- VUID-VkPushDescriptorSetWithTemplateInfo-layout-07993
`layout` **must** be compatible with the layout used to create `descriptorUpdateTemplate`
- VUID-VkPushDescriptorSetWithTemplateInfo-descriptorUpdateTemplate-07994
`descriptorUpdateTemplate` **must** have been created with a `templateType` of `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS`
- VUID-VkPushDescriptorSetWithTemplateInfo-set-07995
`set` **must** be the same value used to create `descriptorUpdateTemplate`
- VUID-VkPushDescriptorSetWithTemplateInfo-set-07304
`set` **must** be less than `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-VkPushDescriptorSetWithTemplateInfo-set-11854
`set` **must** reference a valid `VkDescriptorSetLayout` handle in `layout`
- VUID-VkPushDescriptorSetWithTemplateInfo-set-07305
`set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`
- VUID-VkPushDescriptorSetWithTemplateInfo-None-09495
If the `dynamicPipelineLayout` feature is not enabled, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkPushDescriptorSetWithTemplateInfo-layout-09496
If `layout` is `VK_NULL_HANDLE`, the `pNext` chain **must** include a valid `VkPipelineLayoutCreateInfo` structure
- VUID-VkPushDescriptorSetWithTemplateInfo-None-10359
If the `VK_KHR_push_descriptor` extension is not enabled, `pushDescriptor` **must** be enabled

Valid Usage (Implicit)

- VUID-VkPushDescriptorSetWithTemplateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PUSH_DESCRIPTOR_SET_WITH_TEMPLATE_INFO`
- VUID-VkPushDescriptorSetWithTemplateInfo-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`
- VUID-VkPushDescriptorSetWithTemplateInfo-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique

- VUID-VkPushDescriptorSetWithTemplateInfo-descriptorUpdateTemplate-parameter **descriptorUpdateTemplate** **must** be a valid [VkDescriptorUpdateTemplate](#) handle
- VUID-VkPushDescriptorSetWithTemplateInfo-layout-parameter
If **layout** is not [VK_NULL_HANDLE](#), **layout** **must** be a valid [VkPipelineLayout](#) handle
- VUID-VkPushDescriptorSetWithTemplateInfo-pData-parameter
pData **must** be a pointer value
- VUID-VkPushDescriptorSetWithTemplateInfo-commonparent
Both of **descriptorUpdateTemplate**, and **layout** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

17.10. Push Constant Updates

As described above in section [Pipeline Layouts](#), the pipeline layout defines shader push constants which are updated via Vulkan commands rather than via writes to memory or copy commands.

NOTE

Push constants represent a high speed path to modify constant data in pipelines that is expected to outperform memory-backed resource updates.

To update push constants, call:

```
// Provided by VK_VERSION_1_0
void vkCmdPushConstants(
    VkCommandBuffer          commandBuffer,
    VkPipelineLayout         layout,
    VkShaderStageFlags       stageFlags,
    uint32_t                 offset,
    uint32_t                 size,
    const void*              pValues);
```

- **commandBuffer** is the command buffer in which the push constant update will be recorded.
- **layout** is the pipeline layout used to program the push constant updates.
- **stageFlags** is a bitmask of [VkShaderStageFlagBits](#) specifying the shader stages that will use the push constants in the updated range.
- **offset** is the start offset of the push constant range to update, in units of bytes.
- **size** is the size of the push constant range to update, in units of bytes.
- **pValues** is a pointer to an array of **size** bytes containing the new push constant values.

When a command buffer begins recording, all push constant values are undefined. Reads of undefined push constant values by the executing shader return undefined values.

Push constant values **can** be updated incrementally, causing shader stages in **stageFlags** to read the new data from **pValues** for push constants modified by this command, while still reading the previous data for push constants not modified by this command. When a [bound pipeline command](#) is issued, the bound pipeline's layout **must** be compatible with the layouts used to set the values of

all push constants in the pipeline layout's push constant ranges, as described in [Pipeline Layout Compatibility](#). Binding a pipeline with a layout that is not compatible with the push constant layout does not disturb the push constant values.

NOTE

As `stageFlags` needs to include all flags the relevant push constant ranges were created with, any flags that are not supported by the queue family that the `VkCommandPool` used to allocate `commandBuffer` was created on are ignored.

Valid Usage

- VUID-vkCmdPushConstants-commandBuffer-11295
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdPushConstants-commandBuffer-11296
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdPushConstants-offset-01795
For each byte in the range specified by `offset` and `size` and for each shader stage in `stageFlags`, there **must** be a push constant range in `layout` that includes that byte and that stage
- VUID-vkCmdPushConstants-offset-01796
For each byte in the range specified by `offset` and `size` and for each push constant range that overlaps that byte, `stageFlags` **must** include all stages in that push constant range's `VkPushConstantRange::stageFlags`
- VUID-vkCmdPushConstants-offset-00368
`offset` **must** be a multiple of 4
- VUID-vkCmdPushConstants-size-00369
`size` **must** be a multiple of 4
- VUID-vkCmdPushConstants-offset-00370
`offset` **must** be less than `VkPhysicalDeviceLimits::maxPushConstantsSize`
- VUID-vkCmdPushConstants-size-00371
`size` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPushConstantsSize` minus `offset`

Valid Usage (Implicit)

- VUID-vkCmdPushConstants-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushConstants-layout-parameter
`layout` **must** be a valid `VkPipelineLayout` handle

- VUID-vkCmdPushConstants-stageFlags-parameter
stageFlags **must** be a valid combination of [VkShaderStageFlagBits](#) values
- VUID-vkCmdPushConstants-stageFlags-requiredbitmask
stageFlags **must** not be 0
- VUID-vkCmdPushConstants-pValues-parameter
pValues **must** be a valid pointer to an array of **size** bytes
- VUID-vkCmdPushConstants-commandBuffer-recording
commandBuffer **must** be in the [recording state](#)
- VUID-vkCmdPushConstants-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) operations
- VUID-vkCmdPushConstants-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdPushConstants-size-arraylength
size **must** be greater than 0
- VUID-vkCmdPushConstants-commonparent
Both of **commandBuffer**, and **layout** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdPushConstants is not affected by [conditional rendering](#)

To update push constants, call:

```
// Provided by VK_VERSION_1_4
void vkCmdPushConstants2(
    VkCommandBuffer                      commandBuffer,
    const VkPushConstantsInfo*          pPushConstantsInfo);
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to vkCmdPushConstants2
void vkCmdPushConstants2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkPushConstantsInfo*          pPushConstantsInfo);
```

- `commandBuffer` is the command buffer in which the push constant update will be recorded.
- `pPushConstantsInfo` is a pointer to a `VkPushConstantsInfo` structure.

Valid Usage

- VUID-vkCmdPushConstants2-commandBuffer-11295
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdPushConstants2-commandBuffer-11296
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`

Valid Usage (Implicit)

- VUID-vkCmdPushConstants2-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushConstants2-pPushConstantsInfo-parameter
`pPushConstantsInfo` **must** be a valid pointer to a valid `VkPushConstantsInfo` structure
- VUID-vkCmdPushConstants2-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdPushConstants2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdPushConstants2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	State

Conditional Rendering

`vkCmdPushConstants2` is not affected by [conditional rendering](#)

The `VkPushConstantsInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPushConstantsInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkPipelineLayout    layout;
    VkShaderStageFlags stageFlags;
    uint32_t            offset;
    uint32_t            size;
    const void*        pValues;
} VkPushConstantsInfo;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkPushConstantsInfo
typedef VkPushConstantsInfo VkPushConstantsInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `layout` is the pipeline layout used to program the push constant updates. If the `dynamicPipelineLayout` feature is enabled, `layout` can be `VK_NULL_HANDLE` and the layout **must** be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`

- **stageFlags** is a bitmask of **VkShaderStageFlagBits** specifying the shader stages that will use the push constants in the updated range.
- **offset** is the start offset of the push constant range to update, in units of bytes.
- **size** is the size of the push constant range to update, in units of bytes.
- **pValues** is a pointer to an array of **size** bytes containing the new push constant values.

Valid Usage

- VUID-VkPushConstantsInfo-offset-01795
For each byte in the range specified by **offset** and **size** and for each shader stage in **stageFlags**, there **must** be a push constant range in **layout** that includes that byte and that stage
- VUID-VkPushConstantsInfo-offset-01796
For each byte in the range specified by **offset** and **size** and for each push constant range that overlaps that byte, **stageFlags** **must** include all stages in that push constant range's **VkPushConstantRange::stageFlags**
- VUID-VkPushConstantsInfo-offset-00368
offset **must** be a multiple of 4
- VUID-VkPushConstantsInfo-size-00369
size **must** be a multiple of 4
- VUID-VkPushConstantsInfo-offset-00370
offset **must** be less than **VkPhysicalDeviceLimits::maxPushConstantsSize**
- VUID-VkPushConstantsInfo-size-00371
size **must** be less than or equal to **VkPhysicalDeviceLimits::maxPushConstantsSize** minus **offset**
- VUID-VkPushConstantsInfo-None-09495
If the **dynamicPipelineLayout** feature is not enabled, **layout** **must** be a valid **VkPipelineLayout** handle
- VUID-VkPushConstantsInfo-layout-09496
If **layout** is **VK_NULL_HANDLE**, the **pNext** chain **must** include a valid **VkPipelineLayoutCreateInfo** structure

Valid Usage (Implicit)

- VUID-VkPushConstantsInfo-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_PUSH_CONSTANTS_INFO**
- VUID-VkPushConstantsInfo-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkPipelineLayoutCreateInfo** or **VkPushConstantBankInfoNV**
- VUID-VkPushConstantsInfo-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkPushConstantsInfo-layout-parameter

If **layout** is not **VK_NULL_HANDLE**, **layout** **must** be a valid **VkPipelineLayout** handle

- VUID-VkPushConstantsInfo-stageFlags-parameter

stageFlags **must** be a valid combination of **VkShaderStageFlagBits** values

- VUID-VkPushConstantsInfo-stageFlags-requiredbitmask

stageFlags **must** not be **0**

- VUID-VkPushConstantsInfo-pValues-parameter

pValues **must** be a valid pointer to an array of **size** bytes

- VUID-VkPushConstantsInfo-size-arraylength

size **must** be greater than **0**

Chapter 18. Descriptor Buffers

If the `descriptorBuffer` feature is enabled, an alternative way to specify descriptor sets is via buffers, rather than descriptor set objects.

18.1. Putting Descriptors in Memory

Commands are provided to retrieve descriptor data, and also to locate where in memory that data **must** be written to match the given descriptor set layout.

To determine the amount of memory needed to store all descriptors with a given layout, call:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorSetLayoutSizeEXT(
    VkDevice          device,
    VkDescriptorSetLayout layout,
    VkDeviceSize*      pLayoutSizeInBytes);
```

- `device` is the logical device that gets the size.
- `layout` is the descriptor set layout being queried.
- `pLayoutSizeInBytes` is a pointer to `VkDeviceSize` where the size in bytes will be written.

The size of a descriptor set layout will be at least as large as the sum total of the size of all descriptors in the layout, and **may** be larger. This size represents the amount of memory that will be required to store all of the descriptors for this layout in memory, when placed according to the layout's offsets as obtained by [vkGetDescriptorSetLayoutBindingOffsetEXT](#).

If any `binding` in `layout` is `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, the returned size includes space for the maximum `descriptorCount` descriptors as declared for that `binding`. To compute the required size of a descriptor set with a `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`:

$$\text{size} = \text{offset} + \text{descriptorSize} \times \text{variableDescriptorCount}$$

where `offset` is obtained by [vkGetDescriptorSetLayoutBindingOffsetEXT](#) and `descriptorSize` is the size of the relevant descriptor as obtained from [VkPhysicalDeviceDescriptorBufferPropertiesEXT](#), and `variableDescriptorCount` is the equivalent of [VkDescriptorSetVariableDescriptorCountAllocateInfo::pDescriptorCounts](#). For `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `variableDescriptorCount` is the size in bytes for the inline uniform block, and `descriptorSize` is 1.

If [VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSingleArray](#) is

`VK_FALSE` and the variable `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `variableDescriptorCount` is always considered to be the upper bound.

Valid Usage

- VUID-vkGetDescriptorSetLayoutSizeEXT-None-08011
The `descriptorBuffer` feature **must** be enabled
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-08012
`layout` **must** have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` flag set
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-11811
`layout` **must** have not been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT` flag set
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-11812
`layout` **must** have not been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT` flag set

Valid Usage (Implicit)

- VUID-vkGetDescriptorSetLayoutSizeEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-parameter
`layout` **must** be a valid `VkDescriptorSetLayout` handle
- VUID-vkGetDescriptorSetLayoutSizeEXT-pLayoutSizeInBytes-parameter
`pLayoutSizeInBytes` **must** be a valid pointer to a `VkDeviceSize` value
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-parent
`layout` **must** have been created, allocated, or retrieved from `device`

To get the offset of a binding within a descriptor set layout in memory, call:

WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorSetLayoutBindingOffsetEXT(
    VkDevice          device,
    VkDescriptorSetLayout layout,
    uint32_t          binding,
    VkDeviceSize*      pOffset);
```

- `device` is the logical device that gets the offset.

- **layout** is the descriptor set layout being queried.
- **binding** is the binding number being queried.
- **pOffset** is a pointer to **VkDeviceSize** where the byte offset of the binding will be written.

Each binding in a descriptor set layout is assigned an offset in memory by the implementation. When a shader accesses a resource with that binding, it will access the bound descriptor buffer from that offset to look for its descriptor. This command provides an application with that offset, so that descriptors can be placed in the correct locations. The precise location accessed by a shader for a given descriptor is as follows:

$$\text{location} = \text{bufferAddress} + \text{setOffset} + \text{descriptorOffset} + (\text{arrayElement} \times \text{descriptorSize})$$

where **bufferAddress** and **setOffset** are the base address and offset for the identified descriptor set as specified by **vkCmdBindDescriptorBuffersEXT** and **vkCmdSetDescriptorBufferOffsetsEXT**, **descriptorOffset** is the offset for the binding returned by this command, **arrayElement** is the index into the array specified in the shader, and **descriptorSize** is the size of the relevant descriptor as obtained from **VkPhysicalDeviceDescriptorBufferPropertiesEXT**. Applications are responsible for placing valid descriptors at the expected location in order for a shader to access it. The overall offset added to **bufferAddress** to calculate **location** **must** be less than **VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferRange** for samplers and **VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange** for resources.

If any **binding** in **layout** is **VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT**, that **binding** **must** have the largest offset of any **binding**.

A descriptor **binding** with type **VK_DESCRIPTOR_TYPE_MUTABLE_EXT** **can** be used. Any potential types in **VkMutableDescriptorTypeCreateInfoEXT::pDescriptorTypes** for **binding** share the same offset. If the size of the **mutable descriptor** is larger than the size of a concrete descriptor type being accessed, the padding area is ignored by the implementation.

Valid Usage

- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-None-08013
The **descriptorBuffer** feature **must** be enabled
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-08014
layout **must** have been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT** flag set
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-11813
layout **must** have not been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT** flag set
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-11814
layout **must** have not been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT** flag set

Valid Usage (Implicit)

- `VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-device-parameter`
`device` **must** be a valid [VkDevice](#) handle
- `VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-parameter`
`layout` **must** be a valid [VkDescriptorSetLayout](#) handle
- `VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-pOffset-parameter`
`pOffset` **must** be a valid pointer to a [VkDeviceSize](#) value
- `VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-parent`
`layout` **must** have been created, allocated, or retrieved from `device`

To get descriptor data to place in a buffer, call:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorEXT(
    VkDevice                device,
    const VkDescriptorGetInfoEXT* pDescriptorInfo,
    size_t                  dataSize,
    void*                    pDescriptor);
```

- `device` is the logical device that gets the descriptor.
- `pDescriptorInfo` is a pointer to a [VkDescriptorGetInfoEXT](#) structure specifying the parameters of the descriptor to get.
- `dataSize` is the amount of the descriptor data to get in bytes.
- `pDescriptor` is a pointer to an application-allocated buffer where the descriptor will be written.

The size of the data for each descriptor type is determined by the value in [VkPhysicalDeviceDescriptorBufferPropertiesEXT](#). This value also defines the stride in bytes for arrays of that descriptor type.

If the [VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSingleArray](#) property is [VK_FALSE](#) the implementation requires an array of [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#) descriptors to be written into a descriptor buffer as an array of image descriptors, immediately followed by an array of sampler descriptors. Applications **must** write the first [VkPhysicalDeviceDescriptorBufferPropertiesEXT::sampledImageDescriptorSize](#) bytes of the data returned through `pDescriptor` to the first array, and the remaining [VkPhysicalDeviceDescriptorBufferPropertiesEXT::samplerDescriptorSize](#) bytes of the data to the second array. For variable-sized descriptor bindings of [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#) descriptors, the two arrays each have a size equal to the upper bound `descriptorCount` of that binding.

A descriptor obtained by this command references the underlying [VkImageView](#) or [VkSampler](#), and these objects **must** not be destroyed before the last time a descriptor is dynamically accessed. For descriptor types which consume an address instead of an object, the underlying [VkBuffer](#) is referenced instead.

Valid Usage

- VUID-vkGetDescriptorEXT-None-08015
The [descriptorBuffer](#) feature **must** be enabled
- VUID-vkGetDescriptorEXT-dataSize-08125
If [pDescriptorInfo->type](#) is not [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#) or [pDescriptorInfo->data.pCombinedImageSampler](#) has an [imageView](#) member that was not created with a [VkSamplerYcbcrConversionInfo](#) structure in its [pNext](#) chain, [dataSize](#) **must** equal the size of a descriptor of type [VkDescriptorGetInfoEXT::type](#) determined by the value in [VkPhysicalDeviceDescriptorBufferPropertiesEXT](#), or determined by [VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT::combinedImageSamplerDescriptorSize](#) if [pDescriptorInfo](#) specifies a [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#) whose [VkSampler](#) was created with [VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT](#) set
- VUID-vkGetDescriptorEXT-descriptorType-09469
If [pDescriptorInfo->type](#) is [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#) and [pDescriptorInfo->data.pCombinedImageSampler](#) has an [imageView](#) member that was created with a [VkSamplerYcbcrConversionInfo](#) structure in its [pNext](#) chain, [dataSize](#) **must** equal the size of [VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSize](#) times [VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount](#)
- VUID-vkGetDescriptorEXT-pDescriptorInfo-09507
If [pDescriptorInfo->type](#) is [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#) and it has a [imageView](#) that is [VK_NULL_HANDLE](#) then [dataSize](#) **must** be equal to the size of [VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSize](#)

Valid Usage (Implicit)

- VUID-vkGetDescriptorEXT-device-parameter
[device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkGetDescriptorEXT-pDescriptorInfo-parameter
[pDescriptorInfo](#) **must** be a valid pointer to a valid [VkDescriptorGetInfoEXT](#) structure
- VUID-vkGetDescriptorEXT-pDescriptor-parameter
[pDescriptor](#) **must** be a valid pointer to an array of [dataSize](#) bytes
- VUID-vkGetDescriptorEXT-dataSize-arraylength
[dataSize](#) **must** be greater than 0

Information about the descriptor to get is passed in a [VkDescriptorGetInfoEXT](#) structure:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorGetInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkDescriptorType      type;
    VkDescriptorDataEXT   data;
} VkDescriptorGetInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is the type of descriptor to get.
- `data` is a [VkDescriptorDataEXT](#) union containing the information needed to get the descriptor.

Valid Usage

- VUID-VkDescriptorGetInfoEXT-type-08018
`type` **must** not be [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC](#), [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC](#) or [VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#)
- VUID-VkDescriptorGetInfoEXT-type-08019
If `type` is [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#), the `pCombinedImageSampler->sampler` member of `data` **must** be a [VkSampler](#) created on `device`
- VUID-VkDescriptorGetInfoEXT-type-08020
If `type` is [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#), the `pCombinedImageSampler->imageView` member of `data` **must** be a [VkImageView](#) created on `device`, or [VK_NULL_HANDLE](#)
- VUID-VkDescriptorGetInfoEXT-type-08021
If `type` is [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#), the `pInputAttachmentImage->imageView` member of `data` **must** be a [VkImageView](#) created on `device`
- VUID-VkDescriptorGetInfoEXT-type-08022
If `type` is [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), and if `pSampledImage` is not `NULL`, the `pSampledImage->imageView` member of `data` **must** be a [VkImageView](#) created on `device`, or [VK_NULL_HANDLE](#)
- VUID-VkDescriptorGetInfoEXT-type-08023
If `type` is [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), and if `pStorageImage` is not `NULL`, the `pStorageImage->imageView` member of `data` **must** be a [VkImageView](#) created on `device`, or [VK_NULL_HANDLE](#)
- VUID-VkDescriptorGetInfoEXT-type-09427
If `type` is [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#), `pUniformBuffer` is not `NULL`, the number of texel buffer elements given by $(\text{pUniformBuffer->range} / (\text{texel block size}))$

× (texels per block)) where texel block size and texels per block are as defined in the [Compatible Formats](#) table for `pUniformBuffer->format`, **must** be less than or equal to `VkPhysicalDeviceLimits::maxTexelBufferElements`

- VUID-VkDescriptorGetInfoEXT-type-09428

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `pStorageBuffer` is not `NULL`, the number of texel buffer elements given by $(\lceil pStorageBuffer->range \rceil / (\text{texel block size})) \times (\text{texels per block})$ where texel block size and texels per block are as defined in the [Compatible Formats](#) table for `pStorageBuffer->format`, **must** be less than or equal to `VkPhysicalDeviceLimits::maxTexelBufferElements`

- VUID-VkDescriptorGetInfoEXT-type-08028

If `type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` and `accelerationStructure` is not `0`, `accelerationStructure` **must** contain the address of a `VkAccelerationStructureKHR` created on `device`

- VUID-VkDescriptorGetInfoEXT-type-08029

If `type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` and `accelerationStructure` is not `0`, `accelerationStructure` **must** contain the handle of a `VkAccelerationStructureNV` created on `device`, returned by `vkGetAccelerationStructureHandleNV`

- VUID-VkDescriptorGetInfoEXT-type-09701

If `type` is `VK_DESCRIPTOR_TYPE_TENSOR_ARM`, a `VkDescriptorGetTensorInfoARM` structure **must** be included in the `pNext` chain and `data` is ignored

- VUID-VkDescriptorGetInfoEXT-type-12216

If `type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` and `pCombinedImageSampler->imageView` is not `VK_NULL_HANDLE`, the `pCombinedImageSampler->imageView` member of `data` **must** have been created with `VK_IMAGE_USAGE_SAMPLED_BIT` set

- VUID-VkDescriptorGetInfoEXT-type-12217

If `type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `pSampledImage` is not `NULL`, and `pSampledImage->imageView` is not `VK_NULL_HANDLE`, the `pSampledImage->imageView` member of `data` **must** have been created with `VK_IMAGE_USAGE_SAMPLED_BIT` set

- VUID-VkDescriptorGetInfoEXT-type-12218

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `pStorageImage` is not `NULL`, and `pStorageImage->imageView` is not `VK_NULL_HANDLE`, the `pStorageImage->imageView` member of `data` **must** have been created with `VK_IMAGE_USAGE_STORAGE_BIT` set

- VUID-VkDescriptorGetInfoEXT-type-12219

If `type` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `pInputAttachmentImage->imageView` member of `data` **must** have been created with `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` set

- VUID-VkDescriptorGetInfoEXT-type-12220

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `pUniformBuffer` is not `NULL` and `pUniformBuffer->address` is not zero, `pUniformBuffer->address` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-VkDescriptorGetInfoEXT-type-12221

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `pStorageBuffer` is not `NULL` and `pStorageBuffer->address` is not zero, `pStorageBuffer->address` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-VkDescriptorGetInfoEXT-type-12222

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, `pUniformTexelBuffer` is not `NULL` and `pUniformTexelBuffer->address` is not zero, `pUniformTexelBuffer->address` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT` usage flag set

- VUID-VkDescriptorGetInfoEXT-type-12223

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `pStorageTexelBuffer` is not `NULL` and `pStorageTexelBuffer->address` is not zero, `pStorageTexelBuffer->address` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT` usage flag set

- VUID-VkDescriptorGetInfoEXT-type-12265

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` and `pUniformBuffer` is not `NULL`, `pUniformBuffer->address` **must** be aligned to `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`

- VUID-VkDescriptorGetInfoEXT-type-12266

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` and `pStorageBuffer` is not `NULL`, `pStorageBuffer->address` **must** be aligned to `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`

- VUID-VkDescriptorGetInfoEXT-type-12269

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, and `pUniformTexelBuffer` is not `NULL`, `pUniformTexelBuffer->address` **must** be a multiple of the effective alignment requirement as determined by `minTexelBufferOffsetAlignment`

- VUID-VkDescriptorGetInfoEXT-type-12270

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, the and `pStorageTexelBuffer` is not `NULL`, `pStorageTexelBuffer->address` **must** be a multiple of the effective alignment requirement as determined by `minTexelBufferOffsetAlignment`

Valid Usage (Implicit)

- VUID-VkDescriptorGetInfoEXT-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_GET_INFO_EXT`

- VUID-VkDescriptorGetInfoEXT-pNext-pNext

`pNext` **must** be `NULL` or a pointer to a valid instance of `VkDescriptorGetTensorInfoARM`

- VUID-VkDescriptorGetInfoEXT-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique

- VUID-VkDescriptorGetInfoEXT-type-parameter

`type` **must** be a valid `VkDescriptorType` value

- VUID-VkDescriptorGetInfoEXT-pSampler-parameter

If `type` is `VK_DESCRIPTOR_TYPE_SAMPLER`, the `pSampler` member of `data` **must** be a valid

pointer to a valid [VkSampler](#) handle

- VUID-VkDescriptorGetInfoEXT-pCombinedImageSampler-parameter
If `type` is [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#), the `pCombinedImageSampler` member of `data` **must** be a valid pointer to a valid [VkDescriptorImageInfo](#) structure
- VUID-VkDescriptorGetInfoEXT-pInputAttachmentImage-parameter
If `type` is [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#), the `pInputAttachmentImage` member of `data` **must** be a valid pointer to a valid [VkDescriptorImageInfo](#) structure
- VUID-VkDescriptorGetInfoEXT-pSampledImage-parameter
If `type` is [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), and if `pSampledImage` is not `NULL`, the `pSampledImage` member of `data` **must** be a valid pointer to a valid [VkDescriptorImageInfo](#) structure
- VUID-VkDescriptorGetInfoEXT-pStorageImage-parameter
If `type` is [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), and if `pStorageImage` is not `NULL`, the `pStorageImage` member of `data` **must** be a valid pointer to a valid [VkDescriptorImageInfo](#) structure
- VUID-VkDescriptorGetInfoEXT-pUniformTexelBuffer-parameter
If `type` is [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#), and if `pUniformTexelBuffer` is not `NULL`, the `pUniformTexelBuffer` member of `data` **must** be a valid pointer to a valid [VkDescriptorAddressInfoEXT](#) structure
- VUID-VkDescriptorGetInfoEXT-pStorageTexelBuffer-parameter
If `type` is [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#), and if `pStorageTexelBuffer` is not `NULL`, the `pStorageTexelBuffer` member of `data` **must** be a valid pointer to a valid [VkDescriptorAddressInfoEXT](#) structure
- VUID-VkDescriptorGetInfoEXT-pUniformBuffer-parameter
If `type` is [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#), and if `pUniformBuffer` is not `NULL`, the `pUniformBuffer` member of `data` **must** be a valid pointer to a valid [VkDescriptorAddressInfoEXT](#) structure
- VUID-VkDescriptorGetInfoEXT-pStorageBuffer-parameter
If `type` is [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER](#), and if `pStorageBuffer` is not `NULL`, the `pStorageBuffer` member of `data` **must** be a valid pointer to a valid [VkDescriptorAddressInfoEXT](#) structure
- VUID-VkDescriptorGetInfoEXT-accelerationStructure-parameter
If `type` is [VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR](#) or [VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV](#), the `accelerationStructure` member of `data` **must** be a valid [VkDeviceAddress](#) value

Data describing the descriptor is passed in a [VkDescriptorDataEXT](#) structure:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef union VkDescriptorDataEXT {
    const VkSampler*                pSampler;
    const VkDescriptorImageInfo*    pCombinedImageSampler;
    const VkDescriptorImageInfo*    pInputAttachmentImage;
    const VkDescriptorImageInfo*    pSampledImage;
    const VkDescriptorImageInfo*    pStorageImage;
    const VkDescriptorAddressInfoEXT* pUniformTexelBuffer;
    const VkDescriptorAddressInfoEXT* pStorageTexelBuffer;
    const VkDescriptorAddressInfoEXT* pUniformBuffer;
    const VkDescriptorAddressInfoEXT* pStorageBuffer;
    VkDeviceAddress                 accelerationStructure;
} VkDescriptorDataEXT;
```

- `pSampler` is a pointer to a `VkSampler` handle specifying the parameters of a `VK_DESCRIPTOR_TYPE_SAMPLER` descriptor.
- `pCombinedImageSampler` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor.
- `pInputAttachmentImage` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` descriptor.
- `pSampledImage` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` descriptor.
- `pStorageImage` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` descriptor.
- `pUniformTexelBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor.
- `pStorageTexelBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor.
- `pUniformBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` descriptor.
- `pStorageBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` descriptor.
- `accelerationStructure` is the address of a `VkAccelerationStructureKHR` specifying the parameters of a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` descriptor, or a `VkAccelerationStructureNV` handle specifying the parameters of a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` descriptor.

If the `nullDescriptor` feature is enabled, `pSampledImage`, `pStorageImage`, `pUniformTexelBuffer`, `pStorageTexelBuffer`, `pUniformBuffer`, and `pStorageBuffer` can each be `NULL`. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded.

If the `nullDescriptor` feature is enabled, `accelerationStructure` can be `0`. A null acceleration structure descriptor results in the miss shader being invoked.

Valid Usage

- VUID-VkDescriptorDataEXT-type-08034
If `VkDescriptorGetInfoEXT::type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and the `nullDescriptor` feature is not enabled, `pCombinedImageSampler->imageView` **must** not be `VK_NULL_HANDLE`
- VUID-VkDescriptorDataEXT-type-08035
If `VkDescriptorGetInfoEXT::type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and the `nullDescriptor` feature is not enabled, `pSampledImage` **must** not be `NULL` and `pSampledImage->imageView` **must** not be `VK_NULL_HANDLE`
- VUID-VkDescriptorDataEXT-type-08036
If `VkDescriptorGetInfoEXT::type` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and the `nullDescriptor` feature is not enabled, `pStorageImage` **must** not be `NULL` and `pStorageImage->imageView` **must** not be `VK_NULL_HANDLE`
- VUID-VkDescriptorDataEXT-type-08037
If `VkDescriptorGetInfoEXT::type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, and the `nullDescriptor` feature is not enabled, `pUniformTexelBuffer` **must** not be `NULL`
- VUID-VkDescriptorDataEXT-type-08038
If `VkDescriptorGetInfoEXT::type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, and the `nullDescriptor` feature is not enabled, `pStorageTexelBuffer` **must** not be `NULL`
- VUID-VkDescriptorDataEXT-type-08039
If `VkDescriptorGetInfoEXT::type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, and the `nullDescriptor` feature is not enabled, `pUniformBuffer` **must** not be `NULL`
- VUID-VkDescriptorDataEXT-type-08040
If `VkDescriptorGetInfoEXT::type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, and the `nullDescriptor` feature is not enabled, `pStorageBuffer` **must** not be `NULL`
- VUID-VkDescriptorDataEXT-type-08041
If `VkDescriptorGetInfoEXT::type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, and the `nullDescriptor` feature is not enabled, `accelerationStructure` **must** not be `0`
- VUID-VkDescriptorDataEXT-type-08042
If `VkDescriptorGetInfoEXT::type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, and the `nullDescriptor` feature is not enabled, `accelerationStructure` **must** not be `0`

Data describing a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is passed in a `VkDescriptorAddressInfoEXT` structure:

WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorAddressInfoEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceAddress     address;
    VkDeviceSize        range;
    VkFormat            format;
} VkDescriptorAddressInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **address** is either **0** or a device address at an offset in a buffer, where the base address can be queried from [vkGetBufferDeviceAddress](#).
- **range** is the size in bytes of the buffer or buffer view used by the descriptor.
- **format** is the format of the data elements in the buffer view and is ignored for buffers.

Valid Usage

- VUID-VkDescriptorAddressInfoEXT-None-09508
If **address** is not zero, and the descriptor is of type [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#) or [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#), then **format** **must** not be [VK_FORMAT_UNDEFINED](#)
- VUID-VkDescriptorAddressInfoEXT-address-08043
If the **nullDescriptor** feature is not enabled, **address** **must** not be zero
- VUID-VkDescriptorAddressInfoEXT-nullDescriptor-08938
If **address** is zero, **range** **must** be [VK_WHOLE_SIZE](#)
- VUID-VkDescriptorAddressInfoEXT-nullDescriptor-08939
If **address** is not zero, **range** **must** not be [VK_WHOLE_SIZE](#)
- VUID-VkDescriptorAddressInfoEXT-range-08045
If **address** is not zero, then **range** **must** be less than or equal to the size of the buffer containing **address** minus the offset of **address** from the base address of the buffer
- VUID-VkDescriptorAddressInfoEXT-range-08940
range **must** not be zero
- VUID-VkDescriptorAddressInfoEXT-None-12271
If Vulkan 1.3 is not supported and the **ycbcr2plane444Formats** feature is not enabled, **format** **must** not be [VK_FORMAT_G8_B8R8_2PLANE_444_UNORM](#), [VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16](#), [VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16](#), or [VK_FORMAT_G16_B16R16_2PLANE_444_UNORM](#)

Valid Usage (Implicit)

- VUID-VkDescriptorAddressInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_ADDRESS_INFO_EXT`
- VUID-VkDescriptorAddressInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDescriptorAddressInfoEXT-address-parameter
If `address` is not `0`, `address` **must** be a valid `VkDeviceAddress` value
- VUID-VkDescriptorAddressInfoEXT-format-parameter
`format` **must** be a valid `VkFormat` value

If the `nullDescriptor` feature is enabled, `address` **can** be zero. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded.

Immutable samplers specified in a descriptor set layout through `pImmutableSamplers` **must** be provided by applications when obtaining descriptor data. Immutable samplers written in a descriptor buffer **must** have identical parameters to the immutable samplers in the descriptor set layout that consumes the sampler.

NOTE	If the descriptor set layout was created with <code>VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT</code> , there is no buffer backing for the immutable sampler, so this requirement does not exist. The implementation handles allocation of these descriptors internally.
NOTE	As descriptors are now in regular memory, drivers cannot hide copies of immutable samplers that end up in descriptor sets from the application. As such, applications are required to provide these samplers as if they were not provided immutably.

The `VkDescriptorGetTensorInfoARM` is defined as:

```
// Provided by VK_EXT_descriptor_buffer with VK_ARM_tensors
typedef struct VkDescriptorGetTensorInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkTensorViewARM    tensorView;
} VkDescriptorGetTensorInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `tensorView` is a `VkTensorViewARM` handle specifying the parameters of a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor.

Valid Usage

- VUID-VkDescriptorGetTensorInfoARM-nullDescriptor-09899
If the `nullDescriptor` feature is not enabled, `tensorView` **must** not be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkDescriptorGetTensorInfoARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_GET_TENSOR_INFO_ARM`
- VUID-VkDescriptorGetTensorInfoARM-tensorView-parameter
If `tensorView` is not `VK_NULL_HANDLE`, `tensorView` **must** be a valid `VkTensorViewARM` handle

Structure Chaining

Extends the structure

- `VkDescriptorGetInfoEXT`

18.2. Binding Descriptor Buffers

Descriptor buffers have their own separate binding point on the command buffer, with buffers bound using `vkCmdBindDescriptorBuffersEXT`. `vkCmdSetDescriptorBufferOffsetsEXT` assigns pairs of buffer binding indices and buffer offsets to the same binding point on the command buffer as `vkCmdBindDescriptorSets`, allowing subsequent [bound pipeline commands](#) to use the specified descriptor buffers. Bindings applied via `vkCmdBindDescriptorSets` **cannot** exist simultaneously with those applied via calls to `vkCmdSetDescriptorBufferOffsetsEXT` or `vkCmdBindDescriptorBufferEmbeddedSamplersEXT`, as calls to `vkCmdSetDescriptorBufferOffsetsEXT` or `vkCmdBindDescriptorBufferEmbeddedSamplersEXT` invalidate any bindings by previous calls to `vkCmdBindDescriptorSets` and vice-versa.

To bind descriptor buffers to a command buffer, call:

WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBuffersEXT(
    VkCommandBuffer          commandBuffer,
    uint32_t                 bufferCount,
    const VkDescriptorBufferBindingInfoEXT* pBindingInfos);
```

- `commandBuffer` is the command buffer that the descriptor buffers will be bound to.

- `bufferCount` is the number of elements in the `pBindingInfos` array.
- `pBindingInfos` is a pointer to an array of `VkDescriptorBufferBindingInfoEXT` structures.

`vkCmdBindDescriptorBuffersEXT` causes any offsets previously set by `vkCmdSetDescriptorBufferOffsetsEXT` that use the bindings numbered `[0.. bufferCount-1]` to be no longer valid for subsequent bound pipeline commands. Any previously bound buffers at binding points greater than or equal to `bufferCount` are unbound.

Valid Usage

- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-11295
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-11296
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBuffersEXT-None-08047
The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdBindDescriptorBuffersEXT-maxSamplerDescriptorBufferBindings-08048
There **must** be no more than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferBindings` elements in `pBindingInfos` with `VkDescriptorBufferBindingInfoEXT::usage` containing `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdBindDescriptorBuffersEXT-maxResourceDescriptorBufferBindings-08049
There **must** be no more than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferBindings` elements in `pBindingInfos` with `VkDescriptorBufferBindingInfoEXT::usage` containing `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdBindDescriptorBuffersEXT-None-08050
There **must** be no more than `1` element in `pBindingInfos` with `VkDescriptorBufferBindingInfoEXT::usage` containing `VK_BUFFER_USAGE_PUSH_DESCRIPTOR_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdBindDescriptorBuffersEXT-bufferCount-08051
`bufferCount` **must** be less than or equal to `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings`
- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08053
For each element of `pBindingInfos`, the buffer from which `address` was queried **must** have been created with the `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` usage flag set if it contains sampler descriptor data
- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08054
For each element of `pBindingInfos`, the buffer from which `address` was queried **must** have been created with the `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`

usage flag set if it contains resource descriptor data

- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08055

For each element of `pBindingInfos`, at least one buffer from which `address` was queried must contain `usage`

- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-09947

For all elements of `pBindingInfos`, the buffer from which `address` was queried **must** have been created with the `VK_BUFFER_USAGE_2_DATA_GRAPH_FOREIGN_DESCRIPTOR_BIT_ARM` usage flag set if the command pool from which `commandBuffer` was allocated from was created with any element of `VkDataGraphProcessingEngineCreateInfoARM::pProcessingEngines` with `isForeign` set to `VK_TRUE`

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-parameter

`pBindingInfos` **must** be a valid pointer to an array of `bufferCount` valid `VkDescriptorBufferBindingInfoEXT` structures

- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_DATA_GRAPH_BIT_ARM`, or `VK_QUEUE_GRAPHICS_BIT` operations

- VUID-vkCmdBindDescriptorBuffersEXT-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdBindDescriptorBuffersEXT-bufferCount-arraylength

`bufferCount` **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_DATA_GRAPH_BIT VK_QUEUE_GRAPH_RENDER VK_QUEUE_GRAPH_HICS_BIT	State

Conditional Rendering

vkCmdBindDescriptorBuffersEXT is not affected by [conditional rendering](#)

Data describing a descriptor buffer binding is passed in a [VkDescriptorBufferBindingInfoEXT](#) structure:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorBufferBindingInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceAddress     address;
    VkBufferUsageFlags  usage;
} VkDescriptorBufferBindingInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `address` is a [VkDeviceAddress](#) specifying the device address defining the descriptor buffer to be bound.
- `usage` is a bitmask of [VkBufferUsageFlagBits](#) specifying the [VkBufferCreateInfo::usage](#) for the buffer from which `address` was queried. Usage flags other than [VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT](#), [VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT](#), and [VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT](#) are ignored.

If the `pNext` chain includes a [VkBufferUsageFlags2CreateInfo](#) structure, [VkBufferUsageFlags2CreateInfo::usage](#) from that structure is used instead of `usage` from this structure.

Valid Usage

- VUID-VkDescriptorBufferBindingInfoEXT-None-09499
If the **pNext** chain does not include a **VkBufferUsageFlags2CreateInfo** structure, **usage** **must** be a valid combination of **VkBufferUsageFlagBits** values
- VUID-VkDescriptorBufferBindingInfoEXT-None-09500
If the **pNext** chain does not include a **VkBufferUsageFlags2CreateInfo** structure, **usage** **must** not be 0
- VUID-VkDescriptorBufferBindingInfoEXT-usage-10998
The **usage** **must** include at least one of **VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT**, **VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT**, or **VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT**
- VUID-VkDescriptorBufferBindingInfoEXT-bufferlessPushDescriptors-08056
If **VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors** is **VK_FALSE**, and **usage** contains **VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT**, then the **pNext** chain **must** include a **VkDescriptorBufferBindingPushDescriptorBufferHandleEXT** structure
- VUID-VkDescriptorBufferBindingInfoEXT-address-08057
address **must** be aligned to **VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment**
- VUID-VkDescriptorBufferBindingInfoEXT-usage-08122
If **usage** includes **VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT**, **address** **must** be a device address allocated to the application from a buffer created with the **VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT** usage flag set
- VUID-VkDescriptorBufferBindingInfoEXT-usage-08123
If **usage** includes **VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT**, **address** **must** be a device address allocated to the application from a buffer created with the **VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT** usage flag set
- VUID-VkDescriptorBufferBindingInfoEXT-usage-08124
If **usage** includes **VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT**, **address** **must** be a device address allocated to the application from a buffer created with the **VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT** usage flag set

Valid Usage (Implicit)

- VUID-VkDescriptorBufferBindingInfoEXT-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_INFO_EXT**
- VUID-VkDescriptorBufferBindingInfoEXT-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkBufferUsageFlags2CreateInfo** or

VkDescriptorBufferBindingPushDescriptorBufferHandleEXT

- VUID-VkDescriptorBufferBindingInfoEXT-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkDescriptorBufferBindingInfoEXT-address-parameter
address **must** be a valid **VkDeviceAddress** value

When the **VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors** property is **VK_FALSE**, the **VkBuffer** handle of the buffer for push descriptors is passed in a **VkDescriptorBufferBindingPushDescriptorBufferHandleEXT** structure:

WARNING

This functionality is superseded by **VK_EXT_descriptor_heap**. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorBufferBindingPushDescriptorBufferHandleEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            buffer;
} VkDescriptorBufferBindingPushDescriptorBufferHandleEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **buffer** is the **VkBuffer** handle of the buffer for push descriptors.

Valid Usage

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-bufferlessPushDescriptors-08059
VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors **must** be **VK_FALSE**

Valid Usage (Implicit)

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_PUSH_DESCRIPTOR_BUFFER_HANDLE_EXT**
- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-buffer-parameter
buffer **must** be a valid **VkBuffer** handle

Structure Chaining

Extends the structure

- [VkDescriptorBufferBindingInfoEXT](#)

To set descriptor buffer offsets in a command buffer, call:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkCmdSetDescriptorBufferOffsetsEXT(
    VkCommandBuffer                commandBuffer,
    VkPipelineBindPoint            pipelineBindPoint,
    VkPipelineLayout               layout,
    uint32_t                       firstSet,
    uint32_t                       setCount,
    const uint32_t*                pBufferIndices,
    const VkDeviceSize*            pOffsets);
```

- `commandBuffer` is the command buffer in which the descriptor buffer offsets will be set.
- `pipelineBindPoint` is a [VkPipelineBindPoint](#) indicating the type of the pipeline that will use the descriptors.
- `layout` is a [VkPipelineLayout](#) object used to program the bindings.
- `firstSet` is the number of the first set to be bound.
- `setCount` is the number of elements in the `pBufferIndices` and `pOffsets` arrays.
- `pBufferIndices` is a pointer to an array of indices into the descriptor buffer binding points set by [vkCmdBindDescriptorBuffersEXT](#).
- `pOffsets` is a pointer to an array of [VkDeviceSize](#) offsets to apply to the bound descriptor buffers.

`vkCmdSetDescriptorBufferOffsetsEXT` binds `setCount` pairs of descriptor buffers, specified by indices into the binding points bound using [vkCmdBindDescriptorBuffersEXT](#), and buffer offsets to set numbers `[firstSet..firstSet+setCount-1]` for subsequent [bound pipeline commands](#) set by `pipelineBindPoint`. Set `[firstSet + i]` is bound to the descriptor buffer at binding `pBufferIndices[i]` at an offset of `pOffsets[i]`. Any bindings that were previously applied via these sets, or calls to [vkCmdBindDescriptorSets](#), are no longer valid. Other sets will also be invalidated upon calling this command if `layout` differs from the pipeline layout used to bind those other sets, as described in [Pipeline Layout Compatibility](#).

After binding descriptors, applications **can** modify descriptor memory either by performing writes on the host or with device commands. When descriptor memory is updated with device commands, visibility for the shader stage accessing a descriptor is ensured with the [VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT_EXT](#) access flag. Implementations **must** not access

resources referenced by these descriptors unless they are dynamically accessed by shaders. Descriptors bound with this call **can** be undefined if they are not dynamically accessed by shaders.

Implementations **may** read descriptor data for any statically accessed descriptor if the **binding** in **layout** is not declared with the `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` flag. If the **binding** in **layout** is declared with `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, implementations **must** not read descriptor data that is not dynamically accessed.

Applications **must** ensure that any descriptor which the implementation **may** read **must** be in-bounds of the underlying descriptor buffer binding.

NOTE

Applications can freely decide how large a variable descriptor buffer binding is, so it may not be safe to read such descriptor payloads statically. The intention of these rules is to allow implementations to speculatively prefetch descriptor payloads where feasible.

Dynamically accessing a resource through descriptor data from an unbound region of a **sparse partially-resident buffer** will result in invalid descriptor data being read, and therefore undefined behavior.

NOTE

For descriptors written by the host, visibility is implied through the automatic visibility operation on queue submit, and there is no need to consider `VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT`. Explicit synchronization for descriptors is only required when descriptors are updated on the device.

NOTE

The requirements above imply that all descriptor bindings have been defined with the equivalent of `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` and `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT`, but enabling those features is not required to get this behavior.

Valid Usage

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-11295
If **commandBuffer** is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to **NULL**
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-11296
If **commandBuffer** is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to **NULL**
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08061
The offsets in **pOffsets** **must** be aligned to `VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment`
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08063

The offsets in **pOffsets** **must** be small enough such that any descriptor binding referenced by **layout** without the **VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT** flag computes a valid address inside the underlying **VkBuffer**

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08126

The offsets in **pOffsets** **must** be small enough such that any location accessed by a shader as a sampler descriptor **must** be within **VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferRange** of the sampler descriptor buffer binding

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08127

The offsets in **pOffsets** **must** be small enough such that any location accessed by a shader as a resource descriptor **must** be within **VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange** of the resource descriptor buffer binding

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-08064

Each element of **pBufferIndices** **must** be less than **VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings**

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-08065

Each element of **pBufferIndices** **must** reference a valid descriptor buffer binding set by a previous call to **vkCmdBindDescriptorBuffersEXT** in **commandBuffer**

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-08066

The sum of **firstSet** and **setCount** **must** be less than or equal to **VkPipelineLayoutCreateInfo::setLayoutCount** provided when **layout** was created

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-09006

The **VkDescriptorSetLayout** for each set from **firstSet** to **firstSet + setCount** when **layout** was created **must** have been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT** bit set

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-11803

The **VkDescriptorSetLayout** for each set from **firstSet** to **firstSet + setCount** when **layout** was created **must** not have been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR** bit set

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-11804

The **VkDescriptorSetLayout** for each set from **firstSet** to **firstSet + setCount** when **layout** was created **must** not have been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT** bit set

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-None-08060

The **descriptorBuffer** feature **must** be enabled

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pipelineBindPoint-08067

pipelineBindPoint **must** be supported by the **commandBuffer**'s parent **VkCommandPool**'s queue family

Valid Usage (Implicit)

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-layout-parameter
`layout` **must** be a valid `VkPipelineLayout` handle
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-parameter
`pBufferIndices` **must** be a valid pointer to an array of `setCount uint32_t` values
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-parameter
`pOffsets` **must** be a valid pointer to an array of `setCount VkDeviceSize` values
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_DATA_GRAPH_BIT_ARM`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-setCount-arraylength
`setCount` **must** be greater than `0`
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commonparent
Both of `commandBuffer`, and `layout` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_DATA_GRAPH_BIT_ARM VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDescriptorBufferOffsetsEXT is not affected by [conditional rendering](#)

To set descriptor buffer offsets in a command buffer, call:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
void vkCmdSetDescriptorBufferOffsets2EXT(
    VkCommandBuffer                commandBuffer,
    const VkSetDescriptorBufferOffsetsInfoEXT* pSetDescriptorBufferOffsetsInfo);
```

- `commandBuffer` is the command buffer in which the descriptor buffer offsets will be set.
- `pSetDescriptorBufferOffsetsInfo` is a pointer to a `VkSetDescriptorBufferOffsetsInfoEXT` structure.

Valid Usage

- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-11295
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-11296
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-descriptorBuffer-09470
The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-pSetDescriptorBufferOffsetsInfo-09471
Each bit in `pSetDescriptorBufferOffsetsInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-pSetDescriptorBufferOffsetsInfo-parameter
`pSetDescriptorBufferOffsetsInfo` **must** be a valid pointer to a valid `VkSetDescriptorBufferOffsetsInfoEXT` structure
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_DATA_GRAPH_BIT_ARM`, or `VK_QUEUE_GRAPHICS_BIT` operations

- VUID-vkCmdSetDescriptorBufferOffsets2EXT-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_DATA_GRAPH_BIT_ARM VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

`vkCmdSetDescriptorBufferOffsets2EXT` is not affected by `conditional rendering`

The `VkSetDescriptorBufferOffsetsInfoEXT` structure is defined as:

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
typedef struct VkSetDescriptorBufferOffsetsInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkShaderStageFlags   stageFlags;
    VkPipelineLayout     layout;
    uint32_t             firstSet;
    uint32_t             setCount;
    const uint32_t*       pBufferIndices;
    const VkDeviceSize*   pOffsets;
} VkSetDescriptorBufferOffsetsInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages the descriptor sets will be bound to
- `layout` is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, `layout` **can** be `VK_NULL_HANDLE` and the layout **must** be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`
- `firstSet` is the number of the first set to be bound.
- `setCount` is the number of elements in the `pBufferIndices` and `pOffsets` arrays.
- `pBufferIndices` is a pointer to an array of indices into the descriptor buffer binding points set by `vkCmdBindDescriptorBuffersEXT`.
- `pOffsets` is a pointer to an array of `VkDeviceSize` offsets to apply to the bound descriptor buffers.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`.

Valid Usage

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08061
The offsets in `pOffsets` **must** be aligned to `VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08063
The offsets in `pOffsets` **must** be small enough such that any descriptor binding referenced by `layout` without the `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` flag computes a valid address inside the underlying `VkBuffer`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08126

The offsets in **pOffsets** **must** be small enough such that any location accessed by a shader as a sampler descriptor **must** be within **VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferRange** of the sampler descriptor buffer binding

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08127

The offsets in **pOffsets** **must** be small enough such that any location accessed by a shader as a resource descriptor **must** be within **VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange** of the resource descriptor buffer binding

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pBufferIndices-08064

Each element of **pBufferIndices** **must** be less than **VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings**

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pBufferIndices-08065

Each element of **pBufferIndices** **must** reference a valid descriptor buffer binding set by a previous call to **vkCmdBindDescriptorBuffersEXT** in **commandBuffer**

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-08066

The sum of **firstSet** and **setCount** **must** be less than or equal to **VkPipelineLayoutCreateInfo::setLayoutCount** provided when **layout** was created

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-09006

The **VkDescriptorSetLayout** for each set from **firstSet** to **firstSet + setCount** when **layout** was created **must** have been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT** bit set

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-11803

The **VkDescriptorSetLayout** for each set from **firstSet** to **firstSet + setCount** when **layout** was created **must** not have been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR** bit set

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-11804

The **VkDescriptorSetLayout** for each set from **firstSet** to **firstSet + setCount** when **layout** was created **must** not have been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT** bit set

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-None-09495

If the **dynamicPipelineLayout** feature is not enabled, **layout** **must** be a valid **VkPipelineLayout** handle

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-layout-09496

If **layout** is **VK_NULL_HANDLE**, the **pNext** chain **must** include a valid **VkPipelineLayoutCreateInfo** structure

Valid Usage (Implicit)

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-sType-sType

sType **must** be **VK_STRUCTURE_TYPE_SET_DESCRIPTOR_BUFFER_OFFSETS_INFO_EXT**

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pNext-pNext

pNext **must** be **NULL** or a pointer to a valid instance of [VkPipelineLayoutCreateInfo](#)

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-stageFlags-parameter
stageFlags **must** be a valid combination of [VkShaderStageFlagBits](#) values
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-stageFlags-requiredbitmask
stageFlags **must** not be 0
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-layout-parameter
If **layout** is not [VK_NULL_HANDLE](#), **layout** **must** be a valid [VkPipelineLayout](#) handle
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pBufferIndices-parameter
pBufferIndices **must** be a valid pointer to an array of **setCount** [uint32_t](#) values
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-parameter
pOffsets **must** be a valid pointer to an array of **setCount** [VkDeviceSize](#) values
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-setCount-arraylength
setCount **must** be greater than 0

To bind an embedded immutable sampler set to a command buffer, call:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBufferEmbeddedSamplersEXT(
    VkCommandBuffer          commandBuffer,
    VkPipelineBindPoint      pipelineBindPoint,
    VkPipelineLayout          layout,
    uint32_t                  set);
```

- **commandBuffer** is the command buffer that the embedded immutable samplers will be bound to.
- **pipelineBindPoint** is a [VkPipelineBindPoint](#) indicating the type of the pipeline that will use the embedded immutable samplers.
- **layout** is a [VkPipelineLayout](#) object used to program the bindings.
- **set** is the number of the set to be bound.

vkCmdBindDescriptorBufferEmbeddedSamplersEXT binds the embedded immutable samplers in **set** of **layout** to **set** for the command buffer for subsequent [bound pipeline commands](#) set by **pipelineBindPoint**. Any previous binding to this set by [vkCmdSetDescriptorBufferOffsetsEXT](#) or this command is overwritten. Any sets that were last bound by a call to [vkCmdBindDescriptorSets](#) are invalidated upon calling this command. Other sets will also be invalidated upon calling this command if **layout** differs from the pipeline layout used to bind those other sets, as described in [Pipeline Layout Compatibility](#).

Valid Usage

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-11295
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-11296
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-set-08070
The `VkDescriptorSetLayout` at index `set` when `layout` was created **must** have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT` bit set
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-set-08071
`set` **must** be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-None-08068
The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-pipelineBindPoint-08069
`pipelineBindPoint` **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-layout-parameter
`layout` **must** be a valid `VkPipelineLayout` handle
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commonparent
Both of `commandBuffer`, and `layout` **must** have been created, allocated, or retrieved from

the same [VkDevice](#)

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_SPARSE_BINDING_BIT	State

Conditional Rendering

`vkCmdBindDescriptorBufferEmbeddedSamplersEXT` is not affected by [conditional rendering](#)

To bind an embedded immutable sampler set to a command buffer, call:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBufferEmbeddedSamplers2EXT(
    VkCommandBuffer                commandBuffer,
    const VkBindDescriptorBufferEmbeddedSamplersInfoEXT*
pBindDescriptorBufferEmbeddedSamplersInfo);
```

- `commandBuffer` is the command buffer that the embedded immutable samplers will be bound to.
- `pBindDescriptorBufferEmbeddedSamplersInfo` is a pointer to a `VkBindDescriptorBufferEmbeddedSamplersInfoEXT` structure.

Valid Usage

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-11295
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to

NULL

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-11296
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to NULL
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-descriptorBuffer-09472
The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-pBindDescriptorBufferEmbeddedSamplersInfo-09473
Each bit in `pBindDescriptorBufferEmbeddedSamplersInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-pBindDescriptorBufferEmbeddedSamplersInfo-parameter `pBindDescriptorBufferEmbeddedSamplersInfo` **must** be a valid pointer to a valid `VkBindDescriptorBufferEmbeddedSamplersInfoEXT` structure
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-recording `commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_HCS_BIT	State

Conditional Rendering

vkCmdBindDescriptorBufferEmbeddedSamplers2EXT is not affected by [conditional rendering](#)

The `VkBindDescriptorBufferEmbeddedSamplersInfoEXT` structure is defined as:

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
typedef struct VkBindDescriptorBufferEmbeddedSamplersInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkShaderStageFlags   stageFlags;
    VkPipelineLayout      layout;
    uint32_t             set;
} VkBindDescriptorBufferEmbeddedSamplersInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages that will use the embedded immutable samplers.
- `layout` is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, `layout` can be `VK_NULL_HANDLE` and the layout must be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`
- `set` is the number of the set to be bound.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`.

Valid Usage

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-set-08070
The [VkDescriptorSetLayout](#) at index [set](#) when [layout](#) was created **must** have been created with the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT](#) bit set
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-set-08071
[set](#) **must** be less than or equal to [VkPipelineLayoutCreateInfo::setLayoutCount](#) provided when [layout](#) was created
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-None-09495
If the [dynamicPipelineLayout](#) feature is not enabled, [layout](#) **must** be a valid [VkPipelineLayout](#) handle
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-layout-09496
If [layout](#) is [VK_NULL_HANDLE](#), the [pNext](#) chain **must** include a valid [VkPipelineLayoutCreateInfo](#) structure

Valid Usage (Implicit)

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_BIND_DESCRIPTOR_BUFFER_EMBEDDED_SAMPLERS_INFO_EXT](#)
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-pNext-pNext
[pNext](#) **must** be [NULL](#) or a pointer to a valid instance of [VkPipelineLayoutCreateInfo](#)
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-sType-unique
The [sType](#) value of each structure in the [pNext](#) chain **must** be unique
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-stageFlags-parameter
[stageFlags](#) **must** be a valid combination of [VkShaderStageFlagBits](#) values
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-stageFlags-requiredbitmask
[stageFlags](#) **must** not be 0
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-layout-parameter
If [layout](#) is not [VK_NULL_HANDLE](#), [layout](#) **must** be a valid [VkPipelineLayout](#) handle

18.3. Updating Descriptor Buffers

Updates to descriptor data in buffers **can** be performed by any operation on either the host or device that **can** access memory.

Descriptor buffer reads **can** be synchronized using [VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT_EXT](#) in the relevant shader stage.

18.4. Push Descriptors With Descriptor Buffers

If the `descriptorBufferPushDescriptors` feature is enabled, push descriptors **can** be used with descriptor buffers in the same way as with descriptor sets.

The `VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors` property indicates whether the implementation requires a buffer to back push descriptors. If the property is `VK_FALSE` then before recording any push descriptors, the application **must** bind exactly 1 descriptor buffer that was created with the `VK_BUFFER_USAGE_PUSH_DESCRIPTOR_DESCRIPTOR_BUFFER_BIT_EXT` usage flag set. When this buffer is bound, any previously recorded push descriptors that are required for a subsequent command **must** be recorded again.

18.5. Capture and Replay

In a similar way to `bufferDeviceAddressCaptureReplay`, the `descriptorBufferCaptureReplay` feature allows the creation of opaque handles for objects at capture time that **can** be passed into object creation calls in a future replay, causing descriptors to be created with the same data. The opaque memory address for any memory used by these resources **must** have been captured using `vkGetDeviceMemoryOpaqueCaptureAddress` and be replayed using `VkMemoryOpaqueCaptureAddressAllocateInfo`.

To get the opaque descriptor data for a buffer, call:

WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetBufferOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkBufferCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a `VkBufferCaptureDescriptorDataInfoEXT` structure specifying the buffer.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-None-08072
The `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pData-08073
`pData` **must** point to a buffer that is at least `VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferCaptureReplayDescriptorDataSize` bytes in size

- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-device-08074

If **device** was created with multiple physical devices, then the **bufferDeviceAddressMultiDevice** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkBufferCaptureDescriptorDataInfoEXT](#) structure
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pData-parameter **pData** **must** be a pointer value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Information about the buffer to get descriptor buffer capture data for is passed in a [VkBufferCaptureDescriptorDataInfoEXT](#) structure:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkBufferCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            buffer;
} VkBufferCaptureDescriptorDataInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **buffer** is the [VkBuffer](#) handle of the buffer to get opaque capture data for.

Valid Usage

- VUID-VkBufferCaptureDescriptorDataInfoEXT-buffer-08075

`buffer` **must** have been created with `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkBufferCreateInfo::flags`

Valid Usage (Implicit)

- VUID-VkBufferCaptureDescriptorDataInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
- VUID-VkBufferCaptureDescriptorDataInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkBufferCaptureDescriptorDataInfoEXT-buffer-parameter
`buffer` **must** be a valid `VkBuffer` handle

To get the opaque capture descriptor data for an image, call:

WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetImageOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkImageCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a `VkImageCaptureDescriptorDataInfoEXT` structure specifying the image.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-None-08076

The `descriptorBufferCaptureReplay` feature **must** be enabled

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pData-08077

`pData` **must** point to a buffer that is at least `VkPhysicalDeviceDescriptorBufferPropertiesEXT::imageCaptureReplayDescriptorDataSize` bytes in size

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-device-08078

If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pInfo-parameter **pInfo** must be a valid pointer to a valid [VkImageCaptureDescriptorDataInfoEXT](#) structure
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pData-parameter **pData** must be a pointer value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Information about the image to get descriptor buffer capture data for is passed in a [VkImageCaptureDescriptorDataInfoEXT](#) structure:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkImageCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
} VkImageCaptureDescriptorDataInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **image** is the [VkImage](#) handle of the image to get opaque capture data for.

Valid Usage

- VUID-VkImageCaptureDescriptorDataInfoEXT-image-08079
image must have been created with
[VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#) set in

Valid Usage (Implicit)

- VUID-VkImageCaptureDescriptorDataInfoEXT-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IMAGE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT](#)
- VUID-VkImageCaptureDescriptorDataInfoEXT-pNext-pNext
pNext **must** be `NULL`
- VUID-VkImageCaptureDescriptorDataInfoEXT-image-parameter
image **must** be a valid [VkImage](#) handle

To get the opaque capture descriptor data for an image view, call:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetImageViewOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkImageViewCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- device is the logical device that gets the data.
- pInfo is a pointer to a [VkImageViewCaptureDescriptorDataInfoEXT](#) structure specifying the image view.
- pData is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-None-08080
The [descriptorBufferCaptureReplay](#) feature **must** be enabled
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pData-08081
pData **must** point to a buffer that is at least [VkPhysicalDeviceDescriptorBufferPropertiesEXT::imageViewCaptureReplayDescriptorDataSize](#) bytes in size
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-device-08082
If device was created with multiple physical devices, then the [bufferDeviceAddressMultiDevice](#) feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkImageViewCaptureDescriptorDataInfoEXT](#) structure
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pData-parameter **pData** **must** be a pointer value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Information about the image view to get descriptor buffer capture data for is passed in a [VkImageViewCaptureDescriptorDataInfoEXT](#) structure:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkImageViewCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImageView         imageView;
} VkImageViewCaptureDescriptorDataInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **imageView** is the [VkImageView](#) handle of the image view to get opaque capture data for.

Valid Usage

- VUID-VkImageViewCaptureDescriptorDataInfoEXT-imageView-08083 **imageView** **must** have been created with

`VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkImageViewCreateInfo::flags`

Valid Usage (Implicit)

- VUID-VkImageViewCaptureDescriptorDataInfoEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
- VUID-VkImageViewCaptureDescriptorDataInfoEXT-pNext-pNext `pNext` **must** be `NULL`
- VUID-VkImageViewCaptureDescriptorDataInfoEXT-imageView-parameter `imageView` **must** be a valid `VkImageView` handle

To get the opaque capture descriptor data for a sampler, call:

WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetSamplerOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkSamplerCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a `VkSamplerCaptureDescriptorDataInfoEXT` structure specifying the sampler.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-None-08084
The `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pData-08085
`pData` **must** point to a buffer that is at least `VkPhysicalDeviceDescriptorBufferPropertiesEXT::samplerCaptureReplayDescriptorDataSize` bytes in size
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-device-08086
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkSamplerCaptureDescriptorDataInfoEXT](#) structure
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pData-parameter **pData** **must** be a pointer value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Information about the sampler to get descriptor buffer capture data for is passed in a [VkSamplerCaptureDescriptorDataInfoEXT](#) structure:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkSamplerCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkSampler          sampler;
} VkSamplerCaptureDescriptorDataInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **sampler** is the [VkSampler](#) handle of the sampler to get opaque capture data for.

Valid Usage

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sampler-08087 **sampler** **must** have been created with

VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT
VkSamplerCreateInfo::flags

set

in

Valid Usage (Implicit)

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sType-sType
sType must be VK_STRUCTURE_TYPE_SAMPLER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT
- VUID-VkSamplerCaptureDescriptorDataInfoEXT-pNext-pNext
pNext must be NULL
- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sampler-parameter
sampler must be a valid [VkSampler](#) handle

To get the opaque capture descriptor data for an acceleration structure, call:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer with VK_KHR_acceleration_structure or  
VK_NV_ray_tracing  
VkResult vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT(  
    VkDevice device,  
    const VkAccelerationStructureCaptureDescriptorDataInfoEXT* pInfo,  
    void* pData);
```

- **device** is the logical device that gets the data.
- **pInfo** is a pointer to a [VkAccelerationStructureCaptureDescriptorDataInfoEXT](#) structure specifying the acceleration structure.
- **pData** is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-None-08088
The **descriptorBufferCaptureReplay** feature must be enabled
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pData-08089
pData must point to a buffer that is at least [VkPhysicalDeviceDescriptorBufferPropertiesEXT::accelerationStructureCaptureReplayDescriptorDataSize](#) bytes in size
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-device-08090
If **device** was created with multiple physical devices, then the **bufferDeviceAddressMultiDevice** feature must be enabled

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkAccelerationStructureCaptureDescriptorDataInfoEXT](#) structure
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pData-parameter **pData** **must** be a pointer value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Information about the acceleration structure to get descriptor buffer capture data for is passed in a [VkAccelerationStructureCaptureDescriptorDataInfoEXT](#) structure:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer with VK_KHR_acceleration_structure or
VK_NV_ray_tracing
typedef struct VkAccelerationStructureCaptureDescriptorDataInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkAccelerationStructureKHR accelerationStructure;
    VkAccelerationStructureNV accelerationStructureNV;
} VkAccelerationStructureCaptureDescriptorDataInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **accelerationStructure** is the [VkAccelerationStructureKHR](#) handle of the acceleration structure to get opaque capture data for.
- **accelerationStructureNV** is the [VkAccelerationStructureNV](#) handle of the acceleration structure to get opaque capture data for.

Valid Usage

- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-08091
If `accelerationStructure` is not `VK_NULL_HANDLE` then `accelerationStructure` **must** have been created with `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkAccelerationStructureCreateInfoKHR::createFlags`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-08092
If `accelerationStructureNV` is not `VK_NULL_HANDLE` then `accelerationStructureNV` **must** have been created with `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkAccelerationStructureCreateInfoNV::info.flags`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-08093
If `accelerationStructure` is not `VK_NULL_HANDLE` then `accelerationStructureNV` **must** be `VK_NULL_HANDLE`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-08094
If `accelerationStructureNV` is not `VK_NULL_HANDLE` then `accelerationStructure` **must** be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-parameter
If `accelerationStructure` is not `VK_NULL_HANDLE`, `accelerationStructure` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-parameter
If `accelerationStructureNV` is not `VK_NULL_HANDLE`, `accelerationStructureNV` **must** be a valid `VkAccelerationStructureNV` handle
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-commonparent
Both of `accelerationStructure`, and `accelerationStructureNV` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure is defined as:

WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkOpaqueCaptureDescriptorDataCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    const void*        opaqueCaptureDescriptorData;
} VkOpaqueCaptureDescriptorDataCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `opaqueCaptureDescriptorData` is a pointer to an application-allocated buffer containing opaque capture data retrieved using `vkGetBufferOpaqueCaptureDescriptorDataEXT`, `vkGetImageOpaqueCaptureDescriptorDataEXT`, `vkGetImageViewOpaqueCaptureDescriptorDataEXT`, `vkGetTensorOpaqueCaptureDescriptorDataARM`, `vkGetTensorViewOpaqueCaptureDescriptorDataARM`, `vkGetSamplerOpaqueCaptureDescriptorDataEXT`, or `vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT`.

During replay, opaque descriptor capture data **can** be specified by adding a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure to the relevant `pNext` chain of a `VkBufferCreateInfo`, `VkImageCreateInfo`, `VkImageViewCreateInfo`, `VkSamplerCreateInfo`, `VkTensorCreateInfoARM`, `VkTensorViewCreateInfoARM`, `VkAccelerationStructureCreateInfoNV` or `VkAccelerationStructureCreateInfoKHR` structure.

When providing opaque capture data for an image, if the `pNext` chain of `VkImageCreateInfo` or `VkTensorCreateInfoARM` contains an instance of both this structure and `VkOpaqueCaptureDataCreateInfoEXT`, they **should** both specify data from the same original resource. If they have capture data from different original resources, resource creation is much more likely to fail.

Valid Usage (Implicit)

- VUID-VkOpaqueCaptureDescriptorDataCreateInfoEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_OPAQUE_CAPTURE_DESCRIPTOR_DATA_CREATE_INFO_EXT`
- VUID-VkOpaqueCaptureDescriptorDataCreateInfoEXT-opaqueCaptureDescriptorData-parameter `opaqueCaptureDescriptorData` must be a pointer value

Structure Chaining

Extends the structures

To get the opaque capture descriptor data for a tensor, call:

```
// Provided by VK_EXT_descriptor_buffer with VK_ARM_tensors
VkResult vkGetTensorOpaqueCaptureDescriptorDataARM(
    VkDevice device,
    const VkTensorCaptureDescriptorDataInfoARM* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a [VkTensorCaptureDescriptorDataInfoARM](#) structure specifying the tensor.
- `pData` is a pointer to a user-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetTensorOpaqueCaptureDescriptorDataARM-descriptorBufferCaptureReplay-09702
The `descriptorBufferCaptureReplay` and `descriptorBufferTensorDescriptors` features **must** be enabled
- VUID-vkGetTensorOpaqueCaptureDescriptorDataARM-pData-09703
`pData` **must** point to a buffer that is at least [VkPhysicalDeviceDescriptorBufferTensorPropertiesARM::tensorCaptureReplayDescriptorDataSize](#) bytes in size
- VUID-vkGetTensorOpaqueCaptureDescriptorDataARM-device-09704
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetTensorOpaqueCaptureDescriptorDataARM-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetTensorOpaqueCaptureDescriptorDataARM-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkTensorCaptureDescriptorDataInfoARM](#) structure
- VUID-vkGetTensorOpaqueCaptureDescriptorDataARM-pData-parameter **pData** **must** be a pointer value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Information about the tensor to get descriptor buffer capture data for is passed in a [VkTensorCaptureDescriptorDataInfoARM](#) structure:

```
// Provided by VK_EXT_descriptor_buffer with VK_ARM_tensors
typedef struct VkTensorCaptureDescriptorDataInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkTensorARM        tensor;
} VkTensorCaptureDescriptorDataInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **tensor** is the [VkTensorARM](#) handle of the tensor to get opaque capture data for.

Valid Usage

- VUID-VkTensorCaptureDescriptorDataInfoARM-tensor-09705
If **tensor** is not [VK_NULL_HANDLE](#) then **tensor** **must** have been created with [VK_TENSOR_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#) set in [VkTensorCreateInfoARM::flags](#)

Valid Usage (Implicit)

- VUID-VkTensorCaptureDescriptorDataInfoARM-sType-sType
sType must be [VK_STRUCTURE_TYPE_TENSOR_CAPTURE_DESCRIPTOR_DATA_INFO_ARM](#)
- VUID-VkTensorCaptureDescriptorDataInfoARM-pNext-pNext
pNext must be `NULL`
- VUID-VkTensorCaptureDescriptorDataInfoARM-tensor-parameter
tensor must be a valid [VkTensorARM](#) handle

To get the opaque capture descriptor data for a tensor view, call:

```
// Provided by VK_EXT_descriptor_buffer with VK_ARM_tensors
VkResult vkGetTensorViewOpaqueCaptureDescriptorDataARM(
    VkDevice device,
    const VkTensorViewCaptureDescriptorDataInfoARM* pInfo,
    void* pData);
```

- **device** is the logical device that gets the data.
- **pInfo** is a pointer to a [VkTensorViewCaptureDescriptorDataInfoARM](#) structure specifying the tensor view.
- **pData** is a pointer to a user-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetTensorViewOpaqueCaptureDescriptorDataARM-descriptorBufferCaptureReplay-09706
The **descriptorBufferCaptureReplay** and **descriptorBufferTensorDescriptors** features must be enabled
- VUID-vkGetTensorViewOpaqueCaptureDescriptorDataARM-pData-09707
pData must point to a buffer that is at least [VkPhysicalDeviceDescriptorBufferTensorPropertiesARM::tensorViewCaptureReplayDescriptorDataSize](#) bytes in size
- VUID-vkGetTensorViewOpaqueCaptureDescriptorDataARM-device-09708
If **device** was created with multiple physical devices, then the **bufferDeviceAddressMultiDevice** feature must be enabled

Valid Usage (Implicit)

- VUID-vkGetTensorViewOpaqueCaptureDescriptorDataARM-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkGetTensorViewOpaqueCaptureDescriptorDataARM-pInfo-parameter
pInfo must be a valid pointer to a valid [VkTensorViewCaptureDescriptorDataInfoARM](#)

structure

- VUID-vkGetTensorViewOpaqueCaptureDescriptorDataARM-pData-parameter
pData must be a pointer value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Information about the tensor view to get descriptor buffer capture data for is passed in a [VkTensorViewCaptureDescriptorDataInfoARM](#) structure:

```
// Provided by VK_EXT_descriptor_buffer with VK_ARM_tensors
typedef struct VkTensorViewCaptureDescriptorDataInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkTensorViewARM    tensorView;
} VkTensorViewCaptureDescriptorDataInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **tensorView** is the [VkTensorViewARM](#) handle of the tensor view to get opaque capture data for.

Valid Usage

- VUID-VkTensorViewCaptureDescriptorDataInfoARM-tensorView-09709
If **tensorView** is not [VK_NULL_HANDLE](#) then **tensorView must** have been created with [VK_TENSOR_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#) set in [VkTensorViewCreateInfoARM::flags](#)

Valid Usage (Implicit)

- VUID-VkTensorViewCaptureDescriptorDataInfoARM-sType-sType
sType must be [VK_STRUCTURE_TYPE_TENSOR_VIEW_CAPTURE_DESCRIPTOR_DATA_INFO_ARM](#)
- VUID-VkTensorViewCaptureDescriptorDataInfoARM-pNext-pNext

pNext must be **NULL**

- VUID-VkTensorViewCaptureDescriptorDataInfoARM-tensorView-parameter
tensorView must be a valid **VkTensorViewARM** handle

Chapter 19. Shader Interfaces

When a pipeline is created, the set of shaders specified in the corresponding `VkPipelineCreateInfo` structure are implicitly linked at a number of different interfaces.

- [Shader Input and Output Interface](#)
- [Vertex Input Interface](#)
- [Fragment Output Interface](#)
- [Fragment Tile Image Interface](#)
- [Fragment Input Attachment Interface](#)
- [Ray Tracing Pipeline Interface](#)
- [Shader Resource Interface](#)
- [Geometry Shader Passthrough](#)

This chapter describes valid uses for a set of SPIR-V decorations. Any other use of one of these decorations is invalid, with the exception that, when using SPIR-V versions 1.4 and earlier: `Block`, `BufferBlock`, `Offset`, `ArrayStride`, and `MatrixStride` can also decorate types and type members used by variables in the `Private` and `Function` storage classes.

NOTE

In this chapter, there are references to SPIR-V terms such as the `MeshNV` execution model. These terms will appear even in a build of the specification which does not support any extensions. This is as intended, since these terms appear in the unified SPIR-V specification without such qualifiers.

19.1. Shader Input and Output Interfaces

When multiple stages are present in a pipeline, the outputs of one stage form an interface with the inputs of the next stage. When such an interface involves a shader, shader outputs are matched against the inputs of the next stage, and shader inputs are matched against the outputs of the previous stage.

All the variables forming the shader input and output *interfaces* are listed as operands to the `OpEntryPoint` instruction and are declared with the `Input` or `Output` storage classes, respectively, in the SPIR-V module. These generally form the interfaces between consecutive shader stages, regardless of any non-shader stages between the consecutive shader stages.

There are two classes of variables that **can** be matched between shader stages, built-in variables and user-defined variables. Each class has a different set of matching criteria.

For compute shaders, the input interface is formed by the built-in interface. The output interface is empty.

19.1.1. Built-In Interface Block

Shader `built-in` variables meeting the following requirements define the *built-in interface block*.

They **must**

- be explicitly declared (there are no implicit built-ins),
- be identified with a **BuiltIn** decoration,
- form object types as described in the **Built-in Variables** section, and
- be declared in a block whose top-level members are the built-ins.

There **must** be no more than one built-in interface block per shader per interface , except for the mesh output interface where there **must** be at most one built-in interface block decorated with the **PerPrimitiveEXT** decoration and at most one built-in interface block without this decoration .

Built-ins **must** not have any **Location** or **Component** decorations.

19.1.2. User-Defined Variable Interface

The non-built-in variables listed by **OpEntryPoint** with the **Input** or **Output** storage class form the *user-defined variable interface*. These **must** have **numeric type** or, recursively, composite types of such types. If an implementation supports **storageInputOutput16**, components **can** have a width of 16 bits. These variables **must** be identified with a **Location** decoration and **can** also be identified with a **Component** decoration.

19.1.3. Interface Matching

An output variable, block, or structure member in a given shader stage has an interface match with an input variable, block, or structure member in a subsequent shader stage if they both adhere to the following conditions:

- They have equivalent decorations, other than:
 - **XfbBuffer**, **XfbStride**, **Offset**, and **Stream**
 - one is not decorated with **Component** and the other is declared with a **Component** of 0
 - **Interpolation decorations**
 - **RelaxedPrecision** if one is an input variable and the other an output variable
- Their types match as follows:
 - if the input is declared in a tessellation control or geometry shader as an **OpTypeArray** with an **Element Type** equivalent to the **OpType*** declaration of the output, and neither is a structure member; or
 - if the **maintenance4** feature is enabled, they are declared as **OpTypeVector** variables, and the output has a **Component Count** value higher than that of the input but the same **Component Type**; or
 - if the output is declared in a mesh shader as an **OpTypeArray** with an **Element Type** equivalent to the **OpType*** declaration of the input, and neither is a structure member; or
 - if the input is decorated with **PerVertexKHR**, and is declared in a fragment shader as an **OpTypeArray** with an **Element Type** equivalent to the **OpType*** declaration of the output, and neither the input nor the output is a structure member; or

- if in any other case they are declared with an equivalent `OpType*` declaration.
- If both are structures and every member has an interface match.

NOTE

The word “structure” above refers to both variables that have an `OpTypeStruct` type and interface blocks (which are also declared as `OpTypeStruct`).

If the pipeline is compiled as separate graphics pipeline libraries and the `graphicsPipelineLibraryIndependentInterpolationDecoration` limit is not supported, matches are not found if the `interpolation decorations` differ between the last `pre-rasterization shader stage` and the fragment shader stage.

All input variables and blocks **must** have an interface match in the preceding shader stage, except for built-in variables in fragment shaders. Shaders **can** declare and write to output variables that are not declared or read by the subsequent stage.

Matching rules for *passthrough geometry shaders* are slightly different and are described in the [Passthrough Interface Matching](#) section.

The value of an input variable is undefined if the preceding stage does not write to a matching output variable, as described above.

19.1.4. Location and Component Assignment

`User-defined variables` in interfaces between shader stages in the graphics pipeline consume a unique set of `Location` and `Component` values.

Available space for user-defined interface variables is partitioned into a number of 32-bit four-component vectors, each identified by a `Location` value. Each individual 32-bit component of a vector is then further identified by a `Component` value.

16-bit scalar or vector values consume one `Component` slot per 16-bit component and **must** be specified within a single `Location`. 32-bit scalar or vector values consume one `Component` slot per 32-bit component and **must** be specified within a single `Location`. 64-bit scalar or vector values consume two consecutive `Component` slots per 64-bit component from up to two consecutive `Location` slots.

For any shader interface variable where `one level of the array is disregarded for type matching`, the outer array level is also disregarded when assigning `Location` slots.

An array of size n with elements consuming l `Location` slots each will consume $l \times n$ `Location` slots. Each element of the array will consume `Component` slots in each `Location` slot identically to a declaration using the element type.

Matrices of size $n \times m$ are assigned locations identically to arrays of size n of vectors of length m with an identical element type.

When a variable with a structure type is decorated with a `Location`, the members in the structure type **must** not be decorated with a `Location`. The variable’s members are assigned consecutive locations in declaration order, starting from the first member, which is assigned the location

decoration from the variable. The **Location** slots consumed by structure members are determined by applying the rules above in a depth-first traversal of the instantiated members as though the structure or block member were declared as an input or output variable of the same type.

A variable with a structure type that is not decorated with **Block must** be decorated with a **Location**.

When a variable with a structure type decorated with **Block** is declared without a **Location** decoration, each member in the structure **must** be decorated with a **Location**. Types nested deeper than the top-level members **must** not have **Location** decorations.

Multiple variable declarations in the same storage class **must** not have overlapping **Component** slots within the same **Location**.

The number of input and output locations available for a shader input or output interface depend on the shader stage as described in [Shader Input and Output Locations](#). All variables in both the [built-in interface block](#) and the [user-defined variable interface](#) count against these limits. Each effective **Location must** have a value less than the number of **Location** slots available for the given interface, as specified in the “Locations Available” column in [Shader Input and Output Locations](#).

Table 20. Shader Input and Output Locations

Shader Interface	Locations Available
vertex input	<code>maxVertexInputAttributes</code>
vertex output	<code>maxVertexOutputComponents</code> / 4
tessellation control input	<code>maxTessellationControlPerVertexInputComponents</code> / 4
tessellation control output	<code>maxTessellationControlPerVertexOutputComponents</code> / 4
tessellation evaluation input	<code>maxTessellationEvaluationInputComponents</code> / 4
tessellation evaluation output	<code>maxTessellationEvaluationOutputComponents</code> / 4
geometry input	<code>maxGeometryInputComponents</code> / 4
geometry output	<code>maxGeometryOutputComponents</code> / 4
fragment input	<code>maxFragmentInputComponents</code> / 4
fragment output	<code>maxFragmentOutputAttachments</code>
mesh output	<code>maxMeshOutputComponents</code> / 4
cluster culling output	<code>maxOutputClusterCount</code>

19.2. Vertex Input Interface

When the vertex stage is present in a pipeline, the vertex shader input variables form an interface with the vertex input attributes. The vertex shader input variables are matched by the **Location** and **Component** decorations to the vertex input attributes specified in the `pVertexInputState` member of the `VkGraphicsPipelineCreateInfo` structure.

The vertex shader input variables listed by `OpEntryPoint` with the **Input** storage class form the *vertex*

input interface. These variables **must** be identified with a **Location** decoration and **can** also be identified with a **Component** decoration.

For the purposes of interface matching: variables declared without a **Component** decoration are considered to have a **Component** decoration of zero. The number of available vertex input **Location** slots is given by the **maxVertexInputAttributes** member of the **VkPhysicalDeviceLimits** structure.

See [Attribute Location and Component Assignment](#) for details.

All vertex shader inputs declared as above **must** have a corresponding attribute and binding in the pipeline.

Components and locations are consumed as defined for [Location and Component Assignment](#). Multiple **user-defined input variable** declarations **must** not have overlapping **Component** slots within the same **Location**.

19.3. Fragment Output Interface

When the fragment stage is present in a pipeline, the fragment shader outputs form an interface with the output attachments defined by a **render pass instance**. The fragment shader output variables are matched by the **Location** and **Component** decorations to specified color attachments.

The fragment shader output variables listed by **OpEntryPoint** with the **Output** storage class form the *fragment output interface*. These variables **must** be identified with a **Location** decoration. They **can** also be identified with a **Component** decoration and/or an **Index** decoration. For the purposes of interface matching: variables declared without a **Component** decoration are considered to have a **Component** decoration of zero, and variables declared without an **Index** decoration are considered to have an **Index** decoration of zero.

A fragment shader output variable identified with a **Location** decoration of *i* is associated with the color attachment indicated by **VkRenderingInfo::pColorAttachments[i]**. When using render pass objects, it is associated with the color attachment indicated by **VkSubpassDescription::pColorAttachments[i]**. Values are written to those attachments after passing through the blending unit as described in [Blending](#), if enabled. The number of available fragment output **Location** slots is given by the **maxFragmentOutputAttachments** member of the **VkPhysicalDeviceLimits** structure.

If the **dynamicRenderingLocalRead** feature is supported, fragment output locations **can** be remapped when using dynamic rendering.

