicalDeviceRobustness2FeaturesEXT-robustBufferAccess2-04000
If `robustBufferAccess2` is enabled then `robustBufferAccess` **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRobustness2FeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_FEATURES_EXT`

The `VkPhysicalDeviceImageRobustnessFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceImageRobustnessFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustImageAccess;
} VkPhysicalDeviceImageRobustnessFeatures;
```

or the equivalent

```
// Provided by VK_EXT_image_robustness
typedef VkPhysicalDeviceImageRobustnessFeatures
VkPhysicalDeviceImageRobustnessFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **robustImageAccess** indicates whether image accesses are tightly bounds-checked against the dimensions of the image view. [Invalid texels](#) resulting from out of bounds image loads will be replaced as described in [Texel Replacement](#), with either (0,0,1) or (0,0,0) values inserted for missing G, B, or A components based on the format.

If the [VkPhysicalDeviceImageRobustnessFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceImageRobustnessFeatures](#) **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageRobustnessFeatures-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_ROBUSTNESS_FEATURES](#)

The [VkPhysicalDeviceShaderTerminateInvocationFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderTerminateInvocationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderTerminateInvocation;
} VkPhysicalDeviceShaderTerminateInvocationFeatures;
```

or the equivalent

```
// Provided by VK_KHR_shader_terminate_invocation
typedef VkPhysicalDeviceShaderTerminateInvocationFeatures
VkPhysicalDeviceShaderTerminateInvocationFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- `shaderTerminateInvocation` specifies whether the implementation supports SPIR-V modules that use the `SPV_KHR_terminate_invocation` extension.

If the `VkPhysicalDeviceShaderTerminateInvocationFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderTerminateInvocationFeatures` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderTerminateInvocationFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_TERMINATE_INVOCATION_FEATURES`

The `VkPhysicalDeviceCustomBorderColorFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_custom_border_color
typedef struct VkPhysicalDeviceCustomBorderColorFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           customBorderColors;
    VkBool32           customBorderColorWithoutFormat;
} VkPhysicalDeviceCustomBorderColorFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `customBorderColors` indicates that the implementation supports providing a `borderColor` value with one of the following values at sampler creation time:
 - `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`
 - `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- `customBorderColorWithoutFormat` indicates that explicit formats are not required for custom border colors and the value of the `format` member of the `VkSamplerCustomBorderColorCreateInfoEXT` structure **may** be `VK_FORMAT_UNDEFINED`. If this feature bit is not set, applications **must** provide the `VkFormat` of the image view(s) being sampled by this sampler in the `format` member of the `VkSamplerCustomBorderColorCreateInfoEXT` structure.

If the `VkPhysicalDeviceCustomBorderColorFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCustomBorderColorFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomBorderColorFeaturesEXT-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_FEATURES_EXT

The `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_border_color_swizzle
typedef struct VkPhysicalDeviceBorderColorSwizzleFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           borderColorSwizzle;
    VkBool32           borderColorSwizzleFromImage;
} VkPhysicalDeviceBorderColorSwizzleFeaturesEXT;
```

This structure describes the following features:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- borderColorSwizzle indicates that defined values are returned by sampled image operations when used with a sampler that uses a `VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK`, `VK_BORDER_COLOR_INT_OPAQUE_BLACK`, `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`, or `VK_BORDER_COLOR_INT_CUSTOM_EXT` borderColor and an image view that uses a non-identity component mapping, when either `borderColorSwizzleFromImage` is enabled or the `VkSamplerBorderColorComponentMappingCreateInfoEXT` is specified.
- borderColorSwizzleFromImage indicates that the implementation will return the correct border color values from sampled image operations under the conditions expressed above, without the application having to specify the border color component mapping when creating the sampler object. If this feature bit is not set, applications **can** chain a `VkSamplerBorderColorComponentMappingCreateInfoEXT` structure when creating samplers for use with image views that do not have an identity swizzle and, when those samplers are combined with image views using the same component mapping, sampled image operations that use opaque black or custom border colors will return the correct border color values.

If the `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT` structure is included in the pNext chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT` **can** also be used in the pNext chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBorderColorSwizzleFeaturesEXT-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BORDER_COLOR_SWIZZLE_FEATURES_EXT

The `VkPhysicalDevicePortabilitySubsetFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_portability_subset
typedef struct VkPhysicalDevicePortabilitySubsetFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           constantAlphaColorBlendFactors;
    VkBool32           events;
    VkBool32           imageViewFormatReinterpretation;
    VkBool32           imageViewFormatSwizzle;
    VkBool32           imageView2DOn3DImage;
    VkBool32           multisampleArrayImage;
    VkBool32           mutableComparisonSamplers;
    VkBool32           pointPolygons;
    VkBool32           samplerMipLodBias;
    VkBool32           separateStencilMaskRef;
    VkBool32           shaderSampleRateInterpolationFunctions;
    VkBool32           tessellationIsolines;
    VkBool32           tessellationPointMode;
    VkBool32           triangleFans;
    VkBool32           vertexAttributeAccessBeyondStride;
} VkPhysicalDevicePortabilitySubsetFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantAlphaColorBlendFactors` indicates whether this implementation supports constant *alpha Blend Factors* used as source or destination *color Blending*.
- `events` indicates whether this implementation supports synchronization using *Events*.
- `imageViewFormatReinterpretation` indicates whether this implementation supports a `VkImageView` being created with a texel format containing a different number of components, or a different number of bits in each component, than the texel format of the underlying `VkImage`.
- `imageViewFormatSwizzle` indicates whether this implementation supports remapping format components using `VkImageViewCreateInfo::components`.
- `imageView2DOn3DImage` indicates whether this implementation supports a `VkImage` being created with the `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` flag set, permitting a 2D or 2D array image view to be created on a 3D `VkImage`.
- `multisampleArrayImage` indicates whether this implementation supports a `VkImage` being created as a 2D array with multiple samples per texel.
- `mutableComparisonSamplers` indicates whether this implementation allows descriptors with comparison samplers to be *updated*.
- `pointPolygons` indicates whether this implementation supports *Rasterization* using a *point Polygon Mode*.

- `samplerMipLodBias` indicates whether this implementation supports setting a [mipmap LOD bias value](#) when [creating a sampler](#).
- `separateStencilMaskRef` indicates whether this implementation supports separate front and back [Stencil Test](#) reference values.
- `shaderSampleRateInterpolationFunctions` indicates whether this implementation supports fragment shaders which use the [InterpolationFunction](#) capability and the extended instructions [InterpolateAtCentroid](#), [InterpolateAtOffset](#), and [InterpolateAtSample](#) from the [GLSL.std.450](#) extended instruction set. This member is only meaningful if the `sampleRateShading` feature is supported.
- `tessellationIsolines` indicates whether this implementation supports [isoline output](#) from the [Tessellation](#) stage of a graphics pipeline. This member is only meaningful if `tessellationShader` are supported.
- `tessellationPointMode` indicates whether this implementation supports [point output](#) from the [Tessellation](#) stage of a graphics pipeline. This member is only meaningful if `tessellationShader` are supported.
- `triangleFans` indicates whether this implementation supports [Triangle Fans](#) primitive topology.
- `vertexAttributeAccessBeyondStride` indicates whether this implementation supports accessing a vertex input attribute beyond the stride of the corresponding vertex input binding.

If the `VkPhysicalDevicePortabilitySubsetFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePortabilitySubsetFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePortabilitySubsetFeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PORTABILITY_SUBSET_FEATURES_KHR`

The `VkPhysicalDevicePerformanceQueryFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkPhysicalDevicePerformanceQueryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           performanceCounterQueryPools;
    VkBool32           performanceCounterMultipleQueryPools;
} VkPhysicalDevicePerformanceQueryFeaturesKHR;
```

This structure describes the following features:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `performanceCounterQueryPools` indicates whether the implementation supports performance counter query pools.
- `performanceCounterMultipleQueryPools` indicates whether the implementation supports using multiple performance query pools in a primary command buffer and secondary command buffers executed within it.

If the `VkPhysicalDevicePerformanceQueryFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePerformanceQueryFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePerformanceQueryFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_QUERY_FEATURES_KHR`

The `VkPhysicalDevice4444FormatsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_4444_formats
typedef struct VkPhysicalDevice4444FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           formatA4R4G4B4;
    VkBool32           formatA4B4G4R4;
} VkPhysicalDevice4444FormatsFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatA4R4G4B4` indicates that the implementation **must** support using a `VkFormat` of `VK_FORMAT_A4R4G4B4_UNORM_PACK16_EXT` with at least the following `VkFormatFeatureFlagBits`:
 - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`
 - `VK_FORMAT_FEATURE_BLIT_SRC_BIT`
 - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- `formatA4B4G4R4` indicates that the implementation **must** support using a `VkFormat` of `VK_FORMAT_A4B4G4R4_UNORM_PACK16_EXT` with at least the following `VkFormatFeatureFlagBits`:
 - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`
 - `VK_FORMAT_FEATURE_BLIT_SRC_BIT`
 - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

If the `VkPhysicalDevice4444FormatsFeaturesEXT` structure is included in the `pNext` chain of the

`VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevice4444FormatsFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDevice4444FormatsFeaturesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_4444_FORMATS_FEATURES_EXT`

NOTE

Although the formats defined by the `VK_EXT_4444_formats` extension were promoted to Vulkan 1.3 as optional formats, the `VkPhysicalDevice4444FormatsFeaturesEXT` structure was not promoted to Vulkan 1.3.

The `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           mutableDescriptorType;
} VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT;
```

or the equivalent

```
// Provided by VK_VALVE_mutable_descriptor_type
typedef VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT
VkPhysicalDeviceMutableDescriptorTypeFeaturesVALVE;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mutableDescriptorType` indicates that the implementation **must** support using the `VkDescriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` with at least the following descriptor types, where any combination of the types **must** be supported:
 - `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`
 - `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`
 - `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`
 - `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`
 - `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`
 - `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`
- Additionally, `mutableDescriptorType` indicates that:

- Non-uniform descriptor indexing **must** be supported if all descriptor types in a `VkMutableDescriptorTypeListEXT` for `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` have the corresponding non-uniform indexing features enabled in `VkPhysicalDeviceDescriptorIndexingFeatures`.
- `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` with `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` relaxes the list of required descriptor types to the descriptor types which have the corresponding update-after-bind feature enabled in `VkPhysicalDeviceDescriptorIndexingFeatures`.
- Dynamically uniform descriptor indexing **must** be supported if all descriptor types in a `VkMutableDescriptorTypeListEXT` for `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` have the corresponding dynamic indexing features enabled.
- `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT` **must** be supported.
- `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` **must** be supported.

If the `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MUTABLE_DESCRIPTOR_TYPE_FEATURES_EXT`

The `VkPhysicalDeviceDepthClipControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clip_control
typedef struct VkPhysicalDeviceDepthClipControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClipControl;
} VkPhysicalDeviceDepthClipControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClipControl` indicates that the implementation supports setting `VkPipelineViewportDepthClipControlCreateInfoEXT::negativeOneToOne` to `VK_TRUE`.

If the `VkPhysicalDeviceDepthClipControlFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDepthClipControlFeaturesEXT` **can** also be used in the `pNext` chain of

[VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClipControlFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLIP_CONTROL_FEATURES_EXT`

The `VkPhysicalDeviceDepthClampControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clamp_control
typedef struct VkPhysicalDeviceDepthClampControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClampControl;
} VkPhysicalDeviceDepthClampControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClampControl` indicates that the implementation supports setting `VkPipelineViewportDepthClampControlCreateInfoEXT::depthClampMode` to `VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT`.

If the `VkPhysicalDeviceDepthClampControlFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDepthClampControlFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClampControlFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLAMP_CONTROL_FEATURES_EXT`

The `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_workgroup_memory_explicit_layout
typedef struct VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           workgroupMemoryExplicitLayout;
    VkBool32           workgroupMemoryExplicitLayoutScalarBlockLayout;
    VkBool32           workgroupMemoryExplicitLayout8BitAccess;
    VkBool32           workgroupMemoryExplicitLayout16BitAccess;
} VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `workgroupMemoryExplicitLayout` indicates whether the implementation supports the SPIR-V `WorkgroupMemoryExplicitLayoutKHR` capability.
- `workgroupMemoryExplicitLayoutScalarBlockLayout` indicates whether the implementation supports scalar alignment for laying out Workgroup Blocks.
- `workgroupMemoryExplicitLayout8BitAccess` indicates whether objects in the `Workgroup` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `WorkgroupMemoryExplicitLayout8BitAccessKHR` capability.
- `workgroupMemoryExplicitLayout16BitAccess` indicates whether objects in the `Workgroup` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `WorkgroupMemoryExplicitLayout16BitAccessKHR` capability.

If the `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_FEATURES_KHR`

The `VkPhysicalDeviceSynchronization2Features` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSynchronization2Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           synchronization2;
} VkPhysicalDeviceSynchronization2Features;
```

or the equivalent

```
// Provided by VK_KHR_synchronization2
typedef VkPhysicalDeviceSynchronization2Features
VkPhysicalDeviceSynchronization2FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **synchronization2** indicates whether the implementation supports the new set of synchronization commands introduced in [VK_KHR_synchronization2](#).

If the [VkPhysicalDeviceSynchronization2Features](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceSynchronization2Features](#) **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSynchronization2Features-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SYNCHRONIZATION_2_FEATURES](#)

The [VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_vertex_input_dynamic_state
typedef struct VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexInputDynamicState;
} VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- `vertexInputDynamicState` indicates that the implementation supports the following dynamic states:
 - `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT`

If the `VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_INPUT_DYNAMIC_STATE_FEATURES_EXT`

The `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_primitives_generated_query
typedef struct VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           primitivesGeneratedQuery;
    VkBool32           primitivesGeneratedQueryWithRasterizerDiscard;
    VkBool32           primitivesGeneratedQueryWithNonZeroStreams;
} VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitivesGeneratedQuery` indicates whether the implementation supports the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query type.
- `primitivesGeneratedQueryWithRasterizerDiscard` indicates whether the implementation supports this query when `rasterization discard` is enabled.
- `primitivesGeneratedQueryWithNonZeroStreams` indicates whether the implementation supports this query with a non-zero index in `vkCmdBeginQueryIndexedEXT`.

If the `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVES_GENERATED_QUERY_FEATURES_EXT`

The `VkPhysicalDeviceFragmentShadingRateFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_fragment_shading_rate
typedef struct VkPhysicalDeviceFragmentShadingRateFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineFragmentShadingRate;
    VkBool32           primitiveFragmentShadingRate;
    VkBool32           attachmentFragmentShadingRate;
} VkPhysicalDeviceFragmentShadingRateFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineFragmentShadingRate` indicates that the implementation supports the [pipeline fragment shading rate](#).
- `primitiveFragmentShadingRate` indicates that the implementation supports the [primitive fragment shading rate](#).
- `attachmentFragmentShadingRate` indicates that the implementation supports the [attachment fragment shading rate](#).

If the `VkPhysicalDeviceFragmentShadingRateFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentShadingRateFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRateFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_FEATURES_KHR`

The `VkPhysicalDeviceLegacyDitheringFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_legacy_dithering
typedef struct VkPhysicalDeviceLegacyDitheringFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           legacyDithering;
} VkPhysicalDeviceLegacyDitheringFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `legacyDithering` indicates whether the implementation supports [Legacy Dithering](#).

If the `VkPhysicalDeviceLegacyDitheringFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceLegacyDitheringFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyDitheringFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LEGACY_DITHERING_FEATURES_EXT`

The `VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV` structure is defined as:

```
// Provided by VK_NV_fragment_shading_rate_enums
typedef struct VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShadingRateEnums;
    VkBool32           supersampleFragmentShadingRates;
    VkBool32           noInvocationFragmentShadingRates;
} VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentShadingRateEnums` indicates that the implementation supports specifying fragment shading rates using the `VkFragmentShadingRateNV` enumerated type.
- `supersampleFragmentShadingRates` indicates that the implementation supports fragment shading rate enum values indicating more than one invocation per fragment.
- `noInvocationFragmentShadingRates` indicates that the implementation supports a fragment

shading rate enum value indicating that no fragment shaders should be invoked when that shading rate is used.

If the `VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_ENUMS_FEATURES_NV`

The `VkPhysicalDeviceInheritedViewportScissorFeaturesNV` structure is defined as:

```
// Provided by VK_NV_inherited_viewport_scissor
typedef struct VkPhysicalDeviceInheritedViewportScissorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           inheritedViewportScissor2D;
} VkPhysicalDeviceInheritedViewportScissorFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `inheritedViewportScissor2D` indicates whether secondary command buffers can inherit most of the dynamic state affected by `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT`, `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT`, `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT`, `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT`, `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT`, `VK_DYNAMIC_STATE_VIEWPORT` or `VK_DYNAMIC_STATE_SCISSOR`, from a primary command buffer.

If the `VkPhysicalDeviceInheritedViewportScissorFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceInheritedViewportScissorFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInheritedViewportScissorFeaturesNV-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INHERITED_VIEWPORT_SCISSOR_FEATURES_NV`

The `VkPhysicalDevicePipelineProtectedAccessFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_pipeline_protected_access
typedef struct VkPhysicalDevicePipelineProtectedAccessFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineProtectedAccess;
} VkPhysicalDevicePipelineProtectedAccessFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineProtectedAccess` indicates whether the implementation supports specifying protected access on individual pipelines.

If the `VkPhysicalDevicePipelineProtectedAccessFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelineProtectedAccessFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_PROTECTED_ACCESS_FEATURES_EXT` must be `sType` of `VkPhysicalDevicePipelineProtectedAccessFeaturesEXT`.

The `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_ycbcr_2plane_444_formats
typedef struct VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           ycbcr2plane444Formats;
} VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `ycbcr2plane444Formats` indicates that the implementation supports the following 2-plane 444 Y'C_BR formats:
 - `VK_FORMAT_G8_B8R8_2PLANE_444_UNORM`

- `VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16`
- `VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16`
- `VK_FORMAT_G16_B16R16_2PLANE_444_UNORM`

If the `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_2_PLANE_444_FORMATS_FEATURES_EXT`

NOTE

Although the formats defined by the `VK_EXT_ycbcr_2plane_444_formats` were promoted to Vulkan 1.3 as optional formats, the `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT` structure was not promoted to Vulkan 1.3.

The `VkPhysicalDeviceColorWriteEnableFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_color_write_enable
typedef struct VkPhysicalDeviceColorWriteEnableFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           colorWriteEnable;
} VkPhysicalDeviceColorWriteEnableFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `colorWriteEnable` indicates that the implementation supports the dynamic state `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT`.

If the `VkPhysicalDeviceColorWriteEnableFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceColorWriteEnableFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceColorWriteEnableFeaturesEXT-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COLOR_WRITE_ENABLE_FEATURES_EXT

The `VkPhysicalDevicePipelinePropertiesFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_pipeline_properties
typedef struct VkPhysicalDevicePipelinePropertiesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelinePropertiesIdentifier;
} VkPhysicalDevicePipelinePropertiesFeaturesEXT;
```

This structure describes the following feature:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- pipelinePropertiesIdentifier indicates that the implementation supports querying a unique pipeline identifier.

If the `VkPhysicalDevicePipelinePropertiesFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelinePropertiesFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProvokingVertexFeaturesEXT-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_PROPERTIES_FEATURES_EXT

The `VkPhysicalDeviceProvokingVertexFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceProvokingVertexFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           provokingVertexLast;
    VkBool32           transformFeedbackPreservesProvokingVertex;
} VkPhysicalDeviceProvokingVertexFeaturesEXT;
```

This structure describes the following features:

- sType is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `provokingVertexLast` indicates whether the implementation supports the `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT` provoking vertex mode for flat shading.
- `transformFeedbackPreservesProvokingVertex` indicates that the order of vertices within each primitive written by transform feedback will preserve the provoking vertex. This does not apply to triangle fan primitives when `transformFeedbackPreservesTriangleFanProvokingVertex` is `VK_FALSE`. `transformFeedbackPreservesProvokingVertex` **must** be `VK_FALSE` when the `VK_EXT_transform_feedback` extension is not supported.

If the `VkPhysicalDeviceProvokingVertexFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceProvokingVertexFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

When `VkPhysicalDeviceProvokingVertexFeaturesEXT` is in the `pNext` chain of `VkDeviceCreateInfo` but the `transformFeedback` feature is not enabled, the value of `transformFeedbackPreservesProvokingVertex` is ignored.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProvokingVertexFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_FEATURES_EXT`

The `VkPhysicalDeviceDescriptorBufferFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            descriptorBuffer;
    VkBool32            descriptorBufferCaptureReplay;
    VkBool32            descriptorBufferImageLayoutIgnored;
    VkBool32            descriptorBufferPushDescriptors;
} VkPhysicalDeviceDescriptorBufferFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorBuffer` indicates that the implementation supports putting shader-accessible descriptors directly in memory.
- `descriptorBufferCaptureReplay` indicates that the implementation supports capture and replay when using descriptor buffers. If this is `VK_TRUE`, all resources created with `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`,

VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT,
VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT,
VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, or
VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT **must** be created
before resources of the same types without those flags.

- `descriptorBufferImageLayoutIgnored` indicates that the implementation will ignore `imageLayout` in `VkDescriptorImageInfo` when calling `vkGetDescriptorEXT`.
- `descriptorBufferPushDescriptors` indicates that the implementation supports using push descriptors with descriptor buffers.

If the `VkPhysicalDeviceDescriptorBufferFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDescriptorBufferFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorBufferFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_FEATURES_EXT`

The `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_pageable_device_local_memory
typedef struct VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pageableDeviceLocalMemory;
} VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pageableDeviceLocalMemory` indicates that the implementation supports pageable device-local memory and **may** transparently move device-local memory allocations to host-local memory to better share device-local memory with other applications.

If the `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PAGEABLE_DEVICE_LOCAL_MEMORY_FEATURES_EXT`

The `VkPhysicalDeviceMultiDrawFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_multi_draw
typedef struct VkPhysicalDeviceMultiDrawFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiDraw;
} VkPhysicalDeviceMultiDrawFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `multiDraw` indicates that the implementation supports `vkCmdDrawMultiEXT` and `vkCmdDrawMultiIndexedEXT`.

If the `VkPhysicalDeviceMultiDrawFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMultiDrawFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiDrawFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_FEATURES_EXT`

The `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkPhysicalDeviceRayTracingMotionBlurFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingMotionBlur;
    VkBool32           rayTracingMotionBlurPipelineTraceRaysIndirect;
} VkPhysicalDeviceRayTracingMotionBlurFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingMotionBlur` indicates whether the implementation supports the motion blur feature.
- `rayTracingMotionBlurPipelineTraceRaysIndirect` indicates whether the implementation supports indirect ray tracing commands with the motion blur feature enabled.

If the `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingMotionBlurFeaturesNV-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_MOTION_BLUR_FEATURES_NV`

The `VkPhysicalDeviceOpacityMicromapFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           micromap;
    VkBool32           micromapCaptureReplay;
    VkBool32           micromapHostCommands;
} VkPhysicalDeviceOpacityMicromapFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `micromap` indicates whether the implementation supports the micromap array feature.
- `micromapCaptureReplay` indicates whether the implementation supports capture and replay of addresses for micromap arrays.
- `micromapHostCommands` indicates whether the implementation supports host side micromap array commands.

If the `VkPhysicalDeviceOpacityMicromapFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceOpacityMicromapFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpacityMicromapFeaturesEXT-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPACITY_MICROMAP_FEATURES_EXT

The `VkPhysicalDeviceDisplacementMicromapFeaturesNV` structure is defined as:

```
// Provided by VK_NV_displacement_micromap
typedef struct VkPhysicalDeviceDisplacementMicromapFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           displacementMicromap;
} VkPhysicalDeviceDisplacementMicromapFeaturesNV;
```

This structure describes the following feature:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- displacementMicromap indicates whether the implementation supports the displacement micromap feature.

If the `VkPhysicalDeviceDisplacementMicromapFeaturesNV` structure is included in the pNext chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDisplacementMicromapFeaturesNV` can also be used in the pNext chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDisplacementMicromapFeaturesNV-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISPLACEMENT_MICROMAP_FEATURES_NV

The `VkPhysicalDeviceRayTracingValidationFeaturesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_validation
typedef struct VkPhysicalDeviceRayTracingValidationFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingValidation;
} VkPhysicalDeviceRayTracingValidationFeaturesNV;
```

This structure describes the following feature:

- sType is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingValidation` indicates whether the implementation supports the ray tracing validation feature.

If the `VkPhysicalDeviceRayTracingValidationFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRayTracingValidationFeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingValidationFeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_VALIDATION_FEATURES_NV`

The `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_subpass_shading
typedef struct VkPhysicalDeviceSubpassShadingFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subpassShading;
} VkPhysicalDeviceSubpassShadingFeaturesHUAWEI;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subpassShading` specifies whether subpass shading is supported.

If the `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubpassShadingFeaturesHUAWEI-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_SHADING_FEATURES_HUAWEI`

The `VkPhysicalDeviceExternalMemoryRDMAFeaturesNV` structure is defined as:

```
// Provided by VK_NV_external_memory_rdma
typedef struct VkPhysicalDeviceExternalMemoryRDMAFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           externalMemoryRDMA;
} VkPhysicalDeviceExternalMemoryRDMAFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalMemoryRDMA` indicates whether the implementation has support for the `VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV` memory property and the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_RDMA_ADDRESS_BIT_NV` external memory handle type.

If the `VkPhysicalDeviceExternalMemoryRDMAFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExternalMemoryRDMAFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceExternalMemoryRDMAFeaturesNV-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_RDMA_FEATURES_NV`

The `VkPhysicalDevicePresentIdFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_id
typedef struct VkPhysicalDevicePresentIdFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId;
} VkPhysicalDevicePresentIdFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId` indicates that the implementation supports specifying present ID values in the `VkPresentIdKHR` extension to the `VkPresentInfoKHR` struct.

If the `VkPhysicalDevicePresentIdFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePresentIdFeaturesKHR`

can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentIdFeaturesKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_ID_FEATURES_KHR`

The `VkPhysicalDevicePresentWaitFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_wait
typedef struct VkPhysicalDevicePresentWaitFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait;
} VkPhysicalDevicePresentWaitFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentWait` indicates that the implementation supports `vkWaitForPresentKHR`.

If the `VkPhysicalDevicePresentWaitFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePresentWaitFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentWaitFeaturesKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_WAIT_FEATURES_KHR`

The `VkPhysicalDeviceHostImageCopyFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_host_image_copy
typedef struct VkPhysicalDeviceHostImageCopyFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hostImageCopy;
} VkPhysicalDeviceHostImageCopyFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hostImageCopy` indicates that the implementation supports copying from host memory to images using the `vkCopyMemoryToImageEXT` command, copying from images to host memory using the `vkCopyImageToMemoryEXT` command, and copying between images using the `vkCopyImageToImageEXT` command.

If the `VkPhysicalDeviceHostImageCopyFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceHostImageCopyFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHostImageCopyFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HOST_IMAGE_COPY_FEATURES_EXT`

The `VkPhysicalDevicePresentBarrierFeaturesNV` structure is defined as:

```
// Provided by VK_NV_present_barrier
typedef struct VkPhysicalDevicePresentBarrierFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentBarrier;
} VkPhysicalDevicePresentBarrierFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentBarrier` indicates that the implementation supports the present barrier feature.

If the `VkPhysicalDevicePresentBarrierFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePresentBarrierFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentBarrierFeaturesNV-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_BARRIER_FEATURES_NV`

The `VkPhysicalDeviceShaderIntegerDotProductFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderIntegerDotProductFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderIntegerDotProduct;
} VkPhysicalDeviceShaderIntegerDotProductFeatures;
```

or the equivalent

```
// Provided by VK_KHR_shader_integer_dot_product
typedef VkPhysicalDeviceShaderIntegerDotProductFeatures
VkPhysicalDeviceShaderIntegerDotProductFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderIntegerDotProduct** specifies whether shader modules **can** declare the **DotProductInputAllKHR**, **DotProductInput4x8BitKHR**, **DotProductInput4x8BitPackedKHR** and **DotProductKHR** capabilities.

If the **VkPhysicalDeviceShaderIntegerDotProductFeatures** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceShaderIntegerDotProductFeatures** **can** also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderIntegerDotProductFeatures-sType-sType **sType must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INTEGER_DOT_PRODUCT_FEATURES**

The **VkPhysicalDeviceMaintenance4Features** structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance4;
} VkPhysicalDeviceMaintenance4Features;
```

or the equivalent

```
// Provided by VK_KHR_maintenance4
typedef VkPhysicalDeviceMaintenance4Features VkPhysicalDeviceMaintenance4FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maintenance4** indicates that the implementation supports the following:
 - The application **may** destroy a [VkPipelineLayout](#) object immediately after using it to create another object.
 - **LocalSizeId** **can** be used as an alternative to **LocalSize** to specify the local workgroup size with specialization constants.
 - Images created with identical creation parameters will always have the same alignment requirements.
 - The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.
 - Push constants do not have to be initialized before they are dynamically accessed.
 - The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.

If the **VkPhysicalDeviceMaintenance4Features** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceMaintenance4Features** **can** also be used in the **pNext** chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance4Features-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_FEATURES**

The **VkPhysicalDeviceMaintenance5FeaturesKHR** structure is defined as:

```
// Provided by VK_KHR_maintenance5
typedef struct VkPhysicalDeviceMaintenance5FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance5;
} VkPhysicalDeviceMaintenance5FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maintenance5` indicates that the implementation supports the following:
 - The ability to expose support for the optional format `VK_FORMAT_A1B5G5R5_UNORM_PACK16_KHR`.
 - The ability to expose support for the optional format `VK_FORMAT_A8_UNORM_KHR`.
 - A property to indicate that multisample coverage operations are performed after sample counting in `EarlyFragmentTests` mode.
 - Creating a `VkBufferView` with a subset of the associated `VkBuffer` usage using `VkBufferUsageFlags2CreateInfoKHR`.
 - A new function `vkCmdBindIndexBuffer2KHR`, allowing a range of memory to be bound as an index buffer.
 - `vkGetDeviceProcAddr` will return `NULL` for function pointers of core functions for versions higher than the version requested by the application.
 - `vkCmdBindVertexBuffers2` supports using `VK_WHOLE_SIZE` in the `pSizes` parameter.
 - If `PointSize` is not written, a default value of `1.0` is used for the size of points.
 - `VkShaderModuleCreateInfo` **can** be added as a chained structure to pipeline creation via `VkPipelineShaderStageCreateInfo`, rather than having to create a shader module.
 - A function `vkGetRenderingAreaGranularityKHR` to query the optimal render area for a dynamic rendering instance.
 - A property to indicate that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE` have defined behavior.
 - `vkGetDeviceImageSubresourceLayoutKHR` allows an application to perform a `vkGetImageSubresourceLayout` query without having to create an image.
 - `VK_REMAINING_ARRAY_LAYERS` as the `layerCount` member of `VkImageSubresourceLayers`.
 - A property to indicate whether `PointSize` controls the final rasterization of polygons if `polygon mode` is `VK_POLYGON_MODE_POINT`.
 - Two properties to indicate the non-strict line rasterization algorithm used.
 - Two new flags words `VkPipelineCreateFlagBits2KHR` and `VkBufferUsageFlagBits2KHR`.
 - Physical-device-level functions **can** now be called with any value in the valid range for a type beyond the defined enumerants, such that applications can avoid checking individual features, extensions, or versions before querying supported properties of a particular enumerant.
 - Copies between images of any type are allowed, with 1D images treated as 2D images with a height of `1`.

If the `VkPhysicalDeviceMaintenance5FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMaintenance5FeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance5FeaturesKHR-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_FEATURES_KHR

The `VkPhysicalDeviceMaintenance6FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance6
typedef struct VkPhysicalDeviceMaintenance6FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance6;
} VkPhysicalDeviceMaintenance6FeaturesKHR;
```

This structure describes the following feature:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- maintenance6 indicates that the implementation supports the following:
 - `VK_NULL_HANDLE` **can** be used when binding an index buffer
 - `VkBindMemoryStatusKHR` **can** be included in the pNext chain of the `VkBindBufferMemoryInfo` and `VkBindImageMemoryInfo` structures, enabling applications to retrieve `VkResult` values for individual memory binding operations.
 - `VkPhysicalDeviceMaintenance6PropertiesKHR::blockTexelViewCompatibleMultipleLayers` property to indicate that the implementation supports creating image views with `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` where the `layerCount` member of `subresourceRange` is greater than 1.
 - `VkPhysicalDeviceMaintenance6PropertiesKHR::maxCombinedImageSamplerDescriptorCount` property which indicates the maximum descriptor size required for any `format` that requires a `sampler Y'CBCR conversion` supported by the implementation.
 - A `VkPhysicalDeviceMaintenance6PropertiesKHR::fragmentShadingRateClampCombinerInputs` property which indicates whether the implementation clamps the inputs to fragment shading rate combiner operations.

If the `VkPhysicalDeviceMaintenance6FeaturesKHR` structure is included in the pNext chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMaintenance6FeaturesKHR` **can** also be used in the pNext chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance6FeaturesKHR-sType-sType

sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_6_FEATURES_KHR`

The `VkPhysicalDeviceMaintenance7FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceMaintenance7FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance7;
} VkPhysicalDeviceMaintenance7FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **maintenance7** indicates that the implementation supports the following:
 - The `VK_RENDERING_CONTENTS_INLINE_BIT_KHR` and `VK_SUBPASS_CONTENTS_INLINE_AND_SECONDARY_COMMAND_BUFFERS_KHR` flags **can** be used to record commands in render pass instances both inline and in secondary command buffers executed with `vkCmdExecuteCommands` for dynamic rendering and legacy render passes respectively.
 - Querying information regarding the underlying devices in environments where the Vulkan implementation is provided through layered implementations. This is done by chaining `VkPhysicalDeviceLayeredApiPropertiesListKHR` to `VkPhysicalDeviceProperties2`.
 - New limits which indicate the maximum total count of dynamic uniform buffers and dynamic storage buffers that **can** be included in a pipeline layout.
 - 32-bit timestamp queries **must** wrap on overflow
 - A property that indicates whether a fragment shading rate attachment can have a size that is too small to cover a specified render area.
 - A property that indicates support for writing to one aspect of a depth/stencil attachment without performing a read-modify-write operation on the other aspect

If the `VkPhysicalDeviceMaintenance7FeaturesKHR` structure is included in the **pNext** chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMaintenance7FeaturesKHR` **can** also be used in the **pNext** chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance7FeaturesKHR-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_7_FEATURES_KHR`

The `VkPhysicalDeviceDynamicRenderingFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceDynamicRenderingFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRendering;
} VkPhysicalDeviceDynamicRenderingFeatures;
```

or the equivalent

```
// Provided by VK_KHR_dynamic_rendering
typedef VkPhysicalDeviceDynamicRenderingFeatures
VkPhysicalDeviceDynamicRenderingFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dynamicRendering` specifies that the implementation supports dynamic render pass instances using the `vkCmdBeginRendering` command.

If the `VkPhysicalDeviceDynamicRenderingFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDynamicRenderingFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDynamicRenderingFeatures-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DYNAMIC_RENDERING_FEATURES`

The `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_rgba10x6_formats
typedef struct VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           formatRgba10x6WithoutYCbCrSampler;
} VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatRgba10x6WithoutYCbCrSampler` indicates that `VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16` **can** be used with a `VkImageView` with `subresourceRange.aspectMask` equal to `VK_IMAGE_ASPECT_COLOR_BIT` without a `sampler Y'CBCR conversion` enabled.

If the `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RGBA10X6_FORMATS_FEATURES_EXT`

The `VkPhysicalDevicePipelineRobustnessFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_pipeline_robustness
typedef struct VkPhysicalDevicePipelineRobustnessFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineRobustness;
} VkPhysicalDevicePipelineRobustnessFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineRobustness` indicates that robustness **can** be requested on a per-pipeline-stage granularity.

NOTE

Enabling `pipelineRobustness` may, on some platforms, incur a minor performance cost when `robustBufferAccess` is disabled, even for pipelines which do not make use of any robustness features. If robustness is not needed, `pipelineRobustness` should not be enabled by an application.

If the `VkPhysicalDevicePipelineRobustnessFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelineRobustnessFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineRobustnessFeaturesEXT-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_FEATURES_EXT

The `VkPhysicalDeviceImageViewMinLodFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_view_min_lod
typedef struct VkPhysicalDeviceImageViewMinLodFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           minLod;
} VkPhysicalDeviceImageViewMinLodFeaturesEXT;
```

This structure describes the following feature:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- minLod indicates whether the implementation supports clamping the minimum LOD value during [Image Level\(s\) Selection](#), [Texel Gathering](#) and [Integer Texel Coordinate Operations](#) with a given `VkImageView` by `VkImageViewMinLodCreateInfoEXT::minLod`.

If the `VkPhysicalDeviceImageViewMinLodFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceImageViewMinLodFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageViewMinLodFeaturesEXT-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_VIEW_MIN_LOD_FEATURES_EXT

The `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_rasterization_order_attachment_access
typedef struct VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rasterizationOrderColorAttachmentAccess;
    VkBool32           rasterizationOrderDepthAttachmentAccess;
    VkBool32           rasterizationOrderStencilAttachmentAccess;
} VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT;
```

or the equivalent

```
// Provided by VK_ARM_rasterization_order_attachment_access
typedef VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT
VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesARM;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rasterizationOrderColorAttachmentAccess` indicates that rasterization order access to color and input attachments is supported by the implementation.
- `rasterizationOrderDepthAttachmentAccess` indicates that rasterization order access to the depth aspect of depth/stencil and input attachments is supported by the implementation.
- `rasterizationOrderStencilAttachmentAccess` indicates that rasterization order access to the stencil aspect of depth/stencil and input attachments is supported by the implementation.

If the `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_FEATURES_EXT`

The `VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_subpass_merge_feedback
typedef struct VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subpassMergeFeedback;
} VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subpassMergeFeedback` indicates whether the implementation supports feedback of subpass merging.

If the `VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_MERGE_FEEDBACK_FEATURES_EXT`

The `VkPhysicalDeviceLinearColorAttachmentFeaturesNV` structure is defined as:

```
// Provided by VK_NV_linear_color_attachment
typedef struct VkPhysicalDeviceLinearColorAttachmentFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           linearColorAttachment;
} VkPhysicalDeviceLinearColorAttachmentFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `linearColorAttachment` indicates whether the implementation supports renderable `Linear Color Attachment`

If the `VkPhysicalDeviceLinearColorAttachmentFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceLinearColorAttachmentFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLinearColorAttachmentFeaturesNV-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINEAR_COLOR_ATTACHMENT_FEATURES_NV`

The `VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_attachment_feedback_loop_layout
typedef struct VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           attachmentFeedbackLoopLayout;
} VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `attachmentFeedbackLoopLayout` indicates whether the implementation supports using `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` image layout for images created with `VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ATTACHMENT_FEEDBACK_LOOP_LAYOUT_FEATURES_EXT`

The `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_nested_command_buffer
typedef struct VkPhysicalDeviceNestedCommandBufferFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nestedCommandBuffer;
    VkBool32           nestedCommandBufferRendering;
    VkBool32           nestedCommandBufferSimultaneousUse;
} VkPhysicalDeviceNestedCommandBufferFeaturesEXT;
```

This structure describes the following features:

- `nestedCommandBuffer` indicates the implementation supports nested command buffers, which allows [Secondary Command Buffers](#) to execute other [Secondary Command Buffers](#).
- `nestedCommandBufferRendering` indicates that it is valid to call [vkCmdExecuteCommands](#) inside a [Secondary Command Buffer](#) recorded with `VK_COMMAND_BUFFER_USAGE_RENDER_PASS_CONTINUE_BIT`.
- `nestedCommandBufferSimultaneousUse` indicates that the implementation supports nested command buffers with command buffers that are recorded with `VK_COMMAND_BUFFER_USAGE_SIMULTANEOUS_USE_BIT`.

If the `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported.

`VkPhysicalDeviceNestedCommandBufferFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNestedCommandBufferFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NESTED_COMMAND_BUFFER_FEATURES_EXT`

The `VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           graphicsPipelineLibrary;
} VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `graphicsPipelineLibrary` indicates that the implementation supports graphics pipeline libraries.

If the `VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GRAPHICS_PIPELINE_LIBRARY_FEATURES_EXT`

The `VkPhysicalDevicePipelineBinaryFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPhysicalDevicePipelineBinaryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineBinaries;
} VkPhysicalDevicePipelineBinaryFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBinaries` indicates that the implementation supports `Pipeline Binaries`.

If the `VkPhysicalDevicePipelineBinaryFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelineBinaryFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineBinaryFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_BINARY_FEATURES_KHR`

The `VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_multisampled_render_to_single_sampled
typedef struct VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multisampledRenderToSingleSampled;
} VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `multisampledRenderToSingleSampled` indicates that the implementation supports multisampled rendering to single-sampled render pass attachments.

If the `VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_FEATURES_EXT`

The `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_2d_view_of_3d
typedef struct VkPhysicalDeviceImage2DViewOf3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           image2DViewOf3D;
    VkBool32           sampler2DViewOf3D;
} VkPhysicalDeviceImage2DViewOf3DFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image2DViewOf3D` indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` if the image is created using `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT`.
- `sampler2DViewOf3D` indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` if the image is created using `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT`.

If the `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImage2DViewOf3DFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_2D_VIEW_OF_3D_FEATURES_EXT`

The `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_sliced_view_of_3d
typedef struct VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageSlicedViewOf3D;
} VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT;
```

The members of the `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` structure describe the following features:

- `imageSlicedViewOf3D` indicates that the implementation supports using a sliced view of a 3D image in a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` by using a

[VkImageViewSlicedCreateInfoEXT](#) structure when creating the view.

If the [VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT](#) **can** also be used in the [pNext](#) chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_SLICED_VIEW_OF_3D_FEATURES_EXT](#)

The [VkPhysicalDeviceImageCompressionControlFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkPhysicalDeviceImageCompressionControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageCompressionControl;
} VkPhysicalDeviceImageCompressionControlFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [imageCompressionControl](#) indicates that the implementation supports providing controls for image compression at image creation time.

If the [VkPhysicalDeviceImageCompressionControlFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. [VkPhysicalDeviceImageCompressionControlFeaturesEXT](#) **can** also be used in the [pNext](#) chain of [VkDeviceCreateInfo](#) to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageCompressionControlFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_FEATURES_EXT](#)

The [VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_image_compression_control_swapchain
typedef struct VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageCompressionControlSwapchain;
} VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **imageCompressionControlSwapchain** indicates that the implementation supports controlling image controls per swapchain and querying image compression properties per surface.

If the **VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT** **can** also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT-sType-sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_SWAPCHAIN_FEATURES_EXT**

The **VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR** structure is defined as:

```
// Provided by VK_KHR_ray_tracing_position_fetch
typedef struct VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingPositionFetch;
} VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **rayTracingPositionFetch** indicates that the implementation supports fetching the object space vertex positions of a hit triangle.

If the **VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported.

`VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_POSITION_FETCH_FEATURES_KHR`

The `VkPhysicalDeviceShaderFloatControls2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_float_controls2
typedef struct VkPhysicalDeviceShaderFloatControls2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloatControls2;
} VkPhysicalDeviceShaderFloatControls2FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloatControls2` specifies whether shader modules **can** declare the `FloatControls2` capability.

If the `VkPhysicalDeviceShaderFloatControls2FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderFloatControls2FeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderFloatControls2FeaturesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FLOAT_CONTROLS_2_FEATURES_KHR`

The `VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD` structure is defined as:

```
// Provided by VK_AMD_shader_early_and_late_fragment_tests
typedef struct VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderEarlyAndLateFragmentTests;
} VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderEarlyAndLateFragmentTests` indicates whether the implementation supports the `EarlyAndLateFragmentTestsAMD` Execution Mode.

If the `VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_EARLY_AND_LATE_FRAGMENT_TESTS_FEATURES_AMD`

The `VkPhysicalDeviceAntiLagFeaturesAMD` structure is defined as:

```
// Provided by VK_AMD_anti_lag
typedef struct VkPhysicalDeviceAntiLagFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           antiLag;
} VkPhysicalDeviceAntiLagFeaturesAMD;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `antiLag` indicates whether the implementation supports AMD Radeon™ Anti-Lag functionality. The `antiLag` feature only supports a single GPU and must not be enabled if `VkDeviceGroupDeviceCreateInfo::physicalDeviceCount` is greater than 1.

If the `VkPhysicalDeviceAntiLagFeaturesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceAntiLagFeaturesAMD` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAntiLagFeaturesAMD-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ANTI_LAG_FEATURES_AMD`

The `VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_non_seamless_cube_map
typedef struct VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nonSeamlessCubeMap;
} VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `nonSeamlessCubeMap` indicates that the implementation supports `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT`.

If the `VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NON_SEAMLESS_CUBE_MAP_FEATURES_EXT`

The `VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderModuleIdentifier;
} VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderModuleIdentifier` indicates whether the implementation supports querying an identifier of a `VkShaderModule` or `VkShaderModuleCreateInfo` structure, and creating pipelines from identifiers only.

If the `VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT` structure is included in the `pNext` chain of

the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MODULE_IDENTIFIER_FEATURES_EXT`

The `VkPhysicalDeviceTilePropertiesFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_tile_properties
typedef struct VkPhysicalDeviceTilePropertiesFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           tileProperties;
} VkPhysicalDeviceTilePropertiesFeaturesQCOM;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `tileProperties` indicates that the implementation supports queries for returning tile properties.

If the `VkPhysicalDeviceTilePropertiesFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceTilePropertiesFeaturesQCOM` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTilePropertiesFeaturesQCOM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TILE_PROPERTIES_FEATURES_QCOM`

The `VkPhysicalDeviceImageProcessingFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_image_processing
typedef struct VkPhysicalDeviceImageProcessingFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureSampleWeighted;
    VkBool32           textureBoxFilter;
    VkBool32           textureBlockMatch;
} VkPhysicalDeviceImageProcessingFeaturesQCOM;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **textureSampleWeighted** indicates that the implementation supports shader modules that declare the **TextureSampleWeightedQCOM** capability.
- **textureBoxFilter** indicates that the implementation supports shader modules that declare the **TextureBoxFilterQCOM** capability.
- **textureBlockMatch** indicates that the implementation supports shader modules that declare the **TextureBlockMatchQCOM** capability.

If the **VkPhysicalDeviceImageProcessingFeaturesQCOM** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceImageProcessingFeaturesQCOM** **can** also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageProcessingFeaturesQCOM-sType-sType
sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_PROCESSING_FEATURES_QCOM**

The **VkPhysicalDeviceImageProcessing2FeaturesQCOM** structure is defined as:

```
// Provided by VK_QCOM_image_processing2
typedef struct VkPhysicalDeviceImageProcessing2FeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureBlockMatch2;
} VkPhysicalDeviceImageProcessing2FeaturesQCOM;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- `textureBlockMatch2` indicates that the implementation supports shader modules that declare the `TextureBlockMatch2QCOM` capability.

If the `VkPhysicalDeviceImageProcessing2FeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceImageProcessing2FeaturesQCOM` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageProcessing2FeaturesQCOM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_PROCESSING_2_FEATURES_QCOM`

The `VkPhysicalDeviceDepthClampZeroOneFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clamp_zero_one
typedef struct VkPhysicalDeviceDepthClampZeroOneFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClampZeroOne;
} VkPhysicalDeviceDepthClampZeroOneFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClampZeroOne` indicates that the implementation supports clamping the depth to a range of 0 to 1.

If the `VkPhysicalDeviceDepthClampZeroOneFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDepthClampZeroOneFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClampZeroOneFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLAMP_ZERO_ONE_FEATURES_EXT`

The `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_tile_image
typedef struct VkPhysicalDeviceShaderTileImageFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderTileImageColorReadAccess;
    VkBool32           shaderTileImageDepthReadAccess;
    VkBool32           shaderTileImageStencilReadAccess;
} VkPhysicalDeviceShaderTileImageFeaturesEXT;
```

The members of the `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure describe the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderTileImageColorReadAccess` indicates that the implementation supports the `TileImageColorReadAccessEXT` SPIR-V capability.
- `shaderTileImageDepthReadAccess` indicates that the implementation supports the `TileImageDepthReadAccessEXT` SPIR-V capability.
- `shaderTileImageStencilReadAccess` indicates that the implementation supports the `TileImageStencilReadAccessEXT` SPIR-V capability.

If the `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderTileImageFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderTileImageFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_TILE_IMAGE_FEATURES_EXT`

The `VkPhysicalDeviceDepthBiasControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_bias_control
typedef struct VkPhysicalDeviceDepthBiasControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthBiasControl;
    VkBool32           leastRepresentableValueForceUnormRepresentation;
    VkBool32           floatRepresentation;
    VkBool32           depthBiasExact;
} VkPhysicalDeviceDepthBiasControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthBiasControl` indicates whether the implementation supports the `vkCmdSetDepthBias2EXT` command and the `VkDepthBiasRepresentationInfoEXT` structure.
- `leastRepresentableValueForceUnormRepresentation` indicates whether the implementation supports using the `VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORCE_UNORM_EXT` depth bias representation.
- `floatRepresentation` indicates whether the implementation supports using the `VK_DEPTH_BIAS_REPRESENTATION_FLOAT_EXT` depth bias representation.
- `depthBiasExact` indicates whether the implementation supports forcing depth bias to not be scaled to ensure a minimum resolvable difference using `VkDepthBiasRepresentationInfoEXT::depthBiasExact`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthBiasControlFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_BIAS_CONTROL_FEATURES_EXT`

The `VkPhysicalDeviceAddressBindingReportFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_device_address_binding_report
typedef struct VkPhysicalDeviceAddressBindingReportFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           reportAddressBinding;
} VkPhysicalDeviceAddressBindingReportFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `reportAddressBinding` indicates whether this implementation supports reporting the binding of GPU virtual address ranges to Vulkan objects.

If the `VkPhysicalDeviceAddressBindingReportFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceAddressBindingReportFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAddressBindingReportFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ADDRESS_BINDING_REPORT_FEATURES_EXT`

The `VkPhysicalDeviceOpticalFlowFeaturesNV` structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkPhysicalDeviceOpticalFlowFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           opticalFlow;
} VkPhysicalDeviceOpticalFlowFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `opticalFlow` indicates whether the implementation supports optical flow.

If the `VkPhysicalDeviceOpticalFlowFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceOpticalFlowFeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpticalFlowFeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPTICAL_FLOW_FEATURES_NV`

The `VkPhysicalDeviceFaultFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_device_fault
typedef struct VkPhysicalDeviceFaultFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceFault;
    VkBool32           deviceFaultVendorBinary;
} VkPhysicalDeviceFaultFeaturesEXT;
```

The members of the `VkPhysicalDeviceFaultFeaturesEXT` structure describe the following features:

- `deviceFault` indicates that the implementation supports the reporting of device fault information.
- `deviceFaultVendorBinary` indicates that the implementation supports the generation of vendor-specific binary crash dumps. These may provide additional information when imported into vendor-specific external tools.

If the `VkPhysicalDeviceFaultFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFaultFeaturesEXT` **can**

also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFaultFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FAULT_FEATURES_EXT`

The `VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_pipeline_library_group_handles
typedef struct VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineLibraryGroupHandles;
} VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT;
```

This structure describes the following features:

- `pipelineLibraryGroupHandles` indicates whether the implementation supports querying group handles directly from a ray tracing pipeline library, and guarantees bitwise identical group handles for such libraries when linked into other pipelines.

If the `VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_LIBRARY_GROUP_HANDLES_FEATURES_EXT`

The `VkPhysicalDeviceShaderObjectFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_object
typedef struct VkPhysicalDeviceShaderObjectFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderObject;
} VkPhysicalDeviceShaderObjectFeaturesEXT;
```

This structure describes the following feature:

- `shaderObject` indicates whether the implementation supports `shader objects`.

If the `VkPhysicalDeviceShaderObjectFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderObjectFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderObjectFeaturesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_FEATURES_EXT`

The `VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_shader_core_builtins
typedef struct VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderCoreBuiltins;
} VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderCoreBuiltins` indicates whether the implementation supports the SPIR-V `CoreBuiltinsARM` capability.

If the `VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_BUILTINS_FEATURES_ARM`

The `VkPhysicalDeviceFrameBoundaryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_frame_boundary
typedef struct VkPhysicalDeviceFrameBoundaryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           frameBoundary;
} VkPhysicalDeviceFrameBoundaryFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `frameBoundary` indicates whether the implementation supports frame boundary information.

If the `VkPhysicalDeviceFrameBoundaryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFrameBoundaryFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFrameBoundaryFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAME_BOUNDARY_FEATURES_EXT`

The `VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_swapchain_maintenance1
typedef struct VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           swapchainMaintenance1;
} VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainMaintenance1` indicates that the implementation supports the following:
 - `VkSwapchainPresentFenceInfoEXT`, specifying a fence that is signaled when the resources associated with a present operation **can** be safely destroyed.
 - `VkSwapchainPresentModesCreateInfoEXT` and `VkSwapchainPresentModeInfoEXT`, allowing the swapchain to switch present modes without a need for recreation.
 - `VkSwapchainPresentScalingCreateInfoEXT`, specifying the scaling behavior of the swapchain

in presence of window resizing.

- The `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT` flag, allowing the implementation to defer the allocation of swapchain image memory until first acquisition.
- `vkReleaseSwapchainImagesEXT`, allowing acquired swapchain images to be released without presenting them.

If the `VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SWAPCHAIN_MAINTENANCE_1_FEATURES_EXT`

The `VkPhysicalDevicePresentModeFifoLatestReadyFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_present_mode_fifo_latest_ready
typedef struct VkPhysicalDevicePresentModeFifoLatestReadyFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentModeFifoLatestReady;
} VkPhysicalDevicePresentModeFifoLatestReadyFeaturesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeFifoLatestReady` specifies whether the implementation supports the `VK_PRESENT_MODE_FIFO_LATEST_READY_EXT` present mode.

If the `VkPhysicalDevicePresentModeFifoLatestReadyFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePresentModeFifoLatestReadyFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentModeFifoLatestReadyFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_MODE_FIFO_LATEST_READY_FEATURES_EXT`

The `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_dynamic_rendering_unused_attachments
typedef struct VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRenderingUnusedAttachments;
} VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dynamicRenderingUnusedAttachments` indicates that the implementation supports binding graphics pipelines within a render pass instance where any pipeline `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` element with a format other than `VK_FORMAT_UNDEFINED` is allowed with a corresponding `VkRenderingInfo::pColorAttachments` element with an `imageView` equal to `VK_NULL_HANDLE`, or any pipeline `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` element with a `VK_FORMAT_UNDEFINED` format is allowed with a corresponding `VkRenderingInfo::pColorAttachments` element with a non-`VK_NULL_HANDLE` `imageView`. Also a `VkPipelineRenderingCreateInfo::depthAttachmentFormat` other than `VK_FORMAT_UNDEFINED` is allowed with a `VK_NULL_HANDLE` `VkRenderingInfo::pDepthAttachment`, or a `VkPipelineRenderingCreateInfo::depthAttachmentFormat` of `VK_FORMAT_UNDEFINED` is allowed with a non-`VK_NULL_HANDLE` `VkRenderingInfo::pDepthAttachment`. Also a `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` other than `VK_FORMAT_UNDEFINED` is allowed with a `VK_NULL_HANDLE` `VkRenderingInfo::pStencilAttachment`, or a `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` of `VK_FORMAT_UNDEFINED` is allowed with a non-`VK_NULL_HANDLE` `VkRenderingInfo::pStencilAttachment`. Any writes to a `VkRenderingInfo::pColorAttachments`, `VkRenderingInfo::pDepthAttachment`, or `VkRenderingInfo::pStencilAttachment` with `VK_NULL_HANDLE` are discarded.

If the `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DYNAMIC_RENDERING_UNUSED_ATTACHMENTS_FEATURES_EXT`

The `VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingInvocationReorder;
} VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingInvocationReorder` indicates that the implementation supports `SPV_NV_shader_invocation_reorder`.

If the `VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_INVOCATION_REORDER_FEATURES_NV`

The `VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV` structure is defined as:

```
// Provided by VK_NV_extended_sparse_address_space
typedef struct VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedSparseAddressSpace;
} VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `extendedSparseAddressSpace` indicates that the implementation supports allowing certain usages of sparse memory resources to exceed `VkPhysicalDeviceLimits::sparseAddressSpaceSize`. See `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV`.

