 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - all other members of `pSequenceParameterSetVui` are interpreted as defined in section E.3.1 of the [ITU-T H.265 Specification](#);

- if `flags.sps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265SequenceParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

H.265 Picture Parameter Sets (PPS)

Represented by `StdVideoH265PictureParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- the triplet constructed from `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
 - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- if `flags.pps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265PictureParameterSet` are interpreted as defined in section 7.4.3.3 of the [ITU-T H.265 Specification](#).

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                  maxStdVPSCount;
    uint32_t                  maxStdSPSCount;
    uint32_t                  maxStdPPSCount;
    const VkVideoDecodeH265SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoDecodeH265SessionParametersCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxStdVPSCount** is the maximum number of [H.265 VPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- **maxStdSPSCount** is the maximum number of [H.265 SPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- **maxStdPPSCount** is the maximum number of [H.265 PPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- **pParametersAddInfo** is **NULL** or a pointer to a [VkVideoDecodeH265SessionParametersAddInfoKHR](#) structure specifying H.265 parameters to add upon object creation.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-sType-sType **must** be [VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_CREATE_INFO_KHR](#)
- VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-pParametersAddInfo-parameter
If **pParametersAddInfo** is not **NULL**, **pParametersAddInfo** **must** be a valid pointer to a valid [VkVideoDecodeH265SessionParametersAddInfoKHR](#) structure

Structure Chaining

Extends the structure

- [VkVideoSessionParametersCreateInfoKHR](#)

The [VkVideoDecodeH265SessionParametersAddInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265SessionParametersAddInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 stdVPSCount;
    const StdVideoH265VideoParameterSet* pStdVPSSs;
    uint32_t                 stdSPSCount;
    const StdVideoH265SequenceParameterSet* pStdSPSSs;
    uint32_t                 stdPPSCount;
    const StdVideoH265PictureParameterSet* pStdPPSSs;
} VkVideoDecodeH265SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdVPSCount` is the number of elements in the `pStdVPSSs` array.
- `pStdVPSSs` is a pointer to an array of `StdVideoH265VideoParameterSet` structures describing the H.265 VPS entries to add.
- `stdSPSCount` is the number of elements in the `pStdSPSSs` array.
- `pStdSPSSs` is a pointer to an array of `StdVideoH265SequenceParameterSet` structures describing the H.265 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSSs` array.
- `pStdPPSSs` is a pointer to an array of `StdVideoH265PictureParameterSet` structures describing the H.265 PPS entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a `video session parameters` object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the `video session parameters` object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

Valid Usage

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04833
The `vps_video_parameter_set_id` member of each `StdVideoH265VideoParameterSet` structure specified in the elements of `pStdVPSSs` **must** be unique within `pStdVPSSs`
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04834
The pair constructed from the `sps_video_parameter_set_id` and `sps_seq_parameter_set_id`

members of each `StdVideoH265SequenceParameterSet` structure specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04835

The triplet constructed from the `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` members of each `StdVideoH265PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdVPSSs-parameter
If `stdVPSCount` is not 0, `pStdVPSSs` **must** be a valid pointer to an array of `stdVPSCount` `StdVideoH265VideoParameterSet` values
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdSPSSs-parameter
If `stdSPSCount` is not 0, `pStdSPSSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` values
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdPPSSs-parameter
If `stdPPSCount` is not 0, `pStdPPSSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` values

Structure Chaining

Extends the structure

- `VkVideoSessionParametersUpdateInfoKHR`

Inline Parameter Sets

In case of `video sessions` created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, the application **can** also specify the active parameter sets *inline* by including an instance of the `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure in the `pNext` chain of `VkVideoDecodeInfoKHR`.

The `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265 with VK_KHR_video_maintenance2
typedef struct VkVideoDecodeH265InlineSessionParametersInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoH265VideoParameterSet* pStdVPS;
    const StdVideoH265SequenceParameterSet* pStdSPS;
    const StdVideoH265PictureParameterSet* pStdPPS;
} VkVideoDecodeH265InlineSessionParametersInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pStdVPS** is **NULL** or a pointer to an instance of the **StdVideoH265VideoParameterSet** structure describing the **active H.265 VPS**.
- **pStdSPS** is **NULL** or a pointer to an instance of the **StdVideoH265SequenceParameterSet** structure describing the **active H.265 SPS**.
- **pStdPPS** is **NULL** or a pointer to an instance of the **StdVideoH265PictureParameterSet** structure describing the **active H.265 PPS**.

If **pStdVPS**, **pStdSPS**, or **pStdPPS** is not **NULL**, the issued video decode operations will use the parameter sets specified by them, respectively, instead of the corresponding active parameter sets being sourced from the bound video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-sType-sType **must** be **VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_INLINE_SESSION_PARAMETERS_INFO_KHR**
- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-pStdVPS-parameter
If **pStdVPS** is not **NULL**, **pStdVPS** **must** be a valid pointer to a valid **StdVideoH265VideoParameterSet** value
- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-pStdSPS-parameter
If **pStdSPS** is not **NULL**, **pStdSPS** **must** be a valid pointer to a valid **StdVideoH265SequenceParameterSet** value
- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-pStdPPS-parameter
If **pStdPPS** is not **NULL**, **pStdPPS** **must** be a valid pointer to a valid **StdVideoH265PictureParameterSet** value

Structure Chaining

Extends the structure

- **VkVideoDecodeInfoKHR**

48.13.6. H.265 Decoding Parameters

The `VkVideoDecodeH265PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoDecodeH265PictureInfo* pStdPictureInfo;
    uint32_t                 sliceSegmentCount;
    const uint32_t*          pSliceSegmentOffsets;
} VkVideoDecodeH265PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a `StdVideoDecodeH265PictureInfo` structure specifying [H.265 picture information](#).
- `sliceSegmentCount` is the number of elements in `pSliceSegmentOffsets`.
- `pSliceSegmentOffsets` is a pointer to an array of `sliceSegmentCount` offsets specifying the start offset of the slice segments of the picture within the video bitstream buffer range specified in `VkVideoDecodeInfoKHR`.

This structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR` to specify the codec-specific picture information for an [H.265 decode operation](#).

Decode Output Picture Information

When this structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR`, the information related to the [decode output picture](#) is defined as follows:

- The image subregion used is determined according to the [H.265 Decode Picture Data Access](#) section.
- The decode output picture is associated with the [H.265 picture information](#) provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoDecodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `reserved` is used only for padding purposes and is otherwise ignored;
- `flags.IrapPicFlag` as defined in section 3.73 of the [ITU-T H.265 Specification](#);
- `flags.IdrPicFlag` as defined in section 3.67 of the [ITU-T H.265 Specification](#);
- `flags.IsReference` as defined in section 3.132 of the [ITU-T H.265 Specification](#);
- `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` are

used to identify the active parameter sets, as described below;

- `PicOrderCntVal` as defined in section 8.3.1 of the [ITU-T H.265 Specification](#);
- `NumBitsForSTRefPicSetInSlice` is the number of bits used in `st_ref_pic_set` when `short_term_ref_pic_set_sps_flag` is 0, or 0 otherwise, as defined in sections 7.4.7 and 7.4.8 of the [ITU-T H.265 Specification](#);
- `NumDeltaPocsOfRefRpsIdx` is the value of `NumDeltaPocs[RefRpsIdx]` when `short_term_ref_pic_set_sps_flag` is 1, or 0 otherwise, as defined in sections 7.4.7 and 7.4.8 of the [ITU-T H.265 Specification](#);
- `RefPicSetStCurrBefore`, `RefPicSetStCurrAfter`, and `RefPicSetLtCurr` are interpreted as defined in section 8.3.2 of the [ITU-T H.265 Specification](#) where each element of these arrays either identifies an [active reference picture](#) using its [DPB slot](#) index or contains the value `STD_VIDEO_H265_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
- all other members are interpreted as defined in section 8.3.2 of the [ITU-T H.265 Specification](#).

Reference picture setup is controlled by the value of `StdVideoDecodeH265PictureInfo::flags.IsReference`. If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the corresponding [DPB slot](#). If `StdVideoDecodeH265PictureInfo::flags.IsReference` is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The members of the `StdVideoDecodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the specified [inline parameter sets](#) or from the bound video session parameters object, as follows:

- The *active VPS* is the [VPS](#) identified by the key specified in `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`.
- The *active SPS* is the [SPS](#) identified by the key specified by the pair constructed from `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`.
- The *active PPS* is the [PPS](#) identified by the key specified by the triplet constructed from `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id`.

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR](#) and any of the active parameter sets are specified [inline](#), then the corresponding inline parameter set is used. Otherwise, the parameter set in question is sourced from the bound video session parameters object.

Valid Usage (Implicit)

- `VUID-VkVideoDecodeH265PictureInfoKHR-sType-sType`
`sType` must be [VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PICTURE_INFO_KHR](#)
- `VUID-VkVideoDecodeH265PictureInfoKHR-pStdPictureInfo-parameter`

`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeH265PictureInfo` value

- `VOID-VkVideoDecodeH265PictureInfoKHR-pSliceSegmentOffsets-parameter`
`pSliceSegmentOffsets` **must** be a valid pointer to an array of `sliceSegmentCount uint32_t` values
- `VOID-VkVideoDecodeH265PictureInfoKHR-sliceSegmentCount-arraylength`
`sliceSegmentCount` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkVideoDecodeInfoKHR`

The `VkVideoDecodeH265DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265DpbSlotInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoDecodeH265ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeH265DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoDecodeH265ReferenceInfo` structure specifying reference picture information described in section 8.3 of the [ITU-T H.265 Specification](#).

This structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [H.265 decode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots`, one element is added to the list of [active reference pictures](#) used by the video decode operation for each element of `VkVideoDecodeInfoKHR::pReferenceSlots` as follows:

- The image subregion used is determined according to the [H.265 Decode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoDecodeInfoKHR::pReferenceSlots`.
- The reference picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, the information related to the **reconstructed picture** is defined as follows:

- The image subregion used is determined according to the [H.265 Decode Picture Data Access](#) section.
- If **reference picture setup** is requested, then the reconstructed picture is used to **activate** the **DPB slot** with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the **H.265 reference information** provided in `pStdReferenceInfo`.

Std Reference Information

The members of the `StdVideoDecodeH265ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `flags.unused_for_reference` is used to indicate whether the picture is marked as “unused for reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- all other members are interpreted as defined in section 8.3 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265DpbSlotInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_DPB_SLOT_INFO_KHR`
- VUID-VkVideoDecodeH265DpbSlotInfoKHR-pStdReferenceInfo-parameter `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeH265ReferenceInfo` value

Structure Chaining

Extends the structure

- `VkVideoReferenceSlotInfoKHR`

48.13.7. H.265 Decode Requirements

This section describes the **required** H.265 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 59. Required *Video Std Header Versions*

Video Std Header Name	Version
vulkan_video_codec_h265std_decode	1.0.0

Table 60. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹
VkVideoCapabilitiesKHR		
flags	-	min
minBitstreamBufferOffsetAlignment	4096	max
minBitstreamBufferSizeAlignment	4096	max
pictureAccessGranularity	(64,64)	max
minCodedExtent	-	max
maxCodedExtent	-	min
maxDpbSlots	0	min
maxActiveReferencePictures	0	min
VkVideoDecodeCapabilitiesKHR		
flags	VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR	min
VkVideoDecodeH265CapabilitiesKHR		
maxLevelIdc	STD_VIDEO_H265_LEVEL_IDC_1_0	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

48.14. VP9 Decode Operations

Video decode operations using an [VP9 decode profile](#) can be used to decode elementary video stream sequences compliant with the [VP9 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 8 of the [VP9 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the [StdVideoDecodeVP9PictureInfo](#) structure specifying the [VP9 picture information](#).
- The contents of the provided video bitstream buffer range are interpreted as defined in the [VP9 Decode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [active reference pictures](#), [decode output picture](#), and optional [reconstructed picture](#) is accessed as defined in the [VP9 Decode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [VP9 picture information](#).

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the [VP9 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete [unsuccessfully](#).

48.14.1. VP9 Decode Bitstream Data Access

The video bitstream buffer range **should** contain the bitstream that represents an entire frame, as defined in section 6.1, and this data is interpreted as defined in section 7.1 of the [VP9 Specification](#), respectively.

The offset specified in [VkVideoDecodeVP9PictureInfoKHR::uncompressedHeaderOffset](#) **should** specify the starting offset of the uncompressed header of the frame, as defined in section 6.2 of the [VP9 Specification](#).

The offset specified in [VkVideoDecodeVP9PictureInfoKHR::compressedHeaderOffset](#) **should** specify the starting offset of the compressed header of the frame, as defined in section 6.3 of the [VP9 Specification](#).

The offset specified in [VkVideoDecodeVP9PictureInfoKHR::tilesOffset](#) **should** specify the starting offset of the frame tile data, as defined in section 6.4 of the [VP9 Specification](#).

48.14.2. VP9 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by [VkVideoCapabilitiesKHR::pictureAccessGranularity](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used [video profile](#). Accordingly, the complete image subregion of a [decode output picture](#), [reference picture](#), or [reconstructed picture](#) accessed by video coding operations using an [VP9 decode profile](#) is defined as the set of texels within the coordinate range:

([0,endX), [0,endY))

Where:

- endX equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- endY equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video decode operations using an `VP9 decode profile`, any access to a picture at the coordinates (x,y), as defined by the `VP9 Specification`, is an access to the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates (x,y).

48.14.3. VP9 Reference Names and Semantics

Individual reference frames used in the decoding process have different semantics, as defined in section 7.4.12 of the `VP9 Specification`. The VP9 semantics associated with a reference picture are indicated by the corresponding enumeration constant defined in the Video Std enumeration type `StdVideoVP9ReferenceName`:

- `STD_VIDEO_VP9_REFERENCE_NAME_INTRA_FRAME` identifies the reference used for intra coding (`INTRA_FRAME`), as defined in sections 2 and 8.5.1 of the `VP9 Specification`.
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 8.5.2 of the `VP9 Specification`:
 - `STD_VIDEO_VP9_REFERENCE_NAME_LAST_FRAME` identifies the `LAST_FRAME` reference
 - `STD_VIDEO_VP9_REFERENCE_NAME_GOLDEN_FRAME` identifies the `GOLDEN_FRAME` reference
 - `STD_VIDEO_VP9_REFERENCE_NAME_ALTREF_FRAME` identifies the `ALTREF_FRAME` reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

48.14.4. VP9 Decode Profile

A video profile supporting VP9 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR` and adding a `VkVideoDecodeVP9ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeVP9ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkVideoDecodeVP9ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoVP9Profile  stdProfile;
} VkVideoDecodeVP9ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfile` is a `StdVideoVP9Profile` value specifying the VP9 codec profile, as defined in section 7.2 of the [VP9 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeVP9ProfileInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_VP9_PROFILE_INFO_KHR`

Structure Chaining

Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

48.14.5. VP9 Decode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [VP9 decode profile](#), the `VkVideoCapabilitiesKHR::pNext` chain **must** include a `VkVideoDecodeVP9CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoDecodeVP9CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkVideoDecodeVP9CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoVP9Level    maxLevel;
} VkVideoDecodeVP9CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevel` is a `StdVideoVP9Level` value specifying the maximum VP9 level supported by the profile, as defined in section A.1 of the [VP9 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeVP9CapabilitiesKHR-sType-sType
sType must be VK_STRUCTURE_TYPE_VIDEO_DECODE_VP9_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- [VkVideoCapabilitiesKHR](#)

48.14.6. VP9 Decoding Parameters

The [VkVideoDecodeVP9PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkVideoDecodeVP9PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoDecodeVP9PictureInfo* pStdPictureInfo;
    int32_t                  referenceNameSlotIndices
[VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR];
    uint32_t                  uncompressedHeaderOffset;
    uint32_t                  compressedHeaderOffset;
    uint32_t                  tilesOffset;
} VkVideoDecodeVP9PictureInfoKHR;
```

- sType is a [VkStructureType](#) value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdPictureInfo is a pointer to a [StdVideoDecodeVP9PictureInfo](#) structure specifying [VP9 picture information](#).
- referenceNameSlotIndices is an array of three ([VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR](#), which is equal to the Video Std definition [STD_VIDEO_VP9_REFS_PER_FRAME](#)) signed integer values specifying the index of the [DPB slot](#) or a negative integer value for each [VP9 reference name](#) used for inter coding. In particular, the DPB slot index for the VP9 reference name [frame](#) is specified in [referenceNameSlotIndices\[frame - STD_VIDEO_VP9_REFERENCE_NAME_LAST_FRAME\]](#).
- uncompressedHeaderOffset is the byte offset of the uncompressed frame header, as defined in section 6.2 of the [VP9 Specification](#).
- compressedHeaderOffset is the byte offset of the compressed frame header, as defined in section 6.3 of the [VP9 Specification](#).
- tilesOffset is the byte offset of the frame tile data, as defined in section 6.4 of the [VP9 Specification](#).

This structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR` to specify the codec-specific picture information for an `VP9 decode operation`.

Decode Output Picture Information

When this structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR`, the information related to the `decode output picture` is defined as follows:

- The image subregion used is determined according to the `VP9 Decode Picture Data Access` section.
- The decode output picture is associated with the `VP9 picture information` provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoDecodeVP9PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `ref_frame_sign_bias_mask` is a bitmask where bit index `i` corresponds to `ref_frame_sign_bias[i]` as defined in section 7.2 of the `VP9 Specification`;
- the `StdVideoVP9ColorConfig` structure pointed to by `pColorConfig` is interpreted as follows:
 - `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
 - all other members of `StdVideoVP9ColorConfig` are interpreted as defined in sections 6.2, 6.2.2, and 7.2.2 of the `VP9 Specification`;
- the `StdVideoVP9LoopFilter` structure pointed to by `pLoopFilter` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - `update_ref_delta` is a bitmask where bit index `i` is interpreted as the value of `update_ref_delta` corresponding to element `i` of `loop_filter_ref_deltas` as defined in section 7.2.8 of the `VP9 Specification`;
 - `update_mode_delta` is a bitmask where bit index `i` is interpreted as the value of `update_mode_delta` corresponding to element `i` of `loop_filter_mode_deltas` as defined in section 7.2.8 of the `VP9 Specification`;
 - all other members of `StdVideoVP9LoopFilter` are interpreted as defined in section 7.2.8 of the `VP9 Specification`;

NOTE

If the syntax elements corresponding to `loop_filter_ref_deltas` and `loop_filter_mode_deltas` are not present, the application should specify the previous values, as defined in section 7.2.8 of the `VP9 Specification`.

- if `flags.segmentation_enabled` is set, then the `StdVideoVP9Segmentation` structure pointed to by `pSegmentation` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;

- the elements of **FeatureEnabled** are bitmasks where bit index *j* of element *i* corresponds to **FeatureEnabled[i][j]** as defined in section 6.2.11 of the [VP9 Specification](#);
- **FeatureData** is interpreted as defined in section 6.2.11 of the [VP9 Specification](#);
- all other members of **StdVideoVP9Segmentation** are interpreted as defined in section 7.2.10 of the [VP9 Specification](#);
- all other members are interpreted as defined in section 7.2 of the [VP9 Specification](#).

Reference picture setup is controlled by the value of **StdVideoDecodeVP9PictureInfo::refresh_frame_flags**. If it is not zero and a **reconstructed picture** is specified, then the latter is used as the target of picture reconstruction to **activate** the **DPB slot** specified in **pDecodeInfo->pSetupReferenceSlot->slotIndex**. If **StdVideoDecodeVP9PictureInfo::refresh_frame_flags** is zero, but a **reconstructed picture** is specified, then the corresponding picture reference associated with the **DPB slot** is invalidated, as described in the [DPB Slot States](#) section.

Valid Usage (Implicit)

- VUID-VkVideoDecodeVP9PictureInfoKHR-sType-sType **sType** **must** be [VK_STRUCTURE_TYPE_VIDEO_DECODE_VP9_PICTURE_INFO_KHR](#)
- VUID-VkVideoDecodeVP9PictureInfoKHR-pStdPictureInfo-parameter **pStdPictureInfo** **must** be a valid pointer to a valid **StdVideoDecodeVP9PictureInfo** value

Structure Chaining

Extends the structure

- [VkVideoDecodeInfoKHR](#)

NOTE

VP9 decode operations do not need any std reference information to be specified for the active reference pictures and the optional reconstructed picture. Accordingly, no DPB slot info structure exists in the API that would need to be chained to the corresponding [VkVideoReferenceSlotInfoKHR](#) structures and no **StdVideoDecodeVP9ReferenceInfo** structure exists in the VP9 Video Std Headers.

[VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR](#) is the length of the array of DPB slot or VP9 reference names passed in [VkVideoDecodeVP9PictureInfoKHR::referenceNameSlotIndices](#).

```
#define VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR 3U
```

48.14.7. VP9 Decode Requirements

This section describes the **required** VP9 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR](#), as returned by [vkGetPhysicalDeviceQueueFamilyProperties2](#) in [VkQueueFamilyVideoPropertiesKHR](#)

::videoCodecOperations.

Table 61. Required *Video Std Header Versions*

Video Std Header Name	Version
vulkan_video_codec_vp9std_decode	1.0.0

Table 62. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹
VkVideoCapabilitiesKHR		
flags	-	min
minBitstreamBufferOffsetAlignment	4096	max
minBitstreamBufferSizeAlignment	4096	max
pictureAccessGranularity	(64,64)	max
minCodedExtent	-	max
maxCodedExtent	-	min
maxDpbSlots	0	min
maxActiveReferencePictures	0	min
VkVideoDecodeCapabilitiesKHR		
flags	VK_VIDEO_DECODE_C APABILITY_DPB_AND _OUTPUT_COINCIDE_ BIT_KHR or VK_VIDEO_DECODE_C APABILITY_DPB_AND _OUTPUT_DISTINCT_ BIT_KHR	min
VkVideoDecodeVP9CapabilitiesKHR		
maxLevel	STD_VIDEO_VP9_LEVEL_2 _0	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

48.15. AV1 Decode Operations

Video decode operations using an [AV1 decode profile](#) **can** be used to decode elementary video stream sequences compliant with the [AV1 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 7 of the [AV1 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The `StdVideoAV1SequenceHeader` structure stored in the bound video session parameters object specifying the [active sequence header](#).
 - The `StdVideoDecodeAV1PictureInfo` structure specifying the [AV1 picture information](#).
 - The `StdVideoDecodeAV1ReferenceInfo` structures specifying the [AV1 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The contents of the provided video bitstream buffer range are interpreted as defined in the [AV1 Decode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [active reference pictures](#), [decode output picture](#), and optional [reconstructed picture](#) is accessed as defined in the [AV1 Decode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [AV1 picture information](#).

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the [AV1 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete [unsuccessfully](#).

48.15.1. AV1 Decode Bitstream Data Access

The video bitstream buffer range **should** contain one or more frame OBUs, comprised of a frame header OBU and tile group OBU, that together represent an entire frame, as defined in sections 5.10, 5.9, and 5.11, and this data is interpreted as defined in sections 6.9, 6.8, and 6.10 of the [AV1 Specification](#), respectively.

The offset specified in `VkVideoDecodeAV1PictureInfoKHR::frameHeaderOffset` **should** specify the starting offset of the frame header OBU of the frame.

NOTE

When the tiles of the frame are encoded into multiple tile groups, each frame OBU has a separate frame header OBU but their content is expected to match per the requirements of the [AV1 Specification](#). Accordingly, the offset specified in `frameHeaderOffset` **can** be the offset of any of the otherwise identical frame header OBUs when multiple tile groups are present.

The offsets and sizes provided in `VkVideoDecodeAV1PictureInfoKHR::pTileOffsets` and `VkVideoDecodeAV1PictureInfoKHR::pTileSizes`, respectively, **should** specify the starting offsets and

sizes corresponding to each tile within the video bitstream buffer range.

48.15.2. AV1 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used `video profile`. Accordingly, the complete image subregion of a `decode output picture`, `reference picture`, or `reconstructed picture` accessed by video coding operations using an `AV1 decode profile` is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video decode operations using an `AV1 decode profile`, any access to a picture at the coordinates (x, y) , as defined by the `AV1 Specification`, is an access to the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates (x, y) .

48.15.3. AV1 Reference Names and Semantics

Individual reference frames used in the decoding process have different semantics, as defined in section 6.10.24 of the `AV1 Specification`. The AV1 semantics associated with a reference picture are indicated by the corresponding enumeration constant defined in the Video Std enumeration type `StdVideoAV1ReferenceName`:

- `STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME` identifies the reference used for intra coding (`INTRA_FRAME`), as defined in sections 2 and 7.11.2 of the `AV1 Specification`.
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 7.11.3 of the `AV1 Specification`:
 - `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME` identifies the `LAST_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_LAST2_FRAME` identifies the `LAST2_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_LAST3_FRAME` identifies the `LAST3_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_GOLDEN_FRAME` identifies the `GOLDEN_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_BWDREF_FRAME` identifies the `BWDREF_FRAME` reference

- `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF2_FRAME` identifies the `ALTREF2_FRAME` reference
- `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF_FRAME` identifies the `ALTREF_FRAME` reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

48.15.4. AV1 Decode Profile

A video profile supporting AV1 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` and adding a `VkVideoDecodeAV1ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeAV1ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoAV1Profile  stdProfile;
    VkBool32           filmGrainSupport;
} VkVideoDecodeAV1ProfileInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **stdProfile** is a [StdVideoAV1Profile](#) value specifying the AV1 codec profile, as defined in section A.2 of the [AV1 Specification](#).
- **filmGrainSupport** specifies whether AV1 film grain, as defined in section 7.8.3 of the [AV1 Specification](#), **can** be used with the video profile. When this member is [VK_TRUE](#), video session objects created against the video profile will be able to decode pictures that have [film grain](#) enabled.

NOTE

Enabling `filmGrainSupport` **may** increase the memory requirements of video sessions and/or video picture resources on some implementations.

Valid Usage (Implicit)

- `VUID-VkVideoDecodeAV1ProfileInfoKHR-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_PROFILE_INFO_KHR`

Structure Chaining

Extends the structures

- `VkQueryPoolCreateInfo`

- [VkVideoProfileInfoKHR](#)

48.15.5. AV1 Decode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [AV1 decode profile](#), the [VkVideoCapabilitiesKHR::pNext](#) chain **must** include a [VkVideoDecodeAV1CapabilitiesKHR](#) structure that will be filled with the profile-specific capabilities.

The [VkVideoDecodeAV1CapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoAV1Level    maxLevel;
} VkVideoDecodeAV1CapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxLevel](#) is a [StdVideoAV1Level](#) value specifying the maximum AV1 level supported by the profile, as defined in section A.3 of the [AV1 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1CapabilitiesKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_CAPABILITIES_KHR](#)

Structure Chaining

Extends the structure

- [VkVideoCapabilitiesKHR](#)

48.15.6. AV1 Decode Parameter Sets

[Video session parameters](#) objects created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#) contain a single instance of the following parameter set:

AV1 Sequence Header

Represented by [StdVideoAV1SequenceHeader](#) structures and interpreted as follows:

- [flags.reserved](#) and [reserved1](#) are used only for padding purposes and are otherwise ignored;

- the `StdVideoAV1ColorConfig` structure pointed to by `pColorConfig` is interpreted as follows:
 - `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
 - all other members of `StdVideoAV1ColorConfig` are interpreted as defined in section 6.4.2 of the [AV1 Specification](#);
- if `flags.timing_info_present_flag` is set, then the `StdVideoAV1TimingInfo` structure pointed to by `pTimingInfo` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoAV1TimingInfo` are interpreted as defined in section 6.4.3 of the [AV1 Specification](#);
- all other members of `StdVideoAV1SequenceHeader` are interpreted as defined in section 6.4 of the [AV1 Specification](#).

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure specifying the contents of the object.

The `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1SessionParametersCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoAV1SequenceHeader* pStdSequenceHeader;
} VkVideoDecodeAV1SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdSequenceHeader` is a pointer to a `StdVideoAV1SequenceHeader` structure describing the [AV1 sequence header](#) entry to store in the created object.

NOTE

As AV1 video session parameters objects will only ever contain a single AV1 sequence header, this has to be specified at object creation time and such video session parameters objects cannot be updated using the `vkUpdateVideoSessionParametersKHR` command. When a new AV1 sequence header is decoded from the input video bitstream the application needs to create a new video session parameters object to store it.

Valid Usage (Implicit)

- VOID-VkVideoDecodeAV1SessionParametersCreateInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_SESSION_PARAMETERS_CREATE_INFO_KHR`

- VUID-VkVideoDecodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-parameter
pStdSequenceHeader **must** be a valid pointer to a valid **StdVideoAV1SequenceHeader** value

Structure Chaining

Extends the structure

- [VkVideoSessionParametersCreateInfoKHR](#)

Inline Parameter Sets

In case of [video sessions](#) created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#) and with [VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR](#), the application **can** also specify the active [sequence header](#) *inline* by including an instance of the [VkVideoDecodeAV1InlineSessionParametersInfoKHR](#) structure in the **pNext** chain of [VkVideoDecodeInfoKHR](#).

The [VkVideoDecodeAV1InlineSessionParametersInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_av1 with VK_KHR_video_maintenance2
typedef struct VkVideoDecodeAV1InlineSessionParametersInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoAV1SequenceHeader* pStdSequenceHeader;
} VkVideoDecodeAV1InlineSessionParametersInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pStdSequenceHeader** is **NULL** or a pointer to an instance of the [StdVideoAV1SequenceHeader](#) structure describing the [active AV1 sequence header](#).

If **pStdSequenceHeader** is not **NULL**, the issued video decode operations will use the specified sequence header parameters instead of the active sequence header being sourced from the bound video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1InlineSessionParametersInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_INLINE_SESSION_PARAMETERS_INFO_KHR](#)
- VUID-VkVideoDecodeAV1InlineSessionParametersInfoKHR-pStdSequenceHeader-parameter
 If **pStdSequenceHeader** is not **NULL**, **pStdSequenceHeader** **must** be a valid pointer to a valid

Structure Chaining

Extends the structure

- [VkVideoDecodeInfoKHR](#)

48.15.7. AV1 Decoding Parameters

The [VkVideoDecodeAV1PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoDecodeAV1PictureInfo* pStdPictureInfo;
    int32_t                  referenceNameSlotIndices
[VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR];
    uint32_t                 frameHeaderOffset;
    uint32_t                 tileCount;
    const uint32_t*          pTileOffsets;
    const uint32_t*          pTileSizes;
} VkVideoDecodeAV1PictureInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [pStdPictureInfo](#) is a pointer to a [StdVideoDecodeAV1PictureInfo](#) structure specifying [AV1 picture information](#).
- [referenceNameSlotIndices](#) is an array of seven ([VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR](#), which is equal to the Video Std definition [STD_VIDEO_AV1_REFS_PER_FRAME](#)) signed integer values specifying the index of the [DPB slot](#) or a negative integer value for each [AV1 reference name](#) used for inter coding. In particular, the DPB slot index for the AV1 reference name [frame](#) is specified in [referenceNameSlotIndices\[frame - STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME\]](#).
- [frameHeaderOffset](#) is the byte offset of the AV1 frame header OBU, as defined in section 5.9 of the [AV1 Specification](#), within the video bitstream buffer range specified in [VkVideoDecodeInfoKHR](#).
- [tileCount](#) is the number of elements in [pTileOffsets](#) and [pTileSizes](#).
- [pTileOffsets](#) is a pointer to an array of [tileCount](#) integers specifying the byte offset of the tiles of the picture within the video bitstream buffer range specified in [VkVideoDecodeInfoKHR](#).
- [pTileSizes](#) is a pointer to an array of [tileCount](#) integers specifying the byte size of the tiles of the picture within the video bitstream buffer range specified in [VkVideoDecodeInfoKHR](#).

This structure is specified in the [pNext](#) chain of the [VkVideoDecodeInfoKHR](#) structure passed to

[vkCmdDecodeVideoKHR](#) to specify the codec-specific picture information for an [AV1 decode operation](#).

Decode Output Picture Information

When this structure is specified in the [pNext](#) chain of the [VkVideoDecodeInfoKHR](#) structure passed to [vkCmdDecodeVideoKHR](#), the information related to the [decode output picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Decode Picture Data Access](#) section.
- The decode output picture is associated with the [AV1 picture information](#) provided in [pStdPictureInfo](#).

Std Picture Information

The members of the [StdVideoDecodeAV1PictureInfo](#) structure pointed to by [pStdPictureInfo](#) are interpreted as follows:

- [flags.reserved](#), [reserved1](#), and [reserved2](#) are used only for padding purposes and are otherwise ignored;
- [flags.apply_grain](#) indicates that film grain is enabled for the decoded picture, as defined in section 6.8.20 of the [AV1 Specification](#);
- [OrderHint](#), [OrderHints](#), and [expectedFrameId](#) are interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- the [StdVideoAV1TileInfo](#) structure pointed to by [pTileInfo](#) is interpreted as follows:
 - [flags.reserved](#) and [reserved1](#) are used only for padding purposes and are otherwise ignored;
 - [pMiColStarts](#) is a pointer to an array of [TileCols](#) number of unsigned integers that corresponds to [MiColStarts](#) defined in section 6.8.14 of the [AV1 Specification](#);
 - [pMiRowStarts](#) is a pointer to an array of [TileRows](#) number of unsigned integers that corresponds to [MiRowStarts](#) defined in section 6.8.14 of the [AV1 Specification](#);

NOTE

Historically some applications incorrectly specified the values in [pMiColStarts](#) and [pMiRowStarts](#) in terms of superblocks instead of mode info blocks, therefore it is recommended for implementations to ignore the values specified in [pMiColStarts](#) and [pMiRowStarts](#). Instead, the values should be calculated based on [flags.uniform_tile_spacing_flag](#), [pWidthInSbsMinus1](#), [pHeightInSbsMinus1](#), the [sequence header](#) parameter [flags.use_128x128_superblock](#), and the coded extent of the decoded picture.

- [pWidthInSbsMinus1](#) is a pointer to an array of [TileCols](#) number of unsigned integers that corresponds to [width_in_sbs_minus_1](#) defined in section 6.8.14 of the [AV1 Specification](#);
- [pHeightInSbsMinus1](#) is a pointer to an array of [TileRows](#) number of unsigned integers that corresponds to [height_in_sbs_minus_1](#) defined in section 6.8.14 of the [AV1 Specification](#);
- all other members of [StdVideoAV1TileInfo](#) are interpreted as defined in section 6.8.14 of

the [AV1 Specification](#);

- the `StdVideoAV1Quantization` structure pointed to by `pQuantization` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoAV1Quantization` are interpreted as defined in section 6.8.11 of the [AV1 Specification](#);
- if `flags.segmentation_enabled` is set, then the `StdVideoAV1Segmentation` structure pointed to by `pSegmentation` is interpreted as follows:
 - the elements of `FeatureEnabled` are bitmasks where bit index *j* of element *i* corresponds to `FeatureEnabled[i][j]` as defined in section 5.9.14 of the [AV1 Specification](#);
 - `FeatureData` is interpreted as defined in section 5.9.14 of the [AV1 Specification](#);
- the `StdVideoAV1LoopFilter` structure pointed to by `pLoopFilter` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - `update_ref_delta` is a bitmask where bit index *i* is interpreted as the value of `update_ref_delta` corresponding to element *i* of `loop_filter_ref_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);
 - `update_mode_delta` is a bitmask where bit index *i* is interpreted as the value of `update_mode_delta` corresponding to element *i* of `loop_filter_mode_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);
 - all other members of `StdVideoAV1LoopFilter` are interpreted as defined in section 6.8.10 of the [AV1 Specification](#);

NOTE

If the syntax elements corresponding to `loop_filter_ref_deltas` and `loop_filter_mode_deltas` are not present or otherwise defined according to section 5.9.11 of the [AV1 Specification](#), the application should specify the previous values, as defined in section 6.8.10 of the [AV1 Specification](#).

- if `flags.enable_cdef` is set in the [active sequence header](#), then the members of the `StdVideoAV1CDEF` structure pointed to by `pCDEF` are interpreted as follows:
 - `cdef_y_sec_strength` and `cdef_uv_sec_strength` are the bitstream values of the corresponding syntax elements defined in section 5.9.19 of the [AV1 Specification](#);
 - all other members of `StdVideoAV1CDEF` are interpreted as defined in section 6.10.14 of the [AV1 Specification](#);
- if `flags.UsesLr` is set in the [active sequence header](#), then the `StdVideoAV1LoopRestoration` structure pointed to by `pLoopRestoration` is interpreted as follows:
 - `LoopRestorationSize[plane]` is interpreted as $\log_2(\text{size}) - 5$, where `size` is the value of `LoopRestorationSize[plane]` as defined in section 6.10.15 of the [AV1 Specification](#).
 - all other members of `StdVideoAV1LoopRestoration` are defined as in section 6.10.15 of the [AV1 Specification](#);
- the members of the `StdVideoAV1GlobalMotion` structure pointed to by `pGlobalMotion` are interpreted as defined in section 7.10 of the [AV1 Specification](#);
- if `flags.film_grain_params_present` is set in the [active sequence header](#), then the

`StdVideoAV1FilmGrain` structure pointed to by `pFilmGrain` is interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- all other members of `StdVideoAV1FilmGrain` are interpreted as defined in section 6.8.20 of the [AV1 Specification](#);
- all other members are interpreted as defined in section 6.8 of the [AV1 Specification](#).

When [film grain is enabled](#) for the decoded frame, the `flags.update_grain` and `film_grain_params_ref_idx` values specified in `StdVideoAV1FilmGrain` are ignored by AV1 decode operations and the `load_grain_params` function, as defined in section 6.8.20 of the [AV1 Specification](#), is not executed. Instead, the application is responsible for specifying the effective film grain parameters for the frame in `StdVideoAV1FilmGrain`.

When [film grain is enabled](#) for the decoded frame, the application is required to specify a different decode output picture resource in `VkVideoDecodeInfoKHR::dstPictureResource` compared to the reconstructed picture specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->pPictureResource` even if the implementation does not report support for `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR` in `VkVideoDecodeCapabilitiesKHR::flags` for the video decode profile.

Reference picture setup is controlled by the value of `StdVideoDecodeAV1PictureInfo::refresh_frame_flags`. If it is not zero and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoDecodeAV1PictureInfo::refresh_frame_flags` is zero, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The *active sequence header* is the [AV1 sequence header](#) stored in the bound video session parameters object , unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the active sequence header is specified [inline](#). .

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1PictureInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_PICTURE_INFO_KHR`
- VUID-VkVideoDecodeAV1PictureInfoKHR-pStdPictureInfo-parameter
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeAV1PictureInfo` value
- VUID-VkVideoDecodeAV1PictureInfoKHR-pTileOffsets-parameter
`pTileOffsets` **must** be a valid pointer to an array of `tileCount uint32_t` values
- VUID-VkVideoDecodeAV1PictureInfoKHR-pTileSizes-parameter
`pTileSizes` **must** be a valid pointer to an array of `tileCount uint32_t` values
- VUID-VkVideoDecodeAV1PictureInfoKHR-tileCount-arraylength
`tileCount` **must** be greater than 0

Structure Chaining

Extends the structure

- [VkVideoDecodeInfoKHR](#)

[VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR](#) is the length of the array of DPB slot or AV1 reference names passed in [VkVideoDecodeAV1PictureInfoKHR::referenceNameSlotIndices](#).

```
#define VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR 7U
```

The [VkVideoDecodeAV1DpbSlotInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1DpbSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoDecodeAV1ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeAV1DpbSlotInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pStdReferenceInfo](#) is a pointer to a [StdVideoDecodeAV1ReferenceInfo](#) structure specifying [AV1 reference information](#).

This structure is specified in the [pNext](#) chain of [VkVideoDecodeInfoKHR::pSetupReferenceSlot](#), if not [NULL](#), and the [pNext](#) chain of the elements of [VkVideoDecodeInfoKHR::pReferenceSlots](#) to specify the codec-specific reference picture information for an [AV1 decode operation](#).

Active Reference Picture Information

When this structure is specified in the [pNext](#) chain of the elements of [VkVideoDecodeInfoKHR::pReferenceSlots](#), one element is added to the list of [active reference pictures](#) used by the video decode operation for each element of [VkVideoDecodeInfoKHR::pReferenceSlots](#) as follows:

- The image subregion used is determined according to the [AV1 Decode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the [slotIndex](#) member of the corresponding element of [VkVideoDecodeInfoKHR::pReferenceSlots](#).
- The reference picture is associated with the [AV1 reference information](#) provided in [pStdReferenceInfo](#).

Reconstructed Picture Information

When this structure is specified in the [pNext](#) chain of [VkVideoDecodeInfoKHR::pSetupReferenceSlot](#), the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Decode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [AV1 reference information](#) provided in `pStdReferenceInfo`.

Std Reference Information

The members of the `StdVideoDecodeAV1ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.disable_frame_end_update_cdf` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `flags.segmentation_enabled` is interpreted as defined in section 6.8.13 of the [AV1 Specification](#);
- `frame_type` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);

NOTE

The `frame_type` member is defined with the type `uint8_t`, but it takes the same values defined in the `StdVideoAV1FrameType` enumeration type as `StdVideoDecodeAV1PictureInfo::frame_type`.

- `RefFrameSignBias` is a bitmask where bit index `i` corresponds to `RefFrameSignBias[i]` as defined in section 6.8.2 of the [AV1 Specification](#);
- `OrderHint` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `SavedOrderHints` is interpreted as defined in section 7.20 of the [AV1 Specification](#).

NOTE

When the AV1 reference information is provided for the reconstructed picture, certain parameters (e.g. `frame_type`) are specified both in the [AV1 picture information](#) and in the AV1 reference information. This is necessary because unlike the AV1 picture information, which is only used for the purposes of the video decode operation in question, the AV1 reference information specified for the reconstructed picture **may** be associated with the activated DPB slot, meaning that some implementations **may** maintain it as part of the [reference picture metadata](#) corresponding to the video picture resource associated with the DPB slot. When the AV1 reference information is provided for an active reference picture, the specified parameters correspond to the parameters specified when the DPB slot was activated (set up) with the reference picture, as usual, in order to communicate these parameters for implementations that do not maintain any subset of these parameters as part of the DPB slot's [reference picture metadata](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1DpbSlotInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_DPB_SLOT_INFO_KHR`
- VUID-VkVideoDecodeAV1DpbSlotInfoKHR-pStdReferenceInfo-parameter
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeAV1ReferenceInfo` value

Structure Chaining

Extends the structure

- `VkVideoReferenceSlotInfoKHR`

48.15.8. AV1 Decode Requirements

This section describes the **required** AV1 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 63. Required *Video Std Header Versions*

Video Std Header Name	Version
<code>vulkan_video_codec_av1std_decode</code>	1.0.0

Table 64. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹
<code>VkVideoCapabilitiesKHR</code>		
<code>flags</code>	-	min
<code>minBitstreamBufferOffsetAlignment</code>	4096	max
<code>minBitstreamBufferSizeAlignment</code>	4096	max
<code>pictureAccessGranularity</code>	(64,64)	max
<code>minCodedExtent</code>	-	max
<code>maxCodedExtent</code>	-	min
<code>maxDpbSlots</code>	0	min
<code>maxActiveReferencePictures</code>	0	min
<code>VkVideoDecodeCapabilitiesKHR</code>		

Video Capability	Requirement	Requirement Type ¹
flags	VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR	min
VkVideoDecodeAV1CapabilitiesKHR		
maxLevel	STD_VIDEO_AV1_LEVEL_2_0	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

48.16. Video Encode Operations

Video encode operations consume an *encode input picture* and zero or more reference pictures, and produce compressed video data to a video bitstream buffer and an optional *reconstructed picture*.

NOTE

Such encode input pictures can be used as the *output* of video decode operations, with graphics or compute operations, or with *Window System Integration* APIs, depending on the capabilities of the implementation.

Video encode operations **may** access the following resources in the *VK_PIPELINE_STAGE_2_VIDEO_ENCODE_BIT_KHR* stage:

- The image subregions corresponding to the source *encode input picture* and *active reference pictures* with access *VK_ACCESS_2_VIDEO_ENCODE_READ_BIT_KHR*.
- The destination video bitstream buffer range and the optional *reconstructed picture* with access *VK_ACCESS_2_VIDEO_ENCODE_WRITE_BIT_KHR*.
- The image subregion corresponding to a *quantization map* used in the video encode operation with access *VK_ACCESS_2_VIDEO_ENCODE_READ_BIT_KHR*.

The image subresource of each *video picture resource* accessed by the video encode operation is specified using a corresponding *VkVideoPictureResourceInfoKHR* structure. Each such image subresource **must** be in the appropriate image layout as follows:

- If the image subresource is used in the video encode operation as an *encode input picture*, then it **must** be in the *VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR* layout, unless the *unifiedImageLayoutsVideo* feature is enabled, in which case it **may** be in the

[VK_IMAGE_LAYOUT_GENERAL](#) layout .

- If the image subresource is used in the video encode operation as a [reconstructed picture](#) or [reference picture](#), then it **must** be in the [VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK_IMAGE_LAYOUT_GENERAL](#) layout .
- If the image subresource is used in the video encode operation as a [quantization map](#), then it **must** be in the [VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK_IMAGE_LAYOUT_GENERAL](#) layout .

A video encode operation **may** complete unsuccessfully. In this case the target video bitstream buffer will have undefined contents. Similarly, if [reference picture setup](#) is requested, the [reconstructed-picture](#) will also have undefined contents, and the activated DPB slot will have an [invalid picture reference](#).

If a video encode operation completes successfully and the codec-specific parameters provided by the application adhere to the syntactic and semantic requirements defined in the corresponding video compression standard, then the target video bitstream buffer will contain compressed video data after the execution of the video encode operation according to the respective [codec-specific semantics](#).

48.16.1. Codec-Specific Semantics

The following aspects of video encode operations are codec-specific:

- The compressed video data written to the target video bitstream buffer range.
- The construction and interpretation of the list of [active reference pictures](#) and the interpretation of the picture data referred to by the corresponding image subregions.
- The construction and interpretation of information related to the [encode input picture](#) and the interpretation of the picture data referred to by the corresponding image subregion.
- The decision on [reference picture setup](#).
- The construction and interpretation of information related to the optional [reconstructed picture](#) and the generation of picture data to the corresponding image subregion.
- Certain aspects of [rate control](#).

These codec-specific behaviors are defined for each video codec operation separately.

- If the used video codec operation is [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#), then the codec-specific aspects of the video encoding process are performed as defined in the [H.264 Encode Operations](#) section.
- If the used video codec operation is [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the codec-specific aspects of the video encoding process are performed as defined in the [H.265 Encode Operations](#) section.
- If the used video codec operation is [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#), then the codec-specific aspects of the video encoding process are performed as defined in the

Video Encode Parameter Overrides

Implementations supporting video encode operations for any particular video codec operation often support only a subset of the available encoding tools defined by the corresponding video compression standards. Accordingly, certain implementation-dependent limitations **may** apply to codec-specific parameters provided through the structures defined in the Video Std headers corresponding to the used video codec operation.

Exposing all of these restrictions on particular codec-specific parameter values or combinations thereof in the form of application-queryable capabilities is impractical, hence this specification allows implementations to *override* the value of any of the codec-specific parameters, unless otherwise specified, as long as all of the following conditions are met:

- If the application-provided codec-specific parameters adhere to the syntactic and semantic requirements and rules defined by the used video compression standard, and thus would be usable to produce a video bitstream compliant with that standard, then the codec-specific parameters resulting from the process of implementation overrides **must** also adhere to the same requirements and rules, and any video bitstream produced using the overridden parameters **must** also be compliant.
- The overridden codec-specific parameter values **must** not have an impact on the codec-independent behaviors defined for video encode operations.
- The implementation **must** not override any codec-specific parameters specified to a command that **may** cause application-provided codec-specific parameters specified to subsequent commands to no longer adhere to the semantic requirements and rules defined by the used video compression standard, unless the implementation also overrides those parameters to adhere to any such requirements and rules.
- The overridden codec-specific parameter values **must** not have an impact on the codec-specific picture data access semantics.
- The overridden codec-specific parameter values **may** change the contents of the codec-specific bitstream elements produced by video encode operations or otherwise retrieved by the application (e.g. using the [vkGetEncodedVideoSessionParametersKHR](#) command) but **must** still adhere to the codec-specific semantics defined for that video codec operation, including, but not limited to, the number, type, and order of the encoded codec-specific bitstream elements.

Besides codec-specific parameter overrides performed for implementation-dependent reasons, applications **can** enable the implementation to apply additional [optimizing overrides](#) that **may** improve the efficiency or performance of video encoding operations. However, implementations **must** meet the conditions listed above even in case of such optimizing overrides.

NOTE

Unless the application opts in for optimizing overrides, implementations are not expected to override any of the codec-specific parameters, except when such overrides are necessary for the correct operation of video encoder implementation due to limitations to the available encoding tools on that implementation.

48.16.2. Video Encode Operation Steps

Each video encode operation performs the following steps in the `VK_PIPELINE_STAGE_2_VIDEO_ENCODE_BIT_KHR` stage:

1. Reads the input picture data from the `encode input picture`;
2. Determine derived encoding quality parameters according to the `codec-specific semantics` and the current `rate control` state;
3. Compresses the input picture data according to the `codec-specific semantics`, applying any prediction data read from the `active reference pictures` and rate control restrictions in the process;
4. Writes the encoded bitstream data to the destination video bitstream buffer range;
5. Performs picture reconstruction of the encoded video data according to the `codec-specific semantics`, applying any prediction data read from the `active reference pictures` in the process, if a `reconstructed picture` is specified and `reference picture setup` is requested;
6. If `reference picture setup` is requested, the `DPB slot index` specified in the `reconstructed picture information` is `activated` with the `reconstructed picture`;
7. Writes the reconstructed picture data to the `reconstructed picture`, if one is specified, according to the `codec-specific semantics`.

When `reconstructed picture information` is provided, the specified `DPB slot` index is associated with the corresponding `bound reference picture resource`, regardless of whether `reference picture setup` is requested.

48.16.3. Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `pVideoProfile->videoCodecOperation` specifying an encode operation, the `VkVideoEncodeCapabilitiesKHR` structure **must** be included in the `pNext` chain of the `VkVideoCapabilitiesKHR` structure to retrieve capabilities specific to video encoding.

The `VkVideoEncodeCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeCapabilityFlagsKHR flags;
    VkVideoEncodeRateControlModeFlagsKHR rateControlModes;
    uint32_t            maxRateControlLayers;
    uint64_t            maxBitrate;
    uint32_t            maxQualityLevels;
    VkExtent2D          encodeInputPictureGranularity;
    VkVideoEncodeFeedbackFlagsKHR supportedEncodeFeedbackFlags;
} VkVideoEncodeCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeCapabilityFlagBitsKHR` describing supported encoding features.
- `rateControlModes` is a bitmask of `VkVideoEncodeRateControlModeFlagBitsKHR` indicating supported `rate control modes`.
- `maxRateControlLayers` indicates the maximum number of `rate control layers` supported.
- `maxBitrate` indicates the maximum supported bitrate.
- `maxQualityLevels` indicates the number of discrete `video encode quality levels` supported. Implementations **must** support at least one quality level.
- `encodeInputPictureGranularity` indicates the granularity at which `encode input picture` data is encoded and **may** indicate a texel granularity up to the size of the largest supported codec-specific coding block. This capability does not impose any valid usage constraints on the application, however, depending on the contents of the encode input picture, it **may** have effects on the encoded bitstream, as described in more detail below.
- `supportedEncodeFeedbackFlags` is a bitmask of `VkVideoEncodeFeedbackFlagBitsKHR` values specifying the supported flags for `video encode feedback queries`.

Implementations **must** include support for at least `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR` and `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR` in `supportedEncodeFeedbackFlags`.

`encodeInputPictureGranularity` provides information about the way `encode input picture` data is used as input to video encode operations. In particular, some implementations **may** not be able to limit the set of texels used to encode the output video bitstream to the image subregion specified in the `VkVideoPictureResourceInfoKHR` structure corresponding to the encode input picture (i.e. to the resolution of the image data to encode specified in its `codedExtent` member).

NOTE

For example, the application requests the coded extent to be 1920x1080, but the implementation is only able to source the encode input picture data at the granularity of the codec-specific coding block size which is 16x16 pixels (or as otherwise indicated in `encodeInputPictureGranularity`). In this example, the content is horizontally aligned with the coding block size, but not vertically aligned with it. Thus encoding of the last row of coding blocks will be impacted by the contents of the input image at texel rows 1080 to 1087 (the latter being the next row which is vertically aligned with the coding block size, assuming a zero-based texel row index).

If `codedExtent` rounded up to the next integer multiple of `encodeInputPictureGranularity` is greater than the extent of the image subresource specified for the `encode input picture`, then the texel values corresponding to texel coordinates outside of the bounds of the image subresource **may** be undefined. However, implementations **should** use well-defined default values for such texels in order to maximize the encoding efficiency for the last coding block row/column, and/or to ensure consistent encoding results across repeated encoding of the same input content. Nonetheless, the

values used for such texels **must** not have an effect on whether the video encode operation produces a compliant bitstream, and **must** not have any other effects on the encoded picture data beyond what **may** otherwise result from using these texel values as input to any compression algorithm, as defined in the used video compression standard.

NOTE

While not required, it is generally a good practice for applications to make sure that the image subresource used for the encode input picture has an extent that is an integer multiple of the codec-specific coding block size (or at least `encodeInputPictureGranularity`) and that this padding area is filled with known values in order to improve encoding efficiency, portability, and reproducibility.

Valid Usage (Implicit)

- `VUID-VkVideoEncodeCapabilitiesKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_CAPABILITIES_KHR`

Structure Chaining

Extends the structure

- `VkVideoCapabilitiesKHR`

Bits which **may** be set in `VkVideoEncodeCapabilitiesKHR::flags`, indicating the encoding tools supported, are:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeCapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR =
0x00000001,
    VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR =
0x00000002,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x00000004,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR = 0x00000008,
} VkVideoEncodeCapabilityFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR` specifies that the implementation supports the use of `VkVideoEncodeInfoKHR::precedingExternallyEncodedBytes`.
- `VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR` specifies that the implementation is able to detect and report when the destination video bitstream buffer range provided by the application is not sufficiently large to fit the encoded bitstream data produced by a video encode operation by reporting the `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` query result status code.

NOTE

Some implementations **may** not be able to reliably detect insufficient bitstream buffer range conditions in all situations. Such implementations will not report support for the `VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR` encode capability flag for the video profile, but **may** still report the `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` query result status code in certain cases. Applications **should** always check for the specific query result status code `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` even when this encode capability flag is not supported by the implementation for the video profile in question. However, applications **must** not assume that a different negative query result status code indicating an unsuccessful completion of a video encode operation is not the result of an insufficient bitstream buffer condition unless this encode capability flag is supported.

- `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR` specifies support for using quantization delta maps.
- `VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR` specifies support for using emphasis maps.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeCapabilityFlagsKHR;
```

`VkVideoEncodeCapabilityFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeCapabilityFlagBitsKHR`.

48.16.4. Video Encode Quality Levels

Implementations **can** support more than one video encode quality levels for a video encode profile, which control the number and type of implementation-specific encoding tools and algorithms utilized in the encoding process.

NOTE

Generally, using higher video encode quality levels **may** produce higher quality video streams at the cost of additional processing time. However, as the final quality of an encoded picture depends on the contents of the `encode input picture`, the contents of the `active reference pictures`, the codec-specific encode parameters, and the particular implementation-specific tools used corresponding to the individual video encode quality levels, there are no guarantees that using a higher video encode quality level will always produce a higher quality encoded picture for any given set of inputs.

To query properties for a specific video encode quality level supported by a video encode profile, call:

```
// Provided by VK_KHR_video_encode_queue
VkResult vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR* pQualityLevelInfo,
    VkVideoEncodeQualityLevelPropertiesKHR* pQualityLevelProperties);
```

- **physicalDevice** is the physical device to query the video encode quality level properties for.
- **pQualityLevelInfo** is a pointer to a [VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR](#) structure specifying the video encode profile and quality level to query properties for.
- **pQualityLevelProperties** is a pointer to a [VkVideoEncodeQualityLevelPropertiesKHR](#) structure in which the properties are returned.

Valid Usage

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-08257
If **pQualityLevelInfo->pVideoProfile->videoCodecOperation** is [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#), then the **pNext** chain of **pQualityLevelProperties** **must** include a [VkVideoEncodeH264QualityLevelPropertiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-08258
If **pQualityLevelInfo->pVideoProfile->videoCodecOperation** is [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the **pNext** chain of **pQualityLevelProperties** **must** include a [VkVideoEncodeH265QualityLevelPropertiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-10305
If **pQualityLevelInfo->pVideoProfile->videoCodecOperation** is [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#), then the **pNext** chain of **pQualityLevelProperties** **must** include a [VkVideoEncodeAV1QualityLevelPropertiesKHR](#) structure

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-physicalDevice-parameter
physicalDevice **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-parameter
pQualityLevelInfo **must** be a valid pointer to a valid [VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-

pQualityLevelProperties-parameter

pQualityLevelProperties must be a valid pointer to a **VkVideoEncodeQualityLevelPropertiesKHR** structure

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**
- **VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR**
- **VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR**
- **VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR**
- **VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR**

The **VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    const VkVideoProfileInfoKHR* pVideoProfile;
    uint32_t             qualityLevel;
} VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pVideoProfile** is a pointer to a **VkVideoProfileInfoKHR** structure specifying the video profile to query the video encode quality level properties for.
- **qualityLevel** is the video encode quality level to query properties for.

Valid Usage

- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-08259 **pVideoProfile** must be a **supported video profile**
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-08260 **pVideoProfile->videoCodecOperation** must specify an encode operation

- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-qualityLevel-08261
`qualityLevel` **must** be less than `VkVideoEncodeCapabilitiesKHR::maxQualityLevels`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified in `pVideoProfile`

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR`
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-parameter
`pVideoProfile` **must** be a valid pointer to a valid `VkVideoProfileInfoKHR` structure

The `VkVideoEncodeQualityLevelPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeRateControlModeFlagBitsKHR preferredRateControlMode;
    uint32_t           preferredRateControlLayerCount;
} VkVideoEncodeQualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlMode` is a `VkVideoEncodeRateControlModeFlagBitsKHR` value indicating the preferred `rate control mode` to use with the video encode quality level.
- `preferredRateControlLayerCount` indicates the preferred number of `rate control layers` to use with the video encode quality level.

Valid Usage (Implicit)

- VUID-VkVideoEncodeQualityLevelPropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_PROPERTIES_KHR`
- VUID-VkVideoEncodeQualityLevelPropertiesKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeAV1QualityLevelPropertiesKHR`, `VkVideoEncodeH264QualityLevelPropertiesKHR`, or `VkVideoEncodeH265QualityLevelPropertiesKHR`
- VUID-VkVideoEncodeQualityLevelPropertiesKHR-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

The **VkVideoEncodeQualityLevelInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           qualityLevel;
} VkVideoEncodeQualityLevelInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **qualityLevel** is the used video encode quality level.

This structure **can** be specified in the following places:

- In the **pNext** chain of **VkVideoSessionParametersCreateInfoKHR** to specify the video encode quality level to use for a video session parameters object created for a video encode session. If no instance of this structure is included in the **pNext** chain of **VkVideoSessionParametersCreateInfoKHR**, then the video session parameters object is created with a video encode quality level of zero.
- In the **pNext** chain of **VkVideoCodingControlInfoKHR** to change the video encode quality level state of the bound video session.

Valid Usage

- VUID-VkVideoEncodeQualityLevelInfoKHR-qualityLevel-08311
qualityLevel **must** be less than **VkVideoEncodeCapabilitiesKHR::maxQualityLevels**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the used video profile

Valid Usage (Implicit)

- VUID-VkVideoEncodeQualityLevelInfoKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR**

Structure Chaining

Extends the structures

- **VkVideoCodingControlInfoKHR**
- **VkVideoSessionParametersCreateInfoKHR**

48.16.5. Retrieving Encoded Session Parameters

Any codec-specific parameters stored in video session parameters objects **may** need to be separately encoded and included in the final video bitstream data, depending on the used video compression standard. In such cases the application **must** call the [vkGetEncodedVideoSessionParametersKHR](#) command to retrieve the encoded parameter data from the used video session parameters object in order to be able to produce a compliant video bitstream.

NOTE

This is needed because implementations **may** have changed some of the codec-specific parameters stored in the video session parameters object, as defined in the [Video Encode Parameter Overrides](#) section. In addition, the [vkGetEncodedVideoSessionParametersKHR](#) command enables the application to retrieve the encoded parameter data without having to encode these codec-specific parameters manually.

Encoded parameter data **can** be retrieved from a video session parameters object created with a video encode operation using the command:

```
// Provided by VK_KHR_video_encode_queue
VkResult vkGetEncodedVideoSessionParametersKHR(
    VkDevice          device,
    const VkVideoEncodeSessionParametersGetInfoKHR* pVideoSessionParametersInfo,
    VkVideoEncodeSessionParametersFeedbackInfoKHR* pFeedbackInfo,
    size_t*           pDataSize,
    void*             pData);
```

- `device` is the logical device that owns the video session parameters object.
- `pVideoSessionParametersInfo` is a pointer to a [VkVideoEncodeSessionParametersGetInfoKHR](#) structure specifying the parameters of the encoded parameter data to retrieve.
- `pFeedbackInfo` is either `NULL` or a pointer to a [VkVideoEncodeSessionParametersFeedbackInfoKHR](#) structure in which feedback about the requested parameter data is returned.
- `pDataSize` is a pointer to a `size_t` value related to the amount of encode parameter data returned, as described below.
- `pData` is either `NULL` or a pointer to a buffer to write the encoded parameter data to.

If `pData` is `NULL`, then the size of the encoded parameter data, in bytes, that **can** be retrieved is returned in `pDataSize`. Otherwise, `pDataSize` **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by `pData`, and on return the variable is overwritten with the number of bytes actually written to `pData`. If `pDataSize` is less than the size of the encoded parameter data that **can** be retrieved, then no data will be written to `pData`, zero will be written to `pDataSize`, and [VK_INCOMPLETE](#) will be returned instead of [VK_SUCCESS](#), to indicate that no encoded parameter data was returned.

If `pFeedbackInfo` is not `NULL` then the members of the

[VkVideoEncodeSessionParametersFeedbackInfoKHR](#) structure and any additional structures included in its `pNext` chain that are applicable to the video session parameters object specified in `pVideoSessionParametersInfo->videoSessionParameters` will be filled with feedback about the requested parameter data on all successful calls to this command.

NOTE

This includes the cases when `pData` is `NULL` or when `VK_INCOMPLETE` is returned by the command, and enables the application to determine whether the implementation `override` any of the requested video session parameters without actually needing to retrieve the encoded parameter data itself.

NOTE

This query does not behave consistently with the behavior described in [Opaque Binary Data Results](#), for historical reasons.

If the amount of data available is larger than the passed `pDataSize`, the query returns a `VK_INCOMPLETE` success status instead of a `VK_ERROR_NOT_ENOUGH_SPACE_KHR` error status, and writes zero to `pDataSize`.

Valid Usage

- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08359 `pVideoSessionParametersInfo->videoSessionParameters` **must** have been created with an encode operation
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08262 If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of `pVideoSessionParametersInfo` **must** include a `VkVideoEncodeH264SessionParametersGetInfoKHR` structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08263 If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then for the `VkVideoEncodeH264SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdSPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching `VkVideoEncodeH264SessionParametersGetInfoKHR::stdSPSId`
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08264 If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then for the `VkVideoEncodeH264SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdPPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH264PictureParameterSet` entry with `seq_parameter_set_id` and `pic_parameter_set_id` matching `VkVideoEncodeH264SessionParametersGetInfoKHR::stdSPSId` and `VkVideoEncodeH264SessionParametersGetInfoKHR::stdPPSId`, respectively
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08265

If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of `pVideoSessionParametersInfo` **must** include a `VkVideoEncodeH265SessionParametersGetInfoKHR` structure

- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08266
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then for the `VkVideoEncodeH265SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdVPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching `VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId`
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08267
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then for the `VkVideoEncodeH265SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdSPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265SequenceParameterSet` entry with `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching `VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId` and `VkVideoEncodeH265SessionParametersGetInfoKHR::stdSPSId`, respectively
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08268
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then for the `VkVideoEncodeH265SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdPPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` matching `VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId`, `VkVideoEncodeH265SessionParametersGetInfoKHR::stdSPSId`, and `VkVideoEncodeH265SessionParametersGetInfoKHR::stdPPSId`, respectively

Valid Usage (Implicit)

- VUID-vkGetEncodedVideoSessionParametersKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-parameter
`pVideoSessionParametersInfo` **must** be a valid pointer to a valid `VkVideoEncodeSessionParametersGetInfoKHR` structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pFeedbackInfo-parameter
If `pFeedbackInfo` is not `NULL`, `pFeedbackInfo` **must** be a valid pointer to a `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure

- VUID-vkGetEncodedVideoSessionParametersKHR-pDataSize-parameter
`pDataSize` **must** be a valid pointer to a `size_t` value
- VUID-vkGetEncodedVideoSessionParametersKHR-pData-parameter
If the value referenced by `pDataSize` is not 0, and `pData` is not `NULL`, `pData` **must** be a valid pointer to an array of `pDataSize` bytes

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkVideoEncodeSessionParametersGetInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoSessionParametersKHR    videoSessionParameters;
} VkVideoEncodeSessionParametersGetInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoSessionParameters` is the `VkVideoSessionParametersKHR` object to retrieve encoded parameter data from.

Depending on the used video encode operation, additional codec-specific structures **may** need to be included in the `pNext` chain of this structure to identify the specific video session parameters to retrieve encoded parameter data for, as described in the corresponding sections.

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_GET_INFO_KHR`
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either

NULL or a pointer to a valid instance of [VkVideoEncodeH264SessionParametersGetInfoKHR](#) or [VkVideoEncodeH265SessionParametersGetInfoKHR](#)

- VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-videoSessionParameters-parameter
videoSessionParameters **must** be a valid [VkVideoSessionParametersKHR](#) handle

The [VkVideoEncodeSessionParametersFeedbackInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasOverrides;
} VkVideoEncodeSessionParametersFeedbackInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **hasOverrides** indicates whether any of the requested parameter data were [overridden](#) by the implementation.

Depending on the used video encode operation, additional codec-specific structures **can** be included in the **pNext** chain of this structure to capture codec-specific feedback information about the requested parameter data, as described in the corresponding sections.

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_FEEDBACK_INFO_KHR](#)
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either NULL or a pointer to a valid instance of [VkVideoEncodeH264SessionParametersFeedbackInfoKHR](#) or [VkVideoEncodeH265SessionParametersFeedbackInfoKHR](#)
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique

48.16.6. Video Encode Commands

To launch video encode operations, call:

```
// Provided by VK_KHR_video_encode_queue
void vkCmdEncodeVideoKHR(
    VkCommandBuffer                      commandBuffer,
    const VkVideoEncodeInfoKHR*          pEncodeInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pEncodeInfo` is a pointer to a `VkVideoEncodeInfoKHR` structure specifying the parameters of the video encode operations.

Each call issues one or more video encode operations. The implicit parameter `opCount` corresponds to the number of video encode operations issued by the command. After calling this command, the `active query index` of each `active` query is incremented by `opCount`.

Currently each call to this command results in the issue of a single video encode operation.

If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR` and the `pNext` chain of `pEncodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then this command will execute a query for each video encode operation issued by it.

Active Reference Picture Information

The list of `active reference pictures` used by a video encode operation is a list of image subregions used as the source of `reference picture` data and related parameters, and is derived from the `VkVideoReferenceSlotInfoKHR` structures provided as the elements of the `pEncodeInfo->pReferenceSlots` array. For each element of `pEncodeInfo->pReferenceSlots`, one or more elements are added to the active reference picture list, as defined by the `codec-specific semantics`. Each element of this list contains the following information:

- The image subregion within the image subresource `referred` to by the `video picture resource` used as the reference picture.
- The `DPB slot` index the reference picture is associated with.
- The codec-specific reference information related to the reference picture.

Reconstructed Picture Information

Information related to the optional `reconstructed picture` used by a video encode operation is derived from the `VkVideoReferenceSlotInfoKHR` structure pointed to by `pEncodeInfo->pSetupReferenceSlot`, if not `NULL`, as defined by the `codec-specific semantics`, and consists of the following:

- The image subregion within the image subresource `referred` to by the `video picture resource` used as the reconstructed picture.
- The `DPB slot` index to use for picture reconstruction.
- The codec-specific reference information related to the reconstructed picture.

Specifying a valid `VkVideoReferenceSlotInfoKHR` structure in `pEncodeInfo->pSetupReferenceSlot` is

always required, unless the video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlots` equal to zero. However, the DPB slot identified by `pEncodeInfo->pSetupReferenceSlot->slotIndex` is only **activated** with the **reconstructed picture** specified in `pEncodeInfo->pSetupReferenceSlot->pPictureResource` if reference picture setup is requested according to the **codec-specific semantics**.

If reconstructed picture information is specified, but reference picture setup is not requested, according to the codec-specific semantics, the contents of the **video picture resource** corresponding to the reconstructed picture will be undefined after the video encode operation.

NOTE

Some implementations may always output the reconstructed picture or use it as temporary storage during the video encode operation even when the reconstructed picture is not marked for future reference.

Encode Input Picture Information

Information related to the **encode input picture** used by a video encode operation is derived from `pEncodeInfo->srcPictureResource` and any codec-specific parameters provided in the `pEncodeInfo->pNext` chain, as defined by the **codec-specific semantics**, and consists of the following:

- The image subregion within the image subresource **referred** to by the **video picture resource** used as the encode input picture.
- The codec-specific picture information related to the encoded picture.

Several limiting values are defined below that are referenced by the relevant valid usage statements of this command.

- Let `uint32_t activeReferencePictureCount` be the size of the list of active reference pictures used by the video encode operation. Unless otherwise defined, `activeReferencePictureCount` is set to the value of `pEncodeInfo->referenceSlotCount`.
- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of `codedOffsetGranularity` are 0.
- Let `uint32_t dpbFrameUseCount[]` be an array of size `maxDpbSlots`, where `maxDpbSlots` is the `VkVideoSessionCreateInfoKHR::maxDpbSlots` the bound video session was created with, with each element indicating the number of times a frame associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the array be 0.
 - If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `dpbFrameUseCount[i]` is incremented by one, where `i` equals `pEncodeInfo->pSetupReferenceSlot->slotIndex`.
 - For each element of `pEncodeInfo->pReferenceSlots`, `dpbFrameUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the corresponding element.
- If there is a bound video session parameters object created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then let `VkExtent2D quantizationMapTexelSize` be the **quantization map texel size** the bound video session parameters object was created with.

- Let `VkExtent2D maxCodingBlockSize` be the maximum codec-specific coding block size that **may** be used by the video encode operation.
 - If the bound video session object was created with an `H.264 encode profile`, then let `maxCodingBlockSize` be equal to the size of an H.264 macroblock, i.e. `{16,16}`.
 - If the bound video session object was created with an `H.265 encode profile`, then let `maxCodingBlockSize` be equal to the maximum H.265 coding block size that **may** be used by the video encode operation derived as the maximum of the CTB sizes corresponding to the `VkVideoEncodeH265CtbSizeFlagBitsKHR` bits set in `VkVideoEncodeH265CapabilitiesKHR::ctbSizes`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with.
 - If the bound video session object was created with an `AV1 encode profile`, then let `maxCodingBlockSize` be equal to the maximum AV1 superblock size that **may** be used by the video encode operation derived as the maximum of the superblock sizes corresponding to the `VkVideoEncodeAV1SuperblockSizeFlagBitsKHR` bits set in `VkVideoEncodeAV1CapabilitiesKHR::superblockSizes`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with.
 - Otherwise, `maxCodingBlockSize` is undefined.
- If `maxCodingBlockSize` is defined, then let `VkExtent2D minCodingBlockExtent` be the coded extent of the `encode input picture` expressed in terms of codec-specific coding blocks, assuming the maximum size of such coding blocks, as defined by `maxCodingBlockSize`, calculated from the value of the `codedExtent` member of `pEncodeInfo->srcPictureResource` as follows:
 - `minCodingBlockExtent.width = (codedExtent.width / maxCodingBlockSize.width - 1) * maxCodingBlockSize.width`
 - `minCodingBlockExtent.height = (codedExtent.height / maxCodingBlockSize.height - 1) * maxCodingBlockSize.height`
- If the bound video session object was created with an `H.264 encode profile`, then:
 - Let `StdVideoH264PictureType h264PictureType` be the picture type of the encoded picture set to the value of `pStdPictureInfo->primary_pic_type` specified in the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain.
 - Let `StdVideoH264PictureType h264L0PictureTypes[]` and `StdVideoH264PictureType h264L1PictureTypes[]` be the picture types of the reference pictures in the L0 and L1 reference lists, respectively. If `pStdPictureInfo->pRefLists` specified in the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain is not `NULL`, then for each reference index specified in the elements of the `pStdPictureInfo->pRefLists->RefPicList0` and `pStdPictureInfo->pRefLists->RefPicList1` arrays, if the reference index is not `STD_VIDEO_H264_NO_REFERENCE_PICTURE`, `pStdReferenceInfo->primary_pic_type` is added to `h264L0PictureTypes` or `h264L1PictureTypes`, respectively, where `pStdReferenceInfo` is the member of the `VkVideoEncodeH264DpbSlotInfoKHR` structure included in the `pNext` chain of the element of `pEncodeInfo->pReferenceSlots` for which `slotIndex` equals the reference index in question.
- If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and with the `intra refresh mode`

VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, and the pNext chain of pEncodeInfo includes a VkVideoEncodeIntraRefreshInfoKHR structure, then let uint32_t intraRefreshH264SliceIndex be the intra refresh index specified in VkVideoEncodeIntraRefreshInfoKHR::intraRefreshIndex. Otherwise intraRefreshH264SliceIndex is not defined.

- If the bound video session object was created with an H.265 encode profile, then:
 - Let StdVideoH265PictureType h265PictureType be the picture type of the encoded picture set to the value of pStdPictureInfo->pic_type specified in the VkVideoEncodeH265PictureInfoKHR structure included in the pEncodeInfo->pNext chain.
 - Let StdVideoH265PictureType h265L0PictureTypes[] and StdVideoH265PictureType h265L1PictureTypes[] be the picture types of the reference pictures in the L0 and L1 reference lists, respectively. If pStdPictureInfo->pRefLists specified in the VkVideoEncodeH265PictureInfoKHR structure included in the pEncodeInfo->pNext chain is not NULL, then for each reference index specified in the elements of the pStdPictureInfo->pRefLists->RefPicList0 and pStdPictureInfo->pRefLists->RefPicList1 arrays, if the reference index is not STD_VIDEO_H265_NO_REFERENCE_PICTURE, pStdReferenceInfo->pic_type is added to h265L0PictureTypes or h265L1PictureTypes, respectively, where pStdReferenceInfo is the member of the VkVideoEncodeH265DpbSlotInfoKHR structure included in the pNext chain of the element of pEncodeInfo->pReferenceSlots for which slotIndex equals the reference index in question.
- If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR and with the intra refresh mode VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, and the pNext chain of pEncodeInfo includes a VkVideoEncodeIntraRefreshInfoKHR structure, then let uint32_t intraRefreshH265SliceSegmentIndex be the intra refresh index specified in VkVideoEncodeIntraRefreshInfoKHR::intraRefreshIndex. Otherwise intraRefreshH265SliceSegmentIndex is not defined.
- If the bound video session object was created with an AV1 encode profile, then:
 - If the primaryReferenceCdfOnly member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pEncodeInfo->pNext chain is set to VK_TRUE, then let int32_t cdfOnlyReferenceIndex be the value of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->primary_ref_frame.
 - Otherwise let int32_t cdfOnlyReferenceIndex be -1.

Valid Usage

- VUID-vkCmdEncodeVideoKHR-None-08250
The bound video session **must** have been created with an encode operation
- VUID-vkCmdEncodeVideoKHR-None-07012
The bound video session **must** not be in uninitialized state at the time the command is executed on the device
- VUID-vkCmdEncodeVideoKHR-None-08318

If there is a bound video session parameters object, then it **must** have been created with the currently set [video encode quality level](#) for the bound video session at the time the command is executed on the device

- VUID-vkCmdEncodeVideoKHR-opCount-07174

For each [active](#) query, the [active query index](#) corresponding to the query type of that query plus [opCount](#) **must** be less than or equal to the [last activatable query index](#) corresponding to the query type of that query plus one

- VUID-vkCmdEncodeVideoKHR-pNext-08360

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), and the [pNext](#) chain of [pEncodeInfo](#) includes a [VkVideoInlineQueryInfoKHR](#) structure with its [queryPool](#) member specifying a valid [VkQueryPool](#) handle, then [VkVideoInlineQueryInfoKHR::queryCount](#) **must** equal [opCount](#)

- VUID-vkCmdEncodeVideoKHR-pNext-08361

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), and the [pNext](#) chain of [pEncodeInfo](#) includes a [VkVideoInlineQueryInfoKHR](#) structure with its [queryPool](#) member specifying a valid [VkQueryPool](#) handle, then all the queries used by the command, as specified by the [VkVideoInlineQueryInfoKHR](#) structure, **must** be *unavailable*

- VUID-vkCmdEncodeVideoKHR-queryType-08362

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), then the [queryType](#) used to create the [queryPool](#) specified in the [VkVideoInlineQueryInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) **must** be [VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR](#) or [VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR](#)

- VUID-vkCmdEncodeVideoKHR-queryPool-08363

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), then the [queryPool](#) specified in the [VkVideoInlineQueryInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) **must** have been created with a [VkVideoProfileInfoKHR](#) structure included in the [pNext](#) chain of [VkQueryPoolCreateInfo](#) identical to the one specified in [VkVideoSessionCreateInfoKHR::pVideoProfile](#) the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-queryType-08364

If the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#), and the [queryType](#) used to create the [queryPool](#) specified in the [VkVideoInlineQueryInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) is [VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR](#), then the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** have been created with a queue family index that supports [result status queries](#), as indicated by [VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport](#)

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08201

[pEncodeInfo->dstBuffer](#) **must** be [compatible](#) with the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-commandBuffer-08202

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported,

then `pEncodeInfo->dstBuffer` **must** not be a protected buffer

- VUID-vkCmdEncodeVideoKHR-commandBuffer-08203

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pEncodeInfo->dstBuffer` **must** be a protected buffer

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08204

`pEncodeInfo->dstBufferOffset` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferOffsetAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08205

`pEncodeInfo->dstBufferRange` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferSizeAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08206

`pEncodeInfo->srcPictureResource.imageViewBinding` **must** be `compatible` with the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08207

The format of `pEncodeInfo->srcPictureResource.imageViewBinding` **must** match the `VkVideoSessionCreateInfoKHR::pictureFormat` the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08208

`pEncodeInfo->srcPictureResource.codedOffset` **must** be an integer multiple of `codedOffsetGranularity`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08209

`pEncodeInfo->srcPictureResource.codedExtent` **must** be between `minCodedExtent` and `maxCodedExtent`, inclusive, the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08210

`pEncodeInfo->srcPictureResource.imageViewBinding` **must** have been created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR` usage flag set

- VUID-vkCmdEncodeVideoKHR-commandBuffer-08211

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pEncodeInfo->srcPictureResource.imageViewBinding` **must** not have been created from a protected image

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08377

`pEncodeInfo->pSetupReferenceSlot` **must** not be `NULL` unless the bound video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlots` equal to zero

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08213

If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pEncodeInfo->pSetupReferenceSlot->slotIndex` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08214

If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pEncodeInfo->pSetupReferenceSlot->pPictureResource->codedOffset` **must** be an integer multiple of `codedOffsetGranularity`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08215
If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pEncodeInfo->pSetupReferenceSlot->pPictureResource` **must** match one of the bound reference picture resource
- VUID-vkCmdEncodeVideoKHR-activeReferencePictureCount-08216
`activeReferencePictureCount` **must** be less than or equal to the `VkVideoSessionCreateInfoKHR::maxActiveReferencePictures` specified when the bound video session was created
- VUID-vkCmdEncodeVideoKHR-slotIndex-08217
The `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created
- VUID-vkCmdEncodeVideoKHR-codedOffset-08218
The `codedOffset` member of the `VkVideoPictureResourceInfoKHR` structure pointed to by the `pPictureResource` member of each element of `pEncodeInfo->pReferenceSlots` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdEncodeVideoKHR-pPictureResource-08219
The `pPictureResource` member of each element of `pEncodeInfo->pReferenceSlots` **must** match one of the bound reference picture resource associated with the DPB slot index specified in the `slotIndex` member of that element
- VUID-vkCmdEncodeVideoKHR-pPictureResource-08220
Each video picture resource corresponding to the `pPictureResource` member specified in the elements of `pEncodeInfo->pReferenceSlots` **must** be unique within `pEncodeInfo->pReferenceSlots`
- VUID-vkCmdEncodeVideoKHR-dpbFrameUseCount-08221
All elements of `dpbFrameUseCount` **must** be less than or equal to 1
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10811
The image subresource referred to by `pEncodeInfo->srcPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR` layout at the time the video encode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10812
If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the image subresource referred to by `pEncodeInfo->pSetupReferenceSlot->pPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR` layout at the time the video encode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout
- VUID-vkCmdEncodeVideoKHR-pPictureResource-10813
The image subresource referred to by the `pPictureResource` member of each element of `pEncodeInfo->pReferenceSlots` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR` layout at the time the video encode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10306
If `pEncodeInfo->flags` includes

VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR, then the bound video session **must** have been created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10307

If `pEncodeInfo->flags` includes VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR, then the bound video session **must** have been created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10308

If the current rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then `pEncodeInfo->flags` **must** not include VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10309

If `pEncodeInfo->flags` includes VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeQuantizationMapInfoKHR` structure with its `quantizationMap` member specifying a valid `VkImageView` handle

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10310

If `pEncodeInfo->flags` includes VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR, then the `VkImageView` specified by the `quantizationMap` member of the `VkVideoEncodeQuantizationMapInfoKHR` structure included in the `pNext` chain **must** be compatible with the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10311

If `pEncodeInfo->flags` includes VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR, then the `VkImageView` specified by the `quantizationMap` member of the `VkVideoEncodeQuantizationMapInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** have been created with the VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR usage flag set

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10312

If `pEncodeInfo->flags` includes VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR, then the `VkImageView` specified by the `quantizationMap` member of the `VkVideoEncodeQuantizationMapInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** have been created with the VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR usage flag set

- VUID-vkCmdEncodeVideoKHR-pNext-10313

If an instance of the `VkVideoEncodeQuantizationMapInfoKHR` structure is included in the `pNext` chain of `pEncodeInfo`, its `quantizationMap` member is not VK_NULL_HANDLE, `commandBuffer` is an unprotected command buffer, and `protectedNoFault` is not supported, then `VkVideoEncodeQuantizationMapInfoKHR::quantizationMap` **must** not have been created from a protected image

- VUID-vkCmdEncodeVideoKHR-pNext-10314

If an instance of the `VkVideoEncodeQuantizationMapInfoKHR` structure is included in the

`pNext` chain of `pEncodeInfo` and its `quantizationMap` member is not `VK_NULL_HANDLE`, then the image subresource range referenced by `quantizationMap` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR` layout at the time the video encode operation is executed on the device, unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdEncodeVideoKHR-pNext-10315

If an instance of the `VkVideoEncodeQuantizationMapInfoKHR` structure is included in the `pNext` chain of `pEncodeInfo` and its `quantizationMap` member is not `VK_NULL_HANDLE`, and there is a bound video session parameters object, then the bound video session parameters object **must** have been created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`

- VUID-vkCmdEncodeVideoKHR-pNext-10316

If an instance of the `VkVideoEncodeQuantizationMapInfoKHR` structure is included in the `pNext` chain of `pEncodeInfo`, its `quantizationMap` member is not `VK_NULL_HANDLE`, and there is a bound video session parameters object created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then `quantizationMapExtent` **must** equal `pEncodeInfo->srcPictureResource.codedExtent / quantizationMapTexelSize`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10837

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `intra refresh mode` the bound video session was created with **must** not be `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10838

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then `pEncodeInfo->activeReferencePictureCount` **must** be less than or equal to `VkVideoEncodeIntraRefreshCapabilitiesKHR::maxIntraRefreshActiveReferencePictures`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10839

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeIntraRefreshInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10840

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `intraRefreshCycleDuration` member of the `VkVideoEncodeIntraRefreshInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** not be zero

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10841

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `intraRefreshIndex` member of the `VkVideoEncodeIntraRefreshInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than `VkVideoEncodeIntraRefreshInfoKHR::intraRefreshCycleDuration`

- VUID-vkCmdEncodeVideoKHR-pNext-10842

If the `pNext` chain of any element of `pEncodeInfo->pReferenceSlots` includes a `VkVideoReferenceIntraRefreshInfoKHR` structure with a non-zero `dirtyIntraRefreshRegions` member, then `pEncodeInfo->flags` **must** include

VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR

- VUID-vkCmdEncodeVideoKHR-pNext-10843

If the `pNext` chain of any element of `pEncodeInfo->pReferenceSlots` includes a `VkVideoReferenceIntraRefreshInfoKHR` structure with a non-zero `dirtyIntraRefreshRegions` member, then for each such element `dirtyIntraRefreshRegions` **must** equal `intraRefreshCycleDuration` minus `intraRefreshIndex` where `intraRefreshCycleDuration` and `intraRefreshIndex` are the members of the `VkVideoEncodeIntraRefreshInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pNext-10844

If the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeIntraRefreshInfoKHR` structure, then its `intraRefreshCycleDuration` member **must** be zero or **must** be between 2 and `VkVideoEncodeIntraRefreshCapabilitiesKHR::maxIntraRefreshCycleDuration`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pNext-08225

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeH264PictureInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-StdVideoH264SequenceParameterSet-08226

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching `StdVideoEncodeH264PictureInfo::seq_parameter_set_id` that is provided in the `pStdPictureInfo` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-StdVideoH264PictureParameterSet-08227

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH264PictureParameterSet` entry with `seq_parameter_set_id` and `pic_parameter_set_id` matching `StdVideoEncodeH264PictureInfo::seq_parameter_set_id` and `StdVideoEncodeH264PictureInfo::pic_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08228

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` **must** include a `VkVideoEncodeH264DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pNext-08229

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of each element of `pEncodeInfo->pReferenceSlots` **must** include a `VkVideoEncodeH264DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-constantQp-08269

If the bound video session was created with the video codec operation

VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and the current rate control mode is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then VkVideoEncodeH264NaluSliceInfoKHR::constantQp **must** be zero for each element of the pNaluSliceEntries member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo

- VUID-vkCmdEncodeVideoKHR-constantQp-08270

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and the current rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then VkVideoEncodeH264NaluSliceInfoKHR::constantQp **must** be between VkVideoEncodeH264CapabilitiesKHR::minQp and VkVideoEncodeH264CapabilitiesKHR::maxQp, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, for each element of the pNaluSliceEntries member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo

- VUID-vkCmdEncodeVideoKHR-constantQp-08271

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::flags does not include VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then VkVideoEncodeH264NaluSliceInfoKHR::constantQp **must** have the same value for each element of the pNaluSliceEntries member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo

- VUID-vkCmdEncodeVideoKHR-naluSliceEntryCount-08302

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** be less than or equal to minCodingBlockExtent.width multiplied by minCodingBlockExtent.height

- VUID-vkCmdEncodeVideoKHR-naluSliceEntryCount-08312

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::flags does not include VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** be less than or equal to minCodingBlockExtent.height

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10845

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and with an intra refresh mode other than VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, and VkVideoEncodeIntraRefreshCapabilitiesKHR::partitionIndependentIntraRefreshRegions is

VK_FALSE, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** equal 1

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10846

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and with the intra refresh mode VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, and pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** equal the intraRefreshCycleDuration member of the VkVideoEncodeIntraRefreshInfoKHR structure included in the pNext chain of pEncodeInfo

- VUID-vkCmdEncodeVideoKHR-intraRefreshH264SliceIndex-10847

If intraRefreshH264SliceIndex is defined, then pNaluSliceEntries[intraRefreshH264SliceIndex].pStdSliceHeader->slice_type **must** be STD_VIDEO_H264_SLICE_TYPE_I in the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10848

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and with the intra refresh mode VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, and VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions is VK_FALSE, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** be less than or equal to minCodingBlockExtent.height

- VUID-vkCmdEncodeVideoKHR-h264PictureType-10849

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, h264PictureType is STD_VIDEO_H264_PICTURE_TYPE_B, and VkVideoEncodeH264CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, does not include VK_VIDEO_ENCODE_H264_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR, then pEncodeInfo->flags **must** not include VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR

- VUID-vkCmdEncodeVideoKHR-flags-10850

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, does not include VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR, then pNaluSliceEntries[i].pStdSliceHeader->slice_type **must** be identical for all elements i of the pNaluSliceEntries member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo, except for element index i equal to

`intraRefreshH264SliceIndex`, if `intraRefreshH264SliceIndex` is defined

- VUID-vkCmdEncodeVideoKHR-pNext-08352

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH264PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then `VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists` **must** not be `NULL`

- VUID-vkCmdEncodeVideoKHR-pNext-08339

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH264PictureInfoKHR` structure, and `VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists` is not `NULL`, then each element of the `RefPicList0` and `RefPicList1` array members of the `StdVideoEncodeH264ReferenceListsInfo` structure pointed to by `VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists` **must** either be `STD_VIDEO_H264_NO_REFERENCE_PICTURE` or **must** equal the `slotIndex` member of one of the elements of `pEncodeInfo->pReferenceSlots`

- VUID-vkCmdEncodeVideoKHR-pNext-08353

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH264PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then the `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** equal one of the elements of the `RefPicList0` or `RefPicList1` array members of the `StdVideoEncodeH264ReferenceListsInfo` structure pointed to by `VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists`

- VUID-vkCmdEncodeVideoKHR-maxPPictureL0ReferenceCount-08340

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::maxPPictureL0ReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h264PictureType` and each element of `h264L0PictureTypes` and `h264L1PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_P`

- VUID-vkCmdEncodeVideoKHR-maxBPictureL0ReferenceCount-08341

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::maxBPictureL0ReferenceCount` and `VkVideoEncodeH264CapabilitiesKHR::maxL1ReferenceCount` are both zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h264PictureType` and each element of `h264L0PictureTypes` and `h264L1PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-flags-08342

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR`, as returned by

[vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with, then each element of [h264L0PictureTypes](#) **must** not be [STD_VIDEO_H264_PICTURE_TYPE_B](#)

- VUID-vkCmdEncodeVideoKHR-flags-08343

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#) and [VkVideoEncodeH264CapabilitiesKHR::flags](#) does not include [VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with, then each element of [h264L1PictureTypes](#) **must** not be [STD_VIDEO_H264_PICTURE_TYPE_B](#)

- VUID-vkCmdEncodeVideoKHR-pNext-08230

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the [pNext](#) chain of [pEncodeInfo](#) **must** include a [VkVideoEncodeH265PictureInfoKHR](#) structure

- VUID-vkCmdEncodeVideoKHR-StdVideoH265VideoParameterSet-08231

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the bound video session parameters object **must** contain a [StdVideoH265VideoParameterSet](#) entry with [vps_video_parameter_set_id](#) matching [StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id](#) that is provided in the [pStdPictureInfo](#) member of the [VkVideoEncodeH265PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-StdVideoH265SequenceParameterSet-08232

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the bound video session parameters object **must** contain a [StdVideoH265SequenceParameterSet](#) entry with [sps_video_parameter_set_id](#) and [sps_seq_parameter_set_id](#) matching [StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id](#) and [StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id](#), respectively, that are provided in the [pStdPictureInfo](#) member of the [VkVideoEncodeH265PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-StdVideoH265PictureParameterSet-08233

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the bound video session parameters object **must** contain a [StdVideoH265PictureParameterSet](#) entry with [sps_video_parameter_set_id](#), [pps_seq_parameter_set_id](#), and [pps_pic_parameter_set_id](#) matching [StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id](#), [StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id](#), and [StdVideoEncodeH265PictureInfo::pps_pic_parameter_set_id](#), respectively, that are provided in the [pStdPictureInfo](#) member of the [VkVideoEncodeH265PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08234

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#) and [pEncodeInfo->pSetupReferenceSlot](#) is not [NULL](#), then the [pNext](#) chain of [pEncodeInfo->pSetupReferenceSlot](#)

must include a [VkVideoEncodeH265DpbSlotInfoKHR](#) structure

- VUID-vkCmdEncodeVideoKHR-pNext-08235

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the [pNext](#) chain of each element of [pEncodeInfo->pReferenceSlots](#) **must** include a [VkVideoEncodeH265DpbSlotInfoKHR](#) structure

- VUID-vkCmdEncodeVideoKHR-constantQp-08272

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#) and the current [rate control mode](#) is not [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#), then [VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp](#) **must** be zero for each element of the [pNaluSliceSegmentEntries](#) member of the [VkVideoEncodeH265PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-constantQp-08273

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#) and the current [rate control mode](#) is [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#), then [VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp](#) **must** be between [VkVideoEncodeH265CapabilitiesKHR::minQp](#) and [VkVideoEncodeH265CapabilitiesKHR::maxQp](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with, for each element of the [pNaluSliceSegmentEntries](#) member of the [VkVideoEncodeH265PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-constantQp-08274

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#) and [VkVideoEncodeH265CapabilitiesKHR::flags](#) does not include [VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with, then [VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp](#) **must** have the same value for each element of the [pNaluSliceSegmentEntries](#) member of the [VkVideoEncodeH264PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-naluSliceSegmentEntryCount-08307

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the [naluSliceSegmentEntryCount](#) member of the [VkVideoEncodeH265PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) **must** be less than or equal to [minCodingBlockExtent.width](#) multiplied by [minCodingBlockExtent.height](#)

- VUID-vkCmdEncodeVideoKHR-naluSliceSegmentEntryCount-08313

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#) and [VkVideoEncodeH265CapabilitiesKHR::flags](#) does not include [VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound

video session was created with, then the `naluSliceSegmentEntryCount` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10851

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and with an `intra refresh mode` other than

`VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`,

`pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, and

`VkVideoEncodeIntraRefreshCapabilitiesKHR::partitionIndependentIntraRefreshRegions` is

`VK_FALSE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile

the bound video session was created with, then the `naluSliceSegmentEntryCount` member

of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of

`pEncodeInfo` **must** equal 1

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10852

If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and with the `intra refresh mode`

`VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`, and

`pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the

`naluSliceSegmentEntryCount` member of the `VkVideoEncodeH265PictureInfoKHR` structure

included in the `pNext` chain of `pEncodeInfo` **must** equal

`VkVideoEncodeIntraRefreshInfoKHR::intraRefreshCycleDuration`

- VUID-vkCmdEncodeVideoKHR-intraRefreshH265SliceSegmentIndex-10853

If `intraRefreshH265SliceSegmentIndex` is defined, then `pNaluSliceSegmentEntries`

[`intraRefreshH265SliceSegmentIndex`].`pStdSliceSegmentHeader->slice_type` **must** be

`STD_VIDEO_H265_SLICE_TYPE_I` in the `VkVideoEncodeH265PictureInfoKHR` structure

included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10854

If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and with the `intra refresh mode`

`VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`,

`pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, and

`VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions` is

`VK_FALSE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile

the bound video session was created with, then the `naluSliceSegmentEntryCount` member

of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of

`pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-h265PictureType-10855

If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, `h265PictureType` is

`STD_VIDEO_H265_PICTURE_TYPE_B`, and `VkVideoEncodeH265CapabilitiesKHR::flags`, as

returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound

video session was created with, does not include

`VK_VIDEO_ENCODE_H265_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR`, then

`pEncodeInfo->flags` **must** not include `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`

- VUID-vkCmdEncodeVideoKHR-flags-10856

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR`, then `pNaluSliceSegmentEntries[i].pStdSliceSegmentHeader->slice_type` **must** be identical for all elements `i` of the `pNaluSliceSegmentEntries` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`, except for element index `i` equal to `intraRefreshH265SliceSegmentIndex`, if `intraRefreshH265SliceSegmentIndex` is defined

- VUID-vkCmdEncodeVideoKHR-pNext-08354

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH265PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists` **must** not be `NULL`

- VUID-vkCmdEncodeVideoKHR-pNext-08344

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH265PictureInfoKHR` structure, and `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists` is not `NULL`, then each element of the `RefPicList0` and `RefPicList1` array members of the `StdVideoEncodeH265ReferenceListsInfo` structure pointed to by `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists` **must** either be `STD_VIDEO_H265_NO_REFERENCE_PICTURE` or **must** equal the `slotIndex` member of one of the elements of `pEncodeInfo->pReferenceSlots`

- VUID-vkCmdEncodeVideoKHR-pNext-08355

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH265PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then the `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** equal one of the elements of the `RefPicList0` or `RefPicList1` array members of the `StdVideoEncodeH265ReferenceListsInfo` structure pointed to by `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists`

- VUID-vkCmdEncodeVideoKHR-maxPPictureL0ReferenceCount-08345

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::maxPPictureL0ReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h265PictureType` and each element of `h265L0PictureTypes` and `h265L1PictureTypes` **must** not be `STD_VIDEO_H265_PICTURE_TYPE_P`

- VUID-vkCmdEncodeVideoKHR-maxBPictureL0ReferenceCount-08346

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::maxBPictureL0ReferenceCount` and

`VkVideoEncodeH265CapabilitiesKHR::maxL1ReferenceCount` are both zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h265PictureType` and each element of `h265L0PictureTypes` and `h265L1PictureTypes` **must** not be `STD_VIDEO_H265_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-flags-08347

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then each element of `h265L0PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-flags-08348

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then each element of `h265L1PictureTypes` **must** not be `STD_VIDEO_H265_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-pNext-10317

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeAV1PictureInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10318

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` **must** include a `VkVideoEncodeAV1DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pNext-10319

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain of each element of `pEncodeInfo->pReferenceSlots` **must** include a `VkVideoEncodeAV1DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-constantQIndex-10320

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the `constantQIndex` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be zero

- VUID-vkCmdEncodeVideoKHR-constantQIndex-10321

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the current `rate control mode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the `constantQIndex` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in

the `pNext` chain of `pEncodeInfo` **must** be between `VkVideoEncodeAV1CapabilitiesKHR::minQIndex` and `VkVideoEncodeAV1CapabilitiesKHR::maxQIndex`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-flags-10322

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->flags.frame_size_override_flag` **must** be zero for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-flags-10323

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `pEncodeInfo->srcPictureResource.codedExtent.width` **must** equal `StdVideoAV1SequenceHeader::max_frame_width_minus_1 + 1` of the `active AV1 sequence header`

- VUID-vkCmdEncodeVideoKHR-flags-10324

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `pEncodeInfo->srcPictureResource.codedExtent.height` **must** equal `StdVideoAV1SequenceHeader::max_frame_height_minus_1 + 1` of the `active AV1 sequence header`

- VUID-vkCmdEncodeVideoKHR-flags-10325

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_MOTION_VECTOR_SCALING_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then for each element `i` of `pEncodeInfo->pReferenceSlots` `pEncodeInfo->pReferenceSlots[i].pPictureResource->codedExtent` **must** match `pEncodeInfo->srcPictureResource.codedExtent`

- VUID-vkCmdEncodeVideoKHR-predictionMode-10326

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR`, then `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->frame_type` **must** be `STD_VIDEO_AV1_FRAME_TYPE_KEY` or `STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY`

- VUID-vkCmdEncodeVideoKHR-pStdPictureInfo-10327

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `pStdPictureInfo->frame_type` for the `pStdPictureInfo` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `STD_VIDEO_AV1_FRAME_TYPE_KEY` or `STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY`, then `VkVideoEncodeAV1PictureInfoKHR::predictionMode` **must** be `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR`

- VUID-vkCmdEncodeVideoKHR-maxSingleReferenceCount-10328

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::maxSingleReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** not be `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR`

- VUID-vkCmdEncodeVideoKHR-predictionMode-10329

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR`, then there **must** be at least one non-negative element of `VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices` with element index `i` that does not equal `cdfOnlyReferenceIndex` and for which bit index `i` is set in `VkVideoEncodeAV1CapabilitiesKHR::singleReferenceNameMask`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-maxUnidirectionalCompoundReferenceCount-10330

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::maxUnidirectionalCompoundReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** not be `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR`

- VUID-vkCmdEncodeVideoKHR-predictionMode-10331

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR`, then there **must** be at least two non-negative elements of `VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices` with element indices `i` and `j` where $(i,j) \in \{(0,1),(0,2),(0,3),(4,6)\}$, such that neither element equals `cdfOnlyReferenceIndex` and for which bit indices `i` and `j` are set in `VkVideoEncodeAV1CapabilitiesKHR::unidirectionalCompoundReferenceNameMask`,

as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-maxBidirectionalCompoundReferenceCount-10332

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#) and [VkVideoEncodeAV1CapabilitiesKHR::maxBidirectionalCompoundReferenceCount](#) is zero, as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with, then the [predictionMode](#) member of the [VkVideoEncodeAV1PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) **must** not be [VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR](#)

- VUID-vkCmdEncodeVideoKHR-predictionMode-10333

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#) and the [predictionMode](#) member of the [VkVideoEncodeAV1PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) is [VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR](#), then there **must** be at least two non-negative elements of [VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices](#) with element indices $i \in \{0,1,2,3\}$ and $j \in \{4,5,6\}$, respectively, such that neither element equals [cdfOnlyReferenceIndex](#), and for which bit indices i and j are set in [VkVideoEncodeAV1CapabilitiesKHR::bidirectionalCompoundReferenceNameMask](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-predictionMode-10857

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#), the [predictionMode](#) member of the [VkVideoEncodeAV1PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) is [VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR](#) or [VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR](#), and [VkVideoEncodeAV1CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with, does not include [VK_VIDEO_ENCODE_AV1_CAPABILITY_COMPOUND_PREDICTION_INTRA_REFRESH_BIT_KHR](#), then [pEncodeInfo->flags](#) **must** not include [VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR](#)

- VUID-vkCmdEncodeVideoKHR-referenceNameSlotIndices-10334

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#), then each element of the [referenceNameSlotIndices](#) array member of the [VkVideoEncodeAV1PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#) **must** either be negative or **must** equal the [slotIndex](#) member of one of the elements of [pEncodeInfo->pReferenceSlots](#)

- VUID-vkCmdEncodeVideoKHR-slotIndex-10335

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#), then the [slotIndex](#) member of each element of [pEncodeInfo->pReferenceSlots](#) **must** equal one of the elements of the

`referenceNameSlotIndices` array member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10336

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pExtensionHeader` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pExtensionHeader->temporal_id` **must** be less than `VkVideoEncodeAV1CapabilitiesKHR::maxTemporalLayerCount`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10337

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pExtensionHeader` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pExtensionHeader->spatial_id` **must** be less than `VkVideoEncodeAV1CapabilitiesKHR::maxSpatialLayerCount`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10338

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for the `VkVideoEncodeAV1DpbSlotInfoKHR` structure included in the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` and the `pExtensionHeader` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** both be `NULL` or not `NULL`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10339

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, and the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for the `VkVideoEncodeAV1DpbSlotInfoKHR` structure included in the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pExtensionHeader->temporal_id` **must** equal `pStdPictureInfo->pExtensionHeader->temporal_id` in the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10340

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, and the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for the `VkVideoEncodeAV1DpbSlotInfoKHR` structure included in the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pExtensionHeader->spatial_id` **must** equal

`pStdPictureInfo->pExtensionHeader->spatial_id` in the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10341

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for any of the `VkVideoEncodeAV1DpbSlotInfoKHR` structures included in the `pNext` chain of any element of `pEncodeInfo->pReferenceSlots` is not `NULL`, then `pExtensionHeader->temporal_id` **must** be less than `VkVideoEncodeAV1CapabilitiesKHR::maxTemporalLayerCount`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10342

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for any of the `VkVideoEncodeAV1DpbSlotInfoKHR` structures included in the `pNext` chain of any element of `pEncodeInfo->pReferenceSlots` is not `NULL`, then `pExtensionHeader->spatial_id` **must** be less than `VkVideoEncodeAV1CapabilitiesKHR::maxSpatialLayerCount`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10343

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pTileInfo->TileCols` **must** be greater than 0

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10344

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pTileInfo->TileRows` **must** be greater than 0

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10345

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pTileInfo->TileCols` **must** be less than or equal to `VkVideoEncodeAV1CapabilitiesKHR::maxTiles.width`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10346

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the

`VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pTileInfo->TileRows` **must** be less than or equal to `VkVideoEncodeAV1CapabilitiesKHR::maxTiles.height`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10347

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pEncodeInfo->srcPictureResource.codedExtent.width / pTileInfo->TileCols` **must** be between `VkVideoEncodeAV1CapabilitiesKHR::minTileSize.width` and `VkVideoEncodeAV1CapabilitiesKHR::maxTileSize.width`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10348

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pEncodeInfo->srcPictureResource.codedExtent.height / pTileInfo->TileRows` **must** be between `VkVideoEncodeAV1CapabilitiesKHR::minTileSize.height` and `VkVideoEncodeAV1CapabilitiesKHR::maxTileSize.height`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pStdPictureInfo-10349

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->flags.segmentation_enabled` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be zero

- VUID-vkCmdEncodeVideoKHR-pStdPictureInfo-10350

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->pSegmentation` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkCmdEncodeVideoKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-parameter
`pEncodeInfo` **must** be a valid pointer to a valid `VkVideoEncodeInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-commandBuffer-recording
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdEncodeVideoKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support [VK_QUEUE_VIDEO_ENCODE_BIT_KHR](#) operations
- VUID-vkCmdEncodeVideoKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdEncodeVideoKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdEncodeVideoKHR-videocoding
This command **must** only be called inside of a video coding scope
- VUID-vkCmdEncodeVideoKHR-bufferlevel
`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

`vkCmdEncodeVideoKHR` is not affected by [conditional rendering](#)

The `VkVideoEncodeInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeFlagsKHR    flags;
    VkBuffer                  dstBuffer;
    VkDeviceSize              dstBufferOffset;
    VkDeviceSize              dstBufferRange;
    VkVideoPictureResourceInfoKHR srcPictureResource;
    const VkVideoReferenceSlotInfoKHR* pSetupReferenceSlot;
    uint32_t                  referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
    uint32_t                  precedingExternallyEncodedBytes;
} VkVideoEncodeInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeFlagBitsKHR` indicating video encode command flags.
- `dstBuffer` is the destination video bitstream buffer to write the encoded bitstream to.
- `dstBufferOffset` is the starting offset in bytes from the start of `dstBuffer` to write the encoded bitstream to.
- `dstBufferRange` is the maximum bitstream size in bytes that **can** be written to `dstBuffer`, starting from `dstBufferOffset`.
- `srcPictureResource` is the video picture resource to use as the `encode input picture`.
- `pSetupReferenceSlot` is `NULL` or a pointer to a `VkVideoReferenceSlotInfoKHR` structure specifying the `reconstructed picture information`.
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is `NULL` or a pointer to an array of `VkVideoReferenceSlotInfoKHR` structures describing the DPB slots and corresponding `reference picture` resources to use in this video encode operation (the set of `active reference pictures`).
- `precedingExternallyEncodedBytes` is the number of bytes externally encoded by the application to the video bitstream and is used to update the internal state of the implementation's `rate control` algorithm to account for the bitrate budget consumed by these externally encoded bytes.

Valid Usage

- VUID-VkVideoEncodeInfoKHR-dstBuffer-08236
`dstBuffer` **must** have been created with the `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR` usage flag set
- VUID-VkVideoEncodeInfoKHR-dstBufferOffset-08237
`dstBufferOffset` **must** be less than the size of `dstBuffer`
- VUID-VkVideoEncodeInfoKHR-dstBufferRange-08238

`dstBufferRange` **must** be less than or equal to the size of `dstBuffer` minus `dstBufferOffset`

- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-08239
If `pSetupReferenceSlot` is not `NULL`, then its `slotIndex` member **must** not be negative
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-08240
If `pSetupReferenceSlot` is not `NULL`, then its `pPictureResource` **must** not be `NULL`
- VUID-VkVideoEncodeInfoKHR-slotIndex-08241
The `slotIndex` member of each element of `pReferenceSlots` **must** not be negative
- VUID-VkVideoEncodeInfoKHR-pPictureResource-08242
The `pPictureResource` member of each element of `pReferenceSlots` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkVideoEncodeInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_INFO_KHR`
- VUID-VkVideoEncodeInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeAV1PictureInfoKHR`, `VkVideoEncodeH264PictureInfoKHR`, `VkVideoEncodeH265PictureInfoKHR`, `VkVideoEncodeIntraRefreshInfoKHR`, `VkVideoEncodeQuantizationMapInfoKHR`, or `VkVideoInlineQueryInfoKHR`
- VUID-VkVideoEncodeInfoKHR-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoEncodeInfoKHR-flags-parameter
`flags` **must** be a valid combination of `VkVideoEncodeFlagBitsKHR` values
- VUID-VkVideoEncodeInfoKHR-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkVideoEncodeInfoKHR-srcPictureResource-parameter
`srcPictureResource` **must** be a valid `VkVideoPictureResourceInfoKHR` structure
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-parameter
If `pSetupReferenceSlot` is not `NULL`, `pSetupReferenceSlot` **must** be a valid pointer to a valid `VkVideoReferenceSlotInfoKHR` structure
- VUID-VkVideoEncodeInfoKHR-pReferenceSlots-parameter
If `referenceSlotCount` is not `0`, `pReferenceSlots` **must** be a valid pointer to an array of `referenceSlotCount` valid `VkVideoReferenceSlotInfoKHR` structures

Bits which **can** be set in `VkVideoEncodeInfoKHR::flags`, specifying video encode flags, are:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef enum VkVideoEncodeFlagBitsKHR {
    // Provided by VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR = 0x00000004,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR = 0x00000002,
} VkVideoEncodeFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR](#) specifies the use of a [quantization delta map](#) in the issued [video encode operations](#).
- [VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR](#) specifies the use of an [emphasis map](#) in the issued [video encode operations](#).
- [VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR](#) enables [intra refresh](#) for the encoded picture.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeFlagsKHR;
```

[VkVideoEncodeFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeFlagBitsKHR](#).

48.17. Video Encode Intra Refresh

Encoding a picture with intra refresh enables encoding a subset of the coding blocks produced for an [encode input picture](#) with intra prediction.

NOTE

This enables the application to perform a decoder refresh through a series of pictures instead of a single picture. In conjunction with [restricting reference picture prediction](#), this enables avoiding error propagation across refresh cycles without introducing sudden spikes in the bitrate. This is achieved by amortizing the bitstream consumption of the refresh across a series of subsequent pictures.

An *intra refresh cycle* is a series of encode operations using intra refresh that contain at least one encode operation for any subregion of the coded extent that encoded the subregion with intra prediction.

The *intra refresh cycle duration* is the number of encode operations in an intra refresh cycle.

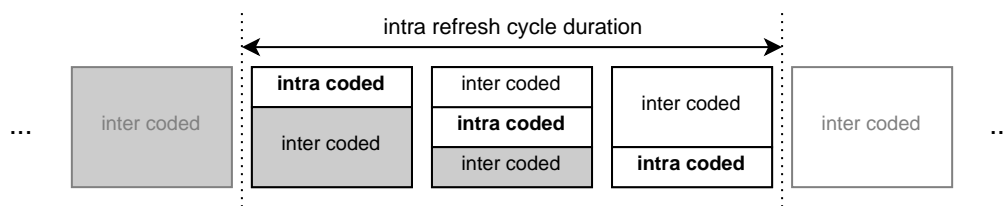

Figure 39. Intra refresh cycle duration

For the purposes of performing an intra refresh cycle, the coded extent is divided into a set of *intra refresh regions*. The number of intra refresh regions for a given intra refresh cycle equals the intra refresh cycle duration.

Implementations **may** partition the coded extent into intra refresh regions in an implementation-specific manner, unless otherwise specified. The following is true for the resulting set of intra refresh regions:

- Each intra refresh region encompasses entire coding blocks.
- Any intra refresh region **may** be non-rectangular.
- Some intra refresh regions **may** be empty.
- The union of intra refresh regions of a given partitioning covers the entire coded extent.

NOTE

While intra refresh regions are generally disjoint, there may be overlap between distinct intra refresh regions of a given partitioning in order to accommodate for any filtering that may need to be applied across coding blocks of neighboring intra refresh regions.

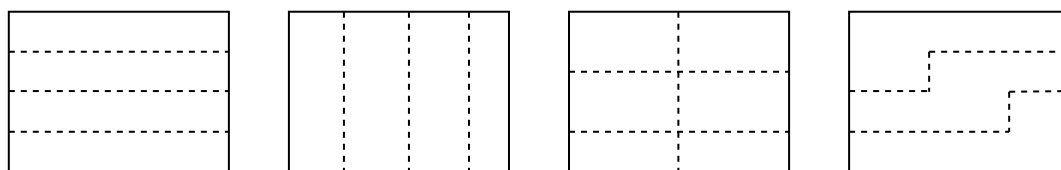

Figure 40. Examples of picture partitioning into intra refresh regions

An intra refresh cycle is performed by encoding subsequent pictures with intra refresh, each encoding subsequent intra refresh regions using intra prediction. This inherently defines an ordering of encode operations within an intra refresh cycle. Therefore each encode operation in an intra refresh cycle has an *intra refresh index* that provides the following information:

- The intra refresh index of an encode operation using intra refresh is the ordinal index of the intra refresh region being encoded using intra prediction.

- The intra refresh index of an encode operation using intra refresh inherently tells the number of intra refresh regions already refreshed by previous encode operations of the intra refresh cycle.

NOTE

For AV1 encoding, applications should consider setting the `error_resilient_mode` flag for the first frame encoded as part of the intra refresh cycle in order to avoid any error propagation of CDF data.

An intra refresh region of a picture encoded using intra refresh is considered *clean* once the encode operation within the intra refresh cycle that encoded that intra refresh region using intra prediction is complete. Otherwise, the intra refresh region is considered *dirty*.

The number of *dirty intra refresh regions* of a picture encoded using intra refresh is always one less than the difference between the intra refresh cycle duration and the intra refresh index used to encode that picture.

NOTE

As the intra refresh cycle progresses, each subsequent picture encoded with intra refresh will have fewer dirty intra refresh regions. Consequently, the final encode operation of the intra refresh cycle will produce an encoded picture with no more dirty intra refresh regions.

48.17.1. Intra Refresh Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `pVideoProfile->videoCodecOperation` specifying an encode operation, the `VkVideoEncodeIntraRefreshCapabilitiesKHR` structure **can** be included in the `pNext` chain of the `VkVideoCapabilitiesKHR` structure to retrieve capabilities specific to video encode intra refresh.

The `VkVideoEncodeIntraRefreshCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoEncodeIntraRefreshCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeIntraRefreshModeFlagsKHR  intraRefreshModes;
    uint32_t           maxIntraRefreshCycleDuration;
    uint32_t           maxIntraRefreshActiveReferencePictures;
    VkBool32           partitionIndependentIntraRefreshRegions;
    VkBool32           nonRectangularIntraRefreshRegions;
} VkVideoEncodeIntraRefreshCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `intraRefreshModes` is a bitmask of `VkVideoEncodeIntraRefreshModeFlagBitsKHR` values indicating the set of supported [intra refresh modes](#).
- `maxIntraRefreshCycleDuration` specifies the maximum supported [intra refresh cycle duration](#).

- `maxIntraRefreshActiveReferencePictures` is the maximum number of [active reference pictures](#) when encoding pictures with [intra refresh](#) enabled. This capability indicates additional restrictions beyond the maximum number of [active reference pictures](#) supported by the video profile, as reported in `VkVideoCapabilitiesKHR::maxActiveReferencePictures` and the maximum requested at video session creation time in `VkVideoSessionCreateInfoKHR::maxActiveReferencePictures`.
- `partitionIndependentIntraRefreshRegions` specifies whether the implementation supports intra refresh regions that are independent of the picture partitioning used during encoding. If it is `VK_TRUE`, then pictures **can** be encoded with multiple picture partitions, independent of the used intra refresh mode. Otherwise, pictures **cannot** be encoded with multiple picture partitions with any intra refresh mode other than `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`.

NOTE

This capability is only indicative for [AV1 encode profiles](#) and does not impose any restrictions on the application as implementations may change the application requested picture partitioning according to implementation-specific restrictions.

- `nonRectangularIntraRefreshRegions` specifies whether the implementation supports non-rectangular intra refresh regions.

NOTE

If this capability is not supported, then using per picture partition intra refresh may impose additional restrictions on the number of picture partitions a picture can be encoded with.

Valid Usage (Implicit)

- `VOID-VkVideoEncodeIntraRefreshCapabilitiesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_INTRA_REFRESH_CAPABILITIES_KHR`

Structure Chaining

Extends the structure

- [VkVideoCapabilitiesKHR](#)

48.17.2. Intra Refresh Modes

The intra refresh modes are defined with the following enums:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef enum VkVideoEncodeIntraRefreshModeFlagBitsKHR {
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR = 0,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_BASED_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_ROW_BASED_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_COLUMN_BASED_BIT_KHR = 0x00000008,
} VkVideoEncodeIntraRefreshModeFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR](#) specifies that intra refresh **must** not be used.
- [VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR](#) specifies the use of *per picture partition intra refresh*. In this mode each intra refresh region *i* corresponds to the encoded picture partition *i*.
- [VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_BASED_BIT_KHR](#) specifies the use of any *block-based intra refresh*. In this mode each intra refresh region encompasses a set of coding blocks, independent of encoded picture partitions but without any additional guarantees on the granularity at which the picture is split into intra refresh regions. When using this mode, the set of coding blocks comprising the intra refresh regions and the direction of intra refresh are implementation-defined.
- [VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_ROW_BASED_BIT_KHR](#) specifies the use of *block-row-based intra refresh*. This mode is a block-based intra refresh mode where each intra refresh region encompasses a set of coding block rows.
- [VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_COLUMN_BASED_BIT_KHR](#) specifies the use of *block-column-based intra refresh*. This mode is a block-based intra refresh mode where each intra refresh region encompasses a set of coding block columns.

Implementations reporting support for
[VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_ROW_BASED_BIT_KHR](#) and/or
[VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_COLUMN_BASED_BIT_KHR](#) in
[VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes](#) are also **required** to report support
for [VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_BASED_BIT_KHR](#).

NOTE

Both block-row-based and block-column-based intra refresh are just specific types of block-based intra refresh that provide additional guarantees about the granularity at which the picture is split into intra refresh regions, therefore implementations supporting either block-row-based or block-column-based intra refresh inherently support block-based intra refresh. Applications can use [VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_BASED_BIT_KHR](#) on such implementations when they do not have any preference for a more specific block-based mode and would rather leave the decision about the division into intra refresh regions to the implementation.

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef VkFlags VkVideoEncodeIntraRefreshModeFlagsKHR;
```

`VkVideoEncodeIntraRefreshModeFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeIntraRefreshModeFlagBitsKHR`.

The used intra refresh mode is selected at [video session creation time](#) by including an instance of the `VkVideoEncodeSessionIntraRefreshCreateInfoKHR` structure in the `pNext` chain of the `VkVideoSessionCreateInfoKHR` structure and specifying one of the supported intra refresh modes, as returned in `VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes`, in its `intraRefreshMode` member.

The `VkVideoEncodeSessionIntraRefreshCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoEncodeSessionIntraRefreshCreateInfoKHR {
    VkStructureType              sType;
    const void*                  pNext;
    VkVideoEncodeIntraRefreshModeFlagBitsKHR intraRefreshMode;
} VkVideoEncodeSessionIntraRefreshCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `intraRefreshMode` is a `VkVideoEncodeIntraRefreshModeFlagBitsKHR` specifying the used [intra refresh mode](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionIntraRefreshCreateInfoKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_INTRA_REFRESH_CREATE_INFO_KHR`
- VUID-VkVideoEncodeSessionIntraRefreshCreateInfoKHR-intraRefreshMode-parameter If `intraRefreshMode` is not `0`, `intraRefreshMode` must be a valid `VkVideoEncodeIntraRefreshModeFlagBitsKHR` value

Structure Chaining

Extends the structure

- `VkVideoSessionCreateInfoKHR`

48.17.3. Encoding Pictures with Intra Refresh

If the video encode operation is issued with the `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`

flag, the picture will be encoded with intra refresh, resulting in the [intra refresh region](#) identified by the specified [intra refresh index](#) to be encoded with intra prediction.

Intra refresh parameters are specified to video encode operations by including an instance of the [VkVideoEncodeIntraRefreshInfoKHR](#) structure in the [pNext](#) chain of the [VkVideoEncodeInfoKHR](#) structure specified to the video encode command.

The [VkVideoEncodeIntraRefreshInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoEncodeIntraRefreshInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t            intraRefreshCycleDuration;
    uint32_t            intraRefreshIndex;
} VkVideoEncodeIntraRefreshInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [intraRefreshCycleDuration](#) is the used [intra refresh cycle duration](#).
- [intraRefreshIndex](#) is the [intra refresh index](#) of the encoded picture.

Valid Usage (Implicit)

- VUID-VkVideoEncodeIntraRefreshInfoKHR-sType-sType
[sType](#) must be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_INTRA_REFRESH_INFO_KHR](#)

Structure Chaining

Extends the structure

- [VkVideoEncodeInfoKHR](#)

48.17.4. Referencing Pictures Encoded with Intra Refresh

When using pictures encoded with intra refresh as an [active reference picture](#) in a video encode operation, applications **may** want to limit the set of [intra refresh regions](#) of the reference picture that are used to predict samples of the encoded picture to exclude [dirty intra refresh regions](#) of the reference picture in question.

NOTE

This enables the application to avoid error propagation from previous refresh cycles by only using already refreshed (clean) intra refresh regions for sample prediction.

In order to limit the set of [intra refresh regions](#) of an [active reference picture](#) used for sample

prediction, the application **must** specify an instance of the [VkVideoReferenceIntraRefreshInfoKHR](#) structure in the **pNext** chain of the [VkVideoReferenceSlotInfoKHR](#) structure specifying the active reference picture in question.

The [VkVideoReferenceIntraRefreshInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoReferenceIntraRefreshInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           dirtyIntraRefreshRegions;
} VkVideoReferenceIntraRefreshInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **dirtyIntraRefreshRegions** is the number of [dirty intra refresh regions](#) in the reference picture.

Valid Usage (Implicit)

- VUID-VkVideoReferenceIntraRefreshInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_VIDEO_REFERENCE_INTRA_REFRESH_INFO_KHR](#)

Structure Chaining

Extends the structure

- [VkVideoReferenceSlotInfoKHR](#)

In order to use active reference pictures with a non-zero number of dirty intra refresh regions and therefore limit sample prediction to clean intra refresh regions, the currently encoded picture **must** be encoded with intra refresh enabled.

When limiting sample prediction to clean intra refresh regions of a reference picture with a non-zero number of [dirty intra refresh regions](#), the number of dirty intra refresh regions **must** equal the used [intra refresh cycle duration](#) minus the [intra refresh index](#) of the encoded picture.

NOTE

This has the practical effect that pictures can only reference the previous picture within the intra refresh cycle or pictures outside of the intra refresh cycle.

Given an [active reference picture](#) with **dirtyIntraRefreshRegions** number of [dirty intra refresh regions](#) and an [intra refresh cycle duration](#) of **intraRefreshCycleDuration**, the samples within intra refresh region index *i* of the encoded picture are allowed to be predicted by samples within intra refresh region index *j* of the active reference picture in question if and only if any of the following conditions are true:

- The picture is encoded with [VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR](#) and *i* is greater

than the `intraRefreshIndex` of the encoded picture.

- The picture is encoded with `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, `i` is less than the `intraRefreshIndex` of the encoded picture, and `j` is less than the difference of `intraRefreshCycleDuration` and `dirtyIntraRefreshRegions`.

NOTE

Even if a particular intra refresh region is allowed to be used for sample prediction, as defined above, implementations may not always support sample prediction from the given intra refresh region.

Some implementations may only support sample prediction from a single set of intra refresh regions across the entire set of active reference pictures. For example, when encoding a picture with two active reference pictures, one with no dirty intra refresh regions, and one with some dirty intra refresh regions, sample prediction may not happen from those intra refresh regions of the first active reference picture which are marked dirty in the second active reference picture.

Other implementations may have the additional restriction that the set of intra refresh regions to use for sample prediction across the entire set of active reference pictures is implied from the intra refresh index of the currently encoded picture, further restricting the set of intra refresh regions that such implementations can use for sample prediction. For example, when encoding a picture with intra refresh using an active reference picture that has no dirty intra refresh regions, sample prediction may not happen from intra refresh regions of the active reference picture which have an index greater than or equal to the currently encoded picture's intra refresh index, even though those intra refresh regions were not marked as dirty.

None of these implementation limitations will have an effect on application behavior from the perspective of correctness, but they may negatively impact the encoding efficiency.

48.18. Video Encode Rate Control

The size of the encoded bitstream data produced by video encode operations is a function of the following set of constraints:

- The capabilities of the compression algorithms defined and employed by the used video compression standard;
- Restrictions imposed by the selected `video profile` according to the rules defined by the used video compression standard;
- Further restrictions imposed by the `capabilities` supported by the implementation for the selected `video profile`;
- The image data in the `encode input picture` and the set of `active reference pictures` (as these affect the effectiveness of the compression algorithms employed by the video encode operations);
- The set of codec-specific and codec-independent encoding parameters provided by the

application.

These also inherently define the set of decoder capabilities required for reconstructing and processing the picture data in the encoded bitstream.

Video coding uses *bitrate* as the quantitative metric associated with encoded bitstream data size which expresses the rate at which video bitstream data **can** be transferred or processed, measured in number of bits per second. This bitrate is both a function of the encoded bitstream data size of the encoded pictures as well as the *frame rate* used by the video sequence.

Rate control algorithms are used by video encode operations to enable adjusting encoding parameters to achieve a target bitrate, or otherwise directly or indirectly control the bitrate of the generated video bitstream data. These algorithms are usually not defined by the used video compression standard, although some video compression standards do provide non-normative guidelines for implementations.

Accordingly, this specification does not mandate implementations to produce identical encoded bitstream data outputs in response to video encode operations, however, it does define a set of codec-independent and codec-specific parameters that enable the application to control the behavior of the rate control algorithms supported by the implementation. Some of these parameters guarantee certain implementation behavior while others provide guidance for implementations to apply various rate control heuristics.

NOTE

Applications need to make sure that they configure rate control parameters appropriately and that they follow the promises made to the implementation through parameters providing guidance for the implementation's rate control algorithms and heuristics in order to be able to get the desired rate control behavior and to be able to hit the set bitrate targets. In addition, the behavior of rate control may also differ across implementations even if the capabilities of the used video profile match between those implementations. This may happen due to implementations applying different rate control algorithms or heuristics internally, and thus even the same set of guidance parameter values may have different effects on the rate control behavior across implementations.

48.18.1. Rate Control Modes

After a video session is reset to the [initial state](#), the default behavior and parameters of video encode rate control are entirely implementation-dependent and the application **cannot** affect the bitrate or quality parameters of the encoded bitstream data produced by video encode operations unless the application changes the rate control configuration of the video session, as described in the [Video Coding Control](#) section.

For each supported [video profile](#), the implementation **may** expose a set of *rate control modes* that are available for use by the application when encoding bitstreams targeting that video profile. These modes allow using different rate control algorithms that fall into one of the following two categories:

1. Per-operation rate control

2. Stream-level rate control

In case of *per-operation rate control*, the bitrate of the generated video bitstream data is indirectly controlled by quality, size, or other encoding parameters specified by the application for each individual video encode operation.

In case of *stream-level rate control*, the application **can** directly specify target bitrates besides other encoding parameters to control the behavior of the rate control algorithm used by the implementation across multiple video encode operations.

The rate control modes are defined with the following enums:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeRateControlModeFlagBitsKHR {
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR = 0x00000004,
} VkVideoEncodeRateControlModeFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR](#) specifies the use of implementation-specific rate control.
- [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#) specifies that rate control is disabled and the application will specify per-operation rate control parameters controlling the encoding quality. In this mode implementations will encode pictures independently of the output bitrate of prior video encode operations.
 - When using an [H.264 encode profile](#), implementations will use the QP value specified in [VkVideoEncodeH264NaluSliceInfoKHR::constantQp](#) to control the quality of the encoded picture.
 - When using an [H.265 encode profile](#), implementations will use the QP value specified in [VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp](#) to control the quality of the encoded picture.
 - When using an [AV1 encode profile](#), implementations will use the quantizer index value specified in [VkVideoEncodeAV1PictureInfoKHR::constantQIndex](#) to control the quality of the encoded picture.
- [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR](#) specifies the use of constant bitrate (CBR) rate control mode. In this mode the implementation will attempt to produce the encoded bitstream at a constant bitrate while conforming to the constraints of other rate control parameters.
- [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR](#) specifies the use of variable bitrate (VBR) rate control mode. In this mode the implementation will produce the encoded bitstream at a variable bitrate according to the constraints of other rate control parameters.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeRateControlModeFlagsKHR;
```

`VkVideoEncodeRateControlModeFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeRateControlModeFlagBitsKHR`.

48.18.2. Leaky Bucket Model

Video encoding implementations use the *leaky bucket model* for stream-level rate control. The leaky bucket is a concept referring to the interface between the video encoder and the consumer (for example, a network connection), where the video encoder produces encoded bitstream data corresponding to the encoded pictures and adds them in the leaky bucket while its content are drained by the consumer.

Analogously, a similar leaky bucket is considered to exist at the input interface of a video decoder, into which encoded bitstream data is continuously added and is subsequently consumed by the video decoder. It is desirable to avoid overflowing or underflowing this leaky bucket because:

- In case of an underflow, the video decoder will be unable to consume encoded bitstream data in order to decode pictures (and optionally display them).
- In case of an overflow, the leaky bucket will be unable to accommodate more encoded bitstream data and such data **may** need to be thrown away, leading to the loss of the corresponding encoded pictures.

These requirements **can** be satisfied by imposing various constraints on the encoder-side leaky bucket to avoid its overflow or underflow, depending on the used rate control algorithm and codec parameters. However, enumerating these constraints is outside the scope of this specification.

The term *virtual buffer* is often used as an alternative to refer to the leaky bucket.

This virtual buffer model is defined by the following parameters:

- The bitrate (**R**) at which the encoded bitstream is expected to be processed.
- The size (**B**) of the virtual buffer.
- The initial occupancy (**F**) of the virtual buffer.

In this model the virtual buffer is used to smooth out fluctuations in the bitrate of the encoded bitstream over time without experiencing buffer overflow or underflow, as long as the bitrate of the encoded stream does not diverge from the target bitrate for extended periods of time.

This buffering **may** inherently impose a processing delay, as the goal of the model is to enable decoders maintain a consistent processing rate of an encoded bitstream with varying data rate.

The initial or start-up delay (**D**) is computed as:

$$D = F / R$$

NOTE

Applications need to configure the virtual buffer with sufficient size to avoid or minimize buffer overflows and underflows while also keeping it small enough to meet their latency goals.

48.18.3. Rate Control Layers

Some video compression standards and [video profiles](#) allow associating encoded pictures with specific *video coding layers*. The name, identification, and semantics associated with such video coding layers are defined by the corresponding video compression standards.

Analogously, stream-level rate control **can** be configured to use one or more *rate control layers*:

- When a single rate control layer is configured, it is applied to all encoded pictures, regardless of the picture's video coding layer. In this case the distribution of the available bitrate budget across video coding layers is implementation-dependent.
- When multiple rate control layers are configured, each rate control layer is applied to the corresponding video coding layer, i.e. only across encoded pictures pertaining to the corresponding video coding layer.

Individual rate control layers are identified using *layer indices* between zero and **N-1**, where **N** is the number of active rate control layers.

Rate control layers are only applicable when using [stream-level rate control modes](#).

48.18.4. Rate Control State

Rate control state is maintained by the implementation in the [video session](#) objects and its parameters are specified using an instance of the `VkVideoEncodeRateControlInfoKHR` structure. The complete rate control state of a video session is defined by the following set of parameters:

- The values of the members of the `VkVideoEncodeRateControlInfoKHR` structure used to configure the rate control state.
- The values of the members of any `VkVideoEncodeRateControlLayerInfoKHR` structures specified in `VkVideoEncodeRateControlInfoKHR::pLayers` used to configure the state of individual [rate control layers](#).
- If the video session was created with an [H.264 encode profile](#):
 - The values of the members of the `VkVideoEncodeH264RateControlInfoKHR` structure, if one is specified in the `pNext` chain of the `VkVideoEncodeRateControlInfoKHR` used to configure the rate control state.
 - The values of the members of any `VkVideoEncodeH264RateControlLayerInfoKHR` structures included in the `pNext` chain of a `VkVideoEncodeRateControlLayerInfoKHR` structure used to configure the state of a rate control layer.
- If the video session was created with an [H.265 encode profile](#):
 - The values of the members of the `VkVideoEncodeH265RateControlInfoKHR` structure, if one is specified in the `pNext` chain of the `VkVideoEncodeRateControlInfoKHR` used to configure the rate control state.

- The values of the members of any [VkVideoEncodeH265RateControlLayerInfoKHR](#) structures included in the [pNext](#) chain of a [VkVideoEncodeRateControlLayerInfoKHR](#) structure used to configure the state of a rate control layer.
- If the video session was created with an [AV1 encode profile](#):
 - The values of the members of the [VkVideoEncodeAV1RateControlInfoKHR](#) structure, if one is specified in the [pNext](#) chain of the [VkVideoEncodeRateControlInfoKHR](#) used to configure the rate control state.
 - The values of the members of any [VkVideoEncodeAV1RateControlLayerInfoKHR](#) structures included in the [pNext](#) chain of a [VkVideoEncodeRateControlLayerInfoKHR](#) structure used to configure the state of a rate control layer.