To set the fragment output location mappings during rendering, call:

```
// Provided by VK_VERSION_1_4
void vkCmdSetRenderingAttachmentLocations(
    VkCommandBuffer                commandBuffer,
    const VkRenderingAttachmentLocationInfo* pLocationInfo);
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to vkCmdSetRenderingAttachmentLocations
void vkCmdSetRenderingAttachmentLocationsKHR(
    VkCommandBuffer                commandBuffer,
    const VkRenderingAttachmentLocationInfo* pLocationInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pLocationInfo` is a `VkRenderingAttachmentLocationInfo` structure indicating the new mappings.

This command sets the attachment location mappings for subsequent drawing commands, and **must** match the mappings provided to the bound pipeline, if one is bound, which **can** be set by chaining `VkRenderingAttachmentLocationInfo` to `VkGraphicsPipelineCreateInfo`.

Until this command is called, mappings in the command buffer state are treated as each color attachment specified in `vkCmdBeginRendering` having a location equal to its index in `VkRenderingInfo::pColorAttachments`. This state is reset whenever `vkCmdBeginRendering` is called.

Valid Usage

- VUID-vkCmdSetRenderingAttachmentLocations-dynamicRenderingLocalRead-09509
`dynamicRenderingLocalRead` **must** be enabled
- VUID-vkCmdSetRenderingAttachmentLocations-pLocationInfo-09510
`pLocationInfo->colorAttachmentCount` **must** be equal to the value of `VkRenderingInfo::colorAttachmentCount` used to begin the current render pass instance
- VUID-vkCmdSetRenderingAttachmentLocations-commandBuffer-09511
The current render pass instance **must** have been started or resumed by `vkCmdBeginRendering` in this `commandBuffer`

Valid Usage (Implicit)

- VUID-vkCmdSetRenderingAttachmentLocations-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetRenderingAttachmentLocations-pLocationInfo-parameter
`pLocationInfo` **must** be a valid pointer to a valid `VkRenderingAttachmentLocationInfo` structure
- VUID-vkCmdSetRenderingAttachmentLocations-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetRenderingAttachmentLocations-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdSetRenderingAttachmentLocations-renderpass
This command **must** only be called inside of a render pass instance
- VUID-vkCmdSetRenderingAttachmentLocations-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAP HICS_BIT	State

Conditional Rendering

vkCmdSetRenderingAttachmentLocations is not affected by [conditional rendering](#)

The **VkRenderingAttachmentLocationInfo** structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkRenderingAttachmentLocationInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           colorAttachmentCount;
    const uint32_t*    pColorAttachmentLocations;
} VkRenderingAttachmentLocationInfo;
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to VkRenderingAttachmentLocationInfo
typedef VkRenderingAttachmentLocationInfo VkRenderingAttachmentLocationInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **colorAttachmentCount** is the number of elements in **pColorAttachmentLocations**.
- **pColorAttachmentLocations** is a pointer to an array of **colorAttachmentCount** **uint32_t** values defining remapped locations for color attachments.

This structure allows applications to remap the locations of color attachments to different fragment

shader output locations.

Each element of `pColorAttachmentLocations` set to `VK_ATTACHMENT_UNUSED` will be inaccessible to this pipeline as a color attachment; no location will map to it. Each element of `pColorAttachmentLocations` set to any other value will map the specified location value to the color attachment specified in the render pass at the corresponding index in the `pColorAttachmentLocations` array. Any writes to a fragment output location that is not mapped to an attachment **must** be discarded.

If `pColorAttachmentLocations` is `NULL`, it is equivalent to setting each element to its index within the array.

This structure **can** be included in the `pNext` chain of a `VkGraphicsPipelineCreateInfo` structure to set this state for a pipeline. If this structure is not included in the `pNext` chain of `VkGraphicsPipelineCreateInfo`, it is equivalent to specifying this structure with the following properties:

- `colorAttachmentCount` set to `VkPipelineRenderingCreateInfo::colorAttachmentCount`.
- `pColorAttachmentLocations` set to `NULL`.

This structure **can** be included in the `pNext` chain of a `VkCommandBufferInheritanceInfo` structure to specify inherited state from the primary command buffer. If `VkCommandBufferInheritanceInfo::renderPass` is not `VK_NULL_HANDLE`, or `VK_COMMAND_BUFFER_USAGE_RENDER_PASS_CONTINUE_BIT` is not specified in `VkCommandBufferBeginInfo::flags`, members of this structure are ignored. If this structure is not included in the `pNext` chain of `VkCommandBufferInheritanceInfo`, it is equivalent to specifying this structure with the following properties:

- `colorAttachmentCount` set to `VkCommandBufferInheritanceRenderingInfo::colorAttachmentCount`.
- `pColorAttachmentLocations` set to `NULL`.

Valid Usage

- VUID-VkRenderingAttachmentLocationInfo-dynamicRenderingLocalRead-09512
If the `dynamicRenderingLocalRead` feature is not enabled, and `pColorAttachmentLocations` is not `NULL`, each element **must** be the value of its index within the array
- VUID-VkRenderingAttachmentLocationInfo-pColorAttachmentLocations-09513
Elements of `pColorAttachmentLocations` that are not `VK_ATTACHMENT_UNUSED` **must** each be unique
- VUID-VkRenderingAttachmentLocationInfo-colorAttachmentCount-09514
`colorAttachmentCount` **must** be less than or equal to `maxColorAttachments`
- VUID-VkRenderingAttachmentLocationInfo-pColorAttachmentLocations-09515
Each element of `pColorAttachmentLocations` **must** be less than `maxColorAttachments`

Valid Usage (Implicit)

- VUID-VkRenderingAttachmentLocationInfo-sType-sType
sType must be [VK_STRUCTURE_TYPE_RENDERING_ATTACHMENT_LOCATION_INFO](#)

Structure Chaining

Extends the structures

- [VkCommandBufferInheritanceInfo](#)
- [VkGraphicsPipelineCreateInfo](#)

When an active fragment shader invocation finishes, the values of all fragment shader outputs are copied out and used as blend inputs or color attachments writes. If an output variable is declared, but there is no color attachment at that **Location**, any values written to it are discarded. If a color attachment at a given **Location** does not have an output variable declared, the values **must** not be modified.

Output **Component** words identified as 0, 1, 2, and 3 will be directed to the R, G, B, and A inputs to the blending unit, respectively, or to the output attachment if blending is disabled. If two variables are placed within the same **Location**, they **must** have the same **numeric type**. **Component** words which do not correspond to any fragment shader output will also result in undefined values for blending or color attachment writes.

Fragment outputs identified with an **Index** of zero are directed to the first input of the blending unit associated with the corresponding **Location**. Outputs identified with an **Index** of one are directed to the second input of the corresponding blending unit.

Components and locations are consumed as defined for [Location and Component Assignment](#). Output variable declarations **must** not consume any of the same **Component** slots within the same **Location** and with the same **Index** value as any other output variable declaration.

Output values written by a fragment shader **must** be declared with either **OpTypeFloat** or **OpTypeInt**, and a **Width** of 32. If **storageInputOutput16** is supported, output values written by a fragment shader **can** be also declared with either **OpTypeFloat** or **OpTypeInt** and a **Width** of 16. Composites of these types are also permitted. If the color attachment has a signed or unsigned normalized fixed-point format, color values are assumed to be floating-point and are converted to fixed-point as described in [Conversion From Floating-Point to Normalized Fixed-Point](#); If the color attachment has an integer format, color values are assumed to be integers and converted to the bit-depth of the target. Any value that cannot be represented in the attachment's format is undefined. For any other attachment format no conversion is performed. If the type of the values written by the fragment shader do not match the format of the corresponding color attachment, the resulting values are undefined for those components.

19.4. Legacy Dithering

The application **can** enable dithering to be applied to the color output of a subpass, by using the `VK_SUBPASS_DESCRIPTION_ENABLE_LEGACY_DITHERING_BIT_EXT` flag. For use in a dynamic render pass, the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag **must** be used. In that case, the pipelines used **must** have been created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`.

When dithering is enabled, the implementation **may** modify the output color value c by one ULP. This modification **must** only depend on the framebuffer coordinates (x_f, y_f) of the sample, as well as on the value of c .

The exact details of the dithering algorithm are unspecified, including the algorithm itself, the formats dithering is applied to, and the stage in which it is applied.

NOTE

This extension is intended only for use by OpenGL emulation layers, and as such the dithering algorithm applied to the subpass **should** be equivalent to the vendor's OpenGL implementation, if any.

19.5. Fragment Tile Image Interface

When a fragment stage is present in a pipeline, the fragment shader tile image variables decorated with `Location` form an interface with the color attachments defined by the render pass instance. The fragment shader tile image variables are matched by `Location` decorations to the color attachments specified in the `pColorAttachments` array of the `VkRenderingInfoKHR` structure describing the render pass instance the fragment shader is executed in.

The fragment shader variables listed by `OpEntryPoint` with the `TileImageEXT` storage class and a decoration of `Location` form the *fragment tile image interface*. These variables **must** be declared with a type of `OpTypeImage`, and a `Dim` operand of `TileImageDataEXT`. The `Component` decoration is not supported for these variables.

Reading from a tile image variable with a `Location` decoration of i reads from the color attachment identified by the element of `VkRenderingInfoKHR::pColorAttachments` with a `location` equal to i . If the tile image variable is declared as an array of size N , it consumes N consecutive tile image locations, starting with the index specified. There **must** not be more than one tile image variable with the same `Location` whether explicitly declared or implied by an array declaration. The number of available tile image locations is the same as the number of available fragment output locations as given by the `maxFragmentOutputAttachments` member of the `VkPhysicalDeviceLimits` structure.

The basic data type (floating-point, integer, unsigned integer) of the tile image variable **must** match the basic format of the corresponding color attachment, or the values read from the tile image variables are poison.

19.6. Tile Attachment Interface

The image variables declared with `TileAttachmentQCOM` storage class form the *tile attachment interface*.

These [tile attachment variables](#) correspond to a per-tile view of the color, depth, or input attachment of the current subpass or render pass instance.

Such variables **must** only be declared and accessed in compute and fragment shaders invoked within a render pass instance that [enables tile shading](#). Access of such variables in a fragment shader, additionally requires that the [tileShadingFragmentStage](#) feature **must** be enabled.

Tile attachment variables **must** not include a [Component](#) decoration. Tile attachment variables **must** not be consumed by [OpImageQuery*](#) instructions. Tile attachment variables **can** be declared as either single-sampled with [MS](#) operand of [0](#), or as multi-sampled with [MS](#) operand of [1](#). The image subresources of the tile attachment image **must** not be in [VK_IMAGE_LAYOUT_UNDEFINED](#) or [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout in order to access its data in a shader.

Tile attachment variables statically accessed by a fragment or compute shader **must** be backed by a descriptor that is equivalent to the [VkImageView](#) in the [VkFramebuffer](#) or the [VkRenderingAttachmentInfo](#) except for [subresourceRange.aspectMask](#). The [aspectMask](#) **must** be equal to the aspect accessed by the shader.

Tile attachment variables are further subdivided into *storage tile attachment*, *sampled tile attachment*, and *input tile attachment* variables.

- *Sampled tile attachment* variables **must** be declared with a [Sampled](#) operand of [1](#), **must** be backed by a descriptor of type [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), or [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#), and **can** be used with [OpImageFetch](#), [OpImageSparseFetch](#), or used to construct an [OpTypeSampledImage](#) that is subsequently consumed by [OpImageSample*](#), [OpImageSparseSample*](#), [OpImageSampleWeightedQCOM](#), [OpImageBoxFilterQCOM](#), [OpImageBlockMatch*QCOM](#), [OpImage*Gather](#), or [OpImageSparse*Gather](#). *Sampled tile attachment* variables are managed by the [Descriptor Set Interface](#) as sampled images.
- *Storage tile attachment* variables **must** be declared with a [Sampled](#) operand of [2](#), **must** be backed by a descriptor of type [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), and **can** be used with [OpImageRead](#), [OpImageSparseRead](#), and [OpImageWrite](#) instructions. *Storage tile attachment* variables **can** be consumed by [OpImageTexelPointer](#) for compatibility with atomic operations. *Sampled tile attachment* variables are managed by the [Descriptor Set Interface](#) as storage images.
- *Input tile attachment* variables **must** be declared with a [Sampled](#) operand of [2](#), **must** be backed by a descriptor of type [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#), and **can** be used with [OpImageRead](#) instructions. *Input tile attachment* variables are managed by the [Descriptor Set Interface](#) as input attachment images.

Tile attachment access using [OpImageWrite](#) instructions **must** be used only in the compute stage. Tile attachment access using [OpImageWrite](#) instructions **must** not be used on a variable whose underlying descriptor references the same [VkImageView](#) bound as a depth or stencil attachment.

The basic data type (floating-point, integer, unsigned integer) of the tile attachment variable **must** match the basic format of the corresponding input, depth, or color attachment, otherwise the result of loads/stores for tile attachment variables is poison. If the render pass attachment contains both

depth and stencil aspects, the basic data type of the tile attachment variable determines if depth or stencil aspect is accessed by the shader.

19.7. Fragment Input Attachment Interface

When a fragment stage is present in a pipeline, the fragment shader subpass inputs form an interface with the input attachments of the current subpass. The fragment shader subpass input variables are matched by `InputAttachmentIndex` decorations to the input attachments specified in the `pInputAttachments` array of the `VkSubpassDescription` structure describing the subpass that the fragment shader is executed in.

The fragment shader subpass input variables with the `UniformConstant` storage class and a decoration of `InputAttachmentIndex` that are statically used by `OpEntryPoint` form the *fragment input attachment interface*. These variables **must** be declared with a type of `OpTypeImage`, a `Dim` operand of `SubpassData`, an `Arrayed` operand of 0, and a `Sampled` operand of 2. The `MS` operand of the `OpTypeImage` **must** be 0 if the `samples` field of the corresponding `VkAttachmentDescription` is `VK_SAMPLE_COUNT_1_BIT` and `multisampled-render-to-single-sampled` is not enabled, and 1 otherwise.

A subpass input variable identified with an `InputAttachmentIndex` decoration of *i* reads from the input attachment indicated by `pInputAttachments[i]` member of `VkSubpassDescription`. If the subpass input variable is declared as an array of size N, or a runtime-sized array, it consumes consecutive input attachments, starting with the index specified. For runtime-sized arrays, the number of input attachment indices consumed is equal to `VkDescriptorSetLayoutBinding::descriptorCount`. There **must** not be more than one input variable with the same `InputAttachmentIndex` whether explicitly declared or implied by an array declaration per image aspect. A multi-aspect image (e.g. a depth/stencil format) **can** use the same input variable. The number of available input attachment indices is given by the `maxPerStageDescriptorInputAttachments` member of the `VkPhysicalDeviceLimits` structure.

When using dynamic rendering with the `dynamicRenderingLocalRead` feature enabled, a subpass input variable with a `InputAttachmentIndex` decoration of *i* can be mapped to a color, depth, or stencil attachment.

To set the input attachment index mappings during dynamic rendering, call:

```
// Provided by VK_VERSION_1_4
void vkCmdSetRenderingInputAttachmentIndices(
    VkCommandBuffer                commandBuffer,
    const VkRenderingInputAttachmentIndexInfo* pInputAttachmentIndexInfo);
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to vkCmdSetRenderingInputAttachmentIndices
void vkCmdSetRenderingInputAttachmentIndicesKHR(
    VkCommandBuffer                commandBuffer,
    const VkRenderingInputAttachmentIndexInfo* pInputAttachmentIndexInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInputAttachmentIndexInfo` is a `VkRenderingInputAttachmentIndexInfo` structure indicating the new mappings.

This command sets the input attachment index mappings for subsequent drawing commands, and **must** match the mappings provided to the bound pipeline, if one is bound, which **can** be set by chaining `VkRenderingInputAttachmentIndexInfo` to `VkGraphicsPipelineCreateInfo`.

Until this command is called, mappings in the command buffer state are treated as each color attachment specified in `vkCmdBeginRendering` mapping to subpass inputs with a `InputAttachmentIndex` equal to its index in `VkRenderingInfo::pColorAttachments`, and depth/stencil attachments mapping to input attachments without these decorations. This state is reset whenever `vkCmdBeginRendering` is called.

Valid Usage

- VUID-vkCmdSetRenderingInputAttachmentIndices-dynamicRenderingLocalRead-09516 `dynamicRenderingLocalRead` **must** be enabled
- VUID-vkCmdSetRenderingInputAttachmentIndices-pInputAttachmentIndexInfo-09517 `pInputAttachmentIndexInfo->colorAttachmentCount` **must** be equal to the value of `VkRenderingInfo::colorAttachmentCount` used to begin the current render pass instance
- VUID-vkCmdSetRenderingInputAttachmentIndices-commandBuffer-09518 The current render pass instance **must** have been started or resumed by `vkCmdBeginRendering` in this `commandBuffer`

Valid Usage (Implicit)

- VUID-vkCmdSetRenderingInputAttachmentIndices-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetRenderingInputAttachmentIndices-pInputAttachmentIndexInfo-parameter `pInputAttachmentIndexInfo` **must** be a valid pointer to a valid `VkRenderingInputAttachmentIndexInfo` structure
- VUID-vkCmdSetRenderingInputAttachmentIndices-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetRenderingInputAttachmentIndices-commandBuffer-cmdpool The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdSetRenderingInputAttachmentIndices-renderpass This command **must** only be called inside of a render pass instance
- VUID-vkCmdSetRenderingInputAttachmentIndices-videocoding This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAP HICS_BIT	State

Conditional Rendering

vkCmdSetRenderingInputAttachmentIndices is not affected by **conditional rendering**

The **VkRenderingInputAttachmentIndexInfo** structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkRenderingInputAttachmentIndexInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           colorAttachmentCount;
    const uint32_t*     pColorAttachmentInputIndices;
    const uint32_t*     pDepthInputAttachmentIndex;
    const uint32_t*     pStencilInputAttachmentIndex;
} VkRenderingInputAttachmentIndexInfo;
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to VkRenderingInputAttachmentIndexInfo
typedef VkRenderingInputAttachmentIndexInfo VkRenderingInputAttachmentIndexInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **colorAttachmentCount** is the number of elements in **pColorAttachmentInputIndices**.
- **pColorAttachmentInputIndices** is a pointer to an array of **colorAttachmentCount** **uint32_t** values defining indices for color attachments to be used as input attachments.
- **pDepthInputAttachmentIndex** is either **NULL**, or a pointer to a **uint32_t** value defining the index for the depth attachment to be used as an input attachment.

- `pStencilInputAttachmentIndex` is either `NULL`, or a pointer to a `uint32_t` value defining the index for the stencil attachment to be used as an input attachment.

This structure allows applications to remap attachments to different input attachment indices.

Each element of `pColorAttachmentInputIndices` set to a value of `VK_ATTACHMENT_UNUSED` indicates that the corresponding attachment will not be used as an input attachment in this pipeline. Any other value in each of those elements will map the corresponding attachment to a `InputAttachmentIndex` value defined in shader code.

If `pColorAttachmentInputIndices` is `NULL`, it is equivalent to setting each element to its index within the array.

If `pDepthInputAttachmentIndex` or `pStencilInputAttachmentIndex` are set to `NULL`, they map to input attachments without a `InputAttachmentIndex` decoration. If they point to a value of `VK_ATTACHMENT_UNUSED`, it indicates that the corresponding attachment will not be used as an input attachment in this pipeline. If they point to any other value it maps the corresponding attachment to a `InputAttachmentIndex` value defined in shader code.

This structure **can** be included in the `pNext` chain of a `VkGraphicsPipelineCreateInfo` structure to set this state for a pipeline. If this structure is not included in the `pNext` chain of `VkGraphicsPipelineCreateInfo`, it is equivalent to specifying this structure with the following properties:

- `colorAttachmentCount` set to `VkPipelineRenderingCreateInfo::colorAttachmentCount`.
- `pColorAttachmentInputIndices` set to `NULL`.
- `pDepthInputAttachmentIndex` set to `NULL`.
- `pStencilInputAttachmentIndex` set to `NULL`.

This structure **can** be included in the `pNext` chain of a `VkCommandBufferInheritanceInfo` structure to specify inherited state from the primary command buffer. If this structure is not included in the `pNext` chain of `VkCommandBufferInheritanceInfo`, it is equivalent to specifying this structure with the following properties:

- `colorAttachmentCount` set to `VkCommandBufferInheritanceRenderingInfo::colorAttachmentCount`.
- `pColorAttachmentInputIndices` set to `NULL`.
- `pDepthInputAttachmentIndex` set to `NULL`.
- `pStencilInputAttachmentIndex` set to `NULL`.

Valid Usage

- VUID-VkRenderingInputAttachmentIndexInfo-dynamicRenderingLocalRead-09519
If the `dynamicRenderingLocalRead` feature is not enabled, and `pColorAttachmentInputIndices` is not `NULL`, each element **must** be `VK_ATTACHMENT_UNUSED`
- VUID-VkRenderingInputAttachmentIndexInfo-dynamicRenderingLocalRead-09520
If the `dynamicRenderingLocalRead` feature is not enabled, `pDepthInputAttachmentIndex` **must**

be a valid pointer to a value of `VK_ATTACHMENT_UNUSED`

- VUID-VkRenderingInputAttachmentIndexInfo-dynamicRenderingLocalRead-09521
If the `dynamicRenderingLocalRead` feature is not enabled, `pStencilInputAttachmentIndex` **must** be a valid pointer to a value of `VK_ATTACHMENT_UNUSED`
- VUID-VkRenderingInputAttachmentIndexInfo-pColorAttachmentInputIndices-09522
Elements of `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` **must** each be unique
- VUID-VkRenderingInputAttachmentIndexInfo-pColorAttachmentInputIndices-09523
Elements of `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` **must** not take the same value as the content of `pDepthInputAttachmentIndex`
- VUID-VkRenderingInputAttachmentIndexInfo-pColorAttachmentInputIndices-09524
Elements of `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` **must** not take the same value as the content of `pStencilInputAttachmentIndex`
- VUID-VkRenderingInputAttachmentIndexInfo-colorAttachmentCount-09525
`colorAttachmentCount` **must** be less than or equal to `maxColorAttachments`
- VUID-VkRenderingInputAttachmentIndexInfo-pDepthInputAttachmentIndex-12274
Elements of `pDepthInputAttachmentIndex`, `pStencilInputAttachmentIndex`, and `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` **must** be less than `maxPerStageDescriptorInputAttachments`

Valid Usage (Implicit)

- VUID-VkRenderingInputAttachmentIndexInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RENDERING_INPUT_ATTACHMENT_INDEX_INFO`
- VUID-VkRenderingInputAttachmentIndexInfo-pColorAttachmentInputIndices-parameter
If `colorAttachmentCount` is not `0`, and `pColorAttachmentInputIndices` is not `NULL`, `pColorAttachmentInputIndices` **must** be a valid pointer to an array of `colorAttachmentCount` `uint32_t` values
- VUID-VkRenderingInputAttachmentIndexInfo-pDepthInputAttachmentIndex-parameter
If `pDepthInputAttachmentIndex` is not `NULL`, `pDepthInputAttachmentIndex` **must** be a valid pointer to a valid `uint32_t` value
- VUID-VkRenderingInputAttachmentIndexInfo-pStencilInputAttachmentIndex-parameter
If `pStencilInputAttachmentIndex` is not `NULL`, `pStencilInputAttachmentIndex` **must** be a valid pointer to a valid `uint32_t` value

Structure Chaining

Extends the structures

- `VkCommandBufferInheritanceInfo`
- `VkGraphicsPipelineCreateInfo`

Variables identified with the `InputAttachmentIndex` **must** only be used by a fragment stage. The `numeric format` of the subpass input **must** match the format of the corresponding input attachment, or the values of subpass loads from these variables are poison. If the framebuffer attachment contains both depth and stencil aspects, the numeric format of the subpass input determines if depth or stencil aspect is accessed by the shader.

See [Input Attachment](#) for more details.

19.7.1. Fragment Input Attachment Compatibility

An input attachment that is statically accessed by a fragment shader **must** be backed by a descriptor that is equivalent to the `VkImageView` in the `VkFramebuffer`, except for `subresourceRange.aspectMask`. The `aspectMask` **must** be equal to the aspect accessed by the shader.

19.8. Ray Tracing Pipeline Interface

Ray tracing pipelines **may** have more stages than other pipelines with multiple instances of each stage and more dynamic interactions between the stages, but still have interface structures that obey the same general rules as interfaces between shader stages in other pipelines. The three types of inter-stage interface variables for ray tracing pipelines are:

- Ray payloads containing data preserved for the entire lifetime of the ray.
- Hit attributes containing data about a specific hit for the duration of its processing.
- Callable data for passing data into and out of a callable shader.

Ray payloads and callable data are used in explicit shader call instructions, so they have an incoming variant to distinguish the parameter passed to the invocation from any other payloads or data being used by subsequent shader call instructions.

An interface structure between stages **must** match between the stages using it. Specifically:

- If an intersection shader is present, the hit attribute structure read in an any-hit or closest hit shader **must** be the same structure as the hit attribute structure written in the corresponding intersection shader in the same hit group.
- If an intersection shader is not present, the hit attribute structure read in an any-hit or closest hit shader **must** be a vector of 2 32-bit floating-point values that accepts the barycentric coordinates for triangle hits.
- The incoming callable data for a callable shader **must** be the same structure as the callable data referenced by the execute callable instruction in the calling shader.
- The ray payload for a shader invoked by a ray tracing command **must** be the same structure for all shader stages using the payload for that ray, and **must** be declared in the shader even if it is not referenced.

Any shader with an incoming ray payload, incoming callable data, or hit attribute **must** only declare one variable of that type.

Table 21. Ray Pipeline Shader Interface

Shader Stage	Ray Payload	Incoming Ray Payload	Hit Attribute	Callable Data	Incoming Callable Data
Ray Generation	r/w			r/w	
Intersection			r/w		
Any-Hit		r/w	r		
Closest Hit	r/w	r/w	r	r/w	
Miss	r/w	r/w		r/w	
Callable				r/w	r/w

19.9. Shader Resource Interface

Shaders **can** access [resources](#) and [samplers](#) through [Resource Descriptors](#) created in the API, via the [Descriptor Heap Interface](#) or the [Descriptor Set Interface](#).

The set of shader variables that form the *shader resource interface* for a stage are the variables statically used by that stage's [OpEntryPoint](#) with a storage class of [Uniform](#), [UniformConstant](#), [TileAttachmentQCOM](#), [StorageBuffer](#), or [PushConstant](#). For the fragment shader, this includes the [fragment input attachment interface](#).

The shader resource interface is made up of the sub-interfaces defined in the following sections.

19.9.1. Push Constant Interface

The shader variables defined with a storage class of [PushConstant](#) that are statically used by the shader entry points for the pipeline define the *push constant interface*. They **must** be:

- typed as [OpTypeStruct](#),
- identified with a [Block](#) decoration, and
- laid out explicitly using the [Offset](#), [ArrayStride](#), and [MatrixStride](#) decorations as specified in [Offset and Stride Assignment](#).

There **must** be no more than one push constant block statically used per shader entry point.

When using descriptor heaps, each statically used member of a push constant block **must** be placed at an [Offset](#) such that the entire member is entirely contained within the range specified by [vkCmdPushDataEXT](#) in the command buffer. The [Offset](#) decoration for any member of a push constant block **must** not cause the space required for that member to extend outside the range [0, [maxPushDataSize](#)).

When using descriptor buffers or descriptor sets, each statically used member of a push constant block **must** be placed at an [Offset](#) such that the entire member is entirely contained within the [VkPushConstantRange](#) for each [OpEntryPoint](#) that uses it, and the [stageFlags](#) for that range **must** specify the appropriate [VkShaderStageFlagBits](#) for that stage. The [Offset](#) decoration for any

member of a push constant block **must** not cause the space required for that member to extend outside the range [0, `maxPushConstantsSize`).

Push constant variables or blocks **can** be decorated with `BankNV` and `MemberOffsetNV` decorations to control their placement within push constant banks. The `BankNV` decoration specifies which hardware bank the push constant data should be placed in or accessed from, while `MemberOffsetNV` provides additional offset control within the specified bank. When these decorations are used, the push constant data placement is determined by both the API-specified ranges and the shader-specified bank and offset decorations, allowing for more flexible push constant management on implementations where multiple banks are available.

Any member of a push constant block that is declared as an array **must** only be accessed with *dynamically uniform* indices.

19.9.2. Descriptor Heap Interface

The *descriptor heap interface* provides access to resources through pointers to heaps of different types, without many of the restrictions that apply to the [descriptor set interface](#).

Two built-in pointers are available to shaders:

- `SamplerHeapEXT` for [samplers](#)
- `ResourceHeapEXT` for [resources](#)

These built-ins **must** be declared as pointers in the `UniformConstant Storage Class`. These built-ins **must** not be used to access data outside of the heap bound to them.

These built-ins **can** be accessed non-uniformly, with no further decoration required, and with no dependency on other features or properties. The `UniformId` decoration **can** be applied to the result of accesses to indicate that the data will be accessed uniformly to a given scope, as a hint to improve performance on some implementations.

Resources retrieved from each heap **must** have been created with descriptors that match the variable being declared, as follows:

Table 22. Heap Resource Type Correspondence

Descriptor Type	Heap	SPIR-V Type
<code>VK_DESCRIPTOR_TYPE_SAMPLER</code>	<code>SamplerHeapEXT</code>	<code>OpTypeSampler</code>
<code>VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE</code>	<code>ResourceHeapEXT</code>	<code>OpTypeImage</code>
<code>VK_DESCRIPTOR_TYPE_STORAGE_IMAGE</code>	<code>ResourceHeapEXT</code>	<code>OpTypeImage</code>
<code>VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM</code>	<code>ResourceHeapEXT</code>	<code>OpTypeImage</code>
<code>VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM</code>	<code>ResourceHeapEXT</code>	<code>OpTypeImage</code>
<code>VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT</code>	<code>ResourceHeapEXT</code>	<code>OpTypeImage</code>

Descriptor Type	Heap	SPIR-V Type
VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER	ResourceHeapEXT	OpTypeImage
VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER	ResourceHeapEXT	OpTypeImage
VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER	ResourceHeapEXT	OpTypeBufferEXT with the Uniform Storage Class
VK_DESCRIPTOR_TYPE_STORAGE_BUFFER	ResourceHeapEXT	OpTypeBufferEXT with the StorageBuffer Storage Class
VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR	ResourceHeapEXT	OpTypeAccelerationStructureKHR
VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV	ResourceHeapEXT	OpTypeAccelerationStructureNV
VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV	ResourceHeapEXT	OpTypeAccelerationStructureKHR
VK_DESCRIPTOR_TYPE_TENSOR_ARM	ResourceHeapEXT	OpTypeTensorARM

While the built-in heap pointers **can** be declared and dereferenced as pointing to any type, applications **must** not access data types valid for one heap from any other heap.

When one of the types above is read from a heap in the shader, it will read a number of bytes equal to value advertised for the [VkDescriptorType](#) as returned by [vkGetPhysicalDeviceDescriptorSizeEXT](#).

For image types, there are further restrictions on the operands used for the type, according to the descriptor type:

Table 23. Heap Image Operand Correspondence

Descriptor Type	Dim	Arrayed	MS	Sampled
VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE	*	*	0	1
VK_DESCRIPTOR_TYPE_STORAGE_IMAGE	*	*	0 or 1	2
VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT	SubpassData	0	0 or 1	2
VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER	Buffer	0	0	2
VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER	Buffer	0	0	2

Descriptor Type	Dim	Arrayed	MS	Sampled
VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM	2D	1	0	1
VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM	2D	0	0	1

For storage images and input attachments, **MS** is 0 if the image has one sample per pixel, or 1 otherwise. For sampled and storage images, the **Dim** and **Arrayed** qualifiers depend on the [VkImageViewType](#) specified when writing the descriptor:

Table 24. Heap Image View Type Dimensionality

Image View Type	Dim	Arrayed
VK_IMAGE_VIEW_TYPE_1D	1D	0
VK_IMAGE_VIEW_TYPE_2D	2D	0
VK_IMAGE_VIEW_TYPE_3D	3D	0
VK_IMAGE_VIEW_TYPE_CUBE	Cube	0
VK_IMAGE_VIEW_TYPE_1D_ARRAY	1D	1
VK_IMAGE_VIEW_TYPE_2D_ARRAY	2D	1
VK_IMAGE_VIEW_TYPE_CUBE_ARRAY	Cube	1

The **type** and **format** of the image resource **must** also match between the API and SPIR-V.

Descriptors accessed via the **ResourceHeapEXT** built-in **must** be [explicitly laid out](#).

There is no further limit to the number of resources that **can** be accessed by a shader through a heap pointer beyond the size of the bound range for each heap.

19.9.3. Descriptor Set Interface

The *descriptor set interface* is comprised of the shader variables with the storage class of **StorageBuffer**, **TileAttachmentQCOM**, **Uniform**, or **UniformConstant** (including the variables in the [fragment input attachment interface](#)) that are statically used by the shader entry points for the pipeline.

When using descriptor heaps, this interface is not used directly to access heaps, but **may** be accessed by specifying [Shader Bindings](#) to map to the descriptor heaps.

These variables **must** have **DescriptorSet** and **Binding** decorations specified, which are assigned and matched with the **VkDescriptorSetLayout** objects in the pipeline layout as described in [DescriptorSet and Binding Assignment](#).

The **Image Format** of an **OpTypeImage** declaration **must** not be **Unknown**, for variables which are used

for `OpImageRead`, `OpImageSparseRead`, or `OpImageWrite` operations, except under the following conditions:

- For `OpImageWrite`, if the image format is listed in the [storage without format](#) list and if the `shaderStorageImageWriteWithoutFormat` feature is enabled and the shader module declares the `StorageImageWriteWithoutFormat` capability.
- For `OpImageWrite`, if the image format supports [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#) and the shader module declares the `StorageImageWriteWithoutFormat` capability.
- For `OpImageRead` or `OpImageSparseRead`, if the image format is listed in the [storage without format](#) list and if the `shaderStorageImageReadWithoutFormat` feature is enabled and the shader module declares the `StorageImageReadWithoutFormat` capability.
- For `OpImageRead` or `OpImageSparseRead`, if the image format supports [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#) and the shader module declares the `StorageImageReadWithoutFormat` capability.
- For `OpImageRead`, if `Dim` is `SubpassData` (indicating a read from an input attachment).

The `Image Format` of an `OpTypeImage` declaration **must** not be `Unknown`, for variables which are used for `OpAtomic*` operations.

Variables identified with the `Uniform` storage class are used to access transparent buffer backed resources. Such variables **must** be:

- typed as `OpTypeStruct`, or an array of this type,
- identified with a `Block` or `BufferBlock` decoration, and
- laid out explicitly using the `Offset`, `ArrayStride`, and `MatrixStride` decorations as specified in [Offset and Stride Assignment](#).

Variables identified with the `StorageBuffer` storage class are used to access transparent buffer backed resources. Such variables **must** be:

- typed as `OpTypeStruct`, or an array of this type,
- identified with a `Block` decoration, and
- laid out explicitly using the `Offset`, `ArrayStride`, and `MatrixStride` decorations as specified in [Offset and Stride Assignment](#).

The `Offset` decoration for any member of a `Block`-decorated variable in the `Uniform` storage class **must** not cause the space required for that variable to extend outside the range `[0, maxUniformBufferRange)`. The `Offset` decoration for any member of a `Block`-decorated variable in the `StorageBuffer` storage class **must** not cause the space required for that variable to extend outside the range `[0, maxStorageBufferRange)`.

Variables identified with the `Uniform` storage class **can** also be used to access transparent descriptor set backed resources when the variable is assigned to a descriptor set layout binding with a `descriptorType` of [VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#). In this case the variable **must** be typed as `OpTypeStruct` and **cannot** be aggregated into arrays of that type. Further, the `Offset`

decoration for any member of such a variable **must** not cause the space required for that variable to extend outside the range [0,maxInlineUniformBlockSize).

Storage tile attachment and *sampled tile attachment* variables declared as described in the [tile attachment interface](#) are also managed by this interface. The requirements in this section for storage image variables also applies to *storage tile attachment* variables. The requirements in this section for sampled image variables also applies to *sampled tile attachment* variables. The requirements in this section for input attachment variables also applies to *input tile attachment* variables.

Variables identified with a storage class of `UniformConstant` and a decoration of `InputAttachmentIndex` **must** be declared as described in [Fragment Input Attachment Interface](#).

SPIR-V variables decorated with a descriptor set and binding that identify a [combined image sampler descriptor](#) **can** have a type of `OpTypeImage`, `OpTypeSampler` (`Sampled=1`), or `OpTypeSampledImage`.

NOTE

When using descriptor heaps, there is no combined image sampler descriptor type, but shader variables of `OpTypeSampledImage` can be mapped to a separate image and sampler for compatibility.

When accessing a resource through such a variable, the resource **must** be selected via compile time constant expressions unless features are enabled to allow dynamically uniform or non-uniform expressions, as described below:

- Storage images (except storage texel buffers and input attachments):
 - Dynamically uniform: `shaderStorageImageArrayDynamicIndexing` and `StorageImageArrayDynamicIndexing`
 - Non-uniform: `shaderStorageImageArrayNonUniformIndexing` and `StorageImageArrayNonUniformIndexing`
- Storage texel buffers:
 - Dynamically uniform: `shaderStorageTexelBufferArrayDynamicIndexing` and `StorageTexelBufferArrayDynamicIndexing`
 - Non-uniform: `shaderStorageTexelBufferArrayNonUniformIndexing` and `StorageTexelBufferArrayNonUniformIndexing`
- Input attachments:
 - Dynamically uniform: `shaderInputAttachmentArrayDynamicIndexing` and `InputAttachmentArrayDynamicIndexing`
 - Non-uniform: `shaderInputAttachmentArrayNonUniformIndexing` and `InputAttachmentArrayNonUniformIndexing`
- Sampled images (except uniform texel buffers), samplers and combined image samplers:
 - Dynamically uniform: `shaderSampledImageArrayDynamicIndexing` and `SampledImageArrayDynamicIndexing`
 - Non-uniform: `shaderSampledImageArrayNonUniformIndexing` and `SampledImageArrayNonUniformIndexing`

- Uniform texel buffers:
 - Dynamically uniform: `shaderUniformTexelBufferArrayDynamicIndexing` and `UniformTexelBufferArrayDynamicIndexing`
 - Non-uniform: `shaderUniformTexelBufferArrayNonUniformIndexing` and `UniformTexelBufferArrayNonUniformIndexing`
- Uniform buffers:
 - Dynamically uniform: `shaderUniformBufferArrayDynamicIndexing` and `UniformBufferArrayDynamicIndexing`
 - Non-uniform: `shaderUniformBufferArrayNonUniformIndexing` and `UniformBufferArrayNonUniformIndexing`
- Storage buffers:
 - Dynamically uniform: `shaderStorageBufferArrayDynamicIndexing` and `StorageBufferArrayDynamicIndexing`
 - Non-uniform: `shaderStorageBufferArrayNonUniformIndexing` and `StorageBufferArrayNonUniformIndexing`
- Acceleration structures:
 - Dynamically uniform: Always supported.
 - Non-uniform: Always supported.
- [weight image](#):
 - Dynamically uniform: Always supported.
 - Non-uniform: Never supported.
- [Block matching image](#):
 - Dynamically uniform: Always supported.
 - Non-uniform: Never supported.
- Storage tensors:
 - Dynamically uniform: `shaderStorageTensorArrayDynamicIndexing` and `StorageTensorArrayDynamicIndexingARM`
 - Non-uniform: `shaderStorageTensorArrayNonUniformIndexing` and `StorageTensorArrayNonUniformIndexingARM`

NOTE

Implementations must take care when implementing this if subgroups are not necessarily a subset of the invocation group for their hardware (e.g. if multiple draw calls are packed together). If such an implementation needs uniformity across the subgroup for any resource access, the implementation is responsible for ensuring that indices that are only dynamically uniform across the invocation group still function as expected if they advertise the respective feature.

A combined image sampler in an array that enables sampler $Y'C_B C_R$ conversion or samples a [subsampled image](#) **must** only be indexed by constant integral expressions.

Table 25. Shader Resource and Descriptor Type Correspondence

Resource type	Descriptor Type
sampler	VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER
sampled image	VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER
storage image	VK_DESCRIPTOR_TYPE_STORAGE_IMAGE
combined image sampler	VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER or both VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE and VK_DESCRIPTOR_TYPE_SAMPLER when using heaps
uniform texel buffer	VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER
storage texel buffer	VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER
uniform buffer	VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC
storage buffer	VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC
input attachment	VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT
inline uniform block	VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK
acceleration structure	VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR or VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV
weight image	VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM
block matching image	VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM
storage tensor	VK_DESCRIPTOR_TYPE_TENSOR_ARM

Table 26. Shader Resource and Storage Class Correspondence

Resource type	Storage Class	Type ¹	Decoration(s) ²
sampler	UniformConstant	OpTypeSampler	
sampled image	UniformConstant or TileAttachmentQCOM	OpTypeImage (Sampled=1)	
storage image	UniformConstant or TileAttachmentQCOM	OpTypeImage (Sampled=2)	
combined image sampler	UniformConstant or TileAttachmentQCOM	OpTypeSampledImage OpTypeImage (Sampled=1) OpTypeSampler	
uniform texel buffer	UniformConstant	OpTypeImage (Dim=Buffer, Sampled=1)	
storage texel buffer	UniformConstant	OpTypeImage (Dim=Buffer, Sampled=2)	

Resource type	Storage Class	Type ¹	Decoration(s) ²
uniform buffer	Uniform	OpTypeStruct	Block, Offset, (ArrayStride), (MatrixStride)
storage buffer	Uniform	OpTypeStruct	BufferBlock, Offset, (ArrayStride), (MatrixStride)
	StorageBuffer		Block, Offset, (ArrayStride), (MatrixStride)
input attachment	UniformConstant or TileAttachmentQCOM	OpTypeImage (Dim=SubpassData, Sampled=2)	InputAttachmentIndex
inline uniform block	Uniform	OpTypeStruct	Block, Offset, (ArrayStride), (MatrixStride)
acceleration structure	UniformConstant	OpTypeAccelerationStructureKHR	
sample weight image	UniformConstant or TileAttachmentQCOM	OpTypeImage (Depth=0, Dim=2D, Arrayed=1, MS=0, Sampled=1)	WeightTextureQCOM
block matching image	UniformConstant or TileAttachmentQCOM	OpTypeImage (Depth=0, Dim=2D, Arrayed=0, MS=0, Sampled=1)	BlockMatchTextureQCOM
storage tensor	UniformConstant	OpTypeTensorARM	

1

Where **OpTypeImage** is referenced, the **Dim** values **Buffer** and **Subpassdata** are only accepted where they are specifically referenced. They do not correspond to resource types where a generic **OpTypeImage** is specified.

2

In addition to **DescriptorSet** and **Binding**.

19.9.4. DescriptorSet and Binding Assignment

A variable decorated with a **DescriptorSet** decoration of **s** and a **Binding** decoration of **b** indicates that this variable is associated with the **VkDescriptorSetLayoutBinding** that has a **binding** equal to **b** in **pSetLayouts[s]** that was specified in **VkPipelineLayoutCreateInfo**. If using descriptor heaps, such a variable will instead be associated with a **shader binding**.

If not using descriptor heaps, **DescriptorSet** decoration values **must** be between zero and **maxBoundDescriptorSets** minus one, inclusive. If a pipeline is created with **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT**, or a shader is created with **VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT**, **DescriptorSet** decorations **can** be any 32-bit unsigned integer value. **Binding** decoration values **can** be any 32-bit unsigned integer value. Each descriptor set has its own binding name space.

If the **Binding** decoration is used with an array, the entire array is assigned that binding value. The decorated array **must** have an **Element Type** corresponding to a descriptor type, and the size of the array **must** be no larger than the number of descriptors in the binding. If the array is runtime-sized, then array elements greater than or equal to the size of that binding in the bound descriptor set **must** not be used. If the array is runtime-sized, the **runtimeDescriptorArray** feature **must** be enabled and the **RuntimeDescriptorArray** capability **must** be declared. The index of each element of the array is referred to as the *arrayElement*. For the purposes of interface matching and descriptor set **operations**, if a resource variable is not an array, it is treated as if it has an *arrayElement* of zero.

NOTE

Even though an array is assigned to a single **Binding**, when using **descriptor heap mappings**, each element will be assigned a consecutive offset according to the stride for that type. Applications should take care to set subsequent bindings with this in mind to avoid unintentional overlap.

There is a limit on the number of resources of each type that **can** be accessed by a pipeline stage as shown in **Shader Resource Limits**. The “Resources Per Stage” column gives the limit on the number each type of resource that **can** be statically used for an entry point in any given stage in a pipeline. The “Resource Types” column lists which resource types are counted against the limit. Some resource types count against multiple limits. The **VK_DESCRIPTOR_TYPE_MUTABLE_EXT** descriptor type counts as one individual resource and one for every unique resource limit per descriptor set type that is present in the associated binding’s **VkMutableDescriptorTypeListEXT**. If multiple descriptor types in **VkMutableDescriptorTypeListEXT** map to the same resource limit, only one descriptor is consumed for purposes of computing resource limits. These limits only apply to resources accessed with **DescriptorSet** and **Binding** values.

A pipeline layout **may** include descriptor sets and bindings which are not referenced by any variables statically used by the entry points for the shader stages in the binding’s **stageFlags**. Similarly, **descriptor heap bindings** **may** include mappings that are unused by the shader.

However, if a variable assigned to a given **DescriptorSet** and **Binding** is statically used by the entry point for a shader stage, the **heap bindings** **must** specify a mapping for it when using heaps, or the pipeline layout **must** contain a descriptor set layout binding in that descriptor set layout and for that binding number, and that binding’s **stageFlags** **must** include the appropriate **VkShaderStageFlagBits** for that stage. The variable **must** be of a valid resource type determined by its SPIR-V type and storage class, as defined in **Shader Resource and Storage Class Correspondence**. The descriptor set layout binding **must** be of a corresponding descriptor type, as defined in **Shader Resource and Descriptor Type Correspondence**.

NOTE

There are no limits on the number of shader variables that can have overlapping set and binding values in a shader; but which resources are **statically used** has an impact. If any shader variable identifying a resource is **statically used** in a shader, then the underlying descriptor bound at the declared set and binding **must support the declared type in the shader** when the shader executes.

If multiple shader variables are declared with the same set and binding values, and with the same underlying descriptor type, they can all be statically used within the same shader. However, accesses are not automatically synchronized, and **Aliased** decorations should be used to avoid data hazards (see **section 2.18.2 Aliasing in the**

[SPIR-V specification](#)).

If multiple shader variables with the same set and binding values are declared in a single shader, but with different declared types, where any of those are not supported by the relevant bound descriptor, that shader can only be executed if the variables with the unsupported type are not statically used.

A noteworthy example of using multiple statically-used shader variables sharing the same descriptor set and binding values is a descriptor of type [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#) that has multiple corresponding shader variables in the [UniformConstant](#) storage class, where some could be [OpTypeImage](#) ([Sampled=1](#)), some could be [OpTypeSampler](#), and some could be [OpTypeSampledImage](#).

Table 27. Shader Resource Limits

Resources per Stage	Resource Types
maxPerStageDescriptorSamplers or maxPerStageDescriptorUpdateAfterBindSamplers	sampler
	combined image sampler
maxPerStageDescriptorSampledImages or maxPerStageDescriptorUpdateAfterBindSampledImages	sampled image
	combined image sampler
	uniform texel buffer
	sample weight image
	block matching image
maxPerStageDescriptorStorageImages or maxPerStageDescriptorUpdateAfterBindStorageImages	storage image
	storage texel buffer
maxPerStageDescriptorUniformBuffers or maxPerStageDescriptorUpdateAfterBindUniformBuffers	uniform buffer
	uniform buffer dynamic
maxPerStageDescriptorStorageBuffers or maxPerStageDescriptorUpdateAfterBindStorageBuffers	storage buffer
	storage buffer dynamic
maxPerStageDescriptorInputAttachments or maxPerStageDescriptorUpdateAfterBindInputAttachments	input attachment ¹
maxPerStageDescriptorInlineUniformBlocks or maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks	inline uniform block
VkPhysicalDeviceRayTracingPropertiesNV::maxDescriptorSetAccelerationStructures or maxPerStageDescriptorAccelerationStructures or maxPerStageDescriptorUpdateAfterBindAccelerationStructures	acceleration structure

NOTE

Resources accessed directly through the [descriptor heap interface](#) do not count towards these limits.

1

Input attachments **can** only be used in the fragment shader stage

19.9.5. Offset and Stride Assignment

When a SPIR-V object is declared using an [explicit layout](#), it **must** be laid out according to the following additional requirements.

NOTE

The numeric order of [Offset](#) decorations does not need to follow member declaration order.

Alignment Requirements

There are different alignment requirements depending on the specific resources and on the features enabled.

Matrix types are defined in terms of arrays as follows:

- A column-major matrix with C columns and R rows is equivalent to a C element array of vectors with R components.
- A row-major matrix with C columns and R rows is equivalent to an R element array of vectors with C components.

The *scalar alignment* of the type of an [OpTypeStruct](#) member is defined recursively as follows:

- A scalar of size N has a scalar alignment of N.
- A vector type has a scalar alignment equal to that of its component type.
- An array type has a scalar alignment equal to that of its element type.
- A structure has a scalar alignment equal to the largest scalar alignment of any of its members.
- A matrix type inherits *scalar alignment* from the equivalent array declaration.
- [OpTypeImage](#) has a scalar alignment equal to the value of [imageDescriptorAlignment](#)
- [OpTypeBufferEXT](#) has a scalar alignment equal to the value of [bufferDescriptorAlignment](#)
- [OpTypeSampler](#) has a scalar alignment equal to the value of [samplerDescriptorAlignment](#)
- [OpTypeTensorARM](#) has a scalar alignment equal to the value of [tensorDescriptorAlignment](#)

The aligned size of a [OpTypeImage](#), [OpTypeBufferEXT](#), or [OpTypeSampler](#) can be queried from within SPIR-V using [OpConstantSizeOfEXT](#), which can be used with the [OffsetIdEXT](#) or [ArrayStrideIdEXT](#) decorations to lay out types in a descriptor heap. [OpConstantSizeOfEXT](#) returns the following for values for each type:

Table 28. Shader Descriptor Sizes

Type	Size
OpTypeSampler	samplerDescriptorSize aligned to samplerDescriptorAlignment
OpTypeImage	imageDescriptorSize aligned to imageDescriptorAlignment
OpTypeBufferEXT	bufferDescriptorSize aligned to bufferDescriptorAlignment
OpTypeAccelerationStructureKHR	bufferDescriptorSize aligned to bufferDescriptorAlignment

The *base alignment* of the type of an **OpTypeStruct** member is defined recursively as follows:

- A scalar has a base alignment equal to its scalar alignment.
- A two-component vector has a base alignment equal to twice its scalar alignment.
- A three- or four-component vector has a base alignment equal to four times its scalar alignment.
- An array has a base alignment equal to the base alignment of its element type.
- A structure has a base alignment equal to the largest base alignment of any of its members. An empty structure has a base alignment equal to the size of the smallest scalar type permitted by the capabilities declared in the SPIR-V module. (e.g., for a 1 byte aligned empty structure in the **StorageBuffer** storage class, **StorageBuffer8BitAccess** or **UniformAndStorageBuffer8BitAccess** **must** be declared in the SPIR-V module.)
- A matrix type inherits *base alignment* from the equivalent array declaration.

The *extended alignment* of the type of an **OpTypeStruct** member is similarly defined as follows:

- A scalar or vector type has an extended alignment equal to its base alignment.
- An array or structure type has an extended alignment equal to the largest extended alignment of any of its members, rounded up to a multiple of 16.
- A matrix type inherits extended alignment from the equivalent array declaration.

A member is defined to *improperly straddle* if either of the following are true:

- It is a vector with total size less than or equal to 16 bytes, and has **Offset** decorations placing its first byte at F and its last byte at L, where $\text{floor}(F / 16) \neq \text{floor}(L / 16)$.
- It is a vector with total size greater than 16 bytes and has its **Offset** decorations placing its first byte at a non-integer multiple of 16.

Standard Buffer Layout

Every member of an **OpTypeStruct** that is required to be explicitly laid out **must** be aligned according to the first matching rule as follows. If the structure is contained in pointer types of multiple storage classes, it **must** satisfy the requirements for every storage class used to reference it.

1. If the **scalarBlockLayout** feature is enabled and the storage class is **Uniform**, **StorageBuffer**, **PhysicalStorageBuffer**, **ShaderRecordBufferKHR**, or **PushConstant**, or the storage class is **UniformConstant** and the type is decorated with either **SamplerHeapEXT** or **ResourceHeapEXT**, then every member **must** be aligned according to its scalar alignment.

2. If the `workgroupMemoryExplicitLayoutScalarBlockLayout` feature is enabled and the storage class is `Workgroup` then every member **must** be aligned according to its scalar alignment.
3. All vectors **must** be aligned according to their scalar alignment.
4. If the `uniformBufferStandardLayout` feature is not enabled, then any member of an `OpTypeStruct` with a storage class of `Uniform` and a decoration of `Block` **must** be aligned according to its extended alignment.
5. Every other member **must** be aligned according to its base alignment.

NOTE

Even if scalar alignment is supported, it is generally more performant to use the *base alignment*.

The memory layout **must** obey the following rules:

- The `Offset` or `OffsetIdEXT` decoration of any member **must** be a multiple of its alignment.
- Any `ArrayStride`, or `ArrayStrideIdEXT`, or `MatrixStride` decoration **must** be a multiple of the alignment of the array or matrix as defined above.

If one of the conditions below applies

- The storage class is `Uniform`, `StorageBuffer`, `PhysicalStorageBuffer`, `ShaderRecordBufferKHR`, or `PushConstant`, and the `scalarBlockLayout` feature is not enabled.
- The storage class is `Workgroup`, and either the structure member is not part of a `Block` or the `workgroupMemoryExplicitLayoutScalarBlockLayout` feature is not enabled.
- The storage class is any other storage class.

the memory layout **must** also obey the following rules:

- Vectors **must** not improperly straddle, as defined above.
- The `Offset` decoration of a member **must** not place it between the end of a structure, an array, or a matrix and the next multiple of the alignment of that structure, array, or matrix.

NOTE

The **std430 layout** in GLSL satisfies these rules for types using the base alignment. The **std140 layout** satisfies the rules for types using the extended alignment.

NOTE

An alternate explanation of the shader memory requirements, discussing the underlying extensions and core versions which affect them, is found in the [Vulkan Guide](#).

19.10. Built-In Variables

Built-in variables are accessed in shaders by declaring a variable decorated with a `BuiltIn` SPIR-V decoration. The meaning of each `BuiltIn` decoration is as follows. In the remainder of this section, the name of a built-in is used interchangeably with a term equivalent to a variable decorated with that particular built-in. Built-ins that represent integer values **can** be declared as either signed or unsigned 32-bit integers.

As mentioned above, some inputs and outputs have an additional level of arrayness relative to other shader inputs and outputs. This level of arrayness is not included in the type descriptions below, but **must** be included when declaring the built-in.

Any two variables declared in the **Input** storage class listed as operands on the same **OpEntryPoint** **must** not have the same **BuiltIn** decoration. Any two variables declared in the **Output** storage class listed as operands on the same **OpEntryPoint** **must** not have the same **BuiltIn** decoration.

Built-in values for descriptor heaps are listed in the descriptor heap chapter:

- [\[SamplerHeapEXT\]](#)
- [\[ResourceHeapEXT\]](#)

Types used to access these built-ins **must** be laid out explicitly using the **Offset**, **OffsetIdEXT**, **ArrayStride**, **ArrayStrideIdEXT**, and **MatrixStride** decorations as specified in [Offset and Stride Assignment](#).

BaryCoordKHR

The **BaryCoordKHR** decoration **can** be used to decorate a fragment shader input variable. This variable will contain a three-component floating-point vector with barycentric weights that indicate the location of the fragment relative to the screen-space locations of vertices of its primitive, obtained using perspective interpolation.

Valid Usage

- VUID-BaryCoordKHR-BaryCoordKHR-04154
The **BaryCoordKHR** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordKHR-BaryCoordKHR-04155
The variable decorated with **BaryCoordKHR** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordKHR-BaryCoordKHR-04156
The variable decorated with **BaryCoordKHR** **must** be declared as a three-component vector of 32-bit floating-point values

BaryCoordNoPerspAMD

The **BaryCoordNoPerspAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using linear interpolation at the fragment's center. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordNoPerspAMD-BaryCoordNoPerspAMD-04157
The **BaryCoordNoPerspAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordNoPerspAMD-BaryCoordNoPerspAMD-04158
The variable decorated with **BaryCoordNoPerspAMD** **must** be declared using the **Input Storage Class**

- VUID-BaryCoordNoPerspAMD-BaryCoordNoPerspAMD-04159
The variable decorated with **BaryCoordNoPerspAMD** **must** be declared as a two-component vector of 32-bit floating-point values

BaryCoordNoPerspKHR

The **BaryCoordNoPerspKHR** decoration **can** be used to decorate a fragment shader input variable. This variable will contain a three-component floating-point vector with barycentric weights that indicate the location of the fragment relative to the screen-space locations of vertices of its primitive, obtained using linear interpolation.

Valid Usage

- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04160
The **BaryCoordNoPerspKHR** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04161
The variable decorated with **BaryCoordNoPerspKHR** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04162
The variable decorated with **BaryCoordNoPerspKHR** **must** be declared as a three-component vector of 32-bit floating-point values

BaryCoordNoPerspCentroidAMD

The **BaryCoordNoPerspCentroidAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using linear interpolation at the centroid. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordNoPerspCentroidAMD-BaryCoordNoPerspCentroidAMD-04163
The **BaryCoordNoPerspCentroidAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordNoPerspCentroidAMD-BaryCoordNoPerspCentroidAMD-04164
The variable decorated with **BaryCoordNoPerspCentroidAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordNoPerspCentroidAMD-BaryCoordNoPerspCentroidAMD-04165
The variable decorated with **BaryCoordNoPerspCentroidAMD** **must** be declared as a three-component vector of 32-bit floating-point values

BaryCoordNoPerspSampleAMD

The **BaryCoordNoPerspSampleAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using linear interpolation at each covered sample. The K coordinate of

the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordNoPerspSampleAMD-BaryCoordNoPerspSampleAMD-04166
The `BaryCoordNoPerspSampleAMD` decoration **must** be used only within the `Fragment Execution Model`
- VUID-BaryCoordNoPerspSampleAMD-BaryCoordNoPerspSampleAMD-04167
The variable decorated with `BaryCoordNoPerspSampleAMD` **must** be declared using the `Input Storage Class`
- VUID-BaryCoordNoPerspSampleAMD-BaryCoordNoPerspSampleAMD-04168
The variable decorated with `BaryCoordNoPerspSampleAMD` **must** be declared as a two-component vector of 32-bit floating-point values

`BaryCoordPullModelAMD`

The `BaryCoordPullModelAMD` decoration **can** be used to decorate a fragment shader input variable. This variable will contain $(1/W, 1/I, 1/J)$ evaluated at the fragment center and **can** be used to calculate gradients and then interpolate I, J , and W at any desired sample location.

Valid Usage

- VUID-BaryCoordPullModelAMD-BaryCoordPullModelAMD-04169
The `BaryCoordPullModelAMD` decoration **must** be used only within the `Fragment Execution Model`
- VUID-BaryCoordPullModelAMD-BaryCoordPullModelAMD-04170
The variable decorated with `BaryCoordPullModelAMD` **must** be declared using the `Input Storage Class`
- VUID-BaryCoordPullModelAMD-BaryCoordPullModelAMD-04171
The variable decorated with `BaryCoordPullModelAMD` **must** be declared as a three-component vector of 32-bit floating-point values

`BaryCoordSmoothAMD`

The `BaryCoordSmoothAMD` decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I, J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at the fragment's center. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordSmoothAMD-BaryCoordSmoothAMD-04172
The `BaryCoordSmoothAMD` decoration **must** be used only within the `Fragment Execution Model`
- VUID-BaryCoordSmoothAMD-BaryCoordSmoothAMD-04173
The variable decorated with `BaryCoordSmoothAMD` **must** be declared using the `Input Storage`

Class

- VUID-BaryCoordSmoothAMD-BaryCoordSmoothAMD-04174

The variable decorated with **BaryCoordSmoothAMD** **must** be declared as a two-component vector of 32-bit floating-point values

BaryCoordSmoothCentroidAMD

The **BaryCoordSmoothCentroidAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at the centroid. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordSmoothCentroidAMD-BaryCoordSmoothCentroidAMD-04175
The **BaryCoordSmoothCentroidAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordSmoothCentroidAMD-BaryCoordSmoothCentroidAMD-04176
The variable decorated with **BaryCoordSmoothCentroidAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordSmoothCentroidAMD-BaryCoordSmoothCentroidAMD-04177
The variable decorated with **BaryCoordSmoothCentroidAMD** **must** be declared as a two-component vector of 32-bit floating-point values

BaryCoordSmoothSampleAMD

The **BaryCoordSmoothSampleAMD** decoration **can** be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at each covered sample. The K coordinate of the barycentric coordinates **can** be derived given the identity $I + J + K = 1.0$.

Valid Usage

- VUID-BaryCoordSmoothSampleAMD-BaryCoordSmoothSampleAMD-04178
The **BaryCoordSmoothSampleAMD** decoration **must** be used only within the **Fragment Execution Model**
- VUID-BaryCoordSmoothSampleAMD-BaryCoordSmoothSampleAMD-04179
The variable decorated with **BaryCoordSmoothSampleAMD** **must** be declared using the **Input Storage Class**
- VUID-BaryCoordSmoothSampleAMD-BaryCoordSmoothSampleAMD-04180
The variable decorated with **BaryCoordSmoothSampleAMD** **must** be declared as a two-component vector of 32-bit floating-point values

BaseInstance

Decorating a variable with the **BaseInstance** built-in will make that variable contain the integer

value corresponding to the first instance that was passed to the command that invoked the current vertex shader invocation. **BaseInstance** is the **firstInstance** parameter to a *direct drawing command* or the **firstInstance** member of a structure consumed by an *indirect drawing command*.

Valid Usage

- VUID-BaseInstance-BaseInstance-04181
The **BaseInstance** decoration **must** be used only within the **Vertex Execution Model**
- VUID-BaseInstance-BaseInstance-04182
The variable decorated with **BaseInstance** **must** be declared using the **Input Storage Class**
- VUID-BaseInstance-BaseInstance-04183
The variable decorated with **BaseInstance** **must** be declared as a scalar 32-bit integer value

BaseVertex

Decorating a variable with the **BaseVertex** built-in will make that variable contain the integer value corresponding to the first vertex or vertex offset that was passed to the command that invoked the current vertex shader invocation. For *non-indexed drawing commands*, this variable is the **firstVertex** parameter to a *direct drawing command* or the **firstVertex** member of the structure consumed by an *indirect drawing command*. For *indexed drawing commands*, this variable is the **vertexOffset** parameter to a *direct drawing command* or the **vertexOffset** member of the structure consumed by an *indirect drawing command*.

Valid Usage

- VUID-BaseVertex-BaseVertex-04184
The **BaseVertex** decoration **must** be used only within the **Vertex Execution Model**
- VUID-BaseVertex-BaseVertex-04185
The variable decorated with **BaseVertex** **must** be declared using the **Input Storage Class**
- VUID-BaseVertex-BaseVertex-04186
The variable decorated with **BaseVertex** **must** be declared as a scalar 32-bit integer value

ClipDistance

Decorating a variable with the **ClipDistance** built-in decoration will make that variable contain the mechanism for controlling user clipping. **ClipDistance** is an array such that the i^{th} element of the array specifies the clip distance for plane i . A clip distance of 0 means the vertex is on the plane, a positive distance means the vertex is inside the clip half-space, and a negative distance means the vertex is outside the clip half-space.

NOTE The array variable decorated with **ClipDistance** is explicitly sized by the shader.

NOTE In the last **pre-rasterization shader stage**, these values will be linearly interpolated across the primitive and the portion of the primitive with interpolated distances

less than 0 will be considered outside the clip volume. If `ClipDistance` is then used by a fragment shader, `ClipDistance` contains these linearly interpolated values.

Valid Usage

- VUID-ClipDistance-ClipDistance-04187
The `ClipDistance` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `Vertex`, `Fragment`, `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model`
- VUID-ClipDistance-ClipDistance-04188
The variable decorated with `ClipDistance` within the `MeshEXT`, `MeshNV`, or `Vertex Execution Model` **must** be declared using the `Output Storage Class`
- VUID-ClipDistance-ClipDistance-04189
The variable decorated with `ClipDistance` within the `Fragment Execution Model` **must** be declared using the `Input Storage Class`
- VUID-ClipDistance-ClipDistance-04190
The variable decorated with `ClipDistance` within the `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model` **must** not be declared in a `Storage Class` other than `Input` or `Output`
- VUID-ClipDistance-ClipDistance-04191
The variable decorated with `ClipDistance` **must** be declared as an array of 32-bit floating-point values

`ClipDistancePerViewNV`

Decorating a variable with the `ClipDistancePerViewNV` built-in decoration will make that variable contain the per-view clip distances. The per-view clip distances have the same semantics as `ClipDistance`.

Valid Usage

- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04192
The `ClipDistancePerViewNV` decoration **must** be used only within the `MeshNV Execution Model`
- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04193
The variable decorated with `ClipDistancePerViewNV` **must** be declared using the `Output Storage Class`
- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04194
The variable decorated with `ClipDistancePerViewNV` **must** also be decorated with the `PerViewNV` decoration
- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04195
The variable decorated with `ClipDistancePerViewNV` **must** be declared as a two-dimensional array of 32-bit floating-point values

`ClusterIDHUAWEI`

The `ClusterIDHUAWEI` decoration can be used to decorate a cluster culling shader output

variable, this variable will contain an integer value that specifies the id of cluster being rendered by this drawing command. When Cluster Culling Shader enable, `ClusterIDHUAWEI` will replace `gl_DrawID` pass to vertex shader for cluster-related information fetching.

Valid Usage

- VUID-ClusterIDHUAWEI-ClusterIDHUAWEI-07797
The `ClusterIDHUAWEI` decoration **must** be used only within the `ClusterCullingHUAWEI Execution Model`
- VUID-ClusterIDHUAWEI-ClusterIDHUAWEI-07798
The variable decorated with `ClusterIDHUAWEI` **must** be declared as a scalar 32-bit integer value

ClusterShadingRateHUAWEI

The `ClusterShadingRateHUAWEI` decoration can be used to decorate a cluster culling shader output variable. This variable will contain an integer value specifying the shading rate of a rendering cluster.

Valid Usage

- VUID-ClusterShadingRateHUAWEI-ClusterShadingRateHUAWEI-09448
The `ClusterShadingRateHUAWEI` decoration **must** be used only within the `ClusterCullingHUAWEI Execution Model`
- VUID-ClusterShadingRateHUAWEI-ClusterShadingRateHUAWEI-09449
The variable decorated with `ClusterShadingRateHUAWEI` **must** be declared as a scalar 32-bit integer value

CullDistance

Decorating a variable with the `CullDistance` built-in decoration will make that variable contain the mechanism for controlling user culling. If any member of this array is assigned a negative value for all vertices belonging to a primitive, then the primitive is discarded before rasterization.

NOTE

In fragment shaders, the values of the `CullDistance` array are linearly interpolated across each primitive.

NOTE

If `CullDistance` decorates an input variable, that variable will contain the corresponding value from the `CullDistance` decorated output variable from the previous shader stage.

Valid Usage

- VUID-CullDistance-CullDistance-04196
The `CullDistance` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `Vertex`,

Fragment, TessellationControl, TessellationEvaluation, or Geometry Execution Model

- VUID-CullDistance-CullDistance-04197
The variable decorated with **CullDistance** within the MeshEXT, MeshNV or Vertex Execution Model **must** be declared using the Output Storage Class
- VUID-CullDistance-CullDistance-04198
The variable decorated with **CullDistance** within the Fragment Execution Model **must** be declared using the Input Storage Class
- VUID-CullDistance-CullDistance-04199
The variable decorated with **CullDistance** within the TessellationControl, TessellationEvaluation, or Geometry Execution Model **must** not be declared using a Storage Class other than Input or Output
- VUID-CullDistance-CullDistance-04200
The variable decorated with **CullDistance** **must** be declared as an array of 32-bit floating-point values

CullDistancePerViewNV

Decorating a variable with the **CullDistancePerViewNV** built-in decoration will make that variable contain the per-view cull distances. The per-view cull distances have the same semantics as **CullDistance**.

Valid Usage

- VUID-CullDistancePerViewNV-CullDistancePerViewNV-04201
The **CullDistancePerViewNV** decoration **must** be used only within the MeshNV Execution Model
- VUID-CullDistancePerViewNV-CullDistancePerViewNV-04202
The variable decorated with **CullDistancePerViewNV** **must** be declared using the Output Storage Class
- VUID-CullDistancePerViewNV-CullDistancePerViewNV-04203
The variable decorated with **CullDistancePerViewNV** **must** also be decorated with the **PerViewNV** decoration
- VUID-CullDistancePerViewNV-CullDistancePerViewNV-04204
The variable decorated with **CullDistancePerViewNV** **must** be declared as a two-dimensional array of 32-bit floating-point values

CullPrimitiveEXT

Decorating a variable with the **CullPrimitiveEXT** built-in decoration will make that variable contain the culling state of output primitives. If the per-primitive boolean value is **true**, the primitive will be culled, if it is **false** it will not be culled.

Valid Usage

- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07034
The **CullPrimitiveEXT** decoration **must** be used only within the MeshEXT Execution Model

- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07035
The variable decorated with **CullPrimitiveEXT** **must** be declared using the **Output Storage Class**
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07036
CullPrimitiveEXT **must** decorate a scalar boolean member of a structure decorated as **Block**, or decorate a variable of type **OpTypeArray** of boolean values
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-10589
If **CullPrimitiveEXT** is declared as an array of boolean values, the size of the array **must** match the value specified by **OutputPrimitivesEXT**
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-10590
If **CullPrimitiveEXT** decorates a member of a structure, the variable declaration of the containing **Block** type **must** have an array size that matches the value specified by **OutputPrimitivesEXT**
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-10591
There must be only one declaration of the **CullPrimitiveEXT** associated with a entry point's interface
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07038
The variable decorated with **CullPrimitiveEXT** within the **MeshEXT Execution Model** **must** also be decorated with the **PerPrimitiveEXT** decoration

CullMaskKHR

A variable decorated with the **CullMaskKHR** decoration will specify the cull mask of the ray being processed. The value is given by the **Cull Mask** parameter passed into one of the **OpTrace*** instructions.

Valid Usage

- VUID-CullMaskKHR-CullMaskKHR-06735
The **CullMaskKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**
- VUID-CullMaskKHR-CullMaskKHR-06736
The variable decorated with **CullMaskKHR** **must** be declared using the **Input Storage Class**
- VUID-CullMaskKHR-CullMaskKHR-06737
The variable decorated with **CullMaskKHR** **must** be declared as a scalar 32-bit integer value

CurrentRayTimeNV

A variable decorated with the **CurrentRayTimeNV** decoration contains the time value passed in to **OpTraceRayMotionNV** which called this shader.

Valid Usage

- VUID-CurrentRayTimeNV-CurrentRayTimeNV-04942
The **CurrentRayTimeNV** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**,

ClosestHitKHR, or MissKHR Execution Model

- VUID-CurrentRayTimeNV-CurrentRayTimeNV-04943
The variable decorated with **CurrentRayTimeNV** **must** be declared using the **Input Storage Class**
- VUID-CurrentRayTimeNV-CurrentRayTimeNV-04944
The variable decorated with **CurrentRayTimeNV** **must** be declared as a scalar 32-bit floating-point value

DeviceIndex

The **DeviceIndex** decoration **can** be applied to a shader input which will be filled with the device index of the physical device that is executing the current shader invocation. This value will be in the range $[0, \max(1, \text{physicalDeviceCount}))$, where `physicalDeviceCount` is the **physicalDeviceCount** member of **VkDeviceGroupDeviceCreateInfo**.

Valid Usage

- VUID-DeviceIndex-DeviceIndex-04205
The variable decorated with **DeviceIndex** **must** be declared using the **Input Storage Class**
- VUID-DeviceIndex-DeviceIndex-04206
The variable decorated with **DeviceIndex** **must** be declared as a scalar 32-bit integer value

DrawIndex

Decorating a variable with the **DrawIndex** built-in will make that variable contain the integer value corresponding to the zero-based index of the draw that invoked the current task, mesh, or vertex shader invocation. For *indirect drawing commands*, **DrawIndex** begins at zero and increments by one for each draw executed. The number of draws is given by the **drawCount** parameter. For *direct drawing commands*, if **vkCmdDrawMultiEXT** or **vkCmdDrawMultiIndexedEXT** is used, this variable contains the integer value corresponding to the zero-based index of the draw. Otherwise **DrawIndex** is always zero. **DrawIndex** is dynamically uniform.

When task or mesh shaders are used, only the first active stage will have proper access to the variable. The value read by other stages is poison.

Valid Usage

- VUID-DrawIndex-DrawIndex-04207
The **DrawIndex** decoration **must** be used only within the **Vertex**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**
- VUID-DrawIndex-DrawIndex-04208
The variable decorated with **DrawIndex** **must** be declared using the **Input Storage Class**
- VUID-DrawIndex-DrawIndex-04209
The variable decorated with **DrawIndex** **must** be declared as a scalar 32-bit integer value

FirstIndexHUAWEI

The **FirstIndexHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this indexed mode specific variable will contain an integer value that specifies the base index within the index buffer corresponding to a cluster.

Valid Usage

- VUID-FirstIndexHUAWEI-FirstIndexHUAWEI-07799
The **FirstIndexHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**
- VUID-FirstIndexHUAWEI-FirstIndexHUAWEI-07800
The variable decorated with **FirstIndexHUAWEI** **must** be declared as a scalar 32-bit integer value

FragCoord

Decorating a variable with the **FragCoord** built-in decoration will make that variable contain the coordinates (x,y,z,1/w) of the fragment being processed.

The (x,y) values are the framebuffer coordinates (x_f, y_f) of the fragment.

When **Sample Shading** is enabled, the x and y components of **FragCoord** reflect the location of one of the samples corresponding to the shader invocation.

Otherwise, the x and y components of **FragCoord** reflect the location of the center of the fragment.

The z component of **FragCoord** is the interpolated depth value of the primitive.

The w component is the interpolated $\frac{1}{w}$.

The **Centroid** interpolation decoration is ignored, but allowed, on **FragCoord**.

Valid Usage

- VUID-FragCoord-FragCoord-04210
The **FragCoord** decoration **must** be used only within the **Fragment Execution Model**
- VUID-FragCoord-FragCoord-04211
The variable decorated with **FragCoord** **must** be declared using the **Input Storage Class**
- VUID-FragCoord-FragCoord-04212
The variable decorated with **FragCoord** **must** be declared as a four-component vector of 32-bit floating-point values

FragDepth

To have a shader supply a fragment-depth value, the shader **must** declare the **DepthReplacing** execution mode. Such a shader's fragment-depth value will come from the variable decorated with the **FragDepth** built-in decoration.

This value will be used for any subsequent depth testing performed by the implementation or writes to the depth attachment. See [fragment shader depth replacement](#) for details.

Valid Usage

- VUID-FragDepth-FragDepth-04213
The **FragDepth** decoration **must** be used only within the **Fragment Execution Model**
- VUID-FragDepth-FragDepth-04214
The variable decorated with **FragDepth** **must** be declared using the **Output Storage Class**
- VUID-FragDepth-FragDepth-04215
The variable decorated with **FragDepth** **must** be declared as a scalar 32-bit floating-point value
- VUID-FragDepth-FragDepth-04216
If the shader dynamically writes to the variable decorated with **FragDepth**, the **DepthReplacing Execution Mode** **must** be declared

FirstInstanceHUAWEI

The **FirstInstanceHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this variable will contain an integer value that specifies the instance ID of the first instance to draw.

Valid Usage

- VUID-FirstInstanceHUAWEI-FirstInstanceHUAWEI-07801
The **FirstInstanceHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**
- VUID-FirstInstanceHUAWEI-FirstInstanceHUAWEI-07802
The variable decorated with **FirstInstanceHUAWEI** **must** be declared as a scalar 32-bit integer value

FirstVertexHUAWEI

The **FirstVertexHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this non-indexed mode specific variable will contain an integer value that specifies the index of the first vertex in a cluster to draw.

Valid Usage

- VUID-FirstVertexHUAWEI-FirstVertexHUAWEI-07803
The **FirstVertexHUAWEI** decoration **must** be used only within the **FirstVertexHUAWEI Execution Model**
- VUID-FirstVertexHUAWEI-FirstVertexHUAWEI-07804
The variable decorated with **FirstVertexHUAWEI** **must** be declared as a scalar 32-bit integer value

FragInvocationCountEXT

Decorating a variable with the `FragInvocationCountEXT` built-in decoration will make that variable contain the maximum number of fragment shader invocations for the fragment, as determined by `minSampleShading`.

If `Sample Shading` is not enabled, `FragInvocationCountEXT` will be filled with a value of 1.

Valid Usage

- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04217
The `FragInvocationCountEXT` decoration **must** be used only within the `Fragment Execution Model`
- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04218
The variable decorated with `FragInvocationCountEXT` **must** be declared using the `Input Storage Class`
- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04219
The variable decorated with `FragInvocationCountEXT` **must** be declared as a scalar 32-bit integer value

FragSizeEXT

Decorating a variable with the `FragSizeEXT` built-in decoration will make that variable contain the dimensions in pixels of the `area` that the fragment covers for that invocation.

NOTE

When used in a custom resolve operation and the `customResolve` feature is enabled, the dimensions in pixels returned **may** be (1,1) if the fragment area was reduced.

If fragment density map is not enabled, `FragSizeEXT` will be filled with a value of (1,1).

Valid Usage

- VUID-FragSizeEXT-FragSizeEXT-04220
The `FragSizeEXT` decoration **must** be used only within the `Fragment Execution Model`
- VUID-FragSizeEXT-FragSizeEXT-04221
The variable decorated with `FragSizeEXT` **must** be declared using the `Input Storage Class`
- VUID-FragSizeEXT-FragSizeEXT-04222
The variable decorated with `FragSizeEXT` **must** be declared as a two-component vector of 32-bit integer values

FragStencilRefEXT

Decorating a variable with the `FragStencilRefEXT` built-in decoration will make that variable contain the new stencil reference value for all samples covered by the fragment. This value will be used as the stencil reference value used in stencil testing.

To write to `FragStencilRefEXT`, a shader **must** declare the `StencilRefReplacingEXT` execution mode. If a shader declares the `StencilRefReplacingEXT` execution mode and there is an execution path through the shader that does not set `FragStencilRefEXT`, then the fragment's stencil reference value is undefined for executions of the shader that take that path.

Only the least significant `s` bits of the integer value of the variable decorated with `FragStencilRefEXT` are considered for stencil testing, where `s` is the number of bits in the stencil framebuffer attachment, and higher order bits are discarded.

See [fragment shader stencil reference replacement](#) for more details.

Valid Usage

- VUID-FragStencilRefEXT-FragStencilRefEXT-04223
The `FragStencilRefEXT` decoration **must** be used only within the `Fragment Execution Model`
- VUID-FragStencilRefEXT-FragStencilRefEXT-04224
The variable decorated with `FragStencilRefEXT` **must** be declared using the `Output Storage Class`
- VUID-FragStencilRefEXT-FragStencilRefEXT-04225
The variable decorated with `FragStencilRefEXT` **must** be declared as a scalar integer value

FragmentSizeNV

Decorating a variable with the `FragmentSizeNV` built-in decoration will make that variable contain the width and height of the fragment.

Valid Usage

- VUID-FragmentSizeNV-FragmentSizeNV-04226
The `FragmentSizeNV` decoration **must** be used only within the `Fragment Execution Model`
- VUID-FragmentSizeNV-FragmentSizeNV-04227
The variable decorated with `FragmentSizeNV` **must** be declared using the `Input Storage Class`
- VUID-FragmentSizeNV-FragmentSizeNV-04228
The variable decorated with `FragmentSizeNV` **must** be declared as a two-component vector of 32-bit integer values

FrontFacing

Decorating a variable with the `FrontFacing` built-in decoration will make that variable contain whether the fragment is front or back facing. This variable is non-zero if the current fragment is considered to be part of a `front-facing` polygon primitive or of a non-polygon primitive and is zero if the fragment is considered to be part of a back-facing polygon primitive.

Valid Usage

- VUID-FrontFacing-FrontFacing-04229
The **FrontFacing** decoration **must** be used only within the **Fragment Execution Model**
- VUID-FrontFacing-FrontFacing-04230
The variable decorated with **FrontFacing** **must** be declared using the **Input Storage Class**
- VUID-FrontFacing-FrontFacing-04231
The variable decorated with **FrontFacing** **must** be declared as a boolean value

FullyCoveredEXT

Decorating a variable with the **FullyCoveredEXT** built-in decoration will make that variable indicate whether the **fragment area** is fully covered by the generating primitive. This variable is non-zero if conservative rasterization is enabled and the current fragment area is fully covered by the generating primitive, and is zero if the fragment is not covered or partially covered, or conservative rasterization is disabled.

Valid Usage

- VUID-FullyCoveredEXT-FullyCoveredEXT-04232
The **FullyCoveredEXT** decoration **must** be used only within the **Fragment Execution Model**
- VUID-FullyCoveredEXT-FullyCoveredEXT-04233
The variable decorated with **FullyCoveredEXT** **must** be declared using the **Input Storage Class**
- VUID-FullyCoveredEXT-FullyCoveredEXT-04234
The variable decorated with **FullyCoveredEXT** **must** be declared as a boolean value
- VUID-FullyCoveredEXT-conservativeRasterizationPostDepthCoverage-04235
If **VkPhysicalDeviceConservativeRasterizationPropertiesEXT::conservativeRasterizationPostDepthCoverage** is not supported the **PostDepthCoverage Execution Mode** **must** not be declared, when a variable with the **FullyCoveredEXT** decoration is declared

GlobalInvocationId

Decorating a variable with the **GlobalInvocationId** built-in decoration will make that variable contain the location of the current invocation within the global workgroup. Each component is equal to the index of the local workgroup multiplied by the size of the local workgroup plus **LocalInvocationId**.

Valid Usage

- VUID-GlobalInvocationId-GlobalInvocationId-04236
The **GlobalInvocationId** decoration **must** be used only within the **GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model**
- VUID-GlobalInvocationId-GlobalInvocationId-04237

The variable decorated with **GlobalInvocationId** **must** be declared using the **Input Storage Class**

- VUID-GlobalInvocationId-GlobalInvocationId-04238

The variable decorated with **GlobalInvocationId** **must** be declared as a three-component vector of 32-bit integer values

HelperInvocation

Decorating a variable with the **HelperInvocation** built-in decoration will make that variable contain whether the current invocation is a helper invocation. This variable is non-zero if the current fragment being shaded is a helper invocation and zero otherwise. A helper invocation is an invocation of the shader that is produced to satisfy internal requirements such as the generation of derivatives.

NOTE

It is very likely that a helper invocation will have a value of **SampleMask** fragment shader input value that is zero.

Valid Usage

- VUID-HelperInvocation-HelperInvocation-04239

The **HelperInvocation** decoration **must** be used only within the **Fragment Execution Model**

- VUID-HelperInvocation-HelperInvocation-04240

The variable decorated with **HelperInvocation** **must** be declared using the **Input Storage Class**

- VUID-HelperInvocation-HelperInvocation-04241

The variable decorated with **HelperInvocation** **must** be declared as a boolean value

HitKindKHR

A variable decorated with the **HitKindKHR** decoration will describe the intersection that triggered the execution of the current shader. The values are determined by the intersection shader. For user-defined intersection shaders this is the value that was passed to the “Hit Kind” operand of **OpReportIntersectionKHR**. For triangle intersection candidates, this will be one of **HitKindFrontFacingTriangleKHR** or **HitKindBackFacingTriangleKHR**.

Valid Usage

- VUID-HitKindKHR-HitKindKHR-04242

The **HitKindKHR** decoration **must** be used only within the **AnyHitKHR** or **ClosestHitKHR Execution Model**

- VUID-HitKindKHR-HitKindKHR-04243

The variable decorated with **HitKindKHR** **must** be declared using the **Input Storage Class**

- VUID-HitKindKHR-HitKindKHR-04244

The variable decorated with **HitKindKHR** **must** be declared as a scalar 32-bit integer value

HitTNV

A variable decorated with the **HitTNV** decoration is equivalent to a variable decorated with the **RayTmaxKHR** decoration.

Valid Usage

- VUID-HitTNV-HitTNV-04245
The **HitTNV** decoration **must** be used only within the **AnyHitNV** or **ClosestHitNV Execution Model**
- VUID-HitTNV-HitTNV-04246
The variable decorated with **HitTNV** **must** be declared using the **Input Storage Class**
- VUID-HitTNV-HitTNV-04247
The variable decorated with **HitTNV** **must** be declared as a scalar 32-bit floating-point value

HitTriangleVertexPositionsKHR

A variable decorated with the **HitTriangleVertexPositionsKHR** decoration will specify the object space vertices of the triangle at the current intersection in application-provided order. The positions returned are transformed by the geometry transform, which is performed at standard **floating-point** precision, but without a specifically defined order of floating-point operations to perform the matrix multiplication.

Valid Usage

- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08747
The **HitTriangleVertexPositionsKHR** decoration **must** be used only within the **AnyHitKHR** or **ClosestHitKHR Execution Model**
- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08748
The variable decorated with **HitTriangleVertexPositionsKHR** **must** be declared using the **Input Storage Class**
- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08749
The variable decorated with **HitTriangleVertexPositionsKHR** **must** be declared as an array of three vectors of three 32-bit float values
- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08750
The variable decorated with **HitTriangleVertexPositionsKHR** **must** be used only if the value of **HitKindKHR** is **HitKindFrontFacingTriangleKHR** or **HitKindBackFacingTriangleKHR**
- VUID-HitTriangleVertexPositionsKHR-None-08751
The acceleration structure corresponding to the current intersection **must** have been built with **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_BIT_KHR**

IncomingRayFlagsKHR

A variable with the **IncomingRayFlagsKHR** decoration will contain the ray flags passed in to the trace call that invoked this particular shader. Setting pipeline flags on the ray tracing pipeline

must not cause any corresponding flags to be set in variables with this decoration.

Valid Usage

- VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04248
The **IncomingRayFlagsKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**
- VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04249
The variable decorated with **IncomingRayFlagsKHR** **must** be declared using the **Input Storage Class**
- VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04250
The variable decorated with **IncomingRayFlagsKHR** **must** be declared as a scalar 32-bit integer value

IndexCountHUAWEI

The **IndexCountHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this indexed mode specific variable will contain an integer value that specifies the number of indexed vertices in a cluster to draw.

Valid Usage

- VUID-IndexCountHUAWEI-IndexCountHUAWEI-07805
The **IndexCountHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**
- VUID-IndexCountHUAWEI-IndexCountHUAWEI-07806
The variable decorated with **IndexCountHUAWEI** **must** be declared as a scalar 32-bit integer value

InstanceCountHUAWEI

The **InstanceCountHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this variable will contain an integer value that specifies the number of instance to draw in a cluster.

Valid Usage

- VUID-InstanceCountHUAWEI-InstanceCountHUAWEI-07807
The **InstanceCountHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**
- VUID-InstanceCountHUAWEI-InstanceCountHUAWEI-07808
The variable decorated with **InstanceCountHUAWEI** **must** be declared as a scalar 32-bit integer value

InstanceCustomIndexKHR

A variable decorated with the `InstanceCustomIndexKHR` decoration will contain the application-defined value of the instance that intersects the current ray. This variable contains the value that was specified in `VkAccelerationStructureInstanceKHR::instanceCustomIndex` for the current acceleration structure instance in the lower 24 bits and the upper 8 bits will be zero.

Valid Usage

- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04251
The `InstanceCustomIndexKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR Execution Model`
- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04252
The variable decorated with `InstanceCustomIndexKHR` **must** be declared using the `Input Storage Class`
- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04253
The variable decorated with `InstanceCustomIndexKHR` **must** be declared as a scalar 32-bit integer value

InstanceId

Decorating a variable in an intersection, any-hit, or closest hit shader with the `InstanceId` decoration will make that variable contain the index of the instance that intersects the current ray.

Valid Usage

- VUID-InstanceId-InstanceId-04254
The `InstanceId` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR Execution Model`
- VUID-InstanceId-InstanceId-04255
The variable decorated with `InstanceId` **must** be declared using the `Input Storage Class`
- VUID-InstanceId-InstanceId-04256
The variable decorated with `InstanceId` **must** be declared as a scalar 32-bit integer value

InvocationId

Decorating a variable with the `InvocationId` built-in decoration will make that variable contain the index of the current shader invocation in a geometry shader, or the index of the output patch vertex in a tessellation control shader.

In a geometry shader, the index of the current shader invocation ranges from zero to the number of `instances` declared in the shader minus one. If the instance count of the geometry shader is one or is not specified, then `InvocationId` will be zero.

Valid Usage

- VUID-InvocationId-InvocationId-04257
The **InvocationId** decoration **must** be used only within the **TessellationControl** or **Geometry Execution Model**
- VUID-InvocationId-InvocationId-04258
The variable decorated with **InvocationId** **must** be declared using the **Input Storage Class**
- VUID-InvocationId-InvocationId-04259
The variable decorated with **InvocationId** **must** be declared as a scalar 32-bit integer value

InvocationsPerPixelNV

Decorating a variable with the **InvocationsPerPixelNV** built-in decoration will make that variable contain the maximum number of fragment shader invocations per pixel, as derived from the effective shading rate for the fragment. If a primitive does not fully cover a pixel, the number of fragment shader invocations for that pixel **may** be less than the value of **InvocationsPerPixelNV**. If the shading rate indicates a fragment covering multiple pixels, then **InvocationsPerPixelNV** will be one.

Valid Usage

- VUID-InvocationsPerPixelNV-InvocationsPerPixelNV-04260
The **InvocationsPerPixelNV** decoration **must** be used only within the **Fragment Execution Model**
- VUID-InvocationsPerPixelNV-InvocationsPerPixelNV-04261
The variable decorated with **InvocationsPerPixelNV** **must** be declared using the **Input Storage Class**
- VUID-InvocationsPerPixelNV-InvocationsPerPixelNV-04262
The variable decorated with **InvocationsPerPixelNV** **must** be declared as a scalar 32-bit integer value

InstanceIndex

Decorating a variable in a vertex shader with the **InstanceIndex** built-in decoration will make that variable contain the index of the instance that is being processed by the current vertex shader invocation. **InstanceIndex** begins at the **firstInstance** parameter to **vkCmdDraw** or **vkCmdDrawIndexed** or at the **firstInstance** member of a structure consumed by **vkCmdDrawIndirect** or **vkCmdDrawIndexedIndirect**.

Valid Usage

- VUID-InstanceIndex-InstanceIndex-04263
The **InstanceIndex** decoration **must** be used only within the **Vertex Execution Model**
- VUID-InstanceIndex-InstanceIndex-04264

The variable decorated with **InstanceId** **must** be declared using the **Input Storage Class**

- VUID-InstanceId-InstanceId-04265

The variable decorated with **InstanceId** **must** be declared as a scalar 32-bit integer value

LaunchIdKHR

A variable decorated with the **LaunchIdKHR** decoration will specify the index of the work item being processed. One work item is generated for each of the **width** × **height** × **depth** items dispatched by a **vkCmdTraceRaysKHR** or **vkCmdTraceRaysNV** command. All shader invocations inherit the same value for variables decorated with **LaunchIdKHR**.