If the `VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is

filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_SPARSE_ADDRESS_SPACE_FEATURES_NV`

The `VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_multiview_per_view_viewports
typedef struct VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiviewPerViewViewports;
} VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM;
```

This structure describes the following features:

- `multiviewPerViewViewports` indicates that the implementation supports multiview per-view viewports.

If the `VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PER_VIEW_VIEWPORTS_FEATURES_QCOM`

The `VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_multiview_per_view_render_areas
typedef struct VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiviewPerViewRenderAreas;
} VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM;
```

This structure describes the following features:

- `multiviewPerViewRenderAreas` indicates that the implementation supports multiview per-view render areas.

If the `VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PER_VIEW_RENDER_AREAS_FEATURES_QCOM`

The `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           clusterCullingShader;
    VkBool32           multiviewClusterCullingShader;
} VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `clusterCullingShader` specifies whether cluster culling shader is supported.
- `multiviewClusterCullingShader` specifies whether multiview is supported.

If the `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_CULLING_SHADER_FEATURES_HUAWEI`

To query whether a Cluster Culling Shader supports the per-cluster shading rate feature, include a

`VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI` structure in the `pNext` chain of the `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI` structure. This structure is defined as:

```
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           clusterShadingRate;
} VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `clusterShadingRate` specifies whether per-cluster shading rates is supported.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_CULLING_SHADER_VRS_FEATURES_HUAWEI`

The `VkPhysicalDeviceHdrVividFeaturesHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_hdr_vivid
typedef struct VkPhysicalDeviceHdrVividFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hdrVivid;
} VkPhysicalDeviceHdrVividFeaturesHUAWEI;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hdrVivid` specifies whether HDR Vivid metadata is supported.

If the `VkPhysicalDeviceHdrVividFeaturesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceHdrVividFeaturesHUAWEI` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHdrVividFeaturesHUAWEI-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HDR_VIVID_FEATURES_HUAWEI`

The `VkPhysicalDeviceShaderEnqueueFeaturesAMD` structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkPhysicalDeviceShaderQueueFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderQueue;
    VkBool32           shaderMeshQueue;
} VkPhysicalDeviceShaderQueueFeaturesAMD;
```

This structure describes the following feature:

- **shaderQueue** indicates whether the implementation supports [execution graphs](#).
- **shaderMeshQueue** indicates whether the implementation supports [mesh nodes in execution graphs](#).

If the **VkPhysicalDeviceShaderQueueFeaturesAMD** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceShaderQueueFeaturesAMD** can also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderQueueFeaturesAMD-sType-sType
sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_QUEUE_FEATURES_AMD**

The **VkPhysicalDeviceCubicClampFeaturesQCOM** structure is defined as:

```
// Provided by VK_QCOM_filter_cubic_clamp
typedef struct VkPhysicalDeviceCubicClampFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cubicRangeClamp;
} VkPhysicalDeviceCubicClampFeaturesQCOM;
```

This structure describes the following features:

- **cubicRangeClamp** indicates that the implementation supports cubic filtering in combination with a [texel range clamp](#).

If the **VkPhysicalDeviceCubicClampFeaturesQCOM** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceCubicClampFeaturesQCOM** can also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCubicClampFeaturesQCOM-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUBIC_CLAMP_FEATURES_QCOM

The `VkPhysicalDeviceYcbcrDegammaFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_ycbcr_degamma
typedef struct VkPhysicalDeviceYcbcrDegammaFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           ycbcrDegamma;
} VkPhysicalDeviceYcbcrDegammaFeaturesQCOM;
```

This structure describes the following features:

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- ycbcrDegamma indicates whether the implementation supports `Y'CBCR degamma`.

If the `VkPhysicalDeviceYcbcrDegammaFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceYcbcrDegammaFeaturesQCOM` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceYcbcrDegammaFeaturesQCOM-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_DEGAMMA_FEATURES_QCOM

The `VkPhysicalDeviceCubicWeightsFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_filter_cubic_weights
typedef struct VkPhysicalDeviceCubicWeightsFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           selectableCubicWeights;
} VkPhysicalDeviceCubicWeightsFeaturesQCOM;
```

This structure describes the following feature:

- `selectableCubicWeights` indicates that the implementation supports the selection of filter cubic weights.

If the `VkPhysicalDeviceCubicWeightsFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCubicWeightsFeaturesQCOM` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCubicWeightsFeaturesQCOM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUBIC_WEIGHTS_FEATURES_QCOM`

The `VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV` structure is defined as:

```
// Provided by VK_NV_descriptor_pool_overallocation
typedef struct VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorPoolOverallocation;
} VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorPoolOverallocation` indicates that the implementation allows the application to opt into descriptor pool overallocation by creating the descriptor pool with `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV` and/or `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV` flags.

If the `VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_POOL_OVERALLOCATION_FEATURES_NV`

The `VkPhysicalDevicePerStageDescriptorSetFeaturesNV` structure is defined as:

```
// Provided by VK_NV_per_stage_descriptor_set
typedef struct VkPhysicalDevicePerStageDescriptorSetFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           perStageDescriptorSet;
    VkBool32           dynamicPipelineLayout;
} VkPhysicalDevicePerStageDescriptorSetFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `perStageDescriptorSet` indicates that the implementation allows the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV` descriptor set layout creation flag to be used so the bindings are specified per-stage rather than across all stages.
- `dynamicPipelineLayout` indicates the implementation allows the `layout` member of `VkBindDescriptorSetsInfoKHR`, `VkPushConstantsInfoKHR`, `VkPushDescriptorSetInfoKHR`, `VkPushDescriptorSetWithTemplateInfoKHR`, `VkSetDescriptorBufferOffsetsInfoEXT` and `VkBindDescriptorBufferEmbeddedSamplersInfoEXT` to be `VK_NULL_HANDLE` and `VkPipelineLayoutCreateInfo` can be chained off those structures' `pNext` instead.

If the `VkPhysicalDevicePerStageDescriptorSetFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePerStageDescriptorSetFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePerStageDescriptorSetFeaturesNV-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PER_STAGE_DESCRIPTOR_SET_FEATURES_NV`

The `VkPhysicalDeviceCudaKernelLaunchFeaturesNV` structure is defined as:

```
// Provided by VK_NV_cuda_kernel_launch
typedef struct VkPhysicalDeviceCudaKernelLaunchFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cudaKernelLaunchFeatures;
} VkPhysicalDeviceCudaKernelLaunchFeaturesNV;
```

This structure describes the following features:

- `cudaKernelLaunchFeatures` is non-zero if cuda kernel launch is supported.

If the `VkPhysicalDeviceCudaKernelLaunchFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCudaKernelLaunchFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCudaKernelLaunchFeaturesNV-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUDA_KERNEL_LAUNCH_FEATURES_NV`

The `VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_maximal_reconvergence
typedef struct VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderMaximalReconvergence;
} VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderMaximalReconvergence` specifies whether the implementation supports the shader execution mode `MaximallyReconvergesKHR`

If the `VkPhysicalDevicePrivateDataFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePrivateDataFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MAXIMAL_RECONVERGENCE_FEATURES_KHR`

The `VkPhysicalDeviceExternalFormatResolveFeaturesANDROID` structure is defined as:

```
// Provided by VK_ANDROID_external_format_resolve
typedef struct VkPhysicalDeviceExternalFormatResolveFeaturesANDROID {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           externalFormatResolve;
} VkPhysicalDeviceExternalFormatResolveFeaturesANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalFormatResolve` specifies whether external format resolves are supported.

If the `VkPhysicalDeviceExternalFormatResolveFeaturesANDROID` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExternalFormatResolveFeaturesANDROID` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalFormatResolveFeaturesANDROID-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_FORMAT_RESOLVE_FEATURES_ANDROID`

The `VkPhysicalDeviceSchedulingControlsFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_scheduling_controls
typedef struct VkPhysicalDeviceSchedulingControlsFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           schedulingControls;
} VkPhysicalDeviceSchedulingControlsFeaturesARM;
```

This structure describes the following features:

- `schedulingControls` indicates that the implementation supports scheduling controls.

If the `VkPhysicalDeviceSchedulingControlsFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSchedulingControlsFeaturesARM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSchedulingControlsFeaturesARM-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SCHEDULING_CONTROLS_FEATURES_ARM

The `VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG` structure is defined as:

```
// Provided by VK_IMG_relaxed_line_rasterization
typedef struct VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           relaxedLineRasterization;
} VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `relaxedLineRasterization` indicates that the implementation supports relaxed line rasterization control.

If the `VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RELAXED_LINE_RASTERIZATION_FEATURES_IMG`

The `VkPhysicalDeviceRenderPassStripedFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_render_pass_striped
typedef struct VkPhysicalDeviceRenderPassStripedFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           renderPassStriped;
} VkPhysicalDeviceRenderPassStripedFeaturesARM;
```

The members of the `VkPhysicalDeviceRenderPassStripedFeaturesARM` structure describe the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `renderPassStriped` indicates that striped rendering is supported by the implementation.

If the `VkPhysicalDeviceRenderPassStripedFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRenderPassStripedFeaturesARM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRenderPassStripedFeaturesARM-sType-sType
sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RENDER_PASS_STRIPED_FEATURES_ARM`

The `VkPhysicalDeviceShaderSubgroupRotateFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_subgroup_rotate
typedef struct VkPhysicalDeviceShaderSubgroupRotateFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupRotate;
    VkBool32           shaderSubgroupRotateClustered;
} VkPhysicalDeviceShaderSubgroupRotateFeaturesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupRotate` specifies whether shader modules can declare the `GroupNonUniformRotateKHR` capability.
- `shaderSubgroupRotateClustered` specifies whether shader modules can use the `ClusterSize` operand to `OpGroupNonUniformRotateKHR`.

If the `VkPhysicalDeviceShaderSubgroupRotateFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderSubgroupRotateFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSubgroupRotateFeaturesKHR-sType-sType
sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_ROTATE_FEATURES_KHR`

The `VkPhysicalDeviceShaderExpectAssumeFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_expect_assume
typedef struct VkPhysicalDeviceShaderExpectAssumeFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderExpectAssume;
} VkPhysicalDeviceShaderExpectAssumeFeaturesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderExpectAssume` specifies whether shader modules **can** declare the `ExpectAssumeKHR` capability.

If the `VkPhysicalDeviceShaderExpectAssumeFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderExpectAssumeFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderExpectAssumeFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_EXPECT_ASSUME_FEATURES_KHR`

The `VkPhysicalDeviceDynamicRenderingLocalReadFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_dynamic_rendering_local_read
typedef struct VkPhysicalDeviceDynamicRenderingLocalReadFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRenderingLocalRead;
} VkPhysicalDeviceDynamicRenderingLocalReadFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dynamicRenderingLocalRead` specifies that the implementation supports local reads inside dynamic render pass instances using the `vkCmdBeginRendering` command.

If the `VkPhysicalDeviceDynamicRenderingLocalReadFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDynamicRenderingLocalReadFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDynamicRenderingLocalReadFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DYNAMIC_RENDERING_LOCAL_READ_FEATURES_KHR`

The `VkPhysicalDeviceShaderQuadControlFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_quad_control
typedef struct VkPhysicalDeviceShaderQuadControlFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderQuadControl;
} VkPhysicalDeviceShaderQuadControlFeaturesKHR;
```

This structure describes the following features:

- `shaderQuadControl` indicates whether the implementation supports shaders with the `QuadControlKHR` capability.

If the `VkPhysicalDeviceShaderQuadControlFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderQuadControlFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderQuadControlFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_QUAD_CONTROL_FEATURES_KHR`

The `VkPhysicalDeviceMapMemoryPlacedFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_map_memory_placed
typedef struct VkPhysicalDeviceMapMemoryPlacedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryMapPlaced;
    VkBool32           memoryMapRangePlaced;
    VkBool32           memoryUnmapReserve;
} VkPhysicalDeviceMapMemoryPlacedFeaturesEXT;
```

This structure describes the following features:

- `memoryMapPlaced` indicates that the implementation supports placing memory maps at

application-specified virtual addresses.

- **memoryMapRangePlaced** indicates that the implementation supports placing memory maps of a subrange of a memory object at application-specified virtual addresses.
- **memoryUnmapReserve** indicates that the implementation supports leaving the memory range reserved when unmapping a memory object.

If the **VkPhysicalDeviceMapMemoryPlacedFeaturesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceMapMemoryPlacedFeaturesEXT** can also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMapMemoryPlacedFeaturesEXT-sType-sType
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAP_MEMORY_PLACED_FEATURES_EXT

The **VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV** structure is defined as:

```
// Provided by VK_NV_shader_atomic_float16_vector
typedef struct VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat16VectorAtomics;
} VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderFloat16VectorAtomics** indicates whether shaders can perform 16-bit floating-point, 2- and 4-component vector atomic operations.

If the **VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV** can also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV-sType-sType
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT16_VECTOR_FEATURES_NV

The `VkPhysicalDeviceRawAccessChainsFeaturesNV` structure is defined as:

```
// Provided by VK_NV_raw_access_chains
typedef struct VkPhysicalDeviceRawAccessChainsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderRawAccessChains;
} VkPhysicalDeviceRawAccessChainsFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderRawAccessChains` specifies whether shader modules **can** declare the `RawAccessChainsNV` capability.

If the `VkPhysicalDeviceRawAccessChainsFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRawAccessChainsFeaturesNV` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRawAccessChainsFeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAW_ACCESS_CHAINS_FEATURES_NV`

The `VkPhysicalDeviceCommandBufferInheritanceFeaturesNV` structure is defined as:

```
// Provided by VK_NV_command_buffer_inheritance
typedef struct VkPhysicalDeviceCommandBufferInheritanceFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           commandBufferInheritance;
} VkPhysicalDeviceCommandBufferInheritanceFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `commandBufferInheritance` indicates that command buffers executed in a queue inherit graphics and compute state from the previously executed command buffer in that queue.

If the `VkPhysicalDeviceCommandBufferInheritanceFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to

indicate whether each corresponding feature is supported. `VkPhysicalDeviceCommandBufferInheritanceFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceCommandBufferInheritanceFeaturesNV-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMMAND_BUFFER_INHERITANCE_FEATURES_NV`

The `VkPhysicalDeviceImageAlignmentControlFeaturesMESA` structure is defined as:

```
// Provided by VK_MESA_image_alignment_control
typedef struct VkPhysicalDeviceImageAlignmentControlFeaturesMESA {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageAlignmentControl;
} VkPhysicalDeviceImageAlignmentControlFeaturesMESA;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageAlignmentControl` specifies that `VkImageAlignmentControlCreateInfoMESA` can be chained in `VkImageCreateInfo`

If the `VkPhysicalDeviceImageAlignmentControlFeaturesMESA` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceImageAlignmentControlFeaturesMESA` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceImageAlignmentControlFeaturesMESA-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_ALIGNMENT_CONTROL_FEATURES_MESA`

The `VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_replicated_composites
typedef struct VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderReplicatedComposites;
} VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderReplicatedComposites` specifies whether shader modules **can** declare the `ReplicatedCompositesEXT` capability.

If the `VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_REPLICATED_COMPOSITES_FEATURES_EXT`

The `VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_relaxed_extended_instruction
typedef struct VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderRelaxedExtendedInstruction;
} VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderRelaxedExtendedInstruction` specifies whether the implementation supports SPIR-V modules that use the `SPV_KHR_relaxed_extended_instruction` extension.

If the `VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR-sType-sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_RELAXED_EXTENDED_INSTRUCTION_FEATURES_KHR

46.1. Feature Requirements

All Vulkan graphics implementations **must** support the following features:

- If Vulkan 1.0 is supported, **robustBufferAccess** **must** be supported if **VK_KHR_portability_subset** is not advertised
- If Vulkan 1.1 is supported, the following features **must** be supported:
 - **storageBuffer16BitAccess** if **uniformAndStorageBuffer16BitAccess** is supported
 - **multiview**
 - **shaderDrawParameters** if **VK_KHR_shader_draw_parameters** is supported
- If Vulkan 1.2 is supported, the following features **must** be supported:
 - **subgroupBroadcastDynamicId**
 - **samplerMirrorClampToEdge** if **VK_KHR_sampler_mirror_clamp_to_edge** is supported
 - **drawIndirectCount** if **VK_KHR_draw_indirect_count** is supported
 - **storageBuffer8BitAccess** if **uniformAndStorageBuffer8BitAccess** is supported
 - **shaderInt64** if **shaderSharedInt64Atomics** or **shaderBufferInt64Atomics** are supported
 - **descriptorIndexing** if **VK_EXT_descriptor_indexing** is supported
 - **shaderSampledImageArrayDynamicIndexing** if **descriptorIndexing** is supported
 - **shaderStorageBufferArrayDynamicIndexing** if **descriptorIndexing** is supported
 - **shaderUniformTexelBufferArrayDynamicIndexing** if **descriptorIndexing** is supported
 - **shaderStorageTexelBufferArrayDynamicIndexing** if **descriptorIndexing** is supported
 - **shaderSampledImageArrayNonUniformIndexing** if **descriptorIndexing** is supported
 - **shaderStorageBufferArrayNonUniformIndexing** if **descriptorIndexing** is supported
 - **shaderUniformTexelBufferArrayNonUniformIndexing** if **descriptorIndexing** is supported
 - **descriptorBindingSampledImageUpdateAfterBind** if **descriptorIndexing** is supported
 - **descriptorBindingStorageImageUpdateAfterBind** if **descriptorIndexing** is supported
 - **descriptorBindingStorageBufferUpdateAfterBind** if **descriptorIndexing** is supported
 - **descriptorBindingUniformTexelBufferUpdateAfterBind** if **descriptorIndexing** is supported
 - **descriptorBindingStorageTexelBufferUpdateAfterBind** if **descriptorIndexing** is supported
 - **descriptorBindingUpdateUnusedWhilePending** if **descriptorIndexing** is supported
 - **descriptorBindingPartiallyBound** if **descriptorIndexing** is supported

- `runtimeDescriptorArray` if `descriptorIndexing` is supported
- `shaderOutputViewportIndex` if `VK_EXT_shader_viewport_index_layer` is supported
- `shaderOutputLayer` if `VK_EXT_shader_viewport_index_layer` is supported
- `samplerFilterMinmax` if `VK_EXT_sampler_filter_minmax` is supported
- `imagelessFramebuffer`
- `uniformBufferStandardLayout`
- `shaderSubgroupExtendedTypes`
- `separateDepthStencilLayouts`
- `hostQueryReset`
- `timelineSemaphore`
- If Vulkan 1.3 is supported, the following features **must** be supported:
 - `shaderTerminateInvocation`
 - `shaderDemoteToHelperInvocation`
 - `privateData`
 - `pipelineCreationCacheControl`
 - `synchronization2`
 - `shaderZeroInitializeWorkgroupMemory`
 - `robustImageAccess`
 - `subgroupSizeControl`
 - `computeFullSubgroups`
 - `dynamicRendering`
 - `shaderIntegerDotProduct`
 - `maintenance4`
 - `vulkanMemoryModel`
 - `vulkanMemoryModelDeviceScope`
 - `inlineUniformBlock`
 - `bufferDeviceAddress`
 - `descriptorBindingInlineUniformBlockUpdateAfterBind` if `VK_EXT_descriptor_indexing` or `descriptorIndexing` are supported
- If `VK_KHR_dynamic_rendering` is supported, `dynamicRendering` **must** be supported
- If `VK_KHR_multiview` is supported, `multiview` **must** be supported
- If `VK_KHR_shader_float16_int8` is supported, `shaderFloat16`, or `shaderInt8` **must** be supported
- If `VK_KHR_16bit_storage` is supported, `storageBuffer16BitAccess` **must** be supported
- If `VK_KHR_imageless_framebuffer` is supported, `imagelessFramebuffer` **must** be supported
- If `VK_KHR_performance_query` is supported, `performanceCounterQueryPools` **must** be supported

- If `VK_KHR_variable_pointers` is supported, `variablePointersStorageBuffer` **must** be supported
- If `VK_KHR_sampler_ycbcr_conversion` is supported, `samplerYcbcrConversion` **must** be supported
- If `VK_KHR_shader_subgroup_extended_types` is supported, `shaderSubgroupExtendedTypes` **must** be supported
- If `VK_KHR_8bit_storage` is supported, `storageBuffer8BitAccess` **must** be supported
- If `VK_KHR_shader_atomic_int64` is supported, `shaderBufferInt64Atomics` **must** be supported
- If `VK_KHR_shader_clock` is supported, `shaderSubgroupClock` **must** be supported
- If `VK_KHR_global_priority` is supported, `globalPriorityQuery` **must** be supported
- If `VK_KHR_timeline_semaphore` is supported, `timelineSemaphore` **must** be supported
- If `VK_KHR_vulkan_memory_model` is supported, `vulkanMemoryModel` **must** be supported
- If `VK_KHR_shader_terminate_invocation` is supported, `shaderTerminateInvocation` **must** be supported
- If `VK_KHR_fragment_shading_rate` is supported, `pipelineFragmentShadingRate` **must** be supported
- If `VK_KHR_dynamic_rendering_local_read` is supported, `dynamicRenderingLocalRead` **must** be supported
- If `VK_KHR_shader_quad_control` is supported, `shaderQuadControl` **must** be supported
- If `VK_KHR_separate_depth_stencil_layouts` is supported, `separateDepthStencilLayouts` **must** be supported
- If `VK_KHR_present_wait` is supported, `presentWait` **must** be supported
- If `VK_KHR_uniform_buffer_standard_layout` is supported, `uniformBufferStandardLayout` **must** be supported
- If `VK_KHR_buffer_device_address` is supported, `bufferDeviceAddress` **must** be supported
- If `VK_KHR_pipeline_executable_properties` is supported, `pipelineExecutableInfo` **must** be supported
- If `VK_KHR_shader_integer_dot_product` is supported, `shaderIntegerDotProduct` **must** be supported
- If `VK_KHR_present_id` is supported, `presentId` **must** be supported
- If `VK_KHR_synchronization2` is supported, `synchronization2` **must** be supported
- If `VK_KHR_shader_subgroup_uniform_control_flow` is supported, `shaderSubgroupUniformControlFlow` **must** be supported
- If `VK_KHR_zero_initialize_workgroup_memory` is supported, `shaderZeroInitializeWorkgroupMemory` **must** be supported
- If `VK_KHR_workgroup_memory_explicit_layout` is supported, `workgroupMemoryExplicitLayout` **must** be supported
- If `VK_KHR_ray_tracing_maintenance1` is supported, `rayTracingMaintenance1` **must** be supported
- If `VK_KHR_maintenance4` is supported, `maintenance4` **must** be supported
- If `VK_KHR_shader_subgroup_rotate` is supported, `shaderSubgroupRotate` **must** be supported
- If `VK_KHR_shader_maximal_reconvergence` is supported, `shaderMaximalReconvergence` **must** be supported

supported

- If `VK_KHR_maintenance5` is supported, `maintenance5` **must** be supported
- If `VK_KHR_ray_tracing_position_fetch` is supported, `rayTracingPositionFetch` **must** be supported
- If `VK_KHR_pipeline_binary` is supported, `pipelineBinaries` **must** be supported
- If `VK_KHR_cooperative_matrix` is supported, `cooperativeMatrix` **must** be supported
- If `VK_KHR_compute_shader_derivatives` is supported, `computeDerivativeGroupLinear` **must** be supported
- If `VK_KHR_video_maintenance1` is supported, `videoMaintenance1` **must** be supported
- If `VK_KHR_vertex_attribute_divisor` is supported, `vertexAttributeInstanceRateDivisor` **must** be supported
- If `VK_KHR_shader_float_controls2` is supported, `shaderFloatControls2` **must** be supported
- If `VK_KHR_index_type_uint8` is supported, `indexTypeUint8` **must** be supported
- If `VK_KHR_line_rasterization` is supported, `rectangularLines`, `bresenhamLines`, `smoothLines`, `stippledRectangularLines`, `stippledBresenhamLines`, or `stippledSmoothLines` **must** be supported
- If `VK_KHR_shader_expect_assume` is supported, `shaderExpectAssume` **must** be supported
- If `VK_KHR_maintenance6` is supported, `maintenance6` **must** be supported
- If `VK_KHR_shader_relaxed_extended_instruction` is supported, `shaderRelaxedExtendedInstruction` **must** be supported
- If `VK_KHR_maintenance7` is supported, `maintenance7` **must** be supported
- If `VK_EXT_transform_feedback` is supported, `transformFeedback` **must** be supported
- If `VK_EXT_texture_compression_astc_hdr` is supported, `textureCompressionASTC_HDR` **must** be supported
- If `VK_EXT_pipeline_robustness` is supported, `pipelineRobustness` **must** be supported
- If `VK_EXT_conditional_rendering` is supported, `conditionalRendering` **must** be supported
- If `VK_EXT_depth_clip_enable` is supported, `depthClipEnable` **must** be supported
- If `VK_IMG_relaxed_line_rasterization` is supported, `relaxedLineRasterization` **must** be supported
- If `VK_AMD_shader_enqueue` is supported, the following features **must** be supported:
 - `shaderEnqueue`
 - `shaderMeshEnqueue` if `VK_EXT_mesh_shader` is supported
- If `VK_EXT_inline_uniform_block` is supported, the following features **must** be supported:
 - `inlineUniformBlock`
 - `descriptorBindingInlineUniformBlockUpdateAfterBind` if `VK_EXT_descriptor_indexing` is supported, or if Vulkan 1.2 and `descriptorIndexing` are supported
- If `VK_EXT_descriptor_indexing` is supported, the following features **must** be supported:
 - `shaderSampledImageArrayDynamicIndexing`
 - `shaderStorageBufferArrayDynamicIndexing`