Two rate control states match if all the parameters listed above match between them.

The [VkVideoEncodeRateControlInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeRateControlInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeRateControlFlagsKHR    flags;
    VkVideoEncodeRateControlModeFlagBitsKHR    rateControlMode;
    uint32_t                 layerCount;
    const VkVideoEncodeRateControlLayerInfoKHR* pLayers;
    uint32_t                 virtualBufferSizeInMs;
    uint32_t                 initialVirtualBufferSizeInMs;
} VkVideoEncodeRateControlInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is reserved for future use.
- [rateControlMode](#) is a [VkVideoEncodeRateControlModeFlagBitsKHR](#) value specifying the [rate control mode](#).
- [layerCount](#) specifies the number of [rate control layers](#) to use.
- [pLayers](#) is a pointer to an array of [layerCount](#) [VkVideoEncodeRateControlLayerInfoKHR](#) structures, each specifying the rate control configuration of the corresponding rate control layer.
- [virtualBufferSizeInMs](#) is the size in milliseconds of the virtual buffer used by the implementation's rate control algorithm for the [leaky bucket model](#), with respect to the average bitrate of the stream calculated by summing the values of the [averageBitrate](#) members of the [pLayers](#) array.
- [initialVirtualBufferSizeInMs](#) is the initial occupancy in milliseconds of the virtual buffer used by the implementation's rate control algorithm for the [leaky bucket model](#).

If [layerCount](#) is zero then the values of [virtualBufferSizeInMs](#) and [initialVirtualBufferSizeInMs](#) are

ignored.

This structure **can** be specified in the following places:

- In the **pNext** chain of [VkVideoBeginCodingInfoKHR](#) to specify the current rate control state expected to be configured when beginning a [video coding scope](#).
- In the **pNext** chain of [VkVideoCodingControlInfoKHR](#) to change the rate control configuration of the bound video session.

Including this structure in the **pNext** chain of [VkVideoCodingControlInfoKHR](#) and including [VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR](#) in [VkVideoCodingControlInfoKHR::flags](#) enables updating the rate control configuration of the bound video session. This replaces the entire rate control configuration of the bound video session and **may** reset the state of all enabled rate control layers to an initial state according to the codec-specific rate control semantics defined in the corresponding sections listed below.

When **layerCount** is greater than one, multiple [rate control layers](#) are configured, and each rate control layer is applied to the corresponding video coding layer identified by the index of the corresponding element of **pLayer**.

- If the video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#), then this index specifies the H.264 temporal layer ID of the video coding layer the rate control layer is applied to.
- If the video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then this index specifies the H.265 temporal ID of the video coding layer the rate control layer is applied to.
- If the video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#), then this index specifies the AV1 temporal ID of the temporal layer the rate control layer is applied to.

Additional structures providing codec-specific rate control parameters **can** be included in the **pNext** chain of [VkVideoCodingControlInfoKHR](#) depending on the [video profile](#) the bound video session was created. For further details see:

- [Video Coding Control](#)
- [H.264 Encode Rate Control](#)
- [H.265 Encode Rate Control](#)
- [AV1 Encode Rate Control](#)

The new rate control configuration takes effect when the corresponding [vkCmdControlVideoCodingKHR](#) is executed on the device, and only impacts video encode operations that follow in execution order.

Valid Usage

- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08248

If **rateControlMode** is [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR](#) or

VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then **layerCount** must be 0

- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08275
If **rateControlMode** is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR, then **layerCount** must be greater than 0
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08244
If **rateControlMode** is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR, then it must specify one of the bits included in **VkVideoEncodeCapabilitiesKHR::rateControlModes**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08245
layerCount member must be less than or equal to **VkVideoEncodeCapabilitiesKHR::maxRateControlLayers**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-08276
For each element of **pLayers**, its **averageBitrate** member must be between 1 and **VkVideoEncodeCapabilitiesKHR::maxBitrate**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-08277
For each element of **pLayers**, its **maxBitrate** member must be between 1 and **VkVideoEncodeCapabilitiesKHR::maxBitrate**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08356
If **rateControlMode** is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR, then for each element of **pLayers**, its **averageBitrate** member must equal its **maxBitrate** member
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08278
If **rateControlMode** is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR, then for each element of **pLayers**, its **averageBitrate** member must be less than or equal to its **maxBitrate** member
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08357
If **layerCount** is not zero, then **virtualBufferSizeInMs** must be greater than zero
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08358
If **layerCount** is not zero, then **initialVirtualBufferSizeInMs** must be less than or equal to **virtualBufferSizeInMs**
- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-07022
If the **videoCodecOperation** of the used video profile is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, the **pNext** chain this structure is included in also includes an instance of the **VkVideoEncodeH264RateControlInfoKHR** structure, and **layerCount** is greater than 1, then **layerCount** must equal **VkVideoEncodeH264RateControlInfoKHR::temporalLayerCount**
- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-07025
If the **videoCodecOperation** of the used video profile is

`VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain this structure is included in also includes an instance of the `VkVideoEncodeH265RateControlInfoKHR` structure, and `layerCount` is greater than 1, then `layerCount` **must** equal `VkVideoEncodeH265RateControlInfoKHR::subLayerCount`

- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-10351

If the `videoCodecOperation` of the used video profile is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, the `pNext` chain this structure is included in also includes an instance of the `VkVideoEncodeAV1RateControlInfoKHR` structure, and `layerCount` is greater than 1, then `layerCount` **must** equal `VkVideoEncodeAV1RateControlInfoKHR::temporalLayerCount`

Valid Usage (Implicit)

- VUID-VkVideoEncodeRateControlInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_INFO_KHR`
- VUID-VkVideoEncodeRateControlInfoKHR-flags-zero bitmask
`flags` **must** be 0
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-parameter
If `rateControlMode` is not 0, `rateControlMode` **must** be a valid `VkVideoEncodeRateControlModeFlagBitsKHR` value
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-parameter
If `layerCount` is not 0, `pLayers` **must** be a valid pointer to an array of `layerCount` valid `VkVideoEncodeRateControlLayerInfoKHR` structures

Structure Chaining

Extends the structures

- `VkVideoBeginCodingInfoKHR`
- `VkVideoCodingControlInfoKHR`

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeRateControlFlagsKHR;
```

`VkVideoEncodeRateControlFlagsKHR` is a bitmask type for setting a mask, but currently reserved for future use.

Rate Control Layer State

The configuration of individual rate control layers is specified using an instance of the `VkVideoEncodeRateControlLayerInfoKHR` structure.

The `VkVideoEncodeRateControlLayerInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeRateControlLayerInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           averageBitrate;
    uint64_t           maxBitrate;
    uint32_t           frameRateNumerator;
    uint32_t           frameRateDenominator;
} VkVideoEncodeRateControlLayerInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is a pointer to a structure extending this structure.
- `averageBitrate` is the average `bitrate` to be targeted by the implementation's rate control algorithm.
- `maxBitrate` is the peak `bitrate` to be targeted by the implementation's rate control algorithm.
- `frameRateNumerator` is the numerator of the frame rate assumed by the implementation's rate control algorithm.
- `frameRateDenominator` is the denominator of the frame rate assumed by the implementation's rate control algorithm.

NOTE

The ability of the implementation's rate control algorithm to be able to match the requested average and/or peak bitrates **may** be limited by the set of other codec-independent and codec-specific rate control parameters specified by the application, the input content, as well as the application conforming to the rate control guidance provided to the implementation, as described [earlier](#).

Additional structures providing codec-specific rate control parameters **can** be included in the `pNext` chain of `VkVideoEncodeRateControlLayerInfoKHR` depending on the `video profile` the bound video session was created with. For further details see:

- [Video Coding Control](#)
- [H.264 Encode Rate Control](#)
- [H.265 Encode Rate Control](#)
- [AV1 Encode Rate Control](#)

Valid Usage

- VUID-VkVideoEncodeRateControlLayerInfoKHR-frameRateNumerator-08350
`frameRateNumerator` **must** be greater than zero
- VUID-VkVideoEncodeRateControlLayerInfoKHR-frameRateDenominator-08351
`frameRateDenominator` **must** be greater than zero

Valid Usage (Implicit)

- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_LAYER_INFO_KHR`
- VUID-VkVideoEncodeRateControlLayerInfoKHR-pNext-pNext
Each pNext member of any structure (including this one) in the pNext chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeAV1RateControlLayerInfoKHR`, `VkVideoEncodeH264RateControlLayerInfoKHR`, or `VkVideoEncodeH265RateControlLayerInfoKHR`
- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-unique
The sType value of each structure in the pNext chain **must** be unique

48.19. Video Encode Quantization Maps

Quantization maps are `VkImage` objects that are used in video encode operations to control the relative quantization parameter values across the encoded picture. Each texel in the quantization map controls the relative quantization parameter values used to encode the corresponding rectangular block of texels in the [encode input picture](#).

The size of the rectangular block of texels each quantization map texel covers is referred to as the *quantization map texel size*.

The extent of the image subresource used as a quantization map when encoding a picture with a coded extent of (`width,height`) thus has to be at least ($\lceil \text{width} / \text{texelSize.width} \rceil$, $\lceil \text{height} / \text{texelSize.height} \rceil$), where `texelSize` is the used quantization map texel size.

In particular, the quantization map texel at location (`x,y`) contains relative quantization parameter values used when encoding the `texelSize` sized rectangular block of the [encode input picture](#) starting at the texel location (`x × texelSize.width, y × texelSize.height`).

The quantization map texel size does not always match the size of the codec-specific coding blocks used during encoding. Furthermore, some video compression standards allow the size of the codec-specific coding blocks to vary across the encoded picture. In order to accommodate for such mismatches between the granularity at which quantization parameters are stored in quantization maps and the granularity at which they are applied to codec-specific coding blocks during encoding, the following mapping rules are applied to define the quantization map texel value corresponding to a given codec-specific coding block with a size (`width,height`) at the texel location (`x,y`) in the [encode input picture](#):

- If the size of the codec-specific coding block matches the used quantization map texel size, then the fetched quantization map value corresponding to the codec-specific coding block is the texel value at the texel location (`x / texelSize.width, y / texelSize.height`).
- If the size of the codec-specific coding block is smaller than the used quantization map texel size, then the fetched quantization map value corresponding to the codec-specific coding block is the texel value at the texel location ($\lceil x / \text{texelSize.width} \rceil$, $\lceil y / \text{texelSize.height} \rceil$).
- If the size of the codec-specific coding block is larger than the used quantization map texel size,

then the fetched quantization map value corresponding to the codec-specific coding block **may** be any value determined as the linear interpolation of the quantization map texel values in the subregion starting at texel location ($x / \text{texelSize.width}, y / \text{texelSize.height}$) with a size ($\lceil \text{width} / \text{texelSize.width} \rceil, \lceil \text{height} / \text{texelSize.height} \rceil$).

The actual control parameters stored in the quantization map depend on its type. This specification supports the following types of quantization maps:

- [Quantization delta maps](#)
- [Emphasis maps](#)

48.19.1. Quantization Delta Maps

Quantization delta maps contain values that directly affect the codec-specific quantization parameter values used to encode the corresponding block of the [encode input picture](#).

Quantization delta maps **can** be used in conjunction with any [rate control mode](#), including [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#).

Due to their codec-specific nature, they are described in more detail in the corresponding codec-specific section for video encode operations that support them. In particular:

- The behavior of quantization delta maps used with an [H.264 encode profile](#) is described in the [H.264 Encode Quantization](#) and [H.264 QP Delta Maps](#) sections.
- The behavior of quantization delta maps used with an [H.265 encode profile](#) is described in the [H.265 Encode Quantization](#) and [H.265 QP Delta Maps](#) sections.
- The behavior of quantization delta maps used with an [AV1 encode profile](#) is described in the [AV1 Encode Quantization](#) and [AV1 Quantizer Index Delta Maps](#) sections.

This specification does not support quantization delta maps for any other video encode operation.

48.19.2. Emphasis Maps

Emphasis maps contain values that indirectly affect the codec-specific quantization parameter values used to encode the corresponding block of the [encode input picture](#).

The texels of emphasis maps contain values that provide input to the encoder implementation about the relative importance (emphasis) of regions of the encoded pictures in order to enable the implementation's rate control algorithm to allocate more bitrate budget for regions of the encoded picture with higher emphasis values than to those with lower emphasis values.

Emphasis maps **can** only be used when the current [rate control mode](#) configured for the video session is not [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR](#) or [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#).

As these emphasis values only control the otherwise implementation-specific behavior of the used rate control algorithm, this specification does not impose additional restrictions on implementations beyond the ones outlined in the corresponding codec-specific sections describing quantization behavior:

- The behavior of emphasis maps used with an [H.264 encode profile](#) is described in the [H.264 Encode Quantization](#) section.
- The behavior of emphasis maps used with an [H.265 encode profile](#) is described in the [H.265 Encode Quantization](#) section.
- The behavior of emphasis maps used with an [AV1 encode profile](#) is described in the [AV1 Encode Quantization](#) section.

This specification does not support emphasis maps for any other video encode operation.

Emphasis maps always have single channel unsigned normalized integer formats and implementations are **required** to support the [VK_FORMAT_R8_UNORM](#) format for emphasis maps, as reported in [VkVideoFormatPropertiesKHR::format](#), when the video encode profile supports [VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR](#).

48.19.3. Quantization Map Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specifying an encode operation, the [VkVideoEncodeQuantizationMapCapabilitiesKHR](#) structure **can** be included in the [pNext](#) chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve capabilities specific to video encode quantization maps.

The [VkVideoEncodeQuantizationMapCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeQuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         maxQuantizationMapExtent;
} VkVideoEncodeQuantizationMapCapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxQuantizationMapExtent](#) indicates the maximum supported width and height of quantization maps.

Valid Usage (Implicit)

- VUID-VkVideoEncodeQuantizationMapCapabilitiesKHR-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUANTIZATION_MAP_CAPABILITIES_KHR](#)

Structure Chaining

Extends the structure

- [VkVideoCapabilitiesKHR](#)

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities of an [H.264 encode profile](#), the [VkVideoEncodeH264QuantizationMapCapabilitiesKHR](#) structure **can** be included in the [pNext](#) chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve additional video encode quantization map capabilities specific to H.264 encode profiles.

The [VkVideoEncodeH264QuantizationMapCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeH264QuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    int32_t             minQpDelta;
    int32_t             maxQpDelta;
} VkVideoEncodeH264QuantizationMapCapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [minQpDelta](#) indicates the minimum QP delta value supported for [H.264 QP delta maps](#).
- [maxQpDelta](#) indicates the maximum QP delta value supported for [H.264 QP delta maps](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264QuantizationMapCapabilitiesKHR-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_QUANTIZATION_MAP_CAPABILITIES_KHR](#)

Structure Chaining

Extends the structure

- [VkVideoCapabilitiesKHR](#)

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities of an [H.265 encode profile](#), the [VkVideoEncodeH265QuantizationMapCapabilitiesKHR](#) structure **can** be included in the [pNext](#) chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve additional video encode quantization map capabilities specific to H.265 encode profiles.

The [VkVideoEncodeH265QuantizationMapCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeH265QuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    int32_t             minQpDelta;
    int32_t             maxQpDelta;
} VkVideoEncodeH265QuantizationMapCapabilitiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minQpDelta` indicates the minimum QP delta value supported for [H.265 QP delta maps](#).
- `maxQpDelta` indicates the maximum QP delta value supported for [H.265 QP delta maps](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265QuantizationMapCapabilitiesKHR-sType-sType `sType` must be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_QUANTIZATION_MAP_CAPABILITIES_KHR](#)

Structure Chaining

Extends the structure

- [VkVideoCapabilitiesKHR](#)

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities of an [AV1 encode profile](#), the [VkVideoEncodeAV1QuantizationMapCapabilitiesKHR](#) structure **can** be included in the `pNext` chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve additional video encode quantization map capabilities specific to AV1 encode profiles.

The [VkVideoEncodeAV1QuantizationMapCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeAV1QuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    int32_t             minQIndexDelta;
    int32_t             maxQIndexDelta;
} VkVideoEncodeAV1QuantizationMapCapabilitiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minQIndexDelta` indicates the minimum quantizer index delta value supported for [AV1 quantizer index delta maps](#).

- `maxQIndexDelta` indicates the maximum quantizer index delta value supported for [AV1 quantizer index delta maps](#).

Valid Usage (Implicit)

- `VUID-VkVideoEncodeAV1QuantizationMapCapabilitiesKHR-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_QUANTIZATION_MAP_CAPABILITIES_KHR`

Structure Chaining

Extends the structure

- [VkVideoCapabilitiesKHR](#)

48.19.4. Quantization Map Format Properties

When calling [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#), the [VkVideoFormatQuantizationMapPropertiesKHR](#) structure **can** be included in the `pNext` chain of the [VkVideoFormatPropertiesKHR](#) structure to retrieve video format properties specific to video encode quantization maps.

The [VkVideoFormatQuantizationMapPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoFormatQuantizationMapPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         quantizationMapTexelSize;
} VkVideoFormatQuantizationMapPropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `quantizationMapTexelSize` indicates the [quantization map texel size](#) of the video format, i.e. the number of pixels corresponding to each quantization map texel.

The values returned in this structure are only defined if the allowed image usage flags returned in [VkVideoFormatPropertiesKHR::imageUsageFlags](#) for this video format include [VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR](#) or [VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR](#).

Implementations **may** support multiple quantization map texel sizes for a particular video format which is indicated by [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#) returning multiple entries with different `quantizationMapTexelSize` values.

Valid Usage (Implicit)

- `VUID-VkVideoFormatQuantizationMapPropertiesKHR-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_VIDEO_FORMAT_QUANTIZATION_MAP_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- `VkVideoFormatPropertiesKHR`

When calling `vkGetPhysicalDeviceVideoFormatPropertiesKHR`, the `VkVideoFormatH265QuantizationMapPropertiesKHR` structure **can** be included in the `pNext` chain of the `VkVideoFormatPropertiesKHR` structure to retrieve video format properties specific to video encode quantization maps used with an [H.265 encode profile](#).

The `VkVideoFormatH265QuantizationMapPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoFormatH265QuantizationMapPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeH265CtbSizeFlagsKHR compatibleCtbSizes;
} VkVideoFormatH265QuantizationMapPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `compatibleCtbSizes` is a bitmask of `VkVideoEncodeH265CtbSizeFlagBitsKHR` indicating the CTB sizes that quantization maps using this video format are compatible with.

NOTE

The value of `compatibleCtbSizes` does not limit the use of the specific quantization map format, but does limit the implementation in being able to encode pictures with CTB sizes not included in `compatibleCtbSizes` but otherwise supported by the used video profile, as indicated by `VkVideoEncodeH265CapabilitiesKHR::ctbSizes`. In particular, using smaller [quantization map texel sizes](#) may prevent implementations from encoding with larger CTB sizes which may have a negative impact on the efficiency of the encoder.

The values returned in this structure are only defined if the allowed image usage flags returned in `VkVideoFormatPropertiesKHR::imageUsageFlags` for this video format include `VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR`.

Valid Usage (Implicit)

- VUID-VkVideoFormatH265QuantizationMapPropertiesKHR-sType-sType must be VK_STRUCTURE_TYPE_VIDEO_FORMAT_H265_QUANTIZATION_MAP_PROPERTIES_KHR

Structure Chaining

Extends the structure

- [VkVideoFormatPropertiesKHR](#)

When calling [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#), the [VkVideoFormatAV1QuantizationMapPropertiesKHR](#) structure **can** be included in the **pNext** chain of the [VkVideoFormatPropertiesKHR](#) structure to retrieve video format properties specific to video encode quantization maps used with an [AV1 encode profile](#).

The [VkVideoFormatAV1QuantizationMapPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoFormatAV1QuantizationMapPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeAV1SuperblockSizeFlagsKHR compatibleSuperblockSizes;
} VkVideoFormatAV1QuantizationMapPropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **compatibleSuperblockSizes** is a bitmask of [VkVideoEncodeAV1SuperblockSizeFlagBitsKHR](#) indicating the AV1 superblock sizes that quantization maps using this video format are compatible with.

NOTE

The value of **compatibleSuperblockSizes** does not limit the use of the specific quantization map format, but does limit the implementation in being able to encode pictures with superblock sizes not included in **compatibleSuperblockSizes** but otherwise supported by the used video profile, as indicated by [VkVideoEncodeAV1CapabilitiesKHR::superblockSizes](#). In particular, using smaller [quantization map texel sizes](#) may prevent implementations from encoding with larger superblock sizes which may have a negative impact on the efficiency of the encoder.

The values returned in this structure are only defined if the allowed image usage flags returned in [VkVideoFormatPropertiesKHR::imageUsageFlags](#) for this video format include [VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR](#) or [VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR](#).

Valid Usage (Implicit)

- VUID-VkVideoFormatAV1QuantizationMapPropertiesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_VIDEO_FORMAT_AV1_QUANTIZATION_MAP_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- `VkVideoFormatPropertiesKHR`

48.19.5. Encoding with Quantization Maps

The `VkVideoEncodeQuantizationMapInfoKHR` structure **can** be included in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to the `vkCmdEncodeVideoKHR` command to specify the quantization map used by the issued video encode operations.

The `VkVideoEncodeQuantizationMapInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeQuantizationMapInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkImageView         quantizationMap;
    VkExtent2D         quantizationMapExtent;
} VkVideoEncodeQuantizationMapInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `quantizationMap` specifies the image view to use as the quantization map.
- `quantizationMapExtent` specifies the extent of the image subregion of `quantizationMap` to use as the quantization map starting at offset (0,0).

Valid Usage

- VUID-VkVideoEncodeQuantizationMapInfoKHR-quantizationMapExtent-10352 `quantizationMapExtent.width` **must** be less than or equal to the width of `quantizationMap`
- VUID-VkVideoEncodeQuantizationMapInfoKHR-quantizationMapExtent-10353 `quantizationMapExtent.height` **must** be less than or equal to the height of `quantizationMap`

Valid Usage (Implicit)

- VUID-VkVideoEncodeQuantizationMapInfoKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUANTIZATION_MAP_INFO_KHR`
- VUID-VkVideoEncodeQuantizationMapInfoKHR-quantizationMap-parameter
If `quantizationMap` is not `VK_NULL_HANDLE`, `quantizationMap` must be a valid `VkImageView` handle

Structure Chaining

Extends the structure

- `VkVideoEncodeInfoKHR`

48.20. Video Encode R'G'B' Conversion

R'G'B' to Y'C_BC_R conversion performs the following operations to the `encode input picture` before video coding:

- `R'G'B' Range Compression`
- `R'G'B' Model Conversion`
- `R'G'B' Chroma Subsampling and Quantization`

48.20.1. R'G'B' Conversion Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `pVideoProfile->videoCodecOperation` specifying an encode operation, the `VkVideoEncodeRgbConversionCapabilitiesVALVE` structure **can** be included in the `pNext` chain of the `VkVideoCapabilitiesKHR` structure to retrieve capabilities specific to video encode R'G'B' conversion.

The `VkVideoEncodeRgbConversionCapabilitiesVALVE` structure is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef struct VkVideoEncodeRgbConversionCapabilitiesVALVE {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeRgbModelConversionFlagsVALVE    rgbModels;
    VkVideoEncodeRgbRangeCompressionFlagsVALVE  rgbRanges;
    VkVideoEncodeRgbChromaOffsetFlagsVALVE      xChromaOffsets;
    VkVideoEncodeRgbChromaOffsetFlagsVALVE      yChromaOffsets;
} VkVideoEncodeRgbConversionCapabilitiesVALVE;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `rgbModels` is a bitmask of `VkVideoEncodeRgbModelConversionFlagBitsVALVE` describing supported [model conversions](#) for video encode R'G'B' conversion.
- `rgbRanges` is a bitmask of `VkVideoEncodeRgbRangeCompressionFlagBitsVALVE` describing supported [range compressions](#) for video encode R'G'B' conversion.
- `xChromaOffsets` is a bitmask of `VkVideoEncodeRgbChromaOffsetFlagBitsVALVE` describing supported offsets of the output location of the downsampled chroma component on the X axis for video encode R'G'B' conversion.
- `yChromaOffsets` is a bitmask of `VkVideoEncodeRgbChromaOffsetFlagBitsVALVE` describing supported offsets of the output location of the downsampled chroma component on the Y axis for video encode R'G'B' conversion.

Valid Usage (Implicit)

- VUID-VkVideoEncodeRgbConversionCapabilitiesVALVE-sType-sType **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_RGB_CONVERSION_CAPABILITIES_VALVE`

Structure Chaining

Extends the structure

- `VkVideoCapabilitiesKHR`

R'G'B' Range Compression

The video encode R'G'B' range compression to be applied to color component values of the [encode input picture](#) before video coding is defined by the `rgbRange` member of the `VkVideoEncodeSessionRgbConversionCreateInfoVALVE` structure.

The `VkVideoEncodeRgbRangeCompressionFlagBitsVALVE` enum describes whether color components are encoded using the full range of numerical values or whether values are reserved for headroom and foot room:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef enum VkVideoEncodeRgbRangeCompressionFlagBitsVALVE {
    VK_VIDEO_ENCODE_RGB_RANGE_COMPRESSION_FULL_RANGE_BIT_VALVE = 0x00000001,
    VK_VIDEO_ENCODE_RGB_RANGE_COMPRESSION_NARROW_RANGE_BIT_VALVE = 0x00000002,
} VkVideoEncodeRgbRangeCompressionFlagBitsVALVE;
```

- `VK_VIDEO_ENCODE_RGB_RANGE_COMPRESSION_FULL_RANGE_BIT_VALVE` specifies the following transformations are applied:

$$Y' = C'_{rgb} [G]$$

$$C_B = C'_{rgb} [B] - \frac{2^{(n-1)}}{(2^n) - 1}$$

$$C_R = C'_{rgb} [R] - \frac{2^{(n-1)}}{(2^n) - 1}$$

NOTE

These formulae correspond to the “full range” encoding in the “Quantization schemes” chapter of the [Khronos Data Format Specification](#).

Should any future amendments be made to the ITU specifications from which these equations are derived, the formulae used by Vulkan **may** also be updated to maintain parity.

- [VK_VIDEO_ENCODE_RGB_RANGE_COMPRESSION_NARROW_RANGE_BIT_VALVE](#) specifies the following transformations are applied:

$$Y' = \frac{C'_{rgb} [G] \times (2^n - 1) - 16 \times 2^{n-8}}{219 \times 2^{n-8}}$$

$$C_B = \frac{C'_{rgb} [B] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}}$$

$$C_R = \frac{C'_{rgb} [R] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}}$$

NOTE

These formulae correspond to the “narrow range” encoding in the “Quantization schemes” chapter of the [Khronos Data Format Specification](#).

Unlike [sampler Y'C_BC_R range expansion](#), no precision guarantees are made for video encode R'G'B' range compression.

- n is the bit-depth of the components in the bound video session's [pictureFormat](#).

NOTE

Video encode R'G'B' range compression transformations have the inverse definition of the [sampler Y'C_BC_R range expansion](#) transformations.

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef VkFlags VkVideoEncodeRgbRangeCompressionFlagsVALVE;
```

[VkVideoEncodeRgbRangeCompressionFlagsVALVE](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeRgbRangeCompressionFlagBitsVALVE](#).

R'G'B' Model Conversion

The range-compressed values are converted between color models, according to the color model conversion specified in the [rgbModel](#) member of the [VkVideoEncodeSessionRgbConversionCreateInfoVALVE](#) structure.

[VkVideoEncodeRgbModelConversionFlagBitsVALVE](#) defines the conversion from the [encode input picture](#)'s color model to the encode color model.

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef enum VkVideoEncodeRgbModelConversionFlagBitsVALVE {
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_RGB_IDENTITY_BIT_VALVE = 0x00000001,
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_IDENTITY_BIT_VALVE = 0x00000002,
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_709_BIT_VALVE = 0x00000004,
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_601_BIT_VALVE = 0x00000008,
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_2020_BIT_VALVE = 0x00000010,
} VkVideoEncodeRgbModelConversionFlagBitsVALVE;
```

- [VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_RGB_IDENTITY_BIT_VALVE](#) specifies the color components are not modified by the color model conversion since they are assumed to represent the desired color model for video coding; R'G'B' range compression is applied to the components.
- [VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_IDENTITY_BIT_VALVE](#) specifies the color components are not modified by the color model conversion are assumed to be treated as though in Y'C_BC_R form; video encode R'G'B' range compression and video encode R'G'B' chroma subsampling is also ignored.
- [VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_709_BIT_VALVE](#) specifies the color components are transformed from an R'G'B' representation to a Y'C_BC_R representation as described in the “BT.709 Y'C_BC_R conversion” section of the [Khronos Data Format Specification](#).
- [VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_601_BIT_VALVE](#) specifies the color components are transformed from an R'G'B' representation to a Y'C_BC_R representation as described in the “BT.601 Y'C_BC_R conversion” section of the [Khronos Data Format Specification](#).
- [VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_2020_BIT_VALVE](#) specifies the color components are transformed from an R'G'B' representation to a Y'C_BC_R representation as described in the “BT.2020 Y'C_BC_R conversion” section of the [Khronos Data Format Specification](#).

NOTE Video encode R'G'B' model conversion transformations have the inverse definition of [sampler Y'C_BC_R model conversion](#) transformations.

NOTE The video encode R'G'B' model conversion step does not apply any transfer function, only converting from R'G'B' to Y'C_BC_R using the primaries of the specified [rgbModel](#) color model.

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef VkFlags VkVideoEncodeRgbModelConversionFlagsVALVE;
```

[VkVideoEncodeRgbModelConversionFlagsVALVE](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeRgbModelConversionFlagBitsVALVE](#).

R'G'B' Chroma Subsampling and Quantization

The model-converted values are chroma subsampled and quantized, according to the `chromaSubsampling`, `lumaBitDepth` and `chromaBitDepth` values specified by the bound video session.

The `VkVideoEncodeRgbChromaOffsetFlagBitsVALVE` enum defines the location of downsampled chroma component samples relative to the luma samples for video encode R'G'B' conversion, and is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef enum VkVideoEncodeRgbChromaOffsetFlagBitsVALVE {
    VK_VIDEO_ENCODE_RGB_CHROMA_OFFSET_COSITED_EVEN_BIT_VALVE = 0x00000001,
    VK_VIDEO_ENCODE_RGB_CHROMA_OFFSET_MIDPOINT_BIT_VALVE = 0x00000002,
} VkVideoEncodeRgbChromaOffsetFlagBitsVALVE;
```

- `VK_VIDEO_ENCODE_RGB_CHROMA_OFFSET_COSITED_EVEN_BIT_VALVE` specifies that downsampled chroma samples are aligned with luma samples with even coordinates.
- `VK_VIDEO_ENCODE_RGB_CHROMA_OFFSET_MIDPOINT_BIT_VALVE` specifies that downsampled chroma samples are located half way between each even luma sample and the nearest higher odd luma sample.

The output location of downsampled chroma components are specified by the `xChromaOffset` and `yChromaOffset` values of the `VkVideoEncodeSessionRgbConversionCreateInfoVALVE` structure:

Chroma subsampling is described in more detail in the [Chroma Reconstruction](#) section.

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef VkFlags VkVideoEncodeRgbChromaOffsetFlagsVALVE;
```

`VkVideoEncodeRgbChromaOffsetFlagsVALVE` is a bitmask type for setting a mask of zero or more `VkVideoEncodeRgbChromaOffsetFlagBitsVALVE`.

48.20.2. Encoding Pictures with R'G'B' Conversion

A video profile supporting video encode R'G'B' conversion is specified by an `pVideoProfile->videoCodecOperation` specifying an encode operation and including a `VkVideoEncodeProfileRgbConversionInfoVALVE` structure in the `pNext` chain of the `VkVideoProfileInfoKHR` structure and enabling `performEncodeRgbConversion`.

The `VkVideoEncodeProfileRgbConversionInfoVALVE` structure is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef struct VkVideoEncodeProfileRgbConversionInfoVALVE {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           performEncodeRgbConversion;
} VkVideoEncodeProfileRgbConversionInfoVALVE;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `performEncodeRgbConversion` is a boolean value indicating whether video encode R'G'B' conversion will be used for the encode operation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeProfileRgbConversionInfoVALVE-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_PROFILE_RGB_CONVERSION_INFO_VALVE`

Structure Chaining

Extends the structure

- `VkVideoProfileInfoKHR`

The `VkVideoEncodeSessionRgbConversionCreateInfoVALVE` structure **can** be included in the `pNext` chain of the `VkVideoSessionCreateInfoKHR` to specify the R'G'B' conversion parameters used by the issued video encode operations of the video session.

The `VkVideoEncodeSessionRgbConversionCreateInfoVALVE` structure is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef struct VkVideoEncodeSessionRgbConversionCreateInfoVALVE {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoEncodeRgbModelConversionFlagBitsVALVE    rgbModel;
    VkVideoEncodeRgbRangeCompressionFlagBitsVALVE    rgbRange;
    VkVideoEncodeRgbChromaOffsetFlagBitsVALVE    xChromaOffset;
    VkVideoEncodeRgbChromaOffsetFlagBitsVALVE    yChromaOffset;
} VkVideoEncodeSessionRgbConversionCreateInfoVALVE;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rgbModel` is the used `R'G'B' model conversion` for the R'G'B' conversion.
- `rgbRange` is the used `R'G'B' range compression` for the R'G'B' conversion.
- `xChromaOffset` describes the output location of downsampled chroma components in the x dimension for the R'G'B' conversion.
- `yChromaOffset` describes the output location of downsampled chroma components in the y dimension for the R'G'B' conversion.

Valid Usage

- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-rgbModel-10930
`rgbModel` **must** only be a bit set in `VkVideoEncodeRgbConversionCapabilitiesVALVE::rgbModels` as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `VkVideoEncodeRgbConversionCapabilitiesVALVE` in the `pNext` chain of `VkVideoCapabilitiesKHR` with the given `pVideoProfile`
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-rgbRange-10931
`rgbRange` **must** only be a bit set in `VkVideoEncodeRgbConversionCapabilitiesVALVE::rgbRanges` as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `VkVideoEncodeRgbConversionCapabilitiesVALVE` in the `pNext` chain of `VkVideoCapabilitiesKHR` with the given `pVideoProfile`
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-xChromaOffset-10932
`xChromaOffset` **must** only be a bit set in `VkVideoEncodeRgbConversionCapabilitiesVALVE::xChromaOffsets` as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `VkVideoEncodeRgbConversionCapabilitiesVALVE` in the `pNext` chain of `VkVideoCapabilitiesKHR` with the given `pVideoProfile`
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-yChromaOffset-10933
`yChromaOffset` **must** only be a bit set in `VkVideoEncodeRgbConversionCapabilitiesVALVE::yChromaOffsets` as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `VkVideoEncodeRgbConversionCapabilitiesVALVE` in the `pNext` chain of `VkVideoCapabilitiesKHR` with the given `pVideoProfile`

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_RGB_CONVERSION_CREATE_INFO_VALVE`
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-rgbModel-parameter
`rgbModel` **must** be a valid `VkVideoEncodeRgbModelConversionFlagBitsVALVE` value
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-rgbRange-parameter
`rgbRange` **must** be a valid `VkVideoEncodeRgbRangeCompressionFlagBitsVALVE` value
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-xChromaOffset-parameter
`xChromaOffset` **must** be a valid `VkVideoEncodeRgbChromaOffsetFlagBitsVALVE` value
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-yChromaOffset-parameter
`yChromaOffset` **must** be a valid `VkVideoEncodeRgbChromaOffsetFlagBitsVALVE` value

Structure Chaining

Extends the structure

- `VkVideoSessionCreateInfoKHR`

48.21. H.264 Encode Operations

Video encode operations using an [H.264 encode profile](#) **can** be used to encode elementary video stream sequences compliant to the [ITU-T H.264 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video encode operation steps](#) with the codec-specific semantics defined in section 8 of the [ITU-T H.264 Specification](#) as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The `StdVideoH264SequenceParameterSet` structure corresponding to the [active SPS](#) specifying the [H.264 sequence parameter set](#).
 - The `StdVideoH264PictureParameterSet` structure corresponding to the [active PPS](#) specifying the [H.264 picture parameter set](#).
 - The `StdVideoEncodeH264PictureInfo` structure specifying the [H.264 picture information](#).
 - The `StdVideoEncodeH264SliceHeader` structures specifying the [H.264 slice header parameters](#) for each encoded H.264 slice.
 - The `StdVideoEncodeH264ReferenceInfo` structures specifying the [H.264 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The encoded bitstream data is written to the destination video bitstream buffer range as defined in the [H.264 Encode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [encode input picture](#), [active reference pictures](#), and optional [reconstructed picture](#) is accessed as defined in the [H.264 Encode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [H.264 picture information](#).

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the [ITU-T H.264 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete [unsuccessfully](#).

48.21.1. H.264 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the H.264 encode parameters specified in the following Video Std structures:

- `StdVideoH264SequenceParameterSet`
- `StdVideoH264PictureParameterSet`
- `StdVideoEncodeH264PictureInfo`

- `StdVideoEncodeH264SliceHeader`
- `StdVideoEncodeH264ReferenceInfo`

All such H.264 encode parameter overrides **must** fulfill the conditions defined in the [Video Encode Parameter Overrides](#) section.

In addition, implementations **must** not override any of the following H.264 encode parameters:

- `StdVideoEncodeH264PictureInfo::primary_pic_type`
- `StdVideoEncodeH264SliceHeader::slice_type`

If the `videoMaintenance2` feature is enabled, implementations **must** not override any of the following H.264 encode parameters:

- the following parameters specified in `StdVideoH264SequenceParameterSet`:
 - `flags.vui_parameters_present_flag`
 - `profile_idc`
 - `level_idc`
 - `chroma_format_idc`
- the following parameters specified in the `StdVideoH264SequenceParameterSetVui` structure pointed to by `StdVideoH264SequenceParameterSet::pSequenceParameterSetVui`:
 - `flags.aspect_ratio_info_present_flag`
 - `flags.overscan_info_present_flag`
 - `flags.overscan_appropriate_flag`
 - `flags.video_signal_type_present_flag`
 - `flags.video_full_range_flag`
 - `flags.color_description_present_flag`
 - `flags.chroma_loc_info_present_flag`
 - `flags.timing_info_present_flag`
 - `flags.fixed_frame_rate_flag`
 - `aspect_ratio_idc`
 - `sar_width`
 - `sar_height`
 - `video_format`
 - `colour_primaries`
 - `transfer_characteristics`
 - `matrix_coefficients`
 - `num_units_in_tick`
 - `time_scale`

- `chroma_sample_loc_type_top_field`
- `chroma_sample_loc_type_bottom_field`

In case of H.264 encode parameters stored in [video session parameters](#) objects, applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded H.264 parameter sets in the bitstream in order to be able to produce a compliant H.264 video bitstream using the H.264 encode parameters stored in the video session parameters object.

In case of any H.264 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the [VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR](#) [video encode feedback query](#) flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those H.264 encode parameters.

48.21.2. H.264 Encode Bitstream Data Access

Each video encode operation writes one or more VCL NAL units comprising of slice headers and data of the encoded picture, in the format defined in sections 7.3.3 and 7.3.4, according to the semantics defined in sections 7.4.3 and 7.4.4 of the [ITU-T H.264 Specification](#), respectively. The number of VCL NAL units written is specified by `VkVideoEncodeH264PictureInfoKHR::naluSliceEntryCount`.

In addition, if `VkVideoEncodeH264PictureInfoKHR::generatePrefixNalu` is [VK_TRUE](#) for the video encode operation, then an additional prefix NAL unit is written before each VCL NAL unit corresponding to individual slices in the format defined in section 7.3.2.12, according to the semantics defined in section 7.4.2.12 of the [ITU-T H.264 Specification](#), respectively.

48.21.3. H.264 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used [video profile](#). Accordingly, the complete image subregion of a [encode input picture](#), [reference picture](#), or [reconstructed picture](#) accessed by video coding operations using an [H.264 encode profile](#) is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource [referred](#) to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource [referred](#)

to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;

Where `codedExtent` is the member of the [VkVideoPictureResourceInfoKHR](#) structure corresponding to the picture.

In case of video encode operations using an [H.264 encode profile](#), any access to a picture at the coordinates (x,y), as defined by the [ITU-T H.264 Specification](#), is an access to the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure at the texel coordinates (x,y).

Implementations **may** choose not to access some or all texels within particular [reference pictures](#) available to a video encode operation (e.g. due to [video encode parameter overrides](#) restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

48.21.4. H.264 Frame, Picture, and Slice

H.264 pictures are partitioned into slices, as defined in section 6.3 of the [ITU-T H.264 Specification](#).

For the purposes of this specification, the H.264 slices comprising a picture are referred to as the *picture partitions* of the picture.

Video encode operations using an [H.264 encode profile](#) **can** encode slices of different types, as defined in section 7.4.3 of the [ITU-T H.264 Specification](#), by specifying the corresponding enumeration constant value in `StdVideoEncodeH264SliceHeader::slice_type` in the [H.264 slice header parameters](#) from the Video Std enumeration type `StdVideoH264SliceType`:

- `STD_VIDEO_H264_SLICE_TYPE_P` indicates that the slice is a *P slice* as defined in section 3.109 of the [ITU-T H.264 Specification](#).
- `STD_VIDEO_H264_SLICE_TYPE_B` indicates that the slice is a *B slice* as defined in section 3.9 of the [ITU-T H.264 Specification](#).
- `STD_VIDEO_H264_SLICE_TYPE_I` indicates that the slice is an *I slice* as defined in section 3.66 of the [ITU-T H.264 Specification](#).

Pictures constructed from such slices **can** be of different types, as defined in section 7.4.2.4 of the [ITU-T H.264 Specification](#). Video encode operations using an [H.264 encode profile](#) **can** encode pictures of a specific type by specifying the corresponding enumeration constant value in `StdVideoEncodeH264PictureInfo::primary_pic_type` in the [H.264 picture information](#) from the Video Std enumeration type `StdVideoH264PictureType`:

- `STD_VIDEO_H264_PICTURE_TYPE_P` indicates that the picture is a *P picture*. A frame consisting of a P picture is also referred to as a *P frame*.
- `STD_VIDEO_H264_PICTURE_TYPE_B` indicates that the picture is a *B picture*. A frame consisting of a B picture is also referred to as a *B frame*.
- `STD_VIDEO_H264_PICTURE_TYPE_I` indicates that the picture is an *I picture*. A frame consisting of an I picture is also referred to as an *I frame*.
- `STD_VIDEO_H264_PICTURE_TYPE_IDR` indicates that the picture is a special type of I picture called an *IDR picture* as defined in section 3.69 of the [ITU-T H.264 Specification](#). A frame consisting of an

IDR picture is also referred to as an *IDR frame*.

48.21.5. H.264 Coding Blocks

H.264 encode supports a single type of coding block called a *macroblock*, as defined in section 3.84 of the [ITU-T H.264 Specification](#).

48.21.6. H.264 Encode Profile

A video profile supporting H.264 video encode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and adding a `VkVideoEncodeH264ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoEncodeH264ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoH264ProfileIdc stdProfileIdc;
} VkVideoEncodeH264ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a `StdVideoH264ProfileIdc` value specifying the H.264 codec profile IDC, where enum constant `STD_VIDEO_H264_PROFILE_IDC_BASELINE` identifies the Constrained Baseline profile as defined in A.2.1.1 of the [ITU-T H.264 Specification](#), and all other values correspond to profiles defined in section A.2 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264ProfileInfoKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PROFILE_INFO_KHR`

Structure Chaining

Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

48.21.7. H.264 Encode Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities for an [H.264](#)

encode profile, the `VkVideoCapabilitiesKHR::pNext` chain **must** include a `VkVideoEncodeH264CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoEncodeH264CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264CapabilitiesKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkVideoEncodeH264CapabilityFlagsKHR flags;
    StdVideoH264LevelIdc     maxLevelIdc;
    uint32_t                 maxSliceCount;
    uint32_t                 maxPPictureL0ReferenceCount;
    uint32_t                 maxBPictureL0ReferenceCount;
    uint32_t                 maxL1ReferenceCount;
    uint32_t                 maxTemporalLayerCount;
    VkBool32                 expectDyadicTemporalLayerPattern;
    int32_t                  minQp;
    int32_t                  maxQp;
    VkBool32                 prefersGopRemainingFrames;
    VkBool32                 requiresGopRemainingFrames;
    VkVideoEncodeH264StdFlagsKHR stdSyntaxFlags;
} VkVideoEncodeH264CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH264CapabilityFlagBitsKHR` indicating supported H.264 encoding capabilities.
- `maxLevelIdc` is a `StdVideoH264LevelIdc` value indicating the maximum H.264 level supported by the profile, where enum constant `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifies H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#).
- `maxSliceCount` indicates the maximum number of slices that **can** be encoded for a single picture. Further restrictions **may** apply to the number of slices that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- `maxPPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [P pictures](#).

NOTE

As implementations **may** [override](#) the reference lists, `maxPPictureL0ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 reference list for P pictures. However, if `maxPPictureL0ReferenceCount` is zero, then the use of P pictures is not allowed.

- `maxBPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [B pictures](#).
- `maxL1ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of [B pictures](#) is supported.

NOTE

As implementations **may** **override** the reference lists, `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 and L1 reference lists for B pictures. However, if `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` are both zero, then the use of B pictures is not allowed.

- `maxTemporalLayerCount` indicates the maximum number of H.264 temporal layers supported by the implementation.
- `expectDyadicTemporalLayerPattern` indicates that the implementation's rate control algorithms expect the application to use a **dyadic temporal layer pattern** when encoding multiple temporal layers.
- `minQp` indicates the minimum QP value supported.
- `maxQp` indicates the maximum QP value supported.
- `prefersGopRemainingFrames` indicates that the implementation's rate control algorithm prefers the application to specify the number of frames of each type **remaining** in the current **group of pictures** when beginning a **video coding scope**.
- `requiresGopRemainingFrames` indicates that the implementation's rate control algorithm requires the application to specify the number of frames of each type **remaining** in the current **group of pictures** when beginning a **video coding scope**.
- `stdSyntaxFlags` is a bitmask of `VkVideoEncodeH264StdFlagBitsKHR` indicating capabilities related to H.264 syntax elements.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264CapabilitiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_CAPABILITIES_KHR`

Structure Chaining

Extends the structure

- `VkVideoCapabilitiesKHR`

Bits which **may** be set in `VkVideoEncodeH264CapabilitiesKHR::flags`, indicating the H.264 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR = 0x00000080,
    VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR = 0x00000100,
    // Provided by VK_KHR_video_encode_h264 with VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR = 0x00000400,
    // Provided by VK_KHR_video_encode_h264 with VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_H264_CAPABILITY_MB_QP_DIFF_WRAPAROUND_BIT_KHR = 0x00000200,
} VkVideoEncodeH264CapabilityFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR](#) specifies whether the implementation **may** be able to generate HRD compliant bitstreams if any of the [nal_hrd_parameters_present_flag](#) or [vcl_hrd_parameters_present_flag](#) members of [StdVideoH264SpsVuiFlags](#) are set to 1 in the [active SPS](#).
- [VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR](#) specifies that if [StdVideoH264PpsFlags::weighted_pred_flag](#) is set to 1 or [StdVideoH264PictureParameterSet::weighted_bipred_idc](#) is set to [STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT](#) in the [active PPS](#) when encoding a [P picture](#) or [B picture](#), respectively, then the implementation is able to internally decide syntax for [pred_weight_table](#), as defined in section 7.4.3.2 of the [ITU-T H.264 Specification](#), and the application is not **required** to provide a weight table in the [H.264 slice header parameters](#).
- [VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR](#) specifies that each slice in a frame with multiple slices may begin or finish at any offset in a macroblock row. If not supported, all slices in the frame **must** begin at the start of a macroblock row (and hence each slice **must** finish at the end of a macroblock row). When a picture is encoded with [intra refresh](#), encoding non-rectangular slices also requires: support for the [VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions](#) capability.
- [VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR](#) specifies that when a frame is encoded with multiple slices, the implementation allows encoding each slice with a different [StdVideoEncodeH264SliceHeader::slice_type](#) specified in the [H.264 slice header parameters](#). If not supported, all slices of the frame **must** be encoded with the same [slice_type](#) which corresponds to the picture type of the frame. There is one exception to this rule: if the picture is encoded with the [intra refresh mode](#) [VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR](#), then the currently refreshed slice **must** specify the [slice_type](#) [STD_VIDEO_H264_SLICE_TYPE_I](#) and **can** differ from the [slice_type](#) of the other slices regardless of whether [VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR](#) is supported.
- [VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR](#) specifies support for

using a [B frame](#) as L0 reference, as specified in [StdVideoEncodeH264ReferenceListsInfo::RefPicList0](#) in the [H.264 picture information](#).

- [VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR](#) specifies support for using a [B frame](#) as L1 reference, as specified in [StdVideoEncodeH264ReferenceListsInfo::RefPicList1](#) in the [H.264 picture information](#).
- [VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR](#) specifies support for specifying different QP values in the members of [VkVideoEncodeH264QpKHR](#).
- [VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR](#) specifies support for specifying different constant QP values for each slice.
- [VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR](#) specifies support for generating prefix NAL units by setting [VkVideoEncodeH264PictureInfoKHR::generatePrefixNalu](#) to [VK_TRUE](#).
- [VK_VIDEO_ENCODE_H264_CAPABILITY_MB_QP_DIFF_WRAPAROUND_BIT_KHR](#) indicates support for wraparound during the calculation of the QP values of subsequently encoded macroblocks, as defined in equation 7-37 of the [ITU-T H.264 Specification](#). If not supported, equation 7-37 of the [ITU-T H.264 Specification](#) is effectively reduced to the following:

$$QP_Y = QP_{Y,PREV} + mb_qp_delta$$

NOTE

The effect of this is that the maximum QP difference across subsequent macroblocks is limited to the $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$ range.

- [VK_VIDEO_ENCODE_H264_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR](#) indicates support for encoding [B pictures](#) with [intra refresh](#) enabled.

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264CapabilityFlagsKHR;
```

[VkVideoEncodeH264CapabilityFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH264CapabilityFlagBitsKHR](#).

Bits which **may** be set in [VkVideoEncodeH264CapabilitiesKHR::stdSyntaxFlags](#), indicating the capabilities related to the H.264 syntax elements, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264StdFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_STD_QPPRIME_Y_ZERO_TRANSFORM_BYPASS_FLAG_SET_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H264_STD_SCALING_MATRIX_PRESENT_FLAG_SET_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_STD_CHROMA_QP_INDEX_OFFSET_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_STD_SECOND_CHROMA_QP_INDEX_OFFSET_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H264_STD_PIC_INIT_QP_MINUS26_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_EXPLICIT_BIT_KHR = 0x00000080,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_IMPLICIT_BIT_KHR = 0x00000100,
    VK_VIDEO_ENCODE_H264_STD_TRANSFORM_8X8_MODE_FLAG_SET_BIT_KHR = 0x00000200,
    VK_VIDEO_ENCODE_H264_STD_DIRECT_SPATIAL_MV_PRED_FLAG_UNSET_BIT_KHR = 0x00000400,
    VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_UNSET_BIT_KHR = 0x00000800,
    VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_SET_BIT_KHR = 0x00001000,
    VK_VIDEO_ENCODE_H264_STD_DIRECT_8X8_INFERENCE_FLAG_UNSET_BIT_KHR = 0x00002000,
    VK_VIDEO_ENCODE_H264_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR = 0x00004000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_DISABLED_BIT_KHR = 0x00008000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_ENABLED_BIT_KHR = 0x00010000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_PARTIAL_BIT_KHR = 0x00020000,
    VK_VIDEO_ENCODE_H264_STD_SLICE_QP_DELTA_BIT_KHR = 0x00080000,
    VK_VIDEO_ENCODE_H264_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR = 0x00100000,
} VkVideoEncodeH264StdFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_H264_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoH264SpsFlags::separate_colour_plane_flag](#) in the [SPS](#) when that value is 1.
- [VK_VIDEO_ENCODE_H264_STD_QPPRIME_Y_ZERO_TRANSFORM_BYPASS_FLAG_SET_BIT_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoH264SpsFlags::qpprime_y_zero_transform_bypass_flag](#) in the [SPS](#) when that value is 1.
- [VK_VIDEO_ENCODE_H264_STD_SCALING_MATRIX_PRESENT_FLAG_SET_BIT_KHR](#) specifies whether the implementation supports using the application-provided values for [StdVideoH264SpsFlags::seq_scaling_matrix_present_flag](#) in the [SPS](#) and [StdVideoH264PpsFlags::pic_scaling_matrix_present_flag](#) in the [PPS](#) when any of those values are 1.
- [VK_VIDEO_ENCODE_H264_STD_CHROMA_QP_INDEX_OFFSET_BIT_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoH264PictureParameterSet::chroma_qp_index_offset](#) in the [PPS](#) when that value is non-zero.
- [VK_VIDEO_ENCODE_H264_STD_SECOND_CHROMA_QP_INDEX_OFFSET_BIT_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoH264PictureParameterSet::second_chroma_qp_index_offset](#) in the [PPS](#) when that value is non-zero.
- [VK_VIDEO_ENCODE_H264_STD_PIC_INIT_QP_MINUS26_BIT_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoH264PictureParameterSet::pic_init_qp_minus26](#) in the [PPS](#) when that value is non-zero.

- `VK_VIDEO_ENCODE_H264_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PpsFlags::weighted_pred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_EXPLICIT_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::weighted_bipred_idc` in the PPS when that value is `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT`.
- `VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_IMPLICIT_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::weighted_bipred_idc` in the PPS when that value is `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_IMPLICIT`.
- `VK_VIDEO_ENCODE_H264_STD_TRANSFORM_8X8_MODE_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PpsFlags::transform_8x8_mode_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_DIRECT_SPATIAL_MV_PRED_FLAG_UNSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeaderFlags::direct_spatial_mv_pred_flag` in the H.264 slice header parameters when that value is 0.
- `VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_UNSET_BIT_KHR` specifies whether the implementation supports CAVLC entropy coding, as defined in section 9.2 of the ITU-T H.264 Specification, and thus supports using the application-provided value for `StdVideoH264PpsFlags::entropy_coding_mode_flag` in the PPS when that value is 0.
- `VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_SET_BIT_KHR` specifies whether the implementation supports CABAC entropy coding, as defined in section 9.3 of the ITU-T H.264 Specification, and thus supports using the application-provided value for `StdVideoH264PpsFlags::entropy_coding_mode_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_DIRECT_8X8_INFERENCE_FLAG_UNSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264SpsFlags::direct_8x8_inference_flag` in the SPS when that value is 0.
- `VK_VIDEO_ENCODE_H264_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PpsFlags::constrained_intra_pred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_DISABLED_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc` in the H.264 slice header parameters when that value is `STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_DISABLED`.
- `VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_ENABLED_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc` in the H.264 slice header parameters when that value is `STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_ENABLED`.
- `VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_PARTIAL_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc` in the H.264 slice header parameters when that value is 1.

parameters when that value is `STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_PARTIAL`.

- `VK_VIDEO_ENCODE_H264_STD_SLICE_QP_DELTA_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::slice_qp_delta` in the H.264 slice header parameters when that value is identical across the slices of the encoded frame.
- `VK_VIDEO_ENCODE_H264_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::slice_qp_delta` in the H.264 slice header parameters when that value is different across the slices of the encoded frame.

These capability flags provide information to the application about specific H.264 syntax element values that the implementation supports without having to `override` them and do not otherwise restrict the values that the application **can** specify for any of the mentioned H.264 syntax elements.

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264StdFlagsKHR;
```

`VkVideoEncodeH264StdFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH264StdFlagBitsKHR`.

48.21.8. H.264 Encode Quality Level Properties

When calling `vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR` with `pVideoProfile->videoCodecOperation` specified as `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `VkVideoEncodeH264QualityLevelPropertiesKHR` structure **must** be included in the `pNext` chain of the `VkVideoEncodeQualityLevelPropertiesKHR` structure to retrieve additional video encode quality level properties specific to H.264 encoding.

The `VkVideoEncodeH264QualityLevelPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264QualityLevelPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeH264RateControlFlagsKHR preferredRateControlFlags;
    uint32_t            preferredGopFrameCount;
    uint32_t            preferredIdrPeriod;
    uint32_t            preferredConsecutiveBFrameCount;
    uint32_t            preferredTemporalLayerCount;
    VkVideoEncodeH264QpKHR preferredConstantQp;
    uint32_t            preferredMaxL0ReferenceCount;
    uint32_t            preferredMaxL1ReferenceCount;
    VkBool32            preferredStdEntropyCodingModeFlag;
} VkVideoEncodeH264QualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of `VkVideoEncodeH264RateControlFlagBitsKHR` values indicating the preferred flags to use for `VkVideoEncodeH264RateControlInfoKHR::flags`.
- `preferredGopFrameCount` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::gopFrameCount`.
- `preferredIdrPeriod` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::idrPeriod`.
- `preferredConsecutiveBFrameCount` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::consecutiveBFrameCount`.
- `preferredTemporalLayerCount` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::temporalLayerCount`.
- `preferredConstantQp` indicates the preferred values to use for `VkVideoEncodeH264NaluSliceInfoKHR::constantQp` for each picture type when using rate control mode `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `preferredMaxL0ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L0.
- `preferredMaxL1ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L1.
- `preferredStdEntropyCodingModeFlag` indicates the preferred value to use for `entropy_coding_mode_flag` in `StdVideoH264PpsFlags`.

Valid Usage (Implicit)

- `VOID-VkVideoEncodeH264QualityLevelPropertiesKHR-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_QUALITY_LEVEL_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- `VkVideoEncodeQualityLevelPropertiesKHR`

48.21.9. H.264 Encode Session

Additional parameters can be specified when creating a video session with an H.264 encode profile by including an instance of the `VkVideoEncodeH264SessionCreateInfoKHR` structure in the `pNext` chain of `VkVideoSessionCreateInfoKHR`.

The `VkVideoEncodeH264SessionCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMaxLevelIdc;
    StdVideoH264LevelIdc maxLevelIdc;
} VkVideoEncodeH264SessionCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMaxLevelIdc` indicates whether the value of `maxLevelIdc` should be used by the implementation. When it is `VK_FALSE`, the implementation ignores the value of `maxLevelIdc` and uses the value of `VkVideoEncodeH264CapabilitiesKHR::maxLevelIdc`, as reported by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile.
- `maxLevelIdc` is a `StdVideoH264LevelIdc` value specifying the upper bound on the H.264 level for the video bitstreams produced by the created video session, where enum constant `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifies H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionCreateInfoKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_CREATE_INFO_KHR`

Structure Chaining

Extends the structure

- `VkVideoSessionCreateInfoKHR`

48.21.10. H.264 Encode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` can contain the following types of parameters:

H.264 Sequence Parameter Sets (SPS)

Represented by `StdVideoH264SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `seq_parameter_set_id` is used as the key of the SPS entry;
- `level_idc` is one of the enum constants `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifying

the H.264 level <major>.<minor> as defined in section A.3 of the [ITU-T H.264 Specification](#);

- `pOffsetForRefFrame` is a pointer to an array of `num_ref_frames_in_pic_order_cnt_cycle` number of signed integers specifying the elements of the `offset_for_ref_frame` array, as defined in section 7.4.2.1.1 of the [ITU-T H.264 Specification](#);
- if `flags.seq_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `seq_scaling_list_present_flag[i]` as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#);
 - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
 - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then `pSequenceParameterSetVui` is a pointer to a `StdVideoH264SequenceParameterSetVui` structure that is interpreted as follows:
 - `reserved1` is used only for padding purposes and is otherwise ignored;
 - `flags.color_description_present_flag` is interpreted as the value of `colour_description_present_flag`, as defined in section E.2.1 of the [ITU-T H.264 Specification](#);

NOTE

The name of `colour_description_present_flag` was misspelled in the Video Std header.

- if `flags.nal_hrd_parameters_present_flag` or `flags.vcl_hrd_parameters_present_flag` is set, then the `StdVideoH264HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `reserved1` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoH264HrdParameters` are interpreted as defined in section E.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSetVui` are interpreted as defined in section E.2.1 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSet` are interpreted as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#).

H.264 Picture Parameter Sets (PPS)

Represented by `StdVideoH264PictureParameterSet` structures and interpreted as follows:

- the pair constructed from `seq_parameter_set_id` and `pic_parameter_set_id` is used as the key of the PPS entry;

- if `flags.pic_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `pic_scaling_list_present_flag[i]` as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#);
 - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
 - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264PictureParameterSet` are interpreted as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#).

Implementations **may** override any of these parameters according to the semantics defined in the [Video Encode Parameter Overrides](#) section before storing the resulting H.264 parameter sets into the video session parameters object. Applications need to use the [vkGetEncodedVideoSessionParametersKHR](#) command to determine whether any implementation overrides happened and to retrieve the encoded H.264 parameter sets in order to be able to produce a compliant H.264 video bitstream.

Such H.264 parameter set overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the [VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR](#) video encode feedback query flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a [video session parameters](#) object is created with the codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#), the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxStdSPSCount;
    uint32_t                 maxStdPPSCount;
    const VkVideoEncodeH264SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoEncodeH264SessionParametersCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdSPSCount` is the maximum number of `H.264 SPS` entries the created `VkVideoSessionParametersKHR` can contain.
- `maxStdPPSCount` is the maximum number of `H.264 PPS` entries the created `VkVideoSessionParametersKHR` can contain.
- `pParametersAddInfo` is `NULL` or a pointer to a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure specifying H.264 parameters to add upon object creation.

Valid Usage (Implicit)

- `VOID-VkVideoEncodeH264SessionParametersCreateInfoKHR-sType-sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR`
- `VOID-VkVideoEncodeH264SessionParametersCreateInfoKHR-pParametersAddInfo-parameter`
If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` must be a valid pointer to a valid `VkVideoEncodeH264SessionParametersAddInfoKHR` structure

Structure Chaining

Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

The `VkVideoEncodeH264SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersAddInfoKHR {
    VkStructureType    sType;
    const void*         pNext;
    uint32_t            stdSPSCount;
    const StdVideoH264SequenceParameterSet* pStdSPSs;
    uint32_t            stdPPSCount;
    const StdVideoH264PictureParameterSet* pStdPPSs;
} VkVideoEncodeH264SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH264SequenceParameterSet` structures describing the `H.264 SPS` entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.

- `pStdPPSs` is a pointer to an array of `StdVideoH264PictureParameterSet` structures describing the H.264 PPS entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a `video session parameters` object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the `video session parameters` object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

Valid Usage

- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-None-04837
The `seq_parameter_set_id` member of each `StdVideoH264SequenceParameterSet` structure specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-None-04838
The pair constructed from the `seq_parameter_set_id` and `pic_parameter_set_id` members of each `StdVideoH264PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-pStdSPSs-parameter
If `stdSPSCount` is not 0, and `pStdSPSs` is not NULL, `pStdSPSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH264SequenceParameterSet` values
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-pStdPPSs-parameter
If `stdPPSCount` is not 0, and `pStdPPSs` is not NULL, `pStdPPSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH264PictureParameterSet` values

Structure Chaining

Extends the structure

- `VkVideoSessionParametersUpdateInfoKHR`

The `VkVideoEncodeH264SessionParametersGetInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           writeStdSPS;
    VkBool32           writeStdPPS;
    uint32_t           stdSPSId;
    uint32_t           stdPPSId;
} VkVideoEncodeH264SessionParametersGetInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `writeStdSPS` indicates whether the encoded H.264 sequence parameter set identified by `stdSPSId` is requested to be retrieved.
- `writeStdPPS` indicates whether the encoded H.264 picture parameter set identified by the pair constructed from `stdSPSId` and `stdPPSId` is requested to be retrieved.
- `stdSPSId` specifies the H.264 sequence parameter set ID used to identify the retrieved H.264 sequence and/or picture parameter set(s).
- `stdPPSId` specifies the H.264 picture parameter set ID used to identify the retrieved H.264 picture parameter set when `writeStdPPS` is `VK_TRUE`.

When this structure is specified in the `pNext` chain of the `VkVideoEncodeSessionParametersGetInfoKHR` structure passed to `vkGetEncodedVideoSessionParametersKHR`, the command will write encoded parameter data to the output buffer in the following order:

1. The H.264 sequence parameter set identified by `stdSPSId`, if `writeStdSPS` is `VK_TRUE`.
2. The H.264 picture parameter set identified by the pair constructed from `stdSPSId` and `stdPPSId`, if `writeStdPPS` is `VK_TRUE`.

Valid Usage

- VUID-VkVideoEncodeH264SessionParametersGetInfoKHR-writeStdSPS-08279
At least one of `writeStdSPS` and `writeStdPPS` must be `VK_TRUE`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersGetInfoKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_GET_INFO_KHR`

Structure Chaining

Extends the structure

- [VkVideoEncodeSessionParametersGetInfoKHR](#)

The [VkVideoEncodeH264SessionParametersFeedbackInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasStdSPSOverrides;
    VkBool32           hasStdPPSOverrides;
} VkVideoEncodeH264SessionParametersFeedbackInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hasStdSPSOverrides` indicates whether any of the parameters of the requested [H.264 sequence parameter set](#), if one was requested via [VkVideoEncodeH264SessionParametersGetInfoKHR::writeStdSPS](#), were [overridden](#) by the implementation.
- `hasStdPPSOverrides` indicates whether any of the parameters of the requested [H.264 picture parameter set](#), if one was requested via [VkVideoEncodeH264SessionParametersGetInfoKHR::writeStdPPS](#), were [overridden](#) by the implementation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersFeedbackInfoKHR-sType-sType `sType` must be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_FEEDBACK_INFO_KHR](#)

Structure Chaining

Extends the structure

- [VkVideoEncodeSessionParametersFeedbackInfoKHR](#)

48.21.11. H.264 Encoding Parameters

The [VkVideoEncodeH264PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 naluSliceEntryCount;
    const VkVideoEncodeH264NaluSliceInfoKHR* pNaluSliceEntries;
    const StdVideoEncodeH264PictureInfo*    pStdPictureInfo;
    VkBool32                 generatePrefixNalu;
} VkVideoEncodeH264PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `naluSliceEntryCount` is the number of elements in `pNaluSliceEntries`.
- `pNaluSliceEntries` is a pointer to an array of `naluSliceEntryCount` `VkVideoEncodeH264NaluSliceInfoKHR` structures specifying the parameters of the individual H.264 slices to encode for the input picture.
- `pStdPictureInfo` is a pointer to a `StdVideoEncodeH264PictureInfo` structure specifying [H.264 picture information](#).
- `generatePrefixNalu` controls whether prefix NALUs are generated before slice NALUs into the target bitstream, as defined in sections 7.3.2.12 and 7.4.2.12 of the [ITU-T H.264 Specification](#).

This structure is specified in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to `vkCmdEncodeVideoKHR` to specify the codec-specific picture information for an [H.264 encode operation](#).

Encode Input Picture Information

When this structure is specified in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to `vkCmdEncodeVideoKHR`, the information related to the [encode input picture](#) is defined as follows:

- The image subregion used is determined according to the [H.264 Encode Picture Data Access](#) section.
- The encode input picture is associated with the [H.264 picture information](#) provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoEncodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.IdrPicFlag` as defined in section 7.4.1 of the [ITU-T H.264 Specification](#);
- `flags.is_reference` as defined in section 3.136 of the [ITU-T H.264 Specification](#);
- `seq_parameter_set_id` and `pic_parameter_set_id` are used to identify the active parameter sets, as described below;

- `primary_pic_type` as defined in section 7.4.2 of the [ITU-T H.264 Specification](#);
- `PicOrderCnt` as defined in section 8.2 of the [ITU-T H.264 Specification](#);
- `temporal_id` as defined in section G.7.4.1.1 of the [ITU-T H.264 Specification](#);
- if `pRefLists` is not `NULL`, then it is a pointer to a `StdVideoEncodeH264ReferenceListsInfo` structure that is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - `ref_pic_list_modification_flag_l0` and `ref_pic_list_modification_flag_l1` as defined in section 7.4.3.1 of the [ITU-T H.264 Specification](#);
 - `num_ref_idx_l0_active_minus1` and `num_ref_idx_l1_active_minus1` as defined in section 7.4.3 of the [ITU-T H.264 Specification](#);
 - `RefPicList0` and `RefPicList1` as defined in section 8.2.4 of the [ITU-T H.264 Specification](#) where each element of these arrays either identifies an [active reference picture](#) using its [DPB slot](#) index or contains the value `STD_VIDEO_H264_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
 - if `refList0ModOpCount` is not zero, then `pRefList0ModOperations` is a pointer to an array of `refList0ModOpCount` number of `StdVideoEncodeH264RefListModEntry` structures specifying the modification parameters for the reference list L0 as defined in section 7.4.3.1 of the [ITU-T H.264 Specification](#);
 - if `refList1ModOpCount` is not zero, then `pRefList1ModOperations` is a pointer to an array of `refList1ModOpCount` number of `StdVideoEncodeH264RefListModEntry` structures specifying the modification parameters for the reference list L1 as defined in section 7.4.3.1 of the [ITU-T H.264 Specification](#);
 - if `refPicMarkingOpCount` is not zero, then `refPicMarkingOperations` is a pointer to an array of `refPicMarkingOpCount` number of `StdVideoEncodeH264RefPicMarkingEntry` structures specifying the reference picture marking parameters as defined in section 7.4.3.3 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 7.4.3 of the [ITU-T H.264 Specification](#).

Reference picture setup is controlled by the value of `StdVideoEncodeH264PictureInfo::flags.is_reference`. If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pEncodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoEncodeH264PictureInfo::flags.is_reference` is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The members of the `StdVideoEncodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active SPS* is the [SPS](#) identified by the key specified in `StdVideoEncodeH264PictureInfo::seq_parameter_set_id`.
- The *active PPS* is the [PPS](#) identified by the key specified by the pair constructed from `StdVideoEncodeH264PictureInfo::seq_parameter_set_id` and `StdVideoEncodeH264PictureInfo`

`::pic_parameter_set_id.`

H.264 encoding uses *explicit weighted sample prediction* for a slice, as defined in section 8.4.2.3 of the [ITU-T H.264 Specification](#), if any of the following conditions are true for the active `PPS` and the `pStdSliceHeader` member of the corresponding element of `pNaluSliceEntries`:

- `pStdSliceHeader->slice_type` is `STD_VIDEO_H264_SLICE_TYPE_P` and `weighted_pred_flag` is enabled in the active PPS.
- `pStdSliceHeader->slice_type` is `STD_VIDEO_H264_SLICE_TYPE_B` and `weighted_bipred_idc` in the active PPS equals `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT`.

Valid Usage

- VUID-VkVideoEncodeH264PictureInfoKHR-naluSliceEntryCount-08301
`naluSliceEntryCount` **must** be between 1 and `VkVideoEncodeH264CapabilitiesKHR::maxSliceCount`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH264PictureInfoKHR-flags-08304
If `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR`, then `generatePrefixNalu` **must** be `VK_FALSE`
- VUID-VkVideoEncodeH264PictureInfoKHR-flags-08314
If `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR` and the slice corresponding to any element of `pNaluSliceEntries` uses *explicit weighted sample prediction*, then `VkVideoEncodeH264NaluSliceInfoKHR::pStdSliceHeader->pWeightTable` **must** not be `NULL` for that element of `pNaluSliceEntries`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264PictureInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PICTURE_INFO_KHR`
- VUID-VkVideoEncodeH264PictureInfoKHR-pNaluSliceEntries-parameter
`pNaluSliceEntries` **must** be a valid pointer to an array of `naluSliceEntryCount` valid `VkVideoEncodeH264NaluSliceInfoKHR` structures
- VUID-VkVideoEncodeH264PictureInfoKHR-pStdPictureInfo-parameter
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoEncodeH264PictureInfo` value
- VUID-VkVideoEncodeH264PictureInfoKHR-naluSliceEntryCount-arraylength
`naluSliceEntryCount` **must** be greater than 0

Structure Chaining

Extends the structure

- [VkVideoEncodeInfoKHR](#)

The [VkVideoEncodeH264NaluSliceInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264NaluSliceInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    int32_t                  constantQp;
    const StdVideoEncodeH264SliceHeader* pStdSliceHeader;
} VkVideoEncodeH264NaluSliceInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantQp` is the QP to use for the slice if the current [rate control mode](#) configured for the video session is [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#).
- `pStdSliceHeader` is a pointer to a [StdVideoEncodeH264SliceHeader](#) structure specifying [H.264 slice header parameters](#) for the slice.

Std Slice Header Parameters

The members of the [StdVideoEncodeH264SliceHeader](#) structure pointed to by `pStdSliceHeader` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- if `pWeightTable` is not `NULL`, then it is a pointer to a [StdVideoEncodeH264WeightTable](#) that is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - all other members of [StdVideoEncodeH264WeightTable](#) are interpreted as defined in section 7.4.3.2 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 7.4.3 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264NaluSliceInfoKHR-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_NALU_SLICE_INFO_KHR](#)
- VUID-VkVideoEncodeH264NaluSliceInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkVideoEncodeH264NaluSliceInfoKHR-pStdSliceHeader-parameter
`pStdSliceHeader` **must** be a valid pointer to a valid [StdVideoEncodeH264SliceHeader](#) value

The [VkVideoEncodeH264DpbSlotInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264DpbSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoEncodeH264ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeH264DpbSlotInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a [StdVideoEncodeH264ReferenceInfo](#) structure specifying [H.264 reference information](#).

This structure is specified in the `pNext` chain of [VkVideoEncodeInfoKHR::pSetupReferenceSlot](#), if not `NULL`, and the `pNext` chain of the elements of [VkVideoEncodeInfoKHR::pReferenceSlots](#) to specify the codec-specific reference picture information for an [H.264 encode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of [VkVideoEncodeInfoKHR::pReferenceSlots](#), one element is added to the list of [active reference pictures](#) used by the video encode operation for each element of [VkVideoEncodeInfoKHR::pReferenceSlots](#) as follows:

- The image subregion used is determined according to the [H.264 Encode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of [VkVideoEncodeInfoKHR::pReferenceSlots](#).
- The reference picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of [VkVideoEncodeInfoKHR::pSetupReferenceSlot](#), the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [H.264 Encode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in [VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex](#).
- The reconstructed picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

Std Reference Information

The members of the [StdVideoEncodeH264ReferenceInfo](#) structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.2.5.1 of the [ITU-T H.264 Specification](#);
- `primary_pic_type` as defined in section 7.4.2 of the [ITU-T H.264 Specification](#);
- `long_term_pic_num` and `long_term_frame_idx` as defined in section 7.4.3 of the [ITU-T H.264 Specification](#);
- `temporal_id` as defined in section G.7.4.1.1 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 8.2 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- `VUID-VkVideoEncodeH264DpbSlotInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoEncodeH264DpbSlotInfoKHR-pStdReferenceInfo-parameter`
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeH264ReferenceInfo` value

Structure Chaining

Extends the structure

- `VkVideoReferenceSlotInfoKHR`

48.21.12. H.264 Encode Rate Control

Group of Pictures

In case of H.264 encoding it is common practice to follow a regular pattern of different picture types in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive B frames between I and/or P frames in display order.

Frame types in a regular GOP follow each other in display order according to the following algorithm:

1. The first frame is always an I or an IDR frame.
2. This is followed by a number of consecutive B frames, as defined above.
3. If the number of frames in the GOP is not reached yet, then the next frame is a P frame and the algorithm continues from step 2.

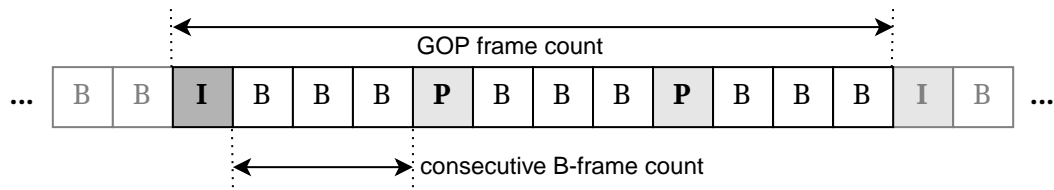

Figure 41. H.264 regular GOP starting with an I frame

When **IDR frames** are used in a video sequence, the *IDR period* refers to the distance between subsequent IDR frames.

It is also typical for H.264 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

Flat Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- Each B frame uses the last non-B frame, in display order, as its forward reference, and uses the next non-B frame, in display order, as its backward reference.

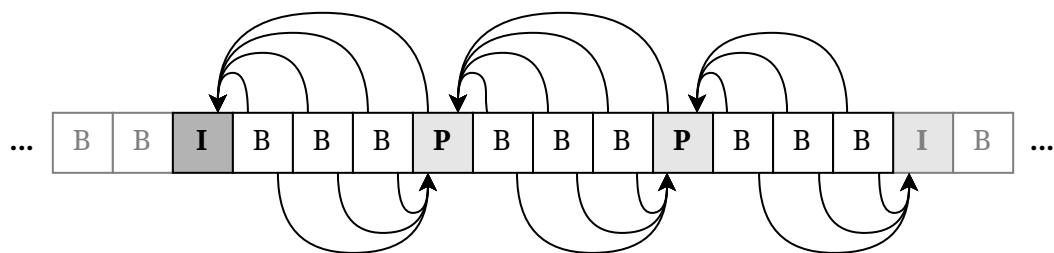

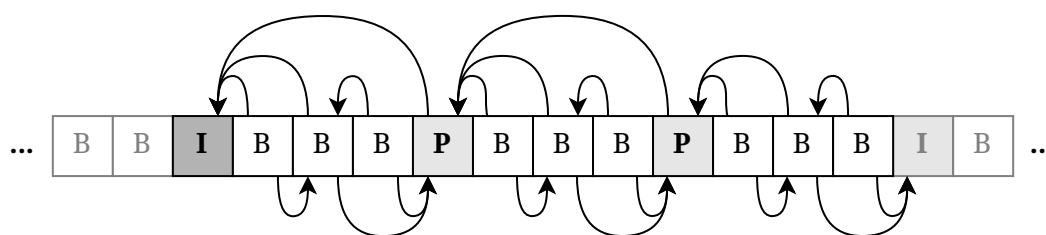

Figure 42. H.264 flat reference pattern

Dyadic Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- The following algorithm is applied to the sequence of consecutive B frames between I and/or P frames in display order:
 1. The B frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
 2. The algorithm is executed recursively for the following frame sequences:
 - The B frames of the original sequence preceding the frame in the middle, if any.
 - The B frames of the original sequence following the frame in the middle, if any.

Text is not SVG - cannot display

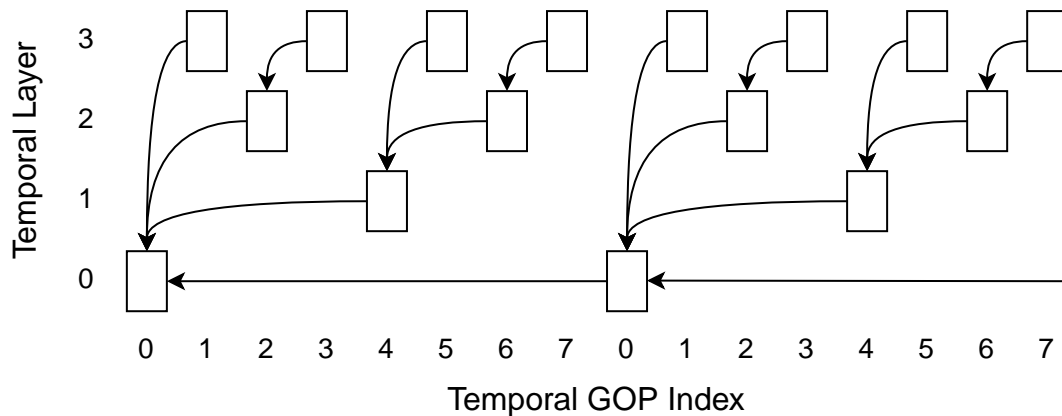

Figure 43. H.264 dyadic reference pattern

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the picture type of individual encoded pictures is still application-controlled, however, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited, to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an H.264 encode session is used to encode multiple temporal layers, it is also common practice to follow a regular pattern for the H.264 temporal ID for the encoded pictures in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most common temporal layer pattern used is as follows:

Dyadic Temporal Layer Pattern

- The number of frames in the temporal GOP is 2^{n-1} , where n is the number of temporal layers.
- The i^{th} frame in the temporal GOP uses temporal ID t , if and only if the index of the least significant bit set in i equals $n-t-1$, except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The i^{th} frame in the temporal GOP uses the r^{th} frame as reference, where r is calculated from i by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.

Text is not SVG - cannot display

Figure 44. H.264 dyadic temporal layer pattern

NOTE

Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence B pictures with backward prediction are usually not used.

The `VkVideoEncodeH264RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264RateControlInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeH264RateControlFlagsKHR flags;
    uint32_t                  gopFrameCount;
    uint32_t                  idrPeriod;
    uint32_t                  consecutiveBFrameCount;
    uint32_t                  temporalLayerCount;
} VkVideoEncodeH264RateControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH264RateControlFlagBitsKHR` specifying H.264 rate control flags.
- `gopFrameCount` is the number of frames within a [group of pictures \(GOP\)](#) intended to be used by the application. If it is 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is `UINT32_MAX`, the GOP length is treated as infinite.
- `idrPeriod` is the interval, in terms of number of frames, between two [IDR frames](#) (see [IDR period](#)). If it is 0, the rate control algorithm **may** assume an implementation-dependent IDR period. If it is `UINT32_MAX`, the IDR period is treated as infinite.
- `consecutiveBFrameCount` is the number of consecutive B frames between I and/or P frames within

the [GOP](#).

- [temporalLayerCount](#) specifies the number of H.264 temporal layers that the application intends to use.

When an instance of this structure is included in the [pNext](#) chain of the [VkVideoCodingControlInfoKHR](#) structure passed to the [vkCmdControlVideoCodingKHR](#) command, and [VkVideoCodingControlInfoKHR::flags](#) includes [VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR](#), the parameters in this structure are used as guidance for the implementation's rate control algorithm (see [Video Coding Control](#)).

If [VkVideoCodingControlInfoKHR::flags](#) includes [VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR](#), then the rate control state is reset to an initial state to meet HRD compliance requirements. Otherwise the new rate control state **may** be applied without a reset depending on the implementation and the specified rate control parameters.

NOTE

It would be possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for [consecutiveBFrameCount](#), [idrPeriod](#), and [gopFrameCount](#), but this inferred picture type will not be used by implementations to override the picture type provided to the video encode operation.

Valid Usage

- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08280
If [VkVideoEncodeH264CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR](#), then [flags](#) **must** not contain [VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR](#)
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08281
If [VkVideoEncodeH264RateControlInfoKHR::flags](#) contains [VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR](#) or [VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR](#), then it **must** also contain [VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR](#)
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08282
If [VkVideoEncodeH264RateControlInfoKHR::flags](#) contains [VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR](#), then it **must** not also contain [VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR](#)
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08283
If [flags](#) contains [VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR](#), then [gopFrameCount](#) **must** be greater than 0
- VUID-VkVideoEncodeH264RateControlInfoKHR-idrPeriod-08284
If [idrPeriod](#) is not 0, then it **must** be greater than or equal to [gopFrameCount](#)

- VUID-VkVideoEncodeH264RateControlInfoKHR-consecutiveBFrameCount-08285
If `consecutiveBFrameCount` is not 0, then it **must** be less than `gopFrameCount`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264RateControlInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_RATE_CONTROL_INFO_KHR`
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-parameter
`flags` **must** be a valid combination of `VkVideoEncodeH264RateControlFlagBitsKHR` values

Structure Chaining

Extends the structures

- `VkVideoBeginCodingInfoKHR`
- `VkVideoCodingControlInfoKHR`

Bits which **can** be set in `VkVideoEncodeH264RateControlInfoKHR::flags`, specifying H.264 rate control flags, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR =
    0x00000010,
} VkVideoEncodeH264RateControlFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR` specifies that rate control **should** attempt to produce an HRD compliant bitstream, as defined in annex C of the [ITU-T H.264 Specification](#).
- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR` specifies that the application intends to use a [regular GOP structure](#) according to the parameters specified in the `gopFrameCount`, `idrPeriod`, and `consecutiveBFrameCount` members of the `VkVideoEncodeH264RateControlInfoKHR` structure.
- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR` specifies that the application intends to follow a [flat reference pattern](#) in the GOP.
- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR` specifies that the application intends to follow a [dyadic reference pattern](#) in the GOP.
- `VK_VIDEO_ENCODE_H264_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR` specifies that the application intends to follow a [dyadic temporal layer pattern](#).

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264RateControlFlagsKHR;
```

`VkVideoEncodeH264RateControlFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH264RateControlFlagBitsKHR`.

Rate Control Layers

The `VkVideoEncodeH264RateControlLayerInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264RateControlLayerInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkBool32                 useMinQp;
    VkVideoEncodeH264QpKHR   minQp;
    VkBool32                 useMaxQp;
    VkVideoEncodeH264QpKHR   maxQp;
    VkBool32                 useMaxFrameSize;
    VkVideoEncodeH264FrameSizeKHR maxFrameSize;
} VkVideoEncodeH264RateControlLayerInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMinQp` indicates whether the QP values determined by rate control will be clamped to the lower bounds on the QP values specified in `minQp`.
- `minQp` specifies the lower bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when `useMinQp` is `VK_TRUE`.
- `useMaxQp` indicates whether the QP values determined by rate control will be clamped to the upper bounds on the QP values specified in `maxQp`.
- `maxQp` specifies the upper bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when `useMaxQp` is `VK_TRUE`.
- `useMaxFrameSize` indicates whether the implementation's rate control algorithm **should** use the values specified in `maxFrameSize` as the upper bounds on the encoded frame size for each picture type.
- `maxFrameSize` specifies the upper bounds on the encoded frame size, for each picture type, when `useMaxFrameSize` is `VK_TRUE`.

When used, the values in `minQp` and `maxQp` guarantee that the effective QP values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of QP values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak `bitrate` values to be used for the encoded bitstream specified in the

`averageBitrate` and `maxBitrate` members of the `VkVideoEncodeRateControlLayerInfoKHR` structure.

- The upper bounds on the encoded frame size, for each picture type, specified in the `maxFrameSize` member of `VkVideoEncodeH264RateControlLayerInfoKHR`.

NOTE

In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the [Video Encode Rate Control](#) section.

When an instance of this structure is included in the `pNext` chain of a `VkVideoEncodeRateControlLayerInfoKHR` structure specified in one of the elements of the `players` array member of the `VkVideoEncodeRateControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, and the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, it specifies the H.264-specific rate control parameters of the rate control layer corresponding to that element of `players`.

Valid Usage

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08286
If `useMinQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be between `VkVideoEncodeH264CapabilitiesKHR::minQp` and `VkVideoEncodeH264CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMaxQp-08287
If `useMaxQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all be between `VkVideoEncodeH264CapabilitiesKHR::minQp` and `VkVideoEncodeH264CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08288
If `useMinQp` is `VK_TRUE` and `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all specify the same value
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMaxQp-08289
If `useMaxQp` is `VK_TRUE` and `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all specify the same value
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08374
If `useMinQp` and `useMaxQp` are both `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be less than or equal to the respective members of `maxQp`

Valid Usage (Implicit)

- `VUID-VkVideoEncodeH264RateControlLayerInfoKHR-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_RATE_CONTROL_LAYER_INFO_KHR`
- `VUID-VkVideoEncodeH264RateControlLayerInfoKHR-minQp-parameter` `minQp` **must** be a valid `VkVideoEncodeH264QpKHR` structure
- `VUID-VkVideoEncodeH264RateControlLayerInfoKHR-maxQp-parameter` `maxQp` **must** be a valid `VkVideoEncodeH264QpKHR` structure
- `VUID-VkVideoEncodeH264RateControlLayerInfoKHR-maxFrameSize-parameter` `maxFrameSize` **must** be a valid `VkVideoEncodeH264FrameSizeKHR` structure

Structure Chaining

Extends the structure

- `VkVideoEncodeRateControlLayerInfoKHR`

The `VkVideoEncodeH264QpKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264QpKHR {
    int32_t    qpI;
    int32_t    qpP;
    int32_t    qpB;
} VkVideoEncodeH264QpKHR;
```

- `qpI` is the QP to be used for `I` pictures.
- `qpP` is the QP to be used for `P` pictures.
- `qpB` is the QP to be used for `B` pictures.

The `VkVideoEncodeH264FrameSizeKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264FrameSizeKHR {
    uint32_t    frameISize;
    uint32_t    framePSize;
    uint32_t    frameBSize;
} VkVideoEncodeH264FrameSizeKHR;
```

- `frameISize` is the size in bytes to be used for `I` pictures.
- `framePSize` is the size in bytes to be used for `P` pictures.
- `frameBSize` is the size in bytes to be used for `B` pictures.

GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the [group of pictures \(GOP\)](#).

The `VkVideoEncodeH264GopRemainingFrameInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t            gopRemainingI;
    uint32_t            gopRemainingP;
    uint32_t            gopRemainingB;
} VkVideoEncodeH264GopRemainingFrameInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useGopRemainingFrames` indicates whether the implementation's rate control algorithm **should** use the values specified in `gopRemainingI`, `gopRemainingP`, and `gopRemainingB`. If `useGopRemainingFrames` is `VK_FALSE`, then the values of `gopRemainingI`, `gopRemainingP`, and `gopRemainingB` are ignored.
- `gopRemainingI` specifies the number of [I frames](#) the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the video encode operation.
- `gopRemainingP` specifies the number of [P frames](#) the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the video encode operation.
- `gopRemainingB` specifies the number of [B frames](#) the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the video encode operation.

Setting `useGopRemainingFrames` to `VK_TRUE` and including this structure in the `pNext` chain of `VkVideoBeginCodingInfoKHR` is only mandatory if the `VkVideoEncodeH264CapabilitiesKHR::requiresGopRemainingFrames` reported for the used [video profile](#) is `VK_TRUE`. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a [regular GOP structure](#), these values **may** provide additional guidance for the implementation's rate control algorithm.

The `VkVideoEncodeH264CapabilitiesKHR::prefersGopRemainingFrames` capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264GopRemainingFrameInfoKHR-sType-sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_GOP_REMAINING_FRAME_INFO_KHR

Structure Chaining

Extends the structure

- [VkVideoBeginCodingInfoKHR](#)

H.264 QP Delta Maps

Quantization delta maps used with an [H.264 encode profile](#) are referred to as *QP delta maps* and their texels contain integer values representing QP delta values that are applied in the process of determining the [quantization parameters](#) of the encoded picture.

Accordingly, H.264 QP delta maps always have single channel integer formats, as reported in [VkVideoFormatPropertiesKHR::format](#).

When the [rate control mode](#) is [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#), the QP delta values are added to the per slice constant QP values that, in effect, enable the application to explicitly control the used QP values at the granularity of the used [quantization map texel size](#).

For all other [rate control modes](#), the QP delta values **can** be used to offset the QP values that the rate control algorithm would otherwise produce.

H.264 Encode Quantization

Performing H.264 encode operations involves the process of assigning QP values to individual H.264 macroblocks. This process depends on the used [rate control mode](#), as well as other encode and rate control parameters, as described below:

- If the configured rate control mode is [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR](#), then the QP value is initialized by the implementation-specific default rate control algorithm.
 - If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the macroblock, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the [minQpDelta](#) and [maxQpDelta](#) members of [VkVideoEncodeH264QuantizationMapCapabilitiesKHR](#), then the QP value used for the macroblock becomes undefined.
- If the configured rate control mode is [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#), then the QP value is initialized from the constant QP value specified for the [H.264 slice](#) the macroblock is part of.

- If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the macroblock, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the [minQpDelta](#) and [maxQpDelta](#) members of [VkVideoEncodeH264QuantizationMapCapabilitiesKHR](#), then the QP value used for the macroblock becomes undefined.
- If the configured rate control mode is not [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR](#) or [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#), then the QP value is initialized by the corresponding rate control algorithm.
 - If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the macroblock, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the [minQpDelta](#) and [maxQpDelta](#) members of [VkVideoEncodeH264QuantizationMapCapabilitiesKHR](#), then the QP value used for the macroblock becomes undefined.
 - If the video encode operation is issued with an [emphasis map](#), the rate control will adjust the QP value based on the emphasis value corresponding to the macroblock, as [fetched from the quantization map](#), according to the following equation:

$$QP_{\text{new}} = f(QP_{\text{prev}}, e)$$

Where QP_{new} is the resulting QP value, QP_{prev} is the previously determined QP value, e is the emphasis value corresponding to the macroblock, and f is an implementation-defined function for which the following implication is true:

$$e_1 < e_2 \Rightarrow f(QP, e_1) \geq f(QP, e_2)$$

NOTE

This means that lower emphasis values will result in higher QP values, whereas higher emphasis values will result in lower QP values, but the function is not strictly decreasing with respect to the input emphasis value for a given input QP value.

- If clamping to minimum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding minimum QP value.
- If clamping to maximum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding maximum QP value.
- If [VK_VIDEO_ENCODE_H264_CAPABILITY_MB_QP_DIFF_WRAPAROUND_BIT_KHR](#) is not supported, then the determined QP value is clamped in such a way that the [mb_qp_delta](#) value of the encoded macroblock complies to the [modified version](#) of equation 7-37 of the [ITU-T H.264 Specification](#).

NOTE

The effect of this is that the maximum QP difference across subsequent macroblocks is limited to the $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$ range and only has an observable change in behavior when the video encode operation is issued with a [QP delta map](#).

- In all cases, the final QP value is clamped to the QP value range supported by the video profile, as reported in the `minQp` and `maxQp` members of `VkVideoEncodeH264CapabilitiesKHR`.

48.21.13. H.264 Encode Requirements

This section described the **required** H.264 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 65. Required *Video Std Header Versions*

Video Std Header Name	Version
<code>vulkan_video_codec_h264std_encode</code>	1.0.0

Table 66. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹

minQpDelta	- ³	max
maxQpDelta	- ³	min
VkVideoEncodeIntraRefreshCapabilitiesKHR		
intraRefreshModes	0	min
maxIntraRefreshCycleDuration	2 ⁵	min
maxIntraRefreshActiveReferencePictures	1 ⁵	min

Video Capability	Requirement	Requirement Type ¹
<code>partitionIndependentIntraRefreshRegions</code>	-	implementation-dependent
<code>nonRectangularIntraRefreshRegions</code>	-	implementation-dependent

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR`, then the `width` and `height` members of `maxQuantizationMapExtent` **must** be greater than zero.

3

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR`, then `maxQpDelta` **must** be greater than `minQpDelta`.

4

If the `videoMaintenance2` feature is supported.

5

If `VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes` is not zero.

48.22. H.265 Encode Operations

Video encode operations using an [H.265 encode profile](#) **can** be used to encode elementary video stream sequences compliant to the [ITU-T H.265 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video encode operation steps](#) with the codec-specific semantics defined in section 8 of the [ITU-T H.265 Specification](#) as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The `StdVideoH265VideoParameterSet` structure corresponding to the [active VPS](#) specifying the [H.265 video parameter set](#).

- The `StdVideoH265SequenceParameterSet` structure corresponding to the [active SPS](#) specifying the [H.265 sequence parameter set](#).
- The `StdVideoH265PictureParameterSet` structure corresponding to the [active PPS](#) specifying the [H.265 picture parameter set](#).
- The `StdVideoEncodeH265PictureInfo` structure specifying the [H.265 picture information](#).
- The `StdVideoEncodeH265SliceSegmentHeader` structures specifying the [H.265 slice segment header parameters](#) for each encoded H.265 slice segment.
- The `StdVideoEncodeH265ReferenceInfo` structures specifying the [H.265 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The encoded bitstream data is written to the destination video bitstream buffer range as defined in the [H.265 Encode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [encode input picture](#), [active reference pictures](#), and optional [reconstructed picture](#) is accessed as defined in the [H.265 Encode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [H.265 picture information](#).

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the [ITU-T H.265 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete [unsuccessfully](#).

48.22.1. H.265 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the H.265 encode parameters specified in the following Video Std structures:

- `StdVideoH265VideoParameterSet`
- `StdVideoH265SequenceParameterSet`
- `StdVideoH265PictureParameterSet`
- `StdVideoEncodeH265PictureInfo`
- `StdVideoEncodeH265SliceSegmentHeader`
- `StdVideoEncodeH265ReferenceInfo`

All such H.265 encode parameter overrides **must** fulfill the conditions defined in the [Video Encode Parameter Overrides](#) section.

In addition, implementations **must** not override any of the following H.265 encode parameters:

- `StdVideoEncodeH265PictureInfo::pic_type`
- `StdVideoEncodeH265SliceSegmentHeader::slice_type`

If the `videoMaintenance2` feature is enabled, implementations **must** not override any of the following H.265 encode parameters:

- the following parameters specified in the `StdVideoH265ProfileTierLevel` structure pointed to by `StdVideoH265VideoParameterSet::pProfileTierLevel` and `StdVideoH265SequenceParameterSet::pProfileTierLevel`:
 - `flags.general_tier_flag`
 - `flags.general_progressive_source_flag`, if set to 1
 - `flags.general_interlaced_source_flag`, if set to 0
 - `flags.general_frame_only_constraint_flag`
 - `general_profile_idc`
 - `general_level_idc`
- the following parameters specified in `StdVideoH265SequenceParameterSet`:
 - `chroma_format_idc`
- the following parameters specified in the `StdVideoH265SequenceParameterSetVui` structure pointed to by `StdVideoH265SequenceParameterSet::pSequenceParameterSetVui`:
 - `flags.aspect_ratio_info_present_flag`
 - `flags.overscan_info_present_flag`
 - `flags.overscan_appropriate_flag`
 - `flags.video_signal_type_present_flag`
 - `flags.video_full_range_flag`
 - `flags.colour_description_present_flag`
 - `flags.chroma_loc_info_present_flag`
 - `flags.neutral_chroma_indication_flag`
 - `flags.field_seq_flag`
 - `flags.frame_field_info_present_flag`
 - `flags.default_display_window_flag`
 - `flags.vui_timing_info_present_flag`
 - `flags.vui_poc_proportional_to_timing_flag`
 - `aspect_ratio_idc`
 - `sar_width`
 - `sar_height`
 - `video_format`
 - `colour_primaries`
 - `transfer_characteristics`
 - `matrix_coeffs`
 - `chroma_sample_loc_type_top_field`
 - `chroma_sample_loc_type_bottom_field`

- `def_disp_win_left_offset`
- `def_disp_win_right_offset`
- `def_disp_win_top_offset`
- `def_disp_win_bottom_offset`
- `vui_num_units_in_tick`
- `vui_time_scale`
- `vui_num_ticks_poc_diff_one_minus1`

In case of a [video session parameters](#) object created with [VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR](#), the following H.265 [SPS](#) and [PPS](#) parameters **may** be overridden by the implementation according to the [quantization map texel size](#) the video session parameters object was created with:

- `StdVideoH265SequenceParameterSet::log2_min_luma_coding_block_size_minus3`
- `StdVideoH265SequenceParameterSet::log2_diff_max_min_luma_coding_block_size`
- `StdVideoH265SequenceParameterSet::log2_min_pcm_luma_coding_block_size_minus3`
- `StdVideoH265SequenceParameterSet::log2_diff_max_min_pcm_luma_coding_block_size`
- `StdVideoH265PictureParameterSet::diff_cu_qp_delta_depth`

This **may** be necessary in order to limit the set of H.265 coding unit and coding tree unit sizes used during picture encoding to those that are supported by the implementation when using the specific quantization map texel size.

In case of H.265 encode parameters stored in [video session parameters](#) objects, applications need to use the [vkGetEncodedVideoSessionParametersKHR](#) command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded H.265 parameter sets in the bitstream in order to be able to produce a compliant H.265 video bitstream using the H.265 encode parameters stored in the video session parameters object.

In case of any H.265 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the [VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR](#) [video encode feedback query](#) flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those H.265 encode parameters.

48.22.2. H.265 Encode Bitstream Data Access

Each video encode operation writes one or more VCL NAL units comprising of slice segment headers and data of the encoded picture, in the format defined in sections 7.3.6 and 7.3.8, according to the semantics defined in sections 7.4.7 and 7.4.9 of the [ITU-T H.265 Specification](#), respectively. The number of VCL NAL units written is specified by `VkVideoEncodeH265PictureInfoKHR::naluSliceSegmentEntryCount`.

48.22.3. H.265 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile. Accordingly, the complete image subregion of a `encode input picture`, `reference picture`, or `reconstructed picture` accessed by video coding operations using an `H.265 encode profile` is defined as the set of texels within the coordinate range:

$$([0, \text{endX}), [0, \text{endY}))$$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video encode operations using an `H.265 encode profile`, any access to a picture at the coordinates `(x,y)`, as defined by the `ITU-T H.265 Specification`, is an access to the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates `(x,y)`.

Implementations **may** choose not to access some or all texels within particular `reference pictures` available to a video encode operation (e.g. due to `video encode parameter overrides` restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

48.22.4. H.265 Frame, Picture, Slice Segments, and Tiles

H.265 pictures consist of one or more slices, slice segments, and tiles, as defined in section 6.3.1 of the `ITU-T H.265 Specification`.

For the purposes of this specification, the H.265 slice segments comprising a picture are referred to as the *picture partitions* of the picture.

Video encode operations using an `H.265 encode profile` **can** encode slice segments of different types, as defined in section 7.4.7.1 of the `ITU-T H.265 Specification`, by specifying the corresponding enumeration constant value in `StdVideoEncodeH265SliceSegmentHeader::slice_type` in the `H.265 slice segment header parameters` from the Video Std enumeration type `StdVideoH265SliceType`:

- `STD_VIDEO_H265_SLICE_TYPE_B` indicates that the slice segment is part of a *B slice* as defined in section 3.12 of the `ITU-T H.265 Specification`.

- `STD_VIDEO_H265_SLICE_TYPE_P` indicates that the slice segment is part of a *P slice* as defined in section 3.111 of the [ITU-T H.265 Specification](#).
- `STD_VIDEO_H265_SLICE_TYPE_I` indicates that the slice segment is part of an *I slice* as defined in section 3.74 of the [ITU-T H.265 Specification](#).

Pictures constructed from such slice segments **can** be of different types, as defined in section 7.4.3.5 of the [ITU-T H.265 Specification](#). Video encode operations using an [H.265 encode profile](#) **can** encode pictures of a specific type by specifying the corresponding enumeration constant value in `StdVideoEncodeH265PictureInfo::pic_type` in the [H.265 picture information](#) from the Video Std enumeration type `StdVideoH265PictureType`:

- `STD_VIDEO_H265_PICTURE_TYPE_P` indicates that the picture is a *P picture*. A frame consisting of a P picture is also referred to as a *P frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_B` indicates that the picture is a *B picture*. A frame consisting of a B picture is also referred to as a *B frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_I` indicates that the picture is an *I picture*. A frame consisting of an I picture is also referred to as an *I frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_IDR` indicates that the picture is a special type of I picture called an *IDR picture* as defined in section 3.67 of the [ITU-T H.265 Specification](#). A frame consisting of an IDR picture is also referred to as an *IDR frame*.

48.22.5. H.265 Coding Blocks

H.265 encode supports two types of coding blocks:

- *Coding tree unit*, as defined in section 3.35 of the [ITU-T H.265 Specification](#).
- *Coding unit*, as defined in section 3.36 of the [ITU-T H.265 Specification](#).

48.22.6. H.265 Encode Profile

A video profile supporting H.265 video encode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and adding a `VkVideoEncodeH265ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoEncodeH265ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoH265ProfileIdc stdProfileIdc;
} VkVideoEncodeH265ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `stdProfileIdc` is a `StdVideoH265ProfileIdc` value specifying the H.265 codec profile IDC, as defined in section A.3 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- `VUID-VkVideoEncodeH265ProfileInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PROFILE_INFO_KHR`

Structure Chaining

Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

48.22.7. H.265 Encode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [H.265 encode profile](#), the `VkVideoCapabilitiesKHR::pNext` chain **must** include a `VkVideoEncodeH265CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoEncodeH265CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeH265CapabilityFlagsKHR    flags;
    StdVideoH265LevelIdc    maxLevelIdc;
    uint32_t           maxSliceSegmentCount;
    VkExtent2D          maxTiles;
    VkVideoEncodeH265CtbSizeFlagsKHR        ctbSizes;
    VkVideoEncodeH265TransformBlockSizeFlagsKHR    transformBlockSizes;
    uint32_t           maxPPictureL0ReferenceCount;
    uint32_t           maxBPictureL0ReferenceCount;
    uint32_t           maxL1ReferenceCount;
    uint32_t           maxSubLayerCount;
    VkBool32
    expectDyadicTemporalSubLayerPattern;
    int32_t            minQp;
    int32_t            maxQp;
    VkBool32           prefersGopRemainingFrames;
    VkBool32           requiresGopRemainingFrames;
    VkVideoEncodeH265StdFlagsKHR            stdSyntaxFlags;
} VkVideoEncodeH265CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH265CapabilityFlagBitsKHR` indicating supported H.265 encoding capabilities.
- `maxLevelIdc` is a `StdVideoH265LevelIdc` value indicating the maximum H.265 level supported by the profile, where enum constant `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifies H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#).
- `maxSliceSegmentCount` indicates the maximum number of slice segments that **can** be encoded for a single picture. Further restrictions **may** apply to the number of slice segments that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- `maxTiles` indicates the maximum number of H.265 tile columns and rows, as defined in sections 3.175 and 3.176 of the [ITU-T H.265 Specification](#) that **can** be encoded for a single picture. Further restrictions **may** apply to the number of H.265 tiles that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- `ctbSizes` is a bitmask of `VkVideoEncodeH265CtbSizeFlagBitsKHR` describing the supported CTB sizes.
- `transformBlockSizes` is a bitmask of `VkVideoEncodeH265TransformBlockSizeFlagBitsKHR` describing the supported transform block sizes.
- `maxPPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [P pictures](#).

NOTE

As implementations **may** [override](#) the reference lists, `maxPPictureL0ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 reference list for P pictures. However, if `maxPPictureL0ReferenceCount` is zero, then the use of P pictures is not allowed. In case of H.265 encoding, pictures **can** be encoded using only forward prediction even if P pictures are not supported, as the [ITU-T H.265 Specification](#) supports *generalized P & B frames* (also known as low delay B frames) whereas B frames **can** refer to past frames through both the L0 and L1 reference lists.

- `maxBPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [B pictures](#).
- `maxL1ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of [B pictures](#) is supported.

NOTE

As implementations **may** [override](#) the reference lists, `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 and L1 reference lists for B pictures. However, if `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` are both zero, then the use of B pictures is not allowed.

- `maxSubLayerCount` indicates the maximum number of H.265 sub-layers supported by the implementation.
- `expectDyadicTemporalSubLayerPattern` indicates that the implementation's rate control algorithms expect the application to use a [dyadic temporal sub-layer pattern](#) when encoding

multiple temporal sub-layers.

- **minQp** indicates the minimum QP value supported.
- **maxQp** indicates the maximum QP value supported.
- **prefersGopRemainingFrames** indicates that the implementation's rate control algorithm prefers the application to specify the number of frames of each type **remaining** in the current **group of pictures** when beginning a **video coding scope**.
- **requiresGopRemainingFrames** indicates that the implementation's rate control algorithm requires the application to specify the number of frames of each type **remaining** in the current **group of pictures** when beginning a **video coding scope**.
- **stdSyntaxFlags** is a bitmask of **VkVideoEncodeH265StdFlagBitsKHR** indicating capabilities related to H.265 syntax elements.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265CapabilitiesKHR-sType-sType
sType must be **VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_CAPABILITIES_KHR**

Structure Chaining

Extends the structure

- **VkVideoCapabilitiesKHR**

Bits which **may** be set in **VkVideoEncodeH265CapabilitiesKHR::flags**, indicating the H.265 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR =
0x00000080,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR =
0x00000100,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR =
0x00000200,
    // Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR = 0x00000800,
    // Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_H265_CAPABILITY_CU_QP_DIFF_WRAPAROUND_BIT_KHR = 0x00000400,
} VkVideoEncodeH265CapabilityFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR](#) specifies whether the implementation **may** be able to generate HRD compliant bitstreams if any of the [nal_hrd_parameters_present_flag](#), [vcl_hrd_parameters_present_flag](#), or [sub_pic_hrd_params_present_flag](#) members of [StdVideoH265HrdFlags](#) are set to 1 in the HRD parameters of the [active VPS](#) or [active SPS](#), or if [StdVideoH265SpsVuiFlags::vui_hrd_parameters_present_flag](#) is set to 1 in the [active SPS](#).
- [VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR](#) specifies that if the [weighted_pred_flag](#) or the [weighted_bipred_flag](#) member of [StdVideoH265PpsFlags](#) is set to 1 in the [active PPS](#) when encoding a [P picture](#) or [B picture](#), respectively, then the implementation is able to internally decide syntax for [pred_weight_table](#), as defined in section 7.4.7.3 of the [ITU-T H.265 Specification](#), and the application is not **required** to provide a weight table in the [H.265 slice segment header parameters](#).
- [VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR](#) specifies that each slice segment in a frame with a single or multiple tiles per slice may begin or finish at any offset in a CTB row. If not supported, all slice segments in such a frame **must** begin at the start of a CTB row (and hence each slice segment **must** finish at the end of a CTB row). Also indicates that each slice segment in a frame with multiple slices per tile may begin or finish at any offset within the enclosing tile's CTB row. If not supported, slice segments in such a frame **must** begin at the start of the enclosing tile's CTB row (and hence each slice segment **must** finish at the end of the enclosing tile's CTB row). When a picture is encoded with [intra refresh](#), encoding non-rectangular slice segments also requires: support for the [VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions](#) capability.
- [VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR](#) specifies that when a frame is encoded with multiple slice segments, the implementation allows encoding each slice segment with a different [StdVideoEncodeH265SliceSegmentHeader::slice_type](#) specified

in the [H.265 slice segment header parameters](#). If not supported, all slice segments of the frame **must** be encoded with the same [slice_type](#) which corresponds to the picture type of the frame. There is one exception to this rule: if the picture is encoded with the [intra refresh mode](#) [VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR](#), then the currently refreshed slice segment **must** specify the [slice_type](#) [STD_VIDEO_H265_SLICE_TYPE_I](#) and **can** differ from the [slice_type](#) of the other slice segments regardless of whether [VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR](#) is supported.

- [VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR](#) specifies support for using a [B frame](#) as L0 reference, as specified in [StdVideoEncodeH265ReferenceListsInfo::RefPicList0](#) in the [H.265 picture information](#).
- [VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR](#) specifies support for using a [B frame](#) as L1 reference, as specified in [StdVideoEncodeH265ReferenceListsInfo::RefPicList1](#) in the [H.265 picture information](#).
- [VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR](#) specifies support for specifying different QP values in the members of [VkVideoEncodeH265QpKHR](#).
- [VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR](#) specifies support for specifying different constant QP values for each slice segment.
- [VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR](#) specifies whether encoding multiple tiles per slice segment, as defined in section 6.3.1 of the [ITU-T H.265 Specification](#), is supported. If this capability flag is not present, then the implementation is only able to encode a single tile for each slice segment.
- [VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR](#) specifies whether encoding multiple slice segments per tile, as defined in section 6.3.1 of the [ITU-T H.265 Specification](#), is supported. If this capability flag is not present, then the implementation is only able to encode a single slice segment for each tile.
- [VK_VIDEO_ENCODE_H265_CAPABILITY_CU_QP_DIFF_WRAPAROUND_BIT_KHR](#) indicates support for wraparound during the calculation of the QP values of subsequently encoded coding units, as defined in section 7.4.9.14 of the [ITU-T H.265 Specification](#). If not supported, equation 8-283 of the [ITU-T H.265 Specification](#) is effectively reduced to the following:

$$Qp_Y = qP_{Y_PRED} + CuQpDeltaVal$$

NOTE

The effect of this is that the maximum QP difference across subsequent coding units is limited to the $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$ range.

- [VK_VIDEO_ENCODE_H265_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR](#) indicates support for encoding [B pictures](#) with [intra refresh](#) enabled.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265CapabilityFlagsKHR;
```

[VkVideoEncodeH265CapabilityFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH265CapabilityFlagBitsKHR](#).

Bits which **may** be set in `VkVideoEncodeH265CapabilitiesKHR::stdSyntaxFlags`, indicating the capabilities related to the H.265 syntax elements, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265StdFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR = 0x00000001,

```

- `VK_VIDEO_ENCODE_H265_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265SpsFlags::separate_colour_plane_flag` in the `SPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_SAMPLE_ADAPTIVE_OFFSET_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265SpsFlags::sample_adaptive_offset_enabled_flag` in the `SPS` when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_SCALING_LIST_DATA_PRESENT_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for the `scaling_list_enabled_flag` and `sps_scaling_list_data_present_flag` members of `StdVideoH265SpsFlags` in the `SPS`, and the application-provided value for `StdVideoH265PpsFlags::pps_scaling_list_data_present_flag` in the `PPS` when those values are 1.
- `VK_VIDEO_ENCODE_H265_STD_PCM_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265SpsFlags::pcm_enable_flag` in the `SPS` when that value is 1.

- `VK_VIDEO_ENCODE_H265_STD_SPS_TEMPORAL_MVP_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265SpsFlags::sps_temporal_mvp_enabled_flag` in the SPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_INIT_QP_MINUS26_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PictureParameterSet::init_qp_minus26` in the PPS when that value is non-zero.
- `VK_VIDEO_ENCODE_H265_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::weighted_pred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_WEIGHTED_BIPRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::weighted_bipred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_LOG2_PARALLEL_MERGE_LEVEL_MINUS2_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PictureParameterSet::log2_parallel_merge_level_minus2` in the PPS when that value is non-zero.
- `VK_VIDEO_ENCODE_H265_STD_SIGN_DATA_HIDING_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::sign_data_hiding_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::transform_skip_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_UNSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::transform_skip_enabled_flag` in the PPS when that value is 0.
- `VK_VIDEO_ENCODE_H265_STD_PPS_SLICE_CHROMA_QP_OFFSETS_PRESENT_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::pps_slice_chroma_qp_offsets_present_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_TRANSQUANT_BYPASS_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::transquant_bypass_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::constrained_intra_pred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_ENTROPY_CODING_SYNC_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::entropy_coding_sync_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_DEBLOCKING_FILTER_OVERRIDE_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::deblocking_filter_override_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENTS_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::dependent_slice_segments_enabled_flag` in the PPS when that value is 1.

- [VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENT_FLAG_SET_BIT_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoEncodeH265SliceSegmentHeader::dependent_slice_segment_flag](#) in the [H.265 slice segment header parameters](#) when that value is 1.
- [VK_VIDEO_ENCODE_H265_STD_SLICE_QP_DELTA_BIT_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta](#) in the [H.265 slice segment header parameters](#) when that value is identical across the slice segments of the encoded frame.
- [VK_VIDEO_ENCODE_H265_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta](#) in the [H.265 slice segment header parameters](#) when that value is different across the slice segments of the encoded frame.

These capability flags provide information to the application about specific H.265 syntax element values that the implementation supports without having to [override](#) them and do not otherwise restrict the values that the application **can** specify for any of the mentioned H.265 syntax elements.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265StdFlagsKHR;
```

[VkVideoEncodeH265StdFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH265StdFlagBitsKHR](#).

Bits which **may** be set in [VkVideoEncodeH265CapabilitiesKHR::ctbSizes](#), indicating the CTB sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265CtbSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_64_BIT_KHR = 0x00000004,
} VkVideoEncodeH265CtbSizeFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_KHR](#) specifies that a CTB size of 16x16 is supported.
- [VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_KHR](#) specifies that a CTB size of 32x32 is supported.
- [VK_VIDEO_ENCODE_H265_CTB_SIZE_64_BIT_KHR](#) specifies that a CTB size of 64x64 is supported.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265CtbSizeFlagsKHR;
```

[VkVideoEncodeH265CtbSizeFlagsKHR](#) is a bitmask type for setting a mask of zero or more

[VkVideoEncodeH265CtbSizeFlagBitsKHR](#).

Implementations **must** support at least one of [VkVideoEncodeH265CtbSizeFlagBitsKHR](#).

Bits which **may** be set in [VkVideoEncodeH265CapabilitiesKHR::transformBlockSizes](#), indicating the transform block sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265TransformBlockSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_4_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_8_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_16_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_32_BIT_KHR = 0x00000008,
} VkVideoEncodeH265TransformBlockSizeFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_4_BIT_KHR](#) specifies that a transform block size of 4x4 is supported.
- [VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_8_BIT_KHR](#) specifies that a transform block size of 8x8 is supported.
- [VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_16_BIT_KHR](#) specifies that a transform block size of 16x16 is supported.
- [VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_32_BIT_KHR](#) specifies that a transform block size of 32x32 is supported.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265TransformBlockSizeFlagsKHR;
```

[VkVideoEncodeH265TransformBlockSizeFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH265TransformBlockSizeFlagBitsKHR](#).

Implementations **must** support at least one of [VkVideoEncodeH265TransformBlockSizeFlagBitsKHR](#).

48.22.8. H.265 Encode Quality Level Properties

When calling [vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specified as [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), the [VkVideoEncodeH265QualityLevelPropertiesKHR](#) structure **must** be included in the [pNext](#) chain of the [VkVideoEncodeQualityLevelPropertiesKHR](#) structure to retrieve additional video encode quality level properties specific to H.265 encoding.

The [VkVideoEncodeH265QualityLevelPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265QualityLevelPropertiesKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkVideoEncodeH265RateControlFlagsKHR preferredRateControlFlags;
    uint32_t                 preferredGopFrameCount;
    uint32_t                 preferredIdrPeriod;
    uint32_t                 preferredConsecutiveBFrameCount;
    uint32_t                 preferredSubLayerCount;
    VkVideoEncodeH265QpKHR   preferredConstantQp;
    uint32_t                 preferredMaxL0ReferenceCount;
    uint32_t                 preferredMaxL1ReferenceCount;
} VkVideoEncodeH265QualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of `VkVideoEncodeH265RateControlFlagBitsKHR` values indicating the preferred flags to use for `VkVideoEncodeH265RateControlInfoKHR::flags`.
- `preferredGopFrameCount` indicates the preferred value to use for `VkVideoEncodeH265RateControlInfoKHR::gopFrameCount`.
- `preferredIdrPeriod` indicates the preferred value to use for `VkVideoEncodeH265RateControlInfoKHR::idrPeriod`.
- `preferredConsecutiveBFrameCount` indicates the preferred value to use for `VkVideoEncodeH265RateControlInfoKHR::consecutiveBFrameCount`.
- `preferredSubLayerCount` indicates the preferred value to use for `VkVideoEncodeH265RateControlInfoKHR::subLayerCount`.
- `preferredConstantQp` indicates the preferred values to use for `VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp` for each picture type when using rate control mode `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `preferredMaxL0ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L0.
- `preferredMaxL1ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L1.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265QualityLevelPropertiesKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_QUALITY_LEVEL_PROPERTIES_KHR`

48.22.9. H.265 Encode Session

Additional parameters can be specified when creating a video session with an H.265 encode profile by including an instance of the [VkVideoEncodeH265SessionCreateInfoKHR](#) structure in the [pNext](#) chain of [VkVideoSessionCreateInfoKHR](#).

The [VkVideoEncodeH265SessionCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMaxLevelIdc;
    StdVideoH265LevelIdc maxLevelIdc;
} VkVideoEncodeH265SessionCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [useMaxLevelIdc](#) indicates whether the value of [maxLevelIdc](#) should be used by the implementation. When it is [VK_FALSE](#), the implementation ignores the value of [maxLevelIdc](#) and uses the value of [VkVideoEncodeH265CapabilitiesKHR::maxLevelIdc](#), as reported by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile.
- [maxLevelIdc](#) is a [StdVideoH265LevelIdc](#) value specifying the upper bound on the H.265 level for the video bitstreams produced by the created video session, where enum constant [STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>](#) identifies H.265 level [<major>.<minor>](#) as defined in section A.4 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionCreateInfoKHR-sType-sType [sType](#) must be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_CREATE_INFO_KHR](#)

48.22.10. H.265 Encode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` can contain the following types of parameters:

H.265 Video Parameter Sets (VPS)

Represented by `StdVideoH265VideoParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- `vps_video_parameter_set_id` is used as the key of the VPS entry;
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `vps_max_latency_increase_plus1`, `vps_max_dec_pic_buffering_minus1`, and `vps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `reserved` is used only for padding purposes and is otherwise ignored;
 - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:

- `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
 - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265VideoParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

H.265 Sequence Parameter Sets (SPS)

Represented by `StdVideoH265SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- the pair constructed from `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` is used as the key of the SPS entry;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
 - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `sps_max_latency_increase_plus1`, `sps_max_dec_pic_buffering_minus1`, and `sps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.sps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
 - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as

defined in section 7.3.4 of the [ITU-T H.265 Specification](#);

- `pShortTermRefPicSet` is a pointer to an array of `num_short_term_ref_pic_sets` number of `StdVideoH265ShortTermRefPicSet` structures where each element is interpreted as follows:
 - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
 - `used_by_curr_pic_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `use_delta_flag` is a bitmask where bit index `i` corresponds to `use_delta_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `used_by_curr_pic_s0_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s0_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `used_by_curr_pic_s1_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s1_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ShortTermRefPicSet` are interpreted as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
- if `flags.long_term_ref_pics_present_flag` is set then the `StdVideoH265LongTermRefPicsSps` structure pointed to by `pLongTermRefPicsSps` is interpreted as follows:
 - `used_by_curr_pic_lt_sps_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_lt_sps_flag[i]` as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265LongTermRefPicsSps` are interpreted as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then the `StdVideoH265SequenceParameterSetVui` structure pointed to by `pSequenceParameterSetVui` is interpreted as follows:
 - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
 - the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:

- `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- all other members of `pSequenceParameterSetVui` are interpreted as defined in section E.3.1 of the [ITU-T H.265 Specification](#);
- if `flags.sps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265SequenceParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

H.265 Picture Parameter Sets (PPS)

Represented by `StdVideoH265PictureParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- the triplet constructed from `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
 - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- if `flags.pps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure

pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);

- all other members of `StdVideoH265PictureParameterSet` are interpreted as defined in section 7.4.3.3 of the [ITU-T H.265 Specification](#).

Implementations **may** override any of these parameters according to the semantics defined in the [Video Encode Parameter Overrides](#) section before storing the resulting H.265 parameter sets into the video session parameters object. Applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened and to retrieve the encoded H.265 parameter sets in order to be able to produce a compliant H.265 video bitstream.

Such H.265 parameter set overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` video encode feedback query flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a video session parameters object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxStdVPSCount;
    uint32_t                 maxStdSPSCount;
    uint32_t                 maxStdPPSCount;
    const VkVideoEncodeH265SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoEncodeH265SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdVPSCount` is the maximum number of H.265 VPS entries the created `VkVideoSessionParametersKHR` **can** contain.
- `maxStdSPSCount` is the maximum number of H.265 SPS entries the created `VkVideoSessionParametersKHR` **can** contain.
- `maxStdPPSCount` is the maximum number of H.265 PPS entries the created `VkVideoSessionParametersKHR` **can** contain.
- `pParametersAddInfo` is `NULL` or a pointer to a `VkVideoEncodeH265SessionParametersAddInfoKHR`

structure specifying H.265 parameters to add upon object creation.

Valid Usage (Implicit)

- `VUID-VkVideoEncodeH265SessionParametersCreateInfoKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_CREATE_INFO_KHR`
- `VUID-VkVideoEncodeH265SessionParametersCreateInfoKHR-pParametersAddInfo-parameter`
If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` **must** be a valid pointer to a valid `VkVideoEncodeH265SessionParametersAddInfoKHR` structure

Structure Chaining

Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

The `VkVideoEncodeH265SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersAddInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           stdVPSCount;
    const StdVideoH265VideoParameterSet* pStdVPSSs;
    uint32_t           stdSPSCount;
    const StdVideoH265SequenceParameterSet* pStdSPSs;
    uint32_t           stdPPSCount;
    const StdVideoH265PictureParameterSet* pStdPPSs;
} VkVideoEncodeH265SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdVPSCount` is the number of elements in the `pStdVPSSs` array.
- `pStdVPSSs` is a pointer to an array of `StdVideoH265VideoParameterSet` structures describing the H.265 VPS entries to add.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH265SequenceParameterSet` structures describing the H.265 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH265PictureParameterSet` structures describing the

[H.265 PPS](#) entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a `video session parameters` object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the `video session parameters` object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdVPSSs-parameter
If `stdVPSCount` is not `0`, and `pStdVPSSs` is not `NULL`, `pStdVPSSs` **must** be a valid pointer to an array of `stdVPSCount` `StdVideoH265VideoParameterSet` values
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdSPSSs-parameter
If `stdSPSCount` is not `0`, and `pStdSPSSs` is not `NULL`, `pStdSPSSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` values
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdPPSSs-parameter
If `stdPPSCount` is not `0`, and `pStdPPSSs` is not `NULL`, `pStdPPSSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` values

Structure Chaining

Extends the structure

- [VkVideoSessionParametersUpdateInfoKHR](#)

Valid Usage

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06438
The `vps_video_parameter_set_id` member of each `StdVideoH265VideoParameterSet` structure specified in the elements of `pStdVPSSs` **must** be unique within `pStdVPSSs`
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06439
The pair constructed from the `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` members of each `StdVideoH265SequenceParameterSet` structure specified in the elements of

pStdSPSs must be unique within **pStdSPSs**

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06440

The triplet constructed from the **sps_video_parameter_set_id**, **pps_seq_parameter_set_id**, and **pps_pic_parameter_set_id** members of each **StdVideoH265PictureParameterSet** structure specified in the elements of **pStdPPSs must** be unique within **pStdPPSs**

The **VkVideoEncodeH265SessionParametersGetInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           writeStdVPS;
    VkBool32           writeStdSPS;
    VkBool32           writeStdPPS;
    uint32_t           stdVPSId;
    uint32_t           stdSPSId;
    uint32_t           stdPPSId;
} VkVideoEncodeH265SessionParametersGetInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **writeStdVPS** indicates whether the encoded **H.265 video parameter set** identified by **stdVPSId** is requested to be retrieved.
- **writeStdSPS** indicates whether the encoded **H.265 sequence parameter set** identified by the pair constructed from **stdVPSId** and **stdSPSId** is requested to be retrieved.
- **writeStdPPS** indicates whether the encoded **H.265 picture parameter set** identified by the triplet constructed from **stdVPSId**, **stdSPSId**, and **stdPPSId** is requested to be retrieved.
- **stdVPSId** specifies the H.265 video parameter set ID used to identify the retrieved H.265 video, sequence, and/or picture parameter set(s).
- **stdSPSId** specifies the H.265 sequence parameter set ID used to identify the retrieved H.265 sequence and/or picture parameter set(s) when **writeStdSPS** and/or **writeStdPPS** is **VK_TRUE**.
- **stdPPSId** specifies the H.265 picture parameter set ID used to identify the retrieved H.265 picture parameter set when **writeStdPPS** is **VK_TRUE**.

When this structure is specified in the **pNext** chain of the **VkVideoEncodeSessionParametersGetInfoKHR** structure passed to **vkGetEncodedVideoSessionParametersKHR**, the command will write encoded parameter data to the output buffer in the following order:

1. The **H.265 video parameter set** identified by **stdVPSId**, if **writeStdVPS** is **VK_TRUE**.
2. The **H.265 sequence parameter set** identified by the pair constructed from **stdVPSId** and **stdSPSId**, if **writeStdSPS** is **VK_TRUE**.
3. The **H.265 picture parameter set** identified by the triplet constructed from **stdVPSId**, **stdSPSId**,

and `stdPPSId`, if `writeStdPPS` is `VK_TRUE`.

Valid Usage

- VUID-VkVideoEncodeH265SessionParametersGetInfoKHR-writeStdVPS-08290
At least one of `writeStdVPS`, `writeStdSPS`, and `writeStdPPS` must be `VK_TRUE`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersGetInfoKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_GET_INFO_KHR`

Structure Chaining

Extends the structure

- `VkVideoEncodeSessionParametersGetInfoKHR`

The `VkVideoEncodeH265SessionParametersFeedbackInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasStdVPSOverrides;
    VkBool32           hasStdSPSOverrides;
    VkBool32           hasStdPPSOverrides;
} VkVideoEncodeH265SessionParametersFeedbackInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hasStdVPSOverrides` indicates whether any of the parameters of the requested H.265 video parameter set, if one was requested via `VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdVPS`, were overridden by the implementation.
- `hasStdSPSOverrides` indicates whether any of the parameters of the requested H.265 sequence parameter set, if one was requested via `VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdSPS`, were overridden by the implementation.
- `hasStdPPSOverrides` indicates whether any of the parameters of the requested H.265 picture parameter set, if one was requested via `VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdPPS`, were overridden by the implementation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersFeedbackInfoKHR-sType-sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_FEEDBACK_INFO_KHR

Structure Chaining

Extends the structure

- [VkVideoEncodeSessionParametersFeedbackInfoKHR](#)

48.22.11. H.265 Encoding Parameters

The [VkVideoEncodeH265PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265PictureInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t            naluSliceSegmentEntryCount;
    const VkVideoEncodeH265NaluSliceSegmentInfoKHR* pNaluSliceSegmentEntries;
    const StdVideoEncodeH265PictureInfo* pStdPictureInfo;
} VkVideoEncodeH265PictureInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `naluSliceSegmentEntryCount` is the number of elements in `pNaluSliceSegmentEntries`.
- `pNaluSliceSegmentEntries` is a pointer to an array of `naluSliceSegmentEntryCount` [VkVideoEncodeH265NaluSliceSegmentInfoKHR](#) structures specifying the parameters of the individual H.265 slice segments to encode for the input picture.
- `pStdPictureInfo` is a pointer to a [StdVideoEncodeH265PictureInfo](#) structure specifying [H.265 picture information](#).

This structure is specified in the `pNext` chain of the [VkVideoEncodeInfoKHR](#) structure passed to [vkCmdEncodeVideoKHR](#) to specify the codec-specific picture information for an [H.265 encode operation](#).

Encode Input Picture Information

When this structure is specified in the `pNext` chain of the [VkVideoEncodeInfoKHR](#) structure passed to [vkCmdEncodeVideoKHR](#), the information related to the [encode input picture](#) is defined as follows:

- The image subregion used is determined according to the [H.265 Encode Picture Data Access](#)

section.

- The encode input picture is associated with the [H.265 picture information](#) provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoEncodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.is_reference` as defined in section 3.132 of the [ITU-T H.265 Specification](#);
- `flags.IrapPicFlag` as defined in section 3.73 of the [ITU-T H.265 Specification](#);
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `flags.discardable_flag` and `cross_layer_bla_flag` as defined in section F.7.4.7.1 of the [ITU-T H.265 Specification](#);
- `pic_type` as defined in section 7.4.3.5 of the [ITU-T H.265 Specification](#);
- `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- `PicOrderCntVal` as defined in section 8.3.1 of the [ITU-T H.265 Specification](#);
- `TemporalId` as defined in section 7.4.2.2 of the [ITU-T H.265 Specification](#);
- if `pRefLists` is not `NULL`, then it is a pointer to a `StdVideoEncodeH265ReferenceListsInfo` structure that is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - `ref_pic_list_modification_flag_l0` and `ref_pic_list_modification_flag_l1` as defined in section 7.4.7.2 of the [ITU-T H.265 Specification](#);
 - `num_ref_idx_l0_active_minus1` and `num_ref_idx_l1_active_minus1` as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#);
 - `RefPicList0` and `RefPicList1` as defined in section 8.3.4 of the [ITU-T H.265 Specification](#) where each element of these arrays either identifies an [active reference picture](#) using its [DPB slot](#) index or contains the value `STD_VIDEO_H265_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
 - `list_entry_l0` and `list_entry_l1` as defined in section 7.4.7.2 of the [ITU-T H.265 Specification](#);
- if `flags.short_term_ref_pic_set_sps_flag` is set, then the `StdVideoH265ShortTermRefPicSet` structure pointed to by `pShortTermRefPicSet` is interpreted as defined for the elements of the `pShortTermRefPicSet` array specified in [H.265 sequence parameter sets](#).
- if `flags.long_term_ref_pics_present_flag` is set in the [active SPS](#), then the `StdVideoEncodeH265LongTermRefPics` structure pointed to by `pLongTermRefPics` is interpreted as follows:
 - `used_by_curr_pic_lt_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_lt_flag[i]` as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#);

- all other members of `StdVideoEncodeH265LongTermRefPics` are interpreted as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#);
- all other members are interpreted as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#).

Reference picture setup is controlled by the value of `StdVideoEncodeH265PictureInfo::flags.is_reference`. If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pEncodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoEncodeH265PictureInfo::flags.is_reference` is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The members of the `StdVideoEncodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active VPS* is the [VPS](#) identified by the key specified in `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id`.
- The *active SPS* is the [SPS](#) identified by the key specified by the pair constructed from `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`.
- The *active PPS* is the [PPS](#) identified by the key specified by the triplet constructed from `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoEncodeH265PictureInfo::pps_pic_parameter_set_id`.

H.265 encoding uses *explicit weighted sample prediction* for a slice segment, as defined in section 8.5.3.3.4 of the [ITU-T H.265 Specification](#), if any of the following conditions are true for the active [PPS](#) and the `pStdSliceSegmentHeader` member of the corresponding element of `pNaluSliceSegmentEntries`:

- `pStdSliceSegmentHeader->slice_type` is `STD_VIDEO_H265_SLICE_TYPE_P` and `weighted_pred_flag` is enabled in the active PPS.
- `pStdSliceSegmentHeader->slice_type` is `STD_VIDEO_H265_SLICE_TYPE_B` and `weighted_bipred_flag` is enabled in the active PPS.

The number of H.265 tiles, as defined in section 3.174 of the [ITU-T H.265 Specification](#), is derived from the `num_tile_columns_minus1` and `num_tile_rows_minus1` members of the active [PPS](#) as follows:

$$(\text{num_tile_columns_minus1} + 1) \times (\text{num_tile_rows_minus1} + 1)$$

Valid Usage

- `VOID-VkVideoEncodeH265PictureInfoKHR-naluSliceSegmentEntryCount-08306` `naluSliceSegmentEntryCount` **must** be between 1 and `VkVideoEncodeH265CapabilitiesKHR::maxSliceSegmentCount`, inclusive, as returned by

[vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile

- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08323

If [VkVideoEncodeH265CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR](#), then [naluSliceSegmentEntryCount](#) **must** be greater than or equal to the number of H.265 tiles in the picture

- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08324

If [VkVideoEncodeH265CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR](#), then [naluSliceSegmentEntryCount](#) **must** be less than or equal to the number of H.265 tiles in the picture

- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08316

If [VkVideoEncodeH265CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR](#) and the slice segment corresponding to any element of [pNaluSliceSegmentEntries](#) uses [explicit weighted sample prediction](#), then [VkVideoEncodeH265NaluSliceSegmentInfoKHR::pStdSliceSegmentHeader->pWeightTable](#) **must** not be [NULL](#) for that element of [pNaluSliceSegmentEntries](#)

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265PictureInfoKHR-sType-sType

[sType](#) **must** be [VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PICTURE_INFO_KHR](#)

- VUID-VkVideoEncodeH265PictureInfoKHR-pNaluSliceSegmentEntries-parameter

[pNaluSliceSegmentEntries](#) **must** be a valid pointer to an array of [naluSliceSegmentEntryCount](#) valid [VkVideoEncodeH265NaluSliceSegmentInfoKHR](#) structures

- VUID-VkVideoEncodeH265PictureInfoKHR-pStdPictureInfo-parameter

[pStdPictureInfo](#) **must** be a valid pointer to a valid [StdVideoEncodeH265PictureInfo](#) value

- VUID-VkVideoEncodeH265PictureInfoKHR-naluSliceSegmentEntryCount-arraylength

[naluSliceSegmentEntryCount](#) **must** be greater than 0

Structure Chaining

Extends the structure

- [VkVideoEncodeInfoKHR](#)

The [VkVideoEncodeH265NaluSliceSegmentInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265NaluSliceSegmentInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    int32_t                  constantQp;
    const StdVideoEncodeH265SliceSegmentHeader* pStdSliceSegmentHeader;
} VkVideoEncodeH265NaluSliceSegmentInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantQp` is the QP to use for the slice segment if the current `rate control mode` configured for the video session is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `pStdSliceSegmentHeader` is a pointer to a `StdVideoEncodeH265SliceSegmentHeader` structure specifying `H.265 slice segment header parameters` for the slice segment.

Std Slice Segment Header Parameters

The members of the `StdVideoEncodeH265SliceSegmentHeader` structure pointed to by `pStdSliceSegmentHeader` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- if `pWeightTable` is not `NULL`, then it is a pointer to a `StdVideoEncodeH265WeightTable` that is interpreted as follows:
 - `flags.luma_weight_l0_flag`, `flags.chroma_weight_l0_flag`, `flags.luma_weight_l1_flag`, and `flags.chroma_weight_l1_flag` are bitmasks where bit index `i` corresponds to `luma_weight_l0_flag[i]`, `chroma_weight_l0_flag[i]`, `luma_weight_l1_flag[i]`, and `chroma_weight_l1_flag[i]`, respectively, as defined in section 7.4.7.3 of the `ITU-T H.265 Specification`;
 - all other members of `StdVideoEncodeH265WeightTable` are interpreted as defined in section 7.4.7.3 of the `ITU-T H.265 Specification`;
- all other members are interpreted as defined in section 7.4.7.1 of the `ITU-T H.265 Specification`.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_NALU_SLICE_SEGMENT_INFO_KHR`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-pStdSliceSegmentHeader-parameter
`pStdSliceSegmentHeader` **must** be a valid pointer to a valid `StdVideoEncodeH265SliceSegmentHeader` value

The [VkVideoEncodeH265DpbSlotInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265DpbSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoEncodeH265ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeH265DpbSlotInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a [StdVideoEncodeH265ReferenceInfo](#) structure specifying [H.265 reference information](#).

This structure is specified in the `pNext` chain of [VkVideoEncodeInfoKHR::pSetupReferenceSlot](#), if not `NULL`, and the `pNext` chain of the elements of [VkVideoEncodeInfoKHR::pReferenceSlots](#) to specify the codec-specific reference picture information for an [H.265 encode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of [VkVideoEncodeInfoKHR::pReferenceSlots](#), one element is added to the list of [active reference pictures](#) used by the video encode operation for each element of [VkVideoEncodeInfoKHR::pReferenceSlots](#) as follows:

- The image subregion used is determined according to the [H.265 Encode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of [VkVideoEncodeInfoKHR::pReferenceSlots](#).
- The reference picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of [VkVideoEncodeInfoKHR::pSetupReferenceSlot](#), the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [H.265 Encode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in [VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex](#).
- The reconstructed picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

Std Reference Information

The members of the [StdVideoEncodeH265ReferenceInfo](#) structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `flags.unused_for_reference` is used to indicate whether the picture is marked as “unused for reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `pic_type` as defined in section 7.4.3.5 of the [ITU-T H.265 Specification](#);
- `PicOrderCntVal` as defined in section 8.3.1 of the [ITU-T H.265 Specification](#);
- `TemporalId` as defined in section 7.4.2.2 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- `VUID-VkVideoEncodeH265DpbSlotInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoEncodeH265DpbSlotInfoKHR-pStdReferenceInfo-parameter`
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeH265ReferenceInfo` value

Structure Chaining

- [VkVideoReferenceSlotInfoKHR](#)

48.22.12. H.265 Encode Rate Control

Group of Pictures

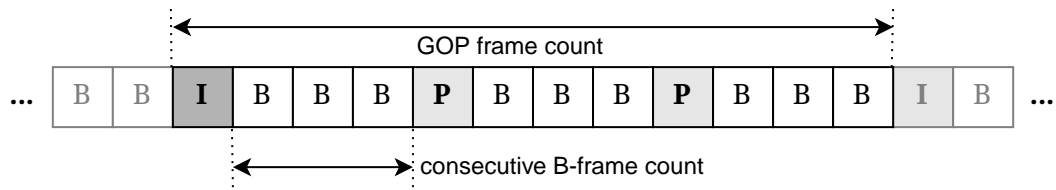

In case of H.265 encoding it is common practice to follow a regular pattern of different picture types in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive B frames between I and/or P frames in display order.

Frame types in a regular GOP follow each other in display order according to the following algorithm:

1. The first frame is always an I or an IDR frame.
2. This is followed by a number of consecutive B frames, as defined above.
3. If the number of frames in the GOP is not reached yet, then the next frame is a P frame and the algorithm continues from step 2.

Text is not SVG - cannot display

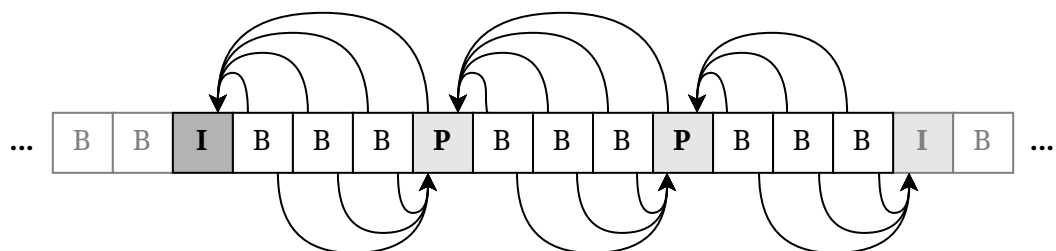

Figure 45. H.265 regular GOP starting with an I frame

When **IDR frames** are used in a video sequence, the *IDR period* refers to the distance between subsequent IDR frames.

It is also typical for H.265 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

Flat Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- Each B frame uses the last non-B frame, in display order, as its forward reference, and uses the next non-B frame, in display order, as its backward reference.

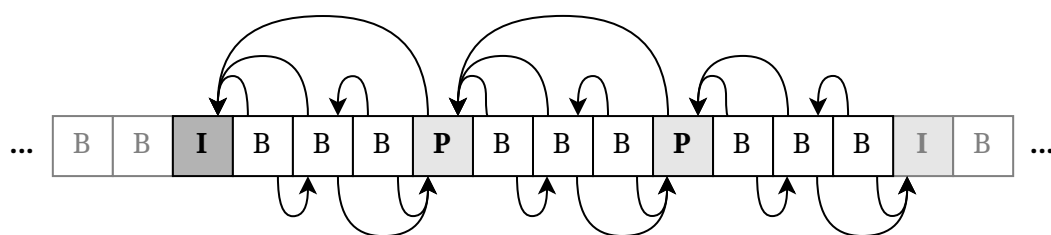

Text is not SVG - cannot display

Figure 46. H.265 flat reference pattern

Dyadic Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- The following algorithm is applied to the sequence of consecutive B frames between I and/or P frames in display order:
 1. The B frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
 2. The algorithm is executed recursively for the following frame sequences:
 - The B frames of the original sequence preceding the frame in the middle, if any.
 - The B frames of the original sequence following the frame in the middle, if any.

Text is not SVG - cannot display

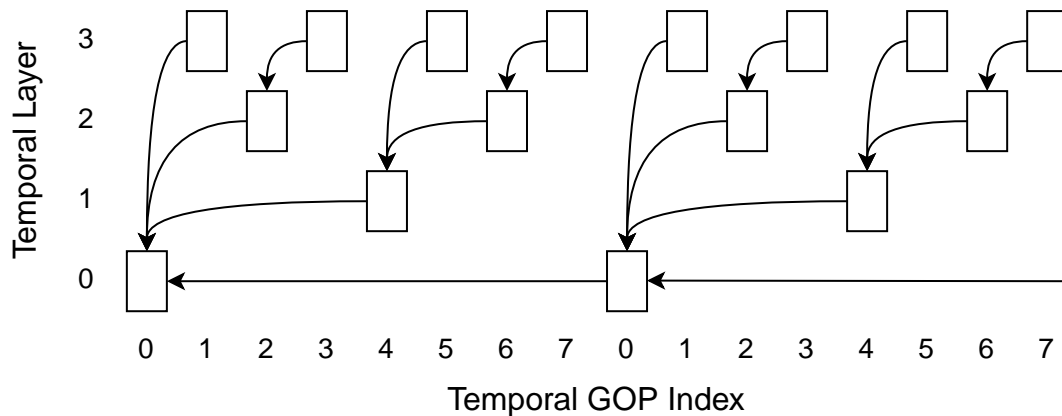

Figure 47. H.265 dyadic reference pattern

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the picture type of individual encoded pictures is still application-controlled, however, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited, to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an H.265 encode session is used to encode multiple temporal sub-layers, it is also common practice to follow a regular pattern for the H.265 temporal ID for the encoded pictures in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most common temporal layer pattern used is as follows:

Dyadic Temporal Sub-Layer Pattern

- The number of frames in the temporal GOP is 2^{n-1} , where n is the number of temporal sub-layers.
- The i^{th} frame in the temporal GOP uses temporal ID t , if and only if the index of the least significant bit set in i equals $n-t-1$, except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The i^{th} frame in the temporal GOP uses the r^{th} frame as reference, where r is calculated from i by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.

Text is not SVG - cannot display

Figure 48. H.265 dyadic temporal sub-layer pattern

NOTE

Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence B pictures with backward prediction are usually not used.

The `VkVideoEncodeH265RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265RateControlInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkVideoEncodeH265RateControlFlagsKHR flags;
    uint32_t                    gopFrameCount;
    uint32_t                    idrPeriod;
    uint32_t                    consecutiveBFrameCount;
    uint32_t                    subLayerCount;
} VkVideoEncodeH265RateControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH265RateControlFlagBitsKHR` specifying H.265 rate control flags.
- `gopFrameCount` is the number of frames within a [group of pictures \(GOP\)](#) intended to be used by the application. If it is 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is `UINT32_MAX`, the GOP length is treated as infinite.
- `idrPeriod` is the interval, in terms of number of frames, between two [IDR frames](#) (see [IDR period](#)). If it is 0, the rate control algorithm **may** assume an implementation-dependent IDR period. If it is `UINT32_MAX`, the IDR period is treated as infinite.
- `consecutiveBFrameCount` is the number of consecutive B frames between I and/or P frames within

the [GOP](#).

- [subLayerCount](#) specifies the number of H.265 sub-layers that the application intends to use.

When an instance of this structure is included in the [pNext](#) chain of the [VkVideoCodingControlInfoKHR](#) structure passed to the [vkCmdControlVideoCodingKHR](#) command, and [VkVideoCodingControlInfoKHR::flags](#) includes [VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR](#), the parameters in this structure are used as guidance for the implementation's rate control algorithm (see [Video Coding Control](#)).

If [VkVideoCodingControlInfoKHR::flags](#) includes [VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR](#), then the rate control state is reset to an initial state to meet HRD compliance requirements. Otherwise the new rate control state **may** be applied without a reset depending on the implementation and the specified rate control parameters.

NOTE

It would be possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for [consecutiveBFrameCount](#), [idrPeriod](#), and [gopFrameCount](#), but this inferred picture type will not be used by implementations to override the picture type provided to the video encode operation.

Valid Usage

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08291

If [VkVideoEncodeH265CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR](#), then [flags](#) **must** not contain [VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR](#)

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08292

If [VkVideoEncodeH265RateControlInfoKHR::flags](#) contains [VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR](#) or [VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR](#), then it **must** also contain [VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR](#)

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08293

If [VkVideoEncodeH265RateControlInfoKHR::flags](#) contains [VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR](#), then it **must** not also contain [VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR](#)

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08294

If [flags](#) contains [VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR](#), then [gopFrameCount](#) **must** be greater than 0

- VUID-VkVideoEncodeH265RateControlInfoKHR-idrPeriod-08295

If [idrPeriod](#) is not 0, then it **must** be greater than or equal to [gopFrameCount](#)

- VUID-VkVideoEncodeH265RateControlInfoKHR-consecutiveBFrameCount-08296
If `consecutiveBFrameCount` is not 0, then it **must** be less than `gopFrameCount`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265RateControlInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_INFO_KHR`
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-parameter
`flags` **must** be a valid combination of `VkVideoEncodeH265RateControlFlagBitsKHR` values

Structure Chaining

Extends the structures

- `VkVideoBeginCodingInfoKHR`
- `VkVideoCodingControlInfoKHR`

Bits which **can** be set in `VkVideoEncodeH265RateControlInfoKHR::flags`, specifying H.265 rate control flags, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_KHR =
    0x00000010,
} VkVideoEncodeH265RateControlFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR` specifies that rate control **should** attempt to produce an HRD compliant bitstream, as defined in annex C of the [ITU-T H.265 Specification](#).
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR` specifies that the application intends to use a [regular GOP structure](#) according to the parameters specified in the `gopFrameCount`, `idrPeriod`, and `consecutiveBFrameCount` members of the `VkVideoEncodeH265RateControlInfoKHR` structure.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR` specifies that the application intends to follow a [flat reference pattern](#) in the GOP.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR` specifies that the application intends to follow a [dyadic reference pattern](#) in the GOP.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_KHR` specifies that the application intends to follow a [dyadic temporal sub-layer pattern](#).

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265RateControlFlagsKHR;
```

`VkVideoEncodeH265RateControlFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH265RateControlFlagBitsKHR`.