Valid Usage

- VUID-LaunchIdKHR-LaunchIdKHR-04266

The **LaunchIdKHR** decoration **must** be used only within the **RayGenerationKHR**, **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, **MissKHR**, or **CallableKHR Execution Model**

- VUID-LaunchIdKHR-LaunchIdKHR-04267

The variable decorated with **LaunchIdKHR** **must** be declared using the **Input Storage Class**

- VUID-LaunchIdKHR-LaunchIdKHR-04268

The variable decorated with **LaunchIdKHR** **must** be declared as a three-component vector of 32-bit integer values

LaunchSizeKHR

A variable decorated with the **LaunchSizeKHR** decoration will contain the **width**, **height**, and **depth** dimensions passed to the **vkCmdTraceRaysKHR** or **vkCmdTraceRaysNV** command that initiated this shader execution. The **width** is in the first component, the **height** is in the second component, and the **depth** is in the third component.

Valid Usage

- VUID-LaunchSizeKHR-LaunchSizeKHR-04269

The **LaunchSizeKHR** decoration **must** be used only within the **RayGenerationKHR**, **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, **MissKHR**, or **CallableKHR Execution Model**

- VUID-LaunchSizeKHR-LaunchSizeKHR-04270

The variable decorated with **LaunchSizeKHR** **must** be declared using the **Input Storage Class**

- VUID-LaunchSizeKHR-LaunchSizeKHR-04271

The variable decorated with **LaunchSizeKHR** **must** be declared as a three-component vector of 32-bit integer values

Layer

Decorating a variable with the **Layer** built-in decoration will make that variable contain the select layer of a multi-layer framebuffer attachment.

In a mesh, vertex, tessellation evaluation, or geometry shader, any variable decorated with **Layer** can be written with the framebuffer layer index to which the primitive produced by that shader will be directed.

The last active **pre-rasterization shader stage** (in pipeline order) controls the **Layer** that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the **Layer**.

If the last active **pre-rasterization shader stage** shader entry point's interface does not include a variable decorated with **Layer**, then the first layer is used. If a **pre-rasterization shader stage** shader entry point's interface includes a variable decorated with **Layer**, it **must** write the same value to **Layer** for all output vertices of a given primitive. If the **Layer** value is less than 0 or greater than or equal to the number of layers in the framebuffer, then primitives **may** still be rasterized, fragment shaders **may** be executed, and the framebuffer values for all layers are undefined. In a mesh shader this also applies when the **Layer** value is greater than or equal to the **maxMeshOutputLayers** limit.

If a variable with the **Layer** decoration is also decorated with **ViewportRelativeNV**, then the **ViewportIndex** is added to the layer that is used for rendering and that is made available in the fragment shader.

If the shader writes to a variable decorated **ViewportMaskNV**, then the layer selected has a different value for each viewport a primitive is rendered to.

In a fragment shader, a variable decorated with **Layer** contains the layer index of the primitive that the fragment invocation belongs to.

Valid Usage

- VUID-Layer-Layer-04272

The **Layer** decoration **must** be used only within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationEvaluation**, **Geometry**, or **Fragment Execution Model**

- VUID-Layer-Layer-04273

If the **shaderOutputLayer** feature is not enabled then the **Layer** decoration **must** be used only within the **Geometry** or **Fragment Execution Model**

- VUID-Layer-Layer-04274

The variable decorated with **Layer** within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationEvaluation**, or **Geometry Execution Model** **must** be declared using the **Output Storage Class**

- VUID-Layer-Layer-04275

The variable decorated with **Layer** within the **Fragment Execution Model** **must** be declared using the **Input Storage Class**

- VUID-Layer-Layer-04276

The variable decorated with **Layer** **must** be declared as a scalar 32-bit integer value for all supported execution models except **MeshEXT**

- VUID-Layer-Layer-07039

The variable decorated with **Layer** within the **MeshEXT Execution Model** **must** also be decorated with the **PerPrimitiveEXT** decoration

- VUID-Layer-Layer-10592
Layer within the **MeshEXT Execution Model** **must** decorate a scalar 32-bit integer member of a structure decorated as **Block**, or decorate a variable of type **OpTypeArray** of scalar 32-bit integer values
- VUID-Layer-Layer-10593
 If **Layer** is declared as an array of 32-bit integer values, within the **MeshEXT Execution Model**, size of the array **must** match the value specified by **OutputPrimitivesEXT**
- VUID-Layer-Layer-10594
 If **Layer** decorates a member of a structure, the variable declaration of the containing **Block** type **must** have an array size that matches the value specified by **OutputPrimitivesEXT**

LayerPerViewNV

Decorating a variable with the **LayerPerViewNV** built-in decoration will make that variable contain the per-view layer information. The per-view layer has the same semantics as **Layer**, for each view.

Valid Usage

- VUID-LayerPerViewNV-LayerPerViewNV-04277
 The **LayerPerViewNV** decoration **must** be used only within the **MeshNV Execution Model**
- VUID-LayerPerViewNV-LayerPerViewNV-04278
 The variable decorated with **LayerPerViewNV** **must** be declared using the **Output Storage Class**
- VUID-LayerPerViewNV-LayerPerViewNV-04279
 The variable decorated with **LayerPerViewNV** **must** also be decorated with the **PerViewNV** decoration
- VUID-LayerPerViewNV-LayerPerViewNV-04280
 The variable decorated with **LayerPerViewNV** **must** be declared as an array of scalar 32-bit integer values

LocalInvocationId

Decorating a variable with the **LocalInvocationId** built-in decoration will make that variable contain the location of the current cluster culling, task, mesh, or compute shader invocation within the local workgroup. Each component ranges from zero through to the size of the workgroup in that dimension minus one.

NOTE

If the size of the workgroup in a particular dimension is one, then the **LocalInvocationId** in that dimension will be zero. If the workgroup is effectively two-dimensional, then **LocalInvocationId.z** will be zero. If the workgroup is effectively one-dimensional, then both **LocalInvocationId.y** and **LocalInvocationId.z** will be zero.

Valid Usage

- VUID-LocalInvocationId-LocalInvocationId-04281
The `LocalInvocationId` decoration **must** be used only within the `GLCompute`, `MeshEXT`, `TaskEXT`, `MeshNV`, or `TaskNV Execution Model`
- VUID-LocalInvocationId-LocalInvocationId-04282
The variable decorated with `LocalInvocationId` **must** be declared using the `Input Storage Class`
- VUID-LocalInvocationId-LocalInvocationId-04283
The variable decorated with `LocalInvocationId` **must** be declared as a three-component vector of 32-bit integer values

LocalInvocationIndex

Decorating a variable with the `LocalInvocationIndex` built-in decoration will make that variable contain a one-dimensional representation of `LocalInvocationId`. This is computed as:

```
LocalInvocationIndex =  
    LocalInvocationId.z * WorkgroupSize.x * WorkgroupSize.y +  
    LocalInvocationId.y * WorkgroupSize.x +  
    LocalInvocationId.x;
```

Valid Usage

- VUID-LocalInvocationIndex-LocalInvocationIndex-04284
The `LocalInvocationIndex` decoration **must** be used only within the `GLCompute`, `MeshEXT`, `TaskEXT`, `MeshNV`, or `TaskNV Execution Model`
- VUID-LocalInvocationIndex-LocalInvocationIndex-04285
The variable decorated with `LocalInvocationIndex` **must** be declared using the `Input Storage Class`
- VUID-LocalInvocationIndex-LocalInvocationIndex-04286
The variable decorated with `LocalInvocationIndex` **must** be declared as a scalar 32-bit integer value

MeshViewCountNV

Decorating a variable with the `MeshViewCountNV` built-in decoration will make that variable contain the number of views processed by the current mesh or task shader invocations.

Valid Usage

- VUID-MeshViewCountNV-MeshViewCountNV-04287
The `MeshViewCountNV` decoration **must** be used only within the `MeshNV` or `TaskNV Execution Model`

- VUID-MeshViewCountNV-MeshViewCountNV-04288

The variable decorated with **MeshViewCountNV** **must** be declared using the **Input Storage Class**

- VUID-MeshViewCountNV-MeshViewCountNV-04289

The variable decorated with **MeshViewCountNV** **must** be declared as a scalar 32-bit integer value

MeshViewIndicesNV

Decorating a variable with the **MeshViewIndicesNV** built-in decoration will make that variable contain the mesh view indices. The mesh view indices is an array of values where each element holds the view number of one of the views being processed by the current mesh or task shader invocations. The values of array elements with indices greater than or equal to **MeshViewCountNV** are poison. If the value of **MeshViewIndicesNV[i]** is *j*, then any outputs decorated with **PerViewNV** will take on the value of array element *i* when processing primitives for view index *j*.

Valid Usage

- VUID-MeshViewIndicesNV-MeshViewIndicesNV-04290

The **MeshViewIndicesNV** decoration **must** be used only within the **MeshNV** or **TaskNV Execution Model**

- VUID-MeshViewIndicesNV-MeshViewIndicesNV-04291

The variable decorated with **MeshViewIndicesNV** **must** be declared using the **Input Storage Class**

- VUID-MeshViewIndicesNV-MeshViewIndicesNV-04292

The variable decorated with **MeshViewIndicesNV** **must** be declared as an array of scalar 32-bit integer values

NumSubgroups

Decorating a variable with the **NumSubgroups** built-in decoration will make that variable contain the number of subgroups in the local workgroup.

Valid Usage

- VUID-NumSubgroups-NumSubgroups-04293

The **NumSubgroups** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**

- VUID-NumSubgroups-NumSubgroups-04294

The variable decorated with **NumSubgroups** **must** be declared using the **Input Storage Class**

- VUID-NumSubgroups-NumSubgroups-04295

The variable decorated with **NumSubgroups** **must** be declared as a scalar 32-bit integer value

NumWorkgroups

Decorating a variable with the **NumWorkgroups** built-in decoration will make that variable contain the number of local workgroups that are part of the dispatch that the invocation belongs to. Each component is equal to the values of the workgroup count parameters passed into the dispatching commands.

Valid Usage

- VUID-NumWorkgroups-NumWorkgroups-04296
The **NumWorkgroups** decoration **must** be used only within the **GLCompute**, **MeshEXT**, or **TaskEXT Execution Model**
- VUID-NumWorkgroups-NumWorkgroups-04297
The variable decorated with **NumWorkgroups** **must** be declared using the **Input Storage Class**
- VUID-NumWorkgroups-NumWorkgroups-04298
The variable decorated with **NumWorkgroups** **must** be declared as a three-component vector of 32-bit integer values

ObjectRayDirectionKHR

A variable decorated with the **ObjectRayDirectionKHR** decoration will specify the direction of the ray being processed, in object space.

Valid Usage

- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04299
The **ObjectRayDirectionKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04300
The variable decorated with **ObjectRayDirectionKHR** **must** be declared using the **Input Storage Class**
- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04301
The variable decorated with **ObjectRayDirectionKHR** **must** be declared as a three-component vector of 32-bit floating-point values

ObjectRayOriginKHR

A variable decorated with the **ObjectRayOriginKHR** decoration will specify the origin of the ray being processed, in object space.

Valid Usage

- VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04302
The **ObjectRayOriginKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04303

The variable decorated with **ObjectRayOriginKHR** **must** be declared using the **Input Storage Class**

- VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04304
The variable decorated with **ObjectRayOriginKHR** **must** be declared as a three-component vector of 32-bit floating-point values

ObjectToWorldKHR

A variable decorated with the **ObjectToWorldKHR** decoration will contain the current object-to-world transformation matrix, which is determined by the instance of the current intersection.

Valid Usage

- VUID-ObjectToWorldKHR-ObjectToWorldKHR-04305
The **ObjectToWorldKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-ObjectToWorldKHR-ObjectToWorldKHR-04306
The variable decorated with **ObjectToWorldKHR** **must** be declared using the **Input Storage Class**
- VUID-ObjectToWorldKHR-ObjectToWorldKHR-04307
The variable decorated with **ObjectToWorldKHR** **must** be declared as a matrix with four columns of three-component vectors of 32-bit floating-point values

PatchVertices

Decorating a variable with the **PatchVertices** built-in decoration will make that variable contain the number of vertices in the input patch being processed by the shader. In a Tessellation Control Shader, this is the same as the `name:patchControlPoints` member of **VkPipelineTessellationStateCreateInfo**. In a Tessellation Evaluation Shader, **PatchVertices** is equal to the tessellation control output patch size. When the same shader is used in different pipelines where the patch sizes are configured differently, the value of the **PatchVertices** variable will also differ.

Valid Usage

- VUID-PatchVertices-PatchVertices-04308
The **PatchVertices** decoration **must** be used only within the **TessellationControl** or **TessellationEvaluation Execution Model**
- VUID-PatchVertices-PatchVertices-04309
The variable decorated with **PatchVertices** **must** be declared using the **Input Storage Class**
- VUID-PatchVertices-PatchVertices-04310
The variable decorated with **PatchVertices** **must** be declared as a scalar 32-bit integer value

PointCoord

Decorating a variable with the **PointCoord** built-in decoration will make that variable contain the coordinate of the current fragment within the point being rasterized, normalized to the size of the point with origin in the upper left corner of the point, as described in [Basic Point Rasterization](#). If the primitive the fragment shader invocation belongs to is not a point, then the variable decorated with **PointCoord** contains poison.

NOTE Depending on how the point is rasterized, **PointCoord** **may** never reach (0,0) or (1,1).

Valid Usage

- VUID-PointCoord-PointCoord-04311
The **PointCoord** decoration **must** be used only within the **Fragment Execution Model**
- VUID-PointCoord-PointCoord-04312
The variable decorated with **PointCoord** **must** be declared using the **Input Storage Class**
- VUID-PointCoord-PointCoord-04313
The variable decorated with **PointCoord** **must** be declared as a two-component vector of 32-bit floating-point values

PointSize

Decorating a variable with the **PointSize** built-in decoration will make that variable contain the size of point primitives or the final rasterization of polygons if **polygon mode** is **VK_POLYGON_MODE_POINT** when **VkPhysicalDeviceMaintenance5Properties::polygonModePointSize** is set to **VK_TRUE**. The value written to the variable decorated with **PointSize** by the last **pre-rasterization shader stage** in the pipeline is used as the framebuffer-space size of points produced by rasterization. If the **maintenance5** feature is enabled and a value is not written to a variable decorated with **PointSize**, a value of 1.0 is used as the size of points.

NOTE When **PointSize** decorates a variable in the **Input Storage Class**, it contains the data written to the output variable decorated with **PointSize** from the previous shader stage.

Valid Usage

- VUID-PointSize-PointSize-04314
The **PointSize** decoration **must** be used only within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model**
- VUID-PointSize-PointSize-04315
The variable decorated with **PointSize** within the **MeshEXT**, **MeshNV**, or **Vertex Execution Model** **must** be declared using the **Output Storage Class**
- VUID-PointSize-PointSize-04316
The variable decorated with **PointSize** within the **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model** **must** not be declared using a **Storage Class** other than **Input** or **Output**

- VUID-PointSize-PointSize-04317

The variable decorated with **PointSize** **must** be declared as a scalar 32-bit floating-point value

Position

Decorating a variable with the **Position** built-in decoration will make that variable contain the position of the current vertex. In the last **pre-rasterization shader stage**, the value of the variable decorated with **Position** is used in subsequent primitive assembly, clipping, and rasterization operations.

NOTE

When **Position** decorates a variable in the **Input Storage Class**, it contains the data written to the output variable decorated with **Position** from the previous shader stage.

Valid Usage

- VUID-Position-Position-04318

The **Position** decoration **must** be used only within the **MeshEXT**, **MeshNV**, **Vertex**, **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model**

- VUID-Position-Position-04319

The variable decorated with **Position** within the **MeshEXT**, **MeshNV**, or **Vertex Execution Model** **must** be declared using the **Output Storage Class**

- VUID-Position-Position-04320

The variable decorated with **Position** within the **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model** **must** not be declared using a **Storage Class** other than **Input** or **Output**

- VUID-Position-Position-04321

The variable decorated with **Position** **must** be declared as a four-component vector of 32-bit floating-point values

PositionPerViewNV

Decorating a variable with the **PositionPerViewNV** built-in decoration will make that variable contain the position of the current vertex, for each view.

Elements of the array correspond to views in a multiview subpass, and those elements corresponding to views in the view mask of the subpass the shader is compiled against will be used as the position value for those views. For the final **pre-rasterization shader stage** in the pipeline, values written to an output variable decorated with **PositionPerViewNV** are used in subsequent primitive assembly, clipping, and rasterization operations, as with **Position**. **PositionPerViewNV** output in an earlier **pre-rasterization shader stage** is available as an input in the subsequent **pre-rasterization shader stage**.

If a shader is compiled against a subpass that has the **VK_SUBPASS_DESCRIPTION_PER_VIEW_POSITION_X_ONLY_BIT_NVX** bit set, then the position values for each view **must** not differ in any component other than the X component. If the

values do differ, one will be chosen in an implementation-dependent manner.

Valid Usage

- VUID-PositionPerViewNV-PositionPerViewNV-04322
The **PositionPerViewNV** decoration **must** be used only within the **MeshNV**, **Vertex**, **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model**
- VUID-PositionPerViewNV-PositionPerViewNV-04323
The variable decorated with **PositionPerViewNV** within the **Vertex**, or **MeshNV Execution Model** **must** be declared using the **Output Storage Class**
- VUID-PositionPerViewNV-PositionPerViewNV-04324
The variable decorated with **PositionPerViewNV** within the **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model** **must** not be declared using a **Storage Class** other than **Input** or **Output**
- VUID-PositionPerViewNV-PositionPerViewNV-04325
The variable decorated with **PositionPerViewNV** **must** be declared as an array of four-component vector of 32-bit floating-point values with at least as many elements as the maximum view in the subpass's view mask plus one
- VUID-PositionPerViewNV-PositionPerViewNV-04326
The array variable decorated with **PositionPerViewNV** **must** only be indexed by a constant or specialization constant

PrimitiveCountNV

Decorating a variable with the **PrimitiveCountNV** decoration will make that variable contain the primitive count. The primitive count specifies the number of primitives in the output mesh produced by the mesh shader that will be processed by subsequent pipeline stages.

Valid Usage

- VUID-PrimitiveCountNV-PrimitiveCountNV-04327
The **PrimitiveCountNV** decoration **must** be used only within the **MeshNV Execution Model**
- VUID-PrimitiveCountNV-PrimitiveCountNV-04328
The variable decorated with **PrimitiveCountNV** **must** be declared using the **Output Storage Class**
- VUID-PrimitiveCountNV-PrimitiveCountNV-04329
The variable decorated with **PrimitiveCountNV** **must** be declared as a scalar 32-bit integer value

PrimitiveId

Decorating a variable with the **PrimitiveId** built-in decoration will make that variable contain the index of the current primitive.

The index of the first primitive generated by a drawing command is zero, and the index is

incremented after every individual point, line, or triangle primitive is processed.

For triangles drawn as points or line segments (see [Polygon Mode](#)), the primitive index is incremented only once, even if multiple points or lines are eventually drawn.

Variables decorated with `PrimitiveId` are reset to zero between each instance drawn.

Restarting a primitive topology using primitive restart has no effect on the value of variables decorated with `PrimitiveId`.

In tessellation control and tessellation evaluation shaders, it will contain the index of the patch within the current set of rendering primitives that corresponds to the shader invocation.

In a geometry shader, it will contain the number of primitives presented as input to the shader since the current set of rendering primitives was started.

In a fragment shader, it will contain the primitive index written by the mesh shader if a mesh shader is present, or the primitive index written by the geometry shader if a geometry shader is present, or with the value that would have been presented as input to the geometry shader had it been present.

In an intersection, any-hit, or closest hit shader, it will contain the index within the geometry of the triangle or bounding box being processed.

NOTE

When the `PrimitiveId` decoration is applied to an output variable in the mesh shader or geometry shader, the resulting value is seen through the `PrimitiveId` decorated input variable in the fragment shader.

The fragment shader using `PrimitiveId` will need to declare either the `MeshShadingNV`, `MeshShadingEXT`, `Geometry` or `Tessellation` capability to satisfy the requirement SPIR-V has to use `PrimitiveId`.

Valid Usage

- VUID-PrimitiveId-PrimitiveId-04330

The `PrimitiveId` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, `TessellationControl`, `TessellationEvaluation`, `Geometry`, or `Fragment Execution Model`

- VUID-PrimitiveId-Fragment-04331

If pipeline contains both the `Fragment` and `Geometry Execution Model` and a variable decorated with `PrimitiveId` is read from `Fragment` shader, then the `Geometry` shader **must** write to the output variables decorated with `PrimitiveId` in all execution paths

- VUID-PrimitiveId-Fragment-04332

If pipeline contains both the `Fragment` and `MeshEXT` or `MeshNV Execution Model` and a variable decorated with `PrimitiveId` is read from `Fragment` shader, then the `MeshEXT` or `MeshNV` shader **must** write to the output variables decorated with `PrimitiveId` in all execution paths

- VUID-PrimitiveId-Fragment-04333

If **Fragment Execution Model** contains a variable decorated with **PrimitiveId**, then either the **MeshShadingEXT**, **MeshShadingNV**, **Geometry** or **Tessellation** capability **must** also be declared

- VUID-PrimitiveId-PrimitiveId-04334
The variable decorated with **PrimitiveId** within the **TessellationControl**, **TessellationEvaluation**, **Fragment**, **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model** **must** be declared using the **Input Storage Class**
- VUID-PrimitiveId-PrimitiveId-04335
The variable decorated with **PrimitiveId** within the **Geometry Execution Model** **must** be declared using the **Input** or **Output Storage Class**
- VUID-PrimitiveId-PrimitiveId-04336
The variable decorated with **PrimitiveId** within the **MeshEXT** or **MeshNV Execution Model** **must** be declared using the **Output Storage Class**
- VUID-PrimitiveId-PrimitiveId-04337
The variable decorated with **PrimitiveId** **must** be declared as a scalar 32-bit integer value for all supported execution models except **MeshEXT**
- VUID-PrimitiveId-PrimitiveId-07040
The variable decorated with **PrimitiveId** within the **MeshEXT Execution Model** **must** also be decorated with the **PerPrimitiveEXT** decoration
- VUID-PrimitiveId-PrimitiveId-10595
PrimitiveId within the **MeshEXT Execution Model** **must** decorate a scalar 32-bit integer member of a structure decorated as **Block**, or decorate a variable of type **OpTypeArray** of 32-bit integer values
- VUID-PrimitiveId-PrimitiveId-10596
If **PrimitiveId** is declared as an array of 32-bit integer values, within the **MeshEXT Execution Model**, size of the array **must** match the value specified by **OutputPrimitivesEXT**
- VUID-PrimitiveId-PrimitiveId-10597
If **PrimitiveId** decorates a member of a structure, the variable declaration of the containing **Block** type **must** have an array size that matches the value specified by **OutputPrimitivesEXT**

PrimitiveIndicesNV

Decorating a variable with the **PrimitiveIndicesNV** decoration will make that variable contain the output array of vertex index values. Depending on the output primitive type declared using the execution mode, the indices are split into groups of one (**OutputPoints**), two (**OutputLinesNV**), or three (**OutputTrianglesNV**) indices and each group generates a primitive.

Valid Usage

- VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04338
The **PrimitiveIndicesNV** decoration **must** be used only within the **MeshNV Execution Model**
- VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04339
The variable decorated with **PrimitiveIndicesNV** **must** be declared using the **Output Storage Class**

- VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04340
The variable decorated with **PrimitiveIndicesNV** **must** be declared as an array of scalar 32-bit integer values
- VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04341
All index values of the array decorated with **PrimitiveIndicesNV** **must** be in the range [0, N-1], where N is the value specified by the **OutputVertices Execution Mode**
- VUID-PrimitiveIndicesNV-OutputPoints-04342
If the **Execution Mode** is **OutputPoints**, then the array decorated with **PrimitiveIndicesNV** **must** be the size of the value specified by **OutputPrimitivesNV**
- VUID-PrimitiveIndicesNV-OutputLinesNV-04343
If the **Execution Mode** is **OutputLinesNV**, then the array decorated with **PrimitiveIndicesNV** **must** be the size of two times the value specified by **OutputPrimitivesNV**
- VUID-PrimitiveIndicesNV-OutputTrianglesNV-04344
If the **Execution Mode** is **OutputTrianglesNV**, then the array decorated with **PrimitiveIndicesNV** **must** be the size of three times the value specified by **OutputPrimitivesNV**

PrimitivePointIndicesEXT

Decorating a variable with the **PrimitivePointIndicesEXT** decoration will make that variable contain the output array of vertex index values for point primitives.

Valid Usage

- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07041
The **PrimitivePointIndicesEXT** decoration **must** be used only within the **MeshEXT Execution Model**
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07042
The **PrimitivePointIndicesEXT** decoration **must** be used with the **OutputPoints Execution Mode**
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07043
The variable decorated with **PrimitivePointIndicesEXT** **must** be declared using the **Output Storage Class**
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07044
The variable decorated with **PrimitivePointIndicesEXT** **must** be declared as an array of scalar 32-bit integer values
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07045
The index to access the array decorated with **PrimitivePointIndicesEXT** **must** be in the range [0, N-1], where N is the value specified by the “Primitive Count” operand of **OpSetMeshOutputsEXT**
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-12335
All index values written to the array decorated with **PrimitivePointIndicesEXT** **must** be in the range [0, N-1], where N is the value specified by the “Vertex Count” operand of **OpSetMeshOutputsEXT**

- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07046

The size of the array decorated with **PrimitivePointIndicesEXT** **must** match the value specified by **OutputPrimitivesEXT**

PrimitiveLineIndicesEXT

Decorating a variable with the **PrimitiveLineIndicesEXT** decoration will make that variable contain the output array of vertex index values for line primitives.

Valid Usage

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07047
The **PrimitiveLineIndicesEXT** decoration **must** be used only within the **MeshEXT Execution Model**
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07048
The **PrimitiveLineIndicesEXT** decoration **must** be used with the **OutputLinesEXT Execution Mode**
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07049
The variable decorated with **PrimitiveLineIndicesEXT** **must** be declared using the **Output Storage Class**
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07050
The variable decorated with **PrimitiveLineIndicesEXT** **must** be declared as an array of two component vector 32-bit integer values
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07051
The index to access the array decorated with **PrimitiveLineIndicesEXT** **must** be in the range $[0, N-1]$, where N is the value specified by the “Primitive Count” operand of **OpSetMeshOutputsEXT**
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-12336
All index values written to the array decorated with **PrimitiveLineIndicesEXT** **must** be in the range $[0, N-1]$, where N is the value specified by the “Vertex Count” operand of **OpSetMeshOutputsEXT**
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07052
The size of the array decorated with **PrimitiveLineIndicesEXT** **must** match the value specified by **OutputPrimitivesEXT**

PrimitiveTriangleIndicesEXT

Decorating a variable with the **PrimitiveTriangleIndicesEXT** decoration will make that variable contain the output array of vertex index values for triangle primitives.

Valid Usage

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07053
The **PrimitiveTriangleIndicesEXT** decoration **must** be used only within the **MeshEXT Execution Model**

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07054
The `PrimitiveTriangleIndicesEXT` decoration **must** be used with the `OutputTrianglesEXT Execution Mode`
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07055
The variable decorated with `PrimitiveTriangleIndicesEXT` **must** be declared using the `Output Storage Class`
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07056
The variable decorated with `PrimitiveTriangleIndicesEXT` **must** be declared as an array of three component vector 32-bit integer values
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07057
The index to access the array decorated with `PrimitiveTriangleIndicesEXT` **must** be in the range $[0, N-1]$, where N is the value specified by the “Primitive Count” operand of `OpSetMeshOutputsEXT`
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-12337
All index values written to the array decorated with `PrimitiveTriangleIndicesEXT` **must** be in the range $[0, N-1]$, where N is the value specified by the “Vertex Count” operand of `OpSetMeshOutputsEXT`
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07058
The size of the array decorated with `PrimitiveTriangleIndicesEXT` **must** match the value specified by `OutputPrimitivesEXT`

PrimitiveShadingRateKHR

Decorating a variable with the `PrimitiveShadingRateKHR` built-in decoration will make that variable contain the `primitive fragment shading rate`.

The value written to the variable decorated with `PrimitiveShadingRateKHR` by the last `pre-rasterization shader stage` in the pipeline is used as the `primitive fragment shading rate`. Outputs in previous shader stages are ignored.

If the last active `pre-rasterization shader stage` shader entry point’s interface does not include a variable decorated with `PrimitiveShadingRateKHR`, then it is as if the shader specified a fragment shading rate value of 0, indicating a horizontal and vertical rate of 1 pixel.

Valid Usage

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04484
The `PrimitiveShadingRateKHR` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `Vertex`, or `Geometry Execution Model`
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04485
The variable decorated with `PrimitiveShadingRateKHR` **must** be declared using the `Output Storage Class`
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04486
The variable decorated with `PrimitiveShadingRateKHR` **must** be declared as a scalar 32-bit integer value for all supported execution models except `MeshEXT`

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04487
The value written to **PrimitiveShadingRateKHR** **must** include no more than one of **Vertical2Pixels** and **Vertical4Pixels**
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04488
The value written to **PrimitiveShadingRateKHR** **must** include no more than one of **Horizontal2Pixels** and **Horizontal4Pixels**
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04489
The value written to **PrimitiveShadingRateKHR** **must** not have any bits set other than those defined by **Fragment Shading Rate Flags** enumerants in the SPIR-V specification
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-07059
The variable decorated with **PrimitiveShadingRateKHR** within the **MeshEXT Execution Model** **must** also be decorated with the **PerPrimitiveEXT** decoration
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-10598
PrimitiveShadingRateKHR within the **MeshEXT Execution Model** **must** decorate a scalar 32-bit integer member of a structure decorated as **Block**, or decorate a variable of type **OpTypeArray** of 32-bit integer values
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-10599
If **PrimitiveShadingRateKHR** is declared as an array of 32-bit integer values, within the **MeshEXT Execution Model**, size of the array **must** match the value specified by **OutputPrimitivesEXT**
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-10600
If **PrimitiveShadingRateKHR** decorates a member of a structure, the variable declaration of the containing **Block** type **must** have an array size that matches the value specified by **OutputPrimitivesEXT**
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-12275
If **PrimitiveShadingRateKHR** is declared in the **MeshEXT Execution Model**, the **primitiveFragmentShadingRateMeshShader** feature **must** be enabled

RayGeometryIndexKHR

A variable decorated with the **RayGeometryIndexKHR** decoration will contain the **geometry index** for the acceleration structure geometry currently being shaded.

Valid Usage

- VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04345
The **RayGeometryIndexKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04346
The variable decorated with **RayGeometryIndexKHR** **must** be declared using the **Input Storage Class**
- VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04347
The variable decorated with **RayGeometryIndexKHR** **must** be declared as a scalar 32-bit integer value

RayTmaxKHR

A variable decorated with the **RayTmaxKHR** decoration will contain the parametric t_{\max} value of the ray being processed. The value is independent of the space in which the ray origin and direction exist. The value is initialized to the parameter passed into the **pipeline trace ray** instruction.

The t_{\max} value changes throughout the lifetime of the ray that produced the intersection. In the closest hit shader, the value reflects the closest distance to the intersected primitive. In the any-hit shader, it reflects the distance to the primitive currently being intersected. In the intersection shader, it reflects the distance to the closest primitive intersected so far or the initial value. The value can change in the intersection shader after calling **OpReportIntersectionKHR** if the corresponding any-hit shader does not ignore the intersection. In a miss shader, the value is identical to the parameter passed into the **pipeline trace ray** instruction.

Valid Usage

- VUID-RayTmaxKHR-RayTmaxKHR-04348
The **RayTmaxKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**
- VUID-RayTmaxKHR-RayTmaxKHR-04349
The variable decorated with **RayTmaxKHR** **must** be declared using the **Input Storage Class**
- VUID-RayTmaxKHR-RayTmaxKHR-04350
The variable decorated with **RayTmaxKHR** **must** be declared as a scalar 32-bit floating-point value

RayTminKHR

A variable decorated with the **RayTminKHR** decoration will contain the parametric t_{\min} value of the ray being processed. The value is independent of the space in which the ray origin and direction exist. The value is the parameter passed into the **pipeline trace ray** instruction.

The t_{\min} value remains constant for the duration of the ray query.

Valid Usage

- VUID-RayTminKHR-RayTminKHR-04351
The **RayTminKHR** decoration **must** be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR Execution Model**
- VUID-RayTminKHR-RayTminKHR-04352
The variable decorated with **RayTminKHR** **must** be declared using the **Input Storage Class**
- VUID-RayTminKHR-RayTminKHR-04353
The variable decorated with **RayTminKHR** **must** be declared as a scalar 32-bit floating-point value

SampleId

Decorating a variable with the **SampleId** built-in decoration will make that variable contain the

[coverage index](#) for the current fragment shader invocation. [SampleId](#) ranges from zero to the number of samples in the framebuffer minus one. If a fragment shader entry point's interface includes an input variable decorated with [SampleId](#), [Sample Shading](#) is considered enabled with a [minSampleShading](#) value of 1.0.

Valid Usage

- VUID-SampleId-SampleId-04354
The [SampleId](#) decoration **must** be used only within the [Fragment Execution Model](#)
- VUID-SampleId-SampleId-04355
The variable decorated with [SampleId](#) **must** be declared using the [Input Storage Class](#)
- VUID-SampleId-SampleId-04356
The variable decorated with [SampleId](#) **must** be declared as a scalar 32-bit integer value

[SampleMask](#)

Decorating a variable with the [SampleMask](#) built-in decoration will make any variable contain the [sample mask](#) for the current fragment shader invocation.

A variable in the [Input](#) storage class decorated with [SampleMask](#) will contain a bitmask of the set of samples covered by the primitive generating the fragment during rasterization. It has a sample bit set if and only if the sample is considered covered for this fragment shader invocation. [SampleMask\[\]](#) is an array of integers. Bits are mapped to samples in a manner where bit B of mask M ([SampleMask\[M\]](#)) corresponds to sample $32 \times M + B$.

A variable in the [Output](#) storage class decorated with [SampleMask](#) is an array of integers forming a bit array in a manner similar to an input variable decorated with [SampleMask](#), but where each bit represents coverage as computed by the shader. This computed [SampleMask](#) is combined with the generated coverage mask in the [multisample coverage](#) operation.

Variables decorated with [SampleMask](#) **must** be either an unsized array, or explicitly sized to be no larger than the implementation-dependent maximum sample-mask (as an array of 32-bit elements), determined by the maximum number of samples.

If a fragment shader entry point's interface does not include an output variable decorated with [SampleMask](#), the sample mask has no effect on the processing of a fragment.

Valid Usage

- VUID-SampleMask-SampleMask-04357
The [SampleMask](#) decoration **must** be used only within the [Fragment Execution Model](#)
- VUID-SampleMask-SampleMask-04358
The variable decorated with [SampleMask](#) **must** be declared using the [Input](#) or [Output Storage Class](#)
- VUID-SampleMask-SampleMask-04359
The variable decorated with [SampleMask](#) **must** be declared as an array of 32-bit integer values

SamplePosition

Decorating a variable with the **SamplePosition** built-in decoration will make that variable contain the sub-pixel position of the sample being shaded. The top left of the pixel is considered to be at coordinate (0,0) and the bottom right of the pixel is considered to be at coordinate (1,1).

If the render pass has a fragment density map attachment, the variable will instead contain the sub-fragment position of the sample being shaded. The top left of the fragment is considered to be at coordinate (0,0) and the bottom right of the fragment is considered to be at coordinate (1,1) for any fragment area.

If a fragment shader entry point's interface includes an input variable decorated with **SamplePosition**, **Sample Shading** is considered enabled with a **minSampleShading** value of 1.0.

If the current pipeline uses **custom sample locations** the value of any variable decorated with the **SamplePosition** built-in decoration is poison.

Valid Usage

- VUID-SamplePosition-SamplePosition-04360
The **SamplePosition** decoration **must** be used only within the **Fragment Execution Model**
- VUID-SamplePosition-SamplePosition-04361
The variable decorated with **SamplePosition** **must** be declared using the **Input Storage Class**
- VUID-SamplePosition-SamplePosition-04362
The variable decorated with **SamplePosition** **must** be declared as a two-component vector of 32-bit floating-point values

ShadingRateKHR

Decorating a variable with the **ShadingRateKHR** built-in decoration will make that variable contain the **fragment shading rate** for the current fragment invocation.

Valid Usage

- VUID-ShadingRateKHR-ShadingRateKHR-04490
The **ShadingRateKHR** decoration **must** be used only within the **Fragment Execution Model**
- VUID-ShadingRateKHR-ShadingRateKHR-04491
The variable decorated with **ShadingRateKHR** **must** be declared using the **Input Storage Class**
- VUID-ShadingRateKHR-ShadingRateKHR-04492
The variable decorated with **ShadingRateKHR** **must** be declared as a scalar 32-bit integer value

SMCountNV

Decorating a variable with the **SMCountNV** built-in decoration will make that variable contain the

number of SMs on the device.

Valid Usage

- VUID-SMCountNV-SMCountNV-04363
The variable decorated with **SMCountNV** **must** be declared using the **Input Storage Class**
- VUID-SMCountNV-SMCountNV-04364
The variable decorated with **SMCountNV** **must** be declared as a scalar 32-bit integer value

SMIDNV

Decorating a variable with the **SMIDNV** built-in decoration will make that variable contain the ID of the SM on which the current shader invocation is running. This variable is in the range [0, **SMCountNV**-1].

Valid Usage

- VUID-SMIDNV-SMIDNV-04365
The variable decorated with **SMIDNV** **must** be declared using the **Input Storage Class**
- VUID-SMIDNV-SMIDNV-04366
The variable decorated with **SMIDNV** **must** be declared as a scalar 32-bit integer value

SubgroupId

Decorating a variable with the **SubgroupId** built-in decoration will make that variable contain the index of the subgroup within the local workgroup. This variable is in range [0, **NumSubgroups**-1].

Valid Usage

- VUID-SubgroupId-SubgroupId-04367
The **SubgroupId** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**
- VUID-SubgroupId-SubgroupId-04368
The variable decorated with **SubgroupId** **must** be declared using the **Input Storage Class**
- VUID-SubgroupId-SubgroupId-04369
The variable decorated with **SubgroupId** **must** be declared as a scalar 32-bit integer value

SubgroupEqMask

Decorating a variable with the **SubgroupEqMask** builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bit corresponding to the **SubgroupLocalInvocationId** is set in the variable decorated with **SubgroupEqMask**. All other bits are set to zero.

SubgroupEqMaskKHR is an alias of **SubgroupEqMask**.

Valid Usage

- VUID-SubgroupEqMask-SubgroupEqMask-04370
The variable decorated with **SubgroupEqMask** **must** be declared using the **Input Storage Class**
- VUID-SubgroupEqMask-SubgroupEqMask-04371
The variable decorated with **SubgroupEqMask** **must** be declared as a four-component vector of 32-bit integer values

SubgroupGeMask

Decorating a variable with the **SubgroupGeMask** builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations greater than or equal to **SubgroupLocalInvocationId** through **SubgroupSize-1** are set in the variable decorated with **SubgroupGeMask**. All other bits are set to zero.

SubgroupGeMaskKHR is an alias of **SubgroupGeMask**.

Valid Usage

- VUID-SubgroupGeMask-SubgroupGeMask-04372
The variable decorated with **SubgroupGeMask** **must** be declared using the **Input Storage Class**
- VUID-SubgroupGeMask-SubgroupGeMask-04373
The variable decorated with **SubgroupGeMask** **must** be declared as a four-component vector of 32-bit integer values

SubgroupGtMask

Decorating a variable with the **SubgroupGtMask** builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations greater than **SubgroupLocalInvocationId** through **SubgroupSize-1** are set in the variable decorated with **SubgroupGtMask**. All other bits are set to zero.

SubgroupGtMaskKHR is an alias of **SubgroupGtMask**.

Valid Usage

- VUID-SubgroupGtMask-SubgroupGtMask-04374
The variable decorated with **SubgroupGtMask** **must** be declared using the **Input Storage Class**
- VUID-SubgroupGtMask-SubgroupGtMask-04375
The variable decorated with **SubgroupGtMask** **must** be declared as a four-component vector of 32-bit integer values

SubgroupLeMask

Decorating a variable with the `SubgroupLeMask` builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations less than or equal to `SubgroupLocalInvocationId` are set in the variable decorated with `SubgroupLeMask`. All other bits are set to zero.

`SubgroupLeMaskKHR` is an alias of `SubgroupLeMask`.

Valid Usage

- VUID-SubgroupLeMask-SubgroupLeMask-04376
The variable decorated with `SubgroupLeMask` **must** be declared using the `Input Storage Class`
- VUID-SubgroupLeMask-SubgroupLeMask-04377
The variable decorated with `SubgroupLeMask` **must** be declared as a four-component vector of 32-bit integer values

SubgroupLtMask

Decorating a variable with the `SubgroupLtMask` builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations less than `SubgroupLocalInvocationId` are set in the variable decorated with `SubgroupLtMask`. All other bits are set to zero.

`SubgroupLtMaskKHR` is an alias of `SubgroupLtMask`.

Valid Usage

- VUID-SubgroupLtMask-SubgroupLtMask-04378
The variable decorated with `SubgroupLtMask` **must** be declared using the `Input Storage Class`
- VUID-SubgroupLtMask-SubgroupLtMask-04379
The variable decorated with `SubgroupLtMask` **must** be declared as a four-component vector of 32-bit integer values

SubgroupLocalInvocationId

Decorating a variable with the `SubgroupLocalInvocationId` builtin decoration will make that variable contain the index of the invocation within the subgroup. This variable is in range `[0,SubgroupSize-1]`.

If `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` is specified, or if `module` declares SPIR-V version 1.6 or higher, and the local workgroup size in the X dimension of the `stage` is a multiple of `SubgroupSize`, full subgroups are enabled for that pipeline stage. When full subgroups are enabled, subgroups **must** be launched with all invocations active, i.e., there is an active invocation with `SubgroupLocalInvocationId` for each value in range `[0,SubgroupSize-1]`.

NOTE

There is no direct relationship between `SubgroupLocalInvocationId` and `LocalInvocationId` or `LocalInvocationIndex`. If the pipeline or shader object was created with full subgroups applications can compute their own local invocation index to serve the same purpose:

$$\text{index} = \text{SubgroupLocalInvocationId} + \text{SubgroupId} \times \text{SubgroupSize}$$

If full subgroups are not enabled, some subgroups may be dispatched with inactive invocations that do not correspond to a local workgroup invocation, making the value of index unreliable.

NOTE

`VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` and `VK_SHADER_CREATE_REQUIRE_FULL_SUBGROUPS_BIT_EXT` are effectively deprecated when compiling SPIR-V 1.6 shaders, as this behavior is the default for Vulkan with SPIR-V 1.6. This is more aligned with developer expectations, and avoids applications unexpectedly breaking in the future.

Valid Usage

- VUID-SubgroupLocalInvocationId-SubgroupLocalInvocationId-04380
The variable decorated with `SubgroupLocalInvocationId` **must** be declared using the `Input Storage Class`
- VUID-SubgroupLocalInvocationId-SubgroupLocalInvocationId-04381
The variable decorated with `SubgroupLocalInvocationId` **must** be declared as a scalar 32-bit integer value

SubgroupSize

Decorating a variable with the `SubgroupSize` builtin decoration will make that variable contain the implementation-dependent `number of invocations in a subgroup`. This value **must** be a power-of-two integer.

If the pipeline was created with the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag set, or the shader object was created with the `VK_SHADER_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT_EXT` flag set, or the SPIR-V module is at least version 1.6, the `SubgroupSize` decorated variable will contain the subgroup size for each subgroup that gets dispatched. This value **must** be between `minSubgroupSize` and `maxSubgroupSize` and **must** be uniform with `subgroup scope`. The value **may** vary across a single draw call, and for fragment shaders **may** vary across a single primitive. In compute dispatches, `SubgroupSize` **must** be uniform with `command scope`. In mesh and task shaders, `SubgroupSize` **must** be uniform with `command scope`. In a single `command scope`, the mesh and task shader **may** have different `SubgroupSize`.

If the pipeline was created with a chained `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure, or the shader object was created with a chained `VkShaderRequiredSubgroupSizeCreateInfoEXT` structure, the

SubgroupSize decorated variable will match **requiredSubgroupSize**.

If SPIR-V **module** is less than version 1.6 and the pipeline was not created with the **VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT** flag set and no **VkPipelineShaderStageRequiredSubgroupSizeCreateInfo** structure was chained, and the shader was not created with the **VK_SHADER_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT_EXT** flag set and no **VkShaderRequiredSubgroupSizeCreateInfoEXT** structure was chained, the variable decorated with **SubgroupSize** will match **subgroupSize**.

The maximum number of invocations that an implementation can support per subgroup is 128.

NOTE

The old behavior for **SubgroupSize** is considered legacy as certain compute algorithms cannot be easily implemented without the guarantees of **VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT** and **VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT**.

Valid Usage

- VUID-SubgroupSize-SubgroupSize-04382
The variable decorated with **SubgroupSize** **must** be declared using the **Input Storage Class**
- VUID-SubgroupSize-SubgroupSize-04383
The variable decorated with **SubgroupSize** **must** be declared as a scalar 32-bit integer value

TaskCountNV

Decorating a variable with the **TaskCountNV** decoration will make that variable contain the task count. The task count specifies the number of subsequent mesh shader workgroups that get generated upon completion of the task shader.

Valid Usage

- VUID-TaskCountNV-TaskCountNV-04384
The **TaskCountNV** decoration **must** be used only within the **TaskNV Execution Model**
- VUID-TaskCountNV-TaskCountNV-04385
The variable decorated with **TaskCountNV** **must** be declared using the **Output Storage Class**
- VUID-TaskCountNV-TaskCountNV-04386
The variable decorated with **TaskCountNV** **must** be declared as a scalar 32-bit integer value

TessCoord

Decorating a variable with the **TessCoord** built-in decoration will make that variable contain the three-dimensional (u,v,w) barycentric coordinate of the tessellated vertex within the patch. u, v, and w are in the range [0,1] and vary linearly across the primitive being subdivided. For the tessellation modes of **Quads** or **Isolines**, the third component is always zero.

Valid Usage

- VUID-TessCoord-TessCoord-04387
The **TessCoord** decoration **must** be used only within the **TessellationEvaluation Execution Model**
- VUID-TessCoord-TessCoord-04388
The variable decorated with **TessCoord** **must** be declared using the **Input Storage Class**
- VUID-TessCoord-TessCoord-04389
The variable decorated with **TessCoord** **must** be declared as a three-component vector of 32-bit floating-point values

TessLevelOuter

Decorating a variable with the **TessLevelOuter** built-in decoration will make that variable contain the outer tessellation levels for the current patch.

In tessellation control shaders, the variable decorated with **TessLevelOuter** **can** be written to, controlling the tessellation factors for the resulting patch. These values are used by the tessellator to control primitive tessellation and **can** be read by tessellation evaluation shaders.

In tessellation evaluation shaders, the variable decorated with **TessLevelOuter** **can** read the values written by the tessellation control shader.

Valid Usage

- VUID-TessLevelOuter-TessLevelOuter-04390
The **TessLevelOuter** decoration **must** be used only within the **TessellationControl** or **TessellationEvaluation Execution Model**
- VUID-TessLevelOuter-TessLevelOuter-04391
The variable decorated with **TessLevelOuter** within the **TessellationControl Execution Model** **must** be declared using the **Output Storage Class**
- VUID-TessLevelOuter-TessLevelOuter-04392
The variable decorated with **TessLevelOuter** within the **TessellationEvaluation Execution Model** **must** be declared using the **Input Storage Class**
- VUID-TessLevelOuter-TessLevelOuter-04393
The variable decorated with **TessLevelOuter** **must** be declared as an array of size four, containing 32-bit floating-point values

TessLevelInner

Decorating a variable with the **TessLevelInner** built-in decoration will make that variable contain the inner tessellation levels for the current patch.

In tessellation control shaders, the variable decorated with **TessLevelInner** **can** be written to, controlling the tessellation factors for the resulting patch. These values are used by the tessellator to control primitive tessellation and **can** be read by tessellation evaluation shaders.

In tessellation evaluation shaders, the variable decorated with `TessLevelInner` **can** read the values written by the tessellation control shader.

Valid Usage

- VUID-TessLevelInner-TessLevelInner-04394
The `TessLevelInner` decoration **must** be used only within the `TessellationControl` or `TessellationEvaluation` Execution Model
- VUID-TessLevelInner-TessLevelInner-04395
The variable decorated with `TessLevelInner` within the `TessellationControl` Execution Model **must** be declared using the `Output Storage Class`
- VUID-TessLevelInner-TessLevelInner-04396
The variable decorated with `TessLevelInner` within the `TessellationEvaluation` Execution Model **must** be declared using the `Input Storage Class`
- VUID-TessLevelInner-TessLevelInner-04397
The variable decorated with `TessLevelInner` **must** be declared as an array of size two, containing 32-bit floating-point values

`TileOffsetQCOM`

The `TileOffsetQCOM` decoration **can** be applied to a shader input which will be filled with the framebuffer coordinates of the active tile.

When [per-tile execution model](#) is enabled, for the current shader invocation x and y components of `TileOffsetQCOM` reflect the framebuffer integer coordinates of the top-left texel of the tile corresponding to the shader invocation.

Otherwise, the x and y components of `TileOffsetQCOM` are filled with (0,0).

Valid Usage

- VUID-TileOffsetQCOM-TileOffsetQCOM-10626
The `TileOffsetQCOM` decoration **must** be used only within the `Fragment Execution Model` or `GLCompute Execution Model`
- VUID-TileOffsetQCOM-TileOffsetQCOM-10627
The variable decorated with `TileOffsetQCOM` **must** be declared using the `Input Storage Class`
- VUID-TileOffsetQCOM-TileOffsetQCOM-10628
The variable decorated with `TileOffsetQCOM` **must** be declared as a two-component vector of 32-bit integer values

`TileDimensionQCOM`

The `TileDimensionQCOM` decoration **can** be applied to a shader input which will be filled with the width and height of the active tile.

When [per-tile execution model](#) is enabled, for the current shader invocation x and y components of `TileDimensionQCOM` reflect the with and height of the tile corresponding to the shader invocation.

Otherwise, the x and y components of `TileDimensionQCOM` are filled with (0,0).

Valid Usage

- VUID-TileDimensionQCOM-TileDimensionQCOM-10629
The `TileDimensionQCOM` decoration **must** be used only within the `Fragment Execution Model` or `GLCompute Execution Model`
- VUID-TileDimensionQCOM-TileDimensionQCOM-10630
The variable decorated with `TileDimensionQCOM` **must** be declared using the `Input Storage Class`
- VUID-TileDimensionQCOM-TileDimensionQCOM-10631
The variable decorated with `TileDimensionQCOM` **must** be declared as a two-component vector of 32-bit integer values

`TileApronSizeQCOM`

The `TileApronSizeQCOM` decoration **can** be applied to a shader input which will be filled with the width and height of the active tile's apron.

If [per-tile execution model](#) is enabled for the current shader invocation, and is executing in a dynamic render pass or is executing in a subpass where `VK_SUBPASS_DESCRIPTION_TILE_SHADING_APRON_BIT_QCOM` is included in its `flags`, x and y components of `TileApronSizeQCOM` reflect the with and height of the tile apron corresponding to the shader invocation.

Otherwise, the x and y components of `TileApronSizeQCOM` are filled with (0,0).

Valid Usage

- VUID-TileApronSizeQCOM-TileApronSizeQCOM-10632
The `TileApronSizeQCOM` decoration **must** be used only within the `Fragment Execution Model` or `GLCompute Execution Model`
- VUID-TileApronSizeQCOM-TileApronSizeQCOM-10633
The variable decorated with `TileApronSizeQCOM` **must** be declared using the `Input Storage Class`
- VUID-TileApronSizeQCOM-TileApronSizeQCOM-10634
The variable decorated with `TileApronSizeQCOM` **must** be declared as a two-component vector of 32-bit integer values

`VertexCountHUAWEI`

The `VertexCountHUAWEI` decoration can be used to decorate a cluster culling shader output variable, this non-indexed mode specific variable will contain an integer value that specifies the

number of vertices in a cluster to draw.

Valid Usage

- VUID-VertexCountHUAWEI-VertexCountHUAWEI-07809
The **VertexCountHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**
- VUID-VertexCountHUAWEI-VertexCountHUAWEI-07810
The variable decorated with **VertexCountHUAWEI** **must** be declared as a scalar 32-bit integer value

VertexIndex

Decorating a variable with the **VertexIndex** built-in decoration will make that variable contain the index of the vertex that is being processed by the current vertex shader invocation. For non-indexed draws, this variable begins at the **firstVertex** parameter to **vkCmdDraw** or the **firstVertex** member of a structure consumed by **vkCmdDrawIndirect** and increments by one for each vertex in the draw. For indexed draws, its value is the content of the index buffer for the vertex plus the **vertexOffset** parameter to **vkCmdDrawIndexed** or the **vertexOffset** member of the structure consumed by **vkCmdDrawIndexedIndirect**.

NOTE | **VertexIndex** starts at the same starting value for each instance.

Valid Usage

- VUID-VertexIndex-VertexIndex-04398
The **VertexIndex** decoration **must** be used only within the **Vertex Execution Model**
- VUID-VertexIndex-VertexIndex-04399
The variable decorated with **VertexIndex** **must** be declared using the **Input Storage Class**
- VUID-VertexIndex-VertexIndex-04400
The variable decorated with **VertexIndex** **must** be declared as a scalar 32-bit integer value

VertexOffsetHUAWEI

The **VertexOffsetHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this indexed mode specific variable will contain an integer value that specifies an offset value added to the vertex index of a cluster before indexing into the vertex buffer.

Valid Usage

- VUID-VertexOffsetHUAWEI-VertexOffsetHUAWEI-07811
The **VertexOffsetHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**
- VUID-VertexOffsetHUAWEI-VertexOffsetHUAWEI-07812
The variable decorated with **VertexOffsetHUAWEI** **must** be declared as a scalar 32-bit

integer value

ViewIndex

The **ViewIndex** decoration **can** be applied to a shader input which will be filled with the index of the view that is being processed by the current shader invocation.

If multiview is enabled in the render pass, this value will be the index of one of the bits set in the view mask of the subpass the pipeline is compiled against. If multiview is not enabled in the render pass, this value will be zero.

Valid Usage

- VUID-ViewIndex-ViewIndex-04401

The **ViewIndex** decoration **must** be used only within the **MeshEXT**, **Vertex**, **Geometry**, **TessellationControl**, **TessellationEvaluation** or **Fragment Execution Model**

- VUID-ViewIndex-ViewIndex-04402

The variable decorated with **ViewIndex** **must** be declared using the **Input Storage Class**

- VUID-ViewIndex-ViewIndex-04403

The variable decorated with **ViewIndex** **must** be declared as a scalar 32-bit integer value

ViewportIndex

Decorating a variable with the **ViewportIndex** built-in decoration will make that variable contain the index of the viewport.

In a mesh, vertex, tessellation evaluation, or geometry shader, the variable decorated with **ViewportIndex** can be written to with the viewport index to which the primitive produced by that shader will be directed.

The selected viewport index is used to select the viewport transform, scissor rectangle, and exclusive scissor rectangle.

The last active **pre-rasterization shader stage** (in pipeline order) controls the **ViewportIndex** that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the **ViewportIndex**.

If the last active **pre-rasterization shader stage** shader entry point's interface does not include a variable decorated with **ViewportIndex**, and if the **multiviewPerViewViewports** feature is not enabled, then the first viewport is used. If a **pre-rasterization shader stage** shader entry point's interface includes a variable decorated with **ViewportIndex**, it **must** write the same value to **ViewportIndex** for all output vertices of a given primitive.

In a fragment shader, the variable decorated with **ViewportIndex** contains the viewport index of the primitive that the fragment invocation belongs to.

If the **multiviewPerViewViewports** feature is enabled, and if the last active **pre-rasterization shader stage** shader entry point's interface does not include a variable decorated with **ViewportIndex**, then the value of **ViewIndex** is used as an index to select the viewport transform and scissor

rectangle, and the value of `ViewportIndex` in the fragment shader is poison.

Valid Usage

- VUID-ViewportIndex-ViewportIndex-04404
The `ViewportIndex` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `Vertex`, `TessellationEvaluation`, `Geometry`, or `Fragment Execution Model`
- VUID-ViewportIndex-ViewportIndex-04405
If the `shaderOutputViewportIndex` feature is not enabled then the `ViewportIndex` decoration **must** be used only within the `Geometry` or `Fragment Execution Model`
- VUID-ViewportIndex-ViewportIndex-04406
The variable decorated with `ViewportIndex` within the `MeshEXT`, `MeshNV`, `Vertex`, `TessellationEvaluation`, or `Geometry Execution Model` **must** be declared using the `Output Storage Class`
- VUID-ViewportIndex-ViewportIndex-04407
The variable decorated with `ViewportIndex` within the `Fragment Execution Model` **must** be declared using the `Input Storage Class`
- VUID-ViewportIndex-ViewportIndex-04408
The variable decorated with `ViewportIndex` **must** be declared as a scalar 32-bit integer value for all supported execution models except `MeshEXT`
- VUID-ViewportIndex-ViewportIndex-07060
The variable decorated with `ViewportIndex` within the `MeshEXT Execution Model` **must** also be decorated with the `PerPrimitiveEXT` decoration
- VUID-ViewportIndex-ViewportIndex-10601
`ViewportIndex` within the `MeshEXT Execution Model` **must** decorate a scalar 32-bit integer member of a structure decorated as `Block`, or decorate a variable of type `OpTypeArray` of scalar 32-bit integer values
- VUID-ViewportIndex-ViewportIndex-10602
If `ViewportIndex` is declared as an array of 32-bit integer values, within the `MeshEXT Execution Model`, size of the array **must** match the value specified by `OutputPrimitivesEXT`
- VUID-ViewportIndex-ViewportIndex-10603
If `ViewportIndex` decorates a member of a structure, the variable declaration of the containing `Block` type **must** have an array size that matches the value specified by `OutputPrimitivesEXT`

ViewportMaskNV

Decorating a variable with the `ViewportMaskNV` built-in decoration will make that variable contain the viewport mask.

In a mesh, vertex, tessellation evaluation, or geometry shader, the variable decorated with `ViewportMaskNV` can be written to with the mask of which viewports the primitive produced by that shader will directed.

The `ViewportMaskNV` variable **must** be an array that has $\lceil \text{VkPhysicalDeviceLimits::maxViewports} /$

32) elements. When a shader writes to this variable, bit B of element M controls whether a primitive is emitted to viewport $32 \times M + B$. The viewports indicated by the mask are used to select the viewport transform, scissor rectangle, and exclusive scissor rectangle that a primitive will be transformed by.

The last active *pre-rasterization shader stage* (in pipeline order) controls the `ViewportMaskNV` that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the `ViewportMaskNV`. When `ViewportMaskNV` is written by the final *pre-rasterization shader stage*, any variable decorated with `ViewportIndex` in the fragment shader will have the index of the viewport that was used in generating that fragment.

If a *pre-rasterization shader stage* shader entry point's interface includes a variable decorated with `ViewportMaskNV`, it **must** write the same value to `ViewportMaskNV` for all output vertices of a given primitive.

Valid Usage

- VUID-ViewportMaskNV-ViewportMaskNV-04409
The `ViewportMaskNV` decoration **must** be used only within the `Vertex`, `MeshNV`, `TessellationEvaluation`, or `Geometry Execution Model`
- VUID-ViewportMaskNV-ViewportMaskNV-04410
The variable decorated with `ViewportMaskNV` **must** be declared using the `Output Storage Class`
- VUID-ViewportMaskNV-ViewportMaskNV-04411
The variable decorated with `ViewportMaskNV` **must** be declared as an array of 32-bit integer values

`ViewportMaskPerViewNV`

Decorating a variable with the `ViewportMaskPerViewNV` built-in decoration will make that variable contain the mask of viewports primitives are broadcast to, for each view.

The value written to an element of `ViewportMaskPerViewNV` in the last *pre-rasterization shader stage* is a bitmask indicating which viewports the primitive will be directed to. The primitive will be broadcast to the viewport corresponding to each non-zero bit of the bitmask, and that viewport index is used to select the viewport transform, scissor rectangle, and exclusive scissor rectangle, for each view. The same values **must** be written to all vertices in a given primitive, or else the set of viewports used for that primitive is undefined.

Elements of the array correspond to views in a multiview subpass, and those elements corresponding to views in the view mask of the subpass the shader is compiled against will be used as the viewport mask value for those views. `ViewportMaskPerViewNV` output in an earlier *pre-rasterization shader stage* is not available as an input in the subsequent *pre-rasterization shader stage*.

Although `ViewportMaskNV` is an array, `ViewportMaskPerViewNV` is not a two-dimensional array. Instead, `ViewportMaskPerViewNV` is limited to 32 viewports.

Valid Usage

- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04412
The **ViewportMaskPerViewNV** decoration **must** be used only within the **Vertex**, **MeshNV**, **TessellationControl**, **TessellationEvaluation**, or **Geometry Execution Model**
- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04413
The variable decorated with **ViewportMaskPerViewNV** **must** be declared using the **Output Storage Class**
- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04414
The variable decorated with **ViewportMaskPerViewNV** **must** be declared as an array of 32-bit integer values
- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04415
The array decorated with **ViewportMaskPerViewNV** **must** be a size less than or equal to 32
- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04416
The array decorated with **ViewportMaskPerViewNV** **must** be a size greater than the maximum view in the subpass's view mask
- VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04417
The array variable decorated with **ViewportMaskPerViewNV** **must** only be indexed by a constant or specialization constant

WarpsPerSMNV

Decorating a variable with the **WarpsPerSMNV** built-in decoration will make that variable contain the maximum number of warps executing on a SM.

Valid Usage

- VUID-WarpsPerSMNV-WarpsPerSMNV-04418
The variable decorated with **WarpsPerSMNV** **must** be declared using the **Input Storage Class**
- VUID-WarpsPerSMNV-WarpsPerSMNV-04419
The variable decorated with **WarpsPerSMNV** **must** be declared as a scalar 32-bit integer value

WarpIDNV

Decorating a variable with the **WarpIDNV** built-in decoration will make that variable contain the ID of the warp on a SM on which the current shader invocation is running. This variable is in the range [0, **WarpsPerSMNV**-1].

Valid Usage

- VUID-WarpIDNV-WarpIDNV-04420
The variable decorated with **WarpIDNV** **must** be declared using the **Input Storage Class**
- VUID-WarpIDNV-WarpIDNV-04421

The variable decorated with **WarpIDNV** **must** be declared as a scalar 32-bit integer value

WorkgroupId

Decorating a variable with the **WorkgroupId** built-in decoration will make that variable contain the global coordinate of the local workgroup that the current invocation is a member of. Each component is in the range [base,base + count), where base and count are based on the parameters passed into the dispatching or drawing commands in each dimension.

Valid Usage

- VUID-WorkgroupId-WorkgroupId-04422
The **WorkgroupId** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**
- VUID-WorkgroupId-WorkgroupId-04423
The variable decorated with **WorkgroupId** **must** be declared using the **Input Storage Class**
- VUID-WorkgroupId-WorkgroupId-04424
The variable decorated with **WorkgroupId** **must** be declared as a three-component vector of 32-bit integer values

WorkgroupSize

NOTE

SPIR-V 1.6 deprecated **WorkgroupSize** in favor of using the **LocalSizeId** Execution Mode instead. Support for **LocalSizeId** was added with **VK_KHR_maintenance4** and promoted to core in Version 1.3.

Decorating an object with the **WorkgroupSize** built-in decoration will make that object contain the dimensions of a local workgroup. If an object is decorated with the **WorkgroupSize** decoration, this takes precedence over any **LocalSize** or **LocalSizeId** execution mode.

Valid Usage

- VUID-WorkgroupSize-WorkgroupSize-04425
The **WorkgroupSize** decoration **must** be used only within the **GLCompute**, **MeshEXT**, **TaskEXT**, **MeshNV**, or **TaskNV Execution Model**
- VUID-WorkgroupSize-WorkgroupSize-04426
The variable decorated with **WorkgroupSize** **must** be a specialization constant or a constant
- VUID-WorkgroupSize-WorkgroupSize-04427
The variable decorated with **WorkgroupSize** **must** be declared as a three-component vector of 32-bit integer values
- VUID-WorkgroupSize-TileShadingRateQCOM-10635
If the **TileShadingRateQCOM Execution Mode** is used, variables decorated with **WorkgroupSize** **must** be declared using the **Input Storage Class**

WorldRayDirectionKHR

A variable decorated with the `WorldRayDirectionKHR` decoration will specify the direction of the ray being processed, in world space. The value is the parameter passed into the `pipeline trace ray` instruction.

Valid Usage

- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04428
The `WorldRayDirectionKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, or `MissKHR Execution Model`
- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04429
The variable decorated with `WorldRayDirectionKHR` **must** be declared using the `Input Storage Class`
- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04430
The variable decorated with `WorldRayDirectionKHR` **must** be declared as a three-component vector of 32-bit floating-point values

WorldRayOriginKHR

A variable decorated with the `WorldRayOriginKHR` decoration will specify the origin of the ray being processed, in world space. The value is the parameter passed into the `pipeline trace ray` instruction.

Valid Usage

- VUID-WorldRayOriginKHR-WorldRayOriginKHR-04431
The `WorldRayOriginKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, or `MissKHR Execution Model`
- VUID-WorldRayOriginKHR-WorldRayOriginKHR-04432
The variable decorated with `WorldRayOriginKHR` **must** be declared using the `Input Storage Class`
- VUID-WorldRayOriginKHR-WorldRayOriginKHR-04433
The variable decorated with `WorldRayOriginKHR` **must** be declared as a three-component vector of 32-bit floating-point values

WorldToObjectKHR

A variable decorated with the `WorldToObjectKHR` decoration will contain the current world-to-object transformation matrix, which is determined by the instance of the current intersection.

Valid Usage

- VUID-WorldToObjectKHR-WorldToObjectKHR-04434
The `WorldToObjectKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR Execution Model`

- VUID-WorldToObjectKHR-WorldToObjectKHR-04435
The variable decorated with **WorldToObjectKHR** **must** be declared using the **Input Storage Class**
- VUID-WorldToObjectKHR-WorldToObjectKHR-04436
The variable decorated with **WorldToObjectKHR** **must** be declared as a matrix with four columns of three-component vectors of 32-bit floating-point values

HitIsSphereNV

A variable decorated with the **HitIsSphereNV** decoration will contain a non-zero value if the current ray hit a sphere primitive or zero otherwise.

Valid Usage

- VUID-HitIsSphereNV-HitIsSphereNV-10513
The **HitIsSphereNV** decoration **must** be used only within the **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-HitIsSphereNV-HitIsSphereNV-10514
The variable decorated with **HitIsSphereNV** **must** be declared using the **Input Storage Class**
- VUID-HitIsSphereNV-HitIsSphereNV-10515
The variable decorated with **HitIsSphereNV** **must** be declared as a boolean value

HitIsLSSNV

A variable decorated with the **HitIsLSSNV** decoration will contain a non-zero value if the current ray hit a LSS primitive or zero otherwise.

Valid Usage

- VUID-HitIsLSSNV-HitIsLSSNV-10516
The **HitIsLSSNV** decoration **must** be used only within the **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-HitIsLSSNV-HitIsLSSNV-10517
The variable decorated with **HitIsLSSNV** **must** be declared using the **Input Storage Class**
- VUID-HitIsLSSNV-HitIsLSSNV-10518
The variable decorated with **HitIsLSSNV** **must** be declared as a boolean value

HitSpherePositionNV

A variable decorated with the **HitSpherePositionNV** decoration will contain the position of sphere primitive intersected by current ray.

Valid Usage

- VUID-HitSpherePositionNV-HitSpherePositionNV-10519
The **HitSpherePositionNV** decoration **must** be used only within the **AnyHitKHR**, or

ClosestHitKHR Execution Model

- VUID-HitSpherePositionNV-HitSpherePositionNV-10520
The variable decorated with **HitSpherePositionNV** **must** be declared using the **Input Storage Class**
- VUID-HitSpherePositionNV-HitSpherePositionNV-10521
The variable decorated with **HitSpherePositionNV** **must** be declared as a three-component vector of 32-bit floating-point values

HitSphereRadiusNV

A variable decorated with the **HitSphereRadiusNV** decoration will contain the radius of sphere primitive intersected by current ray.

Valid Usage

- VUID-HitSphereRadiusNV-HitSphereRadiusNV-10522
The **HitSphereRadiusNV** decoration **must** be used only within the **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-HitSphereRadiusNV-HitSphereRadiusNV-10523
The variable decorated with **HitSphereRadiusNV** **must** be declared using the **Input Storage Class**
- VUID-HitSphereRadiusNV-HitSphereRadiusNV-10524
The variable decorated with **HitSphereRadiusNV** **must** be declared as a scalar 32-bit floating-point value

HitLSSPositionsNV

A variable decorated with the **HitLSSPositionsNV** decoration will contain the position of the LSS primitive intersected by current ray.

Valid Usage

- VUID-HitLSSPositionsNV-HitLSSPositionsNV-10525
The **HitLSSPositionsNV** decoration **must** be used only within the **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-HitLSSPositionsNV-HitLSSPositionsNV-10526
The variable decorated with **HitLSSPositionsNV** **must** be declared using the **Input Storage Class**
- VUID-HitLSSPositionsNV-HitLSSPositionsNV-10527
The variable decorated with **HitLSSPositionsNV** **must** be declared as an array of size two, containing three-component vector of 32-bit floating-point values

HitLSSRadiiNV

A variable decorated with the **HitLSSRadiiNV** decoration will contain the radii of LSS primitive

intersected by current ray.

Valid Usage

- VUID-HitLSSRadiiNV-HitLSSRadiiNV-10528
The **HitLSSRadiiNV** decoration **must** be used only within the **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-HitLSSRadiiNV-HitLSSRadiiNV-10529
The variable decorated with **HitLSSRadiiNV** **must** be declared using the **Input Storage Class**
- VUID-HitLSSRadiiNV-HitLSSRadiiNV-10530
The variable decorated with **HitLSSRadiiNV** **must** be declared as an array of size two, containing 32-bit floating-point values

CoreCountARM

Decorating a variable with the **CoreCountARM** built-in decoration will make that variable contain the number of cores on the device.

Valid Usage

- VUID-CoreCountARM-CoreCountARM-07595
The variable decorated with **CoreCountARM** **must** be declared using the **Input Storage Class**
- VUID-CoreCountARM-CoreCountARM-07596
The variable decorated with **CoreCountARM** **must** be declared as a scalar 32-bit integer value

CoreMaxIDARM

Decorating a variable with the **CoreMaxIDARM** built-in decoration will make that variable contain the max ID of any shader core on the device on which the current shader invocation is running.

Valid Usage

- VUID-CoreMaxIDARM-CoreMaxIDARM-07597
The variable decorated with **CoreMaxIDARM** **must** be declared using the **Input Storage Class**
- VUID-CoreMaxIDARM-CoreMaxIDARM-07598
The variable decorated with **CoreMaxIDARM** **must** be declared as a scalar 32-bit integer value

CoreIDARM

Decorating a variable with the **CoreIDARM** built-in decoration will make that variable contain the ID of the core on which the current shader invocation is running. This variable is in the range [0, **CoreMaxIDARM**].

Valid Usage

- VUID-CoreIDARM-CoreIDARM-07599
The variable decorated with **CoreIDARM** must be declared using the **Input Storage Class**
- VUID-CoreIDARM-CoreIDARM-07600
The variable decorated with **CoreIDARM** must be declared as a scalar 32-bit integer value

WarpMaxIDARM

Decorating a variable with the **WarpMaxIDARM** built-in decoration will make that variable contain the maximum warp ID for the core on which the current invocation is running.

Valid Usage

- VUID-WarpMaxIDARM-WarpMaxIDARM-07601
The variable decorated with **WarpMaxIDARM** must be declared using the **Input Storage Class**
- VUID-WarpMaxIDARM-WarpMaxIDARM-07602
The variable decorated with **WarpMaxIDARM** must be declared as a scalar 32-bit integer value

WarpIDARM

Decorating a variable with the **WarpIDARM** built-in decoration will make that variable contain the ID of the warp on a core on which the current shader invocation is running. This variable is in the range [0, **WarpMaxIDARM**].

Valid Usage

- VUID-WarpIDARM-WarpIDARM-07603
The variable decorated with **WarpIDARM** must be declared using the **Input Storage Class**
- VUID-WarpIDARM-WarpIDARM-07604
The variable decorated with **WarpIDARM** must be declared as a scalar 32-bit integer value

CoalescedInputCountAMD

Decorating a variable with the **CoalescedInputCountAMD** built-in decoration will make that variable contain the number of node dispatches that the implementation coalesced into the input for the current shader. This variable will take a value in the range [1, arraySize), where arraySize is the maximum size of the input payload array for the shader.

Valid Usage

- VUID-CoalescedInputCountAMD-CoalescedInputCountAMD-09172
The variable decorated with **CoalescedInputCountAMD** must be declared using the **Input Storage Class**

- VUID-CoalescedInputCountAMD-09173
If a variable is decorated with **CoalescedInputCountAMD**, the **CoalescingAMD** execution mode **must** be declared
- VUID-CoalescedInputCountAMD-09174
The variable decorated with **CoalescedInputCountAMD** **must** be declared as a scalar 32-bit integer value

ShaderIndexAMD

Decorating a variable with the **ShaderIndexAMD** built-in decoration will make that variable contain the index of the shader specified when it was compiled, either via **VkPipelineShaderStageNodeCreateInfoAMD::index** or by the **ShaderIndexAMD** execution mode.

Valid Usage

- VUID-ShaderIndexAMD-09175
The variable decorated with **ShaderIndexAMD** **must** be declared using the **Input Storage Class**
- VUID-ShaderIndexAMD-09176
The variable decorated with **ShaderIndexAMD** **must** be declared as a scalar 32-bit integer value

ClusterIDNV

A variable decorated with the **ClusterIDNV** decoration will contain the triangle cluster ID of a hit triangle in a cluster acceleration structure if the current ray hit a triangle primitive or -1 otherwise.

Valid Usage

- VUID-ClusterIDNV-10531
The **ClusterIDNV** decoration **must** be used only within the **AnyHitKHR**, or **ClosestHitKHR Execution Model**
- VUID-ClusterIDNV-10532
The variable decorated with **ClusterIDNV** **must** be declared using the **Input Storage Class**
- VUID-ClusterIDNV-10533
The variable decorated with **ClusterIDNV** **must** be declared as a scalar 32-bit integer value

Chapter 20. Sampling

Sampling is performed on [images](#), typically in conjunction with a sampler, to return a value based on a neighborhood of texels in an image.

Sampling instructions include the functionality of the following SPIR-V Image Instructions:

- `OpImageSample*` and `OpImageSparseSample*` read one or more neighboring texels of the image, and [filter](#) the texel values based on the state of the sampler.
 - Instructions with `ImplicitLod` in the name [determine](#) the LOD used in the sampling operation based on the coordinates used in neighboring fragments.
 - Instructions with `ExplicitLod` in the name [determine](#) the LOD used in the sampling operation based on additional coordinates.
 - Instructions with `Proj` in the name apply homogeneous [projection](#) to the coordinates.
- `OpImageFetch` and `OpImageSparseFetch` return a single texel of the image. No sampler is used.
- `OpImage*Gather` and `OpImageSparse*Gather` read neighboring texels and [return a single component](#) of each.
- `OpImageSampleFootprintNV` identifies and returns information about the set of texels in the image that would be accessed by an equivalent `OpImageSample*` instruction.
- `OpImage*Dref*` instructions apply [depth comparison](#) on the texel values.
- `OpImageSparse*` instructions additionally return a [sparse residency](#) code.
- `OpImageQueryLod` returns the LOD parameters that would be used in a sample operation. The actual operation is not performed.
- `OpImageSampleWeightedQCOM` reads a 2D neighborhood of texels and computes a weighted average using weight values from a separate weight texture.
- `opImageBlockMatchSADQCOM` and `opTextureBlockMatchSSD` compare 2D neighborhoods of texels from two textures.
- `OpImageBoxFilterQCOM` reads a 2D neighborhood of texels and computes a weighted average of the texels.
- `opImageBlockMatchWindowSADQCOM` and `opImageBlockMatchWindowSSDQCOM` compare 2D neighborhoods of texels from two textures with the comparison repeated across a window region in the target texture.
- `opImageBlockMatchGatherSADQCOM` and `opImageBlockMatchWindowSSDQCOM` compares four 2D neighborhoods of texels from a target texture with a single 2D neighborhood in the reference texture. The R component of each comparison is gathered and returned in the output.

20.1. Sampling Coordinate Systems

There are three sampling coordinate systems used in this chapter:

- [Normalized Sampling Coordinates](#)
- [Unnormalized Sampling Coordinates](#)

- Integer Sampling Coordinates

SPIR-V `opImageBlockMatchSADQCOM`, `opImageBlockMatchSSDQCOM`, `opImageBlockMatchWindowSADQCOM`, `opImageBlockMatchWindowSSDQCOM`, `OpImageFetch`, and `OpImageSparseFetch` instructions use integer sampling coordinates.

Other image instructions **can** use either normalized or unnormalized sampling coordinates (selected by the `unnormalizedCoordinates` state of the sampler used in the instruction), but there are **limitations** on what operations, image state, and sampler state is supported. Normalized coordinates are logically **converted** to unnormalized as part of image operations, and **certain steps** are only performed on normalized coordinates. The array layer coordinate is always treated as unnormalized even when other coordinates are normalized.

20.1.1. Normalized Sampling Coordinates

Normalized sampling coordinates are referred to as (s,t,r,q,a), with the coordinates having the following meanings:

- s: Coordinate in the first dimension of an image.
- t: Coordinate in the second dimension of an image.
- r: Coordinate in the third dimension of an image.
 - (s,t,r) are interpreted as a direction vector for Cube images.
- q: Fourth coordinate, for homogeneous (projective) coordinates.
- a: Coordinate for array layer.

The values s,t,r,q,a are all floating-point values. Values of s,t,r in the normalized range [0.0,1.0] and a in the range [0.0, layers - 1] correspond to locations in the image being sampled, where layers is the dimension of the image with the same name. The value q is used as a divisor for each of s,t,r, rather than directly corresponding to a location in an image.

The coordinates are extracted from the SPIR-V operand based on the dimensionality of the image variable and type of instruction. For **Proj** instructions, the components are in order (s, [t,] [r,] q), with t and r being conditionally present based on the **Dim** of the image. For non-**Proj** instructions, the coordinates are (s [t,] [r,] [a]), with t and r being conditionally present based on the **Dim** of the image and a being conditionally present based on the **Arrayed** property of the image. Projective image instructions are not supported on **Arrayed** images.

20.1.2. Unnormalized Sampling Coordinates

Unnormalized sampling coordinates are referred to as (u,v,w,a), with the coordinates having the following meanings:

- u: Coordinate in the first dimension of an image.
- v: Coordinate in the second dimension of an image.
- w: Coordinate in the third dimension of an image.
- a: Coordinate for array layer.

The values `u,v,w,a` are all floating-point values, with values in the ranges `[0.0,width)`, `[0.0, height)`, `[0.0, depth)`, and `[0,layers-1]` corresponding to locations in the image being sampled. The values `width`, `height`, `depth`, and `layers` are the dimensions of the accessed [image](#).

Only the `u` and `v` coordinates are directly extracted from the SPIR-V operand, because only 1D and 2D (non-`Arrayed`) dimensionalities support unnormalized coordinates. The components are in order `(u [v])`, with `v` being conditionally present when the dimensionality is 2D. When normalized coordinates are converted to unnormalized coordinates, all four coordinates are used.

20.1.3. Integer Sampling Coordinates

Integer sampling coordinates are referred to as `(i,j,k,l,n)`, with the coordinates having the following meanings:

- `i`: Coordinate in the first dimension of an image.
- `j`: Coordinate in the second dimension of an image.
- `k`: Coordinate in the third dimension of an image.
- `l`: Coordinate for array layer.
- `n`: Index of the sample within the texel.

The values `i,j,k,l,n` are all integer values, with values in the ranges `[0,width)`, `[0, height)`, `[0, depth)`, `[0,layers)`, and `[0,samples)` corresponding to locations in the image being sampled. The values `width`, `height`, `depth`, `layers`, and `samples` are the dimensions of the accessed [image](#).

They are extracted from the SPIR-V operand in order `(i [j] [k] [l] [n])`, with `j` and `k` conditionally present based on the `Dim` of the image, and `l` conditionally present based on the `Arrayed` property of the image. `n` is conditionally present and is taken from the `Sample` image operand.

Integer coordinates are used as [image coordinates](#) to perform an [image read](#) after sampling calculations, directly translating each coordinate as follows:

- `i` → `x`
- `j` → `y`
- `k` → `z`
- `l` → `layer`
- `n` → `sample`

`level` is calculated separately via the `Lod` image operand if present, or is set to 0 otherwise.

Integer sampling coordinates are used as [image coordinates](#) to perform an [image read](#) after sampling calculations, directly translating each coordinate as follows:

- `x` = `i`
- `y` = `j`
- `z` = `k`
- `layer` = `l` + `VkImageSubresourceRange::baseArrayLayer`

- sample = n

20.1.4. Sampling Coordinate Diagrams

The following diagrams illustrate the different sampling coordinate systems for 2D images.

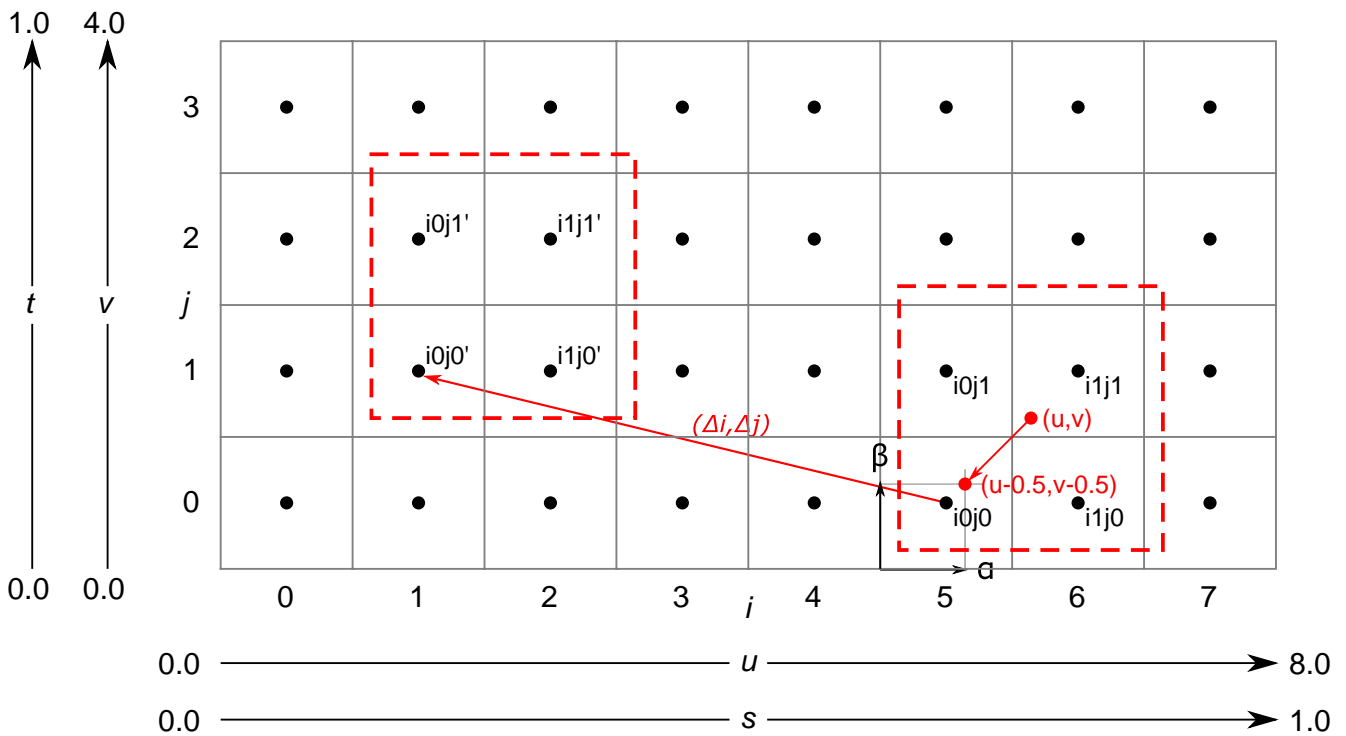

Figure 3. Texel Coordinate Systems, Linear Filtering

The Texel Coordinate Systems - For the example shown of an 8×4 texel two dimensional image.

- Normalized texel coordinates:
 - The s coordinate goes from 0.0 to 1.0.
 - The t coordinate goes from 0.0 to 1.0.
- Unnormalized texel coordinates:
 - The u coordinate within the range 0.0 to 8.0 is within the image, otherwise it is outside the image.
 - The v coordinate within the range 0.0 to 4.0 is within the image, otherwise it is outside the image.
- Integer texel coordinates:
 - The i coordinate within the range 0 to 7 addresses texels within the image, otherwise it is outside the image.
 - The j coordinate within the range 0 to 3 addresses texels within the image, otherwise it is outside the image.
- Also shown for linear filtering:
 - Given the unnormalized coordinates (u,v), the four texels selected are i_0j_0 , i_1j_0 , i_0j_1 , and i_1j_1 .
 - The fractions α and β .

- Given the offset Δ_i and Δ_j , the four texels selected by the offset are $i_0j'_0$, $i_1j'_0$, $i_0j'_1$, and $i_1j'_1$.

NOTE

For formats with reduced-resolution components, Δ_i and Δ_j are relative to the resolution of the highest-resolution component, and therefore may be divided by two relative to the unnormalized coordinate space of the lower-resolution components.

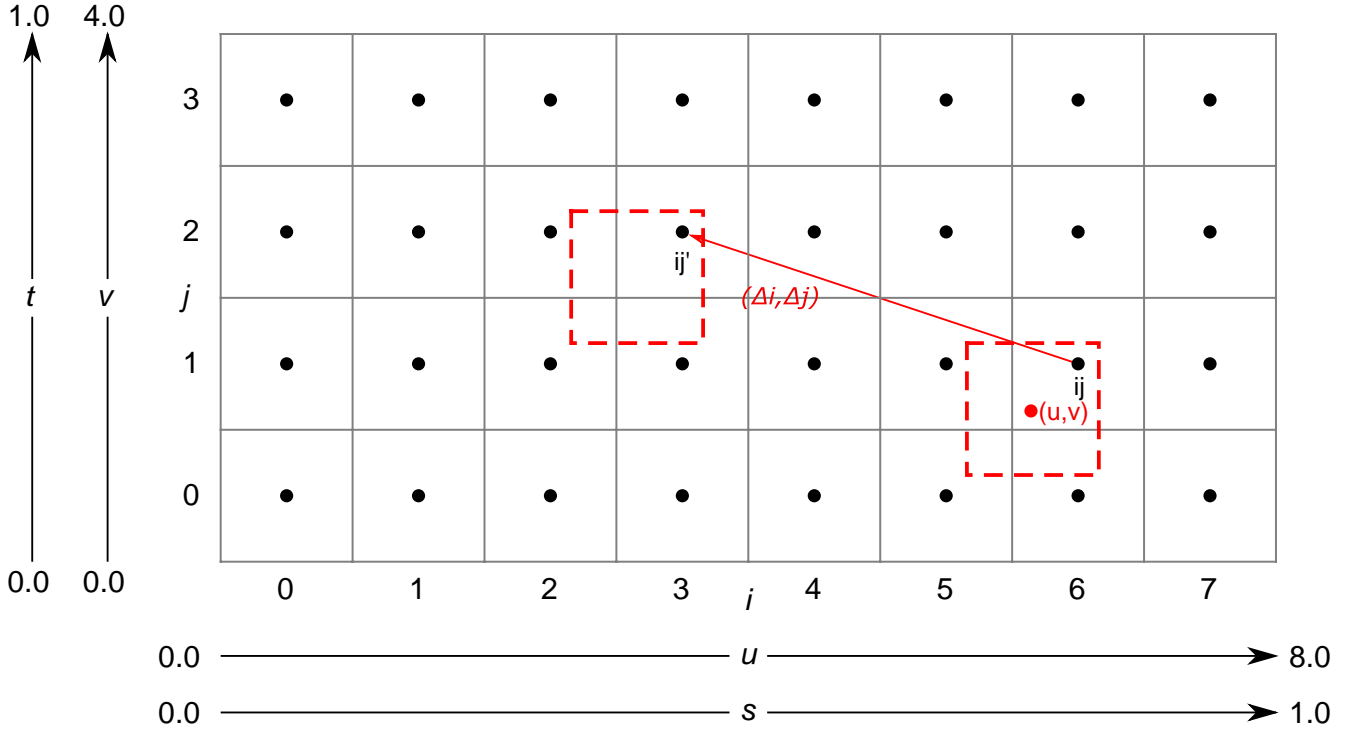

Figure 4. Texel Coordinate Systems, Nearest Filtering

The Texel Coordinate Systems - For the example shown of an 8x4 texel two dimensional image.