- `shaderUniformTexelBufferArrayDynamicIndexing`
- `shaderStorageTexelBufferArrayDynamicIndexing`
- `shaderSampledImageArrayNonUniformIndexing`
- `shaderStorageBufferArrayNonUniformIndexing`
- `shaderUniformTexelBufferArrayNonUniformIndexing`
- `descriptorBindingSampledImageUpdateAfterBind`
- `descriptorBindingStorageImageUpdateAfterBind`
- `descriptorBindingStorageBufferUpdateAfterBind`
- `descriptorBindingUniformTexelBufferUpdateAfterBind`
- `descriptorBindingStorageTexelBufferUpdateAfterBind`
- `descriptorBindingUpdateUnusedWhilePending`
- `descriptorBindingPartiallyBound`
- `runtimeDescriptorArray`
- If `VK_NV_shading_rate_image` is supported, `shadingRateImage` **must** be supported
- If `VK_NV_representative_fragment_test` is supported, `representativeFragmentTest` **must** be supported
- If `VK_EXT_vertex_attribute_divisor` is supported, `vertexAttributeInstanceRateDivisor` **must** be supported
- If `VK_EXT_fragment_density_map` is supported, `fragmentDensityMap` **must** be supported
- If `VK_EXT_scalar_block_layout` is supported, `scalarBlockLayout` **must** be supported
- If `VK_EXT_subgroup_size_control` is supported, the following features **must** be supported:
 - `subgroupSizeControl`
 - `computeFullSubgroups`
- If `VK_AMD_device_coherent_memory` is supported, `deviceCoherentMemory` **must** be supported
- If `VK_EXT_shader_image_atomic_int64` is supported, the following features **must** be supported:
 - `shaderInt64`
 - `shaderImageInt64Atomics`
- If `VK_EXT_memory_priority` is supported, `memoryPriority` **must** be supported
- If `VK_NV_coverage_reduction_mode` is supported, `coverageReductionMode` **must** be supported
- If `VK_EXT_fragment_shader_interlock` is supported, `fragmentShaderSampleInterlock`, `fragmentShaderPixelInterlock`, or `fragmentShaderShadingRateInterlock` **must** be supported
- If `VK_EXT_ycbcr_image_arrays` is supported, `ycbcrImageArrays` **must** be supported
- If `VK_EXT_provoking_vertex` is supported, `provokingVertexLast` **must** be supported
- If `VK_EXT_line_rasterization` is supported, `rectangularLines`, `bresenhamLines`, `smoothLines`, `stippledRectangularLines`, `stippledBresenhamLines`, or `stippledSmoothLines` **must** be supported
- If `VK_EXT_shader_atomic_float` is supported, the following features **must** be supported:

- `shaderImageFloat32Atomics` if `sparseImageFloat32Atomics` is supported
- `shaderImageFloat32AtomicAdd` if `sparseImageFloat32AtomicAdd` is supported
- If `VK_EXT_host_query_reset` is supported, `hostQueryReset` **must** be supported
- If `VK_EXT_index_type_uint8` is supported, `indexTypeUint8` **must** be supported
- If `VK_EXT_extended_dynamic_state` is supported, `extendedDynamicState` **must** be supported
- If `VK_EXT_host_image_copy` is supported, `hostImageCopy` **must** be supported
- If `VK_EXT_map_memory_placed` is supported, `memoryMapPlaced` **must** be supported
- If `VK_EXT_shader_atomic_float2` is supported, `shaderImageFloat32AtomicMinMax` **must** be supported if `sparseImageFloat32AtomicMinMax` is supported
- If `VK_EXT_swapchain_maintenance1` is supported, `swapchainMaintenance1` **must** be supported
- If `VK_EXT_shader_demote_to_helper_invocation` is supported, `shaderDemoteToHelperInvocation` **must** be supported
- If `VK_NV_device_generated_commands` is supported, `deviceGeneratedCommands` **must** be supported
- If `VK_EXT_texel_buffer_alignment` is supported, `texelBufferAlignment` **must** be supported
- If `VK_EXT_depth_bias_control` is supported, `depthBiasControl` **must** be supported
- If `VK_EXT_device_memory_report` is supported, `deviceMemoryReport` **must** be supported
- If `VK_EXT_custom_border_color` is supported, `customBorderColors` **must** be supported
- If `VK_NV_present_barrier` is supported, `presentBarrier` **must** be supported
- If `VK_EXT_private_data` is supported, `privateData` **must** be supported
- If `VK_EXT_pipeline_creation_cache_control` is supported, `pipelineCreationCacheControl` **must** be supported
- If `VK_EXT_descriptor_buffer` is supported, `descriptorBuffer` **must** be supported
- If `VK_EXT_graphics_pipeline_library` is supported, `graphicsPipelineLibrary` **must** be supported
- If `VK_AMD_shader_early_and_late_fragment_tests` is supported, `shaderEarlyAndLateFragmentTests` **must** be supported
- If `VK_EXT_ycbcr_2plane_444_formats` is supported, `ycbcr2plane444Formats` **must** be supported
- If `VK_EXT_image_robustness` is supported, `robustImageAccess` **must** be supported
- If `VK_EXT_image_compression_control` is supported, `imageCompressionControl` **must** be supported
- If `VK_EXT_attachment_feedback_loop_layout` is supported, `attachmentFeedbackLoopLayout` **must** be supported
- If `VK_EXT_4444_formats` is supported, `formatA4R4G4B4` **must** be supported
- If `VK_EXT_device_fault` is supported, `deviceFault` **must** be supported
- If `VK_VALVE_mutable_descriptor_type` is supported, `mutableDescriptorType` **must** be supported
- If `VK_EXT_vertex_input_dynamic_state` is supported, `vertexInputDynamicState` **must** be supported
- If `VK_EXT_device_address_binding_report` is supported, `reportAddressBinding` **must** be supported
- If `VK_EXT_depth_clip_control` is supported, `depthClipControl` **must** be supported

- If `VK_EXT_primitive_topology_list_restart` is supported, `primitiveTopologyListRestart` **must** be supported
- If `VK_EXT_present_mode_fifo_latest_ready` is supported, `presentModeFifoLatestReady` **must** be supported
- If `VK_EXT_frame_boundary` is supported, `frameBoundary` **must** be supported
- If `VK_EXT_multisampled_render_to_single_sampled` is supported, `multisampledRenderToSingleSampled` **must** be supported
- If `VK_EXT_extended_dynamic_state2` is supported, `extendedDynamicState2` **must** be supported
- If `VK_EXT_color_write_enable` is supported, `colorWriteEnable` **must** be supported
- If `VK_EXT_primitives_generated_query` is supported, `primitivesGeneratedQuery` **must** be supported
- If `VK_EXT_global_priority_query` is supported, `globalPriorityQuery` **must** be supported
- If `VK_EXT_image_view_min_lod` is supported, `minLod` **must** be supported
- If `VK_EXT_multi_draw` is supported, `multiDraw` **must** be supported
- If `VK_EXT_image_2d_view_of_3d` is supported, `image2DViewOf3D` **must** be supported
- If `VK_EXT_shader_tile_image` is supported, `shaderTileImageColorReadAccess` **must** be supported
- If `VK_EXT_opacity_micromap` is supported, `micromap` **must** be supported
- If `VK_NV_displacement_micromap` is supported, `displacementMicromap` **must** be supported
- If `VK_EXT_border_color_swizzle` is supported, `borderColorSwizzle` **must** be supported
- If `VK_EXT_pageable_device_local_memory` is supported, `pageableDeviceLocalMemory` **must** be supported
- If `VK_ARM_scheduling_controls` is supported, `schedulingControls` **must** be supported
- If `VK_EXT_image_sliced_view_of_3d` is supported, `imageSlicedViewOf3D` **must** be supported
- If `VK_EXT_depth_clamp_zero_one` is supported, `depthClampZeroOne` **must** be supported
- If `VK_EXT_non_seamless_cube_map` is supported, `nonSeamlessCubeMap` **must** be supported
- If `VK_ARM_render_pass_striped` is supported, `renderPassStriped` **must** be supported
- If `VK_NV_device_generated_commands_compute` is supported, `deviceGeneratedCompute` **must** be supported
- If `VK_NV_linear_color_attachment` is supported, `linearColorAttachment` **must** be supported
- If `VK_EXT_image_compression_control_swapchain` is supported, `imageCompressionControlSwapchain` **must** be supported
- If `VK_QCOM_image_processing` is supported, the following features **must** be supported:
 - `textureSampleWeighted`
 - `textureBlockMatch`
 - `textureBoxFilter`
- If `VK_EXT_nested_command_buffer` is supported, `nestedCommandBuffer` **must** be supported
- If `VK_EXT_extended_dynamic_state3` is supported, the following features **must** be supported:

- `tessellationShader` if `extendedDynamicState3TessellationDomainOrigin` is supported
- `depthClamp` if `extendedDynamicState3DepthClampEnable` is supported
- `fillModeNonSolid` if `extendedDynamicState3PolygonMode` is supported
- `alphaToOne` if `extendedDynamicState3AlphaToOneEnable` is supported
- `logicOp` if `extendedDynamicState3LogicOpEnable` is supported
- `geometryStreams` if `VK_EXT_transform_feedback` and `extendedDynamicState3RasterizationStream` are supported
- If `VK_EXT_subpass_merge_feedback` is supported, `subpassMergeFeedback` **must** be supported
- If `VK_EXT_shader_module_identifier` is supported, `shaderModuleIdentifier` **must** be supported
- If `VK_EXT_legacy_dithering` is supported, `legacyDithering` **must** be supported
- If `VK_EXT_pipeline_protected_access` is supported, `pipelineProtectedAccess` **must** be supported
- If `VK_ANDROID_external_format_resolve` is supported, `externalFormatResolve` **must** be supported
- If `VK_AMD_anti_lag` is supported, `antiLag` **must** be supported
- If `VK_EXT_shader_object` is supported, `shaderObject` **must** be supported
- If `VK_QCOM_tile_properties` is supported, `tileProperties` **must** be supported
- If `VK_QCOM_multiview_per_view_viewports` is supported, `multiviewPerViewViewports` **must** be supported
- If `VK_NV_extended_sparse_address_space` is supported, `extendedSparseAddressSpace` **must** be supported
- If `VK_EXT_mutable_descriptor_type` is supported, `mutableDescriptorType` **must** be supported
- If `VK_EXT_legacy_vertex_attributes` is supported, `legacyVertexAttributes` **must** be supported
- If `VK_EXT_pipeline_library_group_handles` is supported, `pipelineLibraryGroupHandles` **must** be supported
- If `VK_EXT_dynamic_rendering_unused_attachments` is supported, `dynamicRenderingUnusedAttachments` **must** be supported
- If `VK_NV_per_stage_descriptor_set` is supported, `perStageDescriptorSet` **must** be supported
- If `VK_QCOM_image_processing2` is supported, `textureBlockMatch2` **must** be supported
- If `VK_QCOM_ycbcr_degama` is supported, `ycbcrDegamma` **must** be supported
- If `VK_EXT_attachment_feedback_loop_dynamic_state` is supported, `attachmentFeedbackLoopDynamicState` **must** be supported
- If `VK_NV_descriptor_pool_overallocation` is supported, `descriptorPoolOverallocation` **must** be supported
- If `VK_NV_raw_access_chains` is supported, `shaderRawAccessChains` **must** be supported
- If `VK_NV_command_buffer_inheritance` is supported, `commandBufferInheritance` **must** be supported
- If `VK_NV_shader_atomic_float16_vector` is supported, `shaderFloat16VectorAtomics` **must** be supported
- If `VK_EXT_shader_replicated_composites` is supported, `shaderReplicatedComposites` **must** be supported

supported

- If `VK_EXT_device_generated_commands` is supported, `deviceGeneratedCommands` **must** be supported
- If `VK_MESA_image_alignment_control` is supported, `imageAlignmentControl` **must** be supported
- If `VK_EXT_depth_clamp_control` is supported, `depthClampControl` **must** be supported
- If `VK_HUAWEI_hdr_vivid` is supported, `hdrVivid` **must** be supported
- If `VK_NV_cooperative_matrix2` is supported, `cooperativeMatrixWorkgroupScope`, `cooperativeMatrixFlexibleDimensions`, `cooperativeMatrixReductions`, `cooperativeMatrixConversions`, `cooperativeMatrixPerElementOperations`, `cooperativeMatrixTensorAddressing`, or `cooperativeMatrixBlockLoads` **must** be supported
- If `VK_KHR_acceleration_structure` is supported, the following features **must** be supported:
 - `accelerationStructure`
 - `bufferDeviceAddress`
 - `descriptorBindingAccelerationStructureUpdateAfterBind`
 - `descriptorIndexing` if Vulkan 1.2 is supported
- If `VK_KHR_ray_tracing_pipeline` is supported, the following features **must** be supported:
 - `rayTracingPipeline`
 - `rayTracingPipelineTraceRaysIndirect`
 - `rayTraversalPrimitiveCulling` if `VK_KHR_ray_query` is supported
- If `VK_KHR_ray_query` is supported, `rayQuery` **must** be supported
- If `VK_EXT_mesh_shader` is supported, the following features **must** be supported:
 - `taskShader`
 - `meshShader`
 - `primitiveFragmentShadingRate` if `VK_KHR_fragment_shading_rate` and `primitiveFragmentShadingRateMeshShader` are supported
- `VK_KHR_fragment_shading_rate` if `primitiveFragmentShadingRateMeshShader` feature is supported.
- `VK_EXT_transform_feedback`, if the `extendedDynamicState3RasterizationStream` feature is supported.
- `VK_EXT_conservative_rasterization` extension, if the `extendedDynamicState3ConservativeRasterizationMode` feature is supported.
- `VK_EXT_conservative_rasterization` extension, if the `extendedDynamicState3ExtraPrimitiveOverestimationSize` feature is supported.
- `VK_EXT_sample_locations` extension, if the `extendedDynamicState3SampleLocationsEnable` feature is supported.
- `VK_EXT_blend_operation_advanced` extension, if the `extendedDynamicState3ColorBlendAdvanced` feature is supported.
- `VK_EXT_provoking_vertex`, if the `extendedDynamicState3ProvokingVertexMode` feature is supported.
- `VK_KHR_line_rasterization` or `VK_EXT_line_rasterization` extension, if the

`extendedDynamicState3LineRasterizationMode` feature is supported.

- `VK_KHR_line_rasterization` or `VK_EXT_line_rasterization` extension, if the `extendedDynamicState3LineStippleEnable` feature is supported.
- `VK_EXT_depth_clip_control`, if the `extendedDynamicState3DepthClipNegativeOneToOne` feature is supported.
- `VK_NV_clip_space_w_scaling` extension, if the `extendedDynamicState3ViewportWScalingEnable` feature is supported.
- `VK_NV_viewport_swizzle` extension, if the `extendedDynamicState3ViewportSwizzle` feature is supported.
- `VK_NV_fragment_coverage_to_color` extension, if the `extendedDynamicState3CoverageToColorEnable` feature is supported.
- `VK_NV_fragment_coverage_to_color` extension, if the `extendedDynamicState3CoverageToColorLocation` feature is supported.
- `VK_NV_framebuffer_mixed_samples` extension, if the `extendedDynamicState3CoverageModulationMode` feature is supported.
- `VK_NV_framebuffer_mixed_samples` extension, if the `extendedDynamicState3CoverageModulationTableEnable` feature is supported.
- `VK_NV_framebuffer_mixed_samples` extension, if the `extendedDynamicState3CoverageModulationTable` feature is supported.
- `VK_NV_coverage_reduction_mode`, if the `extendedDynamicState3CoverageReductionMode` feature is supported.
- `VK_NV_representative_fragment_test`, if the `extendedDynamicState3RepresentativeFragmentTestEnable` feature is supported.
- `VK_NV_shading_rate_image`, if the `extendedDynamicState3ShadingRateImageEnable` feature is supported.

All other features defined in the Specification are **optional**.

46.2. Profile Features

46.2.1. Roadmap 2022

Implementations that claim support for the [Roadmap 2022](#) profile **must** support the following features:

- `fullDrawIndexUint32`
- `imageCubeArray`
- `independentBlend`
- `sampleRateShading`
- `drawIndirectFirstInstance`
- `depthClamp`

- depthBiasClamp
- samplerAnisotropy
- occlusionQueryPrecise
- fragmentStoresAndAtomics
- shaderStorageImageExtendedFormats
- shaderUniformBufferArrayDynamicIndexing
- shaderSampledImageArrayDynamicIndexing
- shaderStorageBufferArrayDynamicIndexing
- shaderStorageImageArrayDynamicIndexing
- samplerYcbcrConversion
- samplerMirrorClampToEdge
- descriptorIndexing
- shaderUniformTexelBufferArrayDynamicIndexing
- shaderStorageTexelBufferArrayDynamicIndexing
- shaderUniformBufferArrayNonUniformIndexing
- shaderSampledImageArrayNonUniformIndexing
- shaderStorageBufferArrayNonUniformIndexing
- shaderStorageImageArrayNonUniformIndexing
- shaderUniformTexelBufferArrayNonUniformIndexing
- shaderStorageTexelBufferArrayNonUniformIndexing
- descriptorBindingSampledImageUpdateAfterBind
- descriptorBindingStorageImageUpdateAfterBind
- descriptorBindingStorageBufferUpdateAfterBind
- descriptorBindingUniformTexelBufferUpdateAfterBind
- descriptorBindingStorageTexelBufferUpdateAfterBind
- descriptorBindingUpdateUnusedWhilePending
- descriptorBindingPartiallyBound
- descriptorBindingVariableDescriptorCount
- runtimeDescriptorArray
- scalarBlockLayout

46.2.2. Roadmap 2024

Implementations that claim support for the [Roadmap 2024](#) profile **must** support the following features:

- multiDrawIndirect

- `shaderImageGatherExtended`
- `shaderDrawParameters`
- `shaderInt8`
- `shaderInt16`
- `shaderFloat16`
- `storageBuffer16BitAccess`
- `storageBuffer8BitAccess`

Chapter 47. Limits

Limits are implementation-dependent minimums, maximums, and other device characteristics that an application **may** need to be aware of.

NOTE

Limits are reported via the basic [VkPhysicalDeviceLimits](#) structure as well as the extensible structure [VkPhysicalDeviceProperties2](#), which was added in [VK_KHR_get_physical_device_properties2](#) and included in Vulkan 1.1. When limits are added in future Vulkan versions or extensions, each extension **should** introduce one new limit structure, if needed. This structure **can** be added to the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure.