Rate Control Layers

The `VkVideoEncodeH265RateControlLayerInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265RateControlLayerInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkBool32                 useMinQp;
    VkVideoEncodeH265QpKHR   minQp;
    VkBool32                 useMaxQp;
    VkVideoEncodeH265QpKHR   maxQp;
    VkBool32                 useMaxFrameSize;
    VkVideoEncodeH265FrameSizeKHR maxFrameSize;
} VkVideoEncodeH265RateControlLayerInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMinQp` indicates whether the QP values determined by rate control will be clamped to the lower bounds on the QP values specified in `minQp`.
- `minQp` specifies the lower bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when `useMinQp` is `VK_TRUE`.
- `useMaxQp` indicates whether the QP values determined by rate control will be clamped to the upper bounds on the QP values specified in `maxQp`.
- `maxQp` specifies the upper bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when `useMaxQp` is `VK_TRUE`.
- `useMaxFrameSize` indicates whether the implementation's rate control algorithm **should** use the values specified in `maxFrameSize` as the upper bounds on the encoded frame size for each picture type.
- `maxFrameSize` specifies the upper bounds on the encoded frame size, for each picture type, when `useMaxFrameSize` is `VK_TRUE`.

When used, the values in `minQp` and `maxQp` guarantee that the effective QP values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of QP values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak `bitrate` values to be used for the encoded bitstream specified in the

`averageBitrate` and `maxBitrate` members of the `VkVideoEncodeRateControlLayerInfoKHR` structure.

- The upper bounds on the encoded frame size, for each picture type, specified in the `maxFrameSize` member of `VkVideoEncodeH265RateControlLayerInfoKHR`.

NOTE

In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the [Video Encode Rate Control](#) section.

When an instance of this structure is included in the `pNext` chain of a `VkVideoEncodeRateControlLayerInfoKHR` structure specified in one of the elements of the `players` array member of the `VkVideoEncodeRateControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, and the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, it specifies the H.265-specific rate control parameters of the rate control layer corresponding to that element of `players`.

Valid Usage

- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08297
If `useMinQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be between `VkVideoEncodeH265CapabilitiesKHR::minQp` and `VkVideoEncodeH265CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMaxQp-08298
If `useMaxQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all be between `VkVideoEncodeH265CapabilitiesKHR::minQp` and `VkVideoEncodeH265CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08299
If `useMinQp` is `VK_TRUE` and `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all specify the same value
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMaxQp-08300
If `useMaxQp` is `VK_TRUE` and `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all specify the same value
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08375
If `useMinQp` and `useMaxQp` are both `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be less than or equal to the respective members of `maxQp`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_LAYER_INFO_KHR`
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-minQp-parameter `minQp` **must** be a valid `VkVideoEncodeH265QpKHR` structure
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-maxQp-parameter `maxQp` **must** be a valid `VkVideoEncodeH265QpKHR` structure
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-maxFrameSize-parameter `maxFrameSize` **must** be a valid `VkVideoEncodeH265FrameSizeKHR` structure

Structure Chaining

Extends the structure

- `VkVideoEncodeRateControlLayerInfoKHR`

The `VkVideoEncodeH265QpKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265QpKHR {
    int32_t    qpI;
    int32_t    qpP;
    int32_t    qpB;
} VkVideoEncodeH265QpKHR;
```

- `qpI` is the QP to be used for `I` pictures.
- `qpP` is the QP to be used for `P` pictures.
- `qpB` is the QP to be used for `B` pictures.

The `VkVideoEncodeH265FrameSizeKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265FrameSizeKHR {
    uint32_t    frameISize;
    uint32_t    framePSize;
    uint32_t    frameBSize;
} VkVideoEncodeH265FrameSizeKHR;
```

- `frameISize` is the size in bytes to be used for `I` frames.
- `framePSize` is the size in bytes to be used for `P` frames.
- `frameBSize` is the size in bytes to be used for `B` frames.

GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the [group of pictures \(GOP\)](#).

The `VkVideoEncodeH265GopRemainingFrameInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t            gopRemainingI;
    uint32_t            gopRemainingP;
    uint32_t            gopRemainingB;
} VkVideoEncodeH265GopRemainingFrameInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useGopRemainingFrames` indicates whether the implementation's rate control algorithm **should** use the values specified in `gopRemainingI`, `gopRemainingP`, and `gopRemainingB`. If `useGopRemainingFrames` is `VK_FALSE`, then the values of `gopRemainingI`, `gopRemainingP`, and `gopRemainingB` are ignored.
- `gopRemainingI` specifies the number of [I frames](#) the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the video encode operation.
- `gopRemainingP` specifies the number of [P frames](#) the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the video encode operation.
- `gopRemainingB` specifies the number of [B frames](#) the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the video encode operation.

Setting `useGopRemainingFrames` to `VK_TRUE` and including this structure in the `pNext` chain of `VkVideoBeginCodingInfoKHR` is only mandatory if the `VkVideoEncodeH265CapabilitiesKHR::requiresGopRemainingFrames` reported for the used [video profile](#) is `VK_TRUE`. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a [regular GOP structure](#), these values **may** provide additional guidance for the implementation's rate control algorithm.

The `VkVideoEncodeH265CapabilitiesKHR::prefersGopRemainingFrames` capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265GopRemainingFrameInfoKHR-sType-sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_GOP_REMAINING_FRAME_INFO_KHR

Structure Chaining

Extends the structure

- [VkVideoBeginCodingInfoKHR](#)

H.265 QP Delta Maps

Quantization delta maps used with an [H.265 encode profile](#) are referred to as *QP delta maps* and their texels contain integer values representing QP delta values that are applied in the process of determining the [quantization parameters](#) of the encoded picture.

Accordingly, H.265 QP delta maps always have single channel integer formats, as reported in [VkVideoFormatPropertiesKHR::format](#).

When the [rate control mode](#) is [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#), the QP delta values are added to the per slice segment constant QP values that, in effect, enable the application to explicitly control the used QP values at the granularity of the used [quantization map texel size](#).

For all other [rate control modes](#), the QP delta values **can** be used to offset the QP values that the rate control algorithm would otherwise produce.

H.265 Encode Quantization

Performing H.265 encode operations involves the process of assigning QP values to individual H.265 coding units. This process depends on the used [rate control mode](#), as well as other encode and rate control parameters, as described below:

- If the configured rate control mode is [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR](#), then the QP value is initialized by the implementation-specific default rate control algorithm.
 - If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the coding unit, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the [minQpDelta](#) and [maxQpDelta](#) members of [VkVideoEncodeH265QuantizationMapCapabilitiesKHR](#), then the QP value used for the coding unit becomes undefined.
- If the configured rate control mode is [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#), then the QP value is initialized from the constant QP value specified for the [H.265 slice segment](#) the coding unit is

part of.

- If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the coding unit, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the [minQpDelta](#) and [maxQpDelta](#) members of [VkVideoEncodeH265QuantizationMapCapabilitiesKHR](#), then the QP value used for the coding unit becomes undefined.
- If the configured rate control mode is not [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR](#) or [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#), then the QP value is initialized by the corresponding rate control algorithm.
 - If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the coding unit, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the [minQpDelta](#) and [maxQpDelta](#) members of [VkVideoEncodeH265QuantizationMapCapabilitiesKHR](#), then the QP value used for the coding unit becomes undefined.
 - If the video encode operation is issued with an [emphasis map](#), the rate control will adjust the QP value based on the emphasis value corresponding to the coding unit, as [fetched from the quantization map](#), according to the following equation:

$$QP_{\text{new}} = f(QP_{\text{prev}}, e)$$

Where QP_{new} is the resulting QP value, QP_{prev} is the previously determined QP value, e is the emphasis value corresponding to the coding unit, and f is an implementation-defined function for which the following implication is true:

$$e_1 < e_2 \Rightarrow f(QP, e_1) \geq f(QP, e_2)$$

NOTE

This means that lower emphasis values will result in higher QP values, whereas higher emphasis values will result in lower QP values, but the function is not strictly decreasing with respect to the input emphasis value for a given input QP value.

- If clamping to minimum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding minimum QP value.
- If clamping to maximum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding maximum QP value.
- If [VK_VIDEO_ENCODE_H265_CAPABILITY_CU_QP_DIFF_WRAPAROUND_BIT_KHR](#) is not supported, then the determined QP value is clamped in such a way that the [CuQpDeltaVal](#) value of the encoded coding unit complies to the [modified version](#) of equation 8-283 of the [ITU-T H.265 Specification](#).

NOTE

The effect of this is that the maximum QP difference across subsequent coding units is limited to the $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$ range and only has an observable change in behavior when the video encode operation is

issued with a [QP delta map](#).

- In all cases, the final QP value is clamped to the QP value range supported by the video profile, as reported in the `minQp` and `maxQp` members of [VkVideoEncodeH265CapabilitiesKHR](#).

48.22.13. H.265 Encode Requirements

This section described the **required** H.265 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), as returned by [vkGetPhysicalDeviceQueueFamilyProperties2](#) in [VkQueueFamilyVideoPropertiesKHR::videoCodecOperations](#).

Table 67. Required [Video Std Header Versions](#)

Video Std Header Name	Version
vulkan_video_codec_h265std_encode	1.0.0

Table 68. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹

<code>intraRefreshModes</code>	0	min
<code>maxIntraRefreshCycleDuration</code>	2 ⁵	min
<code>maxIntraRefreshActiveReferencePictures</code>	1 ⁵	min
<code>partitionIndependentIntraRefreshRegions</code>	-	implementation-dependent
<code>nonRectangularIntraRefreshRegions</code>	-	implementation-dependent

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR`, then the `width` and `height` members of `maxQuantizationMapExtent` **must** be greater than zero.

3

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR`, then `maxQpDelta` **must** be greater than `minQpDelta`.

4

If the `videoMaintenance2` feature is supported.

5

If `VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes` is not zero.

48.23. AV1 Encode Operations

Video encode operations using an [AV1 encode profile](#) **can** be used to encode elementary video stream sequences compliant with the [AV1 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video encode operation steps](#) with the codec-specific semantics defined in section 7 of the [AV1 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The `StdVideoAV1SequenceHeader` structure, the optional `StdVideoEncodeAV1DecoderModelInfo` structure, and the optional array of `StdVideoEncodeAV10peratingPointInfo` structures stored in the bound video session parameters object specifying the [active sequence header](#).
 - The `StdVideoEncodeAV1PictureInfo` structure specifying the [AV1 picture information](#).
 - The `StdVideoEncodeAV1ReferenceInfo` structures specifying the [AV1 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
 - The encoded bitstream data is written to the destination video bitstream buffer range as defined in the [AV1 Encode Bitstream Data Access](#) section.
 - Picture data in the [video picture resources](#) corresponding to the used [encode input picture](#), [active reference pictures](#), and optional [reconstructed picture](#) is accessed as defined in the [AV1 Encode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [AV1 picture information](#).

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the [AV1 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete [unsuccessfully](#).

48.23.1. AV1 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the AV1 encode parameters specified in the following Video Std structures:

- `StdVideoAV1SequenceHeader`
- `StdVideoEncodeAV1DecoderModelInfo`
- `StdVideoEncodeAV10peratingPointInfo`
- `StdVideoEncodeAV1PictureInfo`
- `StdVideoEncodeAV1ReferenceInfo`

All such AV1 encode parameter overrides **must** fulfill the conditions defined in the [Video Encode Parameter Overrides](#) section.

In addition, implementations **must** not override any of the following AV1 encode parameters:

- the following parameters specified in `StdVideoAV1SequenceHeader`:
 - `flags.still_picture`
 - `flags.enable_order_hint`
 - `flags.frame_id_numbers_present_flag`
 - `flags.film_grain_params_present`
 - `flags.timing_info_present_flag`

- `flags.initial_display_delay_present_flag`
- `delta_frame_id_length_minus_2`
- `additional_frame_id_length_minus_1`
- `order_hint_bits_minus_1`
- the following parameters specified in the `StdVideoAV1ColorConfig` structure pointed to by `StdVideoAV1SequenceHeader::pColorConfig`:
 - `flags.mono_chrome`
 - `flags.color_range`
 - `BitDepth`
 - `subsampling_x`
 - `subsampling_y`
 - `color_primaries`
 - `transfer_characteristics`
 - `matrix_coefficients`
 - `chroma_sample_position`
- the following parameters specified in the `StdVideoAV1TimingInfo` structure pointed to by `StdVideoAV1SequenceHeader::pTimingInfo`:
 - `flags.equal_picture_interval`
 - `num_units_in_display_tick`
 - `time_scale`
 - `num_ticks_per_picture_minus_1`
- the parameters specified in `StdVideoEncodeAV1DecoderModelInfo`
- the parameters specified in `StdVideoEncodeAV10peratingPointInfo`
- the following parameters specified in `StdVideoEncodeAV1PictureInfo`:
 - `flags.show_frame`
 - `flags.showable_frame`
 - `frame_type`
 - `frame_presentation_time`
 - `current_frame_id`
 - `order_hint`
 - `refresh_frame_flags`
 - `render_width_minus_1`
 - `render_height_minus_1`
 - `ref_order_hint`
 - `ref_frame_idx`

- `delta_frame_id_minus_1`
- the following parameters specified in the `StdVideoEncodeAV1ExtensionHeader` structure pointed to by `StdVideoEncodeAV1PictureInfo::pExtensionHeader` when `VkVideoEncodeAV1PictureInfoKHR::generateOBUExtensionHeader` is set to `VK_TRUE`:
 - `temporal_id`
 - `spatial_id`

If `VkVideoEncodeAV1PictureInfoKHR::primaryReferenceCdfOnly` is set to `VK_TRUE` for a video encode operation, the implementation will not override `StdVideoEncodeAV1PictureInfo::primary_ref_frame`.

NOTE

Implementations supporting the `VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR` AV1 syntax element capability reported in `VkVideoEncodeAV1CapabilitiesKHR::stdSyntaxFlags` also guarantee the use of the application-specified value for `StdVideoEncodeAV1PictureInfo::primary_ref_frame`. While support for `VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR` guarantees that the implementation will not override the application-specified `primary_ref_frame`, it does not mandate the implementation to use the reference picture indicated by `primary_ref_frame` for sample prediction as implementations can always decide to use only a subset of the application-specified reference pictures for sample prediction. This means that implementations supporting `VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR` may end up using the reference picture indicated by `primary_ref_frame` only for CDF data reference even if the application did not set `VkVideoEncodeAV1PictureInfoKHR::primaryReferenceCdfOnly` to `VK_TRUE`.

If `VkVideoEncodeAV1CapabilitiesKHR::codedPictureAlignment` is not equal to `{8,8}` for the used video profile, implementations will override the coded picture's resolution and parameters related to the width and height in the following manner:

- Let `w` and `h` be the `codedExtent.width` and `codedExtent.height` of the `VkVideoPictureResourceInfoKHR` structure corresponding to the encode input picture, rounded up to the nearest integer multiple of 8.
- Let `aW` and `aH` be `w` and `h` rounded up to the nearest integer multiple of `codedPictureAlignment.width` and `codedPictureAlignment.height` respectively.
- If `w` equals `aW`, no override will occur. Otherwise the coded width will be `aW`.
- If `h` equals `aH`, no override will occur. Otherwise the coded height will be `aH`.

NOTE

The AV1 specification codes all resolutions to an 8x8 alignment, but supports unaligned resolutions through implicit cropping. Thus, if the original coded extent, aligned to 8x8, meets the implementation required alignment, no override needs to occur. Otherwise, the implementation cannot code the requested coded extent, so the final resolution in the bitstream is overridden to be aligned to the implementation required alignment.

For example, consider an implementation that is only able to output bitstreams that

are 16x16 aligned (as indicated by [VkVideoEncodeAV1CapabilitiesKHR::codedPictureAlignment](#)). If an application requests the coded extent to be 1920x1080, the resulting bitstream will be 1920x1088. On the other hand, a request of 1920x1082 will result in no override, since the 8x8 alignment of this resolution (1920x1088) is 16x16 aligned.

In case of a [video session parameters](#) object created with [VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR](#), the following [AV1 sequence header](#) parameters **may** be overridden by the implementation according to the [quantization map texel size](#) the video session parameters object was created with:

- [StdVideoAV1SequenceHeader::flags.use_128x128_superblock](#)

This **may** be necessary to change the AV1 superblock size used during encoding to be compatible with the used quantization map texel size.

In case of AV1 encode parameters stored in [video session parameters](#) objects, applications need to use the [vkGetEncodedVideoSessionParametersKHR](#) command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded AV1 sequence header in the bitstream in order to be able to produce a compliant AV1 video bitstream using the AV1 encode parameters stored in the video session parameters object.

In case of any AV1 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the [VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR](#) [video encode feedback query](#) flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those AV1 encode parameters.

48.23.2. AV1 Encode Bitstream Data Access

Each video encode operation writes either:

- A single OBU with [obu_type](#) equal to [OBU_FRAME](#) comprising of the frame header and tile data of the encoded picture, or
- An OBU with [obu_type](#) equal to [OBU_FRAME_HEADER](#) encapsulating the frame header of the encoded picture, followed by one or more OBUs with [obu_type](#) equal to [OBU_TILE_GROUP](#) comprising of the tile data of the encoded picture.

In addition, if [VkVideoEncodeAV1PictureInfoKHR::generateObuExtensionHeader](#) is set to [VK_TRUE](#) for the video encode operation, then OBU extension headers are included in the generated bitstream as defined in sections 5.3.1, 5.3.2, and 5.3.3 of the [AV1 Specification](#).

48.23.3. AV1 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by [VkVideoCapabilitiesKHR::pictureAccessGranularity](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used [video profile](#). Accordingly, the complete image subregion of a [encode input picture](#), [reference picture](#), or [reconstructed picture](#) accessed by

video coding operations using an [AV1 encode profile](#) is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;

Where `codedExtent` is the member of the [VkVideoPictureResourceInfoKHR](#) structure corresponding to the picture.

In case of video encode operations using an [AV1 encode profile](#), any access to a picture at the coordinates (x,y) , as defined by the [AV1 Specification](#), is an access to the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure at the texel coordinates (x,y) .

Implementations **may** choose not to access some or all texels within particular [reference pictures](#) available to a video encode operation (e.g. due to [video encode parameter overrides](#) restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

48.23.4. AV1 Reference Names and Semantics

Individual reference frames used in the encoding process have different semantics, as defined in section 6.10.24 of the [AV1 Specification](#). The AV1 semantics associated with a reference picture is indicated by the corresponding enumeration constant defined in the Video Std enumeration type `StdVideoAV1ReferenceName`:

- `STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME` identifies the reference used for intra coding (`INTRA_FRAME`), as defined in sections 2 and 7.11.2 of the [AV1 Specification](#).
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 7.11.3 of the [AV1 Specification](#):
 - `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME` identifies the `LAST_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_LAST2_FRAME` identifies the `LAST2_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_LAST3_FRAME` identifies the `LAST3_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_GOLDEN_FRAME` identifies the `GOLDEN_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_BWDREF_FRAME` identifies the `BWDREF_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF2_FRAME` identifies the `ALTREF2_FRAME` reference
 - `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF_FRAME` identifies the `ALTREF_FRAME` reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

48.23.5. AV1 Prediction Modes

AV1 encoding supports multiple types of prediction modes, as described in section 6.10.24 of the [AV1 Specification](#).

Possible AV1 encode prediction modes are as follows:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1PredictionModeKHR {
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR = 0,
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR = 1,
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR = 2,
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR = 3,
} VkVideoEncodeAV1PredictionModeKHR;
```

- [VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR](#) specifies the use of *intra-only prediction mode*, used when encoding AV1 frames of type [STD_VIDEO_AV1_FRAME_TYPE_KEY](#) or [STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY](#).
- [VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR](#) specifies the use of *single reference prediction mode*, used when encoding AV1 frames of type [STD_VIDEO_AV1_FRAME_TYPE_INTER](#) or [STD_VIDEO_AV1_FRAME_TYPE_SWITCH](#) with [reference_select](#), as defined in section 6.8.23 of the [AV1 Specification](#), equal to 0. When using this prediction mode, the application **must** specify a reference picture for at least one [AV1 reference name](#) in [VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices](#) that is supported by the implementation, as reported in [VkVideoEncodeAV1CapabilitiesKHR::singleReferenceNameMask](#).
- [VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR](#) specifies the use of *unidirectional compound prediction mode*, used when encoding AV1 frames of type [STD_VIDEO_AV1_FRAME_TYPE_INTER](#) or [STD_VIDEO_AV1_FRAME_TYPE_SWITCH](#) with [reference_select](#), as defined in section 6.8.23 of the [AV1 Specification](#), equal to 1, and both [reference names](#) used for prediction are from the same reference frame group, as defined in section 6.10.24 of the [AV1 Specification](#). When using this prediction mode, the application **must** specify a reference picture for at least two [AV1 reference names](#) in [VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices](#) that is supported by the implementation, as reported in [VkVideoEncodeAV1CapabilitiesKHR::unidirectionalCompoundReferenceNameMask](#), where those two reference names are one of the allowed pairs of reference names, as defined in section 5.11.25 of the [AV1 Specification](#), listed below:
 - [LAST_FRAME](#) and [LAST2_FRAME](#),
 - [LAST_FRAME](#) and [LAST3_FRAME](#),
 - [LAST_FRAME](#) and [GOLDEN_FRAME](#), or
 - [BWDREF_FRAME](#) and [ALTREF_FRAME](#).
- [VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR](#) specifies the use of *bidirectional compound prediction mode*, used when encoding AV1 frames of type

STD_VIDEO_AV1_FRAME_TYPE_INTER or STD_VIDEO_AV1_FRAME_TYPE_SWITCH with `reference_select`, as defined in section 6.8.23 of the [AV1 Specification](#), equal to 1, and the two [reference names](#) used for prediction are from different reference frame groups, as defined in section 6.10.24 of the [AV1 Specification](#). When using this prediction mode, the application **must** specify a reference picture for at least one [AV1 reference name](#) from each reference frame group in `VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices` that is supported by the implementation, as reported in `VkVideoEncodeAV1CapabilitiesKHR::bidirectionalCompoundReferenceNameMask`.

The effective prediction mode used to encode individual AV1 mode info blocks **may** use simpler prediction modes than the one set by the application for the frame, as allowed by the [AV1 Specification](#), in particular:

- Frames encoded with single reference prediction mode **may** contain mode info blocks encoded with intra-only prediction mode.
- Frames encoded with unidirectional compound prediction mode **may** contain mode info blocks encoded with intra-only or single reference prediction mode.
- Frames encoded with bidirectional compound prediction mode **may** contain mode info blocks encoded with intra-only, single reference, or unidirectional compound prediction mode.

48.23.6. AV1 Frame and Tile

AV1 frames are partitioned into tiles, as defined in section 2 of the [AV1 Specification](#).

For the purposes of this specification, the AV1 tiles comprising a frame are referred to as the *picture partitions* of the frame.

48.23.7. AV1 Coding Blocks

AV1 encode supports two types of coding blocks, as defined in section 2 of the [AV1 Specification](#):

- *Superblock*.
- *Mode info block*.

48.23.8. AV1 Encode Profile

A video profile supporting AV1 video encode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and adding a `VkVideoEncodeAV1ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoEncodeAV1ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoAV1Profile  stdProfile;
} VkVideoEncodeAV1ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfile` is a `StdVideoAV1Profile` value specifying the AV1 codec profile, as defined in section A.2 of the [AV1 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1ProfileInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_PROFILE_INFO_KHR`

Structure Chaining

Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

48.23.9. AV1 Encode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [AV1 encode profile](#), the `VkVideoCapabilitiesKHR::pNext` chain **must** include a [VkVideoEncodeAV1CapabilitiesKHR](#) structure that will be filled with the profile-specific capabilities.

The [VkVideoEncodeAV1CapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1CapabilitiesKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkVideoEncodeAV1CapabilityFlagsKHR flags;
    StdVideoAV1Level         maxLevel;
    VkExtent2D               codedPictureAlignment;
    VkExtent2D               maxTiles;
    VkExtent2D               minTileSize;
    VkExtent2D               maxTileSize;
    VkVideoEncodeAV1SuperblockSizeFlagsKHR superblockSizes;
    uint32_t                 maxSingleReferenceCount;
    uint32_t                 singleReferenceNameMask;
    uint32_t                 maxUnidirectionalCompoundReferenceCount;
    maxUnidirectionalCompoundGroup1ReferenceCount;
    uint32_t                 unidirectionalCompoundReferenceNameMask;
    uint32_t                 maxBidirectionalCompoundReferenceCount;
    uint32_t                 maxBidirectionalCompoundGroup1ReferenceCount;
    uint32_t                 maxBidirectionalCompoundGroup2ReferenceCount;
    uint32_t                 bidirectionalCompoundReferenceNameMask;
    uint32_t                 maxTemporalLayerCount;
    uint32_t                 maxSpatialLayerCount;
    uint32_t                 maxOperatingPoints;
    uint32_t                 minQIndex;
    uint32_t                 maxQIndex;
    VkBool32                 prefersGopRemainingFrames;
    VkBool32                 requiresGopRemainingFrames;
    VkVideoEncodeAV1StdFlagsKHR stdSyntaxFlags;
} VkVideoEncodeAV1CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeAV1CapabilityFlagBitsKHR` indicating supported AV1 encoding capabilities.
- `maxLevel` is a `StdVideoAV1Level` value indicating the maximum AV1 level supported by the profile, as defined in section A.3 of the [AV1 Specification](#).
- `codedPictureAlignment` indicates the alignment at which the implementation will code pictures. This capability does not impose any valid usage constraints on the application. However, depending on the `codedExtent` of the encode input picture resource, this capability **may** result in a change of the resolution of the encoded picture, as described in more detail below.
- `maxTiles` indicates the maximum number of AV1 tile columns and rows the implementation supports.
- `minTileSize` indicates the minimum extent of individual AV1 tiles the implementation supports.

- **maxTileSize** indicates the maximum extent of individual AV1 tiles the implementation supports.
- **superblockSizes** is a bitmask of **VkVideoEncodeAV1SuperblockSizeFlagBitsKHR** values indicating the supported AV1 superblock sizes.
- **maxSingleReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **single reference prediction mode**.
- **singleReferenceNameMask** is a bitmask of supported **AV1 reference names** when using **single reference prediction mode**.
- **maxUnidirectionalCompoundReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **unidirectional compound prediction mode**.
- **maxUnidirectionalCompoundGroup1ReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **unidirectional compound prediction mode** from reference frame group 1, as defined in section 6.10.24 of the **AV1 Specification**.
- **unidirectionalCompoundReferenceNameMask** is a bitmask of supported **AV1 reference names** when using **unidirectional compound prediction mode**.
- **maxBidirectionalCompoundReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **bidirectional compound prediction mode**.
- **maxBidirectionalCompoundGroup1ReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **bidirectional compound prediction mode** from reference frame group 1, as defined in section 6.10.24 of the **AV1 Specification**.
- **maxBidirectionalCompoundGroup2ReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **bidirectional compound prediction mode** from reference frame group 2, as defined in section 6.10.24 of the **AV1 Specification**.
- **bidirectionalCompoundReferenceNameMask** is a bitmask of supported **AV1 reference names** when using **bidirectional compound prediction mode**.
- **maxTemporalLayerCount** indicates the maximum number of AV1 temporal layers supported by the implementation.
- **maxSpatialLayerCount** indicates the maximum number of AV1 spatial layers supported by the implementation.
- **maxOperatingPoints** indicates the maximum number of AV1 operating points supported by the implementation.
- **minQIndex** indicates the minimum quantizer index value supported.
- **maxQIndex** indicates the maximum quantizer index value supported.
- **prefersGopRemainingFrames** indicates that the implementation's rate control algorithm prefers the application to specify the number of frames in each **AV1 rate control group remaining** in the current **group of pictures** when beginning a **video coding scope**.
- **requiresGopRemainingFrames** indicates that the implementation's rate control algorithm requires the application to specify the number of frames in each **AV1 rate control group remaining** in the current **group of pictures** when beginning a **video coding scope**.
- **stdSyntaxFlags** is a bitmask of **VkVideoEncodeAV1StdFlagBitsKHR** indicating capabilities related to AV1 syntax elements.

`singleReferenceNameMask`, `unidirectionalCompoundReferenceNameMask`, and `bidirectionalCompoundReferenceNameMask` are encoded such that when bit index `i` is set, it indicates support for the AV1 reference name `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME + i`.

NOTE

These masks indicate which elements of the `referenceNameSlotIndices` member of `VkVideoEncodeAV1PictureInfoKHR` are supported to be used by the implementation. It is important to note that both the bits of these masks and the elements of `referenceNameSlotIndices` are indexed such that the first value specifies the support bit and DPB slot index, respectively, for the AV1 reference name `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME` (i.e. there is no bit or element for `STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME`).

`codedPictureAlignment` provides information about implementation limitations to encode arbitrary resolutions. In particular, some implementations **may** not be able to generate bitstreams aligned to the requirements of the AV1 Specification (8x8). In such cases, the implementation **may** override the width and height of the bitstream, in order to produce a bitstream compliant to the AV1 Specification. If such an override occurs, the encoded resolution of the coded picture is enlarged, with the texel values used for the texel coordinates outside of the bounds of the `codedExtent` of the encode input picture resource being first governed by the rules regarding the `encode input picture granularity`. Any texel values outside of the region described by the encode input picture granularity are implementation-defined. Implementations **should** use well-defined values to minimize impact on the produced encoded content.

NOTE

This capability does not impose additional application requirements. However, these overrides change the effective resolution of the bitstream and add padding pixels. Applications sensitive to such overrides **can** use this capability and the corresponding `override behavior` to compute the cropping needed to reproduce the original input of the encoding and transmit it in a side channel (i.e. by using cropping fields available in a container). Additionally, applications **can** explicitly consider this alignment in their coded extent, to avoid implementation-defined texel values being included in the encoded content.

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1CapabilitiesKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_CAPABILITIES_KHR`

Structure Chaining

Extends the structure

- `VkVideoCapabilitiesKHR`

Bits which **may** be set in `VkVideoEncodeAV1CapabilitiesKHR::flags`, indicating the AV1 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR =
0x00000001,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_GENERATE_OBU_EXTENSION_HEADER_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_PRIMARY_REFERENCE_CDF_ONLY_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_MOTION_VECTOR_SCALING_BIT_KHR = 0x00000010,
    // Provided by VK_KHR_video_encode_av1 with VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_AV1_CAPABILITY_COMPOUND_PREDICTION_INTRA_REFRESH_BIT_KHR =
0x00000020,
} VkVideoEncodeAV1CapabilityFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR](#) specifies support for specifying different quantizer index values in the members of [VkVideoEncodeAV1QIndexKHR](#).
- [VK_VIDEO_ENCODE_AV1_CAPABILITY_GENERATE_OBU_EXTENSION_HEADER_BIT_KHR](#) specifies support for generating OBU extension headers, as defined in section 5.3.3 of the [AV1 Specification](#).
- [VK_VIDEO_ENCODE_AV1_CAPABILITY_PRIMARY_REFERENCE_CDF_ONLY_BIT_KHR](#) specifies support for using the primary reference frame indicated by the value of [StdVideoEncodeAV1PictureInfo::primary_ref_frame](#) in the [AV1 picture information](#) only for CDF data reference, as defined in section 6.8.2 of the [AV1 Specification](#).
- [VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR](#) specifies support for encoding a picture with a frame size different from the maximum frame size defined in the [active AV1 sequence header](#). If this capability is not supported, then [frame_size_override_flag](#) **must** not be set in the [AV1 picture information](#) of the encoded frame and the coded extent of the [encode input picture](#) **must** match the maximum coded extent allowed by the [active AV1 sequence header](#), i.e. ([max_frame_width_minus_1](#) + 1, [max_frame_height_minus_1](#) + 1).
- [VK_VIDEO_ENCODE_AV1_CAPABILITY_MOTION_VECTOR_SCALING_BIT_KHR](#) specifies support for motion vector scaling, as defined in section 7.11.3.3 of the [AV1 Specification](#). If this capability is not supported, then the coded extent of all [active reference pictures](#) **must** match the coded extent of the [encode input picture](#). This capability **may** only be supported by a video profile when [VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR](#) is also supported.
- [VK_VIDEO_ENCODE_AV1_CAPABILITY_COMPOUND_PREDICTION_INTRA_REFRESH_BIT_KHR](#) indicates support for encoding frames using [unidirectional or bidirectional compound prediction mode](#) with [intra refresh](#) enabled.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1CapabilityFlagsKHR;
```

[VkVideoEncodeAV1CapabilityFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeAV1CapabilityFlagBitsKHR](#).

Bits which **may** be set in `VkVideoEncodeAV1CapabilitiesKHR::stdSyntaxFlags`, indicating the capabilities related to the AV1 syntax elements, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1StdFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_STD_UNIFORM_TILE_SPACING_FLAG_SET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_AV1_STD_SKIP_MODE_PRESENT_UNSET_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_AV1_STD_DELTA_Q_BIT_KHR = 0x00000008,
} VkVideoEncodeAV1StdFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_AV1_STD_UNIFORM_TILE_SPACING_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoAV1TileInfoFlags::uniform_tile_spacing_flag` in the AV1 tile parameters when that value is 1, regardless of the coded extent of the `encode input picture` and the number of tile columns and rows requested in the `TileCols` and `TileRows` members of `StdVideoAV1TileInfo`.
- `VK_VIDEO_ENCODE_AV1_STD_SKIP_MODE_PRESENT_UNSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeAV1PictureInfoFlags::skip_mode_present` when that value is 0.
- `VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeAV1PictureInfo::primary_ref_frame`.
- `VK_VIDEO_ENCODE_AV1_STD_DELTA_Q_BIT_KHR` specifies whether the implementation supports using the application-provided values for the `DeltaQYDc`, `DeltaQUdc`, `DeltaQUAc`, `DeltaQVDc`, and `DeltaQVAc` members of `StdVideoAV1Quantization`.

These capability flags provide information to the application about specific AV1 syntax element values that the implementation supports without having to `override` them and do not otherwise restrict the values that the application **can** specify for any of the mentioned AV1 syntax elements.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1StdFlagsKHR;
```

`VkVideoEncodeAV1StdFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeAV1StdFlagBitsKHR`.

Bits which **may** be set in `VkVideoEncodeAV1CapabilitiesKHR::superblockSizes`, indicating the superblock sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1SuperblockSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_64_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_128_BIT_KHR = 0x00000002,
} VkVideoEncodeAV1SuperblockSizeFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_64_BIT_KHR](#) specifies that a superblock size of 64x64 is supported.
- [VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_128_BIT_KHR](#) specifies that a superblock size of 128x128 is supported.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1SuperblockSizeFlagsKHR;
```

[VkVideoEncodeAV1SuperblockSizeFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeAV1SuperblockSizeFlagBitsKHR](#).

Implementations **must** support at least one of [VkVideoEncodeAV1SuperblockSizeFlagBitsKHR](#).

48.23.10. AV1 Encode Quality Level Properties

When calling [vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specified as [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#), the [VkVideoEncodeAV1QualityLevelPropertiesKHR](#) structure **must** be included in the [pNext](#) chain of the [VkVideoEncodeQualityLevelPropertiesKHR](#) structure to retrieve additional video encode quality level properties specific to AV1 encoding.

The [VkVideoEncodeAV1QualityLevelPropertiesKHR](#) structure is defined as:

```

// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1QualityLevelPropertiesKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkVideoEncodeAV1RateControlFlagsKHR preferredRateControlFlags;
    uint32_t                 preferredGopFrameCount;
    uint32_t                 preferredKeyFramePeriod;
    uint32_t                 preferredConsecutiveBipredictiveFrameCount;
    uint32_t                 preferredTemporalLayerCount;
    VkVideoEncodeAV1QIndexKHR preferredConstantQIndex;
    uint32_t                 preferredMaxSingleReferenceCount;
    uint32_t                 preferredSingleReferenceNameMask;
    uint32_t
preferredMaxUnidirectionalCompoundReferenceCount;
    uint32_t
preferredMaxUnidirectionalCompoundGroup1ReferenceCount;
    uint32_t
preferredUnidirectionalCompoundReferenceNameMask;
    uint32_t
preferredMaxBidirectionalCompoundReferenceCount;
    uint32_t
preferredMaxBidirectionalCompoundGroup1ReferenceCount;
    uint32_t
preferredMaxBidirectionalCompoundGroup2ReferenceCount;
    uint32_t
preferredBidirectionalCompoundReferenceNameMask;
} VkVideoEncodeAV1QualityLevelPropertiesKHR;

```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of `VkVideoEncodeAV1RateControlFlagBitsKHR` values indicating the preferred flags to use for `VkVideoEncodeAV1RateControlInfoKHR::flags`.
- `preferredGopFrameCount` indicates the preferred value to use for `VkVideoEncodeAV1RateControlInfoKHR::gopFrameCount`.
- `preferredKeyFramePeriod` indicates the preferred value to use for `VkVideoEncodeAV1RateControlInfoKHR::keyFramePeriod`.
- `preferredConsecutiveBipredictiveFrameCount` indicates the preferred value to use for `VkVideoEncodeAV1RateControlInfoKHR::consecutiveBipredictiveFrameCount`.
- `preferredTemporalLayerCount` indicates the preferred value to use for `VkVideoEncodeAV1RateControlInfoKHR::temporalLayerCount`.
- `preferredConstantQIndex` indicates the preferred value to use for `VkVideoEncodeAV1PictureInfoKHR::constantQIndex` when using `rate control mode VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `preferredMaxSingleReferenceCount` indicates the preferred maximum number of reference pictures to use with `single reference prediction mode`.

- `preferredSingleReferenceNameMask` is a bitmask of preferred [AV1 reference names](#) when using [single reference prediction mode](#).
- `preferredMaxUnidirectionalCompoundReferenceCount` indicates the preferred maximum number of reference pictures to use with [unidirectional compound prediction mode](#).
- `preferredMaxUnidirectionalCompoundGroup1ReferenceCount` indicates the preferred maximum number of reference pictures to use with [unidirectional compound prediction mode](#) from reference frame group 1, as defined in section 6.10.24 of the [AV1 Specification](#).
- `preferredUnidirectionalCompoundReferenceNameMask` is a bitmask of preferred [AV1 reference names](#) when using [unidirectional compound prediction mode](#).
- `preferredMaxBidirectionalCompoundReferenceCount` indicates the preferred maximum number of reference pictures to use with [bidirectional compound prediction mode](#).
- `preferredMaxBidirectionalCompoundGroup1ReferenceCount` indicates the preferred maximum number of reference pictures to use with [bidirectional compound prediction mode](#) from reference frame group 1, as defined in section 6.10.24 of the [AV1 Specification](#).
- `preferredMaxBidirectionalCompoundGroup2ReferenceCount` indicates the preferred maximum number of reference pictures to use with [bidirectional compound prediction mode](#) from reference frame group 2, as defined in section 6.10.24 of the [AV1 Specification](#).
- `preferredBidirectionalCompoundReferenceNameMask` is a bitmask of preferred [AV1 reference names](#) when using [bidirectional compound prediction mode](#).

`preferredSingleReferenceNameMask`, `preferredUnidirectionalCompoundReferenceNameMask`, and `preferredBidirectionalCompoundReferenceNameMask` are encoded such that when bit index *i* is set, it indicates preference for using the [AV1 reference name](#) `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME + i`.

Valid Usage (Implicit)

- `VOID-VkVideoEncodeAV1QualityLevelPropertiesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_QUALITY_LEVEL_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- [VkVideoEncodeQualityLevelPropertiesKHR](#)

48.23.11. AV1 Encode Session

Additional parameters can be specified when creating a video session with an AV1 encode profile by including an instance of the [VkVideoEncodeAV1SessionCreateInfoKHR](#) structure in the `pNext` chain of [VkVideoSessionCreateInfoKHR](#).

The [VkVideoEncodeAV1SessionCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1SessionCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMaxLevel;
    StdVideoAV1Level    maxLevel;
} VkVideoEncodeAV1SessionCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMaxLevel` indicates whether the value of `maxLevel` should be used by the implementation. When it is set to `VK_FALSE`, the implementation ignores the value of `maxLevel` and uses the value of `VkVideoEncodeAV1CapabilitiesKHR::maxLevel`, as reported by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile.
- `maxLevel` is a `StdVideoAV1Level` value specifying the upper bound on the AV1 level for the video bitstreams produced by the created video session.

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1SessionCreateInfoKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_SESSION_CREATE_INFO_KHR`

Structure Chaining

Extends the structure

- `VkVideoSessionCreateInfoKHR`

48.23.12. AV1 Encode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` contain a single instance of the following parameter set:

AV1 Sequence Header

Represented by `StdVideoAV1SequenceHeader` structures and interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- the `StdVideoAV1ColorConfig` structure pointed to by `pColorConfig` is interpreted as follows:
 - `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
 - all other members of `StdVideoAV1ColorConfig` are interpreted as defined in section 6.4.2 of

the [AV1 Specification](#);

- if `flags.timing_info_present_flag` is set, then the `StdVideoAV1TimingInfo` structure pointed to by `pTimingInfo` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoAV1TimingInfo` are interpreted as defined in section 6.4.3 of the [AV1 Specification](#);
- all other members of `StdVideoAV1SequenceHeader` are interpreted as defined in section 6.4 of the [AV1 Specification](#).

When `StdVideoAV1SequenceHeader::flags.timing_info_present_flag` is set, the AV1 sequence header **can** be amended with AV1 decoder model information, represented by a `StdVideoEncodeAV1DecoderModelInfo` structure and interpreted as follows:

- `reserved1` is used only for padding purposes and is otherwise ignored;
- all other members of `StdVideoEncodeAV1DecoderModelInfo` are interpreted as defined in section 6.4.4 of the [AV1 Specification](#).

When `StdVideoAV1SequenceHeader::flags.reduced_still_picture_header` is not set, the AV1 sequence header **can** be amended with AV1 operating point information, represented by an array of `StdVideoEncodeAV10operatingPointInfo` structures and interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- all other members of `StdVideoEncodeAV10operatingPointInfo` are interpreted as the corresponding element of the respective arrays defined in section 6.4 of the [AV1 Specification](#).

Implementations **may** override any of these parameters according to the semantics defined in the [Video Encode Parameter Overrides](#) section before storing the resulting AV1 sequence header into the video session parameters object. Applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened and to retrieve the encoded AV1 sequence header in order to be able to produce a compliant AV1 video bitstream.

The encoded AV1 sequence header retrieved using the `vkGetEncodedVideoSessionParametersKHR` command is encoded as a single OBU with `obu_type` equal to `OBU_SEQUENCE_HEADER`, as defined in section 5.3 of the [AV1 Specification](#).

Such AV1 sequence header overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` video encode feedback query flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure specifying the contents of the object.

The `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoAV1SequenceHeader* pStdSequenceHeader;
    const StdVideoEncodeAV1DecoderModelInfo* pStdDecoderModelInfo;
    uint32_t                 stdOperatingPointCount;
    const StdVideoEncodeAV1OperatingPointInfo* pStdOperatingPoints;
} VkVideoEncodeAV1SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdSequenceHeader` is a pointer to a `StdVideoAV1SequenceHeader` structure describing parameters of the [AV1 sequence header](#) entry to store in the created object.
- `pStdDecoderModelInfo` is `NULL` or a pointer to a `StdVideoEncodeAV1DecoderModelInfo` structure specifying the [AV1 decoder model information](#) to store in the created object.
- `stdOperatingPointCount` is the number of elements in the `pStdOperatingPoints` array.
- `pStdOperatingPoints` is `NULL` or a pointer to an array of `stdOperatingPointCount` number of `StdVideoEncodeAV1OperatingPointInfo` structures specifying the [AV1 operating point information](#) to store in the created object. Each element `i` specifies the parameter values corresponding to element `i` of the syntax elements defined in section 6.4 of the [AV1 Specification](#).

Valid Usage

- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-10288
`pStdSequenceHeader->flags.film_grain_params_present` **must** be zero

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_SESSION_PARAMETERS_CREATE_INFO_KHR`
- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-parameter
`pStdSequenceHeader` **must** be a valid pointer to a valid `StdVideoAV1SequenceHeader` value
- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdDecoderModelInfo-parameter
If `pStdDecoderModelInfo` is not `NULL`, `pStdDecoderModelInfo` **must** be a valid pointer to a valid `StdVideoEncodeAV1DecoderModelInfo` value
- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdOperatingPoints-parameter

If `stdOperatingPointCount` is not 0, and `pStdOperatingPoints` is not NULL, `pStdOperatingPoints` **must** be a valid pointer to an array of `stdOperatingPointCount` `StdVideoEncodeAV10peratingPointInfo` values

Structure Chaining

Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

48.23.13. AV1 Encoding Parameters

The `VkVideoEncodeAV1PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeAV1PredictionModeKHR predictionMode;
    VkVideoEncodeAV1RateControlGroupKHR rateControlGroup;
    uint32_t                 constantQIndex;
    const StdVideoEncodeAV1PictureInfo* pStdPictureInfo;
    int32_t                  referenceNameSlotIndices
[VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR];
    VkBool32                 primaryReferenceCdfOnly;
    VkBool32                 generateOBUExtensionHeader;
} VkVideoEncodeAV1PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `predictionMode` specifies the `AV1 prediction mode` to use for the encoded frame.
- `rateControlGroup` specifies the `AV1 rate control group` to use for the encoded frame when the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`. Otherwise it is ignored.
- `constantQIndex` is the quantizer index to use for the encoded frame if the current `rate control mode` configured for the video session is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `pStdPictureInfo` is a pointer to a `StdVideoEncodeAV1PictureInfo` structure specifying `AV1 picture information`.
- `referenceNameSlotIndices` is an array of seven (`VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR`, which is equal to the Video Std definition `STD_VIDEO_AV1_REFS_PER_FRAME`) signed integer values specifying the index of the `DPB slot` or a negative integer value for each `AV1 reference name` used for inter coding. In particular, the DPB slot index for the AV1 reference name `frame` is specified in `referenceNameSlotIndices`

[frame - STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME].

- `primaryReferenceCdfOnly` controls whether the primary reference frame indicated by the value of `pStdPictureInfo->primary_ref_frame` is used only for CDF data reference, as defined in sections 6.8.2 of the [AV1 Specification](#). If set to `VK_TRUE`, then the primary reference frame's picture data will not be used for sample prediction.
- `generateObuExtensionHeader` controls whether OBU extension headers are generated into the target bitstream, as defined in sections 5.3.1, 5.3.2, and 5.3.3 of the [AV1 Specification](#).

This structure is specified in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to `vkCmdEncodeVideoKHR` to specify the codec-specific picture information for an [AV1 encode operation](#).

Encode Input Picture Information

When this structure is specified in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to `vkCmdEncodeVideoKHR`, the information related to the [encode input picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Encode Picture Data Access](#) section.
- The encode input picture is associated with the [AV1 picture information](#) provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoEncodeAV1PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `pSegmentation` **must** be `NULL`

NOTE

AV1 segmentation is currently not supported in video encode operations. Accordingly, the application needs to set `flags.segmentation_enabled` to 0 and `pSegmentation` to `NULL`.

- `pTileInfo` is `NULL` or a pointer to a `StdVideoAV1TileInfo` structure specifying [AV1 tile parameters](#);
- the `StdVideoAV1Quantization` structure pointed to by `pQuantization` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoAV1Quantization` are interpreted as defined in section 6.8.11 of the [AV1 Specification](#);
- the `StdVideoAV1LoopFilter` structure pointed to by `pLoopFilter` is interpreted as follows:
 - `flags.reserved` is used only for padding purposes and is otherwise ignored;
 - `update_ref_delta` is a bitmask where bit index `i` is interpreted as the value of `update_ref_delta` corresponding to element `i` of `loop_filter_ref_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);

- `update_mode_delta` is a bitmask where bit index `i` is interpreted as the value of `update_mode_delta` corresponding to element `i` of `loop_filter_mode_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);
- all other members of `StdVideoAV1LoopFilter` are interpreted as defined in section 6.8.10 of the [AV1 Specification](#);
- if `flags.enable_cdef` is set in the [active sequence header](#), then the members of the `StdVideoAV1CDEF` structure pointed to by `pCDEF` are interpreted as follows:
 - `cdef_y_sec_strength` and `cdef_uv_sec_strength` are the bitstream values of the corresponding syntax elements defined in section 5.9.19 of the [AV1 Specification](#);
 - all other members of `StdVideoAV1CDEF` are interpreted as defined in section 6.10.14 of the [AV1 Specification](#);
- if `flags.UsesLr` is set in the [active sequence header](#), then the `StdVideoAV1LoopRestoration` structure pointed to by `pLoopRestoration` is interpreted as follows:
 - `LoopRestorationSize[plane]` is interpreted as $\log_2(\text{size}) - 5$, where `size` is the value of `LoopRestorationSize[plane]` as defined in section 6.10.15 of the [AV1 Specification](#);
 - all other members of `StdVideoAV1LoopRestoration` are defined as in section 6.10.15 of the [AV1 Specification](#);
- the members of the `StdVideoAV1GlobalMotion` structure pointed to by `pGlobalMotion` are interpreted as defined in section 7.10 of the [AV1 Specification](#);
- `pExtensionHeader` is `NULL` or a pointer to a `StdVideoEncodeAV1ExtensionHeader` structure whose `temporal_id` and `spatial_id` members specify the temporal and spatial layer ID of the reference frame, respectively (these IDs are encoded into the OBU extension header if `VkVideoEncodeAV1PictureInfoKHR::generateObuExtensionHeader` is set to `VK_TRUE` for the encode operation);
- if `flags.buffer_removal_time_present_flag` is set, then `pBufferRemovalTimes` is a pointer to an array of `N` number of unsigned integer values specifying the elements of the `buffer_removal_time` array, as defined in section 6.8.2 of the [AV1 Specification](#), where `N` is the number of operating points specified for the [active sequence header](#) through `VkVideoEncodeAV1SessionParametersCreateInfoKHR::stdOperatingPointCount`;
- all other members are interpreted as defined in section 6.8 of the [AV1 Specification](#).

Reference picture setup is controlled by the value of `StdVideoEncodeAV1PictureInfo::refresh_frame_flags`. If it is not zero and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pEncodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoEncodeAV1PictureInfo::refresh_frame_flags` is zero, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Std Tile Parameters

Specifying AV1 tile parameters is optional. If `StdVideoEncodeAV1PictureInfo::pTileInfo` is `NULL`, then the implementation determines the values of AV1 tile parameters defined in section 6.8.14 of the [AV1 Specification](#) in an implementation-dependent manner. If `StdVideoEncodeAV1PictureInfo::pTileInfo` is not `NULL`, then the members of the `StdVideoAV1TileInfo` structure pointed to by `StdVideoEncodeAV1PictureInfo::pTileInfo` are

interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `TileCols` and `TileRows` specify the number of tile columns and tile rows as defined in section 6.8.14 of the [AV1 Specification](#);
- `tile_size_bytes_minus_1` is ignored, as its value, as defined in section 6.8.14 of the [AV1 Specification](#), is determined as the result of the encoding process;
- `pMiColStarts` and `pMiRowStarts` are ignored, as the elements of the `MiColStarts` and `MiRowStarts` arrays defined in section 6.8.14 of the [AV1 Specification](#) are determined by the implementation based on the tile widths and heights determined by the implementation or specified through the `pWidthInSbsMinus1` and `pHeightInSbsMinus1` arrays, respectively;
- `pWidthInSbsMinus1` is `NULL` or a pointer to an array of `TileCols` number of unsigned integers that corresponds to `width_in_sbs_minus_1` defined in section 6.8.14 of the [AV1 Specification](#);
- `pHeightInSbsMinus1` is `NULL` or is a pointer to an array of `TileRows` number of unsigned integers that corresponds to `height_in_sbs_minus_1` defined in section 6.8.14 of the [AV1 Specification](#);
- all other members of `StdVideoAV1TileInfo` are interpreted as defined in section 6.8.14 of the [AV1 Specification](#).

If `flags.uniform_tile_spacing_flag` is set, then `pWidthInSbsMinus1` and `pHeightInSbsMinus1` are ignored.

If `flags.uniform_tile_spacing_flag` is not set and `pWidthInSbsMinus1` is `NULL`, then the width of individual tile columns is determined in an implementation-dependent manner.

If `flags.uniform_tile_spacing_flag` is not set and `pHeightInSbsMinus1` is `NULL`, then the height of individual tile rows is determined in an implementation-dependent manner.

NOTE

In general, implementations are expected to respect the application-specified AV1 tile parameters. However, as implementations may have restrictions on the combination of tile column and row counts, and tile widths and heights with respect to the extent of the encoded frame beyond the restrictions specified in the [AV1 Specification](#) and this specification (through video profile capabilities), certain parameter combinations may require the implementation to [override](#) them in order to conform to such implementation-specific limitations.

Active Parameter Sets

The *active sequence header* is the [AV1 sequence header](#) stored in the bound video session parameters object.

Valid Usage

- VUID-VkVideoEncodeAV1PictureInfoKHR-flags-10289
If `VkVideoEncodeAV1CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_PRIMARY_REFERENCE_CDF_ONLY_BIT_KHR`, then `primaryReferenceCdfOnly` must be `VK_FALSE`

- VUID-VkVideoEncodeAV1PictureInfoKHR-primaryReferenceCdfOnly-10290
If `primaryReferenceCdfOnly` is set to `VK_TRUE`, then `pStdPictureInfo->primary_ref_frame` **must** be less than `VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR`
- VUID-VkVideoEncodeAV1PictureInfoKHR-pStdPictureInfo-10291
If `pStdPictureInfo->primary_ref_frame` is less than `VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR`, then `referenceNameSlotIndices[pStdPictureInfo->primary_ref_frame]` **must** not be negative
- VUID-VkVideoEncodeAV1PictureInfoKHR-flags-10292
If `VkVideoEncodeAV1CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_GENERATE_OBU_EXTENSION_HEADER_BIT_KHR`, then `generateObuExtensionHeader` **must** be `VK_FALSE`
- VUID-VkVideoEncodeAV1PictureInfoKHR-generateObuExtensionHeader-10293
If `generateObuExtensionHeader` is set to `VK_TRUE`, then `pStdPictureInfo->pExtensionHeader` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1PictureInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_PICTURE_INFO_KHR`
- VUID-VkVideoEncodeAV1PictureInfoKHR-predictionMode-parameter
`predictionMode` **must** be a valid `VkVideoEncodeAV1PredictionModeKHR` value
- VUID-VkVideoEncodeAV1PictureInfoKHR-rateControlGroup-parameter
`rateControlGroup` **must** be a valid `VkVideoEncodeAV1RateControlGroupKHR` value
- VUID-VkVideoEncodeAV1PictureInfoKHR-pStdPictureInfo-parameter
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoEncodeAV1PictureInfo` value

Structure Chaining

Extends the structure

- `VkVideoEncodeInfoKHR`

The `VkVideoEncodeAV1DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1DpbSlotInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    const StdVideoEncodeAV1ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeAV1DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoEncodeAV1ReferenceInfo` structure specifying [AV1 reference information](#).

This structure is specified in the `pNext` chain of `VkVideoEncodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoEncodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [AV1 encode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoEncodeInfoKHR::pReferenceSlots`, one element is added to the list of [active reference pictures](#) used by the video encode operation for each element of `VkVideoEncodeInfoKHR::pReferenceSlots` as follows:

- The image subregion used is determined according to the [AV1 Encode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoEncodeInfoKHR::pReferenceSlots`.
- The reference picture is associated with the [AV1 reference information](#) provided in `pStdReferenceInfo`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoEncodeInfoKHR::pSetupReferenceSlot`, the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Encode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [AV1 reference information](#) provided in `pStdReferenceInfo`.

Std Reference Information

The members of the `StdVideoEncodeAV1ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.disable_frame_end_update_cdf` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `flags.segmentation_enabled` is interpreted as defined in section 6.8.13 of the [AV1 Specification](#);
- `RefFrameId` is interpreted as the element of the `RefFrameId` array defined in section 6.8.2 of the [AV1 Specification](#) corresponding to the reference frame;
- `frame_type` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `OrderHint` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);

- `pExtensionHeader` is `NULL` or a pointer to a `StdVideoEncodeAV1ExtensionHeader` structure whose `temporal_id` and `spatial_id` members specify the temporal and spatial layer ID of the reference frame, respectively.

Valid Usage (Implicit)

- `VUID-VkVideoEncodeAV1DpbSlotInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoEncodeAV1DpbSlotInfoKHR-pStdReferenceInfo-parameter`
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeAV1ReferenceInfo` value

Structure Chaining

Extends the structure

- `VkVideoReferenceSlotInfoKHR`

48.23.14. AV1 Encode Rate Control

Group of Pictures

In case of AV1 encoding it is common practice to follow a regular pattern of frame types and prediction directions in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

The [AV1 Specification](#), unlike some other video compression standards, does not restrict the direction in display order of the referenced frames based on the used frame type or [AV1 prediction mode](#). Accordingly, this specification introduces the concept of *rate control groups* for which the application **can** specify separate rate control configuration parameters. When encoding a frame, the application specifies the rate control group the encoded frame belongs to through a `VkVideoEncodeAV1RateControlGroupKHR` value in `VkVideoEncodeAV1PictureInfoKHR::rateControlGroup`. This value is then used by the implementation's rate control algorithm to determine which rate control configuration parameters apply to it.

Possible AV1 encode rate control groups are as follows:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1RateControlGroupKHR {
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR = 0,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR = 1,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR = 2,
} VkVideoEncodeAV1RateControlGroupKHR;
```

- `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR` **should** be specified when encoding AV1 frames that use intra-only prediction (e.g. when encoding AV1 frames of type `STD_VIDEO_AV1_FRAME_TYPE_KEY` or `STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY`).

- `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR` **should** be specified when encoding AV1 frames that only have forward references in display order.
- `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR` **should** be specified when encoding AV1 frames that have backward references in display order.

NOTE

While the application can specify any rate control group for any frame, regardless of the frame type, prediction mode, or prediction direction, specifying a rate control group that does not reflect the prediction direction used by the encoded frame may result in unexpected behavior of the implementation's rate control algorithm.

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR` between frames encoded with other rate control groups in display order.

Frame types in a regular GOP follow each other in display order according to the following algorithm:

1. The first frame is always a frame encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR`.
2. This is followed by a number of consecutive frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR`.
3. If the number of frames in the GOP is not reached yet, then the next frame is a frame encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR` and the algorithm continues from step 2.

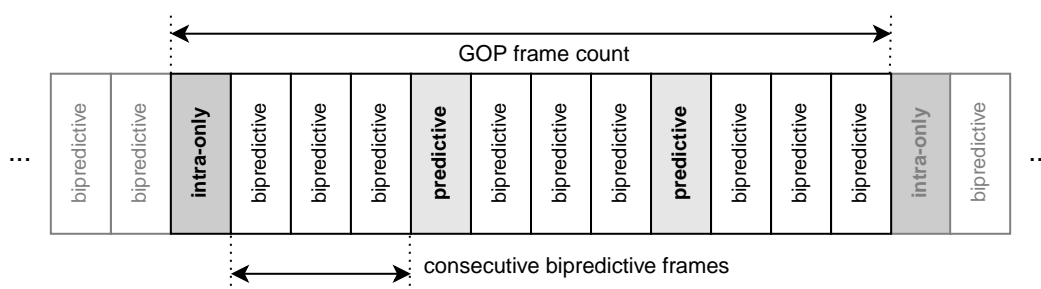

Figure 49. AV1 regular GOP starting with an intra-only frame

When frames with the AV1 frame type `STD_VIDEO_AV1_FRAME_TYPE_KEY` are used in a video sequence, the *key frame period* refers to the distance between subsequent frames with the AV1 frame type `STD_VIDEO_AV1_FRAME_TYPE_KEY`.

It is also typical for AV1 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

Flat Reference Pattern

- Each frame encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR](#) refers to the last frame that was not encoded using [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR](#), in display order, as its forward reference.
- Each frame encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR](#) refers to the last frame that was not encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR](#), in display order, as its forward reference, and refers to the next frame that was not encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR](#), in display order, as its backward reference.

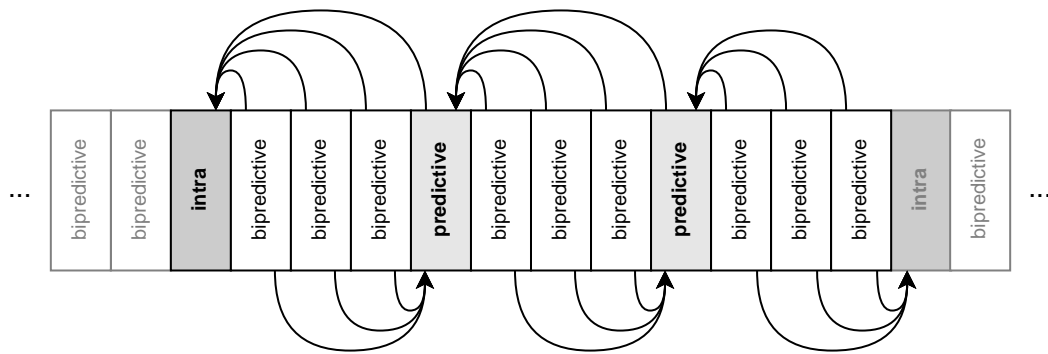

Figure 50. AV1 flat reference pattern

Dyadic Reference Pattern

- Each frame encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR](#) refers to the last frame that was not encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR](#), in display order, as its forward reference.
- The following algorithm is applied to the sequence of consecutive frames encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR](#) between frames using other [rate control groups](#) in display order:
 - The frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
 - The algorithm is executed recursively for the following frame sequences:
 - The frames of the original sequence preceding the frame in the middle, if any.
 - The frames of the original sequence following the frame in the middle, if any.

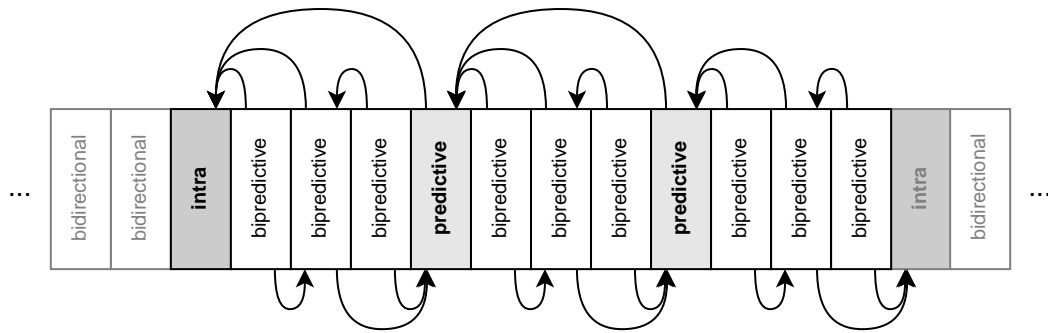

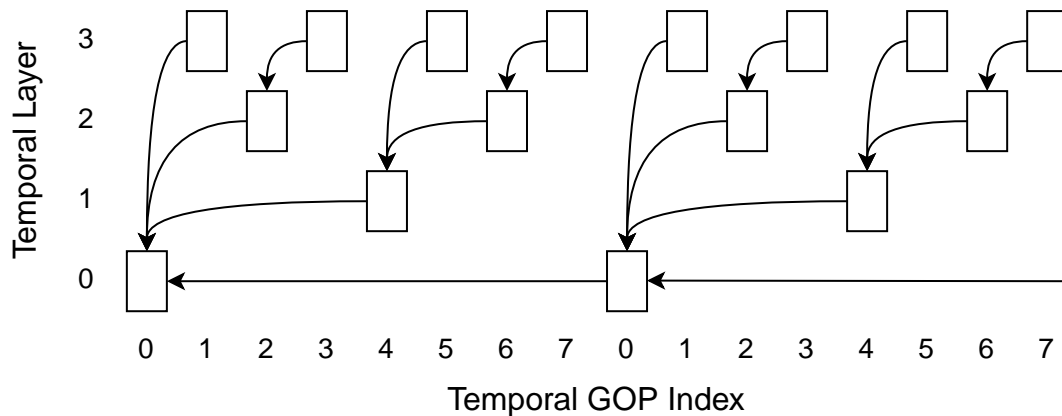

Figure 51. AV1 dyadic reference pattern

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the frame type and the selected [rate control group](#) is still application-controlled, however, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited, to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an AV1 encode session is used to encode multiple temporal layers, it is also common practice to follow a regular pattern for the AV1 temporal ID for the encoded frames in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most common temporal layer pattern used is as follows:

Dyadic Temporal Layer Pattern

- The number of frames in the temporal GOP is 2^{n-1} , where n is the number of temporal layers.
- The i^{th} frame in the temporal GOP uses temporal ID t , if and only if the index of the least significant bit set in i equals $n-t-1$, except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The i^{th} frame in the temporal GOP uses the r^{th} frame as reference, where r is calculated from i by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.

Text is not SVG - cannot display

Figure 52. AV1 dyadic temporal layer pattern

NOTE

Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence frames usually do not use backward references in display order.

The `VkVideoEncodeAV1RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1RateControlInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeAV1RateControlFlagsKHR flags;
    uint32_t                 gopFrameCount;
    uint32_t                 keyFramePeriod;
    uint32_t                 consecutiveBipredictiveFrameCount;
    uint32_t                 temporalLayerCount;
} VkVideoEncodeAV1RateControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeAV1RateControlFlagBitsKHR` specifying AV1 rate control flags.
- `gopFrameCount` is the number of frames within a [group of pictures \(GOP\)](#) intended to be used by the application. If it is set to 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is set to `UINT32_MAX`, the GOP length is treated as infinite.
- `keyFramePeriod` is the interval, in terms of number of frames, between two frames with the AV1 frame type `STD_VIDEO_AV1_FRAME_TYPE_KEY` (see [key frame period](#)). If it is set to 0, the rate control algorithm **may** assume an implementation-dependent key frame period. If it is set to `UINT32_MAX`, the key frame period is treated as infinite.

- **consecutiveBipredictiveFrameCount** is the number of consecutive frames encoded with **VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR** between frames encoded with other **rate control groups** within the **GOP**.
- **temporalLayerCount** specifies the number of AV1 temporal layers that the application intends to use.

When an instance of this structure is included in the **pNext** chain of the **VkVideoCodingControlInfoKHR** structure passed to the **vkCmdControlVideoCodingKHR** command, and **VkVideoCodingControlInfoKHR::flags** includes **VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR**, the parameters in this structure are used as guidance for the implementation's rate control algorithm (see **Video Coding Control**).

Valid Usage

- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-10294
If **flags** contains **VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR** or **VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR**, then it **must** also contain **VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR**
- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-10295
If **flags** contains **VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR**, then it **must** not also contain **VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR**
- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-10296
If **flags** contains **VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR**, then **gopFrameCount** **must** be greater than 0
- VUID-VkVideoEncodeAV1RateControlInfoKHR-keyFramePeriod-10297
If **keyFramePeriod** is not 0, then it **must** be greater than or equal to **gopFrameCount**
- VUID-VkVideoEncodeAV1RateControlInfoKHR-consecutiveBipredictiveFrameCount-10298
If **consecutiveBipredictiveFrameCount** is not 0, then it **must** be less than **gopFrameCount**
- VUID-VkVideoEncodeAV1RateControlInfoKHR-temporalLayerCount-10299
temporalLayerCount **must** be less than or equal to **VkVideoEncodeAV1CapabilitiesKHR::maxTemporalLayerCount**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the used video profile

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1RateControlInfoKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_RATE_CONTROL_INFO_KHR**
- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-parameter
flags **must** be a valid combination of **VkVideoEncodeAV1RateControlFlagBitsKHR** values

Structure Chaining

Extends the structures

- [VkVideoBeginCodingInfoKHR](#)
- [VkVideoCodingControlInfoKHR](#)

Bits which **can** be set in [VkVideoEncodeAV1RateControlInfoKHR::flags](#), specifying AV1 rate control flags, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
} VkVideoEncodeAV1RateControlFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR](#) specifies that the application intends to use a [regular GOP structure](#) according to the parameters specified in the [gopFrameCount](#) and [keyFramePeriod](#) members of the [VkVideoEncodeAV1RateControlInfoKHR](#) structure.
- [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR](#) specifies that the application intends to follow a [dyadic temporal layer pattern](#).
- [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR](#) specifies that the application intends to follow a [flat reference pattern](#) in the GOP.
- [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR](#) specifies that the application intends to follow a [dyadic reference pattern](#) in the GOP.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1RateControlFlagsKHR;
```

[VkVideoEncodeAV1RateControlFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeAV1RateControlFlagBitsKHR](#).

Rate Control Layers

The [VkVideoEncodeAV1RateControlLayerInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1RateControlLayerInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkBool32              useMinQIndex;
    VkVideoEncodeAV1QIndexKHR minQIndex;
    VkBool32              useMaxQIndex;
    VkVideoEncodeAV1QIndexKHR maxQIndex;
    VkBool32              useMaxFrameSize;
    VkVideoEncodeAV1FrameSizeKHR maxFrameSize;
} VkVideoEncodeAV1RateControlLayerInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMinQIndex` indicates whether the quantizer index values determined by rate control will be clamped to the lower bounds on the quantizer index values specified in `minQIndex`.
- `minQIndex` specifies the lower bounds on the quantizer index values, for each `rate control group`, that the implementation's rate control algorithm will use when `useMinQIndex` is set to `VK_TRUE`.
- `useMaxQIndex` indicates whether the quantizer index values determined by rate control will be clamped to the upper bounds on the quantizer index values specified in `maxQIndex`.
- `maxQIndex` specifies the upper bounds on the quantizer index values, for each `rate control group`, that the implementation's rate control algorithm will use when `useMaxQIndex` is set to `VK_TRUE`.
- `useMaxFrameSize` indicates whether the implementation's rate control algorithm **should** use the values specified in `maxFrameSize` as the upper bounds on the encoded frame size for each `rate control group`.
- `maxFrameSize` specifies the upper bounds on the encoded frame size, for each `rate control group`, when `useMaxFrameSize` is set to `VK_TRUE`.

When used, the values in `minQIndex` and `maxQIndex` guarantee that the effective quantizer index values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of quantizer index values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak `bitrate` values to be used for the encoded bitstream specified in the `averageBitrate` and `maxBitrate` members of the `VkVideoEncodeRateControlLayerInfoKHR` structure.
- The upper bounds on the encoded frame size, for each `rate control group`, specified in the `maxFrameSize` member of `VkVideoEncodeAV1RateControlLayerInfoKHR`.

NOTE

In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the [Video Encode Rate Control](#) section.

When an instance of this structure is included in the `pNext` chain of a

`VkVideoEncodeRateControlLayerInfoKHR` structure specified in one of the elements of the `players` array member of the `VkVideoEncodeRateControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, and the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, it specifies the AV1-specific rate control parameters of the rate control layer corresponding to that element of `pLayers`.

Valid Usage

- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMinQIndex-10300
If `useMinQIndex` is `VK_TRUE`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `minQIndex` **must** all be between `VkVideoEncodeAV1CapabilitiesKHR::minQIndex` and `VkVideoEncodeAV1CapabilitiesKHR::maxQIndex`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMinQIndex-10301
If `useMinQIndex` is `VK_TRUE` and `VkVideoEncodeAV1CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `minQIndex` **must** all specify the same value
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMaxQIndex-10302
If `useMaxQIndex` is `VK_TRUE`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `maxQIndex` **must** all be between `VkVideoEncodeAV1CapabilitiesKHR::minQIndex` and `VkVideoEncodeAV1CapabilitiesKHR::maxQIndex`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMaxQIndex-10303
If `useMaxQIndex` is `VK_TRUE` and `VkVideoEncodeAV1CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `maxQIndex` **must** all specify the same value
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMinQIndex-10304
If `useMinQIndex` and `useMaxQIndex` are both `VK_TRUE`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `minQIndex` **must** all be less than or equal to the respective members of `maxQIndex`

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_RATE_CONTROL_LAYER_INFO_KHR`

- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-minQIndex-parameter **minQIndex** **must** be a valid [VkVideoEncodeAV1QIndexKHR](#) structure
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-maxQIndex-parameter **maxQIndex** **must** be a valid [VkVideoEncodeAV1QIndexKHR](#) structure
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-maxFrameSize-parameter **maxFrameSize** **must** be a valid [VkVideoEncodeAV1FrameSizeKHR](#) structure

Structure Chaining

Extends the structure

- [VkVideoEncodeRateControlLayerInfoKHR](#)

The [VkVideoEncodeAV1QIndexKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1QIndexKHR {
    uint32_t    intraQIndex;
    uint32_t    predictiveQIndex;
    uint32_t    bipredictiveQIndex;
} VkVideoEncodeAV1QIndexKHR;
```

- **intraQIndex** is the quantizer index to be used for frames encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR](#).
- **predictiveQIndex** is the quantizer index to be used for frames encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR](#).
- **bipredictiveQIndex** is the quantizer index to be used for frames encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR](#).

The [VkVideoEncodeAV1FrameSizeKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1FrameSizeKHR {
    uint32_t    intraFrameSize;
    uint32_t    predictiveFrameSize;
    uint32_t    bipredictiveFrameSize;
} VkVideoEncodeAV1FrameSizeKHR;
```

- **intraFrameSize** is the size in bytes to be used for frames encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR](#).
- **predictiveFrameSize** is the size in bytes to be used for frames encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR](#).
- **bipredictiveFrameSize** is the size in bytes to be used for frames encoded with [VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR](#).

GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the [group of pictures \(GOP\)](#).

The `VkVideoEncodeAV1GopRemainingFrameInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t            gopRemainingIntra;
    uint32_t            gopRemainingPredictive;
    uint32_t            gopRemainingBipredictive;
} VkVideoEncodeAV1GopRemainingFrameInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useGopRemainingFrames` indicates whether the implementation's rate control algorithm **should** use the values specified in `gopRemainingIntra`, `gopRemainingPredictive`, and `gopRemainingBipredictive`. If `useGopRemainingFrames` is `VK_FALSE`, then the values of `gopRemainingIntra`, `gopRemainingPredictive`, and `gopRemainingBipredictive` are ignored.
- `gopRemainingIntra` specifies the number of frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR` the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the next video encode operation.
- `gopRemainingPredictive` specifies the number of frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR` the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the next video encode operation.
- `gopRemainingBipredictive` specifies the number of frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR` the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the next video encode operation.

Setting `useGopRemainingFrames` to `VK_TRUE` and including this structure in the `pNext` chain of `VkVideoBeginCodingInfoKHR` is only mandatory if the `VkVideoEncodeAV1CapabilitiesKHR::requiresGopRemainingFrames` reported for the used [video profile](#) is `VK_TRUE`. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a [regular GOP structure](#), these values **may** provide additional guidance for the implementation's rate control algorithm.

The `VkVideoEncodeAV1CapabilitiesKHR::prefersGopRemainingFrames` capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

Valid Usage (Implicit)

- `VOID-VkVideoEncodeAV1GopRemainingFrameInfoKHR-sType-sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_GOP_REMAINING_FRAME_INFO_KHR`

Structure Chaining

Extends the structure

- `VkVideoBeginCodingInfoKHR`

AV1 Quantizer Index Delta Maps

Quantization delta maps used with an [AV1 encode profile](#) are referred to as *quantizer index delta maps* and their texels contain integer values representing quantizer index delta values that are applied in the process of determining the [quantizer indices](#) of the encoded picture.

Accordingly, AV1 quantizer index delta maps always have single channel integer formats, as reported in `VkVideoFormatPropertiesKHR::format`.

When the [rate control mode](#) is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, the quantizer index delta values are added to the constant quantizer index value that, in effect, enable the application to explicitly control the used quantizer index values at the granularity of the used [quantization map texel size](#).

For all other [rate control modes](#), the quantizer index delta values **can** be used to offset the quantizer index values that the rate control algorithm would otherwise produce.

AV1 Encode Quantization

Performing AV1 encode operations involves the process of assigning quantizer index values to individual AV1 mode info blocks. This process depends on the used [rate control mode](#), as well as other encode and rate control parameters, as described below:

- If the configured rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR`, then the quantizer index value is initialized by the implementation-specific default rate control algorithm.
 - If the video encode operation is issued with a [quantization delta map](#), the quantizer index delta value corresponding to the mode info block, as [fetched from the quantization map](#), is added to the previously determined quantizer index value. If the fetched quantizer index delta value falls outside the supported quantizer index delta value range reported in the

`minQIndexDelta` and `maxQIndexDelta` members of `VkVideoEncodeAV1QuantizationMapCapabilitiesKHR`, then the quantizer index value used for the mode info block becomes undefined.

- If the configured rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the quantizer index value is initialized from the constant quantizer index value specified for the encoded frame.
 - If the video encode operation is issued with a [quantization delta map](#), the quantizer index delta value corresponding to the mode info block, as [fetched from the quantization map](#), is added to the previously determined quantizer index value. If the fetched quantizer index delta value falls outside the supported quantizer index delta value range reported in the `minQIndexDelta` and `maxQIndexDelta` members of `VkVideoEncodeAV1QuantizationMapCapabilitiesKHR`, then the quantizer index value used for the mode info block becomes undefined.
- If the configured rate control mode is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the quantizer index value is initialized by the corresponding rate control algorithm.
 - If the video encode operation is issued with a [quantization delta map](#), the quantizer index delta value corresponding to the mode info block, as [fetched from the quantization map](#), is added to the previously determined quantizer index value. If the fetched quantizer index delta value falls outside the supported quantizer index delta value range reported in the `minQIndexDelta` and `maxQIndexDelta` members of `VkVideoEncodeAV1QuantizationMapCapabilitiesKHR`, then the quantizer index value used for the mode info block becomes undefined.
 - If the video encode operation is issued with an [emphasis map](#), the rate control will adjust the quantizer index value based on the emphasis value corresponding to the mode info block, as [fetched from the quantization map](#), according to the following equation:

$$QIndex_{new} = f(QIndex_{prev}, e)$$

Where $QIndex_{new}$ is the resulting quantizer index value, $QIndex_{prev}$ is the previously determined quantizer index value, e is the emphasis value corresponding to the macroblock, and f is an implementation-defined function for which the following implication is true:

$$e_1 < e_2 \Rightarrow f(QIndex, e_1) \geq f(QIndex, e_2)$$

NOTE

This means that lower emphasis values will result in higher quantizer index values, whereas higher emphasis values will result in lower quantizer index values, but the function is not strictly decreasing with respect to the input emphasis value for a given input quantizer index value.

- If clamping to minimum quantizer index values is enabled in the applied rate control layer, then the quantizer index value is clamped to the corresponding minimum quantizer index value.
- If clamping to maximum quantizer index values is enabled in the applied rate control layer,

then the quantizer index value is clamped to the corresponding maximum quantizer index value.

- In all cases, the final quantizer index value is clamped to the minimum and maximum quantizer index values supported by the video profile.

48.23.15. AV1 Encode Requirements

This section described the **required** AV1 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 69. Required *Video Std Header Versions*

<code>maxIntraRefreshActiveReferencePictures</code>	1 ⁹	min
<code>partitionIndependentIntraRefreshRegions</code>	-	implementation-dependent
<code>nonRectangularIntraRefreshRegions</code>	-	implementation-dependent

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2

These masks **must** only have bits set in the least significant `VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR` bits (bit index *i* indicates support for the AV1 reference name `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME + i` when using the corresponding AV1 prediction mode), and **must** have at least as many bits set in any `*ReferenceNameMask` capability as the value of the corresponding `max*ReferenceCount` capability.

3

If greater than zero, it **must** be at least 2.

4

`maxUnidirectionalCompoundGroup1ReferenceCount` **must** be less than or equal to `maxUnidirectionalCompoundReferenceCount`

5

The sum of `maxBidirectionalCompoundGroup1ReferenceCount` and `maxBidirectionalCompoundGroup2ReferenceCount` **must** be greater than or equal to `maxBidirectionalCompoundReferenceCount`

6

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR`, then the `width` and `height` members of `maxQuantizationMapExtent` **must** be greater than zero.

7

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR`, then `maxQIndexDelta` **must** be greater than `minQIndexDelta`.

8

If the `videoMaintenance2` feature is supported.

9

If `VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes` is not zero.

Chapter 49. Optical Flow

49.1. Optical Flow Queues

`VK_NV_optical_flow` adds an optical flow queue type bit `VK_QUEUE_OPTICAL_FLOW_BIT_NV` to `VkQueueFlagBits`. Optical flow operations are supported by queues with an advertised queue capability of `VK_QUEUE_OPTICAL_FLOW_BIT_NV`. As in the case of other queue types, an application **must** use `vkGetPhysicalDeviceQueueFamilyProperties` to query whether the physical device has support for the Optical Flow Queue. When the implementation reports the `VK_QUEUE_OPTICAL_FLOW_BIT_NV` bit for a queue family, it advertises general support for Vulkan queue operations described in [Devices and Queues](#).

49.2. Optical Flow Image Formats

To enumerate the supported image formats for a specific optical flow usage, call:

```
// Provided by VK_NV_optical_flow
VkResult vkGetPhysicalDeviceOpticalFlowImageFormatsNV(
    VkPhysicalDevice          physicalDevice,
    const VkOpticalFlowImageFormatInfoNV* pOpticalFlowImageFormatInfo,
    uint32_t*                 pFormatCount,
    VkOpticalFlowImageFormatPropertiesNV* pImageFormatProperties);
```

- `physicalDevice` is the physical device being queried.
- `pOpticalFlowImageFormatInfo` is a pointer to a `VkOpticalFlowImageFormatInfoNV` structure specifying the optical flow usage for which information is returned.
- `pFormatCount` is a pointer to an integer related to the number of optical flow properties available or queried, as described below.
- `pImageFormatProperties` is a pointer to an array of `VkOpticalFlowImageFormatPropertiesNV` structures in which supported formats and image parameters are returned.

If `pImageFormatProperties` is `NULL`, then the number of optical flow properties supported for the given `physicalDevice` is returned in `pFormatCount`. Otherwise, `pFormatCount` **must** point to a variable set by the application to the number of elements in the `pImageFormatProperties` array, and on return the variable is overwritten with the number of values actually written to `pImageFormatProperties`. If the value of `pFormatCount` is less than the number of optical flow properties supported, at most `pFormatCount` values will be written to `pImageFormatProperties`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available values were returned.

Before creating an image to be used as an optical flow frame, obtain the supported image creation parameters by querying with `vkGetPhysicalDeviceFormatProperties2` and `vkGetPhysicalDeviceImageFormatProperties2` using one of the reported formats and adding `VkOpticalFlowImageFormatInfoNV` to the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2`.

When querying the parameters with `vkGetPhysicalDeviceImageFormatProperties2` for images used

for optical flow operations, the `VkOpticalFlowImageFormatsNV::usage` field **must** contain one or more of the bits defined in `VkOpticalFlowUsageFlagBitsNV`.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-pOpticalFlowImageFormatInfo-parameter `pOpticalFlowImageFormatInfo` **must** be a valid pointer to a valid `VkOpticalFlowImageFormatInfoNV` structure
- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-pFormatCount-parameter `pFormatCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-pImageFormatProperties-parameter
If the value referenced by `pFormatCount` is not `0`, and `pImageFormatProperties` is not `NULL`, `pImageFormatProperties` **must** be a valid pointer to an array of `pFormatCount` `VkOpticalFlowImageFormatPropertiesNV` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_EXTENSION_NOT_PRESENT`
- `VK_ERROR_FORMAT_NOT_SUPPORTED`
- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

NOTE

`VK_FORMAT_B8G8R8A8_UNORM`, `VK_FORMAT_R8_UNORM` and `VK_FORMAT_G8_B8R8_2PLANE_420_UNORM` are initially supported for images with optical usage `VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV`.

`VK_FORMAT_R16G16_SFIXED5_NV` is initially supported for images with optical flow usage `VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV`, `VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV` and `VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV`.

`VK_FORMAT_R8_UINT` and `VK_FORMAT_R32_UINT` are initially supported for images with optical flow usage `VK_OPTICAL_FLOW_USAGE_COST_BIT_NV`. It is

recommended to use [VK_FORMAT_R8_UINT](#) because of the lower bandwidth.

The [VkOpticalFlowImageFormatInfoNV](#) structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowImageFormatInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkOpticalFlowUsageFlagsNV  usage;
} VkOpticalFlowImageFormatInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **usage** is a bitmask of [VkOpticalFlowUsageFlagBitsNV](#) describing the intended optical flow usage of the image.

Valid Usage (Implicit)

- VUID-VkOpticalFlowImageFormatInfoNV-sType-sType
sType must be [VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_INFO_NV](#)
- VUID-VkOpticalFlowImageFormatInfoNV-usage-parameter
usage must be a valid combination of [VkOpticalFlowUsageFlagBitsNV](#) values
- VUID-VkOpticalFlowImageFormatInfoNV-usage-requiredbitmask
usage must not be `0`

Structure Chaining

Extends the structures

- [VkImageCreateInfo](#)
- [VkPhysicalDeviceImageFormatInfo2](#)

Bits which **can** be set in [VkOpticalFlowImageFormatInfoNV::usage](#), controlling optical flow usage, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowUsageFlagBitsNV {
    VK_OPTICAL_FLOW_USAGE_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_USAGE_COST_BIT_NV = 0x00000008,
    VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV = 0x00000010,
} VkOpticalFlowUsageFlagBitsNV;
```

- [VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV](#) specifies that the image **can** be used as input or reference frame for an optical flow operation.
- [VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV](#) specifies that the image **can** be used as output flow vector map for an optical flow operation.
- [VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV](#) specifies that the image **can** be used as hint flow vector map for an optical flow operation.
- [VK_OPTICAL_FLOW_USAGE_COST_BIT_NV](#) specifies that the image **can** be used as output cost map for an optical flow operation.
- [VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV](#) specifies that the image **can** be used as global flow vector for an optical flow operation.

```
// Provided by VK_NV_optical_flow
typedef VkFlags    VkOpticalFlowUsageFlagsNV;
```

[VkOpticalFlowUsageFlagsNV](#) is a bitmask type for setting a mask of zero or more [VkOpticalFlowUsageFlagBitsNV](#).

The [VkOpticalFlowImageFormatPropertiesNV](#) structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowImageFormatPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkFormat            format;
} VkOpticalFlowImageFormatPropertiesNV;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [format](#) is a [VkFormat](#) that specifies the format that can be used with the specified optical flow image usages.

Valid Usage (Implicit)

- VUID-VkOpticalFlowImageFormatPropertiesNV-sType-sType
sType must be [VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_PROPERTIES_NV](#)
- VUID-VkOpticalFlowImageFormatPropertiesNV-pNext-pNext
pNext must be [NULL](#)

49.3. Optical Flow Session

49.3.1. Optical Flow Session Object

Optical flow session objects are abstracted and represented by [VkOpticalFlowSessionNV](#) handles:

```
// Provided by VK_NV_optical_flow
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkOpticalFlowSessionNV)
```

Creating an Optical Flow Session

To create an optical flow session object, call:

```
// Provided by VK_NV_optical_flow
VkResult vkCreateOpticalFlowSessionNV(
    VkDevice                                device,
    const VkOpticalFlowSessionCreateInfoNV* pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkOpticalFlowSessionNV*                 pSession);
```

- **device** is the logical device that creates the optical flow session object.
- **pCreateInfo** is a pointer to a [VkOpticalFlowSessionCreateInfoNV](#) structure containing parameters specifying the creation of the optical flow session.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pSession** is a pointer to a [VkOpticalFlowSessionNV](#) handle specifying the optical flow session object which will be created by this function when it returns [VK_SUCCESS](#)

Valid Usage (Implicit)

- VUID-vkCreateOpticalFlowSessionNV-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkCreateOpticalFlowSessionNV-pCreateInfo-parameter
pCreateInfo must be a valid pointer to a valid [VkOpticalFlowSessionCreateInfoNV](#) structure
- VUID-vkCreateOpticalFlowSessionNV-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- `VUID-vkCreateOpticalFlowSessionNV-pSession-parameter`
`pSession` **must** be a valid pointer to a `VkOpticalFlowSessionNV` handle
- `VUID-vkCreateOpticalFlowSessionNV-device-queuecount`
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkOpticalFlowSessionCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowSessionCreateInfoNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           width;
    uint32_t           height;
    VkFormat            imageFormat;
    VkFormat            flowVectorFormat;
    VkFormat            costFormat;
    VkOpticalFlowGridSizeFlagsNV outputGridSize;
    VkOpticalFlowGridSizeFlagsNV hintGridSize;
    VkOpticalFlowPerformanceLevelNV performanceLevel;
    VkOpticalFlowSessionCreateFlagsNV flags;
} VkOpticalFlowSessionCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `width` is the width in pixels of the input or reference frame to be bound to this optical flow session.
- `height` is the height in pixels of the input or reference frame to be bound to this optical flow session.
- `imageFormat` is the `VkFormat` of the input and reference frame to be bound to this optical flow session.

- **flowVectorFormat** is the **VkFormat** of the flow vector maps (output or hint) to be bound to this optical flow session.
- **costFormat** is the **VkFormat** of the cost maps to be bound to this optical flow session.
- **outputGridSize** is exactly one bit of **VkOpticalFlowGridSizeFlagsNV** specifying the grid size of the output flow and cost maps to be bound to this optical flow session. The size of the output flow and cost maps is determined by **VkOpticalFlowSessionCreateInfoNV::width** and **VkOpticalFlowSessionCreateInfoNV::height** divided by **VkOpticalFlowSessionCreateInfoNV::outputGridSize**.
- **hintGridSize** is one exactly bit of **VkOpticalFlowGridSizeFlagsNV** specifying the grid size of the hint flow vector maps to be bound to this optical flow session. The size of the hint maps is determined by **VkOpticalFlowSessionCreateInfoNV::width** and **VkOpticalFlowSessionCreateInfoNV::height** divided by **VkOpticalFlowSessionCreateInfoNV::hintGridSize**.
- **performanceLevel** is the **VkOpticalFlowPerformanceLevelNV** used for this optical flow session.
- **flags** are the **VkOpticalFlowSessionCreateFlagsNV** used for this optical flow session.

Valid Usage

- VUID-VkOpticalFlowSessionCreateInfoNV-width-07581
width **must** be greater than or equal to **VkPhysicalDeviceOpticalFlowPropertiesNV::minWidth** and less than or equal to **VkPhysicalDeviceOpticalFlowPropertiesNV::maxWidth**
- VUID-VkOpticalFlowSessionCreateInfoNV-height-07582
height **must** be greater than or equal to **VkPhysicalDeviceOpticalFlowPropertiesNV::minHeight** and less than or equal to **VkPhysicalDeviceOpticalFlowPropertiesNV::maxHeight**
- VUID-VkOpticalFlowSessionCreateInfoNV-imageFormat-07583
imageFormat **must** be one of the formats returned by **vkGetPhysicalDeviceOpticalFlowImageFormatsNV** for **VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV**
- VUID-VkOpticalFlowSessionCreateInfoNV-flowVectorFormat-07584
flowVectorFormat **must** be one of the formats returned by **vkGetPhysicalDeviceOpticalFlowImageFormatsNV** for **VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV**
- VUID-VkOpticalFlowSessionCreateInfoNV-costFormat-07585
costFormat **must** be one of the formats returned by **vkGetPhysicalDeviceOpticalFlowImageFormatsNV** for **VK_OPTICAL_FLOW_USAGE_COST_BIT_NV** if **VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV** is set in **flags**
- VUID-VkOpticalFlowSessionCreateInfoNV-outputGridSize-07586
outputGridSize **must** be exactly one of the bits reported in **VkPhysicalDeviceOpticalFlowPropertiesNV::supportedOutputGridSizes**
- VUID-VkOpticalFlowSessionCreateInfoNV-hintGridSize-07587
hintGridSize **must** be exactly one of the bits reported in **VkPhysicalDeviceOpticalFlowPropertiesNV::supportedHintGridSizes** if **VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV** is set in **flags**

- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07588
VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV **must** not be set in **flags** if VkPhysicalDeviceOpticalFlowPropertiesNV::hintSupported is VK_FALSE
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07589
VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV **must** not be set in **flags** if VkPhysicalDeviceOpticalFlowPropertiesNV::costSupported is VK_FALSE
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07590
VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV **must** not be set in **flags** if VkPhysicalDeviceOpticalFlowPropertiesNV::globalFlowSupported is VK_FALSE
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07591
VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV **must** not be set in **flags** if VkPhysicalDeviceOpticalFlowPropertiesNV::maxNumRegionsOfInterest is 0
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07592
VK_OPTICAL_FLOW_SESSION_CREATE_BOTH DIRECTIONS_BIT_NV **must** not be set in **flags** if VkPhysicalDeviceOpticalFlowPropertiesNV::bidirectionalFlowSupported is VK_FALSE

Valid Usage (Implicit)

- VUID-VkOpticalFlowSessionCreateInfoNV-sType-sType
sType **must** be VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_INFO_NV
- VUID-VkOpticalFlowSessionCreateInfoNV-pNext-pNext
pNext **must** be NULL or a pointer to a valid instance of VkOpticalFlowSessionCreatePrivateDataInfoNV
- VUID-VkOpticalFlowSessionCreateInfoNV-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkOpticalFlowSessionCreateInfoNV-imageFormat-parameter
imageFormat **must** be a valid VkFormat value
- VUID-VkOpticalFlowSessionCreateInfoNV-flowVectorFormat-parameter
flowVectorFormat **must** be a valid VkFormat value
- VUID-VkOpticalFlowSessionCreateInfoNV-costFormat-parameter
If **costFormat** is not 0, **costFormat** **must** be a valid VkFormat value
- VUID-VkOpticalFlowSessionCreateInfoNV-outputGridSize-parameter
outputGridSize **must** be a valid combination of VkOpticalFlowGridSizeFlagBitsNV values
- VUID-VkOpticalFlowSessionCreateInfoNV-outputGridSize-requiredbitmask
outputGridSize **must** not be 0
- VUID-VkOpticalFlowSessionCreateInfoNV-hintGridSize-parameter
hintGridSize **must** be a valid combination of VkOpticalFlowGridSizeFlagBitsNV values
- VUID-VkOpticalFlowSessionCreateInfoNV-performanceLevel-parameter
If **performanceLevel** is not 0, **performanceLevel** **must** be a valid VkOpticalFlowPerformanceLevelNV value
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-parameter

flags must be a valid combination of [VkOpticalFlowSessionCreateFlagBitsNV](#) values

The [VkOpticalFlowSessionCreatePrivateDataInfoNV](#) structure is for NV internal use only and is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowSessionCreatePrivateDataInfoNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           id;
    uint32_t           size;
    const void*        pPrivateData;
} VkOpticalFlowSessionCreatePrivateDataInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **id** is an identifier for data which is passed at a memory location specified in [VkOpticalFlowSessionCreatePrivateDataInfoNV::pPrivateData](#).
- **size** is the size of data in bytes which is passed at a memory location specified in [VkOpticalFlowSessionCreatePrivateDataInfoNV::pPrivateData](#).
- **pPrivateData** is a pointer to NV internal data.

Valid Usage (Implicit)

- VUID-VkOpticalFlowSessionCreatePrivateDataInfoNV-sType-sType **must** be [VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_PRIVATE_DATA_INFO_NV](#)
- VUID-VkOpticalFlowSessionCreatePrivateDataInfoNV-pPrivateData-parameter **pPrivateData** must be a pointer value

Structure Chaining

Extends the structure

- [VkOpticalFlowSessionCreateInfoNV](#)

Optical flow vectors are generated block-wise, one vector for each block of NxN pixels (referred to as grid).

Bits which can be set in [VkOpticalFlowSessionCreateInfoNV::outputGridSize](#) and [VkOpticalFlowSessionCreateInfoNV::hintGridSize](#), or which are returned in [VkPhysicalDeviceOpticalFlowPropertiesNV::supportedOutputGridSizes](#) and [VkPhysicalDeviceOpticalFlowPropertiesNV::supportedHintGridSizes](#) controlling optical flow grid sizes, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowGridSizeFlagBitsNV {
    VK_OPTICAL_FLOW_GRID_SIZE_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_NV = 0x00000008,
} VkOpticalFlowGridSizeFlagBitsNV;
```

- [VK_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_NV](#) specifies that grid is 1x1 pixel.
- [VK_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_NV](#) specifies that grid is 2x2 pixel.
- [VK_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_NV](#) specifies that grid is 4x4 pixel.
- [VK_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_NV](#) specifies that grid is 8x8 pixel.

```
// Provided by VK_NV_optical_flow
typedef VkFlags    VkOpticalFlowGridSizeFlagsNV;
```

[VkOpticalFlowGridSizeFlagsNV](#) is a bitmask type for setting a mask of zero or more [VkOpticalFlowGridSizeFlagBitsNV](#).

Optical flow exposes performance levels which the application **can** choose based on the desired performance and quality requirement.

The optical flow performance level types are defined with the following:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowPerformanceLevelNV {
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_NV = 1,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_NV = 2,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_NV = 3,
} VkOpticalFlowPerformanceLevelNV;
```

- [VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_NV](#) is a level with slower performance but higher quality.
- [VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_NV](#) is a level with medium performance and medium quality.
- [VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_NV](#) is a preset with higher performance but lower quality.

Bits which **can** be set in [VkOpticalFlowSessionCreateInfoNV::flags](#), controlling optical flow session operations, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowSessionCreateFlagBitsNV {
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV = 0x00000008,
    VK_OPTICAL_FLOW_SESSION_CREATE_BOTH DIRECTIONS_BIT_NV = 0x00000010,
} VkOpticalFlowSessionCreateFlagBitsNV;
```

- [VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV](#) specifies that a [VkImageView](#) with external flow vectors will be used as hints in performing the motion search and **must** be bound to [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV](#).
- [VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV](#) specifies that the cost for the forward flow is generated in a [VkImageView](#) which **must** be bound to [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV](#). Additionally, if [VK_OPTICAL_FLOW_SESSION_CREATE_BOTH DIRECTIONS_BIT_NV](#) is also set, the cost for backward flow is generated in a [VkImageView](#) which **must** be bound to [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV](#). The cost is the confidence level of the flow vector for each grid in the frame. The Cost implies how (in)accurate the flow vector is. Higher cost value implies the flow vector to be less accurate and vice-versa.
- [VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV](#) specifies that a global flow vector is estimated from forward flow in a single pixel [VkImageView](#) which **must** be bound to [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV](#).
- [VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV](#) specifies that regions of interest **can** be specified in [VkOpticalFlowExecuteInfoNV](#).
- [VK_OPTICAL_FLOW_SESSION_CREATE_BOTH DIRECTIONS_BIT_NV](#) specifies that backward flow is generated in addition to forward flow which is always generated.

[VkOpticalFlowSessionCreateFlagsNV](#) is a bitmask type for setting a mask of zero or more [VkOpticalFlowSessionCreateFlagBitsNV](#).

```
// Provided by VK_NV_optical_flow
typedef VkFlags    VkOpticalFlowSessionCreateFlagsNV;
```

Destroying an Optical Flow Session

To destroy an optical flow session object, call:

```
// Provided by VK_NV_optical_flow
void vkDestroyOpticalFlowSessionNV(
    VkDevice                device,
    VkOpticalFlowSessionNV  session,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the device that was used for the creation of the optical flow session.
- **session** is the optical flow session to be destroyed.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage (Implicit)

- VUID-vkDestroyOpticalFlowSessionNV-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyOpticalFlowSessionNV-session-parameter **session** **must** be a valid [VkOpticalFlowSessionNV](#) handle
- VUID-vkDestroyOpticalFlowSessionNV-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyOpticalFlowSessionNV-session-parent **session** **must** have been created, allocated, or retrieved from **device**

49.3.2. Binding Vulkan Image Views to an Optical Flow Session

To bind a Vulkan image to an optical flow session object, call:

```
// Provided by VK_NV_optical_flow
VkResult vkBindOpticalFlowSessionImageNV(
    VkDevice          device,
    VkOpticalFlowSessionNV session,
    VkOpticalFlowSessionBindingPointNV bindingPoint,
    VkImageView        view,
    VkImageLayout      layout);
```

- **device** is the device which owns the optical flow session object **session**.
- **session** is the optical flow session object to which the image view is to be bound.
- **bindingPoint** specifies the binding point [VkOpticalFlowSessionBindingPointNV](#) to which the image view is bound.
- **view** is a [VkImageView](#) to be bound.
- **layout** **must** specify the layout that the image subresources accessible from **view** will be in at the time the optical flow vectors are calculated with [vkCmdOpticalFlowExecuteNV](#) on a [VkDevice](#).

Valid Usage (Implicit)

- VUID-vkBindOpticalFlowSessionImageNV-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkBindOpticalFlowSessionImageNV-session-parameter **session** **must** be a valid [VkOpticalFlowSessionNV](#) handle

- VUID-vkBindOpticalFlowSessionImageNV-bindingPoint-parameter
bindingPoint **must** be a valid [VkOpticalFlowSessionBindingPointNV](#) value
- VUID-vkBindOpticalFlowSessionImageNV-view-parameter
If **view** is not [VK_NULL_HANDLE](#), **view** **must** be a valid [VkImageView](#) handle
- VUID-vkBindOpticalFlowSessionImageNV-layout-parameter
layout **must** be a valid [VkImageLayout](#) value
- VUID-vkBindOpticalFlowSessionImageNV-session-parent
session **must** have been created, allocated, or retrieved from **device**
- VUID-vkBindOpticalFlowSessionImageNV-view-parent
If **view** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The optical flow session binding points are defined with the following:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowSessionBindingPointNV {
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_INPUT_NV = 1,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_REFERENCE_NV = 2,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV = 3,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_FLOW_VECTOR_NV = 4,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_FLOW_VECTOR_NV = 5,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV = 6,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV = 7,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV = 8,
} VkOpticalFlowSessionBindingPointNV;
```

- [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_INPUT_NV](#) specifies the binding point for the input frame.
- [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_REFERENCE_NV](#) specifies the binding point for the input reference frame.
- [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV](#) specifies the binding point for the optional external hint flow vectors.

- [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_FLOW_VECTOR_NV](#) specifies the binding point for output flow vectors of default forward flow calculation.
- [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_FLOW_VECTOR_NV](#) specifies the binding point for the optional output flow vector map of optional backward flow calculation.
- [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV](#) specifies the binding point for the optional output cost map of default forward flow calculation.
- [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV](#) specifies the binding point for the optional output cost map of optional backward flow calculation.
- [VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV](#) specifies the binding point for the optional global flow value of default forward flow calculation.

49.3.3. Optical Flow Execution

Default direction of flow estimation is forward which calculates the optical flow from input frame to reference frame. Optionally backward flow estimation can be additionally calculated. An output flow vector (Vx, Vy) means that current pixel (x, y) of input frame can be found at location (x+Vx, y+Vy) in reference frame. A backward flow vector (Vx, Vy) means that current pixel (x, y) of reference frame can be found at location (x+Vx, y+Vy) in input frame.

To calculate optical flow vectors from two input frames, call:

```
// Provided by VK_NV_optical_flow
void vkCmdOpticalFlowExecuteNV(
    VkCommandBuffer                commandBuffer,
    VkOpticalFlowSessionNV         session,
    const VkOpticalFlowExecuteInfoNV* pExecuteInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `session` is the optical flow session object on which this command is operating.
- `pExecuteInfo` Info is a pointer to a [VkOpticalFlowExecuteInfoNV](#).

Valid Usage (Implicit)

- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-parameter `commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdOpticalFlowExecuteNV-session-parameter `session` **must** be a valid [VkOpticalFlowSessionNV](#) handle
- VUID-vkCmdOpticalFlowExecuteNV-pExecuteInfo-parameter `pExecuteInfo` **must** be a valid pointer to a valid [VkOpticalFlowExecuteInfoNV](#) structure
- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-recording `commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-cmdpool The `VkCommandPool` that `commandBuffer` was allocated from **must** support

VK_QUEUE_OPTICAL_FLOW_BIT_NV operations

- VUID-vkCmdOpticalFlowExecuteNV-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdOpticalFlowExecuteNV-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdOpticalFlowExecuteNV-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdOpticalFlowExecuteNV-commonparent

Both of **commandBuffer**, and **session** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_OPTICAL_FLOW_BIT_NV	Action

Conditional Rendering

vkCmdOpticalFlowExecuteNV is not affected by **conditional rendering**

The **VkOpticalFlowExecuteInfoNV** structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowExecuteInfoNV {
    VkStructureType    sType;
    void*              pNext;
    VkOpticalFlowExecuteFlagsNV flags;
    uint32_t           regionCount;
    const VkRect2D*    pRegions;
} VkOpticalFlowExecuteInfoNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- **flags** are the [VkOpticalFlowExecuteFlagsNV](#) used for this command.
- **regionCount** is the number of regions of interest specified in **pRegions**.
- **pRegions** is a pointer to **regionCount** [VkRect2D](#) regions of interest.

Valid Usage

- VUID-VkOpticalFlowExecuteInfoNV-regionCount-07593
regionCount **must** be 0 if [VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV](#) was not set for [VkOpticalFlowSessionNV](#) on which this command is operating

Valid Usage (Implicit)

- VUID-VkOpticalFlowExecuteInfoNV-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_OPTICAL_FLOW_EXECUTE_INFO_NV](#)
- VUID-VkOpticalFlowExecuteInfoNV-pNext-pNext
pNext **must** be `NULL`
- VUID-VkOpticalFlowExecuteInfoNV-flags-parameter
flags **must** be a valid combination of [VkOpticalFlowExecuteFlagBitsNV](#) values
- VUID-VkOpticalFlowExecuteInfoNV-pRegions-parameter
 If **regionCount** is not 0, **pRegions** **must** be a valid pointer to an array of **regionCount** [VkRect2D](#) structures

Bits which **can** be set in [VkOpticalFlowExecuteInfoNV::flags](#), controlling optical flow execution, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowExecuteFlagBitsNV {
    VK_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_NV = 0x00000001,
} VkOpticalFlowExecuteFlagBitsNV;
```

- [VK_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_NV](#) specifies that temporal hints from previously generated flow vectors are not used. If temporal hints are enabled, optical flow vectors from previous [vkCmdOpticalFlowExecuteNV](#) call are automatically used as hints for the current [vkCmdOpticalFlowExecuteNV](#) call, to take advantage of temporal correlation in a video sequence. Temporal hints should be disabled if there is a-priori knowledge of no temporal correlation (e.g. a scene change, independent successive frame pairs).

[VkOpticalFlowExecuteFlagsNV](#) is a bitmask type for setting a mask of zero or more [VkOpticalFlowExecuteFlagBitsNV](#).

```
// Provided by VK_NV_optical_flow  
typedef VkFlags    VkOpticalFlowExecuteFlagsNV;
```

Chapter 50. Execution Graphs

Execution graphs provide a way for applications to dispatch multiple operations dynamically from a single initial command on the host. To achieve this, a new execution graph pipeline is provided, that links together multiple shaders or pipelines which each describe one or more operations that can be dispatched within the execution graph. Each linked pipeline or shader describes an *execution node* within the graph, which **can** be dispatched dynamically from another shader within the same graph. This allows applications to describe much richer execution topologies at a finer granularity than would typically be possible with API commands alone.

50.1. Pipeline Creation

To create execution graph pipelines, call:

```
// Provided by VK_AMD_shader_enqueue
VkResult vkCreateExecutionGraphPipelinesAMD(
    VkDevice                device,
    VkPipelineCache         pipelineCache,
    uint32_t                createInfoCount,
    const VkExecutionGraphPipelineCreateInfoAMD* pCreateInfos,
    const VkAllocationCallbacks* pAllocator,
    VkPipeline*              pPipelines);
```

- **device** is the logical device that creates the execution graph pipelines.
- **pipelineCache** is either `VK_NULL_HANDLE`, indicating that pipeline caching is disabled; or the handle of a valid `pipeline cache` object, in which case use of that cache is enabled for the duration of the command. The implementation **must** not access this object outside of the duration of this command.
- **createInfoCount** is the length of the **pCreateInfos** and **pPipelines** arrays.
- **pCreateInfos** is a pointer to an array of `VkExecutionGraphPipelineCreateInfoAMD` structures.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pPipelines** is a pointer to an array of `VkPipeline` handles in which the resulting execution graph pipeline objects are returned.

Pipelines are created and returned as described for [Multiple Pipeline Creation](#).

Valid Usage

- VUID-vkCreateExecutionGraphPipelinesAMD-shaderEnqueue-09124
The **shaderEnqueue** feature **must** be enabled
- VUID-vkCreateExecutionGraphPipelinesAMD-flags-09125
If the **flags** member of any element of **pCreateInfos** contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and the **basePipelineIndex** member of that same element is not `-1`, **basePipelineIndex** **must** be less than the index into **pCreateInfos**

that corresponds to that element

- VUID-vkCreateExecutionGraphPipelinesAMD-X-flags-09126

If the **flags** member of any element of **pCreateInfo**s contains the **VK_PIPELINE_CREATE_DERIVATIVE_BIT** flag, the base pipeline **must** have been created with the **VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT** flag set

- VUID-vkCreateExecutionGraphPipelinesAMD-X-pipelineCache-09127

If **pipelineCache** was created with **VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT**, host access to **pipelineCache** **must** be externally synchronized

- VUID-vkCreateExecutionGraphPipelinesAMD-X-pNext-09616

If **VkPipelineBinaryInfoKHR::binaryCount** is not 0 for any element of **pCreateInfo**s, **pipelineCache** **must** be **VK_NULL_HANDLE**

- VUID-vkCreateExecutionGraphPipelinesAMD-X-pNext-09617

If a **VkPipelineCreateFlags2CreateInfoKHR** structure with the **VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR** flag set is included in the **pNext** chain of any element of **pCreateInfo**s, **pipelineCache** **must** be **VK_NULL_HANDLE**

- VUID-vkCreateExecutionGraphPipelinesAMD-X-binaryCount-09620

If **VkPipelineBinaryInfoKHR::binaryCount** is not 0 for any element of **pCreateInfo**s, **VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT** **must** not be set in the **flags** of that element

- VUID-vkCreateExecutionGraphPipelinesAMD-X-binaryCount-09621

If **VkPipelineBinaryInfoKHR::binaryCount** is not 0 for any element of **pCreateInfo**s, **VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT** **must** not be set in the **flags** of that element

- VUID-vkCreateExecutionGraphPipelinesAMD-X-binaryCount-09622

If **VkPipelineBinaryInfoKHR::binaryCount** is not 0 for any element of **pCreateInfo**s, **VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT** **must** not be set in the **flags** of that element

- VUID-vkCreateExecutionGraphPipelinesAMD-X-pCreateInfo-11414

If any element of **pCreateInfo**s sets **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT** and includes embedded sampler mappings, there **must** be less than $(\text{maxSamplerAllocationCount} - (\text{minSamplerHeapReservedRangeWithEmbedded} / \text{samplerDescriptorSize}))$ **VkSampler** objects currently created on the device

- VUID-vkCreateExecutionGraphPipelinesAMD-X-pCreateInfo-11429

If any element of **pCreateInfo**s sets **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT** and includes embedded sampler mappings, this command **must** not cause the total number of unique embedded samplers in pipelines and shaders on this device to exceed **maxDescriptorHeapEmbeddedSamplers**

Valid Usage (Implicit)

- VUID-vkCreateExecutionGraphPipelinesAMD-X-device-parameter **device** **must** be a valid **VkDevice** handle

- VUID-vkCreateExecutionGraphPipelinesAMD-X-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pCreateInfos-parameter
`pCreateInfos` **must** be a valid pointer to an array of `createInfoCount` valid `VkExecutionGraphPipelineCreateInfoAMD-X` structures
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pPipelines-parameter
`pPipelines` **must** be a valid pointer to an array of `createInfoCount` `VkPipeline` handles
- VUID-vkCreateExecutionGraphPipelinesAMD-X-createInfoCount-arraylength
`createInfoCount` **must** be greater than `0`
- VUID-vkCreateExecutionGraphPipelinesAMD-X-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from device

Return Codes

Success

- `VK_PIPELINE_COMPILE_REQUIRED_EXT`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkExecutionGraphPipelineCreateInfoAMD-X` structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkExecutionGraphPipelineCreateInfoAMD {
    VkStructureType           sType;
    const void*               pNext;
    VkPipelineCreateFlags     flags;
    uint32_t                  stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    const VkPipelineLibraryCreateInfoKHR* pLibraryInfo;
    VkPipelineLayout          layout;
    VkPipeline                 basePipelineHandle;
    int32_t                   basePipelineIndex;
} VkExecutionGraphPipelineCreateInfoAMD;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of [VkPipelineCreateFlagBits](#) specifying how the pipeline will be generated.
- `stageCount` is the number of entries in the `pStages` array.
- `pStages` is a pointer to an array of `stageCount` [VkPipelineShaderStageCreateInfo](#) structures describing the set of the shader stages to be included in the execution graph pipeline.
- `pLibraryInfo` is a pointer to a [VkPipelineLibraryCreateInfoKHR](#) structure defining pipeline libraries to include.
- `layout` is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline. The implementation **must** not access this object outside of the duration of the command this structure is passed to.
- `basePipelineHandle` is a pipeline to derive from
- `basePipelineIndex` is an index into the `pCreateInfos` parameter to use as a pipeline to derive from

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in [Pipeline Derivatives](#).

Each shader stage provided when creating an execution graph pipeline (including those in libraries) is associated with a name and an index, determined by the inclusion or omission of a [VkPipelineShaderStageNodeCreateInfoAMD](#) structure in its `pNext` chain. For any graphics pipeline libraries, only the name and index of the vertex or mesh shader stage is linked directly to the graph as a node - other shader stages in the pipeline will be executed after those shader stages as normal. Task shaders cannot be included in a graphics pipeline used for a draw node.

In addition to the shader name and index, an internal “node index” is also generated for each node, which can be queried with [vkGetExecutionGraphPipelineNodeIndexAMD](#), and is used exclusively for initial dispatch of an execution graph.