- Texel coordinates as above. Also shown for nearest filtering:
 - Given the unnormalized coordinates (u,v), the texel selected is ij.
 - Given the offset Δ_i and Δ_j , the texel selected by the offset is ij'.

For corner-sampled images, the texel samples are located at the grid intersections instead of the texel centers.

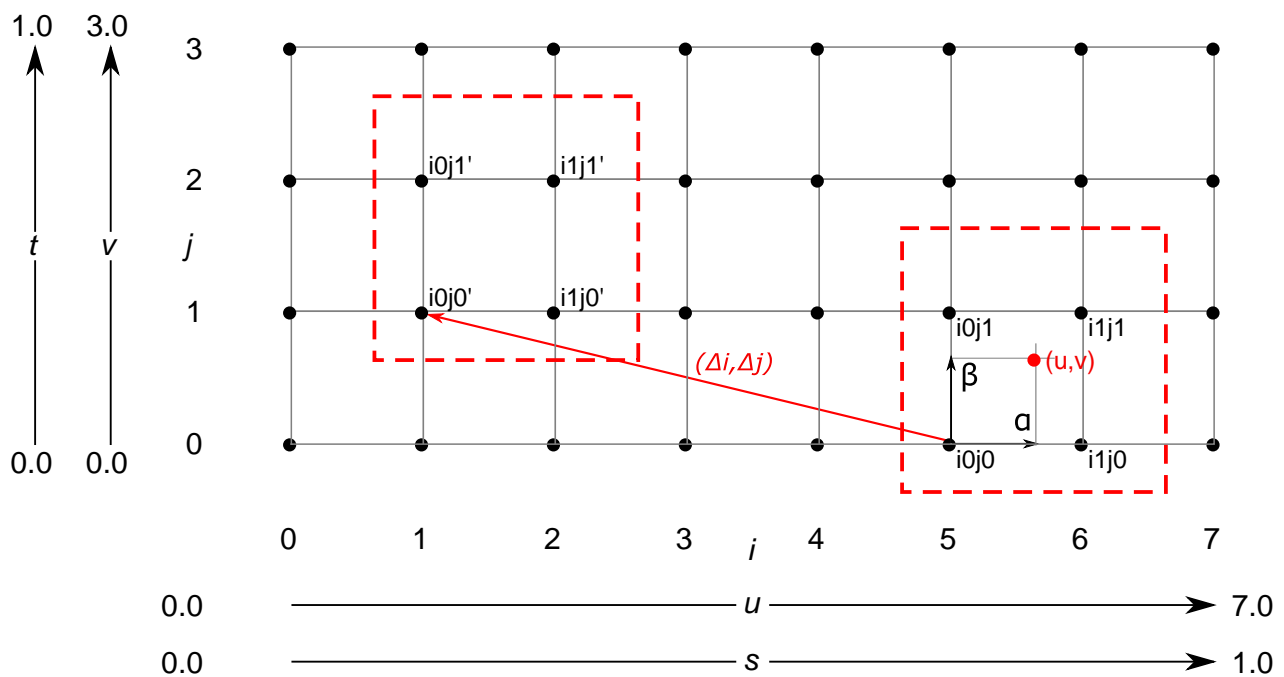

Figure 5. Texel Coordinate Systems, Corner Sampling

20.2. Sampling Operations

Sampling instructions are SPIR-V image instructions that read from an image with a sampler. *Sampling operations* are a set of steps that are performed on state, coordinates, and texel values while processing a sampling instruction, and which are common to some or all sampling instructions. They include the following steps, which are performed in the listed order:

- Validation operations
 - Instruction/Sampler/Image validation
 - Coordinate validation
 - Layout validation
 - Cube Map Edge Handling
- Border Replacement
- Texel Reads
- Depth comparison
- Component swizzle
- $Y'C_B C_R$ degamma
- Chroma reconstruction
- $Y'C_B C_R$ conversion

For sampling instructions involving multiple texels (for sampling or gathering), these steps are applied for each texel that is used in the instruction. Depending on the type of sampling instruction, other steps are conditionally performed between these steps or involving multiple coordinate or texel values.

If [Chroma Reconstruction](#) is implicit, [Texel Filtering](#) instead takes place during chroma reconstruction, before [sampler Y'C_BC_R conversion](#) occurs.

The operations described in [block matching](#) are performed before [Component Substitution](#) during [texel read](#).

The operations described in [weight image sampling](#) are performed before [Component swizzle](#).

20.2.1. Texel Input Validation Operations

Texel input validation operations inspect instruction/image/sampler state or coordinates, and in certain circumstances cause the texel value to be replaced or become undefined. There are a series of validations that the texel undergoes.

Instruction/Sampler/Image View Validation

There are a number of cases where a SPIR-V instruction **can** mismatch with the sampler, the image view, or both, and a number of further cases where the sampler **can** mismatch with the image view. In such cases the value of the texel returned is poison.

These cases include:

- The sampler [borderColor](#) is an integer type and the image view [format](#) is not one of the [VkFormat](#) integer types or a stencil component of a depth/stencil format.
- The sampler [borderColor](#) is a float type and the image view [format](#) is not one of the [VkFormat](#) float types or a depth component of a depth/stencil format.
- The sampler [borderColor](#) is one of the opaque black colors ([VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK](#) or [VK_BORDER_COLOR_INT_OPAQUE_BLACK](#)) and the image view [VkComponentSwizzle](#) for any of the [VkComponentMapping](#) components is not the [identity swizzle](#), and [VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::borderColorSwizzleFromImage](#) feature is not enabled, and [VkSamplerBorderColorComponentMappingCreateInfoEXT](#) is not specified.
- [VkSamplerBorderColorComponentMappingCreateInfoEXT::components](#), if specified, has a component swizzle that does not match the component swizzle of the image view, and either component swizzle is not a form of identity swizzle.
- [VkSamplerBorderColorComponentMappingCreateInfoEXT::srgb](#), if specified, does not match the sRGB encoding of the image view.
- The sampler [borderColor](#) is a custom color ([VK_BORDER_COLOR_FLOAT_CUSTOM_EXT](#) or [VK_BORDER_COLOR_INT_CUSTOM_EXT](#)) and the supplied [VkSamplerCustomBorderColorCreateInfoEXT::customBorderColor](#) is outside the bounds of the values representable in the image view's [format](#).
- The sampler [borderColor](#) is a custom color ([VK_BORDER_COLOR_FLOAT_CUSTOM_EXT](#) or [VK_BORDER_COLOR_INT_CUSTOM_EXT](#)) and the image view [VkComponentSwizzle](#) for any of the [VkComponentMapping](#) components is not the [identity swizzle](#), and [VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::borderColorSwizzleFromImage](#) feature is not enabled, and [VkSamplerBorderColorComponentMappingCreateInfoEXT](#) is not specified.

- The `VkImageLayout` of any subresource in the image view does not match the `VkDescriptorImageInfo::imageLayout` used to write the image descriptor.
- The SPIR-V Image Format is not `compatible` with the image view's `format`.
- The sampler `unnormalizedCoordinates` is `VK_TRUE` and any of the `limitations of unnormalized coordinates` are violated.
- The sampler was created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` and the image was not created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.
- The sampler was not created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` and the image was created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.
- The sampler was created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` and is used with a function that is not `OpImageSampleImplicitLod` or `OpImageSampleExplicitLod`, or is used with operands `Offset` or `ConstOffsets`.
- The SPIR-V instruction is one of the `OpImage*Dref*` instructions and the sampler `compareEnable` is `VK_FALSE`
- The SPIR-V instruction is not one of the `OpImage*Dref*` instructions and the sampler `compareEnable` is `VK_TRUE`
- The SPIR-V instruction is one of the `OpImage*Dref*` instructions, the image view `format` is one of the depth/stencil formats, and the image view aspect is not `VK_IMAGE_ASPECT_DEPTH_BIT`.
- The SPIR-V instruction's image variable's properties are not compatible with the image view:
 - If the image view's `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, and the image was not created with `VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR`, then the instruction **must** have `Arrayed` = 1.
 - If the image view's `viewType` is `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`, and the image was not created with `VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR`, the instruction **must** have `Arrayed` = 0.
 - If the image view's `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY` and `Arrayed` = 0, the image view **must** have been created with a single layer.
 - If the image view's `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY` then the instruction **must** have `Arrayed` = 1.
 - If the image view's `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE` then the instruction **must** have `Arrayed` = 0.
 - If the image was created with `VkImageCreateInfo::samples` equal to `VK_SAMPLE_COUNT_1_BIT`, the instruction **must** have `MS` = 0.
 - If the image was created with `VkImageCreateInfo::samples` not equal to `VK_SAMPLE_COUNT_1_BIT`, the instruction **must** have `MS` = 1.
 - If the `Sampled Type` of the `OpTypeImage` does not match the `SPIR-V Type`.

- If the [signedness of any read or sample operation](#) does not match the signedness of the image's format.
- If the image was created with [VkImageCreateInfo::flags](#) containing [VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV](#), the sampler addressing modes **must** only use a [VkSamplerAddressMode](#) of [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#).
- The SPIR-V instruction is [OpImageSampleFootprintNV](#) with [Dim](#) = 2D and [addressModeU](#) or [addressModeV](#) in the sampler is not [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#).
- The SPIR-V instruction is [OpImageSampleFootprintNV](#) with [Dim](#) = 3D and [addressModeU](#), [addressModeV](#), or [addressModeW](#) in the sampler is not [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#).
- The sampler was created with a specified [VkSamplerCustomBorderColorCreateInfoEXT::format](#) which does not match the [VkFormat](#) of the image view(s) it is sampling.
- The sampler is sampling an image view of [VK_FORMAT_B4G4R4A4_UNORM_PACK16](#), [VK_FORMAT_B5G6R5_UNORM_PACK16](#), or [VK_FORMAT_B5G5R5A1_UNORM_PACK16](#) format without a specified [VkSamplerCustomBorderColorCreateInfoEXT::format](#).

If the underlying [VkImage](#) format has an X component in its format description, undefined values are read from those bits.

NOTE

If the [VkImage](#) format and [VkImageView](#) format are the same, these bits will be unused by format conversion and this will have no effect. However, if the [VkImageView](#) format is different, then some bits of the result may be undefined. For example, when a [VK_FORMAT_R10X6_UNORM_PACK16](#) [VkImage](#) is sampled via a [VK_FORMAT_R16_UNORM](#) [VkImageView](#), the low 6 bits of the value before format conversion are undefined and format conversion may return a range of different values.

NOTE

Some implementations will return undefined values in the case where a sampler uses a [VkSamplerAddressMode](#) of [VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT](#), the sampler is used with operands [Offset](#), [ConstOffset](#), or [ConstOffsets](#), and the value of the offset is larger than or equal to the corresponding width, height, or depth of any accessed image level.

This behavior was not tested prior to Vulkan conformance test suite version 1.3.8.0. Affected implementations will have a conformance test waiver for this issue.

Layout Validation

If all planes of a *disjoint multi-planar* image are not in the same [image layout](#), the image **must** not be sampled with [sampler Y'C_BC_R conversion](#) enabled.

Coordinate Validation

Once the [normalized](#) or [unnormalized coordinates](#) have been converted to integer image coordinates, the integer coordinates are validated as image coordinates, as outlined in [Image Coordinate Validation](#), converted as follows:

- $x = i$
- $y = j$
- $z = k$
- layer = l
- sample = n
- level = d

Cube Map Edge Handling

When sampling a cube map, if the image coordinates are out of bounds of the [selected cube map face](#), the following steps are performed.

NOTE This does not occur when using [VK_FILTER_NEAREST](#) filtering within a mip level, since [VK_FILTER_NEAREST](#) is treated as using [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#).

- Cube Map Edge Texel
 - If the texel lies beyond the selected cube map face in either only x or only y, then the coordinates (x,y,layer) are transformed to select the adjacent texel from the appropriate neighboring face.
- Cube Map Corner Texel
 - If the texel lies beyond the selected cube map face in both x and y, then there is no unique neighboring face from which to read that texel. The texel **should** be replaced by the average of the three values of the adjacent texels in each incident face. However, implementations **may** replace the cube map corner texel by other methods. The methods are subject to the constraint that for linear filtering if the three available texels have the same value, the resulting filtered texel **must** have that value, and for cubic filtering if the twelve available samples have the same value, the resulting filtered texel **must** have that value.

20.2.2. Border Replacement

If the sampler includes a border, out of bounds texels are replaced with a value based on the image format and the [borderColor](#) of the sampler. The border color is:

Table 29. Border Color B, Custom Border Color [VkSamplerCustomBorderColorCreateInfoEXT](#) ::[customBorderColor](#) U

Sampler borderColor	Corresponding Border Color
VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK	$[B_r, B_g, B_b, B_a] = [0.0, 0.0, 0.0, 0.0]$
VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK	$[B_r, B_g, B_b, B_a] = [0.0, 0.0, 0.0, 1.0]$
VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE	$[B_r, B_g, B_b, B_a] = [1.0, 1.0, 1.0, 1.0]$
VK_BORDER_COLOR_INT_TRANSPARENT_BLACK	$[B_r, B_g, B_b, B_a] = [0, 0, 0, 0]$
VK_BORDER_COLOR_INT_OPAQUE_BLACK	$[B_r, B_g, B_b, B_a] = [0, 0, 0, 1]$

Sampler <code>borderColor</code>	Corresponding Border Color
<code>VK_BORDER_COLOR_INT_OPAQUE_WHITE</code>	$[B_r, B_g, B_b, B_a] = [1, 1, 1, 1]$
<code>VK_BORDER_COLOR_FLOAT_CUSTOM_EXT</code>	$[B_r, B_g, B_b, B_a] = [U_r, U_g, U_b, U_a]$
<code>VK_BORDER_COLOR_INT_CUSTOM_EXT</code>	$[B_r, B_g, B_b, B_a] = [U_r, U_g, U_b, U_a]$

The custom border color (U) **may** be rounded by implementations prior to texel replacement, but the error introduced by such a rounding **must** not exceed one ULP of the image's `format`.

NOTE

The names `VK_BORDER_COLOR_*_TRANSPARENT_BLACK`, `VK_BORDER_COLOR_*_OPAQUE_BLACK`, and `VK_BORDER_COLOR_*_OPAQUE_WHITE` are meant to describe which components are zeros and ones in the vocabulary of compositing, and are not meant to imply that the numerical value of `VK_BORDER_COLOR_INT_OPAQUE_WHITE` is a saturating value for integers.

This is substituted for the texel value by replacing the number of components in the image format

Table 30. Border Texel Components After Replacement

Texel Aspect or Format	Component Assignment
Depth aspect	$D = B_r$
Stencil aspect	$S = B_r^\dagger$
One component color format	$\text{Color}_r = B_r$
Two component color format	$[\text{Color}_r, \text{Color}_g] = [B_r, B_g]$
Three component color format	$[\text{Color}_r, \text{Color}_g, \text{Color}_b] = [B_r, B_g, B_b]$
Four component color format	$[\text{Color}_r, \text{Color}_g, \text{Color}_b, \text{Color}_a] = [B_r, B_g, B_b, B_a]$
Single component alpha format	$[\text{Color}_r, \text{Color}_g, \text{Color}_b, \text{Color}_a] = [0, 0, 0, B_a]$

$\dagger S = B_g$ **may** be substituted as the replacement method by the implementation when `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_INT_CUSTOM_EXT` and `VkSamplerCustomBorderColorCreateInfoEXT::format` is `VK_FORMAT_UNDEFINED`. Implementations **should** use $S = B_r$ as the replacement method.

If `rgba40paqueBlackSwizzled` is `VK_FALSE`, the implementation **may** swap the blue and alpha channels when sampling non-custom border colors with the `VK_FORMAT_B4G4R4A4_UNORM_PACK16` format, or the red and alpha channels with the `VK_FORMAT_R4G4B4A4_UNORM_PACK16` format.

NOTE

As `VK_FORMAT_B4G4R4A4_UNORM_PACK16` is required by Vulkan, support must be advertised for this format. Some Vulkan implementations on Apple hardware implement these formats through a hardware format with a different channel order, swizzled to match Vulkan's expectations. Unfortunately the swizzle cannot be readily applied to the fixed border colors - resulting in the apparent channel swap. For most standard border colors this does not result in a modification to the sampled output. However, `VK_BORDER_COLOR_*_OPAQUE_BLACK` will instead be sampled as transparent red or blue. If the `customBorderColorWithoutFormat` feature is

supported and enabled, this functionality is expected to work without issue, but this feature may come with a performance cost.

When border color replacement occurs, [texel reads](#) are skipped, and the replaced color is used for ongoing operations instead.

20.2.3. Texel Reads

A texel is read from an image, performed as outlined in [Image Reads](#), using the converted image coordinates.

The returned components of each texel are then processed by further input operations.

20.2.4. Depth Compare Operation

If the image view has a depth/stencil format, the depth component is selected by the [aspectMask](#), and the operation is an [OpImage*Dref*](#) instruction, a depth comparison is performed. The result is 1.0 if the comparison evaluates to true, and 0.0 otherwise. This value replaces the depth component D.

The compare operation is selected by the [VkCompareOp](#) value set by [VkSamplerCreateInfo::compareOp](#). The reference value from the SPIR-V operand D_{ref} and the texel depth value D_{tex} are used as the *reference* and *test* values, respectively, in that operation.

If the image being sampled has an unsigned normalized fixed-point format, then D_{ref} is clamped to [0,1] before the compare operation.

If the value of [magFilter](#) is [VK_FILTER_LINEAR](#), or the value of [minFilter](#) is [VK_FILTER_LINEAR](#), then D may be computed in an implementation-dependent manner which differs from the normal rules of linear filtering. The resulting value **must** be in the range [0,1] and should be proportional to, or a weighted average of, the number of comparison passes or failures.

20.2.5. Component Swizzle

All texel input instructions apply a *swizzle* based on:

- the [VkComponentSwizzle](#) enums in the [components](#) member of the [VkImageViewCreateInfo](#) structure for the image being read if [sampler Y'C_BC_R conversion](#) is not enabled, and
- the [VkComponentSwizzle](#) enums in the [components](#) member of the [VkSamplerYcbcrConversionCreateInfo](#) structure for the [sampler Y'C_BC_R conversion](#) if sampler Y'C_BC_R conversion is enabled.

The swizzle **can** rearrange the components of the texel, or substitute zero or one for any components. It is defined as follows for each color component:

$$Color_{component} = \begin{cases} Color_r & \text{for RED swizzle} \\ Color_g & \text{for GREEN swizzle} \\ Color_b & \text{for BLUE swizzle} \\ Color_a & \text{for ALPHA swizzle} \\ 0 & \text{for ZERO swizzle} \\ one & \text{for ONE swizzle} \\ identity & \text{for IDENTITY swizzle} \end{cases}$$

where:

$$one = \begin{cases} 1.0f & \text{for floating-point components} \\ 1 & \text{for integer components} \end{cases}$$

$$identity = \begin{cases} Color_r & \text{for } component = r \\ Color_g & \text{for } component = g \\ Color_b & \text{for } component = b \\ Color_a & \text{for } component = a \end{cases}$$

If the border color is one of the `VK_BORDER_COLOR_*_OPAQUE_BLACK` enums and the `VkComponentSwizzle` is not the `identity swizzle` for all components, the value of the texel after swizzle is undefined.

If the image view has a depth/stencil format and the `VkComponentSwizzle` is `VK_COMPONENT_SWIZZLE_ONE`, and `VkPhysicalDeviceMaintenance5Properties::depthStencilSwizzleOneSupport` is not `VK_TRUE`, the value of the texel after swizzle is undefined.

20.2.6. Sparse Residency

`OpImageSparse*` instructions return a structure which includes a *residency code* indicating whether any texels accessed by the instruction are sparse unbound texels. This code **can** be interpreted by the `OpImageSparseTexelsResident` instruction which converts the residency code to a boolean value.

20.2.7. Y'C_BC_R Degamma

If `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableYDegamma` is equal to `VK_TRUE`, then sRGB to linear conversion is applied to the G component of the sampled values as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#).

If `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableCbCrDegamma` is equal to `VK_TRUE`, then sRGB to linear conversion is applied to the R and B components of the sampled values as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#).

20.2.8. Chroma Reconstruction

In some color models, the color representation is defined in terms of monochromatic light intensity (often called “luma”) and color differences relative to this intensity, often called “chroma”. It is common for color models other than RGB to represent the chroma components at lower spatial resolution than the luma component. This approach is used to take advantage of the eye’s lower

spatial sensitivity to color compared with its sensitivity to brightness. Less commonly, the same approach is used with additive color, since the green component dominates the eye's sensitivity to light intensity and the spatial sensitivity to color introduced by red and blue is lower.

Lower-resolution components are “downsampled” by resizing them to a lower spatial resolution than the component representing luminance. This process is also commonly known as “chroma subsampling”. There is one luminance sample in each texture texel, but each chrominance sample may be shared among several texels in one or both texture dimensions.

- “_444” formats do not spatially downsample chroma values compared with luma: there are unique chroma samples for each texel.
- “_422” formats have downsampling in the x dimension (corresponding to u or s coordinates): they are sampled at half the resolution of luma in that dimension.
- “_420” formats have downsampling in the x dimension (corresponding to u or s coordinates) and the y dimension (corresponding to v or t coordinates): they are sampled at half the resolution of luma in both dimensions.

The process of reconstructing a full color value for texture access involves accessing both chroma and luma values at the same location. To generate the color accurately, the values of the lower-resolution components at the location of the luma samples are reconstructed from the lower-resolution sample locations, an operation known here as “chroma reconstruction” irrespective of the actual color model.

The location of the chroma samples relative to the luma coordinates is determined by the `xChromaOffset` and `yChromaOffset` members of the `VkSamplerYcbcrConversionCreateInfo` structure used to create the sampler $Y'C_B C_R$ conversion.

The following diagrams show the relationship between unnormalized (u,v) coordinates and (i,j) integer texel positions in the luma component (shown in black, with circles showing integer sample positions) and the texel coordinates of reduced-resolution chroma components, shown as crosses in red.

NOTE

If the chroma values are reconstructed at the locations of the luma samples by means of interpolation, chroma samples from outside the image bounds are needed; these are determined according to [Wrapping Operation](#). These diagrams represent this by showing the bounds of the “chroma texel” extending beyond the image bounds, and including additional chroma sample positions where required for interpolation. The limits of a sample for `NEAREST` sampling is shown as a grid.

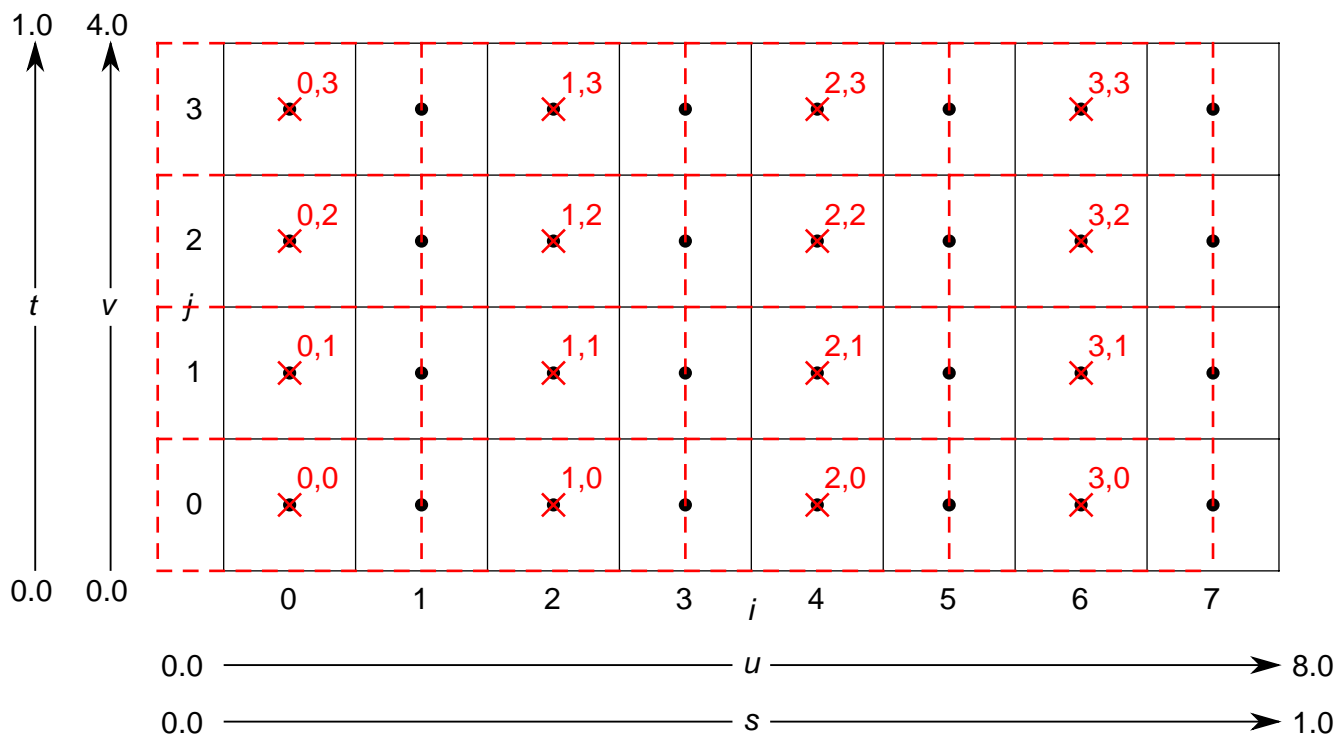

Figure 6. 422 downsampling, $xChromaOffset=COSITED_EVEN$

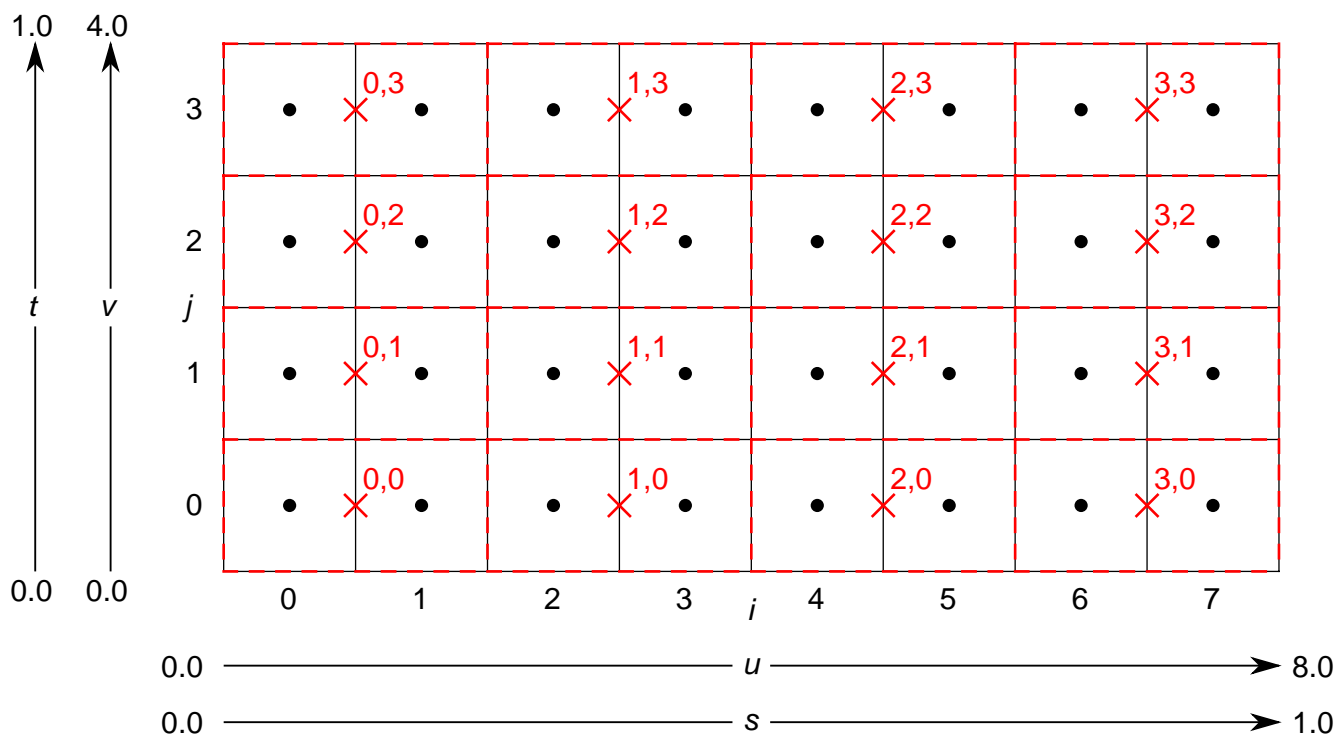

Figure 7. 422 downsampling, $xChromaOffset=MIDPOINT$

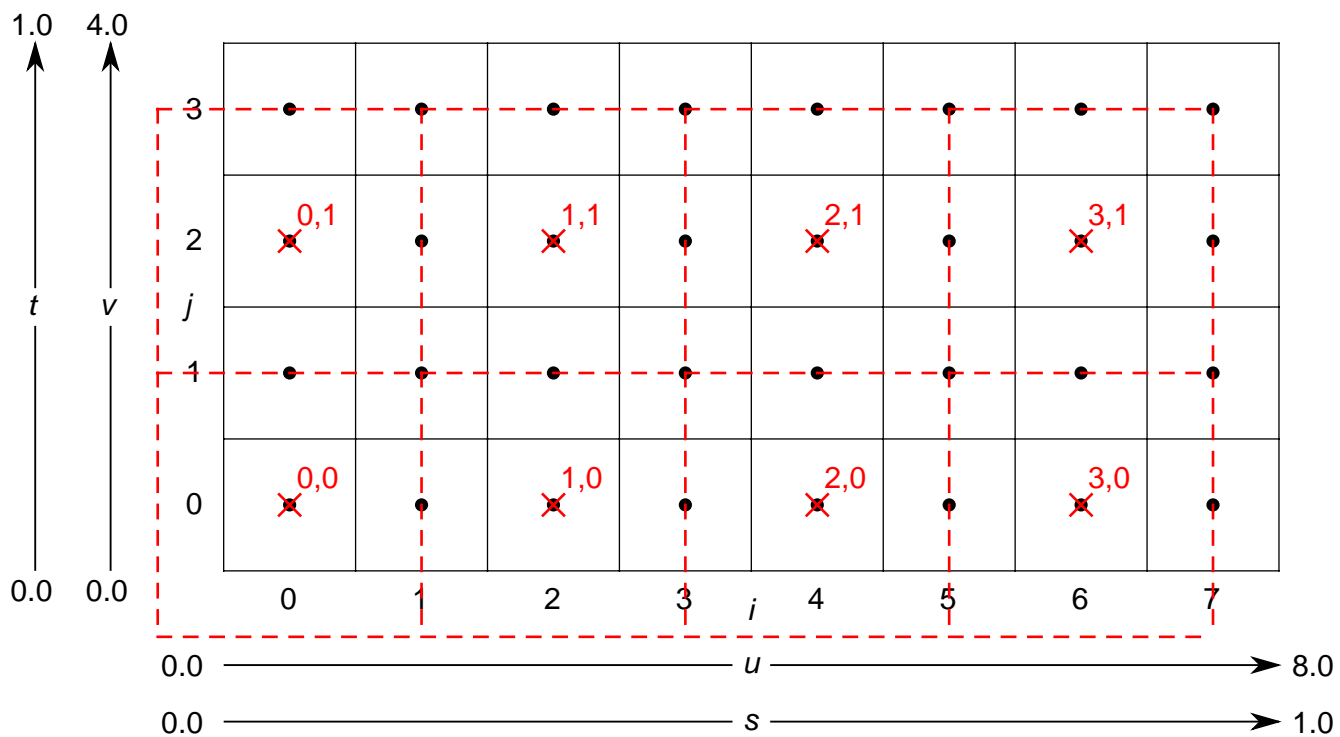

Figure 8. 420 downsampling, $x\text{ChromaOffset}=\text{COSITED_EVEN}$, $y\text{ChromaOffset}=\text{COSITED_EVEN}$

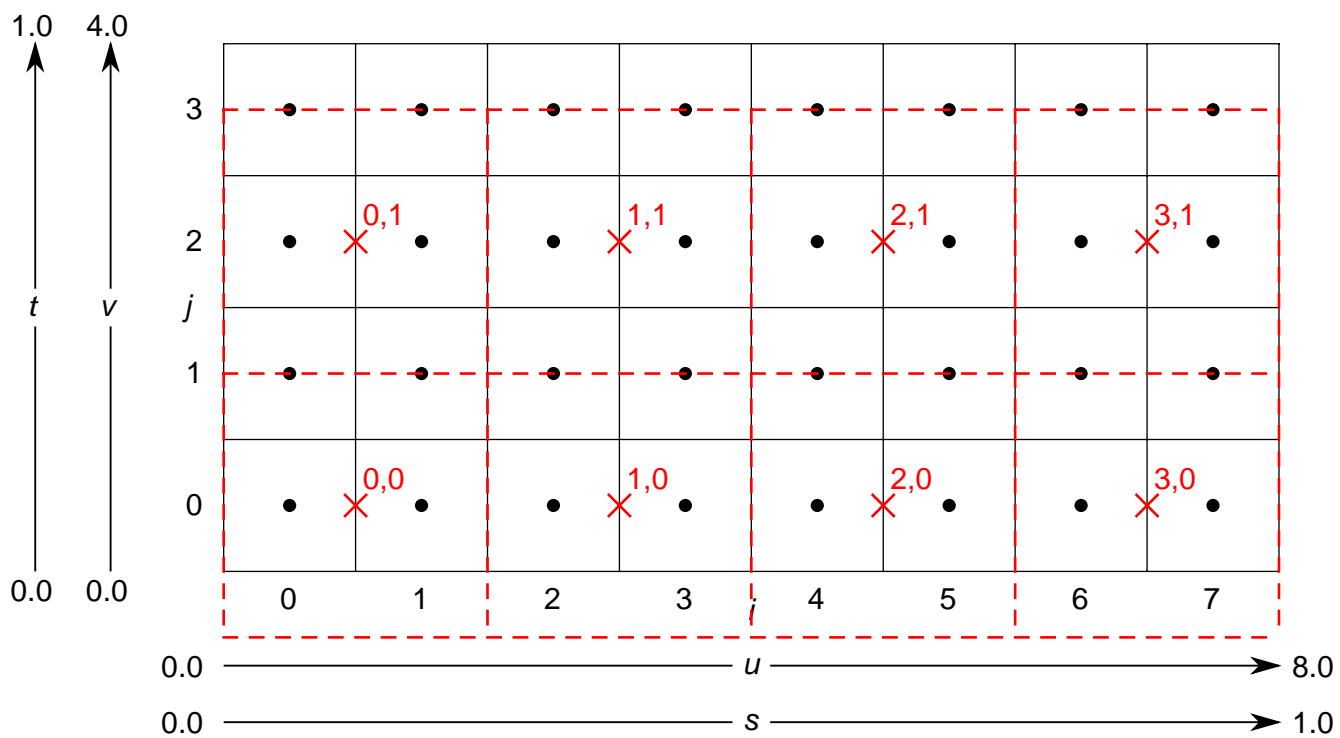

Figure 9. 420 downsampling, $x\text{ChromaOffset}=\text{MIDPOINT}$, $y\text{ChromaOffset}=\text{COSITED_EVEN}$

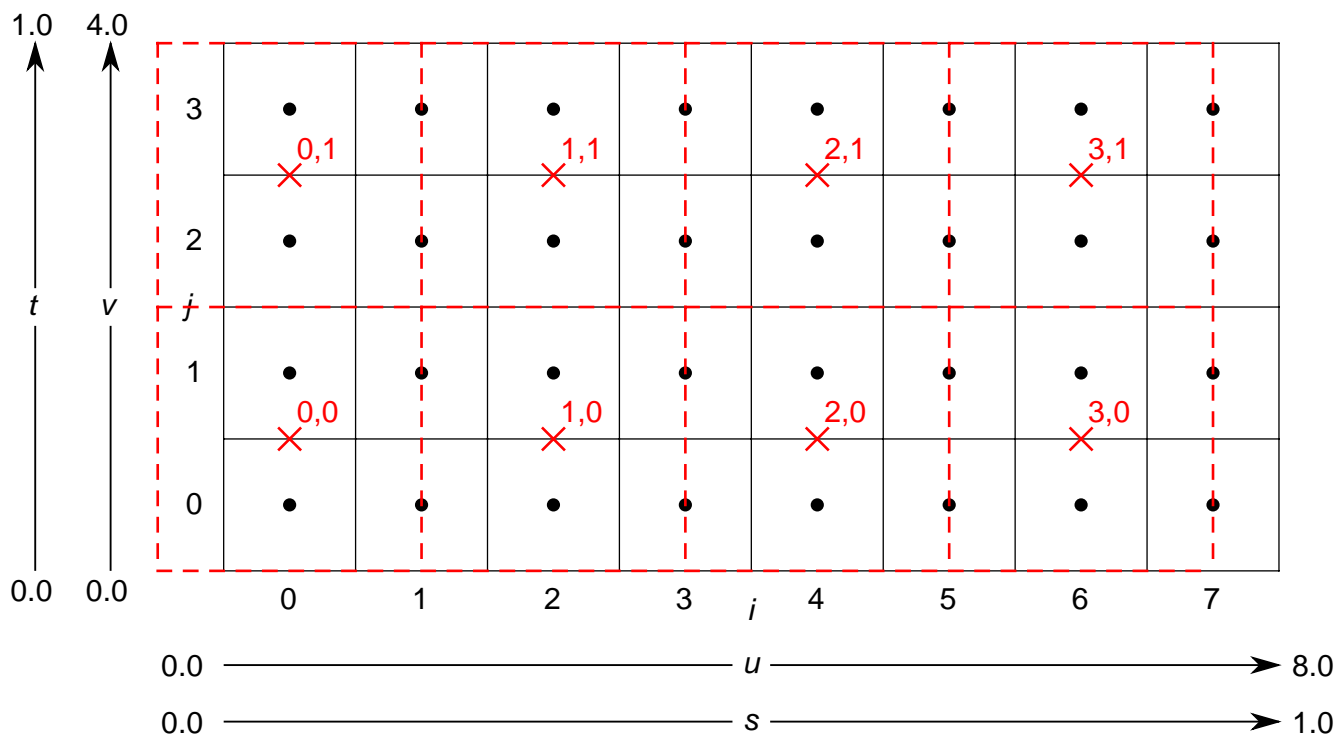

Figure 10. 420 downsampling, $xChromaOffset=COSITED_EVEN$, $yChromaOffset=MIDPOINT$

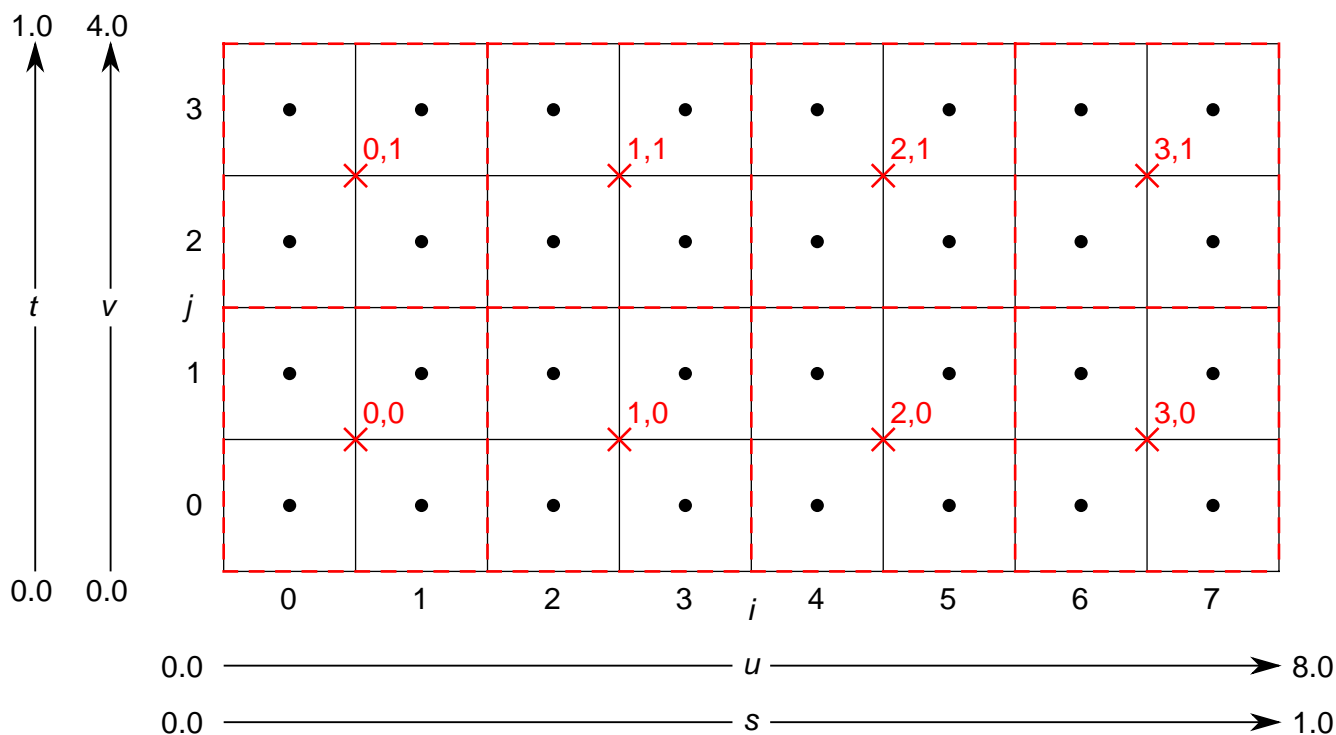

Figure 11. 420 downsampling, $xChromaOffset=MIDPOINT$, $yChromaOffset=MIDPOINT$

Reconstruction is implemented in one of two ways:

If the format of the image that is to be sampled sets [VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT](#), or the [VkSamplerYcbcrConversionCreateInfo](#)'s [forceExplicitReconstruction](#) is [VK_TRUE](#), reconstruction is performed as an explicit step independent of filtering, described in the [Explicit Reconstruction](#) section.

If the format of the image that is to be sampled does not set [VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT](#),

LICIT_BIT and if the `VkSamplerYcbcrConversionCreateInfo`'s `forceExplicitReconstruction` is `VK_FALSE`, reconstruction is performed as an implicit part of filtering prior to color model conversion, with no separate post-conversion texel filtering step, as described in the [Implicit Reconstruction](#) section.

Explicit Reconstruction

- If the `chromaFilter` member of the `VkSamplerYcbcrConversionCreateInfo` structure is `VK_FILTER_NEAREST`:

- If the format's R and B components are reduced in resolution in just width by a factor of two relative to the G component (i.e. this is a “_422” format), the $\tau_{ijk}[level]$ values accessed by [texel filtering](#) are reconstructed as follows:

$$\begin{aligned}\tau_R'(i, j) &= \tau_R(\lfloor i \times 0.5 \rfloor, j)[level] \\ \tau_B'(i, j) &= \tau_B(\lfloor i \times 0.5 \rfloor, j)[level]\end{aligned}$$

- If the format's R and B components are reduced in resolution in width and height by a factor of two relative to the G component (i.e. this is a “_420” format), the $\tau_{ijk}[level]$ values accessed by [texel filtering](#) are reconstructed as follows:

$$\begin{aligned}\tau_R'(i, j) &= \tau_R(\lfloor i \times 0.5 \rfloor, \lfloor j \times 0.5 \rfloor)[level] \\ \tau_B'(i, j) &= \tau_B(\lfloor i \times 0.5 \rfloor, \lfloor j \times 0.5 \rfloor)[level]\end{aligned}$$

NOTE

`xChromaOffset` and `yChromaOffset` have no effect if `chromaFilter` is `VK_FILTER_NEAREST` for explicit reconstruction.

- If the `chromaFilter` member of the `VkSamplerYcbcrConversionCreateInfo` structure is `VK_FILTER_LINEAR`:

- If the format's R and B components are reduced in resolution in just width by a factor of two relative to the G component (i.e. this is a “_422” format):

- If `xChromaOffset` is `VK_CHROMA_LOCATION_COSITED_EVEN`:

$$\tau_{RB}'(i, j) = \begin{cases} \tau_{RB}(\lfloor i \times 0.5 \rfloor, j)[level], & 0.5 \times i = \lfloor 0.5 \times i \rfloor \\ 0.5 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor, j)[level] + \\ 0.5 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor + 1, j)[level], & 0.5 \times i \neq \lfloor 0.5 \times i \rfloor \end{cases}$$

- If `xChromaOffset` is `VK_CHROMA_LOCATION_MIDPOINT`:

$$\tau_{RB}'(i, j) = \begin{cases} 0.25 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor - 1, j)[level] + \\ 0.75 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor, j)[level], & 0.5 \times i = \lfloor 0.5 \times i \rfloor \\ 0.75 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor, j)[level] + \\ 0.25 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor + 1, j)[level], & 0.5 \times i \neq \lfloor 0.5 \times i \rfloor \end{cases}$$

- If the format's R and B components are reduced in resolution in width and height by a factor of two relative to the G component (i.e. this is a “_420” format), a similar relationship applies. Due to the number of options, these formulae are expressed more concisely as follows:

$$\begin{aligned}
i_{RB} &= \begin{cases} 0.5 \times (i) & \text{xChromaOffset=COSITED_EVEN} \\ 0.5 \times (i - 0.5) & \text{xChromaOffset=MIDPOINT} \end{cases} \\
j_{RB} &= \begin{cases} 0.5 \times (j) & \text{yChromaOffset=COSITED_EVEN} \\ 0.5 \times (j - 0.5) & \text{yChromaOffset=MIDPOINT} \end{cases} \\
i_{floor} &= \lfloor i_{RB} \rfloor \\
j_{floor} &= \lfloor j_{RB} \rfloor \\
i_{frac} &= i_{RB} - i_{floor} \\
j_{frac} &= j_{RB} - j_{floor}
\end{aligned}$$

$$\begin{aligned}
\tau_{RB}'(i, j) &= \tau_{RB}(i_{floor}, j_{floor})[level] \times (1 - i_{frac}) \times (1 - j_{frac}) + \\
&\tau_{RB}(1 + i_{floor}, j_{floor})[level] \times (i_{frac}) \times (1 - j_{frac}) + \\
&\tau_{RB}(i_{floor}, 1 + j_{floor})[level] \times (1 - i_{frac}) \times (j_{frac}) + \\
&\tau_{RB}(1 + i_{floor}, 1 + j_{floor})[level] \times (i_{frac}) \times (j_{frac})
\end{aligned}$$

NOTE

In the case where the texture itself is bilinearly interpolated as described in [Texel Filtering](#), thus requiring four full-color samples for the filtering operation, and where the reconstruction of these samples uses bilinear interpolation in the chroma components due to `chromaFilter=VK_FILTER_LINEAR`, up to nine chroma samples may be required, depending on the sample location.

Implicit Reconstruction

Implicit reconstruction takes place by the samples being interpolated, as required by the filter settings of the sampler, except that `chromaFilter` takes precedence for the chroma samples.

If `chromaFilter` is `VK_FILTER_NEAREST`, an implementation **may** behave as if `xChromaOffset` and `yChromaOffset` were both `VK_CHROMA_LOCATION_MIDPOINT`, irrespective of the values set.

NOTE

This will not have any visible effect if the locations of the luma samples coincide with the location of the samples used for rasterization.

The sample coordinates are adjusted by the downsample factor of the component (such that, for example, the sample coordinates are divided by two if the component has a downsample factor of two relative to the luma component):

$$\begin{aligned}
u_{RB}'(422/420) &= \begin{cases} 0.5 \times (u + 0.5), & \text{xChromaOffset=COSITED_EVEN} \\ 0.5 \times u, & \text{xChromaOffset=MIDPOINT} \end{cases} \\
v_{RB}'(420) &= \begin{cases} 0.5 \times (v + 0.5), & \text{yChromaOffset=COSITED_EVEN} \\ 0.5 \times v, & \text{yChromaOffset=MIDPOINT} \end{cases}
\end{aligned}$$

20.2.9. Sampler Y'C_BC_R Conversion

Sampler Y'C_BC_R conversion performs the following operations on sampled data, in order:

1. [Sampler Y'C_BC_R Component Swizzle](#)
2. [Sampler Y'C_BC_R Range Expansion](#)
3. [Sampler Y'C_BC_R Model Conversion](#)

An implementation **may** combine the range expansion and model conversion into a single mathematical operation.

These operations are applied to color component values after [sampling operations](#) which are not specific to sampler Y'C_BC_R conversion have completed.

Sampler Y'C_BC_R Component Swizzle

Rather than the [component swizzle performed as part of sampling](#), which is banned for Y'C_BC_R image views used with sampler Y'C_BC_R conversion, the component swizzle specified by [VkSamplerYcbcrConversionCreateInfo::components](#) is applied to the sampled data instead. This is applied in the same way as the component swizzle usually performed during sampling.

Sampler Y'C_BC_R Range Expansion

Sampler Y'C_BC_R range expansion is not applied if [ycbcrModel](#) is [VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY](#).

For other values of [ycbcrModel](#), range expansion applies independently to each component of the sampled data. For the purposes of range expansion and Y'C_BC_R model conversion, the R and B components contain color difference (chroma) values and the G component contains luma. The A component is not modified by sampler Y'C_BC_R range expansion.

The range expansion to be applied is defined by the [ycbcrRange](#) member of the [VkSamplerYcbcrConversionCreateInfo](#) structure:

- If [ycbcrRange](#) is [VK_SAMPLER_YCBCR_RANGE_ITU_FULL](#), the following transformations are applied:

$$\begin{aligned}
 Y' &= C'_{rgba}[G] \\
 C_B &= C'_{rgba}[B] - \frac{2^{(n-1)}}{(2^n) - 1} \\
 C_R &= C'_{rgba}[R] - \frac{2^{(n-1)}}{(2^n) - 1}
 \end{aligned}$$

NOTE

These formulae correspond to the “full range” encoding in the “Quantization schemes” chapter of the [Khronos Data Format Specification](#).

Should any future amendments be made to the ITU specifications from which these equations are derived, the formulae used by Vulkan **may** also be updated to maintain parity.

- If [ycbcrRange](#) is [VK_SAMPLER_YCBCR_RANGE_ITU_NARROW](#), the following transformations are applied:

$$Y' = \frac{C'_{rgba}[G] \times (2^n - 1) - 16 \times 2^{n-8}}{219 \times 2^{n-8}}$$

$$C_B = \frac{C'_{rgba}[B] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}}$$

$$C_R = \frac{C'_{rgba}[R] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}}$$

NOTE

These formulae correspond to the “narrow range” encoding in the “Quantization schemes” chapter of the [Khronos Data Format Specification](#).

- n is the bit-depth of the components in the format.

The precision of the operations performed during range expansion **must** be at least that of the source format.

An implementation **may** clamp the results of these range expansion operations such that Y' falls in the range $[0,1]$, and/or such that C_B and C_R fall in the range $[-0.5,0.5]$.

Sampler $Y'C_B C_R$ Model Conversion

The range-expanded values are converted between color models, according to the color model conversion specified in the `ycbcrModel` member:

[VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY](#)

The color components are not modified by the color model conversion since they are assumed already to represent the desired color model in which the shader is operating; $Y'C_B C_R$ range expansion is also ignored.

[VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY](#)

The color components are not modified by the color model conversion and are assumed to be treated as though in $Y'C_B C_R$ form both in memory and in the shader; $Y'C_B C_R$ range expansion is applied to the components as for other $Y'C_B C_R$ models, with the vector (C_R, Y', C_B, A) provided to the shader.

[VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709](#)

The color components are transformed from a $Y'C_B C_R$ representation to an $R'G'B'$ representation as described in the “BT.709 $Y'C_B C_R$ conversion” section of the [Khronos Data Format Specification](#).

[VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601](#)

The color components are transformed from a $Y'C_B C_R$ representation to an $R'G'B'$ representation as described in the “BT.601 $Y'C_B C_R$ conversion” section of the [Khronos Data Format Specification](#).

[VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020](#)

The color components are transformed from a $Y'C_B C_R$ representation to an $R'G'B'$ representation as described in the “BT.2020 $Y'C_B C_R$ conversion” section of the [Khronos Data Format Specification](#).

In this operation, each output component is dependent on each input component.

An implementation **may** clamp the R'G'B' results of these conversions to the range [0,1].

The precision of the operations performed during model conversion **must** be at least that of the source format.

The alpha component is not modified by these model conversions.

NOTE

Sampling operations in a non-linear color space can introduce color and intensity shifts at sharp transition boundaries. To avoid this issue, the technically precise color correction sequence described in the “Introduction to Color Conversions” chapter of the [Khronos Data Format Specification](#) may be performed as follows:

- Calculate the [unnormalized texel coordinates](#) corresponding to the desired sample position.
- For a [minFilter](#) or [magFilter](#) of [VK_FILTER_NEAREST](#):
 1. Calculate (i,j) for the sample location as described under the “nearest filtering” formulae in [\(u,v,w,a\) to \(i,j,k,l,n\) Transformation and Array Layer Selection](#)
 2. Calculate the normalized texel coordinates corresponding to these integer coordinates.
 3. Sample using [sampler Y'C_BC_R conversion](#) at this location.
- For a [minFilter](#) or [magFilter](#) of [VK_FILTER_LINEAR](#):
 1. Calculate $(i_{[0,1]},j_{[0,1]})$ for the sample location as described under the “linear filtering” formulae in [\(u,v,w,a\) to \(i,j,k,l,n\) Transformation and Array Layer Selection](#)
 2. Calculate the normalized texel coordinates corresponding to these integer coordinates.
 3. Sample using [sampler Y'C_BC_R conversion](#) at each of these locations.
 4. Convert the non-linear A'R'G'B' outputs of the Y'C_BC_R conversions to linear ARGB values as described in the “Transfer Functions” chapter of the [Khronos Data Format Specification](#).
 5. Interpolate the linear ARGB values using the α and β values described in the “linear filtering” section of [\(u,v,w,a\) to \(i,j,k,l,n\) Transformation and Array Layer Selection](#) and the equations in [Texel Filtering](#).

The additional calculations and, especially, additional number of sampling operations in the [VK_FILTER_LINEAR](#) case can be expected to have a performance impact compared with using the outputs directly. Since the variations from “correct” results are subtle for most content, the application author should determine whether a more costly implementation is strictly necessary.

If [chromaFilter](#), and [minFilter](#) or [magFilter](#) are both [VK_FILTER_NEAREST](#), these operations are redundant and sampling using [sampler Y'C_BC_R conversion](#) at the desired sample coordinates will produce the “correct” results without further processing.

20.3. Normalized Texel Coordinate Operations

If the image sampler instruction provides normalized texel coordinates, some of the following operations are performed.

20.3.1. Projection Operation

For **Proj** image operations, the normalized texel coordinates (s,t,r,q,a) and (if present) the D_{ref} coordinate are transformed as follows:

$$\begin{aligned} s &= \frac{s}{q}, & \text{for 1D, 2D, or 3D image} \\ t &= \frac{t}{q}, & \text{for 2D or 3D image} \\ r &= \frac{r}{q}, & \text{for 3D image} \\ D_{ref} &= \frac{D_{ref}}{q}, & \text{if provided} \end{aligned}$$

20.3.2. Derivative Image Operations

Derivatives are used for LOD selection. These derivatives are either implicit (in an **ImplicitLod** image instruction in a mesh, task, compute, or fragment shader) or explicit (provided explicitly by shader to the image instruction in any shader).

For implicit derivatives image instructions, the derivatives of texel coordinates are calculated in the same manner as [derivative operations](#). That is:

$$\begin{aligned} \partial s / \partial x &= dPdx(s), & \partial s / \partial y &= dPdy(s), & \text{for 1D, 2D, Cube, or 3D image} \\ \partial t / \partial x &= dPdx(t), & \partial t / \partial y &= dPdy(t), & \text{for 2D, Cube, or 3D image} \\ \partial r / \partial x &= dPdx(r), & \partial r / \partial y &= dPdy(r), & \text{for Cube or 3D image} \end{aligned}$$

Partial derivatives not defined above for certain image dimensionalities are set to zero.

For explicit LOD image instructions, if the **optional** SPIR-V operand **Grad** is provided, then the operand values are used for the derivatives. The number of components present in each derivative for a given image dimensionality matches the number of partial derivatives computed above.

If the **optional** SPIR-V operand **Lod** is provided, then derivatives are set to zero, the cube map derivative transformation is skipped, and the scale factor operation is skipped. Instead, the floating-point scalar coordinate is directly assigned to λ_{base} as described in [LOD Operation](#).

If the image or sampler object used by an implicit derivative image instruction is not uniform across the quad and **quadDivergentImplicitLod** is not supported, then the derivative and LOD values are undefined. Implicit derivatives are well-defined when the image and sampler and control flow are uniform across the quad, even if they diverge between different quads.

If **quadDivergentImplicitLod** is supported, then derivatives and implicit LOD values are well-defined

even if the image or sampler object are not uniform within a quad. The derivatives are computed as specified above, and the implicit LOD calculation proceeds for each shader invocation using its respective image and sampler object.

20.3.3. Cube Map Face Selection and Transformations

For cube map image instructions, the (s,t,r) coordinates are treated as a direction vector (r_x, r_y, r_z). The direction vector is used to select a cube map face. The direction vector is transformed to a per-face texel coordinate system ($s_{\text{face}}, t_{\text{face}}$). The direction vector is also used to transform the derivatives to per-face derivatives.

20.3.4. Cube Map Face Selection

The direction vector selects one of the cube map's faces based on the largest magnitude coordinate direction (the major axis direction). Since two or more coordinates **can** have identical magnitude, the implementation **must** have rules to disambiguate this situation.

The rules **should** have as the first rule that r_z wins over r_y and r_x , and the second rule that r_y wins over r_x . An implementation **may** choose other rules, but the rules **must** be deterministic and depend only on (r_x, r_y, r_z).

The layer number (corresponding to a cube map face), the coordinate selections for s_c , t_c , r_c , and the selection of derivatives, are determined by the major axis direction as specified in the following two tables.

Table 31. Cube Map Face and Coordinate Selection

Major Axis Direction	Layer Number	Cube Map Face	s_c	t_c	r_c
$+r_x$	0	Positive X	$-r_z$	$-r_y$	r_x
$-r_x$	1	Negative X	$+r_z$	$-r_y$	r_x
$+r_y$	2	Positive Y	$+r_x$	$+r_z$	r_y
$-r_y$	3	Negative Y	$+r_x$	$-r_z$	r_y
$+r_z$	4	Positive Z	$+r_x$	$-r_y$	r_z
$-r_z$	5	Negative Z	$-r_x$	$-r_y$	r_z

Table 32. Cube Map Derivative Selection

Major Axis Direction	$\partial s_c / \partial x$	$\partial s_c / \partial y$	$\partial t_c / \partial x$	$\partial t_c / \partial y$	$\partial r_c / \partial x$	$\partial r_c / \partial y$
$+r_x$	$-\partial r_z / \partial x$	$-\partial r_z / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$
$-r_x$	$+\partial r_z / \partial x$	$+\partial r_z / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$-\partial r_x / \partial x$	$-\partial r_x / \partial y$
$+r_y$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$	$+\partial r_z / \partial x$	$+\partial r_z / \partial y$	$+\partial r_y / \partial x$	$+\partial r_y / \partial y$

Major Axis Direction	$\partial s_c / \partial x$	$\partial s_c / \partial y$	$\partial t_c / \partial x$	$\partial t_c / \partial y$	$\partial r_c / \partial x$	$\partial r_c / \partial y$
$-r_y$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$	$-\partial r_z / \partial x$	$-\partial r_z / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$
$+r_z$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$+\partial r_z / \partial x$	$+\partial r_z / \partial y$
$-r_z$	$-\partial r_x / \partial x$	$-\partial r_x / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$-\partial r_z / \partial x$	$-\partial r_z / \partial y$

20.3.5. Cube Map Coordinate Transformation

$$s_{face} = \frac{1}{2} \times \frac{s_c}{|r_c|} + \frac{1}{2}$$

$$t_{face} = \frac{1}{2} \times \frac{t_c}{|r_c|} + \frac{1}{2}$$

20.3.6. Cube Map Derivative Transformation

The partial derivatives of the [Cube Map Coordinate Transformations](#) can be computed as:

$$\begin{aligned} \frac{\partial s_{face}}{\partial x} &= \frac{\partial}{\partial x} \left(\frac{1}{2} \times \frac{s_c}{|r_c|} + \frac{1}{2} \right) \\ &= \frac{1}{2} \times \frac{\partial}{\partial x} \left(\frac{s_c}{|r_c|} \right) \\ &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial s_c / \partial x - s_c \times \partial r_c / \partial x}{(r_c)^2} \right) \end{aligned}$$

The other derivatives are simplified similarly, resulting in

$$\begin{aligned} \frac{\partial s_{face}}{\partial y} &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial s_c / \partial y - s_c \times \partial r_c / \partial y}{(r_c)^2} \right) \\ \frac{\partial t_{face}}{\partial x} &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial t_c / \partial x - t_c \times \partial r_c / \partial x}{(r_c)^2} \right) \\ \frac{\partial t_{face}}{\partial y} &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial t_c / \partial y - t_c \times \partial r_c / \partial y}{(r_c)^2} \right) \end{aligned}$$

20.3.7. Scale Factor Operation, LOD Operation and Image Level(s) Selection

LOD selection **can** be either explicit (provided explicitly by the image instruction) or implicit (determined from a scale factor calculated from the derivatives). The LOD **must** be computed with `mipmapPrecisionBits` of accuracy.

Scale Factor Operation

The magnitude of the derivatives are calculated by:

$$m_{ux} = |\partial s / \partial x| \times w_{base}$$

$$m_{vx} = |\partial t / \partial x| \times h_{base}$$

$$m_{wx} = |\partial r / \partial x| \times d_{base}$$

$$m_{uy} = |\partial s / \partial y| \times w_{base}$$

$$m_{vy} = |\partial t / \partial y| \times h_{base}$$

$$m_{wy} = |\partial r / \partial y| \times d_{base}$$

where:

$$\partial t / \partial x = \partial t / \partial y = 0 \text{ (for 1D images)}$$

$$\partial r / \partial x = \partial r / \partial y = 0 \text{ (for 1D, 2D, or Cube images)}$$

and:

$$w_{base} = \text{image.w}$$

$$h_{base} = \text{image.h}$$

$$d_{base} = \text{image.d}$$

(for the **baseMipLevel**, from the image descriptor).

For corner-sampled images, the w_{base} , h_{base} , and d_{base} are instead:

$$w_{base} = \text{image.w} - 1$$

$$h_{base} = \text{image.h} - 1$$

$$d_{base} = \text{image.d} - 1$$

A point sampled in screen space has an elliptical footprint in texture space. The minimum and maximum scale factors (ρ_{\min} , ρ_{\max}) **should** be the minor and major axes of this ellipse.

The *scale factors* ρ_x and ρ_y , calculated from the magnitude of the derivatives in x and y, are used to compute the minimum and maximum scale factors.

ρ_x and ρ_y **may** be approximated with functions f_x and f_y , subject to the following constraints:

f_x is continuous and monotonically increasing in each of m_{ux} , m_{vx} , and m_{wx}
 f_y is continuous and monotonically increasing in each of m_{uy} , m_{vy} , and m_{wy}

$$\max(|m_{ux}|, |m_{vx}|, |m_{wx}|) \leq f_x \leq \sqrt{2}(|m_{ux}| + |m_{vx}| + |m_{wx}|)$$
$$\max(|m_{uy}|, |m_{vy}|, |m_{wy}|) \leq f_y \leq \sqrt{2}(|m_{uy}| + |m_{vy}| + |m_{wy}|)$$

The minimum and maximum scale factors (ρ_{\min} , ρ_{\max}) are determined by:

$$\rho_{\max} = \max(\rho_x, \rho_y)$$

$$\rho_{\min} = \min(\rho_x, \rho_y)$$

The ratio of anisotropy is determined by:

$$\eta = \min(\rho_{\max}/\rho_{\min}, \max_{\text{Aniso}})$$

where:

$$\text{sampler.max}_{\text{Aniso}} = \text{maxAnisotropy} \text{ (from sampler descriptor)}$$

$$\text{limits.max}_{\text{Aniso}} = \text{maxSamplerAnisotropy} \text{ (from physical device limits)}$$

$$\max_{\text{Aniso}} = \min(\text{sampler.max}_{\text{Aniso}}, \text{limits.max}_{\text{Aniso}})$$

If $\rho_{\max} = \rho_{\min} = 0$, then all the partial derivatives are zero, the fragment's footprint in texel space is a point, and η **should** be treated as 1. If $\rho_{\max} \neq 0$ and $\rho_{\min} = 0$ then all partial derivatives along one axis are zero, the fragment's footprint in texel space is a line segment, and η **should** be treated as \max_{Aniso} . However, anytime the footprint is small in texel space the implementation **may** use a smaller value of η , even when ρ_{\min} is zero or close to zero. If either `VkPhysicalDeviceFeatures::samplerAnisotropy` or `VkSamplerCreateInfo::anisotropyEnable` are `VK_FALSE`, \max_{Aniso} is set to 1.

If $\eta = 1$, sampling is isotropic. If $\eta > 1$, sampling is anisotropic.

The sampling rate (N) is derived as:

$$N = \lceil \eta \rceil$$

An implementation **may** round N up to the nearest supported sampling rate. An implementation **may** use the value of N as an approximation of η .

LOD Operation

The LOD parameter λ is computed as follows:

$$\lambda_{base}(x, y) = \begin{cases} shaderOp.Lod & \text{(from optional SPIR-V operand)} \\ \log_2\left(\frac{\rho_{max}}{\eta}\right) & \text{otherwise} \end{cases}$$

$$\lambda'(x, y) = \lambda_{base} + \text{clamp}(sampler.bias + shaderOp.bias, -maxSamplerLodBias, maxSamplerLodBias)$$

$$\lambda = \begin{cases} lod_{max}, & \lambda' > lod_{max} \\ \lambda', & lod_{min} \leq \lambda' \leq lod_{max} \\ lod_{min}, & \lambda' < lod_{min} \\ undefined, & lod_{min} > lod_{max} \end{cases}$$

where:

$$\begin{aligned} sampler.bias &= mipLodBias && \text{(from sampler descriptor)} \\ shaderOp.bias &= \begin{cases} Bias & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases} \\ sampler.lod_{min} &= minLod && \text{(from sampler descriptor)} \\ shaderOp.lod_{min} &= \begin{cases} MinLod & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases} \\ lod_{min} &= \max(sampler.lod_{min}, shaderOp.lod_{min}) \\ lod_{max} &= maxLod && \text{(from sampler descriptor)} \end{aligned}$$

and $maxSamplerLodBias$ is the value of the [VkPhysicalDeviceLimits](#) feature `maxSamplerLodBias`.

Image Level(s) Selection

The image level(s) d , d_{hi} , and d_{lo} which texels are read from are determined by an image-level parameter d_l , which is computed based on the LOD parameter, as follows:

$$d_l = \begin{cases} nearest(d'), & \text{mipmapMode is VK_SAMPLER_MIPMAP_MODE_NEAREST} \\ d', & \text{otherwise} \end{cases}$$

where:

$$d' = \max(level_{base} + \text{clamp}(\lambda, 0, q), minLod_{imageView})$$

$$nearest(d') = \begin{cases} \lfloor d' + 0.5 \rfloor - 1, & \text{preferred} \\ \lfloor d' + 0.5 \rfloor, & \text{alternative} \end{cases}$$

and:

$$\begin{aligned} \text{minLod}_{\text{imageView}} &= \begin{cases} \text{minLodFloat}_{\text{imageView}}, & \text{preferred} \\ \text{minLodInteger}_{\text{imageView}}, & \text{alternative} \end{cases} \\ \text{level}_{\text{base}} &= \text{baseMipLevel} \\ q &= \text{levelCount} - 1 \end{aligned}$$

`baseMipLevel` and `levelCount` are taken from the `subresourceRange` of the image view.

`minLodimageView` **must** be less or equal to `levelbase + q`.

If the sampler's `mipmapMode` is `VK_SAMPLER_MIPMAP_MODE_NEAREST`, then the level selected is `d = dl`.

If the sampler's `mipmapMode` is `VK_SAMPLER_MIPMAP_MODE_LINEAR`, two neighboring levels are selected:

$$\begin{aligned} d_{hi} &= \lfloor d_l \rfloor \\ d_{lo} &= \min(d_{hi} + 1, \text{level}_{\text{base}} + q) \\ \delta &= d_l - d_{hi} \end{aligned}$$

δ is the fractional value, quantized to the number of `mipmap precision bits`, used for `linear filtering` between levels.

20.3.8. (s,t,r,q,a) to (u,v,w,a) Transformation

The normalized texel coordinates are scaled by the image level dimensions and the array layer is selected.

This transformation is performed once for each level used in `filtering` (either `d`, or `dhi` and `dlo`).

$$\begin{aligned} u(x, y) &= s(x, y) \times \text{width}_{\text{scale}} + \Delta_i \\ v(x, y) &= \begin{cases} 0 & \text{for 1D images} \\ t(x, y) \times \text{height}_{\text{scale}} + \Delta_j & \text{otherwise} \end{cases} \\ w(x, y) &= \begin{cases} 0 & \text{for 2D or Cube images} \\ r(x, y) \times \text{depth}_{\text{scale}} + \Delta_k & \text{otherwise} \end{cases} \\ a(x, y) &= \begin{cases} a(x, y) & \text{for array images} \\ 0 & \text{otherwise} \end{cases} \end{aligned}$$

where:

$$\text{width}_{\text{scale}} = \text{width}_{\text{level}}$$

$$\text{height}_{\text{scale}} = \text{height}_{\text{level}}$$

$$\text{depth}_{\text{scale}} = \text{depth}_{\text{level}}$$

for conventional images, and:

$$\text{width}_{\text{scale}} = \text{width}_{\text{level}} - 1$$

$$\text{height}_{\text{scale}} = \text{height}_{\text{level}} - 1$$

$$\text{depth}_{\text{scale}} = \text{depth}_{\text{level}} - 1$$

for corner-sampled images.

and where $(\Delta_i, \Delta_j, \Delta_k)$ are taken from the image instruction if it includes a **ConstOffset** or **Offset** operand, otherwise they are taken to be zero.

Operations then proceed to Unnormalized Texel Coordinate Operations.

20.4. Unnormalized Texel Coordinate Operations

20.4.1. (u,v,w,a) to (i,j,k,l,n) Transformation and Array Layer Selection

The unnormalized texel coordinates are transformed to integer texel coordinates relative to the selected mipmap level.

The layer index l is computed as:

$$l = \text{clamp}(\text{RNE}(a), 0, \text{layerCount} - 1) + \text{baseArrayLayer}$$

where **layerCount** is the number of layers in the image subresource range of the image view, **baseArrayLayer** is the first layer from the subresource range, and where:

$$\text{RNE}(a) = \begin{cases} \text{roundTiesToEven}(a) & \text{preferred, from IEEE Std 754-2008 Floating-Point Arithmetic} \\ \lfloor a + 0.5 \rfloor & \text{alternative} \end{cases}$$

The sample index n is assigned the value 0.

Nearest filtering (**VK_FILTER_NEAREST**) computes the integer texel coordinates that the unnormalized coordinates lie within:

$$\begin{aligned} i &= \lfloor u + \text{shift} \rfloor \\ j &= \lfloor v + \text{shift} \rfloor \\ k &= \lfloor w + \text{shift} \rfloor \end{aligned}$$

where:

shift = 0.0

for conventional images, and:

shift = 0.5

for corner-sampled images.

Linear filtering ([VK_FILTER_LINEAR](#)) computes a set of neighboring coordinates which bound the unnormalized coordinates. The integer texel coordinates are combinations of i_0 or i_1 , j_0 or j_1 , k_0 or k_1 , as well as weights α , β , and γ .

$$i_0 = \lfloor u - shift \rfloor$$

$$i_1 = i_0 + 1$$

$$j_0 = \lfloor v - shift \rfloor$$

$$j_1 = j_0 + 1$$

$$k_0 = \lfloor w - shift \rfloor$$

$$k_1 = k_0 + 1$$

$$\alpha = \text{frac}(u - shift)$$

$$\beta = \text{frac}(v - shift)$$

$$\gamma = \text{frac}(w - shift)$$

where:

shift = 0.5

for conventional images, and:

shift = 0.0

for corner-sampled images, and where:

$$\text{frac}(x) = x - \lfloor x \rfloor$$

where the number of fraction bits retained is specified by [VkPhysicalDeviceLimits::subTexelPrecisionBits](#).

Cubic filtering ([VK_FILTER_CUBIC_EXT](#)) computes a set of neighboring coordinates which bound the unnormalized coordinates. The integer texel coordinates are combinations of i_0 , i_1 , i_2 or i_3 , j_0 , j_1 , j_2 or j_3 , k_0 , k_1 , k_2 or k_3 , as well as weights α , β , and γ .

$$\begin{aligned}
i_0 &= \lfloor u - \frac{3}{2} \rfloor & i_1 &= i_0 + 1 & i_2 &= i_1 + 1 & i_3 &= i_2 + 1 \\
j_0 &= \lfloor v - \frac{3}{2} \rfloor & j_1 &= j_0 + 1 & j_2 &= j_1 + 1 & j_3 &= j_2 + 1 \\
k_0 &= \lfloor w - \frac{3}{2} \rfloor & k_1 &= k_0 + 1 & k_2 &= k_1 + 1 & k_3 &= k_2 + 1
\end{aligned}$$

$$\alpha = \text{frac}\left(u - \frac{1}{2}\right)$$

$$\beta = \text{frac}\left(v - \frac{1}{2}\right)$$

$$\gamma = \text{frac}\left(w - \frac{1}{2}\right)$$

where:

$$\text{frac}(x) = x - \lfloor x \rfloor$$

where the number of fraction bits retained is specified by `VkPhysicalDeviceLimits::subTexelPrecisionBits`.

20.5. Integer Texel Coordinate Operations

Integer texel coordinate operations **may** supply a LOD which texels are to be read from or written to using the optional SPIR-V operand `Lod`. If the `Lod` is provided then it **must** be an integer.

The image level selected is:

$$d = level_{base} + \begin{cases} Lod & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases}$$

If `d` does not lie in the range `[baseMipLevel, baseMipLevel + levelCount)` or `d` is less than `minLodInteger_{imageView}`, then any values fetched are zero if the `robustImageAccess2` feature is enabled, otherwise are undefined, and any writes (if supported) are discarded.

20.6. Image Sample Operations

20.6.1. Wrapping Operation

If the used sampler was created without `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT`, `Cube` images ignore the wrap modes specified in the sampler. Instead, if `VK_FILTER_NEAREST` is used within a mip level then `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE` is used, and if `VK_FILTER_LINEAR` is used within a mip level then sampling at the edges is performed as described earlier in the [Cube map edge handling](#) section.

The first integer texel coordinate i is transformed based on the `addressModeU` parameter of the sampler.

$$i = \begin{cases} i \bmod size & \text{for repeat} \\ (size - 1) - \text{mirror}((i \bmod (2 \times size)) - size) & \text{for mirrored repeat} \\ \text{clamp}(i, 0, size - 1) & \text{for clamp to edge} \\ \text{clamp}(i, -1, size) & \text{for clamp to border} \\ \text{clamp}(\text{mirror}(i), 0, size - 1) & \text{for mirror clamp to edge} \end{cases}$$

where:

$$\text{mirror}(n) = \begin{cases} n & \text{for } n \geq 0 \\ -(1 + n) & \text{otherwise} \end{cases}$$

j (for 2D and Cube image) and k (for 3D image) are similarly transformed based on the `addressModeV` and `addressModeW` parameters of the sampler, respectively.

20.6.2. Texel Gathering

SPIR-V instructions with `Gather` in the name return a vector derived from 4 texels in the base level of the image view. The rules for the `VK_FILTER_LINEAR` minification filter are applied to identify the four selected texels. Each texel is then converted to an RGBA value according to `component substitution` and then `swizzled`. A four-component vector is then assembled by taking the component indicated by the `Component` value in the instruction from the swizzled color value of the four texels. If the operation does not use the `ConstOffsets` image operand then the four texels form the 2×2 rectangle used for texture filtering:

$$\begin{aligned} \tau[R] &= \tau_{i0j1}[\text{level}_{base}][\text{comp}] \\ \tau[G] &= \tau_{i1j1}[\text{level}_{base}][\text{comp}] \\ \tau[B] &= \tau_{i1j0}[\text{level}_{base}][\text{comp}] \\ \tau[A] &= \tau_{i0j0}[\text{level}_{base}][\text{comp}] \end{aligned}$$

If the operation does use the `ConstOffsets` image operand then the offsets allow a custom filter to be defined:

$$\begin{aligned} \tau[R] &= \tau_{i0j0 + \Delta_0}[\text{level}_{base}][\text{comp}] \\ \tau[G] &= \tau_{i0j0 + \Delta_1}[\text{level}_{base}][\text{comp}] \\ \tau[B] &= \tau_{i0j0 + \Delta_2}[\text{level}_{base}][\text{comp}] \\ \tau[A] &= \tau_{i0j0 + \Delta_3}[\text{level}_{base}][\text{comp}] \end{aligned}$$

where:

$$\tau[level_{base}][comp] = \begin{cases} \tau[level_{base}][R], & \text{for } comp = 0 \\ \tau[level_{base}][G], & \text{for } comp = 1 \\ \tau[level_{base}][B], & \text{for } comp = 2 \\ \tau[level_{base}][A], & \text{for } comp = 3 \end{cases}$$

comp from SPIR-V operand Component

OpImage*Gather must not be used on a sampled image with **sampler Y'C_BC_R conversion** enabled.

If $level_{base} < minLodInteger_{imageView}$, then any values fetched are zero if the **robustImageAccess2** feature is enabled. Otherwise values are undefined.

20.6.3. Texel Filtering

Texel filtering is first performed for each level (either d or d_{hi} and d_{lo}).

If λ is less than or equal to zero, the texture is said to be *magnified*, and the filter mode within a mip level is selected by the **magFilter** in the sampler. If λ is greater than zero, the texture is said to be *minified*, and the filter mode within a mip level is selected by the **minFilter** in the sampler.

Texel Nearest Filtering

Within a mip level, **VK_FILTER_NEAREST** filtering selects a single value using the (i, j, k) texel coordinates, with all texels taken from layer l.

$$\tau[level] = \begin{cases} \tau_{ijk}[level], & \text{for 3D image} \\ \tau_{ij}[level], & \text{for 2D or Cube image} \\ \tau_i[level], & \text{for 1D image} \end{cases}$$

Texel Linear Filtering

Within a mip level, **VK_FILTER_LINEAR** filtering combines 8 (for 3D), 4 (for 2D or Cube), or 2 (for 1D) texel values, together with their linear weights. The linear weights are derived from the fractions computed earlier:

$$\begin{aligned} w_{i_0} &= (1 - \alpha) \\ w_{i_1} &= (\alpha) \\ w_{j_0} &= (1 - \beta) \\ w_{j_1} &= (\beta) \\ w_{k_0} &= (1 - \gamma) \\ w_{k_1} &= (\gamma) \end{aligned}$$

The values of multiple texels, together with their weights, are combined to produce a filtered value.

The **VkSamplerReductionModeCreateInfo::reductionMode** can control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, a weighted average is computed:

$$\begin{aligned}\tau_{3D} &= \sum_{k=k_0}^{k_1} \sum_{j=j_0}^{j_1} \sum_{i=i_0}^{i_1} (w_i)(w_j)(w_k)\tau_{ijk} \\ \tau_{2D} &= \sum_{j=j_0}^{j_1} \sum_{i=i_0}^{i_1} (w_i)(w_j)\tau_{ij} \\ \tau_{1D} &= \sum_{i=i_0}^{i_1} (w_i)\tau_i\end{aligned}$$

However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above set of multiple texels, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the set of texels with non-zero weights.

Texel Cubic Filtering

Within a mip level, `VK_FILTER_CUBIC_EXT`, filtering computes a weighted average of 64 (for 3D), 16 (for 2D), or 4 (for 1D) texel values, together with their Catmull-Rom, Zero Tangent Cardinal, B-Spline, or Mitchell-Netravali weights as specified by `VkSamplerCubicWeightsCreateInfoQCOM`.

Catmull-Rom weights specified by `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM` are derived from the fractions computed earlier.

$$\begin{aligned}\begin{bmatrix} w_{i_0} & w_{i_1} & w_{i_2} & w_{i_3} \end{bmatrix} &= \frac{1}{2} \begin{bmatrix} 1 & \alpha & \alpha^2 & \alpha^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -1 & 0 & 1 & 0 \\ 2 & -5 & 4 & -1 \\ -1 & 3 & -3 & 1 \end{bmatrix} \\ \begin{bmatrix} w_{j_0} & w_{j_1} & w_{j_2} & w_{j_3} \end{bmatrix} &= \frac{1}{2} \begin{bmatrix} 1 & \beta & \beta^2 & \beta^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -1 & 0 & 1 & 0 \\ 2 & -5 & 4 & -1 \\ -1 & 3 & -3 & 1 \end{bmatrix} \\ \begin{bmatrix} w_{k_0} & w_{k_1} & w_{k_2} & w_{k_3} \end{bmatrix} &= \frac{1}{2} \begin{bmatrix} 1 & \gamma & \gamma^2 & \gamma^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -1 & 0 & 1 & 0 \\ 2 & -5 & 4 & -1 \\ -1 & 3 & -3 & 1 \end{bmatrix}\end{aligned}$$

Zero Tangent Cardinal weights specified by `VK_CUBIC_FILTER_WEIGHTS_ZERO_TANGENT_CARDINAL_QCOM` are derived from the fractions computed earlier.

$$\begin{bmatrix} w_{i_0} & w_{i_1} & w_{i_2} & w_{i_3} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & \alpha & \alpha^2 & \alpha^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -2 & 0 & 2 & 0 \\ 4 & -4 & 2 & -2 \\ -2 & 2 & -2 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{j_0} & w_{j_1} & w_{j_2} & w_{j_3} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & \beta & \beta^2 & \beta^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -2 & 0 & 2 & 0 \\ 4 & -4 & 2 & -2 \\ -2 & 2 & -2 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{k_0} & w_{k_1} & w_{k_2} & w_{k_3} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & \gamma & \gamma^2 & \gamma^3 \end{bmatrix} \begin{bmatrix} 0 & 2 & 0 & 0 \\ -2 & 0 & 2 & 0 \\ 4 & -4 & 2 & -2 \\ -2 & 2 & -2 & 1 \end{bmatrix}$$

B-Spline weights specified by [VK_CUBIC_FILTER_WEIGHTS_B_SPLINE_QCOM](#) are derived from the fractions computed earlier.

$$\begin{bmatrix} w_{i_0} & w_{i_1} & w_{i_2} & w_{i_3} \end{bmatrix} = \frac{1}{6} \begin{bmatrix} 1 & \alpha & \alpha^2 & \alpha^3 \end{bmatrix} \begin{bmatrix} 1 & 4 & 1 & 0 \\ -3 & 0 & 3 & 0 \\ 3 & -6 & 3 & 0 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{j_0} & w_{j_1} & w_{j_2} & w_{j_3} \end{bmatrix} = \frac{1}{6} \begin{bmatrix} 1 & \beta & \beta^2 & \beta^3 \end{bmatrix} \begin{bmatrix} 1 & 4 & 1 & 0 \\ -3 & 0 & 3 & 0 \\ 3 & -6 & 3 & 0 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{k_0} & w_{k_1} & w_{k_2} & w_{k_3} \end{bmatrix} = \frac{1}{6} \begin{bmatrix} 1 & \gamma & \gamma^2 & \gamma^3 \end{bmatrix} \begin{bmatrix} 1 & 4 & 1 & 0 \\ -3 & 0 & 3 & 0 \\ 3 & -6 & 3 & 0 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

Mitchell-Netravali weights specified by [VK_CUBIC_FILTER_WEIGHTS_MITCHELL_NETRAVALI_QCOM](#) are derived from the fractions computed earlier.

$$\begin{bmatrix} w_{i_0} & w_{i_1} & w_{i_2} & w_{i_3} \end{bmatrix} = \frac{1}{18} \begin{bmatrix} 1 & \alpha & \alpha^2 & \alpha^3 \end{bmatrix} \begin{bmatrix} 1 & 16 & 1 & 0 \\ -9 & 0 & 9 & 0 \\ 15 & -36 & 27 & -6 \\ -7 & 21 & -21 & 7 \end{bmatrix}$$

$$\begin{bmatrix} w_{j_0} & w_{j_1} & w_{j_2} & w_{j_3} \end{bmatrix} = \frac{1}{18} \begin{bmatrix} 1 & \beta & \beta^2 & \beta^3 \end{bmatrix} \begin{bmatrix} 1 & 16 & 1 & 0 \\ -9 & 0 & 9 & 0 \\ 15 & -36 & 27 & -6 \\ -7 & 21 & -21 & 7 \end{bmatrix}$$

$$\begin{bmatrix} w_{k_0} & w_{k_1} & w_{k_2} & w_{k_3} \end{bmatrix} = \frac{1}{18} \begin{bmatrix} 1 & \gamma & \gamma^2 & \gamma^3 \end{bmatrix} \begin{bmatrix} 1 & 16 & 1 & 0 \\ -9 & 0 & 9 & 0 \\ 15 & -36 & 27 & -6 \\ -7 & 21 & -21 & 7 \end{bmatrix}$$

The values of multiple texels, together with their weights, are combined to produce a filtered value.

The [VkSamplerReductionModeCreateInfo::reductionMode](#) can control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE` or `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`, a weighted average is computed:

$$\begin{aligned}\tau_{3D} &= \sum_{k=j_0}^{k_3} \sum_{j=j_0}^{j_3} \sum_{i=i_0}^{i_3} (w_i)(w_j)(w_k)\tau_{ijk} \\ \tau_{2D} &= \sum_{j=j_0}^{j_3} \sum_{i=i_0}^{i_3} (w_i)(w_j)\tau_{ij} \\ \tau_{1D} &= \sum_{i=i_0}^{i_3} (w_i)\tau_i\end{aligned}$$

However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above set of multiple texels, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the set of texels with non-zero weights.

Texel Range Clamp

When `reductionMode` is `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`, the weighted average is clamped to be within the component-wise minimum and maximum of the set of texels with non-zero weights.

Texel Mipmap Filtering

`VK_SAMPLER_MIPMAP_MODE_NEAREST` filtering returns the value of a single mipmap level,

$$\tau = \tau[d].$$

`VK_SAMPLER_MIPMAP_MODE_LINEAR` filtering combines the values of multiple mipmap levels ($\tau[hi]$ and $\tau[lo]$), together with their linear weights.

The linear weights are derived from the fraction computed earlier:

$$\begin{aligned}w_{hi} &= (1 - \delta) \\ w_{lo} &= (\delta)\end{aligned}$$

The values of multiple mipmap levels, together with their weights, are combined to produce a final filtered value.

The `VkSamplerReductionModeCreateInfo::reductionMode` can control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, a weighted average is computed:

$$\tau = (w_{hi})\tau[hi] + (w_{lo})\tau[lo]$$

However, if the reduction mode is [VK_SAMPLER_REDUCTION_MODE_MIN](#) or [VK_SAMPLER_REDUCTION_MODE_MAX](#), the process operates on the above values, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the values with non-zero weights.

Texel Anisotropic Filtering

Anisotropic filtering is enabled by the [anisotropyEnable](#) in the sampler. When enabled, the image filtering scheme accounts for a degree of anisotropy.

The particular scheme for anisotropic texture filtering is implementation-dependent. Implementations **should** consider the [magFilter](#), [minFilter](#) and [mipmapMode](#) of the sampler to control the specifics of the anisotropic filtering scheme used. In addition, implementations **should** consider [minLod](#) and [maxLod](#) of the sampler.

For historical reasons, vendor implementations of anisotropic filtering interpret these sampler parameters in different ways, particularly in corner cases such as [magFilter](#), [minFilter](#) of [VK_FILTER_NEAREST](#) or [maxAnisotropy](#) equal to 1.0. Applications should not expect consistent behavior in such cases, and should use anisotropic filtering only with parameters which are expected to give a quality improvement relative to [LINEAR](#) filtering.