The [VkPhysicalDeviceLimits](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceLimits {
    uint32_t          maxImageDimension1D;
    uint32_t          maxImageDimension2D;
    uint32_t          maxImageDimension3D;
    uint32_t          maxImageDimensionCube;
    uint32_t          maxImageArrayLayers;
    uint32_t          maxTexelBufferElements;
    uint32_t          maxUniformBufferRange;
    uint32_t          maxStorageBufferRange;
    uint32_t          maxPushConstantsSize;
    uint32_t          maxMemoryAllocationCount;
    uint32_t          maxSamplerAllocationCount;
    VkDeviceSize      bufferImageGranularity;
    VkDeviceSize      sparseAddressSpaceSize;
    uint32_t          maxBoundDescriptorSets;
    uint32_t          maxPerStageDescriptorSamplers;
    uint32_t          maxPerStageDescriptorUniformBuffers;
    uint32_t          maxPerStageDescriptorStorageBuffers;
    uint32_t          maxPerStageDescriptorSampledImages;
    uint32_t          maxPerStageDescriptorStorageImages;
    uint32_t          maxPerStageDescriptorInputAttachments;
    uint32_t          maxPerStageResources;
    uint32_t          maxDescriptorSetSamplers;
    uint32_t          maxDescriptorSetUniformBuffers;
    uint32_t          maxDescriptorSetUniformBuffersDynamic;
    uint32_t          maxDescriptorSetStorageBuffers;
    uint32_t          maxDescriptorSetStorageBuffersDynamic;

```

The `VkPhysicalDeviceLimits` are properties of the physical device. These are available in the `limits` member of the `VkPhysicalDeviceProperties` structure which is returned from `vkGetPhysicalDeviceProperties`.

- `maxImageDimension1D` is the largest dimension (`width`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_1D`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageDimension2D` is the largest dimension (`width` or `height`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_2D` and without `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` set in `flags`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageDimension3D` is the largest dimension (`width`, `height`, or `depth`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_3D`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageDimensionCube` is the largest dimension (`width` or `height`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_2D` and with `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` set in `flags`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageArrayLayers` is the maximum number of layers (`arrayLayers`) for an image.

- `maxTexelBufferElements` is the maximum number of addressable texels for a buffer view created on a buffer which was created with the `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT` or `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT` set in the `usage` member of the `VkBufferCreateInfo` structure.
- `maxUniformBufferRange` is the maximum value that **can** be specified in the `range` member of a `VkDescriptorBufferInfo` structure passed to `vkUpdateDescriptorSets` for descriptors of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`.
- `maxStorageBufferRange` is the maximum value that **can** be specified in the `range` member of a `VkDescriptorBufferInfo` structure passed to `vkUpdateDescriptorSets` for descriptors of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`.
- `maxPushConstantsSize` is the maximum size, in bytes, of the pool of push constant memory. For each of the push constant ranges indicated by the `pPushConstantRanges` member of the `VkPipelineLayoutCreateInfo` structure, $(\text{offset} + \text{size})$ **must** be less than or equal to this limit.
- `maxMemoryAllocationCount` is the maximum number of device memory allocations, as created by `vkAllocateMemory`, which **can** simultaneously exist.
- `maxSamplerAllocationCount` is the maximum number of sampler objects, as created by `vkCreateSampler`, which **can** simultaneously exist on a device.
- `bufferImageGranularity` is the granularity, in bytes, at which buffer or linear image resources, and optimal image resources **can** be bound to adjacent offsets in the same `VkDeviceMemory` object without aliasing. See [Buffer-Image Granularity](#) for more details.
- `sparseAddressSpaceSize` is the total amount of address space available, in bytes, for sparse memory resources. This is an upper bound on the sum of the sizes of all sparse resources, regardless of whether any memory is bound to them. If the `extendedSparseAddressSpace` feature is enabled, then the difference between `extendedSparseAddressSpaceSize` and `sparseAddressSpaceSize` can also be used, by `VkImage` created with the `usage` member of `VkImageCreateInfo` only containing bits in `extendedSparseImageUsageFlags` and `VkBuffer` created with the `usage` member of `VkBufferCreateInfo` only containing bits in `extendedSparseBufferUsageFlags`.
- `maxBoundDescriptorSets` is the maximum number of descriptor sets that **can** be simultaneously used by a pipeline. All `DescriptorSet` decorations in shader modules **must** have a value less than `maxBoundDescriptorSets`. See [Descriptor Sets](#).
- `maxPerStageDescriptorSamplers` is the maximum number of samplers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Sampler](#) and [Combined Image Sampler](#).
- `maxPerStageDescriptorUniformBuffers` is the maximum number of uniform buffers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A

descriptor is accessible to a shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Uniform Buffer](#) and [Dynamic Uniform Buffer](#).

- `maxPerStageDescriptorStorageBuffers` is the maximum number of storage buffers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Storage Buffer](#) and [Dynamic Storage Buffer](#).
- `maxPerStageDescriptorSampledImages` is the maximum number of sampled images that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Combined Image Sampler](#), [Sampled Image](#), and [Uniform Texel Buffer](#).
- `maxPerStageDescriptorStorageImages` is the maximum number of storage images that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Storage Image](#), and [Storage Texel Buffer](#).
- `maxPerStageDescriptorInputAttachments` is the maximum number of input attachments that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. These are only supported for the fragment stage. See [Input Attachment](#).
- `maxPerStageResources` is the maximum number of resources that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. For the fragment shader stage the framebuffer color attachments also count against this limit.
- `maxDescriptorSetSamplers` is the maximum number of samplers that **can** be included in a

pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Sampler](#) and [Combined Image Sampler](#).

- `maxDescriptorSetUniformBuffers` is the maximum number of uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Uniform Buffer](#) and [Dynamic Uniform Buffer](#).
- `maxDescriptorSetUniformBuffersDynamic` is the maximum number of dynamic uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Dynamic Uniform Buffer](#).
- `maxDescriptorSetStorageBuffers` is the maximum number of storage buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Storage Buffer](#) and [Dynamic Storage Buffer](#).
- `maxDescriptorSetStorageBuffersDynamic` is the maximum number of dynamic storage buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Dynamic Storage Buffer](#).
- `maxDescriptorSetSampledImages` is the maximum number of sampled images that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Combined Image Sampler](#), [Sampled Image](#), and [Uniform Texel Buffer](#).
- `maxDescriptorSetStorageImages` is the maximum number of storage images that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Storage Image](#), and [Storage Texel Buffer](#).
- `maxDescriptorSetInputAttachments` is the maximum number of input attachments that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Input Attachment](#).

- `maxVertexInputAttributes` is the maximum number of vertex input attributes that **can** be specified for a graphics pipeline. These are described in the array of `VkVertexInputAttributeDescription` structures that are provided at graphics pipeline creation time via the `pVertexAttributeDescriptions` member of the `VkPipelineVertexInputStateCreateInfo` structure. See [Vertex Attributes](#) and [Vertex Input Description](#).
- `maxVertexInputBindings` is the maximum number of vertex buffers that **can** be specified for providing vertex attributes to a graphics pipeline. These are described in the array of `VkVertexInputBindingDescription` structures that are provided at graphics pipeline creation time via the `pVertexBindingDescriptions` member of the `VkPipelineVertexInputStateCreateInfo` structure. The `binding` member of `VkVertexInputBindingDescription` **must** be less than this limit. See [Vertex Input Description](#).
- `maxVertexInputAttributeOffset` is the maximum vertex input attribute offset that **can** be added to the vertex input binding stride. The `offset` member of the `VkVertexInputAttributeDescription` structure **must** be less than or equal to this limit. See [Vertex Input Description](#).
- `maxVertexInputBindingStride` is the maximum vertex input binding stride that **can** be specified in a vertex input binding. The `stride` member of the `VkVertexInputBindingDescription` structure **must** be less than or equal to this limit. See [Vertex Input Description](#).
- `maxVertexOutputComponents` is the maximum number of components of output variables which **can** be output by a vertex shader. See [Vertex Shaders](#).
- `maxTessellationGenerationLevel` is the maximum tessellation generation level supported by the fixed-function tessellation primitive generator. See [Tessellation](#).
- `maxTessellationPatchSize` is the maximum patch size, in vertices, of patches that **can** be processed by the tessellation control shader and tessellation primitive generator. The `patchControlPoints` member of the `VkPipelineTessellationStateCreateInfo` structure specified at pipeline creation time and the value provided in the `OutputVertices` execution mode of shader modules **must** be less than or equal to this limit. See [Tessellation](#).
- `maxTessellationControlPerVertexInputComponents` is the maximum number of components of input variables which **can** be provided as per-vertex inputs to the tessellation control shader stage.
- `maxTessellationControlPerVertexOutputComponents` is the maximum number of components of per-vertex output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationControlPerPatchOutputComponents` is the maximum number of components of per-patch output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationControlTotalOutputComponents` is the maximum total number of components of per-vertex and per-patch output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationEvaluationInputComponents` is the maximum number of components of input variables which **can** be provided as per-vertex inputs to the tessellation evaluation shader stage.
- `maxTessellationEvaluationOutputComponents` is the maximum number of components of per-vertex output variables which **can** be output from the tessellation evaluation shader stage.
- `maxGeometryShaderInvocations` is the maximum invocation count supported for instanced geometry shaders. The value provided in the `Invocations` execution mode of shader modules

must be less than or equal to this limit. See [Geometry Shading](#).

- **maxGeometryInputComponents** is the maximum number of components of input variables which **can** be provided as inputs to the geometry shader stage.
- **maxGeometryOutputComponents** is the maximum number of components of output variables which **can** be output from the geometry shader stage.
- **maxGeometryOutputVertices** is the maximum number of vertices which **can** be emitted by any geometry shader.
- **maxGeometryTotalOutputComponents** is the maximum total number of components of output variables, across all emitted vertices, which **can** be output from the geometry shader stage.
- **maxFragmentInputComponents** is the maximum number of components of input variables which **can** be provided as inputs to the fragment shader stage.
- **maxFragmentOutputAttachments** is the maximum number of output attachments which **can** be written to by the fragment shader stage.
- **maxFragmentDualSrcAttachments** is the maximum number of output attachments which **can** be written to by the fragment shader stage when blending is enabled and one of the dual source blend modes is in use. See [Dual-Source Blending](#) and **dualSrcBlend**.
- **maxFragmentCombinedOutputResources** is the total number of storage buffers, storage images, and output **Location** decorated color attachments (described in [Fragment Output Interface](#)) which **can** be used in the fragment shader stage.
- **maxComputeSharedMemorySize** is the maximum total storage size, in bytes, available for variables declared with the **Workgroup** storage class in shader modules (or with the **shared** storage qualifier in GLSL) in the compute shader stage.
- **maxComputeWorkGroupCount[3]** is the maximum number of local workgroups that **can** be dispatched by a single dispatching command. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the dispatching commands **must** be less than or equal to the corresponding limit. See [Dispatching Commands](#).
- **maxComputeWorkGroupInvocations** is the maximum total number of compute shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the **LocalSize** or **LocalSizeId** execution mode in shader modules or by the object decorated by the **WorkgroupSize** decoration, **must** be less than or equal to this limit.
- **maxComputeWorkGroupSize[3]** is the maximum size of a local compute workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The **x**, **y**, and **z** sizes, as specified by the **LocalSize** or **LocalSizeId** execution mode or by the object decorated by the **WorkgroupSize** decoration in shader modules, **must** be less than or equal to the corresponding limit.
- **subPixelPrecisionBits** is the number of bits of subpixel precision in framebuffer coordinates x_f and y_f . See [Rasterization](#).
- **subTexelPrecisionBits** is the number of bits of precision in the division along an axis of an image used for minification and magnification filters. $2^{\text{subTexelPrecisionBits}}$ is the actual number of divisions along each axis of the image represented. Sub-texel values calculated during image sampling will snap to these locations when generating the filtered results.

- `mipmapPrecisionBits` is the number of bits of division that the LOD calculation for mipmap fetching get snapped to when determining the contribution from each mip level to the mip filtered results. $2^{\text{mipmapPrecisionBits}}$ is the actual number of divisions.
- `maxDrawIndexedIndexValue` is the maximum index value that **can** be used for indexed draw calls when using 32-bit indices. This excludes the primitive restart index value of 0xFFFFFFFF. See `fullDrawIndexUint32`.
- `maxDrawIndirectCount` is the maximum draw count that is supported for indirect drawing calls. See `multiDrawIndirect`.
- `maxSamplerLodBias` is the maximum absolute sampler LOD bias. The sum of the `mipLodBias` member of the `VkSamplerCreateInfo` structure and the `Bias` operand of image sampling operations in shader modules (or 0 if no `Bias` operand is provided to an image sampling operation) are clamped to the range $[-\text{maxSamplerLodBias}, +\text{maxSamplerLodBias}]$. See `[samplers-mipLodBias]`.
- `maxSamplerAnisotropy` is the maximum degree of sampler anisotropy. The maximum degree of anisotropic filtering used for an image sampling operation is the minimum of the `maxAnisotropy` member of the `VkSamplerCreateInfo` structure and this limit. See `[samplers-maxAnisotropy]`.
- `maxViewports` is the maximum number of active viewports. The `viewportCount` member of the `VkPipelineViewportStateCreateInfo` structure that is provided at pipeline creation **must** be less than or equal to this limit.
- `maxViewportDimensions[2]` are the maximum viewport dimensions in the X (width) and Y (height) dimensions, respectively. The maximum viewport dimensions **must** be greater than or equal to the largest image which **can** be created and used as a framebuffer attachment. See `Controlling the Viewport`.
- `viewportBoundsRange[2]` is the [minimum, maximum] range that the corners of a viewport **must** be contained in. This range **must** be at least $[-2 \times \text{size}, 2 \times \text{size} - 1]$, where `size` = $\max(\text{maxViewportDimensions}[0], \text{maxViewportDimensions}[1])$. See `Controlling the Viewport`.

NOTE

The intent of the `viewportBoundsRange` limit is to allow a maximum sized viewport to be arbitrarily shifted relative to the output target as long as at least some portion intersects. This would give a bounds limit of $[-\text{size} + 1, 2 \times \text{size} - 1]$ which would allow all possible non-empty-set intersections of the output target and the viewport. Since these numbers are typically powers of two, picking the signed number range using the smallest possible number of bits ends up with the specified range.

- `viewportSubPixelBits` is the number of bits of subpixel precision for viewport bounds. The subpixel precision that floating-point viewport bounds are interpreted at is given by this limit.
- `minMemoryMapAlignment` is the minimum **required** alignment, in bytes, of host visible memory allocations within the host address space. When mapping a memory allocation with `vkMapMemory`, subtracting `offset` bytes from the returned pointer will always produce an integer multiple of this limit. See `Host Access to Device Memory Objects`. The value **must** be a power of two.
- `minTexelBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkBufferViewCreateInfo` structure for texel buffers. The value **must** be a power

of two. If `texelBufferAlignment` is enabled, this limit is equivalent to the maximum of the `uniformTexelBufferOffsetAlignmentBytes` and `storageTexelBufferOffsetAlignmentBytes` members of `VkPhysicalDeviceTexelBufferAlignmentProperties`, but smaller alignment is **optionally** allowed by `storageTexelBufferOffsetSingleTexelAlignment` and `uniformTexelBufferOffsetSingleTexelAlignment`. If `texelBufferAlignment` is not enabled, `VkBufferViewCreateInfo::offset` **must** be a multiple of this value.

- `minUniformBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkDescriptorBufferInfo` structure for uniform buffers. When a descriptor of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` is updated, the `offset` **must** be an integer multiple of this limit. Similarly, dynamic offsets for uniform buffers **must** be multiples of this limit. The value **must** be a power of two.
- `minStorageBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkDescriptorBufferInfo` structure for storage buffers. When a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` is updated, the `offset` **must** be an integer multiple of this limit. Similarly, dynamic offsets for storage buffers **must** be multiples of this limit. The value **must** be a power of two.
- `minTexelOffset` is the minimum offset value for the `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.
- `maxTexelOffset` is the maximum offset value for the `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.
- `minTexelGatherOffset` is the minimum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` image instructions.
- `maxTexelGatherOffset` is the maximum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` image instructions.
- `minInterpolationOffset` is the base minimum (inclusive) negative offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.
- `maxInterpolationOffset` is the base maximum (inclusive) positive offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.
- `subPixelInterpolationOffsetBits` is the number of fractional bits that the `x` and `y` offsets to the `InterpolateAtOffset` extended instruction **may** be rounded to as fixed-point values.
- `maxFramebufferWidth` is the maximum width for a framebuffer. The `width` member of the `VkFramebufferCreateInfo` structure **must** be less than or equal to this limit.
- `maxFramebufferHeight` is the maximum height for a framebuffer. The `height` member of the `VkFramebufferCreateInfo` structure **must** be less than or equal to this limit.
- `maxFramebufferLayers` is the maximum layer count for a layered framebuffer. The `layers` member of the `VkFramebufferCreateInfo` structure **must** be less than or equal to this limit.
- `framebufferColorSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the color sample counts that are supported for all framebuffer color attachments with floating- or fixed-point formats. For color attachments with integer formats, see `framebufferIntegerColorSampleCounts`.
- `framebufferDepthSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the supported depth sample counts for all framebuffer depth/stencil attachments, when the format includes a

depth component.

- `framebufferStencilSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the supported stencil sample counts for all framebuffer depth/stencil attachments, when the format includes a stencil component.
- `framebufferNoAttachmentsSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the supported sample counts for a [subpass which uses no attachments](#).
- `maxColorAttachments` is the maximum number of color attachments that **can** be used by a subpass in a render pass. The `colorAttachmentCount` member of the `VkSubpassDescription` or `VkSubpassDescription2` structure **must** be less than or equal to this limit.
- `sampledImageColorSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, `usage` containing `VK_IMAGE_USAGE_SAMPLED_BIT`, and a non-integer color format.
- `sampledImageIntegerSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, `usage` containing `VK_IMAGE_USAGE_SAMPLED_BIT`, and an integer color format.
- `sampledImageDepthSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, `usage` containing `VK_IMAGE_USAGE_SAMPLED_BIT`, and a depth format.
- `sampledImageStencilSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, `usage` containing `VK_IMAGE_USAGE_SAMPLED_BIT`, and a stencil format.
- `storageImageSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, and `usage` containing `VK_IMAGE_USAGE_STORAGE_BIT`.
- `maxSampleMaskWords` is the maximum number of array elements of a variable decorated with the `SampleMask` built-in decoration.
- `timestampComputeAndGraphics` specifies support for timestamps on all graphics and compute queues. If this limit is `VK_TRUE`, all queues that advertise the `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT` in the `VkQueueFamilyProperties::queueFlags` support `VkQueueFamilyProperties::timestampValidBits` of at least 36. See [Timestamp Queries](#).
- `timestampPeriod` is the number of nanoseconds **required** for a timestamp query to be incremented by 1. See [Timestamp Queries](#).
- `maxClipDistances` is the maximum number of clip distances that **can** be used in a single shader stage. The size of any array declared with the `ClipDistance` built-in decoration in a shader module **must** be less than or equal to this limit.
- `maxCullDistances` is the maximum number of cull distances that **can** be used in a single shader stage. The size of any array declared with the `CullDistance` built-in decoration in a shader module **must** be less than or equal to this limit.
- `maxCombinedClipAndCullDistances` is the maximum combined number of clip and cull distances that **can** be used in a single shader stage. The sum of the sizes of all arrays declared with the `ClipDistance` and `CullDistance` built-in decoration used by a single shader stage in a shader module **must** be less than or equal to this limit.

- `discreteQueuePriorities` is the number of discrete priorities that **can** be assigned to a queue based on the value of each member of `VkDeviceQueueCreateInfo::pQueuePriorities`. This **must** be at least 2, and levels **must** be spread evenly over the range, with at least one level at 1.0, and another at 0.0. See [Queue Priority](#).
- `pointSizeRange[2]` is the range `[minimum,maximum]` of supported sizes for points. Values written to variables decorated with the `PointSize` built-in decoration are clamped to this range.
- `lineWidthRange[2]` is the range `[minimum,maximum]` of supported widths for lines. Values specified by the `lineWidth` member of the `VkPipelineRasterizationStateCreateInfo` or the `lineWidth` parameter to `vkCmdSetLineWidth` are clamped to this range.
- `pointSizeGranularity` is the granularity of supported point sizes. Not all point sizes in the range defined by `pointSizeRange` are supported. This limit specifies the granularity (or increment) between successive supported point sizes.
- `lineWidthGranularity` is the granularity of supported line widths. Not all line widths in the range defined by `lineWidthRange` are supported. This limit specifies the granularity (or increment) between successive supported line widths.
- `strictLines` specifies whether lines are rasterized according to the preferred method of rasterization. If set to `VK_FALSE`, lines **may** be rasterized under a relaxed set of rules. If set to `VK_TRUE`, lines are rasterized as per the strict definition. See [Basic Line Segment Rasterization](#).
- `standardSampleLocations` specifies whether rasterization uses the standard sample locations as documented in [Multisampling](#). If set to `VK_TRUE`, the implementation uses the documented sample locations. If set to `VK_FALSE`, the implementation **may** use different sample locations.
- `optimalBufferCopyOffsetAlignment` is the optimal buffer offset alignment in bytes for `vkCmdCopyBufferToImage2`, `vkCmdCopyBufferToImage`, `vkCmdCopyImageToBuffer2`, and `vkCmdCopyImageToBuffer`. This value is also the optimal host memory offset alignment in bytes for `vkCopyMemoryToImageEXT` and `vkCopyImageToMemoryEXT`. The per texel alignment requirements are enforced, but applications **should** use the optimal alignment for optimal performance and power use. The value **must** be a power of two.
- `optimalBufferCopyRowPitchAlignment` is the optimal buffer row pitch alignment in bytes for `vkCmdCopyBufferToImage2`, `vkCmdCopyBufferToImage`, `vkCmdCopyImageToBuffer2`, and `vkCmdCopyImageToBuffer`. This value is also the optimal host memory row pitch alignment in bytes for `vkCopyMemoryToImageEXT` and `vkCopyImageToMemoryEXT`. Row pitch is the number of bytes between texels with the same X coordinate in adjacent rows (Y coordinates differ by one). The per texel alignment requirements are enforced, but applications **should** use the optimal alignment for optimal performance and power use. The value **must** be a power of two.
- `nonCoherentAtomSize` is the size and alignment in bytes that bounds concurrent access to [host-mapped device memory](#). The value **must** be a power of two.

1

For all bitmasks of `VkSampleCountFlagBits`, the sample count limits defined above represent the minimum supported sample counts for each image type. Individual images **may** support additional sample counts, which are queried using `vkGetPhysicalDeviceImageFormatProperties` as described in [Supported Sample Counts](#).

Bits which **may** be set in the sample count limits returned by [VkPhysicalDeviceLimits](#), as well as in other queries and structures representing image sample counts, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSampleCountFlagBits {
    VK_SAMPLE_COUNT_1_BIT = 0x00000001,
    VK_SAMPLE_COUNT_2_BIT = 0x00000002,
    VK_SAMPLE_COUNT_4_BIT = 0x00000004,
    VK_SAMPLE_COUNT_8_BIT = 0x00000008,
    VK_SAMPLE_COUNT_16_BIT = 0x00000010,
    VK_SAMPLE_COUNT_32_BIT = 0x00000020,
    VK_SAMPLE_COUNT_64_BIT = 0x00000040,
} VkSampleCountFlagBits;
```

- [VK_SAMPLE_COUNT_1_BIT](#) specifies an image with one sample per pixel.
- [VK_SAMPLE_COUNT_2_BIT](#) specifies an image with 2 samples per pixel.
- [VK_SAMPLE_COUNT_4_BIT](#) specifies an image with 4 samples per pixel.
- [VK_SAMPLE_COUNT_8_BIT](#) specifies an image with 8 samples per pixel.
- [VK_SAMPLE_COUNT_16_BIT](#) specifies an image with 16 samples per pixel.
- [VK_SAMPLE_COUNT_32_BIT](#) specifies an image with 32 samples per pixel.
- [VK_SAMPLE_COUNT_64_BIT](#) specifies an image with 64 samples per pixel.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSampleCountFlags;
```

[VkSampleCountFlags](#) is a bitmask type for setting a mask of zero or more [VkSampleCountFlagBits](#).

The [VkPhysicalDevicePushDescriptorPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_push_descriptor
typedef struct VkPhysicalDevicePushDescriptorPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            maxPushDescriptors;
} VkPhysicalDevicePushDescriptorPropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [maxPushDescriptors](#) is the maximum number of descriptors that **can** be used in a descriptor set layout created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR](#) set.

If the [VkPhysicalDevicePushDescriptorPropertiesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with

each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePushDescriptorPropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PUSH_DESCRIPTOR_PROPERTIES_KHR`

The `VkPhysicalDeviceMultiviewProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxMultiviewViewCount;
    uint32_t           maxMultiviewInstanceIndex;
} VkPhysicalDeviceMultiviewProperties;
```

or the equivalent

```
// Provided by VK_KHR_multiview
typedef VkPhysicalDeviceMultiviewProperties VkPhysicalDeviceMultiviewPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxMultiviewViewCount` is one greater than the maximum view index that **can** be used in a subpass.
- `maxMultiviewInstanceIndex` is the maximum valid value of instance index allowed to be generated by a drawing command recorded within a subpass of a multiview render pass instance.

If the `VkPhysicalDeviceMultiviewProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewProperties-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PROPERTIES`

The `VkPhysicalDeviceFloatControlsProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceFloatControlsProperties {
    VkStructureType           sType;
    void*                     pNext;
    VkShaderFloatControlsIndependence denormBehaviorIndependence;
    VkShaderFloatControlsIndependence roundingModeIndependence;
    VkBool32                  shaderSignedZeroInfNanPreserveFloat16;
    VkBool32                  shaderSignedZeroInfNanPreserveFloat32;
    VkBool32                  shaderSignedZeroInfNanPreserveFloat64;
    VkBool32                  shaderDenormPreserveFloat16;
    VkBool32                  shaderDenormPreserveFloat32;
    VkBool32                  shaderDenormPreserveFloat64;
    VkBool32                  shaderDenormFlushToZeroFloat16;
    VkBool32                  shaderDenormFlushToZeroFloat32;
    VkBool32                  shaderDenormFlushToZeroFloat64;
    VkBool32                  shaderRoundingModeRTEFloat16;
    VkBool32                  shaderRoundingModeRTEFloat32;
    VkBool32                  shaderRoundingModeRTEFloat64;
    VkBool32                  shaderRoundingModeRTZFloat16;
    VkBool32                  shaderRoundingModeRTZFloat32;
    VkBool32                  shaderRoundingModeRTZFloat64;
} VkPhysicalDeviceFloatControlsProperties;
```

or the equivalent

```
// Provided by VK_KHR_shader_float_controls
typedef VkPhysicalDeviceFloatControlsProperties
VkPhysicalDeviceFloatControlsPropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **denormBehaviorIndependence** is a **VkShaderFloatControlsIndependence** value indicating whether, and how, denorm behavior can be set independently for different bit widths.
- **roundingModeIndependence** is a **VkShaderFloatControlsIndependence** value indicating whether, and how, rounding modes can be set independently for different bit widths.
- **shaderSignedZeroInfNanPreserveFloat16** is a boolean value indicating whether sign of a zero, Nans and $\pm\infty$ **can** be preserved in 16-bit floating-point computations. It also indicates whether the **SignedZeroInfNanPreserve** execution mode **can** be used for 16-bit floating-point types.
- **shaderSignedZeroInfNanPreserveFloat32** is a boolean value indicating whether sign of a zero, Nans and $\pm\infty$ **can** be preserved in 32-bit floating-point computations. It also indicates whether the **SignedZeroInfNanPreserve** execution mode **can** be used for 32-bit floating-point types.
- **shaderSignedZeroInfNanPreserveFloat64** is a boolean value indicating whether sign of a zero, Nans and $\pm\infty$ **can** be preserved in 64-bit floating-point computations. It also indicates whether the **SignedZeroInfNanPreserve** execution mode **can** be used for 64-bit floating-point types.

- `shaderDenormPreserveFloat16` is a boolean value indicating whether denormals **can** be preserved in 16-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 16-bit floating-point types.
- `shaderDenormPreserveFloat32` is a boolean value indicating whether denormals **can** be preserved in 32-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 32-bit floating-point types.
- `shaderDenormPreserveFloat64` is a boolean value indicating whether denormals **can** be preserved in 64-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 64-bit floating-point types.
- `shaderDenormFlushToZeroFloat16` is a boolean value indicating whether denormals **can** be flushed to zero in 16-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 16-bit floating-point types.
- `shaderDenormFlushToZeroFloat32` is a boolean value indicating whether denormals **can** be flushed to zero in 32-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 32-bit floating-point types.
- `shaderDenormFlushToZeroFloat64` is a boolean value indicating whether denormals **can** be flushed to zero in 64-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 64-bit floating-point types.
- `shaderRoundingModeRTEFloat16` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 16-bit floating-point types.
- `shaderRoundingModeRTEFloat32` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 32-bit floating-point types.
- `shaderRoundingModeRTEFloat64` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 64-bit floating-point types.
- `shaderRoundingModeRTZFloat16` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode **can** be used for 16-bit floating-point types.
- `shaderRoundingModeRTZFloat32` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode **can** be used for 32-bit floating-point types.
- `shaderRoundingModeRTZFloat64` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode **can** be used for 64-bit floating-point types.

If the `VkPhysicalDeviceFloatControlsProperties` structure is included in the `pNext` chain of the

`VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFloatControlsProperties-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FLOAT_CONTROLS_PROPERTIES`

Values which **may** be returned in the `denormBehaviorIndependence` and `roundingModeIndependence` fields of `VkPhysicalDeviceFloatControlsProperties` are:

```
// Provided by VK_VERSION_1_2
typedef enum VkShaderFloatControlsIndependence {
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY = 0,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL = 1,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE = 2,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE,
} VkShaderFloatControlsIndependence;
```

or the equivalent

```
// Provided by VK_KHR_shader_float_controls
typedef VkShaderFloatControlsIndependence VkShaderFloatControlsIndependenceKHR;
```

- `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY` specifies that shader float controls for 32-bit floating-point **can** be set independently; other bit widths **must** be set identically to each other.
- `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL` specifies that shader float controls for all bit widths **can** be set independently.
- `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE` specifies that shader float controls for all bit widths **must** be set identically.

The `VkPhysicalDeviceDiscardRectanglePropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_discard_rectangles
typedef struct VkPhysicalDeviceDiscardRectanglePropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxDiscardRectangles;
} VkPhysicalDeviceDiscardRectanglePropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxDiscardRectangles` is the maximum number of active discard rectangles that **can** be specified.

If the `VkPhysicalDeviceDiscardRectanglePropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDiscardRectanglePropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISCARD_RECTANGLE_PROPERTIES_EXT`

The `VkPhysicalDeviceSampleLocationsPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_sample_locations
typedef struct VkPhysicalDeviceSampleLocationsPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkSampleCountFlags sampleLocationSampleCounts;
    VkExtent2D         maxSampleLocationGridSize;
    float              sampleLocationCoordinateRange[2];
    uint32_t           sampleLocationSubPixelBits;
    VkBool32           variableSampleLocations;
} VkPhysicalDeviceSampleLocationsPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sampleLocationSampleCounts` is a bitmask of `VkSampleCountFlagBits` indicating the sample counts supporting custom sample locations.
- `maxSampleLocationGridSize` is the maximum size of the pixel grid in which sample locations **can** vary that is supported for all sample counts in `sampleLocationSampleCounts`.
- `sampleLocationCoordinateRange[2]` is the range of supported sample location coordinates.
- `sampleLocationSubPixelBits` is the number of bits of subpixel precision for sample locations.
- `variableSampleLocations` specifies whether the sample locations used by all pipelines that will be bound to a command buffer during a subpass **must** match. If set to `VK_TRUE`, the implementation

supports variable sample locations in a subpass. If set to `VK_FALSE`, then the sample locations **must** stay constant in each subpass.

If the `VkPhysicalDeviceSampleLocationsPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSampleLocationsPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLE_LOCATIONS_PROPERTIES_EXT`

The `VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_legacy_vertex_attributes
typedef struct VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nativeUnalignedPerformance;
} VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `nativeUnalignedPerformance` specifies whether unaligned vertex fetches do not incur significant performance penalties as compared to aligned fetches.

If the `VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT` **can** also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LEGACY_VERTEX_ATTRIBUTES_PROPERTIES_EXT`

The `VkPhysicalDeviceExternalMemoryHostPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkPhysicalDeviceExternalMemoryHostPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        minImportedHostPointerAlignment;
} VkPhysicalDeviceExternalMemoryHostPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minImportedHostPointerAlignment` is the minimum **required** alignment, in bytes, for the base address and size of host pointers that **can** be imported to a Vulkan memory object. The value **must** be a power of two.

If the `VkPhysicalDeviceExternalMemoryHostPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalMemoryHostPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_HOST_PROPERTIES_EXT`

The `VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX` structure is defined as:

```
// Provided by VK_NVX_multiview_per_view_attributes
typedef struct VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            perViewPositionAllComponents;
} VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `perViewPositionAllComponents` is `VK_TRUE` if the implementation supports per-view position values that differ in components other than the X component.

If the `VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX-sType-sType
`sType` **must** be

The `VkPhysicalDevicePointClippingProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevicePointClippingProperties {
    VkStructureType    sType;
    void*              pNext;
    VkPointClippingBehavior pointClippingBehavior;
} VkPhysicalDevicePointClippingProperties;
```

or the equivalent

```
// Provided by VK_KHR_maintenance2
typedef VkPhysicalDevicePointClippingProperties
VkPhysicalDevicePointClippingPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pointClippingBehavior` is a `VkPointClippingBehavior` value specifying the point clipping behavior supported by the implementation.

If the `VkPhysicalDevicePointClippingProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePointClippingProperties-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_POINT_CLIPPING_PROPERTIES`

The `VkPhysicalDeviceSubgroupProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSubgroupProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           subgroupSize;
    VkShaderStageFlags supportedStages;
    VkSubgroupFeatureFlags supportedOperations;
    VkBool32           quadOperationsInAllStages;
} VkPhysicalDeviceSubgroupProperties;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subgroupSize` is the default number of invocations in each subgroup. `subgroupSize` is at least 1 if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. `subgroupSize` is a power-of-two.
- `supportedStages` is a bitfield of `VkShaderStageFlagBits` describing the shader stages that `group operations` with `subgroup scope` are supported in. `supportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.
- `supportedOperations` is a bitmask of `VkSubgroupFeatureFlagBits` specifying the sets of `group operations` with `subgroup scope` supported on this device. `supportedOperations` will have the `VK_SUBGROUP_FEATURE_BASIC_BIT` bit set if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`.
- `quadOperationsInAllStages` is a boolean specifying whether `quad group operations` are available in all stages, or are restricted to fragment and compute stages.

If the `VkPhysicalDeviceSubgroupProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `supportedOperations` includes `VK_SUBGROUP_FEATURE_QUAD_BIT`, or `shaderSubgroupUniformControlFlow` is enabled, `subgroupSize` **must** be greater than or equal to 4.