Valid Usage

- VUID-VkExecutionGraphPipelineCreateInfoAMD-None-09497

If the `pNext` chain does not include a `VkPipelineCreateFlags2CreateInfo` structure, `flags` **must** be a valid combination of `VkPipelineCreateFlagBits` values

- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-07984
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineIndex` is -1, `basePipelineHandle` **must** be a valid execution graph `VkPipeline` handle
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-07985
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` **must** be a valid index into the calling command's `pCreateInfos` parameter
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-07986
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, `basePipelineIndex` **must** be -1 or `basePipelineHandle` **must** be `VK_NULL_HANDLE`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-07987
If a push constant block is declared in a shader and `layout` is not `VK_NULL_HANDLE`, a push constant range in `layout` **must** match the shader stage
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-10069
If a push constant block is declared in a shader and `layout` is not `VK_NULL_HANDLE`, the block must be contained inside the push constant range in `layout` that matches the stage
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-07988
If a `resource variable` is declared in a shader and `layout` is not `VK_NULL_HANDLE`, the corresponding descriptor set in `layout` **must** match the shader stage
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-07990
If a `resource variable` is declared in a shader, `layout` is not `VK_NULL_HANDLE`, and the descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the corresponding descriptor set in `layout` **must** match the descriptor type
- VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-07991
If a `resource variable` is declared in a shader as an array and `layout` is not `VK_NULL_HANDLE`, the corresponding descriptor binding used to create `layout` **must** have a `descriptorCount` that is greater than or equal to the length of the array
- VUID-VkExecutionGraphPipelineCreateInfoAMD-None-10391
If a `resource variables` is declared in a shader as an array of descriptors, then the descriptor type of that variable **must** not be `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-11798
If `shader64BitIndexing` feature is not enabled, `flags` **must** not contain `VK_PIPELINE_CREATE_2_64_BIT_INDEXING_BIT_EXT`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-pipelineCreationCacheControl-02878
If the `pipelineCreationCacheControl` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` nor `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-pipelineProtectedAccess-07368
If the `pipelineProtectedAccess` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` nor

VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT

- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-07369
flags must not include both `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` and `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-11311
If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, **layout must** be `VK_NULL_HANDLE`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-11312
If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, all shader variables in the **shader resource interface** with a **DescriptorSet** and **Binding** decoration **must** have a mapping declared in `VkShaderDescriptorSetAndBindingMappingInfoEXT::pMappings`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-03365
flags must not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-03366
flags must not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-03367
flags must not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-03368
flags must not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-03369
flags must not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-03370
flags must not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-03576
flags must not include `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-04945
flags must not include `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-09007
If the `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines` feature is not enabled, **flags must** not include `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-09008
If **flags** includes `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`, then the **pNext chain must** include a pointer to a valid instance of

[VkComputePipelineIndirectBufferInfoNV](#) specifying the address where the pipeline's metadata will be saved

- VUID-VkExecutionGraphPipelineCreateInfoAMDFlags-11007
If **flags** includes [VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT](#), then the [VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands](#) feature **must** be enabled
- VUID-VkExecutionGraphPipelineCreateInfoAMDStage-09128
The **stage** member of any element of **pStages** **must** be [VK_SHADER_STAGE_COMPUTE_BIT](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDpStages-09129
The shader code for the entry point identified by each element of **pStages** and the rest of the state identified by this structure **must** adhere to the pipeline linking rules described in the [Shader Interfaces](#) chapter
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-09130
If **layout** is not [VK_NULL_HANDLE](#), it **must** be [consistent](#) with the layout of the shaders specified in **pStages**
- VUID-VkExecutionGraphPipelineCreateInfoAMDpLibraryInfo-09131
If **pLibraryInfo** is not [NULL](#) and **layout** is not [VK_NULL_HANDLE](#), each element of **pLibraryInfo->pLibraries** **must** have been created with a **layout** that is compatible with the **layout** in this pipeline
- VUID-VkExecutionGraphPipelineCreateInfoAMDLayout-09132
If **layout** is not [VK_NULL_HANDLE](#), the number of resources in **layout** accessible to each shader stage that is used by the pipeline **must** be less than or equal to [VkPhysicalDeviceLimits::maxPerStageResources](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDpLibraryInfo-09133
If **pLibraryInfo** is not [NULL](#), each element of **pLibraryInfo->pLibraries** **must** be either a compute pipeline, an execution graph pipeline, or a graphics pipeline
- VUID-VkExecutionGraphPipelineCreateInfoAMDpLibraryInfo-10181
If **pLibraryInfo** is not [NULL](#), each element of **pLibraryInfo->pLibraries** that is a compute pipeline or a graphics pipeline **must** have been created with [VK_PIPELINE_CREATE_2_EXECUTION_GRAPH_BIT_AMD](#) set
- VUID-VkExecutionGraphPipelineCreateInfoAMDShaderMeshEnqueue-10182
If the **shaderMeshEnqueue** feature is not enabled, and **pLibraryInfo->pLibraries** is not [NULL](#), **pLibraryInfo->pLibraries** **must** not contain any graphics pipelines
- VUID-VkExecutionGraphPipelineCreateInfoAMDpLibraryInfo-10183
Any element of **pLibraryInfo->pLibraries** identifying a graphics pipeline **must** have been created with [all possible state subsets](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDNone-09134
There **must** be no two nodes in the pipeline that share both the same shader name and index, as specified by [VkPipelineShaderStageNodeCreateInfoAMD](#)
- VUID-VkExecutionGraphPipelineCreateInfoAMDNone-09135
There **must** be no two nodes in the pipeline that share the same shader name and have input payload declarations with different sizes
- VUID-VkExecutionGraphPipelineCreateInfoAMDNone-09136

There **must** be no two nodes in the pipeline that share the same name but have different execution models

- VUID-VkExecutionGraphPipelineCreateInfoAMD-09137
There **must** be no two nodes in the pipeline that share the same name where one includes **CoalescedInputCountAMD** and the other does not
- VUID-VkExecutionGraphPipelineCreateInfoAMD-09138
There **must** be no two nodes in the pipeline that share the same name where one includes **StaticNumWorkgroupsAMD** and the other does not
- VUID-VkExecutionGraphPipelineCreateInfoAMD-PayloadNodeNameAMD-09139
If an output payload declared in any shader in the pipeline has a **PayloadNodeNameAMD** decoration with a **Node Name** that matches the shader name of any other node in the graph, the size of the output payload **must** match the size of the input payload in the matching node
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-10184
If **flags** does not include **VK_PIPELINE_CREATE_LIBRARY_BIT_KHR**, and an output payload declared in any shader in the pipeline does not have a **PayloadNodeSparseArrayAMD** decoration, there **must** be a node in the graph corresponding to every index from 0 to its **PayloadNodeArraySizeAMD** decoration
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-12334
flags **must** not include **VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT** nor **VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT**
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-11271
If **VkPipelineCreateFlags2CreateInfoKHR::flags** includes **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT**, all libraries linked to this pipeline **must** also have that flag set
- VUID-VkExecutionGraphPipelineCreateInfoAMD-flags-11272
If **VkPipelineCreateFlags2CreateInfoKHR::flags** does not include **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT**, all libraries linked to this pipeline **must** also not have that flag set
- VUID-VkExecutionGraphPipelineCreateInfoAMD-None-11363
If **VkPipelineCreateFlags2CreateInfoKHR::flags** does not include **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT**, **layout** **must** not be **VK_NULL_HANDLE**

Valid Usage (Implicit)

- VUID-VkExecutionGraphPipelineCreateInfoAMD-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_EXECUTION_GRAPH_PIPELINE_CREATE_INFO_AMD**
- VUID-VkExecutionGraphPipelineCreateInfoAMD-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkPipelineCompilerControlCreateInfoAMD** or **VkPipelineCreationFeedbackCreateInfo**

- `VUID-VkExecutionGraphPipelineCreateInfoAMD-sType-unique`
The `sType` value of each structure in the `pNext` chain **must** be unique
- `VUID-VkExecutionGraphPipelineCreateInfoAMD-pStages-parameter`
If `stageCount` is not `0`, and `pStages` is not `NULL`, `pStages` **must** be a valid pointer to an array of `stageCount` valid `VkPipelineShaderStageCreateInfo` structures
- `VUID-VkExecutionGraphPipelineCreateInfoAMD-pLibraryInfo-parameter`
If `pLibraryInfo` is not `NULL`, `pLibraryInfo` **must** be a valid pointer to a valid `VkPipelineLibraryCreateInfoKHR` structure
- `VUID-VkExecutionGraphPipelineCreateInfoAMD-layout-parameter`
If `layout` is not `VK_NULL_HANDLE`, `layout` **must** be a valid `VkPipelineLayout` handle
- `VUID-VkExecutionGraphPipelineCreateInfoAMD-commonparent`
Both of `basePipelineHandle`, and `layout` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

`VK_SHADER_INDEX_UNUSED_AMD` is a special shader index used to indicate that the created node does not override the index. In this case, the shader index is determined through other means. It is defined as:

```
#define VK_SHADER_INDEX_UNUSED_AMD    (~0U)
```

The `VkPipelineShaderStageNodeCreateInfoAMD` structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkPipelineShaderStageNodeCreateInfoAMD {
    VkStructureType    sType;
    const void*        pNext;
    const char*        pName;
    uint32_t           index;
} VkPipelineShaderStageNodeCreateInfoAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pName` is the shader name to use when creating a node in an execution graph. If `pName` is `NULL`, the name of the entry point specified in SPIR-V is used as the shader name.
- `index` is the shader index to use when creating a node in an execution graph. If `index` is `VK_SHADER_INDEX_UNUSED_AMD` then the original index is used, either as specified by the `ShaderIndexAMD` execution mode, or `0` if that too is not specified.

When included in the `pNext` chain of a `VkPipelineShaderStageCreateInfo` structure, this structure specifies the shader name and shader index of a node when creating an execution graph pipeline. If this structure is omitted, the shader name is set to the name of the entry point in SPIR-V and the shader index is set to `0`.

When dispatching a node from another shader, the name is fixed at pipeline creation, but the index

can be set dynamically. By associating multiple shaders with the same name but different indexes, applications can dynamically select different nodes to execute. Applications **must** ensure each node has a unique name and index.

NOTE

Shaders with the same name **must** be of the same type - e.g. a compute and graphics shader, or even two compute shaders where one is coalescing and the other is not, cannot share the same name.

Valid Usage (Implicit)

- VUID-VkPipelineShaderStageNodeCreateInfoAMD-sType-sType **must** be `VK_STRUCTURE_TYPE_PIPELINE_SHADER_STAGE_NODE_CREATE_INFO_AMD`
- VUID-VkPipelineShaderStageNodeCreateInfoAMD-pName-parameter
If `pName` is not `NULL`, `pName` **must** be a null-terminated UTF-8 string

Structure Chaining

Extends the structure

- `VkPipelineShaderStageCreateInfo`

To query the internal node index for a particular node in an execution graph, call:

```
// Provided by VK_AMD_shader_enqueue
VkResult vkGetExecutionGraphPipelineNodeIndexAMD(
    VkDevice          device,
    VkPipeline        executionGraph,
    const VkPipelineShaderStageNodeCreateInfoAMD* pNodeInfo,
    uint32_t*         pNodeIndex);
```

- `device` is the logical device that `executionGraph` was created on.
- `executionGraph` is the execution graph pipeline to query the internal node index for.
- `pNodeInfo` is a pointer to a `VkPipelineShaderStageNodeCreateInfoAMD` structure identifying the name and index of the node to query.
- `pNodeIndex` is the returned internal node index of the identified node.

Once this function returns, the contents of `pNodeIndex` contain the internal node index of the identified node.

Valid Usage

- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-pNodeInfo-09140
`pNodeInfo->pName` **must** not be `NULL`

- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-pNodeInfo-09141
`pNodeInfo->index` **must** not be `VK_SHADER_INDEX_UNUSED_AMD`
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-executionGraph-09142
There **must** be a node in `executionGraph` with a shader name and index equal to `pNodeInfo->pName` and `pNodeInfo->index`

Valid Usage (Implicit)

- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-executionGraph-parameter
`executionGraph` **must** be a valid `VkPipeline` handle
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-pNodeInfo-parameter
`pNodeInfo` **must** be a valid pointer to a valid `VkPipelineShaderStageNodeCreateInfoAMD` structure
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-pNodeIndex-parameter
`pNodeIndex` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetExecutionGraphPipelineNodeIndexAMD-executionGraph-parent
`executionGraph` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

50.2. Initializing Scratch Memory

Implementations **may** need scratch memory to manage dispatch queues or similar when executing a pipeline graph, and this is explicitly managed by the application.

To query the scratch space required to dispatch an execution graph, call:

```
// Provided by VK_AMD_shader_enqueue
VkResult vkGetExecutionGraphPipelineScratchSizeAMD(
    VkDevice device,
    VkPipeline executionGraph,
    VkExecutionGraphPipelineScratchSizeAMD* pSizeInfo);
```

- **device** is the logical device that **executionGraph** was created on.
- **executionGraph** is the execution graph pipeline to query the scratch space for.
- **pSizeInfo** is a pointer to a **VkExecutionGraphPipelineScratchSizeAMD** structure that will contain the required scratch size.

After this function returns, information about the scratch space required will be returned in **pSizeInfo**.

Valid Usage (Implicit)

- VUID-vkGetExecutionGraphPipelineScratchSizeAMD-device-parameter **device** **must** be a valid **VkDevice** handle
- VUID-vkGetExecutionGraphPipelineScratchSizeAMD-executionGraph-parameter **executionGraph** **must** be a valid **VkPipeline** handle
- VUID-vkGetExecutionGraphPipelineScratchSizeAMD-pSizeInfo-parameter **pSizeInfo** **must** be a valid pointer to a **VkExecutionGraphPipelineScratchSizeAMD** structure
- VUID-vkGetExecutionGraphPipelineScratchSizeAMD-executionGraph-parent **executionGraph** **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

The **VkExecutionGraphPipelineScratchSizeAMD** structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkExecutionGraphPipelineScratchSizeAMD {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        minSize;
    VkDeviceSize        maxSize;
    VkDeviceSize        sizeGranularity;
} VkExecutionGraphPipelineScratchSizeAMD;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **minSize** indicates the minimum scratch space required for dispatching the queried execution graph.
- **maxSize** indicates the maximum scratch space that can be used for dispatching the queried execution graph.
- **sizeGranularity** indicates the granularity at which the scratch space can be increased from **minSize**.

Applications **can** use any amount of scratch memory greater than **minSize** for dispatching a graph, however only the values equal to **minSize** + an integer multiple of **sizeGranularity** will be used. Greater values **may** result in higher performance, up to **maxSize** which indicates the most memory that an implementation can use effectively.

Valid Usage (Implicit)

- VUID-VkExecutionGraphPipelineScratchSizeAMD-sType-sType **must** be **VK_STRUCTURE_TYPE_EXECUTION_GRAPH_PIPELINE_SCRATCH_SIZE_AMD**

To initialize scratch memory for a particular execution graph, call:

```
// Provided by VK_AMD_shader_enqueue
void vkCmdInitializeGraphScratchMemoryAMD(
    VkCommandBuffer          commandBuffer,
    VkPipeline                executionGraph,
    VkDeviceAddress          scratch,
    VkDeviceSize              scratchSize);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **executionGraph** is the execution graph pipeline to initialize the scratch memory for.
- **scratch** is the address of scratch memory to be initialized.
- **scratchSize** is a range in bytes of scratch memory to be initialized.

This command **must** be called before using `scratch` to dispatch the bound execution graph pipeline.

Execution of this command **may** modify any memory locations in the range [`scratch`,`scratch` + `scratchSize`). Accesses to this memory range are performed in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` and `VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT` access flags.

If any portion of `scratch` is modified by any command other than `vkCmdDispatchGraphAMD`, `vkCmdDispatchGraphIndirectAMD`, `vkCmdDispatchGraphIndirectCountAMD`, or `vkCmdInitializeGraphScratchMemoryAMD` with the same execution graph, it **must** be reinitialized for the execution graph again before dispatching against it.

Valid Usage

- VUID-vkCmdInitializeGraphScratchMemoryAMD-scratch-10185
`scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`
- VUID-vkCmdInitializeGraphScratchMemoryAMD-scratchSize-10186
`scratchSize` **must** be greater than or equal to `VkExecutionGraphPipelineScratchSizeAMD::minSize` returned by `vkGetExecutionGraphPipelineScratchSizeAMD` for the bound execution graph pipeline
- VUID-vkCmdInitializeGraphScratchMemoryAMD-scratch-09144
`scratch` **must** be a multiple of 64

Valid Usage (Implicit)

- VUID-vkCmdInitializeGraphScratchMemoryAMD-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdInitializeGraphScratchMemoryAMD-executionGraph-parameter
`executionGraph` **must** be a valid `VkPipeline` handle
- VUID-vkCmdInitializeGraphScratchMemoryAMD-scratch-parameter
`scratch` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdInitializeGraphScratchMemoryAMD-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdInitializeGraphScratchMemoryAMD-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdInitializeGraphScratchMemoryAMD-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdInitializeGraphScratchMemoryAMD-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdInitializeGraphScratchMemoryAMD-bufferlevel

`commandBuffer` **must** be a primary `VkCommandBuffer`

- `VUID-vkCmdInitializeGraphScratchMemoryAMD-commonparent`
Both of `commandBuffer`, and `executionGraph` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	Action

Conditional Rendering

`vkCmdInitializeGraphScratchMemoryAMD` is not affected by [conditional rendering](#)

50.3. Dispatching a Graph

Initial dispatch of an execution graph is done from the host in the same way as any other command, and **can** be used in a similar way to compute dispatch commands, with indirect variants available.

To record an execution graph dispatch, call:

```
// Provided by VK_AMD_shader_enqueue
void vkCmdDispatchGraphAMD(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          scratch,
    VkDeviceSize             scratchSize,
    const VkDispatchGraphCountInfoAMD* pCountInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `scratch` is the address of scratch memory to be used.
- `scratchSize` is a range in bytes of scratch memory to be used.

- **pCountInfo** is a host pointer to a **VkDispatchGraphCountInfoAMD** structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in **pCountInfo** are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched. There are no rasterization order guarantees between separately dispatched graphics nodes, though individual primitives within a single dispatch do adhere to rasterization order. Draw calls executed before or after the execution graph also execute relative to each graphics node with respect to rasterization order.

For this command, all device/host pointers in substructures are treated as host pointers and read only during host execution of this command. Once this command returns, no reference to the original pointers is retained.

Execution of this command **may** modify any memory locations in the range [**scratch**,**scratch** + **scratchSize**). Accesses to this memory range are performed in the **VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT** pipeline stage with the **VK_ACCESS_2_SHADER_STORAGE_READ_BIT** and **VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT** access flags.

This command **captures command buffer state** for mesh nodes similarly to draw commands.

Valid Usage

- VUID-vkCmdDispatchGraphAMD-magFilter-04553
If a **VkSampler** created with **magFilter** or **minFilter** equal to **VK_FILTER_LINEAR**, **reductionMode** equal to **VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE**, and **compareEnable** equal to **VK_FALSE** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT**
- VUID-vkCmdDispatchGraphAMD-magFilter-09598
If a **VkSampler** created with **magFilter** or **minFilter** equal to **VK_FILTER_LINEAR** and **reductionMode** equal to either **VK_SAMPLER_REDUCTION_MODE_MIN** or **VK_SAMPLER_REDUCTION_MODE_MAX** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT**
- VUID-vkCmdDispatchGraphAMD-mipmapMode-04770
If a **VkSampler** created with **mipmapMode** equal to **VK_SAMPLER_MIPMAP_MODE_LINEAR**, **reductionMode** equal to **VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE**, and **compareEnable** equal to **VK_FALSE** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT**
- VUID-vkCmdDispatchGraphAMD-mipmapMode-09599
If a **VkSampler** created with **mipmapMode** equal to **VK_SAMPLER_MIPMAP_MODE_LINEAR** and **reductionMode** equal to either **VK_SAMPLER_REDUCTION_MODE_MIN** or **VK_SAMPLER_REDUCTION_MODE_MAX** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain

VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT

- VUID-vkCmdDispatchGraphAMD-unnormlizedCoordinates-09635

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDispatchGraphAMD-None-08609

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdDispatchGraphAMD-None-08610

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdDispatchGraphAMD-None-08611

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdDispatchGraphAMD-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDispatchGraphAMD-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphAMD-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphAMD-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdDispatchGraphAMD-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdDispatchGraphAMD-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDispatchGraphAMD-filterCubicMinmax-02695
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdDispatchGraphAMD-cubicRangeClamp-09212
If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`
- VUID-vkCmdDispatchGraphAMD-reductionMode-09213
Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`
- VUID-vkCmdDispatchGraphAMD-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`
- VUID-vkCmdDispatchGraphAMD-flags-02696
Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`
- VUID-vkCmdDispatchGraphAMD-OpTypeImage-07027
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphAMD-OpTypeImage-07028
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphAMD-OpTypeImage-07029
For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphAMD-OpTypeImage-07030
Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphAMD-None-08600

If a [a bound shader](#) was created with a pipeline layout and statically uses a set n , a descriptor set **must** have been bound to n at the same pipeline bind point, with layouts compatible for set n with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdDispatchGraphAMDNone-08601

If a [a bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader

- VUID-vkCmdDispatchGraphAMDNone-10068

For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdDispatchGraphAMDNone-08114

Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid if they are accessed as described by [descriptor validity](#) by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDispatchGraphAMD-imageLayout-00344

If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)

- VUID-vkCmdDispatchGraphAMDNone-08115

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDispatchGraphAMDNone-08116

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDispatchGraphAMDNone-08604

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdDispatchGraphAMDNone-08117

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDispatchGraphAMDNone-08119

If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdDispatchGraphAMD-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphAMD-None-08606
If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphAMD-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatchGraphAMD-uniformBuffers-06935
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphAMD-None-08612
If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphAMD-storageBuffers-06936
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphAMD-None-08613
If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphAMD-commandBuffer-02707
If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource
- VUID-vkCmdDispatchGraphAMD-viewType-07752
If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#) **must** match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between](#)

SPIR-V Image Dimensions and Vulkan ImageView Types

- VUID-vkCmdDispatchGraphAMDFormat-07753
If a [VkImageView](#) or [VkBufferView](#) is accessed as a result of this command, then the [numeric type](#) of the view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must** match
- VUID-vkCmdDispatchGraphAMDFormat-OpImageWrite-08795
If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchGraphAMDFormat-OpImageWrite-08796
If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have four components
- VUID-vkCmdDispatchGraphAMDFormat-OpImageWrite-04469
If a [VkBufferView](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchGraphAMDFormat-SampledType-04470
If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64
- VUID-vkCmdDispatchGraphAMDFormat-SampledType-04471
If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdDispatchGraphAMDFormat-SampledType-04472
If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64
- VUID-vkCmdDispatchGraphAMDFormat-SampledType-04473
If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdDispatchGraphAMDFormat-sparseImageInt64Atomics-04474
If the [sparseImageInt64Atomics](#) feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command
- VUID-vkCmdDispatchGraphAMDFormat-sparseImageInt64Atomics-04475
If the [sparseImageInt64Atomics](#) feature is not enabled, [VkBuffer](#) objects created with the [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command

- VUID-vkCmdDispatchGraphAMD-X-OpImageSampleWeightedQCOM-06971
If `OpImageSampleWeightedQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageSampleWeightedQCOM-06972
If `OpImageSampleWeightedQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageBoxFilterQCOM-06973
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageBlockMatchSSDQCOM-06974
If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDispatchGraphAMD-X-OpImageSampleWeightedQCOM-06977
If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageSampleWeightedQCOM-06978
If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphAMD-X-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format

must be a single-component format

- VUID-vkCmdDispatchGraphAMD-X-OpImageBlockMatchWindow-09217

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)

- VUID-vkCmdDispatchGraphAMD-X-None-07288

Any shader invocation executed by this command **must** [terminate](#)

- VUID-vkCmdDispatchGraphAMD-X-None-09600

If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdDispatchGraphAMD-X-commandBuffer-10746

The `VkDeviceMemory` object allocated from a `VkMemoryHeap` with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in `commandBuffer`

- VUID-vkCmdDispatchGraphAMD-X-None-10678

If this command is recorded inside a [tile shading render pass](#) instance, the stages corresponding to the pipeline bind point used by this command **must** only include [VK_SHADER_STAGE_VERTEX_BIT](#), [VK_SHADER_STAGE_FRAGMENT_BIT](#), and/or [VK_SHADER_STAGE_COMPUTE_BIT](#)

- VUID-vkCmdDispatchGraphAMD-X-None-10679

If this command is recorded where [per-tile execution model](#) is enabled, there **must** be no access to any image while the image was be transitioned to the [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout

- VUID-vkCmdDispatchGraphAMD-X-pDescription-09900

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the underlying `VkTensorARM` object **must** have been created with the [VK_TENSOR_USAGE_SHADER_BIT_ARM](#) usage flag set

- VUID-vkCmdDispatchGraphAMD-X-dimensionCount-09905

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via `VkTensorCreateInfoARM::pDescription` when creating the underlying `VkTensorARM` object

- VUID-vkCmdDispatchGraphAMD-X-OpTypeTensorARM-09906

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be [compatible](#) with the `VkFormat` of the `VkTensorViewARM` used for the access

- VUID-vkCmdDispatchGraphAMD-X-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a [OpTypeStruct](#) decorated with [Block](#) or [BufferBlock](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [bufferDescriptorAlignment](#)

- VUID-vkCmdDispatchGraphAMD-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeImage](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [imageDescriptorAlignment](#)

- VUID-vkCmdDispatchGraphAMD-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdDispatchGraphAMD-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdDispatchGraphAMD-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDispatchGraphAMD-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader

accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDispatchGraphAMD-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDispatchGraphAMD-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdDispatchGraphAMD-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDispatchGraphAMD-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDispatchGraphAMD-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdDispatchGraphAMD-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdDispatchGraphAMD-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the

descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDispatchGraphAMD-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDispatchGraphAMD-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDispatchGraphAMD-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of [pBindInfo->reservedRangeSize](#) set for [vkCmdBindSamplerHeapEXT](#) **must** be greater than or equal to [minSamplerHeapReservedRangeWithEmbedded](#)

- VUID-vkCmdDispatchGraphAMD-None-11376

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, and that shader statically uses a push constant value, that value **must** have been set by [vkCmdPushDataEXT](#)

- VUID-vkCmdDispatchGraphAMD-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the access **must** not be [out of bounds](#)

- VUID-vkCmdDispatchGraphAMD-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDispatchGraphAMD-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDispatchGraphAMDNone-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdDispatchGraphAMDNone-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDispatchGraphAMDNone-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdDispatchGraphAMDNone-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdDispatchGraphAMDIndex-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by

`VkSamplerCustomBorderColorIndexCreateInfoEXT`, the value of `VkSamplerCustomBorderColorIndexCreateInfoEXT::index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdDispatchGraphAMD-protectedNoFault-11455

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, the address that the resource is mapped to **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDispatchGraphAMD-protectedNoFault-11456

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the address of the indirect memory **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDispatchGraphAMD-commandBuffer-09181

`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdDispatchGraphAMD-commandBuffer-09182

`commandBuffer` **must** be a primary command buffer

- VUID-vkCmdDispatchGraphAMD-scratch-10192

`scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`

- VUID-vkCmdDispatchGraphAMD-scratchSize-10193

`scratchSize` **must** be greater than or equal to `VkExecutionGraphPipelineScratchSizeAMD::minSize` returned by `vkGetExecutionGraphPipelineScratchSizeAMD` for the bound execution graph pipeline

- VUID-vkCmdDispatchGraphAMD-scratch-09184

`scratch` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMD` or `VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMD` usage flags set

- VUID-vkCmdDispatchGraphAMD-scratch-10194

The device memory range [`scratch`,`scratchSize`] **must** have been initialized with `vkCmdInitializeGraphScratchMemoryAMD` using the bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command

- VUID-vkCmdDispatchGraphAMD-maxComputeWorkGroupCount-09186

Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMD` decoration in the

dispatched node or `maxComputeWorkGroupCount`

- VUID-vkCmdDispatchGraphAMD-mxExecutionGraphShaderPayloadCount-09187
Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads
- VUID-vkCmdDispatchGraphAMD-NodeMaxPayloadsAMD-09188
Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMD` to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each `NodeMaxPayloadsAMD` decoration separately
- VUID-vkCmdDispatchGraphAMD-None-10195
If the bound execution graph pipeline includes draw nodes, this command **must** be called within a render pass instance that is compatible with the graphics pipeline used to create each of those nodes
- VUID-vkCmdDispatchGraphAMD-pCountInfo-09145
`pCountInfo->infos` **must** be a host pointer to a memory allocation at least as large as the product of `count` and `stride`
- VUID-vkCmdDispatchGraphAMD-infos-09146
Host memory locations at indexes in the range [`infos`, `infos` + (`count*stride`)), at a granularity of `stride` **must** contain valid `VkDispatchGraphInfoAMD` structures in the first 24 bytes
- VUID-vkCmdDispatchGraphAMD-pCountInfo-09147
For each `VkDispatchGraphInfoAMD` structure in `pCountInfo->infos`, `payloads` **must** be a host pointer to a memory allocation at least as large as the product of `payloadCount` and `payloadStride`
- VUID-vkCmdDispatchGraphAMD-pCountInfo-09148
For each `VkDispatchGraphInfoAMD` structure in `pCountInfo->infos`, `nodeIndex` **must** be a valid node index in the bound execution graph pipeline, as returned by `vkGetExecutionGraphPipelineNodeIndexAMD`
- VUID-vkCmdDispatchGraphAMD-pCountInfo-09149
For each `VkDispatchGraphInfoAMD` structure in `pCountInfo->infos`, host memory locations at indexes in the range [`payloads`, `payloads` + (`payloadCount * payloadStride`)), at a granularity of `payloadStride` **must** contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphAMD-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDispatchGraphAMD-scratch-parameter
`scratch` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdDispatchGraphAMD-pCountInfo-parameter
`pCountInfo` **must** be a valid pointer to a valid `VkDispatchGraphCountInfoAMD` structure
- VUID-vkCmdDispatchGraphAMD-commandBuffer-recording

`commandBuffer` **must** be in the [recording state](#)

- VUID-vkCmdDispatchGraphAMD-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) operations

- VUID-vkCmdDispatchGraphAMD-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdDispatchGraphAMD-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdDispatchGraphAMD-bufferlevel

`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

`vkCmdDispatchGraphAMD` is affected by [conditional rendering](#)

To record an execution graph dispatch with node and payload parameters read on device, call:

```
// Provided by VK_AMD_shader_enqueue
void vkCmdDispatchGraphIndirectAMD(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          scratch,
    VkDeviceSize             scratchSize,
    const VkDispatchGraphCountInfoAMD* pCountInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `scratch` is the address of scratch memory to be used.

- `scratchSize` is a range in bytes of scratch memory to be used.
- `pCountInfo` is a host pointer to a `VkDispatchGraphCountInfoAMD` structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in `pCountInfo` are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched. There are no rasterization order guarantees between separately dispatched graphics nodes, though individual primitives within a single dispatch do adhere to rasterization order. Draw calls executed before or after the execution graph also execute relative to each graphics node with respect to rasterization order.

For this command, all device/host pointers in substructures are treated as device pointers and read during device execution of this command. The allocation and contents of these pointers only needs to be valid during device execution. All of these addresses will be read in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` access flag.

Execution of this command **may** modify any memory locations in the range [`scratch`, `scratch` + `scratchSize`). Accesses to this memory range are performed in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` and `VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT` access flags.

This command `captures command buffer state` for mesh nodes similarly to draw commands.

Valid Usage

- VUID-vkCmdDispatchGraphIndirectAMD-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`

and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-unnormlizedCoordinates-09635

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDispatchGraphIndirectAMD-None-08609

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdDispatchGraphIndirectAMD-None-08610

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdDispatchGraphIndirectAMD-None-08611

If a `VkSampler` created with `unnormlizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdDispatchGraphIndirectAMD-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdDispatchGraphIndirectAMD-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this

command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDispatchGraphIndirectAMD-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDispatchGraphIndirectAMD-cubicRangeClamp-09212

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`

- VUID-vkCmdDispatchGraphIndirectAMD-reductionMode-09213

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`

- VUID-vkCmdDispatchGraphIndirectAMD-selectableCubicWeights-09214

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`

- VUID-vkCmdDispatchGraphIndirectAMD-flags-02696

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`

- VUID-vkCmdDispatchGraphIndirectAMD-OpTypeImage-07027

For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-OpTypeImage-07028

For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-OpTypeImage-07029

For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-OpTypeImage-07030

Any `VkBufferView` being read as a storage texel buffer where the image format field of

the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-08600
If a `bound shader` was created with a pipeline layout and statically uses a set `n`, a descriptor set **must** have been bound to `n` at the same pipeline bind point, with layouts compatible for set `n` with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-08601
If a `bound shader` was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are `compatible` with the push constant range used to create the shader
- VUID-vkCmdDispatchGraphIndirectAMD-None-10068
For each array of resources that is used by a `bound shader`, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchGraphIndirectAMD-None-08114
Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid if they are accessed as described by `descriptor validity` by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdDispatchGraphIndirectAMD-imageLayout-00344
If an image descriptor is accessed by a shader, the `VkImageLayout` **must** match the subresource accessible from the `VkImageView` as defined by the `image layout matching rules`
- VUID-vkCmdDispatchGraphIndirectAMD-None-08115
If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdBindDescriptorSets`, the bound `VkPipeline` **must** have been created without `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdDispatchGraphIndirectAMD-None-08116
Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdDispatchGraphIndirectAMD-None-08604
Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphIndirectAMD-None-08117
If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdSetDescriptorBufferOffsetsEXT`, the bound `VkPipeline` **must** have been created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdDispatchGraphIndirectAMD-None-08119

If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdDispatchGraphIndirectAMD-None-08605

If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdDispatchGraphIndirectAMD-None-08606

If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdDispatchGraphIndirectAMD-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdDispatchGraphIndirectAMD-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectAMD-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectAMD-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectAMD-None-08613

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-02707

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource

- VUID-vkCmdDispatchGraphIndirectAMD- viewType-07752
If a [VkImageView](#) is accessed as a result of this command, then the image view's **viewType** **must** match the **Dim** operand of the **OpTypeImage** as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)
- VUID-vkCmdDispatchGraphIndirectAMD- format-07753
If a [VkImageView](#) or [VkBufferView](#) is accessed as a result of this command, then the **numeric type** of the view's **format** and the **Sampled Type** operand of the **OpTypeImage** **must** match
- VUID-vkCmdDispatchGraphIndirectAMD- OpImageWrite-08795
If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM](#) is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchGraphIndirectAMD- OpImageWrite-08796
If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM](#) is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have four components
- VUID-vkCmdDispatchGraphIndirectAMD- OpImageWrite-04469
If a [VkBufferView](#) is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchGraphIndirectAMD- SampledType-04470
If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64
- VUID-vkCmdDispatchGraphIndirectAMD- SampledType-04471
If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32
- VUID-vkCmdDispatchGraphIndirectAMD- SampledType-04472
If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64
- VUID-vkCmdDispatchGraphIndirectAMD- SampledType-04473
If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32
- VUID-vkCmdDispatchGraphIndirectAMD- sparseImageInt64Atomics-04474
If the **sparseImageInt64Atomics** feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command
- VUID-vkCmdDispatchGraphIndirectAMD- sparseImageInt64Atomics-04475
If the **sparseImageInt64Atomics** feature is not enabled, [VkBuffer](#) objects created with the [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic

instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command

- VUID-vkCmdDispatchGraphIndirectAMD-OpImageSampleWeightedQCOM-06971
If `OpImageSampleWeightedQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageSampleWeightedQCOM-06972
If `OpImageSampleWeightedQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBoxFilterQCOM-06973
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchSSDQCOM-06974
If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageSampleWeightedQCOM-06977
If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageSampleWeightedQCOM-06978
If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchWindow-09216

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format

- VUID-vkCmdDispatchGraphIndirectAMD-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDispatchGraphIndirectAMD-None-07288
Any shader invocation executed by this command **must** `terminate`
- VUID-vkCmdDispatchGraphIndirectAMD-None-09600
If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-10746
The `VkDeviceMemory` object allocated from a `VkMemoryHeap` with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property that is bound to a resource accessed as a result of this command **must** be the active bound `bound tile memory object` in `commandBuffer`
- VUID-vkCmdDispatchGraphIndirectAMD-None-10678
If this command is recorded inside a `tile shading render pass` instance, the stages corresponding to the pipeline bind point used by this command **must** only include `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT`, and/or `VK_SHADER_STAGE_COMPUTE_BIT`
- VUID-vkCmdDispatchGraphIndirectAMD-None-10679
If this command is recorded where `per-tile execution model` is enabled, there **must** be no access to any image while the image was be transitioned to the `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` layout
- VUID-vkCmdDispatchGraphIndirectAMD-pDescription-09900
If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the underlying `VkTensorARM` object **must** have been created with the `VK_TENSOR_USAGE_SHADER_BIT_ARM` usage flag set
- VUID-vkCmdDispatchGraphIndirectAMD-dimensionCount-09905
If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via `VkTensorCreateInfoARM::pDescription` when creating the underlying `VkTensorARM` object
- VUID-vkCmdDispatchGraphIndirectAMD-OpTypeTensorARM-09906
If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be `compatible` with the `VkFormat` of the `VkTensorViewARM` used for the access

- VUID-vkCmdDispatchGraphIndirectAMD-None-11297
 If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a [OpTypeStruct](#) decorated with [Block](#) or [BufferBlock](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [bufferDescriptorAlignment](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-11298
 If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeImage](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [imageDescriptorAlignment](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-11299
 If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-11397
 If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)
- VUID-vkCmdDispatchGraphIndirectAMD-None-11300
 If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDispatchGraphIndirectAMD-None-11301
 If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#)

using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDispatchGraphIndirectAMD-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDispatchGraphIndirectAMD-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdDispatchGraphIndirectAMD-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDispatchGraphIndirectAMD-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDispatchGraphIndirectAMD-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdDispatchGraphIndirectAMD-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapsEXT](#) commands

- VUID-vkCmdDispatchGraphIndirectAMD-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#)

`uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdDispatchGraphIndirectAMD-None-11373

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdDispatchGraphIndirectAMD-None-11374

If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdDispatchGraphIndirectAMD-pBindInfo-11375

If any `bound shader` uses an embedded sampler via a `descriptor mapping`, the value of `pBindInfo->reservedRangeSize` set for `vkCmdBindSamplerHeapEXT` **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`

- VUID-vkCmdDispatchGraphIndirectAMD-None-11376

If a `bound shader` was created as a `VkShaderEXT` with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag or as part of a pipeline with the `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, and that shader statically uses a push constant value, that value **must** have been set by `vkCmdPushDataEXT`

- VUID-vkCmdDispatchGraphIndirectAMD-None-11398

If a `bound shader` was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the access **must** not be `out of bounds`

- VUID-vkCmdDispatchGraphIndirectAMD-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-vkCmdDispatchGraphIndirectAMD-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDispatchGraphIndirectAMD-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdDispatchGraphIndirectAMD-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDispatchGraphIndirectAMD-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdDispatchGraphIndirectAMD-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdDispatchGraphIndirectAMD-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdDispatchGraphIndirectAMD-proTECTEDNoFault-11455
If **protectedNoFault** is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), the address that the resource is mapped to **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set
- VUID-vkCmdDispatchGraphIndirectAMD-proTECTEDNoFault-11456
If **protectedNoFault** is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), the address of the indirect memory **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set
- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-09181
commandBuffer **must** not be a protected command buffer
- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-09182
commandBuffer **must** be a primary command buffer
- VUID-vkCmdDispatchGraphIndirectAMD-scratch-10192
scratch **must** be the device address of an allocated memory range at least as large as **scratchSize**
- VUID-vkCmdDispatchGraphIndirectAMD-scratchSize-10193
scratchSize **must** be greater than or equal to [VkExecutionGraphPipelineScratchSizeAMD::minSize](#) returned by [vkGetExecutionGraphPipelineScratchSizeAMD](#) for the bound execution graph pipeline
- VUID-vkCmdDispatchGraphIndirectAMD-scratch-09184
scratch **must** be a device address within a [VkBuffer](#) created with the [VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMD](#) or [VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMD](#) usage flags set
- VUID-vkCmdDispatchGraphIndirectAMD-scratch-10194
The device memory range [**scratch**,**scratch** **scratchSize**] **must** have been initialized with [vkCmdInitializeGraphScratchMemoryAMD](#) using the bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command
- VUID-vkCmdDispatchGraphIndirectAMD-maxComputeWorkGroupCount-09186

Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMD` decoration in the dispatched node or `maxComputeWorkGroupCount`

- VUID-vkCmdDispatchGraphIndirectAMD-mxExecutionGraphShaderPayloadCount-09187

Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads

- VUID-vkCmdDispatchGraphIndirectAMD-NodeMaxPayloadsAMD-09188

Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMD` to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each `NodeMaxPayloadsAMD` decoration separately

- VUID-vkCmdDispatchGraphIndirectAMD-None-10195

If the bound execution graph pipeline includes draw nodes, this command **must** be called within a render pass instance that is compatible with the graphics pipeline used to create each of those nodes

- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09150

`pCountInfo->infos` **must** be a device pointer to a memory allocation at least as large as the product of `count` and `stride` when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09151

`pCountInfo->infos` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set

- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09152

`pCountInfo->infos` **must** be a multiple of `executionGraphDispatchAddressAlignment`

- VUID-vkCmdDispatchGraphIndirectAMD-infos-09153

Device memory locations at indexes in the range `[infos, infos + (count*stride))`, at a granularity of `stride` **must** contain valid `VkDispatchGraphInfoAMD` structures in the first 24 bytes when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09154

For each `VkDispatchGraphInfoAMD` structure in `pCountInfo->infos`, `payloads` **must** be a device pointer to a memory allocation at least as large as the product of `payloadCount` and `payloadStride` when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09155

For each `VkDispatchGraphInfoAMD` structure in `pCountInfo->infos`, `payloads` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set

- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09156

For each `VkDispatchGraphInfoAMD` structure in `pCountInfo->infos`, `payloads` **must** be a multiple of `executionGraphDispatchAddressAlignment`

- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09157

For each `VkDispatchGraphInfoAMD` structure in `pCountInfo->infos`, `nodeIndex` **must** be a valid node index in the bound execution graph pipeline, as returned by `vkGetExecutionGraphPipelineNodeIndexAMD` when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-09158

For each [VkDispatchGraphInfoAMD](#) structure in `pCountInfo->infos`, device memory locations at indexes in the range [`payloads`, `payloads + (payloadCount * payloadStride)`], at a granularity of `payloadStride` **must** contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes when this command is executed on the device

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-parameter
`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdDispatchGraphIndirectAMD-scratch-parameter
`scratch` **must** be a valid [VkDeviceAddress](#) value
- VUID-vkCmdDispatchGraphIndirectAMD-pCountInfo-parameter
`pCountInfo` **must** be a valid pointer to a valid [VkDispatchGraphCountInfoAMD](#) structure
- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-recording
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdDispatchGraphIndirectAMD-commandBuffer-cmdpool
The [VkCommandPool](#) that `commandBuffer` was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) operations
- VUID-vkCmdDispatchGraphIndirectAMD-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatchGraphIndirectAMD-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchGraphIndirectAMD-bufferlevel
`commandBuffer` **must** be a primary [VkCommandBuffer](#)

Host Synchronization

- Host access to the [VkCommandPool](#) that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDispatchGraphIndirectAMD is affected by [conditional rendering](#)

To record an execution graph dispatch with all parameters read on device, call:

```
// Provided by VK_AMD_shader_enqueue
void vkCmdDispatchGraphIndirectCountAMD(
    VkCommandBuffer                commandBuffer,
    VkDeviceAddress                 scratch,
    VkDeviceSize                   scratchSize,
    VkDeviceAddress                 countInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `scratch` is the address of scratch memory to be used.
- `scratchSize` is a range in bytes of scratch memory to be used.
- `countInfo` is a device address of a [VkDispatchGraphCountInfoAMD](#) structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in `countInfo` are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched.

For this command, all pointers in substructures are treated as device pointers and read during device execution of this command. The allocation and contents of these pointers only needs to be valid during device execution. All of these addresses will be read in the [VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT](#) pipeline stage with the [VK_ACCESS_2_SHADER_STORAGE_READ_BIT](#) access flag.

Execution of this command **may** modify any memory locations in the range [`scratch`, `scratch + scratchSize`). Accesses to this memory range are performed in the [VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT](#) pipeline stage with the [VK_ACCESS_2_SHADER_STORAGE_READ_BIT](#) and [VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT](#) access flags.

Valid Usage

- VUID-vkCmdDispatchGraphIndirectCountAMD-magFilter-04553
If a [VkSampler](#) created with `magFilter` or `minFilter` equal to [VK_FILTER_LINEAR](#), `reductionMode` equal to [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE](#), and `compareEnable` equal to [VK_FALSE](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's `format features` **must** contain [VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-magFilter-09598
If a [VkSampler](#) created with `magFilter` or `minFilter` equal to [VK_FILTER_LINEAR](#) and

`reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-mipmapMode-04770

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-unnormalizedCoordinates-09635

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08609

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08610

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08611

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features`

must contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdDispatchGraphIndirectCountAMD-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDispatchGraphIndirectCountAMD-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDispatchGraphIndirectCountAMD-cubicRangeClamp-09212

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`

- VUID-vkCmdDispatchGraphIndirectCountAMD-reductionMode-09213

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-selectableCubicWeights-09214

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`

- VUID-vkCmdDispatchGraphIndirectCountAMD-flags-02696

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpTypeImage-07027

For any `VkImageView` being written as a storage image where the image format field of

the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpTypeImage-07028
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpTypeImage-07029
For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpTypeImage-07030
Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08600
If a `bound shader` was created with a pipeline layout and statically uses a set n , a descriptor set **must** have been bound to n at the same pipeline bind point, with layouts compatible for set n with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08601
If a `bound shader` was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are `compatible` with the push constant range used to create the shader
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-10068
For each array of resources that is used by a `bound shader`, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08114
Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid if they are accessed as described by `descriptor validity` by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdDispatchGraphIndirectCountAMD-imageLayout-00344
If an image descriptor is accessed by a shader, the `VkImageLayout` **must** match the subresource accessible from the `VkImageView` as defined by the `image layout matching rules`
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08115
If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdBindDescriptorSets`, the bound `VkPipeline` **must** have been created without `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08116
Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by the

[VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08606
If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatchGraphIndirectCountAMD-uniformBuffers-06935
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08612
If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectCountAMD-storageBuffers-06936
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either

VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or
VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for
storageBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not
access values outside of the range of the buffer as specified in the descriptor set bound to
the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-08613
If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage
corresponding to the pipeline bind point used by this command accesses a storage buffer,
it **must** not access values outside of the range of the buffer as specified in the descriptor
set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-02707
If commandBuffer is an unprotected command buffer and protectedNoFault is not supported,
any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDispatchGraphIndirectCountAMD-viewType-07752
If a VkImageView is accessed as a result of this command, then the image view's viewType
must match the Dim operand of the OpTypeImage as described in Compatibility Between
SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDispatchGraphIndirectCountAMD-format-07753
If a VkImageView or VkBufferView is accessed as a result of this command, then the
numeric type of the view's format and the Sampled Type operand of the OpTypeImage **must**
match
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWrite-08795
If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed
using OpImageWrite as a result of this command, then the Type of the Texel operand of that
instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWrite-08796
If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using
OpImageWrite as a result of this command, then the Type of the Texel operand of that
instruction **must** have four components
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageWrite-04469
If a VkBufferView is accessed using OpImageWrite as a result of this command, then the
Type of the Texel operand of that instruction **must** have at least as many components as
the buffer view's format
- VUID-vkCmdDispatchGraphIndirectCountAMD-SampledType-04470
If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a
result of this command, the SampledType of the OpTypeImage operand of that instruction
must have a Width of 64
- VUID-vkCmdDispatchGraphIndirectCountAMD-SampledType-04471
If a VkImageView with a VkFormat that has a component width less than 64-bit is
accessed as a result of this command, the SampledType of the OpTypeImage operand of that
instruction **must** have a Width of 32
- VUID-vkCmdDispatchGraphIndirectCountAMD-SampledType-04472
If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a
result of this command, the SampledType of the OpTypeImage operand of that instruction

must have a **Width** of 64

- VUID-vkCmdDispatchGraphIndirectCountAMD-SampledType-04473

If a **VkBufferView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdDispatchGraphIndirectCountAMD-sparseImageInt64Atomics-04474

If the **sparseImageInt64Atomics** feature is not enabled, **VkImage** objects created with the **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdDispatchGraphIndirectCountAMD-sparseImageInt64Atomics-04475

If the **sparseImageInt64Atomics** feature is not enabled, **VkBuffer** objects created with the **VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageSampleWeightedQCOM-06971

If **OpImageSampleWeightedQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageSampleWeightedQCOM-06972

If **OpImageSampleWeightedQCOM** uses a **VkImageView** as a sample weight image as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBoxFilterQCOM-06973

If **OpImageBoxFilterQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchSSDQCOM-06974

If **OpImageBlockMatchSSDQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchSADQCOM-06975

If **OpImageBlockMatchSADQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchSADQCOM-06976

If **OpImageBlockMatchSADQCOM** or **OpImageBlockMatchSSDQCOM** is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail **integer texel coordinate validation**

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageSampleWeightedQCOM-06977

If **OpImageSampleWeightedQCOM**, **OpImageBoxFilterQCOM**, **OpImageBlockMatchWindowSSDQCOM**, **OpImageBlockMatchWindowSADQCOM**, **OpImageBlockMatchGatherSSDQCOM**, **OpImageBlockMatchGatherSADQCOM**, **OpImageBlockMatchSSDQCOM**, or **OpImageBlockMatchSADQCOM** uses a **VkSampler** as a result of this command, then the sampler **must** have been created

with [VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM](#)

- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageSampleWeightedQCOM-06978
If any command other than [OpImageSampleWeightedQCOM](#), [OpImageBoxFilterQCOM](#), [OpImageBlockMatchWindowSSDQCOM](#), [OpImageBlockMatchWindowSADQCOM](#), [OpImageBlockMatchGatherSSDQCOM](#), [OpImageBlockMatchGatherSADQCOM](#), [OpImageBlockMatchSSDQCOM](#), or [OpImageBlockMatchSADQCOM](#) uses a [VkSampler](#) as a result of this command, then the sampler **must** not have been created with [VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchWindow-09215
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchWindow-09216
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpImageBlockMatchWindow-09217
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-07288
Any shader invocation executed by this command **must** [terminate](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-09600
If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-10746
The [VkDeviceMemory](#) object allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in [commandBuffer](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-10678
If this command is recorded inside a [tile shading render pass](#) instance, the stages corresponding to the pipeline bind point used by this command **must** only include [VK_SHADER_STAGE_VERTEX_BIT](#), [VK_SHADER_STAGE_FRAGMENT_BIT](#), and/or [VK_SHADER_STAGE_COMPUTE_BIT](#)
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-10679
If this command is recorded where [per-tile execution model](#) is enabled, there **must** be no access to any image while the image was be transitioned to the [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout

- VUID-vkCmdDispatchGraphIndirectCountAMD-pDescription-09900
If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the underlying `VkTensorARM` object **must** have been created with the `VK_TENSOR_USAGE_SHADER_BIT_ARM` usage flag set
- VUID-vkCmdDispatchGraphIndirectCountAMD-dimensionCount-09905
If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via `VkTensorCreateInfoARM::pDescription` when creating the underlying `VkTensorARM` object
- VUID-vkCmdDispatchGraphIndirectCountAMD-OpTypeTensorARM-09906
If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be `compatible` with the `VkFormat` of the `VkTensorViewARM` used for the access
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11297
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11298
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11299
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11397
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`,

[VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDispatchGraphIndirectCountAMD-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of [pBindInfo->reservedRangeSize](#) set for [vkCmdBindSamplerHeapEXT](#) **must** be greater than or equal to [minSamplerHeapReservedRangeWithEmbedded](#)

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11376

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, and that shader statically uses a push constant value, that value **must** have been set by [vkCmdPushDataEXT](#)

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#),

VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT,
VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT,
VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or
VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to minUniformBufferOffsetAlignment

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a

storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdDispatchGraphIndirectCountAMD-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a `VkAccelerationStructureKHR` object via `vkGetAccelerationStructureDeviceAddressKHR` or handle retrieved from a `VkAccelerationStructureNV` object via `vkGetAccelerationStructureHandleNV`

- VUID-vkCmdDispatchGraphIndirectCountAMD-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by `VkSamplerCustomBorderColorIndexCreateInfoEXT`, the value of `VkSamplerCustomBorderColorIndexCreateInfoEXT::index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdDispatchGraphIndirectCountAMD-protectedNoFault-11455

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, the address that the resource is mapped to **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDispatchGraphIndirectCountAMD-protectedNoFault-11456

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the address of the indirect memory **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-09181

`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdDispatchGraphIndirectCountAMD-commandBuffer-09182

`commandBuffer` **must** be a primary command buffer

- VUID-vkCmdDispatchGraphIndirectCountAMD-scratch-10192

`scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`

- VUID-vkCmdDispatchGraphIndirectCountAMD-scratchSize-10193

`scratchSize` **must** be greater than or equal to `VkExecutionGraphPipelineScratchSizeAMD::minSize` returned by `vkGetExecutionGraphPipelineScratchSizeAMD` for the bound execution graph pipeline

- VUID-vkCmdDispatchGraphIndirectCountAMD-scratch-09184
`scratch` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMD` or `VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMD` usage flags set
- VUID-vkCmdDispatchGraphIndirectCountAMD-scratch-10194
The device memory range [`scratch`,`scratch`
`scratchSize`] **must** have been initialized with `vkCmdInitializeGraphScratchMemoryAMD` using the bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command
- VUID-vkCmdDispatchGraphIndirectCountAMD-maxComputeWorkGroupCount-09186
Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMD` decoration in the dispatched node or `maxComputeWorkGroupCount`
- VUID-vkCmdDispatchGraphIndirectCountAMD-maxExecutionGraphShaderPayloadCount-09187
Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads
- VUID-vkCmdDispatchGraphIndirectCountAMD-NodeMaxPayloadsAMD-09188
Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMD` to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each `NodeMaxPayloadsAMD` decoration separately
- VUID-vkCmdDispatchGraphIndirectCountAMD-None-10195
If the bound execution graph pipeline includes draw nodes, this command **must** be called within a render pass instance that is compatible with the graphics pipeline used to create each of those nodes
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09159
`countInfo` **must** be a device pointer to a memory allocation containing a valid `VkDispatchGraphCountInfoAMD` structure when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09160
`countInfo` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09161
`countInfo` **must** be a multiple of `executionGraphDispatchAddressAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09162
`countInfo->infos` **must** be a device pointer to a memory allocation at least as large as the product of `count` and `stride` when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMD-countInfo-09163
`countInfo->infos` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set

- VUID-vkCmdDispatchGraphIndirectCountAMDCountInfo-09164
`countInfo->infos` **must** be a multiple of `executionGraphDispatchAddressAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMDCountInfos-09165
Device memory locations at indexes in the range [`infos`, `infos + (count*stride)`), at a granularity of `stride` **must** contain valid `VkDispatchGraphInfoAMDCount` structures in the first 24 bytes when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMDCountInfo-09166
For each `VkDispatchGraphInfoAMDCount` structure in `countInfo->infos`, `payloads` **must** be a device pointer to a memory allocation at least as large as the product of `payloadCount` and `payloadStride` when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMDCountInfo-09167
For each `VkDispatchGraphInfoAMDCount` structure in `countInfo->infos`, `payloads` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set
- VUID-vkCmdDispatchGraphIndirectCountAMDCountInfo-09168
For each `VkDispatchGraphInfoAMDCount` structure in `countInfo->infos`, `payloads` **must** be a multiple of `executionGraphDispatchAddressAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMDCountInfo-09169
For each `VkDispatchGraphInfoAMDCount` structure in `countInfo->infos`, `nodeIndex` **must** be a valid node index in the bound execution graph pipeline, as returned by `vkGetExecutionGraphPipelineNodeIndexAMDCount` when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMDCountInfo-09170
For each `VkDispatchGraphInfoAMDCount` structure in `countInfo->infos`, device memory locations at indexes in the range [`payloads`, `payloads + (payloadCount * payloadStride)`), at a granularity of `payloadStride` **must** contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes when this command is executed on the device

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphIndirectCountAMDCountCommandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDispatchGraphIndirectCountAMDCountScratch-parameter
`scratch` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdDispatchGraphIndirectCountAMDCountCountInfo-parameter
`countInfo` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdDispatchGraphIndirectCountAMDCountCommandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdDispatchGraphIndirectCountAMDCountCommandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations

- VUID-vkCmdDispatchGraphIndirectCountAMD-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatchGraphIndirectCountAMD-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchGraphIndirectCountAMD-bufferlevel
`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	Action

Conditional Rendering

`vkCmdDispatchGraphIndirectCountAMD` is affected by [conditional rendering](#)

The `VkDeviceOrHostAddressConstAMD` union is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef union VkDeviceOrHostAddressConstAMD {
    VkDeviceAddress    deviceAddress;
    const void*        hostAddress;
} VkDeviceOrHostAddressConstAMD;
```

- `deviceAddress` is a buffer device address as returned by the `vkGetBufferDeviceAddressKHR` command.
- `hostAddress` is a const host memory address.

The `VkDispatchGraphCountInfoAMD` structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkDispatchGraphCountInfoAMD {
    uint32_t count;
    VkDeviceOrHostAddressConstAMDX infos;
    uint64_t stride;
} VkDispatchGraphCountInfoAMD;
```

- **count** is the number of dispatches to perform.
- **infos** is the device or host address of a flat array of **VkDispatchGraphInfoAMD** structures
- **stride** is the byte stride between successive **VkDispatchGraphInfoAMD** structures in **infos**

Whether **infos** is consumed as a device or host pointer is defined by the command this structure is used in.

The **VkDispatchGraphInfoAMD** structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkDispatchGraphInfoAMD {
    uint32_t nodeIndex;
    uint32_t payloadCount;
    VkDeviceOrHostAddressConstAMDX payloads;
    uint64_t payloadStride;
} VkDispatchGraphInfoAMD;
```

- **nodeIndex** is the index of a node in an execution graph to be dispatched.
- **payloadCount** is the number of payloads to dispatch for the specified node.
- **payloads** is a device or host address pointer to a flat array of payloads with size equal to the product of **payloadCount** and **payloadStride**
- **payloadStride** is the byte stride between successive payloads in **payloads**

Whether **payloads** is consumed as a device or host pointer is defined by the command this structure is used in.

Valid Usage

- VUID-VkDispatchGraphInfoAMD-payloadCount-09171
payloadCount **must** be no greater than **maxExecutionGraphShaderPayloadCount**

50.4. Shader Enqueue

Compute shaders in an execution graph **can** use the **OpInitializeNodePayloadsAMD** to initialize nodes for dispatch. Any node payload initialized in this way will be enqueued for dispatch once the shader is done writing to the payload. As compilers **may** be conservative when making this determination, shaders **can** further call **OpFinalizeNodePayloadsAMD** to guarantee that the payload is

no longer being written.

The **Node Name** operand of the **PayloadNodeNameAMD** decoration on a payload identifies the shader name of the node to be enqueued, and the **Shader Index** operand of **OpInitializeNodePayloadsAMD** identifies the shader index. A node identified in this way is dispatched as described in the following sections.

50.4.1. Compute Nodes

Compute shaders added as nodes to an execution graph are executed differently based on the presence or absence of the **StaticNumWorkgroupsAMD** or **CoalescingAMD** execution modes.

Dispatching a compute shader node that does not declare either the **StaticNumWorkgroupsAMD** or **CoalescingAMD** execution mode will execute a number of workgroups in each dimension specified by the first 12 bytes of the payload, interpreted as a **VkDispatchIndirectCommand**. The same payload will be broadcast to each workgroup in the same dispatch. Additional values in the payload are have no effect on execution.

Dispatching a compute shader node with the **StaticNumWorkgroupsAMD** execution mode will execute workgroups in each dimension according to the **x**, **y**, and **z size** operands to the **StaticNumWorkgroupsAMD** execution mode. The same payload will be broadcast to each workgroup in the same dispatch. Any values in the payload have no effect on execution.

Dispatching a compute shader node with the **CoalescingAMD** execution mode will enqueue a single invocation for execution. Implementations **may** combine multiple such dispatches into the same workgroup, up to the size of the workgroup. The number of invocations coalesced into a given workgroup in this way **can** be queried via the **CoalescedInputCountAMD** built-in. Any values in the payload have no effect on execution.

50.4.2. Mesh Nodes

Graphics pipelines added as nodes to an execution graph are executed in a manner similar to a **vkCmdDrawMeshTasksIndirectEXT**, using the same payloads as compute shaders, but capturing some state from the command buffer.

When an execution graph dispatch is recorded into a command buffer, it captures the following dynamic state for use with draw nodes:

- **VK_DYNAMIC_STATE_VIEWPORT**
- **VK_DYNAMIC_STATE_SCISSOR**
- **VK_DYNAMIC_STATE_LINE_WIDTH**
- **VK_DYNAMIC_STATE_DEPTH_BIAS**
- **VK_DYNAMIC_STATE_BLEND_CONSTANTS**
- **VK_DYNAMIC_STATE_DEPTH_BOUNDS**
- **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT**
- **VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT**

- [VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR](#)

Other state is not captured, and graphics pipelines **must** not be created with other dynamic states when used as a library in an execution graph pipeline.

Chapter 51. External Compute Queues

External compute queues are used to join compatible external APIs to a [VkDevice](#), allowing workloads submitted through these external APIs to be executed simultaneously to workloads submitted through Vulkan.

External compute queues are represented by [VkExternalComputeQueueNV](#) handles:

```
// Provided by VK_NV_external_compute_queue
VK_DEFINE_HANDLE(VkExternalComputeQueueNV)
```

To create an external compute queue for use by compatible external APIs call:

```
// Provided by VK_NV_external_compute_queue
VkResult vkCreateExternalComputeQueueNV(
    VkDevice device,
    const VkExternalComputeQueueCreateInfoNV* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkExternalComputeQueueNV* pExternalQueue);
```

- [device](#) is the [VkDevice](#) that the external queue will be a part of.
- [pCreateInfo](#) is a pointer to a [VkExternalComputeQueueCreateInfoNV](#) structure specifying configuration info for creating the external queue.
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.
- [pExternalQueue](#) is a pointer to a [VkExternalComputeQueueNV](#) object that will be filled with the handle for the created external queue.

Valid Usage (Implicit)

- VUID-vkCreateExternalComputeQueueNV-device-parameter [device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkCreateExternalComputeQueueNV-pCreateInfo-parameter [pCreateInfo](#) **must** be a valid pointer to a valid [VkExternalComputeQueueCreateInfoNV](#) structure
- VUID-vkCreateExternalComputeQueueNV-pAllocator-parameter
If [pAllocator](#) is not [NULL](#), [pAllocator](#) **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateExternalComputeQueueNV-pExternalQueue-parameter [pExternalQueue](#) **must** be a valid pointer to a [VkExternalComputeQueueNV](#) handle
- VUID-vkCreateExternalComputeQueueNV-device-queuecount
The device **must** have been created with at least [1](#) queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To destroy a previously created external compute queue call:

```
// Provided by VK_NV_external_compute_queue
void vkDestroyExternalComputeQueueNV(
    VkDevice          device,
    VkExternalComputeQueueNV externalQueue,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the external queue.
- **externalQueue** is the [VkExternalComputeQueueNV](#) to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage (Implicit)

- VUID-vkDestroyExternalComputeQueueNV-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyExternalComputeQueueNV-externalQueue-parameter **externalQueue** **must** be a valid [VkExternalComputeQueueNV](#) handle
- VUID-vkDestroyExternalComputeQueueNV-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyExternalComputeQueueNV-externalQueue-parent **externalQueue** **must** have been created, allocated, or retrieved from **device**

To query the implementation-specific data that must be passed to compatible external APIs during their initialization process call:

```
// Provided by VK_NV_external_compute_queue
void vkGetExternalComputeQueueDataNV(
    VkExternalComputeQueueNV          externalQueue,
    VkExternalComputeQueueDataParamsNV* params,
    void*                              pData);
```

- `externalQueue` is the [VkExternalComputeQueueNV](#) to query the data for.
- `params` is a pointer to a [VkExternalComputeQueueDataParamsNV](#) structure specifying parameters required for retrieval of the implementation-specific data.
- `pData` is a pointer to application-allocated memory in which the requested data will be returned.

Valid Usage

- VUID-vkGetExternalComputeQueueDataNV-pData-08134
`pData` **must** be at least the size specified by the `externalDataSize` field in the [VkPhysicalDeviceExternalComputeQueuePropertiesNV](#) structure

Valid Usage (Implicit)

- VUID-vkGetExternalComputeQueueDataNV-externalQueue-parameter
`externalQueue` **must** be a valid [VkExternalComputeQueueNV](#) handle
- VUID-vkGetExternalComputeQueueDataNV-params-parameter
`params` **must** be a valid pointer to a [VkExternalComputeQueueDataParamsNV](#) structure
- VUID-vkGetExternalComputeQueueDataNV-pData-parameter
`pData` **must** be a pointer value

The [VkExternalComputeQueueDeviceCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_external_compute_queue
typedef struct VkExternalComputeQueueDeviceCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           reservedExternalQueues;
} VkExternalComputeQueueDeviceCreateInfoNV;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `reservedExternalQueues` is the maximum number of external queues an application **can** create at once. This **must** be less than or equal to the `maxExternalQueues` value reported by [VkPhysicalDeviceExternalComputeQueuePropertiesNV](#)

Valid Usage (Implicit)

- VUID-VkExternalComputeQueueDeviceCreateInfoNV-sType-sType **must** be `VK_STRUCTURE_TYPE_EXTERNAL_COMPUTE_QUEUE_DEVICE_CREATE_INFO_NV`

Structure Chaining

Extends the structure

- `VkDeviceCreateInfo`

The `VkExternalComputeQueueCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_external_compute_queue
typedef struct VkExternalComputeQueueCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkQueue             preferredQueue;
} VkExternalComputeQueueCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredQueue` is a `VkQueue` supporting graphics commands.

When creating a `VkExternalComputeQueueNV`, the `preferredQueue` field is a strong scheduling hint as to which `VkQueue` Vulkan graphics workloads will be submitted to with the expectation that execution will overlap with execution of work submitted by the external API.

Valid Usage (Implicit)

- VUID-VkExternalComputeQueueCreateInfoNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_COMPUTE_QUEUE_CREATE_INFO_NV`
- VUID-VkExternalComputeQueueCreateInfoNV-pNext-pNext `pNext` **must** be `NULL`
- VUID-VkExternalComputeQueueCreateInfoNV-preferredQueue-parameter `preferredQueue` **must** be a valid `VkQueue` handle

The `VkExternalComputeQueueDataParamsNV` structure is defined as:

```
// Provided by VK_NV_external_compute_queue
typedef struct VkExternalComputeQueueDataParamsNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           deviceIndex;
} VkExternalComputeQueueDataParamsNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceIndex` is the index of the device within a device group that the data is being queried for. This is ignored if device groups are not utilized.

Valid Usage (Implicit)

- VUID-VkExternalComputeQueueDataParamsNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_COMPUTE_QUEUE_DATA_PARAMS_NV`
- VUID-VkExternalComputeQueueDataParamsNV-pNext-pNext
`pNext` **must** be `NULL`

The `VkPhysicalDeviceExternalComputeQueuePropertiesNV` structure is defined as:

```
// Provided by VK_NV_external_compute_queue
typedef struct VkPhysicalDeviceExternalComputeQueuePropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           externalDataSize;
    uint32_t           maxExternalQueues;
} VkPhysicalDeviceExternalComputeQueuePropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalDataSize` is the minimum size of the memory allocation that applications **can** pass to `vkGetExternalComputeQueueDataNV`.
- `maxExternalQueues` is the maximum number of external queues that an application can create.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalComputeQueuePropertiesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_COMPUTE_QUEUE_PROPERTIES_NV`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

Chapter 52. Data graphs

Data graph pipelines encapsulate computational graphs that operate on whole resources (e.g. tensors). The [graph operations](#) that form these computational graphs are executed by [graph processing engines](#).

52.1. Pipeline Creation

To create data graph pipelines, call:

```
// Provided by VK_ARM_data_graph
VkResult vkCreateDataGraphPipelinesARM(
    VkDevice                device,
    VkDeferredOperationKHR  deferredOperation,
    VkPipelineCache         pipelineCache,
    uint32_t                createInfoCount,
    const VkDataGraphPipelineCreateInfoARM* pCreateInfos,
    const VkAllocationCallbacks* pAllocator,
    VkPipeline*             pPipelines);
```

- **device** is the logical device that creates the data graph pipelines.
- **deferredOperation** is [VK_NULL_HANDLE](#) or the handle of a valid [VkDeferredOperationKHR](#) [request deferral](#) object for this command.
- **pipelineCache** is either [VK_NULL_HANDLE](#), indicating that pipeline caching is disabled; or the handle of a valid [pipeline cache](#) object, in which case use of that cache is enabled for the duration of the command.
- **createInfoCount** is the length of the **pCreateInfos** and **pPipelines** arrays.
- **pCreateInfos** is a pointer to an array of [VkDataGraphPipelineCreateInfoARM](#) structures.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pPipelines** is a pointer to an array of [VkPipeline](#) handles in which the resulting data graph pipelines objects are returned.

The implementation will create a pipeline in each element of **pPipelines** from the corresponding element of **pCreateInfos**. If the creation of any pipeline fails, that pipeline will be set to [VK_NULL_HANDLE](#).

Valid Usage

- VUID-vkCreateDataGraphPipelinesARM-dataGraph-09760
The **dataGraph** feature **must** be enabled
- VUID-vkCreateDataGraphPipelinesARM-device-09927
device **must** support at least one queue family with the [VK_QUEUE_DATA_GRAPH_BIT_ARM](#) capability

- VUID-vkCreateDataGraphPipelinesARM-deferredOperation-09761
`deferredOperation` **must** be `VK_NULL_HANDLE`
- VUID-vkCreateDataGraphPipelinesARM-deferredOperation-09916
If `deferredOperation` is not `VK_NULL_HANDLE`, the `flags` member of elements of `pCreateInfo` **must** not include `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`
- VUID-vkCreateDataGraphPipelinesARM-pNext-09928
If at least one of the `VkDataGraphPipelineCreateInfoARM` includes a `VkDataGraphPipelineIdentifierCreateInfoARM` structure in its `pNext` chain then `pipelineCache` **must** not be `VK_NULL_HANDLE`
- VUID-vkCreateDataGraphPipelinesARM-pipelineCache-09762
If `pipelineCache` was created with `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`, host access to `pipelineCache` **must** be externally synchronized

Valid Usage (Implicit)

- VUID-vkCreateDataGraphPipelinesARM-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateDataGraphPipelinesARM-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCreateDataGraphPipelinesARM-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkCreateDataGraphPipelinesARM-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to an array of `createInfoCount` valid `VkDataGraphPipelineCreateInfoARM` structures
- VUID-vkCreateDataGraphPipelinesARM-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateDataGraphPipelinesARM-pPipelines-parameter
`pPipelines` **must** be a valid pointer to an array of `createInfoCount` `VkPipeline` handles
- VUID-vkCreateDataGraphPipelinesARM-device-queuecount
The device **must** have been created with at least `1` queue
- VUID-vkCreateDataGraphPipelinesARM-createInfoCount-arraylength
`createInfoCount` **must** be greater than `0`
- VUID-vkCreateDataGraphPipelinesARM-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`
- VUID-vkCreateDataGraphPipelinesARM-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- [VK_PIPELINE_COMPILE_REQUIRED_EXT](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkDataGraphPipelineCreateInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineCreateInfoARM {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineCreateFlags2   flags;
    VkPipelineLayout         layout;
    uint32_t                 resourceInfoCount;
    const VkDataGraphPipelineResourceInfoARM* pResourceInfos;
} VkDataGraphPipelineCreateInfoARM;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkPipelineCreateFlagBits2KHR](#) specifying how the pipeline will be generated.
- [layout](#) is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline.
- [resourceInfoCount](#) is the length of the [pResourceInfos](#) array.
- [pResourceInfos](#) is a pointer to an array of [VkDataGraphPipelineResourceInfoARM](#) structures.

Applications **can** create a data graph pipeline entirely from data present in a pipeline cache. This is done by including a [VkDataGraphPipelineIdentifierCreateInfoARM](#) structure in the [pNext](#) chain. If the required data is not found in the pipeline cache, creating the data graph pipeline is not possible and the implementation **must** fail as specified by [VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT](#).

Applications **can** create a data graph pipeline without providing a pipeline cache or shader module by invoking one of the models provided by the implementation. This is done by including [VkDataGraphPipelineBuiltinModelCreateInfoQCOM](#) in the [pNext](#) chain.

When an identifier or built-in model is used to create a data graph pipeline, implementations **may**

fail pipeline creation with [VK_PIPELINE_COMPILE_REQUIRED](#) for any reason.

The data graph engines for this pipeline **can** be selected by including a [VkDataGraphProcessingEngineCreateInfoARM](#) to the [pNext](#) chain of this structure. Otherwise, [VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_DEFAULT_ARM](#) will be used as the sole data graph engine.

The data graph operations that this pipeline uses **must** be supported for the data graph engines selected for this pipeline as retrieved by [vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM](#).

Valid Usage

- VUID-VkDataGraphPipelineCreateInfoARM-pNext-09977

One and only one of the following structures **must** be included in the [pNext](#) chain:

- [VkDataGraphPipelineShaderModuleCreateInfoARM](#)
- [VkDataGraphPipelineIdentifierCreateInfoARM](#)
- [VkDataGraphPipelineBuiltinModelCreateInfoQCOM](#)
- [VkDataGraphPipelineSingleNodeCreateInfoARM](#)

- VUID-VkDataGraphPipelineCreateInfoARM-flags-09764

[flags](#) **may** only contain [VK_PIPELINE_CREATE_2_NO_PROTECTED_ACCESS_BIT_EXT](#), [VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT_EXT](#), [VK_PIPELINE_CREATE_2_DISABLE_OPTIMIZATION_BIT](#), [VK_PIPELINE_CREATE_2_DESCRIPTOR_BUFFER_BIT_EXT](#), [VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_KHR](#) or [VK_PIPELINE_CREATE_2_EARLY_RETURN_ON_FAILURE_BIT_KHR](#)

- VUID-VkDataGraphPipelineCreateInfoARM-flags-09848

If [flags](#) contains [VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT_EXT](#) then a [VkDataGraphPipelineNeuralStatisticsCreateInfoARM](#) structure **must** not be included in the [pNext](#) chain.

- VUID-VkDataGraphPipelineCreateInfoARM-layout-09767

[layout](#) **must** have been created with [pushConstantRangeCount](#) equal to 0 and [pPushConstantRanges](#) equal to [NULL](#)

- VUID-VkDataGraphPipelineCreateInfoARM-dataGraphUpdateAfterBind-09768

If the [dataGraphUpdateAfterBind](#) feature is not enabled, [layout](#) must not use any [VkDescriptorSetLayout](#) object created with the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set

- VUID-VkDataGraphPipelineCreateInfoARM-dataGraphDescriptorBuffer-09885

If the [dataGraphDescriptorBuffer](#) feature is not enabled, [flags](#) **must** not contain [VK_PIPELINE_CREATE_2_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-VkDataGraphPipelineCreateInfoARM-layout-09769

If a [VkDataGraphPipelineShaderModuleCreateInfoARM](#) structure is included in the [pNext](#) chain and a [resource variable](#) is declared in the shader module, the corresponding descriptor binding used to create [layout](#) **must** have a [descriptorType](#) that corresponds to

the type of the [resource variable](#)

- VUID-VkDataGraphPipelineCreateInfoARM-None-11840

If a [VkDataGraphPipelineIdentifierCreateInfoARM](#) or a [VkDataGraphPipelineBuiltinModelCreateInfoQCOM](#) structure is included in the [pNext](#) chain, then [flags](#) **must** contain [VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT](#)

- VUID-VkDataGraphPipelineCreateInfoARM-None-12363

If a [VkDataGraphPipelineIdentifierCreateInfoARM](#) or a [VkDataGraphPipelineBuiltinModelCreateInfoQCOM](#) structure is included in the [pNext](#) chain, then [resourceInfoCount](#) **must** be 0

- VUID-VkDataGraphPipelineCreateInfoARM-resourceInfoCount-12364

If [resourceInfoCount](#) is equal to 0, then [pResourceInfos](#) **must** equal [NULL](#)

- VUID-VkDataGraphPipelineCreateInfoARM-None-12365

If neither a [VkDataGraphPipelineIdentifierCreateInfoARM](#) nor a [VkDataGraphPipelineBuiltinModelCreateInfoQCOM](#) structure are included in the [pNext](#) chain, then [resourceInfoCount](#) **must** be greater than 0

- VUID-VkDataGraphPipelineCreateInfoARM-dataGraphShaderModule-09886

If the [dataGraphShaderModule](#) feature is not enabled, a [VkDataGraphPipelineShaderModuleCreateInfoARM](#) structure **must** not be included in the [pNext](#) chain

- VUID-VkDataGraphPipelineCreateInfoARM-layout-09934

If a [VkDataGraphPipelineShaderModuleCreateInfoARM](#) structure is included in the [pNext](#) chain and an array [resource variable](#) is declared in the shader module, the corresponding descriptor binding used to create [layout](#) **must** have a [descriptorCount](#) that is greater than or equal to the length of the array

- VUID-VkDataGraphPipelineCreateInfoARM-pipelineCreationCacheControl-09871

If the [pipelineCreationCacheControl](#) feature is not enabled, [flags](#) **must** not include [VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_KHR](#) or [VK_PIPELINE_CREATE_2_EARLY_RETURN_ON_FAILURE_BIT_KHR](#)

- VUID-VkDataGraphPipelineCreateInfoARM-pSetLayouts-09770

The descriptor set layouts in [VkPipelineLayoutCreateInfo::pSetLayouts](#) used to create [layout](#) **must** not include any [VkDescriptorSetLayoutBinding](#) whose descriptor type is [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#)

- VUID-VkDataGraphPipelineCreateInfoARM-pipelineProtectedAccess-09772

If the [pipelineProtectedAccess](#) feature is not enabled, [flags](#) **must** not include [VK_PIPELINE_CREATE_2_NO_PROTECTED_ACCESS_BIT_EXT](#) or [VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT_EXT](#)

- VUID-VkDataGraphPipelineCreateInfoARM-flags-09773

[flags](#) **must** not include both [VK_PIPELINE_CREATE_2_NO_PROTECTED_ACCESS_BIT_EXT](#) and [VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT_EXT](#)

- VUID-VkDataGraphPipelineCreateInfoARM-pNext-09804

If the [pNext](#) chain includes an [VkPipelineCreationFeedbackCreateInfo](#) structure, then its [pipelineStageCreationFeedbackCount](#) **must** be 0

- VUID-VkDataGraphPipelineCreateInfoARM-pNext-09948

If a `VkDataGraphProcessingEngineCreateInfoARM` structure is included in the `pNext` chain, each member of `pProcessingEngines` **must** be identical to an `VkQueueFamilyDataGraphPropertiesARM::engine` retrieved from `vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM` with the `physicalDevice` that was used to create `device`

- VUID-VkDataGraphPipelineCreateInfoARM-pNext-09949

If a `VkDataGraphProcessingEngineCreateInfoARM` structure is not included in the `pNext` chain, `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_DEFAULT_ARM` **must** be set in an `VkQueueFamilyDataGraphPropertiesARM::engine` retrieved from `vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM` with the `physicalDevice` that was used to create `device`

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineCreateInfoARM-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_CREATE_INFO_ARM`

- VUID-VkDataGraphPipelineCreateInfoARM-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDataGraphPipelineBuiltinModelCreateInfoQCOM`, `VkDataGraphPipelineCompilerControlCreateInfoARM`, `VkDataGraphPipelineIdentifierCreateInfoARM`, `VkDataGraphPipelineNeuralStatisticsCreateInfoARM`, `VkDataGraphPipelineOpticalFlowCreateInfoARM`, `VkDataGraphPipelineShaderModuleCreateInfoARM`, `VkDataGraphPipelineSingleNodeCreateInfoARM`, `VkDataGraphProcessingEngineCreateInfoARM`, `VkPipelineCreationFeedbackCreateInfo`, or `VkShaderModuleCreateInfo`

- VUID-VkDataGraphPipelineCreateInfoARM-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique

- VUID-VkDataGraphPipelineCreateInfoARM-flags-parameter

`flags` **must** be a valid combination of `VkPipelineCreateFlagBits2` values

- VUID-VkDataGraphPipelineCreateInfoARM-layout-parameter

`layout` **must** be a valid `VkPipelineLayout` handle

- VUID-VkDataGraphPipelineCreateInfoARM-pResourceInfos-parameter

If `resourceInfoCount` is not 0, `pResourceInfos` **must** be a valid pointer to an array of `resourceInfoCount` valid `VkDataGraphPipelineResourceInfoARM` structures

The `VkDataGraphPipelineShaderModuleCreateInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineShaderModuleCreateInfoARM {
    VkStructureType          sType;
    const void*              pNext;
    VkShaderModule           module;
    const char*              pName;
    const VkSpecializationInfo* pSpecializationInfo;
    uint32_t                 constantCount;
    const VkDataGraphPipelineConstantARM* pConstants;
} VkDataGraphPipelineShaderModuleCreateInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **module** is optionally a [VkShaderModule](#) object containing the description of the graph.
- **pName** is a pointer to a null-terminated UTF-8 string specifying the graph entry point name for this pipeline.
- **pSpecializationInfo** is a pointer to a [VkSpecializationInfo](#) structure as described in [Specialization Constants](#), or **NULL**.
- **constantCount** is the length of the **pConstants** array.
- **pConstants** is a pointer to an array of [VkDataGraphPipelineConstantARM](#) structures.

If **module** is not [VK_NULL_HANDLE](#), the pipeline's graph is defined by **module**. If **module** is [VK_NULL_HANDLE](#), the pipeline's graph is defined by the chained [VkShaderModuleCreateInfo](#).

Valid Usage

- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-dataGraphSpecializationConstants-09849
If the **dataGraphSpecializationConstants** feature is not enabled then **pSpecializationInfo** **must** be **NULL** and **module** **must** not contain any **OpSpec*** instructions
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pName-09872
pName **must** be the name of an **OpGraphEntryPointARM** in **module**
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pNext-09873
If the **pNext** chain includes a [VkShaderModuleCreateInfo](#) structure, then **module** **must** be [VK_NULL_HANDLE](#)
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pNext-09874
If the **pNext** chain does not include a [VkShaderModuleCreateInfo](#) structure, then **module** **must** be a valid [VkShaderModule](#)

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-sType-sType

sType **must** be
[VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SHADER_MODULE_CREATE_INFO_ARM](#)

- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-module-parameter
If **module** is not [VK_NULL_HANDLE](#), **module** **must** be a valid [VkShaderModule](#) handle
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pName-parameter
pName **must** be a null-terminated UTF-8 string
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pSpecializationInfo-parameter
If **pSpecializationInfo** is not [NULL](#), **pSpecializationInfo** **must** be a valid pointer to a valid [VkSpecializationInfo](#) structure
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pConstants-parameter
If **constantCount** is not 0, and **pConstants** is not [NULL](#), **pConstants** **must** be a valid pointer to an array of **constantCount** valid [VkDataGraphPipelineConstantARM](#) structures

Structure Chaining

Extends the structure

- [VkDataGraphPipelineCreateInfoARM](#)

The [VkDataGraphPipelineIdentifierCreateInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineIdentifierCreateInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           identifierSize;
    const uint8_t*      pIdentifier;
} VkDataGraphPipelineIdentifierCreateInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **identifierSize** is the size in bytes of the identifier data accessible via **pIdentifier**.
- **pIdentifier** is a pointer to **identifierSize** bytes of data that describe the pipeline being created.

The **pIdentifier** **can** be retrieved from the device by calling [vkGetDataGraphPipelinePropertiesARM](#) and searching the results for a [VkDataGraphPipelinePropertyQueryResultARM](#) structure with **property** set to [VK_DATA_GRAPH_PIPELINE_PROPERTY_IDENTIFIER_ARM](#).

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineIdentifierCreateInfoARM-sType-sType
sType **must** be
[VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_IDENTIFIER_CREATE_INFO_ARM](#)

- VUID-VkDataGraphPipelineIdentifierCreateInfoARM-pIdentifier-parameter **pIdentifier** **must** be a valid pointer to an array of **identifierSize uint8_t** values
- VUID-VkDataGraphPipelineIdentifierCreateInfoARM-identifierSize-arraylength **identifierSize** **must** be greater than 0

Structure Chaining

Extends the structure

- [VkDataGraphPipelineCreateInfoARM](#)

The **VkDataGraphPipelineBuiltinModelCreateInfoQCOM** structure is defined as:

```
// Provided by VK_QCOM_data_graph_model
typedef struct VkDataGraphPipelineBuiltinModelCreateInfoQCOM {
    VkStructureType          sType;
    const void*              pNext;
    const VkPhysicalDeviceDataGraphOperationSupportARM* pOperation;
} VkDataGraphPipelineBuiltinModelCreateInfoQCOM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pOperation** is a [VkPhysicalDeviceDataGraphOperationSupportARM](#) specifying the built-in operation.

The **pipelineCache** is ignored for the creation of this pipeline.

Applications **can** specify arguments to the built-in operation named in **pOperation** with [VkDataGraphPipelineCompilerControlCreateInfoARM](#).

Applications **should** verify that the **pVendorOptions**, **layout**, and other state included with this pipeline creation are compatible with the **pOperation**. Implementations **may** fail if any state is not compatible and return [VK_PIPELINE_COMPILE_REQUIRED](#).

NOTE

Built-in models are defined by the provider of the model, therefore Vulkan does not define model compatibility. The application should refer to the provider of the built-in model for guidance on compatibility.

Valid Usage

- VUID-VkDataGraphPipelineBuiltinModelCreateInfoQCOM-pOperation-11842

All members of **pOperation** **must** be identical to a [VkQueueFamilyDataGraphPropertiesARM::operation](#) retrieved from [vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM](#) with the **physicalDevice** that was used to create **device** and paired in the retrieved results with a

`VkQueueFamilyDataGraphPropertiesARM::engine` identical to an element of `VkDataGraphProcessingEngineCreateInfoARM::pProcessingEngines` provided in the `pNext` chain

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineBuiltinModelCreateInfoQCOM-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_BUILTIN_MODEL_CREATE_INFO_QCOM`
- VUID-VkDataGraphPipelineBuiltinModelCreateInfoQCOM-pOperation-parameter `pOperation` **must** be a valid pointer to a valid `VkPhysicalDeviceDataGraphOperationSupportARM` structure

Structure Chaining

Extends the structure

- `VkDataGraphPipelineCreateInfoARM`

The `VkDataGraphPipelineCompilerControlCreateInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineCompilerControlCreateInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    const char*        pVendorOptions;
} VkDataGraphPipelineCompilerControlCreateInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pVendorOptions` is a null-terminated UTF-8 string specifying implementation-specific options that affect the creation of a data graph pipeline.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineCompilerControlCreateInfoARM-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_COMPILER_CONTROL_CREATE_INFO_ARM`
- VUID-VkDataGraphPipelineCompilerControlCreateInfoARM-pVendorOptions-parameter `pVendorOptions` **must** be a null-terminated UTF-8 string

Structure Chaining

Extends the structure

- [VkDataGraphPipelineCreateInfoARM](#)

The [VkDataGraphPipelineConstantARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineConstantARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           id;
    const void*        pConstantData;
} VkDataGraphPipelineConstantARM;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is a pointer to a structure extending this structure.
- [id](#) is the unique identifier of the graph constant this structure describes.
- [pConstantData](#) is a pointer to the data for this graph constant.

The size and layout of the data pointed to by [pConstantData](#) is specified by a specific structure in the [pNext](#) chain for each type of graph constant.

For graph constants of tensor type, the layout of the data is specified by a [VkTensorDescriptionARM](#) structure. The data **must** be laid out according to the following members of this structure:

- [VkTensorDescriptionARM::tiling](#)
- [VkTensorDescriptionARM::format](#)
- [VkTensorDescriptionARM::dimensionCount](#)
- [VkTensorDescriptionARM::pDimensions](#)
- [VkTensorDescriptionARM::pStrides](#)

The presence of a [VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM](#) structure in the [pNext](#) chain has no impact on the expected layout of the data pointed to by [pConstantData](#).

Valid Usage

- VUID-VkDataGraphPipelineConstantARM-pNext-09775
If the [pNext](#) chain of this structure includes one or more [VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM](#) structures then it **must** also include a [VkTensorDescriptionARM](#) structure
- VUID-VkDataGraphPipelineConstantARM-pNext-09776
If the [pNext](#) chain of this structure includes one or more

`VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM` structures then, for each structure, `VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM::dimension` **must** be less than `VkTensorDescriptionARM::dimensionCount`

- VUID-VkDataGraphPipelineConstantARM-pNext-09777

If the `pNext` chain of this structure includes a `VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM` structure then, for each structure, `VkTensorDescriptionARM::pDimensions` [`VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM::dimension`] **must** be a multiple of `VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM::groupSize`

- VUID-VkDataGraphPipelineConstantARM-pNext-09870

If the `pNext` chain of this structure includes multiple `VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM` structures then no two structures **may** have their `VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM::dimension` member set to the same value

- VUID-VkDataGraphPipelineConstantARM-id-09850

If the `pNext` chain of this structure includes a `VkTensorDescriptionARM` structure, then its `usage` member **must** contain `VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM`

- VUID-VkDataGraphPipelineConstantARM-pNext-09917

If the `pNext` chain of this structure includes a `VkTensorDescriptionARM` structure, then its `tiling` member **must** be `VK_TENSOR_TILING_LINEAR_ARM`

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineConstantARM-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_CONSTANT_ARM`

- VUID-VkDataGraphPipelineConstantARM-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM` or `VkTensorDescriptionARM`

- VUID-VkDataGraphPipelineConstantARM-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique, with the exception of structures of type `VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM`

- VUID-VkDataGraphPipelineConstantARM-pConstantData-parameter

`pConstantData` **must** be a pointer value

The `VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph with VK_ARM_tensors
typedef struct VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           dimension;
    uint32_t           zeroCount;
    uint32_t           groupSize;
} VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **dimension** is the dimension of the tensor along which its data is sparse.
- **zeroCount** is the number of tensor elements that **must** be zero in every group of **groupSize** elements.
- **groupSize** is the number of tensor elements in a group.

NOTE

This extension does not provide applications with a way of knowing which combinations of **dimension**, **zeroCount**, and **groupSize** an implementation **can** take advantage of. Providing sparsity information for a graph constant is always valid and recommended, regardless of the specific combinations an implementation **can** take advantage of. When they **can** not take advantage of the sparsity information, implementations will ignore it and treat the data as dense.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM-sType-sType **must** be [VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_CONSTANT_TENSOR_SEMI_STRUCTURED_SPARSITY_INFO_ARM](#)

Structure Chaining

Extends the structure

- [VkDataGraphPipelineConstantARM](#)

The [VkDataGraphPipelineResourceInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineResourceInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           descriptorSet;
    uint32_t           binding;
    uint32_t           arrayElement;
} VkDataGraphPipelineResourceInfoARM;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **descriptorSet** is the descriptor set number of the resource being described.
- **binding** is the binding number of the resource being described.
- **arrayElement** is the element in the resource array if **descriptorSet** and **binding** identifies an array of resources or **0** otherwise.

Valid Usage

- VUID-VkDataGraphPipelineResourceInfoARM-descriptorSet-09851
If the **pNext** chain of this structure includes a **VkTensorDescriptionARM** structure, then its **usage** **must** contain **VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM**
- VUID-VkDataGraphPipelineResourceInfoARM-descriptorSet-09962
If **descriptorSet** and **binding** identify an image resource or an array of image resources, then a **VkDataGraphPipelineResourceInfoImageLayoutARM** structure **must** be included in the **pNext** chain , unless the **unifiedImageLayouts** feature is enabled

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineResourceInfoARM-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_RESOURCE_INFO_ARM**
- VUID-VkDataGraphPipelineResourceInfoARM-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkDataGraphPipelineResourceInfoImageLayoutARM** or **VkTensorDescriptionARM**
- VUID-VkDataGraphPipelineResourceInfoARM-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique

The **VkDataGraphPipelineResourceInfoImageLayoutARM** structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineResourceInfoImageLayoutARM {
    VkStructureType    sType;
    const void*        pNext;
    VkImageLayout      layout;
} VkDataGraphPipelineResourceInfoImageLayoutARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **layout** specifies the layout that the image subresource accessible from the view provided as a graph pipeline resource **must** be in at the time where the graph pipeline being created is dispatched.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineResourceInfoImageLayoutARM-sType-sType **must** be [VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_RESOURCE_INFO_IMAGE_LAYOUT_ARM](#)
- VUID-VkDataGraphPipelineResourceInfoImageLayoutARM-layout-parameter **layout must** be a valid [VkImageLayout](#) value

Structure Chaining

Extends the structure

- [VkDataGraphPipelineResourceInfoARM](#)

The [VkDataGraphPipelineSingleNodeCreateInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineSingleNodeCreateInfoARM {
    VkStructureType    sType;
    void*              pNext;
    VkDataGraphPipelineNodeTypeARM    nodeType;
    uint32_t           connectionCount;
    const VkDataGraphPipelineSingleNodeConnectionARM* pConnections;
} VkDataGraphPipelineSingleNodeCreateInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **nodeType** is a [VkDataGraphPipelineNodeTypeARM](#) describing the type of this node.
- **connectionCount** is the length of the **pConnections** array.
- **pConnections** is a pointer to an array of **connectionCount**

VkDataGraphPipelineSingleNodeConnectionARM structures.

Valid Usage

- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-nodeType-09963
If `nodeType` is `VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM`, then a `VkDataGraphPipelineOpticalFlowCreateInfoARM` structure **must** be included in the `pNext` chain of this structure
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-nodeType-09978
If `nodeType` is `VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM`, then one and only `VkDataGraphPipelineSingleNodeConnectionARM` structure **must** be present in the `pConnections` array for each of the following values of its `connection` member:
 - `VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_INPUT_ARM`
 - `VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_REFERENCE_ARM`
 - `VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_FLOW_VECTOR_ARM`
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-nodeType-09979
If `nodeType` is `VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM` and `VkDataGraphPipelineOpticalFlowCreateInfoARM::hintGridSize` is not 0, then one and only `VkDataGraphPipelineSingleNodeConnectionARM` structure whose `connection` member is `VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM` **must** be present in the `pConnections` array

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SINGLE_NODE_CREATE_INFO_ARM`
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-nodeType-parameter
`nodeType` **must** be a valid `VkDataGraphPipelineNodeTypeARM` value
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-pConnections-parameter
`pConnections` **must** be a valid pointer to an array of `connectionCount` valid `VkDataGraphPipelineSingleNodeConnectionARM` structures
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-connectionCount-arraylength
`connectionCount` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkDataGraphPipelineCreateInfoARM`

Possible values of [VkDataGraphPipelineNodeTypeARM](#), specifying the type of a data graph pipeline node, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphPipelineNodeTypeARM {
    // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM = 1000631000,
} VkDataGraphPipelineNodeTypeARM;
```

- [VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM](#) corresponds to an [optical flow node](#).

The [VkDataGraphPipelineSingleNodeConnectionARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineSingleNodeConnectionARM {
    VkStructureType          sType;
    void*                    pNext;
    uint32_t                 set;
    uint32_t                 binding;
    VkDataGraphPipelineNodeConnectionTypeARM connection;
} VkDataGraphPipelineSingleNodeConnectionARM;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [set](#) is the descriptor set number of the graph pipeline layout resource to be connected to this connection point.
- [binding](#) is the binding number of the graph pipeline layout resource to be connected to this connection point.
- [connection](#) is a [VkDataGraphPipelineNodeConnectionTypeARM](#) specifying the connection point to link to a graph pipeline layout resource.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSingleNodeConnectionARM-sType-sType **must** be [VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SINGLE_NODE_CONNECTION_ARM](#)
- VUID-VkDataGraphPipelineSingleNodeConnectionARM-pNext-pNext **must** be `NULL`
- VUID-VkDataGraphPipelineSingleNodeConnectionARM-connection-parameter **connection** **must** be a valid [VkDataGraphPipelineNodeConnectionTypeARM](#) value

Possible values of [VkDataGraphPipelineNodeConnectionTypeARM](#), specifying the connection points of a data graph pipeline node, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphPipelineNodeConnectionTypeARM {
    // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_INPUT_ARM = 1000631000,
    // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_REFERENCE_ARM =
1000631001,
    // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM = 1000631002,
    // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_FLOW_VECTOR_ARM =
1000631003,
    // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_COST_ARM = 1000631004,
} VkDataGraphPipelineNodeConnectionTypeARM;
```

- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_INPUT_ARM](#) specifies the connection point for the input image of an optical flow node.
- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_REFERENCE_ARM](#) specifies the connection point for the input reference image of an optical flow node.
- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM](#) specifies the connection point for the optional external hint flow vector map of an optical flow node.
- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_FLOW_VECTOR_ARM](#) specifies the connection point for the output flow vector map of an optical flow node.
- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_COST_ARM](#) specifies the connection point for the optional output cost map of an optical flow node.

The [VkDataGraphPipelineNeuralStatisticsCreateInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph_neural_accelerator_statistics
typedef struct VkDataGraphPipelineNeuralStatisticsCreateInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           allowNeuralStatistics;
} VkDataGraphPipelineNeuralStatisticsCreateInfoARM;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [allowNeuralStatistics](#) specifies whether sessions for the newly created pipeline **may** enable neural statistics reporting.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineNeuralStatisticsCreateInfoARM-sType-sType
[sType](#) **must** be

be

52.2. Sessions

Graph pipelines execute within *data graph pipeline sessions* that provide a context for their execution as well as binding points for the memory they need (e.g. transient storage).

Graph pipeline sessions are represented by [VkDataGraphPipelineSessionARM](#) handles:

```
// Provided by VK_ARM_data_graph
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDataGraphPipelineSessionARM)
```

To create a data graph pipeline session, call

```
// Provided by VK_ARM_data_graph
VkResult vkCreateDataGraphPipelineSessionARM(
    VkDevice device,
    const VkDataGraphPipelineSessionCreateInfoARM* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDataGraphPipelineSessionARM* pSession);
```

- [device](#) is the logical device that creates the data graph pipeline session.
- [pCreateInfo](#) is a pointer to a [VkDataGraphPipelineSessionCreateInfoARM](#) structure.
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.
- [pSession](#) is a pointer to a [VkDataGraphPipelineSessionARM](#) handle in which the resulting data graph pipeline session object is returned.

Valid Usage (Implicit)

- VUID-vkCreateDataGraphPipelineSessionARM-device-parameter [device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkCreateDataGraphPipelineSessionARM-pCreateInfo-parameter [pCreateInfo](#) **must** be a valid pointer to a valid [VkDataGraphPipelineSessionCreateInfoARM](#) structure
- VUID-vkCreateDataGraphPipelineSessionARM-pAllocator-parameter If [pAllocator](#) is not `NULL`, [pAllocator](#) **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure

- VUID-vkCreateDataGraphPipelineSessionARM-pSession-parameter
pSession **must** be a valid pointer to a [VkDataGraphPipelineSessionARM](#) handle
- VUID-vkCreateDataGraphPipelineSessionARM-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkDataGraphPipelineSessionCreateInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineSessionCreateInfoARM {
    VkStructureType          sType;
    const void*              pNext;
    VkDataGraphPipelineSessionCreateFlagsARM flags;
    VkPipeline               dataGraphPipeline;
} VkDataGraphPipelineSessionCreateInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkDataGraphPipelineSessionCreateFlagBitsARM](#) describing additional parameters of the session.
- **dataGraphPipeline** is the [VkPipeline](#) handle of the data graph pipeline for which a session is being created.

Valid Usage

- VUID-VkDataGraphPipelineSessionCreateInfoARM-dataGraphPipeline-09781
dataGraphPipeline **must** have been obtained via a call to [vkCreateDataGraphPipelinesARM](#)
- VUID-VkDataGraphPipelineSessionCreateInfoARM-protectedMemory-09782
If the **protectedMemory** feature is not enabled, **flags** **must** not contain [VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM](#)
- VUID-VkDataGraphPipelineSessionCreateInfoARM-pNext-09852
A [VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM](#) structure **may** only be

included in the `pNext` chain if and only if a `VkDataGraphPipelineNeuralStatisticsCreateInfoARM` structure whose `allowNeuralStatistics` member was `VK_TRUE` was included in the `pNext` chain of the `VkDataGraphPipelineCreateInfoARM` structure used to create `dataGraphPipeline`

- VUID-VkDataGraphPipelineSessionCreateInfoARM-flags-09853
If `flags` contains `VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM` then a `VkDataGraphPipelineNeuralStatisticsCreateInfoARM` structure **must** not be included in the `pNext` chain

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionCreateInfoARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_CREATE_INFO_ARM`
- VUID-VkDataGraphPipelineSessionCreateInfoARM-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM`
- VUID-VkDataGraphPipelineSessionCreateInfoARM-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkDataGraphPipelineSessionCreateInfoARM-flags-parameter
`flags` **must** be a valid combination of `VkDataGraphPipelineSessionCreateFlagBitsARM` values
- VUID-VkDataGraphPipelineSessionCreateInfoARM-dataGraphPipeline-parameter
`dataGraphPipeline` **must** be a valid `VkPipeline` handle

Bits which **can** be set in `VkDataGraphPipelineSessionCreateInfoARM::flags`, specifying additional parameters of a data graph pipeline session, are:

```
// Provided by VK_ARM_data_graph
// Flag bits for VkDataGraphPipelineSessionCreateFlagBitsARM
typedef VkFlags64 VkDataGraphPipelineSessionCreateFlagBitsARM;
static const VkDataGraphPipelineSessionCreateFlagBitsARM
VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM = 0x00000001ULL;
// Provided by VK_ARM_data_graph_optical_flow
static const VkDataGraphPipelineSessionCreateFlagBitsARM
VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_OPTICAL_FLOW_CACHE_BIT_ARM = 0x00000002ULL;
```

- `VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM` specifies that the data graph pipeline session is backed by protected memory.
- `VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_OPTICAL_FLOW_CACHE_BIT_ARM` specifies that the data graph pipeline session has a cache for optical flow operations. Enabling the cache is required for the implementation to use temporal hints.

```
// Provided by VK_ARM_data_graph
typedef VkFlags64 VkDataGraphPipelineSessionCreateFlagsARM;
```

`VkDataGraphPipelineSessionCreateFlagsARM` is a bitmask type for setting a mask of zero or more `VkDataGraphPipelineSessionCreateFlagBitsARM`.

```
// Provided by VK_ARM_data_graph_neural_accelerator_statistics
typedef struct VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM {
    VkStructureType          sType;
    const void*              pNext;
    VkNeuralAcceleratorStatisticsModeARM mode;
} VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mode` is a `VkNeuralAcceleratorStatisticsModeARM` specifying the neural statistics mode for the session being created.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM-sType-sType `sType` must be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_NEURAL_STATISTICS_CREATE_INFO_ARM`
- VUID-VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM-mode-parameter `mode` must be a valid `VkNeuralAcceleratorStatisticsModeARM` value

Structure Chaining

Extends the structure

- `VkDataGraphPipelineSessionCreateInfoARM`

The available values for `VkNeuralAcceleratorStatisticsModeARM` are:

```
// Provided by VK_ARM_data_graph_neural_accelerator_statistics
typedef enum VkNeuralAcceleratorStatisticsModeARM {
    VK_NEURAL_ACCELERATOR_STATISTICS_MODE_DISABLED_ARM = 0,
    VK_NEURAL_ACCELERATOR_STATISTICS_MODE_STATISTICS0_ARM = 1,
    VK_NEURAL_ACCELERATOR_STATISTICS_MODE_STATISTICS1_ARM = 2,
} VkNeuralAcceleratorStatisticsModeARM;
```

- `VK_NEURAL_ACCELERATOR_STATISTICS_MODE_DISABLED_ARM` specifies that neural

accelerator statistics are disabled.

- `VK_NEURAL_ACCELERATOR_STATISTICS_MODE_STATISTICS0_ARM` specifies the `statistics0` mode of operation.
- `VK_NEURAL_ACCELERATOR_STATISTICS_MODE_STATISTICS1_ARM` specifies the `statistics1` mode of operation.

To determine the bind point requirements for a data graph pipeline session, call:

```
// Provided by VK_ARM_data_graph
VkResult vkGetDataGraphPipelineSessionBindPointRequirementsARM(
    VkDevice device,
    const VkDataGraphPipelineSessionBindPointRequirementsInfoARM* pInfo,
    uint32_t* pBindPointRequirementCount,
    VkDataGraphPipelineSessionBindPointRequirementARM* pBindPointRequirements);
```

- `device` is the logical device that owns the data graph pipeline session.
- `pInfo` is a pointer to a `VkDataGraphPipelineSessionBindPointRequirementsInfoARM` structure containing parameters for the bind point requirements query.
- `pBindPointRequirementCount` is a pointer to an integer related to the number of bind point available or queried, as described below.
- `pBindPointRequirements` is either `NULL` or a pointer to an array of `VkDataGraphPipelineSessionBindPointRequirementARM` structures.

If `pBindPointRequirements` is `NULL`, then the number of bind points associated with the data graph pipeline session is returned in `pBindPointRequirementCount`. Otherwise, `pBindPointRequirementCount` **must** point to a variable set by the user to the number of elements in the `pBindPointRequirements` array, and on return the variable is overwritten with the number of structures actually written to `pBindPointRequirements`. If `pBindPointRequirementCount` is less than the number of bind points associated with the data graph pipeline session, at most `pBindPointRequirementCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the required bind points were returned.

Valid Usage

- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-session-09783
The `session` member of `pInfo` **must** have been created with `device`

Valid Usage (Implicit)

- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-pInfo-parameter `pInfo` **must** be a valid pointer to a valid `VkDataGraphPipelineSessionBindPointRequirementsInfoARM` structure

- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-pBindPointRequirementCount-parameter
pBindPointRequirementCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-pBindPointRequirements-parameter
If the value referenced by pBindPointRequirementCount is not 0, and pBindPointRequirements is not NULL, pBindPointRequirements **must** be a valid pointer to an array of pBindPointRequirementCount VkDataGraphPipelineSessionBindPointRequirementARM structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineSessionBindPointRequirementsInfoARM {
    VkStructureType      sType;
    const void*          pNext;
    VkDataGraphPipelineSessionARM session;
} VkDataGraphPipelineSessionBindPointRequirementsInfoARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- session is a VkDataGraphPipelineSessionARM specifying the data graph pipeline session whose bind point requirements are being queried.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionBindPointRequirementsInfoARM-sType-sType
sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_REQUIREMENTS_INFO_ARM
- VUID-VkDataGraphPipelineSessionBindPointRequirementsInfoARM-pNext-pNext
pNext **must** be NULL

- VUID-VkDataGraphPipelineSessionBindPointRequirementsInfoARM-session-parameter **session** **must** be a valid [VkDataGraphPipelineSessionARM](#) handle

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineSessionBindPointRequirementARM {
    VkStructureType          sType;
    void*                    pNext;
    VkDataGraphPipelineSessionBindPointARM    bindPoint;
    VkDataGraphPipelineSessionBindPointTypeARM bindPointType;
    uint32_t                 numObjects;
} VkDataGraphPipelineSessionBindPointRequirementARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **bindPoint** is a [VkDataGraphPipelineSessionBindPointARM](#) specifying the data graph pipeline session bind point being required.
- **bindPointType** is a [VkDataGraphPipelineSessionBindPointTypeARM](#) specifying the type of object required for **bindPoint**.
- **numObjects** is the number of objects required for **bindPoint**.

Implementations **must** always return 1 for **numObjects** if **bindPoint** is one of the following bind points:

- [VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TRANSIENT_ARM](#)
- [VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_NEURAL_ACCELERATOR_STATISTICS_ARM](#)

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionBindPointRequirementARM-sType-sType **must** be [VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_REQUIREMENT_ARM](#)
- VUID-VkDataGraphPipelineSessionBindPointRequirementARM-pNext-pNext **must** be **NULL**

Possible values of [VkDataGraphPipelineSessionBindPointARM](#), specifying the bind point of a data graph pipeline session, are:

```
// Provided by VK_ARM_data_graph
typedef enum VkDataGraphPipelineSessionBindPointARM {
    VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TRANSIENT_ARM = 0,
    // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_OPTICAL_FLOW_CACHE_ARM = 1000631001,
    // Provided by VK_ARM_data_graph_neural_accelerator_statistics
    VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_NEURAL_ACCELERATOR_STATISTICS_ARM =
1000676000,
} VkDataGraphPipelineSessionBindPointARM;
```

- [VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TRANSIENT_ARM](#) corresponds to the transient data produced and consumed during one dispatch of a data graph pipeline in a data graph pipeline session. This transient data is never reused by subsequent dispatches and can safely be clobbered once a [vkCmdDispatchDataGraphARM](#) command completes execution.
- [VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_OPTICAL_FLOW_CACHE_ARM](#) corresponds to the cache for [optical flow operations](#).
- [VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_NEURAL_ACCELERATOR_STATISTICS_ARM](#) corresponds to neural statistics data produced during one dispatch of a data graph pipeline in a data graph pipeline session.

Possible values of [VkDataGraphPipelineSessionBindPointTypeARM](#), specifying the type of a bind point of a data graph pipeline session, are:

```
// Provided by VK_ARM_data_graph
typedef enum VkDataGraphPipelineSessionBindPointTypeARM {
    VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TYPE_MEMORY_ARM = 0,
} VkDataGraphPipelineSessionBindPointTypeARM;
```

- [VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TYPE_MEMORY_ARM](#) corresponds to a memory allocation.

To determine the memory requirements for a data graph pipeline session, call:

```
// Provided by VK_ARM_data_graph
void vkGetDataGraphPipelineSessionMemoryRequirementsARM(
    VkDevice device,
    const VkDataGraphPipelineSessionMemoryRequirementsInfoARM* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- [device](#) is the logical device that owns the data graph pipeline session.
- [pInfo](#) is a pointer to a [VkDataGraphPipelineSessionMemoryRequirementsInfoARM](#) structure containing parameters for the memory requirements query.
- [pMemoryRequirements](#) is a pointer to a [VkMemoryRequirements2](#) structure in which the memory requirements of the data graph pipeline session object are returned.

Valid Usage

- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-session-09950
The `session` member of `pInfo` **must** have been created with `device`
- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-bindPoint-09784
The `bindPoint` member of `pInfo` **must** have been returned as part of a `VkDataGraphPipelineSessionBindPointRequirementARM` whose `bindPointType` member is `VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TYPE_MEMORY_ARM` by a prior call to `vkGetDataGraphPipelineSessionBindPointRequirementsARM` for the `session` member of `pInfo`

Valid Usage (Implicit)

- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkDataGraphPipelineSessionMemoryRequirementsInfoARM` structure
- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-pMemoryRequirements-parameter
`pMemoryRequirements` **must** be a valid pointer to a `VkMemoryRequirements2` structure

The `VkDataGraphPipelineSessionMemoryRequirementsInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineSessionMemoryRequirementsInfoARM {
    VkStructureType          sType;
    const void*              pNext;
    VkDataGraphPipelineSessionARM session;
    VkDataGraphPipelineSessionBindPointARM bindPoint;
    uint32_t                 objectIndex;
} VkDataGraphPipelineSessionMemoryRequirementsInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `session` is the data graph pipeline session to query.
- `bindPoint` is the bind point of a data graph pipeline session for which memory requirements are being queried.
- `objectIndex` is the index of the object whose memory requirements are being queried.

Valid Usage

- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-objectIndex-09855
`objectIndex` **must** be less than the number of objects returned by `vkGetDataGraphPipelineSessionBindPointRequirementsARM` via `VkDataGraphPipelineSessionBindPointRequirementARM::numObjects` with `VkDataGraphPipelineSessionMemoryRequirementsInfoARM::bindPoint` equal to `bindPoint`

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_MEMORY_REQUIREMENTS_INFO_ARM`
- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-session-parameter
`session` **must** be a valid `VkDataGraphPipelineSessionARM` handle
- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-bindPoint-parameter
`bindPoint` **must** be a valid `VkDataGraphPipelineSessionBindPointARM` value

To attach memory to a data graph pipeline session object, call:

```
// Provided by VK_ARM_data_graph
VkResult vkBindDataGraphPipelineSessionMemoryARM(
    VkDevice device,
    uint32_t bindInfoCount,
    const VkBindDataGraphPipelineSessionMemoryInfoARM* pBindInfos);
```

- `device` is the logical device that owns the data graph pipeline session and memory.
- `bindInfoCount` is the length of the `pBindInfos` array.
- `pBindInfos` is a pointer to an array of `VkBindDataGraphPipelineSessionMemoryInfoARM` structures describing graph pipeline sessions and memory to bind.

Valid Usage (Implicit)

- VUID-vkBindDataGraphPipelineSessionMemoryARM-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkBindDataGraphPipelineSessionMemoryARM-pBindInfos-parameter
`pBindInfos` **must** be a valid pointer to an array of `bindInfoCount` valid `VkBindDataGraphPipelineSessionMemoryInfoARM` structures
- VUID-vkBindDataGraphPipelineSessionMemoryARM-bindInfoCount-arraylength

`bindInfoCount` **must** be greater than 0

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkBindDataGraphPipelineSessionMemoryInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkBindDataGraphPipelineSessionMemoryInfoARM {
    VkStructureType          sType;
    const void*              pNext;
    VkDataGraphPipelineSessionARM session;
    VkDataGraphPipelineSessionBindPointARM bindPoint;
    uint32_t                 objectIndex;
    VkDeviceMemory            memory;
    VkDeviceSize              memoryOffset;
} VkBindDataGraphPipelineSessionMemoryInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `session` is the data graph pipeline session to be attached to memory.
- `bindPoint` is the data graph pipeline session bind point to which `memory` is to be attached.
- `objectIndex` is the index of the object for `bindPoint` at which `memory` is to be attached.
- `memory` is a `VkDeviceMemory` object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the data graph pipeline session.

Valid Usage

- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-session-09785
`session` **must** not have been bound to a memory object for `bindPoint`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-bindPoint-09786
`bindPoint` **must** have been returned as part of a `VkDataGraphPipelineSessionBindPointRequirementARM` whose `bindPointType` member is

`VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TYPE_MEMORY_ARM` by a prior call to `vkGetDataGraphPipelineSessionMemoryRequirementsARM` for `session`

- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-memoryOffset-09787
`memoryOffset` **must** be less than the size of `memory`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-memory-09788
`memory` must have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetDataGraphPipelineSessionMemoryRequirementsARM` with `session`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-memoryOffset-09789
`memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetDataGraphPipelineSessionMemoryRequirementsARM` with `session`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-size-09790
The `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetDataGraphPipelineSessionMemoryRequirementsARM` with `session` **must** be less than or equal to the size of `memory` minus `memoryOffset`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-session-09791
If `session` was created with the `VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM` bit set, the session **must** be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-session-09792
If `session` was created with the `VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM` bit not set, the session **must** not be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-objectIndex-09805
`objectIndex` **must** be less than the value of `numObjects` returned by `vkGetDataGraphPipelineSessionBindPointRequirementsARM` for `bindPoint`

Valid Usage (Implicit)

- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_DATA_GRAPH_PIPELINE_SESSION_MEMORY_INFO_ARM`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-session-parameter
`session` **must** be a valid `VkDataGraphPipelineSessionARM` handle
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-bindPoint-parameter
`bindPoint` **must** be a valid `VkDataGraphPipelineSessionBindPointARM` value
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-memory-parameter

memory must be a valid [VkDeviceMemory](#) handle

- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-commonparent
Both of **memory**, and **session** must have been created, allocated, or retrieved from the same [VkDevice](#)

To destroy a data graph pipeline session, call:

```
// Provided by VK_ARM_data_graph
void vkDestroyDataGraphPipelineSessionARM(
    VkDevice                device,
    VkDataGraphPipelineSessionARM session,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the data graph pipeline session.
- **session** is the handle of the data graph pipeline session to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyDataGraphPipelineSessionARM-session-09793
All submitted commands that refer to **session** must have completed execution
- VUID-vkDestroyDataGraphPipelineSessionARM-session-09794
If **VkAllocationCallbacks** were provided when **session** was created, a compatible set of callbacks must be provided here
- VUID-vkDestroyDataGraphPipelineSessionARM-session-09795
If no **VkAllocationCallbacks** were provided when **session** was created, **pAllocator** must be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyDataGraphPipelineSessionARM-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkDestroyDataGraphPipelineSessionARM-session-parameter
session must be a valid [VkDataGraphPipelineSessionARM](#) handle
- VUID-vkDestroyDataGraphPipelineSessionARM-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** must be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyDataGraphPipelineSessionARM-session-parent
session must have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **session** **must** be externally synchronized

52.3. Dispatch

To record a data graph pipeline dispatch, call:

```
// Provided by VK_ARM_data_graph
void vkCmdDispatchDataGraphARM(
    VkCommandBuffer                commandBuffer,
    VkDataGraphPipelineSessionARM  session,
    const VkDataGraphPipelineDispatchInfoARM* pInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **session** is the **VkDataGraphPipelineSessionARM** that data graph pipeline being dispatched will use.
- **pInfo** is **NULL** or a pointer to a **VkDataGraphPipelineDispatchInfoARM** structure.

Valid Usage

- VUID-vkCmdDispatchDataGraphARM-session-09796
For each of the session bind point requirements returned by **vkGetDataGraphPipelineSessionBindPointRequirementsARM** for **session**, **VkDataGraphPipelineSessionBindPointRequirementARM::numObjects** objects **must** have been bound to **session**
- VUID-vkCmdDispatchDataGraphARM-dataGraphPipeline-09951
The **VkPipeline** bound to the pipeline bind point used by this command **must** be identical to the **dataGraphPipeline** used to create **session**
- VUID-vkCmdDispatchDataGraphARM-None-09797
For each set *n* that is statically used by a bound data graph pipeline, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with a **VkPipelineLayout** that is compatible for set *n*, with the **VkPipelineLayout** used to create the current **VkPipeline**, as described in **Pipeline Layout Compatibility**
- VUID-vkCmdDispatchDataGraphARM-None-09935
Descriptors in each bound descriptor set, specified via **vkCmdBindDescriptorSets**, **must** be valid as described by **descriptor validity** if they are statically used by the **VkPipeline** bound to the pipeline bind point used by this command and the bound **VkPipeline** was not created with **VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT**
- VUID-vkCmdDispatchDataGraphARM-None-09936
If the descriptors used by the **VkPipeline** bound to the pipeline bind point were specified via **vkCmdBindDescriptorSets**, the bound **VkPipeline** **must** have been created without **VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT**

- VUID-vkCmdDispatchDataGraphARM-None-09937
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchDataGraphARM-None-09938
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDispatchDataGraphARM-None-09939
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDispatchDataGraphARM-None-09799
A valid data graph pipeline **must** be bound to the [VK_PIPELINE_BIND_POINT_DATA_GRAPH_ARM](#) pipeline bind point used by this command
- VUID-vkCmdDispatchDataGraphARM-pDescription-09930
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the underlying [VkTensorARM](#) object **must** have been created with a [VkTensorCreateInfoARM::pDescription](#) whose [usage](#) member contained [VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM](#)
- VUID-vkCmdDispatchDataGraphARM-pipeline-09940
If the [VkPipeline](#) bound to the pipeline bind point used by this command was created with a [VkDataGraphProcessingEngineCreateInfoARM](#) structure in the [pNext](#) chain of [VkDataGraphPipelineCreateInfoARM](#) that included a foreign data graph processing engine in its [pProcessingEngines](#) member, then all [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptors accessed as a result of this command **must** be [VkTensorARM](#) objects that have been bound to memory allocated with [VkExportMemoryAllocateInfo::handleTypes](#) with set bits that are a subset of the bits in [VkQueueFamilyDataGraphProcessingEnginePropertiesARM::foreignMemoryHandleTypes](#) structure queried via [vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM](#) with a [queueFamilyIndex](#) matching the one the command pool used to create [commandBuffer](#) was created for and an identical [engineType](#), for all the foreign data graph processing engines that were part of the [VkDataGraphProcessingEngineCreateInfoARM](#) used to create the [VkPipeline](#)
- VUID-vkCmdDispatchDataGraphARM-pNext-09952
If the [VkPipeline](#) bound to the pipeline bind point used by this command was created with a [VkDataGraphProcessingEngineCreateInfoARM](#) structure in the [pNext](#) chain of [VkDataGraphPipelineCreateInfoARM](#) that included a foreign data graph processing engine in its [pProcessingEngines](#) member, then all [session](#) bound memory **must** have been allocated with [VkExportMemoryAllocateInfo::handleTypes](#) with set bits that are a subset of the bits in [VkQueueFamilyDataGraphProcessingEnginePropertiesARM::foreignMemoryHandleTypes](#) structure queried via

`vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM` with a `queueFamilyIndex` matching the one the command pool used to create `commandBuffer` was created for and an identical `engineType`, for all the foreign data graph processing engines that were part of the `VkDataGraphProcessingEngineCreateInfoARM` used to create the `VkPipeline`

- VUID-vkCmdDispatchDataGraphARM-commandBuffer-09800

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound data graph pipelines **must** not be a protected resource

- VUID-vkCmdDispatchDataGraphARM-commandBuffer-09801

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, any resource written to by the `VkPipeline` object bound to the bind point used by this command **must** not be an unprotected resource

- VUID-vkCmdDispatchDataGraphARM-commandBuffer-09941

All the operations used by the bound data graph pipeline **must** be supported on the queue family for which the command pool out of which `commandBuffer` was allocated, as reported by `vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM`

- VUID-vkCmdDispatchDataGraphARM-pInfo-09964

If `pInfo` is not `NULL` and its `pNext` chain includes a `VkDataGraphPipelineOpticalFlowDispatchInfoARM` structure, then the `flags` member of that latter structure **must** not contain `VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_UNCHANGED_BIT_ARM`, `VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_UNCHANGED_BIT_ARM`, `VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_IS_PREVIOUS_REFERENCE_BIT_ARM`, or `VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_IS_PREVIOUS_INPUT_BIT_ARM` if `session` was not created with `VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_OPTICAL_FLOW_CACHE_BIT_ARM`

- VUID-vkCmdDispatchDataGraphARM-nodeType-09980

If the `VkPipeline` bound to the `VK_PIPELINE_BIND_POINT_DATA_GRAPH_ARM` pipeline bind point was not created with a `VkDataGraphPipelineSingleNodeCreateInfoARM` structure whose `nodeType` member is `VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM` included in the `pNext` chain of `VkDataGraphPipelineCreateInfoARM`, then a `VkDataGraphPipelineOpticalFlowDispatchInfoARM` structure **must** not be included in the `pNext` chain of `pInfo`

- VUID-vkCmdDispatchDataGraphARM-nodeType-09981

If the `VkPipeline` bound to the `VK_PIPELINE_BIND_POINT_DATA_GRAPH_ARM` pipeline bind point was created with a `VkDataGraphPipelineSingleNodeCreateInfoARM` structure whose `nodeType` member is `VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM` included in the `pNext` chain of `VkDataGraphPipelineCreateInfoARM`, then all image subresources that are accessed via a connection point in `VkDataGraphPipelineSingleNodeCreateInfoARM::pConnections` **must** be in the layout specified by the `layout` member of the `VkDataGraphPipelineResourceInfoImageLayoutARM` that extends the `VkDataGraphPipelineResourceInfoARM` structure whose `descriptorSet` and `binding`

members match the **set** and **binding** members of the [VkDataGraphPipelineSingleNodeConnectionARM](#) structure for the connection point , unless the **unifiedImageLayouts** feature is enabled, in which case they **may** be in the [VK_IMAGE_LAYOUT_GENERAL](#) layout

Valid Usage (Implicit)

- VUID-vkCmdDispatchDataGraphARM-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdDispatchDataGraphARM-session-parameter **session** **must** be a valid [VkDataGraphPipelineSessionARM](#) handle
- VUID-vkCmdDispatchDataGraphARM-pInfo-parameter
If **pInfo** is not **NULL**, **pInfo** **must** be a valid pointer to a valid [VkDataGraphPipelineDispatchInfoARM](#) structure
- VUID-vkCmdDispatchDataGraphARM-commandBuffer-recording **commandBuffer** **must** be in the **recording state**
- VUID-vkCmdDispatchDataGraphARM-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_DATA_GRAPH_BIT_ARM](#) operations
- VUID-vkCmdDispatchDataGraphARM-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDispatchDataGraphARM-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatchDataGraphARM-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchDataGraphARM-commonparent
Both of **commandBuffer**, and **session** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_DATA_GRAPH_BIT_ARM	Action

Conditional Rendering

vkCmdDispatchDataGraphARM is affected by [conditional rendering](#)

The [VkDataGraphPipelineDispatchInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineDispatchInfoARM {
    VkStructureType          sType;
    void*                    pNext;
    VkDataGraphPipelineDispatchFlagsARM flags;
} VkDataGraphPipelineDispatchInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkDataGraphPipelineDispatchFlagBitsARM](#) describing additional parameters of the dispatch.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineDispatchInfoARM-sType-sType
sType must be [VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_DISPATCH_INFO_ARM](#)
- VUID-VkDataGraphPipelineDispatchInfoARM-pNext-pNext
pNext must be **NULL** or a pointer to a valid instance of [VkDataGraphPipelineOpticalFlowDispatchInfoARM](#)
- VUID-VkDataGraphPipelineDispatchInfoARM-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkDataGraphPipelineDispatchInfoARM-flags-zero-bitmask
flags must be 0

Bits which **can** be set in [VkDataGraphPipelineDispatchInfoARM::flags](#), specifying additional parameters of a data graph pipeline dispatch, are:

```
// Provided by VK_ARM_data_graph
// Flag bits for VkDataGraphPipelineDispatchFlagBitsARM
typedef VkFlags64 VkDataGraphPipelineDispatchFlagBitsARM;
```

```
// Provided by VK_ARM_data_graph
typedef VkFlags64 VkDataGraphPipelineDispatchFlagsARM;
```

`VkDataGraphPipelineDispatchFlagsARM` is a bitmask type for setting a mask of zero or more `VkDataGraphPipelineDispatchFlagBitsARM`.

52.4. Properties

To query the properties of a data graph pipeline that can be obtained, call:

```
// Provided by VK_ARM_data_graph
VkResult vkGetDataGraphPipelineAvailablePropertiesARM(
    VkDevice device,
    const VkDataGraphPipelineInfoARM* pPipelineInfo,
    uint32_t* pPropertiesCount,
    VkDataGraphPipelinePropertyARM* pProperties);
```

- `device` is the logical device that created the data graph pipeline.
- `pPipelineInfo` is a `VkDataGraphPipelineInfoARM` that describes the `VkPipeline` being queried.
- `pPropertiesCount` is a pointer to an integer related to the number of properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDataGraphPipelinePropertyARM` enums.

If `pProperties` is `NULL`, then the number of properties associated with the data graph pipeline is returned in `pPropertiesCount`. Otherwise, `pPropertiesCount` **must** point to a variable set by the user to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of enums actually written to `pProperties`. If `pPropertiesCount` is less than the number of properties associated with the data graph pipeline, at most `pPropertiesCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

Valid Usage

- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-dataGraphPipeline-09888
The `dataGraphPipeline` member of `pPipelineInfo` **must** have been created with `device`

Valid Usage (Implicit)

- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-pPipelineInfo-parameter **pPipelineInfo** **must** be a valid pointer to a valid [VkDataGraphPipelineInfoARM](#) structure
- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-pPropertiesCount-parameter **pPropertiesCount** **must** be a valid pointer to a [uint32_t](#) value
- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-pProperties-parameter
If the value referenced by **pPropertiesCount** is not 0, and **pProperties** is not **NULL**, **pProperties** **must** be a valid pointer to an array of **pPropertiesCount** [VkDataGraphPipelinePropertyARM](#) values

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To query properties of a data graph pipeline, call:

```
// Provided by VK_ARM_data_graph
VkResult vkGetDataGraphPipelinePropertiesARM(
    VkDevice device,
    const VkDataGraphPipelineInfoARM* pPipelineInfo,
    uint32_t propertiesCount,
    VkDataGraphPipelinePropertyQueryResultARM* pProperties);
```

- **device** is the logical device that created the data graph pipeline.
- **pPipelineInfo** is a [VkDataGraphPipelineInfoARM](#) that describes the [VkPipeline](#) being queried.
- **propertiesCount** is the length of the **pProperties** array.
- **pProperties** is a pointer to an array of [VkDataGraphPipelinePropertyQueryResultARM](#) structures.

Valid Usage

- VUID-vkGetDataGraphPipelinePropertiesARM-dataGraphPipeline-09802
The `dataGraphPipeline` member of `pPipelineInfo` **must** have been created with `device`
- VUID-vkGetDataGraphPipelinePropertiesARM-pProperties-09889
There **must** not be two or more structures in the `pProperties` array with the same `VkDataGraphPipelinePropertyQueryResultARM::property`
- VUID-vkGetDataGraphPipelinePropertiesARM-pProperties-09856
If `pProperties` includes a `VkDataGraphPipelinePropertyQueryResultARM` whose `property` member is `VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_STATISTICS_INFO_ARM` then `dataGraphPipeline` **must** have been created with a `VkDataGraphPipelineNeuralStatisticsCreateInfoARM` whose `allowNeuralStatistics` member was `VK_TRUE` included in the `pNext` chain of `VkDataGraphPipelineCreateInfoARM`.

Valid Usage (Implicit)

- VUID-vkGetDataGraphPipelinePropertiesARM-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDataGraphPipelinePropertiesARM-pPipelineInfo-parameter
`pPipelineInfo` **must** be a valid pointer to a valid `VkDataGraphPipelineInfoARM` structure
- VUID-vkGetDataGraphPipelinePropertiesARM-pProperties-parameter
`pProperties` **must** be a valid pointer to an array of `propertiesCount` `VkDataGraphPipelinePropertyQueryResultARM` structures
- VUID-vkGetDataGraphPipelinePropertiesARM-propertiesCount-arraylength
`propertiesCount` **must** be greater than `0`

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkDataGraphPipelineInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline         dataGraphPipeline;
} VkDataGraphPipelineInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataGraphPipeline` is a `VkPipeline` handle.

Valid Usage

- VUID-VkDataGraphPipelineInfoARM-dataGraphPipeline-09803
`dataGraphPipeline` **must** have been created with `vkCreateDataGraphPipelinesARM`

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineInfoARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_INFO_ARM`
- VUID-VkDataGraphPipelineInfoARM-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDataGraphPipelineInfoARM-dataGraphPipeline-parameter
`dataGraphPipeline` **must** be a valid `VkPipeline` handle

The `VkDataGraphPipelinePropertyQueryResultARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelinePropertyQueryResultARM {
    VkStructureType    sType;
    void*              pNext;
    VkDataGraphPipelinePropertyARM    property;
    VkBool32           isText;
    size_t             dataSize;
    void*              pData;
} VkDataGraphPipelinePropertyQueryResultARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `property` is a `VkDataGraphPipelinePropertyARM` specifying the property of the data graph pipeline being queried.
- `isText` specifies whether the returned data is text or opaque data. If `isText` is `VK_TRUE` then the

data returned in `pData` is text and guaranteed to be a null-terminated UTF-8 string.

- `dataSize` is an integer related to the size, in bytes, of the data, as described below.
- `pData` is either `NULL` or a pointer to a block of memory into which the implementation will return the property data.

If `pData` is `NULL`, then the size, in bytes, of the property data is returned in `dataSize`. Otherwise, `dataSize` must be the size of the buffer, in bytes, pointed to by `pData` and on return `dataSize` is overwritten with the number of bytes of data actually written to `pData` including any trailing NUL character. If `dataSize` is less than the size, in bytes, of the property data, at most `dataSize` bytes of data will be written to `pData`, and `VK_INCOMPLETE` will be returned by `vkGetDataGraphPipelinePropertiesARM` instead of `VK_SUCCESS`, to indicate that not all the available property data was returned. If `isText` is `VK_TRUE` and `pData` is not `NULL` and `dataSize` is not zero, the last byte written to `pData` will be a NUL character.

Valid Usage (Implicit)

- `VUID-VkDataGraphPipelinePropertyQueryResultARM-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_PROPERTY_QUERY_RESULT_ARM`
- `VUID-VkDataGraphPipelinePropertyQueryResultARM-pNext-pNext`
`pNext` **must** be `NULL`
- `VUID-VkDataGraphPipelinePropertyQueryResultARM-property-parameter`
`property` **must** be a valid `VkDataGraphPipelinePropertyARM` value
- `VUID-VkDataGraphPipelinePropertyQueryResultARM-pData-parameter`
If `dataSize` is not 0, and `pData` is not `NULL`, `pData` **must** be a valid pointer to an array of `dataSize` bytes

Possible values of `VkDataGraphPipelinePropertyQueryResultARM::property`, specifying the property of the data graph pipeline being queried, are:

```
// Provided by VK_ARM_data_graph
typedef enum VkDataGraphPipelinePropertyARM {
    VK_DATA_GRAPH_PIPELINE_PROPERTY_CREATION_LOG_ARM = 0,
    VK_DATA_GRAPH_PIPELINE_PROPERTY_IDENTIFIER_ARM = 1,
    // Provided by VK_ARM_data_graph_neural_accelerator_statistics
    VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_DEBUG_DATABASE_ARM =
1000676000,
    // Provided by VK_ARM_data_graph_neural_accelerator_statistics
    VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_STATISTICS_INFO_ARM =
1000676001,
} VkDataGraphPipelinePropertyARM;
```

- `VK_DATA_GRAPH_PIPELINE_PROPERTY_CREATION_LOG_ARM` corresponds to a human-readable log produced during the creation of a data graph pipeline. It **may** contain information about errors encountered during the creation or other information generally useful for

debugging. This property **can** be queried for any data graph pipeline.

- [VK_DATA_GRAPH_PIPELINE_PROPERTY_IDENTIFIER_ARM](#) corresponds to an opaque identifier for the data graph pipeline. It **can** be used to create a graph pipeline from a pipeline cache without the need to provide any creation data beyond the identifier, using a [VkDataGraphPipelineIdentifierCreateInfoARM](#) structure.
- [VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_DEBUG_DATABASE_ARM](#) corresponds to opaque debug information that **can** be queried for any data graph pipeline.
- [VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_STATISTICS_INFO_ARM](#) corresponds to opaque information about neural statistics that **can** be queried for any data graph pipeline that was created with a [VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM](#) structure whose `allowNeuralStatistics` was `VK_TRUE` included in the `pNext` chain of [VkDataGraphPipelineCreateInfoARM](#).

52.5. Processing Engines

Data graph pipelines execute on one or more *data graph processing engines*. Each queue family of a [VkPhysicalDevice](#) that supports [VK_QUEUE_DATA_GRAPH_BIT_ARM](#) **may** provide access to processing engines. Processing engines **may** be *foreign*. Foreign processing engines require the use of external memory and semaphores to exchange data and synchronize with data graph pipelines that target them. Each processing engine **may** support a selection of [graph operations](#). There exists a *default processing engine* that enables implementations to support some operations without tying support to specific processing engines. This allows implementations to avoid being specific about the processing engines that they use internally or to remove the necessity for applications to choose the specific processing engine used to execute a given set of operations.

To query the properties of a data graph processing engine for a specific queue family of a physical device, call:

```
// Provided by VK_ARM_data_graph
void vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM*
    pQueueFamilyDataGraphProcessingEngineInfo,
    VkQueueFamilyDataGraphProcessingEnginePropertiesARM*
    pQueueFamilyDataGraphProcessingEngineProperties);
```

- `physicalDevice` is the physical device to query.
- `pQueueFamilyDataGraphProcessingEngineInfo` is a pointer to a [VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM](#) structure that specifies the data graph processing engine and queue family to query.
- `pQueueFamilyDataGraphProcessingEngineProperties` is a pointer to a [VkQueueFamilyDataGraphProcessingEnginePropertiesARM](#) structure in which the queries properties are returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM-physicalDevice-parameter
physicalDevice must be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM-pQueueFamilyDataGraphProcessingEngineInfo-parameter
pQueueFamilyDataGraphProcessingEngineInfo must be a valid pointer to a valid [VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM](#) structure
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM-pQueueFamilyDataGraphProcessingEngineProperties-parameter
pQueueFamilyDataGraphProcessingEngineProperties must be a valid pointer to a [VkQueueFamilyDataGraphProcessingEnginePropertiesARM](#) structure

The [VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 queueFamilyIndex;
    VkPhysicalDeviceDataGraphProcessingEngineTypeARM engineType;
} VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **queueFamilyIndex** specifies the queue family being queried.
- **engineType** is a [VkPhysicalDeviceDataGraphProcessingEngineTypeARM](#) specifying the engine type whose properties are being queried.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_QUEUE_FAMILY_DATA_GRAPH_PROCESSING_ENGINE_INFO_ARM](#)
- VUID-VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM-pNext-pNext
pNext must be `NULL`
- VUID-VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM-engineType-parameter
engineType must be a valid [VkPhysicalDeviceDataGraphProcessingEngineTypeARM](#) value

The [VkQueueFamilyDataGraphProcessingEnginePropertiesARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkQueueFamilyDataGraphProcessingEnginePropertiesARM {
    VkStructureType          sType;
    void*                    pNext;
    VkExternalSemaphoreHandleTypeFlags  foreignSemaphoreHandleTypes;
    VkExternalMemoryHandleTypeFlags    foreignMemoryHandleTypes;
} VkQueueFamilyDataGraphProcessingEnginePropertiesARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **foreignSemaphoreHandleTypes** is a [VkExternalSemaphoreHandleTypeFlags](#) that describes the external semaphore handle types supported by a foreign data graph processing engine.
- **foreignMemoryHandleTypes** is a [VkExternalMemoryHandleTypeFlags](#) that describes the external memory handle types supported by a foreign data graph processing engine.

Valid Usage (Implicit)

- VUID-VkQueueFamilyDataGraphProcessingEnginePropertiesARM-sType-sType **must** be [VK_STRUCTURE_TYPE_QUEUE_FAMILY_DATA_GRAPH_PROCESSING_ENGINE_PROPERTIES_ARM](#)
- VUID-VkQueueFamilyDataGraphProcessingEnginePropertiesARM-pNext-pNext **must** be **NULL**

The [VkPhysicalDeviceDataGraphProcessingEngineARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkPhysicalDeviceDataGraphProcessingEngineARM {
    VkPhysicalDeviceDataGraphProcessingEngineTypeARM  type;
    VkBool32                                           isForeign;
} VkPhysicalDeviceDataGraphProcessingEngineARM;
```

- **type** is a [VkPhysicalDeviceDataGraphProcessingEngineTypeARM](#) that specifies the type of the processing engine.
- **isForeign** specifies whether the processing engine is foreign.