The following describes one particular approach to implementing anisotropic filtering for the 2D Image case; implementations **may** choose other methods:

Given a [magFilter](#), [minFilter](#) of [VK_FILTER_LINEAR](#) and a [mipmapMode](#) of [VK_SAMPLER_MIPMAP_MODE_NEAREST](#):

NOTE

Instead of a single isotropic sample, N isotropic samples are sampled within the image footprint of the image level d to approximate an anisotropic filter. The sum $\tau_{2D_{aniso}}$ is defined using the single isotropic $\tau_{2D}(u,v)$ at level d.

$$\tau_{2D_{aniso}} = \frac{1}{N} \sum_{i=1}^N \tau_{2D} \left(u \left(x - \frac{1}{2} + \frac{i}{N+1}, y \right), v \left(x - \frac{1}{2} + \frac{i}{N+1}, y \right) \right), \quad \text{when } \rho_x > \rho_y$$

$$\tau_{2D_{aniso}} = \frac{1}{N} \sum_{i=1}^N \tau_{2D} \left(u \left(x, y - \frac{1}{2} + \frac{i}{N+1} \right), v \left(x, y - \frac{1}{2} + \frac{i}{N+1} \right) \right), \quad \text{when } \rho_y \geq \rho_x$$

When [VkSamplerReductionModeCreateInfo::reductionMode](#) is [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE](#), the above summation is used. However, if the reduction mode is [VK_SAMPLER_REDUCTION_MODE_MIN](#) or [VK_SAMPLER_REDUCTION_MODE_MAX](#), the process operates on the above values, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the values with non-zero weights.

20.7. Texel Footprint Evaluation

The SPIR-V instruction `OpImageSampleFootprintNV` evaluates the set of texels from a single mip level that would be accessed during a [texel filtering](#) operation. In addition to the inputs that would be accepted by an equivalent `OpImageSample*` instruction, `OpImageSampleFootprintNV` accepts two additional inputs. The `Granularity` input is an integer identifying the size of texel groups used to evaluate the footprint. Each bit in the returned footprint mask corresponds to an aligned block of texels whose size is given by the following table:

Table 33. Texel Footprint Granularity Values

Granularity	Dim = 2D	Dim = 3D
0	unsupported	unsupported
1	2x2	2x2x2
2	4x2	unsupported
3	4x4	4x4x2
4	8x4	unsupported
5	8x8	unsupported
6	16x8	unsupported
7	16x16	unsupported
8	unsupported	unsupported
9	unsupported	unsupported
10	unsupported	16x16x16
11	64x64	32x16x16
12	128x64	32x32x16
13	128x128	32x32x32
14	256x128	64x32x32
15	256x256	unsupported

The `Coarse` input is used to select between the two mip levels that **may** be accessed during texel filtering when using a `mipmapMode` of `VK_SAMPLER_MIPMAP_MODE_LINEAR`. When filtering between two mip levels, a `Coarse` value of `true` requests the footprint in the lower-resolution mip level (higher level number), while `false` requests the footprint in the higher-resolution mip level. If texel filtering would access only a single mip level, the footprint in that level would be returned when `Coarse` is `false`; an empty footprint would be returned when `Coarse` is `true`.

The footprint for `OpImageSampleFootprintNV` is returned in a structure with six members:

- The first member is a boolean value that is true if the texel filtering operation would access only a single mip level.
- The second member is a two- or three-component integer vector holding the footprint anchor location. For two-dimensional images, the returned components are in units of eight texel

groups. For three-dimensional images, the returned components are in units of four texel groups.

- The third member is a two- or three-component integer vector holding a footprint offset relative to the anchor. All returned components are in units of texel groups.
- The fourth member is a two-component integer vector mask, which holds a bitfield identifying the set of texel groups in an 8x8 or 4x4x4 neighborhood relative to the anchor and offset.
- The fifth member is an integer identifying the mip level containing the footprint identified by the anchor, offset, and mask.
- The sixth member is an integer identifying the granularity of the returned footprint.

For footprints in two-dimensional images (**Dim2D**), the mask returned by **OpImageSampleFootprintNV** indicates whether each texel group in a 8x8 local neighborhood of texel groups would have one or more texels accessed during texel filtering. In the mask, the texel group with local group coordinates (lgx, lgy) is considered covered if and only if

$$0 \neq ((mask.x + (mask.y \ll 32)) \& (1 \ll (lgy \times 8 + lgx)))$$

where:

- $0 \leq lgx < 8$ and $0 \leq lgy < 8$; and
- *mask* is the returned two-component mask.

The local group with coordinates (lgx, lgy) in the mask is considered covered if and only if the texel filtering operation would access one or more texels τ_{ij} in the returned mip level where:

$$\begin{aligned} i0 &= \begin{cases} gran.x \times (8 \times anchor.x + lgx), & \text{if } lgx + offset.x < 8 \\ gran.x \times (8 \times (anchor.x - 1) + lgx), & \text{otherwise} \end{cases} \\ i1 &= i0 + gran.x - 1 \\ j0 &= \begin{cases} gran.y \times (8 \times anchor.y + lgy), & \text{if } lgy + offset.y < 8 \\ gran.y \times (8 \times (anchor.y - 1) + lgy), & \text{otherwise} \end{cases} \\ j1 &= j0 + gran.y - 1 \end{aligned}$$

and

- $i0 \leq i \leq i1$ and $j0 \leq j \leq j1$;
- *gran* is a two-component vector holding the width and height of the texel group identified by the granularity;
- *anchor* is the returned two-component anchor vector; and
- *offset* is the returned two-component offset vector.

For footprints in three-dimensional images (**Dim3D**), the mask returned by **OpImageSampleFootprintNV** indicates whether each texel group in a 4x4x4 local neighborhood of texel groups would have one or more texels accessed during texel filtering. In the mask, the texel group with local group coordinates (lgx, lgy, lgz) , is considered covered if and only if:

$$0 \neq ((mask.x + (mask.y < 32)) \& (1 < (lgz \times 16 + lgy \times 4 + lgx)))$$

where:

- $0 \leq lgx < 4$, $0 \leq lgy < 4$, and $0 \leq lgz < 4$; and
- *mask* is the returned two-component mask.

The local group with coordinates (*lgx*, *lgy*, *lgz*) in the mask is considered covered if and only if the texel filtering operation would access one or more texels τ_{ijk} in the returned mip level where:

$$\begin{aligned} i0 &= \begin{cases} gran.x \times (4 \times anchor.x + lgx), & \text{if } lgx + offset.x < 4 \\ gran.x \times (4 \times (anchor.x - 1) + lgx), & \text{otherwise} \end{cases} \\ i1 &= i0 + gran.x - 1 \\ j0 &= \begin{cases} gran.y \times (4 \times anchor.y + lgy), & \text{if } lgy + offset.y < 4 \\ gran.y \times (4 \times (anchor.y - 1) + lgy), & \text{otherwise} \end{cases} \\ j1 &= j0 + gran.y - 1 \\ k0 &= \begin{cases} gran.z \times (4 \times anchor.z + lgz), & \text{if } lgz + offset.z < 4 \\ gran.z \times (4 \times (anchor.z - 1) + lgz), & \text{otherwise} \end{cases} \\ k1 &= k0 + gran.z - 1 \end{aligned}$$

and

- $i0 \leq i \leq i1$, $j0 \leq j \leq j1$, $k0 \leq k \leq k1$;
- *gran* is a three-component vector holding the width, height, and depth of the texel group identified by the granularity;
- *anchor* is the returned three-component anchor vector; and
- *offset* is the returned three-component offset vector.

If the sampler used by `OpImageSampleFootprintNV` enables anisotropic texel filtering via `anisotropyEnable`, it is possible that the set of texel groups accessed in a mip level may be too large to be expressed using an 8x8 or 4x4x4 mask using the granularity requested in the instruction. In this case, the implementation uses a texel group larger than the requested granularity. When a larger texel group size is used, `OpImageSampleFootprintNV` returns an integer granularity value that **can** be interpreted in the same manner as the granularity value provided to the instruction to determine the texel group size used. If anisotropic texel filtering is disabled in the sampler, or if an anisotropic footprint can be represented as an 8x8 or 4x4x4 mask with the requested granularity, `OpImageSampleFootprintNV` will use the requested granularity as-is and return a granularity value of zero.

`OpImageSampleFootprintNV` supports only two- and three-dimensional image accesses (`Dim2D` and `Dim3D`), and the footprint returned is undefined if a sampler uses an addressing mode other than `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.

20.8. Weight Image Sampling

The SPIR-V instruction `OpImageSampleWeightedQCOM` specifies a texture sampling operation involving two images: the *sampled image* and the *weight image*. It is similar to bilinear filtering except more than 2x2 texels may participate in the filter and the filter weights are application-specified rather than computed by fixed-function hardware. The weight image view defines a 2D kernel weights used during sampling.

The `OpImageSampleWeightedQCOM` support normalized or unnormalized texel coordinates. In addition to the inputs that would be accepted by an equivalent `OpImageSample*` instruction, `OpImageSampleWeightedQCOM` accepts a `weight` input that specifies the view of a sample weight image

The input `weight` **must** be a view of a 2D or 1D image with `miplevels` equal to 1, `samples` equal to `VK_SAMPLE_COUNT_1_BIT`, created with an identity swizzle, and created with the `VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM` usage flag set. The `VkImageViewSampleWeightCreateInfoQCOM` specifies additional parameters of the view: `filterCenter`, `filterSize`, and `numPhases`. described in more detail below.

The `weight` input **must** be bound using a `sample weight image` descriptor type. The `weight` view defines a filtering kernel that is a region of view's subresource range. The kernel spans a region from integer texel coordinate (0,0) to (`filterSize.x-1`, `filterSize.y-1`). It is valid for the view's subresource to have dimensions larger than the kernel but the texels with integer coordinates greater than (`filterSize.width-1`, `filterSize.height-1`) are ignored by weight sampling.

`filterCenter` designates an integer texel coordinate within the filter kernel as being the 'center' of the kernel. The center **must** be in the range (0,0) to (`filterSize.x-1`, `filterSize.y-1`). `numPhases` describes the number of filter phases used to provide sub-pixel filtering. Both are described in more detail below.

20.8.1. Weight Image Layout

The weight image specifies filtering kernel weight values. A 2D image view can be used to specify a 2D matrix of filter weights. For separable filters, a 1D image view can be used to specify the horizontal and vertical weights.

2D Non-Separable Weight Filters

A 2D image view defined with `VkImageViewSampleWeightCreateInfoQCOM` describes a 2D matrix (`filterSize.width × filterSize.height`) of weight elements with filter's center point at `filterCenter`. Note that `filterSize` can be smaller than the view's subresource, but the filter will always be located starting at integer texel coordinate (0,0).

The following figure illustrates a 2D convolution filter having `filterSize` of (4,3) and `filterCenter` at (1, 1).

(0,0)	(1,0)	(2,0)	(3,0)
(0,1)	origin	(2,1)	(3,1)
(0,2)	(1,2)	(2,2)	(3,2)

2D Convolution Filter

Figure 12. 2D Convolution Filter

For a 2D weight filter, the phases are stored as layers of a 2D array image. The width and height of the view's subresource range **must** be less than or equal to [VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension](#). The layers are stored in horizontal phase major order. Expressed as a formula, the layer index for each filter phase is computed as:

```
layerIndex(horizPhase,vertPhase,horizPhaseCount) = (vertPhase * horizPhaseCount) +
horizPhase
```

1D Separable Weight Filters

A separable weight filter is a 2D filter that can be specified by two 1D filters in the x and y directions such that their product yields the 2D filter. The following example shows a 2D filter and its associated separable 1D horizontal and vertical filters.

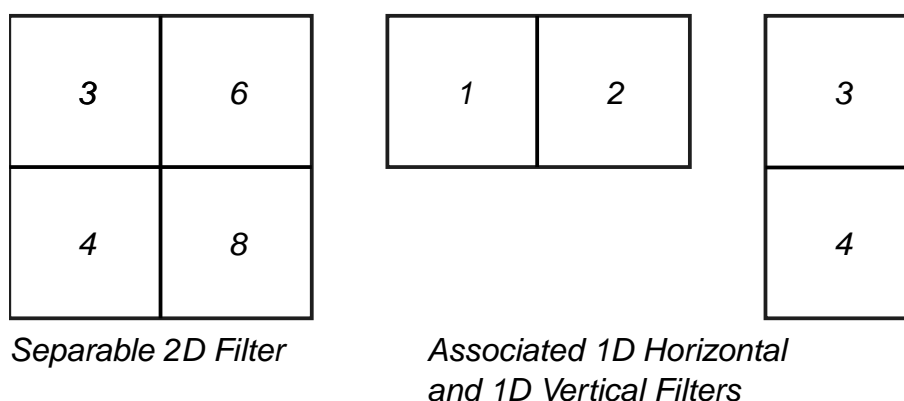

Figure 13. Separable 2D Convolution Filter

A 1D array image view defined with [VkImageViewSampleWeightCreateInfoQCOM](#) and with `layerCount` equal to '2' describes a separable weight filter. The horizontal weights are specified in slice '0' and the vertical weights in slice '1'. The `filterSize` and `filterCenter` specify the size and origin of the of the horizontal and vertical filters. For many use cases, 1D separable filters can offer a performance advantage over 2D filters.

For a 1D separable weight filter, the phases are arranged into a 1D array image with two layers. The horizontal weights are stored in layer 0 and the vertical weights in layer 1. Within each layer of the 1D array image, the weights are arranged into groups of 4, and then arranged by phase. Expressed as a formula, the 1D texel offset for each weight within each layer is computed as:

```
// Let horizontal weights have a weightIndex of [0, filterSize.width - 1]
// Let vertical weights have a weightIndex of [0, filterSize.height - 1]
// Let phaseCount be the number of phases in either the vertical or horizontal
// direction.

texelOffset(phaseIndex, weightIndex, phaseCount) = (phaseCount * 4 * (weightIndex / 4))
+ (phaseIndex * 4) + (weightIndex % 4)
```

20.8.2. Weight Sampling Phases

When using weight image sampling, the texture coordinates may not align with a texel center in the sampled image. In this case, the filter weights can be adjusted based on the subpixel location. This is termed “subpixel filtering” to indicate that the origin of the filter lies at a subpixel location other than the texel center. Conceptually, this means that the weight filter is positioned such that filter taps do not align with sampled texels exactly. In such a case, modified filter weights may be needed to adjust for the off-center filter taps. Unlike bilinear filtering where the subpixel weights are computed by the implementation, subpixel weight image sampling requires that the per-phase filter weights are pre-computed by the application and stored in an array where each slice of the array is a “filter phase”. The array is indexed by the implementation based on subpixel positioning. Rather than a single 2D kernel of filter weights, the application provides an array of kernels, one set of filter weights per phase.

The number of phases are restricted by following requirements, which apply to both separable and non-separable filters:

- The number of phases in the vertical direction, `phaseCountvert`, **must** be a power of two (i.e., 1, 2, 4, etc.).
- The number of phases in the horizontal direction `phaseCounthoriz`, **must** equal `phaseCountvert`.
- The total number of phases, `phaseCountvert × phaseCounthoriz`, **must** be less than or equal to [VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterPhases](#).

20.8.3. Weight Sampler Parameters

Weight sampling requires `VkSamplerCreateInfo` `addressModeU` and `addressModeV` **must** be [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#) or [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER](#). If

[VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER](#) is used, then the border color **must** be [VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK](#).

20.8.4. Weight Sampling Operation

The 2D unnormalized texel coordinates (u, v) are transformed by *filterCenter* to specify coordinates i_0, j_0 .

$$i_0 = \lfloor u - \text{filterCenter}_x \rfloor$$

$$j_0 = \lfloor v - \text{filterCenter}_y \rfloor$$

where *filterCenter* is specified by [VkImageViewSampleWeightCreateInfoQCOM::filterCenter](#).

Two sets of neighboring integer 2D texel coordinates are generated. The first set is used for selecting texels from the sampled image τ and the second set used for selecting texels from the weight image w . The first set of neighboring coordinates are combinations of i_0 to $i_{\text{filterWidth}-1}$ and j_0 to $j_{\text{filterHeight}-1}$. The second set of neighboring coordinates are combinations of k_0 to $k_{\text{filterWidth}-1}$ and l_0 to $l_{\text{filterHeight}-1}$. The first and second sets each contain $(\text{filterWidth} \times \text{filterHeight})$ of pairs of (i, j) and (k, l) coordinates respectively.

$$\{i_q\}_{q=0}^{\text{filterWidth}-1} = i_0 + q$$

$$\{j_q\}_{q=0}^{\text{filterHeight}-1} = j_0 + q$$

$$\{k_q\}_{q=0}^{\text{filterWidth}-1} = q$$

$$\{l_q\}_{q=0}^{\text{filterHeight}-1} = q$$

where *filterWidth* and *filterHeight* are specified by [VkImageViewSampleWeightCreateInfoQCOM::filterSize](#).

Each of the generated integer coordinates (i_q, j_q) is transformed by [texture wrapping operation](#), followed by [integer texel coordinate validation](#). If any coordinate fails coordinate validation, it is a Border Texel and [border replacement](#) is performed.

The phase index ψ is computed from the fraction bits of the unnormalized 2D texel coordinates:

$$\text{phaseCount}_h = \text{phaseCount}_v = \sqrt{\text{numPhases}}$$

$$hPhase = \lfloor \text{frac}(u) \times \text{phaseCount}_h \rfloor$$

$$vPhase = \lfloor \text{frac}(v) \times \text{phaseCount}_v \rfloor$$

$$\psi = (vPhase \times \text{phaseCount}_h) + hPhase$$

where the number of fraction bits retained is $\log_2(\text{numPhases})$ specified by [VkImageViewSampleWeightCreateInfoQCOM::numPhases](#)

Each pair of texel coordinates (i, j) in the first set selects a single texel value τ_{ij} from the sampled

image. Each pair of texel coordinates (k, l) in the second set, combined with phaseIndex ψ , selects a single weight from the weight image $w(k, l, \psi)$.

$$w(k, l, \psi) = \begin{cases} w_{kl}[\psi] & (\psi \text{ as layer index}) \text{ for 2D array view (non-separable filter)} \\ weight_h \times weight_v & \text{for 1D array view (separable filter)} \end{cases}$$

If w is a 2D array view, then non-separable filtering is specified, and integer coordinates (k, l) are used to select texels from layer ψ of w . If w is a 1D array view, then separable filtering is specified and integer coordinates (k, l) are transformed to (k_{packed}, l_{packed}) , and used to select horizontal weight ($weight_h$) and vertical weight ($weight_v$) texels from layer 0 and layer 1 of w respectively.

$$k_{packed} = (phaseCount_h \times 4 \times \lfloor k / 4 \rfloor) + (hPhase \times 4) + (k \% 4)$$

$$l_{packed} = (phaseCount_v \times 4 \times \lfloor l / 4 \rfloor) + (vPhase \times 4) + (l \% 4)$$

$$weight_h = w_{k_{packed}}[0] \quad \text{(horizontal weights packed in layer 0)}$$

$$weight_v = w_{l_{packed}}[1] \quad \text{(vertical weights packed in layer 1)}$$

Where $\%$ refers to the integer modulo operator.

Each selected texel is read with the operations specified in [Texel Reads](#), and their values are combined to produce a filtered value.

$$\tau_{weightSampling} = \sum_{\substack{j = j_0 \\ l = l_0}}^{j_{filterHeight} - 1} \sum_{\substack{i = i_0 \\ k = k_0}}^{i_{filterWidth} - 1} w(k, l, \psi) \tau_{ij}$$

When [VkSamplerReductionModeCreateInfo::reductionMode](#) is [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE](#), the above summation is used. However, if the reduction mode is [VK_SAMPLER_REDUCTION_MODE_MIN](#) or [VK_SAMPLER_REDUCTION_MODE_MAX](#), the process operates on the above values, computing a component-wise minimum or maximum of the texels with non-zero weights. If the reduction mode is [VK_SAMPLER_REDUCTION_MODE_MIN](#) or [VK_SAMPLER_REDUCTION_MODE_MAX](#), each $w(k, l, \psi)$ weight **must** be equal to 0.0 or 1.0, otherwise the undefined values are returned.

Finally, the operations described in [Component swizzle](#) are performed and the final result is returned to the shader.

20.9. Block Matching

The SPIR-V instruction [opImageBlockMatchSAD](#) and [opImageBlockMatchSSD](#) specify texture block matching operations where a block or region of texels within a *target image* is compared with a same-sized region in a *reference image*. The instructions make use of two image views: the *target view* and the *reference view*. The target view and reference view can be the same view, allowing block matching of two blocks within a single image.

Similar to an equivalent [OpImageFetch](#) instruction, [opImageBlockMatchSAD](#) and [opImageBlockMatchSSD](#)

specify an `image` and an integer texel `coordinate` which describes the bottom-left texel of the target block. There are three additional inputs. The `reference` and `refCoordinate` specifies bottom-left texel of the reference block. The `blockSize` specifies the integer width and height of the target and reference blocks to be compared, and **must** not be greater than `VkPhysicalDeviceImageProcessingPropertiesQCOM.maxBlockMatchRegion`. If `blockSize` is specified with either dimension 0, `Result` will return an undefined value.

`opImageBlockMatchWindowSAD` and `opImageBlockMatchWindowSSD` take the same input parameters as the corresponding non-window instructions. The block matching comparison is performed for all pixel values within a 2D window whose dimensions are specified in the sampler.

20.9.1. Block Matching Sampler Parameters

For `opImageBlockMatchSAD` and `opImageBlockMatchSSD`, the input `sampler` **must** be created with `addressModeU` and `addressModeV`, equal to `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`, or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` with `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`. The input `sampler` **must** be created with `unnormalizedCoordinates` equal to `VK_TRUE`. The input `sampler` **must** be created with `components` equal to `VK_COMPONENT_SWIZZLE_IDENTITY`.

For `opImageBlockMatchWindowSAD` and `opImageBlockMatchWindowSSD` instructions, the `target` sampler **must** have been created with `VkSamplerBlockMatchWindowCreateInfoQCOM` in the `pNext` chain.

For `opImageBlockMatchWindowSAD`, `opImageBlockMatchWindowSSD`, `opImageBlockMatchGatherSAD`, or `opImageBlockMatchGatherSSD` instructions, the input `sampler` **must** be created with `addressModeU` and `addressModeV`, equal to `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` with `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`.

Other sampler states are ignored.

20.9.2. Block Matching Operation

Block matching SPIR-V instructions `opImageBlockMatchSAD` and `opImageBlockMatchSSD` specify two sets of 2D integer texel coordinates: target coordinates (u, v) and reference coordinates (s, t).

The coordinates define the bottom-left texel of the target block (i_0, j_0) and the reference block (k_0, l_0).

$$i_0 = u$$

$$j_0 = v$$

$$k_0 = s$$

$$l_0 = t$$

For the target block, a set of neighboring integer texel coordinates are generated. The neighboring coordinates are combinations of i_0 to $i_{blockWidth-1}$ and j_0 to $j_{blockHeight-1}$. The set is of size $blockWidth \times blockHeight$.

$$\{i_q\}_{q=0}^{blockWidth-1} = i_0 + q$$

$$\{j_q\}_{q=0}^{blockHeight-1} = j_0 + q$$

where *blockWidth* and *blockHeight* is specified by the **blockSize** operand.

If any target integer texel coordinate (*i*, *j*) in the set fails [integer texel coordinate validation](#), then the texel is an invalid texel and [border replacement](#) is performed.

Similarly for the reference block, a set of neighboring integer texel coordinates are generated.

$$\{k_q\}_{q=0}^{blockWidth-1} = k_0 + q$$

$$\{l_q\}_{q=0}^{blockHeight-1} = l_0 + q$$

Each reference texel coordinate (*k*, *l*) in the set **must** not fail [integer texel coordinate validation](#). To avoid undefined behavior, application shader should guarantee that the reference block is fully within the bounds of the reference image.

Each pair of texel coordinates (*i*, *j*) in the set selects a single texel from the target image τ_{ij} . Each pair of texel coordinates (*k*, *l*) in the set selects a single texel from the reference image v_{kl} .

Each selected texel is read with the operations specified in [Texel Reads](#), without performing [Component Substitution](#).

The difference between target and reference texel values is summed to compute a difference metric. The **opTextureBlockMatchSAD** computes the sum of absolute differences.

$$\tau_{SAD} = \sum_{\substack{j=j_0 \\ l=l_0}}^{j_{blockHeight}-1} \sum_{\substack{i=i_0 \\ k=k_0}}^{i_{blockWidth}-1} |v_{kl} - \tau_{ij}|$$

The **opImageBlockMatchSSD** computes the sum of the squared differences.

$$\tau_{SSD} = \sum_{\substack{j=j_0 \\ l=l_0}}^{j_{blockHeight}-1} \sum_{\substack{i=i_0 \\ k=k_0}}^{i_{blockWidth}-1} |v_{kl} - \tau_{ij}|^2$$

When [VkSamplerReductionModeCreateInfo::reductionMode](#) is [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE](#), the above summation is used. However, if the reduction mode is [VK_SAMPLER_REDUCTION_MODE_MIN](#) or [VK_SAMPLER_REDUCTION_MODE_MAX](#), the process operates on the above values, computing a component-wise minimum or maximum of $|v_{kl} - \tau_{ij}|$, respectively. For τ_{SAD} , the minimum or maximum difference is computed and for τ_{SSD} , the square of the minimum or maximum is computed.

```

        if (SAD < minSAD) {
            minSAD = SAD;
            minCoord = uvec2(x,y);
        }
        if (SAD > maxSAD) {
            maxSAD = SAD;
            maxCoord = uvec2(x,y);
        }
    }
}
if (compareMode==MIN) {
    return vec4(minSAD, minCoord.x, minCoord.y, 0.0);
} else {
    return vec4(maxSAD, maxCoord.x, maxCoord.y, 0.0);
}
}

```

Block Matching Gather Operation

Block matching Gather SPIR-V instructions `opImageBlockMatchGatherSAD` and `opImageBlockMatchGatherSSD` specify two sets of 2D integer texel coordinates: target coordinates (u, v) and reference coordinates (s, t) .

These instructions perform the [block matching operation](#) 4 times, using integer target coordinates (u, v) , $(u + 1, v)$, $(u + 2, v)$, and $(u + 3, v)$. The R component from each of those 4 operations is gathered and returned in the R, G, B, and A components of the output respectively. For each block match operation, the reference coordinate is (s, t) . For each block match operation, only the R component of the target and reference images are compared. The following pseudocode describes the operation `opImageBlockMatchGatherSAD`. The pseudocode for `opImageBlockMatchGatherSSD` follows an identical pattern.

```

vec4 opImageBlockMatchGatherSAD(sampler2D target,
                                uvec2 targetCoord,
                                sampler2D reference,
                                uvec2 refCoord,
                                uvec2 blocksize) {
    vec4 out;
    for (uint x=0, x<4; x++) {
        float SAD = textureBlockMatchSAD(target,
                                          targetCoord + uvec2(x, 0),
                                          reference,
                                          refCoord,
                                          blocksize).x;

        if (x == 0) {
            out.x = SAD;
        }
        if (x == 1) {
            out.y = SAD;
        }
    }
}

```

```

    if (x == 2) {
        out.z = SAD;
    }
    if (x == 3) {
        out.w = SAD;
    }
}
return out;
}

```

20.10. Box Filter Sampling

The SPIR-V instruction `OpImageBoxFilterQCOM` specifies texture box filtering operation where a weighted average of a region of texels is computed, with the weights proportional to the coverage of each of the texels.

In addition to the inputs that would be accepted by an equivalent `OpImageSample*` instruction, `OpImageBoxFilterQCOM` accepts one additional input, `boxSize` which specifies the width and height in texels of the region to be averaged.

The figure below shows an example of using `OpImageBoxFilterQCOM` to sample from a 8×4 texel two-dimensional image, with unnormalized texture coordinates (4.125, 2.625) and `boxSize` of (2.75, 2.25). The filter will read 12 texel values and compute a weights based portion of each texel covered by the box.

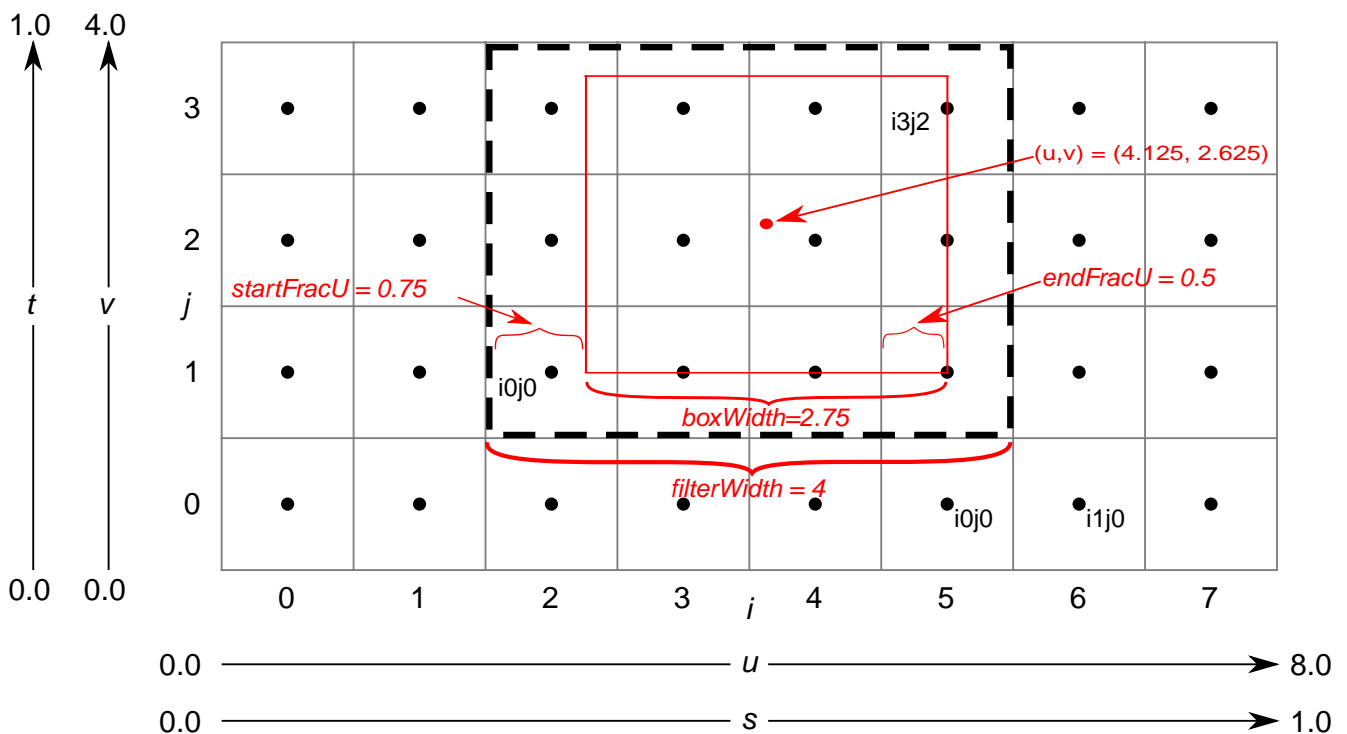

Figure 14. Box Filter Sampling Example

If `boxSize` has height and width both equal to 1.0, then this instruction will behave as traditional bilinear filtering. The `boxSize` parameter **must** be greater than or equal to 1.0 and **must** not be greater than `VkPhysicalDeviceImageProcessingPropertiesQCOM.maxBoxFilterBlockSize`.

20.10.1. Box Filter Sampler Parameters

The input **sampler** must be created with **addressModeU** and **addressModeV**, equal to **VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE**, or **VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER** with **VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK**.

20.10.2. Box Filter Operation

The 2D unnormalized texel coordinates (u, v) are transformed by $boxSize$ to specify integer texel coordinates (i_0, j_0) of the bottom left texel for the filter.

$$i_0 = \lfloor u - \frac{boxWidth}{2} \rfloor$$
$$j_0 = \lfloor v - \frac{boxHeight}{2} \rfloor$$

where $boxWidth$ and $boxHeight$ are specified by the code:(x,y) components of the **boxSize** operand.

The filter dimensions ($filterWidth \times filterHeight$) are computed from the fractional portion of the (u, v) coordinates and the $boxSize$.

$$startFracU = \text{frac} \left(u - \frac{boxWidth}{2} \right)$$
$$startFracV = \text{frac} \left(v - \frac{boxHeight}{2} \right)$$
$$endFracU = \text{frac} (startFracU + boxWidth)$$
$$endFracV = \text{frac} (startFracV + boxHeight)$$
$$filterWidth = \lfloor startFracU + boxWidth \rfloor$$
$$filterHeight = \lfloor startFracV + boxHeight \rfloor$$

where the number of fraction bits retained by $\text{frac}()$ is specified by **VkPhysicalDeviceLimits::subTexelPrecisionBits**.

A set of neighboring integer texel coordinates are generated. The neighboring coordinates are combinations of i_0 to $i_{filterWidth-1}$ and j_0 to $j_{filterHeight-1}$, with i_0, j_0 being the top-left coordinate of this set. The set is of size ($filterWidth \times filterHeight$).

$$\{i_q\}_{q=0}^{filterWidth-1} = i_0 + q$$
$$\{j_q\}_{q=0}^{filterHeight-1} = j_0 + q$$

Each of the generated integer coordinates (i_q, j_q) is transformed by **texture wrapping operation**, followed by **integer texel coordinate validation**. If any coordinate fails coordinate validation, it is a Border Texel and **border replacement** is performed.

Horizontal weights $horizWeight_0$ to $horizWeight_{boxWidth-1}$ and vertical weights $vertWeight_0$ to $vertWeight_{boxHeight-1}$ are computed. Texels that are fully covered by the box will have a horizontal and vertical weight of 1. Texels partially covered by the box will have reduced weights proportional to the coverage.

$$horizWeight_i = \begin{cases} (1 - startFracU), & \text{for } (i = 0) \\ (endFracU), & \text{for } (i = filterWidth - 1) \text{ and } (endFracU \neq 0) \\ (1), & \text{otherwise} \end{cases}$$

$$vertWeight_j = \begin{cases} (1 - startFracV), & \text{for } (j = 0) \\ (endFracV), & \text{for } (j = filterHeight - 1) \text{ and } (endFracV \neq 0) \\ (1), & \text{otherwise} \end{cases}$$

The values of multiple texels, together with their horizontal and vertical weights, are combined to produce a box filtered value.

$$\tau_{boxFilter} = \frac{1}{boxHeight \times boxWidth} \sum_{j=j_0}^{j_{filterHeight}-1} \sum_{i=i_0}^{i_{filterWidth}-1} (horizWeight_i)(vertWeight_j)\tau_{ij}$$

When `VkSamplerReductionModeCreateInfo::reductionMode` is `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, the above summation is used. However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above values, computing a component-wise minimum or maximum of the texels.

20.11. Image Operation Steps

Each step described in this chapter is performed by a subset of the image instructions:

- Texel Input Validation Operations, Format Conversion, Texel Replacement, Conversion to RGBA, and Component Swizzle: Performed by all sampling instructions.
- Depth Comparison: Performed by `OpImage*Dref` instructions.
- Projection: Performed by all `OpImage*Proj` instructions.
- Derivative Image Operations, Cube Map Operations, Scale Factor Operation, LOD Operation and Image Level(s) Selection, and Texel Anisotropic Filtering: Performed by all `OpImageSample*` and `OpImageSparseSample*` instructions.
- (s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and (u,v,w,a) to (i,j,k,l,n) Transformation And Array Layer Selection: Performed by all `OpImageSample`, `OpImageSparseSample`, and `OpImage*Gather` instructions.
- Texel Gathering: Performed by `OpImage*Gather` instructions.
- Texel Footprint Evaluation: Performed by `OpImageSampleFootprint` instructions.
- Texel Filtering: Performed by all `OpImageSample*` and `OpImageSparseSample*` instructions.
- Sparse Residency: Performed by all `OpImageSparse*` instructions.

- (s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and Weight Image Sampling: Performed by `OpImageWeightedSample*` instructions.
- (s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and Block Matching: Performed by `OpImageBlockMatch*` instructions.
- (s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and Box Filter Sampling: Performed by `OpImageBoxFilter*` instructions.

20.12. LOD Query

`OpImageQueryLod` returns the LOD parameters that would be used in a sampling instruction with the given image and coordinates. If the descriptor that would be accessed is a null descriptor then (0,0) is returned. Otherwise, the steps described in this chapter are performed as if for `OpImageSampleImplicitLod`, up to [Scale Factor Operation, LOD Operation and Image Level\(s\) Selection](#). The return value is the vector $(\lambda', d_l - \text{level}_{\text{base}})$. These values **may** be subject to implementation-specific maxima and minima for very large, out-of-range values.

If the image is a [weight image](#), the value returned by `OpImageQueryLod` is undefined.

Chapter 21. Fragment Density Map Operations

21.1. Fragment Density Map Operations Overview

When a fragment is generated in a render pass that has a fragment density map attachment, its area is determined by the properties of the local framebuffer region that the fragment occupies. The framebuffer is divided into a uniform grid of these local regions, and their fragment area property is derived from the density map with the following operations:

- [Fetch density value](#)
 - [Component swizzle](#)
 - [Component mapping](#)
- [Fragment area conversion](#)
 - [Fragment area filter](#)
 - [Fragment area clamp](#)

21.2. Fetch Density Value

Each local framebuffer region at center coordinate (x,y) reads a texel from the fragment density map.

First, the local framebuffer region center coordinate (x,y) is offset by the value specified in [VkRenderPassFragmentDensityMapOffsetEndInfoEXT](#). If no offset is specified, then the default offset (0,0) is used. The offset coordinate (x',y') is computed as follows:

$$\begin{aligned}x' &= x - pFragmentDensityOffsets[layer]_x \\ y' &= y - pFragmentDensityOffsets[layer]_y\end{aligned}$$

NOTE

The offset is relative to the fragment density map, so it is subtracted from the framebuffer coordinates to make the adjustment relative to the framebuffer.

In other words, applying a positive offset in the x component will shift the fragment density map to the right relative to the framebuffer. This means the framebuffer coordinates need to undergo a shift to the left.

The offset fragment coordinate (x',y') [reads a texel from the fragment density map](#) at image coordinates (x,y,0,layer,0,0), where (x,y) are calculated as:

$$x = \text{clamp}(\lfloor \frac{x'}{\text{fragmentDensityTexelSize}_{width}} \rfloor, 0, \text{fragmentDensityMap}_{width} - 1)$$

$$y = \text{clamp}(\lfloor \frac{y'}{\text{fragmentDensityTexelSize}_{height}} \rfloor, 0, \text{fragmentDensityMap}_{height} - 1)$$

Where the size of each region in the framebuffer is:

$$fragmentDensityTexelSize_{width}' = 2^{\lceil \log_2(\lceil \frac{framebuffer_{width}}{fragmentDensityMap_{width}} \rceil) \rceil}$$

$$fragmentDensityTexelSize_{height}' = 2^{\lceil \log_2(\lceil \frac{framebuffer_{height}}{fragmentDensityMap_{height}} \rceil) \rceil}$$

NOTE

The original spec did not include the floor in the equation above. Implementations have shipped with and without the floor. Given that the earliest implementations shipped with the floor, the spec now reflects that as most content was written with this behavior.

All implementations exposing support for version 3 or greater of the extension **must** implement with the floor included.

If using `vkCmdBeginRendering`, then $framebuffer_{width}$ and $framebuffer_{height}$ are defined as:

$$framebuffer_{width} = renderAreaOffset_x + renderAreaExtent_{width}$$

$$framebuffer_{height} = renderAreaOffset_y + renderAreaExtent_{height}$$

using `VkRenderingInfo::renderArea`.

This region is subject to the limits in `VkPhysicalDeviceFragmentDensityMapPropertiesEXT` and therefore the final region size is clamped:

$$fragmentDensityTexelSize_{width} = \text{clamp}(fragmentDensityTexelSize_{width}', minFragmentDensityTexelSize_{width}, maxFragmentDensityTexelSize_{width})$$

$$fragmentDensityTexelSize_{height} = \text{clamp}(fragmentDensityTexelSize_{height}', minFragmentDensityTexelSize_{height}, maxFragmentDensityTexelSize_{height})$$

When multiview is enabled for the render pass and the fragment density map attachment view was created with `layerCount` greater than 1, the layer used for offsets and for fetching from the fragment density map is:

$$layer = baseArrayLayer + ViewIndex$$

Otherwise, if the render pass was created with `VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` specified, or the dynamic render pass was begun with `VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` specified, then the layer used is:

$layer = baseArrayLayer + Layer$

Otherwise:

$layer = baseArrayLayer$

The texel fetched from the density map at (x,y,0,layer,0,0) is next converted to density with the following operations.

21.2.1. Component Swizzle

The **components** member of [VkImageViewCreateInfo](#) is applied to the fetched texel as defined in [Image component swizzle](#).

21.2.2. Component Mapping

The swizzled texel's components are mapped to a density value:

$densityValue_{xy} = (C'_r, C'_g)$

21.3. Fragment Area Conversion

Fragment area for the framebuffer region is undefined if the density fetched is not a normalized floating-point value greater than **0.0**. Otherwise, the fetched fragment area for that region is derived as:

$$fragmentArea_{wh} = \frac{1.0}{densityValue_{xy}}$$

21.3.1. Fragment Area Filter

Optionally, the implementation **may** fetch additional density map texels in an implementation defined window around (i,j). The texels follow the standard conversion steps up to and including [fragment area conversion](#).

A single fetched fragment area for the framebuffer region is chosen by the implementation and **must** have an area between the *min* and *max* areas of the fetched set.

21.3.2. Fragment Area Clamp

The implementation **may** clamp the fetched fragment area to one that it supports. The clamped fragment area **must** have a size less than or equal to the original fetched value. Implementations **may** vary the supported set of fragment areas per framebuffer region. Fragment area (1,1) **must** always be in the supported set.

NOTE

For example, if the fetched fragment area is (1,4) but the implementation only supports areas of {(1,1),(2,2)}, it could choose to clamp the area to (2,2) since it has the same size as (1,4). While this would produce fragments that have lower quality strictly in the x-axis, the overall density is maintained.

The clamped fragment area is assigned to the corresponding framebuffer region.

Chapter 22. Tensor Operations

22.1. Tensor Operations Overview

Vulkan Tensor Operations are operations performed by those SPIR-V Tensor Instructions which take an `OpTypeTensorARM` (representing a `VkTensorViewARM`). Read and write operations take tensor element coordinates as operands, and return elements from the tensor. Query operations return properties of the bound tensor.

Tensor Operations include the functionality of the following SPIR-V Tensor Instructions:

- `OpTensorReadARM` reads one or more elements from the tensor.
- `OpTensorWriteARM` writes one or more elements to the tensor.
- `OpTensorQuerySizeARM` returns the size of the tensor descriptor that would be accessed. The tensor itself is not accessed.

22.1.1. Tensor Coordinate System

Each elements in a tensor can be addressed using a set of N integer coordinates where N is equal to the rank, i.e. number of dimensions, of the tensor.

22.2. Tensor Element Input Operations

Tensor element input instructions are SPIR-V tensor instructions that read from a tensor. *Tensor element input operations* are a set of steps that are performed on state, coordinates, and tensor element values while processing a tensor element input instruction, and which are common to some or all tensor element input instructions. They include the following steps, which are performed in the listed order:

- [Validation operations](#)
 - [Instruction/Tensor validation](#)
 - [Coordinate validation](#)
- [Format conversion](#)
- [Tensor Element replacement](#)

For tensor element input instructions involving multiple tensor elements, these steps are applied for each tensor element that is used in the instruction.

22.2.1. Tensor Element Input Validation Operations

Tensor element input validation operations inspect instruction/tensor state or coordinates, and in certain circumstances cause the tensor element value to be replaced or become undefined. There are a series of validations that the tensor element undergoes.

Instruction/Tensor View Validation

There are a number of cases where a SPIR-V instruction **can** mismatch with the tensor view. In such cases the value of the tensor element returned is poison.

These cases include:

- The SPIR-V instruction's tensor variable's properties are not compatible with the tensor view:
 - The SPIR-V Tensor **Element Type** is not **compatible** with the tensor view's **format**.
 - The SPIR-V Tensor **Rank** is not present.
 - The SPIR-V Tensor **Rank** is not the same as the value provided for **VkTensorDescriptionARM::dimensionCount** when creating the tensor used by the tensor view.
 - The SPIR-V Tensor **Shape**, if present, does not match the set of values provided for **VkTensorDescriptionARM::pDimensions** when creating the tensor used by the tensor view.

Tensor Element Coordinate Validation

Tensor element coordinates are validated against the size of the tensor.

If the tensor element coordinates do not satisfy all of the conditions

$$0 \leq \text{Coordinates}[i] < \text{Size}[i] \text{ for } 0 \leq i < \text{dimensionCount}$$

where:

Size[i] is the size of the tensor along dimension **i** as provided via **VkTensorDescriptionARM::pDimensions[i]** when the tensor was created.

dimensionCount is the number of dimensions of the tensor as provided via **VkTensorDescriptionARM::dimensionCount** when the tensor was created.

, or the tensor descriptor is a null descriptor,

then the tensor element fails coordinate validation.

There are two cases to consider:

1. Valid Tensor Element Coordinates

- If the tensor element coordinates pass validation (that is, the coordinates lie within the tensor),

then the tensor element value comes from the value in tensor memory.

2. Out-of-Bounds Tensor Element

- If the tensor element coordinates fail validation,

then the tensor element is an invalid tensor element and [tensor element replacement](#) is performed.

22.2.2. Format Conversion

If required, tensor elements undergo a format conversion from the [VkFormat](#) of the tensor view to the element type of the tensor resource variable on which a read operation is performed.

Each element is converted based on its type and size (as defined in the [Format Definition](#) section for each [VkFormat](#)), using the appropriate equations in [16-Bit Floating-Point Numbers](#), [Unsigned 11-Bit Floating-Point Numbers](#), [Unsigned 10-Bit Floating-Point Numbers](#), [Fixed-Point Data Conversion](#), and [8-bit booleans](#).

The compatibility between SPIR-V tensor element types and [VkFormat](#) is specified under [Compatibility Between SPIR-V Tensor Element Types And Vulkan Formats](#).

22.2.3. Tensor Element Replacement

A tensor element is replaced if it is an invalid tensor element.

Invalid tensor elements are replaced as follows:

- If the [OpTensorReadARM](#) instruction that caused an invalid tensor element to be accessed did not have a [OutOfBoundsValueARM](#) tensor operand present, then the value returned is the same as that produced by [OpConstantNull](#) for the type returned.
- If the [OpTensorReadARM](#) instruction that caused an invalid tensor element to be accessed had a [OutOfBoundsValueARM](#) tensor operand present, then the value provided using [OutOfBoundsValueARM](#) is returned.

22.3. Tensor Element Output Operations

Tensor element output instructions are SPIR-V tensor instructions that write to a tensor. *Tensor element output operations* are a set of steps that are performed on state, coordinates, and tensor element values while processing a tensor element output instruction, and which are common to some or all tensor element output instructions. They include the following steps, which are performed in the listed order:

- [Validation operations](#)
 - [Format validation](#)
 - [Coordinate validation](#)
- [Tensor element output format conversion](#)

22.3.1. Tensor Element Output Validation Operations

Tensor element output validation operations inspect instruction/tensor state or coordinates, and in certain circumstances cause the write to have no effect. There are a series of validations that the tensor element undergoes.

Tensor Element Format Validation

If one of the following conditions is met, then an operation writing to the tensor causes the tensor's memory to become undefined .

- The SPIR-V instruction's tensor variable's properties are not compatible with the tensor view:
 - The SPIR-V Tensor Element Type is not [compatible](#) with the tensor view's [format](#).
 - The SPIR-V Tensor Rank is not present.
 - The SPIR-V Tensor Rank is not the same as the value provided for [VkTensorDescriptionARM::dimensionCount](#) when creating the tensor used by the tensor view.
 - The SPIR-V Tensor Shape, if present, does not match the set of values provided for [VkTensorDescriptionARM::pDimensions](#) when creating the tensor used by the tensor view.

22.3.2. Tensor Element Coordinate Validation

The tensor element coordinates are validated according to the same rules as for tensor element input [coordinate validation](#).

If the tensor element fails coordinate validation, then the write has no effect.

22.3.3. Tensor Element Output Format Conversion

If required, tensor elements undergo a format conversion from the element type of the tensor resource variable on which a write operation is performed to the [VkFormat](#) of the tensor view.

Each element is converted based on its type and size (as defined in the [Format Definition](#) section for each [VkFormat](#)). Floating-point outputs are converted as described in [Floating-Point Format Conversions](#) and [Fixed-Point Data Conversion](#). Boolean outputs are converted as described in [8-bit boolean](#). Integer outputs are converted such that their value is preserved.

The compatibility between SPIR-V tensor element types and [VkFormat](#) is specified under [Compatibility Between SPIR-V Tensor Element Types And Vulkan Formats](#).

22.4. Tensor Query Instructions

[OpTensorQuerySizeARM](#) queries the size of a tensor whose descriptor would be accessed by a shader tensor operation.

It always returns 0 if the bound descriptor is a null descriptor.

Chapter 23. Queries

Queries provide a mechanism to return information about the processing of a sequence of Vulkan commands. Query operations are asynchronous, and as such, their results are not returned immediately. Instead, their results, and their availability status are stored in a [Query Pool](#). The state of these queries **can** be read back on the host, or copied to a buffer object on the device.

The supported query types are:

- [Occlusion Queries](#)
- [Pipeline Statistics Queries](#)
- [Timestamp Queries](#)
- [Result Status Queries](#)
- [Video Encode Feedback Queries](#)
- [Performance Queries](#)
- [Transform Feedback Queries](#)
- [Intel Performance Queries](#)
- [Mesh Shader Queries](#)

Several additional queries with specific purposes associated with ray tracing are available if the corresponding extensions are supported, as described for [VkQueryType](#).

23.1. Query Pools

Queries are managed using *query pool* objects. Each query pool is a collection of a specific number of queries of a particular type.

Query pools are represented by [VkQueryPool](#) handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkQueryPool)
```

To create a query pool, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateQueryPool(
    VkDevice                                device,
    const VkQueryPoolCreateInfo*             pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkQueryPool*                             pQueryPool);
```

- [device](#) is the logical device that creates the query pool.
- [pCreateInfo](#) is a pointer to a [VkQueryPoolCreateInfo](#) structure containing the number and type

of queries to be managed by the pool.

- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pQueryPool** is a pointer to a [VkQueryPool](#) handle in which the resulting query pool object is returned.

Valid Usage

- VUID-vkCreateQueryPool-device-09663
device **must** support at least one queue family with one of the [VK_QUEUE_VIDEO_ENCODE_BIT_KHR](#), [VK_QUEUE_VIDEO_DECODE_BIT_KHR](#), [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) capabilities

Valid Usage (Implicit)

- VUID-vkCreateQueryPool-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreateQueryPool-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkQueryPoolCreateInfo](#) structure
- VUID-vkCreateQueryPool-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateQueryPool-pQueryPool-parameter
pQueryPool **must** be a valid pointer to a [VkQueryPool](#) handle
- VUID-vkCreateQueryPool-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkQueryPoolCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkQueryPoolCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkQueryPoolCreateFlags flags;
    VkQueryType          queryType;
    uint32_t             queryCount;
    VkQueryPipelineStatisticFlags pipelineStatistics;
} VkQueryPoolCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkQueryPoolCreateFlagBits`
- `queryType` is a `VkQueryType` value specifying the type of queries managed by the pool.
- `queryCount` is the number of queries managed by the pool.
- `pipelineStatistics` is a bitmask of `VkQueryPipelineStatisticFlagBits` specifying which counters will be returned in queries on the new pool, as described below in [Pipeline Statistics Queries](#). `pipelineStatistics` is ignored if `queryType` is not `VK_QUERY_TYPE_PIPELINE_STATISTICS`.

Valid Usage

- VUID-VkQueryPoolCreateInfo-queryType-00791
If the `pipelineStatisticsQuery` feature is not enabled, `queryType` **must** not be `VK_QUERY_TYPE_PIPELINE_STATISTICS`
- VUID-VkQueryPoolCreateInfo-meshShaderQueries-07068
If the `meshShaderQueries` feature is not enabled, `queryType` **must** not be `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT`
- VUID-VkQueryPoolCreateInfo-meshShaderQueries-07069
If the `meshShaderQueries` feature is not enabled, and `queryType` is `VK_QUERY_TYPE_PIPELINE_STATISTICS`, `pipelineStatistics` **must** not contain `VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT` or `VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT`
- VUID-VkQueryPoolCreateInfo-queryType-00792
If `queryType` is `VK_QUERY_TYPE_PIPELINE_STATISTICS`, `pipelineStatistics` **must** be a valid combination of `VkQueryPipelineStatisticFlagBits` values
- VUID-VkQueryPoolCreateInfo-queryType-09534
If `queryType` is `VK_QUERY_TYPE_PIPELINE_STATISTICS`, `pipelineStatistics` **must** not be zero
- VUID-VkQueryPoolCreateInfo-queryType-03222
If `queryType` is `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the `pNext` chain **must** include a `VkQueryPoolPerformanceCreateInfoKHR` structure
- VUID-VkQueryPoolCreateInfo-queryCount-02763

`queryCount` **must** be greater than 0

- VUID-VkQueryPoolCreateInfo-queryType-11839

If `queryType` is `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then at least one of the queue families of the device **must** support `result status queries`, as indicated by `VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport`

- VUID-VkQueryPoolCreateInfo-pNext-10779

If the `pNext` chain includes a `VkVideoProfileInfoKHR` structure and its `videoCodecOperation` member is `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `videoDecodeVP9` feature **must** be enabled

- VUID-VkQueryPoolCreateInfo-queryType-07133

If `queryType` is `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then the `pNext` chain **must** include a `VkVideoProfileInfoKHR` structure with `videoCodecOperation` specifying an encode operation

- VUID-VkQueryPoolCreateInfo-queryType-07906

If `queryType` is `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then the `pNext` chain **must** include a `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR` structure

- VUID-VkQueryPoolCreateInfo-queryType-07907

If `queryType` is `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, and the `pNext` chain includes a `VkVideoProfileInfoKHR` structure and a `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR` structure, then `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags` **must** not contain any bits that are not set in `VkVideoEncodeCapabilitiesKHR::supportedEncodeFeedbackFlags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the `video profile` described by `VkVideoProfileInfoKHR` and its `pNext` chain

- VUID-VkQueryPoolCreateInfo-pNext-10248

If the `pNext` chain includes a `VkVideoProfileInfoKHR` structure and its `videoCodecOperation` member is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `videoEncodeAV1` feature **must** be enabled

- VUID-VkQueryPoolCreateInfo-pNext-10918

If the `pNext` chain includes a `VkVideoEncodeProfileRgbConversionInfoVALVE` structure, then the `videoEncodeRgbConversion` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkQueryPoolCreateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_QUERY_POOL_CREATE_INFO`

- VUID-VkQueryPoolCreateInfo-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkQueryPoolPerformanceCreateInfoKHR`, `VkQueryPoolPerformanceQueryCreateInfoINTEL`, `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR`, `VkVideoDecodeAV1ProfileInfoKHR`, `VkVideoDecodeH264ProfileInfoKHR`, `VkVideoDecodeH265ProfileInfoKHR`, `VkVideoDecodeUsageInfoKHR`, or `VkVideoDecodeVP9ProfileInfoKHR`,

[VkVideoEncodeAV1ProfileInfoKHR](#),
[VkVideoEncodeH265ProfileInfoKHR](#),
[VkVideoProfileInfoKHR](#)

[VkVideoEncodeH264ProfileInfoKHR](#),
[VkVideoEncodeUsageInfoKHR](#), or

- `VUID-VkQueryPoolCreateInfo-sType-unique`
The `sType` value of each structure in the `pNext` chain **must** be unique
- `VUID-VkQueryPoolCreateInfo-flags-parameter`
`flags` **must** be a valid combination of [VkQueryPoolCreateFlagBits](#) values
- `VUID-VkQueryPoolCreateInfo-queryType-parameter`
`queryType` **must** be a valid [VkQueryType](#) value

Bits which **can** be set in [VkQueryPoolCreateInfo::flags](#), specifying options for query pools, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryPoolCreateFlagBits {
    // Provided by VK_KHR_maintenance9
    VK_QUERY_POOL_CREATE_RESET_BIT_KHR = 0x00000001,
} VkQueryPoolCreateFlagBits;
```

- [VK_QUERY_POOL_CREATE_RESET_BIT_KHR](#) specifies that queries in the query pool are initialized on creation and do not need to be reset before first use.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryPoolCreateFlags;
```

[VkQueryPoolCreateFlags](#) is a bitmask type for setting a mask of zero or more [VkQueryPoolCreateFlagBits](#).

The [VkQueryPoolPerformanceCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkQueryPoolPerformanceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           queueFamilyIndex;
    uint32_t           counterIndexCount;
    const uint32_t*     pCounterIndices;
} VkQueryPoolPerformanceCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueFamilyIndex` is the queue family index to create this performance query pool for.
- `counterIndexCount` is the length of the `pCounterIndices` array.
- `pCounterIndices` is a pointer to an array of indices into the

`vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR::pCounters` to enable in this performance query pool.

Valid Usage

- VUID-VkQueryPoolPerformanceCreateInfoKHR-queueFamilyIndex-03236
`queueFamilyIndex` **must** be a valid queue family index of the device
- VUID-VkQueryPoolPerformanceCreateInfoKHR-performanceCounterQueryPools-03237
The `performanceCounterQueryPools` feature **must** be enabled
- VUID-VkQueryPoolPerformanceCreateInfoKHR-pCounterIndices-03321
Each element of `pCounterIndices` **must** be in the range of counters reported by `vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR` for the queue family specified in `queueFamilyIndex`

Valid Usage (Implicit)

- VUID-VkQueryPoolPerformanceCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_CREATE_INFO_KHR`
- VUID-VkQueryPoolPerformanceCreateInfoKHR-pCounterIndices-parameter
`pCounterIndices` **must** be a valid pointer to an array of `counterIndexCount` `uint32_t` values
- VUID-VkQueryPoolPerformanceCreateInfoKHR-counterIndexCount-arraylength
`counterIndexCount` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkQueryPoolCreateInfo`

To query the number of passes required to query a performance query pool on a physical device, call:

```
// Provided by VK_KHR_performance_query
void vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkQueryPoolPerformanceCreateInfoKHR* pPerformanceQueryCreateInfo,
    uint32_t*                 pNumPasses);
```

- `physicalDevice` is the handle to the physical device whose queue family performance query counter properties will be queried.
- `pPerformanceQueryCreateInfo` is a pointer to a `VkQueryPoolPerformanceCreateInfoKHR` of the performance query that is to be created.

- `pNumPasses` is a pointer to an integer related to the number of passes required to query the performance query pool, as described below.

The `pPerformanceQueryCreateInfo` member `VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex` **must** be a queue family of `physicalDevice`. The number of passes required to capture the counters specified in the `pPerformanceQueryCreateInfo` member `VkQueryPoolPerformanceCreateInfoKHR::pCounters` is returned in `pNumPasses`.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-physicalDevice-parameter-
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-pPerformanceQueryCreateInfo-parameter-
`pPerformanceQueryCreateInfo` **must** be a valid pointer to a valid `VkQueryPoolPerformanceCreateInfoKHR` structure
- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-pNumPasses-parameter-
`pNumPasses` **must** be a valid pointer to a `uint32_t` value

To destroy a query pool, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyQueryPool(
    VkDevice          device,
    VkQueryPool       queryPool,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the query pool.
- `queryPool` is the query pool to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyQueryPool-queryPool-00793
All submitted commands that refer to `queryPool` **must** have completed execution
- VUID-vkDestroyQueryPool-queryPool-00794
If `VkAllocationCallbacks` were provided when `queryPool` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyQueryPool-queryPool-00795
If no `VkAllocationCallbacks` were provided when `queryPool` was created, `pAllocator` **must** be `NULL`

NOTE

Applications **can** verify that `queryPool` **can** be destroyed by checking that `vkGetQueryPoolResults()` without the `VK_QUERY_RESULT_PARTIAL_BIT` flag returns `VK_SUCCESS` for all queries that are used in command buffers submitted for execution.

Valid Usage (Implicit)

- VUID-vkDestroyQueryPool-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyQueryPool-queryPool-parameter
If `queryPool` is not `VK_NULL_HANDLE`, `queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkDestroyQueryPool-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyQueryPool-queryPool-parent
If `queryPool` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `queryPool` **must** be externally synchronized

Possible values of `VkQueryPoolCreateInfo::queryType`, specifying the type of queries managed by the pool, are:

```

// Provided by VK_VERSION_1_0
typedef enum VkQueryType {
    VK_QUERY_TYPE_OCCLUSION = 0,
    VK_QUERY_TYPE_PIPELINE_STATISTICS = 1,
    VK_QUERY_TYPE_TIMESTAMP = 2,
    // Provided by VK_KHR_video_queue
    VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR = 1000023000,
    // Provided by VK_EXT_transform_feedback
    VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT = 1000028004,
    // Provided by VK_KHR_performance_query
    VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR = 1000116000,
    // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR = 1000150000,
    // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR = 1000150001,
    // Provided by VK_NV_ray_tracing
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV = 1000165000,
    // Provided by VK_INTEL_performance_query
    VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL = 1000210000,
    // Provided by VK_KHR_video_encode_queue
    VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR = 1000299000,
    // Provided by VK_EXT_mesh_shader
    VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT = 1000328000,
    // Provided by VK_EXT_primitives_generated_query
    VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT = 1000382000,
    // Provided by VK_KHR_ray_tracing_maintenance1
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR =
1000386000,
    // Provided by VK_KHR_ray_tracing_maintenance1
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR = 1000386001,
    // Provided by VK_EXT_opacity_micromap
    VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT = 1000396000,
    // Provided by VK_EXT_opacity_micromap
    VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT = 1000396001,
} VkQueryType;

```

- `VK_QUERY_TYPE_OCCLUSION` specifies an [occlusion query](#).
- `VK_QUERY_TYPE_PIPELINE_STATISTICS` specifies a [pipeline statistics query](#).
- `VK_QUERY_TYPE_TIMESTAMP` specifies a [timestamp query](#).
- `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` specifies a [performance query](#).
- `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` specifies a [transform feedback query](#).
- `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` specifies a [primitives generated query](#).
- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR` specifies a [acceleration structure size query](#) for use with `vkCmdWriteAccelerationStructuresPropertiesKHR` or `vkWriteAccelerationStructuresPropertiesKHR`.
- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR` specifies a

serialization acceleration structure size query.

- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR` specifies an acceleration structure size query for use with `vkCmdWriteAccelerationStructuresPropertiesKHR` or `vkWriteAccelerationStructuresPropertiesKHR`.
- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR` specifies a serialization acceleration structure pointer count query.
- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV` specifies an acceleration structure size query for use with `vkCmdWriteAccelerationStructuresPropertiesNV`.
- `VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL` specifies a Intel performance query.
- `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` specifies a result status query.
- `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR` specifies a video encode feedback query.
- `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT` specifies a generated mesh primitives query.

23.2. Query Operation

The operation of queries is controlled by the commands `vkCmdBeginQuery`, `vkCmdEndQuery`, `vkCmdBeginQueryIndexedEXT`, `vkCmdEndQueryIndexedEXT`, `vkCmdResetQueryPool`, `vkCmdCopyQueryPoolResults`, `vkCmdWriteAccelerationStructuresPropertiesKHR`, `vkCmdWriteAccelerationStructuresPropertiesNV`, `vkCmdWriteMicromapsPropertiesEXT`, `vkCmdCopyQueryPoolResultsToMemoryKHR`, `vkCmdWriteTimestamp2`, and `vkCmdWriteTimestamp`.

In order for a `VkCommandBuffer` to record query management commands, the queue family for which its `VkCommandPool` was created **must** support the appropriate type of operations (graphics, compute) suitable for the query type of a given query pool.

Each query in a query pool has a status that is either *unavailable* or *available*, and also has state to store the numerical results of a query operation of the type requested when the query pool was created. Resetting a query via `vkCmdResetQueryPool` or `vkResetQueryPool` sets the status to unavailable and makes the numerical results undefined. A query is made available by the operation of `vkCmdEndQuery`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteAccelerationStructuresPropertiesKHR`, `vkCmdWriteAccelerationStructuresPropertiesNV`, `vkCmdWriteMicromapsPropertiesEXT`, `vkCmdWriteTimestamp2`, or `vkCmdWriteTimestamp`. Both the availability status and numerical results **can** be retrieved by calling either `vkGetQueryPoolResults` or `vkCmdCopyQueryPoolResults`.

After query pool creation, where `VK_QUERY_POOL_CREATE_RESET_BIT_KHR` was not set in `VkQueryPoolCreateInfo::flags` each query is in an uninitialized state and **must** be reset before it is used. Queries **must** also be reset between uses.

If a logical device includes multiple physical devices, then each command that writes a query **must** execute on a single physical device, and any call to `vkCmdBeginQuery` **must** execute the corresponding `vkCmdEndQuery` command on the same physical device.

To reset a range of queries in a query pool on a queue, call:

```
// Provided by VK_VERSION_1_0
void vkCmdResetQueryPool(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 firstQuery,
    uint32_t                 queryCount);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the handle of the query pool managing the queries being reset.
- `firstQuery` is the initial query index to reset.
- `queryCount` is the number of queries to reset.

When executed on a queue, this command sets the status of query indices [`firstQuery`, `firstQuery + queryCount - 1`] to unavailable.

This command defines an execution dependency between other query commands that reference the same query.

The first [synchronization scope](#) includes all commands which reference the queries in `queryPool` indicated by `firstQuery` and `queryCount` that occur earlier in [submission order](#).

The second [synchronization scope](#) includes all commands which reference the queries in `queryPool` indicated by `firstQuery` and `queryCount` that occur later in [submission order](#).

The operation of this command happens after the first scope and happens before the second scope.

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, this command sets the status of query indices [`firstQuery`, `firstQuery + queryCount - 1`] to unavailable for each pass of `queryPool`, as indicated by a call to [vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR](#).

NOTE

Because `vkCmdResetQueryPool` resets all the passes of the indicated queries, applications must not record a `vkCmdResetQueryPool` command for a `queryPool` created with `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` in a command buffer that needs to be submitted multiple times as indicated by a call to [vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR](#). Otherwise applications will never be able to complete the recorded queries.

Valid Usage

- VUID-vkCmdResetQueryPool-firstQuery-09436
`firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdResetQueryPool-firstQuery-09437
The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`

- VUID-vkCmdResetQueryPool-None-02841
All queries used by the command **must** not be active
- VUID-vkCmdResetQueryPool-firstQuery-02862
If **queryPool** was created with [VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR](#), this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains begin commands for a query from the set of queries [**firstQuery**, **firstQuery** + **queryCount** - 1]

Valid Usage (Implicit)

- VUID-vkCmdResetQueryPool-commandBuffer-parameter
commandBuffer **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdResetQueryPool-queryPool-parameter
queryPool **must** be a valid [VkQueryPool](#) handle
- VUID-vkCmdResetQueryPool-commandBuffer-recording
commandBuffer **must** be in the [recording state](#)
- VUID-vkCmdResetQueryPool-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), [VK_QUEUE_GRAPHICS_BIT](#), [VK_QUEUE_OPTICAL_FLOW_BIT_NV](#), [VK_QUEUE_VIDEO_DECODE_BIT_KHR](#), or [VK_QUEUE_VIDEO_ENCODE_BIT_KHR](#) operations
- VUID-vkCmdResetQueryPool-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdResetQueryPool-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdResetQueryPool-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdResetQueryPool-commonparent
Both of **commandBuffer**, and **queryPool** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_OPTICAL_FLOW_BIT_NV VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

vkCmdResetQueryPool is not affected by [conditional rendering](#)

To reset a range of queries in a query pool on the host, call:

```
// Provided by VK_VERSION_1_2
void vkResetQueryPool(
    VkDevice          device,
    VkQueryPool       queryPool,
    uint32_t          firstQuery,
    uint32_t          queryCount);
```

```
// Provided by VK_EXT_host_query_reset
// Equivalent to vkResetQueryPool
void vkResetQueryPoolEXT(
    VkDevice          device,
    VkQueryPool       queryPool,
    uint32_t          firstQuery,
    uint32_t          queryCount);
```

- **device** is the logical device that owns the query pool.
- **queryPool** is the handle of the query pool managing the queries being reset.
- **firstQuery** is the initial query index to reset.

- `queryCount` is the number of queries to reset.

This command sets the status of query indices [`firstQuery`, `firstQuery + queryCount - 1`] to unavailable.

If `queryPool` is `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` this command sets the status of query indices [`firstQuery`, `firstQuery + queryCount - 1`] to unavailable for each pass.

Valid Usage

- VUID-vkResetQueryPool-firstQuery-09436
`firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkResetQueryPool-firstQuery-09437
The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkResetQueryPool-None-02665
The `hostQueryReset` feature **must** be enabled
- VUID-vkResetQueryPool-firstQuery-02741
Submitted commands that refer to the range specified by `firstQuery` and `queryCount` in `queryPool` **must** have completed execution
- VUID-vkResetQueryPool-firstQuery-02742
The range of queries specified by `firstQuery` and `queryCount` in `queryPool` **must** not be in use by calls to `vkGetQueryPoolResults` or `vkResetQueryPool` in other threads

Valid Usage (Implicit)

- VUID-vkResetQueryPool-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkResetQueryPool-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkResetQueryPool-queryPool-parent
`queryPool` **must** have been created, allocated, or retrieved from `device`

Once queries are reset and ready for use, query commands **can** be issued to a command buffer. Pipeline statistics queries count pipeline stage invocations and occlusion queries count drawn samples resulting from commands that are recorded between a `vkCmdBeginQuery` command and a `vkCmdEndQuery` command within a specified command buffer, effectively scoping a set of dispatching and/or drawing commands. Timestamp queries write timestamps to a query pool. Performance queries record performance counters to a query pool.

A query **must** begin and end in the same command buffer, although if it is a primary command buffer, and the `inheritedQueries` feature is enabled, it **can** execute secondary command buffers during the query operation. For a secondary command buffer to be executed while a query is active, it **must** set the `occlusionQueryEnable`, `queryFlags`, and/or `pipelineStatistics` members of

[VkCommandBufferInheritanceInfo](#) to conservative values, as described in the [Command Buffer Recording](#) section. A query **must** either begin and end inside the same subpass of a render pass instance, or **must** both begin and end outside of a render pass instance (i.e. contain entire render pass instances).

If queries are used while executing a render pass instance that has multiview enabled, the query uses N consecutive query indices in the query pool (starting at [query](#)) where N is the number of bits set in the view mask in the subpass the query is used in. How the numerical results of the query are distributed among the queries is implementation-dependent. For example, some implementations **may** write each view's results to a distinct query, while other implementations **may** write the total result to the first query and write zero to the other queries. However, the sum of the results in all the queries **must** accurately reflect the total result of the query summed over all views. Applications **can** sum the results from all the queries to compute the total result.

Queries used with multiview rendering **must** not span subpasses, i.e. they **must** begin and end in the same subpass.

A query **must** either begin and end inside the same video coding scope, or **must** both begin and end outside of a video coding scope and **must** not contain entire video coding scopes.

To begin a query, call:

```
// Provided by VK_VERSION_1_0
void vkCmdBeginQuery(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 query,
    VkQueryControlFlags      flags);
```

- [commandBuffer](#) is the command buffer into which this command will be recorded.
- [queryPool](#) is the query pool that will manage the results of the query.
- [query](#) is the query index within the query pool that will contain the results.
- [flags](#) is a bitmask of [VkQueryControlFlagBits](#) specifying constraints on the types of queries that **can** be performed.

If the [queryType](#) of the pool is [VK_QUERY_TYPE_OCCLUSION](#) and [flags](#) contains [VK_QUERY_CONTROL_PRECISE_BIT](#), an implementation **must** return a result that matches the actual number of samples passed. This is described in more detail in [Occlusion Queries](#).

Calling [vkCmdBeginQuery](#) is equivalent to calling [vkCmdBeginQueryIndexedEXT](#) with the [index](#) parameter set to zero.

After beginning a query, that query is considered *active* within the command buffer it was called in until that same query is ended. Queries active in a primary command buffer when secondary command buffers are executed are considered active for those secondary command buffers.

Furthermore, if the query is started within a video coding scope, the following command buffer states are initialized for the query type:

- The *active_query_index* is set to the value specified by **query**.
- The *last activatable query index* is also set to the value specified by **query**.

Each **video coding operation** stores a result to the query corresponding to the current active query index, followed by incrementing the active query index. If the active query index gets incremented past the last activatable query index, issuing any further video coding operations results in undefined behavior.

NOTE

In practice, this means that currently no more than a single video coding operation **must** be issued between a begin and end query pair.

This command defines an execution dependency between other query commands that reference the same query.

The first **synchronization scope** includes all commands which reference the queries in **queryPool** indicated by **query** that occur earlier in **submission order**.

The second **synchronization scope** includes all commands which reference the queries in **queryPool** indicated by **query** that occur later in **submission order**.

The operation of this command happens after the first scope and happens before the second scope.

Valid Usage

- VUID-vkCmdBeginQuery-None-00807
All queries used by the command **must** be *unavailable*
- VUID-vkCmdBeginQuery-queryType-02804
The **queryType** used to create **queryPool** **must** not be **VK_QUERY_TYPE_TIMESTAMP**
- VUID-vkCmdBeginQuery-queryType-04728
The **queryType** used to create **queryPool** **must** not be **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR** or **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR**
- VUID-vkCmdBeginQuery-queryType-06741
The **queryType** used to create **queryPool** **must** not be **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR** or **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR**
- VUID-vkCmdBeginQuery-queryType-04729
The **queryType** used to create **queryPool** **must** not be **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV**
- VUID-vkCmdBeginQuery-queryType-00800
If the **occlusionQueryPrecise** feature is not enabled, or the **queryType** used to create **queryPool** was not **VK_QUERY_TYPE_OCCLUSION**, **flags** **must** not contain **VK_QUERY_CONTROL_PRECISE_BIT**
- VUID-vkCmdBeginQuery-query-00802
query **must** be less than the number of queries in **queryPool**

- VUID-vkCmdBeginQuery-queryType-00803
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_OCCLUSION`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-00804
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PIPELINE_STATISTICS` and any of the `pipelineStatistics` indicate graphics operations, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-00805
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PIPELINE_STATISTICS` and any of the `pipelineStatistics` indicate compute operations, the `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdBeginQuery-commandBuffer-01885
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdBeginQuery-query-00808
If called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdBeginQuery-queryType-07126
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then the `VkCommandPool` that `commandBuffer` was allocated from **must** have been created with a queue family index that supports `result status queries`, as indicated by `VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport`
- VUID-vkCmdBeginQuery-None-07127
If there is a bound video session, then there **must** be no `active` queries
- VUID-vkCmdBeginQuery-None-08370
If there is a bound video session, then it **must** not have been created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`
- VUID-vkCmdBeginQuery-queryType-07128
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` and there is a bound video session, then `queryPool` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo` identical to the one specified in `VkVideoSessionCreateInfoKHR::pVideoProfile` the bound video session was created with
- VUID-vkCmdBeginQuery-queryType-07129
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there **must** be a bound video session
- VUID-vkCmdBeginQuery-queryType-07130
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR` and there is a bound video session, then `queryPool` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo` identical to the one specified in `VkVideoSessionCreateInfoKHR::pVideoProfile` the bound video session was created with

- VUID-vkCmdBeginQuery-queryType-07131
If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there **must** be no bound video session
- VUID-vkCmdBeginQuery-None-10681
This command **must** not be recorded when `per-tile execution model` is enabled
- VUID-vkCmdBeginQuery-queryPool-01922
`queryPool` **must** have been created with a `queryType` that differs from that of any queries that are `active` within `commandBuffer`
- VUID-vkCmdBeginQuery-queryType-07070
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT` the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-02327
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-02328
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` then `VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackQueries` **must** be supported
- VUID-vkCmdBeginQuery-queryType-06687
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-06688
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` then `primitivesGeneratedQuery` **must** be enabled
- VUID-vkCmdBeginQuery-queryPool-07289
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then the `VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex` `queryPool` was created with **must** equal the queue family index of the `VkCommandPool` that `commandBuffer` was allocated from
- VUID-vkCmdBeginQuery-queryPool-03223
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the `profiling lock` **must** have been held before `vkBeginCommandBuffer` was called on `commandBuffer`
- VUID-vkCmdBeginQuery-queryPool-03224
If `queryPool` was created with a `queryType` of

`VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR`, the query begin **must** be the first recorded command in `commandBuffer`

- VUID-vkCmdBeginQuery-queryPool-03225

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR`, the begin command **must** not be recorded within a render pass instance

- VUID-vkCmdBeginQuery-queryPool-03226

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and another query pool with a `queryType` `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` has been used within `commandBuffer`, its parent primary command buffer or secondary command buffer recorded within the same parent primary command buffer as `commandBuffer`, the `performanceCounterMultipleQueryPools` feature **must** be enabled

- VUID-vkCmdBeginQuery-None-02863

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains a `vkCmdResetQueryPool` command affecting the same query

Valid Usage (Implicit)

- VUID-vkCmdBeginQuery-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdBeginQuery-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle

- VUID-vkCmdBeginQuery-flags-parameter
`flags` **must** be a valid combination of `VkQueryControlFlagBits` values

- VUID-vkCmdBeginQuery-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdBeginQuery-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations

- VUID-vkCmdBeginQuery-suspended
This command **must** not be called between suspended render pass instances

- VUID-vkCmdBeginQuery-commonparent
Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

`vkCmdBeginQuery` is not affected by [conditional rendering](#)

To begin an indexed query, call:

```
// Provided by VK_EXT_transform_feedback
void vkCmdBeginQueryIndexedEXT(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 query,
    VkQueryControlFlags      flags,
    uint32_t                 index);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that will manage the results of the query.
- `query` is the query index within the query pool that will contain the results.
- `flags` is a bitmask of `VkQueryControlFlagBits` specifying constraints on the types of queries that **can** be performed.
- `index` is the query type specific index. When the query type is

VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT

or

VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT, the index represents the vertex stream.

The `vkCmdBeginQueryIndexedEXT` command operates the same as the `vkCmdBeginQuery` command, except that it also accepts a query type specific `index` parameter.

This command defines an execution dependency between other query commands that reference the same query index.

The first `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` and `index` that occur earlier in `submission order`.

The second `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` and `index` that occur later in `submission order`.

The operation of this command happens after the first scope and happens before the second scope.

Valid Usage

- VUID-vkCmdBeginQueryIndexedEXT-None-00807
All queries used by the command **must** be *unavailable*
- VUID-vkCmdBeginQueryIndexedEXT-queryType-02804
The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_TIMESTAMP`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-04728
The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR` or `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06741
The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR` or `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-04729
The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-00800
If the `occlusionQueryPrecise` feature is not enabled, or the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_OCCLUSION`, `flags` **must** not contain `VK_QUERY_CONTROL_PRECISE_BIT`
- VUID-vkCmdBeginQueryIndexedEXT-query-00802
`query` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-00803
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_OCCLUSION`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQueryIndexedEXT-queryType-00804

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PIPELINE_STATISTICS` and any of the `pipelineStatistics` indicate graphics operations, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations

- VUID-vkCmdBeginQueryIndexedEXT-queryType-00805

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PIPELINE_STATISTICS` and any of the `pipelineStatistics` indicate compute operations, the `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations

- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-01885

`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdBeginQueryIndexedEXT-query-00808

If called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`

- VUID-vkCmdBeginQueryIndexedEXT-queryType-07126

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then the `VkCommandPool` that `commandBuffer` was allocated from **must** have been created with a queue family index that supports `result status queries`, as indicated by `VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport`

- VUID-vkCmdBeginQueryIndexedEXT-None-07127

If there is a bound video session, then there **must** be no `active` queries

- VUID-vkCmdBeginQueryIndexedEXT-None-08370

If there is a bound video session, then it **must** not have been created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`

- VUID-vkCmdBeginQueryIndexedEXT-queryType-07128

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` and there is a bound video session, then `queryPool` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo` identical to the one specified in `VkVideoSessionCreateInfoKHR::pVideoProfile` the bound video session was created with

- VUID-vkCmdBeginQueryIndexedEXT-queryType-07129

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there **must** be a bound video session

- VUID-vkCmdBeginQueryIndexedEXT-queryType-07130

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR` and there is a bound video session, then `queryPool` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo` identical to the one specified in `VkVideoSessionCreateInfoKHR::pVideoProfile` the bound video session was created with

- VUID-vkCmdBeginQueryIndexedEXT-queryType-07131

If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there **must** be no bound video

session

- VUID-vkCmdBeginQueryIndexedEXT-None-10681

This command **must** not be recorded when [per-tile execution model](#) is enabled

- VUID-vkCmdBeginQueryIndexedEXT-queryPool-04753

If the [queryPool](#) was created with the same [queryType](#) as that of another [active](#) query within [commandBuffer](#), then [index](#) **must** not match the index used for the active query

- VUID-vkCmdBeginQueryIndexedEXT-queryType-02338

If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT](#) the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support graphics operations

- VUID-vkCmdBeginQueryIndexedEXT-queryType-02339

If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT](#) the [index](#) parameter **must** be less than [VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams](#)

- VUID-vkCmdBeginQueryIndexedEXT-queryType-06692

If the [queryType](#) used to create [queryPool](#) was not [VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT](#) and not [VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT](#), the [index](#) **must** be zero

- VUID-vkCmdBeginQueryIndexedEXT-queryType-06689

If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT](#) the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support graphics operations

- VUID-vkCmdBeginQueryIndexedEXT-queryType-06690

If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT](#) the [index](#) parameter **must** be less than [VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams](#)

- VUID-vkCmdBeginQueryIndexedEXT-queryType-06691

If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT](#) and the [primitivesGeneratedQueryWithNonZeroStreams](#) feature is not enabled, the [index](#) parameter **must** be zero

- VUID-vkCmdBeginQueryIndexedEXT-queryType-06693

If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT](#) then [primitivesGeneratedQuery](#) **must** be enabled

- VUID-vkCmdBeginQueryIndexedEXT-queryType-02341

If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT](#) then [VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackQueries](#) **must** be supported

- VUID-vkCmdBeginQueryIndexedEXT-queryType-07071

The [queryType](#) used to create [queryPool](#) **must** not be [VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT](#)

- VUID-vkCmdBeginQueryIndexedEXT-queryPool-07289
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then the `VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex` `queryPool` was created with **must** equal the queue family index of the `VkCommandPool` that `commandBuffer` was allocated from
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03223
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the `profiling lock` **must** have been held before `vkBeginCommandBuffer` was called on `commandBuffer`
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03224
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR`, the query begin **must** be the first recorded command in `commandBuffer`
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03225
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR`, the begin command **must** not be recorded within a render pass instance
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03226
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and another query pool with a `queryType` `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` has been used within `commandBuffer`, its parent primary command buffer or secondary command buffer recorded within the same parent primary command buffer as `commandBuffer`, the `performanceCounterMultipleQueryPools` feature **must** be enabled
- VUID-vkCmdBeginQueryIndexedEXT-None-02863
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains a `vkCmdResetQueryPool` command affecting the same query

Valid Usage (Implicit)

- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdBeginQueryIndexedEXT-flags-parameter
`flags` **must** be a valid combination of `VkQueryControlFlagBits` values
- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations
- VUID-vkCmdBeginQueryIndexedEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBeginQueryIndexedEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBeginQueryIndexedEXT-commonparent
Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	<code>VK_QUEUE_COMPUTE_BIT</code> <code>VK_QUEUE_GRAPHICS_BIT</code> <code>VK_QUEUE_VIDEO_DECODE_BIT_KHR</code> <code>VK_QUEUE_VIDEO_ENCODE_BIT_KHR</code>	Action State

Conditional Rendering

`vkCmdBeginQueryIndexedEXT` is not affected by [conditional rendering](#)

Bits which **can** be set in `vkCmdBeginQuery::flags`, specifying constraints on the types of queries that **can** be performed, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryControlFlagBits {
    VK_QUERY_CONTROL_PRECISE_BIT = 0x00000001,
} VkQueryControlFlagBits;
```

- `VK_QUERY_CONTROL_PRECISE_BIT` specifies the precision of [occlusion queries](#).

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryControlFlags;
```

`VkQueryControlFlags` is a bitmask type for setting a mask of zero or more [VkQueryControlFlagBits](#).

To end a query after the set of desired commands is recorded, call:

```
// Provided by VK_VERSION_1_0
void vkCmdEndQuery(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 query);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that is managing the results of the query.
- `query` is the query index within the query pool where the result is stored.

The command completes the query in `queryPool` identified by `query`, and marks it as available.

This command defines an execution dependency between other query commands that reference the same query.

The first [synchronization scope](#) includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in [submission order](#).

The second [synchronization scope](#) includes only the operation of this command.

Calling `vkCmdEndQuery` is equivalent to calling `vkCmdEndQueryIndexedEXT` with the `index` parameter set to zero.

Valid Usage

- VUID-vkCmdEndQuery-None-01923
All queries used by the command **must** be [active](#)
- VUID-vkCmdEndQuery-query-00810
`query` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdEndQuery-commandBuffer-01886
`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdEndQuery-query-00812

If `vkCmdEndQuery` is called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`

- VUID-vkCmdEndQuery-queryPool-03227

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one or more of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR`, the `vkCmdEndQuery` **must** be the last recorded command in `commandBuffer`

- VUID-vkCmdEndQuery-queryPool-03228

If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one or more of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR`, the `vkCmdEndQuery` **must** not be recorded within a render pass instance

- VUID-vkCmdEndQuery-None-07007

If called within a subpass of a render pass instance, the corresponding `vkCmdBeginQuery*` command **must** have been called previously within the same subpass

- VUID-vkCmdEndQuery-None-10682

This command **must** not be recorded when `per-tile execution model` is enabled

Valid Usage (Implicit)

- VUID-vkCmdEndQuery-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdEndQuery-queryPool-parameter

`queryPool` **must** be a valid `VkQueryPool` handle

- VUID-vkCmdEndQuery-commandBuffer-recording

`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdEndQuery-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations

- VUID-vkCmdEndQuery-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdEndQuery-commonparent

Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

`vkCmdEndQuery` is not affected by [conditional rendering](#)

To end an indexed query after the set of desired drawing or dispatching commands is recorded, call:

```
// Provided by VK_EXT_transform_feedback
void vkCmdEndQueryIndexedEXT(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 query,
    uint32_t                 index);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that is managing the results of the query.
- `query` is the query index within the query pool where the result is stored.
- `index` is the query type specific index.

The command completes the query in `queryPool` identified by `query` and `index`, and marks it as available.

The `vkCmdEndQueryIndexedEXT` command operates the same as the `vkCmdEndQuery` command, except that it also accepts a query type specific `index` parameter.

This command defines an execution dependency between other query commands that reference the same query index.

The first [synchronization scope](#) includes all commands which reference the queries in [queryPool](#) indicated by [query](#) that occur earlier in [submission order](#).

The second [synchronization scope](#) includes only the operation of this command.