If the `shaderQuadControl` feature is supported, `supportedOperations` **must** include `VK_SUBGROUP_FEATURE_QUAD_BIT`.

If `VK_KHR_shader_subgroup_rotate` is supported, and the implementation advertises support with a `VkExtensionProperties::specVersion` greater than or equal to 2, and `shaderSubgroupRotate` is supported, `VK_SUBGROUP_FEATURE_ROTATE_BIT_KHR` **must** be returned in `supportedOperations`. If `VK_KHR_shader_subgroup_rotate` is supported, and the implementation advertises support with a `VkExtensionProperties::specVersion` greater than or equal to 2, and `shaderSubgroupRotateClustered` is supported, `VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT_KHR` **must** be returned in `supportedOperations`.

NOTE

`VK_SUBGROUP_FEATURE_ROTATE_BIT_KHR` and `VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT_KHR` were added in version 2 of the `VK_KHR_shader_subgroup_rotate` extension, after the initial release, so there are implementations that do not advertise these bits. Applications should use the `shaderSubgroupRotate` and `shaderSubgroupRotateClustered` features to determine and enable support. These bits are advertised here for consistency and for future dependencies.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceSubgroupProperties-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_PROPERTIES`

Bits which **can** be set in `VkPhysicalDeviceSubgroupProperties::supportedOperations` and

`VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations` to specify supported `group operations` with `subgroup scope` are:

```
// Provided by VK_VERSION_1_1
typedef enum VkSubgroupFeatureFlagBits {
    VK_SUBGROUP_FEATURE_BASIC_BIT = 0x00000001,
    VK_SUBGROUP_FEATURE_VOTE_BIT = 0x00000002,
    VK_SUBGROUP_FEATURE_ARITHMETIC_BIT = 0x00000004,
    VK_SUBGROUP_FEATURE_BALLOT_BIT = 0x00000008,
    VK_SUBGROUP_FEATURE_SHUFFLE_BIT = 0x00000010,
    VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT = 0x00000020,
    VK_SUBGROUP_FEATURE_CLUSTERED_BIT = 0x00000040,
    VK_SUBGROUP_FEATURE_QUAD_BIT = 0x00000080,
    // Provided by VK_NV_shader_subgroup_partitioned
    VK_SUBGROUP_FEATURE_PARTITIONED_BIT_NV = 0x00000100,
    // Provided by VK_KHR_shader_subgroup_rotate
    VK_SUBGROUP_FEATURE_ROTATE_BIT_KHR = 0x00000200,
    // Provided by VK_KHR_shader_subgroup_rotate
    VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT_KHR = 0x00000400,
} VkSubgroupFeatureFlagBits;
```

- `VK_SUBGROUP_FEATURE_BASIC_BIT` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniform` capability.
- `VK_SUBGROUP_FEATURE_VOTE_BIT` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformVote` capability.
- `VK_SUBGROUP_FEATURE_ARITHMETIC_BIT` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformArithmetic` capability.
- `VK_SUBGROUP_FEATURE_BALLOT_BIT` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformBallot` capability.
- `VK_SUBGROUP_FEATURE_SHUFFLE_BIT` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformShuffle` capability.
- `VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformShuffleRelative` capability.
- `VK_SUBGROUP_FEATURE_CLUSTERED_BIT` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformClustered` capability.
- `VK_SUBGROUP_FEATURE_QUAD_BIT` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformQuad` capability.
- `VK_SUBGROUP_FEATURE_PARTITIONED_BIT_NV` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformPartitionedNV` capability.
- `VK_SUBGROUP_FEATURE_ROTATE_BIT_KHR` specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformRotateKHR` capability.
- `VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT_KHR` specifies the device will accept SPIR-V shader modules that use the `ClusterSize` operand to `OpGroupNonUniformRotateKHR`.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkSubgroupFeatureFlags;
```

`VkSubgroupFeatureFlags` is a bitmask type for setting a mask of zero or more `VkSubgroupFeatureFlagBits`.

The `VkPhysicalDeviceSubgroupSizeControlProperties` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           minSubgroupSize;
    uint32_t           maxSubgroupSize;
    uint32_t           maxComputeWorkgroupSubgroups;
    VkShaderStageFlags requiredSubgroupSizeStages;
} VkPhysicalDeviceSubgroupSizeControlProperties;
```

or the equivalent

```
// Provided by VK_EXT_subgroup_size_control
typedef VkPhysicalDeviceSubgroupSizeControlProperties
VkPhysicalDeviceSubgroupSizeControlPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minSubgroupSize` is the minimum subgroup size supported by this device. `minSubgroupSize` is at least one if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. `minSubgroupSize` is a power-of-two. `minSubgroupSize` is less than or equal to `maxSubgroupSize`. `minSubgroupSize` is less than or equal to `subgroupSize`.
- `maxSubgroupSize` is the maximum subgroup size supported by this device. `maxSubgroupSize` is at least one if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. `maxSubgroupSize` is a power-of-two. `maxSubgroupSize` is greater than or equal to `minSubgroupSize`. `maxSubgroupSize` is greater than or equal to `subgroupSize`.
- `maxComputeWorkgroupSubgroups` is the maximum number of subgroups supported by the implementation within a workgroup.
- `requiredSubgroupSizeStages` is a bitfield of what shader stages support having a required subgroup size specified.

If the `VkPhysicalDeviceSubgroupSizeControlProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `VkPhysicalDeviceSubgroupProperties::supportedOperations` includes

VK_SUBGROUP_FEATURE_QUAD_BIT, minSubgroupSize **must** be greater than or equal to 4.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupSizeControlProperties-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_PROPERTIES

The VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           advancedBlendMaxColorAttachments;
    VkBool32           advancedBlendIndependentBlend;
    VkBool32           advancedBlendNonPremultipliedSrcColor;
    VkBool32           advancedBlendNonPremultipliedDstColor;
    VkBool32           advancedBlendCorrelatedOverlap;
    VkBool32           advancedBlendAllOperations;
} VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- advancedBlendMaxColorAttachments is one greater than the highest color attachment index that **can** be used in a subpass, for a pipeline that uses an advanced blend operation.
- advancedBlendIndependentBlend specifies whether advanced blend operations **can** vary per-attachment.
- advancedBlendNonPremultipliedSrcColor specifies whether the source color **can** be treated as non-premultiplied. If this is VK_FALSE, then VkPipelineColorBlendAdvancedStateCreateInfoEXT::srcPremultiplied **must** be VK_TRUE.
- advancedBlendNonPremultipliedDstColor specifies whether the destination color **can** be treated as non-premultiplied. If this is VK_FALSE, then VkPipelineColorBlendAdvancedStateCreateInfoEXT::dstPremultiplied **must** be VK_TRUE.
- advancedBlendCorrelatedOverlap specifies whether the overlap mode **can** be treated as correlated. If this is VK_FALSE, then VkPipelineColorBlendAdvancedStateCreateInfoEXT::blendOverlap **must** be VK_BLEND_OVERLAP_UNCORRELATED_EXT.
- advancedBlendAllOperations specifies whether all advanced blend operation enums are supported. See the valid usage of VkPipelineColorBlendAttachmentState.

If the VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BLEND_OPERATION_ADVANCED_PROPERTIES_EXT

The `VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_vertex_attribute_divisor
typedef struct VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVertexAttribDivisor;
} VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxVertexAttribDivisor` is the maximum value of the number of instances that will repeat the value of vertex attribute data when instanced rendering is enabled.

If the `VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_PROPERTIES_EXT

The `VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_vertex_attribute_divisor
typedef struct VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVertexAttribDivisor;
    VkBool32           supportsNonZeroFirstInstance;
} VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxVertexAttribDivisor` is the maximum value of the number of instances that will repeat the

value of vertex attribute data when instanced rendering is enabled.

- `supportsNonZeroFirstInstance` specifies whether a non-zero value for the `firstInstance` parameter of `drawing commands` is supported when `VkVertexInputBindingDescriptorKHR::divisor` is not 1.

If the `VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_PROPERTIES_KHR`

The `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSamplerFilterMinmaxProperties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           filterMinmaxSingleComponentFormats;
    VkBool32           filterMinmaxImageComponentMapping;
} VkPhysicalDeviceSamplerFilterMinmaxProperties;
```

or the equivalent

```
// Provided by VK_EXT_sampler_filter_minmax
typedef VkPhysicalDeviceSamplerFilterMinmaxProperties
VkPhysicalDeviceSamplerFilterMinmaxPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `filterMinmaxSingleComponentFormats` is a boolean value indicating whether a minimum set of required formats support min/max filtering.
- `filterMinmaxImageComponentMapping` is a boolean value indicating whether the implementation supports non-identity component mapping of the image when doing min/max filtering.

If the `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `filterMinmaxSingleComponentFormats` is `VK_TRUE`, the following formats **must** support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT` feature with `VK_IMAGE_TILING_OPTIMAL`, if they

support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`:

- `VK_FORMAT_R8_UNORM`
- `VK_FORMAT_R8_SNORM`
- `VK_FORMAT_R16_UNORM`
- `VK_FORMAT_R16_SNORM`
- `VK_FORMAT_R16_SFLOAT`
- `VK_FORMAT_R32_SFLOAT`
- `VK_FORMAT_D16_UNORM`
- `VK_FORMAT_X8_D24_UNORM_PACK32`
- `VK_FORMAT_D32_SFLOAT`
- `VK_FORMAT_D16_UNORM_S8_UINT`
- `VK_FORMAT_D24_UNORM_S8_UINT`
- `VK_FORMAT_D32_SFLOAT_S8_UINT`

If the format is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports min/max filtering, and that min/max filtering of the depth aspect is supported when depth compare is disabled in the sampler.

If `filterMinmaxImageComponentMapping` is `VK_FALSE` the component mapping of the image view used with min/max filtering **must** have been created with the `r` component set to the [identity swizzle](#). Only the `r` component of the sampled image value is defined and the other component values are undefined. If `filterMinmaxImageComponentMapping` is `VK_TRUE` this restriction does not apply and image component mapping works as normal.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceSamplerFilterMinmaxProperties-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLER_FILTER_MINMAX_PROPERTIES`

The `VkPhysicalDeviceProtectedMemoryProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceProtectedMemoryProperties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           protectedNoFault;
} VkPhysicalDeviceProtectedMemoryProperties;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `protectedNoFault` specifies how an implementation behaves when an application attempts to

write to unprotected memory in a protected queue operation, read from protected memory in an unprotected queue operation, or perform a query in a protected queue operation. If this limit is `VK_TRUE`, such writes will be discarded or have undefined values written, reads and queries will return undefined values. If this limit is `VK_FALSE`, applications **must** not perform these operations. See [Protected Memory Access Rules](#) for more information.

If the `VkPhysicalDeviceProtectedMemoryProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceProtectedMemoryProperties-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROTECTED_MEMORY_PROPERTIES`

The `VkPhysicalDeviceMaintenance3Properties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMaintenance3Properties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxPerSetDescriptors;
    VkDeviceSize       maxMemoryAllocationSize;
} VkPhysicalDeviceMaintenance3Properties;
```

or the equivalent

```
// Provided by VK_KHR_maintenance3
typedef VkPhysicalDeviceMaintenance3Properties
VkPhysicalDeviceMaintenance3PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxPerSetDescriptors` is a maximum number of descriptors (summed over all descriptor types) in a single descriptor set that is guaranteed to satisfy any implementation-dependent constraints on the size of a descriptor set itself. Applications **can** query whether a descriptor set that goes beyond this limit is supported using `vkGetDescriptorSetLayoutSupport`.
- `maxMemoryAllocationSize` is the maximum size of a memory allocation that **can** be created, even if there is more space available in the heap.

If the `VkPhysicalDeviceMaintenance3Properties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance3Properties-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_3_PROPERTIES

The `VkPhysicalDeviceMaintenance4Properties` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Properties {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       maxBufferSize;
} VkPhysicalDeviceMaintenance4Properties;
```

or the equivalent

```
// Provided by VK_KHR_maintenance4
typedef VkPhysicalDeviceMaintenance4Properties
VkPhysicalDeviceMaintenance4PropertiesKHR;
```

- sType is a `VkStructureType` value identifying this structure.
- pNext is `NULL` or a pointer to a structure extending this structure.
- maxBufferSize is the maximum size `VkBuffer` that **can** be created.

If the `VkPhysicalDeviceMaintenance4Properties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance4Properties-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_PROPERTIES

The `VkPhysicalDeviceMaintenance5PropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance5
typedef struct VkPhysicalDeviceMaintenance5PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           earlyFragmentMultisampleCoverageAfterSampleCounting;
    VkBool32           earlyFragmentSampleMaskTestBeforeSampleCounting;
    VkBool32           depthStencilSwizzleOneSupport;
    VkBool32           polygonModePointSize;
    VkBool32           nonStrictSinglePixelWideLinesUseParallelogram;
    VkBool32           nonStrictWideLinesUseParallelogram;
} VkPhysicalDeviceMaintenance5PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `earlyFragmentMultisampleCoverageAfterSampleCounting` is a boolean value indicating whether the `fragment shading` and `multisample coverage` operations are performed after `sample counting` for `fragment shaders` with `EarlyFragmentTests` execution mode.
- `earlyFragmentSampleMaskTestBeforeSampleCounting` is a boolean value indicating whether the `sample mask test` operation is performed before `sample counting` for `fragment shaders` using the `EarlyFragmentTests` execution mode.
- `depthStencilSwizzleOneSupport` is a boolean indicating that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE` have defined behavior.
- `polygonModePointSize` is a boolean value indicating whether the point size of the final rasterization of polygons with `VK_POLYGON_MODE_POINT` is controlled by `PointSize`.
- `nonStrictSinglePixelWideLinesUseParallelogram` is a boolean value indicating whether non-strict lines with a width of 1.0 are rasterized as parallelograms or using Bresenham's algorithm.
- `nonStrictWideLinesUseParallelogram` is a boolean value indicating whether non-strict lines with a width greater than 1.0 are rasterized as parallelograms or using Bresenham's algorithm.

If the `VkPhysicalDeviceMaintenance5PropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance5PropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_PROPERTIES_KHR`

The `VkPhysicalDeviceMaintenance6PropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance6
typedef struct VkPhysicalDeviceMaintenance6PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           blockTexelViewCompatibleMultipleLayers;
    uint32_t           maxCombinedImageSamplerDescriptorCount;
    VkBool32           fragmentShadingRateClampCombinerInputs;
} VkPhysicalDeviceMaintenance6PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `blockTexelViewCompatibleMultipleLayers` is a boolean value indicating that an implementation supports creating image views with `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` where the `layerCount` member of `subresourceRange` is greater than 1.
- `maxCombinedImageSamplerDescriptorCount` is the maximum number of combined image sampler descriptors that the implementation uses to access any of the `formats that require a sampler Y'CBCR conversion` supported by the implementation.
- `fragmentShadingRateClampCombinerInputs` is a boolean value indicating that an implementation clamps the inputs to `combiner operations`.

If the `VkPhysicalDeviceMaintenance6PropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance6PropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_6_PROPERTIES_KHR`

The `VkPhysicalDeviceMaintenance7PropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceMaintenance7PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustFragmentShadingRateAttachmentAccess;
    VkBool32           separateDepthStencilAttachmentAccess;
    uint32_t           maxDescriptorSetTotalUniformBuffersDynamic;
    uint32_t           maxDescriptorSetTotalStorageBuffersDynamic;
    uint32_t           maxDescriptorSetTotalBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalBuffersDynamic;
} VkPhysicalDeviceMaintenance7PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `robustFragmentShadingRateAttachmentAccess` indicates whether the scaled size of a fragment shading rate attachment **can** be less than the size of the render area. If `robustFragmentShadingRateAttachmentAccess` is `VK_FALSE`, the size of the attachment multiplied by the texel size **must** be greater than or equal to the size of the render area. If it is `VK_TRUE` and the fragment shading rate attachment was created with `VkImageSubresourceRange::baseMipLevel` equal to 0, the scaled size **can** be smaller than the render area, and shading rates for missing texels are defined by [texel replacement for invalid texels](#).
- `separateDepthStencilAttachmentAccess` indicates support for writing to one aspect of a depth/stencil attachment without performing read-modify-write operations on the other aspect. If this property is `VK_TRUE`, writes to one aspect **must** not result in read-modify-write operations on the other aspect. If `VK_FALSE`, writes to one aspect **may** result in writes to the other aspect as defined by [render pass load operations](#), [render pass store operations](#) and [render pass resolve operations](#).
- `maxDescriptorSetTotalUniformBuffersDynamic` is the maximum total count of dynamic uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Dynamic Uniform Buffer](#).
- `maxDescriptorSetTotalStorageBuffersDynamic` is the maximum total count of dynamic storage buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Dynamic Storage Buffer](#).
- `maxDescriptorSetTotalBuffersDynamic` is the maximum total count of dynamic uniform buffers and storage buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic` is similar to `maxDescriptorSetTotalUniformBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic` is similar to `maxDescriptorSetTotalStorageBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindTotalBuffersDynamic` is similar to `maxDescriptorSetTotalBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic storage buffer descriptors from a pool created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with

VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT.

If the `VkPhysicalDeviceMaintenance7PropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance7PropertiesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_7_PROPERTIES_KHR`

The `VkPhysicalDeviceLayeredApiPropertiesListKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiPropertiesListKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           layeredApiCount;
    VkPhysicalDeviceLayeredApiPropertiesKHR* pLayeredApis;
} VkPhysicalDeviceLayeredApiPropertiesListKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `layeredApiCount` is an integer related to the number of layered implementations underneath the Vulkan physical device, as described below.
- `pLayeredApis` is a pointer to an array of `VkPhysicalDeviceLayeredApiPropertiesKHR` in which information regarding the layered implementations underneath the Vulkan physical device are returned.

If `pLayeredApis` is `NULL`, then the number of layered implementations that are underneath the top-most Vulkan physical device (i.e. the one returned by `vkGetPhysicalDeviceProperties2`) is returned in `layeredApiCount`. Otherwise, `layeredApiCount` **must** be set by the application to the number of elements in the `pLayeredApis` array, and on return the variable is overwritten with the number of values actually written to `pLayeredApis`. If the value of `layeredApiCount` is less than the number of layered implementations underneath the Vulkan physical device, at most `layeredApiCount` values will be written to `pLayeredApis`. An implementation that is not a layer will return 0 in `layeredApiCount`.

In the presence of multiple layered implementations, each element of `pLayeredApis` corresponds to an API implementation that is implemented on top of the API at the previous index. If there are layered implementations underneath a non-Vulkan implementation, they may not be visible in this query as the corresponding APIs may lack such a query.

If the `VkPhysicalDeviceLayeredApiPropertiesListKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiPropertiesListKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_PROPERTIES_LIST_KHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesListKHR-pLayeredApis-parameter
If `layeredApiCount` is not `0`, and `pLayeredApis` is not `NULL`, `pLayeredApis` **must** be a valid pointer to an array of `layeredApiCount` `VkPhysicalDeviceLayeredApiPropertiesKHR` structures

The `VkPhysicalDeviceLayeredApiPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           vendorID;
    uint32_t           deviceID;
    VkPhysicalDeviceLayeredApiKHR    layeredAPI;
    char               deviceName[VK_MAX_PHYSICAL_DEVICE_NAME_SIZE];
} VkPhysicalDeviceLayeredApiPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vendorID` is a unique identifier for the vendor of the layered implementation.
- `deviceID` is a unique identifier for the layered implementation among devices available from the vendor.
- `layeredAPI` is a `VkPhysicalDeviceLayeredApiKHR` specifying the API implemented by the layered implementation.
- `deviceName` is an array of `VK_MAX_PHYSICAL_DEVICE_NAME_SIZE` `char` containing a null-terminated UTF-8 string which is the name of the device.

If `layeredAPI` is `VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR`, additional Vulkan-specific information can be queried by including the `VkPhysicalDeviceLayeredApiVulkanPropertiesKHR` structure in the `pNext` chain. Otherwise if such a structure is included in the `pNext` chain, it is ignored.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_PROPERTIES_KHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPhysicalDeviceLayeredApiVulkanPropertiesKHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-sType-unique

The **sType** value of each struct in the **pNext** chain **must** be unique

The list of possible API implementations of a layered implementation underneath the Vulkan physical device, as returned in **VkPhysicalDeviceLayeredApiPropertiesKHR::layeredAPI**, are:

```
// Provided by VK_KHR_maintenance7
typedef enum VkPhysicalDeviceLayeredApiKHR {
    VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR = 0,
    VK_PHYSICAL_DEVICE_LAYERED_API_D3D12_KHR = 1,
    VK_PHYSICAL_DEVICE_LAYERED_API_METAL_KHR = 2,
    VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_KHR = 3,
    VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_ES_KHR = 4,
} VkPhysicalDeviceLayeredApiKHR;
```

- **VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR** - the device implements the Vulkan API.
- **VK_PHYSICAL_DEVICE_LAYERED_API_D3D12_KHR** - the device implements the D3D12 API.
- **VK_PHYSICAL_DEVICE_LAYERED_API_METAL_KHR** - the device implements the Metal API.
- **VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_KHR** - the device implements the OpenGL API.
- **VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_ES_KHR** - the device implements the OpenGL ES API.

The **VkPhysicalDeviceLayeredApiVulkanPropertiesKHR** structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiVulkanPropertiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkPhysicalDeviceProperties2 properties;
} VkPhysicalDeviceLayeredApiVulkanPropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **properties** is a **VkPhysicalDeviceProperties2** in which properties of the underlying layered Vulkan implementation are returned.

The implementation **must** zero-fill the contents of **properties.properties.limits** and **properties.properties.sparseProperties**.

Valid Usage

- VUID-VkPhysicalDeviceLayeredApiVulkanPropertiesKHR-pNext-10011
Only **VkPhysicalDeviceDriverProperties** and **VkPhysicalDeviceIDProperties** are allowed in the **pNext** chain of **properties**

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceLayeredApiVulkanPropertiesKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_VULKAN_PROPERTIES_KHR`

The `VkPhysicalDeviceMeshShaderPropertiesNV` structure is defined as:

```
// Provided by VK_NV_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxDrawMeshTasksCount;
    uint32_t           maxTaskWorkGroupInvocations;
    uint32_t           maxTaskWorkGroupSize[3];
    uint32_t           maxTaskTotalMemorySize;
    uint32_t           maxTaskOutputCount;
    uint32_t           maxMeshWorkGroupInvocations;
    uint32_t           maxMeshWorkGroupSize[3];
    uint32_t           maxMeshTotalMemorySize;
    uint32_t           maxMeshOutputVertices;
    uint32_t           maxMeshOutputPrimitives;
    uint32_t           maxMeshMultiviewViewCount;
    uint32_t           meshOutputPerVertexGranularity;
    uint32_t           meshOutputPerPrimitiveGranularity;
} VkPhysicalDeviceMeshShaderPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxDrawMeshTasksCount` is the maximum number of local workgroups that **can** be launched by a single draw mesh tasks command. See [Programmable Mesh Shading](#).
- `maxTaskWorkGroupInvocations` is the maximum total number of task shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxTaskWorkGroupSize[3]` is the maximum size of a local task workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxTaskTotalMemorySize` is the maximum number of bytes that the task shader can use in total for shared and output memory combined.
- `maxTaskOutputCount` is the maximum number of output tasks a single task shader workgroup can emit.
- `maxMeshWorkGroupInvocations` is the maximum total number of mesh shader invocations in a

single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.

- `maxMeshWorkGroupSize[3]` is the maximum size of a local mesh workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxMeshTotalMemorySize` is the maximum number of bytes that the mesh shader can use in total for shared and output memory combined.
- `maxMeshOutputVertices` is the maximum number of vertices a mesh shader output can store.
- `maxMeshOutputPrimitives` is the maximum number of primitives a mesh shader output can store.
- `maxMeshMultiviewViewCount` is the maximum number of multiview views a mesh shader can use.
- `meshOutputPerVertexGranularity` is the granularity with which mesh vertex outputs are allocated. The value can be used to compute the memory size used by the mesh shader, which **must** be less than or equal to `maxMeshTotalMemorySize`.
- `meshOutputPerPrimitiveGranularity` is the granularity with which mesh outputs qualified as per-primitive are allocated. The value can be used to compute the memory size used by the mesh shader, which **must** be less than or equal to `maxMeshTotalMemorySize`.

If the `VkPhysicalDeviceMeshShaderPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceMeshShaderPropertiesNV-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_NV`

The `VkPhysicalDeviceMeshShaderPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxTaskWorkGroupTotalCount;
    uint32_t           maxTaskWorkGroupCount[3];
    uint32_t           maxTaskWorkGroupInvocations;
    uint32_t           maxTaskWorkGroupSize[3];
    uint32_t           maxTaskPayloadSize;
    uint32_t           maxTaskSharedMemorySize;
    uint32_t           maxTaskPayloadAndSharedMemorySize;
    uint32_t           maxMeshWorkGroupTotalCount;
    uint32_t           maxMeshWorkGroupCount[3];
    uint32_t           maxMeshWorkGroupInvocations;
    uint32_t           maxMeshWorkGroupSize[3];
    uint32_t           maxMeshSharedMemorySize;
    uint32_t           maxMeshPayloadAndSharedMemorySize;
    uint32_t           maxMeshOutputMemorySize;
    uint32_t           maxMeshPayloadAndOutputMemorySize;
    uint32_t           maxMeshOutputComponents;
    uint32_t           maxMeshOutputVertices;
    uint32_t           maxMeshOutputPrimitives;
    uint32_t           maxMeshOutputLayers;
    uint32_t           maxMeshMultiviewViewCount;
    uint32_t           meshOutputPerVertexGranularity;
    uint32_t           meshOutputPerPrimitiveGranularity;
    uint32_t           maxPreferredTaskWorkGroupInvocations;
    uint32_t           maxPreferredMeshWorkGroupInvocations;
    VkBool32           prefersLocalInvocationVertexOutput;
    VkBool32           prefersLocalInvocationPrimitiveOutput;
    VkBool32           prefersCompactVertexOutput;
    VkBool32           prefersCompactPrimitiveOutput;
} VkPhysicalDeviceMeshShaderPropertiesEXT;
```

The members of the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure describe the following implementation-dependent limits:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTaskWorkGroupTotalCount` is the maximum number of total local workgroups that **can** be launched by a single mesh tasks drawing command. See [Programmable Mesh Shading](#).
- `maxTaskWorkGroupCount[3]` is the maximum number of local workgroups that **can** be launched by a single mesh tasks drawing command. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the drawing commands **must** be less than or equal to the corresponding limit. The product of these dimensions **must** be less than or equal to `maxTaskWorkGroupTotalCount`.
- `maxTaskWorkGroupInvocations` is the maximum total number of task shader invocations in a

single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.