The defined data graph processing engines are:

```
// Provided by VK_ARM_data_graph
typedef enum VkPhysicalDeviceDataGraphProcessingEngineTypeARM {
    VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_DEFAULT_ARM = 0,
    // Provided by VK_QCOM_data_graph_model
    VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM = 1000629000,
    // Provided by VK_QCOM_data_graph_model
    VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM = 1000629001,
} VkPhysicalDeviceDataGraphProcessingEngineTypeARM;
```

- `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_DEFAULT_ARM` corresponds to the default data graph processing engine.
- `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM` specifies an engine that specializes in neural processing.
- `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM` specifies an engine that uses compute processing to execute data graphs.

The `VkDataGraphProcessingEngineCreateInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphProcessingEngineCreateInfoARM {
    VkStructureType                sType;
    const void*                    pNext;
    uint32_t                       processingEngineCount;
    VkPhysicalDeviceDataGraphProcessingEngineARM* pProcessingEngines;
} VkDataGraphProcessingEngineCreateInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `processingEngineCount` is the number of elements in `pProcessingEngines`.
- `pProcessingEngines` is a pointer to an array of `processingEngineCount` `VkPhysicalDeviceDataGraphProcessingEngineARM` structures.

Valid Usage

- VUID-VkDataGraphProcessingEngineCreateInfoARM-dataGraph-09953
The `dataGraph` feature **must** be enabled
- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-09918
`pProcessingEngines` **must** not contain identical `VkPhysicalDeviceDataGraphProcessingEngineARM` structures
- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-09956
For each element of `pProcessingEngines`, its `type` member **must** be a valid `VkPhysicalDeviceDataGraphProcessingEngineTypeARM` value
- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-11843

If any element of `pProcessingEngines` has a `type` of `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM` or `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM` and `isForeign` set to `VK_TRUE`, `processingEngineCount` **must** equal 1

- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-11844

If any element of `pProcessingEngines` has a `type` of `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM` or `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM`, the `dataGraphModel` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkDataGraphProcessingEngineCreateInfoARM-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PROCESSING_ENGINE_CREATE_INFO_ARM`
- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-parameter `pProcessingEngines` **must** be a valid pointer to an array of `processingEngineCount` `VkPhysicalDeviceDataGraphProcessingEngineARM` structures
- VUID-VkDataGraphProcessingEngineCreateInfoARM-processingEngineCount-arraylength `processingEngineCount` **must** be greater than 0

Structure Chaining

Extends the structures

- `VkCommandPoolCreateInfo`
- `VkDataGraphPipelineCreateInfoARM`
- `VkDescriptorPoolCreateInfo`

52.6. Operations

Data graph processing engines execute *data graph operations*. Operations **may** be of a fixed-function nature, configurable or not, or **may**, for example, be provided as part of a SPIR-V extended instruction set.

To query the data graph processing engines and operations they support for a specific queue family of a physical device, call:

```
// Provided by VK_ARM_data_graph
VkResult vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM(
    VkPhysicalDevice          physicalDevice,
    uint32_t                  queueFamilyIndex,
    uint32_t*                  pQueueFamilyDataGraphPropertyCount,
    VkQueueFamilyDataGraphPropertiesARM* pQueueFamilyDataGraphProperties);
```

- `physicalDevice` is the physical device to query.
- `queueFamilyIndex` is the index of the queue family being queried.
- `pQueueFamilyDataGraphPropertyCount` is a pointer to an integer related to the number of properties available or queried.
- `pQueueFamilyDataGraphProperties` is either `NULL` or a pointer to an array of `VkQueueFamilyDataGraphPropertiesARM` structures.

If `pQueueFamilyDataGraphProperties` is `NULL`, then the number of properties available is returned in `pQueueFamilyDataGraphPropertyCount`. Otherwise, `pQueueFamilyDataGraphPropertyCount` **must** point to a variable set by the application to the number of elements in the `pQueueFamilyDataGraphProperties` array, and on return the variable is overwritten with the number of structures actually written to `pQueueFamilyDataGraphProperties`. If `pQueueFamilyDataGraphPropertyCount` is less than the number of properties available, at most `pQueueFamilyDataGraphPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

If the `dataGraphModel` feature is supported, the implementation **must** return at least one property with `engine` type `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM` or `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM`.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM-pQueueFamilyDataGraphPropertyCount-parameter
`pQueueFamilyDataGraphPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM-pQueueFamilyDataGraphProperties-parameter
If the value referenced by `pQueueFamilyDataGraphPropertyCount` is not `0`, and `pQueueFamilyDataGraphProperties` is not `NULL`, `pQueueFamilyDataGraphProperties` **must** be a valid pointer to an array of `pQueueFamilyDataGraphPropertyCount` `VkQueueFamilyDataGraphPropertiesARM` structures

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkQueueFamilyDataGraphPropertiesARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkQueueFamilyDataGraphPropertiesARM {
    VkStructureType          sType;
    void*                    pNext;
    VkPhysicalDeviceDataGraphProcessingEngineARM engine;
    VkPhysicalDeviceDataGraphOperationSupportARM operation;
} VkQueueFamilyDataGraphPropertiesARM;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [engine](#) is a [VkPhysicalDeviceDataGraphProcessingEngineARM](#) structure describing a data graph processing engine.
- [operation](#) is a [VkPhysicalDeviceDataGraphOperationSupportARM](#) structure describing one or more operations supported by a data graph processing engine.

Valid Usage (Implicit)

- VUID-VkQueueFamilyDataGraphPropertiesARM-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_QUEUE_FAMILY_DATA_GRAPH_PROPERTIES_ARM](#)
- VUID-VkQueueFamilyDataGraphPropertiesARM-pNext-pNext
[pNext](#) **must** be [NULL](#)

The [VkPhysicalDeviceDataGraphOperationSupportARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkPhysicalDeviceDataGraphOperationSupportARM {
    VkPhysicalDeviceDataGraphOperationTypeARM    operationType;
    char                                          name
[VK_MAX_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_SET_NAME_SIZE_ARM];
    uint32_t                                     version;
} VkPhysicalDeviceDataGraphOperationSupportARM;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `operationType` is a [VkPhysicalDeviceDataGraphOperationTypeARM](#) enum specifying the type of the operation whose support is being described.
- `name` is a pointer to a null-terminated UTF-8 string specifying the name of the operation whose support is being described.
- `version` is an integer specifying the version of the operation whose support is being described.

[VK_MAX_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_SET_NAME_SIZE_ARM](#) is the length in `char` values of an array containing the name of a data graph operation, as returned in [VkPhysicalDeviceDataGraphOperationSupportARM::name](#).

```
#define VK_MAX_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_SET_NAME_SIZE_ARM 128U
```

The defined data graph operations are:

```
// Provided by VK_ARM_data_graph
typedef enum VkPhysicalDeviceDataGraphOperationTypeARM {
    VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_SPIRV_EXTENDED_INSTRUCTION_SET_ARM =
0,
    // Provided by VK_QCOM_data_graph_model
    VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_NEURAL_MODEL_QCOM = 1000629000,
    // Provided by VK_QCOM_data_graph_model
    VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_BUILTIN_MODEL_QCOM = 1000629001,
    // Provided by VK_ARM_data_graph_optical_flow
    VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_OPTICAL_FLOW_ARM = 1000631000,
} VkPhysicalDeviceDataGraphOperationTypeARM;
```

- [VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_SPIRV_EXTENDED_INSTRUCTION_SET_ARM](#) corresponds to operations provided by a SPIR-V extended instruction set.
- [VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_NEURAL_MODEL_QCOM](#) specifies an operation that executes neural models provided by the application.
- [VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_BUILTIN_MODEL_QCOM](#) specifies an operation that executes specialized built-in models provided by the implementation.
- [VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_OPTICAL_FLOW_ARM](#) corresponds to

fixed-function optical flow as defined by [VK_ARM_data_graph_optical_flow](#).

To query the properties of a data graph processing engine and operation set combination for a specific queue family of a physical device, call:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa, VK_ARM_data_graph_optical_flow
VkResult vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM(
    VkPhysicalDevice          physicalDevice,
    uint32_t                  queueFamilyIndex,
    const VkQueueFamilyDataGraphPropertiesARM* pQueueFamilyDataGraphProperties,
    VkBaseOutStructure*       pProperties);
```

- **physicalDevice** is the physical device to query.
- **queueFamilyIndex** is the index of the queue family being queried.
- **pQueueFamilyDataGraphProperties** is a pointer to a [VkQueueFamilyDataGraphPropertiesARM](#) structure that selects the processing engine and operation set for which the properties are queried.
- **pProperties** is a pointer to a structure in which the properties are returned.

Valid property queries for specific engines and operations

Engine	Operation Type	Operation Name	Operation Version	Property structure
Any	Any	TOSA.XXXXXX.X where X is a digit between 0 and 9	Any	VkQueueFamilyDataGraphTOSAPropertiesARM
Any	Any	OpticalFlow	Any	VkQueueFamilyDataGraphOpticalFlowPropertiesARM

Valid Usage

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM-pQueueFamilyDataGraphProperties-09957
The [VkQueueFamilyDataGraphPropertiesARM](#) structure pointed to by **pQueueFamilyDataGraphProperties** **must** have been obtained by a prior call to [vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM](#) with the same **physicalDevice** and **queueFamilyIndex**
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM-pProperties-09958
pProperties **must** be a valid structure of the appropriate type as defined in [Valid property queries for specific engines and operations](#)

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM-pQueueFamilyDataGraphProperties-parameter
`pQueueFamilyDataGraphProperties` **must** be a valid pointer to a valid `VkQueueFamilyDataGraphPropertiesARM` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

52.6.1. Data Graph Operations Requirements

Physical devices that support the `dataGraphShaderModule` feature **must** support an operation whose `VkPhysicalDeviceDataGraphOperationSupportARM::operationType` is `VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_SPIRV_EXTENDED_INSTRUCTION_SET_ARM` and `name` and `version` are as described in the following table for at least one processing engine in at least one queue family when specific extensions are supported at a specific version:

Extension	Extension specification version	Operation name	Operation version
<code>VK_ARM_data_graph_instruction_set_tosa</code>	1	<code>TOSA.001000.1</code>	0

Physical devices that support `VK_ARM_data_graph_optical_flow` **must** support the following `VkPhysicalDeviceDataGraphOperationSupportARM` for at least one processing engine in at least one queue family:

- `operationType`: `VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_OPTICAL_FLOW_ARM`
- `name`: `OpticalFlow`
- `version`: 1

52.6.2. TOSA

The `VkQueueFamilyDataGraphTOSAPropertiesARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef struct VkQueueFamilyDataGraphTOSAPropertiesARM {
    VkStructureType          sType;
    void*                    pNext;
    uint32_t                 profileCount;
    const VkDataGraphTOSANameQualityARM* pProfiles;
    uint32_t                 extensionCount;
    const VkDataGraphTOSANameQualityARM* pExtensions;
    VkDataGraphTOSALevelARM  level;
} VkQueueFamilyDataGraphTOSAPropertiesARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `profileCount` is the length of the `pProfiles` array.
- `pProfiles` is a pointer to an array of `VkDataGraphTOSANameQualityARM` structures describing the TOSA profiles supported.
- `extensionCount` is the length of the `pExtensions` array.
- `pExtensions` is a pointer to an array of `VkDataGraphTOSANameQualityARM` structures describing the TOSA extensions supported.
- `level` is a `VkDataGraphTOSALevelARM` describing the TOSA level supported.

Valid Usage (Implicit)

- VUID-VkQueueFamilyDataGraphTOSAPropertiesARM-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_QUEUE_FAMILY_DATA_GRAPH_TOSA_PROPERTIES_ARM`
- VUID-VkQueueFamilyDataGraphTOSAPropertiesARM-pNext-pNext `pNext` **must** be `NULL`

The `VkDataGraphTOSANameQualityARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef struct VkDataGraphTOSANameQualityARM {
    char                name[VK_MAX_DATA_GRAPH_TOSA_NAME_SIZE_ARM];
    VkDataGraphTOSAQualityFlagsARM  qualityFlags;
} VkDataGraphTOSANameQualityARM;
```

- `name` is a pointer to a null-terminated UTF-8 string specifying the name of the TOSA profile or extension.

- **qualityLevel** is a [VkDataGraphTOSAQualityFlagsARM](#) describing the quality of the support for the TOSA profile or extension.

[VK_MAX_DATA_GRAPH_TOSA_NAME_SIZE_ARM](#) is the length in **char** values of an array containing the name of a data graph TOSA profile or extension, as returned in [VkDataGraphTOSANameQualityARM::name](#).

```
#define VK_MAX_DATA_GRAPH_TOSA_NAME_SIZE_ARM 128U
```

Bits which **can** be set in [VkDataGraphTOSANameQualityARM::qualityLevel](#), describing the quality of a TOSA profile or extension, are:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef enum VkDataGraphTOSAQualityFlagBitsARM {
    VK_DATA_GRAPH_TOSA_QUALITY_ACCELERATED_ARM = 0x00000001,
    VK_DATA_GRAPH_TOSA_QUALITY_CONFORMANT_ARM = 0x00000002,
    VK_DATA_GRAPH_TOSA_QUALITY_EXPERIMENTAL_ARM = 0x00000004,
    VK_DATA_GRAPH_TOSA_QUALITY_DEPRECATED_ARM = 0x00000008,
} VkDataGraphTOSAQualityFlagBitsARM;
```

- [VK_DATA_GRAPH_TOSA_QUALITY_ACCELERATED_ARM](#) specifies that the implementation of the TOSA profile or extension is accelerated.
- [VK_DATA_GRAPH_TOSA_QUALITY_CONFORMANT_ARM](#) specifies that the implementation of the TOSA profile or extension is conformant.
- [VK_DATA_GRAPH_TOSA_QUALITY_EXPERIMENTAL_ARM](#) specifies that the TOSA profile or extension is experimental.
- [VK_DATA_GRAPH_TOSA_QUALITY_DEPRECATED_ARM](#) specifies that the TOSA profile or extension is deprecated.

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef VkFlags    VkDataGraphTOSAQualityFlagsARM;
```

[VkDataGraphTOSAQualityFlagsARM](#) is a bitmask type for setting a mask of zero or more [VkDataGraphTOSAQualityFlagBitsARM](#).

The defined data graph TOSA levels are:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef enum VkDataGraphTOSALevelARM {
    VK_DATA_GRAPH_TOSA_LEVEL_NONE_ARM = 0,
    VK_DATA_GRAPH_TOSA_LEVEL_8K_ARM = 1,
} VkDataGraphTOSALevelARM;
```

- [VK_DATA_GRAPH_TOSA_LEVEL_NONE_ARM](#) corresponds to the none TOSA level, as described

in the TOSA specification.

- [VK_DATA_GRAPH_TOSA_LEVEL_8K_ARM](#) corresponds to the 8K TOSA level, as described in the TOSA specification.

52.6.3. Optical flow

An optical flow fixed-function node in a graph calculates the forward optical flow between an input image and a reference image. An output flow vector (V_x , V_y) means that current pixel (x , y) of the input image can be found at location $(x+V_x, y+V_y)$ in the reference image.

An optical flow fixed function nodes have the following [graph node connection points](#):

- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_INPUT_ARM](#)
- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_REFERENCE_ARM](#)
- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM](#)
- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_FLOW_VECTOR_ARM](#)
- [VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_COST_ARM](#)

The [VkQueueFamilyDataGraphOpticalFlowPropertiesARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkQueueFamilyDataGraphOpticalFlowPropertiesARM {
    VkStructureType      sType;
    void*                pNext;
    VkDataGraphOpticalFlowGridSizeFlagsARM supportedOutputGridSizes;
    VkDataGraphOpticalFlowGridSizeFlagsARM supportedHintGridSizes;
    VkBool32             hintSupported;
    VkBool32             costSupported;
    uint32_t             minWidth;
    uint32_t             minHeight;
    uint32_t             maxWidth;
    uint32_t             maxHeight;
} VkQueueFamilyDataGraphOpticalFlowPropertiesARM;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [supportedOutputGridSizes](#) are the supported [VkDataGraphOpticalFlowGridSizeFlagsARM](#) which **can** be specified in [VkDataGraphPipelineOpticalFlowCreateInfoARM::outputGridSize](#).
- [supportedHintGridSizes](#) are the supported [VkDataGraphOpticalFlowGridSizeFlagsARM](#) which **can** be specified in [VkDataGraphPipelineOpticalFlowCreateInfoARM::hintGridSize](#).
- [hintSupported](#) is a boolean describing whether using hint flow vector map is supported in an optical flow graph pipeline.
- [costSupported](#) is a boolean describing whether cost map generation is supported in an optical flow graph pipeline.

- `minWidth` is the minimum width in pixels for images used in an optical flow graph pipeline.
- `minHeight` is the minimum height in pixels for images used in an optical flow graph pipeline.
- `maxWidth` is the maximum width in pixels for images used in an optical flow graph pipeline.
- `maxHeight` is the maximum height in pixels for images used in an optical flow graph pipeline.

Valid Usage (Implicit)

- `VOID-VkQueueFamilyDataGraphOpticalFlowPropertiesARM-sType-sType` **must** be `VK_STRUCTURE_TYPE_QUEUE_FAMILY_DATA_GRAPH_OPTICAL_FLOW_PROPERTIES_ARM`
- `VOID-VkQueueFamilyDataGraphOpticalFlowPropertiesARM-pNext-pNext` **must** be `NULL`

Image formats

To enumerate the supported image formats for a specific data graph optical flow usage, call:

```
// Provided by VK_ARM_data_graph_optical_flow
VkResult vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM(
    VkPhysicalDevice          physicalDevice,
    uint32_t                  queueFamilyIndex,
    const VkQueueFamilyDataGraphPropertiesARM* pQueueFamilyDataGraphProperties,
    const VkDataGraphOpticalFlowImageFormatInfoARM* pOpticalFlowImageFormatInfo,
    uint32_t*                  pFormatCount,
    VkDataGraphOpticalFlowImageFormatPropertiesARM* pImageFormatProperties);
```

- `physicalDevice` is the physical device being queried.
- `queueFamilyIndex` is the index of the queue family being queried.
- `pQueueFamilyDataGraphProperties` is a pointer to a `VkQueueFamilyDataGraphPropertiesARM` structure that selects the processing engine and operation set for which the properties are queried.
- `pOpticalFlowImageFormatInfo` is a pointer to a `VkDataGraphOpticalFlowImageFormatInfoARM` structure specifying the optical flow usage for which information is returned.
- `pFormatCount` is a pointer to an integer related to the number of optical flow properties available or queried, as described below.
- `pImageFormatProperties` is a pointer to an array of `VkDataGraphOpticalFlowImageFormatPropertiesARM` structures in which supported formats and image parameters are returned.

If `pImageFormatProperties` is `NULL`, then the number of optical flow properties supported for the given `physicalDevice` is returned in `pFormatCount`. Otherwise, `pFormatCount` **must** point to a variable set by the user to the number of elements in the `pImageFormatProperties` array, and on return the variable is overwritten with the number of values actually written to `pImageFormatProperties`. If the

value of `pFormatCount` is less than the number of optical flow properties supported, at most `pFormatCount` values will be written to `pImageFormatProperties`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available values were returned. Before creating an image to be used as an optical flow image, obtain the supported image creation parameters by querying with `vkGetPhysicalDeviceFormatProperties2` and `vkGetPhysicalDeviceImageFormatProperties2` using one of the reported formats and adding `VkDataGraphOpticalFlowImageFormatInfoARM` to the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2`. When querying the parameters with `vkGetPhysicalDeviceImageFormatProperties2` for images used for optical flow operations, the `VkDataGraphOpticalFlowImageFormatInfoARM::usage` field should contain one or more of the bits defined in `VkDataGraphOpticalFlowImageUsageFlagBitsARM`.

Valid Usage

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pQueueFamilyDataGraphProperties-09965
`pQueueFamilyDataGraphProperties` **must** point to a structure whose `operation` member has its `name` member equal to `OpticalFlow`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pQueueFamilyDataGraphProperties-parameter
`pQueueFamilyDataGraphProperties` **must** be a valid pointer to a valid `VkQueueFamilyDataGraphPropertiesARM` structure
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pOpticalFlowImageFormatInfo-parameter
`pOpticalFlowImageFormatInfo` **must** be a valid pointer to a valid `VkDataGraphOpticalFlowImageFormatInfoARM` structure
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pFormatCount-parameter
`pFormatCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pImageFormatProperties-parameter
If the value referenced by `pFormatCount` is not 0, and `pImageFormatProperties` is not NULL, `pImageFormatProperties` **must** be a valid pointer to an array of `pFormatCount` `VkDataGraphOpticalFlowImageFormatPropertiesARM` structures

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_EXTENSION_NOT_PRESENT](#)
- [VK_ERROR_FORMAT_NOT_SUPPORTED](#)
- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

NOTE

[VK_FORMAT_B8G8R8A8_UNORM](#), [VK_FORMAT_R8G8B8A8_UNORM](#), [VK_FORMAT_R8G8B8_UNORM](#), [VK_FORMAT_B8G8R8_UNORM](#), [VK_FORMAT_R8_UNORM](#), and [VK_FORMAT_B10G11R11_UFLOAT_PACK32](#) are initially supported for images with optical flow usage [VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_INPUT_BIT_ARM](#).

[VK_FORMAT_R16G16_SFLOAT](#) is initially supported for images with optical flow usage [VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_OUTPUT_BIT_ARM](#) and [VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_HINT_BIT_ARM](#).

[VK_FORMAT_R16_UINT](#) is initially supported for images with optical flow usage [VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_COST_BIT_ARM](#).

The [VkDataGraphOpticalFlowImageFormatInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphOpticalFlowImageFormatInfoARM {
    VkStructureType          sType;
    const void*              pNext;
    VkDataGraphOpticalFlowImageUsageFlagsARM usage;
} VkDataGraphOpticalFlowImageFormatInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **usage** is a bitmask of [VkDataGraphOpticalFlowImageUsageFlagBitsARM](#) describing the intended optical flow usage of the image.

Valid Usage (Implicit)

- VUID-VkDataGraphOpticalFlowImageFormatInfoARM-sType-sType

`sType` **must** be
`VK_STRUCTURE_TYPE_DATA_GRAPH_OPTICAL_FLOW_IMAGE_FORMAT_INFO_ARM`

- VUID-VkDataGraphOpticalFlowImageFormatInfoARM-usage-parameter
`usage` **must** be a valid combination of `VkDataGraphOpticalFlowImageUsageFlagBitsARM` values
- VUID-VkDataGraphOpticalFlowImageFormatInfoARM-usage-requiredbitmask
`usage` **must** not be `0`

Structure Chaining

Extends the structures

- `VkImageCreateInfo`
- `VkPhysicalDeviceImageFormatInfo2`

Bits which **can** be set in `VkDataGraphOpticalFlowImageFormatInfoARM::usage`, controlling optical flow usage, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowImageUsageFlagBitsARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_UNKNOWN_ARM = 0,
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_INPUT_BIT_ARM = 0x00000001,
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_OUTPUT_BIT_ARM = 0x00000002,
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_HINT_BIT_ARM = 0x00000004,
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_COST_BIT_ARM = 0x00000008,
} VkDataGraphOpticalFlowImageUsageFlagBitsARM;
```

- `VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_INPUT_BIT_ARM` specifies that the image **can** be used as input or reference image for an optical flow operation.
- `VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_OUTPUT_BIT_ARM` specifies that the image **can** be used as output flow vector map for an optical flow operation.
- `VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_HINT_BIT_ARM` specifies that the image **can** be used as hint flow vector map for an optical flow operation.
- `VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_COST_BIT_ARM` specifies that the image **can** be used as output cost map for an optical flow operation.

```
// Provided by VK_ARM_data_graph_optical_flow
typedef VkFlags    VkDataGraphOpticalFlowImageUsageFlagsARM;
```

`VkDataGraphOpticalFlowImageUsageFlagsARM` is a bitmask type for setting a mask of zero or more `VkDataGraphOpticalFlowImageUsageFlagBitsARM`.

The `VkDataGraphOpticalFlowImageFormatPropertiesARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphOpticalFlowImageFormatPropertiesARM {
    VkStructureType    sType;
    void*              pNext;
    VkFormat            format;
} VkDataGraphOpticalFlowImageFormatPropertiesARM;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **format** is a **VkFormat** that specifies the format that **can** be used with the specified optical flow image usages.

Valid Usage (Implicit)

- VUID-VkDataGraphOpticalFlowImageFormatPropertiesARM-sType-sType **must** be **VK_STRUCTURE_TYPE_DATA_GRAPH_OPTICAL_FLOW_IMAGE_FORMAT_PROPERTIES_ARM**
- VUID-VkDataGraphOpticalFlowImageFormatPropertiesARM-pNext-pNext **pNext must** be **NULL**

Pipeline creation

The **VkDataGraphPipelineOpticalFlowCreateInfoARM** structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineOpticalFlowCreateInfoARM {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            width;
    uint32_t            height;
    VkFormat            imageFormat;
    VkFormat            flowVectorFormat;
    VkFormat            costFormat;
    VkDataGraphOpticalFlowGridSizeFlagsARM outputGridSize;
    VkDataGraphOpticalFlowGridSizeFlagsARM hintGridSize;
    VkDataGraphOpticalFlowPerformanceLevelARM performanceLevel;
    VkDataGraphOpticalFlowCreateFlagsARM    flags;
} VkDataGraphPipelineOpticalFlowCreateInfoARM;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **width** is the width in pixels of the input or reference image to be bound to this optical flow pipeline.

- **height** is the height in pixels of the input or reference image to be bound to this optical flow pipeline.
- **imageFormat** is the **VkFormat** of the input and reference image to be bound to this optical flow pipeline.
- **flowVectorFormat** is the **VkFormat** of the flow vector maps (output or hint) to be bound to this optical flow pipeline.
- **costFormat** is the **VkFormat** of the cost maps to be bound to this optical flow pipeline.
- **outputGridSize** is exactly one bit of **VkDataGraphOpticalFlowGridSizeFlagsARM** specifying the grid size of the output flow and cost maps to be bound to this optical flow pipeline. The size of the output flow and cost maps is a function of the input image dimensions and **outputGridSize** and is calculated as follows:

$$\text{OutputWidth} = \lceil \text{width} / \text{OutputGridWidth} \rceil$$

$$\text{OutputHeight} = \lceil \text{height} / \text{OutputGridHeight} \rceil$$
 where **OutputGridWidth** and **OutputGridHeight** are determined by **outputGridSize**.
- **hintGridSize** is one exactly bit of **VkDataGraphOpticalFlowGridSizeFlagsARM** specifying the grid size of the hint flow vector map to be bound to this optical flow pipeline. The size of the hint maps is a function of the input image dimensions and **hintGridSize** and is calculated as follows:

$$\text{HintWidth} = \lceil \text{width} / \text{HintGridWidth} \rceil$$

$$\text{HintHeight} = \lceil \text{height} / \text{HintGridHeight} \rceil$$
 where **HintGridWidth** and **HintGridHeight** are determined by **hintGridSize**.
- **performanceLevel** is the **VkDataGraphOpticalFlowPerformanceLevelARM** used for this optical flow pipeline.
- **flags** are the **VkDataGraphOpticalFlowCreateFlagsARM** used for this optical flow pipeline.

Valid Usage

- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-width-09966
width **must** be greater than or equal to **VkQueueFamilyDataGraphOpticalFlowPropertiesARM::minWidth** and less than or equal to **VkQueueFamilyDataGraphOpticalFlowPropertiesARM::maxWidth**
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-height-09967
height **must** be greater than or equal to **VkQueueFamilyDataGraphOpticalFlowPropertiesARM::minHeight** and less than or equal to **VkQueueFamilyDataGraphOpticalFlowPropertiesARM::maxHeight**
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-imageFormat-09968
imageFormat **must** be one of the formats returned by **vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM** for **VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_INPUT_BIT_ARM**
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flowVectorFormat-09969
flowVectorFormat **must** be one of the formats returned by **vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM** for **VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_OUTPUT_BIT_ARM**
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-costFormat-09970

`costFormat` **must** be one of the formats returned by `vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM` for `VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_COST_BIT_ARM` if `VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_COST_BIT_ARM` is set in `flags`

- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-outputGridSize-09971
`outputGridSize` **must** be exactly one of the bits reported in `VkQueueFamilyDataGraphOpticalFlowPropertiesARM::supportedOutputGridSizes`
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-hintGridSize-09972
`hintGridSize` **must** be 0 or exactly one of the bits reported in `VkQueueFamilyDataGraphOpticalFlowPropertiesARM::supportedHintGridSizes` if `VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_HINT_BIT_ARM` is set in `flags`
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-hintGridSize-09973
`hintGridSize` **must** be the same as `outputGridSize` if `hintGridSize` is not 0
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flags-09974
`VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_HINT_BIT_ARM` **must** not be set in `flags` if `VkQueueFamilyDataGraphOpticalFlowPropertiesARM::hintSupported` is `VK_FALSE`
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flags-09975
`VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_COST_BIT_ARM` **must** not be set in `flags` if `VkQueueFamilyDataGraphOpticalFlowPropertiesARM::costSupported` is `VK_FALSE`

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_OPTICAL_FLOW_CREATE_INFO_ARM`
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-imageFormat-parameter
`imageFormat` **must** be a valid `VkFormat` value
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flowVectorFormat-parameter
`flowVectorFormat` **must** be a valid `VkFormat` value
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-costFormat-parameter
If `costFormat` is not 0, `costFormat` **must** be a valid `VkFormat` value
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-performanceLevel-parameter
If `performanceLevel` is not 0, `performanceLevel` **must** be a valid `VkDataGraphOpticalFlowPerformanceLevelARM` value
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flags-parameter
`flags` **must** be a valid combination of `VkDataGraphOpticalFlowCreateFlagBitsARM` values

Structure Chaining

Extends the structure

- `VkDataGraphPipelineCreateInfoARM`

Optical flow vectors are generated block-wise, one vector for each block of NxN pixels (referred to as grid). Bits which **can** be set in [VkDataGraphPipelineOpticalFlowCreateInfoARM::outputGridSize](#) and [VkDataGraphPipelineOpticalFlowCreateInfoARM::hintGridSize](#), or which are returned in [VkQueueFamilyDataGraphOpticalFlowPropertiesARM::supportedOutputGridSizes](#) and [VkQueueFamilyDataGraphOpticalFlowPropertiesARM::supportedHintGridSizes](#) controlling optical flow grid sizes, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowGridSizeFlagBitsARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_UNKNOWN_ARM = 0,
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_ARM = 0x00000001,
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_ARM = 0x00000002,
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_ARM = 0x00000004,
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_ARM = 0x00000008,
} VkDataGraphOpticalFlowGridSizeFlagBitsARM;
```

- [VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_ARM](#) specifies that grid is 1x1 pixel.
- [VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_ARM](#) specifies that grid is 2x2 pixel.
- [VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_ARM](#) specifies that grid is 4x4 pixel.
- [VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_ARM](#) specifies that grid is 8x8 pixel.

```
// Provided by VK_ARM_data_graph_optical_flow
typedef VkFlags    VkDataGraphOpticalFlowGridSizeFlagsARM;
```

[VkDataGraphOpticalFlowGridSizeFlagsARM](#) is a bitmask type for setting a mask of zero or more [VkDataGraphOpticalFlowGridSizeFlagBitsARM](#).

Optical flow exposes performance levels which the user can choose based on the desired performance and quality requirement. The optical flow performance level types are defined with the following:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowPerformanceLevelARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_UNKNOWN_ARM = 0,
    VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_ARM = 1,
    VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_ARM = 2,
    VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_ARM = 3,
} VkDataGraphOpticalFlowPerformanceLevelARM;
```

- [VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_ARM](#) is a level with slower performance but higher quality.
- [VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_ARM](#) is a level with medium performance and medium quality.
- [VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_ARM](#) is a preset with higher

performance but lower quality.

Bits which **can** be set in `VkDataGraphPipelineOpticalFlowCreateInfoARM::flags`, controlling optical flow pipeline operations, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowCreateFlagBitsARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_HINT_BIT_ARM = 0x00000001,
    VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_COST_BIT_ARM = 0x00000002,
    VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_RESERVED_30_BIT_ARM = 0x40000000,
} VkDataGraphOpticalFlowCreateFlagBitsARM;
```

- `VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_HINT_BIT_ARM` specifies that a `VkImageView` with external flow vector map will be used as hints in performing the motion search and **must** be connected to `VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM`.
- `VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_COST_BIT_ARM` specifies that the cost for the forward flow is generated in a `VkImageView` which **must** be connected to `VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_COST_ARM`. The cost is the confidence level of the flow vector for each grid in the image. The cost implies how (in)accurate the flow vector is. Higher cost value implies the flow vector to be less accurate and vice-versa.

`VkDataGraphOpticalFlowCreateFlagsARM` is a bitmask type for setting a mask of zero or more `VkDataGraphOpticalFlowCreateFlagBitsARM`.

```
// Provided by VK_ARM_data_graph_optical_flow
typedef VkFlags    VkDataGraphOpticalFlowCreateFlagsARM;
```

Pipeline dispatch

The `VkDataGraphPipelineOpticalFlowDispatchInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineOpticalFlowDispatchInfoARM {
    VkStructureType    sType;
    void*              pNext;
    VkDataGraphOpticalFlowExecuteFlagsARM    flags;
    uint32_t            meanFlowL1NormHint;
} VkDataGraphPipelineOpticalFlowDispatchInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` are the `VkDataGraphOpticalFlowExecuteFlagsARM` used for this command.
- `meanFlowL1NormHint` is an integer used to hint to the implementation that the mean L1 norm of

flow vectors is expected to be centered around this value (in number of pixels of the input image). The implementation may use this value to influence how flow vectors are computed. Different values may result in different flow vectors and will affect the cost of computing the flow vectors. A value of 0 means that the application does not wish to provide a hint.

Valid Usage

- VUID-VkDataGraphPipelineOpticalFlowDispatchInfoARM-meanFlowL1NormHint-09976 `meanFlowL1NormHint`, when different from 0, **must** be less than or equal to the maximum of the width or height of the input image provided at pipeline creation time via `VkDataGraphPipelineOpticalFlowCreateInfoARM::width` or `VkDataGraphPipelineOpticalFlowCreateInfoARM::height`, respectively

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineOpticalFlowDispatchInfoARM-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_OPTICAL_FLOW_DISPATCH_INFO_ARM`
- VUID-VkDataGraphPipelineOpticalFlowDispatchInfoARM-flags-parameter `flags` **must** be a valid combination of `VkDataGraphOpticalFlowExecuteFlagBitsARM` values

Structure Chaining

Extends the structure

- `VkDataGraphPipelineDispatchInfoARM`

Bits which **can** be set in `VkDataGraphPipelineOpticalFlowDispatchInfoARM::flags`, controlling optical flow execution, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowExecuteFlagBitsARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_ARM = 0x00000001,
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_UNCHANGED_BIT_ARM = 0x00000002,
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_UNCHANGED_BIT_ARM = 0x00000004,
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_IS_PREVIOUS_REFERENCE_BIT_ARM =
0x00000008,
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_IS_PREVIOUS_INPUT_BIT_ARM =
0x00000010,
} VkDataGraphOpticalFlowExecuteFlagBitsARM;
```

- `VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_ARM` specifies that temporal hints from previously generated flow vector map are not used. If temporal hints are enabled, the optical flow vector map from previous `vkCmdDispatchDataGraphARM` calls in

the same graph pipeline session **may** be automatically used as hints for the current `vkCmdDispatchDataGraphARM` call, to take advantage of temporal correlation in a video sequence. Temporal hints should be disabled if there is a-priori knowledge of no temporal correlation (e.g. a scene change, independent successive image pairs).

- `VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_UNCHANGED_BIT_ARM` specifies that the contents of the input image are the same as in the previously executed `vkCmdDispatchDataGraphARM` call in the same graph pipeline session.
- `VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_UNCHANGED_BIT_ARM` specifies that the contents of the reference image are the same as in the previously executed `vkCmdDispatchDataGraphARM` call in the same graph pipeline session.
- `VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_IS_PREVIOUS_REFERENCE_BIT_ARM` specifies that the contents of the input image are the same as the contents of the reference image in the previously executed `vkCmdDispatchDataGraphARM` call in the same graph pipeline session.
- `VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_IS_PREVIOUS_INPUT_BIT_ARM` specifies that the contents of the reference image are the same as the contents of the input image in the previously executed `vkCmdDispatchDataGraphARM` call in the same graph pipeline session.

`VkDataGraphOpticalFlowExecuteFlagsARM` is a bitmask type for setting a mask of zero or more `VkDataGraphOpticalFlowExecuteFlagBitsARM`.

```
// Provided by VK_ARM_data_graph_optical_flow
typedef VkFlags    VkDataGraphOpticalFlowExecuteFlagsARM;
```

Chapter 53. Extending Vulkan

New functionality **may** be added to Vulkan via either new extensions or new versions of the core, or new versions of an extension in some cases.

This chapter describes how Vulkan is versioned, how compatibility is affected between different versions, and compatibility rules that are followed by the Vulkan Working Group.

53.1. Functionality Levels

Functionality in Vulkan is divided into several different levels; global, instance-level, physical-device-level, and device-level.

- [VkInstance](#) and any objects created from a [VkInstance](#) other than [VkPhysicalDevice](#) are instance-level.
- [VkPhysicalDevice](#) is the only physical-device-level object.
- [VkDevice](#) and any objects created from a [VkDevice](#) are device-level.

The level of a command is the same as the level of its first parameter - if the first parameter is not a [dispatchable handle](#), it is a global command. Different levels of functionality **may** be advertised in different ways.

53.2. Instance and Device Versions

Starting with Vulkan 1.1, there are separate versions advertised for the Vulkan instance, and for each device supported on the system. This allows a system with multiple devices to advertise all devices at their full capabilities, even if those devices do not support the same version of Vulkan.

The instance version indicates which global and instance-level functionality is supported, while each device version indicates the physical-device-level and device-level functionality supported.

The instance version **can** be queried by calling [vkEnumerateInstanceVersion](#). Querying for this function via [vkGetInstanceProcAddr](#) will return [NULL](#) on implementations that only support Vulkan 1.0 functionality.

The device version **can** be queried by calling [vkGetPhysicalDeviceProperties](#) or [vkGetPhysicalDeviceProperties2](#), and is returned in [VkPhysicalDeviceProperties::apiVersion](#), encoded as described in [Version Numbers](#).

53.3. Core Versions

The Vulkan Specification is regularly updated with bug fixes and clarifications. Occasionally new functionality is added to the core and at some point it is expected that there will be a desire to perform a large, breaking change to the API. In order to indicate to developers how and when these changes are made to the specification, and to provide a way to identify each set of changes, the Vulkan API maintains a version number.

53.3.1. Version Numbers

The Vulkan version number comprises four parts indicating the variant, major, minor and patch version of the Vulkan API Specification.

The *variant* indicates the variant of the Vulkan API supported by the implementation. This is always 0 for the Vulkan API.

NOTE

A non-zero variant indicates the API is a variant of the Vulkan API and applications will typically need to be modified to run against it. The variant field was a later addition to the version number, added in version 1.2.175 of the Specification. As Vulkan uses variant 0, this change is fully backwards compatible with the previous version number format for Vulkan implementations. New version number macros have been added for this change and the old macros marked as legacy. For existing applications using the older format and macros, an implementation with non-zero variant will decode as a very high Vulkan version. The high version number should be detectable by applications performing suitable version checking.

The *major version* indicates a significant change in the API, which will encompass a wholly new version of the specification.

The *minor version* indicates the incorporation of new functionality into the core specification.

The *patch version* indicates bug fixes, clarifications, and language improvements have been incorporated into the specification.

Compatibility guarantees made about versions of the API sharing any of the same version numbers are documented in [Core Versions](#)

The version number is used in several places in the API. In each such use, the version numbers are packed into a 32-bit integer as follows:

- The variant is a 3-bit integer packed into bits 31-29.
- The major version is a 7-bit integer packed into bits 28-22.
- The minor version number is a 10-bit integer packed into bits 21-12.
- The patch version number is a 12-bit integer packed into bits 11-0.

VK_API_VERSION_VARIANT extracts the API variant number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_VARIANT(version) ((uint32_t)(version) >> 29U)
```

VK_API_VERSION_MAJOR extracts the API major version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MAJOR(version) (((uint32_t)(version) >> 22U) & 0x7FU)
```

VK_VERSION_MAJOR extracts the API major version number from a packed version number:

WARNING

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
#define VK_VERSION_MAJOR(version) ((uint32_t)(version) >> 22U)
```

VK_API_VERSION_MINOR extracts the API minor version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

VK_VERSION_MINOR extracts the API minor version number from a packed version number:

WARNING

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
#define VK_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

VK_API_VERSION_PATCH extracts the API patch version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

VK_VERSION_PATCH extracts the API patch version number from a packed version number:

WARNING

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
#define VK_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

VK_MAKE_API_VERSION constructs an API version number.

```
// Provided by VK_VERSION_1_0
#define VK_MAKE_API_VERSION(variant, major, minor, patch) \
    (((uint32_t)(variant)) << 29U) | (((uint32_t)(major)) << 22U) | \
    (((uint32_t)(minor)) << 12U) | ((uint32_t)(patch)))
```

- **variant** is the variant number.

- **major** is the major version number.
- **minor** is the minor version number.
- **patch** is the patch version number.

VK_MAKE_VERSION constructs an API version number.

WARNING

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
#define VK_MAKE_VERSION(major, minor, patch) \
    (((uint32_t)(major)) << 22U) | (((uint32_t)(minor)) << 12U) | \
    ((uint32_t)(patch)))
```

- **major** is the major version number.
- **minor** is the minor version number.
- **patch** is the patch version number.

VK_API_VERSION_1_0 returns the API version number for Vulkan 1.0.0.

```
// Provided by VK_VERSION_1_0
// Vulkan 1.0 version number
#define VK_API_VERSION_1_0 VK_MAKE_API_VERSION(0, 1, 0, 0)// Patch version should
always be set to 0
```

VK_API_VERSION_1_1 returns the API version number for Vulkan 1.1.0.

```
// Provided by VK_VERSION_1_1
// Vulkan 1.1 version number
#define VK_API_VERSION_1_1 VK_MAKE_API_VERSION(0, 1, 1, 0)// Patch version should
always be set to 0
```

VK_API_VERSION_1_2 returns the API version number for Vulkan 1.2.0.

```
// Provided by VK_VERSION_1_2
// Vulkan 1.2 version number
#define VK_API_VERSION_1_2 VK_MAKE_API_VERSION(0, 1, 2, 0)// Patch version should
always be set to 0
```

VK_API_VERSION_1_3 returns the API version number for Vulkan 1.3.0.

```
// Provided by VK_VERSION_1_3
// Vulkan 1.3 version number
#define VK_API_VERSION_1_3 VK_MAKE_API_VERSION(0, 1, 3, 0)// Patch version should
always be set to 0
```

VK_API_VERSION_1_4 returns the API version number for Vulkan 1.4.0.

```
// Provided by VK_VERSION_1_4
// Vulkan 1.4 version number
#define VK_API_VERSION_1_4 VK_MAKE_API_VERSION(0, 1, 4, 0)// Patch version should
always be set to 0
```

53.4. Layers

When a layer is enabled, it inserts itself into the call chain for Vulkan commands the layer is interested in. Layers **can** be used for a variety of tasks that extend the base behavior of Vulkan beyond what is required by the specification - such as call logging, tracing, validation, or providing additional extensions.

NOTE

For example, an implementation is not expected to check that the value of enums used by the application fall within allowed ranges. Instead, a validation layer would do those checks and flag issues. This avoids a performance penalty during production use of the application because those layers would not be enabled in production.

NOTE

Vulkan layers **may** wrap object handles (i.e. return a different handle value to the application than that generated by the implementation). This is generally discouraged, as it increases the probability of incompatibilities with new extensions. The validation layers wrap handles in order to track the proper use and destruction of each object. See the [“Architecture of the Vulkan Loader Interfaces”](#) document for additional information.

To query the available layers, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceLayerProperties(
    uint32_t*                pPropertyCount,
    VkLayerProperties*        pProperties);
```

- **pPropertyCount** is a pointer to an integer related to the number of layer properties available or queried, as described below.
- **pProperties** is either **NULL** or a pointer to an array of **VkLayerProperties** structures.

If **pProperties** is **NULL**, then the number of layer properties available is returned in **pPropertyCount**.

Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of layer properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

The list of available layers may change at any time due to actions outside of the Vulkan implementation, so two calls to `vkEnumerateInstanceLayerProperties` with the same parameters **may** return different results, or retrieve different `pPropertyCount` values or `pProperties` contents. Once an instance has been created, the layers enabled for that instance will continue to be enabled and valid for the lifetime of that instance, even if some of them become unavailable for future instances.

Valid Usage (Implicit)

- VUID-vkEnumerateInstanceLayerProperties-pPropertyCount-parameter
`pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateInstanceLayerProperties-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkLayerProperties` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkLayerProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkLayerProperties {
    char        layerName[VK_MAX_EXTENSION_NAME_SIZE];
    uint32_t    specVersion;
    uint32_t    implementationVersion;
    char        description[VK_MAX_DESCRIPTION_SIZE];
} VkLayerProperties;
```

- `layerName` is an array of `VK_MAX_EXTENSION_NAME_SIZE` `char` containing a null-terminated

UTF-8 string which is the name of the layer. Use this name in the `ppEnabledLayerNames` array passed in the `VkInstanceCreateInfo` structure to enable this layer for an instance.

- `specVersion` is the Vulkan version the layer was written to, encoded as described in [Version Numbers](#).
- `implementationVersion` is the version of this layer. It is an integer, increasing with backward compatible changes.
- `description` is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which provides additional details that **can** be used by the application to identify the layer.

`VK_MAX_EXTENSION_NAME_SIZE` is the length in `char` values of an array containing a layer or extension name string, as returned in `VkLayerProperties::layerName`, `VkExtensionProperties::extensionName`, and other queries.

```
#define VK_MAX_EXTENSION_NAME_SIZE    256U
```

`VK_MAX_DESCRIPTION_SIZE` is the length in `char` values of an array containing a string with additional descriptive information about a query, as returned in `VkLayerProperties::description` and other queries.

```
#define VK_MAX_DESCRIPTION_SIZE      256U
```

To enable a layer, the name of the layer **should** be added to the `ppEnabledLayerNames` member of `VkInstanceCreateInfo` when creating a `VkInstance`.

Loader implementations **may** provide mechanisms outside the Vulkan API for enabling specific layers. Layers enabled through such a mechanism are *implicitly enabled*, while layers enabled by including the layer name in the `ppEnabledLayerNames` member of `VkInstanceCreateInfo` are *explicitly enabled*. Implicitly enabled layers are loaded before explicitly enabled layers, such that implicitly enabled layers are closer to the application, and explicitly enabled layers are closer to the driver. Except where otherwise specified, implicitly enabled and explicitly enabled layers differ only in the way they are enabled, and the order in which they are loaded. Explicitly enabling a layer that is implicitly enabled results in this layer being loaded as an implicitly enabled layer; it has no additional effect.

To enumerate device layers, call:

WARNING

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceLayerProperties(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pPropertyCount,
    VkLayerProperties*         pProperties);
```

- `physicalDevice` is the physical device that will be queried.
- `pPropertyCount` is a pointer to an integer related to the number of layer properties available or queried.
- `pProperties` is either `NULL` or a pointer to an array of `VkLayerProperties` structures.

If `pProperties` is `NULL`, then the number of layer properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of layer properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

The list of layers enumerated by `vkEnumerateDeviceLayerProperties` **must** be exactly the sequence of layers enabled for the instance. The members of `VkLayerProperties` for each enumerated layer **must** be the same as the properties when the layer was enumerated by `vkEnumerateInstanceLayerProperties`.

NOTE

Due to platform details on Android, `vkEnumerateDeviceLayerProperties` may be called with `physicalDevice` equal to `NULL` during layer discovery. This behavior will only be observed by layer implementations, and not the underlying Vulkan driver.

Valid Usage (Implicit)

- VUID-vkEnumerateDeviceLayerProperties-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkEnumerateDeviceLayerProperties-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateDeviceLayerProperties-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkLayerProperties` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `ppEnabledLayerNames` and `enabledLayerCount` members of `VkDeviceCreateInfo` are legacy and their values **must** be ignored by implementations. However, for compatibility, only an empty list of layers or a list that exactly matches the sequence enabled at instance creation time are valid, and validation layers **should** issue diagnostics for other cases.

Regardless of the enabled layer list provided in `VkDeviceCreateInfo`, the sequence of layers active for a device will be exactly the sequence of layers enabled when the parent instance was created.

53.5. Extensions

Extensions **may** define new Vulkan commands, structures, and enumerants. For compilation purposes, the interfaces defined by registered extensions, including new structures and enumerants as well as function pointer types for new commands, are defined in the Khronos-supplied `vulkan_core.h` together with the core API. However, commands defined by extensions **may** not be available for static linking - in which case function pointers to these commands **should** be queried at runtime as described in [Command Function Pointers](#). Extensions **may** be provided by layers as well as by a Vulkan implementation.

Because extensions **may** extend or change the behavior of the Vulkan API, extension authors **should** add support for their extensions to the Khronos validation layers. This is especially important for new commands whose parameters have been wrapped by the validation layers. See the “[Architecture of the Vulkan Loader Interfaces](#)” document for additional information.

NOTE

To enable an instance extension, the name of the extension **can** be added to the `ppEnabledExtensionNames` member of `VkInstanceCreateInfo` when creating a `VkInstance`.

To enable a device extension, the name of the extension **can** be added to the `ppEnabledExtensionNames` member of `VkDeviceCreateInfo` when creating a `VkDevice`.

Physical-Device-Level functionality does not have any enabling mechanism and **can** be used as long as the `VkPhysicalDevice` supports the device extension as determined by `vkEnumerateDeviceExtensionProperties`.

Enabling an extension (with no further use of that extension) does not change the behavior of functionality exposed by the core Vulkan API or any other extension, other than making valid the use of the commands, enums and structures defined by that extension.

Valid Usage sections for individual commands and structures do not currently contain which extensions have to be enabled in order to make their use valid, although they might do so in the future. It is defined only in the [Valid Usage for Extensions](#) section.

53.5.1. Instance Extensions

Instance extensions add new [global or instance-level functionality](#) to the API, outside of the core specification. Instance extensions **may** also add [physical-device-level functionality](#).

To query the available instance extensions, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceExtensionProperties(
    const char*          pLayerName,
    uint32_t*            pPropertyCount,
    VkExtensionProperties* pProperties);
```

- `pLayerName` is either `NULL` or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- `pPropertyCount` is a pointer to an integer related to the number of extension properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkExtensionProperties` structures.

When `pLayerName` parameter is `NULL`, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When `pLayerName` is the name of a layer, the instance extensions provided by that layer are returned.

If `pProperties` is `NULL`, then the number of extensions properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of extension properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

Because the list of available layers may change externally between calls to `vkEnumerateInstanceExtensionProperties`, two calls may retrieve different results if a `pLayerName` is available in one call but not in another. The extensions supported by a layer may also change between two calls, e.g. if the layer implementation is replaced by a different version between those calls.

Implementations **must** not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.

Valid Usage (Implicit)

- VUID-vkEnumerateInstanceExtensionProperties-pLayerName-parameter
If `pLayerName` is not `NULL`, `pLayerName` **must** be a null-terminated UTF-8 string
- VUID-vkEnumerateInstanceExtensionProperties-pPropertyCount-parameter
`pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateInstanceExtensionProperties-pProperties-parameter
If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkExtensionProperties` structures

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_LAYER_NOT_PRESENT](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

53.5.2. Device Extensions

Device extensions add new [device-level functionality](#) to the API, outside of the core specification. If Vulkan 1.1 or [VK_KHR_get_physical_device_properties2](#) is required by the extension, it **may** also add new [physical-device-level functionality](#).

To query the extensions available to a given physical device, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceExtensionProperties(
    VkPhysicalDevice      physicalDevice,
    const char*           pLayerName,
    uint32_t*             pPropertyCount,
    VkExtensionProperties* pProperties);
```

- [physicalDevice](#) is the physical device that will be queried.
- [pLayerName](#) is either `NULL` or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- [pPropertyCount](#) is a pointer to an integer related to the number of extension properties available or queried, and is treated in the same fashion as the [vkEnumerateInstanceExtensionProperties::pPropertyCount](#) parameter.
- [pProperties](#) is either `NULL` or a pointer to an array of [VkExtensionProperties](#) structures.

When [pLayerName](#) parameter is `NULL`, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When [pLayerName](#) is the name of a layer, the device extensions provided by that layer are returned.

Implementations **must** not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.

If the [VK_KHR_ray_tracing_pipeline](#) extension is advertised as supported by this query, the

VK_KHR_pipeline_library extension **must** also be supported.

If the VK_EXT_descriptor_heap extension is advertised as supported by this query, the VK_KHR_shader_untyped_pointers extension **must** also be supported.

Implementations claiming support for the Roadmap 2022 profile **must** advertise the VK_KHR_global_priority extension in pProperties.

Implementations claiming support for the Roadmap 2024 profile **must** advertise the following extensions in pProperties:

- VK_KHR_dynamic_rendering_local_read
- VK_KHR_load_store_op_none
- VK_KHR_shader_quad_control
- VK_KHR_shader_maximal_reconvergence
- VK_KHR_shader_subgroup_uniform_control_flow
- VK_KHR_shader_subgroup_rotate
- VK_KHR_shader_float_controls2
- VK_KHR_shader_expect_assume
- VK_KHR_line_rasterization
- VK_KHR_vertex_attribute_divisor
- VK_KHR_index_type_uint8
- VK_KHR_map_memory2
- VK_KHR_maintenance5
- VK_KHR_push_descriptor

NOTE

Due to platform details on Android, vkEnumerateDeviceExtensionProperties may be called with physicalDevice equal to NULL during layer discovery. This behavior will only be observed by layer implementations, and not the underlying Vulkan driver.

Valid Usage (Implicit)

- VUID-vkEnumerateDeviceExtensionProperties-physicalDevice-parameter physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkEnumerateDeviceExtensionProperties-pLayerName-parameter
If pLayerName is not NULL, pLayerName **must** be a null-terminated UTF-8 string
- VUID-vkEnumerateDeviceExtensionProperties-pPropertyCount-parameter
pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkEnumerateDeviceExtensionProperties-pProperties-parameter
If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkExtensionProperties structures

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_LAYER_NOT_PRESENT](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkExtensionProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkExtensionProperties {
    char          extensionName[VK_MAX_EXTENSION_NAME_SIZE];
    uint32_t      specVersion;
} VkExtensionProperties;
```

- [extensionName](#) is an array of [VK_MAX_EXTENSION_NAME_SIZE](#) [char](#) containing a null-terminated UTF-8 string which is the name of the extension.
- [specVersion](#) is the version of this extension. It is an integer, incremented with backward compatible changes.

53.6. Extension Dependencies

Some extensions are dependent on other extensions, or on specific core API versions, to function. To enable extensions with dependencies, any *required extensions* **must** also be enabled through the same API mechanisms when creating an instance with [vkCreateInstance](#) or a device with [vkCreateDevice](#). Each extension which has such dependencies documents them in the [appendix summarizing that extension](#).

If an extension is supported (as queried by [vkEnumerateInstanceExtensionProperties](#) or [vkEnumerateDeviceExtensionProperties](#)), then *required extensions* of that extension **must** also be supported for the same instance or physical device.

Any device extension that has an instance extension dependency that is not enabled by [vkCreateInstance](#) is considered to be unsupported, hence it **must** not be returned by [vkEnumerateDeviceExtensionProperties](#) for any [VkPhysicalDevice](#) child of the instance. Instance extensions do not have dependencies on device extensions.

If a required extension has been [promoted](#) to another extension or to a core API version, then as a

general rule, the dependency is also satisfied by the promoted extension or core version. This will be true so long as any features required by the original extension are also required or enabled by the promoted extension or core version. However, in some cases an extension is promoted while making some of its features optional in the promoted extension or core version. In this case, the dependency **may** not be satisfied. The only way to be certain is to look at the descriptions of the original dependency and the promoted version in the [Layers & Extensions](#) and [Core Revisions](#) appendices.

NOTE

There is metadata in `vk.xml` describing some aspects of promotion, especially `requires`, `promotedto` and `deprecatedby` attributes of `<extension>` tags. However, the metadata does not yet fully describe this scenario. In the future, we may extend the XML schema to describe the full set of extensions and versions satisfying a dependency. As discussed in more detail for [Promotion](#) below, when an extension is promoted it does not mean that a mechanical substitution of an extension API by the corresponding promoted API will work in exactly the same fashion; be supported at runtime; or even exist.

53.7. Compatibility Guarantees (Informative)

This section is marked as informal as there is no binding responsibility on implementations of the Vulkan API - these guarantees are however a contract between the Vulkan Working Group and developers using this Specification.

53.7.1. Core Versions

Each of the [major](#), [minor](#), and [patch versions](#) of the Vulkan specification provide different compatibility guarantees.

Patch Versions

A difference in the patch version indicates that a set of bug fixes or clarifications have been made to the Specification. Informative enums returned by Vulkan commands that will not affect the runtime behavior of a valid application may be added in a patch version (e.g. [VkVendorId](#)).

The specification's patch version is strictly increasing for a given major version of the specification; any change to a specification as described above will result in the patch version being increased by 1. Patch versions are applied to all minor versions, even if a given minor version is not affected by the provoking change.

Specifications with different patch versions but the same major and minor version are *fully compatible* with each other - such that a valid application written against one will work with an implementation of another.

NOTE

If a patch version includes a bug fix or clarification that could have a significant impact on developer expectations, these will be highlighted in the change log. Generally the Vulkan Working Group tries to avoid these kinds of changes, instead fixing them in either an extension or core version.

Minor Versions

Changes in the minor version of the specification indicate that new functionality has been added to the core specification. This will usually include new interfaces in the header, and **may** also include behavior changes and bug fixes. Core functionality **may** be marked as legacy in a minor version, but will not be obsoleted or removed.

The specification's minor version is strictly increasing for a given major version of the specification; any change to a specification as described above will result in the minor version being increased by 1. Changes that can be accommodated in a patch version will not increase the minor version.

Specifications with a lower minor version are *backwards compatible* with an implementation of a specification with a higher minor version for core functionality and extensions issued with the KHR vendor tag. Vendor and multi-vendor extensions are not guaranteed to remain functional across minor versions, though in general they are with few exceptions - see [Obsolescence](#) for more information.

Major Versions

A difference in the major version of specifications indicates a large set of changes which will likely include interface changes, behavioral changes, removal of [legacy functionality](#), and the modification, addition, or replacement of other functionality.

The specification's major version is monotonically increasing; any change to the specification as described above will result in the major version being increased. Changes that can be accommodated in a patch or minor version will not increase the major version.

The Vulkan Working Group intends to only issue a new major version of the Specification in order to realize significant improvements to the Vulkan API that will necessarily require breaking compatibility.

A new major version will likely include a wholly new version of the specification to be issued - which could include an overhaul of the versioning semantics for the minor and patch versions. The patch and minor versions of a specification are therefore not meaningful across major versions. If a major version of the specification includes similar versioning semantics, it is expected that the patch and the minor version will be reset to 0 for that major version.

53.7.2. Extensions

A KHR extension **must** be able to be enabled alongside any other KHR extension, and for any minor or patch version of the core Specification beyond the minimum version it requires. A multi-vendor extension **should** be able to be enabled alongside any KHR extension or other multi-vendor extension, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension **should** be able to be enabled alongside any KHR extension, multi-vendor extension, or other vendor extension from the same vendor, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension **may** be able to be enabled alongside vendor extensions from another vendor.

The one other exception to this is if a vendor or multi-vendor extension is [made obsolete](#) by either a

core version or another extension, which will be highlighted in the [extension appendix](#).

Promotion

Extensions, or features of an extension, **may** be promoted to a new [core version of the API](#), or a newer extension which an equal or greater number of implementors are in favor of.

NOTE

Structure and enumerated types defined in extensions that were promoted to core in a later version of Vulkan are defined in terms of the equivalent Vulkan core interfaces in that version and its successors. This affects the Vulkan Specification, the Vulkan header files, and the corresponding XML Registry.

When extension functionality is promoted, minor changes **may** be introduced, limited to the following:

- Naming
- Non-intrusive parameter changes
- [Feature advertisement/enablement](#)
- Combining structure parameters into larger structures
- Author ID suffixes changed or removed

NOTE

If extension functionality is promoted, there is no guarantee of direct compatibility, however it should require little effort to port code from the original feature to the promoted one.

The Vulkan Working Group endeavors to ensure that larger changes are marked as either [deprecated](#) or [obsoleted](#) as appropriate, and can do so retroactively if necessary.

Extensions that are promoted are listed as being promoted in their extension appendices, with reference to where they were promoted to.

When an extension is promoted, any backwards compatibility aliases which exist in the extension will **not** be promoted.

NOTE

As a hypothetical example, if the [VK_KHR_surface](#) extension were promoted to part of a future core version, the [VK_COLOR_SPACE_SRGB_NONLINEAR_KHR](#) token defined by that extension would be promoted to [VK_COLOR_SPACE_SRGB_NONLINEAR](#). However, the [VK_COLORSPACE_SRGB_NONLINEAR_KHR](#) token aliases [VK_COLOR_SPACE_SRGB_NONLINEAR_KHR](#). The [VK_COLORSPACE_SRGB_NONLINEAR_KHR](#) would not be promoted, because it is a backwards compatibility alias that exists only due to a naming mistake when the extension was initially published.

Deprecation

Extensions **may** be marked as [deprecated](#) when they are no longer intended to be used by applications under certain conditions. Generally, a new feature will become available to solve the

use case in another extension or core version of the API, but it is not guaranteed.

NOTE

Features that are intended to replace deprecated functionality have no guarantees of compatibility, and applications may require drastic modification in order to make use of the new features.

Extensions that are deprecated are listed as being deprecated in their extension appendices, with an explanation of the deprecation and any related features that are relevant.

Obsolescence

Occasionally, an extension will be marked as obsolete if a new version of the core API or a new extension is fundamentally incompatible with it. An obsoleted extension **must** not be used with the extension or core version that obsoleted it.

Extensions that are obsoleted are listed as being obsoleted in their extension appendices, with reference to what they were obsoleted by.

Aliases

When an extension is promoted or deprecated by a newer feature, some or all of its functionality **may** be replicated into the newer feature. Rather than duplication of all the documentation and definitions, the specification instead identifies the identical commands and types as *aliases* of one another. Each alias is mentioned together with the definition it aliases, with the older aliases marked as “equivalents”. Each alias of the same command has identical behavior, and each alias of the same type has identical meaning - they can be used interchangeably in an application with no compatibility issues.

NOTE

For promoted types, the aliased extension type is semantically identical to the new core type. The C99 headers simply `typedef` the older aliases to the promoted types.

For promoted command aliases, however, there are two separate command definitions, due to the fact that the C99 ABI has no way to alias command definitions without resorting to macros. Calling either command will produce identical behavior within the bounds of the specification, and should still invoke the same path in the implementation. Debug tools may use separate commands with different debug behavior; to write the appropriate command name to an output log, for instance.

Special Use Extensions

Some extensions exist only to support a specific purpose or specific class of application. These are referred to as “special use extensions”. Use of these extensions in applications not meeting the special use criteria is not recommended.

Special use cases are restricted, and only those defined below are used to describe extensions:

Table 71. Extension Special Use Cases

Special Use	XML Tag	Full Description
CAD support	cadsupport	Extension is intended to support specialized functionality used by CAD/CAM applications.
D3D support	d3demulation	Extension is intended to support D3D emulation layers, and applications ported from D3D, by adding functionality specific to D3D.
Developer tools	devtools	Extension is intended to support developer tools such as capture-replay libraries.
Debugging tools	debugging	Extension is intended for use by applications when debugging.
OpenGL / ES support	glesemulation	Extension is intended to support OpenGL and/or OpenGL ES emulation layers, and applications ported from those APIs, by adding functionality specific to those APIs.

Special use extensions are identified in the metadata for each such extension in the [Layers & Extensions](#) appendix, using the name in the “Special Use” column above.

Special use extensions are also identified in `vk.xml` with the short name in “XML Tag” column above, as described in the “API Extensions (`extension` tag)” section of the [registry schema documentation](#).

Chapter 54. Features

Features advertise additional functionality which **can** be enabled in the API. If a feature is *supported* by a physical device, it **must** be *enabled* when creating a [VkDevice](#) in order to use its associated functionality with that [VkDevice](#). If a feature is *unsupported*, that functionality **cannot** be used with that [VkDevice](#).

NOTE

Features are reported via the extensible structure [VkPhysicalDeviceFeatures2](#), which was added in the [VK_KHR_get_physical_device_properties2](#) extension and included in Vulkan 1.1. When new features are added in future Vulkan versions or extensions, each extension **should** introduce one new feature structure, if needed. This structure **can** be added to the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure.

For convenience, new core versions of Vulkan **may** introduce new unified feature structures for features promoted from extensions. At the same time, the extension’s original feature structure (if any) is also promoted to the core API, and is an alias of the extension’s structure. This results in multiple names for the same feature: in the original extension’s feature structure and the promoted structure alias, in the unified feature structure. When a feature was implicitly supported and enabled in the extension, but an explicit name was added during promotion, then the extension itself acts as an alias for the feature as listed in the table below.

All aliases of the same feature in the core API **must** be reported consistently: either all **must** be reported as supported, or none of them. When a promoted extension is available, any corresponding feature aliases **must** be supported.

Table 72. Extension Feature Aliases

Extension	Feature(s)
VK_KHR_shader_draw_parameters	shaderDrawParameters
VK_KHR_draw_indirect_count	drawIndirectCount
VK_KHR_sampler_mirror_clamp_to_edge	samplerMirrorClampToEdge
VK_EXT_descriptor_indexing	descriptorIndexing
VK_EXT_sampler_filter_minmax	samplerFilterMinmax
VK_EXT_shader_viewport_index_layer	shaderOutputViewportIndex , shaderOutputLayer
VK_KHR_push_descriptor	pushDescriptor

To query supported features, call:

WARNING

This functionality is superseded by [vkGetPhysicalDeviceFeatures2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceFeatures(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceFeatures* pFeatures);
```

- **physicalDevice** is the physical device from which to query the supported features.
- **pFeatures** is a pointer to a **VkPhysicalDeviceFeatures** structure in which the physical device features are returned. For each feature, a value of **VK_TRUE** specifies that the feature is supported on this physical device, and **VK_FALSE** specifies that the feature is not supported.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFeatures-physicalDevice-parameter **physicalDevice** **must** be a valid **VkPhysicalDevice** handle
- VUID-vkGetPhysicalDeviceFeatures-pFeatures-parameter **pFeatures** **must** be a valid pointer to a **VkPhysicalDeviceFeatures** structure

Fine-grained features used by a logical device **must** be enabled at **VkDevice** creation time. If a feature is enabled that the physical device does not support, **VkDevice** creation will fail and return **VK_ERROR_FEATURE_NOT_PRESENT**.

The fine-grained features are enabled by passing a pointer to the **VkPhysicalDeviceFeatures** structure via the **pEnabledFeatures** member of the **VkDeviceCreateInfo** structure that is passed into the **vkCreateDevice** call. If a member of **pEnabledFeatures** is **VK_TRUE** or **VK_FALSE**, then the device will be created with the indicated feature enabled or disabled, respectively. Features **can** also be enabled by using the **VkPhysicalDeviceFeatures2** structure.

If an application wishes to enable all features supported by a device, it **can** simply pass in the **VkPhysicalDeviceFeatures** structure that was previously returned by **vkGetPhysicalDeviceFeatures**. To disable an individual feature, the application **can** set the desired member to **VK_FALSE** in the same structure. Setting **pEnabledFeatures** to **NULL** and not including a **VkPhysicalDeviceFeatures2** in the **pNext** chain of **VkDeviceCreateInfo** is equivalent to setting all members of the structure to **VK_FALSE**.

NOTE

Some features, such as **robustBufferAccess**, **may** incur a runtime performance cost. Application writers **should** carefully consider the implications of enabling all supported features.

To query supported features defined by the core or extensions, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceFeatures2(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceFeatures2* pFeatures);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceFeatures2
void vkGetPhysicalDeviceFeatures2KHR(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceFeatures2* pFeatures);
```

- **physicalDevice** is the physical device from which to query the supported features.
- **pFeatures** is a pointer to a **VkPhysicalDeviceFeatures2** structure in which the physical device features are returned.

Each structure in **pFeatures** and its **pNext** chain contains members corresponding to fine-grained features. Each structure in **pFeatures** and its **pNext** chain contains **VkBool32** members corresponding to fine-grained features. Each such member is returned with a **VK_TRUE** value indicating that feature is supported on this physical device, or a **VK_FALSE** value indicating it is unsupported.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFeatures2-physicalDevice-parameter **physicalDevice** **must** be a valid **VkPhysicalDevice** handle
- VUID-vkGetPhysicalDeviceFeatures2-pFeatures-parameter **pFeatures** **must** be a valid pointer to a **VkPhysicalDeviceFeatures2** structure

The **VkPhysicalDeviceFeatures2** structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceFeatures2 {
    VkStructureType    sType;
    void*              pNext;
    VkPhysicalDeviceFeatures  features;
} VkPhysicalDeviceFeatures2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkPhysicalDeviceFeatures2
typedef VkPhysicalDeviceFeatures2 VkPhysicalDeviceFeatures2KHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **features** is a **VkPhysicalDeviceFeatures** structure describing the fine-grained features of the Vulkan 1.0 API.

The **pNext** chain of this structure is used to extend the structure with features defined by extensions. This structure **can** be used in **vkGetPhysicalDeviceFeatures2** or **can** be included in the **pNext** chain of a **VkDeviceCreateInfo** structure, in which case it controls which features are enabled in lieu of

pEnabledFeatures.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFeatures2-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2](#)

Structure Chaining

Extends the structure

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceFeatures {
    VkBool32    robustBufferAccess;
    VkBool32    fullDrawIndexUint32;
    VkBool32    imageCubeArray;
    VkBool32    independentBlend;
    VkBool32    geometryShader;
    VkBool32    tessellationShader;
    VkBool32    sampleRateShading;
    VkBool32    dualSrcBlend;
    VkBool32    logicOp;
    VkBool32    multiDrawIndirect;
    VkBool32    drawIndirectFirstInstance;
    VkBool32    depthClamp;
    VkBool32    depthBiasClamp;
    VkBool32    fillModeNonSolid;
    VkBool32    depthBounds;
    VkBool32    wideLines;
    VkBool32    largePoints;
    VkBool32    alphaToOne;
    VkBool32    multiViewport;
    VkBool32    samplerAnisotropy;
    VkBool32    textureCompressionETC2;
    VkBool32    textureCompressionASTC_LDR;
    VkBool32    textureCompressionBC;
    VkBool32    occlusionQueryPrecise;
    VkBool32    pipelineStatisticsQuery;
    VkBool32    vertexPipelineStoresAndAtomics;
    VkBool32    fragmentStoresAndAtomics;
    VkBool32    shaderTessellationAndGeometryPointSize;
    VkBool32    shaderImageGatherExtended;
    VkBool32    shaderStorageImageExtendedFormats;
    VkBool32    shaderStorageImageMultisample;
```

```

VkBool32    shaderStorageImageReadWithoutFormat;
VkBool32    shaderStorageImageWriteWithoutFormat;
VkBool32    shaderUniformBufferArrayDynamicIndexing;
VkBool32    shaderSampledImageArrayDynamicIndexing;
VkBool32    shaderStorageBufferArrayDynamicIndexing;
VkBool32    shaderStorageImageArrayDynamicIndexing;
VkBool32    shaderClipDistance;
VkBool32    shaderCullDistance;
VkBool32    shaderFloat64;
VkBool32    shaderInt64;
VkBool32    shaderInt16;
VkBool32    shaderResourceResidency;
VkBool32    shaderResourceMinLod;
VkBool32    sparseBinding;
VkBool32    sparseResidencyBuffer;
VkBool32    sparseResidencyImage2D;
VkBool32    sparseResidencyImage3D;
VkBool32    sparseResidency2Samples;
VkBool32    sparseResidency4Samples;
VkBool32    sparseResidency8Samples;
VkBool32    sparseResidency16Samples;
VkBool32    sparseResidencyAliased;
VkBool32    variableMultisampleRate;
VkBool32    inheritedQueries;
} VkPhysicalDeviceFeatures;

```

This structure describes the following features:

- **robustBufferAccess** enables **Robust Buffer Access** guarantees for shader buffer accesses.
- **fullDrawIndexUint32** specifies the full 32-bit range of indices is supported for indexed draw calls when using a **VkIndexType** of **VK_INDEX_TYPE_UINT32**. **maxDrawIndexedIndexValue** is the maximum index value that **may** be used (aside from the primitive restart index, which is always $2^{32}-1$ when the **VkIndexType** is **VK_INDEX_TYPE_UINT32**). If this feature is supported, **maxDrawIndexedIndexValue** **must** be $2^{32}-1$; otherwise it **must** be no smaller than $2^{24}-1$. See **maxDrawIndexedIndexValue**.
- **imageCubeArray** specifies whether image views with a **VkImageViewType** of **VK_IMAGE_VIEW_TYPE_CUBE_ARRAY** **can** be created, and that the corresponding **SampledCubeArray** and **ImageCubeArray** SPIR-V capabilities **can** be used in shader code.
- **independentBlend** specifies whether the **VkPipelineColorBlendAttachmentState** settings are controlled independently per-attachment. If this feature is not enabled, the **VkPipelineColorBlendAttachmentState** settings for all color attachments **must** be identical. Otherwise, a different **VkPipelineColorBlendAttachmentState** **can** be provided for each bound color attachment.
- **geometryShader** specifies whether geometry shaders are supported. If this feature is not enabled, the **VK_SHADER_STAGE_GEOMETRY_BIT** and **VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT** enum values **must** not be used. This also specifies whether shader modules **can** declare the **Geometry** capability.

- **tessellationShader** specifies whether tessellation control and evaluation shaders are supported. If this feature is not enabled, the **VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT**, **VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT**, **VK_PIPELINE_STAGE_TESSELLATION_CONTROL_SHADER_BIT**, **VK_PIPELINE_STAGE_TESSELLATION_EVALUATION_SHADER_BIT**, and **VK_STRUCTURE_TYPE_PIPELINE_TESSELLATION_STATE_CREATE_INFO** enum values **must** not be used. This also specifies whether shader modules **can** declare the **Tessellation** capability.
- **sampleRateShading** specifies whether **Sample Shading** and multisample interpolation are supported. If this feature is not enabled, the **sampleShadingEnable** member of the **VkPipelineMultisampleStateCreateInfo** structure **must** be **VK_FALSE** and the **minSampleShading** member is ignored. This also specifies whether shader modules **can** declare the **SampleRateShading** capability.
- **dualSrcBlend** specifies whether blend operations which take two sources are supported. If this feature is not enabled, the **VK_BLEND_FACTOR_SRC1_COLOR**, **VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR**, **VK_BLEND_FACTOR_SRC1_ALPHA**, and **VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA** enum values **must** not be used as source or destination blending factors. See **Dual-Source Blending**.
- **logicOp** specifies whether logic operations are supported. If this feature is not enabled, the **logicOpEnable** member of the **VkPipelineColorBlendStateCreateInfo** structure **must** be **VK_FALSE**, and the **logicOp** member is ignored.
- **multiDrawIndirect** specifies whether multiple draw indirect is supported. If this feature is not enabled, the **drawCount** parameter to the **vkCmdDrawIndirect** and **vkCmdDrawIndexedIndirect** commands **must** be 0 or 1. The **maxDrawIndirectCount** member of the **VkPhysicalDeviceLimits** structure **must** also be 1 if this feature is not supported. See **maxDrawIndirectCount**.
- **drawIndirectFirstInstance** specifies whether indirect drawing calls support the **firstInstance** parameter. If this feature is not enabled, the **firstInstance** member of all **VkDrawIndirectCommand** and **VkDrawIndexedIndirectCommand** structures that are provided to the **vkCmdDrawIndirect** and **vkCmdDrawIndexedIndirect** commands **must** be 0.
- **depthClamp** specifies whether depth clamping is supported. If this feature is not enabled, the **depthClampEnable** member of the **VkPipelineRasterizationStateCreateInfo** structure **must** be **VK_FALSE**. Otherwise, setting **depthClampEnable** to **VK_TRUE** will enable depth clamping.
- **depthBiasClamp** specifies whether depth bias clamping is supported. If this feature is not enabled, the **depthBiasClamp** member of the **VkPipelineRasterizationStateCreateInfo** structure **must** be 0.0 unless the **VK_DYNAMIC_STATE_DEPTH_BIAS** dynamic state is enabled, in which case the **depthBiasClamp** parameter to **vkCmdSetDepthBias** **must** be 0.0.
- **fillModeNonSolid** specifies whether point and wireframe fill modes are supported. If this feature is not enabled, the **VK_POLYGON_MODE_POINT** and **VK_POLYGON_MODE_LINE** enum values **must** not be used.
- **depthBounds** specifies whether depth bounds tests are supported. If this feature is not enabled, the **depthBoundsTestEnable** member of the **VkPipelineDepthStencilStateCreateInfo** structure **must** be **VK_FALSE** unless the **VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE** dynamic state is enabled, in which case the **depthBoundsTestEnable** parameter to **vkCmdSetDepthBoundsTestEnable** **must** be **VK_FALSE**. When **depthBoundsTestEnable** is **VK_FALSE**, the **minDepthBounds** and **maxDepthBounds** members of the

`VkPipelineDepthStencilStateCreateInfo` structure are ignored.

- `wideLines` specifies whether lines with width other than 1.0 are supported. If this feature is not enabled, the `lineWidth` member of the `VkPipelineRasterizationStateCreateInfo` structure **must** be 1.0 unless the `VK_DYNAMIC_STATE_LINE_WIDTH` dynamic state is enabled, in which case the `lineWidth` parameter to `vkCmdSetLineWidth` **must** be 1.0. When this feature is supported, the range and granularity of supported line widths are indicated by the `lineWidthRange` and `lineWidthGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.
- `largePoints` specifies whether points with size greater than 1.0 are supported. If this feature is not enabled, only a point size of 1.0 written by a shader is supported. The range and granularity of supported point sizes are indicated by the `pointSizeRange` and `pointSizeGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.
- `alphaToOne` specifies whether the implementation is able to replace the alpha value of the fragment shader color output in the `Multisample Coverage` fragment operation. If this feature is not enabled, then the `alphaToOneEnable` member of the `VkPipelineMultisampleStateCreateInfo` structure **must** be `VK_FALSE`. Otherwise setting `alphaToOneEnable` to `VK_TRUE` will enable alpha-to-one behavior.
- `multiViewport` specifies whether more than one viewport is supported. If this feature is not enabled:
 - The `viewportCount` and `scissorCount` members of the `VkPipelineViewportStateCreateInfo` structure **must** be 1.
 - The `firstViewport` and `viewportCount` parameters to the `vkCmdSetViewport` command **must** be 0 and 1, respectively.
 - The `firstScissor` and `scissorCount` parameters to the `vkCmdSetScissor` command **must** be 0 and 1, respectively.
 - The `exclusiveScissorCount` member of the `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure **must** be 0 or 1.
 - The `firstExclusiveScissor` and `exclusiveScissorCount` parameters to the `vkCmdSetExclusiveScissorNV` command **must** be 0 and 1, respectively.
- `samplerAnisotropy` specifies whether anisotropic filtering is supported. If this feature is not enabled, the `anisotropyEnable` member of the `VkSamplerCreateInfo` structure **must** be `VK_FALSE`.
- `textureCompressionETC2` specifies whether all of the ETC2 and EAC compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:
 - `VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK`
 - `VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK`
 - `VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK`
 - `VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK`
 - `VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK`

- `VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK`
- `VK_FORMAT_EAC_R11_UNORM_BLOCK`
- `VK_FORMAT_EAC_R11_SNORM_BLOCK`
- `VK_FORMAT_EAC_R11G11_UNORM_BLOCK`
- `VK_FORMAT_EAC_R11G11_SNORM_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

- `textureCompressionASTC_LDR` specifies whether all of the ASTC LDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:

- `VK_FORMAT_ASTC_4x4_UNORM_BLOCK`
- `VK_FORMAT_ASTC_4x4_SRGB_BLOCK`
- `VK_FORMAT_ASTC_5x4_UNORM_BLOCK`
- `VK_FORMAT_ASTC_5x4_SRGB_BLOCK`
- `VK_FORMAT_ASTC_5x5_UNORM_BLOCK`
- `VK_FORMAT_ASTC_5x5_SRGB_BLOCK`
- `VK_FORMAT_ASTC_6x5_UNORM_BLOCK`
- `VK_FORMAT_ASTC_6x5_SRGB_BLOCK`
- `VK_FORMAT_ASTC_6x6_UNORM_BLOCK`
- `VK_FORMAT_ASTC_6x6_SRGB_BLOCK`
- `VK_FORMAT_ASTC_8x5_UNORM_BLOCK`
- `VK_FORMAT_ASTC_8x5_SRGB_BLOCK`
- `VK_FORMAT_ASTC_8x6_UNORM_BLOCK`
- `VK_FORMAT_ASTC_8x6_SRGB_BLOCK`
- `VK_FORMAT_ASTC_8x8_UNORM_BLOCK`
- `VK_FORMAT_ASTC_8x8_SRGB_BLOCK`
- `VK_FORMAT_ASTC_10x5_UNORM_BLOCK`
- `VK_FORMAT_ASTC_10x5_SRGB_BLOCK`
- `VK_FORMAT_ASTC_10x6_UNORM_BLOCK`
- `VK_FORMAT_ASTC_10x6_SRGB_BLOCK`
- `VK_FORMAT_ASTC_10x8_UNORM_BLOCK`
- `VK_FORMAT_ASTC_10x8_SRGB_BLOCK`
- `VK_FORMAT_ASTC_10x10_UNORM_BLOCK`

- `VK_FORMAT_ASTC_10x10_SRGB_BLOCK`
- `VK_FORMAT_ASTC_12x10_UNORM_BLOCK`
- `VK_FORMAT_ASTC_12x10_SRGB_BLOCK`
- `VK_FORMAT_ASTC_12x12_UNORM_BLOCK`
- `VK_FORMAT_ASTC_12x12_SRGB_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

- `textureCompressionBC` specifies whether all of the BC compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:

- `VK_FORMAT_BC1_RGB_UNORM_BLOCK`
- `VK_FORMAT_BC1_RGB_SRGB_BLOCK`
- `VK_FORMAT_BC1_RGBA_UNORM_BLOCK`
- `VK_FORMAT_BC1_RGBA_SRGB_BLOCK`
- `VK_FORMAT_BC2_UNORM_BLOCK`
- `VK_FORMAT_BC2_SRGB_BLOCK`
- `VK_FORMAT_BC3_UNORM_BLOCK`
- `VK_FORMAT_BC3_SRGB_BLOCK`
- `VK_FORMAT_BC4_UNORM_BLOCK`
- `VK_FORMAT_BC4_SNORM_BLOCK`
- `VK_FORMAT_BC5_UNORM_BLOCK`
- `VK_FORMAT_BC5_SNORM_BLOCK`
- `VK_FORMAT_BC6H_UFLOAT_BLOCK`
- `VK_FORMAT_BC6H_SFLOAT_BLOCK`
- `VK_FORMAT_BC7_UNORM_BLOCK`
- `VK_FORMAT_BC7_SRGB_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

- `occlusionQueryPrecise` specifies whether occlusion queries returning actual sample counts are supported. Occlusion queries are created in a `VkQueryPool` by specifying the `queryType` of `VK_QUERY_TYPE_OCCLUSION` in the `VkQueryPoolCreateInfo` structure which is passed to `vkCreateQueryPool`. If this feature is enabled, queries of this type **can** enable `VK_QUERY_CONTROL_PRECISE_BIT` in the `flags` parameter to `vkCmdBeginQuery`. If this feature

is not supported, the implementation supports only boolean occlusion queries. When any samples are passed, boolean queries will return a non-zero result value, otherwise a result value of zero is returned. When this feature is enabled and `VK_QUERY_CONTROL_PRECISE_BIT` is set, occlusion queries will report the actual number of samples passed.

- `pipelineStatisticsQuery` specifies whether the pipeline statistics queries are supported. If this feature is not enabled, queries of type `VK_QUERY_TYPE_PIPELINE_STATISTICS` **cannot** be created, and none of the `VkQueryPipelineStatisticFlagBits` bits **can** be set in the `pipelineStatistics` member of the `VkQueryPoolCreateInfo` structure.
- `vertexPipelineStoresAndAtomics` specifies whether storage buffers and images support stores and atomic operations in the vertex, tessellation, and geometry shader stages. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by these stages in shader modules **must** be decorated with the `NonWritable` decoration (or the `readonly` memory qualifier in GLSL).
- `fragmentStoresAndAtomics` specifies whether storage buffers and images support stores and atomic operations in the fragment shader stage. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by the fragment stage in shader modules **must** be decorated with the `NonWritable` decoration (or the `readonly` memory qualifier in GLSL).
- `shaderTessellationAndGeometryPointSize` specifies whether the `PointSize` built-in decoration is available in the tessellation control, tessellation evaluation, and geometry shader stages. If this feature is not enabled, members decorated with the `PointSize` built-in decoration **must** not be read from or written to and all points written from a tessellation or geometry shader will have a size of 1.0. This also specifies whether shader modules **can** declare the `TessellationPointSize` capability for tessellation control and evaluation shaders, or if the shader modules **can** declare the `GeometryPointSize` capability for geometry shaders. An implementation supporting this feature **must** also support one or both of the `tessellationShader` or `geometryShader` features.
- `shaderImageGatherExtended` specifies whether the extended set of image gather instructions are available in shader code. If this feature is not enabled, the `OpImage*Gather` instructions do not support the `Offset` and `ConstOffsets` operands. This also specifies whether shader modules **can** declare the `ImageGatherExtended` capability.
- `shaderStorageImageExtendedFormats` specifies whether all the “storage image extended formats” below are supported; if this feature is supported, then the `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT` **must** be supported in `optimalTilingFeatures` for the following formats:
 - `VK_FORMAT_R16G16_SFLOAT`
 - `VK_FORMAT_B10G11R11_UFLOAT_PACK32`
 - `VK_FORMAT_R16_SFLOAT`
 - `VK_FORMAT_R16G16B16A16_UNORM`
 - `VK_FORMAT_A2B10G10R10_UNORM_PACK32`
 - `VK_FORMAT_R16G16_UNORM`
 - `VK_FORMAT_R8G8_UNORM`
 - `VK_FORMAT_R16_UNORM`
 - `VK_FORMAT_R8_UNORM`

- `VK_FORMAT_R16G16B16A16_SNORM`
- `VK_FORMAT_R16G16_SNORM`
- `VK_FORMAT_R8G8_SNORM`
- `VK_FORMAT_R16_SNORM`
- `VK_FORMAT_R8_SNORM`
- `VK_FORMAT_R16G16_SINT`
- `VK_FORMAT_R8G8_SINT`
- `VK_FORMAT_R16_SINT`
- `VK_FORMAT_R8_SINT`
- `VK_FORMAT_A2B10G10R10_UINT_PACK32`
- `VK_FORMAT_R16G16_UINT`
- `VK_FORMAT_R8G8_UINT`
- `VK_FORMAT_R16_UINT`
- `VK_FORMAT_R8_UINT`

NOTE

`shaderStorageImageExtendedFormats` feature only adds a guarantee of format support, which is specified for the whole physical device. Therefore enabling or disabling the feature via `vkCreateDevice` has no practical effect.

To query for additional properties, or if the feature is not supported, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats, as usual rules allow.

`VK_FORMAT_R32G32_UINT`, `VK_FORMAT_R32G32_SINT`, and `VK_FORMAT_R32G32_SFLOAT` from `StorageImageExtendedFormats` SPIR-V capability, are already covered by core Vulkan **mandatory format support**.

- `shaderStorageImageMultisample` specifies whether multisampled storage images are supported. If this feature is not enabled, images that are created with the `VK_IMAGE_USAGE_STORAGE_BIT` usage flag set **must** be created with `samples` equal to `VK_SAMPLE_COUNT_1_BIT`. This also specifies whether shader modules **can** declare the `StorageImageMultisample` and `ImageMSArray` capabilities.
- `shaderStorageImageReadWithoutFormat` specifies whether storage images and storage texel buffers require a format qualifier to be specified when reading. `shaderStorageImageReadWithoutFormat` applies only to formats listed in the **storage without format** list.
- `shaderStorageImageWriteWithoutFormat` specifies whether storage images and storage texel buffers require a format qualifier to be specified when writing. `shaderStorageImageWriteWithoutFormat` applies only to formats listed in the **storage without format** list.
- `shaderUniformBufferArrayDynamicIndexing` specifies whether arrays of uniform buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the

invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `UniformBufferArrayDynamicIndexing` capability.

- `shaderSampledImageArrayDynamicIndexing` specifies whether arrays of samplers or sampled images **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `SampledImageArrayDynamicIndexing` capability.
- `shaderStorageBufferArrayDynamicIndexing` specifies whether arrays of storage buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `StorageBufferArrayDynamicIndexing` capability.
- `shaderStorageImageArrayDynamicIndexing` specifies whether arrays of storage images **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `StorageImageArrayDynamicIndexing` capability.
- `shaderClipDistance` specifies whether clip distances are supported in shader code. If this feature is not enabled, any members decorated with the `ClipDistance` built-in decoration **must** not be read from or written to in shader modules. This also specifies whether shader modules **can** declare the `ClipDistance` capability.
- `shaderCullDistance` specifies whether cull distances are supported in shader code. If this feature is not enabled, any members decorated with the `CullDistance` built-in decoration **must** not be read from or written to in shader modules. This also specifies whether shader modules **can** declare the `CullDistance` capability.
- `shaderFloat64` specifies whether 64-bit floats (doubles) are supported in shader code. If this feature is not enabled, 64-bit floating-point types **must** not be used in shader code. This also specifies whether shader modules **can** declare the `Float64` capability. Declaring and using 64-bit floats is enabled for all storage classes that SPIR-V allows with the `Float64` capability.
- `shaderInt64` specifies whether 64-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 64-bit integer types **must** not be used in shader code. This also specifies whether shader modules **can** declare the `Int64` capability. Declaring and using 64-bit integers is enabled for all storage classes that SPIR-V allows with the `Int64` capability.
- `shaderInt16` specifies whether 16-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 16-bit integer types **must** not be used in shader code. This also specifies whether shader modules **can** declare the `Int16` capability. However, this only

enables a subset of the storage classes that SPIR-V allows for the **Int16** SPIR-V capability: Declaring and using 16-bit integers in the **Private**, **Workgroup** (for non-Block variables), and **Function** storage classes is enabled, while declaring them in the interface storage classes (e.g., **UniformConstant**, **Uniform**, **StorageBuffer**, **Input**, **Output**, and **PushConstant**) is not enabled.

- **shaderResourceResidency** specifies whether image operations that return resource residency information are supported in shader code. If this feature is not enabled, the **OpImageSparse*** instructions **must** not be used in shader code. This also specifies whether shader modules **can** declare the **SparseResidency** capability. The feature requires at least one of the **sparseResidency*** features to be supported.
- **shaderResourceMinLod** specifies whether image operations specifying the minimum resource LOD are supported in shader code. If this feature is not enabled, the **MinLod** image operand **must** not be used in shader code. This also specifies whether shader modules **can** declare the **MinLod** capability.
- **sparseBinding** specifies whether resource memory **can** be managed at opaque sparse block level instead of at the object level. If this feature is not enabled, resource memory **must** be bound only on a per-object basis using the **vkBindBufferMemory** and **vkBindImageMemory** commands. In this case, buffers and images **must** not be created with **VK_BUFFER_CREATE_SPARSE_BINDING_BIT** and **VK_IMAGE_CREATE_SPARSE_BINDING_BIT** set in the **flags** member of the **VkBufferCreateInfo** and **VkImageCreateInfo** structures, respectively. Otherwise resource memory **can** be managed as described in [Sparse Resource Features](#).
- **sparseResidencyBuffer** specifies whether the device **can** access partially resident buffers. If this feature is not enabled, buffers **must** not be created with **VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT** set in the **flags** member of the **VkBufferCreateInfo** structure.
- **sparseResidencyImage2D** specifies whether the device **can** access partially resident 2D images with 1 sample per pixel. If this feature is not enabled, images with an **imageType** of **VK_IMAGE_TYPE_2D** and **samples** set to **VK_SAMPLE_COUNT_1_BIT** **must** not be created with **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidencyImage3D** specifies whether the device **can** access partially resident 3D images. If this feature is not enabled, images with an **imageType** of **VK_IMAGE_TYPE_3D** **must** not be created with **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidency2Samples** specifies whether the physical device **can** access partially resident 2D images with 2 samples per pixel. If this feature is not enabled, images with an **imageType** of **VK_IMAGE_TYPE_2D** and **samples** set to **VK_SAMPLE_COUNT_2_BIT** **must** not be created with **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidency4Samples** specifies whether the physical device **can** access partially resident 2D images with 4 samples per pixel. If this feature is not enabled, images with an **imageType** of **VK_IMAGE_TYPE_2D** and **samples** set to **VK_SAMPLE_COUNT_4_BIT** **must** not be created with **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidency8Samples** specifies whether the physical device **can** access partially resident 2D

images with 8 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_8_BIT` **must** not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.

- `sparseResidency16Samples` specifies whether the physical device **can** access partially resident 2D images with 16 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_16_BIT` **must** not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.
- `sparseResidencyAliased` specifies whether the physical device **can** correctly access data aliased into multiple locations. If this feature is not enabled, the `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` and `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` enum values **must** not be used in `flags` members of the `VkBufferCreateInfo` and `VkImageCreateInfo` structures, respectively.
- `variableMultisampleRate` specifies whether all pipelines that will be bound to a command buffer during a subpass which uses no attachments **must** have the same value for `VkPipelineMultisampleStateCreateInfo::rasterizationSamples`. If set to `VK_TRUE`, the implementation supports variable multisample rates in a subpass which uses no attachments. If set to `VK_FALSE`, then all pipelines bound in such a subpass **must** have the same multisample rate. This has no effect in situations where a subpass uses any attachments.
- `inheritedQueries` specifies whether a secondary command buffer **may** be executed while a query is active.

The `VkPhysicalDeviceVulkan11Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan11Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer16BitAccess;
    VkBool32           uniformAndStorageBuffer16BitAccess;
    VkBool32           storagePushConstant16;
    VkBool32           storageInputOutput16;
    VkBool32           multiview;
    VkBool32           multiviewGeometryShader;
    VkBool32           multiviewTessellationShader;
    VkBool32           variablePointersStorageBuffer;
    VkBool32           variablePointers;
    VkBool32           protectedMemory;
    VkBool32           samplerYcbcrConversion;
    VkBool32           shaderDrawParameters;
} VkPhysicalDeviceVulkan11Features;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageBuffer16BitAccess` specifies whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless `storageBuffer8BitAccess` or `uniformAndStorageBuffer8BitAccess` are enabled or they are accessed in 32-bit multiples if `shaderUntypedPointers` is enabled. This also specifies whether shader modules **can** declare the `StorageBuffer16BitAccess` capability.
- `uniformAndStorageBuffer16BitAccess` specifies whether objects in the `Uniform` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless `uniformAndStorageBuffer8BitAccess` are enabled or they are accessed in 32-bit multiples if `shaderUntypedPointers` is enabled. This also specifies whether shader modules **can** declare the `UniformAndStorageBuffer16BitAccess` capability.
- `storagePushConstant16` specifies whether objects in the `PushConstant` storage class **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members **must** not be used in such objects unless `storagePushConstant8` are enabled or they are accessed in 32-bit multiples if `shaderUntypedPointers` is enabled. This also specifies whether shader modules **can** declare the `StoragePushConstant16` capability.
- `storageInputOutput16` specifies whether objects in the `Input` and `Output` storage classes **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StorageInputOutput16` capability.
- `multiview` specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass **must** always be zero.
- `multiviewGeometryShader` specifies whether the implementation supports multiview rendering within a render pass, with `geometry shaders`. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a geometry shader.
- `multiviewTessellationShader` specifies whether the implementation supports multiview rendering within a render pass, with `tessellation shaders`. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include any tessellation shaders.
- `variablePointersStorageBuffer` specifies whether the implementation supports the SPIR-V `VariablePointersStorageBuffer` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_variable_pointers` extension or the `VariablePointersStorageBuffer` capability.
- `variablePointers` specifies whether the implementation supports the SPIR-V `VariablePointers` capability. When this feature is not enabled, shader modules **must** not declare the `VariablePointers` capability.
- `protectedMemory` specifies whether `protected memory` is supported.
- `samplerYcbcrConversion` specifies whether the implementation supports `sampler Y'CBCR conversion`. If `samplerYcbcrConversion` is `VK_FALSE`, sampler Y'C_BC_R conversion is not supported, and samplers using sampler Y'C_BC_R conversion **must** not be used.

- `shaderDrawParameters` specifies whether the implementation supports the SPIR-V `DrawParameters` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_shader_draw_parameters` extension or the `DrawParameters` capability.

If the `VkPhysicalDeviceVulkan11Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVulkan11Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan11Features-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_1_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVulkan12Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan12Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           samplerMirrorClampToEdge;
    VkBool32           drawIndirectCount;
    VkBool32           storageBuffer8BitAccess;
    VkBool32           uniformAndStorageBuffer8BitAccess;
    VkBool32           storagePushConstant8;
    VkBool32           shaderBufferInt64Atomics;
    VkBool32           shaderSharedInt64Atomics;

```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **samplerMirrorClampToEdge** indicates whether the implementation supports the [VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE](#) sampler address mode. If this feature is not enabled, the [VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE](#) sampler address mode **must** not be used.
- **drawIndirectCount** indicates whether the implementation supports the [vkCmdDrawIndirectCount](#) and [vkCmdDrawIndexedIndirectCount](#) functions. If this feature is not enabled, these functions **must** not be used.
- **storageBuffer8BitAccess** indicates whether objects in the [StorageBuffer](#), [ShaderRecordBufferKHR](#), or [PhysicalStorageBuffer](#) storage class with the **Block** decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless [shaderUntypedPointer](#) is enabled and they are accessed in 32-bit multiples or 16-bit multiples if [storageBuffer16BitAccess](#) is enabled. This also indicates whether shader modules

can declare the `StorageBuffer8BitAccess` capability.

- `uniformAndStorageBuffer8BitAccess` indicates whether objects in the `Uniform` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless `shaderUntypedPointers` is enabled and they are accessed in 32-bit multiples or 16-bit multiples if `uniformAndStorageBuffer16BitAccess` is enabled. This also indicates whether shader modules **can** declare the `UniformAndStorageBuffer8BitAccess` capability.
- `storagePushConstant8` indicates whether objects in the `PushConstant` storage class **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless `shaderUntypedPointers` is enabled and they are accessed in 32-bit multiples or 16-bit multiples if `storagePushConstant16` is enabled. This also indicates whether shader modules **can** declare the `StoragePushConstant8` capability.
- `shaderBufferInt64Atomics` indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on buffers.
- `shaderSharedInt64Atomics` indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on shared and payload memory.
- `shaderFloat16` indicates whether 16-bit floats (halves) are supported in shader code. This also indicates whether shader modules **can** declare the `Float16` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Float16` SPIR-V capability: Declaring and using 16-bit floats in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.
- `shaderInt8` indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules **can** declare the `Int8` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Int8` SPIR-V capability: Declaring and using 8-bit integers in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.
- `descriptorIndexing` indicates whether the implementation supports the minimum set of descriptor indexing features as described in the [Feature Requirements](#) section. Enabling this feature when `vkCreateDevice` is called does not imply the other minimum descriptor indexing features are also enabled. Those other descriptor indexing features **must** be enabled individually as needed by the application.
- `shaderInputAttachmentArrayDynamicIndexing` indicates whether arrays of input attachments **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayDynamicIndexing` capability.
- `shaderUniformTexelBufferArrayDynamicIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates

whether shader modules **can** declare the `UniformTexelBufferArrayDynamicIndexing` capability.

- `shaderStorageTexelBufferArrayDynamicIndexing` indicates whether arrays of storage texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayDynamicIndexing` capability.
- `shaderUniformBufferArrayNonUniformIndexing` indicates whether arrays of uniform buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformBufferArrayNonUniformIndexing` capability.
- `shaderSampledImageArrayNonUniformIndexing` indicates whether arrays of samplers or sampled images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `SampledImageArrayNonUniformIndexing` capability.
- `shaderStorageBufferArrayNonUniformIndexing` indicates whether arrays of storage buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageBufferArrayNonUniformIndexing` capability.
- `shaderStorageImageArrayNonUniformIndexing` indicates whether arrays of storage images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageImageArrayNonUniformIndexing` capability.
- `shaderInputAttachmentArrayNonUniformIndexing` indicates whether arrays of input attachments **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayNonUniformIndexing` capability.
- `shaderUniformTexelBufferArrayNonUniformIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayNonUniformIndexing` capability.
- `shaderStorageTexelBufferArrayNonUniformIndexing` indicates whether arrays of storage texel

buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayNonUniformIndexing` capability.

- `descriptorBindingUniformBufferUpdateAfterBind` indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`.
- `descriptorBindingSampledImageUpdateAfterBind` indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`.
- `descriptorBindingStorageImageUpdateAfterBind` indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`.
- `descriptorBindingStorageBufferUpdateAfterBind` indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`.
- `descriptorBindingUniformTexelBufferUpdateAfterBind` indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`.
- `descriptorBindingStorageTexelBufferUpdateAfterBind` indicates whether the implementation supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.
- `descriptorBindingUpdateUnusedWhilePending` indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` **must** not be used.
- `descriptorBindingPartiallyBound` indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` **must** not be used.
- `descriptorBindingVariableDescriptorCount` indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` **must** not be used.
- `runtimeDescriptorArray` indicates whether the implementation supports the SPIR-V `RuntimeDescriptorArray` capability. If this feature is not enabled, descriptors **must** not be declared in runtime arrays.
- `samplerFilterMinmax` indicates whether the implementation supports a minimum set of required

formats supporting min/max filtering as defined by the `filterMinmaxSingleComponentFormats` property minimum requirements. If this feature is not enabled, then `VkSamplerReductionModeCreateInfo` **must** only use `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`.

- `scalarBlockLayout` indicates that the implementation supports the layout of resource blocks in shaders using `scalar alignment`.
- `imagelessFramebuffer` indicates that the implementation supports specifying the image view for attachments at render pass begin time via `VkRenderPassAttachmentBeginInfo`.
- `uniformBufferStandardLayout` indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See `Standard Buffer Layout`.
- `shaderSubgroupExtendedTypes` is a boolean specifying whether subgroup operations can use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in `group operations` with `subgroup scope`, if the implementation supports the types.
- `separateDepthStencilLayouts` indicates whether the implementation supports a `VkImageMemoryBarrier` for a depth/stencil image with only one of `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` set, and whether `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL`, or `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL` can be used.
- `hostQueryReset` indicates that the implementation supports resetting queries from the host with `vkResetQueryPool`.
- `timelineSemaphore` indicates whether semaphores created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE` are supported.
- `bufferDeviceAddress` indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from `vkGetBufferDeviceAddress`.
- `bufferDeviceAddressCaptureReplay` indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.
- `bufferDeviceAddressMultiDevice` indicates that the implementation supports the `bufferDeviceAddress`, `rayTracingPipeline` and `rayQuery` features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses **must** not be queried on a logical device created with more than one physical device.
- `vulkanMemoryModel` indicates whether shader modules **can** declare the `VulkanMemoryModel` capability.
- `vulkanMemoryModelDeviceScope` indicates whether the Vulkan Memory Model can use `Device` scope synchronization. This also indicates whether shader modules **can** declare the `VulkanMemoryModelDeviceScope` capability.
- `vulkanMemoryModelAvailabilityVisibilityChains` indicates whether the Vulkan Memory Model can use `availability and visibility chains` with more than one element.
- `shaderOutputViewportIndex` indicates whether the implementation supports the `ShaderViewportIndex` SPIR-V capability enabling variables decorated with the `ViewportIndex` built-in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not

enabled, the `ViewportIndex` built-in decoration **must** not be used on outputs in mesh, vertex or tessellation evaluation shaders.

- `shaderOutputLayer` indicates whether the implementation supports the `ShaderLayer` SPIR-V capability enabling variables decorated with the `Layer` built-in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not enabled, the `Layer` built-in decoration **must** not be used on outputs in mesh, vertex or tessellation evaluation shaders.
- If `subgroupBroadcastDynamicId` is `VK_TRUE`, the “Id” operand of `OpGroupNonUniformBroadcast` **can** be dynamically uniform within a subgroup, and the “Index” operand of `OpGroupNonUniformQuadBroadcast` **can** be dynamically uniform within the derivative group. If it is `VK_FALSE`, these operands **must** be constants.

If the `VkPhysicalDeviceVulkan12Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVulkan12Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan12Features-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_2_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVulkan13Features` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceVulkan13Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustImageAccess;
    VkBool32           inlineUniformBlock;
    VkBool32           descriptorBindingInlineUniformBlockUpdateAfterBind;
    VkBool32           pipelineCreationCacheControl;
    VkBool32           privateData;
    VkBool32           shaderDemoteToHelperInvocation;
    VkBool32           shaderTerminateInvocation;
    VkBool32           subgroupSizeControl;
    VkBool32           computeFullSubgroups;
    VkBool32           synchronization2;
    VkBool32           textureCompressionASTC_HDR;
    VkBool32           shaderZeroInitializeWorkgroupMemory;
    VkBool32           dynamicRendering;
    VkBool32           shaderIntegerDotProduct;
    VkBool32           maintenance4;
} VkPhysicalDeviceVulkan13Features;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **robustImageAccess** enables [Robust Image Access](#) guarantees for shader image accesses.
- **inlineUniformBlock** indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, [VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#) **must** not be used.
- **descriptorBindingInlineUniformBlockUpdateAfterBind** indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#) **must** not be used with [VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#).
- **pipelineCreationCacheControl** indicates that the implementation supports:
 - The following **can** be used in [Vk*PipelineCreateInfo::flags](#):
 - [VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT](#)
 - [VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT](#)
 - The following **can** be used in [VkPipelineCacheCreateInfo::flags](#):
 - [VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT](#)
- **privateData** indicates whether the implementation supports private data. See [Private Data](#).
- **shaderDemoteToHelperInvocation** indicates whether the implementation supports the SPIR-V [DemoteToHelperInvocationEXT](#) capability.
- **shaderTerminateInvocation** specifies whether the implementation supports SPIR-V modules that

use the `SPV_KHR_terminate_invocation` extension.

- `subgroupSizeControl` indicates whether the implementation supports controlling shader subgroup sizes via the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag and the `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure.
- `computeFullSubgroups` indicates whether the implementation supports requiring full subgroups in compute, mesh, or task shaders via the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag.
- `synchronization2` indicates whether the implementation supports the new set of synchronization commands introduced in `VK_KHR_synchronization2`.
- `textureCompressionASTC_HDR` indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:
 - `VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

- `shaderZeroInitializeWorkgroupMemory` specifies whether the implementation supports initializing a variable in Workgroup storage class.
- `dynamicRendering` specifies that the implementation supports dynamic render pass instances using the `vkCmdBeginRendering` command.
- `shaderIntegerDotProduct` specifies whether shader modules **can** declare the `DotProductInputAllKHR`, `DotProductInput4x8BitKHR`, `DotProductInput4x8BitPackedKHR` and

`DotProductKHR` capabilities.

- `maintenance4` indicates that the implementation supports the following:
 - The application **may** destroy a `VkPipelineLayout` object immediately after using it to create another object.
 - `LocalSizeId` **can** be used as an alternative to `LocalSize` to specify the local workgroup size with specialization constants.
 - Images created with identical creation parameters will always have the same alignment requirements.
 - The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.
 - Push constants do not have to be initialized before they are dynamically accessed.
 - The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.

If the `VkPhysicalDeviceVulkan13Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVulkan13Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan13Features-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_3_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVulkan14Features` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceVulkan14Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           globalPriorityQuery;
    VkBool32           shaderSubgroupRotate;
    VkBool32           shaderSubgroupRotateClustered;
    VkBool32           shaderFloatControls2;
    VkBool32           shaderExpectAssume;
    VkBool32           rectangularLines;
    VkBool32           bresenhamLines;
    VkBool32           smoothLines;
    VkBool32           stippledRectangularLines;
    VkBool32           stippledBresenhamLines;
    VkBool32           stippledSmoothLines;
    VkBool32           vertexAttributeInstanceRateDivisor;
    VkBool32           vertexAttributeInstanceRateZeroDivisor;
    VkBool32           indexTypeUint8;
    VkBool32           dynamicRenderingLocalRead;
    VkBool32           maintenance5;
    VkBool32           maintenance6;
    VkBool32           pipelineProtectedAccess;
    VkBool32           pipelineRobustness;
    VkBool32           hostImageCopy;
    VkBool32           pushDescriptor;
} VkPhysicalDeviceVulkan14Features;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **globalPriorityQuery** indicates whether the implementation supports the ability to query global queue priorities.
- **shaderSubgroupRotate** specifies whether shader modules **can** declare the **GroupNonUniformRotateKHR** capability.
- **shaderSubgroupRotateClustered** specifies whether shader modules **can** use the **ClusterSize** operand to **OpGroupNonUniformRotateKHR**.
- **shaderFloatControls2** specifies whether shader modules **can** declare the **FloatControls2** capability.
- **shaderExpectAssume** specifies whether shader modules **can** declare the **ExpectAssumeKHR** capability.
- **rectangularLines** indicates whether the implementation supports **rectangular line rasterization**.
- **bresenhamLines** indicates whether the implementation supports **Bresenham-style line rasterization**.
- **smoothLines** indicates whether the implementation supports **smooth line rasterization**.

- `stippledRectangularLines` indicates whether the implementation supports `stippled line rasterization` with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR` lines.
- `stippledBresenhamLines` indicates whether the implementation supports `stippled line rasterization` with `VK_LINE_RASTERIZATION_MODE_BRESENHAM` lines.
- `stippledSmoothLines` indicates whether the implementation supports `stippled line rasterization` with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH` lines.
- `vertexAttributeInstanceRateDivisor` specifies whether vertex attribute fetching may be repeated in the case of instanced rendering.
- `vertexAttributeInstanceRateZeroDivisor` specifies whether a zero value for `VkVertexInputBindingDivisorDescriptionEXT::divisor` is supported.
- `indexTypeUint8` indicates that `VK_INDEX_TYPE_UINT8` can be used with `vkCmdBindIndexBuffer2` and `vkCmdBindIndexBuffer`.
- `dynamicRenderingLocalRead` specifies that the implementation supports local reads inside dynamic render pass instances using the `vkCmdBeginRendering` command.
- `maintenance5` indicates that the implementation supports the following:
 - The ability to expose support for the optional format `VK_FORMAT_A1B5G5R5_UNORM_PACK16`.
 - The ability to expose support for the optional format `VK_FORMAT_A8_UNORM`.
 - A property to indicate that multisample coverage operations are performed after sample counting in `EarlyFragmentTests` mode.
 - Creating a `VkBufferView` with a subset of the associated `VkBuffer` usage using `VkBufferUsageFlags2CreateInfo`.
 - A new function `vkCmdBindIndexBuffer2`, allowing a range of memory to be bound as an index buffer.
 - `vkGetDeviceProcAddr` will return `NULL` for function pointers of core functions for versions higher than the version requested by the application.
 - `vkCmdBindVertexBuffers2` supports using `VK_WHOLE_SIZE` in the `pSizes` parameter.
 - If `PointSize` is not written, a default value of `1.0` is used for the size of points.
 - `VkShaderModuleCreateInfo` can be added as a chained structure to pipeline creation via `VkPipelineShaderStageCreateInfo`, rather than having to create a shader module.
 - A function `vkGetRenderingAreaGranularity` to query the optimal render area for a dynamic rendering instance.
 - A property to indicate that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE` have defined behavior.
 - `vkGetDeviceImageSubresourceLayout` allows an application to perform a `vkGetImageSubresourceLayout` query without having to create an image.
 - `VK_REMAINING_ARRAY_LAYERS` as the `layerCount` member of `VkImageSubresourceLayers`.
 - A property to indicate whether `PointSize` controls the final rasterization of polygons if `polygon mode` is `VK_POLYGON_MODE_POINT`.

- Two properties to indicate the non-strict line rasterization algorithm used.
- Two new flags words `VkPipelineCreateFlagBits2` and `VkBufferUsageFlagBits2`.
- Physical-device-level functions **can** now be called with any value in the valid range for a type beyond the defined enumerants, such that applications can avoid checking individual features, extensions, or versions before querying supported properties of a particular enumerant.
- Copies between images of any type are allowed, with 1D images treated as 2D images with a height of 1.
- `maintenance6` indicates that the implementation supports the following:
 - `VK_NULL_HANDLE` **can** be used when binding an index buffer
 - `VkBindMemoryStatus` **can** be included in the `pNext` chain of the `VkBindBufferMemoryInfo` and `VkBindImageMemoryInfo` structures, enabling applications to retrieve `VkResult` values for individual memory binding operations.
 - `VkPhysicalDeviceMaintenance6Properties::blockTexelViewCompatibleMultipleLayers` property to indicate that the implementation supports creating image views with `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` where the `layerCount` member of `subresourceRange` is greater than 1.
 - `VkPhysicalDeviceMaintenance6Properties::maxCombinedImageSamplerDescriptorCount` property which indicates the maximum descriptor size required for any format that requires a sampler $Y'C_B C_R$ conversion supported by the implementation.
 - A `VkPhysicalDeviceMaintenance6Properties::fragmentShadingRateClampCombinerInputs` property which indicates whether the implementation clamps the inputs to fragment shading rate combiner operations.
- `pipelineProtectedAccess` indicates whether the implementation supports specifying protected access on individual pipelines.
- `pipelineRobustness` indicates that robustness **can** be requested on a per-pipeline-stage granularity.
- `hostImageCopy` indicates that the implementation supports copying from host memory to images using the `vkCopyMemoryToImage` command, copying from images to host memory using the `vkCopyImageToMemory` command, and copying between images using the `vkCopyImageToImage` command.
- `pushDescriptor` indicates that the implementation supports push descriptors.

If the `VkPhysicalDeviceVulkan14Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVulkan14Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VALID-VkPhysicalDeviceVulkan14Features-sType-sType`

sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_4_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVariablePointersFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceVariablePointersFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           variablePointersStorageBuffer;
    VkBool32           variablePointers;
} VkPhysicalDeviceVariablePointersFeatures;
```

```
// Provided by VK_VERSION_1_1
// Equivalent to VkPhysicalDeviceVariablePointersFeatures
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointerFeatures;
```

```
// Provided by VK_KHR_variable_pointers
// Equivalent to VkPhysicalDeviceVariablePointersFeatures
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointersFeaturesKHR;
```

```
// Provided by VK_KHR_variable_pointers
// Equivalent to VkPhysicalDeviceVariablePointersFeatures
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointerFeaturesKHR;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **variablePointersStorageBuffer** specifies whether the implementation supports the SPIR-V `VariablePointersStorageBuffer` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_variable_pointers` extension or the `VariablePointersStorageBuffer` capability.

- `variablePointers` specifies whether the implementation supports the SPIR-V `VariablePointers` capability. When this feature is not enabled, shader modules **must** not declare the `VariablePointers` capability.

If the `VkPhysicalDeviceVariablePointersFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVariablePointersFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage

- VUID-VkPhysicalDeviceVariablePointersFeatures-variablePointers-01431
If `variablePointers` is enabled then `variablePointersStorageBuffer` **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVariablePointersFeatures-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VARIABLE_POINTERS_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceMultiviewFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiview;
    VkBool32           multiviewGeometryShader;
    VkBool32           multiviewTessellationShader;
} VkPhysicalDeviceMultiviewFeatures;
```

```
// Provided by VK_KHR_multiview
// Equivalent to VkPhysicalDeviceMultiviewFeatures
typedef VkPhysicalDeviceMultiviewFeatures VkPhysicalDeviceMultiviewFeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **multiview** specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass **must** always be zero.
- **multiviewGeometryShader** specifies whether the implementation supports multiview rendering within a render pass, with [geometry shaders](#). If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a geometry shader.
- **multiviewTessellationShader** specifies whether the implementation supports multiview rendering within a render pass, with [tessellation shaders](#). If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include any tessellation shaders.

If the [VkPhysicalDeviceMultiviewFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMultiviewFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage

- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewGeometryShader-00580
If **multiviewGeometryShader** is enabled then **multiview** **must** also be enabled
- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewTessellationShader-00581
If **multiviewTessellationShader** is enabled then **multiview** **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewFeatures-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceShaderAtomicFloatFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_atomic_float
typedef struct VkPhysicalDeviceShaderAtomicFloatFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferFloat32Atomics;
    VkBool32           shaderBufferFloat32AtomicAdd;
    VkBool32           shaderBufferFloat64Atomics;
    VkBool32           shaderBufferFloat64AtomicAdd;
    VkBool32           shaderSharedFloat32Atomics;
    VkBool32           shaderSharedFloat32AtomicAdd;
    VkBool32           shaderSharedFloat64Atomics;
    VkBool32           shaderSharedFloat64AtomicAdd;
    VkBool32           shaderImageFloat32Atomics;
    VkBool32           shaderImageFloat32AtomicAdd;
    VkBool32           sparseImageFloat32Atomics;
    VkBool32           sparseImageFloat32AtomicAdd;
} VkPhysicalDeviceShaderAtomicFloatFeaturesEXT;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderBufferFloat32Atomics** indicates whether shaders **can** perform 32-bit floating-point load, store, and exchange atomic operations on storage buffers.
- **shaderBufferFloat32AtomicAdd** indicates whether shaders **can** perform 32-bit floating-point add atomic operations on storage buffers.
- **shaderBufferFloat64Atomics** indicates whether shaders **can** perform 64-bit floating-point load, store, and exchange atomic operations on storage buffers.
- **shaderBufferFloat64AtomicAdd** indicates whether shaders **can** perform 64-bit floating-point add atomic operations on storage buffers.
- **shaderSharedFloat32Atomics** indicates whether shaders **can** perform 32-bit floating-point load, store, and exchange atomic operations on shared and payload memory.
- **shaderSharedFloat32AtomicAdd** indicates whether shaders **can** perform 32-bit floating-point add atomic operations on shared and payload memory.
- **shaderSharedFloat64Atomics** indicates whether shaders **can** perform 64-bit floating-point load, store, and exchange atomic operations on shared and payload memory.
- **shaderSharedFloat64AtomicAdd** indicates whether shaders **can** perform 64-bit floating-point add atomic operations on shared and payload memory.
- **shaderImageFloat32Atomics** indicates whether shaders **can** perform 32-bit floating-point load, store, and exchange atomic image operations.
- **shaderImageFloat32AtomicAdd** indicates whether shaders **can** perform 32-bit floating-point add atomic image operations.
- **sparseImageFloat32Atomics** indicates whether 32-bit floating-point load, store, and exchange

atomic operations **can** be used on sparse images.

- `sparseImageFloat32AtomicAdd` indicates whether 32-bit floating-point add atomic operations **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloatFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_atomic_float2
typedef struct VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferFloat16Atomics;
    VkBool32           shaderBufferFloat16AtomicAdd;
    VkBool32           shaderBufferFloat16AtomicMinMax;
    VkBool32           shaderBufferFloat32AtomicMinMax;
    VkBool32           shaderBufferFloat64AtomicMinMax;
    VkBool32           shaderSharedFloat16Atomics;
    VkBool32           shaderSharedFloat16AtomicAdd;
    VkBool32           shaderSharedFloat16AtomicMinMax;
    VkBool32           shaderSharedFloat32AtomicMinMax;
    VkBool32           shaderSharedFloat64AtomicMinMax;
    VkBool32           shaderImageFloat32AtomicMinMax;
    VkBool32           sparseImageFloat32AtomicMinMax;
} VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBufferFloat16Atomics` indicates whether shaders **can** perform 16-bit floating-point load, store, and exchange atomic operations on storage buffers.
- `shaderBufferFloat16AtomicAdd` indicates whether shaders **can** perform 16-bit floating-point add atomic operations on storage buffers.
- `shaderBufferFloat16AtomicMinMax` indicates whether shaders **can** perform 16-bit floating-point min and max atomic operations on storage buffers.
- `shaderBufferFloat32AtomicMinMax` indicates whether shaders **can** perform 32-bit floating-point min and max atomic operations on storage buffers.
- `shaderBufferFloat64AtomicMinMax` indicates whether shaders **can** perform 64-bit floating-point min and max atomic operations on storage buffers.
- `shaderSharedFloat16Atomics` indicates whether shaders **can** perform 16-bit floating-point load, store, and exchange atomic operations on shared and payload memory.
- `shaderSharedFloat16AtomicAdd` indicates whether shaders **can** perform 16-bit floating-point add atomic operations on shared and payload memory.
- `shaderSharedFloat16AtomicMinMax` indicates whether shaders **can** perform 16-bit floating-point min and max atomic operations on shared and payload memory.
- `shaderSharedFloat32AtomicMinMax` indicates whether shaders **can** perform 32-bit floating-point min and max atomic operations on shared and payload memory.
- `shaderSharedFloat64AtomicMinMax` indicates whether shaders **can** perform 64-bit floating-point min and max atomic operations on shared and payload memory.
- `shaderImageFloat32AtomicMinMax` indicates whether shaders **can** perform 32-bit floating-point min and max atomic image operations.
- `sparseImageFloat32AtomicMinMax` indicates whether 32-bit floating-point min and max atomic operations **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

The `VkPhysicalDevice8BitStorageFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDevice8BitStorageFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer8BitAccess;
    VkBool32           uniformAndStorageBuffer8BitAccess;
    VkBool32           storagePushConstant8;
} VkPhysicalDevice8BitStorageFeatures;
```

```
// Provided by VK_KHR_8bit_storage
// Equivalent to VkPhysicalDevice8BitStorageFeatures
typedef VkPhysicalDevice8BitStorageFeatures VkPhysicalDevice8BitStorageFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageBuffer8BitAccess` indicates whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless `shaderUntypedPointer` is enabled and they are accessed in 32-bit multiples or 16-bit multiples if `storageBuffer16BitAccess` is enabled. This also indicates whether shader modules **can** declare the `StorageBuffer8BitAccess` capability.
- `uniformAndStorageBuffer8BitAccess` indicates whether objects in the `Uniform` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless `shaderUntypedPointers` is enabled and they are accessed in 32-bit multiples or 16-bit multiples if `uniformAndStorageBuffer16BitAccess` is enabled. This also indicates whether shader modules **can** declare the `UniformAndStorageBuffer8BitAccess` capability.
- `storagePushConstant8` indicates whether objects in the `PushConstant` storage class **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless `shaderUntypedPointers` is enabled and they are accessed in 32-bit multiples or 16-bit multiples if `storagePushConstant16` is enabled. This also indicates whether shader modules **can** declare the `StoragePushConstant8` capability.

If the `VkPhysicalDevice8BitStorageFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevice8BitStorageFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevice8BitStorageFeatures-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_8BIT_STORAGE_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevice16BitStorageFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevice16BitStorageFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer16BitAccess;
    VkBool32           uniformAndStorageBuffer16BitAccess;
    VkBool32           storagePushConstant16;
    VkBool32           storageInputOutput16;
} VkPhysicalDevice16BitStorageFeatures;
```

```
// Provided by VK_KHR_16bit_storage
// Equivalent to VkPhysicalDevice16BitStorageFeatures
typedef VkPhysicalDevice16BitStorageFeatures VkPhysicalDevice16BitStorageFeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **storageBuffer16BitAccess** specifies whether objects in the **StorageBuffer**, **ShaderRecordBufferKHR**, or **PhysicalStorageBuffer** storage class with the **Block** decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless **storageBuffer8BitAccess** or **uniformAndStorageBuffer8BitAccess** are enabled or they are accessed in 32-bit multiples if **shaderUntypedPointers** is enabled. This also specifies whether shader modules **can** declare the **StorageBuffer16BitAccess** capability.
- **uniformAndStorageBuffer16BitAccess** specifies whether objects in the **Uniform** storage class with the **Block** decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless **uniformAndStorageBuffer8BitAccess** are enabled or they are accessed in 32-bit multiples if

`shaderUntypedPointers` is enabled. This also specifies whether shader modules **can** declare the `UniformAndStorageBuffer16BitAccess` capability.

- `storagePushConstant16` specifies whether objects in the `PushConstant` storage class **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members **must** not be used in such objects unless `storagePushConstant8` are enabled or they are accessed in 32-bit multiples if `shaderUntypedPointers` is enabled. This also specifies whether shader modules **can** declare the `StoragePushConstant16` capability.
- `storageInputOutput16` specifies whether objects in the `Input` and `Output` storage classes **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StorageInputOutput16` capability.

If the `VkPhysicalDevice16BitStorageFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevice16BitStorageFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The `VkPhysicalDeviceShaderFloat16Int8Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderFloat16Int8Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat16;
    VkBool32           shaderInt8;
} VkPhysicalDeviceShaderFloat16Int8Features;
```

```
// Provided by VK_KHR_shader_float16_int8
// Equivalent to VkPhysicalDeviceShaderFloat16Int8Features
typedef VkPhysicalDeviceShaderFloat16Int8Features
VkPhysicalDeviceShaderFloat16Int8FeaturesKHR;
```

```
// Provided by VK_KHR_shader_float16_int8
// Equivalent to VkPhysicalDeviceShaderFloat16Int8Features
typedef VkPhysicalDeviceShaderFloat16Int8Features
VkPhysicalDeviceFloat16Int8FeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderFloat16** indicates whether 16-bit floats (halves) are supported in shader code. This also indicates whether shader modules **can** declare the **Float16** capability. However, this only enables a subset of the storage classes that SPIR-V allows for the **Float16** SPIR-V capability: Declaring and using 16-bit floats in the **Private**, **Workgroup** (for non-Block variables), and **Function** storage classes is enabled, while declaring them in the interface storage classes (e.g., **UniformConstant**, **Uniform**, **StorageBuffer**, **Input**, **Output**, and **PushConstant**) is not enabled.
- **shaderInt8** indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules **can** declare the **Int8** capability. However, this only enables a subset of the storage classes that SPIR-V allows for the **Int8** SPIR-V capability: Declaring and using 8-bit integers in the **Private**, **Workgroup** (for non-Block variables), and **Function** storage classes is enabled, while declaring them in the interface storage classes (e.g., **UniformConstant**, **Uniform**, **StorageBuffer**, **Input**, **Output**, and **PushConstant**) is not enabled.

If the [VkPhysicalDeviceShaderFloat16Int8Features](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderFloat16Int8Features](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderClockFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_shader_clock
typedef struct VkPhysicalDeviceShaderClockFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupClock;
    VkBool32           shaderDeviceClock;
} VkPhysicalDeviceShaderClockFeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **shaderSubgroupClock** indicates whether shaders **can** perform **Subgroup** scoped clock reads.
- **shaderDeviceClock** indicates whether shaders **can** perform **Device** scoped clock reads.

If the [VkPhysicalDeviceShaderClockFeaturesKHR](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderClockFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderClockFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CLOCK_FEATURES_KHR`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceSamplerYcbcrConversionFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSamplerYcbcrConversionFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           samplerYcbcrConversion;
} VkPhysicalDeviceSamplerYcbcrConversionFeatures;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkPhysicalDeviceSamplerYcbcrConversionFeatures
typedef VkPhysicalDeviceSamplerYcbcrConversionFeatures
VkPhysicalDeviceSamplerYcbcrConversionFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `samplerYcbcrConversion` specifies whether the implementation supports `sampler Y'CBCR conversion`. If `samplerYcbcrConversion` is `VK_FALSE`, sampler Y'C_BC_R conversion is not supported, and samplers using sampler Y'C_BC_R conversion **must** not be used.

If the `VkPhysicalDeviceSamplerYcbcrConversionFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceSamplerYcbcrConversionFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSamplerYcbcrConversionFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLER_YCBCR_CONVERSION_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceProtectedMemoryFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceProtectedMemoryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           protectedMemory;
} VkPhysicalDeviceProtectedMemoryFeatures;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `protectedMemory` specifies whether `protected memory` is supported.

If the `VkPhysicalDeviceProtectedMemoryFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceProtectedMemoryFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProtectedMemoryFeatures-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROTECTED_MEMORY_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           advancedBlendCoherentOperations;
} VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `advancedBlendCoherentOperations` specifies whether blending using `advanced blend operations` is guaranteed to execute atomically and in `primitive order`. If this is `VK_TRUE`, `VK_ACCESS_COLOR_ATTACHMENT_READ_NONCOHERENT_BIT_EXT` is treated the same as `VK_ACCESS_COLOR_ATTACHMENT_READ_BIT`, and advanced blending needs no additional synchronization over basic blending. If this is `VK_FALSE`, then memory dependencies are required to guarantee order between two advanced blending operations that occur on the same sample.

If the `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BLEND_OPERATION_ADVANCED_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceConditionalRenderingFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_conditional_rendering
typedef struct VkPhysicalDeviceConditionalRenderingFeaturesEXT {
    VkStructureType    sType;
    void*               pNext;
    VkBool32            conditionalRendering;
    VkBool32            inheritedConditionalRendering;
} VkPhysicalDeviceConditionalRenderingFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `conditionalRendering` specifies whether conditional rendering is supported.
- `inheritedConditionalRendering` specifies whether a secondary command buffer **can** be executed while conditional rendering is active in the primary command buffer.

If the `VkPhysicalDeviceConditionalRenderingFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceConditionalRenderingFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceConditionalRenderingFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CONDITIONAL_RENDERING_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderDrawParametersFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceShaderDrawParametersFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderDrawParameters;
} VkPhysicalDeviceShaderDrawParametersFeatures;
```

```
// Provided by VK_VERSION_1_1
// Equivalent to VkPhysicalDeviceShaderDrawParametersFeatures
typedef VkPhysicalDeviceShaderDrawParametersFeatures
VkPhysicalDeviceShaderDrawParameterFeatures;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderDrawParameters` specifies whether the implementation supports the SPIR-V `DrawParameters` capability. When this feature is not enabled, shader modules **must** not declare the

SPV_KHR_shader_draw_parameters extension or the DrawParameters capability.