Valid Usage

- VUID-vkCmdEndQueryIndexedEXT-None-02342
All queries used by the command **must** be [active](#)
- VUID-vkCmdEndQueryIndexedEXT-query-02343
[query](#) **must** be less than the number of queries in [queryPool](#)
- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-02344
[commandBuffer](#) **must** not be a protected command buffer
- VUID-vkCmdEndQueryIndexedEXT-query-02345
If [vkCmdEndQueryIndexedEXT](#) is called within a render pass instance, the sum of [query](#) and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in [queryPool](#)
- VUID-vkCmdEndQueryIndexedEXT-queryType-06694
If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT](#) or [VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT](#), the [index](#) parameter **must** be less than [VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams](#)
- VUID-vkCmdEndQueryIndexedEXT-queryType-06695
If the [queryType](#) used to create [queryPool](#) was not [VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT](#) and not [VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT](#), the [index](#) **must** be zero
- VUID-vkCmdEndQueryIndexedEXT-queryType-06696
If the [queryType](#) used to create [queryPool](#) was [VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT](#) or [VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT](#), [index](#) **must** equal the [index](#) used to begin the query
- VUID-vkCmdEndQueryIndexedEXT-None-07007
If called within a subpass of a render pass instance, the corresponding [vkCmdBeginQuery*](#) command **must** have been called previously within the same subpass
- VUID-vkCmdEndQueryIndexedEXT-None-10682
This command **must** not be recorded when [per-tile execution model](#) is enabled

Valid Usage (Implicit)

- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdEndQueryIndexedEXT-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations
- VUID-vkCmdEndQueryIndexedEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdEndQueryIndexedEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdEndQueryIndexedEXT-commonparent
Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	<code>VK_QUEUE_COMPUTE_BIT</code> <code>VK_QUEUE_GRAPHICS_BIT</code> <code>VK_QUEUE_VIDEO_DECODE_BIT_KHR</code> <code>VK_QUEUE_VIDEO_ENCODE_BIT_KHR</code>	Action State

Conditional Rendering

vkCmdEndQueryIndexedEXT is not affected by [conditional rendering](#)

An application **can** retrieve results either by requesting they be written into application-provided memory, or by requesting they be copied into a [VkBuffer](#). In either case, the layout in memory is defined as follows:

- The first query's result is written starting at the first byte requested by the command, and each subsequent query's result begins [stride](#) bytes later.
- Each query writes results in a tightly packed array of result values as follows:
 - Occlusion queries write one unsigned integer value - the number of samples passed.
 - Pipeline statistics queries write one unsigned integer value for each bit that is enabled in the [pipelineStatistics](#) when the pool is created, and the statistics values are written in bit order starting from the least significant bit.
 - Timestamp queries write one unsigned integer value.
 - Performance queries write one [VkPerformanceCounterResultKHR](#) value for each [VkPerformanceCounterKHR](#) in the query.
 - Transform feedback queries write two unsigned integer values; the first integer is the number of primitives successfully written to the corresponding transform feedback buffer and the second is the number of primitives output to the vertex stream, regardless of whether they were successfully captured or not. In other words, if the transform feedback buffer was sized too small for the number of primitives output by the vertex stream, the first integer represents the number of primitives actually written and the second is the number that would have been written if all the transform feedback buffers associated with that vertex stream were large enough.
 - Primitives generated queries write one unsigned integer value: the number of primitives output to the vertex stream, regardless of whether transform feedback is active or not, or whether they were successfully captured by transform feedback or not. This is identical to the second integer result value produced by transform feedback queries if transform feedback is active.
 - Mesh shader queries write a single unsigned integer.
 - Video encode feedback queries write one or more signed or unsigned integer values for each bit that is enabled in [VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags](#) when the pool is created, and the feedback values are written in bit order starting from the least significant bit, as described [here](#).
- If [VK_QUERY_RESULT_WITH_AVAILABILITY_BIT](#) is specified, an additional unsigned integer result value is written indicating whether the query's result is available, with any non-zero value indicating that it is available.
- If [VK_QUERY_RESULT_WITH_STATUS_BIT_KHR](#) is specified, an additional signed integer result value is written indicating the status of the query result. Positive values indicate success, negative values indicate failure, and zero indicates that the result is not yet available. Specific error codes are as defined in the [VkQueryResultStatusKHR](#) enumeration.

- The bit width of all integer result values written by all query types is either 32- or 64-bits, as requested by the command. The only exceptions are the [VkPerformanceCounterResultKHR](#) values written by performance queries whose type is determined by the `unit` member of the corresponding [VkPerformanceCounterKHR](#).
- If more than one query is retrieved and `stride` is not at least as large as the size of the array of values corresponding to a single query, the values written to memory are undefined.

To retrieve status and results for a set of queries, call:

```
// Provided by VK_VERSION_1_0
VkResult vkGetQueryPoolResults(
    VkDevice           device,
    VkQueryPool        queryPool,
    uint32_t           firstQuery,
    uint32_t           queryCount,
    size_t             dataSize,
    void*              pData,
    VkDeviceSize       stride,
    VkQueryResultFlags flags);
```

- `device` is the logical device that owns the query pool.
- `queryPool` is the query pool managing the queries containing the desired results.
- `firstQuery` is the initial query index.
- `queryCount` is the number of queries to read.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written
- `stride` is the stride in bytes between results for individual queries within `pData`.
- `flags` is a bitmask of [VkQueryResultFlagBits](#) specifying how and when results are returned.

Any results written for a query are written according to [a layout dependent on the query type](#).

If no bits are set in `flags`, and all requested queries are in the available state, results are written as an array of 32-bit unsigned integer values. Behavior when not all queries are available is described [below](#).

If [VK_QUERY_RESULT_WITH_AVAILABILITY_BIT](#) is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `pData`, along with an extra availability or status value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available. The size of the availability or status values is 64 bits if [VK_QUERY_RESULT_64_BIT](#) is set in `flags`. Otherwise, it is 32 bits.

If [VK_QUERY_RESULT_WITH_STATUS_BIT_KHR](#) is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `pData`, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the

results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

`VkQueryResultStatusKHR` defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise specified for any of the results of the used query type.

NOTE	If <code>VK_QUERY_RESULT_WITH_AVAILABILITY_BIT</code> or <code>VK_QUERY_RESULT_WITH_STATUS_BIT_KHR</code> is set, the layout of data in the buffer is a <i>(result,availability)</i> or <i>(result,status)</i> pair for each query returned, and <code>stride</code> is the stride between each pair.
-------------	---

Results for any available query written by this command are final and represent the final result of the query. If `VK_QUERY_RESULT_PARTIAL_BIT` is set, then for any query that is unavailable, an intermediate result between zero and the final result value is written for that query. Otherwise, any result written by this command is undefined.

If `VK_QUERY_RESULT_64_BIT` is set, results and, if returned, availability or status values for all queries are written as an array of 64-bit values. If the `queryPool` was created with `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, results for each query are written as an array of the type indicated by `VkPerformanceCounterKHR::storage` for the counter being queried. Otherwise, results and availability or status values are written as an array of 32-bit values. If an unsigned integer query's value overflows the result type, the value **may** either wrap or saturate. If the `maintenance7` feature is enabled, for an unsigned integer query, the 32-bit result value **must** be equal to the 32 least significant bits of the equivalent 64-bit result value. If a signed integer query's value overflows the result type, the value is undefined. If a floating-point query's value is not representable as the result type, the value is undefined.

If `VK_QUERY_RESULT_WAIT_BIT` is set, this command defines an execution dependency with any earlier commands that writes one of the identified queries. The first `synchronization scope` includes all instances of `vkCmdEndQuery`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteAccelerationStructuresPropertiesKHR`, `vkCmdWriteAccelerationStructuresPropertiesNV`, `vkCmdWriteMicromapsPropertiesEXT`, `vkCmdWriteTimestamp2`, and `vkCmdWriteTimestamp` that reference any query in `queryPool` indicated by `firstQuery` and `queryCount`. The second `synchronization scope` includes the host operations of this command.

If `VK_QUERY_RESULT_WAIT_BIT` is not set, `vkGetQueryPoolResults` **may** return `VK_NOT_READY` if there are queries in the unavailable state.

NOTE	Applications must take care to ensure that use of the <code>VK_QUERY_RESULT_WAIT_BIT</code> bit has the desired effect. For example, if a query has been used previously and a command buffer records the commands <code>vkCmdResetQueryPool</code> , <code>vkCmdBeginQuery</code> , and <code>vkCmdEndQuery</code> for that
-------------	--

query, then the query will remain in the available state until `vkResetQueryPool` is called or the `vkCmdResetQueryPool` command executes on a queue. Applications **can** use fences or events to ensure that a query has already been reset before checking for its results or availability status. Otherwise, a stale value could be returned from a previous use of the query.

The above also applies when `VK_QUERY_RESULT_WAIT_BIT` is used in combination with `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`. In this case, the returned availability status **may** reflect the result of a previous use of the query unless `vkResetQueryPool` is called or the `vkCmdResetQueryPool` command has been executed since the last use of the query.

A similar situation can arise with the `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` flag.

NOTE

Applications **can** double-buffer query pool usage, with a pool per frame, and reset queries at the end of the frame in which they are read.

Valid Usage

- VUID-vkGetQueryPoolResults-firstQuery-09436
`firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkGetQueryPoolResults-firstQuery-09437
The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkGetQueryPoolResults-queryCount-09438
If `queryCount` is greater than 1, `stride` **must** not be zero
- VUID-vkGetQueryPoolResults-queryType-09439
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TIMESTAMP`, `flags` **must** not contain `VK_QUERY_RESULT_PARTIAL_BIT`
- VUID-vkGetQueryPoolResults-queryType-09440
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, `flags` **must** not contain `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`, `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`, `VK_QUERY_RESULT_PARTIAL_BIT`, or `VK_QUERY_RESULT_64_BIT`
- VUID-vkGetQueryPoolResults-queryType-09441
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the `queryPool` **must** have been recorded once for each pass as retrieved via a call to `vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR`
- VUID-vkGetQueryPoolResults-queryType-11874
If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then `flags` **must** not include

VK_QUERY_RESULT_WITH_STATUS_BIT_KHR

- VUID-vkGetQueryPoolResults-queryType-09442

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then `flags` **must** include `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`

- VUID-vkGetQueryPoolResults-flags-09443

If `flags` includes `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`, then it **must** not include `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`

- VUID-vkGetQueryPoolResults-None-09401

All queries used by the command **must** not be uninitialized

- VUID-vkGetQueryPoolResults-flags-02828

If `VK_QUERY_RESULT_64_BIT` is not set in `flags` and the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then `pData` **must** be aligned to a multiple of 4

- VUID-vkGetQueryPoolResults-queryCount-12251

If `queryCount` is greater than 1, `VK_QUERY_RESULT_64_BIT` is not set in `flags` and the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then `stride` **must** be a multiple of 4

- VUID-vkGetQueryPoolResults-flags-00815

If `VK_QUERY_RESULT_64_BIT` is set in `flags` then `pData` **must** be aligned to a multiple of 8

- VUID-vkGetQueryPoolResults-queryCount-12252

If `queryCount` is greater than 1 and `VK_QUERY_RESULT_64_BIT` is set in `flags`, then `stride` **must** be a multiple of 8

- VUID-vkGetQueryPoolResults-stride-08993

If `queryCount` is greater than 1 and `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT` is set, `stride` **must** be large enough to contain the unsigned integer representing availability or status in addition to the query result

- VUID-vkGetQueryPoolResults-queryType-03229

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then `pData` **must** be aligned to a multiple of the size of `VkPerformanceCounterResultKHR`

- VUID-vkGetQueryPoolResults-queryCount-12253

If `queryCount` is greater than 1 and the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then `stride` **must** be a multiple of the size of `VkPerformanceCounterResultKHR`

- VUID-vkGetQueryPoolResults-queryType-04519

If `queryCount` is greater than 1 and the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then `stride` **must** be large enough to contain the `VkQueryPoolPerformanceCreateInfoKHR::counterIndexCount` used to create `queryPool` times the size of `VkPerformanceCounterResultKHR`

- VUID-vkGetQueryPoolResults-dataSize-00817

`dataSize` **must** be large enough to contain the result of each query, as described [here](#)

Valid Usage (Implicit)

- VUID-vkGetQueryPoolResults-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetQueryPoolResults-queryPool-parameter **queryPool** must be a valid [VkQueryPool](#) handle
- VUID-vkGetQueryPoolResults-pData-parameter **pData** must be a valid pointer to an array of **dataSize** bytes
- VUID-vkGetQueryPoolResults-flags-parameter **flags** must be a valid combination of [VkQueryResultFlagBits](#) values
- VUID-vkGetQueryPoolResults-dataSize-arraylength **dataSize** must be greater than 0
- VUID-vkGetQueryPoolResults-queryPool-parent **queryPool** must have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_NOT_READY](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_DEVICE_LOST](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Bits which **can** be set in [vkGetQueryPoolResults::flags](#) and [vkCmdCopyQueryPoolResults::flags](#), specifying how and when results are returned, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryResultFlagBits {
    VK_QUERY_RESULT_64_BIT = 0x00000001,
    VK_QUERY_RESULT_WAIT_BIT = 0x00000002,
    VK_QUERY_RESULT_WITH_AVAILABILITY_BIT = 0x00000004,
    VK_QUERY_RESULT_PARTIAL_BIT = 0x00000008,
    // Provided by VK_KHR_video_queue
    VK_QUERY_RESULT_WITH_STATUS_BIT_KHR = 0x00000010,
} VkQueryResultFlagBits;
```

- [VK_QUERY_RESULT_64_BIT](#) specifies the results will be written as an array of 64-bit unsigned

integer values. If this bit is not set, the results will be written as an array of 32-bit unsigned integer values.

- [VK_QUERY_RESULT_WAIT_BIT](#) specifies that Vulkan will wait for each query's status to become available before retrieving its results.
- [VK_QUERY_RESULT_WITH_AVAILABILITY_BIT](#) specifies that the availability status accompanies the results.
- [VK_QUERY_RESULT_PARTIAL_BIT](#) specifies that returning partial results is acceptable.
- [VK_QUERY_RESULT_WITH_STATUS_BIT_KHR](#) specifies that the last value returned in the query is a [VkQueryResultStatusKHR](#) value. See [result status query](#) for information on how an application can determine whether the use of this flag bit is supported.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryResultFlags;
```

[VkQueryResultFlags](#) is a bitmask type for setting a mask of zero or more [VkQueryResultFlagBits](#).

Specific status codes that **can** be returned from a query are:

```
// Provided by VK_KHR_video_queue
typedef enum VkQueryResultStatusKHR {
    VK_QUERY_RESULT_STATUS_ERROR_KHR = -1,
    VK_QUERY_RESULT_STATUS_NOT_READY_KHR = 0,
    VK_QUERY_RESULT_STATUS_COMPLETE_KHR = 1,
    // Provided by VK_KHR_video_encode_queue
    VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR = -1000299000,
} VkQueryResultStatusKHR;
```

- [VK_QUERY_RESULT_STATUS_NOT_READY_KHR](#) specifies that the query result is not yet available.
- [VK_QUERY_RESULT_STATUS_ERROR_KHR](#) specifies that operations did not complete successfully.
- [VK_QUERY_RESULT_STATUS_COMPLETE_KHR](#) specifies that operations completed successfully and the query result is available.
- [VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR](#) specifies that a video encode operation did not complete successfully due to the destination video bitstream buffer range not being sufficiently large to fit the encoded bitstream data.

To copy query statuses and numerical results directly to buffer memory, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdCopyQueryPoolResultsToMemoryKHR(
    VkCommandBuffer                commandBuffer,
    VkQueryPool                    queryPool,
    uint32_t                       firstQuery,
    uint32_t                       queryCount,
    const VkStridedDeviceAddressRangeKHR* pDstRange,
    VkAddressCommandFlagsKHR        dstFlags,
    VkQueryResultFlags              queryResultFlags);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool managing the queries containing the desired results.
- `firstQuery` is the initial query index.
- `queryCount` is the number of queries. `firstQuery` and `queryCount` together define a range of queries.
- `pDstRange` is a pointer to a `VkStridedDeviceAddressRangeKHR` describing a range of memory addressed with a stride that will receive the results of the copy command.
- `dstFlags` is a `VkAddressCommandFlagsKHR` value defining the flags for the destination address range.
- `queryResultFlags` is a bitmask of `VkQueryResultFlagBits` specifying how and when results are returned.

Any results written for a query are written according to [a layout dependent on the query type](#).

Results for any query in `queryPool` identified by `firstQuery` and `queryCount` that is available are copied to `pDstRange`.

If `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT` is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `pDstRange`, along with an extra availability value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available.

If `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `pDstRange`, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

`VkQueryResultStatusKHR` defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise specified for any of the results of the used query type.

Results for any available query written by this command are final and represent the final result of the query. If `VK_QUERY_RESULT_PARTIAL_BIT` is set, then for any query that is unavailable, an intermediate result between zero and the final result value is written for that query. Otherwise, any result written by this command is undefined.

If `VK_QUERY_RESULT_64_BIT` is set, results and availability or status values for all queries are written as an array of 64-bit values. If the `queryPool` was created with `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, results for each query are written as an array of the type indicated by `VkPerformanceCounterKHR::storage` for the counter being queried. Otherwise, results and availability or status values are written as an array of 32-bit values. If an unsigned integer query's value overflows the result type, the value **may** either wrap or saturate. If the `maintenance7` feature is enabled, for an unsigned integer query, the 32-bit result value **must** be equal to the 32 least significant bits of the equivalent 64-bit result value. If a signed integer query's value overflows the result type, the value is undefined. If a floating-point query's value is not representable as the result type, the value is undefined.

This command defines an execution dependency between other query commands that reference the same query.

The first `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in `submission order`. If `flags` does not include `VK_QUERY_RESULT_WAIT_BIT`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteTimestamp2`, `vkCmdEndQuery`, and `vkCmdWriteTimestamp` are excluded from this scope.

The second `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` that occur later in `submission order`.

The operation of this command happens after the first scope and happens before the second scope.

`vkCmdCopyQueryPoolResultsToMemoryKHR` is considered to be a transfer operation, and its writes to buffer memory **must** be synchronized using `VK_PIPELINE_STAGE_TRANSFER_BIT` and `VK_ACCESS_TRANSFER_WRITE_BIT` before using the results.

Valid Usage

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13097
If the range specified by `pDstRange` is not bound completely to memory when accessed, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13098
If the buffer from which the range specified by `pDstRange` was created with `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `dstFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13099
If the buffer from which the range specified by `pDstRange` was created without `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-dstFlags-13100

<code>dstFlags</code>	must	not	include	both
-----------------------	-------------	-----	---------	------

VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and
VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13122

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `dstFlags` **must** include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13123

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created without `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-dstFlags-13101

`dstFlags` **must** not include both `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13124

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created with `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `dstFlags` **must** include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13125

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created without `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-firstQuery-09436

`firstQuery` **must** be less than the number of queries in `queryPool`

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-firstQuery-09437

The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryCount-09438

If `queryCount` is greater than 1, `stride` **must** not be zero

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-09439

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TIMESTAMP`, `queryResultFlags` **must** not contain `VK_QUERY_RESULT_PARTIAL_BIT`

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-09440

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, `queryResultFlags` **must** not contain `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`, `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`, `VK_QUERY_RESULT_PARTIAL_BIT`, or

VK_QUERY_RESULT_64_BIT

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-09441
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the `queryPool` **must** have been recorded once for each pass as retrieved via a call to `vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-11874
If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then `queryResultFlags` **must** not include `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-09442
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then `queryResultFlags` **must** include `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-flags-09443
If `queryResultFlags` includes `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`, then it **must** not include `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-None-13076
All queries used by the command **must** not be uninitialized when the command is executed
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-flags-13077
If `VK_QUERY_RESULT_64_BIT` is not set in `flags` then `pDstRange->address` and `pDstRange->stride` **must** be multiples of 4
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-flags-13078
If `VK_QUERY_RESULT_64_BIT` is set in `flags` then `pDstRange->address` and `pDstRange->stride` **must** be multiples of 8
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13079
`pDstRange->size` **must** be large enough to contain the result of each query, as described [here](#)
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13080
The buffer from which the range defined by `pDstRange` was queried **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-13081
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, `VkPhysicalDevicePerformanceQueryPropertiesKHR::allowCommandBufferQueryCopies` **must** be `VK_TRUE`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-13082
`vkCmdCopyQueryPoolResultsToMemoryKHR` **must** not be called if the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-None-13083
All queries used by the command **must** not be active

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-None-13084
All queries used by the command **must** have been made *available* by prior executed commands
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-dstFlags-13085
dstFlags **must** not include [VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR](#)

Valid Usage (Implicit)

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-commandBuffer-parameter
commandBuffer **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryPool-parameter
queryPool **must** be a valid [VkQueryPool](#) handle
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-parameter
pDstRange **must** be a valid pointer to a valid [VkStridedDeviceAddressRangeKHR](#) structure
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-dstFlags-parameter
dstFlags **must** be a valid combination of [VkAddressCommandFlagBitsKHR](#) values
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryResultFlags-parameter
queryResultFlags **must** be a valid combination of [VkQueryResultFlagBits](#) values
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-commandBuffer-recording
commandBuffer **must** be in the [recording state](#)
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_TRANSFER_BIT](#) operations
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-commonparent
Both of **commandBuffer**, and **queryPool** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyQueryPoolResultsToMemoryKHR is not affected by [conditional rendering](#)

To copy query statuses and numerical results directly to buffer memory, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyQueryPoolResults(
    VkCommandBuffer          commandBuffer,
    VkQueryPool              queryPool,
    uint32_t                 firstQuery,
    uint32_t                 queryCount,
    VkBuffer                  dstBuffer,
    VkDeviceSize             dstOffset,
    VkDeviceSize             stride,
    VkQueryResultFlags       flags);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool managing the queries containing the desired results.
- `firstQuery` is the initial query index.
- `queryCount` is the number of queries. `firstQuery` and `queryCount` together define a range of queries.
- `dstBuffer` is a [VkBuffer](#) object that will receive the results of the copy command.
- `dstOffset` is an offset into `dstBuffer`.
- `stride` is the stride in bytes between results for individual queries within `dstBuffer`. The required size of the backing memory for `dstBuffer` is determined as described above for [vkGetQueryPoolResults](#).
- `flags` is a bitmask of [VkQueryResultFlagBits](#) specifying how and when results are returned.

Any results written for a query are written according to [a layout dependent on the query type](#).

Results for any query in `queryPool` identified by `firstQuery` and `queryCount` that is available are copied to `dstBuffer`.

If [VK_QUERY_RESULT_WITH_AVAILABILITY_BIT](#) is set, results for all queries in `queryPool` identified

by `firstQuery` and `queryCount` are copied to `dstBuffer`, along with an extra availability value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available.

If `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `dstBuffer`, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

`VkQueryResultStatusKHR` defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise specified for any of the results of the used query type.

Results for any available query written by this command are final and represent the final result of the query. If `VK_QUERY_RESULT_PARTIAL_BIT` is set, then for any query that is unavailable, an intermediate result between zero and the final result value is written for that query. Otherwise, any result written by this command is undefined.

If `VK_QUERY_RESULT_64_BIT` is set, results and availability or status values for all queries are written as an array of 64-bit values. If the `queryPool` was created with `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, results for each query are written as an array of the type indicated by `VkPerformanceCounterKHR::storage` for the counter being queried. Otherwise, results and availability or status values are written as an array of 32-bit values. If an unsigned integer query's value overflows the result type, the value **may** either wrap or saturate. If the `maintenance7` feature is enabled, for an unsigned integer query, the 32-bit result value **must** be equal to the 32 least significant bits of the equivalent 64-bit result value. If a signed integer query's value overflows the result type, the value is undefined. If a floating-point query's value is not representable as the result type, the value is undefined.

This command defines an execution dependency between other query commands that reference the same query.

The first `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in `submission order`. If `flags` does not include `VK_QUERY_RESULT_WAIT_BIT`, `vkCmdEndQuery`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteAccelerationStructuresPropertiesKHR`, `vkCmdWriteAccelerationStructuresPropertiesNV`, `vkCmdWriteMicromapsPropertiesEXT`, `vkCmdWriteTimestamp2`, and `vkCmdWriteTimestamp` are excluded from this scope.

The second `synchronization scope` includes all commands which reference the queries in `queryPool` indicated by `query` that occur later in `submission order`.

The operation of this command happens after the first scope and happens before the second scope.

`vkCmdCopyQueryPoolResults` is considered to be a transfer operation, and its writes to buffer memory **must** be synchronized using `VK_PIPELINE_STAGE_TRANSFER_BIT` and `VK_ACCESS_TRANSFER_WRITE_BIT` before using the results.

Valid Usage

- VUID-vkCmdCopyQueryPoolResults-firstQuery-09436
`firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdCopyQueryPoolResults-firstQuery-09437
The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdCopyQueryPoolResults-queryCount-09438
If `queryCount` is greater than 1, `stride` **must** not be zero
- VUID-vkCmdCopyQueryPoolResults-queryType-09439
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TIMESTAMP`, `flags` **must** not contain `VK_QUERY_RESULT_PARTIAL_BIT`
- VUID-vkCmdCopyQueryPoolResults-queryType-09440
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, `flags` **must** not contain `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`, `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`, `VK_QUERY_RESULT_PARTIAL_BIT`, or `VK_QUERY_RESULT_64_BIT`
- VUID-vkCmdCopyQueryPoolResults-queryType-09441
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the `queryPool` **must** have been recorded once for each pass as retrieved via a call to `vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR`
- VUID-vkCmdCopyQueryPoolResults-queryType-11874
If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then `flags` **must** not include `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`
- VUID-vkCmdCopyQueryPoolResults-queryType-09442
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then `flags` **must** include `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`
- VUID-vkCmdCopyQueryPoolResults-flags-09443
If `flags` includes `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`, then it **must** not include `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`
- VUID-vkCmdCopyQueryPoolResults-None-09402
All queries used by the command **must** not be uninitialized when the command is executed
- VUID-vkCmdCopyQueryPoolResults-dstOffset-00819

`dstOffset` **must** be less than the size of `dstBuffer`

- VUID-vkCmdCopyQueryPoolResults-flags-00822
If `VK_QUERY_RESULT_64_BIT` is not set in `flags` then `dstOffset` **must** be a multiple of 4
- VUID-vkCmdCopyQueryPoolResults-queryCount-12254
If `queryCount` is greater than 1 and `VK_QUERY_RESULT_64_BIT` is not set in `flags` then `stride` **must** be a multiple of 4
- VUID-vkCmdCopyQueryPoolResults-flags-00823
If `VK_QUERY_RESULT_64_BIT` is set in `flags` then `dstOffset` **must** be a multiple of 8
- VUID-vkCmdCopyQueryPoolResults-queryCount-12255
If `queryCount` is greater than 1 and `VK_QUERY_RESULT_64_BIT` is set in `flags` then `stride` **must** be a multiple of 8
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-00824
`dstBuffer` **must** have enough storage, from `dstOffset`, to contain the result of each query, as described [here](#)
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-00825
`dstBuffer` **must** have been created with the `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-00826
If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyQueryPoolResults-queryType-03232
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, `VkPhysicalDevicePerformanceQueryPropertiesKHR::allowCommandBufferQueryCopies` **must** be `VK_TRUE`
- VUID-vkCmdCopyQueryPoolResults-queryType-02734
`vkCmdCopyQueryPoolResults` **must** not be called if the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL`
- VUID-vkCmdCopyQueryPoolResults-None-07429
All queries used by the command **must** not be active
- VUID-vkCmdCopyQueryPoolResults-None-08752
All queries used by the command **must** have been made *available* by prior executed commands

Valid Usage (Implicit)

- VUID-vkCmdCopyQueryPoolResults-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyQueryPoolResults-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle

- VUID-vkCmdCopyQueryPoolResults-flags-parameter
flags **must** be a valid combination of [VkQueryResultFlagBits](#) values
- VUID-vkCmdCopyQueryPoolResults-commandBuffer-recording
commandBuffer **must** be in the [recording state](#)
- VUID-vkCmdCopyQueryPoolResults-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) operations
- VUID-vkCmdCopyQueryPoolResults-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyQueryPoolResults-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyQueryPoolResults-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyQueryPoolResults-commonparent
Each of **commandBuffer**, **dstBuffer**, and **queryPool** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

`vkCmdCopyQueryPoolResults` is not affected by [conditional rendering](#)

Rendering operations such as clears, MSAA resolves, attachment load/store operations, and blits **may** count towards the results of queries. This behavior is implementation-dependent and **may** vary depending on the path used within an implementation. For example, some implementations have several types of clears, some of which **may** include vertices and some not.

23.3. Occlusion Queries

Occlusion queries track the number of samples that pass the per-fragment tests for a set of drawing commands. As such, occlusion queries are only available on queue families supporting graphics operations. The application **can** then use these results to inform future rendering decisions. An occlusion query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`, respectively. When an occlusion query begins, the count of passing samples always starts at zero. For each drawing command, the count is incremented as described in [Sample Counting](#). If `flags` does not contain `VK_QUERY_CONTROL_PRECISE_BIT` an implementation **may** generate any non-zero result value for the query if the count of passing samples is non-zero.

Not setting `VK_QUERY_CONTROL_PRECISE_BIT` mode **may** be more efficient on some implementations, and **should** be used where it is sufficient to know a boolean result on whether any samples passed the per-fragment tests. In this case, some implementations **may** only return zero or one, regardless of the actual number of samples passing the per-fragment tests.

NOTE

Setting `VK_QUERY_CONTROL_PRECISE_BIT` does not guarantee that different implementations return the same number of samples in an occlusion query. Some implementations may kill fragments in the [pre-rasterization shader stage](#), and these killed fragments do not contribute to the final result of the query. It is possible that some implementations generate a zero result value for the query, while others generate a non-zero value.

When an occlusion query finishes, the result for that query is marked as available. The application **can** then either copy the result to a buffer (via `vkCmdCopyQueryPoolResults`) or request it be put into host memory (via `vkGetQueryPoolResults`).

NOTE

If occluding geometry is not drawn first, samples **can** pass the depth test, but still not be visible in a final image.

23.4. Pipeline Statistics Queries

Pipeline statistics queries allow the application to sample a specified set of `VkPipeline` counters. These counters are accumulated by Vulkan for a set of either drawing or dispatching commands while a pipeline statistics query is active. As such, pipeline statistics queries are available on queue families supporting either graphics or compute operations. The availability of pipeline statistics queries is indicated by the `pipelineStatisticsQuery` member of the `VkPhysicalDeviceFeatures` object (see `vkGetPhysicalDeviceFeatures` and `vkCreateDevice` for detecting and requesting this query type on a `VkDevice`).

A pipeline statistics query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`, respectively. When a pipeline statistics query begins, all statistics counters are set to zero. While the query is active, the pipeline type determines which set of statistics are available, but these **must** be configured on the query pool when it is created. If a statistic counter is issued on a command buffer that does not support the corresponding operation, or the counter corresponds to a shading stage which is missing from any of the pipelines used while the query is active, the value of that counter

is undefined after the query has been made available. At least one statistic counter relevant to the operations supported on the recording command buffer **must** be enabled.

Bits which **can** be set in `VkQueryPoolCreateInfo::pipelineStatistics` for query pools and in `VkCommandBufferInheritanceInfo::pipelineStatistics` for secondary command buffers, individually enabling pipeline statistics counters, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryPipelineStatisticFlagBits {
    VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT = 0x00000001,
    VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT = 0x00000002,
    VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT = 0x00000004,
    VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT = 0x00000008,
    VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT = 0x00000010,
    VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT = 0x00000020,
    VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT = 0x00000040,
    VK_QUERY_PIPELINE_STATISTIC_FRAGMENT_SHADER_INVOCATIONS_BIT = 0x00000080,
    VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT = 0x00000100,
    VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT =
0x00000200,
    VK_QUERY_PIPELINE_STATISTIC_COMPUTE_SHADER_INVOCATIONS_BIT = 0x00000400,
    // Provided by VK_EXT_mesh_shader
    VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT = 0x00000800,
    // Provided by VK_EXT_mesh_shader
    VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT = 0x00001000,
    // Provided by VK_HUAWEI_cluster_culling_shader
    VK_QUERY_PIPELINE_STATISTIC_CLUSTER_CULLING_SHADER_INVOCATIONS_BIT_HUAWEI =
0x00002000,
} VkQueryPipelineStatisticFlagBits;
```

- `VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT` specifies that queries managed by the pool will count the number of vertices processed by the [input assembly](#) stage. Vertices corresponding to incomplete primitives **may** contribute to the count.
- `VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT` specifies that queries managed by the pool will count the number of primitives processed by the [input assembly](#) stage. If primitive restart is enabled, restarting the primitive topology has no effect on the count. Incomplete primitives **may** be counted.
- `VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT` specifies that queries managed by the pool will count the number of vertex shader invocations. This counter's value is incremented each time a vertex shader is [invoked](#).
- `VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT` specifies that queries managed by the pool will count the number of geometry shader invocations. This counter's value is incremented each time a geometry shader is [invoked](#). In the case of [instanced geometry shaders](#), the geometry shader invocations count is incremented for each separate instanced invocation.
- `VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT` specifies that queries managed by the pool will count the number of primitives generated by geometry shader

invocations. The counter's value is incremented each time the geometry shader emits a primitive. Restarting primitive topology using the SPIR-V instructions `OpEndPrimitive` or `OpEndStreamPrimitive` has no effect on the geometry shader output primitives count.

- `VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT` specifies that queries managed by the pool will count the number of primitives processed by the `Primitive Clipping` stage of the pipeline. The counter's value is incremented each time a primitive reaches the primitive clipping stage.
- `VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT` specifies that queries managed by the pool will count the number of primitives output by the `Primitive Clipping` stage of the pipeline. The counter's value is incremented each time a primitive passes the primitive clipping stage. The actual number of primitives output by the primitive clipping stage for a particular input primitive is implementation-dependent but **must** satisfy the following conditions:
 - If at least one vertex of the input primitive lies inside the clipping volume, the counter is incremented by one or more.
 - Otherwise, the counter is incremented by zero or more.
- `VK_QUERY_PIPELINE_STATISTIC_FRAGMENT_SHADER_INVOCATIONS_BIT` specifies that queries managed by the pool will count the number of fragment shader invocations. The counter's value is incremented each time the fragment shader is `invoked`.
- `VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT` specifies that queries managed by the pool will count the number of patches processed by the tessellation control shader. The counter's value is incremented once for each patch for which a tessellation control shader is `invoked`.
- `VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT` specifies that queries managed by the pool will count the number of invocations of the tessellation evaluation shader. The counter's value is incremented each time the tessellation evaluation shader is `invoked`.
- `VK_QUERY_PIPELINE_STATISTIC_COMPUTE_SHADER_INVOCATIONS_BIT` specifies that queries managed by the pool will count the number of compute shader invocations. The counter's value is incremented every time the compute shader is invoked. Implementations **may** skip the execution of certain compute shader invocations or execute additional compute shader invocations for implementation-dependent reasons as long as the results of rendering otherwise remain unchanged.
- `VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT` specifies that queries managed by the pool will count the number of task shader invocations. The counter's value is incremented every time the task shader is invoked.
- `VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT` specifies that queries managed by the pool will count the number of mesh shader invocations. The counter's value is incremented every time the mesh shader is invoked.

These values are intended to measure relative statistics on one implementation. Various device architectures will count these values differently. Any or all counters **may** be affected by the issues described in [Query Operation](#).

This counting difference is especially true if the pipeline contains mesh or task shaders, which may

affect several of the counters in unexpected ways.

NOTE

For example, tile-based rendering devices **may** need to replay the scene multiple times, affecting some of the counts.

If a pipeline has `rasterizerDiscardEnable` enabled, implementations **may** discard primitives after the final `pre-rasterization shader stage`. As a result, if `rasterizerDiscardEnable` is enabled, the clipping input and output primitives counters **may** not be incremented.

When a pipeline statistics query finishes, the result for that query is marked as available. The application **can** copy the result to a buffer (via `vkCmdCopyQueryPoolResults`), or request it be put into host memory (via `vkGetQueryPoolResults`).

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryPipelineStatisticFlags;
```

`VkQueryPipelineStatisticFlags` is a bitmask type for setting a mask of zero or more `VkQueryPipelineStatisticFlagBits`.

23.5. Timestamp Queries

Timestamps provide applications with a mechanism for monotonically tracking the execution of commands. A timestamp is an integer value generated by the `VkPhysicalDevice`. Unlike other queries, timestamps do not operate over a range, and so do not use `vkCmdBeginQuery` or `vkCmdEndQuery`. The mechanism is built around a set of commands that allow the application to tell the `VkPhysicalDevice` to write timestamp values to a `query pool` and then either read timestamp values on the host (using `vkGetQueryPoolResults`) or copy timestamp values to a `VkBuffer` (using `vkCmdCopyQueryPoolResults`).

The number of valid bits in a timestamp value is determined by the `VkQueueFamilyProperties::timestampValidBits` property of the queue on which the timestamp is written. Timestamps are supported on any queue which reports a non-zero value for `timestampValidBits` via `vkGetPhysicalDeviceQueueFamilyProperties`. If the `timestampComputeAndGraphics` limit is `VK_TRUE`, timestamps are supported by every queue family that supports either graphics or compute operations (see `VkQueueFamilyProperties`).

The number of nanoseconds it takes for a timestamp value to be incremented by 1 **can** be obtained from `VkPhysicalDeviceLimits::timestampPeriod` after a call to `vkGetPhysicalDeviceProperties`.

To request a timestamp and write the value to memory, call:

```
// Provided by VK_VERSION_1_3
void vkCmdWriteTimestamp2(
    VkCommandBuffer          commandBuffer,
    VkPipelineStageFlags2    stage,
    VkQueryPool              queryPool,
    uint32_t                 query);
```

```
// Provided by VK_KHR_synchronization2
// Equivalent to vkCmdWriteTimestamp2
void vkCmdWriteTimestamp2KHR(
    VkCommandBuffer                commandBuffer,
    VkPipelineStageFlags2          stage,
    VkQueryPool                    queryPool,
    uint32_t                       query);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `stage` specifies a stage of the pipeline.
- `queryPool` is the query pool that will manage the timestamp.
- `query` is the query within the query pool that will contain the timestamp.

When `vkCmdWriteTimestamp2` is submitted to a queue, it defines an execution dependency on commands that were submitted before it, and writes a timestamp to a query pool.

The first [synchronization scope](#) includes all commands that occur earlier in [submission order](#). The synchronization scope is limited to operations on the pipeline stage specified by `stage`.

The second [synchronization scope](#) includes only the timestamp write operation.

NOTE

Implementations may write the timestamp at any stage that is [logically later](#) than `stage`.

Any timestamp write that [happens-after](#) another timestamp write in the same submission **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. If `VK_KHR_calibrated_timestamps` or `VK_EXT_calibrated_timestamps` is enabled, this extends to timestamp writes across all submissions on the same logical device: any timestamp write that [happens-after](#) another **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. Timestamps written by this command **must** be in the `VK_TIME_DOMAIN_DEVICE_KHR` [time domain](#). If an overflow occurs, the timestamp value **must** wrap back to zero.

If `vkCmdWriteTimestamp2` is called while executing a render pass instance that has multiview enabled, the timestamp uses N consecutive query indices in the query pool (starting at `query`) where N is the number of bits set in the view mask of the subpass or dynamic render pass the command is executed in. The resulting query values are determined by an implementation-dependent choice of one of the following behaviors:

- The first query is a timestamp value and (if more than one bit is set in the view mask) zero is written to the remaining queries.
- All N queries are timestamp values.

Either way, if two timestamps are written in the same subpass or dynamic render pass with multiview enabled, each of the N consecutive queries written for a timestamp **must** not have a lower value than the queries with corresponding indices written by the timestamp that happens-before unless the value overflows the maximum supported integer bit width of the query.

Valid Usage

- VUID-vkCmdWriteTimestamp2-stage-03929
If the `geometryShader` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_GEOMETRY_SHADER_BIT`
- VUID-vkCmdWriteTimestamp2-stage-03930
If the `tessellationShader` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_TESSELLATION_CONTROL_SHADER_BIT` or `VK_PIPELINE_STAGE_2_TESSELLATION_EVALUATION_SHADER_BIT`
- VUID-vkCmdWriteTimestamp2-stage-03931
If the `conditionalRendering` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_CONDITIONAL_RENDERING_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-03932
If the `fragmentDensityMap` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_FRAGMENT_DENSITY_PROCESS_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-03933
If the `transformFeedback` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_TRANSFORM_FEEDBACK_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-03934
If the `meshShader` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_MESH_SHADER_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-03935
If the `taskShader` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_TASK_SHADER_BIT_EXT`
- VUID-vkCmdWriteTimestamp2-stage-07316
If neither of the `shadingRateImage` or the `attachmentFragmentShadingRate` features are enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`
- VUID-vkCmdWriteTimestamp2-stage-04957
If the `subpassShading` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_SUBPASS_SHADER_BIT_HUAWEI`
- VUID-vkCmdWriteTimestamp2-stage-04995
If the `invocationMask` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_INVOCATION_MASK_BIT_HUAWEI`
- VUID-vkCmdWriteTimestamp2-stage-07946
If neither the `VK_NV_ray_tracing` extension or the `rayTracingPipeline` feature are enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_KHR`
- VUID-vkCmdWriteTimestamp2-stage-10751
If the `accelerationStructure` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_BUILD_BIT_KHR`
- VUID-vkCmdWriteTimestamp2-stage-10752
If the `rayTracingMaintenance1` feature is not enabled, `stage` **must** not contain

VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR

- VUID-vkCmdWriteTimestamp2-stage-10753
If the **micromap** feature is not enabled, **stage** **must** not contain **VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT**
- VUID-vkCmdWriteTimestamp2-synchronization2-03858
The **synchronization2** feature **must** be enabled
- VUID-vkCmdWriteTimestamp2-stage-03859
stage **must** only include a single pipeline stage
- VUID-vkCmdWriteTimestamp2-stage-03860
stage **must** only include stages valid for the queue family that was used to create the command pool that **commandBuffer** was allocated from
- VUID-vkCmdWriteTimestamp2-queryPool-03861
queryPool **must** have been created with a **queryType** of **VK_QUERY_TYPE_TIMESTAMP**
- VUID-vkCmdWriteTimestamp2-timestampValidBits-03863
The command pool's queue family **must** support a non-zero **timestampValidBits**
- VUID-vkCmdWriteTimestamp2-query-04903
query **must** be less than the number of queries in **queryPool**
- VUID-vkCmdWriteTimestamp2-None-03864
All queries used by the command **must** be *unavailable*
- VUID-vkCmdWriteTimestamp2-query-03865
If **vkCmdWriteTimestamp2** is called within a render pass instance, the sum of **query** and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in **queryPool**
- VUID-vkCmdWriteTimestamp2-None-10639
This command **must** not be recorded when **per-tile execution model** is enabled

Valid Usage (Implicit)

- VUID-vkCmdWriteTimestamp2-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdWriteTimestamp2-stage-parameter
stage **must** be a valid combination of **VkPipelineStageFlagBits2** values
- VUID-vkCmdWriteTimestamp2-queryPool-parameter
queryPool **must** be a valid **VkQueryPool** handle
- VUID-vkCmdWriteTimestamp2-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdWriteTimestamp2-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support **VK_QUEUE_COMPUTE_BIT**, **VK_QUEUE_GRAPHICS_BIT**, **VK_QUEUE_TRANSFER_BIT**, **VK_QUEUE_VIDEO_DECODE_BIT_KHR**, or **VK_QUEUE_VIDEO_ENCODE_BIT_KHR** operations

- VUID-vkCmdWriteTimestamp2-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteTimestamp2-commonparent
Both of **commandBuffer**, and **queryPool** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

vkCmdWriteTimestamp2 is not affected by [conditional rendering](#)

To request a timestamp and write the value to memory, call:

WARNING

This functionality is superseded by [vkCmdWriteTimestamp2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
void vkCmdWriteTimestamp(
    VkCommandBuffer          commandBuffer,
    VkPipelineStageFlagBits pipelineStage,
    VkQueryPool              queryPool,
    uint32_t                 query);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pipelineStage` is a `VkPipelineStageFlagBits` value, specifying a stage of the pipeline.
- `queryPool` is the query pool that will manage the timestamp.
- `query` is the query within the query pool that will contain the timestamp.

When `vkCmdWriteTimestamp` is submitted to a queue, it defines an execution dependency on commands that were submitted before it, and writes a timestamp to a query pool.

The first [synchronization scope](#) includes all commands that occur earlier in [submission order](#). The synchronization scope is limited to operations on the pipeline stage specified by `pipelineStage`.

The second [synchronization scope](#) includes only the timestamp write operation.

NOTE

Implementations may write the timestamp at any stage that is [logically later](#) than [stage](#).

Any timestamp write that [happens-after](#) another timestamp write in the same submission **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. If `VK_KHR_calibrated_timestamps` or `VK_EXT_calibrated_timestamps` is enabled, this extends to timestamp writes across all submissions on the same logical device: any timestamp write that [happens-after](#) another **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. Timestamps written by this command **must** be in the `VK_TIME_DOMAIN_DEVICE_KHR` [time domain](#). If an overflow occurs, the timestamp value **must** wrap back to zero.

If `vkCmdWriteTimestamp` is called while executing a render pass instance that has multiview enabled, the timestamp uses N consecutive query indices in the query pool (starting at `query`) where N is the number of bits set in the view mask of the subpass or dynamic render pass the command is executed in. The resulting query values are determined by an implementation-dependent choice of one of the following behaviors:

- The first query is a timestamp value and (if more than one bit is set in the view mask) zero is written to the remaining queries.
- All N queries are timestamp values.

Either way, if two timestamps are written in the same subpass or dynamic render pass with multiview enabled, each of the N consecutive queries written for a timestamp **must** not have a lower value than the queries with corresponding indices written by the timestamp that happens-before unless the value overflows the maximum supported integer bit width of the query.

Valid Usage

- VUID-vkCmdWriteTimestamp-pipelineStage-04074
`pipelineStage` **must** be a `valid stage` for the queue family that was used to create the command pool that `commandBuffer` was allocated from
- VUID-vkCmdWriteTimestamp-pipelineStage-04075
If the `geometryShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT`
- VUID-vkCmdWriteTimestamp-pipelineStage-04076
If the `tessellationShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_TESSELLATION_CONTROL_SHADER_BIT` or `VK_PIPELINE_STAGE_TESSELLATION_EVALUATION_SHADER_BIT`
- VUID-vkCmdWriteTimestamp-pipelineStage-04077
If the `conditionalRendering` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_CONDITIONAL_RENDERING_BIT_EXT`
- VUID-vkCmdWriteTimestamp-pipelineStage-04078
If the `fragmentDensityMap` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT`
- VUID-vkCmdWriteTimestamp-pipelineStage-04079
If the `transformFeedback` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT`
- VUID-vkCmdWriteTimestamp-pipelineStage-04080
If the `meshShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT`
- VUID-vkCmdWriteTimestamp-pipelineStage-07077
If the `taskShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT`
- VUID-vkCmdWriteTimestamp-shadingRateImage-07314
If neither of the `shadingRateImage` or the `attachmentFragmentShadingRate` features are enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`
- VUID-vkCmdWriteTimestamp-synchronization2-06489
If the `synchronization2` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_NONE`
- VUID-vkCmdWriteTimestamp-rayTracingPipeline-07943
If neither of the `VK_NV_ray_tracing` extension or the `rayTracingPipeline` feature are enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR`
- VUID-vkCmdWriteTimestamp-queryPool-01416
`queryPool` **must** have been created with a `queryType` of `VK_QUERY_TYPE_TIMESTAMP`
- VUID-vkCmdWriteTimestamp-timestampValidBits-00829
The command pool's queue family **must** support a non-zero `timestampValidBits`

- VUID-vkCmdWriteTimestamp-query-04904
`query` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdWriteTimestamp-None-00830
All queries used by the command **must** be *unavailable*
- VUID-vkCmdWriteTimestamp-query-00831
If `vkCmdWriteTimestamp` is called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdWriteTimestamp-None-10640
This command **must** not be recorded when `per-tile execution model` is enabled

Valid Usage (Implicit)

- VUID-vkCmdWriteTimestamp-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdWriteTimestamp-pipelineStage-parameter
`pipelineStage` **must** be a valid `VkPipelineStageFlagBits` value
- VUID-vkCmdWriteTimestamp-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdWriteTimestamp-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdWriteTimestamp-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, `VK_QUEUE_OPTICAL_FLOW_BIT_NV`, `VK_QUEUE_TRANSFER_BIT`, `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations
- VUID-vkCmdWriteTimestamp-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteTimestamp-commonparent
Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_OPTICAL_FLOW_BIT_NV VK_QUEUE_TRANSFER_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

`vkCmdWriteTimestamp` is not affected by [conditional rendering](#)

23.6. Performance Queries

Performance queries provide applications with a mechanism for getting performance counter information about the execution of command buffers, render passes, and commands.

Each queue family advertises the performance counters that **can** be queried on a queue of that family via a call to [vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR](#). Implementations **may** limit access to performance counters based on platform requirements or only to specialized drivers for development purposes.

NOTE

This may include no performance counters being enumerated, or a reduced set. Please refer to platform-specific documentation for guidance on any such restrictions.

Performance queries use the existing [vkCmdBeginQuery](#) and [vkCmdEndQuery](#) to control what command buffers, render passes, or commands to get performance information for.

Implementations **may** require multiple passes where the command buffer, render passes, or commands being recorded are the same and are executed on the same queue to record performance counter data. This is achieved by submitting the same batch and providing a [VkPerformanceQuerySubmitInfoKHR](#) structure containing a counter pass index. The number of

passes required for a given performance query pool **can** be queried via a call to [vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR](#).

NOTE

Command buffers recorded with [VK_COMMAND_BUFFER_USAGE_ONE_TIME_SUBMIT_BIT](#) **must** not be re-submitted. Changing command buffer usage bits **may** affect performance. To avoid this, the application **should** re-record any command buffers with the [VK_COMMAND_BUFFER_USAGE_ONE_TIME_SUBMIT_BIT](#) when multiple counter passes are required.

Performance counter results from a performance query pool **can** be obtained with the command [vkGetQueryPoolResults](#).

The [VkPerformanceCounterResultKHR](#) union is defined as:

```
// Provided by VK_KHR_performance_query
typedef union VkPerformanceCounterResultKHR {
    int32_t      int32;
    int64_t      int64;
    uint32_t     uint32;
    uint64_t     uint64;
    float        float32;
    double       float64;
} VkPerformanceCounterResultKHR;
```

- [int32](#) is a 32-bit signed integer value.
- [int64](#) is a 64-bit signed integer value.
- [uint32](#) is a 32-bit unsigned integer value.
- [uint64](#) is a 64-bit unsigned integer value.
- [float32](#) is a 32-bit floating-point value.
- [float64](#) is a 64-bit floating-point value.

Performance query results are returned in an array of [VkPerformanceCounterResultKHR](#) unions containing the data associated with each counter in the query, stored in the same order as the counters supplied in [pCounterIndices](#) when creating the performance query. [VkPerformanceCounterKHR::storage](#) specifies how to parse the counter data.

23.6.1. Profiling Lock

To record and submit a command buffer containing a performance query pool the profiling lock **must** be held. The profiling lock **must** be acquired prior to any call to [vkBeginCommandBuffer](#) that will be using a performance query pool. The profiling lock **must** be held while any command buffer containing a performance query pool is in the *recording*, *executable*, or *pending state*. To acquire the profiling lock, call:

```
// Provided by VK_KHR_performance_query
VkResult vkAcquireProfilingLockKHR(
    VkDevice device,
    const VkAcquireProfilingLockInfoKHR* pInfo);
```

- **device** is the logical device to profile.
- **pInfo** is a pointer to a [VkAcquireProfilingLockInfoKHR](#) structure containing information about how the profiling is to be acquired.

Implementations **may** allow multiple actors to hold the profiling lock concurrently.

Valid Usage (Implicit)

- VUID-vkAcquireProfilingLockKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkAcquireProfilingLockKHR-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkAcquireProfilingLockInfoKHR](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)
- [VK_TIMEOUT](#)

The [VkAcquireProfilingLockInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkAcquireProfilingLockInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkAcquireProfilingLockFlagsKHR flags;
    uint64_t timeout;
} VkAcquireProfilingLockInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.

- **timeout** indicates how long the function waits, in nanoseconds, if the profiling lock is not available.

Valid Usage (Implicit)

- VUID-VkAcquireProfilingLockInfoKHR-sType-sType
sType must be [VK_STRUCTURE_TYPE_ACQUIRE_PROFILING_LOCK_INFO_KHR](#)
- VUID-VkAcquireProfilingLockInfoKHR-pNext-pNext
pNext must be **NULL**
- VUID-VkAcquireProfilingLockInfoKHR-flags-zeroBitmask
flags must be **0**

If **timeout** is 0, [vkAcquireProfilingLockKHR](#) will not block while attempting to acquire the profiling lock. If **timeout** is [UINT64_MAX](#), the function will not return until the profiling lock was acquired.

```
// Provided by VK_KHR_performance_query
typedef enum VkAcquireProfilingLockFlagBitsKHR {
} VkAcquireProfilingLockFlagBitsKHR;
```

```
// Provided by VK_KHR_performance_query
typedef VkFlags VkAcquireProfilingLockFlagsKHR;
```

[VkAcquireProfilingLockFlagsKHR](#) is a bitmask type for setting a mask, but is currently reserved for future use.

To release the profiling lock, call:

```
// Provided by VK_KHR_performance_query
void vkReleaseProfilingLockKHR(
    VkDevice device);
```

- **device** is the logical device to cease profiling on.

Valid Usage

- VUID-vkReleaseProfilingLockKHR-device-03235
The profiling lock of **device** **must** have been held via a previous successful call to [vkAcquireProfilingLockKHR](#)

Valid Usage (Implicit)

- VUID-vkReleaseProfilingLockKHR-device-parameter

device must be a valid [VkDevice](#) handle

23.7. Transform Feedback Queries

Transform feedback queries track the number of primitives attempted to be written and actually written, by the vertex stream being captured, to a transform feedback buffer. This query is updated during drawing commands while transform feedback is active. The number of primitives actually written will be less than the number attempted to be written if the bound transform feedback buffer size was too small for the number of primitives actually drawn. Primitives are not written beyond the bound range of the transform feedback buffer. A transform feedback query is begun and ended by calling [vkCmdBeginQuery](#) and [vkCmdEndQuery](#), respectively to query for vertex stream zero. [vkCmdBeginQueryIndexedEXT](#) and [vkCmdEndQueryIndexedEXT](#) **can** be used to begin and end transform feedback queries for any supported vertex stream. When a transform feedback query begins, the count of primitives written and primitives needed starts from zero. For each drawing command, the count is incremented as vertex attribute outputs are captured to the transform feedback buffers while transform feedback is active.

When a transform feedback query finishes, the result for that query is marked as available. The application **can** then either copy the result to a buffer (via [vkCmdCopyQueryPoolResults](#)) or request it be put into host memory (via [vkGetQueryPoolResults](#)).

23.8. Primitives Generated Queries

When a generated primitive query for a vertex stream is active, the primitives-generated count is incremented every time a primitive emitted to that stream reaches the transform feedback stage, whether or not transform feedback is active. A primitives generated query is begun and ended by calling [vkCmdBeginQuery](#) and [vkCmdEndQuery](#), respectively to query for vertex stream zero. [vkCmdBeginQueryIndexedEXT](#) and [vkCmdEndQueryIndexedEXT](#) **can** be used to begin and end primitives generated queries for any supported vertex stream. When a primitives generated query begins, the count of primitives generated starts from zero.

When a primitives generated query finishes, the result for that query is marked as available. The application **can** then either copy the result to a buffer (via [vkCmdCopyQueryPoolResults](#)) or request it be put into host memory (via [vkGetQueryPoolResults](#)).

NOTE

The result of this query is typically identical to [VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT](#), but the primitives generated query is deterministic, i.e. it must be identical to the number of primitives processed. [VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT](#) may vary for implementation-dependent reasons, e.g. the same primitive may be processed multiple times for purposes of clipping.

23.9. Mesh Shader Queries

When a generated mesh primitives query is active, the mesh-primitives-generated count is

incremented every time a primitive emitted from the mesh shader stage reaches the fragment shader stage. When a generated mesh primitives query begins, the mesh-primitives-generated count starts from zero.

Mesh and task shader pipeline statistics queries function the same way that invocation queries work for other shader stages, counting the number of times the respective shader stage has been run. When the statistics query begins, the invocation counters start from zero.

23.10. Intel Performance Queries

Intel performance queries allow an application to capture performance data for a set of commands. Performance queries are used in a similar way than other types of queries. A main difference with existing queries is that the resulting data should be handed over to a library capable to produce human readable results rather than being read directly by an application.

Prior to creating a performance query pool, initialize the device for performance queries with the call:

```
// Provided by VK_INTEL_performance_query
VkResult vkInitializePerformanceApiINTEL(
    VkDevice device,
    const VkInitializePerformanceApiInfoINTEL* pInitializeInfo);
```

- **device** is the logical device used for the queries.
- **pInitializeInfo** is a pointer to a [VkInitializePerformanceApiInfoINTEL](#) structure specifying initialization parameters.

Valid Usage (Implicit)

- VUID-vkInitializePerformanceApiINTEL-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkInitializePerformanceApiINTEL-pInitializeInfo-parameter **pInitializeInfo** must be a valid pointer to a valid [VkInitializePerformanceApiInfoINTEL](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)

- [VK_ERROR_VALIDATION_FAILED](#)

The `VkInitializePerformanceApiInfoINTEL` structure is defined as :

```
// Provided by VK_INTEL_performance_query
typedef struct VkInitializePerformanceApiInfoINTEL {
    VkStructureType    sType;
    const void*        pNext;
    void*              pUserData;
} VkInitializePerformanceApiInfoINTEL;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pUserData` is `NULL` or a pointer for application data.

Valid Usage (Implicit)

- VUID-VkInitializePerformanceApiInfoINTEL-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_INITIALIZE_PERFORMANCE_API_INFO_INTEL](#)
- VUID-VkInitializePerformanceApiInfoINTEL-pNext-pNext
`pNext` **must** be `NULL`

Once performance query operations have completed, uninitialize the device for performance queries with the call:

```
// Provided by VK_INTEL_performance_query
void vkUninitializePerformanceApiINTEL(
    VkDevice device);
```

- `device` is the logical device used for the queries.

Valid Usage (Implicit)

- VUID-vkUninitializePerformanceApiINTEL-device-parameter
`device` **must** be a valid [VkDevice](#) handle

Some performance query features of a device can be discovered with the call:

```
// Provided by VK_INTEL_performance_query
VkResult vkGetPerformanceParameterINTEL(
    VkDevice                device,
    VkPerformanceParameterTypeINTEL parameter,
    VkPerformanceValueINTEL* pValue);
```

- **device** is the logical device to query.
- **parameter** is the parameter to query.
- **pValue** is a pointer to a [VkPerformanceValueINTEL](#) structure in which the type and value of the parameter are returned.

Valid Usage (Implicit)

- VUID-vkGetPerformanceParameterINTEL-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetPerformanceParameterINTEL-parameter-parameter **parameter** **must** be a valid [VkPerformanceParameterTypeINTEL](#) value
- VUID-vkGetPerformanceParameterINTEL-pValue-parameter **pValue** **must** be a valid pointer to a [VkPerformanceValueINTEL](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Possible values of [vkGetPerformanceParameterINTEL::parameter](#), specifying a performance query feature, are:

```
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceParameterTypeINTEL {
    VK_PERFORMANCE_PARAMETER_TYPE_HW_COUNTERS_SUPPORTED_INTEL = 0,
    VK_PERFORMANCE_PARAMETER_TYPE_STREAM_MARKER_VALID_BITS_INTEL = 1,
} VkPerformanceParameterTypeINTEL;
```

- [VK_PERFORMANCE_PARAMETER_TYPE_HW_COUNTERS_SUPPORTED_INTEL](#) has a boolean result which tells whether hardware counters can be captured.

- [VK_PERFORMANCE_PARAMETER_TYPE_STREAM_MARKER_VALID_BITS_INTEL](#) has a 32 bits integer result which tells how many bits can be written into the [VkPerformanceValueINTEL](#) value.

The [VkPerformanceValueINTEL](#) structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceValueINTEL {
    VkPerformanceValueTypeINTEL    type;
    VkPerformanceValueDataINTEL    data;
} VkPerformanceValueINTEL;
```

- [type](#) is a [VkPerformanceValueTypeINTEL](#) value specifying the type of the returned data.
- [data](#) is a [VkPerformanceValueDataINTEL](#) union specifying the value of the returned data.

Possible values of [VkPerformanceValueINTEL::type](#), specifying the type of the data returned in [VkPerformanceValueINTEL::data](#), are:

- [VK_PERFORMANCE_VALUE_TYPE_UINT32_INTEL](#) specifies that unsigned 32-bit integer data is returned in [data.value32](#).
- [VK_PERFORMANCE_VALUE_TYPE_UINT64_INTEL](#) specifies that unsigned 64-bit integer data is returned in [data.value64](#).
- [VK_PERFORMANCE_VALUE_TYPE_FLOAT_INTEL](#) specifies that floating-point data is returned in [data.valueFloat](#).
- [VK_PERFORMANCE_VALUE_TYPE_BOOL_INTEL](#) specifies that [VkBool32](#) data is returned in [data.valueBool](#).
- [VK_PERFORMANCE_VALUE_TYPE_STRING_INTEL](#) specifies that a pointer to a null-terminated UTF-8 string is returned in [data.valueString](#). The pointer is valid for the lifetime of the [device](#) parameter passed to [vkGetPerformanceParameterINTEL](#).

```
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceValueTypeINTEL {
    VK_PERFORMANCE_VALUE_TYPE_UINT32_INTEL = 0,
    VK_PERFORMANCE_VALUE_TYPE_UINT64_INTEL = 1,
    VK_PERFORMANCE_VALUE_TYPE_FLOAT_INTEL = 2,
    VK_PERFORMANCE_VALUE_TYPE_BOOL_INTEL = 3,
    VK_PERFORMANCE_VALUE_TYPE_STRING_INTEL = 4,
} VkPerformanceValueTypeINTEL;
```

The [VkPerformanceValueDataINTEL](#) union is defined as:

```
// Provided by VK_INTEL_performance_query
typedef union VkPerformanceValueDataINTEL {
    uint32_t      value32;
    uint64_t      value64;
    float         valueFloat;
    VkBool32      valueBool;
    const char*   valueString;
} VkPerformanceValueDataINTEL;
```

- `value32` represents 32-bit integer data.
- `value64` represents 64-bit integer data.
- `valueFloat` represents floating-point data.
- `valueBool` represents `VkBool32` data.
- `valueString` represents a pointer to a null-terminated UTF-8 string.

The correct member of the union is determined by the associated `VkPerformanceValueTypeINTEL` value.

The `VkQueryPoolPerformanceQueryCreateInfoINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkQueryPoolPerformanceQueryCreateInfoINTEL {
    VkStructureType      sType;
    const void*          pNext;
    VkQueryPoolSamplingModeINTEL performanceCountersSampling;
} VkQueryPoolPerformanceQueryCreateInfoINTEL;
```

```
// Provided by VK_INTEL_performance_query
// Equivalent to VkQueryPoolPerformanceQueryCreateInfoINTEL
typedef VkQueryPoolPerformanceQueryCreateInfoINTEL VkQueryPoolCreateInfoINTEL;
```

To create a pool for Intel performance queries, set `VkQueryPoolCreateInfo::queryType` to `VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL` and add a `VkQueryPoolPerformanceQueryCreateInfoINTEL` structure to the `pNext` chain of the `VkQueryPoolCreateInfo` structure.

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `performanceCountersSampling` describe how performance queries should be captured.

Valid Usage (Implicit)

- VUID-VkQueryPoolPerformanceQueryCreateInfoINTEL-sType-sType `sType` must be

be

VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_QUERY_CREATE_INFO_INTEL

- VUID-VkQueryPoolPerformanceQueryCreateInfoINTEL-performanceCountersSampling-parameter
`performanceCountersSampling` **must** be a valid `VkQueryPoolSamplingModeINTEL` value

Structure Chaining

Extends the structure

- `VkQueryPoolCreateInfo`

Possible values of `VkQueryPoolPerformanceQueryCreateInfoINTEL::performanceCountersSampling` are:

```
// Provided by VK_INTEL_performance_query
typedef enum VkQueryPoolSamplingModeINTEL {
    VK_QUERY_POOL_SAMPLING_MODE_MANUAL_INTEL = 0,
} VkQueryPoolSamplingModeINTEL;
```

- `VK_QUERY_POOL_SAMPLING_MODE_MANUAL_INTEL` is the default mode in which the application calls `vkCmdBeginQuery` and `vkCmdEndQuery` to record performance data.

To help associate query results with a particular point at which an application emitted commands, markers can be set into the command buffers with the call:

```
// Provided by VK_INTEL_performance_query
VkResult vkCmdSetPerformanceMarkerINTEL(
    VkCommandBuffer                commandBuffer,
    const VkPerformanceMarkerInfoINTEL* pMarkerInfo);
```

The last marker set onto a command buffer before the end of a query will be part of the query result.

Valid Usage (Implicit)

- VUID-vkCmdSetPerformanceMarkerINTEL-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPerformanceMarkerINTEL-pMarkerInfo-parameter
`pMarkerInfo` **must** be a valid pointer to a valid `VkPerformanceMarkerInfoINTEL` structure
- VUID-vkCmdSetPerformanceMarkerINTEL-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdSetPerformanceMarkerINTEL-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT`

operations

- VUID-vkCmdSetPerformanceMarkerINTEL-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdSetPerformanceMarkerINTEL-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action State

Conditional Rendering

`vkCmdSetPerformanceMarkerINTEL` is not affected by [conditional rendering](#)

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkPerformanceMarkerInfoINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceMarkerInfoINTEL {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           marker;
} VkPerformanceMarkerInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `marker` is the marker value that will be recorded into the opaque query results.

Valid Usage (Implicit)

- VUID-VkPerformanceMarkerInfoINTEL-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PERFORMANCE_MARKER_INFO_INTEL`
- VUID-VkPerformanceMarkerInfoINTEL-pNext-pNext
`pNext` **must** be `NULL`

When monitoring the behavior of an application within the dataset generated by the entire set of applications running on the system, it is useful to identify draw calls within a potentially huge amount of performance data. To do so, application can generate stream markers that will be used to trace back a particular draw call with a particular performance data item.

```
// Provided by VK_INTEL_performance_query
VkResult vkCmdSetPerformanceStreamMarkerINTEL(
    VkCommandBuffer          commandBuffer,
    const VkPerformanceStreamMarkerInfoINTEL* pMarkerInfo);
```

- `commandBuffer` is a `VkCommandBuffer` into which a stream marker is added.
- `pMarkerInfo` is a pointer to a `VkPerformanceStreamMarkerInfoINTEL` structure describing the marker to insert.

Valid Usage (Implicit)

- VUID-vkCmdSetPerformanceStreamMarkerINTEL-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPerformanceStreamMarkerINTEL-pMarkerInfo-parameter
`pMarkerInfo` **must** be a valid pointer to a valid `VkPerformanceStreamMarkerInfoINTEL` structure
- VUID-vkCmdSetPerformanceStreamMarkerINTEL-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetPerformanceStreamMarkerINTEL-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations

- VUID-vkCmdSetPerformanceStreamMarkerINTEL-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdSetPerformanceStreamMarkerINTEL-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	<code>VK_QUEUE_COMPUTE_BIT</code> <code>VK_QUEUE_GRAPHICS_BIT</code> <code>VK_QUEUE_TRANSFER_BIT</code>	Action State

Conditional Rendering

`vkCmdSetPerformanceStreamMarkerINTEL` is not affected by [conditional rendering](#)

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkPerformanceStreamMarkerInfoINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceStreamMarkerInfoINTEL {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           marker;
} VkPerformanceStreamMarkerInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `marker` is the marker value that will be recorded into the reports consumed by an external application.

Valid Usage

- VUID-VkPerformanceStreamMarkerInfoINTEL-marker-02735

The value written by the application into `marker` **must** only use the valid bits as reported by `vkGetPerformanceParameterINTEL` with the `VK_PERFORMANCE_PARAMETER_TYPE_STREAM_MARKER_VALID_BITS_INTEL`

Valid Usage (Implicit)

- VUID-VkPerformanceStreamMarkerInfoINTEL-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PERFORMANCE_STREAM_MARKER_INFO_INTEL`
- VUID-VkPerformanceStreamMarkerInfoINTEL-pNext-pNext
`pNext` **must** be `NULL`

Some applications might want to measure the effect of a set of commands with different settings. It is possible to override a particular setting using :

```
// Provided by VK_INTEL_performance_query
VkResult vkCmdSetPerformanceOverrideINTEL(
    VkCommandBuffer          commandBuffer,
    const VkPerformanceOverrideInfoINTEL* pOverrideInfo);
```

- `commandBuffer` is the command buffer where the override takes place.
- `pOverrideInfo` is a pointer to a `VkPerformanceOverrideInfoINTEL` structure selecting the parameter to override.

Valid Usage

- VUID-vkCmdSetPerformanceOverrideINTEL-pOverrideInfo-02736

`pOverrideInfo` **must** not be used with a `VkPerformanceOverrideTypeINTEL` that is not reported available by `vkGetPerformanceParameterINTEL`

Valid Usage (Implicit)

- VUID-vkCmdSetPerformanceOverrideINTEL-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPerformanceOverrideINTEL-pOverrideInfo-parameter
`pOverrideInfo` **must** be a valid pointer to a valid `VkPerformanceOverrideInfoINTEL` structure
- VUID-vkCmdSetPerformanceOverrideINTEL-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetPerformanceOverrideINTEL-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdSetPerformanceOverrideINTEL-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	State

Conditional Rendering

`vkCmdSetPerformanceOverrideINTEL` is not affected by `conditional rendering`

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkPerformanceOverrideInfoINTEL](#) structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceOverrideInfoINTEL {
    VkStructureType      sType;
    const void*          pNext;
    VkPerformanceOverrideTypeINTEL  type;
    VkBool32             enable;
    uint64_t             parameter;
} VkPerformanceOverrideInfoINTEL;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is the particular [VkPerformanceOverrideTypeINTEL](#) to set.
- `enable` defines whether the override is enabled.
- `parameter` is a potential required parameter for the override.

Valid Usage (Implicit)

- VUID-VkPerformanceOverrideInfoINTEL-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_PERFORMANCE_OVERRIDE_INFO_INTEL](#)
- VUID-VkPerformanceOverrideInfoINTEL-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPerformanceOverrideInfoINTEL-type-parameter
`type` **must** be a valid [VkPerformanceOverrideTypeINTEL](#) value

Possible values of [VkPerformanceOverrideInfoINTEL::type](#), specifying performance override types, are:

```
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceOverrideTypeINTEL {
    VK_PERFORMANCE_OVERRIDE_TYPE_NULL_HARDWARE_INTEL = 0,
    VK_PERFORMANCE_OVERRIDE_TYPE_FLUSH_GPU_CACHES_INTEL = 1,
} VkPerformanceOverrideTypeINTEL;
```

- `VK_PERFORMANCE_OVERRIDE_TYPE_NULL_HARDWARE_INTEL` turns all rendering operations into noop.
- `VK_PERFORMANCE_OVERRIDE_TYPE_FLUSH_GPU_CACHES_INTEL` stalls the stream of commands until all previously emitted commands have completed and all caches been flushed and invalidated.

Before submitting command buffers containing performance queries commands to a device queue, the application **must** acquire and set a performance query configuration. The configuration can be released once all command buffers containing performance query commands are not in a pending state.

```
// Provided by VK_INTEL_performance_query
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPerformanceConfigurationINTEL)
```

To acquire a device performance configuration, call:

```
// Provided by VK_INTEL_performance_query
VkResult vkAcquirePerformanceConfigurationINTEL(
    VkDevice device,
    const VkPerformanceConfigurationAcquireInfoINTEL* pAcquireInfo,
    VkPerformanceConfigurationINTEL* pConfiguration);
```

- `device` is the logical device that the performance query commands will be submitted to.
- `pAcquireInfo` is a pointer to a `VkPerformanceConfigurationAcquireInfoINTEL` structure, specifying the performance configuration to acquire.
- `pConfiguration` is a pointer to a `VkPerformanceConfigurationINTEL` handle in which the resulting configuration object is returned.

Valid Usage (Implicit)

- VUID-vkAcquirePerformanceConfigurationINTEL-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkAcquirePerformanceConfigurationINTEL-pAcquireInfo-parameter `pAcquireInfo` **must** be a valid pointer to a valid `VkPerformanceConfigurationAcquireInfoINTEL` structure
- VUID-vkAcquirePerformanceConfigurationINTEL-pConfiguration-parameter `pConfiguration` **must** be a valid pointer to a `VkPerformanceConfigurationINTEL` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkPerformanceConfigurationAcquireInfoINTEL` structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceConfigurationAcquireInfoINTEL {
    VkStructureType          sType;
    const void*              pNext;
    VkPerformanceConfigurationTypeINTEL type;
} VkPerformanceConfigurationAcquireInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is one of the `VkPerformanceConfigurationTypeINTEL` type of performance configuration that will be acquired.

Valid Usage (Implicit)

- VUID-VkPerformanceConfigurationAcquireInfoINTEL-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PERFORMANCE_CONFIGURATION_ACQUIRE_INFO_INTEL`
- VUID-VkPerformanceConfigurationAcquireInfoINTEL-pNext-pNext `pNext` **must** be `NULL`
- VUID-VkPerformanceConfigurationAcquireInfoINTEL-type-parameter `type` **must** be a valid `VkPerformanceConfigurationTypeINTEL` value

Possible values of `VkPerformanceConfigurationAcquireInfoINTEL::type`, specifying performance configuration types, are:

```
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceConfigurationTypeINTEL {
    VK_PERFORMANCE_CONFIGURATION_TYPE_COMMAND_QUEUE_METRICS_DISCOVERY_ACTIVATED_INTEL
    = 0,
} VkPerformanceConfigurationTypeINTEL;
```

To set a performance configuration, call:

```
// Provided by VK_INTEL_performance_query
VkResult vkQueueSetPerformanceConfigurationINTEL(
    VkQueue queue,
    VkPerformanceConfigurationINTEL configuration);
```

- **queue** is the queue on which the configuration will be used.
- **configuration** is the configuration to use.

Valid Usage (Implicit)

- VUID-vkQueueSetPerformanceConfigurationINTEL-queue-parameter **queue must** be a valid [VkQueue](#) handle
- VUID-vkQueueSetPerformanceConfigurationINTEL-configuration-parameter **configuration must** be a valid [VkPerformanceConfigurationINTEL](#) handle
- VUID-vkQueueSetPerformanceConfigurationINTEL-commonparent Both of **configuration**, and **queue must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **queue must** be externally synchronized if it was not created with [VK_DEVICE_QUEUE_CREATE INTERNALLY SYNCHRONIZED_BIT_KHR](#)

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	Any	-

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To release a device performance configuration, call:

```
// Provided by VK_INTEL_performance_query
VkResult vkReleasePerformanceConfigurationINTEL(
    VkDevice device,
    VkPerformanceConfigurationINTEL configuration);
```

- **device** is the device associated to the configuration object to release.
- **configuration** is the configuration object to release.

Valid Usage

- VUID-vkReleasePerformanceConfigurationINTEL-configuration-02737
configuration **must** not be released before all command buffers submitted while the configuration was set are in [pending state](#)

Valid Usage (Implicit)

- VUID-vkReleasePerformanceConfigurationINTEL-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkReleasePerformanceConfigurationINTEL-configuration-parameter
If **configuration** is not [VK_NULL_HANDLE](#), **configuration** **must** be a valid [VkPerformanceConfigurationINTEL](#) handle
- VUID-vkReleasePerformanceConfigurationINTEL-configuration-parent
If **configuration** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **configuration** **must** be externally synchronized

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

23.11. Result Status Queries

Result status queries serve a single purpose: allowing the application to determine whether a set of operations have completed successfully or not, as indicated by the [VkQueryResultStatusKHR](#) value written when retrieving the result of a query using the [VK_QUERY_RESULT_WITH_STATUS_BIT_KHR](#) flag.

Unlike other query types, result status queries do not track or maintain any other data beyond the completion status, thus no other data is written when retrieving their results.

Support for result status queries is indicated by [VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport](#), as returned by [vkGetPhysicalDeviceQueueFamilyProperties2](#) for the queue family in question.

23.12. Video Encode Feedback Queries

Video encode feedback queries allow the application to capture feedback values generated by video encode operations. As such, video encode feedback queries are available on queue families supporting video encode operations. The availability of individual video encode feedback values is indicated by the bits of [VkVideoEncodeCapabilitiesKHR::supportedEncodeFeedbackFlags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the [video profile](#) the queries are intended to be used with.

The set of enabled video encode feedback values **must** be configured on the query pool when it is created using the [encodeFeedbackFlags](#) member of the [VkQueryPoolVideoEncodeFeedbackCreateInfoKHR](#) included in the [pNext](#) chain of [VkQueryPoolCreateInfo](#).

The [VkQueryPoolVideoEncodeFeedbackCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkQueryPoolVideoEncodeFeedbackCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoEncodeFeedbackFlagsKHR    encodeFeedbackFlags;
} VkQueryPoolVideoEncodeFeedbackCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `encodeFeedbackFlags` is a bitmask of `VkVideoEncodeFeedbackFlagBitsKHR` values specifying the set of enabled video encode feedback values captured by queries of the new pool.

Valid Usage (Implicit)

- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_QUERY_POOL_VIDEO_ENCODE_FEEDBACK_CREATE_INFO_KHR`
- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-encodeFeedbackFlags-parameter `encodeFeedbackFlags` **must** be a valid combination of `VkVideoEncodeFeedbackFlagBitsKHR` values
- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-encodeFeedbackFlags-requiredbitmask `encodeFeedbackFlags` **must** not be `0`

Structure Chaining

Extends the structure

- `VkQueryPoolCreateInfo`

Bits which **can** be set in `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags` for video encode feedback query pools are:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeFeedbackFlagBitsKHR {
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR = 0x00000004,
} VkVideoEncodeFeedbackFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR` specifies that queries managed by the pool will capture the byte offset of the bitstream data written by the video encode operation to the bitstream buffer specified in `VkVideoEncodeInfoKHR::dstBuffer` relative to the offset specified in `VkVideoEncodeInfoKHR::dstBufferOffset`. For the first video

encode operation issued by any [video encode command](#), this value will always be zero, meaning that bitstream data is always written to the buffer specified in [VkVideoEncodeInfoKHR::dstBuffer](#) starting from the offset specified in [VkVideoEncodeInfoKHR::dstBufferOffset](#).

- [VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR](#) specifies that queries managed by the pool will capture the number of bytes written by the video encode operation to the bitstream buffer specified in [VkVideoEncodeInfoKHR::dstBuffer](#).
- [VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR](#) specifies that queries managed by the pool will capture a boolean value indicating that the data written to the bitstream buffer specified in [VkVideoEncodeInfoKHR::dstBuffer](#) contains [overridden parameters](#).

When retrieving the results of video encode feedback queries, the values corresponding to each enabled video encode feedback are written in the order of the bits defined above, followed by an optional value indicating availability or result status if [VK_QUERY_RESULT_WITH_AVAILABILITY_BIT](#) or [VK_QUERY_RESULT_WITH_STATUS_BIT_KHR](#) is specified, respectively.

If the result status of a video encode feedback query is negative, then the results of all enabled video encode feedback values will be undefined.

NOTE

Applications should always specify [VK_QUERY_RESULT_WITH_STATUS_BIT_KHR](#) when retrieving the results of video encode feedback queries and ignore such undefined video encode feedback values for any [unsuccessfully](#) completed video encode operations.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeFeedbackFlagsKHR;
```

[VkVideoEncodeFeedbackFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeFeedbackFlagBitsKHR](#).

Chapter 24. Clear Commands

24.1. Clearing Images Outside a Render Pass Instance

Color and depth/stencil images **can** be cleared outside a render pass instance using [vkCmdClearColorImage](#) or [vkCmdClearDepthStencilImage](#), respectively. These commands are only allowed outside of a render pass instance.

To clear one or more subranges of a color image, call:

```
// Provided by VK_VERSION_1_0
void vkCmdClearColorImage(
    VkCommandBuffer          commandBuffer,
    VkImage                  image,
    VkImageLayout             imageLayout,
    const VkClearColorValue* pColor,
    uint32_t                  rangeCount,
    const VkImageSubresourceRange* pRanges);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `image` is the image to be cleared.
- `imageLayout` specifies the current layout of the image subresource ranges to be cleared, and **must** be [VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR](#), [VK_IMAGE_LAYOUT_GENERAL](#) or [VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL](#).
- `pColor` is a pointer to a [VkClearColorValue](#) structure containing the values that the image subresource ranges will be cleared to (see [Clear Values](#) below).
- `rangeCount` is the number of image subresource range structures in `pRanges`.
- `pRanges` is a pointer to an array of [VkImageSubresourceRange](#) structures describing a range of mipmap levels, array layers, and aspects to be cleared, as described in [Image Views](#).

Each specified range in `pRanges` is cleared to the value specified by `pColor`.

Valid Usage

- VUID-vkCmdClearColorImage-image-01993
The [format features](#) of `image` **must** contain [VK_FORMAT_FEATURE_TRANSFER_DST_BIT](#)
- VUID-vkCmdClearColorImage-image-00002
`image` **must** have been created with the [VK_IMAGE_USAGE_TRANSFER_DST_BIT](#) usage flag set
- VUID-vkCmdClearColorImage-image-01545
`image` **must** not use any of the [formats that require a sampler Y'C_BC_R conversion](#)
- VUID-vkCmdClearColorImage-image-00003
If `image` is non-sparse then it **must** be bound completely and contiguously to a single

VkDeviceMemory object

- VUID-vkCmdClearColorImage-imageLayout-00004
imageLayout **must** specify the layout of the image subresource ranges of **image** specified in **pRanges** at the time this command is executed on a **VkDevice**
- VUID-vkCmdClearColorImage-imageLayout-01394
imageLayout **must** be **VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR**, **VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL** or **VK_IMAGE_LAYOUT_GENERAL**
- VUID-vkCmdClearColorImage-aspectMask-02498
The **VkImageSubresourceRange::aspectMask** members of the elements of the **pRanges** array **must** each only include **VK_IMAGE_ASPECT_COLOR_BIT**
- VUID-vkCmdClearColorImage-baseMipLevel-01470
The **VkImageSubresourceRange::baseMipLevel** members of the elements of the **pRanges** array **must** each be less than the **mipLevels** specified in **VkImageCreateInfo** when **image** was created
- VUID-vkCmdClearColorImage-pRanges-01692
For each **VkImageSubresourceRange** element of **pRanges**, if the **levelCount** member is not **VK_REMAINING_MIP_LEVELS**, then **baseMipLevel** + **levelCount** **must** be less than or equal to the **mipLevels** specified in **VkImageCreateInfo** when **image** was created
- VUID-vkCmdClearColorImage-baseArrayLayer-01472
The **VkImageSubresourceRange::baseArrayLayer** members of the elements of the **pRanges** array **must** each be less than the **arrayLayers** specified in **VkImageCreateInfo** when **image** was created
- VUID-vkCmdClearColorImage-pRanges-01693
For each **VkImageSubresourceRange** element of **pRanges**, if the **layerCount** member is not **VK_REMAINING_ARRAY_LAYERS**, then **baseArrayLayer** + **layerCount** **must** be less than or equal to the **arrayLayers** specified in **VkImageCreateInfo** when **image** was created
- VUID-vkCmdClearColorImage-image-00007
image **must** not have a compressed or depth/stencil format
- VUID-vkCmdClearColorImage-pColor-04961
pColor **must** be a valid pointer to a **VkClearColorValue** union
- VUID-vkCmdClearColorImage-commandBuffer-01805
If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, **image** **must** not be a protected image
- VUID-vkCmdClearColorImage-commandBuffer-01806
If **commandBuffer** is a protected command buffer and **protectedNoFault** is not supported, **must** not be an unprotected image
- VUID-vkCmdClearColorImage-image-09678
If **image**'s format has components other than R and G, it **must** not have a 64-bit component width

Valid Usage (Implicit)

- VUID-vkCmdClearColorImage-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdClearColorImage-image-parameter
`image` **must** be a valid `VkImage` handle
- VUID-vkCmdClearColorImage-imageLayout-parameter
`imageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdClearColorImage-pRanges-parameter
`pRanges` **must** be a valid pointer to an array of `rangeCount` valid `VkImageSubresourceRange` structures
- VUID-vkCmdClearColorImage-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdClearColorImage-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdClearColorImage-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdClearColorImage-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdClearColorImage-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdClearColorImage-rangeCount-arraylength
`rangeCount` **must** be greater than 0
- VUID-vkCmdClearColorImage-commonparent
Both of `commandBuffer`, and `image` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	Action

Conditional Rendering

vkCmdClearColorImage is not affected by [conditional rendering](#)

To clear one or more subranges of a depth/stencil image, call:

```
// Provided by VK_VERSION_1_0
void vkCmdClearDepthStencilImage(
    VkCommandBuffer          commandBuffer,
    VkImage                  image,
    VkImageLayout             imageLayout,
    const VkClearDepthStencilValue* pDepthStencil,
    uint32_t                  rangeCount,
    const VkImageSubresourceRange* pRanges);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **image** is the image to be cleared.
- **imageLayout** specifies the current layout of the image subresource ranges to be cleared, and **must** be [VK_IMAGE_LAYOUT_GENERAL](#) or [VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL](#).
- **pDepthStencil** is a pointer to a [VkClearDepthStencilValue](#) structure containing the values that the depth and stencil image subresource ranges will be cleared to (see [Clear Values](#) below).
- **rangeCount** is the number of image subresource range structures in **pRanges**.
- **pRanges** is a pointer to an array of [VkImageSubresourceRange](#) structures describing a range of mipmap levels, array layers, and aspects to be cleared, as described in [Image Views](#).

Valid Usage

- VUID-vkCmdClearDepthStencilImage-image-01994
The [format features](#) of **image** **must** contain [VK_FORMAT_FEATURE_TRANSFER_DST_BIT](#)
- VUID-vkCmdClearDepthStencilImage-pRanges-02658
If the **aspect** member of any element of **pRanges** includes [VK_IMAGE_ASPECT_STENCIL_BIT](#), and **image** was created with [separate stencil usage](#), it must have been created with the [VK_IMAGE_USAGE_TRANSFER_DST_BIT](#) usage flag set

- VUID-vkCmdClearDepthStencilImage-pRanges-02659
If the `aspect` member of any element of `pRanges` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, and `image` was not created with `separate stencil usage`, the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag **must** have been set in the `VkImageCreateInfo::usage` used to create `image`
- VUID-vkCmdClearDepthStencilImage-pRanges-02660
If the `aspect` member of any element of `pRanges` includes `VK_IMAGE_ASPECT_DEPTH_BIT`, `image` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-vkCmdClearDepthStencilImage-image-00010
If `image` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdClearDepthStencilImage-imageLayout-00011
`imageLayout` **must** specify the layout of the image subresource ranges of `image` specified in `pRanges` at the time this command is executed on a `VkDevice`
- VUID-vkCmdClearDepthStencilImage-imageLayout-00012
`imageLayout` **must** be either of `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdClearDepthStencilImage-aspectMask-02824
The `VkImageSubresourceRange::aspectMask` member of each element of the `pRanges` array **must** not include bits other than `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkCmdClearDepthStencilImage-image-02825
If the `image`'s format does not have a stencil component, then the `VkImageSubresourceRange::aspectMask` member of each element of the `pRanges` array **must** not include the `VK_IMAGE_ASPECT_STENCIL_BIT` bit
- VUID-vkCmdClearDepthStencilImage-image-02826
If the `image`'s format does not have a depth component, then the `VkImageSubresourceRange::aspectMask` member of each element of the `pRanges` array **must** not include the `VK_IMAGE_ASPECT_DEPTH_BIT` bit
- VUID-vkCmdClearDepthStencilImage-baseMipLevel-01474
The `VkImageSubresourceRange::baseMipLevel` members of the elements of the `pRanges` array **must** each be less than the `mipLevels` specified in `VkImageCreateInfo` when `image` was created
- VUID-vkCmdClearDepthStencilImage-pRanges-01694
For each `VkImageSubresourceRange` element of `pRanges`, if the `levelCount` member is not `VK_REMAINING_MIP_LEVELS`, then `baseMipLevel + levelCount` **must** be less than or equal to the `mipLevels` specified in `VkImageCreateInfo` when `image` was created
- VUID-vkCmdClearDepthStencilImage-baseArrayLayer-01476
The `VkImageSubresourceRange::baseArrayLayer` members of the elements of the `pRanges` array **must** each be less than the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created
- VUID-vkCmdClearDepthStencilImage-pRanges-01695

For each `VkImageSubresourceRange` element of `pRanges`, if the `layerCount` member is not `VK_REMAINING_ARRAY_LAYERS`, then `baseArrayLayer + layerCount` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created

- VUID-vkCmdClearDepthStencilImage-image-00014
`image` **must** have a depth/stencil format
- VUID-vkCmdClearDepthStencilImage-commandBuffer-01807
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `image` **must** not be a protected image
- VUID-vkCmdClearDepthStencilImage-commandBuffer-01808
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `image` **must** not be an unprotected image

Valid Usage (Implicit)

- VUID-vkCmdClearDepthStencilImage-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdClearDepthStencilImage-image-parameter
`image` **must** be a valid `VkImage` handle
- VUID-vkCmdClearDepthStencilImage-imageLayout-parameter
`imageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdClearDepthStencilImage-pDepthStencil-parameter
`pDepthStencil` **must** be a valid pointer to a valid `VkClearDepthStencilValue` structure
- VUID-vkCmdClearDepthStencilImage-pRanges-parameter
`pRanges` **must** be a valid pointer to an array of `rangeCount` valid `VkImageSubresourceRange` structures
- VUID-vkCmdClearDepthStencilImage-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdClearDepthStencilImage-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdClearDepthStencilImage-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdClearDepthStencilImage-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdClearDepthStencilImage-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdClearDepthStencilImage-rangeCount-arraylength
`rangeCount` **must** be greater than 0
- VUID-vkCmdClearDepthStencilImage-commonparent
Both of `commandBuffer`, and `image` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_GRAPHICS_BIT HICS_BIT	Action

Conditional Rendering

`vkCmdClearDepthStencilImage` is not affected by [conditional rendering](#)

Clears outside render pass instances are treated as transfer operations for the purposes of memory barriers.

24.2. Clearing Images Inside a Render Pass Instance

To clear one or more regions of color and depth/stencil attachments inside a render pass instance, call:

```
// Provided by VK_VERSION_1_0
void vkCmdClearAttachments(
    VkCommandBuffer          commandBuffer,
    uint32_t                 attachmentCount,
    const VkClearAttachment* pAttachments,
    uint32_t                 rectCount,
    const VkClearRect*       pRects);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `attachmentCount` is the number of entries in the `pAttachments` array.
- `pAttachments` is a pointer to an array of `VkClearAttachment` structures defining the attachments to clear and the clear values to use.
- `rectCount` is the number of entries in the `pRects` array.
- `pRects` is a pointer to an array of `VkClearRect` structures defining regions to clear for every attachment in `pAttachments`.