- `maxTaskWorkGroupSize[3]` is the maximum size of a local task workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxTaskPayloadSize` is the maximum total storage size, in bytes, available for variables declared with the `TaskPayloadWorkgroupEXT` storage class in shader modules in the task shader stage.
- `maxTaskSharedMemorySize` is the maximum total storage size, in bytes, available for variables declared with the `Workgroup` storage class in shader modules in the task shader stage.
- `maxTaskPayloadAndSharedMemorySize` is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` or `Workgroup` storage class, in shader modules in the task shader stage.
- `maxMeshWorkGroupTotalCount` is the maximum number of local output tasks a single task shader workgroup can emit.
- `maxMeshWorkGroupCount[3]` is the maximum number of local output tasks a single task shader workgroup can emit, per dimension. These three values represent the maximum number of local output tasks for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the `OpEmitMeshTasksEXT` **must** be less than or equal to the corresponding limit. The product of these dimensions **must** be less than or equal to `maxMeshWorkGroupTotalCount`.
- `maxMeshWorkGroupInvocations` is the maximum total number of mesh shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxMeshWorkGroupSize[3]` is the maximum size of a local mesh workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxMeshSharedMemorySize` is the maximum total storage size, in bytes, available for variables declared with the `Workgroup` storage class in shader modules in the mesh shader stage.
- `maxMeshPayloadAndSharedMemorySize` is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` or `Workgroup` storage class in shader modules in the mesh shader stage.
- `maxMeshOutputMemorySize` is the maximum total storage size, in bytes, available for output variables in shader modules in the mesh shader stage, according to the formula in [Mesh Shader Output](#).
- `maxMeshPayloadAndOutputMemorySize` is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` storage class, or output variables in shader modules in the mesh shader stage, according to the formula in [Mesh Shader Output](#).
- `maxMeshOutputComponents` is the maximum number of components of output variables which **can**

be output from the mesh shader stage.

- `maxMeshOutputVertices` is the maximum number of vertices which **can** be emitted by a single mesh shader workgroup.
- `maxMeshOutputPrimitives` is the maximum number of primitives which **can** be emitted by a single mesh shader workgroup.
- `maxMeshOutputLayers` is one greater than the maximum layer index that **can** be output from the mesh shader stage.
- `maxMeshMultiviewViewCount` is one greater than the maximum view index that **can** be used by any mesh shader.
- `meshOutputPerVertexGranularity` is the granularity of vertex allocation. The number of output vertices allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which **must** be less than or equal to `maxMeshOutputMemorySize`.
- `meshOutputPerPrimitiveGranularity` is the granularity of primitive allocation. The number of output primitives allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which **must** be less than or equal to `maxMeshOutputMemorySize`.
- `maxPreferredTaskWorkGroupInvocations` is the maximum number of task shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the task shader stage.
- `maxPreferredMeshWorkGroupInvocations` is the maximum number of mesh shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the mesh shader stage.
- `prefersLocalInvocationVertexOutput` specifies whether writes to the vertex output array in a mesh shader yield best performance when the array index matches `LocalInvocationIndex`.
- `prefersLocalInvocationPrimitiveOutput` specifies whether writes to the primitive output array in a mesh shader yield best performance when the array index matches `LocalInvocationIndex`.
- `prefersCompactVertexOutput` specifies whether output vertices should be compacted after custom culling in the mesh shader for best performance, otherwise keeping the vertices at their original location may be better.
- `prefersCompactPrimitiveOutput` specifies whether output primitives should be compacted after custom culling in the mesh shader for best performance, otherwise the use of `CullPrimitiveEXT` may be better.

If the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure is included in the `pNext` chain of `VkPhysicalDeviceProperties2`, it is filled with the implementation-dependent limits.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceMeshShaderPropertiesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_EXT`

The `VkPhysicalDeviceDescriptorIndexingProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDescriptorIndexingProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxUpdateAfterBindDescriptorsInAllPools;
    VkBool32           shaderUniformBufferArrayNonUniformIndexingNative;
    VkBool32           shaderSampledImageArrayNonUniformIndexingNative;
    VkBool32           shaderStorageBufferArrayNonUniformIndexingNative;
    VkBool32           shaderStorageImageArrayNonUniformIndexingNative;
    VkBool32           shaderInputAttachmentArrayNonUniformIndexingNative;
    VkBool32           robustBufferAccessUpdateAfterBind;
    VkBool32           quadDivergentImplicitLod;
    uint32_t           maxPerStageDescriptorUpdateAfterBindSamplers;
    uint32_t           maxPerStageDescriptorUpdateAfterBindUniformBuffers;
    uint32_t           maxPerStageDescriptorUpdateAfterBindStorageBuffers;
    uint32_t           maxPerStageDescriptorUpdateAfterBindSampledImages;
    uint32_t           maxPerStageDescriptorUpdateAfterBindStorageImages;
    uint32_t           maxPerStageDescriptorUpdateAfterBindInputAttachments;
    uint32_t           maxPerStageUpdateAfterBindResources;
    uint32_t           maxDescriptorSetUpdateAfterBindSamplers;
    uint32_t           maxDescriptorSetUpdateAfterBindUniformBuffers;
    uint32_t           maxDescriptorSetUpdateAfterBindUniformBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageBuffers;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindSampledImages;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageImages;
    uint32_t           maxDescriptorSetUpdateAfterBindInputAttachments;
} VkPhysicalDeviceDescriptorIndexingProperties;
```

or the equivalent

```
// Provided by VK_EXT_descriptor_indexing
typedef VkPhysicalDeviceDescriptorIndexingProperties
VkPhysicalDeviceDescriptorIndexingPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxUpdateAfterBindDescriptorsInAllPools` is the maximum number of descriptors (summed over all descriptor types) that **can** be created across all pools that are created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit set. Pool creation **may** fail when this limit is exceeded, or when the space this limit represents is unable to satisfy a pool creation due to fragmentation.
- `shaderUniformBufferArrayNonUniformIndexingNative` is a boolean value indicating whether uniform buffer descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a

single dynamic instance of an instruction that non-uniformly indexes an array of uniform buffers **may** execute multiple times in order to access all the descriptors.

- `shaderSampledImageArrayNonUniformIndexingNative` is a boolean value indicating whether sampler and image descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of samplers or images **may** execute multiple times in order to access all the descriptors.
- `shaderStorageBufferArrayNonUniformIndexingNative` is a boolean value indicating whether storage buffer descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of storage buffers **may** execute multiple times in order to access all the descriptors.
- `shaderStorageImageArrayNonUniformIndexingNative` is a boolean value indicating whether storage image descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of storage images **may** execute multiple times in order to access all the descriptors.
- `shaderInputAttachmentArrayNonUniformIndexingNative` is a boolean value indicating whether input attachment descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of input attachments **may** execute multiple times in order to access all the descriptors.
- `robustBufferAccessUpdateAfterBind` is a boolean value indicating whether `robustBufferAccess` can be enabled on a device simultaneously with `descriptorBindingUniformBufferUpdateAfterBind`, `descriptorBindingStorageBufferUpdateAfterBind`, `descriptorBindingUniformTexelBufferUpdateAfterBind`, and/or `descriptorBindingStorageTexelBufferUpdateAfterBind`. If this is `VK_FALSE`, then either `robustBufferAccess` **must** be disabled or all of these update-after-bind features **must** be disabled.
- `quadDivergentImplicitLod` is a boolean value indicating whether implicit LOD calculations for image operations have well-defined results when the image and/or sampler objects used for the instruction are not uniform within a quad. See [Derivative Image Operations](#).
- `maxPerStageDescriptorUpdateAfterBindSamplers` is similar to `maxPerStageDescriptorSamplers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindUniformBuffers` is similar to `maxPerStageDescriptorUniformBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindStorageBuffers` is similar to `maxPerStageDescriptorStorageBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindSampledImages` is similar to `maxPerStageDescriptorSampledImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindStorageImages` is similar to `maxPerStageDescriptorStorageImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindInputAttachments` is similar to

`maxPerStageDescriptorInputAttachments` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

- `maxPerStageUpdateAfterBindResources` is similar to `maxPerStageResources` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindSamplers` is similar to `maxDescriptorSetSamplers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindUniformBuffers` is similar to `maxDescriptorSetUniformBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindUniformBuffersDynamic` is similar to `maxDescriptorSetUniformBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic uniform buffer descriptors from a pool created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`.
- `maxDescriptorSetUpdateAfterBindStorageBuffers` is similar to `maxDescriptorSetStorageBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindStorageBuffersDynamic` is similar to `maxDescriptorSetStorageBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic storage buffer descriptors from a pool created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`.
- `maxDescriptorSetUpdateAfterBindSampledImages` is similar to `maxDescriptorSetSampledImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindStorageImages` is similar to `maxDescriptorSetStorageImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindInputAttachments` is similar to `maxDescriptorSetInputAttachments` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

If the `VkPhysicalDeviceDescriptorIndexingProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorIndexingProperties-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_PROPERTIES

The `VkPhysicalDeviceInlineUniformBlockProperties` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxInlineUniformBlockSize;
    uint32_t           maxPerStageDescriptorInlineUniformBlocks;
    uint32_t           maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks;
    uint32_t           maxDescriptorSetInlineUniformBlocks;
    uint32_t           maxDescriptorSetUpdateAfterBindInlineUniformBlocks;
} VkPhysicalDeviceInlineUniformBlockProperties;
```

or the equivalent

```
// Provided by VK_EXT_inline_uniform_block
typedef VkPhysicalDeviceInlineUniformBlockProperties
VkPhysicalDeviceInlineUniformBlockPropertiesEXT;
```

- sType is a `VkStructureType` value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxInlineUniformBlockSize is the maximum size in bytes of an `inline uniform block` binding.
- maxPerStageDescriptorInlineUniformBlocks is the maximum number of inline uniform block bindings that **can** be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` count against this limit. Only descriptor bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks is similar to `maxPerStageDescriptorInlineUniformBlocks` but counts descriptor bindings from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- maxDescriptorSetInlineUniformBlocks is the maximum number of inline uniform block bindings that **can** be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` count against this limit. Only descriptor bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- maxDescriptorSetUpdateAfterBindInlineUniformBlocks is similar to `maxDescriptorSetInlineUniformBlocks` but counts descriptor bindings from descriptor sets

created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

If the `VkPhysicalDeviceInlineUniformBlockProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInlineUniformBlockProperties-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_PROPERTIES`

The `VkPhysicalDeviceConservativeRasterizationPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_conservative_rasterization
typedef struct VkPhysicalDeviceConservativeRasterizationPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    float              primitiveOverestimationSize;
    float              maxExtraPrimitiveOverestimationSize;
    float              extraPrimitiveOverestimationSizeGranularity;
    VkBool32           primitiveUnderestimation;
    VkBool32           conservativePointAndLineRasterization;
    VkBool32           degenerateTrianglesRasterized;
    VkBool32           degenerateLinesRasterized;
    VkBool32           fullyCoveredFragmentShaderInputVariable;
    VkBool32           conservativeRasterizationPostDepthCoverage;
} VkPhysicalDeviceConservativeRasterizationPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitiveOverestimationSize` is the size in pixels the generating primitive is increased at each of its edges during conservative rasterization overestimation mode. Even with a size of 0.0, conservative rasterization overestimation rules still apply and if any part of the pixel rectangle is covered by the generating primitive, fragments are generated for the entire pixel. However implementations **may** make the pixel coverage area even more conservative by increasing the size of the generating primitive.
- `maxExtraPrimitiveOverestimationSize` is the maximum size in pixels of extra overestimation the implementation supports in the pipeline state. A value of 0.0 means the implementation does not support any additional overestimation of the generating primitive during conservative rasterization. A value above 0.0 allows the application to further increase the size of the generating primitive during conservative rasterization overestimation.
- `extraPrimitiveOverestimationSizeGranularity` is the granularity of extra overestimation that can be specified in the pipeline state between 0.0 and `maxExtraPrimitiveOverestimationSize` inclusive. A value of 0.0 means the implementation can use the smallest representable non-zero value in the screen space pixel fixed-point grid.

- `primitiveUnderestimation` is `VK_TRUE` if the implementation supports the `VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT` conservative rasterization mode in addition to `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`. Otherwise the implementation only supports `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`.
- `conservativePointAndLineRasterization` is `VK_TRUE` if the implementation supports conservative rasterization of point and line primitives as well as triangle primitives. Otherwise the implementation only supports triangle primitives.
- `degenerateTrianglesRasterized` is `VK_FALSE` if the implementation culls primitives generated from triangles that become zero area after they are quantized to the fixed-point rasterization pixel grid. `degenerateTrianglesRasterized` is `VK_TRUE` if these primitives are not culled and the provoking vertex attributes and depth value are used for the fragments. The primitive area calculation is done on the primitive generated from the clipped triangle if applicable. Zero area primitives are backfacing and the application **can** enable backface culling if desired.
- `degenerateLinesRasterized` is `VK_FALSE` if the implementation culls lines that become zero length after they are quantized to the fixed-point rasterization pixel grid. `degenerateLinesRasterized` is `VK_TRUE` if zero length lines are not culled and the provoking vertex attributes and depth value are used for the fragments.
- `fullyCoveredFragmentShaderInputVariable` is `VK_TRUE` if the implementation supports the SPIR-V builtin fragment shader input variable `FullyCoveredEXT` specifying that conservative rasterization is enabled and the fragment area is fully covered by the generating primitive.
- `conservativeRasterizationPostDepthCoverage` is `VK_TRUE` if the implementation supports conservative rasterization with the `PostDepthCoverage` execution mode enabled. Otherwise the `PostDepthCoverage` execution mode **must** not be used when conservative rasterization is enabled.

If the `VkPhysicalDeviceConservativeRasterizationPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceConservativeRasterizationPropertiesEXT-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CONSERVATIVE_RASTERIZATION_PROPERTIES_EXT`

The `VkPhysicalDeviceFragmentDensityMapPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceFragmentDensityMapPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         minFragmentDensityTexelSize;
    VkExtent2D         maxFragmentDensityTexelSize;
    VkBool32           fragmentDensityInvocations;
} VkPhysicalDeviceFragmentDensityMapPropertiesEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **minFragmentDensityTexelSize** is the minimum **fragment density texel size**.
- **maxFragmentDensityTexelSize** is the maximum fragment density texel size.
- **fragmentDensityInvocations** specifies whether the implementation **may** invoke additional fragment shader invocations for each covered sample.

If the **VkPhysicalDeviceFragmentDensityMapPropertiesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMapPropertiesEXT-sType-sType
sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_PROPERTIES_EXT**

The **VkPhysicalDeviceFragmentDensityMap2PropertiesEXT** structure is defined as:

```
// Provided by VK_EXT_fragment_density_map2
typedef struct VkPhysicalDeviceFragmentDensityMap2PropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subsampledLoads;
    VkBool32           subsampledCoarseReconstructionEarlyAccess;
    uint32_t           maxSubsampledArrayLayers;
    uint32_t           maxDescriptorSetSubsampledSamplers;
} VkPhysicalDeviceFragmentDensityMap2PropertiesEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **subsampledLoads** specifies if performing image data read with load operations on subsampled attachments will be resampled to the fragment density of the render pass
- **subsampledCoarseReconstructionEarlyAccess** specifies if performing image data read with samplers created with **flags** containing

`VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT` in fragment shader will trigger additional reads during `VK_PIPELINE_STAGE_VERTEX_SHADER_BIT`

- `maxSubsampledArrayLayers` is the maximum number of `VkImageView` array layers for usages supporting subsampled samplers
- `maxDescriptorSetSubsampledSamplers` is the maximum number of subsampled samplers that **can** be included in a `VkPipelineLayout`

If the `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMap2PropertiesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_2_PROPERTIES_EXT`

The `VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM` structure is defined as:

```
// Provided by VK_QCOM_fragment_density_map_offset
typedef struct VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         fragmentDensityOffsetGranularity;
} VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityOffsetGranularity` is the granularity for `fragment density offsets`.

If the `VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_OFFSET_PROPERTIES_QCOM`

The `VkPhysicalDeviceShaderCorePropertiesAMD` structure is defined as:

```
// Provided by VK_AMD_shader_core_properties
typedef struct VkPhysicalDeviceShaderCorePropertiesAMD {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderEngineCount;
    uint32_t           shaderArraysPerEngineCount;
    uint32_t           computeUnitsPerShaderArray;
    uint32_t           simdPerComputeUnit;
    uint32_t           wavefrontsPerSimd;
    uint32_t           wavefrontSize;
    uint32_t           sgprsPerSimd;
    uint32_t           minSgprAllocation;
    uint32_t           maxSgprAllocation;
    uint32_t           sgprAllocationGranularity;
    uint32_t           vgprsPerSimd;
    uint32_t           minVgprAllocation;
    uint32_t           maxVgprAllocation;
    uint32_t           vgprAllocationGranularity;
} VkPhysicalDeviceShaderCorePropertiesAMD;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderEngineCount** is an unsigned integer value indicating the number of shader engines found inside the shader core of the physical device.
- **shaderArraysPerEngineCount** is an unsigned integer value indicating the number of shader arrays inside a shader engine. Each shader array has its own scan converter, set of compute units, and a render back end (color and depth attachments). Shader arrays within a shader engine share shader processor input (wave launcher) and shader export (export buffer) units. Currently, a shader engine can have one or two shader arrays.
- **computeUnitsPerShaderArray** is an unsigned integer value indicating the physical number of compute units within a shader array. The active number of compute units in a shader array **may** be lower. A compute unit houses a set of SIMDs along with a sequencer module and a local data store.
- **simdPerComputeUnit** is an unsigned integer value indicating the number of SIMDs inside a compute unit. Each SIMD processes a single instruction at a time.
- **wavefrontSize** is an unsigned integer value indicating the maximum size of a subgroup.
- **sgprsPerSimd** is an unsigned integer value indicating the number of physical Scalar General-Purpose Registers (SGPRs) per SIMD.
- **minSgprAllocation** is an unsigned integer value indicating the minimum number of SGPRs allocated for a wave.
- **maxSgprAllocation** is an unsigned integer value indicating the maximum number of SGPRs allocated for a wave.
- **sgprAllocationGranularity** is an unsigned integer value indicating the granularity of SGPR allocation for a wave.

- `vgprsPerSimd` is an unsigned integer value indicating the number of physical Vector General-Purpose Registers (VGPRs) per SIMD.
- `minVgprAllocation` is an unsigned integer value indicating the minimum number of VGPRs allocated for a wave.
- `maxVgprAllocation` is an unsigned integer value indicating the maximum number of VGPRs allocated for a wave.
- `vgprAllocationGranularity` is an unsigned integer value indicating the granularity of VGPR allocation for a wave.

If the `VkPhysicalDeviceShaderCorePropertiesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCorePropertiesAMD-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_AMD`

The `VkPhysicalDeviceShaderCoreProperties2AMD` structure is defined as:

```
// Provided by VK_AMD_shader_core_properties2
typedef struct VkPhysicalDeviceShaderCoreProperties2AMD {
    VkStructureType    sType;
    void*              pNext;
    VkShaderCorePropertiesFlagsAMD  shaderCoreFeatures;
    uint32_t           activeComputeUnitCount;
} VkPhysicalDeviceShaderCoreProperties2AMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderCoreFeatures` is a bitmask of `VkShaderCorePropertiesFlagBitsAMD` indicating the set of features supported by the shader core.
- `activeComputeUnitCount` is an unsigned integer value indicating the number of compute units that have been enabled.

If the `VkPhysicalDeviceShaderCoreProperties2AMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreProperties2AMD-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_2_AMD`

Bits for this type **may** be defined by future extensions, or new versions of the [VK_AMD_shader_core_properties2](#) extension. Possible values of the **flags** member of [VkShaderCorePropertiesFlagsAMD](#) are:

```
// Provided by VK_AMD_shader_core_properties2
typedef enum VkShaderCorePropertiesFlagBitsAMD {
} VkShaderCorePropertiesFlagBitsAMD;
```

```
// Provided by VK_AMD_shader_core_properties2
typedef VkFlags VkShaderCorePropertiesFlagsAMD;
```

[VkShaderCorePropertiesFlagsAMD](#) is a bitmask type for providing zero or more [VkShaderCorePropertiesFlagBitsAMD](#).

The [VkPhysicalDeviceDepthStencilResolveProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDepthStencilResolveProperties {
    VkStructureType    sType;
    void*              pNext;
    VkResolveModeFlags supportedDepthResolveModes;
    VkResolveModeFlags supportedStencilResolveModes;
    VkBool32           independentResolveNone;
    VkBool32           independentResolve;
} VkPhysicalDeviceDepthStencilResolveProperties;
```

or the equivalent

```
// Provided by VK_KHR_depth_stencil_resolve
typedef VkPhysicalDeviceDepthStencilResolveProperties
VkPhysicalDeviceDepthStencilResolvePropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **supportedDepthResolveModes** is a bitmask of [VkResolveModeFlagBits](#) indicating the set of supported depth resolve modes. **VK_RESOLVE_MODE_SAMPLE_ZERO_BIT** **must** be included in the set but implementations **may** support additional modes.
- **supportedStencilResolveModes** is a bitmask of [VkResolveModeFlagBits](#) indicating the set of supported stencil resolve modes. **VK_RESOLVE_MODE_SAMPLE_ZERO_BIT** **must** be included in the set but implementations **may** support additional modes. **VK_RESOLVE_MODE_AVERAGE_BIT** **must** not be included in the set.
- **independentResolveNone** is **VK_TRUE** if the implementation supports setting the depth and stencil resolve modes to different values when one of those modes is **VK_RESOLVE_MODE_NONE**. Otherwise

the implementation only supports setting both modes to the same value.

- `independentResolve` is `VK_TRUE` if the implementation supports all combinations of the supported depth and stencil resolve modes, including setting either depth or stencil resolve mode to `VK_RESOLVE_MODE_NONE`. An implementation that supports `independentResolve` **must** also support `independentResolveNone`.

If the `VkPhysicalDeviceDepthStencilResolveProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthStencilResolveProperties-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_STENCIL_RESOLVE_PROPERTIES`

The `VkPhysicalDevicePerformanceQueryPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkPhysicalDevicePerformanceQueryPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           allowCommandBufferQueryCopies;
} VkPhysicalDevicePerformanceQueryPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `allowCommandBufferQueryCopies` is `VK_TRUE` if the performance query pools are allowed to be used with `vkCmdCopyQueryPoolResults`.

If the `VkPhysicalDevicePerformanceQueryPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePerformanceQueryPropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_QUERY_PROPERTIES_KHR`

The `VkPhysicalDeviceShadingRateImagePropertiesNV` structure is defined as:

```
// Provided by VK_NV_shading_rate_image
typedef struct VkPhysicalDeviceShadingRateImagePropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         shadingRateTexelSize;
    uint32_t           shadingRatePaletteSize;
    uint32_t           shadingRateMaxCoarseSamples;
} VkPhysicalDeviceShadingRateImagePropertiesNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shadingRateTexelSize** indicates the width and height of the portion of the framebuffer corresponding to each texel in the shading rate image.
- **shadingRatePaletteSize** indicates the maximum number of palette entries supported for the shading rate image.
- **shadingRateMaxCoarseSamples** specifies the maximum number of coverage samples supported in a single fragment. If the product of the fragment size derived from the base shading rate and the number of coverage samples per pixel exceeds this limit, the final shading rate will be adjusted so that its product does not exceed the limit.

If the [VkPhysicalDeviceShadingRateImagePropertiesNV](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

These properties are related to the [shading rate image](#) feature.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShadingRateImagePropertiesNV-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADING_RATE_IMAGE_PROPERTIES_NV](#)

The [VkPhysicalDeviceMemoryDecompressionPropertiesNV](#) structure is defined as:

```
// Provided by VK_NV_memory_decompression
typedef struct VkPhysicalDeviceMemoryDecompressionPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkMemoryDecompressionMethodFlagsNV    decompositionMethods;
    uint64_t           maxDecompressionIndirectCount;
} VkPhysicalDeviceMemoryDecompressionPropertiesNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **decompositionMethods** is a bitmask of [VkMemoryDecompressionMethodFlagBitsNV](#) specifying

memory decompression methods supported by the implementation.

- `maxDecompressionIndirectCount` specifies the maximum supported count value in the `countBuffer` of `VkCmdDecompressMemoryIndirectCountNV`

If the `VkPhysicalDeviceMemoryDecompressionPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryDecompressionPropertiesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_DECOMPRESSION_PROPERTIES_NV`

The `VkPhysicalDeviceTransformFeedbackPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxTransformFeedbackStreams;
    uint32_t           maxTransformFeedbackBuffers;
    VkDeviceSize       maxTransformFeedbackBufferSize;
    uint32_t           maxTransformFeedbackStreamDataSize;
    uint32_t           maxTransformFeedbackBufferDataSize;
    uint32_t           maxTransformFeedbackBufferDataStride;
    VkBool32           transformFeedbackQueries;
    VkBool32           transformFeedbackStreamsLinesTriangles;
    VkBool32           transformFeedbackRasterizationStreamSelect;
    VkBool32           transformFeedbackDraw;
} VkPhysicalDeviceTransformFeedbackPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTransformFeedbackStreams` is the maximum number of vertex streams that can be output from geometry shaders declared with the `GeometryStreams` capability. If the implementation does not support `VkPhysicalDeviceTransformFeedbackFeaturesEXT::geometryStreams` then `maxTransformFeedbackStreams` **must** be 1.
- `maxTransformFeedbackBuffers` is the maximum number of transform feedback buffers that can be bound for capturing shader outputs from the last `pre-rasterization shader stage`.
- `maxTransformFeedbackBufferSize` is the maximum size that can be specified when binding a buffer for transform feedback in `VkCmdBindTransformFeedbackBuffersEXT`.
- `maxTransformFeedbackStreamDataSize` is the maximum amount of data in bytes for each vertex that captured to one or more transform feedback buffers associated with a specific vertex stream.

- `maxTransformFeedbackBufferDataSize` is the maximum amount of data in bytes for each vertex that can be captured to a specific transform feedback buffer.
- `maxTransformFeedbackBufferDataStride` is the maximum stride between each capture of vertex data to the buffer.
- `transformFeedbackQueries` is `VK_TRUE` if the implementation supports the `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` query type. `transformFeedbackQueries` is `VK_FALSE` if queries of this type **cannot** be created.
- `transformFeedbackStreamsLinesTriangles` is `VK_TRUE` if the implementation supports the geometry shader `OpExecutionMode` of `OutputLineStrip` and `OutputTriangleStrip` in addition to `OutputPoints` when more than one vertex stream is output. If `transformFeedbackStreamsLinesTriangles` is `VK_FALSE` the implementation only supports an `OpExecutionMode` of `OutputPoints` when more than one vertex stream is output from the geometry shader.
- `transformFeedbackRasterizationStreamSelect` is `VK_TRUE` if the implementation supports the `GeometryStreams` SPIR-V capability and the application can use `VkPipelineRasterizationStateStreamCreateInfoEXT` to modify which vertex stream output is used for rasterization. Otherwise vertex stream `0` **must** always be used for rasterization.
- `transformFeedbackDraw` is `VK_TRUE` if the implementation supports the `vkCmdDrawIndirectByteCountEXT` function otherwise the function **must** not be called.

If the `VkPhysicalDeviceTransformFeedbackPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTransformFeedbackPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_PROPERTIES_EXT`

The `VkPhysicalDeviceCopyMemoryIndirectPropertiesNV` structure is defined as:

```
// Provided by VK_NV_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkQueueFlags        supportedQueues;
} VkPhysicalDeviceCopyMemoryIndirectPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportedQueues` is a bitmask of `VkQueueFlagBits` indicating the queues on which **indirect copy commands** are supported.

If the `indirectCopy` feature is supported, `supportedQueues` **must** return at least one supported queue.