If the `VkPhysicalDeviceShaderDrawParametersFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderDrawParametersFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderDrawParametersFeatures-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_DRAW_PARAMETERS_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceMeshShaderFeaturesNV` structure is defined as:

```
// Provided by VK_NV_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           taskShader;
    VkBool32           meshShader;
} VkPhysicalDeviceMeshShaderFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `taskShader` specifies whether task shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_TASK_BIT_NV` and `VK_PIPELINE_STAGE_TASK_SHADER_BIT_NV` enum values **must** not be used.
- `meshShader` specifies whether mesh shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_MESH_BIT_NV` and `VK_PIPELINE_STAGE_MESH_SHADER_BIT_NV` enum values **must** not be used.

If the `VkPhysicalDeviceMeshShaderFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMeshShaderFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderFeaturesNV-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_NV](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceMeshShaderFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           taskShader;
    VkBool32           meshShader;
    VkBool32           multiviewMeshShader;
    VkBool32           primitiveFragmentShadingRateMeshShader;
    VkBool32           meshShaderQueries;
} VkPhysicalDeviceMeshShaderFeaturesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [taskShader](#) specifies whether task shaders are supported. If this feature is not enabled, the [VK_SHADER_STAGE_TASK_BIT_EXT](#) and [VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT](#) enum values **must** not be used.
- [meshShader](#) specifies whether mesh shaders are supported. If this feature is not enabled, the [VK_SHADER_STAGE_MESH_BIT_EXT](#) and [VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT](#) enum values **must** not be used.
- [multiviewMeshShader](#) specifies whether the implementation supports [multiview](#) rendering within a render pass, with mesh shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a mesh shader.
- [primitiveFragmentShadingRateMeshShader](#) indicates that the implementation supports the [primitive fragment shading rate](#) in mesh shaders.
- [meshShaderQueries](#) indicates that the implementation supports creating query pools using the

`VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT` query type and statistic queries containing the `VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT` and `VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT` flags

If the `VkPhysicalDeviceMeshShaderFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMeshShaderFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

The corresponding features of the `VkPhysicalDeviceMeshShaderFeaturesNV` structure **must** match those in `VkPhysicalDeviceMeshShaderFeaturesEXT`.

Valid Usage

- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-multiviewMeshShader-07032
If `multiviewMeshShader` is enabled then `VkPhysicalDeviceMultiviewFeaturesKHR::multiview` **must** also be enabled
- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-primitiveFragmentShadingRateMeshShader-07033
If `primitiveFragmentShadingRateMeshShader` is enabled then `VkPhysicalDeviceFragmentShadingRateFeaturesKHR::primitiveFragmentShadingRate` **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceMemoryDecompressionFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkPhysicalDeviceMemoryDecompressionFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            memoryDecompression;
} VkPhysicalDeviceMemoryDecompressionFeaturesEXT;
```

```
// Provided by VK_NV_memory_decompression
// Equivalent to VkPhysicalDeviceMemoryDecompressionFeaturesEXT
typedef VkPhysicalDeviceMemoryDecompressionFeaturesEXT
VkPhysicalDeviceMemoryDecompressionFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryDecompression` indicates whether memory decompression is supported.

If the `VkPhysicalDeviceMemoryDecompressionFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMemoryDecompressionFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryDecompressionFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_DECOMPRESSION_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceDescriptorIndexingFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDescriptorIndexingFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderInputAttachmentArrayDynamicIndexing;
    VkBool32           shaderUniformTexelBufferArrayDynamicIndexing;
    VkBool32           shaderStorageTexelBufferArrayDynamicIndexing;
    VkBool32           shaderUniformBufferArrayNonUniformIndexing;
    VkBool32           shaderSampledImageArrayNonUniformIndexing;
    VkBool32           shaderStorageBufferArrayNonUniformIndexing;
    VkBool32           shaderStorageImageArrayNonUniformIndexing;
    VkBool32           shaderInputAttachmentArrayNonUniformIndexing;
    VkBool32           shaderUniformTexelBufferArrayNonUniformIndexing;
    VkBool32           shaderStorageTexelBufferArrayNonUniformIndexing;
    VkBool32           descriptorBindingUniformBufferUpdateAfterBind;
    VkBool32           descriptorBindingSampledImageUpdateAfterBind;
    VkBool32           descriptorBindingStorageImageUpdateAfterBind;
    VkBool32           descriptorBindingStorageBufferUpdateAfterBind;
    VkBool32           descriptorBindingUniformTexelBufferUpdateAfterBind;
    VkBool32           descriptorBindingStorageTexelBufferUpdateAfterBind;
    VkBool32           descriptorBindingUpdateUnusedWhilePending;
    VkBool32           descriptorBindingPartiallyBound;
    VkBool32           descriptorBindingVariableDescriptorCount;
    VkBool32           runtimeDescriptorArray;
} VkPhysicalDeviceDescriptorIndexingFeatures;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkPhysicalDeviceDescriptorIndexingFeatures
typedef VkPhysicalDeviceDescriptorIndexingFeatures
VkPhysicalDeviceDescriptorIndexingFeaturesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderInputAttachmentArrayDynamicIndexing** indicates whether arrays of input attachments **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the **InputAttachmentArrayDynamicIndexing** capability.
- **shaderUniformTexelBufferArrayDynamicIndexing** indicates whether arrays of uniform texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#) **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates

whether shader modules **can** declare the `UniformTexelBufferArrayDynamicIndexing` capability.

- `shaderStorageTexelBufferArrayDynamicIndexing` indicates whether arrays of storage texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayDynamicIndexing` capability.
- `shaderUniformBufferArrayNonUniformIndexing` indicates whether arrays of uniform buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformBufferArrayNonUniformIndexing` capability.
- `shaderSampledImageArrayNonUniformIndexing` indicates whether arrays of samplers or sampled images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `SampledImageArrayNonUniformIndexing` capability.
- `shaderStorageBufferArrayNonUniformIndexing` indicates whether arrays of storage buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageBufferArrayNonUniformIndexing` capability.
- `shaderStorageImageArrayNonUniformIndexing` indicates whether arrays of storage images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageImageArrayNonUniformIndexing` capability.
- `shaderInputAttachmentArrayNonUniformIndexing` indicates whether arrays of input attachments **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayNonUniformIndexing` capability.
- `shaderUniformTexelBufferArrayNonUniformIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayNonUniformIndexing` capability.
- `shaderStorageTexelBufferArrayNonUniformIndexing` indicates whether arrays of storage texel

buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayNonUniformIndexing` capability.

- `descriptorBindingUniformBufferUpdateAfterBind` indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`.
- `descriptorBindingSampledImageUpdateAfterBind` indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`.
- `descriptorBindingStorageImageUpdateAfterBind` indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`.
- `descriptorBindingStorageBufferUpdateAfterBind` indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`.
- `descriptorBindingUniformTexelBufferUpdateAfterBind` indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`.
- `descriptorBindingStorageTexelBufferUpdateAfterBind` indicates whether the implementation supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.
- `descriptorBindingUpdateUnusedWhilePending` indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` **must** not be used.
- `descriptorBindingPartiallyBound` indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` **must** not be used.
- `descriptorBindingVariableDescriptorCount` indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` **must** not be used.
- `runtimeDescriptorArray` indicates whether the implementation supports the SPIR-V `RuntimeDescriptorArray` capability. If this feature is not enabled, descriptors **must** not be declared in runtime arrays.

If the `VkPhysicalDeviceDescriptorIndexingFeatures` structure is included in the `pNext` chain of the

[VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDescriptorIndexingFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorIndexingFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceCopyMemoryIndirectFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indirectCopy;
} VkPhysicalDeviceCopyMemoryIndirectFeaturesNV;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [indirectCopy](#) indicates whether [indirect memory to memory or, memory to image copies](#) are supported.

If the [VkPhysicalDeviceCopyMemoryIndirectFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceCopyMemoryIndirectFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCopyMemoryIndirectFeaturesNV-sType-sType

`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indirectMemoryCopy;
    VkBool32           indirectMemoryToImageCopy;
} VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indirectMemoryCopy` indicates whether `indirect memory to memory copies` are supported.
- `indirectMemoryToImageCopy` indicates whether `indirect memory to image copies` are supported.

If the `VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR-sType-sType
`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_FEATURES_KHR`

The [VkPhysicalDeviceVertexAttributeDivisorFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceVertexAttributeDivisorFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexAttributeInstanceRateDivisor;
    VkBool32           vertexAttributeInstanceRateZeroDivisor;
} VkPhysicalDeviceVertexAttributeDivisorFeatures;
```

```
// Provided by VK_KHR_vertex_attribute_divisor
// Equivalent to VkPhysicalDeviceVertexAttributeDivisorFeatures
typedef VkPhysicalDeviceVertexAttributeDivisorFeatures
VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR;
```

```
// Provided by VK_EXT_vertex_attribute_divisor
// Equivalent to VkPhysicalDeviceVertexAttributeDivisorFeatures
typedef VkPhysicalDeviceVertexAttributeDivisorFeatures
VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **vertexAttributeInstanceRateDivisor** specifies whether vertex attribute fetching may be repeated in the case of instanced rendering.
- **vertexAttributeInstanceRateZeroDivisor** specifies whether a zero value for [VkVertexInputBindingDivisorDescriptionEXT::divisor](#) is supported.

If the [VkPhysicalDeviceVertexAttributeDivisorFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVertexAttributeDivisorFeatures](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_FEATURES](#)

The [VkPhysicalDeviceASTCDecodeFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_astc_decode_mode
typedef struct VkPhysicalDeviceASTCDecodeFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           decodeModeSharedExponent;
} VkPhysicalDeviceASTCDecodeFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [decodeModeSharedExponent](#) indicates whether the implementation supports decoding ASTC compressed formats to [VK_FORMAT_E5B9G9R9_UFLOAT_PACK32](#) internal precision.

If the [VkPhysicalDeviceASTCDecodeFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceASTCDecodeFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceASTCDecodeFeaturesEXT-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ASTC_DECODE_FEATURES_EXT](#)

Structure Chaining

The [VkPhysicalDeviceTransformFeedbackFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            transformFeedback;
    VkBool32            geometryStreams;
} VkPhysicalDeviceTransformFeedbackFeaturesEXT;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **transformFeedback** indicates whether the implementation supports transform feedback and shader modules **can** declare the **TransformFeedback** capability.
- **geometryStreams** indicates whether the implementation supports the **GeometryStreams** SPIR-V capability.

If the **VkPhysicalDeviceTransformFeedbackFeaturesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a **VkDevice** with any features described by **VkPhysicalDeviceTransformFeedbackFeaturesEXT**, it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of **VkDeviceCreateInfo** when creating the **VkDevice**.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTransformFeedbackFeaturesEXT-sType-sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_FEATURES_EXT**

Structure Chaining

The **VkPhysicalDeviceVulkanMemoryModelFeatures** structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkanMemoryModelFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vulkanMemoryModel;
    VkBool32           vulkanMemoryModelDeviceScope;
    VkBool32           vulkanMemoryModelAvailabilityVisibilityChains;
} VkPhysicalDeviceVulkanMemoryModelFeatures;
```

```
// Provided by VK_KHR_vulkan_memory_model
// Equivalent to VkPhysicalDeviceVulkanMemoryModelFeatures
typedef VkPhysicalDeviceVulkanMemoryModelFeatures
VkPhysicalDeviceVulkanMemoryModelFeaturesKHR;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **vulkanMemoryModel** indicates whether shader modules **can** declare the **VulkanMemoryModel** capability.
- **vulkanMemoryModelDeviceScope** indicates whether the Vulkan Memory Model can use **Device** scope synchronization. This also indicates whether shader modules **can** declare the **VulkanMemoryModelDeviceScope** capability.
- **vulkanMemoryModelAvailabilityVisibilityChains** indicates whether the Vulkan Memory Model can use **availability and visibility chains** with more than one element.

If the **VkPhysicalDeviceVulkanMemoryModelFeaturesKHR** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a **VkDevice** with any features described by **VkPhysicalDeviceVulkanMemoryModelFeaturesKHR**, it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of **VkDeviceCreateInfo** when creating the **VkDevice**.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkanMemoryModelFeatures-sType-sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_MEMORY_MODEL_FEATURES**

Structure Chaining

Extends the structures

The `VkPhysicalDeviceInlineUniformBlockFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           inlineUniformBlock;
    VkBool32           descriptorBindingInlineUniformBlockUpdateAfterBind;
} VkPhysicalDeviceInlineUniformBlockFeatures;
```

```
// Provided by VK_EXT_inline_uniform_block
// Equivalent to VkPhysicalDeviceInlineUniformBlockFeatures
typedef VkPhysicalDeviceInlineUniformBlockFeatures
VkPhysicalDeviceInlineUniformBlockFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `inlineUniformBlock` indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` **must** not be used.
- `descriptorBindingInlineUniformBlockUpdateAfterBind` indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`.

If the `VkPhysicalDeviceInlineUniformBlockFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceInlineUniformBlockFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInlineUniformBlockFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_FEATURES`

The [VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_representative_fragment_test
typedef struct VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           representativeFragmentTest;
} VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [representativeFragmentTest](#) indicates whether the implementation supports the representative fragment test. See [Representative Fragment Test](#).

If the [VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_REPRESENTATIVE_FRAGMENT_TEST_FEATURES_NV](#)

Structure Chaining

Extends the structures

The `VkPhysicalDeviceExclusiveScissorFeaturesNV` structure is defined as:

```
// Provided by VK_NV_scissor_exclusive
typedef struct VkPhysicalDeviceExclusiveScissorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           exclusiveScissor;
} VkPhysicalDeviceExclusiveScissorFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `exclusiveScissor` indicates that the implementation supports the exclusive scissor test.

See [Exclusive Scissor Test](#) for more information.

If the `VkPhysicalDeviceExclusiveScissorFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceExclusiveScissorFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExclusiveScissorFeaturesNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXCLUSIVE_SCISSOR_FEATURES_NV`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceCornerSampledImageFeaturesNV` structure is defined as:

```
// Provided by VK_NV_corner_sampled_image
typedef struct VkPhysicalDeviceCornerSampledImageFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cornerSampledImage;
} VkPhysicalDeviceCornerSampledImageFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cornerSampledImage` specifies whether images can be created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV`. See [Corner-Sampled Images](#).

If the `VkPhysicalDeviceCornerSampledImageFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCornerSampledImageFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCornerSampledImageFeaturesNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CORNER_SAMPLED_IMAGE_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_compute_shader_derivatives
typedef struct VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           computeDerivativeGroupQuads;
    VkBool32           computeDerivativeGroupLinear;
} VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR;
```

```
// Provided by VK_NV_compute_shader_derivatives
// Equivalent to VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR
typedef VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR
VkPhysicalDeviceComputeShaderDerivativesFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `computeDerivativeGroupQuads` indicates that the implementation supports the `ComputeDerivativeGroupQuadsKHR` SPIR-V capability.
- `computeDerivativeGroupLinear` indicates that the implementation supports the `ComputeDerivativeGroupLinearKHR` SPIR-V capability.

See [Quad shader scope](#) for more information.

If the `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMPUTE_SHADER_DERIVATIVES_FEATURES_KHR`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_fragment_shader_barycentric
typedef struct VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShaderBarycentric;
} VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR;
```

```
// Provided by VK_NV_fragment_shader_barycentric
// Equivalent to VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR
typedef VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR
VkPhysicalDeviceFragmentShaderBarycentricFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentShaderBarycentric` indicates that the implementation supports the `BaryCoordKHR` and `BaryCoordNoPerspKHR` SPIR-V fragment shader built-ins and supports the `PerVertexKHR` SPIR-V decoration on fragment shader input variables.

See [Barycentric Interpolation](#) for more information.

If the `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_FEATURES_KHR`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceShaderImageFootprintFeaturesNV` structure is defined as:

```
// Provided by VK_NV_shader_image_footprint
typedef struct VkPhysicalDeviceShaderImageFootprintFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageFootprint;
} VkPhysicalDeviceShaderImageFootprintFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageFootprint` specifies whether the implementation supports the `ImageFootprintNV` SPIR-V capability.

See [Texel Footprint Evaluation](#) for more information.

If the `VkPhysicalDeviceShaderImageFootprintFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderImageFootprintFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderImageFootprintFeaturesNV-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_IMAGE_FOOTPRINT_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShadingRateImageFeaturesNV` structure is defined as:

```
// Provided by VK_NV_shading_rate_image
typedef struct VkPhysicalDeviceShadingRateImageFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shadingRateImage;
    VkBool32           shadingRateCoarseSampleOrder;
} VkPhysicalDeviceShadingRateImageFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shadingRateImage` indicates that the implementation supports the use of a shading rate image to derive an effective shading rate for fragment processing. It also indicates that the implementation supports the `ShadingRateNV` SPIR-V execution mode.
- `shadingRateCoarseSampleOrder` indicates that the implementation supports an application-configurable ordering of coverage samples in fragments larger than one pixel.

See [Shading Rate Image](#) for more information.

If the `VkPhysicalDeviceShadingRateImageFeaturesNV` structure is included in the `pNext` chain of the

`VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShadingRateImageFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShadingRateImageFeaturesNV-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADING_RATE_IMAGE_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceFragmentDensityMapFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceFragmentDensityMapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMap;
    VkBool32           fragmentDensityMapDynamic;
    VkBool32           fragmentDensityMapNonSubsampledImages;
} VkPhysicalDeviceFragmentDensityMapFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityMap` specifies whether the implementation supports render passes with a fragment density map attachment. If this feature is not enabled and the `pNext` chain of `VkRenderPassCreateInfo` includes a `VkRenderPassFragmentDensityMapCreateInfoEXT` structure, `fragmentDensityMapAttachment` **must** be `VK_ATTACHMENT_UNUSED`.
- `fragmentDensityMapDynamic` specifies whether the implementation supports dynamic fragment density map image views. If this feature is not enabled, `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT` **must** not be included in `VkImageViewCreateInfo::flags`.
- `fragmentDensityMapNonSubsampledImages` specifies whether the implementation supports regular non-subsampled image attachments with fragment density map render passes. If this feature is

not enabled, render passes with a [fragment density map attachment](#) **must** only have [subsampled attachments](#) bound.

If the [VkPhysicalDeviceFragmentDensityMapFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFragmentDensityMapFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The [VkPhysicalDeviceFragmentDensityMap2FeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_fragment_density_map2
typedef struct VkPhysicalDeviceFragmentDensityMap2FeaturesEXT {
    VkStructureType    sType;
    void*               pNext;
    VkBool32            fragmentDensityMapDeferred;
} VkPhysicalDeviceFragmentDensityMap2FeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [fragmentDensityMapDeferred](#) specifies whether the implementation supports deferred reads of fragment density map image views. If this feature is not enabled, [VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT](#) **must** not be included in [VkImageViewCreateInfo::flags](#).

If the [VkPhysicalDeviceFragmentDensityMap2FeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFragmentDensityMap2FeaturesEXT](#), it **must**

add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceFragmentDensityMap2FeaturesEXT-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_2_FEATURES_EXT`

The `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_density_map_offset
typedef struct VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMapOffset;
} VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT;
```

```
// Provided by VK_QCOM_fragment_density_map_offset
// Equivalent to VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT
typedef VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT
VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityMapOffset` specifies whether the implementation supports `fragment density map offsets`

If the `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

// Provided by VK_VALVE_fragment_density_map_layered
typedef struct VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMapLayered;
} VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [fragmentDensityMapLayered](#) specifies whether the implementation supports layered fragment density maps.

If the [VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceInvocationMaskFeaturesHUAWEI](#) structure is defined as:

```
// Provided by VK_HUAWEI_invocation_mask
typedef struct VkPhysicalDeviceInvocationMaskFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           invocationMask;
} VkPhysicalDeviceInvocationMaskFeaturesHUAWEI;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [invocationMask](#) indicates that the implementation supports the use of an invocation mask image to optimize the ray dispatch.

If the [VkPhysicalDeviceInvocationMaskFeaturesHUAWEI](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceInvocationMaskFeaturesHUAWEI](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceInvocationMaskFeaturesHUAWEI-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INVOCATION_MASK_FEATURES_HUAWEI`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceScalarBlockLayoutFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceScalarBlockLayoutFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           scalarBlockLayout;
} VkPhysicalDeviceScalarBlockLayoutFeatures;
```

```
// Provided by VK_EXT_scalar_block_layout
// Equivalent to VkPhysicalDeviceScalarBlockLayoutFeatures
typedef VkPhysicalDeviceScalarBlockLayoutFeatures
VkPhysicalDeviceScalarBlockLayoutFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `scalarBlockLayout` indicates that the implementation supports the layout of resource blocks in shaders using `scalar alignment`.

If the `VkPhysicalDeviceScalarBlockLayoutFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceScalarBlockLayoutFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceScalarBlockLayoutFeatures-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SCALAR_BLOCK_LAYOUT_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceUniformBufferStandardLayoutFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceUniformBufferStandardLayoutFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           uniformBufferStandardLayout;
} VkPhysicalDeviceUniformBufferStandardLayoutFeatures;
```

```
// Provided by VK_KHR_uniform_buffer_standard_layout
// Equivalent to VkPhysicalDeviceUniformBufferStandardLayoutFeatures
typedef VkPhysicalDeviceUniformBufferStandardLayoutFeatures
VkPhysicalDeviceUniformBufferStandardLayoutFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **uniformBufferStandardLayout** indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See [Standard Buffer Layout](#).

If the [VkPhysicalDeviceUniformBufferStandardLayoutFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceUniformBufferStandardLayoutFeatures](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceUniformBufferStandardLayoutFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_UNIFORM_BUFFER_STANDARD_LAYOUT_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDepthClipEnableFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_depth_clip_enable
typedef struct VkPhysicalDeviceDepthClipEnableFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClipEnable;
} VkPhysicalDeviceDepthClipEnableFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **depthClipEnable** indicates that the implementation supports setting the depth clipping operation explicitly via the [VkPipelineRasterizationDepthClipStateCreateInfoEXT](#) pipeline state. Otherwise depth clipping is only enabled when [VkPipelineRasterizationStateCreateInfo::depthClampEnable](#) is **VK_FALSE**.

If the [VkPhysicalDeviceDepthClipEnableFeaturesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDepthClipEnableFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClipEnableFeaturesEXT-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLIP_ENABLE_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceMemoryPriorityFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_memory_priority
typedef struct VkPhysicalDeviceMemoryPriorityFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryPriority;
} VkPhysicalDeviceMemoryPriorityFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryPriority` indicates that the implementation supports memory priorities specified at memory allocation time via `VkMemoryPriorityAllocateInfoEXT`.

If the `VkPhysicalDeviceMemoryPriorityFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMemoryPriorityFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryPriorityFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PRIORITY_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceBufferDeviceAddressFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceBufferDeviceAddressFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           bufferDeviceAddress;
    VkBool32           bufferDeviceAddressCaptureReplay;
    VkBool32           bufferDeviceAddressMultiDevice;
} VkPhysicalDeviceBufferDeviceAddressFeatures;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkPhysicalDeviceBufferDeviceAddressFeatures
typedef VkPhysicalDeviceBufferDeviceAddressFeatures
VkPhysicalDeviceBufferDeviceAddressFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bufferDeviceAddress` indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from `vkGetBufferDeviceAddress`.
- `bufferDeviceAddressCaptureReplay` indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.
- `bufferDeviceAddressMultiDevice` indicates that the implementation supports the `bufferDeviceAddress`, `rayTracingPipeline` and `rayQuery` features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses **must** not be queried on a logical device created with more than one physical device.

NOTE

`bufferDeviceAddressMultiDevice` exists to allow certain legacy platforms to be able to support `bufferDeviceAddress` without needing to support shared GPU virtual addresses for multi-device configurations.

See `vkGetBufferDeviceAddress` for more information.

If the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceBufferDeviceAddressFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBufferDeviceAddressFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BUFFER_DEVICE_ADDRESS_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_buffer_device_address
typedef struct VkPhysicalDeviceBufferDeviceAddressFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            bufferDeviceAddress;
    VkBool32            bufferDeviceAddressCaptureReplay;
    VkBool32            bufferDeviceAddressMultiDevice;
} VkPhysicalDeviceBufferDeviceAddressFeaturesEXT;
```

```
// Provided by VK_EXT_buffer_device_address
// Equivalent to VkPhysicalDeviceBufferDeviceAddressFeaturesEXT
typedef VkPhysicalDeviceBufferDeviceAddressFeaturesEXT
VkPhysicalDeviceBufferAddressFeaturesEXT;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **bufferDeviceAddress** indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from **vkGetBufferDeviceAddressEXT**.
- **bufferDeviceAddressCaptureReplay** indicates that the implementation supports saving and reusing buffer addresses, e.g. for trace capture and replay.
- **bufferDeviceAddressMultiDevice** indicates that the implementation supports the **bufferDeviceAddress** feature for logical devices created with multiple physical devices. If this feature is not supported, buffer addresses **must** not be queried on a logical device created with more than one physical device.

If the **VkPhysicalDeviceBufferDeviceAddressFeaturesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a **VkDevice** with any features described by **VkPhysicalDeviceBufferDeviceAddressFeaturesEXT**, it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of **VkDeviceCreateInfo** when creating the **VkDevice**.

NOTE

The **VkPhysicalDeviceBufferDeviceAddressFeaturesEXT** structure has the same members as the **VkPhysicalDeviceBufferDeviceAddressFeatures** structure, but the functionality indicated by the members is expressed differently. The features indicated by the **VkPhysicalDeviceBufferDeviceAddressFeatures** structure requires additional flags to be passed at memory allocation time, and the capture and replay mechanism is built around opaque capture addresses for buffer and memory objects.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBufferDeviceAddressFeaturesEXT-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BUFFER_DEVICE_ADDRESS_FEATURES_EXT

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_dedicated_allocation_image_aliasing
typedef struct VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dedicatedAllocationImageAliasing;
} VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [dedicatedAllocationImageAliasing](#) indicates that the implementation supports aliasing of compatible image objects on a dedicated allocation.

If the [VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEDICATED_ALLOCATION_IMAGE_ALIASING_FEATURES_NV

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceImagelessFramebufferFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceImagelessFramebufferFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imagelessFramebuffer;
} VkPhysicalDeviceImagelessFramebufferFeatures;
```

```
// Provided by VK_KHR_imageless_framebuffer
// Equivalent to VkPhysicalDeviceImagelessFramebufferFeatures
typedef VkPhysicalDeviceImagelessFramebufferFeatures
VkPhysicalDeviceImagelessFramebufferFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [imagelessFramebuffer](#) indicates that the implementation supports specifying the image view for attachments at render pass begin time via [VkRenderPassAttachmentBeginInfo](#).

If the [VkPhysicalDeviceImagelessFramebufferFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceImagelessFramebufferFeatures](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImagelessFramebufferFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGELESS_FRAMEBUFFER_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_fragment_shader_interlock
typedef struct VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShaderSampleInterlock;
    VkBool32           fragmentShaderPixelInterlock;
    VkBool32           fragmentShaderShadingRateInterlock;
} VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [fragmentShaderSampleInterlock](#) indicates that the implementation supports the [FragmentShaderSampleInterlockEXT](#) SPIR-V capability.
- [fragmentShaderPixelInterlock](#) indicates that the implementation supports the [FragmentShaderPixelInterlockEXT](#) SPIR-V capability.
- [fragmentShaderShadingRateInterlock](#) indicates that the implementation supports the [FragmentShaderShadingRateInterlockEXT](#) SPIR-V capability.

If the [VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_INTERLOCK_FEATURES_EXT](#)

Structure Chaining

The [VkPhysicalDeviceCooperativeMatrixFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrix;
    VkBool32           cooperativeMatrixRobustBufferAccess;
} VkPhysicalDeviceCooperativeMatrixFeaturesNV;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [cooperativeMatrix](#) indicates that the implementation supports the [CooperativeMatrixNV](#) SPIR-V capability.
- [cooperativeMatrixRobustBufferAccess](#) indicates that the implementation supports implementation supports [robust buffer access](#) for SPIR-V [OpCooperativeMatrixLoadNV](#) and [OpCooperativeMatrixStoreNV](#) instructions.

If the [VkPhysicalDeviceCooperativeMatrixFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceCooperativeMatrixFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixFeaturesNV-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_FEATURES_NV](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrix;
    VkBool32           cooperativeMatrixRobustBufferAccess;
} VkPhysicalDeviceCooperativeMatrixFeaturesKHR;
```

This structure describes the following features:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrix` indicates that the implementation supports the `CooperativeMatrixKHR` SPIR-V capability.
- `cooperativeMatrixRobustBufferAccess` indicates that the implementation supports [robust buffer access](#) for SPIR-V `OpCooperativeMatrixLoadKHR` and `OpCooperativeMatrixStoreKHR` instructions.

If the `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by `VkPhysicalDeviceCooperativeMatrixFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixFeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_FEATURES_KHR`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The `VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_cooperative_matrix_conversion
typedef struct VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            cooperativeMatrixConversion;
} VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixConversion` indicates that the implementation supports the `CooperativeMatrixConversionQCOM` SPIR-V capability.

If the `VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_CONVERSION_FEATURES_QCOM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceCooperativeMatrix2FeaturesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix2
typedef struct VkPhysicalDeviceCooperativeMatrix2FeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrixWorkgroupScope;
    VkBool32           cooperativeMatrixFlexibleDimensions;
    VkBool32           cooperativeMatrixReductions;
    VkBool32           cooperativeMatrixConversions;
    VkBool32           cooperativeMatrixPerElementOperations;
    VkBool32           cooperativeMatrixTensorAddressing;
    VkBool32           cooperativeMatrixBlockLoads;
} VkPhysicalDeviceCooperativeMatrix2FeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixWorkgroupScope` indicates that the implementation supports workgroup scope cooperative matrices.
- `cooperativeMatrixFlexibleDimensions` indicates that the implementation supports cooperative matrix sizes that are a multiple of the granularity advertised in `VkCooperativeMatrixFlexibleDimensionsPropertiesNV`.
- `cooperativeMatrixReductions` indicates that the implementation supports the `CooperativeMatrixReductionsNV` SPIR-V capability. This allows performing (row, column, 2x2, or all element) reductions on matrices.
- `cooperativeMatrixConversions` indicates that the implementation supports the `CooperativeMatrixConversionsNV` SPIR-V capability. This allows converting accumulator matrices to A or B matrices.
- `cooperativeMatrixPerElementOperations` indicates that the implementation supports the `CooperativeMatrixPerElementOperationsNV` SPIR-V capability. This allows performing element-wise operations on matrix elements using a callback function.
- `cooperativeMatrixTensorAddressing` indicates that the implementation supports the `TensorAddressingNV` and `CooperativeMatrixTensorAddressingNV` SPIR-V capabilities. This allows using tensor layout and tensor view types for matrix loads and stores.
- `cooperativeMatrixBlockLoads` indicates that the implementation supports the `CooperativeMatrixBlockLoadsNV` SPIR-V capability. This allows setting block size for loads and using a callback function to decode block elements.

If the `VkPhysicalDeviceCooperativeMatrix2FeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCooperativeMatrix2FeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrix2FeaturesNV-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_2_FEATURES_NV

The [VkPhysicalDeviceCooperativeVectorFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_cooperative_vector
typedef struct VkPhysicalDeviceCooperativeVectorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeVector;
    VkBool32           cooperativeVectorTraining;
} VkPhysicalDeviceCooperativeVectorFeaturesNV;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [cooperativeVector](#) indicates that the implementation supports the [CooperativeVectorNV](#) SPIR-V capability.
- [cooperativeVectorTraining](#) indicates that the implementation supports the [CooperativeVectorTrainingNV](#) SPIR-V capability.

If the [VkPhysicalDeviceCooperativeVectorFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceCooperativeVectorFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

```
// Provided by VK_EXT_ycbcr_image_arrays
typedef struct VkPhysicalDeviceYcbcrImageArraysFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           ycbcrImageArrays;
} VkPhysicalDeviceYcbcrImageArraysFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `ycbcrImageArrays` indicates that the implementation supports creating images with a format that requires `YCBCR conversion` and has multiple array layers.

If the `VkPhysicalDeviceYcbcrImageArraysFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceYcbcrImageArraysFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceYcbcrImageArraysFeaturesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_IMAGE_ARRAYS_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupExtendedTypes;
} VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures;
```

```
// Provided by VK_KHR_shader_subgroup_extended_types
// Equivalent to VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures
typedef VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures
VkPhysicalDeviceShaderSubgroupExtendedTypesFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderSubgroupExtendedTypes** is a boolean specifying whether subgroup operations can use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in [group operations](#) with [subgroup scope](#), if the implementation supports the types.

If the [VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_EXTENDED_TYPES_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceHostQueryResetFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceHostQueryResetFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hostQueryReset;
} VkPhysicalDeviceHostQueryResetFeatures;
```

```
// Provided by VK_EXT_host_query_reset
// Equivalent to VkPhysicalDeviceHostQueryResetFeatures
typedef VkPhysicalDeviceHostQueryResetFeatures
VkPhysicalDeviceHostQueryResetFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **hostQueryReset** indicates that the implementation supports resetting queries from the host with [vkResetQueryPool](#).

If the [VkPhysicalDeviceHostQueryResetFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceHostQueryResetFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHostQueryResetFeatures-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HOST_QUERY_RESET_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL](#) structure is defined as:

```
// Provided by VK_INTEL_shader_integer_functions2
typedef struct VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderIntegerFunctions2;
} VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- `shaderIntegerFunctions2` indicates that the implementation supports the `IntegerFunctions2INTEL` SPIR-V capability.

If the `VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTELfeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTELfeatures`., it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INTEGER_FUNCTIONS_2_FEATURES_INTEL`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceCoverageReductionModeFeaturesNV` structure is defined as:

```
// Provided by VK_NV_coverage_reduction_mode
typedef struct VkPhysicalDeviceCoverageReductionModeFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           coverageReductionMode;
} VkPhysicalDeviceCoverageReductionModeFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `coverageReductionMode` indicates whether the implementation supports coverage reduction modes. See [Coverage Reduction](#).

If the `VkPhysicalDeviceCoverageReductionModeFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCoverageReductionModeFeaturesNV`, it **must**

add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCoverageReductionModeFeaturesNV-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COVERAGE_REDUCTION_MODE_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceTimelineSemaphoreFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           timelineSemaphore;
} VkPhysicalDeviceTimelineSemaphoreFeatures;
```

```
// Provided by VK_KHR_timeline_semaphore
// Equivalent to VkPhysicalDeviceTimelineSemaphoreFeatures
typedef VkPhysicalDeviceTimelineSemaphoreFeatures
VkPhysicalDeviceTimelineSemaphoreFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `timelineSemaphore` indicates whether semaphores created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE` are supported.

If the `VkPhysicalDeviceTimelineSemaphoreFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceTimelineSemaphoreFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTimelineSemaphoreFeatures-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_FEATURES

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_internally_synchronized_queues
typedef struct VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           internallySynchronizedQueues;
} VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [internallySynchronizedQueues](#) indicates that [VK_DEVICE_QUEUE_CREATE_INTERNALLY_SYNCHRONIZED_BIT_KHR](#) can be used to make queues internally synchronized.

If the [VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INTERNALLY_SYNCHRONIZED_QUEUES_FEATURES_KHR

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX](#) structure is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           screenBufferImport;
} VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX;
```

The members of the [VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX](#) structure describe the following features:

- [screenBufferImport](#) indicates whether QNX Screen buffer import functionality is supported. If [screenBufferImport](#) is [VK_TRUE](#), [VkDeviceMemory](#) supports importing [_screen_buffer](#) from applications. In this case, the application is responsible for the resource management of the [_screen_buffer](#).

Table 73. Functionality Supported for QNX Screen Buffer Features

Features	Functionality
screenBufferImport	VkImportScreenBufferInfoQNX
Always supported ¹	vkGetScreenBufferPropertiesQNX , VkScreenBufferPropertiesQNX , VkScreenBufferFormatPropertiesQNX , VkExternalFormatQNX

1

Functionality in this row is always available.

The [Functionality supported for QNX Screen buffer features](#) table summarizes the functionality enabled by the [VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX](#) structure. Each entry in the body of the table summarizes the functionality that **can** be used when the given features are supported and enabled. This summarizes Valid Usage statements that are added elsewhere in this specification.

If the [VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX](#), it **must** add an instance of the structure,

with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_SCREEN_BUFFER_FEATURES_QNX`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceIndexTypeUint8Features` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceIndexTypeUint8Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indexTypeUint8;
} VkPhysicalDeviceIndexTypeUint8Features;
```

```
// Provided by VK_KHR_index_type_uint8
// Equivalent to VkPhysicalDeviceIndexTypeUint8Features
typedef VkPhysicalDeviceIndexTypeUint8Features
VkPhysicalDeviceIndexTypeUint8FeaturesKHR;
```

```
// Provided by VK_EXT_index_type_uint8
// Equivalent to VkPhysicalDeviceIndexTypeUint8Features
typedef VkPhysicalDeviceIndexTypeUint8Features
VkPhysicalDeviceIndexTypeUint8FeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indexTypeUint8` indicates that `VK_INDEX_TYPE_UINT8` can be used with `vkCmdBindIndexBuffer2` and `vkCmdBindIndexBuffer`.

If the `VkPhysicalDeviceIndexTypeUint8Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceIndexTypeUint8Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceIndexTypeUint8Features-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INDEX_TYPE_UINT8_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_primitive_topology_list_restart
typedef struct VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           primitiveTopologyListRestart;
    VkBool32           primitiveTopologyPatchListRestart;
} VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitiveTopologyListRestart` indicates that list type primitives, `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY` and `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, **can** use the primitive restart index value in index buffers.
- `primitiveTopologyPatchListRestart` indicates that the `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` topology **can** use the primitive restart index value in index buffers.

If the `VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to

use a [VkDevice](#) with any features described by [VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVE_TOPOLOGY_LIST_RESTART_FEATURES_EXT](#)

Structure Chaining

Extends the structures

The [VkPhysicalDeviceShaderSMBuiltinsFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_shader_sm_builtins
typedef struct VkPhysicalDeviceShaderSMBuiltinsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSMBuiltins;
} VkPhysicalDeviceShaderSMBuiltinsFeaturesNV;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [shaderSMBuiltins](#) indicates whether the implementation supports the SPIR-V [ShaderSMBuiltinsNV](#) capability.

If the [VkPhysicalDeviceShaderSMBuiltinsFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderSMBuiltinsFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSMBuiltinsFeaturesNV-sType-sType

`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_FEATURES_NV`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           separateDepthStencilLayouts;
} VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures;
```

```
// Provided by VK_KHR_separate_depth_stencil_layouts
// Equivalent to VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures
typedef VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures
VkPhysicalDeviceSeparateDepthStencilLayoutsFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `separateDepthStencilLayouts` indicates whether the implementation supports a `VkImageMemoryBarrier` for a depth/stencil image with only one of `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` set, and whether `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL`, or `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL` can be used.

If the `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SEPARATE_DEPTH_STENCIL_LAYOUTS_FEATURES

The [VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineExecutableInfo;
} VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pipelineExecutableInfo](#) indicates that the implementation supports reporting properties and statistics about the pipeline executables associated with a compiled pipeline.

If the [VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_EXECUTABLE_PROPERTIES_FEATURES_KHR

The [VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderDemoteToHelperInvocation;
} VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures;
```

```
// Provided by VK_EXT_shader_demote_to_helper_invocation
// Equivalent to VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures
typedef VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures
VkPhysicalDeviceShaderDemoteToHelperInvocationFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [shaderDemoteToHelperInvocation](#) indicates whether the implementation supports the SPIR-V [DemoteToHelperInvocationEXT](#) capability.

If the [VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures-sType-sType [sType](#) **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_DEMOTE_TO_HELPER_INVOCATION_FEATURES`

Structure Chaining

Extends the structures

The [VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_texel_buffer_alignment
typedef struct VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           texelBufferAlignment;
} VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [texelBufferAlignment](#) indicates whether the implementation uses more specific alignment requirements advertised in [VkPhysicalDeviceTexelBufferAlignmentProperties](#) rather than [VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment](#).

If the [VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_FEATURES_EXT](#)

Structure Chaining

The [VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_attachment_feedback_loop_dynamic_state
typedef struct VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           attachmentFeedbackLoopDynamicState;
} VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `attachmentFeedbackLoopDynamicState` specifies whether dynamic feedback loops are supported.

If the `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ATTACHMENT_FEEDBACK_LOOP_DYNAMIC_STATE_FEATURES_EXT`

Structure Chaining

The `VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_legacy_vertex_attributes
typedef struct VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           legacyVertexAttributes;
} VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `legacyVertexAttributes` specifies whether compatibility features for vertex attributes are supported when using dynamic vertex input state.

If the `VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LEGACY_VERTEX_ATTRIBUTES_FEATURES_EXT`

The `VkPhysicalDeviceTextureCompressionASTC_HDRFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTextureCompressionASTC_HDRFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureCompressionASTC_HDR;
} VkPhysicalDeviceTextureCompressionASTC_HDRFeatures;
```

```
// Provided by VK_EXT_texture_compression_astc_hdr
// Equivalent to VkPhysicalDeviceTextureCompressionASTC_HDRFeatures
typedef VkPhysicalDeviceTextureCompressionASTC_HDRFeatures
VkPhysicalDeviceTextureCompressionASTC_HDRFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `textureCompressionASTC_HDR` indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:
 - `VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK`
 - `VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

If the `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceTextureCompressionASTCHDRFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTextureCompressionASTCHDRFeatures-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXTURE_COMPRESSION_ASTC_HDR_FEATURES`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_texture_compression_astc_3d
typedef struct VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureCompressionASTC_3D;
} VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [textureCompressionASTC_3D](#) indicates whether all of the ASTC 3D compressed texture formats are supported. If this feature is enabled, then the [VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT](#), [VK_FORMAT_FEATURE_BLIT_SRC_BIT](#) and [VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT](#) features **must** be supported in [optimalTilingFeatures](#) for the following formats:
 - [VK_FORMAT_ASTC_3x3x3_UNORM_BLOCK_EXT](#)
 - [VK_FORMAT_ASTC_3x3x3_SRGB_BLOCK_EXT](#)
 - [VK_FORMAT_ASTC_3x3x3_SFLOAT_BLOCK_EXT](#)
 - [VK_FORMAT_ASTC_4x3x3_UNORM_BLOCK_EXT](#)
 - [VK_FORMAT_ASTC_4x3x3_SRGB_BLOCK_EXT](#)

 - [VK_FORMAT_ASTC_5x4x4_SFLOAT_BLOCK_EXT](#)

- `VK_FORMAT_ASTC_5x5x4_UNORM_BLOCK_EXT`
- `VK_FORMAT_ASTC_5x5x4_SRGB_BLOCK_EXT`
- `VK_FORMAT_ASTC_5x5x4_SFLOAT_BLOCK_EXT`
- `VK_FORMAT_ASTC_5x5x5_UNORM_BLOCK_EXT`
- `VK_FORMAT_ASTC_5x5x5_SRGB_BLOCK_EXT`
- `VK_FORMAT_ASTC_5x5x5_SFLOAT_BLOCK_EXT`
- `VK_FORMAT_ASTC_6x5x5_UNORM_BLOCK_EXT`
- `VK_FORMAT_ASTC_6x5x5_SRGB_BLOCK_EXT`
- `VK_FORMAT_ASTC_6x5x5_SFLOAT_BLOCK_EXT`
- `VK_FORMAT_ASTC_6x6x5_UNORM_BLOCK_EXT`
- `VK_FORMAT_ASTC_6x6x5_SRGB_BLOCK_EXT`
- `VK_FORMAT_ASTC_6x6x5_SFLOAT_BLOCK_EXT`
- `VK_FORMAT_ASTC_6x6x6_UNORM_BLOCK_EXT`
- `VK_FORMAT_ASTC_6x6x6_SRGB_BLOCK_EXT`
- `VK_FORMAT_ASTC_6x6x6_SFLOAT_BLOCK_EXT`

If the `VkPhysicalDeviceTextureCompressionASTC3DFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceTextureCompressionASTC3DFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXTURE_COMPRESSION_ASTC_3D_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceLineRasterizationFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceLineRasterizationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rectangularLines;
    VkBool32           bresenhamLines;
    VkBool32           smoothLines;
    VkBool32           stippledRectangularLines;
    VkBool32           stippledBresenhamLines;
    VkBool32           stippledSmoothLines;
} VkPhysicalDeviceLineRasterizationFeatures;
```

```
// Provided by VK_KHR_line_rasterization
// Equivalent to VkPhysicalDeviceLineRasterizationFeatures
typedef VkPhysicalDeviceLineRasterizationFeatures
VkPhysicalDeviceLineRasterizationFeaturesKHR;
```

```
// Provided by VK_EXT_line_rasterization
// Equivalent to VkPhysicalDeviceLineRasterizationFeatures
typedef VkPhysicalDeviceLineRasterizationFeatures
VkPhysicalDeviceLineRasterizationFeaturesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **rectangularLines** indicates whether the implementation supports [rectangular line rasterization](#).
- **bresenhamLines** indicates whether the implementation supports [Bresenham-style line rasterization](#).
- **smoothLines** indicates whether the implementation supports [smooth line rasterization](#).
- **stippledRectangularLines** indicates whether the implementation supports [stippled line rasterization](#) with [VK_LINE_RASTERIZATION_MODE_RECTANGULAR](#) lines.
- **stippledBresenhamLines** indicates whether the implementation supports [stippled line rasterization](#) with [VK_LINE_RASTERIZATION_MODE_BRESENHAM](#) lines.
- **stippledSmoothLines** indicates whether the implementation supports [stippled line rasterization](#) with [VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH](#) lines.

If the [VkPhysicalDeviceLineRasterizationFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceLineRasterizationFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLineRasterizationFeatures-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_FEATURES

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceSubgroupSizeControlFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subgroupSizeControl;
    VkBool32           computeFullSubgroups;
} VkPhysicalDeviceSubgroupSizeControlFeatures;
```

```
// Provided by VK_EXT_subgroup_size_control
// Equivalent to VkPhysicalDeviceSubgroupSizeControlFeatures
typedef VkPhysicalDeviceSubgroupSizeControlFeatures
VkPhysicalDeviceSubgroupSizeControlFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [subgroupSizeControl](#) indicates whether the implementation supports controlling shader subgroup sizes via the [VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT](#) flag and the [VkPipelineShaderStageRequiredSubgroupSizeCreateInfo](#) structure.
- [computeFullSubgroups](#) indicates whether the implementation supports requiring full subgroups in compute, mesh, or task shaders via the [VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT](#) flag.

If the [VkPhysicalDeviceSubgroupSizeControlFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

[VkDevice](#) with any features described by [VkPhysicalDeviceSubgroupSizeControlFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

NOTE

The [VkPhysicalDeviceSubgroupSizeControlFeaturesEXT](#) structure was added in version 2 of the [VK_EXT_subgroup_size_control](#) extension. Version 1 implementations of this extension will not fill out the features structure but applications may assume that both [subgroupSizeControl](#) and [computeFullSubgroups](#) are supported if the extension is supported. (See also the [Feature Requirements](#) section.) Applications are advised to add a [VkPhysicalDeviceSubgroupSizeControlFeaturesEXT](#) structure to the [pNext](#) chain of [VkDeviceCreateInfo](#) to enable the features regardless of the version of the extension supported by the implementation. If the implementation only supports version 1, it will safely ignore the [VkPhysicalDeviceSubgroupSizeControlFeaturesEXT](#) structure.

Vulkan 1.3 implementations always support the features structure.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupSizeControlFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceCoherentMemoryFeaturesAMD](#) structure is defined as:

```
// Provided by VK_AMD_device_coherent_memory
typedef struct VkPhysicalDeviceCoherentMemoryFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceCoherentMemory;
} VkPhysicalDeviceCoherentMemoryFeaturesAMD;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [deviceCoherentMemory](#) indicates that the implementation supports [device coherent memory](#).

If the `VkPhysicalDeviceCoherentMemoryFeaturesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCoherentMemoryFeaturesAMD`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCoherentMemoryFeaturesAMD-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COHERENT_MEMORY_FEATURES_AMD`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceAccelerationStructureFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructureFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           accelerationStructure;
    VkBool32           accelerationStructureCaptureReplay;
    VkBool32           accelerationStructureIndirectBuild;
    VkBool32           accelerationStructureHostCommands;
    VkBool32           descriptorBindingAccelerationStructureUpdateAfterBind;
} VkPhysicalDeviceAccelerationStructureFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructure` indicates whether the implementation supports the acceleration structure functionality. See [Acceleration Structures](#).
- `accelerationStructureCaptureReplay` indicates whether the implementation supports saving and reusing acceleration structure device addresses, e.g. for trace capture and replay.
- `accelerationStructureIndirectBuild` indicates whether the implementation supports indirect acceleration structure build commands, e.g. `vkCmdBuildAccelerationStructuresIndirectKHR`.
- `accelerationStructureHostCommands` indicates whether the implementation supports host side

acceleration structure commands, e.g. [vkBuildAccelerationStructuresKHR](#), [vkCopyAccelerationStructureKHR](#), [vkCopyAccelerationStructureToMemoryKHR](#), [vkCopyMemoryToAccelerationStructureKHR](#), [vkWriteAccelerationStructuresPropertiesKHR](#).

- [descriptorBindingAccelerationStructureUpdateAfterBind](#) indicates whether the implementation supports updating acceleration structure descriptors after a set is bound. If this feature is not enabled, [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#) **must** not be used with [VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR](#).

If the [VkPhysicalDeviceAccelerationStructureFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceAccelerationStructureFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_FEATURES_KHR](#) [sType](#) **must** be

Structure Chaining

- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceRayTracingPipelineFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelineFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingPipeline;
    VkBool32           rayTracingPipelineShaderGroupHandleCaptureReplay;
    VkBool32           rayTracingPipelineShaderGroupHandleCaptureReplayMixed;
    VkBool32           rayTracingPipelineTraceRaysIndirect;
    VkBool32           rayTraversalPrimitiveCulling;
} VkPhysicalDeviceRayTracingPipelineFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.

- `rayTracingPipeline` indicates whether the implementation supports the ray tracing pipeline functionality. See [Ray Tracing](#).
- `rayTracingPipelineShaderGroupHandleCaptureReplay` indicates whether the implementation supports saving and reusing shader group handles, e.g. for trace capture and replay.
- `rayTracingPipelineShaderGroupHandleCaptureReplayMixed` indicates whether the implementation supports reuse of shader group handles being arbitrarily mixed with creation of non-reused shader group handles. If this is `VK_FALSE`, all reused shader group handles **must** be specified before any non-reused handles **may** be created.
- `rayTracingPipelineTraceRaysIndirect` indicates whether the implementation supports indirect ray tracing commands, e.g. `vkCmdTraceRaysIndirectKHR`.
- `rayTraversalPrimitiveCulling` indicates whether the implementation supports [primitive culling during ray traversal](#).

If the `VkPhysicalDeviceRayTracingPipelineFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayTracingPipelineFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage

- VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03575
If `rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is `VK_TRUE`, `rayTracingPipelineShaderGroupHandleCaptureReplay` **must** also be `VK_TRUE`

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceRayQueryFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_query
typedef struct VkPhysicalDeviceRayQueryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayQuery;
} VkPhysicalDeviceRayQueryFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayQuery` indicates whether the implementation supports ray query (`OpRayQueryProceedKHR`) functionality.

If the `VkPhysicalDeviceRayQueryFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayQueryFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayQueryFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_QUERY_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_maintenance1
typedef struct VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingMaintenance1;
    VkBool32           rayTracingPipelineTraceRaysIndirect2;
} VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingMaintenance1` indicates that the implementation supports the following:
 - The `CullMaskKHR` SPIR-V builtin using the `SPV_KHR_ray_cull_mask` SPIR-V extension.
 - Additional acceleration structure property queries: `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTER_S_KHR` and `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`.
 - A new access flag `VK_ACCESS_2_SHADER_BINDING_TABLE_READ_BIT_KHR`.
 - A new pipeline stage flag bit `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR`.
- `rayTracingPipelineTraceRaysIndirect2` indicates whether the implementation supports the extended indirect ray tracing command `vkCmdTraceRaysIndirect2KHR`.

If the `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The `VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeQuantizationMap;
} VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeQuantizationMap` indicates that the implementation supports `video encode quantization maps`.

NOTE

Support for `videoEncodeQuantizationMap` does not indicate that all video encode profiles support quantization maps. Support for quantization maps for any specific video encode profile is subject to video-profile-specific capabilities.

If the `VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeIntraRefresh;
} VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeIntraRefresh` specifies that the implementation supports [video encode intra refresh](#).

NOTE

Support for `videoEncodeIntraRefresh` does not indicate that all video encode profiles support intra refresh. Support for intra refresh for any specific video encode profile is subject to video-profile-specific capabilities.

If the `VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_INTRA_REFRESH_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE` structure is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef struct VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeRgbConversion;
} VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeRgbConversion` specifies that the implementation supports [video encode RGB conversion](#).

If the `VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE` structure is included in the `pNext`

chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE-sType-sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_RGB_CONVERSION_FEATURES_VALVE](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceVideoMaintenance1FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_maintenance1
typedef struct VkPhysicalDeviceVideoMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*               pNext;
    VkBool32            videoMaintenance1;
} VkPhysicalDeviceVideoMaintenance1FeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [videoMaintenance1](#) indicates that the implementation supports the following:
 - The new buffer creation flag [VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR](#).
 - The new image creation flag [VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR](#).
 - The new video session creation flag [VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR](#).

If the [VkPhysicalDeviceVideoMaintenance1FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

[VkDevice](#) with any features described by [VkPhysicalDeviceVideoMaintenance1FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceVideoMaintenance1FeaturesKHR-sType-sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_MAINTENANCE_1_FEATURES_KHR](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceVideoMaintenance2FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_maintenance2
typedef struct VkPhysicalDeviceVideoMaintenance2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoMaintenance2;
} VkPhysicalDeviceVideoMaintenance2FeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [videoMaintenance2](#) specifies that the implementation supports the following:
 - Support for issuing [video coding control](#) commands against video decode sessions without a bound video session parameters object.
 - The new video session creation flag [VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR](#) for video decode sessions.
 - Required support for the [rate control mode](#) [VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR](#) for the following video encode profiles:
 - [H.264 encode profiles](#);
 - [H.265 encode profiles](#);
 - [AV1 encode profiles](#).

- Additional guarantees on Video Std parameters used with video encode profiles that the implementations support without the need to [override](#) them.

If the `VkPhysicalDeviceVideoMaintenance2FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVideoMaintenance2FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoMaintenance2FeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_MAINTENANCE_2_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVideoEncodeAV1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkPhysicalDeviceVideoEncodeAV1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeAV1;
} VkPhysicalDeviceVideoEncodeAV1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeAV1` indicates that the implementation supports [AV1 encode operations](#).

If the `VkPhysicalDeviceVideoEncodeAV1FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVideoEncodeAV1FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoEncodeAV1FeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_AV1_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVideoDecodeVP9FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkPhysicalDeviceVideoDecodeVP9FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoDecodeVP9;
} VkPhysicalDeviceVideoDecodeVP9FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoDecodeVP9` specifies that the implementation supports `VP9 decode operations`.

If the `VkPhysicalDeviceVideoDecodeVP9FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVideoDecodeVP9FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoDecodeVP9FeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_DECODE_VP9_FEATURES_KHR`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceExtendedDynamicStateFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state
typedef struct VkPhysicalDeviceExtendedDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState;
} VkPhysicalDeviceExtendedDynamicStateFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [extendedDynamicState](#) indicates that the implementation supports the following dynamic states:
 - [VK_DYNAMIC_STATE_CULL_MODE](#)
 - [VK_DYNAMIC_STATE_FRONT_FACE](#)
 - [VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY](#)
 - [VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT](#)
 - [VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT](#)
 - [VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE](#)
 - [VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE](#)
 - [VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE](#)
 - [VK_DYNAMIC_STATE_DEPTH_COMPARE_OP](#)
 - [VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE](#)
 - [VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE](#)
 - [VK_DYNAMIC_STATE_STENCIL_OP](#)

If the [VkPhysicalDeviceExtendedDynamicStateFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceExtendedDynamicStateFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicStateFeaturesEXT-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_FEATURES_EXT

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceExtendedDynamicState2FeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state2
typedef struct VkPhysicalDeviceExtendedDynamicState2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState2;
    VkBool32           extendedDynamicState2LogicOp;
    VkBool32           extendedDynamicState2PatchControlPoints;
} VkPhysicalDeviceExtendedDynamicState2FeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [extendedDynamicState2](#) indicates that the implementation supports the following dynamic states:
 - [VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE](#)
 - [VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE](#)
 - [VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE](#)
- [extendedDynamicState2LogicOp](#) indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_LOGIC_OP_EXT](#)
- [extendedDynamicState2PatchControlPoints](#) indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT](#)

If the [VkPhysicalDeviceExtendedDynamicState2FeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

[VkDevice](#) with any features described by [VkPhysicalDeviceExtendedDynamicState2FeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The [VkPhysicalDeviceExtendedDynamicState3FeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state3
typedef struct VkPhysicalDeviceExtendedDynamicState3FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState3TessellationDomainOrigin;
    VkBool32           extendedDynamicState3DepthClampEnable;
    VkBool32           extendedDynamicState3PolygonMode;
    VkBool32           extendedDynamicState3RasterizationSamples;
    VkBool32           extendedDynamicState3SampleMask;
    VkBool32           extendedDynamicState3AlphaToCoverageEnable;
    VkBool32           extendedDynamicState3AlphaToOneEnable;
    VkBool32           extendedDynamicState3LogicOpEnable;
    VkBool32           extendedDynamicState3ColorBlendEnable;
    VkBool32           extendedDynamicState3ColorBlendEquation;
    VkBool32           extendedDynamicState3ColorWriteMask;
    VkBool32           extendedDynamicState3RasterizationStream;
    VkBool32           extendedDynamicState3ConservativeRasterizationMode;
    VkBool32           extendedDynamicState3ExtraPrimitiveOverestimationSize;
    VkBool32           extendedDynamicState3DepthClipEnable;
    VkBool32           extendedDynamicState3SampleLocationsEnable;
    VkBool32           extendedDynamicState3ColorBlendAdvanced;
    VkBool32           extendedDynamicState3ProvokingVertexMode;
    VkBool32           extendedDynamicState3LineRasterizationMode;
    VkBool32           extendedDynamicState3LineStippleEnable;
    VkBool32           extendedDynamicState3DepthClipNegativeOneToOne;
    VkBool32           extendedDynamicState3ViewportWScalingEnable;
    VkBool32           extendedDynamicState3ViewportSwizzle;
    VkBool32           extendedDynamicState3CoverageToColorEnable;
    VkBool32           extendedDynamicState3CoverageToColorLocation;
    VkBool32           extendedDynamicState3CoverageModulationMode;
    VkBool32           extendedDynamicState3CoverageModulationTableEnable;
    VkBool32           extendedDynamicState3CoverageModulationTable;
    VkBool32           extendedDynamicState3CoverageReductionMode;
    VkBool32           extendedDynamicState3RepresentativeFragmentTestEnable;
    VkBool32           extendedDynamicState3ShadingRateImageEnable;
} VkPhysicalDeviceExtendedDynamicState3FeaturesEXT;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **extendedDynamicState3TessellationDomainOrigin** indicates that the implementation supports the following dynamic state:
 - **VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT**
- **extendedDynamicState3DepthClampEnable** indicates that the implementation supports the following dynamic state:
 - **VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT**

- `extendedDynamicState3PolygonMode` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_POLYGON_MODE_EXT`
- `extendedDynamicState3RasterizationSamples` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT`
- `extendedDynamicState3SampleMask` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT`
- `extendedDynamicState3AlphaToCoverageEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT`
- `extendedDynamicState3AlphaToOneEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT`
- `extendedDynamicState3LogicOpEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT`
- `extendedDynamicState3ColorBlendEnable` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT`
- `extendedDynamicState3ColorBlendEquation` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`
- `extendedDynamicState3ColorWriteMask` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`
- `extendedDynamicState3RasterizationStream` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT`
- `extendedDynamicState3ConservativeRasterizationMode` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT`
- `extendedDynamicState3ExtraPrimitiveOverestimationSize` indicates that the implementation supports the following dynamic state:
 - `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT`
- `extendedDynamicState3DepthClipEnable` indicates that the implementation supports the following dynamic state:

- [VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT](#)
- `extendedDynamicState3SampleLocationsEnable` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT](#)
- `extendedDynamicState3ColorBlendAdvanced` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT](#)
- `extendedDynamicState3ProvokingVertexMode` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT](#)
- `extendedDynamicState3LineRasterizationMode` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT](#)
- `extendedDynamicState3LineStippleEnable` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT](#)
- `extendedDynamicState3DepthClipNegativeOneToOne` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT](#)
- `extendedDynamicState3ViewportWScalingEnable` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV](#)
- `extendedDynamicState3ViewportSwizzle` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV](#)
- `extendedDynamicState3CoverageToColorEnable` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV](#)
- `extendedDynamicState3CoverageToColorLocation` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV](#)
- `extendedDynamicState3CoverageModulationMode` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV](#)
- `extendedDynamicState3CoverageModulationTableEnable` indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV](#)
- `extendedDynamicState3CoverageModulationTable` indicates that the implementation supports the

following dynamic state:

- [VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV](#)
- [extendedDynamicState3CoverageReductionMode](#) indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV](#)
- [extendedDynamicState3RepresentativeFragmentTestEnable](#) indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV](#)
- [extendedDynamicState3ShadingRateImageEnable](#) indicates that the implementation supports the following dynamic state:
 - [VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV](#)

If the [VkPhysicalDeviceExtendedDynamicState3FeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceExtendedDynamicState3FeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicState3FeaturesEXT-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_3_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCommands;
} VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceGeneratedCommands` indicates whether the implementation supports functionality to generate commands on the device. See [Device-Generated Commands](#).

If the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands_compute
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCompute;
    VkBool32           deviceGeneratedComputePipelines;
    VkBool32           deviceGeneratedComputeCaptureReplay;
} VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceGeneratedCompute` indicates whether the implementation supports functionality to generate dispatch commands and push constants for the compute pipeline on the device. See [Device-Generated Commands](#).

- `deviceGeneratedComputePipelines` indicates whether the implementation supports functionality to generate commands to bind compute pipelines on the device. See [Device-Generated Commands](#).
- `deviceGeneratedComputeCaptureReplay` indicates whether the implementation supports functionality to capture compute pipeline address and reuse later for replay in [Device-Generated Commands](#).

If the `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_COMPUTE_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCommands;
    VkBool32           dynamicGeneratedPipelineLayout;
} VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceGeneratedCommands` indicates whether the implementation supports functionality to generate commands on the device.

- `dynamicGeneratedPipelineLayout` indicates the implementation allows the `pipelineLayout` member of `VkIndirectCommandsLayoutCreateInfoEXT` to be `VK_NULL_HANDLE` and `VkPipelineLayoutCreateInfo` can be chained off those structures' `pNext` instead.

If the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_EXT`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceDiagnosticsConfigFeaturesNV` structure is defined as:

```
// Provided by VK_NV_device_diagnostics_config
typedef struct VkPhysicalDeviceDiagnosticsConfigFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           diagnosticsConfig;
} VkPhysicalDeviceDiagnosticsConfigFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `diagnosticsConfig` indicates whether the implementation supports the ability to configure diagnostic tools.

If the `VkPhysicalDeviceDiagnosticsConfigFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDiagnosticsConfigFeaturesNV`, it **must** add

an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceDiagnosticsConfigFeaturesNV-sType-sType](#)
[sType](#) must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DIAGNOSTICS_CONFIG_FEATURES_NV](#)

Structure Chaining

Extends the structures

The [VkPhysicalDeviceClusterAccelerationStructureFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkPhysicalDeviceClusterAccelerationStructureFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           clusterAccelerationStructure;
} VkPhysicalDeviceClusterAccelerationStructureFeaturesNV;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [clusterAccelerationStructure](#) indicates whether the implementation supports the ability to generate and trace cluster acceleration structures.

If the [VkPhysicalDeviceClusterAccelerationStructureFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceClusterAccelerationStructureFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

The [VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           partitionedAccelerationStructure;
} VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [partitionedAccelerationStructure](#) indicates whether the implementation supports the ability to generate top level partitioned acceleration structures.

If the [VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- `VOID-VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PARTITIONED_ACCELERATION_STRUCTURE_FEATURES_NV`

The [VkPhysicalDeviceDeviceMemoryReportFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_device_memory_report
typedef struct VkPhysicalDeviceDeviceMemoryReportFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceMemoryReport;
} VkPhysicalDeviceDeviceMemoryReportFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [deviceMemoryReport](#) indicates whether the implementation supports the ability to register device memory report callbacks.

If the [VkPhysicalDeviceDeviceMemoryReportFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDeviceMemoryReportFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceMemoryReportFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_MEMORY_REPORT_FEATURES_EXT](#)

Structure Chaining

Extends the structures

The [VkPhysicalDeviceGlobalPriorityQueryFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceGlobalPriorityQueryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           globalPriorityQuery;
} VkPhysicalDeviceGlobalPriorityQueryFeatures;
```

```
// Provided by VK_KHR_global_priority
// Equivalent to VkPhysicalDeviceGlobalPriorityQueryFeatures
typedef VkPhysicalDeviceGlobalPriorityQueryFeatures
VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR;
```

```
// Provided by VK_EXT_global_priority_query
// Equivalent to VkPhysicalDeviceGlobalPriorityQueryFeatures
typedef VkPhysicalDeviceGlobalPriorityQueryFeatures
VkPhysicalDeviceGlobalPriorityQueryFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **globalPriorityQuery** indicates whether the implementation supports the ability to query global queue priorities.

If the [VkPhysicalDeviceGlobalPriorityQueryFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceGlobalPriorityQueryFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGlobalPriorityQueryFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GLOBAL_PRIORITY_QUERY_FEATURES](#)

The `VkPhysicalDevicePipelineCreationCacheControlFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDevicePipelineCreationCacheControlFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineCreationCacheControl;
} VkPhysicalDevicePipelineCreationCacheControlFeatures;
```

```
// Provided by VK_EXT_pipeline_creation_cache_control
// Equivalent to VkPhysicalDevicePipelineCreationCacheControlFeatures
typedef VkPhysicalDevicePipelineCreationCacheControlFeatures
VkPhysicalDevicePipelineCreationCacheControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineCreationCacheControl` indicates that the implementation supports:
 - The following **can** be used in `Vk*PipelineCreateInfo::flags`:
 - `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT`
 - `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`
 - The following **can** be used in `VkPipelineCacheCreateInfo::flags`:
 - `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`

If the `VkPhysicalDevicePipelineCreationCacheControlFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePipelineCreationCacheControlFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The [VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderZeroInitializeWorkgroupMemory;
} VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures;
```

```
// Provided by VK_KHR_zero_initialize_workgroup_memory
// Equivalent to VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures
typedef VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures
VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [shaderZeroInitializeWorkgroupMemory](#) specifies whether the implementation supports initializing a variable in Workgroup storage class.

If the [VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

The [VkPhysicalDevicePrivateDataFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDevicePrivateDataFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           privateData;
} VkPhysicalDevicePrivateDataFeatures;
```

```
// Provided by VK_EXT_private_data
// Equivalent to VkPhysicalDevicePrivateDataFeatures
typedef VkPhysicalDevicePrivateDataFeatures VkPhysicalDevicePrivateDataFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `privateData` indicates whether the implementation supports private data. See [Private Data](#).

If the [VkPhysicalDevicePrivateDataFeatures](#) structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePrivateDataFeatures](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The `VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_subgroup_uniform_control_flow
typedef struct VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupUniformControlFlow;
} VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupUniformControlFlow` specifies whether the implementation supports the shader execution mode `SubgroupUniformControlFlowKHR`

If the `VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The `VkPhysicalDeviceRobustness2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_robustness2
typedef struct VkPhysicalDeviceRobustness2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustBufferAccess2;
    VkBool32           robustImageAccess2;
    VkBool32           nullDescriptor;
} VkPhysicalDeviceRobustness2FeaturesKHR;
```

```
// Provided by VK_EXT_robustness2
// Equivalent to VkPhysicalDeviceRobustness2FeaturesKHR
typedef VkPhysicalDeviceRobustness2FeaturesKHR VkPhysicalDeviceRobustness2FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `robustBufferAccess2` enables [Robust Buffer Access 2](#) guarantees for shader buffer accesses.
- `robustImageAccess2` enables [Robust Image Access 2](#) guarantees for shader image accesses.
- `nullDescriptor` indicates whether descriptors **can** be written with a `VK_NULL_HANDLE` resource or view, which are considered valid to access and act as if the descriptor were bound to nothing.

If the `VkPhysicalDeviceRobustness2FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRobustness2FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage

- VUID-VkPhysicalDeviceRobustness2FeaturesKHR-robustBufferAccess2-04000
If `robustBufferAccess2` is enabled then `robustBufferAccess` **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRobustness2FeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_FEATURES_KHR`

The [VkPhysicalDeviceShaderTerminateInvocationFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderTerminateInvocationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderTerminateInvocation;
} VkPhysicalDeviceShaderTerminateInvocationFeatures;
```

```
// Provided by VK_KHR_shader_terminate_invocation
// Equivalent to VkPhysicalDeviceShaderTerminateInvocationFeatures
typedef VkPhysicalDeviceShaderTerminateInvocationFeatures
VkPhysicalDeviceShaderTerminateInvocationFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [shaderTerminateInvocation](#) specifies whether the implementation supports SPIR-V modules that use the [SPV_KHR_terminate_invocation](#) extension.

If the [VkPhysicalDeviceShaderTerminateInvocationFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderTerminateInvocationFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

The `VkPhysicalDeviceCustomBorderColorFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_custom_border_color
typedef struct VkPhysicalDeviceCustomBorderColorFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           customBorderColors;
    VkBool32           customBorderColorWithoutFormat;
} VkPhysicalDeviceCustomBorderColorFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `customBorderColors` indicates that the implementation supports providing a `borderColor` value with one of the following values at sampler creation time:
 - `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`
 - `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- `customBorderColorWithoutFormat` indicates that explicit formats are not required for custom border colors and the value of the `format` member of the `VkSamplerCustomBorderColorCreateInfoEXT` structure **may** be `VK_FORMAT_UNDEFINED`. If this feature bit is not set, applications **must** provide the `VkFormat` of the image view(s) being sampled by this sampler in the `format` member of the `VkSamplerCustomBorderColorCreateInfoEXT` structure.

If the `VkPhysicalDeviceCustomBorderColorFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCustomBorderColorFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomBorderColorFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_border_color_swizzle
typedef struct VkPhysicalDeviceBorderColorSwizzleFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           borderColorSwizzle;
    VkBool32           borderColorSwizzleFromImage;
} VkPhysicalDeviceBorderColorSwizzleFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `borderColorSwizzle` indicates that defined values are returned by sampled image operations when used with a sampler that uses a `VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK`, `VK_BORDER_COLOR_INT_OPAQUE_BLACK`, `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`, or `VK_BORDER_COLOR_INT_CUSTOM_EXT` `borderColor` and an image view that uses a non-identity component mapping, when either `borderColorSwizzleFromImage` is enabled or the `VkSamplerBorderColorComponentMappingCreateInfoEXT` is specified.
- `borderColorSwizzleFromImage` indicates that the implementation will return the correct border color values from sampled image operations under the conditions expressed above, without the application having to specify the border color component mapping when creating the sampler object. If this feature bit is not set, applications **can** chain a `VkSamplerBorderColorComponentMappingCreateInfoEXT` structure when creating samplers for use with image views that do not have an identity swizzle and, when those samplers are combined with image views using the same component mapping, sampled image operations that use opaque black or custom border colors will return the correct border color values.

If the `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The [VkPhysicalDevicePortabilitySubsetFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_portability_subset
typedef struct VkPhysicalDevicePortabilitySubsetFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           constantAlphaColorBlendFactors;
    VkBool32           events;
    VkBool32           imageViewFormatReinterpretation;
    VkBool32           imageViewFormatSwizzle;
    VkBool32           imageView2DOn3DImage;
    VkBool32           multisampleArrayImage;
    VkBool32           mutableComparisonSamplers;
    VkBool32           pointPolygons;
    VkBool32           samplerMipLodBias;
    VkBool32           separateStencilMaskRef;
    VkBool32           shaderSampleRateInterpolationFunctions;
    VkBool32           tessellationIsolines;
    VkBool32           tessellationPointMode;
    VkBool32           triangleFans;
    VkBool32           vertexAttributeAccessBeyondStride;
} VkPhysicalDevicePortabilitySubsetFeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **constantAlphaColorBlendFactors** indicates whether this implementation supports constant *alpha Blend Factors* used as source or destination *color Blending*.
- **events** indicates whether this implementation supports synchronization using [Events](#).
- **imageViewFormatReinterpretation** indicates whether this implementation supports a [VkImageView](#) being created with a texel format containing a different number of components, or a different number of bits in each component, than the texel format of the underlying [VkImage](#).
- **imageViewFormatSwizzle** indicates whether this implementation supports remapping format components using [VkImageViewCreateInfo::components](#).
- **imageView2DOn3DImage** indicates whether this implementation supports a [VkImage](#) being created with the `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` flag set, permitting a 2D or 2D array image view to be created on a 3D [VkImage](#).

- `multisampleArrayImage` indicates whether this implementation supports a `VkImage` being created as a 2D array with multiple samples per texel.
- `mutableComparisonSamplers` indicates whether this implementation allows descriptors with comparison samplers to be `updated`.
- `pointPolygons` indicates whether this implementation supports `Rasterization` using a `point Polygon Mode`.
- `samplerMipLodBias` indicates whether this implementation supports setting a `mipmap LOD bias value` when `creating a sampler`.
- `separateStencilMaskRef` indicates whether this implementation supports separate front and back `Stencil Test` reference values.
- `shaderSampleRateInterpolationFunctions` indicates whether this implementation supports fragment shaders which use the `InterpolationFunction` capability and the extended instructions `InterpolateAtCentroid`, `InterpolateAtOffset`, and `InterpolateAtSample` from the `GLSL.std.450` extended instruction set. This member is only meaningful if the `sampleRateShading` feature is supported.
- `tessellationIsolines` indicates whether this implementation supports `isoline output` from the `Tessellation` stage of a graphics pipeline. This member is only meaningful if the `tessellationShader` feature is supported.
- `tessellationPointMode` indicates whether this implementation supports `point output` from the `Tessellation` stage of a graphics pipeline. This member is only meaningful if the `tessellationShader` feature is supported.
- `triangleFans` indicates whether this implementation supports `Triangle Fans` primitive topology.
- `vertexAttributeAccessBeyondStride` indicates whether this implementation supports accessing a vertex input attribute beyond the stride of the corresponding vertex input binding.

If the `VkPhysicalDevicePortabilitySubsetFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePortabilitySubsetFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

    VkStructureType    sType;
    void*              pNext;
    VkBool32           performanceCounterQueryPools;
    VkBool32           performanceCounterMultipleQueryPools;
} VkPhysicalDevicePerformanceQueryFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [performanceCounterQueryPools](#) indicates whether the implementation supports performance counter query pools.
- [performanceCounterMultipleQueryPools](#) indicates whether the implementation supports using multiple performance query pools in a primary command buffer and secondary command buffers executed within it.

If the [VkPhysicalDevicePerformanceQueryFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePerformanceQueryFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The [VkPhysicalDevice4444FormatsFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_4444_formats
typedef struct VkPhysicalDevice4444FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           formatA4R4G4B4;
    VkBool32           formatA4B4G4R4;
} VkPhysicalDevice4444FormatsFeaturesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **formatA4R4G4B4** indicates that the implementation **must** support using a [VkFormat](#) of `VK_FORMAT_A4R4G4B4_UNORM_PACK16_EXT` with at least the following [VkFormatFeatureFlagBits](#):
 - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`
 - `VK_FORMAT_FEATURE_BLIT_SRC_BIT`
 - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- **formatA4B4G4R4** indicates that the implementation **must** support using a [VkFormat](#) of `VK_FORMAT_A4B4G4R4_UNORM_PACK16_EXT` with at least the following [VkFormatFeatureFlagBits](#):
 - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`
 - `VK_FORMAT_FEATURE_BLIT_SRC_BIT`
 - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

If the `VkPhysicalDevice4444FormatsFeaturesEXT` structure is included in the **pNext** chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by `VkPhysicalDevice4444FormatsFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the **pNext** chain of `VkDeviceCreateInfo` when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDevice4444FormatsFeaturesEXT-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_4444_FORMATS_FEATURES_EXT`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

NOTE

Although the formats defined by the [VK_EXT_4444_formats](#) extension were promoted to Vulkan 1.3 as optional formats, the [VkPhysicalDevice4444FormatsFeaturesEXT](#) structure was not promoted to Vulkan 1.3.

The [VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT](#) structure is defined as:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           mutableDescriptorType;
} VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT;
```

```
// Provided by VK_VALVE_mutable_descriptor_type
// Equivalent to VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT
typedef VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT
VkPhysicalDeviceMutableDescriptorTypeFeaturesVALVE;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **mutableDescriptorType** indicates that the implementation **must** support using the [VkDescriptorType](#) of [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#) with at least the following descriptor types, where any combination of the types **must** be supported:
 - [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#)
 - [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#)
 - [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#)
 - [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#)
 - [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#)
 - [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER](#)
- Additionally, **mutableDescriptorType** indicates that:
 - Non-uniform descriptor indexing **must** be supported if all descriptor types in a [VkMutableDescriptorTypeListEXT](#) for [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#) have the corresponding non-uniform indexing features enabled in [VkPhysicalDeviceDescriptorIndexingFeatures](#).
 - [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#) with **descriptorType** of [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#) relaxes the list of required descriptor types to the descriptor types which have the corresponding update-after-bind feature enabled in

[VkPhysicalDeviceDescriptorIndexingFeatures](#).

- Dynamically uniform descriptor indexing **must** be supported if all descriptor types in a [VkMutableDescriptorTypeListEXT](#) for [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#) have the corresponding dynamic indexing features enabled.
- [VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT](#) **must** be supported.
- [VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT](#) **must** be supported.

If the [VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MUTABLE_DESCRIPTOR_TYPE_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDepthClipControlFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_depth_clip_control
typedef struct VkPhysicalDeviceDepthClipControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClipControl;
} VkPhysicalDeviceDepthClipControlFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [depthClipControl](#) indicates that the implementation supports setting [VkPipelineViewportDepthClipControlCreateInfoEXT::negativeOneToOne](#) to [VK_TRUE](#).

If the [VkPhysicalDeviceDepthClipControlFeaturesEXT](#) structure is included in the [pNext](#) chain of the

`VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDepthClipControlFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceDepthClipControlFeaturesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLIP_CONTROL_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceDepthClampControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clamp_control
typedef struct VkPhysicalDeviceDepthClampControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClampControl;
} VkPhysicalDeviceDepthClampControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClampControl` indicates that the implementation supports setting `VkPipelineViewportDepthClampControlCreateInfoEXT::depthClampMode` to `VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT`.

If the `VkPhysicalDeviceDepthClampControlFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDepthClampControlFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClampControlFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLAMP_CONTROL_FEATURES_EXT`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_workgroup_memory_explicit_layout
typedef struct VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           workgroupMemoryExplicitLayout;
    VkBool32           workgroupMemoryExplicitLayoutScalarBlockLayout;
    VkBool32           workgroupMemoryExplicitLayout8BitAccess;
    VkBool32           workgroupMemoryExplicitLayout16BitAccess;
} VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `workgroupMemoryExplicitLayout` indicates whether the implementation supports the SPIR-V `WorkgroupMemoryExplicitLayoutKHR` capability.
- `workgroupMemoryExplicitLayoutScalarBlockLayout` indicates whether the implementation supports scalar alignment for laying out Workgroup Blocks.
- `workgroupMemoryExplicitLayout8BitAccess` indicates whether objects in the `Workgroup` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `WorkgroupMemoryExplicitLayout8BitAccessKHR` capability.
- `workgroupMemoryExplicitLayout16BitAccess` indicates whether objects in the `Workgroup` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `WorkgroupMemoryExplicitLayout16BitAccessKHR` capability.

If the `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` structure is included in the `pNext`

chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_FEATURES_KHR](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceSynchronization2Features](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSynchronization2Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           synchronization2;
} VkPhysicalDeviceSynchronization2Features;
```

```
// Provided by VK_KHR_synchronization2
// Equivalent to VkPhysicalDeviceSynchronization2Features
typedef VkPhysicalDeviceSynchronization2Features
VkPhysicalDeviceSynchronization2FeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [synchronization2](#) indicates whether the implementation supports the new set of synchronization commands introduced in [VK_KHR_synchronization2](#).

If the [VkPhysicalDeviceSynchronization2Features](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceSynchronization2Features](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSynchronization2Features-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SYNCHRONIZATION_2_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_vertex_input_dynamic_state
typedef struct VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexInputDynamicState;
} VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [vertexInputDynamicState](#) indicates that the implementation supports the following dynamic states:
 - [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#)

If the [VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT-sType-sType

`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_INPUT_DYNAMIC_STATE_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_primitives_generated_query
typedef struct VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           primitivesGeneratedQuery;
    VkBool32           primitivesGeneratedQueryWithRasterizerDiscard;
    VkBool32           primitivesGeneratedQueryWithNonZeroStreams;
} VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitivesGeneratedQuery` indicates whether the implementation supports the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query type.
- `primitivesGeneratedQueryWithRasterizerDiscard` indicates whether the implementation supports this query when `rasterization discard` is enabled.
- `primitivesGeneratedQueryWithNonZeroStreams` indicates whether the implementation supports this query with a non-zero index in `vkCmdBeginQueryIndexedEXT`.

If the `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT-sType-sType
`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVES_GENERATED_QUERY_FEATURES_`

Structure Chaining

Extends the structures

The [VkPhysicalDeviceFragmentShadingRateFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_fragment_shading_rate
typedef struct VkPhysicalDeviceFragmentShadingRateFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineFragmentShadingRate;
    VkBool32           primitiveFragmentShadingRate;
    VkBool32           attachmentFragmentShadingRate;
} VkPhysicalDeviceFragmentShadingRateFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [pipelineFragmentShadingRate](#) indicates that the implementation supports the [pipeline fragment shading rate](#).
- [primitiveFragmentShadingRate](#) indicates that the implementation supports the [primitive fragment shading rate](#).
- [attachmentFragmentShadingRate](#) indicates that the implementation supports the [attachment fragment shading rate](#).

If the [VkPhysicalDeviceFragmentShadingRateFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFragmentShadingRateFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceFragmentShadingRateFeaturesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_FEATURES_KHR`

The [VkPhysicalDeviceLegacyDitheringFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_legacy_dithering
typedef struct VkPhysicalDeviceLegacyDitheringFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           legacyDithering;
} VkPhysicalDeviceLegacyDitheringFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [legacyDithering](#) indicates whether the implementation supports [Legacy Dithering](#).

If the [VkPhysicalDeviceLegacyDitheringFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceLegacyDitheringFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyDitheringFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LEGACY_DITHERING_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_fragment_shading_rate_enums
typedef struct VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShadingRateEnums;
    VkBool32           supersampleFragmentShadingRates;
    VkBool32           noInvocationFragmentShadingRates;
} VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentShadingRateEnums` indicates that the implementation supports specifying fragment shading rates using the `VkFragmentShadingRateNV` enumerated type.
- `supersampleFragmentShadingRates` indicates that the implementation supports fragment shading rate enum values indicating more than one invocation per fragment.
- `noInvocationFragmentShadingRates` indicates that the implementation supports a fragment shading rate enum value indicating that no fragment shaders should be invoked when that shading rate is used.

If the `VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_ENUMS_FEATURES_NV`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceShaderUntypedPointersFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_untyped_pointers
typedef struct VkPhysicalDeviceShaderUntypedPointersFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderUntypedPointers;
} VkPhysicalDeviceShaderUntypedPointersFeaturesKHR;
```

The members of `VkPhysicalDeviceShaderUntypedPointersFeaturesKHR` describe the following features:

- `shaderUntypedPointers` specifies whether shader modules **can** declare the `UntypedPointersKHR` capability and untyped pointers in any [explicitly laid out storage class](#).

If the `VkPhysicalDeviceShaderUntypedPointersFeaturesKHR` structure is included in the `pNext` chain of `VkPhysicalDeviceFeatures2`, it is filled with values indicating whether the features are supported. `VkPhysicalDeviceShaderUntypedPointersFeaturesKHR` **can** also be included in the `pNext` chain of `VkDeviceCreateInfo` to enable the features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderUntypedPointersFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_UNTYPED_POINTERS_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceInheritedViewportScissorFeaturesNV` structure is defined as:

```
// Provided by VK_NV_inherited_viewport_scissor
typedef struct VkPhysicalDeviceInheritedViewportScissorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           inheritedViewportScissor2D;
} VkPhysicalDeviceInheritedViewportScissorFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `inheritedViewportScissor2D` indicates whether secondary command buffers can inherit most of the dynamic state affected by `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT`,

VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT, VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT, VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT, VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT, VK_DYNAMIC_STATE_VIEWPORT or VK_DYNAMIC_STATE_SCISSOR, from a primary command buffer.

If the `VkPhysicalDeviceInheritedViewportScissorFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceInheritedViewportScissorFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInheritedViewportScissorFeaturesNV-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INHERITED_VIEWPORT_SCISSOR_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDevicePipelineProtectedAccessFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePipelineProtectedAccessFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineProtectedAccess;
} VkPhysicalDevicePipelineProtectedAccessFeatures;
```

```
// Provided by VK_EXT_pipeline_protected_access
// Equivalent to VkPhysicalDevicePipelineProtectedAccessFeatures
typedef VkPhysicalDevicePipelineProtectedAccessFeatures
VkPhysicalDevicePipelineProtectedAccessFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `pipelineProtectedAccess` indicates whether the implementation supports specifying protected access on individual pipelines.

If the `VkPhysicalDevicePipelineProtectedAccessFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePipelineProtectedAccessFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineProtectedAccessFeatures-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_PROTECTED_ACCESS_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_ycbcr_2plane_444_formats
typedef struct VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           ycbcr2plane444Formats;
} VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `ycbcr2plane444Formats` indicates that the implementation supports querying format features for, and using, the following 2-plane 444 Y'C_BC_R formats:
 - `VK_FORMAT_G8_B8R8_2PLANE_444_UNORM`
 - `VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16`
 - `VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16`
 - `VK_FORMAT_G16_B16R16_2PLANE_444_UNORM`

If the `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT` structure is included in the `pNext` chain of

the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_2_PLANE_444_FORMATS_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

NOTE

Although the formats defined by the `VK_EXT_ycbcr_2plane_444_formats` were promoted to Vulkan 1.3 as optional formats, the `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT` structure was not promoted to Vulkan 1.3.

The `VkPhysicalDeviceColorWriteEnableFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_color_write_enable
typedef struct VkPhysicalDeviceColorWriteEnableFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           colorWriteEnable;
} VkPhysicalDeviceColorWriteEnableFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `colorWriteEnable` indicates that the implementation supports the dynamic state `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT`.

If the `VkPhysicalDeviceColorWriteEnableFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceColorWriteEnableFeaturesEXT`, it **must** add

an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceColorWriteEnableFeaturesEXT-sType-sType](#) [sType](#) must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COLOR_WRITE_ENABLE_FEATURES_EXT](#)

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevicePipelinePropertiesFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_pipeline_properties
typedef struct VkPhysicalDevicePipelinePropertiesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelinePropertiesIdentifier;
} VkPhysicalDevicePipelinePropertiesFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pipelinePropertiesIdentifier](#) indicates that the implementation supports querying a unique pipeline identifier.

If the [VkPhysicalDevicePipelinePropertiesFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePipelinePropertiesFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDevicePipelinePropertiesFeaturesEXT-sType-sType](#) [sType](#) must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_PROPERTIES_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceProvokingVertexFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceProvokingVertexFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           provokingVertexLast;
    VkBool32           transformFeedbackPreservesProvokingVertex;
} VkPhysicalDeviceProvokingVertexFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [provokingVertexLast](#) indicates whether the implementation supports the [VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT](#) [provoking vertex mode](#) for flat shading.
- [transformFeedbackPreservesProvokingVertex](#) indicates that the order of vertices within each primitive written by transform feedback will preserve the provoking vertex. This does not apply to triangle fan primitives when [transformFeedbackPreservesTriangleFanProvokingVertex](#) is [VK_FALSE](#). [transformFeedbackPreservesProvokingVertex](#) **must** be [VK_FALSE](#) when the [VK_EXT_transform_feedback](#) extension is not supported.

If the [VkPhysicalDeviceProvokingVertexFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceProvokingVertexFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

When [VkPhysicalDeviceProvokingVertexFeaturesEXT](#) is in the [pNext](#) chain of [VkDeviceCreateInfo](#) but the [transformFeedback](#) feature is not enabled, the value of [transformFeedbackPreservesProvokingVertex](#) is ignored.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProvokingVertexFeaturesEXT-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDescriptorBufferFeaturesEXT](#) structure is defined as:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorBuffer;
    VkBool32           descriptorBufferCaptureReplay;
    VkBool32           descriptorBufferImageLayoutIgnored;
    VkBool32           descriptorBufferPushDescriptors;
} VkPhysicalDeviceDescriptorBufferFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **descriptorBuffer** indicates that the implementation supports putting shader-accessible descriptors directly in memory.
- **descriptorBufferCaptureReplay** indicates that the implementation supports capture and replay when using descriptor buffers. If this is [VK_TRUE](#), all resources created with [VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#), [VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#), [VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#), [VK_TENSOR_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#), [VK_TENSOR_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#), [VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#), or [VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#) **must** be created before resources of the same types without those flags.
- **descriptorBufferImageLayoutIgnored** indicates that the implementation will ignore **imageLayout** in [VkDescriptorImageInfo](#) when calling [vkGetDescriptorEXT](#).
- **descriptorBufferPushDescriptors** indicates that the implementation supports using push descriptors with descriptor buffers.

If the [VkPhysicalDeviceDescriptorBufferFeaturesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDescriptorBufferFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceDescriptorBufferFeaturesEXT-sType-sType](#)
[sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceDescriptorBufferTensorFeaturesARM](#) structure is defined as:

```
// Provided by VK_EXT_descriptor_buffer with VK_ARM_tensors
typedef struct VkPhysicalDeviceDescriptorBufferTensorFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorBufferTensorDescriptors;
} VkPhysicalDeviceDescriptorBufferTensorFeaturesARM;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [descriptorBufferTensorDescriptors](#) indicates that the implementation supports putting shader-accessible tensor descriptors directly in memory.

If the [VkPhysicalDeviceDescriptorBufferTensorFeaturesARM](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDescriptorBufferTensorFeaturesARM](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceDescriptorBufferTensorFeaturesARM-sType-sType](#)
[sType](#) **must** be

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_pageable_device_local_memory
typedef struct VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pageableDeviceLocalMemory;
} VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [pageableDeviceLocalMemory](#) indicates that the implementation supports pageable device-local memory and **may** transparently move device-local memory allocations to host-local memory to better share device-local memory with other applications.

If the [VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PAGEABLE_DEVICE_LOCAL_MEMORY_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceMultiDrawFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_multi_draw
typedef struct VkPhysicalDeviceMultiDrawFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiDraw;
} VkPhysicalDeviceMultiDrawFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [multiDraw](#) indicates that the implementation supports [vkCmdDrawMultiEXT](#) and [vkCmdDrawMultiIndexedEXT](#).

If the [VkPhysicalDeviceMultiDrawFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMultiDrawFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiDrawFeaturesEXT-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceRayTracingMotionBlurFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkPhysicalDeviceRayTracingMotionBlurFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingMotionBlur;
    VkBool32           rayTracingMotionBlurPipelineTraceRaysIndirect;
} VkPhysicalDeviceRayTracingMotionBlurFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingMotionBlur` indicates whether the implementation supports the motion blur feature.
- `rayTracingMotionBlurPipelineTraceRaysIndirect` indicates whether the implementation supports indirect ray tracing commands with the motion blur feature enabled.

If the `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingMotionBlurFeaturesNV-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_MOTION_BLUR_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef struct VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           spheres;
    VkBool32           linearSweptSpheres;
} VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `spheres` indicates whether the implementation supports sphere primitives in ray tracing.
- `linearSweptSpheres` indicates whether the implementation supports linear swept sphere primitives in ray tracing.

If the `VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_LINEAR_SWEPT_SPHERES_FEATURES_NV`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceOpacityMicromapFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            micromap;
    VkBool32            micromapCaptureReplay;
    VkBool32            micromapHostCommands;
} VkPhysicalDeviceOpacityMicromapFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **micromap** indicates whether the implementation supports the micromap array feature.
- **micromapCaptureReplay** indicates whether the implementation supports capture and replay of addresses for micromap arrays.
- **micromapHostCommands** indicates whether the implementation supports host side micromap array commands.

If the [VkPhysicalDeviceOpacityMicromapFeaturesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceOpacityMicromapFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpacityMicromapFeaturesEXT-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPACITY_MICROMAP_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceDisplacementMicromapFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_displacement_micromap
typedef struct VkPhysicalDeviceDisplacementMicromapFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           displacementMicromap;
} VkPhysicalDeviceDisplacementMicromapFeaturesNV;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **displacementMicromap** indicates whether the implementation supports the displacement micromap feature.

If the [VkPhysicalDeviceDisplacementMicromapFeaturesNV](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDisplacementMicromapFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDisplacementMicromapFeaturesNV-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISPLACEMENT_MICROMAP_FEATURES_NV](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceRayTracingValidationFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_ray_tracing_validation
typedef struct VkPhysicalDeviceRayTracingValidationFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingValidation;
} VkPhysicalDeviceRayTracingValidationFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingValidation` indicates whether the implementation supports the ray tracing validation feature.

If the `VkPhysicalDeviceRayTracingValidationFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayTracingValidationFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingValidationFeaturesNV-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_VALIDATION_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_zero_initialize_device_memory
typedef struct VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           zeroInitializeDeviceMemory;
} VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `zeroInitializeDeviceMemory` indicates that the implementation supports zeroing memory allocations using a user-specified flag.

If the `VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by

`VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ZERO_INITIALIZE_DEVICE_MEMORY_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_subpass_shading
typedef struct VkPhysicalDeviceSubpassShadingFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subpassShading;
} VkPhysicalDeviceSubpassShadingFeaturesHUAWEI;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subpassShading` specifies whether subpass shading is supported.

If the `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceSubpassShadingFeaturesHUAWEI-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_SHADING_FEATURES_HUAWEI`

Structure Chaining

Extends the structures

The [VkPhysicalDeviceExternalMemoryRDMAFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_external_memory_rdma
typedef struct VkPhysicalDeviceExternalMemoryRDMAFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           externalMemoryRDMA;
} VkPhysicalDeviceExternalMemoryRDMAFeaturesNV;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [externalMemoryRDMA](#) indicates whether the implementation has support for the [VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV](#) memory property and the [VK_EXTERNAL_MEMORY_HANDLE_TYPE_RDMA_ADDRESS_BIT_NV](#) external memory handle type.

If the [VkPhysicalDeviceExternalMemoryRDMAFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceExternalMemoryRDMAFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalMemoryRDMAFeaturesNV-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_RDMA_FEATURES_NV](#)

Structure Chaining

Extends the structures

The `VkPhysicalDevicePresentIdFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_id
typedef struct VkPhysicalDevicePresentIdFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId;
} VkPhysicalDevicePresentIdFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId` indicates that the implementation supports specifying present ID values in the `VkPresentIdKHR` extension to the `VkPresentInfoKHR` struct.

If the `VkPhysicalDevicePresentIdFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePresentIdFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentIdFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_ID_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevicePresentId2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkPhysicalDevicePresentId2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId2;
} VkPhysicalDevicePresentId2FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId2` indicates that the implementation supports specifying present ID values in the `VkPresentId2KHR` extension to the `VkPresentInfoKHR` struct.

If the `VkPhysicalDevicePresentId2FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePresentId2FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentId2FeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_ID_2_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevicePresentWaitFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_wait
typedef struct VkPhysicalDevicePresentWaitFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait;
} VkPhysicalDevicePresentWaitFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentWait` indicates that the implementation supports `vkWaitForPresentKHR`.

If the `VkPhysicalDevicePresentWaitFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePresentWaitFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentWaitFeaturesKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_WAIT_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevicePresentWait2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkPhysicalDevicePresentWait2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait2;
} VkPhysicalDevicePresentWait2FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentWait2` indicates that the implementation supports `vkWaitForPresent2KHR`.

If the `VkPhysicalDevicePresentWait2FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePresentWait2FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentWait2FeaturesKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_WAIT_2_FEATURES_KHR`

The [VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_unified_image_layouts
typedef struct VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           unifiedImageLayouts;
    VkBool32           unifiedImageLayoutsVideo;
} VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [unifiedImageLayouts](#) specifies whether usage of [VK_IMAGE_LAYOUT_GENERAL](#), where valid, incurs no loss in efficiency. Additionally, it indicates whether it **can** be used in place of [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#).
- [unifiedImageLayoutsVideo](#) specifies whether [VK_IMAGE_LAYOUT_GENERAL](#) can be used in place of any of the following image layouts with no loss in efficiency.
 - [VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR](#)
 - [VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR](#)
 - [VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR](#)
 - [VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR](#)
 - [VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR](#)
 - [VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR](#)
 - [VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR](#)

If the [VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The [VkPhysicalDeviceHostImageCopyFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceHostImageCopyFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hostImageCopy;
} VkPhysicalDeviceHostImageCopyFeatures;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkPhysicalDeviceHostImageCopyFeatures
typedef VkPhysicalDeviceHostImageCopyFeatures
VkPhysicalDeviceHostImageCopyFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [hostImageCopy](#) indicates that the implementation supports copying from host memory to images using the [vkCopyMemoryToImage](#) command, copying from images to host memory using the [vkCopyImageToMemory](#) command, and copying between images using the [vkCopyImageToImage](#) command.

If the [VkPhysicalDeviceHostImageCopyFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceHostImageCopyFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The `VkPhysicalDevicePresentTimingFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPhysicalDevicePresentTimingFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentTiming;
    VkBool32           presentAtAbsoluteTime;
    VkBool32           presentAtRelativeTime;
} VkPhysicalDevicePresentTimingFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentTiming` indicates that the implementation supports `vkGetPastPresentationTimingEXT`.
- `presentAtAbsoluteTime` indicates that the implementation supports specifying absolute target present times.
- `presentAtRelativeTime` indicates that the implementation supports specifying relative target present times.

If the `VkPhysicalDevicePresentTimingFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePresentTimingFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

The `VkPhysicalDeviceShaderFmaFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_fma
typedef struct VkPhysicalDeviceShaderFmaFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFmaFloat16;
    VkBool32           shaderFmaFloat32;
    VkBool32           shaderFmaFloat64;
} VkPhysicalDeviceShaderFmaFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFmaFloat16` indicates whether the implementation supports `OpFmaKHR` for Float16 types in shaders.
- `shaderFmaFloat32` indicates whether the implementation supports `OpFmaKHR` for Float32 types in shaders.
- `shaderFmaFloat64` indicates whether the implementation supports `OpFmaKHR` for Float64 types in shaders.

If the `VkPhysicalDeviceShaderFmaFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderFmaFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderFmaFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FMA_FEATURES_KHR`

The `VkPhysicalDeviceShaderIntegerDotProductFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderIntegerDotProductFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderIntegerDotProduct;
} VkPhysicalDeviceShaderIntegerDotProductFeatures;
```

```
// Provided by VK_KHR_shader_integer_dot_product
// Equivalent to VkPhysicalDeviceShaderIntegerDotProductFeatures
typedef VkPhysicalDeviceShaderIntegerDotProductFeatures
VkPhysicalDeviceShaderIntegerDotProductFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderIntegerDotProduct` specifies whether shader modules **can** declare the `DotProductInputAllKHR`, `DotProductInput4x8BitKHR`, `DotProductInput4x8BitPackedKHR` and `DotProductKHR` capabilities.

If the `VkPhysicalDeviceShaderIntegerDotProductFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderIntegerDotProductFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderIntegerDotProductFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INTEGER_DOT_PRODUCT_FEATURES`

The `VkPhysicalDeviceMaintenance4Features` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance4;
} VkPhysicalDeviceMaintenance4Features;
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to VkPhysicalDeviceMaintenance4Features
typedef VkPhysicalDeviceMaintenance4Features VkPhysicalDeviceMaintenance4FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maintenance4** indicates that the implementation supports the following:
 - The application **may** destroy a [VkPipelineLayout](#) object immediately after using it to create another object.
 - **LocalSizeId** **can** be used as an alternative to **LocalSize** to specify the local workgroup size with specialization constants.
 - Images created with identical creation parameters will always have the same alignment requirements.
 - The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.
 - Push constants do not have to be initialized before they are dynamically accessed.
 - The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.

If the [VkPhysicalDeviceMaintenance4Features](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance4Features](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance4Features-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceMaintenance5Features](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance5Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance5;
} VkPhysicalDeviceMaintenance5Features;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkPhysicalDeviceMaintenance5Features
typedef VkPhysicalDeviceMaintenance5Features VkPhysicalDeviceMaintenance5FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maintenance5** indicates that the implementation supports the following:
 - The ability to expose support for the optional format [VK_FORMAT_A1B5G5R5_UNORM_PACK16](#).
 - The ability to expose support for the optional format [VK_FORMAT_A8_UNORM](#).
 - A property to indicate that multisample coverage operations are performed after sample counting in EarlyFragmentTests mode.
 - Creating a [VkBufferView](#) with a subset of the associated [VkBuffer](#) usage using [VkBufferUsageFlags2CreateInfo](#).
 - A new function [vkCmdBindIndexBuffer2](#), allowing a range of memory to be bound as an index buffer.
 - [vkGetDeviceProcAddr](#) will return **NULL** for function pointers of core functions for versions higher than the version requested by the application.
 - [vkCmdBindVertexBuffers2](#) supports using [VK_WHOLE_SIZE](#) in the **pSizes** parameter.
 - If **PointSize** is not written, a default value of **1.0** is used for the size of points.
 - [VkShaderModuleCreateInfo](#) **can** be added as a chained structure to pipeline creation via [VkPipelineShaderStageCreateInfo](#), rather than having to create a shader module.
 - A function [vkGetRenderingAreaGranularity](#) to query the optimal render area for a dynamic

rendering instance.

- A property to indicate that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE` have defined behavior.
- `vkGetDeviceImageSubresourceLayout` allows an application to perform a `vkGetImageSubresourceLayout` query without having to create an image.
- `VK_REMAINING_ARRAY_LAYERS` as the `layerCount` member of `VkImageSubresourceLayers`.
- A property to indicate whether `PointSize` controls the final rasterization of polygons if `polygon mode` is `VK_POLYGON_MODE_POINT`.
- Two properties to indicate the non-strict line rasterization algorithm used.
- Two new flags words `VkPipelineCreateFlagBits2` and `VkBufferUsageFlagBits2`.
- Physical-device-level functions **can** now be called with any value in the valid range for a type beyond the defined enumerants, such that applications can avoid checking individual features, extensions, or versions before querying supported properties of a particular enumerant.
- Copies between images of any type are allowed, with 1D images treated as 2D images with a height of 1.

If the `VkPhysicalDeviceMaintenance5Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMaintenance5Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance5Features-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_FEATURES`

The `VkPhysicalDeviceMaintenance6Features` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance6Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            maintenance6;
} VkPhysicalDeviceMaintenance6Features;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkPhysicalDeviceMaintenance6Features
typedef VkPhysicalDeviceMaintenance6Features VkPhysicalDeviceMaintenance6FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maintenance6** indicates that the implementation supports the following:
 - **VK_NULL_HANDLE** can be used when binding an index buffer
 - **VkBindMemoryStatus** can be included in the **pNext** chain of the [VkBindBufferMemoryInfo](#) and [VkBindImageMemoryInfo](#) structures, enabling applications to retrieve [VkResult](#) values for individual memory binding operations.
 - [VkPhysicalDeviceMaintenance6Properties::blockTexelViewCompatibleMultipleLayers](#) property to indicate that the implementation supports creating image views with **VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT** where the **layerCount** member of **subresourceRange** is greater than 1.
 - [VkPhysicalDeviceMaintenance6Properties::maxCombinedImageSamplerDescriptorCount](#) property which indicates the maximum descriptor size required for any format that requires a sampler Y'C_BC_R conversion supported by the implementation.
 - A [VkPhysicalDeviceMaintenance6Properties::fragmentShadingRateClampCombinerInputs](#) property which indicates whether the implementation clamps the inputs to fragment shading rate combiner operations.

If the [VkPhysicalDeviceMaintenance6Features](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance6Features](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The [VkPhysicalDeviceMaintenance7FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceMaintenance7FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance7;
} VkPhysicalDeviceMaintenance7FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **maintenance7** indicates that the implementation supports the following:
 - The [VK_RENDERING_CONTENTS_INLINE_BIT_KHR](#) and [VK_SUBPASS_CONTENTS_INLINE_AND_SECONDARY_COMMAND_BUFFERS_KHR](#) flags **can** be used to record commands in render pass instances both inline and in secondary command buffers executed with [vkCmdExecuteCommands](#) for dynamic rendering and legacy render passes respectively.
 - Querying information regarding the underlying devices in environments where the Vulkan implementation is provided through layered implementations. This is done by chaining [VkPhysicalDeviceLayeredApiPropertiesListKHR](#) to [VkPhysicalDeviceProperties2](#).
 - New limits which indicate the maximum total count of dynamic uniform buffers and dynamic storage buffers that **can** be included in a pipeline layout.
 - 32-bit timestamp queries **must** wrap on overflow
 - A property that indicates whether a fragment shading rate attachment can have a size that is too small to cover a specified render area.
 - A property that indicates support for writing to one aspect of a depth/stencil attachment without performing a read-modify-write operation on the other aspect

If the [VkPhysicalDeviceMaintenance7FeaturesKHR](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance7FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

// Provided by VK_KHR_maintenance8
typedef struct VkPhysicalDeviceMaintenance8FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance8;
} VkPhysicalDeviceMaintenance8FeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [maintenance8](#) indicates that the implementation supports the following:
 - Allow copies between depth/stencil and “matching” color attachments
 - Allow [dstCache](#) in [vkMergePipelineCaches](#) to be implicitly synchronized.
 - Require src/dst sync scopes to work when doing queue family ownership transfers
 - Support [Offset](#) (as an alternative to [ConstOffset](#)) image operand in texture sampling and fetch operations
 - Use the SPIR-V definition of `OpSRem` and `OpSMod`, making these operations produce well-defined results for negative operands
 - Loosen layer restrictions when blitting from 3D images to other image types
 - Add space for an additional 64 access flags for use with [VkMemoryBarrier2](#), [VkBufferMemoryBarrier2](#), and [VkImageMemoryBarrier2](#)

If the [VkPhysicalDeviceMaintenance8FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance8FeaturesKHR](#), it **must** add an

instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceMaintenance8FeaturesKHR-sType-sType](#)
[sType](#) must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_8_FEATURES_KHR](#)

Structure Chaining

Extends the structures

- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceMaintenance9FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance9
typedef struct VkPhysicalDeviceMaintenance9FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            maintenance9;
} VkPhysicalDeviceMaintenance9FeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maintenance9](#) indicates that the implementation supports the following:
 - The restriction that certain bitfield SPIR-V instructions only operate on 32-bit integers is relaxed.
 - The value returned when a vertex shader reads an unbound vertex attribute is defined by way of the [defaultVertexAttributeValue](#) property.
 - A new [VkQueryPoolCreateFlagBits::VK_QUERY_POOL_CREATE_RESET_BIT_KHR](#) flag **can** be used to initialize all queries in query pool to the reset state on creation.
 - [vkCmdSetEvent2](#) **may** not provide a dependency other than the event src stage mask.
 - The effects of image memory barriers and image layout transitions on 3D images created with [VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT](#) are limited to only those slices specified in [VkImageSubresourceRange](#)
 - A device **can** be created with no queues. This can be used for compiling pipelines or shaders for the purpose of filling pipeline caches.

- Queue family ownership transfers are no longer required for buffers and linear images. For optimally tiled images, a new physical device query is added to check if resources created with `VK_SHARING_MODE_EXCLUSIVE` can automatically transfer ownership between two queue families.
- `image2DViewOf3DSparse` enables 2D views of 3D sparse images.

If the `VkPhysicalDeviceMaintenance9FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMaintenance9FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

The `VkPhysicalDeviceMaintenance10FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance10
typedef struct VkPhysicalDeviceMaintenance10FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance10;
} VkPhysicalDeviceMaintenance10FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maintenance10` indicates that the implementation supports the following:
 - New image format feature bits that indicate support for copying depth or stencil aspects using non-graphics queue families
 - If `vkCmdSetSampleMaskEXT` is called with `pSampleMask` set to `NULL`, it is treated as if the mask has all bits set to 1.

- Add [vkCmdEndRendering2KHR](#) as an extensible version of [vkCmdEndRendering](#)
- Add input attachment information to dynamic rendering
- Require that vertex inputs follow sRGB encoding when those formats are used, instead of being underspecified.
- Add a query to determine if sRGB images are resolved in nonlinear or linear space by default
- Add an optional feature to allow applications to override the default sRGB resolve behavior
- Add resolve mode and depth-stencil resolve support to [vkCmdResolveImage2](#) to bring it in-line with render pass attachment resolves

If the [VkPhysicalDeviceMaintenance10FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance10FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

    void*              pNext;
    VkBool32           maintenance11;
} VkPhysicalDeviceMaintenance11FeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.

- `maintenance11` indicates that the implementation supports the following:
 - `VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR`
 - The depth clipping state of the pipeline is well defined when the pipeline is created without `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` being set and the `VkPipelineRasterizationDepthClipStateCreateInfoEXT` structure is not present
 - `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR`
 - Allow `queueFamilyIndexCount` of 1 in `VkBufferCreateInfo`, `VkImageCreateInfo`, `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`, `VkTensorCreateInfoARM` when `sharingMode` is `VK_SHARING_MODE_CONCURRENT`
 - Require `minImageTransferGranularity` to be (1,1,1) even on transfer-only queues and add `optimalImageTransferGranularity` queue family property to communicate the performance bump for copies not aligned to the optimal granularity
 - When copying between a buffer and an image on a transfer-only queue, do not require `bufferOffset` to be a multiple of 4

If the `VkPhysicalDeviceMaintenance11FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMaintenance11FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance11FeaturesKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_11_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceDynamicRenderingFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceDynamicRenderingFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRendering;
} VkPhysicalDeviceDynamicRenderingFeatures;
```

```
// Provided by VK_KHR_dynamic_rendering
// Equivalent to VkPhysicalDeviceDynamicRenderingFeatures
typedef VkPhysicalDeviceDynamicRenderingFeatures
VkPhysicalDeviceDynamicRenderingFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **dynamicRendering** specifies that the implementation supports dynamic render pass instances using the [vkCmdBeginRendering](#) command.

If the [VkPhysicalDeviceDynamicRenderingFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDynamicRenderingFeatures](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDynamicRenderingFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DYNAMIC_RENDERING_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceCustomResolveFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_custom_resolve
typedef struct VkPhysicalDeviceCustomResolveFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           customResolve;
} VkPhysicalDeviceCustomResolveFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `customResolve` specifies that the implementation supports render pass resolves using shaders.

If the `VkPhysicalDeviceCustomResolveFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCustomResolveFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomResolveFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_RESOLVE_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_rgba10x6_formats
typedef struct VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           formatRgba10x6WithoutYCbCrSampler;
} VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatRgba10x6WithoutYCbCrSampler` indicates that `VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16` can be used with a `VkImageView` with `subresourceRange.aspectMask` equal to `VK_IMAGE_ASPECT_COLOR_BIT` without a `sampler Y'CBCR` conversion enabled.

If the `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT`, it **must** add

an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT-sType-sType](#) [sType](#) must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RGBA10X6_FORMATS_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevicePipelineRobustnessFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePipelineRobustnessFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineRobustness;
} VkPhysicalDevicePipelineRobustnessFeatures;
```

```
// Provided by VK_EXT_pipeline_robustness
// Equivalent to VkPhysicalDevicePipelineRobustnessFeatures
typedef VkPhysicalDevicePipelineRobustnessFeatures
VkPhysicalDevicePipelineRobustnessFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pipelineRobustness](#) indicates that robustness **can** be requested on a per-pipeline-stage granularity.

NOTE

Enabling the [pipelineRobustness](#) feature may, on some platforms, incur a minor performance cost when the [robustBufferAccess](#) feature is not enabled, even for pipelines which do not make use of any robustness features. If robustness is not needed, the [pipelineRobustness](#) feature should not be enabled by an application.

If the [VkPhysicalDevicePipelineRobustnessFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePipelineRobustnessFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineRobustnessFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_FEATURES](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceImageViewMinLodFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_image_view_min_lod
typedef struct VkPhysicalDeviceImageViewMinLodFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           minLod;
} VkPhysicalDeviceImageViewMinLodFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [minLod](#) indicates whether the implementation supports clamping the minimum LOD value during [Image Level\(s\) Selection](#), [Texel Gathering](#) and [Integer Texel Coordinate Operations](#) with a given [VkImageView](#) by [VkImageViewMinLodCreateInfoEXT::minLod](#).

If the [VkPhysicalDeviceImageViewMinLodFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceImageViewMinLodFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageViewMinLodFeaturesEXT-sType-sType

`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_VIEW_MIN_LOD_FEATURES_EXT`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_rasterization_order_attachment_access
typedef struct VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rasterizationOrderColorAttachmentAccess;
    VkBool32           rasterizationOrderDepthAttachmentAccess;
    VkBool32           rasterizationOrderStencilAttachmentAccess;
} VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT;
```

```
// Provided by VK_ARM_rasterization_order_attachment_access
// Equivalent to VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT
typedef VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT
VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesARM;
```

This structure describes the following features:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rasterizationOrderColorAttachmentAccess` indicates that rasterization order access to color and input attachments is supported by the implementation.
- `rasterizationOrderDepthAttachmentAccess` indicates that rasterization order access to the depth aspect of depth/stencil and input attachments is supported by the implementation.
- `rasterizationOrderStencilAttachmentAccess` indicates that rasterization order access to the stencil aspect of depth/stencil and input attachments is supported by the implementation.

If the `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_FEATURES_EXT`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_subpass_merge_feedback
typedef struct VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subpassMergeFeedback;
} VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subpassMergeFeedback` indicates whether the implementation supports feedback of subpass merging.

If the [VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT](#) structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_MERGE_FEEDBACK_FEATURES_EXT`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceLinearColorAttachmentFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_linear_color_attachment
typedef struct VkPhysicalDeviceLinearColorAttachmentFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           linearColorAttachment;
} VkPhysicalDeviceLinearColorAttachmentFeaturesNV;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [linearColorAttachment](#) indicates whether the implementation supports renderable [Linear Color Attachment](#)

If the [VkPhysicalDeviceLinearColorAttachmentFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceLinearColorAttachmentFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceLinearColorAttachmentFeaturesNV-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINEAR_COLOR_ATTACHMENT_FEATURES_NV`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_attachment_feedback_loop_layout
typedef struct VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           attachmentFeedbackLoopLayout;
} VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `attachmentFeedbackLoopLayout` indicates whether the implementation supports using `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` image layout for images created with the `VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` usage flag set.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT-sType-sType `must` be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ATTACHMENT_FEEDBACK_LOOP_LAYOUT_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_nested_command_buffer
typedef struct VkPhysicalDeviceNestedCommandBufferFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nestedCommandBuffer;
    VkBool32           nestedCommandBufferRendering;
    VkBool32           nestedCommandBufferSimultaneousUse;
} VkPhysicalDeviceNestedCommandBufferFeaturesEXT;
```

This structure describes the following features:

- `nestedCommandBuffer` indicates the implementation supports nested command buffers, which allows `Secondary Command Buffers` to execute other `Secondary Command Buffers`.

- `nestedCommandBufferRendering` indicates that it is valid to call `vkCmdExecuteCommands` inside a `Secondary Command Buffer` recorded with `VK_COMMAND_BUFFER_USAGE_RENDER_PASS_CONTINUE_BIT`.
- `nestedCommandBufferSimultaneousUse` indicates that the implementation supports nested command buffers with command buffers that are recorded with `VK_COMMAND_BUFFER_USAGE_SIMULTANEOUS_USE_BIT`.

If the `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceNestedCommandBufferFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNestedCommandBufferFeaturesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NESTED_COMMAND_BUFFER_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           graphicsPipelineLibrary;
} VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `graphicsPipelineLibrary` indicates that the implementation supports `graphics pipeline libraries`.

If the `VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

[VkDevice](#) with any features described by [VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GRAPHICS_PIPELINE_LIBRARY_FEATURES_EXT](#) [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GRAPHICS_PIPELINE_LIBRARY_FEATURES_EXT](#)

Structure Chaining

Extends the structures

The [VkPhysicalDevicePipelineBinaryFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPhysicalDevicePipelineBinaryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineBinaries;
} VkPhysicalDevicePipelineBinaryFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pipelineBinaries](#) indicates that the implementation supports [Pipeline Binaries](#).

If the [VkPhysicalDevicePipelineBinaryFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePipelineBinaryFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_BINARY_FEATURES_KHR](#) [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_BINARY_FEATURES_KHR](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_multisampled_render_to_single_sampled
typedef struct VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multisampledRenderToSingleSampled;
} VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [multisampledRenderToSingleSampled](#) indicates that the implementation supports multisampled rendering to single-sampled render pass attachments.

If the [VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_2d_view_of_3d
typedef struct VkPhysicalDeviceImage2DViewOf3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           image2DViewOf3D;
    VkBool32           sampler2DViewOf3D;
} VkPhysicalDeviceImage2DViewOf3DFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image2DViewOf3D` indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` if the image is created using `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT`.
- `sampler2DViewOf3D` indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` if the image is created using `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT`.

If the `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImage2DViewOf3DFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_2D_VIEW_OF_3D_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_sliced_view_of_3d
typedef struct VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageSlicedViewOf3D;
} VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT;
```

The members of the `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` structure describe the following features:

- `imageSlicedViewOf3D` indicates that the implementation supports using a sliced view of a 3D image in a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` by using a `VkImageViewSlicedCreateInfoEXT` structure when creating the view.

If the `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_SLICED_VIEW_OF_3D_FEATURES_EXT`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceImageCompressionControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkPhysicalDeviceImageCompressionControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageCompressionControl;
} VkPhysicalDeviceImageCompressionControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageCompressionControl` indicates that the implementation supports providing controls for image compression at image creation time.

If the `VkPhysicalDeviceImageCompressionControlFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceImageCompressionControlFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageCompressionControlFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_compression_control_swapchain
typedef struct VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageCompressionControlSwapchain;
} VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageCompressionControlSwapchain` indicates that the implementation supports controlling image controls per swapchain and querying image compression properties per surface.

If the `VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to

use a [VkDevice](#) with any features described by [VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_SWAPCHAIN_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_ray_tracing_position_fetch
typedef struct VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingPositionFetch;
} VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [rayTracingPositionFetch](#) indicates that the implementation supports fetching the object space vertex positions of a hit triangle.

If the [VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR-sType-sType

`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_POSITION_FETCH_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceShaderFloatControls2Features` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceShaderFloatControls2Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloatControls2;
} VkPhysicalDeviceShaderFloatControls2Features;
```

```
// Provided by VK_KHR_shader_float_controls2
// Equivalent to VkPhysicalDeviceShaderFloatControls2Features
typedef VkPhysicalDeviceShaderFloatControls2Features
VkPhysicalDeviceShaderFloatControls2FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloatControls2` specifies whether shader modules **can** declare the `FloatControls2` capability.

If the `VkPhysicalDeviceShaderFloatControls2Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderFloatControls2Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderFloatControls2Features-sType-sType
`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FLOAT_CONTROLS_2_FEATURES`

The [VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD](#) structure is defined as:

```
// Provided by VK_AMD_shader_early_and_late_fragment_tests
typedef struct VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderEarlyAndLateFragmentTests;
} VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [shaderEarlyAndLateFragmentTests](#) indicates whether the implementation supports the [EarlyAndLateFragmentTestsAMD Execution Mode](#).

If the [VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

The `VkPhysicalDeviceAntiLagFeaturesAMD` structure is defined as:

```
// Provided by VK_AMD_anti_lag
typedef struct VkPhysicalDeviceAntiLagFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           antiLag;
} VkPhysicalDeviceAntiLagFeaturesAMD;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `antiLag` indicates whether the implementation supports AMD Radeon™ Anti-Lag functionality. The `antiLag` feature only supports a single GPU and **must** not be enabled if `VkDeviceGroupDeviceCreateInfo::physicalDeviceCount` is greater than 1.

If the `VkPhysicalDeviceAntiLagFeaturesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceAntiLagFeaturesAMD`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAntiLagFeaturesAMD-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ANTI_LAG_FEATURES_AMD`

The `VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_non_seamless_cube_map
typedef struct VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nonSeamlessCubeMap;
} VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `nonSeamlessCubeMap` indicates that the implementation supports `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT`.

If the `VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NON_SEAMLESS_CUBE_MAP_FEATURES_EXT`

The `VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderModuleIdentifier;
} VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderModuleIdentifier` indicates whether the implementation supports querying an identifier of a `VkShaderModule` or `VkShaderModuleCreateInfo` structure, and creating pipelines from identifiers only.

If the `VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT` structure is included in the `pNext` chain of

the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MODULE_IDENTIFIER_FEATURES_EXT`

The `VkPhysicalDeviceTilePropertiesFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_tile_properties
typedef struct VkPhysicalDeviceTilePropertiesFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           tileProperties;
} VkPhysicalDeviceTilePropertiesFeaturesQCOM;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `tileProperties` indicates that the implementation supports queries for returning tile properties.

If the `VkPhysicalDeviceTilePropertiesFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceTilePropertiesFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The `VkPhysicalDeviceImageProcessingFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_image_processing
typedef struct VkPhysicalDeviceImageProcessingFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureSampleWeighted;
    VkBool32           textureBoxFilter;
    VkBool32           textureBlockMatch;
} VkPhysicalDeviceImageProcessingFeaturesQCOM;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `textureSampleWeighted` indicates that the implementation supports shader modules that declare the `TextureSampleWeightedQCOM` capability.
- `textureBoxFilter` indicates that the implementation supports shader modules that declare the `TextureBoxFilterQCOM` capability.
- `textureBlockMatch` indicates that the implementation supports shader modules that declare the `TextureBlockMatchQCOM` capability.

If the `VkPhysicalDeviceImageProcessingFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceImageProcessingFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The [VkPhysicalDeviceDepthClampZeroOneFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_depth_clamp_zero_one
typedef struct VkPhysicalDeviceDepthClampZeroOneFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClampZeroOne;
} VkPhysicalDeviceDepthClampZeroOneFeaturesKHR;
```

```
// Provided by VK_EXT_depth_clamp_zero_one
// Equivalent to VkPhysicalDeviceDepthClampZeroOneFeaturesKHR
typedef VkPhysicalDeviceDepthClampZeroOneFeaturesKHR
VkPhysicalDeviceDepthClampZeroOneFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClampZeroOne` indicates that the implementation supports clamping the depth to a range of 0 to 1.

If the `VkPhysicalDeviceDepthClampZeroOneFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDepthClampZeroOneFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClampZeroOneFeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLAMP_ZERO_ONE_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_tile_image
typedef struct VkPhysicalDeviceShaderTileImageFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            shaderTileImageColorReadAccess;
    VkBool32            shaderTileImageDepthReadAccess;
    VkBool32            shaderTileImageStencilReadAccess;
} VkPhysicalDeviceShaderTileImageFeaturesEXT;
```

The members of the `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure describe the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderTileImageColorReadAccess` indicates that the implementation supports the `TileImageColorReadAccessEXT` SPIR-V capability.
- `shaderTileImageDepthReadAccess` indicates that the implementation supports the `TileImageDepthReadAccessEXT` SPIR-V capability.
- `shaderTileImageStencilReadAccess` indicates that the implementation supports the `TileImageStencilReadAccessEXT` SPIR-V capability.

If the `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderTileImageFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderTileImageFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_TILE_IMAGE_FEATURES_EXT`

The `VkPhysicalDeviceDepthBiasControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_bias_control
typedef struct VkPhysicalDeviceDepthBiasControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            depthBiasControl;
    VkBool32            leastRepresentableValueForceUnormRepresentation;
    VkBool32            floatRepresentation;
    VkBool32            depthBiasExact;
} VkPhysicalDeviceDepthBiasControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthBiasControl` indicates whether the implementation supports the `vkCmdSetDepthBias2EXT` command and the `VkDepthBiasRepresentationInfoEXT` structure.
- `leastRepresentableValueForceUnormRepresentation` indicates whether the implementation supports using the `VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORCE_UNORM_EXT` depth bias representation.
- `floatRepresentation` indicates whether the implementation supports using the `VK_DEPTH_BIAS_REPRESENTATION_FLOAT_EXT` depth bias representation.
- `depthBiasExact` indicates whether the implementation supports forcing depth bias to not be scaled to ensure a minimum resolvable difference using `VkDepthBiasRepresentationInfoEXT::depthBiasExact`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthBiasControlFeaturesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_BIAS_CONTROL_FEATURES_EXT`

The `VkPhysicalDeviceAddressBindingReportFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_device_address_binding_report
typedef struct VkPhysicalDeviceAddressBindingReportFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           reportAddressBinding;
} VkPhysicalDeviceAddressBindingReportFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `reportAddressBinding` indicates whether this implementation supports reporting the binding of GPU virtual address ranges to Vulkan objects.

If the `VkPhysicalDeviceAddressBindingReportFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceAddressBindingReportFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceAddressBindingReportFeaturesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ADDRESS_BINDING_REPORT_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceOpticalFlowFeaturesNV` structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkPhysicalDeviceOpticalFlowFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           opticalFlow;
} VkPhysicalDeviceOpticalFlowFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `opticalFlow` indicates whether the implementation supports optical flow.

If the `VkPhysicalDeviceOpticalFlowFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceOpticalFlowFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpticalFlowFeaturesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPTICAL_FLOW_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceFaultFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_device_fault
typedef struct VkPhysicalDeviceFaultFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceFault;
    VkBool32           deviceFaultVendorBinary;
} VkPhysicalDeviceFaultFeaturesEXT;
```

This structure describes the following features:

- `deviceFault` indicates that the implementation supports the reporting of device fault information.
- `deviceFaultVendorBinary` indicates that the implementation supports the generation of vendor-specific binary crash dumps. These may provide additional information when imported into vendor-specific external tools.

If the `VkPhysicalDeviceFaultFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFaultFeaturesEXT`, it **must** add an instance

of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceFaultFeaturesEXT-sType-sType](#)
[sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FAULT_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceFaultFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_device_fault
typedef struct VkPhysicalDeviceFaultFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceFault;
    VkBool32           deviceFaultVendorBinary;
    VkBool32           deviceFaultReportMasked;
    VkBool32           deviceFaultDeviceLostOnMasked;
} VkPhysicalDeviceFaultFeaturesKHR;
```

This structure describes the following features:

- [deviceFault](#) indicates that the implementation supports the reporting of device fault information.
- [deviceFaultVendorBinary](#) indicates that the implementation supports the generation of vendor-specific binary crash dumps. These **may** provide additional information when imported into vendor-specific external tools.
- [deviceFaultReportMasked](#) indicates that the implementation supports masked faults in normal operation (ie. automatically recovered by the driver internally without the application receiving a [VK_ERROR_DEVICE_LOST](#) error) which **may** be reported via this extension even if they did not result in a [VK_ERROR_DEVICE_LOST](#) condition being returned to the application.
- [deviceFaultDeviceLostOnMasked](#) indicates that the implementation supports returning [VK_ERROR_DEVICE_LOST](#) for faults that would be normally be masked.

In exceptional circumstances, some implementations **may** mask faults and attempt to recover from an error. In such circumstances, the device is not lost and further work can be submitted to the device. When such faults occur, the contents of all resources being written to at the time of the fault are undefined.

If the `VkPhysicalDeviceFaultFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFaultFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFaultFeaturesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FAULT_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_pipeline_library_group_handles
typedef struct VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineLibraryGroupHandles;
} VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT;
```

This structure describes the following features:

- `pipelineLibraryGroupHandles` indicates whether the implementation supports querying group handles directly from a ray tracing pipeline library, and guarantees bitwise identical group handles for such libraries when linked into other pipelines.

If the `VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT-sType-sType
`sType` **must** be

VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_LIBRARY_GROUP_HANDLES_FEATURES_EXT

Structure Chaining

    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderObject;
} VkPhysicalDeviceShaderObjectFeaturesEXT;
```

This structure describes the following feature:

- [shaderObject](#) indicates whether the implementation supports [shader objects](#).

If the [VkPhysicalDeviceShaderObjectFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderObjectFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderObjectFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceTensorFeaturesARM](#) structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkPhysicalDeviceTensorFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           tensorNonPacked;
    VkBool32           shaderTensorAccess;
    VkBool32           shaderStorageTensorArrayDynamicIndexing;
    VkBool32           shaderStorageTensorArrayNonUniformIndexing;
    VkBool32           descriptorBindingStorageTensorUpdateAfterBind;
    VkBool32           tensors;
} VkPhysicalDeviceTensorFeaturesARM;
```

The members of the `VkPhysicalDeviceTensorFeaturesARM` structure describe the following features:

- `tensorNonPacked` indicates whether the implementation supports the creation of tensors that are not packed tensors.
- `shaderTensorAccess` indicates whether shader modules **can** declare the `TensorsARM` capability.
- `shaderStorageBufferArrayDynamicIndexing` indicates whether arrays of storage tensors **can** be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_TENSOR_ARM` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTensorArrayDynamicIndexingARM` capability.
- `shaderStorageTensorArrayNonUniformIndexing` indicates whether arrays of storage tensors **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_TENSOR_ARM` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTensorArrayNonUniformIndexingARM` capability.
- `descriptorBindingStorageTensorUpdateAfterBind` indicates whether the implementation supports updating storage tensor descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_TENSOR_ARM`.
- `tensors` indicates whether the implementation supports tensor resources.

If the `VkPhysicalDeviceTensorFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceTensorFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTensorFeaturesARM-sType-sType

sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TENSOR_FEATURES_ARM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_shader_core_builtins
typedef struct VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderCoreBuiltins;
} VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **shaderCoreBuiltins** indicates whether the implementation supports the SPIR-V `CoreBuiltinsARM` capability.

If the `VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM` structure is included in the **pNext** chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the **pNext** chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM-sType-sType **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_BUILTINS_FEATURES_ARM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceFrameBoundaryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_frame_boundary
typedef struct VkPhysicalDeviceFrameBoundaryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           frameBoundary;
} VkPhysicalDeviceFrameBoundaryFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `frameBoundary` indicates whether the implementation supports frame boundary information.

If the `VkPhysicalDeviceFrameBoundaryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFrameBoundaryFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFrameBoundaryFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAME_BOUNDARY_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           swapchainMaintenance1;
} VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR
typedef VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR
VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **swapchainMaintenance1** indicates that the implementation supports the following:
 - [VkSwapchainPresentFenceInfoKHR](#), specifying a fence that is signaled when the resources associated with a present operation **can** be safely destroyed.
 - [VkSwapchainPresentModesCreateInfoKHR](#) and [VkSwapchainPresentModeInfoKHR](#), allowing the swapchain to switch present modes without a need for recreation.
 - [VkSwapchainPresentScalingCreateInfoKHR](#), specifying the scaling behavior of the swapchain in presence of window resizing.
 - The [VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR](#) flag, allowing the implementation to defer the allocation of swapchain image memory until first acquisition.
 - [vkReleaseSwapchainImagesKHR](#), allowing acquired swapchain images to be released without presenting them.

If the [VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SWAPCHAIN_MAINTENANCE_1_FEATURES_KHR](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_mode_fifo_latest_ready
typedef struct VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentModeFifoLatestReady;
} VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR;
```

```
// Provided by VK_EXT_present_mode_fifo_latest_ready
// Equivalent to VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR
typedef VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR
VkPhysicalDevicePresentModeFifoLatestReadyFeaturesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeFifoLatestReady` specifies whether the implementation supports the `VK_PRESENT_MODE_FIFO_LATEST_READY_KHR` present mode.

If the `VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_MODE_FIFO_LATEST_READY_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_dynamic_rendering_unused_attachments
typedef struct VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRenderingUnusedAttachments;
} VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dynamicRenderingUnusedAttachments` indicates that the implementation supports binding graphics pipelines within a render pass instance where any pipeline `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` element with a format other than `VK_FORMAT_UNDEFINED` is allowed with a corresponding `VkRenderingInfo::pColorAttachments` element with an `imageView` equal to `VK_NULL_HANDLE`, or any pipeline `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` element with a `VK_FORMAT_UNDEFINED` format is allowed with a corresponding `VkRenderingInfo::pColorAttachments` element with a non-`VK_NULL_HANDLE` `imageView`. Also a `VkPipelineRenderingCreateInfo::depthAttachmentFormat` other than `VK_FORMAT_UNDEFINED` is allowed with a `VK_NULL_HANDLE` `VkRenderingInfo::pDepthAttachment`, or a `VkPipelineRenderingCreateInfo::depthAttachmentFormat` of `VK_FORMAT_UNDEFINED` is allowed with a non-`VK_NULL_HANDLE` `VkRenderingInfo::pDepthAttachment`. Also a `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` other than `VK_FORMAT_UNDEFINED` is allowed with a `VK_NULL_HANDLE` `VkRenderingInfo::pStencilAttachment`, or a `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` of `VK_FORMAT_UNDEFINED` is allowed with a non-`VK_NULL_HANDLE` `VkRenderingInfo::pStencilAttachment`. Any writes to a `VkRenderingInfo::pColorAttachments`, `VkRenderingInfo::pDepthAttachment`, or `VkRenderingInfo::pStencilAttachment` with `VK_NULL_HANDLE` are discarded.

If the `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DYNAMIC_RENDERING_UNUSED_ATTACHMENTS_FEATURES_EXT`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingInvocationReorder;
} VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [rayTracingInvocationReorder](#) indicates that the implementation supports [SPV_EXT_shader_invocation_reorder](#).

If the [VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_INVOCATION_REORDER_FEATURES_EXT](#)

The `VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingInvocationReorder;
} VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingInvocationReorder` indicates that the implementation supports `SPV_NV_shader_invocation_reorder`.

If the `VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The `VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV` structure is defined as:

```
// Provided by VK_NV_extended_sparse_address_space
typedef struct VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedSparseAddressSpace;
} VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `extendedSparseAddressSpace` indicates that the implementation supports allowing certain usages of sparse memory resources to exceed `VkPhysicalDeviceLimits::sparseAddressSpaceSize`. See `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV`.

If the `VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The `VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_multiview_per_view_viewports
typedef struct VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiviewPerViewViewports;
} VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM;
```

This structure describes the following features:

- **multiviewPerViewViewports** indicates that the implementation supports multiview per-view viewports.

If the **VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a **VkDevice** with any features described by **VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM**, it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of **VkDeviceCreateInfo** when creating the **VkDevice**.

Valid Usage (Implicit)

The `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            clusterCullingShader;
    VkBool32            multiviewClusterCullingShader;
} VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `clusterCullingShader` specifies whether cluster culling shader is supported.
- `multiviewClusterCullingShader` specifies whether multiview is supported.

If the `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the

`pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

To query whether a Cluster Culling Shader supports the per-cluster shading rate feature, include a `VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI` structure in the `pNext` chain of the `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI` structure. This structure is defined as:

```
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           clusterShadingRate;
} VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `clusterShadingRate` specifies whether per-cluster shading rates is supported.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_CULLING_SHADER_VRS_FEATURES_HUAWEI`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI`

The `VkPhysicalDeviceHdrVividFeaturesHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_hdr_vivid
typedef struct VkPhysicalDeviceHdrVividFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hdrVivid;
} VkPhysicalDeviceHdrVividFeaturesHUAWEI;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hdrVivid` specifies whether HDR Vivid metadata is supported.