If the render pass has a [fragment density map attachment](#), clears follow the [operations of fragment density maps](#) as if each clear region was a primitive which generates fragments. The clear color is applied to all pixels inside each fragment's area regardless if the pixels lie outside of the clear region. Clears **may** have a different set of supported fragment areas than draws.

Unlike other [clear commands](#), [vkCmdClearAttachments](#) is not a transfer command. It performs its operations in [rasterization order](#). For color attachments, the operations are executed as color attachment writes, by the [VK_PIPELINE_STAGE_COLOR_ATTACHMENT_OUTPUT_BIT](#) stage. For depth/stencil attachments, the operations are executed as [depth writes](#) and [stencil writes](#) by the [VK_PIPELINE_STAGE_EARLY_FRAGMENT_TESTS_BIT](#) and [VK_PIPELINE_STAGE_LATE_FRAGMENT_TESTS_BIT](#) stages.

[vkCmdClearAttachments](#) is not affected by the bound pipeline state.

NOTE	It is generally preferable to clear attachments by using the VK_ATTACHMENT_LOAD_OP_CLEAR load operation at the start of rendering, as it is more efficient on some implementations.
-------------	---

If any attachment's [aspectMask](#) to be cleared is not backed by an image view, the clear has no effect on that aspect.

If an attachment being cleared refers to an image view created with an [aspectMask](#) equal to one of [VK_IMAGE_ASPECT_PLANE_0_BIT](#), [VK_IMAGE_ASPECT_PLANE_1_BIT](#) or [VK_IMAGE_ASPECT_PLANE_2_BIT](#), it is considered to be [VK_IMAGE_ASPECT_COLOR_BIT](#) for purposes of this command, and **must** be cleared with the [VK_IMAGE_ASPECT_COLOR_BIT](#) aspect as specified by [image view creation](#).

Valid Usage

- VUID-vkCmdClearAttachments-aspectMask-07884
If the current render pass instance does not use dynamic rendering, and the [aspectMask](#) member of any element of [pAttachments](#) contains [VK_IMAGE_ASPECT_DEPTH_BIT](#), the current subpass instance's depth-stencil attachment **must** be either [VK_ATTACHMENT_UNUSED](#) or the attachment [format](#) **must** contain a depth component
- VUID-vkCmdClearAttachments-aspectMask-07885
If the current render pass instance does not use dynamic rendering, and the [aspectMask](#) member of any element of [pAttachments](#) contains [VK_IMAGE_ASPECT_STENCIL_BIT](#), the current subpass instance's depth-stencil attachment **must** be either [VK_ATTACHMENT_UNUSED](#) or the attachment [format](#) **must** contain a stencil component
- VUID-vkCmdClearAttachments-aspectMask-07271
If the [aspectMask](#) member of any element of [pAttachments](#) contains [VK_IMAGE_ASPECT_COLOR_BIT](#), the [colorAttachment](#) **must** be a valid color attachment index in the current render pass instance
- VUID-vkCmdClearAttachments-rect-02682
The [rect](#) member of each element of [pRects](#) **must** have an [extent.width](#) greater than 0
- VUID-vkCmdClearAttachments-rect-02683

The **rect** member of each element of **pRects** **must** have an **extent.height** greater than 0

- VUID-vkCmdClearAttachments-pRects-00016

The rectangular region specified by each element of **pRects** **must** be contained within the render area of the current render pass instance

- VUID-vkCmdClearAttachments-pRects-06937

The layers specified by each element of **pRects** **must** be contained within every attachment that **pAttachments** refers to, i.e. for each element of **pRects**, **VkClearRect::baseArrayLayer** + **VkClearRect::layerCount** **must** be less than or equal to the number of layers rendered to in the current render pass instance

- VUID-vkCmdClearAttachments-layerCount-01934

The **layerCount** member of each element of **pRects** **must** not be 0

- VUID-vkCmdClearAttachments-commandBuffer-02504

If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, each attachment to be cleared **must** not be a protected image

- VUID-vkCmdClearAttachments-commandBuffer-02505

If **commandBuffer** is a protected command buffer and **protectedNoFault** is not supported, each attachment to be cleared **must** not be an unprotected image

- VUID-vkCmdClearAttachments-baseArrayLayer-00018

If the render pass instance this is recorded in uses multiview, then **baseArrayLayer** **must** be zero and **layerCount** **must** be one

- VUID-vkCmdClearAttachments-colorAttachment-09503

The **colorAttachment** member of each element of **pAttachments** **must** not identify a color attachment that is currently mapped to **VK_ATTACHMENT_UNUSED** in **commandBuffer** via **VkRenderingAttachmentLocationInfo**

- VUID-vkCmdClearAttachments-aspectMask-09298

If the subpass this is recorded in performs an external format resolve, the **aspectMask** member of any element of **pAttachments** **must** not include **VK_IMAGE_ASPECT_PLANE_i_BIT** for any index *i*

- VUID-vkCmdClearAttachments-None-09679

If the attachment format has components other than R and G, it **must** not have a 64-bit component width

- VUID-vkCmdClearAttachments-None-10616

This command **must** not be recorded when **per-tile execution model** is enabled

Valid Usage (Implicit)

- VUID-vkCmdClearAttachments-commandBuffer-parameter

commandBuffer **must** be a valid **VkCommandBuffer** handle

- VUID-vkCmdClearAttachments-pAttachments-parameter

pAttachments **must** be a valid pointer to an array of **attachmentCount** valid **VkClearAttachment** structures

- VUID-vkCmdClearAttachments-pRects-parameter

`pRects` **must** be a valid pointer to an array of `rectCount` `VkClearRect` structures

- VUID-vkCmdClearAttachments-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdClearAttachments-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdClearAttachments-renderpass
This command **must** only be called inside of a render pass instance
- VUID-vkCmdClearAttachments-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdClearAttachments-vidcoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdClearAttachments-attachmentCount-arraylength
`attachmentCount` **must** be greater than 0
- VUID-vkCmdClearAttachments-rectCount-arraylength
`rectCount` **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

`vkCmdClearAttachments` is affected by `conditional rendering`

The `VkClearRect` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkClearRect {
    VkRect2D    rect;
    uint32_t    baseArrayLayer;
    uint32_t    layerCount;
} VkClearRect;
```

- `rect` is the two-dimensional region to be cleared.
- `baseArrayLayer` is the first layer to be cleared.
- `layerCount` is the number of layers to clear.

The layers [`baseArrayLayer`, `baseArrayLayer` + `layerCount`) counting from the base layer of the attachment image view are cleared.

The `VkClearAttachment` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkClearAttachment {
    VkImageAspectFlags    aspectMask;
    uint32_t              colorAttachment;
    VkClearColorValue      clearColor;
} VkClearAttachment;
```

- `aspectMask` is a mask selecting the color, depth and/or stencil aspects of the attachment to be cleared.
- `colorAttachment` is only meaningful if `VK_IMAGE_ASPECT_COLOR_BIT` is set in `aspectMask`, in which case it is an index into the bound color attachments.
- `clearValue` is the color or depth/stencil value to clear the attachment to, as described in [Clear Values](#) below.

Valid Usage

- VUID-VkClearAttachment-aspectMask-00019
If `aspectMask` includes `VK_IMAGE_ASPECT_COLOR_BIT`, it **must** not include `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-VkClearAttachment-aspectMask-00020
`aspectMask` **must** not include `VK_IMAGE_ASPECT_METADATA_BIT`
- VUID-VkClearAttachment-aspectMask-02246
`aspectMask` **must** not include `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` for any index *i*

Valid Usage (Implicit)

- VUID-VkClearAttachment-aspectMask-parameter

aspectMask must be a valid combination of `VkImageAspectFlagBits` values

- `VUID-VkClearAttachment-aspectMask-requiredbitmask`

aspectMask **must** not be 0

24.3. Clear Values

The `VkClearColorValue` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef union VkClearColorValue {
    float      float32[4];
    int32_t    int32[4];
    uint32_t   uint32[4];
} VkClearColorValue;
```

- **float32** are the color clear values when the format of the image or attachment is one of the **numeric formats** with a numeric type that is floating-point. Floating-point values are automatically converted to the format of the image, with the clear value being treated as linear if the image is sRGB.
- **int32** are the color clear values when the format of the image or attachment has a numeric type that is signed integer (**SINT**). Signed integer values are converted to the format of the image by casting to the smaller type (with negative 32-bit values mapping to negative values in the smaller type). If the integer clear value is not representable in the target type (e.g. would overflow in conversion to that type), the clear value is undefined.
- **uint32** are the color clear values when the format of the image or attachment has a numeric type that is unsigned integer (**UINT**). Unsigned integer values are converted to the format of the image by casting to the integer type with fewer bits.

The four array elements of the clear color map to R, G, B, and A components of image formats, in order.

If the image has more than one sample, the same value is written to all samples for any pixels being cleared.

If the image or attachment format has a 64-bit component width, the first 2 array elements of each of the arrays above are reinterpreted as a single 64-bit element for the R component. The next 2 array elements are used in the same way for the G component. In other words, the union behaves as if it had the following additional members:

```
double float64[2];
int64_t int64[2];
uint64_t uint64[2];
```

The `VkClearDepthStencilValue` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkClearDepthStencilValue {
    float        depth;
    uint32_t     stencil;
} VkClearDepthStencilValue;
```

- **depth** is the clear value for the depth aspect of the depth/stencil attachment. It is a floating-point value which is automatically converted to the attachment's format.
- **stencil** is the clear value for the stencil aspect of the depth/stencil attachment. It is a 32-bit integer value which is converted to the attachment's format by taking the appropriate number of LSBs.

Valid Usage

- VUID-VkClearDepthStencilValue-depth-00022
Unless the [VK_EXT_depth_range_unrestricted](#) extension is enabled **depth** **must** be between **0.0** and **1.0**, inclusive

The **VkClearValue** union is defined as:

```
// Provided by VK_VERSION_1_0
typedef union VkClearValue {
    VkClearColorValue        color;
    VkClearDepthStencilValue depthStencil;
} VkClearValue;
```

- **color** specifies the color image clear values to use when clearing a color image or attachment.
- **depthStencil** specifies the depth and stencil clear values to use when clearing a depth/stencil image or attachment.

This union is used where part of the API requires either color or depth/stencil clear values, depending on the attachment, and defines the initial clear values in the [VkRenderPassBeginInfo](#) structure.

24.4. Filling Memory

To fill a memory range with a fixed 4-byte bit pattern, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdFillMemoryKHR(
    VkCommandBuffer                commandBuffer,
    const VkDeviceAddressRangeKHR* pDstRange,
    VkAddressCommandFlagsKHR       dstFlags,
    uint32_t                       data);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pDstRange` is a pointer to the `VkDeviceAddressRangeKHR` selecting the memory range to be filled.
- `dstFlags` is a `VkAddressCommandFlagsKHR` value defining the copy flags for the destination address range.
- `data` is the 4-byte word written repeatedly to the destination range to fill `size` bytes of data.

NOTE

The bit pattern of `data` is determined by the host endianness. For example, an unsigned integer value of `1` will result in a different bit pattern on a little endian machine compared to a big endian machine.

Valid Usage

- VUID-vkCmdFillMemoryKHR-pDstRange-13097
If the range specified by `pDstRange` is not bound completely to memory when accessed, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR`
- VUID-vkCmdFillMemoryKHR-pDstRange-13098
If the buffer from which the range specified by `pDstRange` was created with `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `dstFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdFillMemoryKHR-pDstRange-13099
If the buffer from which the range specified by `pDstRange` was created without `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdFillMemoryKHR-dstFlags-13100
`dstFlags` **must** not include both `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`
- VUID-vkCmdFillMemoryKHR-pDstRange-13122
If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `dstFlags` **must** include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`
- VUID-vkCmdFillMemoryKHR-pDstRange-13123
If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created without `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR`
- VUID-vkCmdFillMemoryKHR-dstFlags-13101
`dstFlags` **must** not include both `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`
- VUID-vkCmdFillMemoryKHR-pDstRange-13124
If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range

backing `pDstRange`, was created with `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `dstFlags` **must** include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdFillMemoryKHR-pDstRange-13125

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created without `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdFillMemoryKHR-dstRange-13000

The buffer from which `dstRange` was queried **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag

- VUID-vkCmdFillMemoryKHR-pDstRange-13001

`pDstRange->address` **must** be a multiple of 4

- VUID-vkCmdFillMemoryKHR-pDstRange-13002

`pDstRange->size` **must** be a multiple of 4

- VUID-vkCmdFillMemoryKHR-commandBuffer-13003

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

- VUID-vkCmdFillMemoryKHR-commandBuffer-13004

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkCmdFillMemoryKHR-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdFillMemoryKHR-pDstRange-parameter

`pDstRange` **must** be a valid pointer to a valid `VkDeviceAddressRangeKHR` structure

- VUID-vkCmdFillMemoryKHR-dstFlags-parameter

`dstFlags` **must** be a valid combination of `VkAddressCommandFlagBitsKHR` values

- VUID-vkCmdFillMemoryKHR-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdFillMemoryKHR-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_TRANSFER_BIT` operations

- VUID-vkCmdFillMemoryKHR-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdFillMemoryKHR-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdFillMemoryKHR-encoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdFillMemoryKHR` is not affected by [conditional rendering](#)

24.5. Updating Memory

To update device memory inline in a command buffer, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdUpdateMemoryKHR(
    VkCommandBuffer                commandBuffer,
    const VkDeviceAddressRangeKHR* pDstRange,
    VkAddressCommandFlagsKHR       dstFlags,
    VkDeviceSize                   dataSize,
    const void*                    pData);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pDstRange` is a pointer to the `VkDeviceAddressRangeKHR` selecting the memory range to be updated.
- `dstFlags` is a `VkAddressCommandFlagsKHR` value defining the copy flags for the destination address range.
- `dataSize` is the number of bytes to update, and **must** be a multiple of 4.
- `pData` is a pointer to the source data for the buffer update, and **must** be at least `dataSize` bytes in size.

The source data is copied from `pData` to the command buffer when the command is called, and then copied to `dstRange` when the command is executed on a device.

NOTE

Due to the data being copied into command buffers, `memory range copies` are recommended for larger data transfers, to avoid excessive memory consumption.

Valid Usage

- VUID-vkCmdUpdateMemoryKHR-pDstRange-13097

If the range specified by `pDstRange` is not bound completely to memory when accessed, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR`

- VUID-vkCmdUpdateMemoryKHR-pDstRange-13098

If the buffer from which the range specified by `pDstRange` was created with `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `dstFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

- VUID-vkCmdUpdateMemoryKHR-pDstRange-13099

If the buffer from which the range specified by `pDstRange` was created without `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

- VUID-vkCmdUpdateMemoryKHR-dstFlags-13100

<code>dstFlags</code>	must	not	include	both
<code>VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR</code>				and
<code>VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR</code>				

- VUID-vkCmdUpdateMemoryKHR-pDstRange-13122

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `dstFlags` **must** include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdUpdateMemoryKHR-pDstRange-13123

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created without `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdUpdateMemoryKHR-dstFlags-13101

<code>dstFlags</code>	must	not	include	both
<code>VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR</code>				and
<code>VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR</code>				

- VUID-vkCmdUpdateMemoryKHR-pDstRange-13124

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created with `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `dstFlags` **must** include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-vkCmdUpdateMemoryKHR-pDstRange-13125
If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `pDstRange`, was created without `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`
- VUID-vkCmdUpdateMemoryKHR-dstRange-13005
The buffer from which `dstRange` was queried **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-vkCmdUpdateMemoryKHR-pDstRange-13006
`pDstRange->address` **must** be a multiple of 4
- VUID-vkCmdUpdateMemoryKHR-pDstRange-13007
`pDstRange->size` **must** be less than or equal to 65536
- VUID-vkCmdUpdateMemoryKHR-dataSize-13008
`dataSize` **must** be less than or equal to `pDstRange->size`
- VUID-vkCmdUpdateMemoryKHR-dataSize-13009
`dataSize` **must** be a multiple of 4
- VUID-vkCmdUpdateMemoryKHR-commandBuffer-13010
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdUpdateMemoryKHR-commandBuffer-13011
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkCmdUpdateMemoryKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdUpdateMemoryKHR-pDstRange-parameter
`pDstRange` **must** be a valid pointer to a valid `VkDeviceAddressRangeKHR` structure
- VUID-vkCmdUpdateMemoryKHR-dstFlags-parameter
`dstFlags` **must** be a valid combination of `VkAddressCommandFlagBitsKHR` values
- VUID-vkCmdUpdateMemoryKHR-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkCmdUpdateMemoryKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdUpdateMemoryKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdUpdateMemoryKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdUpdateMemoryKHR-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdUpdateMemoryKHR-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdUpdateMemoryKHR-dataSize-arraylength

`dataSize` **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdUpdateMemoryKHR` is not affected by [conditional rendering](#)

24.6. Filling Buffers

To clear buffer data, call:

```
// Provided by VK_VERSION_1_0
void vkCmdFillBuffer(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 dstBuffer,
    VkDeviceSize             dstOffset,
    VkDeviceSize             size,
    uint32_t                 data);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `dstBuffer` is the buffer to be filled.
- `dstOffset` is the byte offset into the buffer at which to start filling, and **must** be a multiple of 4.
- `size` is the number of bytes to fill, and **must** be either a multiple of 4, or `VK_WHOLE_SIZE` to fill the range from `offset` to the end of the buffer. If `VK_WHOLE_SIZE` is used and the remaining

size of the buffer is not a multiple of 4, then the nearest smaller multiple is used.

- **data** is the 4-byte word written repeatedly to the buffer to fill **size** bytes of data. The data word is written to memory according to the host endianness.

vkCmdFillBuffer is treated as a “transfer” operation for the purposes of synchronization barriers. It is only compatible with buffers created with the **VK_BUFFER_USAGE_TRANSFER_DST_BIT** usage flag set.

Valid Usage

- VUID-vkCmdFillBuffer-dstOffset-00024
dstOffset **must** be less than the size of **dstBuffer**
- VUID-vkCmdFillBuffer-dstOffset-00025
dstOffset **must** be a multiple of 4
- VUID-vkCmdFillBuffer-size-00026
If **size** is not equal to **VK_WHOLE_SIZE**, **size** **must** be greater than 0
- VUID-vkCmdFillBuffer-size-00027
If **size** is not equal to **VK_WHOLE_SIZE**, **size** **must** be less than or equal to the size of **dstBuffer** minus **dstOffset**
- VUID-vkCmdFillBuffer-size-00028
If **size** is not equal to **VK_WHOLE_SIZE**, **size** **must** be a multiple of 4
- VUID-vkCmdFillBuffer-dstBuffer-00029
dstBuffer **must** have been created with the **VK_BUFFER_USAGE_TRANSFER_DST_BIT** usage flag set
- VUID-vkCmdFillBuffer-apiVersion-07894
If the **VK_KHR_maintenance1** extension is not enabled and **VkPhysicalDeviceProperties::apiVersion** is less than Vulkan 1.1, the **VkCommandPool** that **commandBuffer** was allocated from **must** support graphics or compute operations
- VUID-vkCmdFillBuffer-dstBuffer-00031
If **dstBuffer** is non-sparse then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object
- VUID-vkCmdFillBuffer-commandBuffer-01811
If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, **dstBuffer** **must** not be a protected buffer
- VUID-vkCmdFillBuffer-commandBuffer-01812
If **commandBuffer** is a protected command buffer and **protectedNoFault** is not supported, **dstBuffer** **must** not be an unprotected buffer

Valid Usage (Implicit)

- VUID-vkCmdFillBuffer-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle

- VUID-vkCmdFillBuffer-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdFillBuffer-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdFillBuffer-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdFillBuffer-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdFillBuffer-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdFillBuffer-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdFillBuffer-commonparent
Both of `commandBuffer`, and `dstBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdFillBuffer` is not affected by `conditional rendering`

24.7. Updating Buffers

To update buffer data inline in a command buffer, call:

```
// Provided by VK_VERSION_1_0
void vkCmdUpdateBuffer(
    VkCommandBuffer          commandBuffer,
    VkBuffer                  dstBuffer,
    VkDeviceSize              dstOffset,
    VkDeviceSize              dataSize,
    const void*               pData);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **dstBuffer** is a handle to the buffer to be updated.
- **dstOffset** is the byte offset into the buffer to start updating, and **must** be a multiple of 4.
- **dataSize** is the number of bytes to update, and **must** be a multiple of 4.
- **pData** is a pointer to the source data for the buffer update, and **must** be at least **dataSize** bytes in size.

dataSize **must** be less than or equal to 65536 bytes. For larger updates, applications **can** use buffer to buffer [copies](#).

NOTE

Buffer updates performed with **vkCmdUpdateBuffer** first copy the data into command buffer memory when the command is recorded (which requires additional storage and may incur an additional allocation), and then copy the data from the command buffer into **dstBuffer** when the command is executed on a device.

The additional cost of this functionality compared to [buffer to buffer copies](#) means it should only be used for very small amounts of data, and is why it is limited to at most 65536 bytes. Applications **can** work around this restriction by issuing multiple **vkCmdUpdateBuffer** commands to different ranges of the same buffer, but doing so is not recommended.

The source data is copied from **pData** to the command buffer when the command is called.

vkCmdUpdateBuffer is only allowed outside of a render pass. This command is treated as a “transfer” operation for the purposes of synchronization barriers. The **VK_BUFFER_USAGE_TRANSFER_DST_BIT** **must** be specified in **usage** of **VkBufferCreateInfo** in order for the buffer to be compatible with **vkCmdUpdateBuffer**.

Valid Usage

- VUID-vkCmdUpdateBuffer-dstOffset-00032
dstOffset **must** be less than the size of **dstBuffer**
- VUID-vkCmdUpdateBuffer-dataSize-00033

dataSize **must** be less than or equal to the size of **dstBuffer** minus **dstOffset**

- VUID-vkCmdUpdateBuffer-dstBuffer-00034
dstBuffer **must** have been created with the **VK_BUFFER_USAGE_TRANSFER_DST_BIT** usage flag set
- VUID-vkCmdUpdateBuffer-dstBuffer-00035
If **dstBuffer** is non-sparse then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object
- VUID-vkCmdUpdateBuffer-dstOffset-00036
dstOffset **must** be a multiple of 4
- VUID-vkCmdUpdateBuffer-dataSize-00037
dataSize **must** be less than or equal to 65536
- VUID-vkCmdUpdateBuffer-dataSize-00038
dataSize **must** be a multiple of 4
- VUID-vkCmdUpdateBuffer-commandBuffer-01813
If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, **dstBuffer** **must** not be a protected buffer
- VUID-vkCmdUpdateBuffer-commandBuffer-01814
If **commandBuffer** is a protected command buffer and **protectedNoFault** is not supported, **dstBuffer** **must** not be an unprotected buffer

Valid Usage (Implicit)

- VUID-vkCmdUpdateBuffer-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdUpdateBuffer-dstBuffer-parameter
dstBuffer **must** be a valid **VkBuffer** handle
- VUID-vkCmdUpdateBuffer-pData-parameter
pData **must** be a valid pointer to an array of **dataSize** bytes
- VUID-vkCmdUpdateBuffer-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdUpdateBuffer-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support **VK_QUEUE_COMPUTE_BIT**, **VK_QUEUE_GRAPHICS_BIT**, or **VK_QUEUE_TRANSFER_BIT** operations
- VUID-vkCmdUpdateBuffer-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdUpdateBuffer-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdUpdateBuffer-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdUpdateBuffer-dataSize-arraylength

`dataSize` **must** be greater than 0

- VUID-vkCmdUpdateBuffer-commonparent

Both of `commandBuffer`, and `dstBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdUpdateBuffer` is not affected by [conditional rendering](#)

NOTE

The `pData` parameter was of type `uint32_t*` instead of `void*` prior to version 1.0.19 of the Specification and `VK_HEADER_VERSION` 19 of the [Vulkan Header Files](#). This was a historical anomaly, as the source data may be of other types.

Chapter 25. Copy Commands

An application **can** copy buffer and image data using several methods described in this chapter, depending on the type of data transfer.

All copy commands are treated as “transfer” operations for the purposes of synchronization barriers.

All copy commands that have a source format with an X component in its format description read undefined values from those bits.

All copy commands that have a destination format with an X component in its format description write undefined values to those bits.

25.1. Copying Data Between Memory Ranges

To copy data between memory ranges, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdCopyMemoryKHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyDeviceMemoryInfoKHR*    pCopyMemoryInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyMemoryInfo` a pointer to a `VkCopyDeviceMemoryInfoKHR` structure describing the copies to perform.

Valid Usage

- VUID-vkCmdCopyMemoryKHR-commandBuffer-13012
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, the `srcCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdCopyMemoryKHR-commandBuffer-13013
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, the `dstCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdCopyMemoryKHR-commandBuffer-13014
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, the `dstCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMemoryKHR-pCopyMemoryInfo-parameter
If `pCopyMemoryInfo` is not `NULL`, `pCopyMemoryInfo` **must** be a valid pointer to a valid `VkCopyDeviceMemoryInfoKHR` structure
- VUID-vkCmdCopyMemoryKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdCopyMemoryKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdCopyMemoryKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyMemoryKHR` is not affected by [conditional rendering](#)

The `VkCopyDeviceMemoryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkCopyDeviceMemoryInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             regionCount;
    const VkDeviceMemoryCopyKHR* pRegions;
} VkCopyDeviceMemoryInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **regionCount** is the number of copies to be performed.
- **pRegions** is a pointer to an array of [VkDeviceMemoryCopyKHR](#) structures describing individual copy operations between two memory ranges.

Valid Usage

- VUID-VkCopyDeviceMemoryInfoKHR-srcRange-13015
The range of memory backing the address range defined by the **srcRange** member of any element of **pRegions** **must** not overlap the memory backing the address range defined by the **srcRange** or **dstRange** of any element of **pRegions**

Valid Usage (Implicit)

- VUID-VkCopyDeviceMemoryInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_COPY_DEVICE_MEMORY_INFO_KHR](#)
- VUID-VkCopyDeviceMemoryInfoKHR-pNext-pNext
pNext **must** be **NULL**
- VUID-VkCopyDeviceMemoryInfoKHR-pRegions-parameter
pRegions **must** be a valid pointer to an array of **regionCount** valid [VkDeviceMemoryCopyKHR](#) structures
- VUID-VkCopyDeviceMemoryInfoKHR-regionCount-arraylength
regionCount **must** be greater than 0

The [VkDeviceMemoryCopyKHR](#) structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkDeviceMemoryCopyKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceAddressRangeKHR srcRange;
    VkAddressCommandFlagsKHR srcFlags;
    VkDeviceAddressRangeKHR dstRange;
    VkAddressCommandFlagsKHR dstFlags;
} VkDeviceMemoryCopyKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcRange` is a `VkDeviceAddressRangeKHR` structure defining the source memory to copy from.
- `srcFlags` is a `VkAddressCommandFlagsKHR` value defining the copy flags for the source address range.
- `dstRange` is a `VkDeviceAddressRangeKHR` structure defining the destination memory to copy to.
- `dstFlags` is a `VkAddressCommandFlagsKHR` value defining the copy flags for the destination address range.

This structure defines a copy operation where `srcRange.size` bytes will be copied from `srcRange.address` to `dstRange.address`.

Valid Usage

- VUID-VkDeviceMemoryCopyKHR-srcRange-13097
If the range specified by `srcRange` is not bound completely to memory when accessed, `srcFlags` **must** not include `VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR`
- VUID-VkDeviceMemoryCopyKHR-srcRange-13098
If the buffer from which the range specified by `srcRange` was created with `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `srcFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-VkDeviceMemoryCopyKHR-srcRange-13099
If the buffer from which the range specified by `srcRange` was created without `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `srcFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-VkDeviceMemoryCopyKHR-srcFlags-13100

<code>srcFlags</code>	must	not	include	both
<code>VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR</code>				and
<code>VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR</code>				
- VUID-VkDeviceMemoryCopyKHR-srcRange-13122
If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `srcRange`, was created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `srcFlags` **must** include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` or

VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR

- VUID-VkDeviceMemoryCopyKHR-srcRange-13123

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `srcRange`, was created without `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `srcFlags` **must** not include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-srcFlags-13101

`srcFlags` **must** not include both `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-srcRange-13124

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `srcRange`, was created with `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `srcFlags` **must** include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-srcRange-13125

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `srcRange`, was created without `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `srcFlags` **must** not include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-dstRange-13097

If the range specified by `dstRange` is not bound completely to memory when accessed, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-dstRange-13098

If the buffer from which the range specified by `dstRange` was created with `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `dstFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-dstRange-13099

If the buffer from which the range specified by `dstRange` was created without `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-dstFlags-13100

`dstFlags` **must** not include both `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-dstRange-13122

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `dstRange`, was created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `dstFlags` **must** include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-dstRange-13123

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `dstRange`, was created without `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-dstFlags-13101

`dstFlags` **must** not include both `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-dstRange-13124

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `dstRange`, was created with `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `dstFlags` **must** include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-dstRange-13125

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `dstRange`, was created without `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `dstFlags` **must** not include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkDeviceMemoryCopyKHR-size-13016

The `size` member of `dstRange` **must** be greater than or equal to the `size` member of `srcRange`

- VUID-VkDeviceMemoryCopyKHR-srcRange-13017

The buffer from which `srcRange` was queried **must** have been created with `VK_BUFFER_USAGE_TRANSFER_SRC_BIT`

- VUID-VkDeviceMemoryCopyKHR-dstRange-13018

The buffer from which `dstRange` was queried **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT`

Valid Usage (Implicit)

- VUID-VkDeviceMemoryCopyKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_MEMORY_COPY_KHR`

- VUID-VkDeviceMemoryCopyKHR-pNext-pNext

`pNext` **must** be `NULL`

- VUID-VkDeviceMemoryCopyKHR-srcFlags-parameter

`srcFlags` **must** be a valid combination of `VkAddressCommandFlagBitsKHR` values

- VUID-VkDeviceMemoryCopyKHR-dstFlags-parameter

`dstFlags` **must** be a valid combination of `VkAddressCommandFlagBitsKHR` values

25.2. Copying Data Between Buffers

To copy data between buffer objects, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyBuffer(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 srcBuffer,
    VkBuffer                 dstBuffer,
    uint32_t                 regionCount,
    const VkBufferCopy*     pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcBuffer` is the source buffer.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkBufferCopy` structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source buffer to the destination region of the destination buffer. If any of the specified regions in `srcBuffer` overlaps in memory with any of the specified regions in `dstBuffer`, values read from those overlapping regions are undefined.

Valid Usage

- VUID-vkCmdCopyBuffer-commandBuffer-01822
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer-commandBuffer-01823
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer-commandBuffer-01824
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer
- VUID-vkCmdCopyBuffer-srcOffset-00113
The `srcOffset` member of each element of `pRegions` **must** be less than the size of `srcBuffer`
- VUID-vkCmdCopyBuffer-dstOffset-00114
The `dstOffset` member of each element of `pRegions` **must** be less than the size of `dstBuffer`
- VUID-vkCmdCopyBuffer-size-00115
The `size` member of each element of `pRegions` **must** be less than or equal to the size of `srcBuffer` minus `srcOffset`
- VUID-vkCmdCopyBuffer-size-00116
The `size` member of each element of `pRegions` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`

- VUID-vkCmdCopyBuffer-pRegions-00117
The union of the source regions, and the union of the destination regions, specified by the elements of **pRegions**, **must** not overlap in memory
- VUID-vkCmdCopyBuffer-srcBuffer-00118
srcBuffer **must** have been created with the **VK_BUFFER_USAGE_TRANSFER_SRC_BIT** usage flag set
- VUID-vkCmdCopyBuffer-srcBuffer-00119
If **srcBuffer** is non-sparse then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object
- VUID-vkCmdCopyBuffer-dstBuffer-00120
dstBuffer **must** have been created with the **VK_BUFFER_USAGE_TRANSFER_DST_BIT** usage flag set
- VUID-vkCmdCopyBuffer-dstBuffer-00121
If **dstBuffer** is non-sparse then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object

Valid Usage (Implicit)

- VUID-vkCmdCopyBuffer-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdCopyBuffer-srcBuffer-parameter
srcBuffer **must** be a valid **VkBuffer** handle
- VUID-vkCmdCopyBuffer-dstBuffer-parameter
dstBuffer **must** be a valid **VkBuffer** handle
- VUID-vkCmdCopyBuffer-pRegions-parameter
pRegions **must** be a valid pointer to an array of **regionCount** valid **VkBufferCopy** structures
- VUID-vkCmdCopyBuffer-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdCopyBuffer-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support **VK_QUEUE_COMPUTE_BIT**, **VK_QUEUE_GRAPHICS_BIT**, or **VK_QUEUE_TRANSFER_BIT** operations
- VUID-vkCmdCopyBuffer-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBuffer-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyBuffer-vidcoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyBuffer-regionCount-arraylength
regionCount **must** be greater than 0
- VUID-vkCmdCopyBuffer-commonparent

Each of `commandBuffer`, `dstBuffer`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyBuffer` is not affected by [conditional rendering](#)

The `VkBufferCopy` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferCopy {
    VkDeviceSize    srcOffset;
    VkDeviceSize    dstOffset;
    VkDeviceSize    size;
} VkBufferCopy;
```

- `srcOffset` is the starting offset in bytes from the start of `srcBuffer`.
- `dstOffset` is the starting offset in bytes from the start of `dstBuffer`.
- `size` is the number of bytes to copy.

Valid Usage

- VUID-VkBufferCopy-size-01988
The `size` **must** be greater than 0

A more extensible version of the copy buffer command is defined below.

To copy data between buffer objects, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyBuffer2(
    VkCommandBuffer                      commandBuffer,
    const VkCopyBufferInfo2*            pCopyBufferInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdCopyBuffer2
void vkCmdCopyBuffer2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyBufferInfo2*            pCopyBufferInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyBufferInfo` is a pointer to a `VkCopyBufferInfo2` structure describing the copy parameters.

Each source region specified by `pCopyBufferInfo->pRegions` is copied from the source buffer to the destination region of the destination buffer. If any of the specified regions in `pCopyBufferInfo->srcBuffer` overlaps in memory with any of the specified regions in `pCopyBufferInfo->dstBuffer`, values read from those overlapping regions are undefined.

Valid Usage

- VUID-vkCmdCopyBuffer2-commandBuffer-01822
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer2-commandBuffer-01823
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer2-commandBuffer-01824
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer

Valid Usage (Implicit)

- VUID-vkCmdCopyBuffer2-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyBuffer2-pCopyBufferInfo-parameter
`pCopyBufferInfo` **must** be a valid pointer to a valid `VkCopyBufferInfo2` structure
- VUID-vkCmdCopyBuffer2-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdCopyBuffer2-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations

- VUID-vkCmdCopyBuffer2-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdCopyBuffer2-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdCopyBuffer2-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyBuffer2` is not affected by [conditional rendering](#)

The `VkCopyBufferInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyBufferInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            srcBuffer;
    VkBuffer            dstBuffer;
    uint32_t           regionCount;
    const VkBufferCopy2* pRegions;
} VkCopyBufferInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkCopyBufferInfo2
typedef VkCopyBufferInfo2 VkCopyBufferInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcBuffer` is the source buffer.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkBufferCopy2` structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyBufferInfo2-srcOffset-00113
The `srcOffset` member of each element of `pRegions` **must** be less than the size of `srcBuffer`
- VUID-VkCopyBufferInfo2-dstOffset-00114
The `dstOffset` member of each element of `pRegions` **must** be less than the size of `dstBuffer`
- VUID-VkCopyBufferInfo2-size-00115
The `size` member of each element of `pRegions` **must** be less than or equal to the size of `srcBuffer` minus `srcOffset`
- VUID-VkCopyBufferInfo2-size-00116
The `size` member of each element of `pRegions` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`
- VUID-VkCopyBufferInfo2-pRegions-00117
The union of the source regions, and the union of the destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-VkCopyBufferInfo2-srcBuffer-00118
`srcBuffer` **must** have been created with the `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag set
- VUID-VkCopyBufferInfo2-srcBuffer-00119
If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkCopyBufferInfo2-dstBuffer-00120
`dstBuffer` **must** have been created with the `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-VkCopyBufferInfo2-dstBuffer-00121
If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

Valid Usage (Implicit)

- VUID-VkCopyBufferInfo2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_BUFFER_INFO_2`
- VUID-VkCopyBufferInfo2-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyBufferInfo2-srcBuffer-parameter
`srcBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkCopyBufferInfo2-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkCopyBufferInfo2-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferCopy2` structures
- VUID-VkCopyBufferInfo2-regionCount-arraylength
`regionCount` **must** be greater than `0`
- VUID-VkCopyBufferInfo2-commonparent
Both of `dstBuffer`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkBufferCopy2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkBufferCopy2 {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize        srcOffset;
    VkDeviceSize        dstOffset;
    VkDeviceSize        size;
} VkBufferCopy2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkBufferCopy2
typedef VkBufferCopy2 VkBufferCopy2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcOffset` is the starting offset in bytes from the start of `srcBuffer`.
- `dstOffset` is the starting offset in bytes from the start of `dstBuffer`.
- `size` is the number of bytes to copy.

Valid Usage

- VUID-VkBufferCopy2-size-01988
The `size` **must** be greater than 0

Valid Usage (Implicit)

- VUID-VkBufferCopy2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_COPY_2`
- VUID-VkBufferCopy2-pNext-pNext
`pNext` **must** be `NULL`

25.3. Copying Data Between Images

To copy data between image objects, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyImage(
    VkCommandBuffer          commandBuffer,
    VkImage                  srcImage,
    VkImageLayout            srcImageLayout,
    VkImage                  dstImage,
    VkImageLayout            dstImageLayout,
    uint32_t                 regionCount,
    const VkImageCopy*       pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the current layout of the source image subresource.
- `dstImage` is the destination image.
- `dstImageLayout` is the current layout of the destination image subresource.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkImageCopy` structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source image to the destination region of the destination image. If any of the specified regions in `srcImage` overlaps in memory with any of

the specified regions in `dstImage`, values read from those overlapping regions are undefined. If any region accesses a depth aspect in `dstImage` and the `VK_EXT_depth_range_unrestricted` extension is not enabled, values copied from `srcImage` outside of the range [0,1] will be written as undefined values to the destination image.

Multi-planar images **can** only be copied on a per-plane basis, and the subresources used in each region when copying to or from such images **must** specify only one plane, though different regions **can** specify different planes. When copying planes of multi-planar images, the format considered is the `compatible format for that plane`, rather than the format of the multi-planar image.

If the format of the destination image has a different `block extent` than the source image (e.g. one is a compressed format), the offset and extent for each of the regions specified is `scaled according to the block extents of each format` to match in size. Copy regions for each image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Image data **can** be copied between images with different image types. If one image is `VK_IMAGE_TYPE_3D` and the other image is `VK_IMAGE_TYPE_2D` with multiple layers, then each slice is copied to or from a different layer; `depth` slices in the 3D image correspond to `layerCount` layers in the 2D image, with an effective `depth` of 1 used for the 2D image. If the `maintenance5` feature is enabled, all other combinations are allowed and function as if 1D images are 2D images with a height of 1. Otherwise, other combinations of image types are disallowed.

Valid Usage

- VUID-vkCmdCopyImage-commandBuffer-01825
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImage-commandBuffer-01826
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyImage-commandBuffer-01827
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdCopyImage-commandBuffer-10217
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, and the `maintenance10` feature is not enabled, for each element of `pRegions`, where the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT`, the `aspectMask` of `dstSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkCmdCopyImage-commandBuffer-11782
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pRegions` the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `dstSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the `format features` of `dstImage` **must** contain

VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR

- VUID-vkCmdCopyImage-commandBuffer-11783

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pRegions` the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `dstSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the format features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage-commandBuffer-11784

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pRegions` the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `dstSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the format features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage-commandBuffer-11785

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pRegions` the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `dstSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the format features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage-commandBuffer-10218

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, and the `maintenance10` feature is not enabled, for each element of `pRegions`, where the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` then the `aspectMask` of `srcSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`

- VUID-vkCmdCopyImage-commandBuffer-11786

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pRegions` the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `srcSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage-commandBuffer-11787

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pRegions` the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `srcSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage-commandBuffer-11788

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support

VK_QUEUE_COMPUTE_BIT, and in any element of `pRegions` the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `srcSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the `format` features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage-commandBuffer-11789

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pRegions` the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `srcSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the `format` features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage-pRegions-00124

The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory

- VUID-vkCmdCopyImage-srcImage-01995

The `format` features of `srcImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`

- VUID-vkCmdCopyImage-srcImageLayout-00128

`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`

- VUID-vkCmdCopyImage-srcImageLayout-01917

`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`

- VUID-vkCmdCopyImage-srcImage-09460

If `srcImage` and `dstImage` are the same, and any elements of `pRegions` contains the `srcSubresource` and `dstSubresource` with matching `mipLevel` and overlapping array layers, then the `srcImageLayout` and `dstImageLayout` **must** be `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`

- VUID-vkCmdCopyImage-dstImage-01996

The `format` features of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`

- VUID-vkCmdCopyImage-dstImageLayout-00133

`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`

- VUID-vkCmdCopyImage-dstImageLayout-01395

`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`

- VUID-vkCmdCopyImage-srcImage-01548

If the `VkFormat` of each of `srcImage` and `dstImage` is not a `multi-planar format`, the `VkFormat` of each of `srcImage` and `dstImage` **must** be `size-compatible`

- VUID-vkCmdCopyImage-None-01549

In a copy to or from a plane of a `multi-planar image`, the `VkFormat` of the image and plane **must** be compatible according to [the description of compatible planes](#) for the plane being copied

- VUID-vkCmdCopyImage-srcImage-09247

If the [VkFormat](#) of each of [srcImage](#) and [dstImage](#) is a [compressed image format](#), the formats **must** have the same texel block extent

- VUID-vkCmdCopyImage-srcImage-00136
The sample count of [srcImage](#) and [dstImage](#) **must** match
- VUID-vkCmdCopyImage-srcOffset-01783
The [srcOffset](#) and [extent](#) members of each element of [pRegions](#) **must** respect the image transfer granularity requirements of [commandBuffer](#)'s command pool's queue family, as described in [VkQueueFamilyProperties](#)
- VUID-vkCmdCopyImage-dstOffset-01784
The [dstOffset](#) and [extent](#) members of each element of [pRegions](#) **must** respect the image transfer granularity requirements of [commandBuffer](#)'s command pool's queue family, as described in [VkQueueFamilyProperties](#)
- VUID-vkCmdCopyImage-srcImage-01551
If neither [srcImage](#) nor [dstImage](#) has a [multi-planar format](#) and the [maintenance8](#) feature is not enabled then for each element of [pRegions](#), [srcSubresource.aspectMask](#) and [dstSubresource.aspectMask](#) **must** match
- VUID-vkCmdCopyImage-pRegions-12201
For each element of [pRegions](#) where [srcSubresource.aspectMask](#) and [dstSubresource.aspectMask](#) each contain at least one of [VK_IMAGE_ASPECT_DEPTH_BIT](#) or [VK_IMAGE_ASPECT_STENCIL_BIT](#), [srcSubresource.aspectMask](#) and [dstSubresource.aspectMask](#) **must** match
- VUID-vkCmdCopyImage-srcSubresource-10214
If [srcSubresource.aspectMask](#) is [VK_IMAGE_ASPECT_COLOR_BIT](#), then [dstSubresource.aspectMask](#) **must** not contain both [VK_IMAGE_ASPECT_DEPTH_BIT](#) and [VK_IMAGE_ASPECT_STENCIL_BIT](#)
- VUID-vkCmdCopyImage-dstSubresource-10215
If [dstSubresource.aspectMask](#) is [VK_IMAGE_ASPECT_COLOR_BIT](#), then [srcSubresource.aspectMask](#) **must** not contain both [VK_IMAGE_ASPECT_DEPTH_BIT](#) and [VK_IMAGE_ASPECT_STENCIL_BIT](#)
- VUID-vkCmdCopyImage-srcImage-08713
If [srcImage](#) has a [multi-planar format](#), then for each element of [pRegions](#), [srcSubresource.aspectMask](#) **must** be a single valid [multi-planar aspect mask](#) bit
- VUID-vkCmdCopyImage-dstImage-08714
If [dstImage](#) has a [multi-planar format](#), then for each element of [pRegions](#), [dstSubresource.aspectMask](#) **must** be a single valid [multi-planar aspect mask](#) bit
- VUID-vkCmdCopyImage-srcImage-01556
If [srcImage](#) has a [multi-planar format](#) and the [dstImage](#) does not have a multi-planar image format, then for each element of [pRegions](#), [dstSubresource.aspectMask](#) **must** be [VK_IMAGE_ASPECT_COLOR_BIT](#)
- VUID-vkCmdCopyImage-dstImage-01557
If [dstImage](#) has a [multi-planar format](#) and the [srcImage](#) does not have a multi-planar image format, then for each element of [pRegions](#), [srcSubresource.aspectMask](#) **must** be [VK_IMAGE_ASPECT_COLOR_BIT](#)

- VUID-vkCmdCopyImage-srcSubresource-10211
If `srcSubresource.aspectMask` is `VK_IMAGE_ASPECT_COLOR_BIT` and `dstSubresource.aspectMask` is `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`, then the `VkFormat` values of `srcImage` and `dstImage` **must** be compatible according to [the list of compatible depth-stencil and color formats](#)
- VUID-vkCmdCopyImage-srcSubresource-10212
If `srcSubresource.aspectMask` is `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` and `dstSubresource.aspectMask` is `VK_IMAGE_ASPECT_COLOR_BIT`, then the `VkFormat` values of `srcImage` and `dstImage` **must** be compatible according to [the list of compatible depth-stencil and color formats](#)
- VUID-vkCmdCopyImage-apiVersion-07932
If the `VK_KHR_maintenance1` extension is not enabled, or `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and either `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` and `dstSubresource.baseArrayLayer` **must** both be 0, and `srcSubresource.layerCount` and `dstSubresource.layerCount` **must** both be 1
- VUID-vkCmdCopyImage-srcImage-04443
If `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` **must** be 0 and `srcSubresource.layerCount` **must** be 1
- VUID-vkCmdCopyImage-dstImage-04444
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstSubresource.baseArrayLayer` **must** be 0 and `dstSubresource.layerCount` **must** be 1
- VUID-vkCmdCopyImage-aspectMask-00142
For each element of `pRegions`, `srcSubresource.aspectMask` **must** specify aspects present in `srcImage`
- VUID-vkCmdCopyImage-aspectMask-00143
For each element of `pRegions`, `dstSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-vkCmdCopyImage-srcOffset-00144
For each element of `pRegions`, `srcOffset.x` and `(extent.width + srcOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdCopyImage-srcOffset-00145
For each element of `pRegions`, `srcOffset.y` and `(extent.height + srcOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdCopyImage-srcImage-00146
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.y` **must** be 0 and `extent.height` **must** be 1
- VUID-vkCmdCopyImage-srcOffset-00147
If `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcOffset.z` and `(extent.depth + srcOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `srcSubresource` of `srcImage`

- VUID-vkCmdCopyImage-srcImage-01785
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.z` **must** be 0 and `extent.depth` **must** be 1
- VUID-vkCmdCopyImage-dstImage-01786
If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.z` **must** be 0
- VUID-vkCmdCopyImage-srcImage-10907
If either the `VkFormat` of each of `srcImage` and `dstImage` is not a `compressed image format`, and `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `extent.depth` **must** be 1
- VUID-vkCmdCopyImage-srcImage-01787
If `srcImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `srcOffset.z` **must** be 0
- VUID-vkCmdCopyImage-dstImage-01788
If `dstImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `dstOffset.z` **must** be 0
- VUID-vkCmdCopyImage-apiVersion-07933
If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `srcImage` and `dstImage` **must** have the same `VkImageType`
- VUID-vkCmdCopyImage-apiVersion-08969
If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` **must** be 1
- VUID-vkCmdCopyImage-srcImage-07743
If `srcImage` and `dstImage` have a different `VkImageType`, and the `maintenance5` feature is not enabled, one **must** be `VK_IMAGE_TYPE_3D` and the other **must** be `VK_IMAGE_TYPE_2D`
- VUID-vkCmdCopyImage-srcImage-08793
If `srcImage` and `dstImage` have the same `VkImageType`, for each element of `pRegions`, if neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` members of `srcSubresource` or `dstSubresource` **must** match
- VUID-vkCmdCopyImage-srcImage-08794
If `srcImage` and `dstImage` have the same `VkImageType`, and one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member **must** be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`
- VUID-vkCmdCopyImage-srcImage-01790
If `srcImage` and `dstImage` are both of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` **must** be 1
- VUID-vkCmdCopyImage-srcImage-01791
If `srcImage` is of type `VK_IMAGE_TYPE_2D`, and `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `srcSubresource.layerCount`

- VUID-vkCmdCopyImage-dstImage-01792
If `dstImage` is of type `VK_IMAGE_TYPE_2D`, and `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `dstSubresource.layerCount`
- VUID-vkCmdCopyImage-dstOffset-00150
For each element of `pRegions`, `dstOffset.x` and `(extent.width + dstOffset.x)`, where `extent` is **adjusted for size-compatibility**, **must** both be greater than or equal to `0` and less than or equal to the width of the specified `dstSubresource` of `dstImage`
- VUID-vkCmdCopyImage-dstOffset-00151
For each element of `pRegions`, `dstOffset.y` and `(extent.height + dstOffset.y)`, where `extent` is **adjusted for size-compatibility**, **must** both be greater than or equal to `0` and less than or equal to the height of the specified `dstSubresource` of `dstImage`
- VUID-vkCmdCopyImage-dstImage-00152
If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.y` **must** be `0`
- VUID-vkCmdCopyImage-srcImage-10908
If either the `VkFormat` of each of `srcImage` and `dstImage` is not a **compressed image format**, and `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `extent.height` **must** be `1`, where `extent` is **adjusted for size-compatibility**
- VUID-vkCmdCopyImage-dstOffset-00153
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstOffset.z` and `(extent.depth + dstOffset.z)`, where `extent` is **adjusted for size-compatibility**, **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `dstSubresource` of `dstImage`
- VUID-vkCmdCopyImage-pRegions-07278
For each element of `pRegions`, `srcOffset.x` **must** be a multiple of the **texel block extent width** of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImage-pRegions-07279
For each element of `pRegions`, `srcOffset.y` **must** be a multiple of the **texel block extent height** of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImage-pRegions-07280
For each element of `pRegions`, `srcOffset.z` **must** be a multiple of the **texel block extent depth** of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImage-pRegions-07281
For each element of `pRegions`, `dstOffset.x` **must** be a multiple of the **texel block extent width** of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyImage-pRegions-07282
For each element of `pRegions`, `dstOffset.y` **must** be a multiple of the **texel block extent height** of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyImage-pRegions-07283
For each element of `pRegions`, `dstOffset.z` **must** be a multiple of the **texel block extent depth** of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyImage-srcImage-01728
For each element of `pRegions`, if the sum of `srcOffset.x` and `extent.width` does not equal

the width of the subresource specified by `srcSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-srcImage-01729

For each element of `pRegions`, if the sum of `srcOffset.y` and `extent.height` does not equal the height of the subresource specified by `srcSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-srcImage-01730

For each element of `pRegions`, if the sum of `srcOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-aspect-06662

If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `srcImage` was not created with `separate stencil usage`, `srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set

- VUID-vkCmdCopyImage-aspect-06663

If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `dstImage` was not created with `separate stencil usage`, `dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set

- VUID-vkCmdCopyImage-aspect-06664

If the `aspect` member of any element of `pRegions` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, and `srcImage` was created with `separate stencil usage`, `srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set

- VUID-vkCmdCopyImage-aspect-06665

If the `aspect` member of any element of `pRegions` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, and `dstImage` was created with `separate stencil usage`, `srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set

- VUID-vkCmdCopyImage-srcImage-07966

If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdCopyImage-srcSubresource-07967

The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created

- VUID-vkCmdCopyImage-srcSubresource-07968

If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer` + `srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created

- VUID-vkCmdCopyImage-srcImage-07969

`srcImage` **must** not have been created with flags containing

VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-vkCmdCopyImage-dstImage-07966
If **dstImage** is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single **VkDeviceMemory** object
- VUID-vkCmdCopyImage-dstSubresource-07967
The **dstSubresource.mipLevel** member of each element of **pRegions** **must** be less than the **mipLevels** specified in **VkImageCreateInfo** when **dstImage** was created
- VUID-vkCmdCopyImage-dstSubresource-07968
If **dstSubresource.layerCount** is not **VK_REMAINING_ARRAY_LAYERS**, **dstSubresource.baseArrayLayer** + **dstSubresource.layerCount** of each element of **pRegions** **must** be less than or equal to the **arrayLayers** specified in **VkImageCreateInfo** when **dstImage** was created
- VUID-vkCmdCopyImage-dstImage-07969
dstImage **must** not have been created with **flags** containing **VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT**

Valid Usage (Implicit)

- VUID-vkCmdCopyImage-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdCopyImage-srcImage-parameter
srcImage **must** be a valid **VkImage** handle
- VUID-vkCmdCopyImage-srcImageLayout-parameter
srcImageLayout **must** be a valid **VkImageLayout** value
- VUID-vkCmdCopyImage-dstImage-parameter
dstImage **must** be a valid **VkImage** handle
- VUID-vkCmdCopyImage-dstImageLayout-parameter
dstImageLayout **must** be a valid **VkImageLayout** value
- VUID-vkCmdCopyImage-pRegions-parameter
pRegions **must** be a valid pointer to an array of **regionCount** valid **VkImageCopy** structures
- VUID-vkCmdCopyImage-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdCopyImage-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support **VK_QUEUE_COMPUTE_BIT**, **VK_QUEUE_GRAPHICS_BIT**, or **VK_QUEUE_TRANSFER_BIT** operations
- VUID-vkCmdCopyImage-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImage-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyImage-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdCopyImage-regionCount-arraylength
regionCount **must** be greater than 0
- VUID-vkCmdCopyImage-commonparent

Each of **commandBuffer**, **dstImage**, and **srcImage** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyImage is not affected by **conditional rendering**

The **VkImageCopy** structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageCopy {
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D srcOffset;
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D dstOffset;
    VkExtent3D extent;
} VkImageCopy;
```

- **srcSubresource** and **dstSubresource** are **VkImageSubresourceLayers** structures specifying the image subresources of the images used for the source and destination image data, respectively.

- `srcOffset` and `dstOffset` select the initial `x`, `y`, and `z` offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the image to copy in `width`, `height` and `depth`.

Valid Usage

- VUID-VkImageCopy-apiVersion-07940
If the `VK_KHR_sampler_ycbcr_conversion` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, the `aspectMask` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy-apiVersion-07941
If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, the `layerCount` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy-extent-06668
`extent.width` **must** not be 0
- VUID-VkImageCopy-extent-06669
`extent.height` **must** not be 0
- VUID-VkImageCopy-extent-06670
`extent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkImageCopy-srcSubresource-parameter
`srcSubresource` **must** be a valid `VkImageSubresourceLayers` structure
- VUID-VkImageCopy-dstSubresource-parameter
`dstSubresource` **must** be a valid `VkImageSubresourceLayers` structure

The `VkImageSubresourceLayers` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresourceLayers {
    VkImageAspectFlags    aspectMask;
    uint32_t              mipLevel;
    uint32_t              baseArrayLayer;
    uint32_t              layerCount;
} VkImageSubresourceLayers;
```

- `aspectMask` is a combination of `VkImageAspectFlagBits`, selecting the color, depth and/or stencil aspects to be copied.
- `mipLevel` is the mipmap level to copy
- `baseArrayLayer` and `layerCount` are the starting layer and number of layers to copy.

Valid Usage

- VUID-VkImageSubresourceLayers-aspectMask-00167
If `aspectMask` contains `VK_IMAGE_ASPECT_COLOR_BIT`, it **must** not contain either of `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-VkImageSubresourceLayers-aspectMask-00168
`aspectMask` **must** not contain `VK_IMAGE_ASPECT_METADATA_BIT`
- VUID-VkImageSubresourceLayers-aspectMask-02247
`aspectMask` **must** not include `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` for any index *i*
- VUID-VkImageSubresourceLayers-layerCount-09243
If the `maintenance5` feature is not enabled, `layerCount` **must** not be `VK_REMAINING_ARRAY_LAYERS`
- VUID-VkImageSubresourceLayers-layerCount-01700
If `layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, it **must** be greater than 0

Valid Usage (Implicit)

- VUID-VkImageSubresourceLayers-aspectMask-parameter
`aspectMask` **must** be a valid combination of `VkImageAspectFlagBits` values
- VUID-VkImageSubresourceLayers-aspectMask-requiredbitmask
`aspectMask` **must** not be 0

A more extensible version of the copy image command is defined below.

To copy data between image objects, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyImage2(
    VkCommandBuffer                commandBuffer,
    const VkCopyImageInfo2*       pCopyImageInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdCopyImage2
void vkCmdCopyImage2KHR(
    VkCommandBuffer                commandBuffer,
    const VkCopyImageInfo2*       pCopyImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyImageInfo` is a pointer to a `VkCopyImageInfo2` structure describing the copy parameters.

This command is functionally identical to `vkCmdCopyImage`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdCopyImage2-commandBuffer-01825
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImage2-commandBuffer-01826
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyImage2-commandBuffer-01827
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdCopyImage2-commandBuffer-10217
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, and the `maintenance10` feature is not enabled, for each element of `pCopyImageInfo->pRegions`, where the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT`, the `aspectMask` of `dstSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkCmdCopyImage2-commandBuffer-11782
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `dstSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR`
- VUID-vkCmdCopyImage2-commandBuffer-11783
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `dstSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR`
- VUID-vkCmdCopyImage2-commandBuffer-11784
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `dstSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR`
- VUID-vkCmdCopyImage2-commandBuffer-11785
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `srcSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the

`aspectMask` of `dstSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the format features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage2-commandBuffer-10218

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, and the `maintenance10` feature is not enabled, for each element of `pCopyImageInfo->pRegions`, where the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` then the `aspectMask` of `srcSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`

- VUID-vkCmdCopyImage2-commandBuffer-11786

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `srcSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage2-commandBuffer-11787

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `srcSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage2-commandBuffer-11788

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `srcSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImage2-commandBuffer-11789

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `dstSubresource` is `VK_IMAGE_ASPECT_COLOR_BIT` and the `aspectMask` of `srcSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkCmdCopyImage2-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyImage2-pCopyImageInfo-parameter
`pCopyImageInfo` **must** be a valid pointer to a valid `VkCopyImageInfo2` structure
- VUID-vkCmdCopyImage2-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyImage2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdCopyImage2-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImage2-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyImage2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyImage2` is not affected by `conditional rendering`

The `VkCopyImageInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyImageInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             srcImage;
    VkImageLayout      srcImageLayout;
    VkImage             dstImage;
    VkImageLayout      dstImageLayout;
    uint32_t           regionCount;
    const VkImageCopy2* pRegions;
} VkCopyImageInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkCopyImageInfo2
typedef VkCopyImageInfo2 VkCopyImageInfo2KHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **srcImage** is the source image.
- **srcImageLayout** is the current layout of the source image subresource.
- **dstImage** is the destination image.
- **dstImageLayout** is the current layout of the destination image subresource.
- **regionCount** is the number of regions to copy.
- **pRegions** is a pointer to an array of **VkImageCopy2** structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyImageInfo2-pRegions-00124
The union of all source regions, and the union of all destination regions, specified by the elements of **pRegions**, **must** not overlap in memory
- VUID-VkCopyImageInfo2-srcImage-01995
The **format features** of **srcImage** **must** contain **VK_FORMAT_FEATURE_TRANSFER_SRC_BIT**
- VUID-VkCopyImageInfo2-srcImageLayout-00128
srcImageLayout **must** specify the layout of the image subresources of **srcImage** specified in **pRegions** at the time this command is executed on a **VkDevice**
- VUID-VkCopyImageInfo2-srcImageLayout-01917
srcImageLayout **must** be **VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR**, **VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL**, or **VK_IMAGE_LAYOUT_GENERAL**
- VUID-VkCopyImageInfo2-srcImage-09460
If **srcImage** and **dstImage** are the same, and any elements of **pRegions** contains the **srcSubresource** and **dstSubresource** with matching **mipLevel** and overlapping array layers, then the **srcImageLayout** and **dstImageLayout** **must** be **VK_IMAGE_LAYOUT_GENERAL** or

VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR

- VUID-VkCopyImageInfo2-dstImage-01996
The [format features](#) of [dstImage](#) **must** contain [VK_FORMAT_FEATURE_TRANSFER_DST_BIT](#)
- VUID-VkCopyImageInfo2-dstImageLayout-00133
[dstImageLayout](#) **must** specify the layout of the image subresources of [dstImage](#) specified in [pRegions](#) at the time this command is executed on a [VkDevice](#)
- VUID-VkCopyImageInfo2-dstImageLayout-01395
[dstImageLayout](#) **must** be [VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR](#), [VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL](#), or [VK_IMAGE_LAYOUT_GENERAL](#)
- VUID-VkCopyImageInfo2-srcImage-01548
If the [VkFormat](#) of each of [srcImage](#) and [dstImage](#) is not a [multi-planar format](#), the [VkFormat](#) of each of [srcImage](#) and [dstImage](#) **must** be [size-compatible](#)
- VUID-VkCopyImageInfo2-None-01549
In a copy to or from a plane of a [multi-planar image](#), the [VkFormat](#) of the image and plane **must** be compatible according to [the description of compatible planes](#) for the plane being copied
- VUID-VkCopyImageInfo2-srcImage-09247
If the [VkFormat](#) of each of [srcImage](#) and [dstImage](#) is a [compressed image format](#), the formats **must** have the same texel block extent
- VUID-VkCopyImageInfo2-srcImage-00136
The sample count of [srcImage](#) and [dstImage](#) **must** match
- VUID-VkCopyImageInfo2-srcOffset-01783
The [srcOffset](#) and [extent](#) members of each element of [pRegions](#) **must** respect the image transfer granularity requirements of [commandBuffer](#)'s command pool's queue family, as described in [VkQueueFamilyProperties](#)
- VUID-VkCopyImageInfo2-dstOffset-01784
The [dstOffset](#) and [extent](#) members of each element of [pRegions](#) **must** respect the image transfer granularity requirements of [commandBuffer](#)'s command pool's queue family, as described in [VkQueueFamilyProperties](#)
- VUID-VkCopyImageInfo2-srcImage-01551
If neither [srcImage](#) nor [dstImage](#) has a [multi-planar format](#) and the [maintenance8](#) feature is not enabled then for each element of [pRegions](#), [srcSubresource.aspectMask](#) and [dstSubresource.aspectMask](#) **must** match
- VUID-VkCopyImageInfo2-pRegions-12201
For each element of [pRegions](#) where [srcSubresource.aspectMask](#) and [dstSubresource.aspectMask](#) each contain at least one of [VK_IMAGE_ASPECT_DEPTH_BIT](#) or [VK_IMAGE_ASPECT_STENCIL_BIT](#), [srcSubresource.aspectMask](#) and [dstSubresource.aspectMask](#) **must** match
- VUID-VkCopyImageInfo2-srcSubresource-10214
If [srcSubresource.aspectMask](#) is [VK_IMAGE_ASPECT_COLOR_BIT](#), then [dstSubresource.aspectMask](#) **must** not contain both [VK_IMAGE_ASPECT_DEPTH_BIT](#) and [VK_IMAGE_ASPECT_STENCIL_BIT](#)
- VUID-VkCopyImageInfo2-dstSubresource-10215

If `dstSubresource.aspectMask` is `VK_IMAGE_ASPECT_COLOR_BIT`, then `srcSubresource.aspectMask` **must** not contain both `VK_IMAGE_ASPECT_DEPTH_BIT` and `VK_IMAGE_ASPECT_STENCIL_BIT`

- VUID-VkCopyImageInfo2-srcImage-08713

If `srcImage` has a `multi-planar format`, then for each element of `pRegions`, `srcSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit

- VUID-VkCopyImageInfo2-dstImage-08714

If `dstImage` has a `multi-planar format`, then for each element of `pRegions`, `dstSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit

- VUID-VkCopyImageInfo2-srcImage-01556

If `srcImage` has a `multi-planar format` and the `dstImage` does not have a multi-planar image format, then for each element of `pRegions`, `dstSubresource.aspectMask` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`

- VUID-VkCopyImageInfo2-dstImage-01557

If `dstImage` has a `multi-planar format` and the `srcImage` does not have a multi-planar image format, then for each element of `pRegions`, `srcSubresource.aspectMask` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`

- VUID-VkCopyImageInfo2-srcSubresource-10211

If `srcSubresource.aspectMask` is `VK_IMAGE_ASPECT_COLOR_BIT` and `dstSubresource.aspectMask` is `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`, then the `VkFormat` values of `srcImage` and `dstImage` **must** be compatible according to [the list of compatible depth-stencil and color formats](#)

- VUID-VkCopyImageInfo2-srcSubresource-10212

If `srcSubresource.aspectMask` is `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` and `dstSubresource.aspectMask` is `VK_IMAGE_ASPECT_COLOR_BIT`, then the `VkFormat` values of `srcImage` and `dstImage` **must** be compatible according to [the list of compatible depth-stencil and color formats](#)

- VUID-VkCopyImageInfo2-apiVersion-07932

If the `VK_KHR_maintenance1` extension is not enabled, or `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and either `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` and `dstSubresource.baseArrayLayer` **must** both be 0, and `srcSubresource.layerCount` and `dstSubresource.layerCount` **must** both be 1

- VUID-VkCopyImageInfo2-srcImage-04443

If `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` **must** be 0 and `srcSubresource.layerCount` **must** be 1

- VUID-VkCopyImageInfo2-dstImage-04444

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstSubresource.baseArrayLayer` **must** be 0 and `dstSubresource.layerCount` **must** be 1

- VUID-VkCopyImageInfo2-aspectMask-00142

For each element of `pRegions`, `srcSubresource.aspectMask` **must** specify aspects present in `srcImage`

- VUID-VkCopyImageInfo2-aspectMask-00143

For each element of `pRegions`, `dstSubresource.aspectMask` **must** specify aspects present in `dstImage`

- VUID-VkCopyImageInfo2-srcOffset-00144

For each element of `pRegions`, `srcOffset.x` and `(extent.width + srcOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `srcSubresource` of `srcImage`

- VUID-VkCopyImageInfo2-srcOffset-00145

For each element of `pRegions`, `srcOffset.y` and `(extent.height + srcOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `srcSubresource` of `srcImage`

- VUID-VkCopyImageInfo2-srcImage-00146

If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.y` **must** be `0` and `extent.height` **must** be `1`

- VUID-VkCopyImageInfo2-srcOffset-00147

If `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcOffset.z` and `(extent.depth + srcOffset.z)` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `srcSubresource` of `srcImage`

- VUID-VkCopyImageInfo2-srcImage-01785

If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.z` **must** be `0` and `extent.depth` **must** be `1`

- VUID-VkCopyImageInfo2-dstImage-01786

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.z` **must** be `0`

- VUID-VkCopyImageInfo2-srcImage-10907

If either the `VkFormat` of each of `srcImage` and `dstImage` is not a `compressed image format`, and `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `extent.depth` **must** be `1`

- VUID-VkCopyImageInfo2-srcImage-01787

If `srcImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `srcOffset.z` **must** be `0`

- VUID-VkCopyImageInfo2-dstImage-01788

If `dstImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `dstOffset.z` **must** be `0`

- VUID-VkCopyImageInfo2-apiVersion-07933

If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `srcImage` and `dstImage` **must** have the same `VkImageType`

- VUID-VkCopyImageInfo2-apiVersion-08969

If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` **must** be `1`

- VUID-VkCopyImageInfo2-srcImage-07743

If `srcImage` and `dstImage` have a different `VkImageType`, and the `maintenance5` feature is not

enabled, one **must** be `VK_IMAGE_TYPE_3D` and the other **must** be `VK_IMAGE_TYPE_2D`

- VUID-VkCopyImageInfo2-srcImage-08793

If `srcImage` and `dstImage` have the same `VkImageType`, for each element of `pRegions`, if neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` members of `srcSubresource` or `dstSubresource` **must** match

- VUID-VkCopyImageInfo2-srcImage-08794

If `srcImage` and `dstImage` have the same `VkImageType`, and one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member **must** be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

- VUID-VkCopyImageInfo2-srcImage-01790

If `srcImage` and `dstImage` are both of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` **must** be 1

- VUID-VkCopyImageInfo2-srcImage-01791

If `srcImage` is of type `VK_IMAGE_TYPE_2D`, and `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `srcSubresource.layerCount`

- VUID-VkCopyImageInfo2-dstImage-01792

If `dstImage` is of type `VK_IMAGE_TYPE_2D`, and `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `dstSubresource.layerCount`

- VUID-VkCopyImageInfo2-dstOffset-00150

For each element of `pRegions`, `dstOffset.x` and $(\text{extent.width} + \text{dstOffset.x})$, where `extent` is *adjusted for size-compatibility*, **must** both be greater than or equal to 0 and less than or equal to the width of the specified `dstSubresource` of `dstImage`

- VUID-VkCopyImageInfo2-dstOffset-00151

For each element of `pRegions`, `dstOffset.y` and $(\text{extent.height} + \text{dstOffset.y})$, where `extent` is *adjusted for size-compatibility*, **must** both be greater than or equal to 0 and less than or equal to the height of the specified `dstSubresource` of `dstImage`

- VUID-VkCopyImageInfo2-dstImage-00152

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.y` **must** be 0

- VUID-VkCopyImageInfo2-srcImage-10908

If either the `VkFormat` of each of `srcImage` and `dstImage` is not a *compressed image format*, and `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `extent.height` **must** be 1, where `extent` is *adjusted for size-compatibility*

- VUID-VkCopyImageInfo2-dstOffset-00153

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstOffset.z` and $(\text{extent.depth} + \text{dstOffset.z})$, where `extent` is *adjusted for size-compatibility*, **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `dstSubresource` of `dstImage`

- VUID-VkCopyImageInfo2-pRegions-07278

For each element of `pRegions`, `srcOffset.x` **must** be a multiple of the *texel block extent width* of the `VkFormat` of `srcImage`

- VUID-VkCopyImageInfo2-pRegions-07279
For each element of `pRegions`, `srcOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageInfo2-pRegions-07280
For each element of `pRegions`, `srcOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageInfo2-pRegions-07281
For each element of `pRegions`, `dstOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageInfo2-pRegions-07282
For each element of `pRegions`, `dstOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageInfo2-pRegions-07283
For each element of `pRegions`, `dstOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageInfo2-srcImage-01728
For each element of `pRegions`, if the sum of `srcOffset.x` and `extent.width` does not equal the width of the subresource specified by `srcSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageInfo2-srcImage-01729
For each element of `pRegions`, if the sum of `srcOffset.y` and `extent.height` does not equal the height of the subresource specified by `srcSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageInfo2-srcImage-01730
For each element of `pRegions`, if the sum of `srcOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageInfo2-aspect-06662
If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `srcImage` was not created with `separate stencil usage`, `srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set
- VUID-VkCopyImageInfo2-aspect-06663
If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `dstImage` was not created with `separate stencil usage`, `dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-VkCopyImageInfo2-aspect-06664
If the `aspect` member of any element of `pRegions` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, and `srcImage` was created with `separate stencil usage`, `srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set
- VUID-VkCopyImageInfo2-aspect-06665

If the `aspect` member of any element of `pRegions` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, and `dstImage` was created with `separate stencil usage`, `srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set

- VUID-VkCopyImageInfo2-srcImage-07966

If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkCopyImageInfo2-srcSubresource-07967

The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created

- VUID-VkCopyImageInfo2-srcSubresource-07968

If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer` + `srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created

- VUID-VkCopyImageInfo2-srcImage-07969

`srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- VUID-VkCopyImageInfo2-dstImage-07966

If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkCopyImageInfo2-dstSubresource-07967

The `dstSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created

- VUID-VkCopyImageInfo2-dstSubresource-07968

If `dstSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `dstSubresource.baseArrayLayer` + `dstSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created

- VUID-VkCopyImageInfo2-dstImage-07969

`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkCopyImageInfo2-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_COPY_IMAGE_INFO_2`

- VUID-VkCopyImageInfo2-pNext-pNext

`pNext` **must** be `NULL`

- VUID-VkCopyImageInfo2-srcImage-parameter

`srcImage` **must** be a valid `VkImage` handle

- VUID-VkCopyImageInfo2-srcImageLayout-parameter

`srcImageLayout` **must** be a valid `VkImageLayout` value

- VUID-VkCopyImageInfo2-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-VkCopyImageInfo2-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyImageInfo2-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkImageCopy2` structures
- VUID-VkCopyImageInfo2-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-VkCopyImageInfo2-commonparent
Both of `dstImage`, and `srcImage` **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkImageCopy2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkImageCopy2 {
    VkStructureType      sType;
    const void*          pNext;
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D           srcOffset;
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D           dstOffset;
    VkExtent3D           extent;
} VkImageCopy2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkImageCopy2
typedef VkImageCopy2 VkImageCopy2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcSubresource` and `dstSubresource` are `VkImageSubresourceLayers` structures specifying the image subresources of the images used for the source and destination image data, respectively.
- `srcOffset` and `dstOffset` select the initial `x`, `y`, and `z` offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the image to copy in `width`, `height` and `depth`.

Valid Usage

- VUID-VkImageCopy2-apiVersion-07940

If the [VK_KHR_sampler_ycbcr_conversion](#) extension is not enabled, and [VkPhysicalDeviceProperties::apiVersion](#) is less than Vulkan 1.1, the [aspectMask](#) member of [srcSubresource](#) and [dstSubresource](#) **must** match

- VUID-VkImageCopy2-apiVersion-07941

If the [VK_KHR_maintenance1](#) extension is not enabled, and [VkPhysicalDeviceProperties::apiVersion](#) is less than Vulkan 1.1, the [layerCount](#) member of [srcSubresource](#) and [dstSubresource](#) **must** match

- VUID-VkImageCopy2-extent-06668
[extent.width](#) **must** not be 0
- VUID-VkImageCopy2-extent-06669
[extent.height](#) **must** not be 0
- VUID-VkImageCopy2-extent-06670
[extent.depth](#) **must** not be 0

Valid Usage (Implicit)

- VUID-VkImageCopy2-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_IMAGE_COPY_2](#)
- VUID-VkImageCopy2-pNext-pNext
[pNext](#) **must** be [NULL](#)
- VUID-VkImageCopy2-srcSubresource-parameter
[srcSubresource](#) **must** be a valid [VkImageSubresourceLayers](#) structure
- VUID-VkImageCopy2-dstSubresource-parameter
[dstSubresource](#) **must** be a valid [VkImageSubresourceLayers](#) structure

25.4. Copying Data Between Memory Ranges and Images

To copy data from an image to memory ranges, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdCopyMemoryToImageKHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyDeviceMemoryImageInfoKHR* pCopyMemoryInfo);
```

- [commandBuffer](#) is the command buffer into which the command will be recorded.
- [pCopyMemoryInfo](#) a pointer to a [VkCopyDeviceMemoryImageInfoKHR](#) structure describing the copies to perform.

Valid Usage

- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13102
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, the `addressCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13103
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `pCopyMemoryInfo->image` **must** not have been created with `VK_IMAGE_CREATE_PROTECTED_BIT`
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13104
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `addressRange.pname:address` member of any element of `pCopyMemoryInfo->pRegions` **must** be a multiple of 4
- VUID-vkCmdCopyMemoryToImageKHR-imageOffset-13105
The `imageOffset` and `imageExtent` members of each element of `pCopyMemoryInfo->pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in `VkQueueFamilyProperties`
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13106
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, for each element of `pCopyMemoryInfo->pRegions`, the `aspectMask` member of `imageSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkCmdCopyMemoryToImageKHR-imageLayout-13019
The `imageLayout` member of each element of `pCopyMemoryInfo->pRegions` **must** be `VK_IMAGE_LAYOUT_GENERAL`, `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, or `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`
- VUID-vkCmdCopyMemoryToImageKHR-pCopyMemoryInfo-13020
`pCopyMemoryInfo->image` **must** have been created with `VK_IMAGE_USAGE_TRANSFER_DST_BIT`
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13021
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `pCopyMemoryInfo->image` **must** have been created with `VK_IMAGE_CREATE_PROTECTED_BIT`
- VUID-vkCmdCopyMemoryToImageKHR-None-13022
If `VK_EXT_depth_range_unrestricted` is not enabled, for each element of `pCopyMemoryInfo->pRegions` whose `imageSubresource` contains a depth aspect, each data element in its `addressRange` **must** be in the range [0,1]
- VUID-vkCmdCopyMemoryToImageKHR-addressRange-13128
At least one buffer containing the total address range specified by the `addressRange` member of each element of `pCopyMemoryInfo->pRegions` **must** have been created with `VK_BUFFER_USAGE_TRANSFER_SRC_BIT`

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMemoryToImageKHR-pCopyMemoryInfo-parameter
If `pCopyMemoryInfo` is not `NULL`, `pCopyMemoryInfo` **must** be a valid pointer to a valid `VkCopyDeviceMemoryImageInfoKHR` structure
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdCopyMemoryToImageKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToImageKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryToImageKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyMemoryToImageKHR` is not affected by `conditional rendering`

To copy data from an image to memory ranges, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdCopyImageToMemoryKHR(
    VkCommandBuffer                                commandBuffer,
    const VkCopyDeviceMemoryImageInfoKHR*          pCopyMemoryInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyMemoryInfo` a pointer to a `VkCopyDeviceMemoryImageInfoKHR` structure describing the copies to perform.

Valid Usage

- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13102
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, the `addressCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13103
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `pCopyMemoryInfo->image` **must** not have been created with `VK_IMAGE_CREATE_PROTECTED_BIT`
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13104
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `addressRange.pname:address` member of any element of `pCopyMemoryInfo->pRegions` **must** be a multiple of 4
- VUID-vkCmdCopyImageToMemoryKHR-imageOffset-13105
The `imageOffset` and `imageExtent` members of each element of `pCopyMemoryInfo->pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in `VkQueueFamilyProperties`
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13106
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, for each element of `pCopyMemoryInfo->pRegions`, the `aspectMask` member of `imageSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkCmdCopyImageToMemoryKHR-imageLayout-13023
The `imageLayout` member of each element of `pCopyMemoryInfo->pRegions` **must** be `VK_IMAGE_LAYOUT_GENERAL`, `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, or `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`
- VUID-vkCmdCopyImageToMemoryKHR-pCopyMemoryInfo-13024
`pCopyMemoryInfo->image` **must** have been created with `VK_IMAGE_USAGE_TRANSFER_SRC_BIT`
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13025
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, the `addressCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** include

VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR

- VUID-vkCmdCopyImageToMemoryKHR-addressRange-13129

At least one buffer containing the total address range specified by the **addressRange** member of each element of **pCopyMemoryInfo->pRegions** **must** have been created with **VK_BUFFER_USAGE_TRANSFER_DST_BIT**

Valid Usage (Implicit)

- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdCopyImageToMemoryKHR-pCopyMemoryInfo-parameter
If **pCopyMemoryInfo** is not **NULL**, **pCopyMemoryInfo** **must** be a valid pointer to a valid **VkCopyDeviceMemoryImageInfoKHR** structure
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support **VK_QUEUE_TRANSFER_BIT** operations
- VUID-vkCmdCopyImageToMemoryKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImageToMemoryKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyImageToMemoryKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyImageToMemoryKHR is not affected by [conditional rendering](#)

The `VkCopyDeviceMemoryImageInfoKHR` structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkCopyDeviceMemoryImageInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkImage                   image;
    uint32_t                  regionCount;
    const VkDeviceMemoryImageCopyKHR* pRegions;
} VkCopyDeviceMemoryImageInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the base image accessed by the copy command.
- `regionCount` is the number of copies to be performed.
- `pRegions` is a pointer to an array of [VkDeviceMemoryImageCopyKHR](#) structures describing individual copy operations between two memory ranges.

Valid Usage

- VUID-VkCopyDeviceMemoryImageInfoKHR-addressRange-13026
The range of memory backing the address range defined by the `addressRange` member of any element of `pRegions` **must** not overlap the memory backing the address range defined by the `addressRange` of any other element of `pRegions`
- VUID-VkCopyDeviceMemoryImageInfoKHR-addressRange-13027
The range of memory backing the address range defined by the `addressRange` member of any element of `pRegions` **must** not overlap the memory backing any texels in `image` defined by the `imageSubresource`, `imageOffset`, and `imageExtent` members of any element of `pRegions`
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageLayout-13028
The `imageLayout` member of each element of `pRegions` **must** specify the layout of the image subresource specified for that element of `pRegions` at the time this command is executed on a [VkDevice](#)
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07966
If `image` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single [VkDeviceMemory](#) object
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in [VkImageCreateInfo](#) when `image` was created

- VUID-VkCopyDeviceMemoryImageInfoKHR-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07969
`image` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07973
`image` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07979
If `image` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-09104
For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `image`
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07980
If `image` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `image`
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `image`
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `image`
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `image`
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07276

For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-image-00207

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-10053

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-10054

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-10055

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-image-00208

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-10056

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-10057

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-10058

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-image-00209

For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `image`

- VUID-VkCopyDeviceMemoryImageInfoKHR-imageSubresource-09105

For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in

image

- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07981
If **image** has a **multi-planar format**, then for each element of **pRegions**, **imageSubresource.aspectMask** **must** be a single valid **multi-planar aspect mask** bit
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07983
If **image** is of type **VK_IMAGE_TYPE_3D**, for each element of **pRegions**, **imageSubresource.baseArrayLayer** **must** be 0 and **imageSubresource.layerCount** **must** be 1
- VUID-VkCopyDeviceMemoryImageInfoKHR-addressRowLength-09106
For each element of **pRegions**, **addressRowLength** **must** be a multiple of the **texel block extent width** of the **VkFormat** of **image**
- VUID-VkCopyDeviceMemoryImageInfoKHR-addressImageHeight-09107
For each element of **pRegions**, **addressImageHeight** **must** be a multiple of the **texel block extent height** of the **VkFormat** of **image**
- VUID-VkCopyDeviceMemoryImageInfoKHR-addressRowLength-09108
For each element of **pRegions**, **addressRowLength** divided by the **texel block extent width** and then multiplied by the texel block size of **image** **must** be less than or equal to $2^{31}-1$
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-13029
If **image** does not have either a depth/stencil format or a **multi-planar format**, then for each element of **pRegions**, **addressRange.address** **must** be a multiple of the **texel block size**
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-13030
If **image** has a **multi-planar format**, then for each element of **pRegions**, **addressRange.address** **must** be a multiple of the element size of the compatible format for the format and the **aspectMask** of the **imageSubresource** as defined in **Compatible Formats of Planes of Multi-Planar Formats**
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-13031
If **image** has a depth/stencil format, the **addressRange.address** member of any element of **pRegions** **must** be a multiple of 4
- VUID-VkCopyDeviceMemoryImageInfoKHR-pRegions-13032
The image region specified by each element of **pRegions** that does not contain **VkCopyCommandTransformInfoQCOM** in its **pNext** chain **must** be contained within the specified **imageSubresource** of **image**
- VUID-VkCopyDeviceMemoryImageInfoKHR-pRegions-13033
If the image region specified by each element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, the **rotated image region** **must** be contained within **image**
- VUID-VkCopyDeviceMemoryImageInfoKHR-pRegions-13034
If any element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, then **image** **must** have a 1x1x1 **texel block extent**
- VUID-VkCopyDeviceMemoryImageInfoKHR-pRegions-13035
If any element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, then **image** **must** be of type **VK_IMAGE_TYPE_2D**
- VUID-VkCopyDeviceMemoryImageInfoKHR-pRegions-13036

If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `image` **must** not have a `multi-planar` format

Valid Usage (Implicit)

- `VOID-VkCopyDeviceMemoryImageInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_DEVICE_MEMORY_IMAGE_INFO_KHR`
- `VOID-VkCopyDeviceMemoryImageInfoKHR-pNext-pNext`
`pNext` **must** be `NULL`
- `VOID-VkCopyDeviceMemoryImageInfoKHR-image-parameter`
`image` **must** be a valid `VkImage` handle
- `VOID-VkCopyDeviceMemoryImageInfoKHR-pRegions-parameter`
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkDeviceMemoryImageCopyKHR` structures
- `VOID-VkCopyDeviceMemoryImageInfoKHR-regionCount-arraylength`
`regionCount` **must** be greater than 0

The `VkDeviceMemoryImageCopyKHR` structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkDeviceMemoryImageCopyKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceAddressRangeKHR addressRange;
    VkAddressCommandFlagsKHR addressFlags;
    uint32_t             addressRowLength;
    uint32_t             addressImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkImageLayout         imageLayout;
    VkOffset3D            imageOffset;
    VkExtent3D            imageExtent;
} VkDeviceMemoryImageCopyKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `addressRange` is a `VkDeviceAddressRangeKHR` structure defining the address range accessed by the copy operation.
- `addressFlags` is a `VkAddressCommandFlagsKHR` value defining the copy flags for the source address range.
- `addressRowLength` specifies the total number of texels in the address range representing a row of texels in the x dimension. Each new row of pixels in the copy will be read at an offset increment by this number of texels.

- `addressImageHeight` specifies the total number of rows of texels in the address range representing a 2D slice of texels in the x and y dimensions. Each new 2D slice of pixels in the copy will be read at an offset increment by this number of rows of texels.
- `imageSubresource` is a `VkImageSubresourceLayers` used to specify the specific image subresources of the image used for the source or destination image data.
- `imageLayout` is the `VkImageLayout` of the image subresource accessed by this copy.
- `imageOffset` selects the initial x, y, z offsets in texels of the sub-region of the source or destination image data.
- `imageExtent` is the size in texels of the image to copy in `width`, `height` and `depth`.

This structure defines a copy operation where `srcRange.size` bytes will be copied from `srcRange.address` to `dstRange.address`.

Valid Usage

- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13097
If the range specified by `addressRange` is not bound completely to memory when accessed, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR`
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13098
If the buffer from which the range specified by `addressRange` was created with `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `addressFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13099
If the buffer from which the range specified by `addressRange` was created without `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-VkDeviceMemoryImageCopyKHR-addressFlags-13100
`addressFlags` **must** not include both `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13122
If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `addressFlags` **must** include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13123
If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created without `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR`
- VUID-VkDeviceMemoryImageCopyKHR-addressFlags-13101
`addressFlags` **must** not include both `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

R

- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13124
If any buffer, which is bound to a range of [VkDeviceMemory](#) that overlaps the range backing [addressRange](#), was created with [VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT](#), [addressFlags](#) **must** include [VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR](#) or [VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR](#)
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13125
If any buffer, which is bound to a range of [VkDeviceMemory](#) that overlaps the range backing [addressRange](#), was created without [VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT](#), [addressFlags](#) **must** not include [VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR](#)
- VUID-VkDeviceMemoryImageCopyKHR-size-13037
The [size](#) member of [addressRange](#) **must** be large enough to contain all address locations that are accessed by this copy according to [Buffer and Image Addressing](#)
- VUID-VkDeviceMemoryImageCopyKHR-addressRowLength-09101
[addressRowLength](#) **must** be 0, or greater than or equal to the [width](#) member of [imageExtent](#)
- VUID-VkDeviceMemoryImageCopyKHR-addressImageHeight-09102
[addressImageHeight](#) **must** be 0, or greater than or equal to the [height](#) member of [imageExtent](#)
- VUID-VkDeviceMemoryImageCopyKHR-aspectMask-09103
The [aspectMask](#) member of [imageSubresource](#) **must** only have a single bit set
- VUID-VkDeviceMemoryImageCopyKHR-imageExtent-06659
[imageExtent.width](#) **must** not be 0
- VUID-VkDeviceMemoryImageCopyKHR-imageExtent-06660
[imageExtent.height](#) **must** not be 0
- VUID-VkDeviceMemoryImageCopyKHR-imageExtent-06661
[imageExtent.depth](#) **must** not be 0

Valid Usage (Implicit)

- VUID-VkDeviceMemoryImageCopyKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_DEVICE_MEMORY_IMAGE_COPY_KHR](#)
- VUID-VkDeviceMemoryImageCopyKHR-pNext-pNext
[pNext](#) **must** be [NULL](#) or a pointer to a valid instance of [VkCopyCommandTransformInfoQCOM](#)
- VUID-VkDeviceMemoryImageCopyKHR-sType-unique
The [sType](#) value of each structure in the [pNext](#) chain **must** be unique
- VUID-VkDeviceMemoryImageCopyKHR-addressFlags-parameter
[addressFlags](#) **must** be a valid combination of [VkAddressCommandFlagBitsKHR](#) values

- VUID-VkDeviceMemoryImageCopyKHR-imageSubresource-parameter
`imageSubresource` **must** be a valid `VkImageSubresourceLayers` structure
- VUID-VkDeviceMemoryImageCopyKHR-imageLayout-parameter
`imageLayout` **must** be a valid `VkImageLayout` value

25.5. Copying Data Between Buffers and Images

Data **can** be copied between buffers and images, enabling applications to load and store data between images and application-defined offsets in buffer memory.