If the `VkPhysicalDeviceCopyMemoryIndirectPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCopyMemoryIndirectPropertiesNV-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_PROPERTIES_NV`

The `VkPhysicalDeviceRayTracingPropertiesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkPhysicalDeviceRayTracingPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderGroupHandleSize;
    uint32_t           maxRecursionDepth;
    uint32_t           maxShaderGroupStride;
    uint32_t           shaderGroupBaseAlignment;
    uint64_t           maxGeometryCount;
    uint64_t           maxInstanceCount;
    uint64_t           maxTriangleCount;
    uint32_t           maxDescriptorSetAccelerationStructures;
} VkPhysicalDeviceRayTracingPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRecursionDepth` is the maximum number of levels of recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the shader binding table.
- `shaderGroupBaseAlignment` is the **required** alignment in bytes for the base of the shader binding table.
- `maxGeometryCount` is the maximum number of geometries in the bottom level acceleration structure.
- `maxInstanceCount` is the maximum number of instances in the top level acceleration structure.
- `maxTriangleCount` is the maximum number of triangles in all geometries in the bottom level acceleration structure.
- `maxDescriptorSetAccelerationStructures` is the maximum number of acceleration structure descriptors that are allowed in a descriptor set.

Due to the fact that the geometry, instance, and triangle counts are specified at acceleration structure creation as 32-bit values, `maxGeometryCount`, `maxInstanceCount`, and `maxTriangleCount` **must**

not exceed $2^{32}-1$.

If the `VkPhysicalDeviceRayTracingPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in `VkPhysicalDeviceAccelerationStructurePropertiesKHR` and `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceRayTracingPropertiesNV-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PROPERTIES_NV`

The `VkPhysicalDeviceAccelerationStructurePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructurePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           maxGeometryCount;
    uint64_t           maxInstanceCount;
    uint64_t           maxPrimitiveCount;
    uint32_t           maxPerStageDescriptorAccelerationStructures;
    uint32_t           maxPerStageDescriptorUpdateAfterBindAccelerationStructures;
    uint32_t           maxDescriptorSetAccelerationStructures;
    uint32_t           maxDescriptorSetUpdateAfterBindAccelerationStructures;
    uint32_t           minAccelerationStructureScratchOffsetAlignment;
} VkPhysicalDeviceAccelerationStructurePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxGeometryCount` is the maximum number of geometries in the bottom level acceleration structure.
- `maxInstanceCount` is the maximum number of instances in the top level acceleration structure.
- `maxPrimitiveCount` is the maximum number of triangles or AABBs in all geometries in the bottom level acceleration structure.
- `maxPerStageDescriptorAccelerationStructures` is the maximum number of acceleration structure bindings that **can** be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` count against this limit. Only descriptor bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxPerStageDescriptorUpdateAfterBindAccelerationStructures` is similar to `maxPerStageDescriptorAccelerationStructures` but counts descriptor bindings from descriptor

sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

- `maxDescriptorSetAccelerationStructures` is the maximum number of acceleration structure descriptors that **can** be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` count against this limit. Only descriptor bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxDescriptorSetUpdateAfterBindAccelerationStructures` is similar to `maxDescriptorSetAccelerationStructures` but counts descriptor bindings from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `minAccelerationStructureScratchOffsetAlignment` is the minimum **required** alignment, in bytes, for scratch data passed in to an acceleration structure build command. The value **must** be a power of two.

Due to the fact that the geometry, instance, and primitive counts are specified at acceleration structure creation as 32-bit values, `maxGeometryCount`, `maxInstanceCount`, and `maxPrimitiveCount` **must** not exceed $2^{32}-1$.

If the `VkPhysicalDeviceAccelerationStructurePropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in `VkPhysicalDeviceRayTracingPropertiesNV`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAccelerationStructurePropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_PROPERTIES_KHR`

The `VkPhysicalDeviceRayTracingPipelinePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelinePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderGroupHandleSize;
    uint32_t           maxRayRecursionDepth;
    uint32_t           maxShaderGroupStride;
    uint32_t           shaderGroupBaseAlignment;
    uint32_t           shaderGroupHandleCaptureReplaySize;
    uint32_t           maxRayDispatchInvocationCount;
    uint32_t           shaderGroupHandleAlignment;
    uint32_t           maxRayHitAttributeSize;
} VkPhysicalDeviceRayTracingPipelinePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRayRecursionDepth` is the maximum number of levels of ray recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the shader binding table.
- `shaderGroupBaseAlignment` is the **required** alignment in bytes for the base of the shader binding table.
- `shaderGroupHandleCaptureReplaySize` is the number of bytes for the information required to do capture and replay for shader group handles.
- `maxRayDispatchInvocationCount` is the maximum number of ray generation shader invocations which **may** be produced by a single `vkCmdTraceRaysIndirectKHR` or `vkCmdTraceRaysKHR` command.
- `shaderGroupHandleAlignment` is the **required** alignment in bytes for each entry in a shader binding table. The value **must** be a power of two.
- `maxRayHitAttributeSize` is the maximum size in bytes for a ray attribute structure

If the `VkPhysicalDeviceRayTracingPipelinePropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in `VkPhysicalDeviceRayTracingPropertiesNV`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPipelinePropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_PROPERTIES_KHR`

The `VkPhysicalDeviceCooperativeMatrixPropertiesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkShaderStageFlags cooperativeMatrixSupportedStages;
} VkPhysicalDeviceCooperativeMatrixPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixSupportedStages` is a bitfield of `VkShaderStageFlagBits` describing the shader

stages that cooperative matrix instructions are supported in. `cooperativeMatrixSupportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.

If the `VkPhysicalDeviceCooperativeMatrixPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCooperativeMatrixPropertiesNV-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_PROPERTIES_NV`

The `VkPhysicalDeviceCooperativeMatrixPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkShaderStageFlags cooperativeMatrixSupportedStages;
} VkPhysicalDeviceCooperativeMatrixPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixSupportedStages` is a bitfield of `VkShaderStageFlagBits` describing the shader stages that cooperative matrix instructions are supported in. `cooperativeMatrixSupportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.

`cooperativeMatrixSupportedStages` **must** not have any bits other than `VK_SHADER_STAGE_COMPUTE_BIT` set.

If the `VkPhysicalDeviceCooperativeMatrixPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCooperativeMatrixPropertiesKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_PROPERTIES_KHR`

The `VkPhysicalDeviceCooperativeMatrix2PropertiesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix2
typedef struct VkPhysicalDeviceCooperativeMatrix2PropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           cooperativeMatrixWorkgroupScopeMaxWorkgroupSize;
    uint32_t           cooperativeMatrixFlexibleDimensionsMaxDimension;
    uint32_t           cooperativeMatrixWorkgroupScopeReservedSharedMemory;
} VkPhysicalDeviceCooperativeMatrix2PropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixWorkgroupScopeMaxWorkgroupSize` is the maximum number of invocations in a workgroup when the module uses `OpTypeCooperativeMatrixKHR` with `Scope` equal to `Workgroup`.
- `cooperativeMatrixFlexibleDimensionsMaxDimension` is the maximum supported dimension for cooperative matrix types when `cooperativeMatrixFlexibleDimensions` is enabled.
- `cooperativeMatrixWorkgroupScopeReservedSharedMemory` is the number of bytes of shared memory reserved for the implementation when the module uses `OpTypeCooperativeMatrixKHR` with `Scope` equal to `Workgroup`.

If the `VkPhysicalDeviceCooperativeMatrix2PropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrix2PropertiesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_2_PROPERTIES_NV`

The `VkPhysicalDeviceShaderSMBuiltinsPropertiesNV` structure is defined as:

```
// Provided by VK_NV_shader_sm_builtins
typedef struct VkPhysicalDeviceShaderSMBuiltinsPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderSMCount;
    uint32_t           shaderWarpsPerSM;
} VkPhysicalDeviceShaderSMBuiltinsPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSMCount` is the number of SMs on the device.
- `shaderWarpsPerSM` is the maximum number of simultaneously executing warps on an SM.

If the `VkPhysicalDeviceShaderSMBuiltinsPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderSMBuiltinsPropertiesNV-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_PROPERTIES_NV`

The `VkPhysicalDeviceTexelBufferAlignmentProperties` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTexelBufferAlignmentProperties {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        storageTexelBufferOffsetAlignmentBytes;
    VkBool32            storageTexelBufferOffsetSingleTexelAlignment;
    VkDeviceSize        uniformTexelBufferOffsetAlignmentBytes;
    VkBool32            uniformTexelBufferOffsetSingleTexelAlignment;
} VkPhysicalDeviceTexelBufferAlignmentProperties;
```

or the equivalent

```
// Provided by VK_EXT_texel_buffer_alignment
typedef VkPhysicalDeviceTexelBufferAlignmentProperties
VkPhysicalDeviceTexelBufferAlignmentPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageTexelBufferOffsetAlignmentBytes` is a byte alignment that is sufficient for a storage texel buffer of any format. The value **must** be a power of two.
- `storageTexelBufferOffsetSingleTexelAlignment` indicates whether single texel alignment is sufficient for a storage texel buffer of any format.
- `uniformTexelBufferOffsetAlignmentBytes` is a byte alignment that is sufficient for a uniform texel buffer of any format. The value **must** be a power of two.
- `uniformTexelBufferOffsetSingleTexelAlignment` indicates whether single texel alignment is sufficient for a uniform texel buffer of any format.

If the `VkPhysicalDeviceTexelBufferAlignmentProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If the single texel alignment property is `VK_FALSE`, then the buffer view's offset **must** be aligned to the corresponding byte alignment value. If the single texel alignment property is `VK_TRUE`, then the

buffer view's offset **must** be aligned to the lesser of the corresponding byte alignment value or the size of a single texel, based on `VkBufferViewCreateInfo::format`. If the size of a single texel is a multiple of three bytes, then the size of a single component of the format is used instead.

These limits **must** not advertise a larger alignment than the **required** maximum minimum value of `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`, for any format that supports use as a texel buffer.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTexelBufferAlignmentProperties-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_PROPERTIES`

The `VkPhysicalDeviceTimelineSemaphoreProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreProperties {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           maxTimelineSemaphoreValueDifference;
} VkPhysicalDeviceTimelineSemaphoreProperties;
```

or the equivalent

```
// Provided by VK_KHR_timeline_semaphore
typedef VkPhysicalDeviceTimelineSemaphoreProperties
VkPhysicalDeviceTimelineSemaphorePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTimelineSemaphoreValueDifference` indicates the maximum difference allowed by the implementation between the current value of a timeline semaphore and any pending signal or wait operations.

If the `VkPhysicalDeviceTimelineSemaphoreProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTimelineSemaphoreProperties-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_PROPERTIES`

The `VkPhysicalDeviceLineRasterizationPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_line_rasterization
typedef struct VkPhysicalDeviceLineRasterizationPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           lineSubPixelPrecisionBits;
} VkPhysicalDeviceLineRasterizationPropertiesKHR;
```

or the equivalent

```
// Provided by VK_EXT_line_rasterization
typedef VkPhysicalDeviceLineRasterizationPropertiesKHR
VkPhysicalDeviceLineRasterizationPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `lineSubPixelPrecisionBits` is the number of bits of subpixel precision in framebuffer coordinates x_f and y_f when rasterizing `line segments`.

If the `VkPhysicalDeviceLineRasterizationPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLineRasterizationPropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_PROPERTIES_KHR`

The `VkPhysicalDeviceRobustness2PropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_robustness2
typedef struct VkPhysicalDeviceRobustness2PropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        robustStorageBufferAccessSizeAlignment;
    VkDeviceSize        robustUniformBufferAccessSizeAlignment;
} VkPhysicalDeviceRobustness2PropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `robustStorageBufferAccessSizeAlignment` is the number of bytes that the range of a storage buffer descriptor is rounded up to when used for bounds-checking when the `robustBufferAccess2` feature is enabled. This value **must** be either 1 or 4.
- `robustUniformBufferAccessSizeAlignment` is the number of bytes that the range of a uniform

buffer descriptor is rounded up to when used for bounds-checking when the `robustBufferAccess2` feature is enabled. This value **must** be a power of two in the range [1, 256].

If the `VkPhysicalDeviceRobustness2PropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceRobustness2PropertiesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_PROPERTIES_EXT`

The `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxGraphicsShaderGroupCount;
    uint32_t           maxIndirectSequenceCount;
    uint32_t           maxIndirectCommandsTokenCount;
    uint32_t           maxIndirectCommandsStreamCount;
    uint32_t           maxIndirectCommandsTokenOffset;
    uint32_t           maxIndirectCommandsStreamStride;
    uint32_t           minSequencesCountBufferOffsetAlignment;
    uint32_t           minSequencesIndexBufferOffsetAlignment;
    uint32_t           minIndirectCommandsBufferOffsetAlignment;
} VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxGraphicsShaderGroupCount` is the maximum number of shader groups in `VkGraphicsPipelineShaderGroupsCreateInfoNV`.
- `maxIndirectSequenceCount` is the maximum number of sequences in `VkGeneratedCommandsInfoNV` and in `VkGeneratedCommandsMemoryRequirementsInfoNV`.
- `maxIndirectCommandsTokenCount` is the maximum number of tokens in `VkIndirectCommandsLayoutCreateInfoNV`.
- `maxIndirectCommandsStreamCount` is the maximum number of streams in `VkIndirectCommandsLayoutCreateInfoNV`.
- `maxIndirectCommandsTokenOffset` is the maximum offset in `VkIndirectCommandsLayoutTokenNV`.
- `maxIndirectCommandsStreamStride` is the maximum stream stride in `VkIndirectCommandsLayoutCreateInfoNV`.
- `minSequencesCountBufferOffsetAlignment` is the minimum alignment for memory addresses which **can** be used in `VkGeneratedCommandsInfoNV`.

- `minSequencesIndexBufferOffsetAlignment` is the minimum alignment for memory addresses which **can** be used in `VkGeneratedCommandsInfoNV`.
- `minIndirectCommandsBufferOffsetAlignment` is the minimum alignment for memory addresses used in `VkIndirectCommandsStreamNV`, and as preprocess buffer in `VkGeneratedCommandsInfoNV`.

If the `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_PROPERTIES_NV`

The `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT {
    VkStructureType          sType;
    void*                    pNext;
    uint32_t                 maxIndirectPipelineCount;
    uint32_t                 maxIndirectShaderObjectCount;
    uint32_t                 maxIndirectSequenceCount;
    uint32_t                 maxIndirectCommandsTokenCount;
    uint32_t                 maxIndirectCommandsTokenOffset;
    uint32_t                 maxIndirectCommandsIndirectStride;
    VkIndirectCommandsInputModeFlagsEXT supportedIndirectCommandsInputModes;
    VkShaderStageFlags       supportedIndirectCommandsShaderStages;
    supportedIndirectCommandsShaderStagesPipelineBinding;
    VkShaderStageFlags
    supportedIndirectCommandsShaderStagesShaderBinding;
    VkBool32                 deviceGeneratedCommandsTransformFeedback;
    VkBool32
    deviceGeneratedCommandsMultiDrawIndirectCount;
} VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxIndirectPipelineCount` is the maximum number of pipelines passed to `vkCreateIndirectExecutionSetEXT`.
- `maxIndirectShaderObjectCount` is the maximum number of shader objects passed to `vkCreateIndirectExecutionSetEXT`. If this value is zero, binding shader objects indirectly is not supported.

- `maxIndirectSequenceCount` is the maximum number of sequences in `VkGeneratedCommandsInfoEXT` and in `VkGeneratedCommandsMemoryRequirementsInfoEXT`.
- `maxIndirectCommandsTokenCount` is the maximum number of tokens in `VkIndirectCommandsLayoutCreateInfoEXT`.
- `maxIndirectCommandsTokenOffset` is the maximum offset in `VkIndirectCommandsLayoutTokenEXT`.
- `maxIndirectCommandsIndirectStride` is the maximum stream stride in `VkIndirectCommandsLayoutCreateInfoEXT`.
- `supportedIndirectCommandsInputModes` indicates the supported input modes.
- `supportedIndirectCommandsShaderStages` indicates the stages which **can** be used to generate indirect commands. Implementations are required to support, at minimum: `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT`, `VK_SHADER_STAGE_COMPUTE_BIT`.
- `supportedIndirectCommandsShaderStagesPipelineBinding` indicates the stages which **can** be used within indirect execution sets for indirectly binding shader stages using pipelines.
- `supportedIndirectCommandsShaderStagesShaderBinding` indicates the stages which **can** be used within indirect execution sets for indirectly binding shader stages using shader objects.
- `deviceGeneratedCommandsTransformFeedback` indicates whether the implementation supports interactions with `VK_EXT_transform_feedback` for pipelines not created with `VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT`.
- `deviceGeneratedCommandsMultiDrawIndirectCount` indicates whether the implementation supports COUNT variants of multi-draw indirect tokens.

If the `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_PROPERTIES_EXT`

The `VkPhysicalDevicePortabilitySubsetPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_portability_subset
typedef struct VkPhysicalDevicePortabilitySubsetPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           minVertexInputBindingStrideAlignment;
} VkPhysicalDevicePortabilitySubsetPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `minVertexInputBindingStrideAlignment` indicates the minimum alignment for vertex input strides. `VkVertexInputBindingDescription::stride` **must** be a multiple of, and at least as large as, this value. The value **must** be a power of two.

If the `VkPhysicalDevicePortabilitySubsetPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDevicePortabilitySubsetPropertiesKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PORTABILITY_SUBSET_PROPERTIES_KHR`

The `VkPhysicalDeviceFragmentShadingRatePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_fragment_shading_rate
typedef struct VkPhysicalDeviceFragmentShadingRatePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         minFragmentShadingRateAttachmentTexelSize;
    VkExtent2D         maxFragmentShadingRateAttachmentTexelSize;
    uint32_t           maxFragmentShadingRateAttachmentTexelSizeAspectRatio;
    VkBool32           primitiveFragmentShadingRateWithMultipleViewports;
    VkBool32           layeredShadingRateAttachments;
    VkBool32           fragmentShadingRateNonTrivialCombinerOps;
    VkExtent2D         maxFragmentSize;
    uint32_t           maxFragmentSizeAspectRatio;
    uint32_t           maxFragmentShadingRateCoverageSamples;
    VkSampleCountFlagBits maxFragmentShadingRateRasterizationSamples;
    VkBool32           fragmentShadingRateWithShaderDepthStencilWrites;
    VkBool32           fragmentShadingRateWithSampleMask;
    VkBool32           fragmentShadingRateWithShaderSampleMask;
    VkBool32           fragmentShadingRateWithConservativeRasterization;
    VkBool32           fragmentShadingRateWithFragmentShaderInterlock;
    VkBool32           fragmentShadingRateWithCustomSampleLocations;
    VkBool32           fragmentShadingRateStrictMultiplyCombiner;
} VkPhysicalDeviceFragmentShadingRatePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minFragmentShadingRateAttachmentTexelSize` indicates minimum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value **must** be less than or equal to the values in `maxFragmentShadingRateAttachmentTexelSize`. Each value **must** be a power-of-two. It **must** be (0,0) if the `attachmentFragmentShadingRate` feature is not supported.
- `maxFragmentShadingRateAttachmentTexelSize` indicates maximum supported width and height of

the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value **must** be greater than or equal to the values in `minFragmentShadingRateAttachmentTexelSize`. Each value **must** be a power-of-two. It **must** be (0,0) if the `attachmentFragmentShadingRate` feature is not supported.

- `maxFragmentShadingRateAttachmentTexelSizeAspectRatio` indicates the maximum ratio between the width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. `maxFragmentShadingRateAttachmentTexelSizeAspectRatio` **must** be a power-of-two value, and **must** be less than or equal to $\max(\text{maxFragmentShadingRateAttachmentTexelSize.width} / \text{minFragmentShadingRateAttachmentTexelSize.height}, \text{maxFragmentShadingRateAttachmentTexelSize.height} / \text{minFragmentShadingRateAttachmentTexelSize.width})$. It **must** be 0 if the `attachmentFragmentShadingRate` feature is not supported.
- `primitiveFragmentShadingRateWithMultipleViewports` specifies whether the `primitive fragment shading rate` **can** be used when multiple viewports are used. If this value is `VK_FALSE`, only a single viewport **must** be used, and applications **must** not write to the `ViewportMaskNV` or `ViewportIndex` built-in when setting `PrimitiveShadingRateKHR`. It **must** be `VK_FALSE` if the `shaderOutputViewportIndex` feature, the `VK_EXT_shader_viewport_index_layer` extension, or the `geometryShader` feature is not supported, or if the `primitiveFragmentShadingRate` feature is not supported.
- `layeredShadingRateAttachments` specifies whether a shading rate attachment image view **can** be created with multiple layers. If this value is `VK_FALSE`, when creating an image view with a `usage` that includes `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, `layerCount` **must** be 1. It **must** be `VK_FALSE` if the `multiview` feature, the `shaderOutputViewportIndex` feature, the `VK_EXT_shader_viewport_index_layer` extension, or the `geometryShader` feature is not supported, or if the `attachmentFragmentShadingRate` feature is not supported.
- `fragmentShadingRateNonTrivialCombinerOps` specifies whether `VkFragmentShadingRateCombinerOpKHR` enums other than `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR` or `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR` **can** be used. It **must** be `VK_FALSE` unless either the `primitiveFragmentShadingRate` or `attachmentFragmentShadingRate` feature is supported.
- `maxFragmentSize` indicates the maximum supported width and height of a fragment. Its `width` and `height` members **must** both be power-of-two values. This limit is purely informational, and is not validated.
- `maxFragmentSizeAspectRatio` indicates the maximum ratio between the width and height of a fragment. `maxFragmentSizeAspectRatio` **must** be a power-of-two value, and **must** be less than or equal to the maximum of the `width` and `height` members of `maxFragmentSize`. This limit is purely informational, and is not validated.
- `maxFragmentShadingRateCoverageSamples` specifies the maximum number of coverage samples supported in a single fragment. `maxFragmentShadingRateCoverageSamples` **must** be less than or equal to the product of the `width` and `height` members of `maxFragmentSize`, and the sample count reported by `maxFragmentShadingRateRasterizationSamples`. `maxFragmentShadingRateCoverageSamples` **must** be less than or equal to `maxSampleMaskWords` × 32 if `fragmentShadingRateWithShaderSampleMask` is supported. This limit is purely informational, and is not validated.

- `maxFragmentShadingRateRasterizationSamples` is a `VkSampleCountFlagBits` value specifying the maximum sample rate supported when a fragment covers multiple pixels. This limit is purely informational, and is not validated.
- `fragmentShadingRateWithShaderDepthStencilWrites` specifies whether the implementation supports writing `FragDepth` or `FragStencilRefEXT` from a fragment shader for multi-pixel fragments. If this value is `VK_FALSE`, writing to those built-ins will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithSampleMask` specifies whether the implementation supports setting valid bits of `VkPipelineMultisampleStateCreateInfo::pSampleMask` to 0 for multi-pixel fragments. If this value is `VK_FALSE`, zeroing valid bits in the sample mask will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithShaderSampleMask` specifies whether the implementation supports reading or writing `SampleMask` for multi-pixel fragments. If this value is `VK_FALSE`, using that built-in will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithConservativeRasterization` specifies whether `conservative rasterization` is supported for multi-pixel fragments. It **must** be `VK_FALSE` if `VK_EXT_conservative_rasterization` is not supported. If this value is `VK_FALSE`, using `conservative rasterization` will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithFragmentShaderInterlock` specifies whether `fragment shader interlock` is supported for multi-pixel fragments. It **must** be `VK_FALSE` if `VK_EXT_fragment_shader_interlock` is not supported. If this value is `VK_FALSE`, using `fragment shader interlock` will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithCustomSampleLocations` specifies whether `custom sample locations` are supported for multi-pixel fragments. It **must** be `VK_FALSE` if `VK_EXT_sample_locations` is not supported. If this value is `VK_FALSE`, using `custom sample locations` will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateStrictMultiplyCombiner` specifies whether `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MUL_KHR` accurately performs a multiplication or not. Implementations where this value is `VK_FALSE` will instead combine rates with an addition. If `fragmentShadingRateNonTrivialCombinerOps` is `VK_FALSE`, implementations **must** report this as `VK_FALSE`. If `fragmentShadingRateNonTrivialCombinerOps` is `VK_TRUE`, implementations **should** report this as `VK_TRUE`.

NOTE

Multiplication of the combiner rates using the fragment width/height in linear space is equivalent to an addition of those values in log2 space. Some implementations inadvertently implemented an addition in linear space due to unclear requirements originating outside of this specification. This resulted in `fragmentShadingRateStrictMultiplyCombiner` being added. Fortunately, this only affects situations where a rate of 1 in either dimension is combined with another rate of 1. All other combinations result in the exact same result as if multiplication was performed in linear space due to the clamping logic, and the fact that both the sum and product of 2 and 2 are equal. In many cases, this limit will not affect the correct operation of applications.

If the `VkPhysicalDeviceFragmentShadingRatePropertiesKHR` structure is included in the `pNext` chain of

the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

These properties are related to [fragment shading rates](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRatePropertiesKHR-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_PROPERTIES_KHR](#)

The [VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV](#) structure is defined as:

```
// Provided by VK_NV_fragment_shading_rate_enums
typedef struct VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkSampleCountFlagBits maxFragmentShadingRateInvocationCount;
} VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **maxFragmentShadingRateInvocationCount** is a [VkSampleCountFlagBits](#) value indicating the maximum number of fragment shader invocations per fragment supported in pipeline, primitive, and attachment fragment shading rates.

If the [VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

These properties are related to [fragment shading rates](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_ENUMS_PROPERTIES_NV](#)
- VUID-VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV-maxFragmentShadingRateInvocationCount-parameter **maxFragmentShadingRateInvocationCount** **must** be a valid [VkSampleCountFlagBits](#) value

The [VkPhysicalDeviceCustomBorderColorPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_custom_border_color
typedef struct VkPhysicalDeviceCustomBorderColorPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxCustomBorderColorSamplers;
} VkPhysicalDeviceCustomBorderColorPropertiesEXT;
```

- `maxCustomBorderColorSamplers` indicates the maximum number of samplers with custom border colors which **can** simultaneously exist on a device.

If the `VkPhysicalDeviceCustomBorderColorPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomBorderColorPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_PROPERTIES_EXT`

The `VkPhysicalDeviceProvokingVertexPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceProvokingVertexPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           provokingVertexModePerPipeline;
    VkBool32           transformFeedbackPreservesTriangleFanProvokingVertex;
} VkPhysicalDeviceProvokingVertexPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `provokingVertexModePerPipeline` indicates whether the implementation supports graphics pipelines with different provoking vertex modes within the same render pass instance.
- `transformFeedbackPreservesTriangleFanProvokingVertex` indicates whether the implementation can preserve the provoking vertex order when writing triangle fan vertices to transform feedback.

If the `VkPhysicalDeviceProvokingVertexPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProvokingVertexPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_PROPERTIES_EXT`

The `VkPhysicalDeviceDescriptorBufferPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           combinedImageSamplerDescriptorSingleArray;
    VkBool32           bufferlessPushDescriptors;
    VkBool32           allowSamplerImageViewPostSubmitCreation;
    VkDeviceSize       descriptorBufferOffsetAlignment;