If the `VkPhysicalDeviceHdrVividFeaturesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceHdrVividFeaturesHUAWEI`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHdrVividFeaturesHUAWEI-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HDR_VIVID_FEATURES_HUAWEI`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderQueueFeaturesAMD` structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkPhysicalDeviceShaderQueueFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderQueue;
    VkBool32           shaderMeshQueue;
} VkPhysicalDeviceShaderQueueFeaturesAMD;
```

This structure describes the following feature:

- `shaderQueue` indicates whether the implementation supports `execution graphs`.

- `shaderMeshEnqueue` indicates whether the implementation supports `mesh nodes in execution graphs`.

If the `VkPhysicalDeviceShaderEnqueueFeaturesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderEnqueueFeaturesAMD`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderEnqueueFeaturesAMD-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ENQUEUE_FEATURES_AMD`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceCubicClampFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_filter_cubic_clamp
typedef struct VkPhysicalDeviceCubicClampFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cubicRangeClamp;
} VkPhysicalDeviceCubicClampFeaturesQCOM;
```

This structure describes the following features:

- `cubicRangeClamp` indicates that the implementation supports cubic filtering in combination with a `texel range clamp`.

If the `VkPhysicalDeviceCubicClampFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCubicClampFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCubicClampFeaturesQCOM-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUBIC_CLAMP_FEATURES_QCOM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceYcbcrDegammaFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_ycbcr_degamma
typedef struct VkPhysicalDeviceYcbcrDegammaFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           ycbcrDegamma;
} VkPhysicalDeviceYcbcrDegammaFeaturesQCOM;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `ycbcrDegamma` indicates whether the implementation supports `Y'CBCR` degamma.

If the `VkPhysicalDeviceYcbcrDegammaFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceYcbcrDegammaFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceYcbcrDegammaFeaturesQCOM-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_DEGAMMA_FEATURES_QCOM`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceCubicWeightsFeaturesQCOM](#) structure is defined as:

```
// Provided by VK_QCOM_filter_cubic_weights
typedef struct VkPhysicalDeviceCubicWeightsFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           selectableCubicWeights;
} VkPhysicalDeviceCubicWeightsFeaturesQCOM;
```

This structure describes the following feature:

- [selectableCubicWeights](#) indicates that the implementation supports the selection of filter cubic weights.

If the [VkPhysicalDeviceCubicWeightsFeaturesQCOM](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceCubicWeightsFeaturesQCOM](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCubicWeightsFeaturesQCOM-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUBIC_WEIGHTS_FEATURES_QCOM](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_descriptor_pool_overallocation
typedef struct VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            descriptorPoolOverallocation;
} VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorPoolOverallocation` indicates that the implementation allows the application to opt into descriptor pool overallocation by creating the descriptor pool with `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV` and/or `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV` flags.

If the `VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_POOL_OVERALLOCATION_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDevicePerStageDescriptorSetFeaturesNV` structure is defined as:

```
// Provided by VK_NV_per_stage_descriptor_set
typedef struct VkPhysicalDevicePerStageDescriptorSetFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           perStageDescriptorSet;
    VkBool32           dynamicPipelineLayout;
} VkPhysicalDevicePerStageDescriptorSetFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `perStageDescriptorSet` indicates that the implementation allows the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV` descriptor set layout creation flag to be used so the bindings are specified per-stage rather than across all stages.
- `dynamicPipelineLayout` indicates the implementation allows the `layout` member of `VkBindDescriptorSetsInfo`, `VkPushConstantsInfo`, `VkPushDescriptorSetInfo`, `VkPushDescriptorSetWithTemplateInfo`, `VkSetDescriptorBufferOffsetsInfoEXT` and `VkBindDescriptorBufferEmbeddedSamplersInfoEXT` to be `VK_NULL_HANDLE` and `VkPipelineLayoutCreateInfo` can be chained off those structures' `pNext` instead.

If the `VkPhysicalDevicePerStageDescriptorSetFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePerStageDescriptorSetFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePerStageDescriptorSetFeaturesNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PER_STAGE_DESCRIPTOR_SET_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceCudaKernelLaunchFeaturesNV` structure is defined as:

```
// Provided by VK_NV_cuda_kernel_launch
typedef struct VkPhysicalDeviceCudaKernelLaunchFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cudaKernelLaunchFeatures;
} VkPhysicalDeviceCudaKernelLaunchFeaturesNV;
```

This structure describes the following features:

- `cudaKernelLaunchFeatures` is non-zero if cuda kernel launch is supported.

If the `VkPhysicalDeviceCudaKernelLaunchFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCudaKernelLaunchFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCudaKernelLaunchFeaturesNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUDA_KERNEL_LAUNCH_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_maximal_reconvergence
typedef struct VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderMaximalReconvergence;
} VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderMaximalReconvergence` specifies whether the implementation supports the shader

execution mode `MaximallyReconvergesKHR`

If the `VkPhysicalDevicePrivateDataFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePrivateDataFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MAXIMAL_RECONVERGENCE_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceExternalFormatResolveFeaturesANDROID` structure is defined as:

```
// Provided by VK_ANDROID_external_format_resolve
typedef struct VkPhysicalDeviceExternalFormatResolveFeaturesANDROID {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           externalFormatResolve;
} VkPhysicalDeviceExternalFormatResolveFeaturesANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalFormatResolve` specifies whether external format resolves are supported.

If the `VkPhysicalDeviceExternalFormatResolveFeaturesANDROID` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceExternalFormatResolveFeaturesANDROID`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalFormatResolveFeaturesANDROID-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_FORMAT_RESOLVE_FEATURES_ANDROID

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceTileShadingFeaturesQCOM](#) structure is defined as:

```
// Provided by VK_QCOM_tile_shading
typedef struct VkPhysicalDeviceTileShadingFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           tileShading;
    VkBool32           tileShadingFragmentStage;
    VkBool32           tileShadingColorAttachments;
    VkBool32           tileShadingDepthAttachments;
    VkBool32           tileShadingStencilAttachments;
    VkBool32           tileShadingInputAttachments;
    VkBool32           tileShadingSampledAttachments;
    VkBool32           tileShadingPerTileDraw;
    VkBool32           tileShadingPerTileDispatch;
    VkBool32           tileShadingDispatchTile;
    VkBool32           tileShadingApron;
    VkBool32           tileShadingAnisotropicApron;
    VkBool32           tileShadingAtomicOps;
    VkBool32           tileShadingImageProcessing;
} VkPhysicalDeviceTileShadingFeaturesQCOM;
```

This structure describes the following features:

- [tileShading](#) indicates that the implementation supports [tile shading render pass](#) instances.
- [tileShadingFragmentStage](#) indicates that the implementation supports tile shading in the fragment stage.
- [tileShadingColorAttachments](#) indicates that the implementation supports access to color attachments in a tile shader.
- [tileShadingDepthAttachments](#) indicates that the implementation supports access to depth aspect of depth stencil attachments.

- `tileShadingStencilAttachments` indicates that the implementation supports access to stencil aspect of depth stencil attachments.
- `tileShadingInputAttachments` indicates that the implementation supports access to input attachments.
- `tileShadingSampledAttachments` indicates that the implementation supports access to sampling of tile attachments.
- `tileShadingPerTileDraw` indicates that the implementation supports the recording of `VkCmdDraw*` commands when `per-tile execution model` is enabled.
- `tileShadingPerTileDispatch` indicates that the implementation supports the recording of `VkCmdDispatch*` commands within those regions of a command buffer where the `per-tile execution model` is enabled.
- `tileShadingDispatchTile` indicates that the implementation supports the recording of `VkCmdDispatchTileQCOM` commands.
- `tileShadingApron` indicates that the implementation supports `VkRenderPassTileShadingCreateInfoQCOM::apronSize` value other than (0,0). See [Tiling Aprons](#) for more information.
- `tileShadingAnisotropicApron` indicates that the implementation supports `VkRenderPassTileShadingCreateInfoQCOM::apronSize` set to a value where `apronSize.width` differs from `apronSize.height`.
- `tileShadingAtomicOps` indicates that the implementation supports atomic operations on [tile attachment variables](#).
- `tileShadingImageProcessing` indicates that the implementation supports [image processing operations](#) with tile attachments.

If the `VkPhysicalDeviceTileShadingFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceTileShadingFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceTileShadingFeaturesQCOM-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TILE_SHADING_FEATURES_QCOM`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceSchedulingControlsFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_scheduling_controls
typedef struct VkPhysicalDeviceSchedulingControlsFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           schedulingControls;
} VkPhysicalDeviceSchedulingControlsFeaturesARM;
```

This structure describes the following features:

- `schedulingControls` indicates that the implementation supports scheduling controls.

If the `VkPhysicalDeviceSchedulingControlsFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceSchedulingControlsFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSchedulingControlsFeaturesARM-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SCHEDULING_CONTROLS_FEATURES_ARM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG` structure is defined as:

```
// Provided by VK_IMG_relaxed_line_rasterization
typedef struct VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           relaxedLineRasterization;
} VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `relaxedLineRasterization` indicates that the implementation supports relaxed line rasterization control.

If the `VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RELAXED_LINE_RASTERIZATION_FEATURES_IMG`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceRenderPassStripedFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_render_pass_striped
typedef struct VkPhysicalDeviceRenderPassStripedFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           renderPassStriped;
} VkPhysicalDeviceRenderPassStripedFeaturesARM;
```

The members of the `VkPhysicalDeviceRenderPassStripedFeaturesARM` structure describe the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `renderPassStriped` indicates that striped rendering is supported by the implementation.

If the `VkPhysicalDeviceRenderPassStripedFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRenderPassStripedFeaturesARM`, it **must**

add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceRenderPassStripedFeaturesARM-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RENDER_PASS_STRIPED_FEATURES_ARM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceShaderSubgroupRotateFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceShaderSubgroupRotateFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupRotate;
    VkBool32           shaderSubgroupRotateClustered;
} VkPhysicalDeviceShaderSubgroupRotateFeatures;
```

```
// Provided by VK_KHR_shader_subgroup_rotate
// Equivalent to VkPhysicalDeviceShaderSubgroupRotateFeatures
typedef VkPhysicalDeviceShaderSubgroupRotateFeatures
VkPhysicalDeviceShaderSubgroupRotateFeaturesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupRotate` specifies whether shader modules **can** declare the `GroupNonUniformRotateKHR` capability.
- `shaderSubgroupRotateClustered` specifies whether shader modules **can** use the `ClusterSize` operand to `OpGroupNonUniformRotateKHR`.

If the `VkPhysicalDeviceShaderSubgroupRotateFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderSubgroupRotateFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext`

chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSubgroupRotateFeatures-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_ROTATE_FEATURES](#)

Structure Chaining

Extends the structures

The [VkPhysicalDeviceShaderExpectAssumeFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceShaderExpectAssumeFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderExpectAssume;
} VkPhysicalDeviceShaderExpectAssumeFeatures;
```

```
// Provided by VK_KHR_shader_expect_assume
// Equivalent to VkPhysicalDeviceShaderExpectAssumeFeatures
typedef VkPhysicalDeviceShaderExpectAssumeFeatures
VkPhysicalDeviceShaderExpectAssumeFeaturesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderExpectAssume** specifies whether shader modules **can** declare the **ExpectAssumeKHR** capability.

If the [VkPhysicalDeviceShaderExpectAssumeFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderExpectAssumeFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderExpectAssumeFeatures-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_EXPECT_ASSUME_FEATURES`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceDynamicRenderingLocalReadFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceDynamicRenderingLocalReadFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRenderingLocalRead;
} VkPhysicalDeviceDynamicRenderingLocalReadFeatures;
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to VkPhysicalDeviceDynamicRenderingLocalReadFeatures
typedef VkPhysicalDeviceDynamicRenderingLocalReadFeatures
VkPhysicalDeviceDynamicRenderingLocalReadFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dynamicRenderingLocalRead` specifies that the implementation supports local reads inside dynamic render pass instances using the `vkCmdBeginRendering` command.

If the `VkPhysicalDeviceDynamicRenderingLocalReadFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDynamicRenderingLocalReadFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The `VkPhysicalDeviceShaderQuadControlFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_quad_control
typedef struct VkPhysicalDeviceShaderQuadControlFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderQuadControl;
} VkPhysicalDeviceShaderQuadControlFeaturesKHR;
```

This structure describes the following features:

- `shaderQuadControl` indicates whether the implementation supports shaders with the `QuadControlKHR` capability.

If the `VkPhysicalDeviceShaderQuadControlFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderQuadControlFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderQuadControlFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_QUAD_CONTROL_FEATURES_KHR`

Structure Chaining

Extends the structures

The [VkPhysicalDeviceShaderBfloat16FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_shader_bfloat16
typedef struct VkPhysicalDeviceShaderBfloat16FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBFloat16Type;
    VkBool32           shaderBFloat16DotProduct;
    VkBool32           shaderBFloat16CooperativeMatrix;
} VkPhysicalDeviceShaderBfloat16FeaturesKHR;
```

This structure describes the following features:

- [shaderBFloat16Type](#) indicates whether the implementation supports shaders with the [BFloat16TypeKHR](#) capability.
- [shaderBFloat16DotProduct](#) indicates whether the implementation supports shaders with the [BFloat16DotProductKHR](#) capability.
- [shaderBFloat16CooperativeMatrix](#) indicates whether the implementation supports shaders with the [BFloat16CooperativeMatrixKHR](#) capability.

If the [VkPhysicalDeviceShaderBfloat16FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderBfloat16FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderBfloat16FeaturesKHR-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_BFLOAT16_FEATURES_KHR](#)

Structure Chaining

Extends the structures

The [VkPhysicalDeviceMapMemoryPlacedFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_map_memory_placed
typedef struct VkPhysicalDeviceMapMemoryPlacedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryMapPlaced;
    VkBool32           memoryMapRangePlaced;
    VkBool32           memoryUnmapReserve;
} VkPhysicalDeviceMapMemoryPlacedFeaturesEXT;
```

This structure describes the following features:

- [memoryMapPlaced](#) indicates that the implementation supports placing memory maps at application-specified virtual addresses.
- [memoryMapRangePlaced](#) indicates that the implementation supports placing memory maps of a subrange of a memory object at application-specified virtual addresses.
- [memoryUnmapReserve](#) indicates that the implementation supports leaving the memory range reserved when unmapping a memory object.

If the [VkPhysicalDeviceMapMemoryPlacedFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMapMemoryPlacedFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMapMemoryPlacedFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAP_MEMORY_PLACED_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_shader_atomic_float16_vector
typedef struct VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat16VectorAtomics;
} VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloat16VectorAtomics` indicates whether shaders **can** perform 16-bit floating-point, 2- and 4-component vector atomic operations.

If the `VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT16_VECTOR_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevicePipelineOpacityMicromapFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_pipeline_opacity_micromap
typedef struct VkPhysicalDevicePipelineOpacityMicromapFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineOpacityMicromap;
} VkPhysicalDevicePipelineOpacityMicromapFeaturesARM;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pipelineOpacityMicromap** indicates if a pipeline **can** declare if it can be used with an acceleration structure referencing an opacity micromap, or not.

If the [VkPhysicalDevicePipelineOpacityMicromapFeaturesARM](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePipelineOpacityMicromapFeaturesARM](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineOpacityMicromapFeaturesARM-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_OPACITY_MICROMAP_FEATURES_ARM](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceRawAccessChainsFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_raw_access_chains
typedef struct VkPhysicalDeviceRawAccessChainsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderRawAccessChains;
} VkPhysicalDeviceRawAccessChainsFeaturesNV;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderRawAccessChains** specifies whether shader modules **can** declare the **RawAccessChainsNV** capability.

If the [VkPhysicalDeviceRawAccessChainsFeaturesNV](#) structure is included in the **pNext** chain of the

[VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceRawAccessChainsFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRawAccessChainsFeaturesNV-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAW_ACCESS_CHAINS_FEATURES_NV](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceCommandBufferInheritanceFeaturesNV](#) structure is defined as:

```
// Provided by VK_NV_command_buffer_inheritance
typedef struct VkPhysicalDeviceCommandBufferInheritanceFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           commandBufferInheritance;
} VkPhysicalDeviceCommandBufferInheritanceFeaturesNV;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [commandBufferInheritance](#) indicates that command buffers executed in a queue inherit graphics and compute state from the previously executed command buffer in that queue.

If the [VkPhysicalDeviceCommandBufferInheritanceFeaturesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceCommandBufferInheritanceFeaturesNV](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCommandBufferInheritanceFeaturesNV-sType-sType

`sType` **must** be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMMAND_BUFFER_INHERITANCE_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceImageAlignmentControlFeaturesMESA` structure is defined as:

```
// Provided by VK_MESA_image_alignment_control
typedef struct VkPhysicalDeviceImageAlignmentControlFeaturesMESA {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageAlignmentControl;
} VkPhysicalDeviceImageAlignmentControlFeaturesMESA;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageAlignmentControl` specifies that `VkImageAlignmentControlCreateInfoMESA` **can** be chained in `VkImageCreateInfo`

If the `VkPhysicalDeviceImageAlignmentControlFeaturesMESA` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceImageAlignmentControlFeaturesMESA`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageAlignmentControlFeaturesMESA-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_ALIGNMENT_CONTROL_FEATURES_MESA`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_replicated_composites
typedef struct VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderReplicatedComposites;
} VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [shaderReplicatedComposites](#) specifies whether shader modules **can** declare the [ReplicatedCompositesEXT](#) capability.

If the [VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_REPLICATED_COMPOSITES_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_shader_relaxed_extended_instruction
typedef struct VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderRelaxedExtendedInstruction;
} VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderRelaxedExtendedInstruction` specifies whether the implementation supports SPIR-V modules that use the `SPV_KHR_relaxed_extended_instruction` extension.

If the `VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_RELAXED_EXTENDED_INSTRUCTION_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceDenseGeometryFormatFeaturesAMD` structure is defined as:

```
// Provided by VK_AMD_dense_geometry_format
typedef struct VkPhysicalDeviceDenseGeometryFormatFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           denseGeometryFormat;
} VkPhysicalDeviceDenseGeometryFormatFeaturesAMD;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **denseGeometryFormat** specifies whether the implementation supports DGF1 compressed geometry data.

If the [VkPhysicalDeviceDenseGeometryFormatFeaturesAMD](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDenseGeometryFormatFeaturesAMD](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDenseGeometryFormatFeaturesAMD-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DENSE_GEOMETRY_FORMAT_FEATURES_AMD_X](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_vertex_attribute_robustness
typedef struct VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexAttributeRobustness;
} VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **vertexAttributeRobustness** indicates that vertex shaders **can** read vertex attribute locations that have no vertex attribute description and the value returned is (0,0,0,0) or (0,0,0,1).

If the [VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT](#) structure is included in the **pNext**

chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT-sType-sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_ROBUSTNESS_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceTileMemoryHeapFeaturesQCOM](#) structure is defined as:

```
// Provided by VK_QCOM_tile_memory_heap
typedef struct VkPhysicalDeviceTileMemoryHeapFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           tileMemoryHeap;
} VkPhysicalDeviceTileMemoryHeapFeaturesQCOM;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [tileMemoryHeap](#) indicates whether the implementation supports tile memory heap functionality.

If the [VkPhysicalDeviceTileMemoryHeapFeaturesQCOM](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceTileMemoryHeapFeaturesQCOM](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTileMemoryHeapFeaturesQCOM-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TILE_MEMORY_HEAP_FEATURES_QCOM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDevicePresentMeteringFeaturesNV` structure is defined as:

```
// Provided by VK_NV_present_metering
typedef struct VkPhysicalDevicePresentMeteringFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentMetering;
} VkPhysicalDevicePresentMeteringFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentMetering` indicates whether the implementation supports present metering capability.

If the `VkPhysicalDevicePresentMeteringFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePresentMeteringFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentMeteringFeaturesNV-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_METERING_FEATURES_NV`

Structure Chaining

Extends the structures

The [VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_uniform_buffer_unsigned_array
typedef struct VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderUniformBufferUnsignedArray;
} VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [shaderUniformBufferUnsignedArray](#) indicates that the implementation supports declaring the last member of a uniform buffer block as an unsigned array.

If the [VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_UNIFORM_BUFFER_UNSIGNED_ARRAY_FEATURES_EXT](#)

Structure Chaining

Extends the structures

The `VkPhysicalDeviceFormatPackFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_format_pack
typedef struct VkPhysicalDeviceFormatPackFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           formatPack;
} VkPhysicalDeviceFormatPackFeaturesARM;
```

This structure describes the following feature:

- `formatPack` indicates that the implementation **must** support using a `VkFormat` of `VK_FORMAT_R10X6_UINT_PACK16_ARM`, `VK_FORMAT_R10X6G10X6_UINT_2PACK16_ARM`, `VK_FORMAT_R10X6G10X6B10X6A10X6_UINT_4PACK16_ARM`, `VK_FORMAT_R12X4_UINT_PACK16_ARM`, `VK_FORMAT_R12X4G12X4_UINT_2PACK16_ARM`, `VK_FORMAT_R12X4G12X4B12X4A12X4_UINT_4PACK16_ARM`, `VK_FORMAT_R14X2_UINT_PACK16_ARM`, `VK_FORMAT_R14X2G14X2_UINT_2PACK16_ARM`, and `VK_FORMAT_R14X2G14X2B14X2A14X2_UINT_4PACK16_ARM`, with at least the following `VkFormatFeatureFlagBits`:
 - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`
 - `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`
 - `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`

If the `VkPhysicalDeviceFormatPackFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFormatPackFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFormatPackFeaturesARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FORMAT_PACK_FEATURES_ARM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_primitive_restart_index
typedef struct VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           primitiveRestartIndex;
} VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitiveRestartIndex` specifies whether the index for primitive restart can be set

If the `VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The `VkPhysicalDeviceDataGraphFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkPhysicalDeviceDataGraphFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dataGraph;
    VkBool32           dataGraphUpdateAfterBind;
    VkBool32           dataGraphSpecializationConstants;
    VkBool32           dataGraphDescriptorBuffer;
    VkBool32           dataGraphShaderModule;
} VkPhysicalDeviceDataGraphFeaturesARM;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataGraph` specifies whether data graph pipelines **can** be used.
- `dataGraphUpdateAfterBind` specifies whether data graph pipelines **can** be created with a `VkPipelineLayout` that uses one or more `VkDescriptorSetLayout` objects created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `dataGraphSpecializationConstants` specifies whether data graph pipelines **can** be created from shader modules that use specialization constants.
- `dataGraphDescriptorBuffer` specifies whether data graph pipelines **can** use descriptor buffers.
- `dataGraphShaderModule` specifies whether data graph pipelines **can** be created from a shader module.

If the `VkPhysicalDeviceDataGraphFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDataGraphFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDataGraphFeaturesARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DATA_GRAPH_FEATURES_ARM`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceDataGraphModelFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_data_graph_model
typedef struct VkPhysicalDeviceDataGraphModelFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dataGraphModel;
} VkPhysicalDeviceDataGraphModelFeaturesQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataGraphModel` specifies whether the functionality defined by this extension is available, and guarantees that the implementation supports a data graph queue family with at least one of the

following engine types:

- `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM`
- `VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM`

If the `VkPhysicalDeviceDataGraphModelFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDataGraphModelFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

The `VkPhysicalDeviceShaderFloat8FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_float8
typedef struct VkPhysicalDeviceShaderFloat8FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat8;
    VkBool32           shaderFloat8CooperativeMatrix;
} VkPhysicalDeviceShaderFloat8FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloat8` indicates whether the implementation supports shaders with the `Float8EXT` capability.
- `shaderFloat8CooperativeMatrix` indicates whether the implementation supports shaders with the `Float8CooperativeMatrixEXT` capability.

If the `VkPhysicalDeviceShaderFloat8FeaturesEXT` structure is included in the `pNext` chain of the

`VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderFloat8FeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

    VkStructureType    sType;
    void*              pNext;
    VkBool32           queuePerfHint;
} VkPhysicalDeviceQueuePerfHintFeaturesQCOM;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queuePerfHint` specifies whether the implementation supports setting `queue perf hints`.

If the `VkPhysicalDeviceQueuePerfHintFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceQueuePerfHintFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [shader64BitIndexing](#) indicates that the implementation supports [using 64-bit address calculations](#) for indexing cooperative matrices, cooperative vectors, storage buffers, and physical storage buffers.

If the [VkPhysicalDeviceShader64BitIndexingFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShader64BitIndexingFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShader64BitIndexingFeaturesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_64_BIT_INDEXING_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_subgroup_partitioned
typedef struct VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupPartitioned;
} VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupPartitioned` indicates that the implementation supports `VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT`.

If the `VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_PARTITIONED_FEATURES_EXT`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevicePerformanceCountersByRegionFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_performance_counters_by_region
typedef struct VkPhysicalDevicePerformanceCountersByRegionFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           performanceCountersByRegion;
} VkPhysicalDevicePerformanceCountersByRegionFeaturesARM;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `performanceCountersByRegion` specifies whether the implementation supports capture of per region performance counters.

See [security model](#) for additional guarantees made by implementations that expose this feature.

If the `VkPhysicalDevicePerformanceCountersByRegionFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePerformanceCountersByRegionFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePerformanceCountersByRegionFeaturesARM-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_COUNTERS_BY_REGION_FEATURES_ARM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV` structure is defined as:

```
// Provided by VK_NV_compute_occupancy_priority
typedef struct VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           computeOccupancyPriority;
} VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `computeOccupancyPriority` is true if compute occupancy priority is supported.

If the `VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMPUTE_OCCUPANCY_PRIORITY_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevicePushConstantBankFeaturesNV` structure is defined as:

```
// Provided by VK_NV_push_constant_bank
typedef struct VkPhysicalDevicePushConstantBankFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pushConstantBank;
} VkPhysicalDevicePushConstantBankFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pushConstantBank` indicates whether push constant bank functionality is supported.

If the `VkPhysicalDevicePushConstantBankFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePushConstantBankFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePushConstantBankFeaturesNV-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PUSH_CONSTANT_BANK_FEATURES_NV`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceDescriptorHeapFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkPhysicalDeviceDescriptorHeapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorHeap;
    VkBool32           descriptorHeapCaptureReplay;
} VkPhysicalDeviceDescriptorHeapFeaturesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorHeap` specifies whether `descriptor heaps` can be used.
- `descriptorHeapCaptureReplay` specifies whether `heap descriptors` can be captured and replayed.

If the `VkPhysicalDeviceDescriptorHeapFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDescriptorHeapFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of

[VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_HEAP_FEATURES_EXT](#) [sType](#) must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_HEAP_FEATURES_EXT](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE](#) structure is defined as:

```
// Provided by VK_VALVE_shader_mixed_float_dot_product
typedef struct VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderMixedFloatDotProductFloat16AccFloat32;
    VkBool32           shaderMixedFloatDotProductFloat16AccFloat16;
    VkBool32           shaderMixedFloatDotProductBFloat16Acc;
    VkBool32           shaderMixedFloatDotProductFloat8AccFloat32;
} VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [shaderMixedFloatDotProductFloat16AccFloat32](#) indicates whether the implementation supports shaders with the [DotProductFloat16AccFloat32VALVE](#) capability.
- [shaderMixedFloatDotProductFloat16AccFloat16](#) indicates whether the implementation supports shaders with the [DotProductFloat16AccFloat16VALVE](#) capability.
- [shaderMixedFloatDotProductBFloat16Acc](#) indicates whether the implementation supports shaders with the [DotProductBFloat16AccVALVE](#) capability.
- [shaderMixedFloatDotProductFloat8AccFloat32](#) indicates whether the implementation supports shaders with the [DotProductFloat8AccFloat32VALVE](#) capability.

If the [VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when

creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE-sType-sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MIXED_FLOAT_DOT_PRODUCT_FEATURES_VALVE](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderInstrumentationFeaturesARM](#) structure is defined as:

```
// Provided by VK_ARM_shader_instrumentation
typedef struct VkPhysicalDeviceShaderInstrumentationFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            shaderInstrumentation;
} VkPhysicalDeviceShaderInstrumentationFeaturesARM;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [shaderInstrumentation](#) specifies whether shader instrumentation is supported.

If the [VkPhysicalDeviceShaderInstrumentationFeaturesARM](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderInstrumentationFeaturesARM](#), it **must** add an instance of the structure, with the desired feature members set to [VK_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderInstrumentationFeaturesARM-sType-sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INSTRUMENTATION_FEATURES_ARM](#)

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceAddressCommands;
} VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [deviceAddressCommands](#) specifies whether the implementation supports commands taking a [VkDeviceAddress](#) that would otherwise take a [VkBuffer](#) object.

If the [VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_ADDRESS_COMMANDS_FEATURES_KHR`

Structure Chaining

Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderConstantDataFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_shader_constant_data
typedef struct VkPhysicalDeviceShaderConstantDataFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderConstantData;
} VkPhysicalDeviceShaderConstantDataFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderConstantData` specifies whether the implementation supports SPIR-V modules that use the `VK_KHR_shader_constant_data` extension.

If the `VkPhysicalDeviceShaderConstantDataFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderConstantDataFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderConstantDataFeaturesKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CONSTANT_DATA_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderAbortFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_abort
typedef struct VkPhysicalDeviceShaderAbortFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderAbort;
} VkPhysicalDeviceShaderAbortFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderAbort` specifies whether shaders **can** declare the `AbortKHR` capability.

If the `VkPhysicalDeviceShaderAbortFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderAbortFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAbortFeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ABORT_FEATURES_KHR`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dataGraphOpticalFlow;
} VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM;
```

This structure describes the following feature: * `sType` is a `VkStructureType` value identifying this structure. * `pNext` is `NULL` or a pointer to a structure extending this structure. * `dataGraphOpticalFlow` indicates whether the implementation supports optical flow graph pipelines.

If the `VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DATA_GRAPH_OPTICAL_FLOW_FEATURES_ARM`

Structure Chaining

Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_neural_accelerator_statistics
typedef struct VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dataGraphNeuralAcceleratorStatistics;
} VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataGraphNeuralAcceleratorStatistics` indicates that the implementation supports gathering neural accelerator statistics for data graphs.

If the `VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DATA_GRAPH_NEURAL_ACCELERATOR_STATISTICS_FEATURES_ARM`

54.1. Feature Requirements

All Vulkan graphics implementations **must** support the following features:

- If Vulkan 1.0 is supported, [robustBufferAccess](#) **must** be supported if [VK_KHR_portability_subset](#) is not advertised
- If Vulkan 1.1 is supported, the following features **must** be supported:
 - [multiview](#)
 - [storageBuffer16BitAccess](#) if [uniformAndStorageBuffer16BitAccess](#) is supported
 - [shaderDrawParameters](#) if [VK_KHR_shader_draw_parameters](#) is supported
- If Vulkan 1.2 is supported, the following features **must** be supported:
 - [subgroupBroadcastDynamicId](#)
 - [imagelessFramebuffer](#)
 - [uniformBufferStandardLayout](#)
 - [shaderSubgroupExtendedTypes](#)
 - [separateDepthStencilLayouts](#)
 - [hostQueryReset](#)
 - [timelineSemaphore](#)
 - [samplerMirrorClampToEdge](#) if [VK_KHR_sampler_mirror_clamp_to_edge](#) is supported
 - [drawIndirectCount](#) if [VK_KHR_draw_indirect_count](#) is supported
 - [storageBuffer8BitAccess](#) if [uniformAndStorageBuffer8BitAccess](#) is supported
 - [shaderInt64](#) if [shaderSharedInt64Atomics](#) or [shaderBufferInt64Atomics](#) are supported
 - [descriptorIndexing](#) if [VK_EXT_descriptor_indexing](#) is supported
 - [shaderSampledImageArrayDynamicIndexing](#) if [descriptorIndexing](#) is supported
 - [shaderStorageBufferArrayDynamicIndexing](#) if [descriptorIndexing](#) is supported
 - [shaderUniformTexelBufferArrayDynamicIndexing](#) if [descriptorIndexing](#) is supported
 - [shaderStorageTexelBufferArrayDynamicIndexing](#) if [descriptorIndexing](#) is supported
 - [shaderSampledImageArrayNonUniformIndexing](#) if [descriptorIndexing](#) is supported
 - [shaderStorageBufferArrayNonUniformIndexing](#) if [descriptorIndexing](#) is supported
 - [shaderUniformTexelBufferArrayNonUniformIndexing](#) if [descriptorIndexing](#) is supported

- descriptorBindingSampledImageUpdateAfterBind if descriptorIndexing is supported
- descriptorBindingStorageImageUpdateAfterBind if descriptorIndexing is supported
- descriptorBindingStorageBufferUpdateAfterBind if descriptorIndexing is supported
- descriptorBindingUniformTexelBufferUpdateAfterBind if descriptorIndexing is supported
- descriptorBindingStorageTexelBufferUpdateAfterBind if descriptorIndexing is supported
- descriptorBindingUpdateUnusedWhilePending if descriptorIndexing is supported
- descriptorBindingPartiallyBound if descriptorIndexing is supported
- runtimeDescriptorArray if descriptorIndexing is supported
- shaderOutputViewportIndex if VK_EXT_shader_viewport_index_layer is supported
- shaderOutputLayer if VK_EXT_shader_viewport_index_layer is supported
- samplerFilterMinmax if VK_EXT_sampler_filter_minmax is supported
- If Vulkan 1.3 is supported, the following features **must** be supported:
 - shaderTerminateInvocation
 - shaderDemoteToHelperInvocation
 - privateData
 - pipelineCreationCacheControl
 - synchronization2
 - shaderZeroInitializeWorkgroupMemory
 - robustImageAccess
 - subgroupSizeControl
 - computeFullSubgroups
 - dynamicRendering
 - shaderIntegerDotProduct
 - maintenance4
 - vulkanMemoryModel
 - vulkanMemoryModelDeviceScope
 - inlineUniformBlock
 - bufferDeviceAddress
 - descriptorBindingInlineUniformBlockUpdateAfterBind if VK_EXT_descriptor_indexing or descriptorIndexing are supported
- If Vulkan 1.4 is supported, the following features **must** be supported:
 - fullDrawIndexUint32
 - imageCubeArray
 - independentBlend
 - sampleRateShading

- drawIndirectFirstInstance
- depthClamp
- depthBiasClamp
- samplerAnisotropy
- fragmentStoresAndAtomics
- shaderStorageImageExtendedFormats
- shaderUniformBufferArrayDynamicIndexing
- shaderSampledImageArrayDynamicIndexing
- shaderStorageBufferArrayDynamicIndexing
- shaderStorageImageArrayDynamicIndexing
- shaderImageGatherExtended
- shaderInt16
- largePoints
- samplerYcbcrConversion
- storageBuffer16BitAccess
- variablePointers
- variablePointersStorageBuffer
- samplerMirrorClampToEdge
- scalarBlockLayout
- shaderUniformTexelBufferArrayDynamicIndexing
- shaderStorageTexelBufferArrayDynamicIndexing
- shaderInt8
- storageBuffer8BitAccess
- globalPriorityQuery
- shaderSubgroupRotate
- shaderSubgroupRotateClustered
- shaderFloatControls2
- shaderExpectAssume
- bresenhamLines
- vertexAttributeInstanceRateDivisor
- indexTypeUint8
- maintenance5
- pushDescriptor
- dynamicRenderingLocalRead
- maintenance6

- `pipelineRobustness`
- `pipelineProtectedAccess` if `protectedMemory` is supported
- If `VK_KHR_dynamic_rendering` is supported, `dynamicRendering` **must** be supported
- If `VK_KHR_multiview` is supported, `multiview` **must** be supported
- If `VK_KHR_shader_float16_int8` is supported, at least one of `shaderFloat16` or `shaderInt8` **must** be supported
- If `VK_KHR_16bit_storage` is supported, `storageBuffer16BitAccess` **must** be supported
- If `VK_KHR_imageless_framebuffer` is supported, `imagelessFramebuffer` **must** be supported
- If `VK_KHR_performance_query` is supported, `performanceCounterQueryPools` **must** be supported
- If `VK_KHR_variable_pointers` is supported, `variablePointersStorageBuffer` **must** be supported
- If `VK_KHR_shader_bfloat16` is supported, the following features **must** be supported:
 - `shaderBFloat16Type`
 - at least one of `shaderBFloat16CooperativeMatrix` or `shaderBFloat16DotProduct`
- If `VK_KHR_sampler_ycbcr_conversion` is supported, `samplerYcbcrConversion` **must** be supported
- If `VK_KHR_shader_subgroup_extended_types` is supported, `shaderSubgroupExtendedTypes` **must** be supported
- If `VK_KHR_8bit_storage` is supported, `storageBuffer8BitAccess` **must** be supported
- If `VK_KHR_shader_atomic_int64` is supported, `shaderBufferInt64Atomics` **must** be supported
- If `VK_KHR_shader_clock` is supported, `shaderSubgroupClock` **must** be supported
- If `VK_KHR_global_priority` is supported, `globalPriorityQuery` **must** be supported
- If `VK_KHR_timeline_semaphore` is supported, `timelineSemaphore` **must** be supported
- If `VK_KHR_vulkan_memory_model` is supported, `vulkanMemoryModel` **must** be supported
- If `VK_KHR_shader_terminate_invocation` is supported, `shaderTerminateInvocation` **must** be supported
- If `VK_KHR_fragment_shading_rate` is supported, `pipelineFragmentShadingRate` **must** be supported
- If `VK_KHR_shader_constant_data` is supported, `shaderConstantData` **must** be supported
- If `VK_KHR_dynamic_rendering_local_read` is supported, `dynamicRenderingLocalRead` **must** be supported
- If `VK_KHR_shader_abort` is supported, `shaderAbort` **must** be supported
- If `VK_KHR_shader_quad_control` is supported, `shaderQuadControl` **must** be supported
- If `VK_KHR_separate_depth_stencil_layouts` is supported, `separateDepthStencilLayouts` **must** be supported
- If `VK_KHR_present_wait` is supported, `presentWait` **must** be supported
- If `VK_KHR_uniform_buffer_standard_layout` is supported, `uniformBufferStandardLayout` **must** be supported
- If `VK_KHR_buffer_device_address` is supported, `bufferDeviceAddress` **must** be supported

- If `VK_KHR_pipeline_executable_properties` is supported, `pipelineExecutableInfo` **must** be supported
- If `VK_KHR_shader_integer_dot_product` is supported, `shaderIntegerDotProduct` **must** be supported
- If `VK_KHR_present_id` is supported, `presentId` **must** be supported
- If `VK_KHR_synchronization2` is supported, `synchronization2` **must** be supported
- If `VK_KHR_device_address_commands` is supported, `deviceAddressCommands` **must** be supported
- If `VK_KHR_fragment_shader_barycentric` is supported, `fragmentShaderBarycentric` **must** be supported
- If `VK_KHR_shader_subgroup_uniform_control_flow` is supported, `shaderSubgroupUniformControlFlow` **must** be supported
- If `VK_KHR_zero_initialize_workgroup_memory` is supported, `shaderZeroInitializeWorkgroupMemory` **must** be supported
- If `VK_KHR_workgroup_memory_explicit_layout` is supported, `workgroupMemoryExplicitLayout` **must** be supported
- If `VK_KHR_ray_tracing_maintenance1` is supported, `rayTracingMaintenance1` **must** be supported
- If `VK_KHR_shader_untyped_pointers` is supported, `shaderUntypedPointers` **must** be supported
- If `VK_KHR_maintenance4` is supported, `maintenance4` **must** be supported
- If `VK_KHR_shader_subgroup_rotate` is supported, `shaderSubgroupRotate` **must** be supported
- If `VK_KHR_shader_maximal_reconvergence` is supported, `shaderMaximalReconvergence` **must** be supported
- If `VK_KHR_maintenance5` is supported, `maintenance5` **must** be supported
- If `VK_KHR_present_id2` is supported, `presentId2` **must** be supported
- If `VK_KHR_present_wait2` is supported, `presentWait2` **must** be supported
- If `VK_KHR_ray_tracing_position_fetch` is supported, `rayTracingPositionFetch` **must** be supported
- If `VK_KHR_pipeline_binary` is supported, `pipelineBinaries` **must** be supported
- If `VK_KHR_swapchain_maintenance1` is supported, `swapchainMaintenance1` **must** be supported
- If `VK_KHR_internally_synchronized_queues` is supported, `internallySynchronizedQueues` **must** be supported
- If `VK_KHR_cooperative_matrix` is supported, `cooperativeMatrix` **must** be supported
- If `VK_KHR_compute_shader_derivatives` is supported, `computeDerivativeGroupLinear` **must** be supported
- If `VK_KHR_video_encode_av1` is supported, `videoEncodeAV1` **must** be supported
- If `VK_KHR_video_decode_vp9` is supported, `videoDecodeVP9` **must** be supported
- If `VK_KHR_video_maintenance1` is supported, `videoMaintenance1` **must** be supported
- If `VK_KHR_vertex_attribute_divisor` is supported, `vertexAttributeInstanceRateDivisor` **must** be supported
- If `VK_KHR_unified_image_layouts` is supported, `unifiedImageLayouts` **must** be supported

- If `VK_KHR_shader_float_controls2` is supported, `shaderFloatControls2` **must** be supported
- If `VK_KHR_index_type_uint8` is supported, `indexTypeUint8` **must** be supported
- If `VK_KHR_line_rasterization` is supported, at least one of `rectangularLines`, `bresenhamLines`, `smoothLines`, `stippledRectangularLines`, `stippledBresenhamLines`, or `stippledSmoothLines` **must** be supported
- If `VK_KHR_shader_expect_assume` is supported, `shaderExpectAssume` **must** be supported
- If `VK_KHR_maintenance6` is supported, `maintenance6` **must** be supported
- If `VK_KHR_copy_memory_indirect` is supported, `indirectMemoryCopy` **must** be supported
- If `VK_KHR_video_encode_intra_refresh` is supported, `videoEncodeIntraRefresh` **must** be supported
- If `VK_KHR_video_encode_quantization_map` is supported, `videoEncodeQuantizationMap` **must** be supported
- If `VK_KHR_shader_relaxed_extended_instruction` is supported, `shaderRelaxedExtendedInstruction` **must** be supported
- If `VK_KHR_maintenance7` is supported, `maintenance7` **must** be supported
- If `VK_KHR_device_fault` is supported, `deviceFault` **must** be supported
- If `VK_KHR_maintenance8` is supported, `maintenance8` **must** be supported
- If `VK_KHR_shader_fma` is supported, `shaderFmaFloat32` **must** be supported
- If `VK_KHR_maintenance9` is supported, `maintenance9` **must** be supported
- If `VK_KHR_video_maintenance2` is supported, `videoMaintenance2` **must** be supported
- If `VK_KHR_depth_clamp_zero_one` is supported, `depthClampZeroOne` **must** be supported
- If `VK_KHR_robustness2` is supported, at least one of `robustBufferAccess2`, `robustImageAccess2`, or `nullDescriptor` **must** be supported
- If `VK_KHR_present_mode_fifo_latest_ready` is supported, `presentModeFifoLatestReady` **must** be supported
- If `VK_KHR_maintenance10` is supported, `maintenance10` **must** be supported
- If `VK_KHR_maintenance11` is supported, `maintenance11` **must** be supported
- If `VK_EXT_transform_feedback` is supported, `transformFeedback` **must** be supported
- If `VK_NV_corner_sampled_image` is supported, `cornerSampledImage` **must** be supported
- If `VK_EXT_texture_compression_astc_hdr` is supported, `textureCompressionASTC_HDR` **must** be supported
- If `VK_EXT_pipeline_robustness` is supported, `pipelineRobustness` **must** be supported
- If `VK_EXT_conditional_rendering` is supported, `conditionalRendering` **must** be supported
- If `VK_EXT_depth_clip_enable` is supported, `depthClipEnable` **must** be supported
- If `VK_IMG_relaxed_line_rasterization` is supported, `relaxedLineRasterization` **must** be supported
- If `VK_AMD_shader_enqueue` is supported, the following features **must** be supported:
 - `shaderEnqueue`
 - `shaderMeshEnqueue` if `VK_EXT_mesh_shader` is supported

- If `VK_EXT_descriptor_heap` is supported, `descriptorHeap` **must** be supported
- If `VK_EXT_inline_uniform_block` is supported, the following features **must** be supported:
 - `inlineUniformBlock`
 - `descriptorBindingInlineUniformBlockUpdateAfterBind` if `VK_EXT_descriptor_indexing` is supported, or if Vulkan 1.2 and `descriptorIndexing` are supported
- If `VK_NV_shader_sm_builtins` is supported, `shaderSMBuiltins` **must** be supported
- If `VK_EXT_descriptor_indexing` is supported, the following features **must** be supported:
 - `shaderSampledImageArrayDynamicIndexing`
 - `shaderStorageBufferArrayDynamicIndexing`
 - `shaderUniformTexelBufferArrayDynamicIndexing`
 - `shaderStorageTexelBufferArrayDynamicIndexing`
 - `shaderSampledImageArrayNonUniformIndexing`
 - `shaderStorageBufferArrayNonUniformIndexing`
 - `shaderUniformTexelBufferArrayNonUniformIndexing`
 - `descriptorBindingSampledImageUpdateAfterBind`
 - `descriptorBindingStorageImageUpdateAfterBind`
 - `descriptorBindingStorageBufferUpdateAfterBind`
 - `descriptorBindingUniformTexelBufferUpdateAfterBind`
 - `descriptorBindingStorageTexelBufferUpdateAfterBind`
 - `descriptorBindingUpdateUnusedWhilePending`
 - `descriptorBindingPartiallyBound`
 - `runtimeDescriptorArray`
- If `VK_NV_shading_rate_image` is supported, `shadingRateImage` **must** be supported
- If `VK_NV_representative_fragment_test` is supported, `representativeFragmentTest` **must** be supported
- If `VK_QCOM_cooperative_matrix_conversion` is supported, `cooperativeMatrixConversion` **must** be supported
- If `VK_EXT_vertex_attribute_divisor` is supported, `vertexAttributeInstanceRateDivisor` **must** be supported
- If `VK_NV_compute_shader_derivatives` is supported, at least one of `computeDerivativeGroupQuads` or `computeDerivativeGroupLinear` **must** be supported
- If `VK_NV_mesh_shader` is supported, `VkPhysicalDeviceMeshShaderFeaturesNV::meshShader` **must** be supported
- If `VK_NV_shader_image_footprint` is supported, `imageFootprint` **must** be supported
- If `VK_NV_scissor_exclusive` is supported, `exclusiveScissor` **must** be supported
- If `VK_EXT_present_timing` is supported, `presentTiming` **must** be supported

- If `VK_INTEL_shader_integer_functions2` is supported, `shaderIntegerFunctions2` **must** be supported
- If `VK_EXT_fragment_density_map` is supported, `fragmentDensityMap` **must** be supported
- If `VK_EXT_scalar_block_layout` is supported, `scalarBlockLayout` **must** be supported
- If `VK_EXT_subgroup_size_control` is supported, the following features **must** be supported:
 - `subgroupSizeControl`
 - `computeFullSubgroups`
- If `VK_AMD_device_coherent_memory` is supported, `deviceCoherentMemory` **must** be supported
- If `VK_EXT_shader_image_atomic_int64` is supported, the following features **must** be supported:
 - `shaderInt64`
 - `shaderImageInt64Atomics`
- If `VK_EXT_memory_priority` is supported, `memoryPriority` **must** be supported
- If `VK_NV_dedicated_allocation_image_aliasing` is supported, `dedicatedAllocationImageAliasing` **must** be supported
- If `VK_EXT_buffer_device_address` is supported, `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddress` **must** be supported
- If `VK_NV_cooperative_matrix` is supported, `VkPhysicalDeviceCooperativeMatrixFeaturesNV::cooperativeMatrix` **must** be supported
- If `VK_NV_coverage_reduction_mode` is supported, `coverageReductionMode` **must** be supported
- If `VK_EXT_fragment_shader_interlock` is supported, at least one of `fragmentShaderSampleInterlock`, `fragmentShaderPixelInterlock`, or `fragmentShaderShadingRateInterlock` **must** be supported
- If `VK_EXT_ycbcr_image_arrays` is supported, `ycbcrImageArrays` **must** be supported
- If `VK_EXT_provoking_vertex` is supported, `provokingVertexLast` **must** be supported
- If `VK_EXT_line_rasterization` is supported, at least one of `rectangularLines`, `bresenhamLines`, `smoothLines`, `stippledRectangularLines`, `stippledBresenhamLines`, or `stippledSmoothLines` **must** be supported
- If `VK_EXT_shader_atomic_float` is supported, the following features **must** be supported:
 - at least one of `shaderBufferFloat32Atomics`, `shaderBufferFloat32AtomicAdd`, `shaderBufferFloat64Atomics`, `shaderBufferFloat64AtomicAdd`, `shaderSharedFloat32Atomics`, `shaderSharedFloat32AtomicAdd`, `shaderSharedFloat64Atomics`, `shaderSharedFloat64AtomicAdd`, `shaderImageFloat32Atomics`, or `shaderImageFloat32AtomicAdd`
 - `shaderImageFloat32Atomics` if `sparseImageFloat32Atomics` is supported
 - `shaderImageFloat32AtomicAdd` if `sparseImageFloat32AtomicAdd` is supported
- If `VK_EXT_host_query_reset` is supported, `hostQueryReset` **must** be supported
- If `VK_EXT_index_type_uint8` is supported, `indexTypeUint8` **must** be supported
- If `VK_EXT_extended_dynamic_state` is supported, `extendedDynamicState` **must** be supported
- If `VK_EXT_host_image_copy` is supported, `hostImageCopy` **must** be supported
- If `VK_EXT_map_memory_placed` is supported, `memoryMapPlaced` **must** be supported

- If `VK_EXT_shader_atomic_float2` is supported, the following features **must** be supported:
 - at least one of `shaderBufferFloat16Atomics`, `shaderBufferFloat16AtomicAdd`, `shaderBufferFloat16AtomicMinMax`, `shaderBufferFloat32AtomicMinMax`, `shaderBufferFloat64AtomicMinMax`, `shaderSharedFloat16Atomics`, `shaderSharedFloat16AtomicAdd`, `shaderSharedFloat16AtomicMinMax`, `shaderSharedFloat32AtomicMinMax`, `shaderSharedFloat64AtomicMinMax`, or `shaderImageFloat32AtomicMinMax`
 - `shaderImageFloat32AtomicMinMax` if `sparseImageFloat32AtomicMinMax` is supported
- If `VK_EXT_swapchain_maintenance1` is supported, `swapchainMaintenance1` **must** be supported
- If `VK_EXT_shader_demote_to_helper_invocation` is supported, `shaderDemoteToHelperInvocation` **must** be supported
- If `VK_NV_device_generated_commands` is supported, `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` **must** be supported
- If `VK_NV_inherited_viewport_scissor` is supported, `inheritedViewportScissor2D` **must** be supported
- If `VK_EXT_texel_buffer_alignment` is supported, `texelBufferAlignment` **must** be supported
- If `VK_EXT_depth_bias_control` is supported, `depthBiasControl` **must** be supported
- If `VK_EXT_device_memory_report` is supported, `deviceMemoryReport` **must** be supported
- If `VK_EXT_robustness2` is supported, at least one of `robustBufferAccess2`, `robustImageAccess2`, or `nullDescriptor` **must** be supported
- If `VK_EXT_custom_border_color` is supported, `customBorderColors` **must** be supported
- If `VK_EXT_texture_compression_astc_3d` is supported, `textureCompressionASTC_3D` **must** be supported
- If `VK_NV_present_barrier` is supported, `presentBarrier` **must** be supported
- If `VK_EXT_private_data` is supported, `privateData` **must** be supported
- If `VK_EXT_pipeline_creation_cache_control` is supported, `pipelineCreationCacheControl` **must** be supported
- If `VK_NV_device_diagnostics_config` is supported, `diagnosticsConfig` **must** be supported
- If `VK_QCOM_queue_perf_hint` is supported, `queuePerfHint` **must** be supported
- If `VK_NV_cuda_kernel_launch` is supported, `cudaKernelLaunchFeatures` **must** be supported
- If `VK_QCOM_tile_shading` is supported, the following features **must** be supported:
 - `tileShading`
 - `tileShadingFragmentStage`
 - `tileShadingPerTileDispatch`
 - `tileShadingAtomicOps`
 - `tileShadingColorAttachments`
 - `tileShadingPerTileDraw`
 - `tileShadingDepthAttachments`

- `tileShadingStencilAttachments`
- `tileShadingInputAttachments`
- `tileShadingSampledAttachments`
- If `VK_EXT_descriptor_buffer` is supported, `descriptorBuffer` **must** be supported
- If `VK_EXT_graphics_pipeline_library` is supported, `graphicsPipelineLibrary` **must** be supported
- If `VK_AMD_shader_early_and_late_fragment_tests` is supported, `shaderEarlyAndLateFragmentTests` **must** be supported
- If `VK_NV_fragment_shading_rate_enums` is supported, `fragmentShadingRateEnums` **must** be supported
- If `VK_NV_ray_tracing_motion_blur` is supported, `rayTracingMotionBlur` **must** be supported
- If `VK_EXT_ycbcr_2plane_444_formats` is supported, `ycbcr2plane444Formats` **must** be supported
- If `VK_EXT_fragment_density_map2` is supported, `fragmentDensityMapDeferred` **must** be supported
- If `VK_EXT_image_robustness` is supported, `robustImageAccess` **must** be supported
- If `VK_EXT_image_compression_control` is supported, `imageCompressionControl` **must** be supported
- If `VK_EXT_attachment_feedback_loop_layout` is supported, `attachmentFeedbackLoopLayout` **must** be supported
- If `VK_EXT_4444_formats` is supported, `formatA4R4G4B4` **must** be supported
- If `VK_EXT_device_fault` is supported, `deviceFault` **must** be supported
- If `VK_EXT_rgba10x6_formats` is supported, `formatRgba10x6WithoutYCbCrSampler` **must** be supported
- If `VK_VALVE_mutable_descriptor_type` is supported, `mutableDescriptorType` **must** be supported
- If `VK_EXT_vertex_input_dynamic_state` is supported, `vertexInputDynamicState` **must** be supported
- If `VK_EXT_device_address_binding_report` is supported, `reportAddressBinding` **must** be supported
- If `VK_EXT_depth_clip_control` is supported, `depthClipControl` **must** be supported
- If `VK_EXT_primitive_topology_list_restart` is supported, `primitiveTopologyListRestart` **must** be supported
- If `VK_EXT_present_mode_fifo_latest_ready` is supported, `presentModeFifoLatestReady` **must** be supported
- If `VK_HUAWEI_subpass_shading` is supported, `subpassShading` **must** be supported
- If `VK_HUAWEI_invocation_mask` is supported, `invocationMask` **must** be supported
- If `VK_NV_external_memory_rdma` is supported, `externalMemoryRDMA` **must** be supported
- If `VK_EXT_pipeline_properties` is supported, `pipelinePropertiesIdentifier` **must** be supported
- If `VK_EXT_frame_boundary` is supported, `frameBoundary` **must** be supported
- If `VK_EXT_multisampled_render_to_single_sampled` is supported, `multisampledRenderToSingleSampled` **must** be supported
- If `VK_EXT_extended_dynamic_state2` is supported, `extendedDynamicState2` **must** be supported
- If `VK_EXT_color_write_enable` is supported, `colorWriteEnable` **must** be supported
- If `VK_EXT_primitives_generated_query` is supported, `primitivesGeneratedQuery` **must** be supported

- If `VK_EXT_global_priority_query` is supported, `globalPriorityQuery` **must** be supported
- If `VK_VALVE_video_encode_rgb_conversion` is supported, `videoEncodeRgbConversion` **must** be supported
- If `VK_EXT_image_view_min_lod` is supported, `minLod` **must** be supported
- If `VK_EXT_multi_draw` is supported, `multiDraw` **must** be supported
- If `VK_EXT_image_2d_view_of_3d` is supported, `image2DViewOf3D` **must** be supported
- If `VK_EXT_shader_tile_image` is supported, `shaderTileImageColorReadAccess` **must** be supported
- If `VK_EXT_opacity_micromap` is supported, `micromap` **must** be supported
- If `VK_NV_displacement_micromap` is supported, `displacementMicromap` **must** be supported
- If `VK_HUAWEI_cluster_culling_shader` is supported, `clusterCullingShader` **must** be supported
- If `VK_EXT_border_color_swizzle` is supported, `borderColorSwizzle` **must** be supported
- If `VK_EXT_pageable_device_local_memory` is supported, `pageableDeviceLocalMemory` **must** be supported
- If `VK_ARM_scheduling_controls` is supported, `schedulingControls` **must** be supported
- If `VK_EXT_image_sliced_view_of_3d` is supported, `imageSlicedViewOf3D` **must** be supported
- If `VK_VALVE_descriptor_set_host_mapping` is supported, `descriptorSetHostMapping` **must** be supported
- If `VK_EXT_depth_clamp_zero_one` is supported, `depthClampZeroOne` **must** be supported
- If `VK_EXT_non_seamless_cube_map` is supported, `nonSeamlessCubeMap` **must** be supported
- If `VK_ARM_render_pass_striped` is supported, `renderPassStriped` **must** be supported
- If `VK_QCOM_fragment_density_map_offset` is supported, `fragmentDensityMapOffset` **must** be supported
- If `VK_NV_copy_memory_indirect` is supported, `indirectCopy` **must** be supported
- If `VK_NV_memory_decompression` is supported, `memoryDecompression` **must** be supported
- If `VK_NV_device_generated_commands_compute` is supported, `deviceGeneratedCompute` **must** be supported
- If `VK_NV_ray_tracing_linear_swept_spheres` is supported, at least one of `spheres` or `linearSweptSpheres` **must** be supported
- If `VK_NV_linear_color_attachment` is supported, `linearColorAttachment` **must** be supported
- If `VK_EXT_image_compression_control_swapchain` is supported, `imageCompressionControlSwapchain` **must** be supported
- If `VK_QCOM_image_processing` is supported, the following features **must** be supported:
 - `textureSampleWeighted`
 - `textureBlockMatch`
 - `textureBoxFilter`
- If `VK_EXT_nested_command_buffer` is supported, `nestedCommandBuffer` **must** be supported
- If `VK_EXT_extended_dynamic_state3` is supported, the following features **must** be supported:

- `tessellationShader` if `extendedDynamicState3TessellationDomainOrigin` is supported
- `depthClamp` if `extendedDynamicState3DepthClampEnable` is supported
- `fillModeNonSolid` if `extendedDynamicState3PolygonMode` is supported
- `alphaToOne` if `extendedDynamicState3AlphaToOneEnable` is supported
- `logicOp` if `extendedDynamicState3LogicOpEnable` is supported
- `geometryStreams` if `VK_EXT_transform_feedback` and `extendedDynamicState3RasterizationStream` are supported
- If `VK_EXT_subpass_merge_feedback` is supported, `subpassMergeFeedback` **must** be supported
- If `VK_ARM_tensors` is supported, `tensors` **must** be supported
- If `VK_EXT_shader_module_identifier` is supported, `shaderModuleIdentifier` **must** be supported
- If `VK_NV_optical_flow` is supported, `opticalFlow` **must** be supported
- If `VK_EXT_legacy_dithering` is supported, `legacyDithering` **must** be supported
- If `VK_EXT_pipeline_protected_access` is supported, `pipelineProtectedAccess` **must** be supported
- If `VK_ANDROID_external_format_resolve` is supported, `externalFormatResolve` **must** be supported
- If `VK_AMD_anti_lag` is supported, `antiLag` **must** be supported
- If `VK_AMDX_dense_geometry_format` is supported, `denseGeometryFormat` **must** be supported
- If `VK_EXT_shader_object` is supported, `shaderObject` **must** be supported
- If `VK_QCOM_tile_properties` is supported, `tileProperties` **must** be supported
- If `VK_SEC_amigo_profiling` is supported, `amigoProfiling` **must** be supported
- If `VK_QCOM_multiview_per_view_viewports` is supported, `multiviewPerViewViewports` **must** be supported
- If `VK_NV_ray_tracing_invocation_reorder` is supported, `VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV::rayTracingInvocationReorder` **must** be supported
- If `VK_NV_cooperative_vector` is supported, `cooperativeVector` **must** be supported
- If `VK_NV_extended_sparse_address_space` is supported, `extendedSparseAddressSpace` **must** be supported
- If `VK_EXT_mutable_descriptor_type` is supported, `mutableDescriptorType` **must** be supported
- If `VK_EXT_legacy_vertex_attributes` is supported, `legacyVertexAttributes` **must** be supported
- If `VK_ARM_shader_core_builtins` is supported, `shaderCoreBuiltins` **must** be supported
- If `VK_EXT_pipeline_library_group_handles` is supported, `pipelineLibraryGroupHandles` **must** be supported
- If `VK_EXT_dynamic_rendering_unused_attachments` is supported, `dynamicRenderingUnusedAttachments` **must** be supported
- If `VK_ARM_data_graph` is supported, `dataGraph` **must** be supported
- If `VK_QCOM_multiview_per_view_render_areas` is supported, `multiviewPerViewRenderAreas` **must** be supported

- If `VK_NV_per_stage_descriptor_set` is supported, `perStageDescriptorSet` **must** be supported
- If `VK_QCOM_image_processing2` is supported, `textureBlockMatch2` **must** be supported
- If `VK_QCOM_filter_cubic_weights` is supported, `selectableCubicWeights` **must** be supported
- If `VK_QCOM_ycbcr_degama` is supported, `ycbcrDegamma` **must** be supported
- If `VK_QCOM_filter_cubic_clamp` is supported, `cubicRangeClamp` **must** be supported
- If `VK_EXT_attachment_feedback_loop_dynamic_state` is supported, `attachmentFeedbackLoopDynamicState` **must** be supported
- If `VK_QNX_external_memory_screen_buffer` is supported, `screenBufferImport` **must** be supported
- If `VK_NV_descriptor_pool_overallocation` is supported, `descriptorPoolOverallocation` **must** be supported
- If `VK_QCOM_tile_memory_heap` is supported, `tileMemoryHeap` **must** be supported
- If `VK_EXT_memory_decompression` is supported, `memoryDecompression` **must** be supported
- If `VK_NV_raw_access_chains` is supported, `shaderRawAccessChains` **must** be supported
- If `VK_NV_command_buffer_inheritance` is supported, `commandBufferInheritance` **must** be supported
- If `VK_NV_shader_atomic_float16_vector` is supported, `shaderFloat16VectorAtomics` **must** be supported
- If `VK_EXT_shader_replicated_composites` is supported, `shaderReplicatedComposites` **must** be supported
- If `VK_EXT_shader_float8` is supported, `shaderFloat8` **must** be supported
- If `VK_NV_ray_tracing_validation` is supported, `rayTracingValidation` **must** be supported
- If `VK_NV_cluster_acceleration_structure` is supported, `clusterAccelerationStructure` **must** be supported
- If `VK_NV_partitioned_acceleration_structure` is supported, `partitionedAccelerationStructure` **must** be supported
- If `VK_EXT_device_generated_commands` is supported, `deviceGeneratedCommands` **must** be supported
- If `VK_MESA_image_alignment_control` is supported, `imageAlignmentControl` **must** be supported
- If `VK_NV_push_constant_bank` is supported, `pushConstantBank` **must** be supported
- If `VK_EXT_ray_tracing_invocation_reorder` is supported, `rayTracingInvocationReorder` **must** be supported
- If `VK_EXT_depth_clamp_control` is supported, `depthClampControl` **must** be supported
- If `VK_HUAWEI_hdr_vivid` is supported, `hdrVivid` **must** be supported
- If `VK_NV_cooperative_matrix2` is supported, at least one of `cooperativeMatrixWorkgroupScope`, `cooperativeMatrixFlexibleDimensions`, `cooperativeMatrixReductions`, `cooperativeMatrixConversions`, `cooperativeMatrixPerElementOperations`, `cooperativeMatrixTensorAddressing`, or `cooperativeMatrixBlockLoads` **must** be supported
- If `VK_ARM_pipeline_opacity_micromap` is supported, `pipelineOpacityMicromap` **must** be supported
- If `VK_ARM_performance_counters_by_region` is supported, `performanceCountersByRegion` **must** be supported

- If `VK_ARM_shader_instrumentation` is supported, `shaderInstrumentation` **must** be supported
- If `VK_EXT_vertex_attribute_robustness` is supported, `vertexAttributeRobustness` **must** be supported
- If `VK_ARM_format_pack` is supported, `formatPack` **must** be supported
- If `VK_VALVE_fragment_density_map_layered` is supported, `fragmentDensityMapLayered` **must** be supported
- If `VK_NV_present_metering` is supported, `presentMetering` **must** be supported
- If `VK_EXT_fragment_density_map_offset` is supported, `fragmentDensityMapOffset` **must** be supported
- If `VK_EXT_zero_initialize_device_memory` is supported, `zeroInitializeDeviceMemory` **must** be supported
- If `VK_EXT_shader_64bit_indexing` is supported, `shader64BitIndexing` **must** be supported
- If `VK_EXT_custom_resolve` is supported, `customResolve` **must** be supported
- If `VK_QCOM_data_graph_model` is supported, `VkPhysicalDeviceDataGraphModelFeaturesQCOM::dataGraphModel` **must** be supported
- If `VK_ARM_data_graph_optical_flow` is supported, `dataGraphOpticalFlow` **must** be supported
- If `VK_EXT_shader_long_vector` is supported, the following features **must** be supported:
 - `longVector`
 - `scalarBlockLayout`
 - `workgroupMemoryExplicitLayoutScalarBlockLayout` if `VK_KHR_workgroup_memory_explicit_layout` is supported
- If `VK_SEC_pipeline_cache_incremental_mode` is supported, `pipelineCacheIncrementalMode` **must** be supported
- If `VK_EXT_shader_uniform_buffer_unsized_array` is supported, `shaderUniformBufferUnsizedArray` **must** be supported
- If `VK_NV_compute_occupancy_priority` is supported, `computeOccupancyPriority` **must** be supported
- If `VK_EXT_shader_subgroup_partitioned` is supported, `shaderSubgroupPartitioned` **must** be supported
- If `VK_VALVE_shader_mixed_float_dot_product` is supported, `shaderMixedFloatDotProductFloat16AccFloat32` **must** be supported
- If `VK_SEC_throttle_hint` is supported, `throttleHint` **must** be supported
- If `VK_ARM_data_graph_neural_accelerator_statistics` is supported, `dataGraphNeuralAcceleratorStatistics` **must** be supported
- If `VK_EXT_primitive_restart_index` is supported, `primitiveRestartIndex` **must** be supported
- If `VK_KHR_acceleration_structure` is supported, the following features **must** be supported:
 - `accelerationStructure`
 - `bufferDeviceAddress`
 - `descriptorBindingAccelerationStructureUpdateAfterBind`

- `descriptorIndexing` if Vulkan 1.2 is supported
- If `VK_KHR_ray_tracing_pipeline` is supported, the following features **must** be supported:
 - `rayTracingPipeline`
 - `rayTracingPipelineTraceRaysIndirect`
 - `rayTraversalPrimitiveCulling` if `VK_KHR_ray_query` is supported
- If `VK_KHR_ray_query` is supported, `rayQuery` **must** be supported
- If `VK_EXT_mesh_shader` is supported, the following features **must** be supported:
 - `taskShader`
 - `meshShader`
 - `primitiveFragmentShadingRate` if `VK_KHR_fragment_shading_rate` and `primitiveFragmentShadingRateMeshShader` are supported
- `VK_KHR_fragment_shading_rate` if the `primitiveFragmentShadingRateMeshShader` feature is supported.
- `VK_EXT_transform_feedback`, if the `extendedDynamicState3RasterizationStream` feature is supported.
- `VK_EXT_conservative_rasterization` extension, if the `extendedDynamicState3ConservativeRasterizationMode` feature is supported.
- `VK_EXT_conservative_rasterization` extension, if the `extendedDynamicState3ExtraPrimitiveOverestimationSize` feature is supported.
- `VK_EXT_sample_locations` extension, if the `extendedDynamicState3SampleLocationsEnable` feature is supported.
- `VK_EXT_blend_operation_advanced` extension, if the `extendedDynamicState3ColorBlendAdvanced` feature is supported.
- `VK_EXT_provoking_vertex`, if the `extendedDynamicState3ProvokingVertexMode` feature is supported.
- Vulkan 1.4 or the `VK_KHR_line_rasterization` extension or the `VK_EXT_line_rasterization` extension, if the `extendedDynamicState3LineRasterizationMode` feature is supported.
- `VK_KHR_line_rasterization` or `VK_EXT_line_rasterization` extension, if the `extendedDynamicState3LineStippleEnable` feature is supported.
- `VK_EXT_depth_clip_control`, if the `extendedDynamicState3DepthClipNegativeOneToOne` feature is supported.
- `VK_NV_clip_space_w_scaling` extension, if the `extendedDynamicState3ViewportWScalingEnable` feature is supported.
- `VK_NV_viewport_swizzle` extension, if the `extendedDynamicState3ViewportSwizzle` feature is supported.
- `VK_NV_fragment_coverage_to_color` extension, if the `extendedDynamicState3CoverageToColorEnable` feature is supported.
- `VK_NV_fragment_coverage_to_color` extension, if the `extendedDynamicState3CoverageToColorLocation` feature is supported.

- `VK_NV_framebuffer_mixed_samples` extension, if the `extendedDynamicState3CoverageModulationMode` feature is supported.
- `VK_NV_framebuffer_mixed_samples` extension, if the `extendedDynamicState3CoverageModulationTableEnable` feature is supported.
- `VK_NV_framebuffer_mixed_samples` extension, if the `extendedDynamicState3CoverageModulationTable` feature is supported.
- `VK_NV_coverage_reduction_mode`, if the `extendedDynamicState3CoverageReductionMode` feature is supported.
- `VK_NV_representative_fragment_test`, if the `extendedDynamicState3RepresentativeFragmentTestEnable` feature is supported.
- `VK_NV_shading_rate_image`, if the `extendedDynamicState3ShadingRateImageEnable` feature is supported.
- If Vulkan 1.4 is supported, at least one queue family is reported by `vkGetPhysicalDeviceQueueFamilyProperties` that includes the `VK_QUEUE_GRAPHICS_BIT` flag, and no additional queue families are reported that support the `VK_QUEUE_TRANSFER_BIT` flag, the `hostImageCopy` feature **must** be supported.

All other features defined in the Specification are **optional**.

NOTE

Applications running on Vulkan implementations advertising a `VkPhysicalDeviceDriverProperties::conformanceVersion` less than 1.4.4.0 should be aware that the `formatRgba10x6WithoutYCbCrSampler` feature may not be supported despite `VK_EXT_rgba10x6_formats` being advertised.

54.2. Roadmap Milestone Features

54.2.1. Roadmap 2022

Implementations that claim support for the `Roadmap 2022` milestone **must** support the following features:

- `fullDrawIndexUint32`
- `imageCubeArray`
- `independentBlend`
- `sampleRateShading`
- `drawIndirectFirstInstance`
- `depthClamp`
- `depthBiasClamp`
- `samplerAnisotropy`
- `occlusionQueryPrecise`
- `fragmentStoresAndAtomics`

- `shaderStorageImageExtendedFormats`
- `shaderUniformBufferArrayDynamicIndexing`
- `shaderSampledImageArrayDynamicIndexing`
- `shaderStorageBufferArrayDynamicIndexing`
- `shaderStorageImageArrayDynamicIndexing`
- `samplerYcbcrConversion`
- `samplerMirrorClampToEdge`
- `descriptorIndexing`
- `shaderUniformTexelBufferArrayDynamicIndexing`
- `shaderStorageTexelBufferArrayDynamicIndexing`
- `shaderUniformBufferArrayNonUniformIndexing`
- `shaderSampledImageArrayNonUniformIndexing`
- `shaderStorageBufferArrayNonUniformIndexing`
- `shaderStorageImageArrayNonUniformIndexing`
- `shaderUniformTexelBufferArrayNonUniformIndexing`
- `shaderStorageTexelBufferArrayNonUniformIndexing`
- `descriptorBindingSampledImageUpdateAfterBind`
- `descriptorBindingStorageImageUpdateAfterBind`
- `descriptorBindingStorageBufferUpdateAfterBind`
- `descriptorBindingUniformTexelBufferUpdateAfterBind`
- `descriptorBindingStorageTexelBufferUpdateAfterBind`
- `descriptorBindingUpdateUnusedWhilePending`
- `descriptorBindingPartiallyBound`
- `descriptorBindingVariableDescriptorCount`
- `runtimeDescriptorArray`
- `scalarBlockLayout`

54.2.2. Roadmap 2024

Implementations that claim support for the [Roadmap 2024](#) milestone **must** support the following features:

- `multiDrawIndirect`
- `shaderImageGatherExtended`
- `shaderDrawParameters`
- `shaderInt8`
- `shaderInt16`

- `shaderFloat16`
- `storageBuffer16BitAccess`
- `storageBuffer8BitAccess`

54.2.3. Roadmap 2026

Implementations that claim support for the [Roadmap 2026](#) milestone **must** support the following features:

- `hostImageCopy`
- `robustBufferAccess2`
- `robustImageAccess2`
- `nullDescriptor`

Chapter 55. Limits

Limits are implementation-dependent minimums, maximums, and other device characteristics that an application **may** need to be aware of.

NOTE

Limits are reported via the basic [VkPhysicalDeviceLimits](#) structure as well as the extensible structure [VkPhysicalDeviceProperties2](#), which was added in [VK_KHR_get_physical_device_properties2](#) and included in Vulkan 1.1. When limits are added in future Vulkan versions or extensions, each extension **should** introduce one new limit structure, if needed. This structure **can** be added to the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure.

The [VkPhysicalDeviceLimits](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceLimits {
    uint32_t          maxImageDimension1D;
    uint32_t          maxImageDimension2D;
    uint32_t          maxImageDimension3D;
    uint32_t          maxImageDimensionCube;
    uint32_t          maxImageArrayLayers;
    uint32_t          maxTexelBufferElements;
    uint32_t          maxUniformBufferRange;
    uint32_t          maxStorageBufferRange;
    uint32_t          maxPushConstantsSize;
    uint32_t          maxMemoryAllocationCount;
    uint32_t          maxSamplerAllocationCount;
    VkDeviceSize      bufferImageGranularity;
    VkDeviceSize      sparseAddressSpaceSize;
    uint32_t          maxBoundDescriptorSets;
    uint32_t          maxPerStageDescriptorSamplers;
    uint32_t          maxPerStageDescriptorUniformBuffers;
    uint32_t          maxPerStageDescriptorStorageBuffers;
    uint32_t          maxPerStageDescriptorSampledImages;
    uint32_t          maxPerStageDescriptorStorageImages;
    uint32_t          maxPerStageDescriptorInputAttachments;
    uint32_t          maxPerStageResources;
    uint32_t          maxDescriptorSetSamplers;
    uint32_t          maxDescriptorSetUniformBuffers;
    uint32_t          maxDescriptorSetUniformBuffersDynamic;
    uint32_t          maxDescriptorSetStorageBuffers;
    uint32_t          maxDescriptorSetStorageBuffersDynamic;
    uint32_t          maxDescriptorSetSampledImages;
    uint32_t          maxDescriptorSetStorageImages;
    uint32_t          maxDescriptorSetInputAttachments;
    uint32_t          maxVertexInputAttributes;
    uint32_t          maxVertexInputBindings;
    uint32_t          maxVertexInputAttributeOffset;
    uint32_t          maxVertexInputBindingStride;
```

uint32_t	maxVertexOutputComponents;
uint32_t	maxTessellationGenerationLevel;
uint32_t	maxTessellationPatchSize;
uint32_t	maxTessellationControlPerVertexInputComponents;
uint32_t	maxTessellationControlPerVertexOutputComponents;
uint32_t	maxTessellationControlPerPatchOutputComponents;
uint32_t	maxTessellationControlTotalOutputComponents;
uint32_t	maxTessellationEvaluationInputComponents;
uint32_t	maxTessellationEvaluationOutputComponents;
uint32_t	maxGeometryShaderInvocations;
uint32_t	maxGeometryInputComponents;
uint32_t	maxGeometryOutputComponents;
uint32_t	maxGeometryOutputVertices;
uint32_t	maxGeometryTotalOutputComponents;
uint32_t	maxFragmentInputComponents;
uint32_t	maxFragmentOutputAttachments;
uint32_t	maxFragmentDualSrcAttachments;
uint32_t	maxFragmentCombinedOutputResources;
uint32_t	maxComputeSharedMemorySize;
uint32_t	maxComputeWorkGroupCount[3];
uint32_t	maxComputeWorkGroupInvocations;
uint32_t	maxComputeWorkGroupSize[3];
uint32_t	subPixelPrecisionBits;
uint32_t	subTexelPrecisionBits;
uint32_t	mipmapPrecisionBits;
uint32_t	maxDrawIndexedIndexValue;
uint32_t	maxDrawIndirectCount;
float	maxSamplerLodBias;
float	maxSamplerAnisotropy;
uint32_t	maxViewports;
uint32_t	maxViewportDimensions[2];
float	viewportBoundsRange[2];
uint32_t	viewportSubPixelBits;
size_t	minMemoryMapAlignment;
VkDeviceSize	minTexelBufferOffsetAlignment;
VkDeviceSize	minUniformBufferOffsetAlignment;
VkDeviceSize	minStorageBufferOffsetAlignment;

uint32_t	maxTexelOffset;
int32_t	minTexelGatherOffset;
uint32_t	maxTexelGatherOffset;
float	minInterpolationOffset;
float	maxInterpolationOffset;
uint32_t	subPixelInterpolationOffsetBits;
uint32_t	maxFramebufferWidth;
uint32_t	maxFramebufferHeight;
uint32_t	maxFramebufferLayers;
VkSampleCountFlags	framebufferColorSampleCounts;
VkSampleCountFlags	framebufferDepthSampleCounts;
VkSampleCountFlags	framebufferStencilSampleCounts;
VkSampleCountFlags	framebufferNoAttachmentsSampleCounts;

```

uint32_t      maxColorAttachments;
VkSampleCountFlags sampledImageColorSampleCounts;
VkSampleCountFlags sampledImageIntegerSampleCounts;
VkSampleCountFlags sampledImageDepthSampleCounts;
VkSampleCountFlags sampledImageStencilSampleCounts;
VkSampleCountFlags storageImageSampleCounts;
uint32_t      maxSampleMaskWords;
VkBool32      timestampComputeAndGraphics;
float         timestampPeriod;
uint32_t      maxClipDistances;
uint32_t      maxCullDistances;
uint32_t      maxCombinedClipAndCullDistances;
uint32_t      discreteQueuePriorities;
float         pointSizeRange[2];
float         lineWidthRange[2];
float         pointSizeGranularity;
float         lineWidthGranularity;
VkBool32      strictLines;
VkBool32      standardSampleLocations;
VkDeviceSize  optimalBufferCopyOffsetAlignment;
VkDeviceSize  optimalBufferCopyRowPitchAlignment;
VkDeviceSize  nonCoherentAtomSize;
} VkPhysicalDeviceLimits;

```

The `VkPhysicalDeviceLimits` are properties of the physical device. These are available in the `limits` member of the `VkPhysicalDeviceProperties` structure which is returned from `vkGetPhysicalDeviceProperties`.

- `maxImageDimension1D` is the largest dimension (`width`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_1D`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageDimension2D` is the largest dimension (`width` or `height`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_2D` and without `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` set in `flags`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageDimension3D` is the largest dimension (`width`, `height`, or `depth`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_3D`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageDimensionCube` is the largest dimension (`width` or `height`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_2D` and with `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` set in `flags`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageArrayLayers` is the maximum number of layers (`arrayLayers`) for an image.

- `maxTexelBufferElements` is the maximum number of addressable texels for a buffer view created on a buffer which was created with the `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT` or `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT` usage flag set.
- `maxUniformBufferRange` is the maximum value that **can** be specified in the `range` member of a `VkDescriptorBufferInfo` structure passed to `vkUpdateDescriptorSets` for descriptors of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`.
- `maxStorageBufferRange` is the maximum value that **can** be specified in the `range` member of a `VkDescriptorBufferInfo` structure passed to `vkUpdateDescriptorSets` for descriptors of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`. If the `shader64BitIndexing` feature is enabled, this limit does not apply.
- `maxPushConstantsSize` is the maximum size, in bytes, of the pool of push constant memory. For each of the push constant ranges indicated by the `pPushConstantRanges` member of the `VkPipelineLayoutCreateInfo` structure, `(offset + size)` **must** be less than or equal to this limit.
- `maxMemoryAllocationCount` is the maximum number of device memory allocations, as created by `vkAllocateMemory`, which **can** simultaneously exist.
- `maxSamplerAllocationCount` is the maximum number of sampler objects, as created by `vkCreateSampler`, which **can** simultaneously exist on a device. If the `descriptorHeap` feature is enabled and the application intends to use embedded samplers, the number advertised here is effectively reduced by the quotient of `minSamplerHeapReservedRangeWithEmbedded` divided by `samplerDescriptorSize`, to provide storage for embedded samplers when switching to heaps. If embedded samplers are not used, this can be ignored.
- `bufferImageGranularity` is the granularity, in bytes, at which buffer or linear image resources, linear or optimal tensor resources, and optimal image resources **can** be bound to adjacent offsets in the same `VkDeviceMemory` object without aliasing. See [Buffer-Image Granularity](#) for more details.
- `sparseAddressSpaceSize` is the total amount of address space available, in bytes, for sparse memory resources. This is an upper bound on the sum of the sizes of all sparse resources, regardless of whether any memory is bound to them. If the `extendedSparseAddressSpace` feature is enabled, then the difference between `extendedSparseAddressSpaceSize` and `sparseAddressSpaceSize` can also be used, by `VkImage` created with the `usage` member of `VkImageCreateInfo` only containing bits in `extendedSparseImageUsageFlags` and `VkBuffer` created with the `usage` member of `VkBufferCreateInfo` only containing bits in `extendedSparseBufferUsageFlags`.
- `maxBoundDescriptorSets` is the maximum number of descriptor sets that **can** be simultaneously used by a pipeline. See [Descriptor Sets](#).
- `maxPerStageDescriptorSamplers` is the maximum number of samplers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Sampler](#) and

Combined Image Sampler.

- **maxPerStageDescriptorUniformBuffers** is the maximum number of uniform buffers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#) or [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. A descriptor is accessible to a shader stage when the **stageFlags** member of the [VkDescriptorSetLayoutBinding](#) structure has the bit for that shader stage set. See [Uniform Buffer](#) and [Dynamic Uniform Buffer](#).
- **maxPerStageDescriptorStorageBuffers** is the maximum number of storage buffers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER](#) or [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the **stageFlags** member of the [VkDescriptorSetLayoutBinding](#) structure has the bit for that shader stage set. See [Storage Buffer](#) and [Dynamic Storage Buffer](#).
- **maxPerStageDescriptorSampledImages** is the maximum number of sampled images that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), or [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the **stageFlags** member of the [VkDescriptorSetLayoutBinding](#) structure has the bit for that shader stage set. See [Combined Image Sampler](#), [Sampled Image](#), and [Uniform Texel Buffer](#).
- **maxPerStageDescriptorStorageImages** is the maximum number of storage images that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the **stageFlags** member of the [VkDescriptorSetLayoutBinding](#) structure has the bit for that shader stage set. See [Storage Image](#), and [Storage Texel Buffer](#).
- **maxPerStageDescriptorInputAttachments** is the maximum number of input attachments that **can** be accessible to a single shader stage in a pipeline layout, as well as the maximum usable input attachment index. Descriptors with a type of [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the **stageFlags** member of the [VkDescriptorSetLayoutBinding](#) structure has the bit for that shader stage set. These are only supported for the fragment stage. See [Input Attachment](#).

NOTE

maxPerStageDescriptorInputAttachments was originally only intended to limit the

number of attachments per stage, not the number of available input indices across all shaders in a render pass. The input indices were allowed to be semi arbitrary for render pass objects, or fully arbitrary for dynamic rendering, however some implementations have fixed limits for them. Applications already exist that exceed this limit, and they will continue to work where they already did, but will fail to render on some platforms. For forward looking applications, this can be worked around by either making careful use of index remapping with [VkRenderingInputAttachmentIndexInfo](#) for dynamic rendering, or splitting a subpass with too many input attachments into multiple subpasses.

- **maxPerStageResources** is the maximum number of resources that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#), [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#), [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#), [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER](#), [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC](#), [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. For the fragment shader stage the framebuffer color attachments also count against this limit.
- **maxDescriptorSetSamplers** is the maximum number of samplers that **can** be included in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_SAMPLER](#) or [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. See [Sampler](#) and [Combined Image Sampler](#).
- **maxDescriptorSetUniformBuffers** is the maximum number of uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#) or [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. See [Uniform Buffer](#) and [Dynamic Uniform Buffer](#).
- **maxDescriptorSetUniformBuffersDynamic** is the maximum number of dynamic uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. See [Dynamic Uniform Buffer](#).
- **maxDescriptorSetStorageBuffers** is the maximum number of storage buffers that **can** be included in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER](#) or [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC](#) count against this limit. Only descriptors

in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. See [Storage Buffer](#) and [Dynamic Storage Buffer](#).

- [maxDescriptorSetStorageBuffersDynamic](#) is the maximum number of dynamic storage buffers that **can** be included in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. See [Dynamic Storage Buffer](#).
- [maxDescriptorSetSampledImages](#) is the maximum number of sampled images that **can** be included in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), or [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. See [Combined Image Sampler](#), [Sampled Image](#), and [Uniform Texel Buffer](#).
- [maxDescriptorSetStorageImages](#) is the maximum number of storage images that **can** be included in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. See [Storage Image](#), and [Storage Texel Buffer](#).
- [maxDescriptorSetInputAttachments](#) is the maximum number of input attachments that **can** be included in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. See [Input Attachment](#).
- [maxVertexInputAttributes](#) is the maximum number of vertex input attributes that **can** be specified for a graphics pipeline. These are described in the array of [VkVertexInputAttributeDescription](#) structures that are provided at graphics pipeline creation time via the [pVertexAttributeDescriptions](#) member of the [VkPipelineVertexInputStateCreateInfo](#) structure. See [Vertex Attributes](#) and [Vertex Input Description](#).
- [maxVertexInputBindings](#) is the maximum number of vertex buffers that **can** be specified for providing vertex attributes to a graphics pipeline. These are described in the array of [VkVertexInputBindingDescription](#) structures that are provided at graphics pipeline creation time via the [pVertexBindingDescriptions](#) member of the [VkPipelineVertexInputStateCreateInfo](#) structure. The [binding](#) member of [VkVertexInputBindingDescription](#) **must** be less than this limit. See [Vertex Input Description](#).
- [maxVertexInputAttributeOffset](#) is the maximum vertex input attribute offset that **can** be added to the vertex input binding stride. The [offset](#) member of the [VkVertexInputAttributeDescription](#) structure **must** be less than or equal to this limit. See [Vertex Input Description](#).
- [maxVertexInputBindingStride](#) is the maximum vertex input binding stride that **can** be specified in a vertex input binding. The [stride](#) member of the [VkVertexInputBindingDescription](#) structure **must** be less than or equal to this limit. See [Vertex Input Description](#).

- `maxVertexOutputComponents` is the maximum number of components of output variables which **can** be output by a vertex shader. See [Vertex Shaders](#).
- `maxTessellationGenerationLevel` is the maximum tessellation generation level supported by the fixed-function tessellation primitive generator. See [Tessellation](#).
- `maxTessellationPatchSize` is the maximum patch size, in vertices, of patches that **can** be processed by the tessellation control shader and tessellation primitive generator. The `patchControlPoints` member of the [VkPipelineTessellationStateCreateInfo](#) structure specified at pipeline creation time and the value provided in the `OutputVertices` execution mode of shader modules **must** be less than or equal to this limit. See [Tessellation](#).
- `maxTessellationControlPerVertexInputComponents` is the maximum number of components of input variables which **can** be provided as per-vertex inputs to the tessellation control shader stage.
- `maxTessellationControlPerVertexOutputComponents` is the maximum number of components of per-vertex output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationControlPerPatchOutputComponents` is the maximum number of components of per-patch output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationControlTotalOutputComponents` is the maximum total number of components of per-vertex and per-patch output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationEvaluationInputComponents` is the maximum number of components of input variables which **can** be provided as per-vertex inputs to the tessellation evaluation shader stage.
- `maxTessellationEvaluationOutputComponents` is the maximum number of components of per-vertex output variables which **can** be output from the tessellation evaluation shader stage.
- `maxGeometryShaderInvocations` is the maximum invocation count supported for instanced geometry shaders. The value provided in the `Invocations` execution mode of shader modules **must** be less than or equal to this limit. See [Geometry Shading](#).
- `maxGeometryInputComponents` is the maximum number of components of input variables which **can** be provided as inputs to the geometry shader stage.
- `maxGeometryOutputComponents` is the maximum number of components of output variables which **can** be output from the geometry shader stage.
- `maxGeometryOutputVertices` is the maximum number of vertices which **can** be emitted by any geometry shader.
- `maxGeometryTotalOutputComponents` is the maximum total number of components of output variables, across all emitted vertices, which **can** be output from the geometry shader stage.
- `maxFragmentInputComponents` is the maximum number of components of input variables which **can** be provided as inputs to the fragment shader stage.
- `maxFragmentOutputAttachments` is the maximum number of output attachments which **can** be written to by the fragment shader stage.
- `maxFragmentDualSrcAttachments` is the maximum number of output attachments which **can** be written to by the fragment shader stage when blending is enabled and one of the dual source

blend modes is in use. See [Dual-Source Blending](#) and `dualSrcBlend`.

- `maxFragmentCombinedOutputResources` is the total number of storage buffers, storage images, and output `Location` decorated color attachments (described in [Fragment Output Interface](#)) which **can** be used in the fragment shader stage.
- `maxComputeSharedMemorySize` is the maximum total storage size, in bytes, available for variables declared with the `Workgroup` storage class in shader modules (or with the `shared` storage qualifier in GLSL) in the compute shader stage.
- `maxComputeWorkGroupCount[3]` is the maximum number of local workgroups that **can** be dispatched by a single dispatching command. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the dispatching commands **must** be less than or equal to the corresponding limit. See [Dispatching Commands](#).
- `maxComputeWorkGroupInvocations` is the maximum total number of compute shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxComputeWorkGroupSize[3]` is the maximum size of a local compute workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `subPixelPrecisionBits` is the number of bits of subpixel precision in framebuffer coordinates x_f and y_f . See [Rasterization](#).
- `subTexelPrecisionBits` is the number of bits of precision in the division along an axis of an image used for minification and magnification filters. $2^{\text{subTexelPrecisionBits}}$ is the actual number of divisions along each axis of the image represented. Sub-texel values calculated during image sampling will snap to these locations when generating the filtered results.
- `mipmapPrecisionBits` is the number of bits of division that the LOD calculation for mipmap fetching get snapped to when determining the contribution from each mip level to the mip filtered results. $2^{\text{mipmapPrecisionBits}}$ is the actual number of divisions.
- `maxDrawIndexedIndexValue` is the maximum index value that **can** be used for indexed draw calls when using 32-bit indices. This excludes the primitive restart index value of 0xFFFFFFFF. See [fullDrawIndexUint32](#).
- `maxDrawIndirectCount` is the maximum draw count that is supported for indirect drawing calls. See [multiDrawIndirect](#).
- `maxSamplerLodBias` is the maximum absolute sampler LOD bias. The sum of the `mipLodBias` member of the `VkSamplerCreateInfo` structure and the `Bias` operand of image sampling operations in shader modules (or 0 if no `Bias` operand is provided to an image sampling operation) are clamped to the range `[-maxSamplerLodBias, +maxSamplerLodBias]`. See [\[samplers-mipLodBias\]](#).
- `maxSamplerAnisotropy` is the maximum degree of sampler anisotropy. The maximum degree of anisotropic filtering used for an image sampling operation is the minimum of the `maxAnisotropy` member of the `VkSamplerCreateInfo` structure and this limit. See [\[samplers-maxAnisotropy\]](#).

- `maxViewports` is the maximum number of active viewports. The `viewportCount` member of the `VkPipelineViewportStateCreateInfo` structure that is provided at pipeline creation **must** be less than or equal to this limit.
- `maxViewportDimensions[2]` are the maximum viewport dimensions in the X (width) and Y (height) dimensions, respectively. The maximum viewport dimensions **must** be greater than or equal to the largest image which **can** be created and used as a framebuffer attachment. See [Controlling the Viewport](#).
- `viewportBoundsRange[2]` is the [minimum, maximum] range that the corners of a viewport **must** be contained in. This range **must** be at least $[-2 \times \text{size}, 2 \times \text{size} - 1]$, where `size` = $\max(\text{maxViewportDimensions}[0], \text{maxViewportDimensions}[1])$. See [Controlling the Viewport](#).

NOTE

The wide range of values required for `viewportBoundsRange` allows the viewport to be arbitrarily shifted relative to the output render target while still partially overlapping. However, the minimum range required to achieve this would actually be $[-\text{size} + 1, 2 \times \text{size} - 1]$. As these limits in implementations are typically simple power-of-two values, the specification reflects this convention, rounding the lower bound accordingly.

- `viewportSubPixelBits` is the number of bits of subpixel precision for viewport bounds. The subpixel precision that floating-point viewport bounds are interpreted at is given by this limit.
- `minMemoryMapAlignment` is the minimum **required** alignment, in bytes, of host visible memory allocations within the host address space. When mapping a memory allocation with `vkMapMemory`, subtracting `offset` bytes from the returned pointer will always produce an integer multiple of this limit. See [Host Access to Device Memory Objects](#). The value **must** be a power of two.
- `minTexelBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkBufferViewCreateInfo` structure for texel buffers. The value **must** be a power of two. This limit is equivalent to the maximum of the `uniformTexelBufferOffsetAlignmentBytes` and `storageTexelBufferOffsetAlignmentBytes` members of `VkPhysicalDeviceTexelBufferAlignmentProperties`, but smaller alignment is **optionally** allowed by `storageTexelBufferOffsetSingleTexelAlignment` and `uniformTexelBufferOffsetSingleTexelAlignment`. For single texel alignment, a format has an alignment requirement which is the size of a single component if the size of the format is a multiple of three bytes, otherwise, it is the size of the format itself. The effective alignment requirement is the minimum of the per-format alignment and `uniformTexelBufferOffsetAlignmentBytes` or `storageTexelBufferOffsetAlignmentBytes` depending on the descriptor type. If the `texelBufferAlignment` feature is not enabled, the effective alignment requirement for any format is `minTexelBufferOffsetAlignment`. `VkBufferViewCreateInfo::offset` **must** be a multiple of this value.
- `minUniformBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkDescriptorBufferInfo` structure for uniform buffers. When a descriptor of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` is updated, the `offset` **must** be an integer multiple of this limit. Similarly, dynamic offsets for uniform buffers **must** be multiples of this limit. The value **must** be a power of two.

- `minStorageBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkDescriptorBufferInfo` structure for storage buffers. When a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` is updated, the `offset` **must** be an integer multiple of this limit. Similarly, dynamic offsets for storage buffers **must** be multiples of this limit. The value **must** be a power of two.
- `minTexelOffset` is the minimum offset value for the `Offset` or `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.
- `maxTexelOffset` is the maximum offset value for the `Offset` or `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.
- `minTexelGatherOffset` is the minimum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` image instructions.
- `maxTexelGatherOffset` is the maximum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` image instructions.
- `minInterpolationOffset` is the base minimum (inclusive) negative offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.
- `maxInterpolationOffset` is the base maximum (inclusive) positive offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.
- `subPixelInterpolationOffsetBits` is the number of fractional bits that the `x` and `y` offsets to the `InterpolateAtOffset` extended instruction **may** be rounded to as fixed-point values.
- `maxFramebufferWidth` is the maximum width for a framebuffer. The `width` member of the `VkFramebufferCreateInfo` structure **must** be less than or equal to this limit.
- `maxFramebufferHeight` is the maximum height for a framebuffer. The `height` member of the `VkFramebufferCreateInfo` structure **must** be less than or equal to this limit.
- `maxFramebufferLayers` is the maximum layer count for a layered framebuffer. The `layers` member of the `VkFramebufferCreateInfo` structure **must** be less than or equal to this limit.
- `framebufferColorSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the color sample counts that are supported for all framebuffer color attachments with floating- or fixed-point formats. For color attachments with integer formats, see `framebufferIntegerColorSampleCounts`.
- `framebufferDepthSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the supported depth sample counts for all framebuffer depth/stencil attachments, when the format includes a depth component.
- `framebufferStencilSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the supported stencil sample counts for all framebuffer depth/stencil attachments, when the format includes a stencil component.
- `framebufferNoAttachmentsSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the supported sample counts for a `subpass which uses no attachments`.
- `maxColorAttachments` is the maximum number of color attachments that **can** be used by a subpass in a render pass. The `colorAttachmentCount` member of the `VkSubpassDescription` or `VkSubpassDescription2` structure **must** be less than or equal to this limit.

- `sampledImageColorSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set, and a non-integer color format.
- `sampledImageIntegerSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set, and an integer color format.
- `sampledImageDepthSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set, and a depth format.
- `sampledImageStencilSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set, and a stencil format.
- `storageImageSampleCounts` is a bitmask¹ of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, and the `VK_IMAGE_USAGE_STORAGE_BIT` usage flag set.
- `maxSampleMaskWords` is the maximum number of array elements of a variable decorated with the `SampleMask` built-in decoration.
- `timestampComputeAndGraphics` specifies support for timestamps on all graphics and compute queues. If this limit is `VK_TRUE`, all queues that advertise the `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT` in the `VkQueueFamilyProperties::queueFlags` support `VkQueueFamilyProperties::timestampValidBits` of at least 36. See [Timestamp Queries](#).
- `timestampPeriod` is the number of nanoseconds **required** for a timestamp query to be incremented by 1. See [Timestamp Queries](#).
- `maxClipDistances` is the maximum number of clip distances that **can** be used in a single shader stage. The size of any array declared with the `ClipDistance` built-in decoration in a shader module **must** be less than or equal to this limit.
- `maxCullDistances` is the maximum number of cull distances that **can** be used in a single shader stage. The size of any array declared with the `CullDistance` built-in decoration in a shader module **must** be less than or equal to this limit.
- `maxCombinedClipAndCullDistances` is the maximum combined number of clip and cull distances that **can** be used in a single shader stage. The sum of the sizes of all arrays declared with the `ClipDistance` and `CullDistance` built-in decoration used by a single shader stage in a shader module **must** be less than or equal to this limit.
- `discreteQueuePriorities` is the number of discrete priorities that **can** be assigned to a queue based on the value of each member of `VkDeviceQueueCreateInfo::pQueuePriorities`. This **must** be at least 2, and levels **must** be spread evenly over the range, with at least one level at 1.0, and another at 0.0. See [Queue Priority](#).
- `pointSizeRange[2]` is the range `[minimum,maximum]` of supported sizes for points. Values written to variables decorated with the `PointSize` built-in decoration are clamped to this range.
- `lineWidthRange[2]` is the range `[minimum,maximum]` of supported widths for lines. Values specified by the `lineWidth` member of the `VkPipelineRasterizationStateCreateInfo` or the `lineWidth` parameter to `vkCmdSetLineWidth` are clamped to this range.

- **pointSizeGranularity** is the granularity of supported point sizes. Not all point sizes in the range defined by **pointSizeRange** are supported. This limit specifies the granularity (or increment) between successive supported point sizes.
- **lineWidthGranularity** is the granularity of supported line widths. Not all line widths in the range defined by **lineWidthRange** are supported. This limit specifies the granularity (or increment) between successive supported line widths.
- **strictLines** specifies whether lines are rasterized according to the preferred method of rasterization. If set to **VK_FALSE**, lines **may** be rasterized under a relaxed set of rules. If set to **VK_TRUE**, lines are rasterized as per the strict definition. See [Basic Line Segment Rasterization](#).
- **standardSampleLocations** specifies whether rasterization uses the standard sample locations as documented in [Multisampling](#). If set to **VK_TRUE**, the implementation uses the documented sample locations. If set to **VK_FALSE**, the implementation **may** use different sample locations.
- **optimalBufferCopyOffsetAlignment** is the optimal buffer offset alignment in bytes for [vkCmdCopyBufferToImage2](#), [vkCmdCopyBufferToImage](#), [vkCmdCopyImageToBuffer2](#), and [vkCmdCopyImageToBuffer](#). This value is also the optimal host memory offset alignment in bytes for [vkCopyMemoryToImage](#) and [vkCopyImageToMemory](#). The per texel alignment requirements are enforced, but applications **should** use the optimal alignment for optimal performance and power use. The value **must** be a power of two.
- **optimalBufferCopyRowPitchAlignment** is the optimal buffer row pitch alignment in bytes for [vkCmdCopyBufferToImage2](#), [vkCmdCopyBufferToImage](#), [vkCmdCopyImageToBuffer2](#), and [vkCmdCopyImageToBuffer](#). This value is also the optimal host memory row pitch alignment in bytes for [vkCopyMemoryToImage](#) and [vkCopyImageToMemory](#). Row pitch is the number of bytes between texels with the same X coordinate in adjacent rows (Y coordinates differ by one). The per texel alignment requirements are enforced, but applications **should** use the optimal alignment for optimal performance and power use. The value **must** be a power of two.
- **nonCoherentAtomSize** is the size and alignment in bytes that bounds concurrent access to [host-mapped device memory](#). The value **must** be a power of two.

1

For all bitmasks of [VkSampleCountFlagBits](#), the sample count limits defined above represent the minimum supported sample counts for each image type. Individual images **may** support additional sample counts, which are queried using [vkGetPhysicalDeviceImageFormatProperties](#) as described in [Supported Sample Counts](#).

Bits which **may** be set in the sample count limits returned by [VkPhysicalDeviceLimits](#), as well as in other queries and structures representing image sample counts, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSampleCountFlagBits {
    VK_SAMPLE_COUNT_1_BIT = 0x00000001,
    VK_SAMPLE_COUNT_2_BIT = 0x00000002,
    VK_SAMPLE_COUNT_4_BIT = 0x00000004,
    VK_SAMPLE_COUNT_8_BIT = 0x00000008,
    VK_SAMPLE_COUNT_16_BIT = 0x00000010,
    VK_SAMPLE_COUNT_32_BIT = 0x00000020,
    VK_SAMPLE_COUNT_64_BIT = 0x00000040,
} VkSampleCountFlagBits;
```

- [VK_SAMPLE_COUNT_1_BIT](#) specifies an image with one sample per pixel.
- [VK_SAMPLE_COUNT_2_BIT](#) specifies an image with 2 samples per pixel.
- [VK_SAMPLE_COUNT_4_BIT](#) specifies an image with 4 samples per pixel.
- [VK_SAMPLE_COUNT_8_BIT](#) specifies an image with 8 samples per pixel.
- [VK_SAMPLE_COUNT_16_BIT](#) specifies an image with 16 samples per pixel.
- [VK_SAMPLE_COUNT_32_BIT](#) specifies an image with 32 samples per pixel.
- [VK_SAMPLE_COUNT_64_BIT](#) specifies an image with 64 samples per pixel.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSampleCountFlags;
```

[VkSampleCountFlags](#) is a bitmask type for setting a mask of zero or more [VkSampleCountFlagBits](#).

The [VkPhysicalDevicePushDescriptorProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePushDescriptorProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxPushDescriptors;
} VkPhysicalDevicePushDescriptorProperties;
```

```
// Provided by VK_KHR_push_descriptor
// Equivalent to VkPhysicalDevicePushDescriptorProperties
typedef VkPhysicalDevicePushDescriptorProperties
VkPhysicalDevicePushDescriptorPropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxPushDescriptors](#) is the maximum number of descriptors that **can** be used in a descriptor set layout created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT](#) set.

If the `VkPhysicalDevicePushDescriptorProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VOID-VkPhysicalDevicePushDescriptorProperties-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PUSH_DESCRIPTOR_PROPERTIES`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceMultiviewProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            maxMultiviewViewCount;
    uint32_t            maxMultiviewInstanceIndex;
} VkPhysicalDeviceMultiviewProperties;
```

```
// Provided by VK_KHR_multiview
// Equivalent to VkPhysicalDeviceMultiviewProperties
typedef VkPhysicalDeviceMultiviewProperties VkPhysicalDeviceMultiviewPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxMultiviewViewCount` is one greater than the maximum view index that **can** be used in a subpass.
- `maxMultiviewInstanceIndex` is the maximum valid value of instance index allowed to be generated by a drawing command recorded within a subpass of a multiview render pass instance.

If the `VkPhysicalDeviceMultiviewProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewProperties-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PROPERTIES](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceFloatControlsProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceFloatControlsProperties {
    VkStructureType    sType;
    void*              pNext;
    VkShaderFloatControlsIndependence  denormBehaviorIndependence;
    VkShaderFloatControlsIndependence  roundingModeIndependence;
    VkBool32           shaderSignedZeroInfNanPreserveFloat16;
    VkBool32           shaderSignedZeroInfNanPreserveFloat32;
    VkBool32           shaderSignedZeroInfNanPreserveFloat64;
    VkBool32           shaderDenormPreserveFloat16;
    VkBool32           shaderDenormPreserveFloat32;
    VkBool32           shaderDenormPreserveFloat64;
    VkBool32           shaderDenormFlushToZeroFloat16;
    VkBool32           shaderDenormFlushToZeroFloat32;
    VkBool32           shaderDenormFlushToZeroFloat64;
    VkBool32           shaderRoundingModeRTEFloat16;
    VkBool32           shaderRoundingModeRTEFloat32;
    VkBool32           shaderRoundingModeRTEFloat64;
    VkBool32           shaderRoundingModeRTZFloat16;
    VkBool32           shaderRoundingModeRTZFloat32;
    VkBool32           shaderRoundingModeRTZFloat64;
} VkPhysicalDeviceFloatControlsProperties;
```

```
// Provided by VK_KHR_shader_float_controls
// Equivalent to VkPhysicalDeviceFloatControlsProperties
typedef VkPhysicalDeviceFloatControlsProperties
VkPhysicalDeviceFloatControlsPropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **denormBehaviorIndependence** is a [VkShaderFloatControlsIndependence](#) value indicating whether, and how, denorm behavior can be set independently for different bit widths.

- `roundingModeIndependence` is a `VkShaderFloatControlsIndependence` value indicating whether, and how, rounding modes can be set independently for different bit widths.
- `shaderSignedZeroInfNanPreserveFloat16` is a boolean value indicating whether sign of a zero, Nans and $\pm\infty$ **can** be preserved in 16-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode **can** be used for 16-bit floating-point types.
- `shaderSignedZeroInfNanPreserveFloat32` is a boolean value indicating whether sign of a zero, Nans and $\pm\infty$ **can** be preserved in 32-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode **can** be used for 32-bit floating-point types.
- `shaderSignedZeroInfNanPreserveFloat64` is a boolean value indicating whether sign of a zero, Nans and $\pm\infty$ **can** be preserved in 64-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode **can** be used for 64-bit floating-point types.
- `shaderDenormPreserveFloat16` is a boolean value indicating whether denormals **can** be preserved in 16-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 16-bit floating-point types.
- `shaderDenormPreserveFloat32` is a boolean value indicating whether denormals **can** be preserved in 32-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 32-bit floating-point types.
- `shaderDenormPreserveFloat64` is a boolean value indicating whether denormals **can** be preserved in 64-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 64-bit floating-point types.
- `shaderDenormFlushToZeroFloat16` is a boolean value indicating whether denormals **can** be flushed to zero in 16-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 16-bit floating-point types.
- `shaderDenormFlushToZeroFloat32` is a boolean value indicating whether denormals **can** be flushed to zero in 32-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 32-bit floating-point types.
- `shaderDenormFlushToZeroFloat64` is a boolean value indicating whether denormals **can** be flushed to zero in 64-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 64-bit floating-point types.
- `shaderRoundingModeRTEFloat16` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 16-bit floating-point types.
- `shaderRoundingModeRTEFloat32` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 32-bit floating-point types.
- `shaderRoundingModeRTEFloat64` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 64-bit floating-point types.
- `shaderRoundingModeRTZFloat16` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 16-bit floating-point arithmetic and

conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode **can** be used for 16-bit floating-point types.

- `shaderRoundingModeRTZFloat32` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode **can** be used for 32-bit floating-point types.
- `shaderRoundingModeRTZFloat64` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode **can** be used for 64-bit floating-point types.

If the `VkPhysicalDeviceFloatControlsProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFloatControlsProperties-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FLOAT_CONTROLS_PROPERTIES`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

Values which **may** be returned in the `denormBehaviorIndependence` and `roundingModeIndependence` fields of `VkPhysicalDeviceFloatControlsProperties` are:

```
// Provided by VK_VERSION_1_2
typedef enum VkShaderFloatControlsIndependence {
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY = 0,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL = 1,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE = 2,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE,
} VkShaderFloatControlsIndependence;
```

```
// Provided by VK_KHR_shader_float_controls
// Equivalent to VkShaderFloatControlsIndependence
typedef VkShaderFloatControlsIndependence VkShaderFloatControlsIndependenceKHR;
```

- [VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY](#) specifies that shader float controls for 32-bit floating-point **can** be set independently; other bit widths **must** be set identically to each other.
- [VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL](#) specifies that shader float controls for all bit widths **can** be set independently.
- [VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE](#) specifies that shader float controls for all bit widths **must** be set identically.

The [VkPhysicalDeviceDiscardRectanglePropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_discard_rectangles
typedef struct VkPhysicalDeviceDiscardRectanglePropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxDiscardRectangles;
} VkPhysicalDeviceDiscardRectanglePropertiesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [maxDiscardRectangles](#) is the maximum number of active discard rectangles that **can** be specified.

If the [VkPhysicalDeviceDiscardRectanglePropertiesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDiscardRectanglePropertiesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISCARD_RECTANGLE_PROPERTIES_EXT](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceSampleLocationsPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_sample_locations
typedef struct VkPhysicalDeviceSampleLocationsPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkSampleCountFlags sampleLocationSampleCounts;
    VkExtent2D         maxSampleLocationGridSize;
    float              sampleLocationCoordinateRange[2];
    uint32_t           sampleLocationSubPixelBits;
    VkBool32           variableSampleLocations;
} VkPhysicalDeviceSampleLocationsPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sampleLocationSampleCounts` is a bitmask of `VkSampleCountFlagBits` indicating the sample counts supporting custom sample locations.
- `maxSampleLocationGridSize` is the maximum size of the pixel grid in which sample locations **can** vary that is supported for all sample counts in `sampleLocationSampleCounts`.
- `sampleLocationCoordinateRange[2]` is the range of supported sample location coordinates.
- `sampleLocationSubPixelBits` is the number of bits of subpixel precision for sample locations.
- `variableSampleLocations` specifies whether the sample locations used by all pipelines that will be bound to a command buffer during a subpass **must** match. If set to `VK_TRUE`, the implementation supports variable sample locations in a subpass. If set to `VK_FALSE`, then the sample locations **must** stay constant in each subpass.

If the `VkPhysicalDeviceSampleLocationsPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSampleLocationsPropertiesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLE_LOCATIONS_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_legacy_vertex_attributes
typedef struct VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nativeUnalignedPerformance;
} VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **nativeUnalignedPerformance** specifies whether unaligned vertex fetches do not incur significant performance penalties as compared to aligned fetches.

If the [VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT](#), it **must** add an instance of the structure, with the desired feature members set to **VK_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LEGACY_VERTEX_ATTRIBUTES_PROPERTIES_EXT](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceExternalMemoryHostPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkPhysicalDeviceExternalMemoryHostPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        minImportedHostPointerAlignment;
} VkPhysicalDeviceExternalMemoryHostPropertiesEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minImportedHostPointerAlignment` is the minimum **required** alignment, in bytes, for the base address and size of host pointers that **can** be imported to a Vulkan memory object. The value **must** be a power of two.

If the `VkPhysicalDeviceExternalMemoryHostPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalMemoryHostPropertiesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_HOST_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX` structure is defined as:

```
// Provided by VK_NVX_multiview_per_view_attributes
typedef struct VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           perViewPositionAllComponents;
} VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `perViewPositionAllComponents` is `VK_TRUE` if the implementation supports per-view position values that differ in components other than the X component.

If the `VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PER_VIEW_ATTRIBUTES_PROPERTIES_NVX`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDevicePointClippingProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevicePointClippingProperties {
    VkStructureType    sType;
    void*              pNext;
    VkPointClippingBehavior pointClippingBehavior;
} VkPhysicalDevicePointClippingProperties;
```

```
// Provided by VK_KHR_maintenance2
// Equivalent to VkPhysicalDevicePointClippingProperties
typedef VkPhysicalDevicePointClippingProperties
VkPhysicalDevicePointClippingPropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pointClippingBehavior` is a [VkPointClippingBehavior](#) value specifying the point clipping behavior supported by the implementation.

If the `VkPhysicalDevicePointClippingProperties` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePointClippingProperties-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_POINT_CLIPPING_PROPERTIES`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceSubgroupProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSubgroupProperties {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             subgroupSize;
    VkShaderStageFlags   supportedStages;
    VkSubgroupFeatureFlags supportedOperations;
    VkBool32             quadOperationsInAllStages;
} VkPhysicalDeviceSubgroupProperties;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subgroupSize` is the default number of invocations in each subgroup. `subgroupSize` is at least 1 if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. `subgroupSize` is a power-of-two.
- `supportedStages` is a bitfield of `VkShaderStageFlagBits` describing the shader stages that `group operations` with `subgroup scope` are supported in. `supportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.
- `supportedOperations` is a bitmask of `VkSubgroupFeatureFlagBits` specifying the sets of `group operations` with `subgroup scope` supported on this device. `supportedOperations` will have the `VK_SUBGROUP_FEATURE_BASIC_BIT` bit set if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`.
- `quadOperationsInAllStages` is a boolean specifying whether `quad group operations` are available in all stages, or are restricted to fragment and compute stages.

If the `VkPhysicalDeviceSubgroupProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `supportedOperations` includes `VK_SUBGROUP_FEATURE_QUAD_BIT`, or the `shaderSubgroupUniformControlFlow` feature is enabled, `subgroupSize` **must** be greater than or equal to 4.

If the `shaderQuadControl` feature is supported, `supportedOperations` **must** include `VK_SUBGROUP_FEATURE_QUAD_BIT`.

If `VK_KHR_shader_subgroup_rotate` is supported, and the implementation advertises support with a `VkExtensionProperties::specVersion` greater than or equal to 2, and the `shaderSubgroupRotate` feature is supported, `VK_SUBGROUP_FEATURE_ROTATE_BIT` **must** be returned in `VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations` and `VkPhysicalDeviceSubgroupProperties::supportedOperations`. If `VK_KHR_shader_subgroup_rotate` is supported, and the implementation advertises support with a `VkExtensionProperties::specVersion` greater than or equal to 2, and the `shaderSubgroupRotateClustered` feature is supported, `VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT` **must** be returned in `VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations` and

VkPhysicalDeviceSubgroupProperties::supportedOperations.

If Vulkan 1.4 is supported, VK_SUBGROUP_FEATURE_ROTATE_BIT and VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT must be returned in VkPhysicalDeviceSubgroupProperties::supportedOperations and VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations

NOTE

VK_SUBGROUP_FEATURE_ROTATE_BIT and VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT were added in version 2 of the VK_KHR_shader_subgroup_rotate extension, after the initial release, so there are implementations that do not advertise these bits. Applications should use the shaderSubgroupRotate and shaderSubgroupRotateClustered features to determine and enable support. These bits are advertised here for consistency and for future dependencies.

If the shaderSubgroupPartitioned feature is supported, supportedOperations must include VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupProperties-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

Bits which can be set in VkPhysicalDeviceSubgroupProperties::supportedOperations and VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations to specify supported group operations with subgroup scope are:

```

// Provided by VK_VERSION_1_1
typedef enum VkSubgroupFeatureFlagBits {
    VK_SUBGROUP_FEATURE_BASIC_BIT = 0x00000001,
    VK_SUBGROUP_FEATURE_VOTE_BIT = 0x00000002,
    VK_SUBGROUP_FEATURE_ARITHMETIC_BIT = 0x00000004,
    VK_SUBGROUP_FEATURE_BALLOT_BIT = 0x00000008,
    VK_SUBGROUP_FEATURE_SHUFFLE_BIT = 0x00000010,
    VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT = 0x00000020,
    VK_SUBGROUP_FEATURE_CLUSTERED_BIT = 0x00000040,
    VK_SUBGROUP_FEATURE_QUAD_BIT = 0x00000080,
    // Provided by VK_VERSION_1_4
    VK_SUBGROUP_FEATURE_ROTATE_BIT = 0x00000200,
    // Provided by VK_VERSION_1_4
    VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT = 0x00000400,
    // Provided by VK_EXT_shader_subgroup_partitioned
    VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT = 0x00000100,
    // Provided by VK_NV_shader_subgroup_partitioned
    VK_SUBGROUP_FEATURE_PARTITIONED_BIT_NV = VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT,
    // Provided by VK_KHR_shader_subgroup_rotate
    VK_SUBGROUP_FEATURE_ROTATE_BIT_KHR = VK_SUBGROUP_FEATURE_ROTATE_BIT,
    // Provided by VK_KHR_shader_subgroup_rotate
    VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT_KHR =
VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT,
} VkSubgroupFeatureFlagBits;

```

- **VK_SUBGROUP_FEATURE_BASIC_BIT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniform** capability.
- **VK_SUBGROUP_FEATURE_VOTE_BIT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniformVote** capability.
- **VK_SUBGROUP_FEATURE_ARITHMETIC_BIT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniformArithmetic** capability.
- **VK_SUBGROUP_FEATURE_BALLOT_BIT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniformBallot** capability.
- **VK_SUBGROUP_FEATURE_SHUFFLE_BIT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniformShuffle** capability.
- **VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniformShuffleRelative** capability.
- **VK_SUBGROUP_FEATURE_CLUSTERED_BIT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniformClustered** capability.
- **VK_SUBGROUP_FEATURE_QUAD_BIT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniformQuad** capability.
- **VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniformPartitionedEXT** capability.
- **VK_SUBGROUP_FEATURE_ROTATE_BIT** specifies the device will accept SPIR-V shader modules containing the **GroupNonUniformRotateKHR** capability.

- [VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT](#) specifies the device will accept SPIR-V shader modules that use the [ClusterSize](#) operand to [OpGroupNonUniformRotateKHR](#).

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkSubgroupFeatureFlags;
```

[VkSubgroupFeatureFlags](#) is a bitmask type for setting a mask of zero or more [VkSubgroupFeatureFlagBits](#).

The [VkPhysicalDeviceSubgroupSizeControlProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           minSubgroupSize;
    uint32_t           maxSubgroupSize;
    uint32_t           maxComputeWorkgroupSubgroups;
    VkShaderStageFlags requiredSubgroupSizeStages;
} VkPhysicalDeviceSubgroupSizeControlProperties;
```

```
// Provided by VK_EXT_subgroup_size_control
// Equivalent to VkPhysicalDeviceSubgroupSizeControlProperties
typedef VkPhysicalDeviceSubgroupSizeControlProperties
VkPhysicalDeviceSubgroupSizeControlPropertiesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [minSubgroupSize](#) is the minimum subgroup size supported by this device. [minSubgroupSize](#) is at least one if any of the physical device's queues support [VK_QUEUE_GRAPHICS_BIT](#) or [VK_QUEUE_COMPUTE_BIT](#). [minSubgroupSize](#) is a power-of-two. [minSubgroupSize](#) is less than or equal to [maxSubgroupSize](#). [minSubgroupSize](#) is less than or equal to [subgroupSize](#).
- [maxSubgroupSize](#) is the maximum subgroup size supported by this device. [maxSubgroupSize](#) is at least one if any of the physical device's queues support [VK_QUEUE_GRAPHICS_BIT](#) or [VK_QUEUE_COMPUTE_BIT](#). [maxSubgroupSize](#) is a power-of-two. [maxSubgroupSize](#) is greater than or equal to [minSubgroupSize](#). [maxSubgroupSize](#) is greater than or equal to [subgroupSize](#).
- [maxComputeWorkgroupSubgroups](#) is the maximum number of subgroups supported by the implementation within a workgroup.
- [requiredSubgroupSizeStages](#) is a bitfield of what shader stages support having a required subgroup size specified.

If the [VkPhysicalDeviceSubgroupSizeControlProperties](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

If `VkPhysicalDeviceSubgroupProperties::supportedOperations` includes `VK_SUBGROUP_FEATURE_QUAD_BIT`, `minSubgroupSize` must be greater than or equal to 4.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceSubgroupSizeControlProperties-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_PROPERTIES`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            advancedBlendMaxColorAttachments;
    VkBool32           advancedBlendIndependentBlend;
    VkBool32           advancedBlendNonPremultipliedSrcColor;
    VkBool32           advancedBlendNonPremultipliedDstColor;
    VkBool32           advancedBlendCorrelatedOverlap;
    VkBool32           advancedBlendAllOperations;
} VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `advancedBlendMaxColorAttachments` is one greater than the highest color attachment index that can be used in a render pass instance, for a pipeline that uses an advanced blend operation.
- `advancedBlendIndependentBlend` specifies whether advanced blend operations can vary per-attachment.
- `advancedBlendNonPremultipliedSrcColor` specifies whether the source color can be treated as non-premultiplied. If this is `VK_FALSE`, then `VkPipelineColorBlendAdvancedStateCreateInfoEXT::srcPremultiplied` must be `VK_TRUE`.
- `advancedBlendNonPremultipliedDstColor` specifies whether the destination color can be treated as non-premultiplied. If this is `VK_FALSE`, then `VkPipelineColorBlendAdvancedStateCreateInfoEXT::dstPremultiplied` must be `VK_TRUE`.
- `advancedBlendCorrelatedOverlap` specifies whether the overlap mode can be treated as correlated. If this is `VK_FALSE`, then `VkPipelineColorBlendAdvancedStateCreateInfoEXT::blendOverlap` must be `VK_BLEND_OVERLAP_UNCORRELATED_EXT`.

- `advancedBlendAllOperations` specifies whether all advanced blend operation enums are supported. See the valid usage of `VkPipelineColorBlendAttachmentState`.

If the `VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BLEND_OPERATION_ADVANCED_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_vertex_attribute_divisor
typedef struct VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            maxVertexAttribDivisor;
} VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxVertexAttribDivisor` is the maximum value of the number of instances that will repeat the value of vertex attribute data when instanced rendering is enabled.

If the `VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceVertexAttributeDivisorProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceVertexAttributeDivisorProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVertexAttribDivisor;
    VkBool32           supportsNonZeroFirstInstance;
} VkPhysicalDeviceVertexAttributeDivisorProperties;
```

```
// Provided by VK_KHR_vertex_attribute_divisor
// Equivalent to VkPhysicalDeviceVertexAttributeDivisorProperties
typedef VkPhysicalDeviceVertexAttributeDivisorProperties
VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxVertexAttribDivisor](#) is the maximum value of the number of instances that will repeat the value of vertex attribute data when instanced rendering is enabled.
- [supportsNonZeroFirstInstance](#) specifies whether a non-zero value for the [firstInstance](#) parameter of [drawing commands](#) is supported when [VkVertexInputBindingDivisorDescription::divisor](#) is not 1.

If the [VkPhysicalDeviceVertexAttributeDivisorProperties](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorProperties-sType-sType [sType](#) must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_PROPERTIES](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSamplerFilterMinmaxProperties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           filterMinmaxSingleComponentFormats;
    VkBool32           filterMinmaxImageComponentMapping;
} VkPhysicalDeviceSamplerFilterMinmaxProperties;
```

```
// Provided by VK_EXT_sampler_filter_minmax
// Equivalent to VkPhysicalDeviceSamplerFilterMinmaxProperties
typedef VkPhysicalDeviceSamplerFilterMinmaxProperties
VkPhysicalDeviceSamplerFilterMinmaxPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `filterMinmaxSingleComponentFormats` is a boolean value indicating whether a minimum set of required formats support min/max filtering.
- `filterMinmaxImageComponentMapping` is a boolean value indicating whether the implementation supports non-identity component mapping of the image when doing min/max filtering.

If the `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `filterMinmaxSingleComponentFormats` is `VK_TRUE`, the following formats **must** support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT` feature with `VK_IMAGE_TILING_OPTIMAL`, if they support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`:

- `VK_FORMAT_R8_UNORM`
- `VK_FORMAT_R8_SNORM`
- `VK_FORMAT_R16_UNORM`
- `VK_FORMAT_R16_SNORM`
- `VK_FORMAT_R16_SFLOAT`
- `VK_FORMAT_R32_SFLOAT`
- `VK_FORMAT_D16_UNORM`
- `VK_FORMAT_X8_D24_UNORM_PACK32`
- `VK_FORMAT_D32_SFLOAT`
- `VK_FORMAT_D16_UNORM_S8_UINT`
- `VK_FORMAT_D24_UNORM_S8_UINT`

- [VK_FORMAT_D32_SFLOAT_S8_UINT](#)

If the format is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports min/max filtering, and that min/max filtering of the depth aspect is supported when depth compare is disabled in the sampler.

If `filterMinmaxImageComponentMapping` is [VK_FALSE](#) the component mapping of the image view used with min/max filtering **must** have been created with the `r` component set to the [identity swizzle](#). Only the `r` component of the sampled image value is defined; reading other component values results in poison. If `filterMinmaxImageComponentMapping` is [VK_TRUE](#) this restriction does not apply and image component mapping works as normal.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSamplerFilterMinmaxProperties-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLER_FILTER_MINMAX_PROPERTIES](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceProtectedMemoryProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceProtectedMemoryProperties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           protectedNoFault;
} VkPhysicalDeviceProtectedMemoryProperties;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `protectedNoFault` specifies how an implementation behaves when an application attempts to write to unprotected memory in a protected queue operation, read from protected memory in an unprotected queue operation, or perform a query in a protected queue operation. If this limit is [VK_TRUE](#), such writes will be discarded or have undefined values written; reads and queries will return poison. If this limit is [VK_FALSE](#), applications **must** not perform these operations. See [Protected Memory Access Rules](#) for more information.

If the `VkPhysicalDeviceProtectedMemoryProperties` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceProtectedMemoryProperties-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROTECTED_MEMORY_PROPERTIES`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceMaintenance3Properties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMaintenance3Properties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxPerSetDescriptors;
    VkDeviceSize       maxMemoryAllocationSize;
} VkPhysicalDeviceMaintenance3Properties;
```

```
// Provided by VK_KHR_maintenance3
// Equivalent to VkPhysicalDeviceMaintenance3Properties
typedef VkPhysicalDeviceMaintenance3Properties
VkPhysicalDeviceMaintenance3PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxPerSetDescriptors` is a maximum number of descriptors (summed over all descriptor types) in a single descriptor set that is guaranteed to satisfy any implementation-dependent constraints on the size of a descriptor set itself. Applications **can** query whether a descriptor set that goes beyond this limit is supported using `vkGetDescriptorSetLayoutSupport`.
- `maxMemoryAllocationSize` is the maximum size of a memory allocation that **can** be created, even if there is more space available in the heap. If `VkMemoryAllocateInfo::allocationSize` is larger the error `VK_ERROR_OUT_OF_DEVICE_MEMORY` may be returned.

If the `VkPhysicalDeviceMaintenance3Properties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance3Properties-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_3_PROPERTIES](#)

```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkPhysicalDeviceMaintenance5Properties
typedef VkPhysicalDeviceMaintenance5Properties
VkPhysicalDeviceMaintenance5PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `earlyFragmentMultisampleCoverageAfterSampleCounting` is a boolean value indicating whether the `fragment shading` and `multisample coverage` operations are performed after `sample counting` for `fragment shaders` with `EarlyFragmentTests` execution mode.
- `earlyFragmentSampleMaskTestBeforeSampleCounting` is a boolean value indicating whether the `sample mask test` operation is performed before `sample counting` for `fragment shaders` using the `EarlyFragmentTests` execution mode.
- `depthStencilSwizzleOneSupport` is a boolean indicating that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE` have defined behavior.
- `polygonModePointSize` is a boolean value indicating whether the point size of the final rasterization of polygons with `VK_POLYGON_MODE_POINT` is controlled by `PointSize`.
- `nonStrictSinglePixelWideLinesUseParallelogram` is a boolean value indicating whether non-strict lines with a width of 1.0 are rasterized as parallelograms or using Bresenham's algorithm.
- `nonStrictWideLinesUseParallelogram` is a boolean value indicating whether non-strict lines with a width greater than 1.0 are rasterized as parallelograms or using Bresenham's algorithm.

If the `VkPhysicalDeviceMaintenance5Properties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance5Properties-sType-sType

sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_PROPERTIES](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceMaintenance6Properties](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance6Properties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           blockTexelViewCompatibleMultipleLayers;
    uint32_t           maxCombinedImageSamplerDescriptorCount;
    VkBool32           fragmentShadingRateClampCombinerInputs;
} VkPhysicalDeviceMaintenance6Properties;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkPhysicalDeviceMaintenance6Properties
typedef VkPhysicalDeviceMaintenance6Properties
VkPhysicalDeviceMaintenance6PropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **blockTexelViewCompatibleMultipleLayers** is a boolean value indicating that an implementation supports creating image views with [VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT](#) where the **layerCount** member of **subresourceRange** is greater than 1.
- **maxCombinedImageSamplerDescriptorCount** is the maximum number of combined image sampler descriptors that the implementation uses to access any of the [formats that require a sampler Y'C_BC_R conversion](#) supported by the implementation.
- **fragmentShadingRateClampCombinerInputs** is a boolean value indicating that an implementation clamps the inputs to [combiner operations](#).

If the [VkPhysicalDeviceMaintenance6Properties](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance6Properties-sType-sType

sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_6_PROPERTIES](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceMaintenance7PropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceMaintenance7PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustFragmentShadingRateAttachmentAccess;
    VkBool32           separateDepthStencilAttachmentAccess;
    uint32_t           maxDescriptorSetTotalUniformBuffersDynamic;
    uint32_t           maxDescriptorSetTotalStorageBuffersDynamic;
    uint32_t           maxDescriptorSetTotalBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalBuffersDynamic;
} VkPhysicalDeviceMaintenance7PropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **robustFragmentShadingRateAttachmentAccess** indicates whether the scaled size of a fragment shading rate attachment **can** be less than the size of the render area. If **robustFragmentShadingRateAttachmentAccess** is [VK_FALSE](#), the size of the attachment multiplied by the texel size **must** be greater than or equal to the size of the render area. If it is [VK_TRUE](#) and the fragment shading rate attachment was created with [VkImageSubresourceRange::baseMipLevel](#) equal to 0, the scaled size **can** be smaller than the render area, with missing shading rates defined by [out of bounds behavior](#).
- **separateDepthStencilAttachmentAccess** indicates support for writing to one aspect of a depth/stencil attachment without performing read-modify-write operations on the other aspect. If this property is [VK_TRUE](#), writes to one aspect **must** not result in read-modify-write operations on the other aspect. If [VK_FALSE](#), writes to one aspect **may** result in writes to the other aspect as defined by [render pass load operations](#), [render pass store operations](#) and [render pass resolve operations](#).
- **maxDescriptorSetTotalUniformBuffersDynamic** is the maximum total count of dynamic uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit. See [Dynamic Uniform Buffer](#).

- `maxDescriptorSetTotalStorageBuffersDynamic` is the maximum total count of dynamic storage buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Dynamic Storage Buffer](#).
- `maxDescriptorSetTotalBuffersDynamic` is the maximum total count of dynamic uniform buffers and storage buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic` is similar to `maxDescriptorSetTotalUniformBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic` is similar to `maxDescriptorSetTotalStorageBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindTotalBuffersDynamic` is similar to `maxDescriptorSetTotalBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic storage buffer descriptors from a pool created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`.

If the `VkPhysicalDeviceMaintenance7PropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceMaintenance7PropertiesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_7_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceLayeredApiPropertiesListKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiPropertiesListKHR {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             layeredApiCount;
    VkPhysicalDeviceLayeredApiPropertiesKHR* pLayeredApis;
} VkPhysicalDeviceLayeredApiPropertiesListKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `layeredApiCount` is an integer related to the number of layered implementations underneath the Vulkan physical device, as described below.
- `pLayeredApis` is a pointer to an array of `VkPhysicalDeviceLayeredApiPropertiesKHR` in which information regarding the layered implementations underneath the Vulkan physical device are returned.

If `pLayeredApis` is `NULL`, then the number of layered implementations that are underneath the top-most Vulkan physical device (i.e. the one returned by `vkGetPhysicalDeviceProperties2`) is returned in `layeredApiCount`. Otherwise, `layeredApiCount` **must** be set by the application to the number of elements in the `pLayeredApis` array, and on return is overwritten with the number of values actually written to `pLayeredApis`. If the value of `layeredApiCount` is less than the number of layered implementations underneath the Vulkan physical device, at most `layeredApiCount` values will be written to `pLayeredApis`. An implementation that is not a layer will return 0 in `layeredApiCount`.

In the presence of multiple layered implementations, each element of `pLayeredApis` corresponds to an API implementation that is implemented on top of the API at the previous index. If there are layered implementations underneath a non-Vulkan implementation, they may not be visible in this query as the corresponding APIs may lack such a query.

If the `VkPhysicalDeviceLayeredApiPropertiesListKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiPropertiesListKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_PROPERTIES_LIST_KHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesListKHR-pLayeredApis-parameter If `layeredApiCount` is not 0, and `pLayeredApis` is not `NULL`, `pLayeredApis` **must** be a valid pointer to an array of `layeredApiCount` `VkPhysicalDeviceLayeredApiPropertiesKHR` structures

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceLayeredApiPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiPropertiesKHR {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             vendorID;
    uint32_t             deviceID;
    VkPhysicalDeviceLayeredApiKHR    layeredAPI;
    char                 deviceName[VK_MAX_PHYSICAL_DEVICE_NAME_SIZE];
} VkPhysicalDeviceLayeredApiPropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vendorID` is a unique identifier for the vendor of the layered implementation.
- `deviceID` is a unique identifier for the layered implementation among devices available from the vendor.
- `layeredAPI` is a [VkPhysicalDeviceLayeredApiKHR](#) specifying the API implemented by the layered implementation.
- `deviceName` is an array of `VK_MAX_PHYSICAL_DEVICE_NAME_SIZE` `char` containing a null-terminated UTF-8 string which is the name of the device.

If `layeredAPI` is `VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR`, additional Vulkan-specific information can be queried by including the [VkPhysicalDeviceLayeredApiVulkanPropertiesKHR](#) structure in the `pNext` chain. Otherwise if such a structure is included in the `pNext` chain, it is ignored.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_PROPERTIES_KHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-pNext-pNext `pNext` **must** be `NULL` or a pointer to a valid instance of [VkPhysicalDeviceLayeredApiVulkanPropertiesKHR](#)
- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-sType-unique The `sType` value of each structure in the `pNext` chain **must** be unique

The list of possible API implementations of a layered implementation underneath the Vulkan physical device, as returned in `VkPhysicalDeviceLayeredApiPropertiesKHR::layeredAPI`, are:

```
// Provided by VK_KHR_maintenance7
typedef enum VkPhysicalDeviceLayeredApiKHR {
    VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR = 0,
    VK_PHYSICAL_DEVICE_LAYERED_API_D3D12_KHR = 1,
    VK_PHYSICAL_DEVICE_LAYERED_API_METAL_KHR = 2,
    VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_KHR = 3,
    VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_ES_KHR = 4,
} VkPhysicalDeviceLayeredApiKHR;
```

- `VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR` - the device implements the Vulkan API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_D3D12_KHR` - the device implements the D3D12 API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_METAL_KHR` - the device implements the Metal API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_KHR` - the device implements the OpenGL API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_ES_KHR` - the device implements the OpenGL ES API.

The `VkPhysicalDeviceLayeredApiVulkanPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiVulkanPropertiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkPhysicalDeviceProperties2 properties;
} VkPhysicalDeviceLayeredApiVulkanPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `properties` is a `VkPhysicalDeviceProperties2` in which properties of the underlying layered Vulkan implementation are returned.

The implementation **must** zero-fill the contents of `properties.properties.limits` and `properties.properties.sparseProperties`.

Valid Usage

- VUID-VkPhysicalDeviceLayeredApiVulkanPropertiesKHR-pNext-10011
Only `VkPhysicalDeviceDriverProperties` and `VkPhysicalDeviceIDProperties` are allowed in the `pNext` chain of `properties`

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiVulkanPropertiesKHR-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_VULKAN_PROPERTIES_KHR

Structure Chaining

Extends the structure

- [VkPhysicalDeviceLayeredApiPropertiesKHR](#)

The [VkPhysicalDeviceMaintenance9PropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance9
typedef struct VkPhysicalDeviceMaintenance9PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           image2DViewOf3DSparse;
    VkDefaultVertexAttributeValueKHR defaultVertexAttributeValue;
} VkPhysicalDeviceMaintenance9PropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- If the [image2DViewOf3D](#) feature is enabled, [image2DViewOf3DSparse](#) indicates whether the implementation supports binding a slice of a sparse 3D image to a 2D image view.
- [defaultVertexAttributeValue](#) is a [VkDefaultVertexAttributeValueKHR](#) that indicates what value the implementation will return when the vertex shader reads unbound vertex attributes. Unbound attributes are those that have no corresponding [VkVertexInputAttributeDescription::location](#) defined in the bound graphics pipeline or no corresponding [VkVertexInputAttributeDescription2EXT::location](#) set by the most recent call to [vkCmdSetVertexInputEXT](#) when the state is dynamic .

If the [VkPhysicalDeviceMaintenance9PropertiesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance9PropertiesKHR-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_9_PROPERTIES_KHR

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The possible values returned by the implementation when the vertex shader reads an unbound vertex attribute are:

```
// Provided by VK_KHR_maintenance9
typedef enum VkDefaultVertexAttributeValueKHR {
    VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ZERO_KHR = 0,
    VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ONE_KHR = 1,
} VkDefaultVertexAttributeValueKHR;
```

- [VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ZERO_KHR](#) - the value read for an unbound vertex attribute is (0,0,0,0).
- [VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ONE_KHR](#) - the value read for an unbound vertex attribute is (0,0,0,1).

The [VkPhysicalDeviceMaintenance10PropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance10
typedef struct VkPhysicalDeviceMaintenance10PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rgba40paqueBlackSwizzled;
    VkBool32           resolveSrgbFormatAppliesTransferFunction;
    VkBool32           resolveSrgbFormatSupportsTransferFunctionControl;
} VkPhysicalDeviceMaintenance10PropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [rgba40paqueBlackSwizzled](#) indicates whether correct swizzling is applied to the opaque black border color when using either the [VK_FORMAT_B4G4R4A4_UNORM_PACK16](#) or [VK_FORMAT_R4G4B4A4_UNORM_PACK16](#) format. If it is [VK_TRUE](#), the implementation will correctly produce an opaque black border color with these formats. If it is [VK_FALSE](#), the implementation **may** swap the first channel with the alpha channel for the border color when sampling.
- [resolveSrgbFormatAppliesTransferFunction](#) indicates whether resolving a multi-sampled sRGB format to single-sampled sRGB by a weighted average converts the samples to linear before averaging. This applies to both attachment resolves in a render pass and standalone resolve commands. If [VK_TRUE](#), implementation always converts to linear before averaging unless overridden. If [VK_FALSE](#), implementation never converts to linear before averaging unless overridden.

- `resolveSrgbFormatSupportsTransferFunctionControl` indicates whether the implementation supports overriding the default behavior in `resolveSrgbFormatAppliesTransferFunction` in render passes and `vkCmdResolveImage2`.

Implementations supporting `maintenance10` **should** set `resolveSrgbFormatAppliesTransferFunction` to `VK_TRUE`.

If the `VkPhysicalDeviceMaintenance10PropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance10PropertiesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_10_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceMeshShaderPropertiesNV` structure is defined as:

```
// Provided by VK_NV_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxDrawMeshTasksCount;
    uint32_t           maxTaskWorkGroupInvocations;
    uint32_t           maxTaskWorkGroupSize[3];
    uint32_t           maxTaskTotalMemorySize;
    uint32_t           maxTaskOutputCount;
    uint32_t           maxMeshWorkGroupInvocations;
    uint32_t           maxMeshWorkGroupSize[3];
    uint32_t           maxMeshTotalMemorySize;
    uint32_t           maxMeshOutputVertices;
    uint32_t           maxMeshOutputPrimitives;
    uint32_t           maxMeshMultiviewViewCount;
    uint32_t           meshOutputPerVertexGranularity;
    uint32_t           meshOutputPerPrimitiveGranularity;
} VkPhysicalDeviceMeshShaderPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `maxDrawMeshTasksCount` is the maximum number of local workgroups that **can** be launched by a single draw mesh tasks command. See [Programmable Mesh Shading](#).
- `maxTaskWorkGroupInvocations` is the maximum total number of task shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxTaskWorkGroupSize[3]` is the maximum size of a local task workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxTaskTotalMemorySize` is the maximum number of bytes that the task shader can use in total for shared and output memory combined.
- `maxTaskOutputCount` is the maximum number of output tasks a single task shader workgroup can emit.
- `maxMeshWorkGroupInvocations` is the maximum total number of mesh shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxMeshWorkGroupSize[3]` is the maximum size of a local mesh workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxMeshTotalMemorySize` is the maximum number of bytes that the mesh shader can use in total for shared and output memory combined.
- `maxMeshOutputVertices` is the maximum number of vertices a mesh shader output can store.
- `maxMeshOutputPrimitives` is the maximum number of primitives a mesh shader output can store.
- `maxMeshMultiviewViewCount` is the maximum number of multiview views a mesh shader can use.
- `meshOutputPerVertexGranularity` is the granularity with which mesh vertex outputs are allocated. The value can be used to compute the memory size used by the mesh shader, which **must** be less than or equal to `maxMeshTotalMemorySize`.
- `meshOutputPerPrimitiveGranularity` is the granularity with which mesh outputs qualified as per-primitive are allocated. The value can be used to compute the memory size used by the mesh shader, which **must** be less than or equal to `maxMeshTotalMemorySize`.

If the `VkPhysicalDeviceMeshShaderPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

    uint32_t            maxMeshPayloadAndSharedMemorySize;
    uint32_t            maxMeshOutputMemorySize;
    uint32_t            maxMeshPayloadAndOutputMemorySize;
    uint32_t            maxMeshOutputComponents;
    uint32_t            maxMeshOutputVertices;
    uint32_t            maxMeshOutputPrimitives;
    uint32_t            maxMeshOutputLayers;
    uint32_t            maxMeshMultiviewViewCount;
    uint32_t            meshOutputPerVertexGranularity;
    uint32_t            meshOutputPerPrimitiveGranularity;
    uint32_t            maxPreferredTaskWorkGroupInvocations;
    uint32_t            maxPreferredMeshWorkGroupInvocations;
    VkBool32            prefersLocalInvocationVertexOutput;
    VkBool32            prefersLocalInvocationPrimitiveOutput;
    VkBool32            prefersCompactVertexOutput;
    VkBool32            prefersCompactPrimitiveOutput;
} VkPhysicalDeviceMeshShaderPropertiesEXT;
```

The members of the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure describe the following implementation-dependent limits:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTaskWorkGroupTotalCount` is the maximum number of local workgroups that **can** be launched for a task shader by a `mesh tasks drawing command`.
- `maxTaskWorkGroupCount`[3] is the maximum number of local workgroups that **can** be launched for a task shader in each dimension by a `mesh tasks drawing command`. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the drawing commands **must** be less than or equal to the corresponding limit. The product of these dimensions **must** be less than or equal to `maxTaskWorkGroupTotalCount`.
- `maxTaskWorkGroupInvocations` is the maximum total number of task shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxTaskWorkGroupSize`[3] is the maximum size of a local workgroup for a task shader in each dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxTaskPayloadSize` is the maximum total storage size, in bytes, available for variables declared with the `TaskPayloadWorkgroupEXT` storage class in shader modules in the task shader stage.
- `maxTaskSharedMemorySize` is the maximum total storage size, in bytes, available for variables declared with the `Workgroup` storage class in shader modules in the task shader stage.
- `maxTaskPayloadAndSharedMemorySize` is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` or `Workgroup` storage class, in shader modules in the task shader stage.
- `maxMeshWorkGroupTotalCount` is the maximum number of local workgroups that **can** be launched for a mesh shader, either directly by a `mesh tasks drawing command`, or emitted by a single task shader workgroup.
- `maxMeshWorkGroupCount`[3] is the maximum number of local workgroups that **can** be launched for a mesh shader in each dimension, either directly by a `mesh tasks drawing command`, or emitted by a single task shader workgroup. These three values represent the maximum number of local output tasks for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the `OpEmitMeshTasksEXT` **must** be less than or equal to the corresponding limit. The product of these dimensions **must** be less than or equal to `maxMeshWorkGroupTotalCount`.
- `maxMeshWorkGroupInvocations` is the maximum total number of mesh shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxMeshWorkGroupSize`[3] is the maximum size of a local workgroup for a mesh shader in each dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules,

must be less than or equal to the corresponding limit.

- **maxMeshSharedMemorySize** is the maximum total storage size, in bytes, available for variables declared with the **Workgroup** storage class in shader modules in the mesh shader stage.
- **maxMeshPayloadAndSharedMemorySize** is the maximum total storage size, in bytes, available for variables that are declared with the **TaskPayloadWorkgroupEXT** or **Workgroup** storage class in shader modules in the mesh shader stage.
- **maxMeshOutputMemorySize** is the maximum total storage size, in bytes, available for output variables in shader modules in the mesh shader stage, according to the formula in [Mesh Shader Output](#).
- **maxMeshPayloadAndOutputMemorySize** is the maximum total storage size, in bytes, available for variables that are declared with the **TaskPayloadWorkgroupEXT** storage class, or output variables in shader modules in the mesh shader stage, according to the formula in [Mesh Shader Output](#).
- **maxMeshOutputComponents** is the maximum number of components of output variables which **can** be output from the mesh shader stage.
- **maxMeshOutputVertices** is the maximum number of vertices which **can** be emitted by a single mesh shader workgroup.
- **maxMeshOutputPrimitives** is the maximum number of primitives which **can** be emitted by a single mesh shader workgroup.
- **maxMeshOutputLayers** is one greater than the maximum layer index that **can** be output from the mesh shader stage.
- **maxMeshMultiviewViewCount** is one greater than the maximum view index that **can** be used by any mesh shader.
- **meshOutputPerVertexGranularity** is the granularity of vertex allocation. The number of output vertices allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which **must** be less than or equal to **maxMeshOutputMemorySize**.
- **meshOutputPerPrimitiveGranularity** is the granularity of primitive allocation. The number of output primitives allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which **must** be less than or equal to **maxMeshOutputMemorySize**.
- **maxPreferredTaskWorkGroupInvocations** is the maximum number of task shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the task shader stage.
- **maxPreferredMeshWorkGroupInvocations** is the maximum number of mesh shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the mesh shader stage.
- **prefersLocalInvocationVertexOutput** specifies whether writes to the vertex output array in a mesh shader yield best performance when the array index matches **LocalInvocationIndex**.
- **prefersLocalInvocationPrimitiveOutput** specifies whether writes to the primitive output array in a mesh shader yield best performance when the array index matches **LocalInvocationIndex**.
- **prefersCompactVertexOutput** specifies whether output vertices should be compacted after custom

culling in the mesh shader for best performance, otherwise keeping the vertices at their original location may be better.

- `prefersCompactPrimitiveOutput` specifies whether output primitives should be compacted after custom culling in the mesh shader for best performance, otherwise the use of `CullPrimitiveEXT` may be better.

If the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure is included in the `pNext` chain of `VkPhysicalDeviceProperties2`, it is filled with the implementation-dependent limits.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceDescriptorIndexingProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDescriptorIndexingProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxUpdateAfterBindDescriptorsInAllPools;
    VkBool32           shaderUniformBufferArrayNonUniformIndexingNative;
    VkBool32           shaderSampledImageArrayNonUniformIndexingNative;
    VkBool32           shaderStorageBufferArrayNonUniformIndexingNative;
    VkBool32           shaderStorageImageArrayNonUniformIndexingNative;
    VkBool32           shaderInputAttachmentArrayNonUniformIndexingNative;
    VkBool32           robustBufferAccessUpdateAfterBind;
    VkBool32           quadDivergentImplicitLod;
    uint32_t           maxPerStageDescriptorUpdateAfterBindSamplers;
    uint32_t           maxPerStageDescriptorUpdateAfterBindUniformBuffers;
    uint32_t           maxPerStageDescriptorUpdateAfterBindStorageBuffers;
    uint32_t           maxPerStageDescriptorUpdateAfterBindSampledImages;
    uint32_t           maxPerStageDescriptorUpdateAfterBindStorageImages;
    uint32_t           maxPerStageDescriptorUpdateAfterBindInputAttachments;
    uint32_t           maxPerStageUpdateAfterBindResources;
    uint32_t           maxDescriptorSetUpdateAfterBindSamplers;
    uint32_t           maxDescriptorSetUpdateAfterBindUniformBuffers;
    uint32_t           maxDescriptorSetUpdateAfterBindUniformBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageBuffers;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindSampledImages;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageImages;
    uint32_t           maxDescriptorSetUpdateAfterBindInputAttachments;
} VkPhysicalDeviceDescriptorIndexingProperties;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkPhysicalDeviceDescriptorIndexingProperties
typedef VkPhysicalDeviceDescriptorIndexingProperties
VkPhysicalDeviceDescriptorIndexingPropertiesEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxUpdateAfterBindDescriptorsInAllPools** is the maximum number of descriptors (summed over all descriptor types) that **can** be created across all pools that are created with the **VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT** bit set. Pool creation **may** fail when this limit is exceeded, or when the space this limit represents is unable to satisfy a pool creation due to fragmentation.
- **shaderUniformBufferArrayNonUniformIndexingNative** is a boolean value indicating whether uniform buffer descriptors natively support non-uniform indexing. If this is **VK_FALSE**, then a single dynamic instance of an instruction that non-uniformly indexes an array of uniform buffers **may** execute multiple times in order to access all the descriptors.

- `shaderSampledImageArrayNonUniformIndexingNative` is a boolean value indicating whether sampler and image descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of samplers or images **may** execute multiple times in order to access all the descriptors.
- `shaderStorageBufferArrayNonUniformIndexingNative` is a boolean value indicating whether storage buffer descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of storage buffers **may** execute multiple times in order to access all the descriptors.
- `shaderStorageImageArrayNonUniformIndexingNative` is a boolean value indicating whether storage image descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of storage images **may** execute multiple times in order to access all the descriptors.
- `shaderInputAttachmentArrayNonUniformIndexingNative` is a boolean value indicating whether input attachment descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of input attachments **may** execute multiple times in order to access all the descriptors.
- `robustBufferAccessUpdateAfterBind` is a boolean value indicating whether `robustBufferAccess` **can** be enabled on a device simultaneously with `descriptorBindingUniformBufferUpdateAfterBind`, `descriptorBindingStorageBufferUpdateAfterBind`, `descriptorBindingUniformTexelBufferUpdateAfterBind`, and/or `descriptorBindingStorageTexelBufferUpdateAfterBind`. If this is `VK_FALSE`, then either `robustBufferAccess` **must** be disabled or all of these update-after-bind features **must** be disabled. Similarly, if this property is `VK_FALSE`, robustness **must** not be enabled through the `VkPipelineRobustnessCreateInfo` mechanism.
- `quadDivergentImplicitLod` is a boolean value indicating whether implicit LOD calculations for image operations have well-defined results when the image and/or sampler objects used for the instruction are not uniform within a quad. See [Derivative Image Operations](#).
- `maxPerStageDescriptorUpdateAfterBindSamplers` is similar to `maxPerStageDescriptorSamplers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindUniformBuffers` is similar to `maxPerStageDescriptorUniformBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindStorageBuffers` is similar to `maxPerStageDescriptorStorageBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindSampledImages` is similar to `maxPerStageDescriptorSampledImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindStorageImages` is similar to `maxPerStageDescriptorStorageImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindInputAttachments` is similar to

`maxPerStageDescriptorInputAttachments` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

- `maxPerStageUpdateAfterBindResources` is similar to `maxPerStageResources` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindSamplers` is similar to `maxDescriptorSetSamplers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindUniformBuffers` is similar to `maxDescriptorSetUniformBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindUniformBuffersDynamic` is similar to `maxDescriptorSetUniformBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic uniform buffer descriptors from a pool created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`.
- `maxDescriptorSetUpdateAfterBindStorageBuffers` is similar to `maxDescriptorSetStorageBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindStorageBuffersDynamic` is similar to `maxDescriptorSetStorageBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic storage buffer descriptors from a pool created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`.
- `maxDescriptorSetUpdateAfterBindSampledImages` is similar to `maxDescriptorSetSampledImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindStorageImages` is similar to `maxDescriptorSetStorageImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindInputAttachments` is similar to `maxDescriptorSetInputAttachments` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

If the `VkPhysicalDeviceDescriptorIndexingProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorIndexingProperties-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_PROPERTIES

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceInlineUniformBlockProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxInlineUniformBlockSize;
    uint32_t           maxPerStageDescriptorInlineUniformBlocks;
    uint32_t           maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks;
    uint32_t           maxDescriptorSetInlineUniformBlocks;
    uint32_t           maxDescriptorSetUpdateAfterBindInlineUniformBlocks;
} VkPhysicalDeviceInlineUniformBlockProperties;
```

```
// Provided by VK_EXT_inline_uniform_block
// Equivalent to VkPhysicalDeviceInlineUniformBlockProperties
typedef VkPhysicalDeviceInlineUniformBlockProperties
VkPhysicalDeviceInlineUniformBlockPropertiesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxInlineUniformBlockSize](#) is the maximum size in bytes of an [inline uniform block](#) binding.
- [maxPerStageDescriptorInlineUniformBlocks](#) is the maximum number of inline uniform block bindings that **can** be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of [VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#) count against this limit. Only descriptor bindings in descriptor set layouts created without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set count against this limit.
- [maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks](#) is similar to [maxPerStageDescriptorInlineUniformBlocks](#) but counts descriptor bindings from descriptor sets created with or without the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set.

- `maxDescriptorSetInlineUniformBlocks` is the maximum number of inline uniform block bindings that **can** be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` count against this limit. Only descriptor bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxDescriptorSetUpdateAfterBindInlineUniformBlocks` is similar to `maxDescriptorSetInlineUniformBlocks` but counts descriptor bindings from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

If the `VkPhysicalDeviceInlineUniformBlockProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInlineUniformBlockProperties-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_PROPERTIES`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceConservativeRasterizationPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_conservative_rasterization
typedef struct VkPhysicalDeviceConservativeRasterizationPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    float               primitiveOverestimationSize;
    float               maxExtraPrimitiveOverestimationSize;
    float               extraPrimitiveOverestimationSizeGranularity;
    VkBool32            primitiveUnderestimation;
    VkBool32            conservativePointAndLineRasterization;
    VkBool32            degenerateTrianglesRasterized;
    VkBool32            degenerateLinesRasterized;
    VkBool32            fullyCoveredFragmentShaderInputVariable;
    VkBool32            conservativeRasterizationPostDepthCoverage;
} VkPhysicalDeviceConservativeRasterizationPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitiveOverestimationSize` is the size in pixels the generating primitive is increased at each of its edges during conservative rasterization overestimation mode. Even with a size of 0.0, conservative rasterization overestimation rules still apply and if any part of the pixel rectangle is covered by the generating primitive, fragments are generated for the entire pixel. However implementations **may** make the pixel coverage area even more conservative by increasing the size of the generating primitive.
- `maxExtraPrimitiveOverestimationSize` is the maximum size in pixels of extra overestimation the implementation supports in the pipeline state. A value of 0.0 means the implementation does not support any additional overestimation of the generating primitive during conservative rasterization. A value above 0.0 allows the application to further increase the size of the generating primitive during conservative rasterization overestimation.
- `extraPrimitiveOverestimationSizeGranularity` is the granularity of extra overestimation that can be specified in the pipeline state between 0.0 and `maxExtraPrimitiveOverestimationSize` inclusive. A value of 0.0 means the implementation can use the smallest representable non-zero value in the screen space pixel fixed-point grid.
- `primitiveUnderestimation` is `VK_TRUE` if the implementation supports the `VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT` conservative rasterization mode in addition to `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`. Otherwise the implementation only supports `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`.
- `conservativePointAndLineRasterization` is `VK_TRUE` if the implementation supports conservative rasterization of point and line primitives as well as triangle primitives. Otherwise the implementation only supports triangle primitives.
- `degenerateTrianglesRasterized` is `VK_FALSE` if the implementation culls primitives generated from triangles that become zero area after they are quantized to the fixed-point rasterization pixel grid. `degenerateTrianglesRasterized` is `VK_TRUE` if these primitives are not culled and the provoking vertex attributes and depth value are used for the fragments. The primitive area calculation is done on the primitive generated from the clipped triangle if applicable. Zero area primitives are backfacing and the application **can** enable backface culling if desired.
- `degenerateLinesRasterized` is `VK_FALSE` if the implementation culls lines that become zero length after they are quantized to the fixed-point rasterization pixel grid. `degenerateLinesRasterized` is `VK_TRUE` if zero length lines are not culled and the provoking vertex attributes and depth value are used for the fragments.
- `fullyCoveredFragmentShaderInputVariable` is `VK_TRUE` if the implementation supports the SPIR-V builtin fragment shader input variable `FullyCoveredEXT` specifying that conservative rasterization is enabled and the fragment area is fully covered by the generating primitive.
- `conservativeRasterizationPostDepthCoverage` is `VK_TRUE` if the implementation supports conservative rasterization with the `PostDepthCoverage` execution mode enabled. Otherwise the `PostDepthCoverage` execution mode **must** not be used when conservative rasterization is enabled.

If the `VkPhysicalDeviceConservativeRasterizationPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is

filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

The `VkPhysicalDeviceTileMemoryHeapPropertiesQCOM` structure is defined as:

```
// Provided by VK_QCOM_tile_memory_heap
typedef struct VkPhysicalDeviceTileMemoryHeapPropertiesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           queueSubmitBoundary;
    VkBool32           tileBufferTransfers;
} VkPhysicalDeviceTileMemoryHeapPropertiesQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueSubmitBoundary` is a boolean describing if tile memory becomes undefined at a queue submit boundary instead of the default command buffer submission batch boundary.
- `tileBufferTransfers` is a boolean describing if buffers bound to tile memory support transfer

operations.

If the `VkPhysicalDeviceTileMemoryHeapPropertiesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceTileMemoryHeapPropertiesQCOM-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TILE_MEMORY_HEAP_PROPERTIES_QCOM`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceShaderCorePropertiesAMD` structure is defined as:

```
// Provided by VK_AMD_shader_core_properties
typedef struct VkPhysicalDeviceShaderCorePropertiesAMD {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderEngineCount;
    uint32_t           shaderArraysPerEngineCount;
    uint32_t           computeUnitsPerShaderArray;
    uint32_t           simdPerComputeUnit;
    uint32_t           wavefrontsPerSimd;
    uint32_t           wavefrontSize;
    uint32_t           sgprsPerSimd;
    uint32_t           minSgprAllocation;
    uint32_t           maxSgprAllocation;
    uint32_t           sgprAllocationGranularity;
    uint32_t           vgprsPerSimd;
    uint32_t           minVgprAllocation;
    uint32_t           maxVgprAllocation;
    uint32_t           vgprAllocationGranularity;
} VkPhysicalDeviceShaderCorePropertiesAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderEngineCount` is an unsigned integer value indicating the number of shader engines found inside the shader core of the physical device.
- `shaderArraysPerEngineCount` is an unsigned integer value indicating the number of shader arrays inside a shader engine. Each shader array has its own scan converter, set of compute units, and

a render back end (color and depth attachments). Shader arrays within a shader engine share shader processor input (wave launcher) and shader export (export buffer) units. Currently, a shader engine can have one or two shader arrays.

- `computeUnitsPerShaderArray` is an unsigned integer value indicating the physical number of compute units within a shader array. The active number of compute units in a shader array **may** be lower. A compute unit houses a set of SIMDs along with a sequencer module and a local data store.
- `simdPerComputeUnit` is an unsigned integer value indicating the number of SIMDs inside a compute unit. Each SIMD processes a single instruction at a time.
- `wavefrontSize` is an unsigned integer value indicating the maximum size of a subgroup.
- `sgprsPerSimd` is an unsigned integer value indicating the number of physical Scalar General-Purpose Registers (SGPRs) per SIMD.
- `minSgprAllocation` is an unsigned integer value indicating the minimum number of SGPRs allocated for a wave.
- `maxSgprAllocation` is an unsigned integer value indicating the maximum number of SGPRs allocated for a wave.
- `sgprAllocationGranularity` is an unsigned integer value indicating the granularity of SGPR allocation for a wave.
- `vgprsPerSimd` is an unsigned integer value indicating the number of physical Vector General-Purpose Registers (VGPRs) per SIMD.
- `minVgprAllocation` is an unsigned integer value indicating the minimum number of VGPRs allocated for a wave.
- `maxVgprAllocation` is an unsigned integer value indicating the maximum number of VGPRs allocated for a wave.
- `vgprAllocationGranularity` is an unsigned integer value indicating the granularity of VGPR allocation for a wave.

If the `VkPhysicalDeviceShaderCorePropertiesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderCorePropertiesAMD-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_AMD`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceShaderCoreProperties2AMD` structure is defined as:

```
// Provided by VK_AMD_shader_core_properties2
typedef struct VkPhysicalDeviceShaderCoreProperties2AMD {
    VkStructureType          sType;
    void*                    pNext;
    VkShaderCorePropertiesFlagsAMD  shaderCoreFeatures;
    uint32_t                 activeComputeUnitCount;
} VkPhysicalDeviceShaderCoreProperties2AMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderCoreFeatures` is a bitmask of `VkShaderCorePropertiesFlagBitsAMD` indicating the set of features supported by the shader core.
- `activeComputeUnitCount` is an unsigned integer value indicating the number of compute units that have been enabled.

If the `VkPhysicalDeviceShaderCoreProperties2AMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreProperties2AMD-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_2_AMD`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

Bits for this type **may** be defined by future extensions, or new versions of the `VK_AMD_shader_core_properties2` extension. Possible values of the `flags` member of `VkShaderCorePropertiesFlagsAMD` are:

```
// Provided by VK_AMD_shader_core_properties2
typedef enum VkShaderCorePropertiesFlagBitsAMD {
} VkShaderCorePropertiesFlagBitsAMD;
```

```
// Provided by VK_AMD_shader_core_properties2
typedef VkFlags VkShaderCorePropertiesFlagsAMD;
```

[VkShaderCorePropertiesFlagsAMD](#) is a bitmask type for providing zero or more [VkShaderCorePropertiesFlagBitsAMD](#).

The [VkPhysicalDeviceDepthStencilResolveProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDepthStencilResolveProperties {
    VkStructureType    sType;
    void*              pNext;
    VkResolveModeFlags supportedDepthResolveModes;
    VkResolveModeFlags supportedStencilResolveModes;
    VkBool32           independentResolveNone;
    VkBool32           independentResolve;
} VkPhysicalDeviceDepthStencilResolveProperties;
```

```
// Provided by VK_KHR_depth_stencil_resolve
// Equivalent to VkPhysicalDeviceDepthStencilResolveProperties
typedef VkPhysicalDeviceDepthStencilResolveProperties
VkPhysicalDeviceDepthStencilResolvePropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [supportedDepthResolveModes](#) is a bitmask of [VkResolveModeFlagBits](#) indicating the set of supported depth resolve modes. [VK_RESOLVE_MODE_SAMPLE_ZERO_BIT](#) **must** be included in the set but implementations **may** support additional modes.
- [supportedStencilResolveModes](#) is a bitmask of [VkResolveModeFlagBits](#) indicating the set of supported stencil resolve modes. [VK_RESOLVE_MODE_SAMPLE_ZERO_BIT](#) **must** be included in the set but implementations **may** support additional modes. [VK_RESOLVE_MODE_AVERAGE_BIT](#) **must** not be included in the set.
- [independentResolveNone](#) is [VK_TRUE](#) if the implementation supports setting the depth and stencil resolve modes to different values when one of those modes is [VK_RESOLVE_MODE_NONE](#). Otherwise the implementation only supports setting both modes to the same value.
- [independentResolve](#) is [VK_TRUE](#) if the implementation supports all combinations of the supported depth and stencil resolve modes, including setting either depth or stencil resolve mode to [VK_RESOLVE_MODE_NONE](#). An implementation that supports [independentResolve](#) **must** also support [independentResolveNone](#).

If the [VkPhysicalDeviceDepthStencilResolveProperties](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthStencilResolveProperties-sType-sType

`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_STENCIL_RESOLVE_PROPERTIES`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDevicePerformanceQueryPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkPhysicalDevicePerformanceQueryPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           allowCommandBufferQueryCopies;
} VkPhysicalDevicePerformanceQueryPropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `allowCommandBufferQueryCopies` is `VK_TRUE` if the performance query pools are allowed to be used with [vkCmdCopyQueryPoolResults](#).

If the `VkPhysicalDevicePerformanceQueryPropertiesKHR` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePerformanceQueryPropertiesKHR-sType-sType
`sType` must be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_QUERY_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceShadingRateImagePropertiesNV` structure is defined as:

```
// Provided by VK_NV_shading_rate_image
typedef struct VkPhysicalDeviceShadingRateImagePropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         shadingRateTexelSize;
    uint32_t           shadingRatePaletteSize;
    uint32_t           shadingRateMaxCoarseSamples;
} VkPhysicalDeviceShadingRateImagePropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shadingRateTexelSize` indicates the width and height of the portion of the framebuffer corresponding to each texel in the shading rate image.
- `shadingRatePaletteSize` indicates the maximum number of palette entries supported for the shading rate image.
- `shadingRateMaxCoarseSamples` specifies the maximum number of coverage samples supported in a single fragment. If the product of the fragment size derived from the base shading rate and the number of coverage samples per pixel exceeds this limit, the final shading rate will be adjusted so that its product does not exceed the limit.

If the `VkPhysicalDeviceShadingRateImagePropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

These properties are related to the [shading rate image](#) feature.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShadingRateImagePropertiesNV-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADING_RATE_IMAGE_PROPERTIES_NV`

Structure Chaining

Extends the structure

The `VkPhysicalDeviceMemoryDecompressionPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkPhysicalDeviceMemoryDecompressionPropertiesEXT {
    VkStructureType          sType;
    void*                    pNext;
    VkMemoryDecompressionMethodFlagsEXT decompressionMethods;
    uint64_t                 maxDecompressionIndirectCount;
} VkPhysicalDeviceMemoryDecompressionPropertiesEXT;
```

```
// Provided by VK_NV_memory_decompression
// Equivalent to VkPhysicalDeviceMemoryDecompressionPropertiesEXT
typedef VkPhysicalDeviceMemoryDecompressionPropertiesEXT
VkPhysicalDeviceMemoryDecompressionPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `decompressionMethods` is a bitmask of `VkMemoryDecompressionMethodFlagBitsEXT` specifying memory decompression methods supported by the implementation.
- `maxDecompressionIndirectCount` specifies the maximum supported count value identified by either `vkCmdDecompressMemoryIndirectCountEXT::maxDecompressionCount` or the value specified in `vkCmdDecompressMemoryIndirectCountEXT::indirectCommandsCountAddress`

If `memoryDecompression` feature is supported, `decompressionMethods` **must** have at least one bit set.

If the `VkPhysicalDeviceMemoryDecompressionPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryDecompressionPropertiesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_DECOMPRESSION_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceTransformFeedbackPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxTransformFeedbackStreams;
    uint32_t           maxTransformFeedbackBuffers;
    VkDeviceSize        maxTransformFeedbackBufferSize;
    uint32_t           maxTransformFeedbackStreamDataSize;
    uint32_t           maxTransformFeedbackBufferDataSize;
    uint32_t           maxTransformFeedbackBufferDataStride;
    VkBool32           transformFeedbackQueries;
    VkBool32           transformFeedbackStreamsLinesTriangles;
    VkBool32           transformFeedbackRasterizationStreamSelect;
    VkBool32           transformFeedbackDraw;
} VkPhysicalDeviceTransformFeedbackPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTransformFeedbackStreams` is the maximum number of vertex streams that can be output from geometry shaders declared with the `GeometryStreams` capability. If the implementation does not support `VkPhysicalDeviceTransformFeedbackFeaturesEXT::geometryStreams` then `maxTransformFeedbackStreams` **must** be 1.
- `maxTransformFeedbackBuffers` is the maximum number of transform feedback buffers that can be bound for capturing shader outputs from the last `pre-rasterization shader stage`.
- `maxTransformFeedbackBufferSize` is the maximum size that can be specified when binding a buffer for transform feedback in `vkCmdBindTransformFeedbackBuffersEXT`.
- `maxTransformFeedbackStreamDataSize` is the maximum amount of data in bytes for each vertex that captured to one or more transform feedback buffers associated with a specific vertex stream.
- `maxTransformFeedbackBufferDataSize` is the maximum amount of data in bytes for each vertex that can be captured to a specific transform feedback buffer.
- `maxTransformFeedbackBufferDataStride` is the maximum stride between each capture of vertex data to the buffer.
- `transformFeedbackQueries` is `VK_TRUE` if the implementation supports the `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` query type. `transformFeedbackQueries` is `VK_FALSE` if queries of this type **cannot** be created.
- `transformFeedbackStreamsLinesTriangles` is `VK_TRUE` if the implementation supports the geometry shader `OpExecutionMode` of `OutputLineStrip` and `OutputTriangleStrip` in addition to `OutputPoints` when more than one vertex stream is output. If `transformFeedbackStreamsLinesTriangles` is `VK_FALSE` the implementation only supports an `OpExecutionMode` of `OutputPoints` when more than one vertex stream is output from the geometry shader.
- `transformFeedbackRasterizationStreamSelect` is `VK_TRUE` if the implementation supports the `GeometryStreams` SPIR-V capability and the application can use

`VkPipelineRasterizationStateStreamCreateInfoEXT` to modify which vertex stream output is used for rasterization. Otherwise vertex stream `0` **must** always be used for rasterization.

- `transformFeedbackDraw` is `VK_TRUE` if the implementation supports the `vkCmdDrawIndirectByteCountEXT` function otherwise the function **must** not be called.

If the `VkPhysicalDeviceTransformFeedbackPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTransformFeedbackPropertiesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceCopyMemoryIndirectPropertiesNV` structure is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkQueueFlags        supportedQueues;
} VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR;
```

```
// Provided by VK_NV_copy_memory_indirect
// Equivalent to VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR
typedef VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR
VkPhysicalDeviceCopyMemoryIndirectPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportedQueues` is a bitmask of `VkQueueFlagBits` indicating the types of queues on which `indirect copy commands` are supported. If a queue family supports any of the bits set in `supportedQueues`, then it **must** support at least one `indirect copy command`.

If the `indirectMemoryCopy` or `indirectMemoryToImageCopy` feature is supported, `supportedQueues` **must** return at least one supported queue type.

If the `VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR` structure is included in the `pNext` chain of

the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceRayTracingPropertiesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkPhysicalDeviceRayTracingPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderGroupHandleSize;
    uint32_t           maxRecursionDepth;
    uint32_t           maxShaderGroupStride;
    uint32_t           shaderGroupBaseAlignment;
    uint64_t           maxGeometryCount;
    uint64_t           maxInstanceCount;
    uint64_t           maxTriangleCount;
    uint32_t           maxDescriptorSetAccelerationStructures;
} VkPhysicalDeviceRayTracingPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRecursionDepth` is the maximum number of levels of recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the shader binding table.
- `shaderGroupBaseAlignment` is the **required** alignment in bytes for the base of the shader binding table.
- `maxGeometryCount` is the maximum number of geometries in the bottom level acceleration structure.
- `maxInstanceCount` is the maximum number of instances in the top level acceleration structure.
- `maxTriangleCount` is the maximum number of triangles in all geometries in the bottom level

acceleration structure.

- `maxDescriptorSetAccelerationStructures` is the maximum number of acceleration structure descriptors that are allowed in a descriptor set.

Due to the fact that the geometry, instance, and triangle counts are specified at acceleration structure creation as 32-bit values, `maxGeometryCount`, `maxInstanceCount`, and `maxTriangleCount` **must** not exceed $2^{32}-1$.

If the `VkPhysicalDeviceRayTracingPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in `VkPhysicalDeviceAccelerationStructurePropertiesKHR` and `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPropertiesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PROPERTIES_NV`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceAccelerationStructurePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructurePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           maxGeometryCount;
    uint64_t           maxInstanceCount;
    uint64_t           maxPrimitiveCount;
    uint32_t           maxPerStageDescriptorAccelerationStructures;
    uint32_t           maxPerStageDescriptorUpdateAfterBindAccelerationStructures;
    uint32_t           maxDescriptorSetAccelerationStructures;
    uint32_t           maxDescriptorSetUpdateAfterBindAccelerationStructures;
    uint32_t           minAccelerationStructureScratchOffsetAlignment;
} VkPhysicalDeviceAccelerationStructurePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxGeometryCount` is the maximum number of geometries in the bottom level acceleration

structure.

- **maxInstanceCount** is the maximum number of instances in the top level acceleration structure.
- **maxPrimitiveCount** is the maximum number of triangles or AABBs in all geometries in the bottom level acceleration structure.
- **maxPerStageDescriptorAccelerationStructures** is the maximum number of acceleration structure bindings that **can** be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of **VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR** count against this limit. Only descriptor bindings in descriptor set layouts created without the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** bit set count against this limit.
- **maxPerStageDescriptorUpdateAfterBindAccelerationStructures** is similar to **maxPerStageDescriptorAccelerationStructures** but counts descriptor bindings from descriptor sets created with or without the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** bit set.
- **maxDescriptorSetAccelerationStructures** is the maximum number of acceleration structure descriptors that **can** be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of **VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR** count against this limit. Only descriptor bindings in descriptor set layouts created without the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** bit set count against this limit.
- **maxDescriptorSetUpdateAfterBindAccelerationStructures** is similar to **maxDescriptorSetAccelerationStructures** but counts descriptor bindings from descriptor sets created with or without the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** bit set.
- **minAccelerationStructureScratchOffsetAlignment** is the minimum **required** alignment, in bytes, for scratch data passed in to an acceleration structure build command. The value **must** be a power of two.

Due to the fact that the geometry, instance, and primitive counts are specified at acceleration structure creation as 32-bit values, **maxGeometryCount**, **maxInstanceCount**, and **maxPrimitiveCount** **must** not exceed $2^{32}-1$.

If the **VkPhysicalDeviceAccelerationStructurePropertiesKHR** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in **VkPhysicalDeviceRayTracingPropertiesNV**.

Valid Usage (Implicit)

- **VOID-VkPhysicalDeviceAccelerationStructurePropertiesKHR-sType-sType** **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_PROPERTIES_KH**

The [VkPhysicalDeviceRayTracingPipelinePropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelinePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderGroupHandleSize;
    uint32_t           maxRayRecursionDepth;
    uint32_t           maxShaderGroupStride;
    uint32_t           shaderGroupBaseAlignment;
    uint32_t           shaderGroupHandleCaptureReplaySize;
    uint32_t           maxRayDispatchInvocationCount;
    uint32_t           shaderGroupHandleAlignment;
    uint32_t           maxRayHitAttributeSize;
} VkPhysicalDeviceRayTracingPipelinePropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRayRecursionDepth` is the maximum number of levels of ray recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the shader binding table.
- `shaderGroupBaseAlignment` is the **required** alignment in bytes for the base of the shader binding table.
- `shaderGroupHandleCaptureReplaySize` is the number of bytes for the information required to do capture and replay for shader group handles.
- `maxRayDispatchInvocationCount` is the maximum number of ray generation shader invocations which **may** be produced by a single [vkCmdTraceRaysIndirectKHR](#) or [vkCmdTraceRaysKHR](#) command.
- `shaderGroupHandleAlignment` is the **required** alignment in bytes for each entry in a shader binding table. The value **must** be a power of two.
- `maxRayHitAttributeSize` is the maximum size in bytes for a ray attribute structure

If the [VkPhysicalDeviceRayTracingPipelinePropertiesKHR](#) structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in

with each corresponding implementation-dependent property.

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceCooperativeMatrix2PropertiesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix2
typedef struct VkPhysicalDeviceCooperativeMatrix2PropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            cooperativeMatrixWorkgroupScopeMaxWorkgroupSize;
    uint32_t            cooperativeMatrixFlexibleDimensionsMaxDimension;
    uint32_t            cooperativeMatrixWorkgroupScopeReservedSharedMemory;
} VkPhysicalDeviceCooperativeMatrix2PropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixWorkgroupScopeMaxWorkgroupSize` is the maximum number of invocations in a workgroup when the module uses `OpTypeCooperativeMatrixKHR` with `Scope` equal to `Workgroup`.
- `cooperativeMatrixFlexibleDimensionsMaxDimension` is the maximum supported dimension for cooperative matrix types when the `cooperativeMatrixFlexibleDimensions` feature is enabled.
- `cooperativeMatrixWorkgroupScopeReservedSharedMemory` is the number of bytes of shared memory reserved for the implementation when the module uses `OpTypeCooperativeMatrixKHR` with `Scope` equal to `Workgroup`.

If the `VkPhysicalDeviceCooperativeMatrix2PropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrix2PropertiesNV-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_2_PROPERTIES_NV`

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceCooperativeVectorPropertiesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_vector
typedef struct VkPhysicalDeviceCooperativeVectorPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkShaderStageFlags cooperativeVectorSupportedStages;
    VkBool32           cooperativeVectorTrainingFloat16Accumulation;
    VkBool32           cooperativeVectorTrainingFloat32Accumulation;
    uint32_t           maxCooperativeVectorComponents;
} VkPhysicalDeviceCooperativeVectorPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeVectorSupportedStages` is a bitfield of `VkShaderStageFlagBits` describing the shader stages that cooperative vector instructions are supported in. `cooperativeVectorSupportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.
- `cooperativeVectorTrainingFloat16Accumulation` is `VK_TRUE` if the implementation supports cooperative vector training functions accumulating 16-bit floating-point results.
- `cooperativeVectorTrainingFloat32Accumulation` is `VK_TRUE` if the implementation supports cooperative vector training functions accumulating 32-bit floating-point results.
- `maxCooperativeVectorComponents` indicates the maximum number of components that **can** be in a cooperative vector.

If the `VkPhysicalDeviceCooperativeVectorPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceTexelBufferAlignmentProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTexelBufferAlignmentProperties {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        storageTexelBufferOffsetAlignmentBytes;
    VkBool32            storageTexelBufferOffsetSingleTexelAlignment;
    VkDeviceSize        uniformTexelBufferOffsetAlignmentBytes;
    VkBool32            uniformTexelBufferOffsetSingleTexelAlignment;
} VkPhysicalDeviceTexelBufferAlignmentProperties;
```

```
// Provided by VK_EXT_texel_buffer_alignment
// Equivalent to VkPhysicalDeviceTexelBufferAlignmentProperties
typedef VkPhysicalDeviceTexelBufferAlignmentProperties
VkPhysicalDeviceTexelBufferAlignmentPropertiesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [storageTexelBufferOffsetAlignmentBytes](#) is a byte alignment that is sufficient for a storage texel buffer of any format. The value **must** be a power of two.
- [storageTexelBufferOffsetSingleTexelAlignment](#) indicates whether single texel alignment is sufficient for a storage texel buffer of any format.
- [uniformTexelBufferOffsetAlignmentBytes](#) is a byte alignment that is sufficient for a uniform texel buffer of any format. The value **must** be a power of two.
- [uniformTexelBufferOffsetSingleTexelAlignment](#) indicates whether single texel alignment is sufficient for a uniform texel buffer of any format.

If the `VkPhysicalDeviceTexelBufferAlignmentProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If the single texel alignment property is `VK_FALSE`, then the buffer view's offset **must** be aligned to the corresponding byte alignment value. If the single texel alignment property is `VK_TRUE`, then the buffer view's offset **must** be aligned to the lesser of the corresponding byte alignment value or the size of a single texel, based on `VkBufferViewCreateInfo::format`. If the size of a single texel is a multiple of three bytes, then the size of a single component of the format is used instead.

These limits **must** not advertise a larger alignment than the **required** maximum minimum value of `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`, for any format that supports use as a texel buffer.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceTexelBufferAlignmentProperties-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_PROPERTIES`

The `VkPhysicalDeviceTimelineSemaphoreProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreProperties {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           maxTimelineSemaphoreValueDifference;
} VkPhysicalDeviceTimelineSemaphoreProperties;
```

```
// Provided by VK_KHR_timeline_semaphore
// Equivalent to VkPhysicalDeviceTimelineSemaphoreProperties
typedef VkPhysicalDeviceTimelineSemaphoreProperties
VkPhysicalDeviceTimelineSemaphorePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTimelineSemaphoreValueDifference` indicates the maximum difference allowed by the implementation between the current value of a timeline semaphore and any pending signal or

wait operations.

If the `VkPhysicalDeviceTimelineSemaphoreProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceTimelineSemaphoreProperties-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_PROPERTIES`

Structure Chaining

The `VkPhysicalDeviceLineRasterizationProperties` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceLineRasterizationProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           lineSubPixelPrecisionBits;
} VkPhysicalDeviceLineRasterizationProperties;
```

```
// Provided by VK_KHR_line_rasterization
// Equivalent to VkPhysicalDeviceLineRasterizationProperties
typedef VkPhysicalDeviceLineRasterizationProperties
VkPhysicalDeviceLineRasterizationPropertiesKHR;
```

```
// Provided by VK_EXT_line_rasterization
// Equivalent to VkPhysicalDeviceLineRasterizationProperties
typedef VkPhysicalDeviceLineRasterizationProperties
VkPhysicalDeviceLineRasterizationPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `lineSubPixelPrecisionBits` is the number of bits of subpixel precision in framebuffer coordinates x_f and y_f when rasterizing `line segments`.

If the `VkPhysicalDeviceLineRasterizationProperties` structure is included in the `pNext` chain of the

[VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

The [VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV](#) structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxGraphicsShaderGroupCount;
    uint32_t           maxIndirectSequenceCount;
    uint32_t           maxIndirectCommandsTokenCount;
    uint32_t           maxIndirectCommandsStreamCount;
    uint32_t           maxIndirectCommandsTokenOffset;
    uint32_t           maxIndirectCommandsStreamStride;
    uint32_t           minSequencesCountBufferOffsetAlignment;
    uint32_t           minSequencesIndexBufferOffsetAlignment;
    uint32_t           minIndirectCommandsBufferOffsetAlignment;
} VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [maxGraphicsShaderGroupCount](#) is the maximum number of shader groups in [VkGraphicsPipelineShaderGroupsCreateInfoNV](#).
- [maxIndirectSequenceCount](#) is the maximum number of sequences in [VkGeneratedCommandsInfoNV](#) and in [VkGeneratedCommandsMemoryRequirementsInfoNV](#).
- [maxIndirectCommandsTokenCount](#) is the maximum number of tokens in [VkIndirectCommandsLayoutCreateInfoNV](#).
- [maxIndirectCommandsStreamCount](#) is the maximum number of streams in [VkIndirectCommandsLayoutCreateInfoNV](#).
- [maxIndirectCommandsTokenOffset](#) is the maximum offset in [VkIndirectCommandsLayoutTokenNV](#).
- [maxIndirectCommandsStreamStride](#) is the maximum stream stride in [VkIndirectCommandsLayoutCreateInfoNV](#).
- [minSequencesCountBufferOffsetAlignment](#) is the minimum alignment for memory addresses

which **can** be used in [VkGeneratedCommandsInfoNV](#).

- [minSequencesIndexBufferOffsetAlignment](#) is the minimum alignment for memory addresses which **can** be used in [VkGeneratedCommandsInfoNV](#).
- [minIndirectCommandsBufferOffsetAlignment](#) is the minimum alignment for memory addresses used in [VkIndirectCommandsStreamNV](#), and as preprocess buffer in [VkGeneratedCommandsInfoNV](#).

If the [VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

    VkBool32
deviceGeneratedCommandsMultiDrawIndirectCount;
} VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxIndirectPipelineCount` is the maximum number of pipelines passed to `vkCreateIndirectExecutionSetEXT`.
- `maxIndirectShaderObjectCount` is the maximum number of shader objects passed to `vkCreateIndirectExecutionSetEXT`. If this value is zero, binding shader objects indirectly is not supported.
- `maxIndirectSequenceCount` is the maximum number of sequences in `VkGeneratedCommandsInfoEXT` and in `VkGeneratedCommandsMemoryRequirementsInfoEXT`.
- `maxIndirectCommandsTokenCount` is the maximum number of tokens in `VkIndirectCommandsLayoutCreateInfoEXT`.
- `maxIndirectCommandsTokenOffset` is the maximum offset in `VkIndirectCommandsLayoutTokenEXT`.
- `maxIndirectCommandsIndirectStride` is the maximum stream stride in `VkIndirectCommandsLayoutCreateInfoEXT`.
- `supportedIndirectCommandsInputModes` indicates the supported input modes.
- `supportedIndirectCommandsShaderStages` indicates the stages which **can** be used to generate indirect commands. Implementations are required to support, at minimum: `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT`, `VK_SHADER_STAGE_COMPUTE_BIT`.
- `supportedIndirectCommandsShaderStagesPipelineBinding` indicates the stages which **can** be used within indirect execution sets for indirectly binding shader stages using pipelines.
- `supportedIndirectCommandsShaderStagesShaderBinding` indicates the stages which **can** be used within indirect execution sets for indirectly binding shader stages using shader objects.
- `deviceGeneratedCommandsTransformFeedback` indicates whether the implementation supports interactions with `VK_EXT_transform_feedback` for pipelines not created with `VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT`.
- `deviceGeneratedCommandsMultiDrawIndirectCount` indicates whether the implementation supports COUNT variants of multi-draw indirect tokens.

If the `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minFragmentShadingRateAttachmentTexelSize` indicates minimum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value **must** be less than or equal to the values in `maxFragmentShadingRateAttachmentTexelSize`. Each value **must** be a power-of-two. It **must** be (0,0) if the `attachmentFragmentShadingRate` feature is not supported.
- `maxFragmentShadingRateAttachmentTexelSize` indicates maximum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value **must** be greater than or equal to the values in `minFragmentShadingRateAttachmentTexelSize`. Each value **must** be a power-of-two. It **must** be (0,0) if the `attachmentFragmentShadingRate` feature is not supported.
- `maxFragmentShadingRateAttachmentTexelSizeAspectRatio` indicates the maximum ratio between the width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. `maxFragmentShadingRateAttachmentTexelSizeAspectRatio` **must** be a power-of-two value, and **must** be less than or equal to $\frac{\max(\maxFragmentShadingRateAttachmentTexelSize.width}{\minFragmentShadingRateAttachmentTexelSize.height}, \frac{\maxFragmentShadingRateAttachmentTexelSize.height}{\minFragmentShadingRateAttachmentTexelSize.width})$. It **must** be 0 if the `attachmentFragmentShadingRate` feature is not supported.
- `primitiveFragmentShadingRateWithMultipleViewports` specifies whether the `primitive fragment shading rate` **can** be used when multiple viewports are used. If this value is `VK_FALSE`, only a

single viewport **must** be used, and applications **must** not write to the `ViewportMaskNV` or `ViewportIndex` built-in when setting `PrimitiveShadingRateKHR`. It **must** be `VK_FALSE` if the `shaderOutputViewportIndex` feature, the `VK_EXT_shader_viewport_index_layer` extension, or the `geometryShader` feature is not supported, or if the `primitiveFragmentShadingRate` feature is not supported.

- `layeredShadingRateAttachments` specifies whether a shading rate attachment image view **can** be created with multiple layers. If this value is `VK_FALSE`, when creating an image view with a `usage` that includes `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, `layerCount` **must** be 1. It **must** be `VK_FALSE` if the `multiview` feature, the `shaderOutputViewportIndex` feature, the `VK_EXT_shader_viewport_index_layer` extension, or the `geometryShader` feature is not supported, or if the `attachmentFragmentShadingRate` feature is not supported.
- `fragmentShadingRateNonTrivialCombinerOps` specifies whether `VkFragmentShadingRateCombinerOpKHR` enums other than `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR` or `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR` **can** be used. It **must** be `VK_FALSE` unless either the `primitiveFragmentShadingRate` or `attachmentFragmentShadingRate` feature is supported.
- `maxFragmentSize` indicates the maximum supported width and height of a fragment. Its `width` and `height` members **must** both be power-of-two values. This limit is purely informational, and is not validated.
- `maxFragmentSizeAspectRatio` indicates the maximum ratio between the width and height of a fragment. `maxFragmentSizeAspectRatio` **must** be a power-of-two value, and **must** be less than or equal to the maximum of the `width` and `height` members of `maxFragmentSize`. This limit is purely informational, and is not validated.
- `maxFragmentShadingRateCoverageSamples` specifies the maximum number of coverage samples supported in a single fragment. `maxFragmentShadingRateCoverageSamples` **must** be less than or equal to the product of the `width` and `height` members of `maxFragmentSize`, and the sample count reported by `maxFragmentShadingRateRasterizationSamples`. `maxFragmentShadingRateCoverageSamples` **must** be less than or equal to `maxSampleMaskWords` × 32 if `fragmentShadingRateWithShaderSampleMask` is supported. This limit is purely informational, and is not validated.
- `maxFragmentShadingRateRasterizationSamples` is a `VkSampleCountFlagBits` value specifying the maximum sample rate supported when a fragment covers multiple pixels. This limit is purely informational, and is not validated.
- `fragmentShadingRateWithShaderDepthStencilWrites` specifies whether the implementation supports writing `FragDepth` or `FragStencilRefEXT` from a fragment shader for multi-pixel fragments. If this value is `VK_FALSE`, writing to those built-ins will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithSampleMask` specifies whether the implementation supports setting valid bits of `VkPipelineMultisampleStateCreateInfo::pSampleMask` to 0 for multi-pixel fragments. If this value is `VK_FALSE`, zeroing valid bits in the sample mask will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithShaderSampleMask` specifies whether the implementation supports

reading or writing `SampleMask` for multi-pixel fragments. If this value is `VK_FALSE`, using that built-in will clamp the fragment shading rate to (1,1).

- `fragmentShadingRateWithConservativeRasterization` specifies whether `conservative rasterization` is supported for multi-pixel fragments. It **must** be `VK_FALSE` if `VK_EXT_conservative_rasterization` is not supported. If this value is `VK_FALSE`, using `conservative rasterization` will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithFragmentShaderInterlock` specifies whether `fragment shader interlock` is supported for multi-pixel fragments. It **must** be `VK_FALSE` if `VK_EXT_fragment_shader_interlock` is not supported. If this value is `VK_FALSE`, using `fragment shader interlock` will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithCustomSampleLocations` specifies whether `custom sample locations` are supported for multi-pixel fragments. It **must** be `VK_FALSE` if `VK_EXT_sample_locations` is not supported. If this value is `VK_FALSE`, using `custom sample locations` will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateStrictMultiplyCombiner` specifies whether `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MUL_KHR` accurately performs a multiplication or not. Implementations where this value is `VK_FALSE` will instead combine rates with an addition. If `fragmentShadingRateNonTrivialCombinerOps` is `VK_FALSE`, implementations **must** report this as `VK_FALSE`. If `fragmentShadingRateNonTrivialCombinerOps` is `VK_TRUE`, implementations **should** report this as `VK_TRUE`.

NOTE

Multiplication of the combiner rates using the fragment width/height in linear space is equivalent to an addition of those values in log2 space. Some implementations inadvertently implemented an addition in linear space due to unclear requirements originating outside of this specification. This resulted in `fragmentShadingRateStrictMultiplyCombiner` being added. Fortunately, this only affects situations where a rate of 1 in either dimension is combined with another rate of 1. All other combinations result in the exact same result as if multiplication was performed in linear space due to the clamping logic, and the fact that both the sum and product of 2 and 2 are equal. In many cases, this limit will not affect the correct operation of applications.

If the `VkPhysicalDeviceFragmentShadingRatePropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

These properties are related to [fragment shading rates](#).

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceFragmentShadingRatePropertiesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_PROPERTIES_KHR`

Structure Chaining

    size_t             uniformTexelBufferDescriptorSize;
    size_t             robustUniformTexelBufferDescriptorSize;
    size_t             storageTexelBufferDescriptorSize;
    size_t             robustStorageTexelBufferDescriptorSize;
    size_t             uniformBufferDescriptorSize;
    size_t             robustUniformBufferDescriptorSize;
    size_t             storageBufferDescriptorSize;
    size_t             robustStorageBufferDescriptorSize;
    size_t             inputAttachmentDescriptorSize;
    size_t             accelerationStructureDescriptorSize;
    VkDeviceSize        maxSamplerDescriptorBufferRange;
    VkDeviceSize        maxResourceDescriptorBufferRange;
    VkDeviceSize        samplerDescriptorBufferAddressSpaceSize;
    VkDeviceSize        resourceDescriptorBufferAddressSpaceSize;
    VkDeviceSize        descriptorBufferAddressSpaceSize;
} VkPhysicalDeviceDescriptorBufferPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `combinedImageSamplerDescriptorSingleArray` indicates that the implementation does not require an array of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptors to be written into a descriptor buffer as an array of image descriptors, immediately followed by an array of sampler descriptors.
- `bufferlessPushDescriptors` indicates that the implementation does not require a buffer created with the `VK_BUFFER_USAGE_PUSH_DESCRIPTOR_BUFFER_BIT_EXT` usage flag set to be bound when using push descriptors.

- `allowSamplerImageViewPostSubmitCreation` indicates that the implementation does not restrict when the `VkSampler` or `VkImageView` objects used to retrieve descriptor data **can** be created in relation to command buffer submission. If this value is `VK_FALSE`, then the application **must** create any `VkSampler` or `VkImageView` objects whose descriptor data is accessed during the execution of a command buffer, before the `vkQueueSubmit` , or `vkQueueSubmit2`, call that submits that command buffer.
- `descriptorBufferOffsetAlignment` indicates the **required** alignment in bytes when setting offsets into the descriptor buffer.
- `maxDescriptorBufferBindings` indicates the maximum number of descriptor buffer bindings.
- `maxResourceDescriptorBufferBindings` indicates the maximum number of descriptor buffer bindings with `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` that **can** be used.
- `maxSamplerDescriptorBufferBindings` indicates the maximum number of descriptor buffer bindings with `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` that **can** be used.
- `maxEmbeddedImmutableSamplerBindings` indicates the maximum number of embedded immutable sampler sets that **can** be bound.
- `maxEmbeddedImmutableSamplers` indicates the maximum number of unique immutable samplers in descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, and pipeline layouts created from them, which **can** simultaneously exist on a device.
- `bufferCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with buffers.
- `imageCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with images.
- `imageViewCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with image views.
- `samplerCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with samplers.
- `accelerationStructureCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with acceleration structures.
- `samplerDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_SAMPLER` descriptor.
- `combinedImageSamplerDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor.
- `sampledImageDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` descriptor.
- `storageImageDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` descriptor.
- `uniformTexelBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is not enabled.
- `robustUniformTexelBufferDescriptorSize` indicates the size in bytes of a

`VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.

- `storageTexelBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is not enabled.
- `robustStorageTexelBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.
- `uniformBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` descriptor.
- `robustUniformBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.
- `storageBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` descriptor.
- `robustStorageBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.
- `inputAttachmentDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` descriptor.
- `accelerationStructureDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` or `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` descriptor.
- `maxSamplerDescriptorBufferRange` indicates the maximum range in bytes from the address of a sampler descriptor buffer binding that is accessible to a shader.
- `maxResourceDescriptorBufferRange` indicates the maximum range in bytes from the address of a resource descriptor buffer binding that is accessible to a shader.
- `samplerDescriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with the `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` usage flag set.
- `resourceDescriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with the `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` usage flag set.
- `descriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with both the `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` and `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` usage flags set.

A descriptor binding with type `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` has a descriptor size which is implied by the descriptor types included in the `VkMutableDescriptorTypeCreateInfoEXT::pDescriptorTypes` list. The descriptor size is equal to the maximum size of any descriptor type included in the `pDescriptorTypes` list.

As there is no way to request robust and non-robust descriptors separately, or specify robust/non-robust descriptors in the set layout, if the `robustBufferAccess` feature is enabled then robust descriptors are always used.

If the `VkPhysicalDeviceDescriptorBufferPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorBufferPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_PROPERTIES_EXT`

The `VkPhysicalDeviceHostImageCopyProperties` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceHostImageCopyProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           copySrcLayoutCount;
    VkImageLayout*     pCopySrcLayouts;
    uint32_t           copyDstLayoutCount;
    VkImageLayout*     pCopyDstLayouts;
    uint8_t            optimalTilingLayoutUUID[VK_UUID_SIZE];
    VkBool32           identicalMemoryTypeRequirements;
} VkPhysicalDeviceHostImageCopyProperties;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkPhysicalDeviceHostImageCopyProperties
typedef VkPhysicalDeviceHostImageCopyProperties
VkPhysicalDeviceHostImageCopyPropertiesEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `copySrcLayoutCount` is an integer related to the number of image layouts for host copies from images available or queried, as described below.
- `pCopySrcLayouts` is a pointer to an array of [VkImageLayout](#) in which supported image layouts for use with host copy operations from images are returned.
- `copyDstLayoutCount` is an integer related to the number of image layouts for host copies to images available or queried, as described below.
- `pCopyDstLayouts` is a pointer to an array of [VkImageLayout](#) in which supported image layouts for use with host copy operations to images are returned.
- `optimalTilingLayoutUUID` is an array of `VK_UUID_SIZE` `uint8_t` values representing a universally unique identifier for the implementation's swizzling layout of images created with `VK_IMAGE_TILING_OPTIMAL`.
- `identicalMemoryTypeRequirements` indicates that specifying the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` flag in `VkImageCreateInfo::usage` does not affect the memory type requirements of the image.

If the `VkPhysicalDeviceHostImageCopyProperties` structure is included in the `pNext` chain of the

`VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `pCopyDstLayouts` is `NULL`, then the number of image layouts that are supported in `VkCopyMemoryToImageInfo::dstImageLayout` and `VkCopyImageToImageInfo::dstImageLayout` is returned in `copyDstLayoutCount`. Otherwise, `copyDstLayoutCount` **must** be set by the application to the number of elements in the `pCopyDstLayouts` array, and on return is overwritten with the number of values actually written to `pCopyDstLayouts`. If the value of `copyDstLayoutCount` is less than the number of image layouts that are supported, at most `copyDstLayoutCount` values will be written to `pCopyDstLayouts`. The implementation **must** include the `VK_IMAGE_LAYOUT_GENERAL` image layout in `pCopyDstLayouts`. If the `unifiedImageLayouts` feature is supported, the implementation **must** include all the image layouts that are interchangeable with `VK_IMAGE_LAYOUT_GENERAL` in `pCopyDstLayouts`.

If `pCopySrcLayouts` is `NULL`, then the number of image layouts that are supported in `VkCopyImageToMemoryInfo::srcImageLayout` and `VkCopyImageToImageInfo::srcImageLayout` is returned in `copySrcLayoutCount`. Otherwise, `copySrcLayoutCount` **must** be set by the application to the number of elements in the `pCopySrcLayouts` array, and on return is overwritten with the number of values actually written to `pCopySrcLayouts`. If the value of `copySrcLayoutCount` is less than the number of image layouts that are supported, at most `copySrcLayoutCount` values will be written to `pCopySrcLayouts`. The implementation **must** include the `VK_IMAGE_LAYOUT_GENERAL` image layout in `pCopySrcLayouts`. If the `unifiedImageLayouts` feature is supported, the implementation **must** include all the image layouts that are interchangeable with `VK_IMAGE_LAYOUT_GENERAL` in `pCopySrcLayouts`.

The `optimalTilingLayoutUUID` value can be used to ensure compatible data layouts when using the `VK_HOST_IMAGE_COPY_MEMCPY_BIT` flag in `vkCopyMemoryToImage` and `vkCopyImageToMemory`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHostImageCopyProperties-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HOST_IMAGE_COPY_PROPERTIES`
- VUID-VkPhysicalDeviceHostImageCopyProperties-pCopySrcLayouts-parameter
If `copySrcLayoutCount` is not 0, and `pCopySrcLayouts` is not `NULL`, `pCopySrcLayouts` **must** be a valid pointer to an array of `copySrcLayoutCount` `VkImageLayout` values
- VUID-VkPhysicalDeviceHostImageCopyProperties-pCopyDstLayouts-parameter
If `copyDstLayoutCount` is not 0, and `pCopyDstLayouts` is not `NULL`, `pCopyDstLayouts` **must** be a valid pointer to an array of `copyDstLayoutCount` `VkImageLayout` values

The `VkPhysicalDeviceMultiDrawPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_multi_draw
typedef struct VkPhysicalDeviceMultiDrawPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxMultiDrawCount;
} VkPhysicalDeviceMultiDrawPropertiesEXT;
```

The members of the `VkPhysicalDeviceMultiDrawPropertiesEXT` structure describe the following features:

- `maxMultiDrawCount` indicates the maximum number of draw calls which **can** be batched into a

single multidraw.

If the `VkPhysicalDeviceMultiDrawPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiDrawPropertiesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceNestedCommandBufferPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_nested_command_buffer
typedef struct VkPhysicalDeviceNestedCommandBufferPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxCommandBufferNestingLevel;
} VkPhysicalDeviceNestedCommandBufferPropertiesEXT;
```

The members of the `VkPhysicalDeviceNestedCommandBufferPropertiesEXT` structure describe the following features:

- `maxCommandBufferNestingLevel` indicates the maximum nesting level of calls to `vkCmdExecuteCommands` from `Secondary Command Buffers`. A `maxCommandBufferNestingLevel` of `UINT32_MAX` means there is no limit to the nesting level.

If the `VkPhysicalDeviceNestedCommandBufferPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNestedCommandBufferPropertiesEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NESTED_COMMAND_BUFFER_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           graphicsPipelineLibraryFastLinking;
    VkBool32           graphicsPipelineLibraryIndependentInterpolationDecoration;
} VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT;
```

- [graphicsPipelineLibraryFastLinking](#) indicates whether fast linking of graphics pipelines is supported. If it is [VK_TRUE](#), creating a graphics pipeline entirely from pipeline libraries without [VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT](#) is comparable in cost to recording a command in a command buffer.
- [graphicsPipelineLibraryIndependentInterpolationDecoration](#) indicates whether [NoPerspective](#) and [Flat](#) interpolation decorations in the last vertex processing stage and the fragment shader are required to match when using graphics pipeline libraries. If it is [VK_TRUE](#), the interpolation decorations do not need to match. If it is [VK_FALSE](#), these decorations **must** either be present in both stages or neither stage in order for a given interface variable to match.

If the [VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GRAPHICS_PIPELINE_LIBRARY_PROPERTIES_EXT](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_fragment_shader_barycentric
typedef struct VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           triStripVertexOrderIndependentOfProvokingVertex;
} VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR;
```

- When the [provoking vertex mode](#) is [VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT](#), and the primitive order is odd in a triangle strip, the ordering of vertices is defined in [last vertex table](#). [triStripVertexOrderIndependentOfProvokingVertex](#) equal to [VK_TRUE](#) indicates that the implementation ignores this and uses the vertex order defined by [VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT](#) instead.

If the [VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_PROPERTIES_KHR](#) must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_PROPERTIES_KHR](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint8_t            shaderModuleIdentifierAlgorithmUUID[VK_UUID_SIZE];
} VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT;
```

The members of the [VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT](#) structure describe the following:

- [shaderModuleIdentifierAlgorithmUUID](#) is an array of [VK_UUID_SIZE](#) [uint8_t](#) values which uniquely represents the algorithm used to compute an identifier in [vkGetShaderModuleIdentifierEXT](#) and [vkGetShaderModuleCreateInfoIdentifierEXT](#). Implementations **should** not change this value in different driver versions if the algorithm used

to compute an identifier is the same.

NOTE

The algorithm UUID may be the same in different ICDs if the algorithms are guaranteed to produce the same results. This may happen in driver stacks which support different kinds of hardware with shared code.

Khronos' conformance testing can not guarantee that `shaderModuleIdentifierAlgorithmUUID` values are actually unique, so implementors should make their own best efforts to ensure that their UUID is unlikely to conflict with other implementations which may use a different algorithm. In particular, hard-coded values which easily conflict, such as all-0 bits, **should** never be used. Hard-coded values are acceptable if best effort is ensured that the value will not accidentally conflict.

If the `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MODULE_IDENTIFIER_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDevicePipelineRobustnessProperties` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePipelineRobustnessProperties {
    VkStructureType           sType;
    void*                     pNext;
    VkPipelineRobustnessBufferBehavior defaultRobustnessStorageBuffers;
    VkPipelineRobustnessBufferBehavior defaultRobustnessUniformBuffers;
    VkPipelineRobustnessBufferBehavior defaultRobustnessVertexInputs;
    VkPipelineRobustnessImageBehavior defaultRobustnessImages;
} VkPhysicalDevicePipelineRobustnessProperties;
```

```
// Provided by VK_EXT_pipeline_robustness
// Equivalent to VkPhysicalDevicePipelineRobustnessProperties
typedef VkPhysicalDevicePipelineRobustnessProperties
VkPhysicalDevicePipelineRobustnessPropertiesEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **defaultRobustnessStorageBuffers** describes the behavior of out of bounds accesses made to storage buffers when no robustness features are enabled
- **defaultRobustnessUniformBuffers** describes the behavior of out of bounds accesses made to uniform buffers when no robustness features are enabled
- **defaultRobustnessVertexInputs** describes the behavior of out of bounds accesses made to vertex input attributes when no robustness features are enabled
- **defaultRobustnessImages** describes the behavior of out of bounds accesses made to images when no robustness features are enabled

Some implementations of Vulkan may be able to guarantee that certain types of accesses are always performed with robustness even when the Vulkan API's robustness features are not explicitly enabled.

Even when an implementation reports that accesses to a given resource type are robust by default, it remains invalid to make an out of bounds access without requesting the appropriate robustness feature.

If the **VkPhysicalDevicePipelineRobustnessProperties** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineRobustnessProperties-sType-sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_PROPERTIES**

Structure Chaining

Extends the structure

The **VkPhysicalDeviceExtendedDynamicState3PropertiesEXT** structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state3
typedef struct VkPhysicalDeviceExtendedDynamicState3PropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicPrimitiveTopologyUnrestricted;
} VkPhysicalDeviceExtendedDynamicState3PropertiesEXT;
```

- `dynamicPrimitiveTopologyUnrestricted` indicates that the implementation allows `vkCmdSetPrimitiveTopology` to use a different [primitive topology class](#) to the one specified in the active graphics pipeline.

If the `VkPhysicalDeviceExtendedDynamicState3PropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicState3PropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_3_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceOpticalFlowPropertiesNV` structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkPhysicalDeviceOpticalFlowPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkOpticalFlowGridSizeFlagsNV supportedOutputGridSizes;
    VkOpticalFlowGridSizeFlagsNV supportedHintGridSizes;
    VkBool32           hintSupported;
    VkBool32           costSupported;
    VkBool32           bidirectionalFlowSupported;
    VkBool32           globalFlowSupported;
    uint32_t           minWidth;
    uint32_t           minHeight;
    uint32_t           maxWidth;
    uint32_t           maxHeight;
    uint32_t           maxNumRegionsOfInterest;
} VkPhysicalDeviceOpticalFlowPropertiesNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **supportedOutputGridSizes** are the supported [VkOpticalFlowGridSizeFlagsNV](#) which can be specified in [VkOpticalFlowSessionCreateInfoNV::outputGridSize](#).
- **supportedHintGridSizes** are the supported [VkOpticalFlowGridSizeFlagsNV](#) which can be specified in [VkOpticalFlowSessionCreateInfoNV::hintGridSize](#).
- **hintSupported** is a boolean describing whether using hint flow vector map is supported in an optical flow session.
- **costSupported** is a boolean describing whether cost map generation is supported in an optical flow session.
- **bidirectionalFlowSupported** is a boolean describing whether bi-directional flow generation is supported in an optical flow session.
- **globalFlowSupported** is a boolean describing whether global flow vector map generation is supported in an optical flow session.
- **minWidth** is the minimum width in pixels for images used in an optical flow session.
- **minHeight** is the minimum height in pixels for images used in an optical flow session.
- **maxWidth** is the maximum width in pixels for images used in an optical flow session.
- **maxHeight** is the maximum height in pixels for images used in an optical flow session.
- **maxNumRegionsOfInterest** is the maximum number of regions of interest which can be used in an optical flow session. If this **maxNumRegionsOfInterest** is 0, regions of interest are not supported in an optical flow session.

If the [VkPhysicalDeviceOpticalFlowPropertiesNV](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceOpticalFlowPropertiesNV-sType-sType`
sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPTICAL_FLOW_PROPERTIES_NV](#)

    VkStructureType    sType;
    void*              pNext;
    uint64_t           shaderCoreMask;
    uint32_t           shaderCoreCount;
    uint32_t           shaderWarpsPerCore;
} VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderCoreMask` is a bitfield where each bit set represents the presence of a shader core whose ID is the bit position. The highest ID for any shader core on the device is the position of the most significant bit set.
- `shaderCoreCount` is the number of shader cores on the device.
- `shaderWarpsPerCore` is the maximum number of simultaneously executing warps on a shader core.

If the `VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Values which **may** be returned in the `rayTracingInvocationReorderReorderingHint` field of `VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT` or `VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV` are:

```
// Provided by VK_EXT_ray_tracing_invocation_reorder
typedef enum VkRayTracingInvocationReorderModeEXT {
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_EXT = 0,
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT = 1,
    // Provided by VK_NV_ray_tracing_invocation_reorder
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_NV =
VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_EXT,
    // Provided by VK_NV_ray_tracing_invocation_reorder
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_NV =
VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT,
} VkRayTracingInvocationReorderModeEXT;
```

```
// Provided by VK_NV_ray_tracing_invocation_reorder
// Equivalent to VkRayTracingInvocationReorderModeEXT
typedef VkRayTracingInvocationReorderModeEXT VkRayTracingInvocationReorderModeNV;
```

- `VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_EXT` specifies that the implementation does not reorder at reorder calls.
- `VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT` specifies that the implementation **may** reorder at reorder calls.

The `VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT {
    VkStructureType          sType;
    void*                    pNext;
    VkRayTracingInvocationReorderModeEXT rayTracingInvocationReorderReorderingHint;
    uint32_t                 maxShaderBindingTableRecordIndex;
} VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `rayTracingInvocationReorderReorderingHint` is a hint indicating if the implementation **may** reorder at the reorder calls.
- `maxShaderBindingTableRecordIndex` is the maximum shader binding table record index allowed to be passed in to `OpHitObjectSetShaderBindingTableRecordIndexEXT`

If `rayTracingInvocationReorderReorderingHint` is `VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT` there **must** exist conditions under which the ordered set of invocations before a reorder instruction is different than the ordered set of invocations after the reorder instruction. The ordering of a set of invocations is determined by the `SubgroupId` of an invocation's subgroup and the `SubgroupInvocationId` of an invocation within that subgroup.

The reorder instructions are:

- `OpReorderThreadWithHintEXT`
- `OpReorderThreadWithHitObjectEXT`
- `OpHitObjectReorderExecuteShaderEXT`
- `OpHitObjectTraceReorderExecuteEXT`
- `OpHitObjectTraceMotionReorderExecuteEXT`

NOTE

Because the extension changes how hits are managed there is a compatibility reason to expose the extension even when an implementation does not have sorting active.

If the `VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_INVOCATION_REORDER_PROPERTIES_EXT`

The `VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxWorkGroupCount[3];
    uint32_t           maxWorkGroupSize[3];
    uint32_t           maxOutputClusterCount;
    VkDeviceSize       indirectBufferOffsetAlignment;
} VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxWorkGroupCount`[3] is the maximum number of local workgroups that can be launched by a single command. These three value represent the maximum local workgroup count in the X, Y, and Z dimensions, respectively. In the current implementation, the values of Y and Z are both implicitly set as one. `groupCountX` of `DrawCluster` command **must** be less than or equal to `maxWorkGroupCount`[0].
- `maxWorkGroupSize`[3] is the maximum size of a local workgroup. These three value represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit. In the current implementation, the maximum workgroup size of the X dimension is 32, the others are 1.
- `maxOutputClusterCount` is the maximum number of output cluster a single cluster culling shader workgroup can emit.
- `indirectBufferOffsetAlignment` indicates the alignment for cluster drawing command buffer stride. `vkCmdDrawClusterIndirectHUAWEI::offset` **must** be a multiple of this value.

If the `VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

    void*              pNext;
    uint32_t           pixelRate;
    uint32_t           texelRate;
    uint32_t           fmaRate;
} VkPhysicalDeviceShaderCorePropertiesARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pixelRate** is an unsigned integer value indicating the maximum number of pixels output per clock per shader core.
- **texelRate** is an unsigned integer value indicating the maximum number of texels per clock per shader core.
- **fmaRate** is an unsigned integer value indicating the maximum number of single-precision fused multiply-add operations per clock per shader core.

If a throughput rate cannot be determined on the physical device, the value **0** will be returned for that rate.

If the [VkPhysicalDeviceShaderCorePropertiesARM](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCorePropertiesARM-sType-sType **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_ARM](#)

The [VkPhysicalDeviceShaderObjectPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_object
typedef struct VkPhysicalDeviceShaderObjectPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint8_t            shaderBinaryUUID[VK_UUID_SIZE];
    uint32_t            shaderBinaryVersion;
} VkPhysicalDeviceShaderObjectPropertiesEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBinaryUUID` is an array of [VK_UUID_SIZE](#) `uint8_t` values representing a universally unique identifier for one or more implementations whose shader binaries are guaranteed to be compatible with each other.
- `shaderBinaryVersion` is an unsigned integer incremented to represent backwards compatible differences between implementations with the same `shaderBinaryUUID`.

The purpose and usage of the values of this structure are described in greater detail in [Binary Shader Compatibility](#).

If the `VkPhysicalDeviceShaderObjectPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_PROPERTIES_EXT` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceShaderEnqueuePropertiesAMD` structure is defined as:

```
// Provided by VK_AMD_shader_enqueue
typedef struct VkPhysicalDeviceShaderQueuePropertiesAMD {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxExecutionGraphDepth;
    uint32_t           maxExecutionGraphShaderOutputNodes;
    uint32_t           maxExecutionGraphShaderPayloadSize;
    uint32_t           maxExecutionGraphShaderPayloadCount;
    uint32_t           executionGraphDispatchAddressAlignment;
    uint32_t           maxExecutionGraphWorkgroupCount[3];
    uint32_t           maxExecutionGraphWorkgroups;
} VkPhysicalDeviceShaderQueuePropertiesAMD;
```

The members of the `VkPhysicalDeviceShaderQueuePropertiesAMD` structure describe the following limits:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxExecutionGraphDepth` defines the maximum node chain depth in the graph. The dispatched node is at depth 1 and the node enqueued by it is at depth 2, and so on. If a node enqueues itself, each recursive enqueue increases the depth by 1 as well.
- `maxExecutionGraphShaderOutputNodes` specifies the maximum number of unique nodes that can be dispatched from a single shader, and **must** be at least 256.
- `maxExecutionGraphShaderPayloadSize` specifies the maximum total size of payload declarations in a shader. For any payload declarations that share resources, indicated by `NodeSharesPayloadLimitsWithAMD` decorations, the maximum size of each set of shared payload declarations is taken. The sum of each shared set's maximum size and the size of each unshared payload is counted against this limit.
- `maxExecutionGraphShaderPayloadCount` specifies the maximum number of output payloads that can be initialized in a single workgroup.
- `executionGraphDispatchAddressAlignment` specifies the alignment of non-scratch `VkDeviceAddress` arguments consumed by graph dispatch commands.
- `maxExecutionGraphWorkgroupCount[3]` is the maximum number of local workgroups that a shader **can** be dispatched with in X, Y, and Z dimensions, respectively.
- `maxExecutionGraphWorkgroups` is the total number of local workgroups that a shader **can** be dispatched with.

If the `VkPhysicalDeviceShaderQueuePropertiesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderQueuePropertiesAMD-sType-sType

`sType` **must** be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ENQUEUE_PROPERTIES_AMD`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV` structure is defined as:

```
// Provided by VK_NV_extended_sparse_address_space
typedef struct VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        extendedSparseAddressSpaceSize;
    VkImageUsageFlags   extendedSparseImageUsageFlags;
    VkBufferUsageFlags  extendedSparseBufferUsageFlags;
} VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `extendedSparseAddressSpaceSize` is the total amount of address space available, in bytes, for sparse memory resources of all usages if the `extendedSparseAddressSpace` feature is enabled. This **must** be greater than or equal to `VkPhysicalDeviceLimits::sparseAddressSpaceSize`, and the difference in space **must** only be used with usages allowed below. This is an upper bound on the sum of the sizes of all sparse resources, regardless of whether any memory is bound to them.
- `extendedSparseImageUsageFlags` is a bitmask of `VkImageUsageFlagBits` of usages which **may** allow an implementation to use the full `extendedSparseAddressSpaceSize` space.
- `extendedSparseBufferUsageFlags` is a bitmask of `VkBufferUsageFlagBits` of usages which **may** allow an implementation to use the full `extendedSparseAddressSpaceSize` space.

If the `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV-sType-sType `sType` **must** be
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_SPARSE_ADDRESS_SPACE_PROPERTIES_NV`

Structure Chaining

The [VkPhysicalDeviceCudaKernelLaunchPropertiesNV](#) structure is defined as:

```
// Provided by VK_NV_cuda_kernel_launch
typedef struct VkPhysicalDeviceCudaKernelLaunchPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            computeCapabilityMinor;
    uint32_t            computeCapabilityMajor;
} VkPhysicalDeviceCudaKernelLaunchPropertiesNV;
```

The members of the [VkPhysicalDeviceCudaKernelLaunchPropertiesNV](#) structure describe the following features:

- [computeCapabilityMinor](#) indicates the minor version number of the compute code.
- [computeCapabilityMajor](#) indicates the major version number of the compute code.

If the [VkPhysicalDeviceCudaKernelLaunchPropertiesNV](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCudaKernelLaunchPropertiesNV-sType-sType [sType](#) must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUDA_KERNEL_LAUNCH_PROPERTIES_NV](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDevicePushConstantBankPropertiesNV](#) structure is defined as:

```
// Provided by VK_NV_push_constant_bank
typedef struct VkPhysicalDevicePushConstantBankPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            maxGraphicsPushConstantBanks;
    uint32_t            maxComputePushConstantBanks;
    uint32_t            maxGraphicsPushDataBanks;
    uint32_t            maxComputePushDataBanks;
} VkPhysicalDevicePushConstantBankPropertiesNV;
```

This structure describes the following implementation-dependent limits:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxGraphicsPushConstantBanks` indicates the maximum number of push constant banks supported for graphics pipelines when used with non-descriptor heap scenarios.
- `maxComputePushConstantBanks` indicates the maximum number of push constant banks supported for compute pipelines when used with non-descriptor heap scenarios.
- `maxGraphicsPushDataBanks` indicates the maximum number of push data banks supported for graphics pipelines when using descriptor heaps.
- `maxComputePushDataBanks` indicates the maximum number of push data banks supported for compute pipelines when using descriptor heaps.

If the `VkPhysicalDevicePushConstantBankPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

NOTE

The number of banks available for descriptor heap usage (`maxGraphicsPushDataBanks` and `maxComputePushDataBanks`) is equal or greater than the number of banks available for non-descriptor heap usage (`maxGraphicsPushConstantBanks` and `maxComputePushConstantBanks`).

For graphics shaders, both descriptor heap and non-descriptor heap limits are greater than 1. For compute shaders, the number of banks is equal to or greater than 1.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePushConstantBankPropertiesNV-sType-sType `must` be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PUSH_CONSTANT_BANK_PROPERTIES_NV`

Structure Chaining

The [VkPhysicalDeviceExternalFormatResolvePropertiesANDROID](#) structure is defined as:

```
// Provided by VK_ANDROID_external_format_resolve
typedef struct VkPhysicalDeviceExternalFormatResolvePropertiesANDROID {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nullColorAttachmentWithExternalFormatResolve;
    VkChromaLocation    externalFormatResolveChromaOffsetX;
    VkChromaLocation    externalFormatResolveChromaOffsetY;
} VkPhysicalDeviceExternalFormatResolvePropertiesANDROID;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [nullColorAttachmentWithExternalFormatResolve](#) indicates that there **must** be no color attachment image when performing external format resolves if it is [VK_TRUE](#).
- [externalFormatResolveChromaOffsetX](#) indicates the [VkChromaLocation](#) that an implementation uses in the X axis for accesses to an external format image as a resolve attachment. This **must** be consistent between external format resolves and load operations from external format resolve attachments to color attachments when [nullColorAttachmentWithExternalFormatResolve](#) is [VK_TRUE](#).
- [externalFormatResolveChromaOffsetY](#) indicates the [VkChromaLocation](#) that an implementation uses in the Y axis for accesses to an external format image as a resolve attachment. This **must** be consistent between external format resolves and load operations from external format resolve attachments to color attachments when [nullColorAttachmentWithExternalFormatResolve](#) is [VK_TRUE](#).

If the [VkPhysicalDeviceExternalFormatResolvePropertiesANDROID](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceExternalFormatResolvePropertiesANDROID-sType-sType`
[sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_FORMAT_RESOLVE_PROPERTIES_ANDROID](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDevicePipelineBinaryPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPhysicalDevicePipelineBinaryPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineBinaryInternalCache;
    VkBool32           pipelineBinaryInternalCacheControl;
    VkBool32           pipelineBinaryPrefersInternalCache;
    VkBool32           pipelineBinaryPrecompiledInternalCache;
    VkBool32           pipelineBinaryCompressedData;
} VkPhysicalDevicePipelineBinaryPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBinaryInternalCache` specifies that the implementation maintains a pipeline cache internal to the implementation. If this is `VK_TRUE`, applications **can** create pipeline binaries with only a pipeline create info, and in this case, an implementation **may** be able to create a pipeline binary directly without application needing to capture the binary itself.
- `pipelineBinaryInternalCacheControl` specifies whether the driver's internal cache **can** be disabled. If this property is `VK_TRUE` `VkDevicePipelineBinaryInternalCacheControlKHR::disableInternalCache` **can** be used to disable the driver's internal cache, allowing an application to take full control of both memory and disk usage.
- `pipelineBinaryPrefersInternalCache` specifies that the implementation prefers to maintain an internal cache, and applications **should** not store pipeline binaries in their own on-disk caches to avoid increased on-disk storage requirements. Applications are encouraged to only store pipeline keys instead, and aim to create pipeline binaries from key alone on subsequent runs of the application.
- `pipelineBinaryPrecompiledInternalCache` specifies that the implementation **may** have pipeline binaries in its internal cache, which is populated without the application ever having generated that pipeline itself. Applications **can** attempt to create binaries without extracting pipeline binary data from the pipeline prior for a set of pipeline keys, including from previous runs of the application.
- `pipelineBinaryCompressedData` specifies that the binary data is already compressed and so applications **should** not attempt to compress it.

NOTE These properties tend to be platform specific and may change depending on external configuration which is outside the scope of this specification. These properties are intended to guide applications when implementations have

dedicated caching solutions available. In particular, if the `pipelineBinaryPrefersInternalCache` limit is exposed, relying on the internal cache may provide some advantage compared to an application-specific solution. An application with its own dedicated solution may still use its own caching system even with this limit exposed.

If the `VkPhysicalDevicePipelineBinaryPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VOID-VkPhysicalDevicePipelineBinaryPropertiesKHR-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_BINARY_PROPERTIES_KHR`

The `VkPhysicalDeviceRenderPassStripedPropertiesARM` structure is defined as:

```
// Provided by VK_ARM_render_pass_striped
typedef struct VkPhysicalDeviceRenderPassStripedPropertiesARM {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         renderPassStripeGranularity;
    uint32_t           maxRenderPassStripes;
} VkPhysicalDeviceRenderPassStripedPropertiesARM;
```

The members of the `VkPhysicalDeviceRenderPassStripedPropertiesARM` structure describe the following limits:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `renderPassStripeGranularity` indicates the minimum supported granularity of striped render pass regions.
- `maxRenderPassStripes` indicates the maximum number of stripes supported in striped rendering.

If the `VkPhysicalDeviceRenderPassStripedPropertiesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRenderPassStripedPropertiesARM-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RENDER_PASS_STRIPED_PROPERTIES_ARM

The `VkPhysicalDeviceTileShadingPropertiesQCOM` structure is defined as:

```
// Provided by VK_QCOM_tile_shading
typedef struct VkPhysicalDeviceTileShadingPropertiesQCOM {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            maxApronSize;
    VkBool32            preferNonCoherent;
    VkExtent2D          tileGranularity;
    VkExtent2D          maxTileShadingRate;
} VkPhysicalDeviceTileShadingPropertiesQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxApronSize` is the maximum value supported which can be specified for `VkRenderPassTileShadingCreateInfoQCOM::apronSize` or `width` and `height`.
- `preferNonCoherent` indicates that the implementation prefers tile attachments declared in shaders with the `NonCoherentTileAttachmentReadQCOM` decoration. Use of the decoration **may** offer performance or power advantages.
- `tileGranularity` provides a guarantee on the granularity of each tile. Each tile will have dimensions that are a multiple of this granularity in width and height.
- `maxTileShadingRate` is the maximum value of `TileShadingRateQCOM` and **must** be a power of 2.

If the `VkPhysicalDeviceTileShadingPropertiesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with

each corresponding implementation-dependent property.

Valid Usage (Implicit)

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceTensorPropertiesARM` structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkPhysicalDeviceTensorPropertiesARM {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             maxTensorDimensionCount;
    uint64_t             maxTensorElements;
    uint64_t             maxPerDimensionTensorElements;
    int64_t              maxTensorStride;
    uint64_t             maxTensorSize;
    uint32_t             maxTensorShaderAccessArrayLength;
    uint32_t             maxTensorShaderAccessSize;
    uint32_t             maxDescriptorSetStorageTensors;
    uint32_t             maxPerStageDescriptorSetStorageTensors;
    uint32_t             maxDescriptorSetUpdateAfterBindStorageTensors;
    uint32_t             maxPerStageDescriptorUpdateAfterBindStorageTensors;
    VkBool32             shaderStorageTensorArrayNonUniformIndexingNative;
    VkShaderStageFlags   shaderTensorSupportedStages;
} VkPhysicalDeviceTensorPropertiesARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTensorDimensionCount` is the maximum number of dimensions that can be specified in the `dimensionCount` member of `VkTensorDescriptionARM`.
- `maxTensorElements` is the maximum number of data elements in a created tensor as specified in the `VkTensorDescriptionARM` of `VkTensorCreateInfoARM`. The number of data elements in a tensor is computed as the product of `pDimensions[i]` for all $0 \leq i \leq \text{dimensionCount}-1$.
- `maxPerDimensionTensorElements` is the maximum number of data elements alongside any dimension of a tensor.
- `maxTensorStride` is the maximum value for a tensor stride that can be used in `VkTensorDescriptionARM::pStrides`.
- `maxTensorSize` is the maximum size, in bytes, of a tensor.
- `maxTensorShaderAccessArrayLength` is the maximum number of elements in an array returned by `OpTensorReadARM` or consumed by `OpTensorWriteARM`.
- `maxTensorShaderAccessSize` is the maximum size in bytes of the data that can be read from a tensor with `OpTensorReadARM` or written to a tensor with `OpTensorWriteARM`.
- `maxDescriptorSetStorageTensors` is the maximum number of tensors that **can** be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptors with a type of `VK_DESCRIPTOR_TYPE_TENSOR_ARM` count against this limit.
- `maxPerStageDescriptorSetStorageTensors` is the maximum number of tensors that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_TENSOR_ARM` count against this limit. A descriptor is accessible to a

pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set.

- `maxDescriptorSetUpdateAfterBindStorageTensors` is similar to `maxDescriptorSetStorageTensors` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindStorageTensors` is similar to `maxPerStageDescriptorSetStorageTensors` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `shaderStorageTensorArrayNonUniformIndexingNative` is a boolean value indicating whether storage tensor descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of storage buffers may execute multiple times in order to access all the descriptors.
- `shaderTensorSupportedStages` is a bitfield of `VkShaderStageFlagBits` describing the shader stages that **can** access tensor resources. `shaderTensorSupportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.

If the `VkPhysicalDeviceTensorPropertiesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

    VkDeviceSize        maxPushDataSize;
    size_t              imageCaptureReplayOpaqueDataSize;
    uint32_t            maxDescriptorHeapEmbeddedSamplers;
    uint32_t            samplerYcbcrConversionCount;
    VkBool32            sparseDescriptorHeaps;
    VkBool32            protectedDescriptorHeaps;
} VkPhysicalDeviceDescriptorHeapPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `samplerHeapAlignment` specifies the required alignment of the `heapRange->address` member of `VkBindHeapInfoEXT` for binding sampler heaps. It must be a power-of-two value.
- `resourceHeapAlignment` specifies the required alignment of the `heapRange->address` member of `VkBindHeapInfoEXT` for binding resource heaps. It must be a power-of-two value.
- `maxSamplerHeapSize` describes maximum value of the `size` member of `VkDeviceAddressRangeKHR` for binding sampler heaps, including the reservation, when embedded samplers are used.
- `maxResourceHeapSize` describes maximum value of the `size` member of `VkDeviceAddressRangeKHR` for binding resource heaps, including the reservation.
- `minSamplerHeapReservedRange` specifies the minimum amount of data that the implementation needs to be reserved within the bound sampler heap range when embedded samplers are not used.
- `minSamplerHeapReservedRangeWithEmbedded` specifies the minimum amount of data that the implementation needs to be reserved within the bound sampler heap range when embedded samplers are used.
- `minResourceHeapReservedRange` specifies the minimum amount of data that the implementation needs to be reserved within the bound resource heap range.
- `samplerDescriptorSize` specifies the size of sampler descriptors written by `vkWriteSamplerDescriptorsEXT`. It **must** be a power-of-two value.
- `imageDescriptorSize` specifies the maximum size of image and texel buffer descriptors written by `vkWriteResourceDescriptorsEXT`. It **must** be a power-of-two value.
- `bufferDescriptorSize` specifies the maximum size of unformatted buffer descriptors or acceleration structures written by `vkWriteResourceDescriptorsEXT`. It **must** be a power-of-two value.
- `samplerDescriptorAlignment` specifies the required alignment of sampler descriptors within a sampler heap. It must be a power-of-two value, and less than or equal to `samplerDescriptorSize`.
- `imageDescriptorAlignment` specifies the required alignment of image descriptors within a resource heap. It must be a power-of-two value, and less than or equal to `imageDescriptorSize`.
- `bufferDescriptorAlignment` specifies the required alignment of buffer descriptors within a resource heap. It must be a power-of-two value, and less than or equal to `bufferDescriptorSize`.
- `maxPushDataSize` specifies the maximum total size of all push data.
- `imageCaptureReplayOpaqueDataSize` specifies the size of the opaque capture/replay data for an image.
- `maxDescriptorHeapEmbeddedSamplers` specifies the maximum number of unique embedded samplers across all pipelines.
- `samplerYcbcrConversionCount` specifies the number of sampler descriptors required for any sampler using YC_BC_R conversion.
- `sparseDescriptorHeaps` specifies whether descriptor heaps can be backed by sparse memory or not. If this value is `VK_FALSE`, buffers cannot be specified as both sparse and having descriptor heap usage.
- `protectedDescriptorHeaps` specifies whether descriptor heaps can be used with protected

submissions or not. If this value is `VK_FALSE`, buffers cannot be specified as both protected and having descriptor heap usage.

If the `VkPhysicalDeviceDescriptorHeapPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceDescriptorHeapPropertiesEXT-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_HEAP_PROPERTIES_EXT`

Structure Chaining

Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceDescriptorHeapTensorPropertiesARM` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap with VK_ARM_tensors
typedef struct VkPhysicalDeviceDescriptorHeapTensorPropertiesARM {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        tensorDescriptorSize;
    VkDeviceSize        tensorDescriptorAlignment;
    size_t              tensorCaptureReplayOpaqueDataSize;
} VkPhysicalDeviceDescriptorHeapTensorPropertiesARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `tensorDescriptorSize` specifies the maximum size of tensor descriptors written by `vkWriteResourceDescriptorsEXT`.
- `tensorDescriptorAlignment` specifies the required alignment of tensor descriptors within a resource heap. It must be a power-of-two value, and less than or equal to `tensorDescriptorSize`.
- `tensorCaptureReplayOpaqueDataSize` specifies the size of the opaque capture/replay data for an tensor.

If the `VkPhysicalDeviceDescriptorHeapTensorPropertiesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorHeapTensorPropertiesARM-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_HEAP_TENSOR_PROPERTIES_ARM

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceShaderInstrumentationPropertiesARM](#) structure is defined as:

```
// Provided by VK_ARM_shader_instrumentation
typedef struct VkPhysicalDeviceShaderInstrumentationPropertiesARM {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           numMetrics;
    VkBool32           perBasicBlockGranularity;
} VkPhysicalDeviceShaderInstrumentationPropertiesARM;
```

The members of the [VkPhysicalDeviceShaderInstrumentationPropertiesARM](#) structure describe the following:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [numMetrics](#) is the number of shader instrumentation metrics supported.
- [perBasicBlockGranularity](#) is a boolean value indicating whether shader instrumentation metrics are returned per basic block. If this is [VK_FALSE](#), then all metrics for the shader are reported as basic block index 0.

If the [VkPhysicalDeviceShaderInstrumentationPropertiesARM](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderInstrumentationPropertiesARM-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INSTRUMENTATION_PROPERTIES_ARM

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceShaderAbortPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_abort
typedef struct VkPhysicalDeviceShaderAbortPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           maxShaderAbortMessageSize;
} VkPhysicalDeviceShaderAbortPropertiesKHR;
```

The `VkPhysicalDeviceShaderAbortPropertiesKHR` structure describes the following:

- `maxShaderAbortMessageSize` indicates the maximum size of a shader abort message that the application **can** specify.

If the `VkPhysicalDeviceShaderAbortPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAbortPropertiesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ABORT_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- [VkPhysicalDeviceProperties2](#)

55.1. Limit Requirements

The following table specifies the **required** minimum/maximum for all Vulkan graphics implementations. Where a limit corresponds to a fine-grained device feature which is **optional**, the feature name is listed with two **required** limits, one when the feature is supported and one when it is not supported. If an implementation supports a feature, the limits reported are the same whether or not the feature is enabled.

Table 74. Required Limit Types

Type	Limit	Feature
uint32_t	maxImageDimension1D	-
uint32_t	maxImageDimension2D	-
uint32_t	maxImageDimension3D	-
uint32_t	maxImageDimensionCube	-
uint32_t	maxImageArrayLayers	-

1

The **Limit Type** column specifies the limit is either the minimum limit all implementations **must** support, the maximum limit all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum limit is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2

The `maxPerStageResources` **must** be at least the smallest of the following:

- the sum of the `maxPerStageDescriptorUniformBuffers`, `maxPerStageDescriptorStorageBuffers`, `maxPerStageDescriptorSampledImages`, `maxPerStageDescriptorStorageImages`, `maxPerStageDescriptorInputAttachments`, `maxColorAttachments` limits, or
- 128.

It **may** not be possible to reach this limit in every stage.

3

See `maxViewportDimensions` for the **required** relationship to other limits.

4

See `viewportBoundsRange` for the **required** relationship to other limits.

5

The values `minInterpolationOffset` and `maxInterpolationOffset` describe the closed interval of supported interpolation offsets: `[minInterpolationOffset, maxInterpolationOffset]`. The ULP is determined by `subPixelInterpolationOffsetBits`. If `subPixelInterpolationOffsetBits` is 4, this provides increments of $(1/2^4) = 0.0625$, and thus the range of supported interpolation offsets would be `[-0.5, 0.4375]`.

6

The point size ULP is determined by `pointSizeGranularity`. If the `pointSizeGranularity` is 0.125, the range of supported point sizes **must** be at least `[1.0, 63.875]`.

7

The line width ULP is determined by `lineWidthGranularity`. If the `lineWidthGranularity` is 0.0625, the range of supported line widths **must** be at least `[1.0, 7.9375]`.

8

The minimum `maxDescriptorSet*` limit is n times the corresponding *specification* minimum `maxPerStageDescriptor*` limit, where n is the number of shader stages supported by the `VkPhysicalDevice`. If all shader stages are supported, $n = 6$ (vertex, tessellation control, tessellation evaluation, geometry, fragment, compute).

9

The `UpdateAfterBind` descriptor limits **must** each be greater than or equal to the corresponding `non-UpdateAfterBind` limit.

10

If the `VK_KHR_portability_subset` extension is enabled, the required minimum value of `maxVertexInputBindings` is 8.

12

`maxResourceDescriptorSize` is defined as the maximum value of `storageImageDescriptorSize`, `sampledImageDescriptorSize`, `robustUniformTexelBufferDescriptorSize`,

robustStorageTexelBufferDescriptorSize,
robustStorageBufferDescriptorSize,
accelerationStructureDescriptorSize.

robustUniformBufferDescriptorSize,
inputAttachmentDescriptorSize, and

55.2. Additional Multisampling Capabilities

To query additional multisampling capabilities which **may** be supported for a specific sample count, beyond the minimum capabilities described for [Limits](#) above, call:

```
// Provided by VK_EXT_sample_locations
void vkGetPhysicalDeviceMultisamplePropertiesEXT(
    VkPhysicalDevice          physicalDevice,
    VkSampleCountFlagBits     samples,
    VkMultisamplePropertiesEXT* pMultisampleProperties);
```

- **physicalDevice** is the physical device from which to query the additional multisampling capabilities.
- **samples** is a [VkSampleCountFlagBits](#) value specifying the sample count to query capabilities for.
- **pMultisampleProperties** is a pointer to a [VkMultisamplePropertiesEXT](#) structure in which information about additional multisampling capabilities specific to the sample count is returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-samples-parameter **samples** **must** be a valid [VkSampleCountFlagBits](#) value
- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-pMultisampleProperties-parameter **pMultisampleProperties** **must** be a valid pointer to a [VkMultisamplePropertiesEXT](#) structure

The [VkMultisamplePropertiesEXT](#) structure is defined as

```
// Provided by VK_EXT_sample_locations
typedef struct VkMultisamplePropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         maxSampleLocationGridSize;
} VkMultisamplePropertiesEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.

- `maxSampleLocationGridSize` is the maximum size of the pixel grid in which sample locations **can** vary.

Valid Usage (Implicit)

- VUID-VkMultisamplePropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MULTISAMPLE_PROPERTIES_EXT`
- VUID-VkMultisamplePropertiesEXT-pNext-pNext
`pNext` **must** be `NULL`

If the sample count for which additional multisampling capabilities are requested using `vkGetPhysicalDeviceMultisamplePropertiesEXT` is set in `sampleLocationSampleCounts` the `width` and `height` members of `VkMultisamplePropertiesEXT::maxSampleLocationGridSize` **must** be greater than or equal to the corresponding members of `maxSampleLocationGridSize`, respectively, otherwise both members **must** be 0.

55.3. Milestone Limits

55.3.1. Roadmap 2022

Implementations that claim support for the [Roadmap 2022](#) milestone **must** satisfy the following additional limit requirements:

Limit	Supported Limit	Limit Type ¹
<code>maxImageDimension1D</code>	8192	min
<code>maxImageDimension2D</code>	8192	min
<code>maxImageDimensionCube</code>	8192	min
<code>maxImageArrayLayers</code>	2048	min

maxViewportDimensions.height	8192	min
maxFramebufferWidth	8192	min

Limit	Supported Limit	Limit Type ¹
maxFramebufferHeight	8192	min

Chapter 56. Formats

Supported buffer and image formats **may** vary across implementations. A minimum set of format features are guaranteed, but others **must** be explicitly queried before use to ensure they are supported by the implementation.

The features for the set of formats ([VkFormat](#)) supported by the implementation are queried individually using the [vkGetPhysicalDeviceFormatProperties](#) command.

56.1. Format Definition

The following image formats **can** be passed to, and **may** be returned from Vulkan commands. The memory required to store each format is discussed with that format, and also summarized in the [Representation and Texel Block Size](#) section and the [Compatible formats](#) table.

```
// Provided by VK_VERSION_1_0
typedef enum VkFormat {
    VK_FORMAT_UNDEFINED = 0,
    VK_FORMAT_R4G4_UNORM_PACK8 = 1,
    VK_FORMAT_R4G4B4A4_UNORM_PACK16 = 2,

- [VK_FORMAT_UNDEFINED](#) specifies that the format is not specified.
- [VK_FORMAT_R4G4_UNORM_PACK8](#) specifies a two-component, 8-bit packed unsigned normalized format that has a 4-bit R component in bits 4..7, and a 4-bit G component in bits 0..3.
- [VK_FORMAT_R4G4B4A4_UNORM_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit R component in bits 12..15, a 4-bit G component in bits 8..11, a 4-bit B component in bits 4..7, and a 4-bit A component in bits 0..3.
- [VK_FORMAT_B4G4R4A4_UNORM_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit B component in bits 12..15, a 4-bit G component in bits 8..11, a 4-bit R component in bits 4..7, and a 4-bit A component in bits 0..3.
- [VK_FORMAT_A4R4G4B4_UNORM_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit A component in bits 12..15, a 4-bit R component in bits 8..11, a 4-bit G component in bits 4..7, and a 4-bit B component in bits 0..3.
- [VK_FORMAT_A4B4G4R4_UNORM_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit A component in bits 12..15, a 4-bit B component in bits 8..11, a 4-bit G component in bits 4..7, and a 4-bit R component in bits 0..3.
- [VK_FORMAT_R5G6B5_UNORM_PACK16](#) specifies a three-component, 16-bit packed unsigned normalized format that has a 5-bit R component in bits 11..15, a 6-bit G component in bits 5..10, and a 5-bit B component in bits 0..4.
- [VK_FORMAT_B5G6R5_UNORM_PACK16](#) specifies a three-component, 16-bit packed unsigned normalized format that has a 5-bit B component in bits 11..15, a 6-bit G component in bits 5..10, and a 5-bit R component in bits 0..4.
- [VK_FORMAT_R5G5B5A1_UNORM_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 5-bit R component in bits 11..15, a 5-bit G component in bits 6..10, a 5-bit B component in bits 1..5, and a 1-bit A component in bit 0.
- [VK_FORMAT_B5G5R5A1_UNORM_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 5-bit B component in bits 11..15, a 5-bit G component in bits 6..10, a 5-bit R component in bits 1..5, and a 1-bit A component in bit 0.
- [VK_FORMAT_A1R5G5B5_UNORM_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 1-bit A component in bit 15, a 5-bit R component in bits 10..14, a 5-bit G component in bits 5..9, and a 5-bit B component in bits 0..4.
- [VK_FORMAT_A1B5G5R5_UNORM_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 1-bit A component in bit 15, a 5-bit B component in bits 10..14, a 5-bit G component in bits 5..9, and a 5-bit R component in bits 0..4.
- [VK_FORMAT_A8_UNORM](#) specifies a one-component, 8-bit unsigned normalized format that has a single 8-bit A component.
- [VK_FORMAT_R8_UNORM](#) specifies a one-component, 8-bit unsigned normalized format that has

a single 8-bit R component.

- [VK_FORMAT_R8_SNORM](#) specifies a one-component, 8-bit signed normalized format that has a single 8-bit R component.
- [VK_FORMAT_R8_USCALED](#) specifies a one-component, 8-bit unsigned scaled integer format that has a single 8-bit R component.
- [VK_FORMAT_R8_SSCALED](#) specifies a one-component, 8-bit signed scaled integer format that has a single 8-bit R component.
- [VK_FORMAT_R8_UINT](#) specifies a one-component, 8-bit unsigned integer format that has a single 8-bit R component.
- [VK_FORMAT_R8_SINT](#) specifies a one-component, 8-bit signed integer format that has a single 8-bit R component.
- [VK_FORMAT_R8_SRGB](#) specifies a one-component, 8-bit unsigned normalized format that has a single 8-bit R component stored with sRGB nonlinear encoding.
- [VK_FORMAT_R8G8_UNORM](#) specifies a two-component, 16-bit unsigned normalized format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK_FORMAT_R8G8_SNORM](#) specifies a two-component, 16-bit signed normalized format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK_FORMAT_R8G8_USCALED](#) specifies a two-component, 16-bit unsigned scaled integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK_FORMAT_R8G8_SSCALED](#) specifies a two-component, 16-bit signed scaled integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK_FORMAT_R8G8_UINT](#) specifies a two-component, 16-bit unsigned integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK_FORMAT_R8G8_SINT](#) specifies a two-component, 16-bit signed integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK_FORMAT_R8G8_SRGB](#) specifies a two-component, 16-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, and an 8-bit G component stored with sRGB nonlinear encoding in byte 1.
- [VK_FORMAT_R8G8B8_UNORM](#) specifies a three-component, 24-bit unsigned normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK_FORMAT_R8G8B8_SNORM](#) specifies a three-component, 24-bit signed normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK_FORMAT_R8G8B8_USCALED](#) specifies a three-component, 24-bit unsigned scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK_FORMAT_R8G8B8_SSCALED](#) specifies a three-component, 24-bit signed scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK_FORMAT_R8G8B8_UINT](#) specifies a three-component, 24-bit unsigned integer format that

has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.

- [VK_FORMAT_R8G8B8_SINT](#) specifies a three-component, 24-bit signed integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK_FORMAT_R8G8B8_SRGB](#) specifies a three-component, 24-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, and an 8-bit B component stored with sRGB nonlinear encoding in byte 2.
- [VK_FORMAT_B8G8R8_UNORM](#) specifies a three-component, 24-bit unsigned normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK_FORMAT_B8G8R8_SNORM](#) specifies a three-component, 24-bit signed normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK_FORMAT_B8G8R8_USCALED](#) specifies a three-component, 24-bit unsigned scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK_FORMAT_B8G8R8_SSCALED](#) specifies a three-component, 24-bit signed scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK_FORMAT_B8G8R8_UINT](#) specifies a three-component, 24-bit unsigned integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK_FORMAT_B8G8R8_SINT](#) specifies a three-component, 24-bit signed integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK_FORMAT_B8G8R8_SRGB](#) specifies a three-component, 24-bit unsigned normalized format that has an 8-bit B component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, and an 8-bit R component stored with sRGB nonlinear encoding in byte 2.
- [VK_FORMAT_R8G8B8A8_UNORM](#) specifies a four-component, 32-bit unsigned normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_R8G8B8A8_SNORM](#) specifies a four-component, 32-bit signed normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_R8G8B8A8_USCALED](#) specifies a four-component, 32-bit unsigned scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_R8G8B8A8_SSCALED](#) specifies a four-component, 32-bit signed scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

- [VK_FORMAT_R8G8B8A8_UINT](#) specifies a four-component, 32-bit unsigned integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_R8G8B8A8_SINT](#) specifies a four-component, 32-bit signed integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_R8G8B8A8_SRGB](#) specifies a four-component, 32-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, an 8-bit B component stored with sRGB nonlinear encoding in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_B8G8R8A8_UNORM](#) specifies a four-component, 32-bit unsigned normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_B8G8R8A8_SNORM](#) specifies a four-component, 32-bit signed normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_B8G8R8A8_USCALED](#) specifies a four-component, 32-bit unsigned scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_B8G8R8A8_SSCALED](#) specifies a four-component, 32-bit signed scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_B8G8R8A8_UINT](#) specifies a four-component, 32-bit unsigned integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_B8G8R8A8_SINT](#) specifies a four-component, 32-bit signed integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_B8G8R8A8_SRGB](#) specifies a four-component, 32-bit unsigned normalized format that has an 8-bit B component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, an 8-bit R component stored with sRGB nonlinear encoding in byte 2, and an 8-bit A component in byte 3.
- [VK_FORMAT_A8B8G8R8_UNORM_PACK32](#) specifies a four-component, 32-bit packed unsigned normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK_FORMAT_A8B8G8R8_SNORM_PACK32](#) specifies a four-component, 32-bit packed signed normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK_FORMAT_A8B8G8R8_USCALED_PACK32](#) specifies a four-component, 32-bit packed unsigned scaled integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK_FORMAT_A8B8G8R8_SSCALED_PACK32](#) specifies a four-component, 32-bit packed signed scaled integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits

16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

- [VK_FORMAT_A8B8G8R8_UINT_PACK32](#) specifies a four-component, 32-bit packed unsigned integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK_FORMAT_A8B8G8R8_SINT_PACK32](#) specifies a four-component, 32-bit packed signed integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK_FORMAT_A8B8G8R8_SRGB_PACK32](#) specifies a four-component, 32-bit packed unsigned normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component stored with sRGB nonlinear encoding in bits 16..23, an 8-bit G component stored with sRGB nonlinear encoding in bits 8..15, and an 8-bit R component stored with sRGB nonlinear encoding in bits 0..7.
- [VK_FORMAT_A2R10G10B10_UNORM_PACK32](#) specifies a four-component, 32-bit packed unsigned normalized format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK_FORMAT_A2R10G10B10_SNORM_PACK32](#) specifies a four-component, 32-bit packed signed normalized format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK_FORMAT_A2R10G10B10_USCALED_PACK32](#) specifies a four-component, 32-bit packed unsigned scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK_FORMAT_A2R10G10B10_SSCALED_PACK32](#) specifies a four-component, 32-bit packed signed scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK_FORMAT_A2R10G10B10_UINT_PACK32](#) specifies a four-component, 32-bit packed unsigned integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK_FORMAT_A2R10G10B10_SINT_PACK32](#) specifies a four-component, 32-bit packed signed integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK_FORMAT_A2B10G10R10_UNORM_PACK32](#) specifies a four-component, 32-bit packed unsigned normalized format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK_FORMAT_A2B10G10R10_SNORM_PACK32](#) specifies a four-component, 32-bit packed signed normalized format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK_FORMAT_A2B10G10R10_USCALED_PACK32](#) specifies a four-component, 32-bit packed unsigned scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK_FORMAT_A2B10G10R10_SSCALED_PACK32](#) specifies a four-component, 32-bit packed signed scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

- [VK_FORMAT_A2B10G10R10_UINT_PACK32](#) specifies a four-component, 32-bit packed unsigned integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK_FORMAT_A2B10G10R10_SINT_PACK32](#) specifies a four-component, 32-bit packed signed integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK_FORMAT_R16_UNORM](#) specifies a one-component, 16-bit unsigned normalized format that has a single 16-bit R component.
- [VK_FORMAT_R16_SNORM](#) specifies a one-component, 16-bit signed normalized format that has a single 16-bit R component.
- [VK_FORMAT_R16_USCALED](#) specifies a one-component, 16-bit unsigned scaled integer format that has a single 16-bit R component.
- [VK_FORMAT_R16_SSCALED](#) specifies a one-component, 16-bit signed scaled integer format that has a single 16-bit R component.
- [VK_FORMAT_R16_UINT](#) specifies a one-component, 16-bit unsigned integer format that has a single 16-bit R component.
- [VK_FORMAT_R16_SINT](#) specifies a one-component, 16-bit signed integer format that has a single 16-bit R component.
- [VK_FORMAT_R16_SFLOAT](#) specifies a one-component, 16-bit signed floating-point format that has a single 16-bit R component.
- [VK_FORMAT_R16G16_UNORM](#) specifies a two-component, 32-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK_FORMAT_R16G16_SNORM](#) specifies a two-component, 32-bit signed normalized format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK_FORMAT_R16G16_USCALED](#) specifies a two-component, 32-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK_FORMAT_R16G16_SSCALED](#) specifies a two-component, 32-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK_FORMAT_R16G16_UINT](#) specifies a two-component, 32-bit unsigned integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK_FORMAT_R16G16_SINT](#) specifies a two-component, 32-bit signed integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK_FORMAT_R16G16_SFLOAT](#) specifies a two-component, 32-bit signed floating-point format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK_FORMAT_R16G16B16_UNORM](#) specifies a three-component, 48-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK_FORMAT_R16G16B16_SNORM](#) specifies a three-component, 48-bit signed normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK_FORMAT_R16G16B16_USCALED](#) specifies a three-component, 48-bit unsigned scaled integer

format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- [VK_FORMAT_R16G16B16_SSCALED](#) specifies a three-component, 48-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK_FORMAT_R16G16B16_UINT](#) specifies a three-component, 48-bit unsigned integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK_FORMAT_R16G16B16_SINT](#) specifies a three-component, 48-bit signed integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK_FORMAT_R16G16B16_SFLOAT](#) specifies a three-component, 48-bit signed floating-point format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK_FORMAT_R16G16B16A16_UNORM](#) specifies a four-component, 64-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK_FORMAT_R16G16B16A16_SNORM](#) specifies a four-component, 64-bit signed normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK_FORMAT_R16G16B16A16_USCALED](#) specifies a four-component, 64-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK_FORMAT_R16G16B16A16_SSCALED](#) specifies a four-component, 64-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK_FORMAT_R16G16B16A16_UINT](#) specifies a four-component, 64-bit unsigned integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK_FORMAT_R16G16B16A16_SINT](#) specifies a four-component, 64-bit signed integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK_FORMAT_R16G16B16A16_SFLOAT](#) specifies a four-component, 64-bit signed floating-point format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK_FORMAT_R32_UINT](#) specifies a one-component, 32-bit unsigned integer format that has a single 32-bit R component.
- [VK_FORMAT_R32_SINT](#) specifies a one-component, 32-bit signed integer format that has a single 32-bit R component.
- [VK_FORMAT_R32_SFLOAT](#) specifies a one-component, 32-bit signed floating-point format that has a single 32-bit R component.
- [VK_FORMAT_R32G32_UINT](#) specifies a two-component, 64-bit unsigned integer format that has

a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.

- [VK_FORMAT_R32G32_SINT](#) specifies a two-component, 64-bit signed integer format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.
- [VK_FORMAT_R32G32_SFLOAT](#) specifies a two-component, 64-bit signed floating-point format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.
- [VK_FORMAT_R32G32B32_UINT](#) specifies a three-component, 96-bit unsigned integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.
- [VK_FORMAT_R32G32B32_SINT](#) specifies a three-component, 96-bit signed integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.
- [VK_FORMAT_R32G32B32_SFLOAT](#) specifies a three-component, 96-bit signed floating-point format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.
- [VK_FORMAT_R32G32B32A32_UINT](#) specifies a four-component, 128-bit unsigned integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.
- [VK_FORMAT_R32G32B32A32_SINT](#) specifies a four-component, 128-bit signed integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.
- [VK_FORMAT_R32G32B32A32_SFLOAT](#) specifies a four-component, 128-bit signed floating-point format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.
- [VK_FORMAT_R64_UINT](#) specifies a one-component, 64-bit unsigned integer format that has a single 64-bit R component.
- [VK_FORMAT_R64_SINT](#) specifies a one-component, 64-bit signed integer format that has a single 64-bit R component.
- [VK_FORMAT_R64_SFLOAT](#) specifies a one-component, 64-bit signed floating-point format that has a single 64-bit R component.
- [VK_FORMAT_R64G64_UINT](#) specifies a two-component, 128-bit unsigned integer format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.
- [VK_FORMAT_R64G64_SINT](#) specifies a two-component, 128-bit signed integer format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.
- [VK_FORMAT_R64G64_SFLOAT](#) specifies a two-component, 128-bit signed floating-point format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.
- [VK_FORMAT_R64G64B64_UINT](#) specifies a three-component, 192-bit unsigned integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.
- [VK_FORMAT_R64G64B64_SINT](#) specifies a three-component, 192-bit signed integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.

- [VK_FORMAT_R64G64B64_SFLOAT](#) specifies a three-component, 192-bit signed floating-point format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.
- [VK_FORMAT_R64G64B64A64_UINT](#) specifies a four-component, 256-bit unsigned integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.
- [VK_FORMAT_R64G64B64A64_SINT](#) specifies a four-component, 256-bit signed integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.
- [VK_FORMAT_R64G64B64A64_SFLOAT](#) specifies a four-component, 256-bit signed floating-point format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.
- [VK_FORMAT_B10G11R11_UFLOAT_PACK32](#) specifies a three-component, 32-bit packed unsigned floating-point format that has a 10-bit B component in bits 22..31, an 11-bit G component in bits 11..21, an 11-bit R component in bits 0..10. See [Unsigned 10-Bit Floating-Point Numbers](#) and [Unsigned 11-Bit Floating-Point Numbers](#).
- [VK_FORMAT_E5B9G9R9_UFLOAT_PACK32](#) specifies a three-component, 32-bit packed unsigned floating-point format that has a 5-bit shared exponent in bits 27..31, a 9-bit B component mantissa in bits 18..26, a 9-bit G component mantissa in bits 9..17, and a 9-bit R component mantissa in bits 0..8.
- [VK_FORMAT_D16_UNORM](#) specifies a one-component, 16-bit unsigned normalized format that has a single 16-bit depth component.
- [VK_FORMAT_X8_D24_UNORM_PACK32](#) specifies a two-component, 32-bit format that has 24 unsigned normalized bits in the depth component and, **optionally**, 8 bits that are unused.
- [VK_FORMAT_D32_SFLOAT](#) specifies a one-component, 32-bit signed floating-point format that has 32 bits in the depth component.
- [VK_FORMAT_S8_UINT](#) specifies a one-component, 8-bit unsigned integer format that has 8 bits in the stencil component.
- [VK_FORMAT_D16_UNORM_S8_UINT](#) specifies a two-component, 24-bit format that has 16 unsigned normalized bits in the depth component and 8 unsigned integer bits in the stencil component.
- [VK_FORMAT_D24_UNORM_S8_UINT](#) specifies a two-component, 32-bit packed format that has 8 unsigned integer bits in the stencil component, and 24 unsigned normalized bits in the depth component.
- [VK_FORMAT_D32_SFLOAT_S8_UINT](#) specifies a two-component format that has 32 signed float bits in the depth component and 8 unsigned integer bits in the stencil component. There are **optionally** 24 bits that are unused.
- [VK_FORMAT_BC1_RGB_UNORM_BLOCK](#) specifies a three-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data. This format has no alpha and is considered opaque.
- [VK_FORMAT_BC1_RGB_SRGB_BLOCK](#) specifies a three-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB

texel data with sRGB nonlinear encoding. This format has no alpha and is considered opaque.

- [VK_FORMAT_BC1_RGBA_UNORM_BLOCK](#) specifies a four-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data, and provides 1 bit of alpha.
- [VK_FORMAT_BC1_RGBA_SRGB_BLOCK](#) specifies a four-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding, and provides 1 bit of alpha.
- [VK_FORMAT_BC2_UNORM_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.
- [VK_FORMAT_BC2_SRGB_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding.
- [VK_FORMAT_BC3_UNORM_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.
- [VK_FORMAT_BC3_SRGB_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding.
- [VK_FORMAT_BC4_UNORM_BLOCK](#) specifies a one-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized red texel data.
- [VK_FORMAT_BC4_SNORM_BLOCK](#) specifies a one-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of signed normalized red texel data.
- [VK_FORMAT_BC5_UNORM_BLOCK](#) specifies a two-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- [VK_FORMAT_BC5_SNORM_BLOCK](#) specifies a two-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- [VK_FORMAT_BC6H_UFLOAT_BLOCK](#) specifies a three-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned floating-point RGB texel data.
- [VK_FORMAT_BC6H_SFLOAT_BLOCK](#) specifies a three-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed floating-point RGB texel data.
- [VK_FORMAT_BC7_UNORM_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_BC7_SRGB_BLOCK](#) specifies a four-component, block-compressed format where

each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- [VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK](#) specifies a three-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data. This format has no alpha and is considered opaque.
- [VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK](#) specifies a three-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding. This format has no alpha and is considered opaque.
- [VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK](#) specifies a four-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data, and provides 1 bit of alpha.
- [VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK](#) specifies a four-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding, and provides 1 bit of alpha.
- [VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK](#) specifies a four-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.
- [VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK](#) specifies a four-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding applied.
- [VK_FORMAT_EAC_R11_UNORM_BLOCK](#) specifies a one-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized red texel data.
- [VK_FORMAT_EAC_R11_SNORM_BLOCK](#) specifies a one-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of signed normalized red texel data.
- [VK_FORMAT_EAC_R11G11_UNORM_BLOCK](#) specifies a two-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- [VK_FORMAT_EAC_R11G11_SNORM_BLOCK](#) specifies a two-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- [VK_FORMAT_ASTC_4x4_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_4x4_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed floating-point

RGBA texel data.

- [VK_FORMAT_ASTC_5x4_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_5x4_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_5x5_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_5x5_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_6x5_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_6x5_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_6x6_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_6x6_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_8x5_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×5 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_8x5_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×5 rectangle of unsigned normalized

RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- [VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 8×5 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_8x6_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×6 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_8x6_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 8×6 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_8x8_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×8 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_8x8_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×8 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 8×8 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_10x5_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_10x5_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_10x6_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_10x6_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_10x8_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of unsigned normalized

RGBA texel data.

- [VK_FORMAT_ASTC_10x8_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_10x10_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_10x10_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_12x10_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_12x10_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_12x12_UNORM_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_12x12_SRGB_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_3x3x3_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 3×3×3 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_3x3x3_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 3×3×3 cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_3x3x3_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 3×3×3 cuboid of signed floating-

point RGBA texel data.

- [VK_FORMAT_ASTC_4x3x3_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×3×3 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_4x3x3_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×3×3 cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_4x3x3_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×3×3 cuboid of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_4x4x3_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4×3 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_4x4x3_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4×3 cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_4x4x3_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4×3 cuboid of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_4x4x4_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4×4 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_4x4x4_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4×4 cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_4x4x4_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4×4 cuboid of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_5x4x4_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4×4 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_5x4x4_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4×4 cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_5x4x4_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4×4 cuboid of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_5x5x4_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5×4 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_5x5x4_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5×4 cuboid of unsigned normalized RGBA texel data.

normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- [VK_FORMAT_ASTC_5x5x4_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5×4 cuboid of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_5x5x5_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5×5 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_5x5x5_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5×5 cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_5x5x5_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5×5 cuboid of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_6x5x5_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5×5 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_6x5x5_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5×5 cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_6x5x5_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5×5 cuboid of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_6x6x5_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6×5 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_6x6x5_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6×5 cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_6x6x5_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6×5 cuboid of signed floating-point RGBA texel data.
- [VK_FORMAT_ASTC_6x6x6_UNORM_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6×6 cuboid of unsigned normalized RGBA texel data.
- [VK_FORMAT_ASTC_6x6x6_SRGB_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6×6 cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK_FORMAT_ASTC_6x6x6_SFLOAT_BLOCK_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6×6 cuboid of signed floating-point RGBA texel data.
- [VK_FORMAT_G8B8G8R8_422_UNORM](#) specifies a four-component, 32-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1

rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has an 8-bit G component for the even i coordinate in byte 0, an 8-bit B component in byte 1, an 8-bit G component for the odd i coordinate in byte 2, and an 8-bit R component in byte 3. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- [VK_FORMAT_B8G8R8G8_422_UNORM](#) specifies a four-component, 32-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has an 8-bit B component in byte 0, an 8-bit G component for the even i coordinate in byte 1, an 8-bit R component in byte 2, and an 8-bit G component for the odd i coordinate in byte 3. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.
- [VK_FORMAT_G8_B8_R8_3PLANE_420_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ and $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK_IMAGE_ASPECT_PLANE_0_BIT](#) for the G plane, [VK_IMAGE_ASPECT_PLANE_1_BIT](#) for the B plane, and [VK_IMAGE_ASPECT_PLANE_2_BIT](#) for the R plane. This format only supports images with a width and height that is a multiple of two.
- [VK_FORMAT_G8_B8R8_2PLANE_420_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-bit B component in byte 0 and an 8-bit R component in byte 1. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ and $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK_IMAGE_ASPECT_PLANE_0_BIT](#) for the G plane, and [VK_IMAGE_ASPECT_PLANE_1_BIT](#) for the BR plane. This format only supports images with a width and height that is a multiple of two.
- [VK_FORMAT_G8_B8_R8_3PLANE_422_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK_IMAGE_ASPECT_PLANE_0_BIT](#) for the G plane, [VK_IMAGE_ASPECT_PLANE_1_BIT](#) for the B plane, and [VK_IMAGE_ASPECT_PLANE_2_BIT](#) for the R plane. This format only supports images with a width that is a multiple of two.
- [VK_FORMAT_G8_B8R8_2PLANE_422_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-bit B component in byte 0 and an 8-bit R component in byte 1. The horizontal

dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK_IMAGE_ASPECT_PLANE_0_BIT](#) for the G plane, and [VK_IMAGE_ASPECT_PLANE_1_BIT](#) for the BR plane. This format only supports images with a width that is a multiple of two.

- [VK_FORMAT_G8_B8_R8_3PLANE_444_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. Each plane has the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK_IMAGE_ASPECT_PLANE_0_BIT](#) for the G plane, [VK_IMAGE_ASPECT_PLANE_1_BIT](#) for the B plane, and [VK_IMAGE_ASPECT_PLANE_2_BIT](#) for the R plane.
- [VK_FORMAT_R10X6_UNORM_PACK16](#) specifies a one-component, 16-bit unsigned normalized format that has a single 10-bit R component in the top 10 bits of a 16-bit word, with the bottom 6 bits unused.
- [VK_FORMAT_R10X6G10X6_UNORM_2PACK16](#) specifies a two-component, 32-bit unsigned normalized format that has a 10-bit R component in the top 10 bits of the word in bytes 0..1, and a 10-bit G component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word unused.
- [VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16](#) specifies a four-component, 64-bit unsigned normalized format that has a 10-bit R component in the top 10 bits of the word in bytes 0..1, a 10-bit G component in the top 10 bits of the word in bytes 2..3, a 10-bit B component in the top 10 bits of the word in bytes 4..5, and a 10-bit A component in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused.
- [VK_FORMAT_G10X6B10X6G10X6R10X6_422_UNORM_4PACK16](#) specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 10-bit G component for the even i coordinate in the top 10 bits of the word in bytes 0..1, a 10-bit B component in the top 10 bits of the word in bytes 2..3, a 10-bit G component for the odd i coordinate in the top 10 bits of the word in bytes 4..5, and a 10-bit R component in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.
- [VK_FORMAT_B10X6G10X6R10X6G10X6_422_UNORM_4PACK16](#) specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 10-bit B component in the top 10 bits of the word in bytes 0..1, a 10-bit G component for the even i coordinate in the top 10 bits of the word in bytes 2..3, a 10-bit R component in the top 10 bits of the word in bytes 4..5, and a 10-bit G component for the odd i coordinate in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed

format with a 2×1 compressed texel block.