When copying between an address or a buffer and an image, texels in the image and bytes in memory are accessed as follows.

Texels at each coordinate (x,y,z,layer) in the image subresource are accessed, where:

x is in the range [`imageOffset.x`, `imageOffset.x` + `imageExtent.width`),

y is in the range [`imageOffset.y`, `imageOffset.y` + `imageExtent.height`),

z is in the range [`imageOffset.z`, `imageOffset.z` + `imageExtent.depth`),

layer is in the range [`imageSubresource.baseArrayLayer`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount`)

For each (x,y,z,layer) coordinate in the image, bytes in memory are accessed at offsets in the range [`texelOffset`, `texelOffset` + `blockSize`), where:

$$\text{texelOffset} = \text{baseAddress} + ((x - \text{imageOffset.x}) / \text{blockWidth} \times \text{blockSize}) + ((y - \text{imageOffset.y}) / \text{blockHeight} \times \text{rowExtent}) + ((z - \text{imageOffset.z}) / \text{blockDepth} \times \text{sliceExtent}) + ((\text{layer} - \text{imageSubresource.baseArrayLayer}) \times \text{layerExtent})$$

$$\text{rowExtent} = \lceil \max(\text{bufferRowLength}, \text{imageExtent.width}) / \text{blockWidth} \rceil \times \text{blockSize}$$

$$\text{sliceExtent} = \lceil \max(\text{bufferImageHeight}, \text{imageExtent.height}) / \text{blockHeight} \rceil \times \text{rowExtent}$$

$$\text{layerExtent} = \lceil \text{imageExtent.depth} / \text{blockDepth} \rceil \times \text{sliceExtent}$$

and where `blockSize`, `blockWidth`, `blockHeight`, and `blockDepth` are the [texel block size and extents](#) of the image's format, and `baseAddress` is either the supplied address for the copy, or the address of

the buffer plus any supplied `bufferOffset` value.

Image Rotation Addressing

If a rotation is specified by `VkCopyCommandTransformInfoQCOM`, the 2D region of the image being addressed is rotated around the offset, and texels at each coordinate (x',y',z',layer) are accessed in the image subresource instead, where:

- If `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` is specified, no rotation is performed:

x' is in the same range as x

y' is in the same range as y

- If `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR` is specified

x' is in the range [`imageOffset.x - imageExtent.height`, `imageOffset.x`)

y' is in the range [`imageOffset.y`, `imageOffset.y + imageExtent.width`)

- If `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` is specified:

x' is in the range [`imageOffset.x - imageExtent.width`, `imageOffset.x`)

y' is in the range [`imageOffset.y - imageExtent.height`, `imageOffset.y`)

- If `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` is specified:

x' is in the range [`imageOffset.x`, `imageOffset.x + imageExtent.height`)

y' is in the range [`imageOffset.y - imageExtent.width`, `imageOffset.y`)

Buffer addressing calculations are unaffected by this rotation.

When copying between a buffer and the depth or stencil aspect of an image, data in the buffer is assumed to be laid out as separate planes rather than interleaved. Addressing calculations are thus performed for a different format than the base image, according to the aspect, as described in the following table:

Table 34. Depth/Stencil Aspect Copy

Base Format	Depth Aspect Format	Stencil Aspect Format
<code>VK_FORMAT_D16_UNORM</code>	<code>VK_FORMAT_D16_UNORM</code>	-

Base Format	Depth Aspect Format	Stencil Aspect Format
VK_FORMAT_X8_D24_UNORM_PACK32	VK_FORMAT_X8_D24_UNORM_PACK32	-
VK_FORMAT_D32_SFLOAT	VK_FORMAT_D32_SFLOAT	-
VK_FORMAT_S8_UINT	-	VK_FORMAT_S8_UINT
VK_FORMAT_D16_UNORM_S8_UINT	VK_FORMAT_D16_UNORM	VK_FORMAT_S8_UINT
VK_FORMAT_D24_UNORM_S8_UINT	VK_FORMAT_X8_D24_UNORM_PACK32	VK_FORMAT_S8_UINT
VK_FORMAT_D32_SFLOAT_S8_UINT	VK_FORMAT_D32_SFLOAT	VK_FORMAT_S8_UINT

When copying between a buffer and any plane of a [multi-planar image](#), addressing calculations are performed using the [compatible format for that plane](#), rather than the format of the multi-planar image.

Each texel block is copied from one resource to the other according to the above addressing equations.

To copy data from a buffer object to an image object, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyBufferToImage(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 srcBuffer,
    VkImage                 dstImage,
    VkImageLayout            dstImageLayout,
    uint32_t                 regionCount,
    const VkBufferImageCopy* pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcBuffer` is the source buffer.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of [VkBufferImageCopy](#) structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source buffer to the destination region of the destination image according to the [addressing calculations](#) for each resource. If any of the specified regions in `srcBuffer` overlaps in memory with any of the specified regions in `dstImage`, values read from those overlapping regions are undefined. If any region accesses a depth aspect in `dstImage` and the [VK_EXT_depth_range_unrestricted](#) extension is not enabled, values copied from `srcBuffer` outside of the range [0,1] will be written as undefined values to the destination image.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-vkCmdCopyBufferToImage-dstImage-07966
If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyBufferToImage-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-vkCmdCopyBufferToImage-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer + imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-vkCmdCopyBufferToImage-dstImage-07969
`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-vkCmdCopyBufferToImage-imageSubresource-07971
For each element of `pRegions`, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `imageSubresource` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageSubresource-07972
For each element of `pRegions`, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `imageSubresource` of `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-07973
`dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-vkCmdCopyBufferToImage-commandBuffer-01828
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBufferToImage-commandBuffer-01829
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyBufferToImage-commandBuffer-01830
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdCopyBufferToImage-commandBuffer-07737
If the `maintenance11` feature is not enabled, and the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support

[VK_QUEUE_GRAPHICS_BIT](#) or [VK_QUEUE_COMPUTE_BIT](#), the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4

- VUID-vkCmdCopyBufferToImage-imageOffset-07738

The `imageOffset` and `imageExtent` members of each element of `pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in [VkQueueFamilyProperties](#)

- VUID-vkCmdCopyBufferToImage-commandBuffer-07739

If the queue family used to create the [VkCommandPool](#) which `commandBuffer` was allocated from does not support [VK_QUEUE_GRAPHICS_BIT](#), and the `maintenance10` feature is not enabled, for each element of `pRegions`, the `aspectMask` member of `imageSubresource` **must** not be [VK_IMAGE_ASPECT_DEPTH_BIT](#) or [VK_IMAGE_ASPECT_STENCIL_BIT](#)

- VUID-vkCmdCopyBufferToImage-commandBuffer-11778

If the queue family used to create the [VkCommandPool](#) which `commandBuffer` was allocated from does not support [VK_QUEUE_GRAPHICS_BIT](#) but does support [VK_QUEUE_COMPUTE_BIT](#), and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is [VK_IMAGE_ASPECT_DEPTH_BIT](#), then the `format features` of `dstImage` **must** contain [VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR](#)

- VUID-vkCmdCopyBufferToImage-commandBuffer-11779

If the queue family used to create the [VkCommandPool](#) which `commandBuffer` was allocated from does not support [VK_QUEUE_GRAPHICS_BIT](#) and [VK_QUEUE_COMPUTE_BIT](#), but does support [VK_QUEUE_TRANSFER_BIT](#), and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is [VK_IMAGE_ASPECT_DEPTH_BIT](#), then the `format features` of `dstImage` **must** contain [VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR](#)

- VUID-vkCmdCopyBufferToImage-commandBuffer-11780

If the queue family used to create the [VkCommandPool](#) which `commandBuffer` was allocated from does not support [VK_QUEUE_GRAPHICS_BIT](#) but does support [VK_QUEUE_COMPUTE_BIT](#), and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is [VK_IMAGE_ASPECT_STENCIL_BIT](#), then the `format features` of `dstImage` **must** contain [VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR](#)

- VUID-vkCmdCopyBufferToImage-commandBuffer-11781

If the queue family used to create the [VkCommandPool](#) which `commandBuffer` was allocated from does not support [VK_QUEUE_GRAPHICS_BIT](#) and [VK_QUEUE_COMPUTE_BIT](#), but does support [VK_QUEUE_TRANSFER_BIT](#), and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is [VK_IMAGE_ASPECT_STENCIL_BIT](#), then the `format features` of `dstImage` **must** contain [VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR](#)

- VUID-vkCmdCopyBufferToImage-pRegions-00171

`srcBuffer` **must** be large enough to contain all buffer locations that are accessed according to [Buffer and Image Addressing](#), for each element of `pRegions`

- VUID-vkCmdCopyBufferToImage-pRegions-00173

The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory

- VUID-vkCmdCopyBufferToImage-srcBuffer-00174

`srcBuffer` **must** have been created with the `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag set

- VUID-vkCmdCopyBufferToImage-dstImage-01997

The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`

- VUID-vkCmdCopyBufferToImage-srcBuffer-00176

If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdCopyBufferToImage-dstImage-00177

`dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set

- VUID-vkCmdCopyBufferToImage-dstImageLayout-00180

`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`

- VUID-vkCmdCopyBufferToImage-dstImageLayout-01396

`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`

- VUID-vkCmdCopyBufferToImage-pRegions-07931

If `VK_EXT_depth_range_unrestricted` is not enabled, for each element of `pRegions` whose `imageSubresource` contains a depth aspect, the data in `srcBuffer` **must** be in the range [0,1]

- VUID-vkCmdCopyBufferToImage-dstImage-07979

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1

- VUID-vkCmdCopyBufferToImage-imageOffset-09104

For each element of `pRegions`, `imageOffset.z` and $(\text{imageExtent.depth} + \text{imageOffset.z})$ **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `dstImage`

- VUID-vkCmdCopyBufferToImage-dstImage-07980

If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1

- VUID-vkCmdCopyBufferToImage-dstImage-07274

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyBufferToImage-imageOffset-10051

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyBufferToImage-dstImage-07275

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or

`VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyBufferToImage-imageOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-07276
For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-00207
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10053
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10054
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10055
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-00208
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10056
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyBufferToImage-imageOffset-10057
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageOffset-10058
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-00209
For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-imageSubresource-09105
For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-vkCmdCopyBufferToImage-dstImage-07981
If `dstImage` has a `multi-planar format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-vkCmdCopyBufferToImage-dstImage-07983
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1
- VUID-vkCmdCopyBufferToImage-bufferRowLength-09106
For each element of `pRegions`, `bufferRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-bufferImageHeight-09107
For each element of `pRegions`, `bufferImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyBufferToImage-bufferRowLength-09108
For each element of `pRegions`, `bufferRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `dstImage` **must** be less than or equal to $2^{31}-1$
- VUID-vkCmdCopyBufferToImage-dstImage-07975
If `dstImage` does not have either a depth/stencil format or a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the `texel block size`
- VUID-vkCmdCopyBufferToImage-dstImage-07976
If `dstImage` has a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in `Compatible Formats of Planes of Multi-Planar Formats`
- VUID-vkCmdCopyBufferToImage-dstImage-07978
If `dstImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-vkCmdCopyBufferToImage-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyBufferToImage-srcBuffer-parameter
`srcBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdCopyBufferToImage-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-vkCmdCopyBufferToImage-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdCopyBufferToImage-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferImageCopy` structures
- VUID-vkCmdCopyBufferToImage-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyBufferToImage-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdCopyBufferToImage-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBufferToImage-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyBufferToImage-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyBufferToImage-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-vkCmdCopyBufferToImage-commonparent
Each of `commandBuffer`, `dstImage`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyBufferToImage` is not affected by [conditional rendering](#)

To copy data from an image object to a buffer object, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyImageToBuffer(
    VkCommandBuffer          commandBuffer,
    VkImage                  srcImage,
    VkImageLayout             srcImageLayout,
    VkBuffer                  dstBuffer,
    uint32_t                  regionCount,
    const VkBufferImageCopy* pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of [VkBufferImageCopy](#) structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source image to the destination region of the destination buffer according to the [addressing calculations](#) for each resource. If any of the specified regions in `srcImage` overlaps in memory with any of the specified regions in `dstBuffer`, values read from those overlapping regions are undefined.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-vkCmdCopyImageToBuffer-srcImage-07966
If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-vkCmdCopyImageToBuffer-srcImage-07969
`srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07971
For each element of `pRegions`, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `imageSubresource` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07972
For each element of `pRegions`, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `imageSubresource` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-07973
`srcImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-vkCmdCopyImageToBuffer-commandBuffer-01831
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImageToBuffer-commandBuffer-01832
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyImageToBuffer-commandBuffer-01833
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer
- VUID-vkCmdCopyImageToBuffer-commandBuffer-07746
If the `maintenance11` feature is not enabled, and the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of `4`
- VUID-vkCmdCopyImageToBuffer-imageOffset-07747
The `imageOffset` and `imageExtent` members of each element of `pRegions` **must** respect the

image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in [VkQueueFamilyProperties](#)

- VUID-vkCmdCopyImageToBuffer-commandBuffer-10216

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, and the `maintenance10` feature is not enabled, for each element of `pRegions`, the `aspectMask` member of `imageSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`

- VUID-vkCmdCopyImageToBuffer-commandBuffer-11790

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImageToBuffer-commandBuffer-11791

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImageToBuffer-commandBuffer-11792

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImageToBuffer-commandBuffer-11793

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImageToBuffer-pRegions-00183

`dstBuffer` **must** be large enough to contain all buffer locations that are accessed according to [Buffer and Image Addressing](#), for each element of `pRegions`

- VUID-vkCmdCopyImageToBuffer-pRegions-00184

The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory

- VUID-vkCmdCopyImageToBuffer-srcImage-00186

`srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set

- VUID-vkCmdCopyImageToBuffer-srcImage-01998

The format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`

- VUID-vkCmdCopyImageToBuffer-dstBuffer-00191
`dstBuffer` **must** have been created with the `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-vkCmdCopyImageToBuffer-dstBuffer-00192
If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyImageToBuffer-srcImageLayout-00189
`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-vkCmdCopyImageToBuffer-srcImageLayout-01397
`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdCopyImageToBuffer-srcImage-07979
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1
- VUID-vkCmdCopyImageToBuffer-imageOffset-09104
For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-07980
If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1
- VUID-vkCmdCopyImageToBuffer-srcImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-srcImage-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-vkCmdCopyImageToBuffer-imageOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple

of the [texel block extent height](#) of the [VkFormat](#) of [srcImage](#)

- VUID-vkCmdCopyImageToBuffer-srcImage-07276

For each element of [pRegions](#), [imageOffset.z](#) **must** be a multiple of the [texel block extent depth](#) of the [VkFormat](#) of [srcImage](#)

- VUID-vkCmdCopyImageToBuffer-srcImage-00207

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR](#), the sum of [imageOffset.x](#) and [extent.width](#) does not equal the width of the subresource specified by [imageSubresource](#), [extent.width](#) **must** be a multiple of the [texel block extent width](#) of the [VkFormat](#) of [srcImage](#)

- VUID-vkCmdCopyImageToBuffer-imageOffset-10053

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR](#), the difference of [imageOffset.x](#) and [extent.height](#) **must** be a multiple of the [texel block extent width](#) of the [VkFormat](#) of [srcImage](#)

- VUID-vkCmdCopyImageToBuffer-imageOffset-10054

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR](#), the difference of [imageOffset.x](#) and [extent.width](#) **must** be a multiple of the [texel block extent width](#) of the [VkFormat](#) of [srcImage](#)

- VUID-vkCmdCopyImageToBuffer-imageOffset-10055

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR](#), the sum of [imageOffset.x](#) and [extent.height](#) does not equal the width of the subresource specified by [imageSubresource](#), [extent.height](#) **must** be a multiple of the [texel block extent width](#) of the [VkFormat](#) of [srcImage](#)

- VUID-vkCmdCopyImageToBuffer-srcImage-00208

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR](#), and the sum of [imageOffset.y](#) and [extent.height](#) does not equal the height of the subresource specified by [imageSubresource](#), [extent.height](#) **must** be a multiple of the [texel block extent height](#) of the [VkFormat](#) of [srcImage](#)

- VUID-vkCmdCopyImageToBuffer-imageOffset-10056

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR](#), the sum of [imageOffset.y](#) and [extent.width](#) does not equal the height of the subresource specified by [imageSubresource](#), [extent.width](#) **must** be a multiple of the [texel block extent height](#) of the [VkFormat](#) of [srcImage](#)

- VUID-vkCmdCopyImageToBuffer-imageOffset-10057

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR](#), the difference of [imageOffset.y](#) and [extent.height](#) **must** be a multiple of the [texel block extent height](#) of the [VkFormat](#) of [srcImage](#)

- VUID-vkCmdCopyImageToBuffer-imageOffset-10058

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImageToBuffer-srcImage-00209

For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImageToBuffer-imageSubresource-09105

For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `srcImage`

- VUID-vkCmdCopyImageToBuffer-srcImage-07981

If `srcImage` has a `multi-planar format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit

- VUID-vkCmdCopyImageToBuffer-srcImage-07983

If `srcImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1

- VUID-vkCmdCopyImageToBuffer-bufferRowLength-09106

For each element of `pRegions`, `bufferRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImageToBuffer-bufferImageHeight-09107

For each element of `pRegions`, `bufferImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImageToBuffer-bufferRowLength-09108

For each element of `pRegions`, `bufferRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `srcImage` **must** be less than or equal to $2^{31}-1$

- VUID-vkCmdCopyImageToBuffer-srcImage-07975

If `srcImage` does not have either a depth/stencil format or a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the `texel block size`

- VUID-vkCmdCopyImageToBuffer-srcImage-07976

If `srcImage` has a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in `Compatible Formats of Planes of Multi-Planar Formats`

- VUID-vkCmdCopyImageToBuffer-srcImage-07978

If `srcImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-vkCmdCopyImageToBuffer-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyImageToBuffer-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-vkCmdCopyImageToBuffer-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdCopyImageToBuffer-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdCopyImageToBuffer-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferImageCopy` structures
- VUID-vkCmdCopyImageToBuffer-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdCopyImageToBuffer-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdCopyImageToBuffer-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImageToBuffer-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyImageToBuffer-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyImageToBuffer-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-vkCmdCopyImageToBuffer-commonparent
Each of `commandBuffer`, `dstBuffer`, and `srcImage` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyImageToBuffer` is not affected by [conditional rendering](#)

For both [vkCmdCopyBufferToImage](#) and [vkCmdCopyImageToBuffer](#), each element of `pRegions` is a structure defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferImageCopy {
    VkDeviceSize          bufferOffset;
    uint32_t              bufferRowLength;
    uint32_t              bufferImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D            imageOffset;
    VkExtent3D            imageExtent;
} VkBufferImageCopy;
```

- `bufferOffset` is the offset in bytes from the start of the buffer object where the image data is copied from or to.
- `bufferRowLength` and `bufferImageHeight` specify in texels a subregion of a larger two- or three-dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the `imageExtent`.
- `imageSubresource` is a [VkImageSubresourceLayers](#) used to specify the specific image subresources of the image used for the source or destination image data.
- `imageOffset` selects the initial `x`, `y`, `z` offsets in texels of the sub-region of the source or destination image data.
- `imageExtent` is the size in texels of the image to copy in `width`, `height` and `depth`.

Valid Usage

- VUID-VkBufferImageCopy-bufferRowLength-09101
`bufferRowLength` **must** be 0, or greater than or equal to the `width` member of `imageExtent`
- VUID-VkBufferImageCopy-bufferImageHeight-09102
`bufferImageHeight` **must** be 0, or greater than or equal to the `height` member of `imageExtent`
- VUID-VkBufferImageCopy-aspectMask-09103
The `aspectMask` member of `imageSubresource` **must** only have a single bit set
- VUID-VkBufferImageCopy-imageExtent-06659
`imageExtent.width` **must** not be 0
- VUID-VkBufferImageCopy-imageExtent-06660
`imageExtent.height` **must** not be 0
- VUID-VkBufferImageCopy-imageExtent-06661
`imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkBufferImageCopy-imageSubresource-parameter
`imageSubresource` **must** be a valid `VkImageSubresourceLayers` structure

More extensible versions of the commands to copy between buffers and images are defined below.

To copy data from a buffer object to an image object, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyBufferToImage2(
    VkCommandBuffer                      commandBuffer,
    const VkCopyBufferToImageInfo2*     pCopyBufferToImageInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdCopyBufferToImage2
void vkCmdCopyBufferToImage2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyBufferToImageInfo2*     pCopyBufferToImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyBufferToImageInfo` is a pointer to a `VkCopyBufferToImageInfo2` structure describing the copy parameters.

This command is functionally identical to `vkCmdCopyBufferToImage`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdCopyBufferToImage2-commandBuffer-01828
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBufferToImage2-commandBuffer-01829
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyBufferToImage2-commandBuffer-01830
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdCopyBufferToImage2-commandBuffer-07737
If the `maintenance11` feature is not enabled, and the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `bufferOffset` member of any element of `pCopyBufferToImageInfo->pRegions` **must** be a multiple of 4
- VUID-vkCmdCopyBufferToImage2-imageOffset-07738
The `imageOffset` and `imageExtent` members of each element of `pCopyBufferToImageInfo->pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in [VkQueueFamilyProperties](#)
- VUID-vkCmdCopyBufferToImage2-commandBuffer-07739
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, and the `maintenance10` feature is not enabled, for each element of `pCopyBufferToImageInfo->pRegions`, the `aspectMask` member of `imageSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkCmdCopyBufferToImage2-commandBuffer-11778
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pCopyBufferToImageInfo->pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the `format` features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR`
- VUID-vkCmdCopyBufferToImage2-commandBuffer-11779
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pCopyBufferToImageInfo->pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the `format` features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR`
- VUID-vkCmdCopyBufferToImage2-commandBuffer-11780
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pCopyBufferToImageInfo->pRegions` the

`aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the `format` features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR`

- VUID-vkCmdCopyBufferToImage2-commandBuffer-11781

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pCopyBufferToImageInfo->pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the `format` features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkCmdCopyBufferToImage2-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyBufferToImage2-pCopyBufferToImageInfo-parameter
`pCopyBufferToImageInfo` **must** be a valid pointer to a valid `VkCopyBufferToImageInfo2` structure
- VUID-vkCmdCopyBufferToImage2-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdCopyBufferToImage2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdCopyBufferToImage2-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBufferToImage2-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyBufferToImage2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyBufferToImage2 is not affected by [conditional rendering](#)

The `VkCopyBufferToImageInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyBufferToImageInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            srcBuffer;
    VkImage             dstImage;
    VkImageLayout       dstImageLayout;
    uint32_t            regionCount;
    const VkBufferImageCopy2* pRegions;
} VkCopyBufferToImageInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkCopyBufferToImageInfo2
typedef VkCopyBufferToImageInfo2 VkCopyBufferToImageInfo2KHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcBuffer` is the source buffer.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of [VkBufferImageCopy2](#) structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyBufferToImageInfo2-pRegions-04565
The image region specified by each element of `pRegions` that does not contain `VkCopyCommandTransformInfoQCOM` in its `pNext` chain **must** be contained within the specified `imageSubresource` of `dstImage`
- VUID-VkCopyBufferToImageInfo2KHR-pRegions-04554
If the image region specified by each element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, the `rotated destination region` **must** be contained within `dstImage`
- VUID-VkCopyBufferToImageInfo2KHR-pRegions-04555
If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `dstImage` **must** have a 1x1x1 `texel block extent`
- VUID-VkCopyBufferToImageInfo2KHR-pRegions-06203
If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `dstImage` **must** be of type `VK_IMAGE_TYPE_2D`
- VUID-VkCopyBufferToImageInfo2KHR-pRegions-06204
If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `dstImage` **must** not have a `multi-planar format`
- VUID-VkCopyBufferToImageInfo2-pRegions-00171
`srcBuffer` **must** be large enough to contain all buffer locations that are accessed according to `Buffer and Image Addressing`, for each element of `pRegions`
- VUID-VkCopyBufferToImageInfo2-pRegions-00173
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-VkCopyBufferToImageInfo2-srcBuffer-00174
`srcBuffer` **must** have been created with the `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag set
- VUID-VkCopyBufferToImageInfo2-dstImage-01997
The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`
- VUID-VkCopyBufferToImageInfo2-srcBuffer-00176
If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyBufferToImageInfo2-dstImage-00177
`dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-VkCopyBufferToImageInfo2-dstImageLayout-00180
`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkCopyBufferToImageInfo2-dstImageLayout-01396
`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`

- VUID-VkCopyBufferToImageInfo2-pRegions-07931
If `VK_EXT_depth_range_unrestricted` is not enabled, for each element of `pRegions` whose `imageSubresource` contains a depth aspect, the data in `srcBuffer` **must** be in the range [0,1]
- VUID-VkCopyBufferToImageInfo2-dstImage-07966
If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyBufferToImageInfo2-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkCopyBufferToImageInfo2-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkCopyBufferToImageInfo2-dstImage-07969
`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkCopyBufferToImageInfo2-dstImage-07973
`dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkCopyBufferToImageInfo2-dstImage-07979
If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1
- VUID-VkCopyBufferToImageInfo2-imageOffset-09104
For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-dstImage-07980
If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1
- VUID-VkCopyBufferToImageInfo2-dstImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-imageOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-dstImage-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal

to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10052

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-07276

For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-00207

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10053

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10054

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10055

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-dstImage-00208

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10056

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of

`dstImage`

- VUID-VkCopyBufferToImageInfo2-imageOffset-10057
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-imageOffset-10058
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-dstImage-00209
For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-imageSubresource-09105
For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-VkCopyBufferToImageInfo2-dstImage-07981
If `dstImage` has a `multi-planar format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-VkCopyBufferToImageInfo2-dstImage-07983
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1
- VUID-VkCopyBufferToImageInfo2-bufferRowLength-09106
For each element of `pRegions`, `bufferRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-bufferImageHeight-09107
For each element of `pRegions`, `bufferImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-bufferRowLength-09108
For each element of `pRegions`, `bufferRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `dstImage` **must** be less than or equal to $2^{31}-1$
- VUID-VkCopyBufferToImageInfo2-dstImage-07975
If `dstImage` does not have either a depth/stencil format or a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the `texel block size`
- VUID-VkCopyBufferToImageInfo2-dstImage-07976
If `dstImage` has a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in [Compatible Formats of Planes of Multi-Planar Formats](#)
- VUID-VkCopyBufferToImageInfo2-dstImage-07978

If `dstImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4

- VUID-VkCopyBufferToImageInfo2-pRegions-06223

For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `imageSubresource` of `dstImage`

- VUID-VkCopyBufferToImageInfo2-pRegions-06224

For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `imageSubresource` of `dstImage`

Valid Usage (Implicit)

- VUID-VkCopyBufferToImageInfo2-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_COPY_BUFFER_TO_IMAGE_INFO_2`

- VUID-VkCopyBufferToImageInfo2-pNext-pNext

`pNext` **must** be `NULL`

- VUID-VkCopyBufferToImageInfo2-srcBuffer-parameter

`srcBuffer` **must** be a valid `VkBuffer` handle

- VUID-VkCopyBufferToImageInfo2-dstImage-parameter

`dstImage` **must** be a valid `VkImage` handle

- VUID-VkCopyBufferToImageInfo2-dstImageLayout-parameter

`dstImageLayout` **must** be a valid `VkImageLayout` value

- VUID-VkCopyBufferToImageInfo2-pRegions-parameter

`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferImageCopy2` structures

- VUID-VkCopyBufferToImageInfo2-regionCount-arraylength

`regionCount` **must** be greater than 0

- VUID-VkCopyBufferToImageInfo2-commonparent

Both of `dstImage`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

To copy data from an image object to a buffer object, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyImageToBuffer2(
    VkCommandBuffer                      commandBuffer,
    const VkCopyImageToBufferInfo2*     pCopyImageToBufferInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdCopyImageToBuffer2
void vkCmdCopyImageToBuffer2KHR(
    VkCommandBuffer                                commandBuffer,
    const VkCopyImageToBufferInfo2*                pCopyImageToBufferInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyImageToBufferInfo` is a pointer to a `VkCopyImageToBufferInfo2` structure describing the copy parameters.

This command is functionally identical to `vkCmdCopyImageToBuffer`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01831
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01832
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01833
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-07746
If the `maintenance11` feature is not enabled, and the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `bufferOffset` member of any element of `pCopyImageToBufferInfo->pRegions` **must** be a multiple of 4
- VUID-vkCmdCopyImageToBuffer2-imageOffset-07747
The `imageOffset` and `imageExtent` members of each element of `pCopyImageToBufferInfo->pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in `VkQueueFamilyProperties`
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-10216
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, and the `maintenance10` feature is not enabled, for each element of `pCopyImageToBufferInfo->pRegions`, the `aspectMask` member of `imageSubresource` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-11790
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pCopyImageToBufferInfo->pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the

format features of srcImage must contain
VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-11791

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pCopyImageToBufferInfo->pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_DEPTH_BIT`, then the format features of `srcImage` must contain `VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-11792

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` but does support `VK_QUEUE_COMPUTE_BIT`, and in any element of `pCopyImageToBufferInfo->pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the format features of `srcImage` must contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR`

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-11793

If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` and `VK_QUEUE_COMPUTE_BIT`, but does support `VK_QUEUE_TRANSFER_BIT`, and in any element of `pCopyImageToBufferInfo->pRegions` the `aspectMask` member of `imageSubresource` is `VK_IMAGE_ASPECT_STENCIL_BIT`, then the format features of `srcImage` must contain `VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-parameter

`commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyImageToBuffer2-pCopyImageToBufferInfo-parameter

`pCopyImageToBufferInfo` must be a valid pointer to a valid `VkCopyImageToBufferInfo2` structure

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-recording

`commandBuffer` must be in the `recording state`

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from must support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations

- VUID-vkCmdCopyImageToBuffer2-renderpass

This command must only be called outside of a render pass instance

- VUID-vkCmdCopyImageToBuffer2-suspended

This command must not be called between suspended render pass instances

- VUID-vkCmdCopyImageToBuffer2-videocoding

This command must only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyImageToBuffer2` is not affected by [conditional rendering](#)

The `VkCopyImageToBufferInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyImageToBufferInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             srcImage;
    VkImageLayout       srcImageLayout;
    VkBuffer            dstBuffer;
    uint32_t           regionCount;
    const VkBufferImageCopy2* pRegions;
} VkCopyImageToBufferInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkCopyImageToBufferInfo2
typedef VkCopyImageToBufferInfo2 VkCopyImageToBufferInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcImage` is the source image.

- `srcImageLayout` is the layout of the source image subresources for the copy.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkBufferImageCopy2` structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyImageToBufferInfo2-pRegions-04566
The image region specified by each element of `pRegions` that does not contain `VkCopyCommandTransformInfoQCOM` in its `pNext` chain **must** be contained within the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToBufferInfo2KHR-pRegions-04557
If the image region specified by each element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, the `rotated source region` **must** be contained within `srcImage`
- VUID-VkCopyImageToBufferInfo2KHR-pRegions-04558
If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `srcImage` **must** have a 1x1x1 `texel block extent`
- VUID-VkCopyImageToBufferInfo2KHR-pRegions-06205
If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `srcImage` **must** be of type `VK_IMAGE_TYPE_2D`
- VUID-VkCopyImageToBufferInfo2KHR-pRegions-06206
If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `srcImage` **must** not have a `multi-planar format`
- VUID-VkCopyImageToBufferInfo2-pRegions-00183
`dstBuffer` **must** be large enough to contain all buffer locations that are accessed according to `Buffer and Image Addressing`, for each element of `pRegions`
- VUID-VkCopyImageToBufferInfo2-pRegions-00184
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-VkCopyImageToBufferInfo2-srcImage-00186
`srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set
- VUID-VkCopyImageToBufferInfo2-srcImage-01998
The `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`
- VUID-VkCopyImageToBufferInfo2-dstBuffer-00191
`dstBuffer` **must** have been created with the `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-VkCopyImageToBufferInfo2-dstBuffer-00192
If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkCopyImageToBufferInfo2-srcImageLayout-00189
`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkCopyImageToBufferInfo2-srcImageLayout-01397
`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-VkCopyImageToBufferInfo2-srcImage-07966
If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyImageToBufferInfo2-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkCopyImageToBufferInfo2-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkCopyImageToBufferInfo2-srcImage-07969
`srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkCopyImageToBufferInfo2-srcImage-07973
`srcImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkCopyImageToBufferInfo2-srcImage-07979
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1
- VUID-VkCopyImageToBufferInfo2-imageOffset-09104
For each element of `pRegions`, `imageOffset.z` and $(\text{imageExtent.depth} + \text{imageOffset.z})$ **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-srcImage-07980
If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1
- VUID-VkCopyImageToBufferInfo2-srcImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-imageOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple

of the [texel block extent width](#) of the [VkFormat](#) of [srcImage](#)

- VUID-VkCopyImageToBufferInfo2-srcImage-07275

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR](#) or [VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR](#), [imageOffset.y](#) **must** be a multiple of the [texel block extent height](#) of the [VkFormat](#) of [srcImage](#)

- VUID-VkCopyImageToBufferInfo2-imageOffset-10052

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR](#) or [VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR](#), and [imageOffset.y](#) does not equal the height of the subresource specified by [imageSubresource](#), [imageOffset.y](#) **must** be a multiple of the [texel block extent height](#) of the [VkFormat](#) of [srcImage](#)

- VUID-VkCopyImageToBufferInfo2-srcImage-07276

For each element of [pRegions](#), [imageOffset.z](#) **must** be a multiple of the [texel block extent depth](#) of the [VkFormat](#) of [srcImage](#)

- VUID-VkCopyImageToBufferInfo2-srcImage-00207

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR](#), the sum of [imageOffset.x](#) and [extent.width](#) does not equal the width of the subresource specified by [imageSubresource](#), [extent.width](#) **must** be a multiple of the [texel block extent width](#) of the [VkFormat](#) of [srcImage](#)

- VUID-VkCopyImageToBufferInfo2-imageOffset-10053

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR](#), the difference of [imageOffset.x](#) and [extent.height](#) **must** be a multiple of the [texel block extent width](#) of the [VkFormat](#) of [srcImage](#)

- VUID-VkCopyImageToBufferInfo2-imageOffset-10054

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR](#), the difference of [imageOffset.x](#) and [extent.width](#) **must** be a multiple of the [texel block extent width](#) of the [VkFormat](#) of [srcImage](#)

- VUID-VkCopyImageToBufferInfo2-imageOffset-10055

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR](#), the sum of [imageOffset.x](#) and [extent.height](#) does not equal the width of the subresource specified by [imageSubresource](#), [extent.height](#) **must** be a multiple of the [texel block extent width](#) of the [VkFormat](#) of [srcImage](#)

- VUID-VkCopyImageToBufferInfo2-srcImage-00208

For each element of [pRegions](#), if [VkCopyCommandTransformInfoQCOM::transform](#) is equal to [VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR](#), and the sum of [imageOffset.y](#) and [extent.height](#) does not equal the height of the subresource specified by [imageSubresource](#), [extent.height](#) **must** be a multiple of the [texel block extent height](#) of the [VkFormat](#) of [srcImage](#)

- VUID-VkCopyImageToBufferInfo2-imageOffset-10056

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-imageOffset-10057

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-imageOffset-10058

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-srcImage-00209

For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-imageSubresource-09105

For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `srcImage`

- VUID-VkCopyImageToBufferInfo2-srcImage-07981

If `srcImage` has a `multi-planar format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit

- VUID-VkCopyImageToBufferInfo2-srcImage-07983

If `srcImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1

- VUID-VkCopyImageToBufferInfo2-bufferRowLength-09106

For each element of `pRegions`, `bufferRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-bufferImageHeight-09107

For each element of `pRegions`, `bufferImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToBufferInfo2-bufferRowLength-09108

For each element of `pRegions`, `bufferRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `srcImage` **must** be less than or equal to $2^{31}-1$

- VUID-VkCopyImageToBufferInfo2-srcImage-07975

If `srcImage` does not have either a depth/stencil format or a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the `texel block size`

- VUID-VkCopyImageToBufferInfo2-srcImage-07976

If `srcImage` has a `multi-planar format`, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the

`aspectMask` of the `imageSubresource` as defined in [Compatible Formats of Planes of Multi-Planar Formats](#)

- VUID-VkCopyImageToBufferInfo2-srcImage-07978
If `srcImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of 4
- VUID-VkCopyImageToBufferInfo2-imageOffset-00197
For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-imageOffset-00198
For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `imageSubresource` of `srcImage`

Valid Usage (Implicit)

- VUID-VkCopyImageToBufferInfo2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_IMAGE_TO_BUFFER_INFO_2`
- VUID-VkCopyImageToBufferInfo2-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyImageToBufferInfo2-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-VkCopyImageToBufferInfo2-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyImageToBufferInfo2-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkCopyImageToBufferInfo2-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferImageCopy2` structures
- VUID-VkCopyImageToBufferInfo2-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-VkCopyImageToBufferInfo2-commonparent
Both of `dstBuffer`, and `srcImage` **must** have been created, allocated, or retrieved from the same `VkDevice`

For both `vkCmdCopyBufferToImage2` and `vkCmdCopyImageToBuffer2`, each element of `pRegions` is a structure defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkBufferImageCopy2 {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceSize          bufferOffset;
    uint32_t              bufferRowLength;
    uint32_t              bufferImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D            imageOffset;
    VkExtent3D            imageExtent;
} VkBufferImageCopy2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkBufferImageCopy2
typedef VkBufferImageCopy2 VkBufferImageCopy2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **bufferOffset** is the offset in bytes from the start of the buffer object where the image data is copied from or to.
- **bufferRowLength** and **bufferImageHeight** specify in texels a subregion of a larger two- or three-dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the **imageExtent**.
- **imageSubresource** is a [VkImageSubresourceLayers](#) used to specify the specific image subresources of the image used for the source or destination image data.
- **imageOffset** selects the initial **x**, **y**, **z** offsets in texels of the sub-region of the source or destination image data.
- **imageExtent** is the size in texels of the image to copy in **width**, **height** and **depth**.

This structure is functionally identical to [VkBufferImageCopy](#), but adds **sType** and **pNext** parameters, allowing it to be more easily extended.

Valid Usage

- VUID-VkBufferImageCopy2-bufferRowLength-09101
bufferRowLength **must** be 0, or greater than or equal to the **width** member of **imageExtent**
- VUID-VkBufferImageCopy2-bufferImageHeight-09102
bufferImageHeight **must** be 0, or greater than or equal to the **height** member of **imageExtent**
- VUID-VkBufferImageCopy2-aspectMask-09103
The **aspectMask** member of **imageSubresource** **must** only have a single bit set
- VUID-VkBufferImageCopy2-imageExtent-06659
imageExtent.width **must** not be 0

- VUID-VkBufferImageCopy2-imageExtent-06660
`imageExtent.height` **must** not be 0
- VUID-VkBufferImageCopy2-imageExtent-06661
`imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkBufferImageCopy2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_IMAGE_COPY_2`
- VUID-VkBufferImageCopy2-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkCopyCommandTransformInfoQCOM`
- VUID-VkBufferImageCopy2-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkBufferImageCopy2-imageSubresource-parameter
`imageSubresource` **must** be a valid `VkImageSubresourceLayers` structure

The `VkCopyCommandTransformInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_rotated_copy_commands
typedef struct VkCopyCommandTransformInfoQCOM {
    VkStructureType          sType;
    const void*              pNext;
    VkSurfaceTransformFlagBitsKHR transform;
} VkCopyCommandTransformInfoQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `transform` is a `VkSurfaceTransformFlagBitsKHR` value describing the transform to be applied.

Including this structure in the `pNext` chain of `VkBufferImageCopy2` defines a rotation to be performed when copying between an image and a buffer. Including this structure in the `pNext` chain of `VkBlitImageInfo2` defines a rotation to be performed when blitting between two images. If this structure is not specified in either case, the implementation behaves as if it was specified with a `transform` equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`.

Specifying a transform for a copy between an image and a buffer **rotates the region accessed in the image around the offset**. Specifying a transform for a blit performs a similar transform as described in [Image Blits with Scaling and Rotation](#).

Rotations other than `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` **can** only be specified for single-plane 2D images with a 1x1x1 texel block extent.

Valid Usage

- VUID-VkCopyCommandTransformInfoQCOM-transform-04560

`transform` must be `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`,
`VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`,
`VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, or
`VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`

Valid Usage (Implicit)

- VUID-VkCopyCommandTransformInfoQCOM-sType-sType

`sType` must be `VK_STRUCTURE_TYPE_COPY_COMMAND_TRANSFORM_INFO_QCOM`

Structure Chaining

Extends the structures

- [VkBufferImageCopy2](#)
- [VkDeviceMemoryImageCopyKHR](#)
- [VkImageBlit2](#)

The following commands can be used to copy between host memory and images. Bytes in host memory and texels in images are accessed as specified in [Copying Data Between Buffers and Images](#), with buffers replaced with host memory.

NOTE

Copies to and from an image on the host are not internally synchronized. Simultaneous access (involving writes) to overlapping image memory on the host constitutes a [data race](#).

To copy data from host memory to an image object, call:

```
// Provided by VK_VERSION_1_4
VkResult vkCopyMemoryToImage(
    VkDevice device,
    const VkCopyMemoryToImageInfo* pCopyMemoryToImageInfo);
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to vkCopyMemoryToImage
VkResult vkCopyMemoryToImageEXT(
    VkDevice device,
    const VkCopyMemoryToImageInfo* pCopyMemoryToImageInfo);
```

- `device` is the device which owns `pCopyMemoryToImageInfo->dstImage`.

- `pCopyMemoryToImageInfo` is a pointer to a `VkCopyMemoryToImageInfo` structure describing the copy parameters.

This command is functionally similar to `vkCmdCopyBufferToImage2`, except it is executed on the host and reads from host memory instead of a buffer. The memory of `pCopyMemoryToImageInfo->dstImage` is accessed by the host as if `coherent`.

NOTE

Because queue submissions `automatically make host memory visible to the device`, there would not be a need for a memory barrier before using the results of this copy operation on the device.

Valid Usage (Implicit)

- VUID-vkCopyMemoryToImage-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkCopyMemoryToImage-pCopyMemoryToImageInfo-parameter `pCopyMemoryToImageInfo` **must** be a valid pointer to a valid `VkCopyMemoryToImageInfo` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_MEMORY_MAP_FAILED`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkCopyMemoryToImageInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkCopyMemoryToImageInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkHostImageCopyFlags flags;
    VkImage               dstImage;
    VkImageLayout         dstImageLayout;
    uint32_t              regionCount;
    const VkMemoryToImageCopy* pRegions;
} VkCopyMemoryToImageInfo;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkCopyMemoryToImageInfo
typedef VkCopyMemoryToImageInfo VkCopyMemoryToImageInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkHostImageCopyFlagBits](#) values describing additional copy parameters.
- **dstImage** is the destination image.
- **dstImageLayout** is the layout of the destination image subresources for the copy.
- **regionCount** is the number of regions to copy.
- **pRegions** is a pointer to an array of [VkMemoryToImageCopy](#) structures specifying the regions to copy.

vkCopyMemoryToImage does not check whether the device memory associated with **dstImage** is currently in use before performing the copy. The application **must** guarantee that any previously submitted command that reads from or writes to the copy regions has completed before the host performs the copy.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-VkCopyMemoryToImageInfo-dstImage-09109
If **dstImage** is sparse then all memory ranges accessed by the copy command **must** be bound as described in [Binding Resource Memory](#)
- VUID-VkCopyMemoryToImageInfo-dstImage-09111
If the stencil aspect of **dstImage** is accessed, and **dstImage** was not created with [separate stencil usage](#), **dstImage** **must** have been created with the [VK_IMAGE_USAGE_HOST_TRANSFER_BIT](#) usage flag set
- VUID-VkCopyMemoryToImageInfo-dstImage-09112

If the stencil aspect of `dstImage` is accessed, and `dstImage` was created with `separate stencil usage`, `dstImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set

- VUID-VkCopyMemoryToImageInfo-dstImage-09113

If non-stencil aspects of `dstImage` are accessed, `dstImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set

- VUID-VkCopyMemoryToImageInfo-imageOffset-09114

If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, the `x`, `y`, and `z` members of the `imageOffset` member of each element of `pRegions` **must** be `0`

- VUID-VkCopyMemoryToImageInfo-dstImage-09115

If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, the `imageExtent` member of each element of `pRegions` **must** equal the extents of `dstImage` identified by `imageSubresource`

- VUID-VkCopyMemoryToImageInfo-dstImage-07966

If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkCopyMemoryToImageInfo-imageSubresource-07967

The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created

- VUID-VkCopyMemoryToImageInfo-imageSubresource-07968

If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created

- VUID-VkCopyMemoryToImageInfo-dstImage-07969

`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- VUID-VkCopyMemoryToImageInfo-imageSubresource-07971

For each element of `pRegions`, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `imageSubresource` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-imageSubresource-07972

For each element of `pRegions`, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `imageSubresource` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-dstImage-07973

`dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`

- VUID-VkCopyMemoryToImageInfo-dstImage-07979

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be `0` and `imageExtent.height` **must** be `1`

- VUID-VkCopyMemoryToImageInfo-imageOffset-09104

For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must**

both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-dstImage-07980
If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1
- VUID-VkCopyMemoryToImageInfo-dstImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfo-imageOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfo-dstImage-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfo-imageOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfo-dstImage-07276
For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfo-dstImage-00207
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfo-imageOffset-10053
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfo-imageOffset-10054
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and

`extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-imageOffset-10055

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-dstImage-00208

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-imageOffset-10056

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and `extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-imageOffset-10057

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-imageOffset-10058

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-dstImage-00209

For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-imageSubresource-09105

For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `dstImage`

- VUID-VkCopyMemoryToImageInfo-dstImage-07981

If `dstImage` has a `multi-planar format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit

- VUID-VkCopyMemoryToImageInfo-dstImage-07983

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1

- VUID-VkCopyMemoryToImageInfo-memoryRowLength-09106
For each element of `pRegions`, `memoryRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfo-memoryImageHeight-09107
For each element of `pRegions`, `memoryImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageInfo-memoryRowLength-09108
For each element of `pRegions`, `memoryRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `dstImage` **must** be less than or equal to $2^{31}-1$
- VUID-VkCopyMemoryToImageInfo-dstImageLayout-09059
`dstImageLayout` **must** specify the current layout of the image subresources of `dstImage` specified in `pRegions`
- VUID-VkCopyMemoryToImageInfo-dstImageLayout-09060
`dstImageLayout` **must** be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyProperties::pCopyDstLayouts`
- VUID-VkCopyMemoryToImageInfo-flags-09393
If `flags` includes `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, for each region in `pRegions`, `memoryRowLength` and `memoryImageHeight` **must** both be 0

Valid Usage (Implicit)

- VUID-VkCopyMemoryToImageInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_MEMORY_TO_IMAGE_INFO`
- VUID-VkCopyMemoryToImageInfo-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyMemoryToImageInfo-flags-parameter
`flags` **must** be a valid combination of `VkHostImageCopyFlagBits` values
- VUID-VkCopyMemoryToImageInfo-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-VkCopyMemoryToImageInfo-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyMemoryToImageInfo-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkMemoryToImageCopy` structures
- VUID-VkCopyMemoryToImageInfo-regionCount-arraylength
`regionCount` **must** be greater than 0

Each element of `VkCopyMemoryToImageInfo::pRegions` is a structure defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkMemoryToImageCopy {
    VkStructureType      sType;
    const void*          pNext;
    const void*          pHostPointer;
    uint32_t             memoryRowLength;
    uint32_t             memoryImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D           imageOffset;
    VkExtent3D           imageExtent;
} VkMemoryToImageCopy;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkMemoryToImageCopy
typedef VkMemoryToImageCopy VkMemoryToImageCopyEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pHostPointer** is the host memory address which is the source of the copy.
- **memoryRowLength** and **memoryImageHeight** specify in texels a subregion of a larger two- or three-dimensional image in host memory, and control the addressing calculations. If either of these values is zero, that aspect of the host memory is considered to be tightly packed according to the **imageExtent**.
- **imageSubresource** is a **VkImageSubresourceLayers** used to specify the specific image subresources of the image used for the source or destination image data.
- **imageOffset** selects the initial **x**, **y**, **z** offsets in texels of the sub-region of the destination image data.
- **imageExtent** is the size in texels of the image to copy in **width**, **height** and **depth**.

This structure is functionally similar to **VkBufferImageCopy2**, except it defines host memory as the source of copy instead of a buffer. In particular, the same data packing rules and restrictions as that structure apply here as well.

Valid Usage

- VUID-VkMemoryToImageCopy-pHostPointer-09061
pHostPointer **must** point to memory that is large enough to contain all memory locations that are accessed according to **Buffer and Image Addressing**, for each element of **pRegions**
- VUID-VkMemoryToImageCopy-pRegions-09062
The union of all source regions, and the union of all destination regions, specified by the elements of **pRegions**, **must** not overlap in memory
- VUID-VkMemoryToImageCopy-memoryRowLength-09101
memoryRowLength **must** be **0**, or greater than or equal to the **width** member of **imageExtent**

- VUID-VkMemoryToImageCopy-memoryImageHeight-09102
`memoryImageHeight` **must** be 0, or greater than or equal to the `height` member of `imageExtent`
- VUID-VkMemoryToImageCopy-aspectMask-09103
The `aspectMask` member of `imageSubresource` **must** only have a single bit set
- VUID-VkMemoryToImageCopy-imageExtent-06659
`imageExtent.width` **must** not be 0
- VUID-VkMemoryToImageCopy-imageExtent-06660
`imageExtent.height` **must** not be 0
- VUID-VkMemoryToImageCopy-imageExtent-06661
`imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkMemoryToImageCopy-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_TO_IMAGE_COPY`
- VUID-VkMemoryToImageCopy-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMemoryToImageCopy-pHostPointer-parameter
`pHostPointer` **must** be a pointer value
- VUID-VkMemoryToImageCopy-imageSubresource-parameter
`imageSubresource` **must** be a valid `VkImageSubresourceLayers` structure

To copy data from an image object to host memory, call:

```
// Provided by VK_VERSION_1_4
VkResult vkCopyImageToMemory(
    VkDevice                                device,
    const VkCopyImageToMemoryInfo*         pCopyImageToMemoryInfo);
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to vkCopyImageToMemory
VkResult vkCopyImageToMemoryEXT(
    VkDevice                                device,
    const VkCopyImageToMemoryInfo*         pCopyImageToMemoryInfo);
```

- `device` is the device which owns `pCopyImageToMemoryInfo->srcImage`.
- `pCopyImageToMemoryInfo` is a pointer to a `VkCopyImageToMemoryInfo` structure describing the copy parameters.

This command is functionally similar to `vkCmdCopyImageToBuffer2`, except it is executed on the host and writes to host memory instead of a buffer. The memory of `pCopyImageToMemoryInfo->srcImage` is accessed by the host as if `coherent`.

NOTE

If the device has written to the image memory, it is not automatically made available to the host. Before this copy command can be called, a memory barrier for this image **must** have been issued on the device with the second [synchronization scope](#) including [VK_PIPELINE_STAGE_HOST_BIT](#) and [VK_ACCESS_HOST_READ_BIT](#).

Valid Usage (Implicit)

- VUID-vkCopyImageToMemory-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkCopyImageToMemory-pCopyImageToMemoryInfo-parameter **pCopyImageToMemoryInfo** **must** be a valid pointer to a valid [VkCopyImageToMemoryInfo](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_MEMORY_MAP_FAILED](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkCopyImageToMemoryInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkCopyImageToMemoryInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkHostImageCopyFlags flags;
    VkImage             srcImage;
    VkImageLayout       srcImageLayout;
    uint32_t            regionCount;
    const VkImageToMemoryCopy* pRegions;
} VkCopyImageToMemoryInfo;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkCopyImageToMemoryInfo
typedef VkCopyImageToMemoryInfo VkCopyImageToMemoryInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkHostImageCopyFlagBits` values describing additional copy parameters.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkImageToMemoryCopy` structures specifying the regions to copy.

`vkCopyImageToMemory` does not check whether the device memory associated with `srcImage` is currently in use before performing the copy. The application **must** guarantee that any previously submitted command that writes to the copy regions has completed before the host performs the copy.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-VkCopyImageToMemoryInfo-srcImage-09109
If `srcImage` is sparse then all memory ranges accessed by the copy command **must** be bound as described in [Binding Resource Memory](#)
- VUID-VkCopyImageToMemoryInfo-srcImage-09111
If the stencil aspect of `srcImage` is accessed, and `srcImage` was not created with [separate stencil usage](#), `srcImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set
- VUID-VkCopyImageToMemoryInfo-srcImage-09112
If the stencil aspect of `srcImage` is accessed, and `srcImage` was created with [separate stencil usage](#), `srcImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set
- VUID-VkCopyImageToMemoryInfo-srcImage-09113
If non-stencil aspects of `srcImage` are accessed, `srcImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set
- VUID-VkCopyImageToMemoryInfo-imageOffset-09114
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, the `x`, `y`, and `z` members of the `imageOffset` member of each element of `pRegions` **must** be 0
- VUID-VkCopyImageToMemoryInfo-srcImage-09115
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, the `imageExtent` member of each element of `pRegions` **must** equal the extents of `srcImage` identified by `imageSubresource`
- VUID-VkCopyImageToMemoryInfo-srcImage-07966
If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkCopyImageToMemoryInfo-imageSubresource-07967
The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkCopyImageToMemoryInfo-imageSubresource-07968
If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkCopyImageToMemoryInfo-srcImage-07969
`srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkCopyImageToMemoryInfo-imageSubresource-07971
For each element of `pRegions`, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-imageSubresource-07972
For each element of `pRegions`, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-07973
`srcImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkCopyImageToMemoryInfo-srcImage-07979
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be `0` and `imageExtent.height` **must** be `1`
- VUID-VkCopyImageToMemoryInfo-imageOffset-09104
For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-07980
If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` **must** be `0` and `imageExtent.depth` **must** be `1`
- VUID-VkCopyImageToMemoryInfo-srcImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-imageOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `imageOffset.x` does not equal the width of the subresource specified by `imageSubresource`, `imageOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfo-srcImage-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-imageOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `imageOffset.y` does not equal the height of the subresource specified by `imageSubresource`, `imageOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-07276
For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-00207
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-imageOffset-10053
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `imageOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-imageOffset-10054
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-imageOffset-10055
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `imageOffset.x` and `extent.height` does not equal the width of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-00208
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-imageOffset-10056
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `imageOffset.y` and

`extent.width` does not equal the height of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfo-imageOffset-10057

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `imageOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfo-imageOffset-10058

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `imageOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfo-srcImage-00209

For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfo-imageSubresource-09105

For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `srcImage`

- VUID-VkCopyImageToMemoryInfo-srcImage-07981

If `srcImage` has a `multi-planar format`, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit

- VUID-VkCopyImageToMemoryInfo-srcImage-07983

If `srcImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be 0 and `imageSubresource.layerCount` **must** be 1

- VUID-VkCopyImageToMemoryInfo-memoryRowLength-09106

For each element of `pRegions`, `memoryRowLength` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfo-memoryImageHeight-09107

For each element of `pRegions`, `memoryImageHeight` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToMemoryInfo-memoryRowLength-09108

For each element of `pRegions`, `memoryRowLength` divided by the `texel block extent width` and then multiplied by the texel block size of `srcImage` **must** be less than or equal to $2^{31}-1$

- VUID-VkCopyImageToMemoryInfo-srcImageLayout-09064

`srcImageLayout` **must** specify the current layout of the image subresources of `srcImage` specified in `pRegions`

- VUID-VkCopyImageToMemoryInfo-srcImageLayout-09065

`srcImageLayout` **must** be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyProperties::pCopySrcLayouts`

- VUID-VkCopyImageToMemoryInfo-flags-09394

If `flags` includes `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, for each region in `pRegions`,

`memoryRowLength` and `memoryImageHeight` **must** both be 0

Valid Usage (Implicit)

- VUID-VkCopyImageToMemoryInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_IMAGE_TO_MEMORY_INFO`
- VUID-VkCopyImageToMemoryInfo-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyImageToMemoryInfo-flags-parameter
`flags` **must** be a valid combination of `VkHostImageCopyFlagBits` values
- VUID-VkCopyImageToMemoryInfo-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-VkCopyImageToMemoryInfo-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyImageToMemoryInfo-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkImageToMemoryCopy` structures
- VUID-VkCopyImageToMemoryInfo-regionCount-arraylength
`regionCount` **must** be greater than 0

Each element of `VkCopyImageToMemoryInfo::pRegions` is a structure defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkImageToMemoryCopy {
    VkStructureType    sType;
    const void*        pNext;
    void*              pHostPointer;
    uint32_t            memoryRowLength;
    uint32_t            memoryImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D          imageOffset;
    VkExtent3D          imageExtent;
} VkImageToMemoryCopy;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkImageToMemoryCopy
typedef VkImageToMemoryCopy VkImageToMemoryCopyEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pHostPointer` is the host memory address which is the destination of the copy.

- `memoryRowLength` and `memoryImageHeight` specify in texels a subregion of a larger two- or three-dimensional image in host memory, and control the addressing calculations. If either of these values is zero, that aspect of the host memory is considered to be tightly packed according to the `imageExtent`.
- `imageSubresource` is a `VkImageSubresourceLayers` used to specify the specific image subresources of the image used for the source or destination image data.
- `imageOffset` selects the initial `x`, `y`, `z` offsets in texels of the sub-region of the source image data.
- `imageExtent` is the size in texels of the image to copy in `width`, `height` and `depth`.

This structure is functionally similar to `VkBufferImageCopy2`, except it defines host memory as the target of copy instead of a buffer. In particular, the same data packing rules and restrictions as that structure apply here as well.

Valid Usage

- VUID-VkImageToMemoryCopy-pHostPointer-09066
`pHostPointer` **must** point to memory that is large enough to contain all memory locations that are accessed according to [Buffer and Image Addressing](#), for each element of `pRegions`
- VUID-VkImageToMemoryCopy-pRegions-09067
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-VkImageToMemoryCopy-memoryRowLength-09101
`memoryRowLength` **must** be 0, or greater than or equal to the `width` member of `imageExtent`
- VUID-VkImageToMemoryCopy-memoryImageHeight-09102
`memoryImageHeight` **must** be 0, or greater than or equal to the `height` member of `imageExtent`
- VUID-VkImageToMemoryCopy-aspectMask-09103
The `aspectMask` member of `imageSubresource` **must** only have a single bit set
- VUID-VkImageToMemoryCopy-imageExtent-06659
`imageExtent.width` **must** not be 0
- VUID-VkImageToMemoryCopy-imageExtent-06660
`imageExtent.height` **must** not be 0
- VUID-VkImageToMemoryCopy-imageExtent-06661
`imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkImageToMemoryCopy-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_TO_MEMORY_COPY`
- VUID-VkImageToMemoryCopy-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageToMemoryCopy-pHostPointer-parameter

pHostPointer **must** be a pointer value

- VUID-VkImageToMemoryCopy-imageSubresource-parameter
imageSubresource **must** be a valid [VkImageSubresourceLayers](#) structure

Bits which **can** be set in [VkCopyMemoryToImageInfo::flags](#), [VkCopyImageToMemoryInfo::flags](#), and [VkCopyImageToImageInfo::flags](#), specifying additional copy parameters are:

```
// Provided by VK_VERSION_1_4
typedef enum VkHostImageCopyFlagBits {
    VK_HOST_IMAGE_COPY_MEMCPY_BIT = 0x00000001,
    // VK_HOST_IMAGE_COPY_MEMCPY is a legacy alias
    VK_HOST_IMAGE_COPY_MEMCPY = VK_HOST_IMAGE_COPY_MEMCPY_BIT,
    // Provided by VK_EXT_host_image_copy
    VK_HOST_IMAGE_COPY_MEMCPY_BIT_EXT = VK_HOST_IMAGE_COPY_MEMCPY_BIT,
    // Provided by VK_EXT_host_image_copy
    // VK_HOST_IMAGE_COPY_MEMCPY_EXT is a legacy alias
    VK_HOST_IMAGE_COPY_MEMCPY_EXT = VK_HOST_IMAGE_COPY_MEMCPY_BIT,
} VkHostImageCopyFlagBits;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkHostImageCopyFlagBits
typedef VkHostImageCopyFlagBits VkHostImageCopyFlagBitsEXT;
```

- [VK_HOST_IMAGE_COPY_MEMCPY_BIT](#) specifies that no memory layout swizzling is to be applied during data copy. For copies between memory and images, this flag indicates that image data in host memory is swizzled in exactly the same way as the image data on the device. Using this flag indicates that the implementations **may** use a simple memory copy to transfer the data between the host memory and the device memory. The format of the swizzled data in host memory is platform dependent and is not defined in this specification.

```
// Provided by VK_VERSION_1_4
typedef VkFlags VkHostImageCopyFlags;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkHostImageCopyFlags
typedef VkHostImageCopyFlags VkHostImageCopyFlagsEXT;
```

[VkHostImageCopyFlags](#) is a bitmask type for setting a mask of zero or more [VkHostImageCopyFlagBits](#).

To copy data from an image object to another image object using the host, call:

```
// Provided by VK_VERSION_1_4
VkResult vkCopyImageToImage(
    VkDevice                                device,
    const VkCopyImageToImageInfo*          pCopyImageToImageInfo);
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to vkCopyImageToImage
VkResult vkCopyImageToImageEXT(
    VkDevice                                device,
    const VkCopyImageToImageInfo*          pCopyImageToImageInfo);
```

- **device** is the device which owns `pCopyImageToImageInfo->srcImage` and `pCopyImageToImageInfo->dstImage`.
- **pCopyImageToImageInfo** is a pointer to a `VkCopyImageToImageInfo` structure describing the copy parameters.

This command is functionally similar to `vkCmdCopyImage2`, except it is executed on the host. The memory of `pCopyImageToImageInfo->srcImage` and `pCopyImageToImageInfo->dstImage` is accessed by the host as if **coherent**.

NOTE

If the device has written to the memory of `pCopyImageToImageInfo->srcImage`, it is not automatically made available to the host. Before this copy command can be called, a memory barrier for this image **must** have been issued on the device with the second **synchronization scope** including `VK_PIPELINE_STAGE_HOST_BIT` and `VK_ACCESS_HOST_READ_BIT`.

Because queue submissions **automatically make host memory visible to the device**, there would not be a need for a memory barrier before using the results of this copy operation in `pCopyMemoryToImageInfo->dstImage` on the device.

Valid Usage (Implicit)

- VUID-vkCopyImageToImage-device-parameter **device** **must** be a valid `VkDevice` handle
- VUID-vkCopyImageToImage-pCopyImageToImageInfo-parameter **pCopyImageToImageInfo** **must** be a valid pointer to a valid `VkCopyImageToImageInfo` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_MEMORY_MAP_FAILED](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkCopyImageToImageInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkCopyImageToImageInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkHostImageCopyFlags flags;
    VkImage               srcImage;
    VkImageLayout         srcImageLayout;
    VkImage               dstImage;
    VkImageLayout         dstImageLayout;
    uint32_t              regionCount;
    const VkImageCopy2*   pRegions;
} VkCopyImageToImageInfo;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkCopyImageToImageInfo
typedef VkCopyImageToImageInfo VkCopyImageToImageInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkHostImageCopyFlagBits](#) values describing additional copy parameters.
- [srcImage](#) is the source image.
- [srcImageLayout](#) is the layout of the source image subresources for the copy.
- [dstImage](#) is the destination image.
- [dstImageLayout](#) is the layout of the destination image subresources for the copy.
- [regionCount](#) is the number of regions to copy.
- [pRegions](#) is a pointer to an array of [VkImageCopy2](#) structures specifying the regions to copy.

[vkCopyImageToImage](#) does not check whether the device memory associated with [srcImage](#) or [dstImage](#) is currently in use before performing the copy. The application **must** guarantee that any previously submitted command that writes to the copy regions has completed before the host performs the copy.

Valid Usage

- VUID-VkCopyImageToImageInfo-srcImage-09069
`srcImage` and `dstImage` **must** have been created with identical image creation parameters
- VUID-VkCopyImageToImageInfo-srcImage-09109
If `srcImage` is sparse then all memory ranges accessed by the copy command **must** be bound as described in [Binding Resource Memory](#)
- VUID-VkCopyImageToImageInfo-srcImage-09111
If the stencil aspect of `srcImage` is accessed, and `srcImage` was not created with [separate stencil usage](#), `srcImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set
- VUID-VkCopyImageToImageInfo-srcImage-09112
If the stencil aspect of `srcImage` is accessed, and `srcImage` was created with [separate stencil usage](#), `srcImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set
- VUID-VkCopyImageToImageInfo-srcImage-09113
If non-stencil aspects of `srcImage` are accessed, `srcImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set
- VUID-VkCopyImageToImageInfo-srcOffset-09114
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, the `x`, `y`, and `z` members of the `srcOffset` member of each element of `pRegions` **must** be 0
- VUID-VkCopyImageToImageInfo-srcImage-09115
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, the `extent` member of each element of `pRegions` **must** equal the extents of `srcImage` identified by `srcSubresource`
- VUID-VkCopyImageToImageInfo-srcImage-07966
If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyImageToImageInfo-srcSubresource-07967
The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkCopyImageToImageInfo-srcSubresource-07968
If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer` + `srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkCopyImageToImageInfo-srcImage-07969
`srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkCopyImageToImageInfo-srcSubresource-07971
For each element of `pRegions`, `srcOffset.x` and `(extent.width + srcOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `srcSubresource` of `srcImage`

- VUID-VkCopyImageToImageInfo-srcSubresource-07972
For each element of `pRegions`, `srcOffset.y` and `(extent.height + srcOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `srcSubresource` of `srcImage`
- VUID-VkCopyImageToImageInfo-srcImage-07979
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.y` **must** be `0` and `extent.height` **must** be `1`
- VUID-VkCopyImageToImageInfo-srcOffset-09104
For each element of `pRegions`, `srcOffset.z` and `(extent.depth + srcOffset.z)` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `srcSubresource` of `srcImage`
- VUID-VkCopyImageToImageInfo-srcImage-07980
If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `srcOffset.z` **must** be `0` and `extent.depth` **must** be `1`
- VUID-VkCopyImageToImageInfo-srcImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `srcOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToImageInfo-srcOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `srcOffset.x` does not equal the width of the subresource specified by `srcSubresource`, `srcOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToImageInfo-srcImage-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `srcOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToImageInfo-srcOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `srcOffset.y` does not equal the height of the subresource specified by `srcSubresource`, `srcOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToImageInfo-srcImage-07276
For each element of `pRegions`, `srcOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`
- VUID-VkCopyImageToImageInfo-srcImage-00207
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `srcOffset.x` and `extent.width` does not equal the width of the subresource specified by `srcSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of

`srcImage`

- VUID-VkCopyImageToImageInfo-srcOffset-10053

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `srcOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToImageInfo-srcOffset-10054

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `srcOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToImageInfo-srcOffset-10055

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `srcOffset.x` and `extent.height` does not equal the width of the subresource specified by `srcSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToImageInfo-srcImage-00208

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `srcOffset.y` and `extent.height` does not equal the height of the subresource specified by `srcSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToImageInfo-srcOffset-10056

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `srcOffset.y` and `extent.width` does not equal the height of the subresource specified by `srcSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToImageInfo-srcOffset-10057

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `srcOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToImageInfo-srcOffset-10058

For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `srcOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToImageInfo-srcImage-00209

For each element of `pRegions`, if the sum of `srcOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `srcImage`

- VUID-VkCopyImageToImageInfo-srcSubresource-09105

For each element of `pRegions`, `srcSubresource.aspectMask` **must** specify aspects present in `srcImage`

- VUID-VkCopyImageToImageInfo-srcImage-07981
If `srcImage` has a `multi-planar format`, then for each element of `pRegions`, `srcSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-VkCopyImageToImageInfo-srcImage-07983
If `srcImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `srcSubresource.baseArrayLayer` **must** be 0 and `srcSubresource.layerCount` **must** be 1
- VUID-VkCopyImageToImageInfo-dstImage-09109
If `dstImage` is sparse then all memory ranges accessed by the copy command **must** be bound as described in `Binding Resource Memory`
- VUID-VkCopyImageToImageInfo-dstImage-09111
If the stencil aspect of `dstImage` is accessed, and `dstImage` was not created with `separate stencil usage`, `dstImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set
- VUID-VkCopyImageToImageInfo-dstImage-09112
If the stencil aspect of `dstImage` is accessed, and `dstImage` was created with `separate stencil usage`, `dstImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set
- VUID-VkCopyImageToImageInfo-dstImage-09113
If non-stencil aspects of `dstImage` are accessed, `dstImage` **must** have been created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set
- VUID-VkCopyImageToImageInfo-dstOffset-09114
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, the `x`, `y`, and `z` members of the `dstOffset` member of each element of `pRegions` **must** be 0
- VUID-VkCopyImageToImageInfo-dstImage-09115
If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_BIT`, the `extent` member of each element of `pRegions` **must** equal the extents of `dstImage` identified by `dstSubresource`
- VUID-VkCopyImageToImageInfo-dstImage-07966
If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyImageToImageInfo-dstSubresource-07967
The `dstSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkCopyImageToImageInfo-dstSubresource-07968
If `dstSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `dstSubresource.baseArrayLayer` + `dstSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkCopyImageToImageInfo-dstImage-07969
`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- VUID-VkCopyImageToImageInfo-dstSubresource-07971
For each element of `pRegions`, `dstOffset.x` and `(extent.width + dstOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `dstSubresource` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstSubresource-07972
For each element of `pRegions`, `dstOffset.y` and `(extent.height + dstOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `dstSubresource` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstImage-07979
If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.y` **must** be `0` and `extent.height` **must** be `1`
- VUID-VkCopyImageToImageInfo-dstOffset-09104
For each element of `pRegions`, `dstOffset.z` and `(extent.depth + dstOffset.z)` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `dstSubresource` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstImage-07980
If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `dstOffset.z` **must** be `0` and `extent.depth` **must** be `1`
- VUID-VkCopyImageToImageInfo-dstImage-07274
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, `dstOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstOffset-10051
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, and `dstOffset.x` does not equal the width of the subresource specified by `dstSubresource`, `dstOffset.x` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstImage-07275
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `dstOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstOffset-10052
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` or `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, and `dstOffset.y` does not equal the height of the subresource specified by `dstSubresource`, `dstOffset.y` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstImage-07276
For each element of `pRegions`, `dstOffset.z` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-VkCopyImageToImageInfo-dstImage-00207
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, the sum of `dstOffset.x` and `extent.width` does not equal the width of the subresource specified by `dstSubresource`, `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstOffset-10053
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the difference of `dstOffset.x` and `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstOffset-10054
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `dstOffset.x` and `extent.width` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstOffset-10055
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the sum of `dstOffset.x` and `extent.height` does not equal the width of the subresource specified by `dstSubresource`, `extent.height` **must** be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstImage-00208
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the sum of `dstOffset.y` and `extent.height` does not equal the height of the subresource specified by `dstSubresource`, `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstOffset-10056
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, the sum of `dstOffset.y` and `extent.width` does not equal the height of the subresource specified by `dstSubresource`, `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstOffset-10057
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, the difference of `dstOffset.y` and `extent.height` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstOffset-10058
For each element of `pRegions`, if `VkCopyCommandTransformInfoQCOM::transform` is equal to `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`, the difference of `dstOffset.y` and `extent.width` **must** be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
- VUID-VkCopyImageToImageInfo-dstImage-00209

For each element of `pRegions`, if the sum of `dstOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-VkCopyImageToImageInfo-dstSubresource-09105
For each element of `pRegions`, `dstSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-VkCopyImageToImageInfo-dstImage-07981
If `dstImage` has a `multi-planar format`, then for each element of `pRegions`, `dstSubresource.aspectMask` **must** be a single valid `multi-planar aspect mask` bit
- VUID-VkCopyImageToImageInfo-dstImage-07983
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `dstSubresource.baseArrayLayer` **must** be 0 and `dstSubresource.layerCount` **must** be 1
- VUID-VkCopyImageToImageInfo-srcImageLayout-09070
`srcImageLayout` **must** specify the current layout of the image subresources of `srcImage` specified in `pRegions`
- VUID-VkCopyImageToImageInfo-dstImageLayout-09071
`dstImageLayout` **must** specify the current layout of the image subresources of `dstImage` specified in `pRegions`
- VUID-VkCopyImageToImageInfo-srcImageLayout-09072
`srcImageLayout` **must** be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyProperties::pCopySrcLayouts`
- VUID-VkCopyImageToImageInfo-dstImageLayout-09073
`dstImageLayout` **must** be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyProperties::pCopyDstLayouts`

Valid Usage (Implicit)

- VUID-VkCopyImageToImageInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_IMAGE_TO_IMAGE_INFO`
- VUID-VkCopyImageToImageInfo-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyImageToImageInfo-flags-parameter
`flags` **must** be a valid combination of `VkHostImageCopyFlagBits` values
- VUID-VkCopyImageToImageInfo-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-VkCopyImageToImageInfo-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyImageToImageInfo-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-VkCopyImageToImageInfo-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value

- VUID-VkCopyImageToImageInfo-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkImageCopy2` structures
- VUID-VkCopyImageToImageInfo-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-VkCopyImageToImageInfo-commonparent
Both of `dstImage`, and `srcImage` **must** have been created, allocated, or retrieved from the same `VkDevice`

25.6. Indirect Copies

An application can use indirect copies when the copy parameters are not known during the command buffer creation time.

To copy data between two memory regions by specifying copy parameters indirectly in memory, call:

```
// Provided by VK_KHR_copy_memory_indirect
void vkCmdCopyMemoryIndirectKHR(
    VkCommandBuffer                commandBuffer,
    const VkCopyMemoryIndirectInfoKHR* pCopyMemoryIndirectInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyMemoryIndirectInfo` is a pointer to a `VkCopyMemoryIndirectInfoKHR` structure containing the copy parameters, including the number of copies to execute and a strided array of `VkCopyMemoryIndirectCommandKHR` structures.

Each region specified in the memory referenced by `pCopyMemoryIndirectInfo->copyAddressRange` is copied from the source region to the specified destination region. The results are undefined if any of the source and destination regions overlap in memory.

Valid Usage

- VUID-vkCmdCopyMemoryIndirectKHR-indirectMemoryCopy-10935
The `indirectMemoryCopy` feature **must** be enabled
- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-10936
The `VkCommandPool` that `commandBuffer` was allocated from **must** support at least one of the queue types specified in `VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR::supportedQueues`
- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-10937
`commandBuffer` must not be a protected command buffer

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMemoryIndirectKHR-pCopyMemoryIndirectInfo-parameter `pCopyMemoryIndirectInfo` **must** be a valid pointer to a valid `VkCopyMemoryIndirectInfoKHR` structure
- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdCopyMemoryIndirectKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryIndirectKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryIndirectKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyMemoryIndirectKHR` is not affected by `conditional rendering`

The [VkCopyMemoryIndirectInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkCopyMemoryIndirectInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkAddressCopyFlagsKHR srcCopyFlags;
    VkAddressCopyFlagsKHR dstCopyFlags;
    uint32_t             copyCount;
    VkStridedDeviceAddressRangeKHR copyAddressRange;
} VkCopyMemoryIndirectInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcCopyFlags` is a [VkAddressCopyFlagsKHR](#) value defining the copy flags for the source address range.
- `dstCopyFlags` is a [VkAddressCopyFlagsKHR](#) value defining the copy flags for the destination address range.
- `copyCount` is the number of copies to execute, and **can** be zero.
- `copyAddressRange` is a memory region specifying the copy parameters. It is laid out as an array of [VkCopyMemoryIndirectCommandKHR](#) structures.

Valid Usage

- VUID-VkCopyMemoryIndirectInfoKHR-srcCopyFlags-10938
If `srcCopyFlags` contains [VK_ADDRESS_COPY_SPARSE_BIT_KHR](#), the source memory regions accessed **must** be [bound to memory](#)
- VUID-VkCopyMemoryIndirectInfoKHR-dstCopyFlags-10939
If `dstCopyFlags` contains [VK_ADDRESS_COPY_SPARSE_BIT_KHR](#), the destination memory regions accessed **must** be [bound to memory](#)
- VUID-VkCopyMemoryIndirectInfoKHR-srcCopyFlags-10940
`srcCopyFlags` **must** not contain [VK_ADDRESS_COPY_PROTECTED_BIT_KHR](#)
- VUID-VkCopyMemoryIndirectInfoKHR-dstCopyFlags-10941
`dstCopyFlags` **must** not contain [VK_ADDRESS_COPY_PROTECTED_BIT_KHR](#)
- VUID-VkCopyMemoryIndirectInfoKHR-copyAddressRange-10942
`copyAddressRange.address` **must** be 4 byte aligned
- VUID-VkCopyMemoryIndirectInfoKHR-copyAddressRange-10943
`copyAddressRange.stride` **must** be a multiple of 4 and **must** be greater than or equal to `sizeof(VkCopyMemoryIndirectCommandKHR)`
- VUID-VkCopyMemoryIndirectInfoKHR-copyCount-10944
`copyCount` **must** be less than or equal to `copyAddressRange.size / copyAddressRange.stride`
- VUID-VkCopyMemoryIndirectInfoKHR-copyAddressRange-10945

Any of the source or destination memory regions specified in `copyAddressRange` **must** not overlap with any of the specified destination memory regions

- VUID-VkCopyMemoryIndirectInfoKHR-copyAddressRange-12210
`copyAddressRange` **must** be a device address range allocated to the application from a buffer created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set

Valid Usage (Implicit)

- VUID-VkCopyMemoryIndirectInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_MEMORY_INDIRECT_INFO_KHR`
- VUID-VkCopyMemoryIndirectInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyMemoryIndirectInfoKHR-srcCopyFlags-parameter
`srcCopyFlags` **must** be a valid combination of `VkAddressCopyFlagBitsKHR` values
- VUID-VkCopyMemoryIndirectInfoKHR-dstCopyFlags-parameter
`dstCopyFlags` **must** be a valid combination of `VkAddressCopyFlagBitsKHR` values

The structure describing source and destination memory regions, `VkCopyMemoryIndirectCommandKHR` is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkCopyMemoryIndirectCommandKHR {
    VkDeviceAddress    srcAddress;
    VkDeviceAddress    dstAddress;
    VkDeviceSize       size;
} VkCopyMemoryIndirectCommandKHR;
```

```
// Provided by VK_NV_copy_memory_indirect
// Equivalent to VkCopyMemoryIndirectCommandKHR
typedef VkCopyMemoryIndirectCommandKHR VkCopyMemoryIndirectCommandNV;
```

- `srcAddress` is the starting address of the source device memory to copy from.
- `dstAddress` is the starting address of the destination device memory to copy to.
- `size` is the size of the copy in bytes.

Valid Usage

- VUID-VkCopyMemoryIndirectCommandKHR-srcAddress-10958
The `srcAddress` **must** be 4 byte aligned
- VUID-VkCopyMemoryIndirectCommandKHR-dstAddress-10959
The `dstAddress` **must** be 4 byte aligned

- VUID-VkCopyMemoryIndirectCommandKHR-size-10960
The **size** must be 4 byte aligned
- VUID-VkCopyMemoryIndirectCommandKHR-srcAddress-10961
The memory in range [**srcAddress**, **srcAddress** + **size** - 1] must be within the bounds of the memory allocation backing **srcAddress**
- VUID-VkCopyMemoryIndirectCommandKHR-dstAddress-10962
The memory in range [**dstAddress**, **dstAddress** + **size** - 1] must be within the bounds of the memory allocation backing **dstAddress**
- VUID-VkCopyMemoryIndirectCommandKHR-srcAddress-12211
The range of memory defined by **srcAddress** and **size** must be a device address range allocated to the application from a buffer created with the **VK_BUFFER_USAGE_TRANSFER_SRC_BIT** usage flag set
- VUID-VkCopyMemoryIndirectCommandKHR-dstAddress-12212
The range of memory defined by **dstAddress** and **size** must be a device address range allocated to the application from a buffer created with the **VK_BUFFER_USAGE_TRANSFER_DST_BIT** usage flag set

Valid Usage (Implicit)

- VUID-VkCopyMemoryIndirectCommandKHR-srcAddress-parameter
srcAddress must be a valid **VkDeviceAddress** value
- VUID-VkCopyMemoryIndirectCommandKHR-dstAddress-parameter
dstAddress must be a valid **VkDeviceAddress** value

Bits which **can** be set in a **VkAddressCopyFlagsKHR** mask are:

```
// Provided by VK_KHR_copy_memory_indirect
typedef enum VkAddressCopyFlagBitsKHR {
    VK_ADDRESS_COPY_DEVICE_LOCAL_BIT_KHR = 0x00000001,
    VK_ADDRESS_COPY_SPARSE_BIT_KHR = 0x00000002,
    VK_ADDRESS_COPY_PROTECTED_BIT_KHR = 0x00000004,
} VkAddressCopyFlagBitsKHR;
```

- **VK_ADDRESS_COPY_DEVICE_LOCAL_BIT_KHR** specifies that the address range is expected to be resident in device local memory. Specifying this value is optional, but **may** lead to improved performance if set accurately.
- **VK_ADDRESS_COPY_PROTECTED_BIT_KHR** specifies that the address range is allocated from protected memory.
- **VK_ADDRESS_COPY_SPARSE_BIT_KHR** specifies that the address range may not be fully bound to physical memory when accessed.

```
// Provided by VK_KHR_copy_memory_indirect
typedef VkFlags VkAddressCopyFlagsKHR;
```

`VkAddressCopyFlagsKHR` is a bitmask type for setting a mask of zero or more `VkAddressCopyFlagBitsKHR`.

To copy data between two memory regions by specifying copy parameters indirectly in memory, call:

```
// Provided by VK_NV_copy_memory_indirect
void vkCmdCopyMemoryIndirectNV(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          copyBufferAddress,
    uint32_t                 copyCount,
    uint32_t                 stride);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `copyBufferAddress` is the memory address specifying the copy parameters. It is laid out as an array of `VkCopyMemoryIndirectCommandNV` structures.
- `copyCount` is the number of copies to execute, and **can** be zero.
- `stride` is the stride in bytes between successive sets of copy parameters.

Each region read from `copyBufferAddress` is copied from the source region to the specified destination region. The results are undefined if any of the source and destination regions overlap in memory.

Valid Usage

- VUID-vkCmdCopyMemoryIndirectNV-None-07653
The `indirectCopy` feature **must** be enabled
- VUID-vkCmdCopyMemoryIndirectNV-copyBufferAddress-07654
`copyBufferAddress` **must** be 4 byte aligned
- VUID-vkCmdCopyMemoryIndirectNV-stride-07655
`stride` **must** be a multiple of 4 and **must** be greater than or equal to `sizeof(VkCopyMemoryIndirectCommandNV)`
- VUID-vkCmdCopyMemoryIndirectNV-commandBuffer-07656
The `VkCommandPool` that `commandBuffer` was allocated from **must** support at least one of the queue types specified in `VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR::supportedQueues`
- VUID-vkCmdCopyMemoryIndirectNV-copyBufferAddress-10946
Any of the source or destination memory regions specified in `copyBufferAddress` **must** not overlap with any of the specified destination memory regions

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryIndirectNV-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyMemoryIndirectNV-copyBufferAddress-parameter **copyBufferAddress** **must** be a valid [VkDeviceAddress](#) value
- VUID-vkCmdCopyMemoryIndirectNV-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdCopyMemoryIndirectNV-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), [VK_QUEUE_GRAPHICS_BIT](#), or [VK_QUEUE_TRANSFER_BIT](#) operations
- VUID-vkCmdCopyMemoryIndirectNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryIndirectNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryIndirectNV-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyMemoryIndirectNV is not affected by [conditional rendering](#)

To copy data from a memory region to an image object by specifying copy parameters in memory, call:

```
// Provided by VK_KHR_copy_memory_indirect
void vkCmdCopyMemoryToImageIndirectKHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyMemoryToImageIndirectInfoKHR* pCopyMemoryToImageIndirectInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyMemoryToImageIndirectInfo` is a pointer to a `VkCopyMemoryToImageIndirectInfoKHR` structure which contains the copy parameters, including the number of copies to execute and a strided array of `VkCopyMemoryToImageIndirectCommandKHR` structures.

Each region specified in the memory referenced by `pCopyMemoryToImageIndirectInfo->copyAddressRange` is copied from the source region to an image region in the destination image. If the destination image is of type `VK_IMAGE_TYPE_3D`, the starting slice and number of slices to copy are specified in `pImageSubresources->baseArrayLayer` and `pImageSubresources->layerCount` respectively as `imageOffset` and `imageExtent` from `VkCopyMemoryToImageIndirectCommandKHR` are only available at device execution time. The results are undefined if any of the source and destination regions overlap in memory.

Valid Usage

- VUID-vkCmdCopyMemoryToImageIndirectKHR-indirectMemoryToImageCopy-10947
The `indirectMemoryToImageCopy` feature **must** be enabled
- VUID-vkCmdCopyMemoryToImageIndirectKHR-commandBuffer-10948
The `VkCommandPool` that `commandBuffer` was allocated from **must** support at least one of the queue types specified in `VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR::supportedQueues`
- VUID-vkCmdCopyMemoryToImageIndirectKHR-commandBuffer-10949
`commandBuffer` must not be a protected command buffer

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToImageIndirectKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMemoryToImageIndirectKHR-pCopyMemoryToImageIndirectInfo-parameter
`pCopyMemoryToImageIndirectInfo` **must** be a valid pointer to a valid `VkCopyMemoryToImageIndirectInfoKHR` structure
- VUID-vkCmdCopyMemoryToImageIndirectKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdCopyMemoryToImageIndirectKHR-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations

- VUID-vkCmdCopyMemoryToImageIndirectKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToImageIndirectKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryToImageIndirectKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyMemoryToImageIndirectKHR` is not affected by [conditional rendering](#)

The `VkCopyMemoryToImageIndirectInfoKHR` structure is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkCopyMemoryToImageIndirectInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkAddressCopyFlagsKHR    srcCopyFlags;
    uint32_t                 copyCount;
    VkStridedDeviceAddressRangeKHR copyAddressRange;
    VkImage                  dstImage;
    VkImageLayout            dstImageLayout;
    const VkImageSubresourceLayers* pImageSubresources;
} VkCopyMemoryToImageIndirectInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **srcCopyFlags** is a [VkAddressCopyFlagsKHR](#) value defining the copy flags for the source address range.
- **copyCount** is the number of copies to execute, and **can** be zero.
- **copyAddressRange** is a memory region specifying the copy parameters. It is laid out as an array of [VkCopyMemoryToImageIndirectCommandKHR](#) structures.
- **dstImage** is the destination image.
- **dstImageLayout** is the layout of the destination image subresources for the copy.
- **pImageSubresources** is a pointer to an array of **copyCount** [VkImageSubresourceLayers](#) structures, specifying the image subresources of the destination image data for the copy operation.

Valid Usage

- VUID-VkCopyMemoryToImageIndirectInfoKHR-srcCopyFlags-10950
If **srcCopyFlags** contains [VK_ADDRESS_COPY_SPARSE_BIT_KHR](#), the source memory regions accessed **must** be [bound to memory](#)
- VUID-VkCopyMemoryToImageIndirectInfoKHR-copyCount-10951
copyCount **must** be less than or equal to `copyAddressRange.size / copyAddressRange.stride`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-copyAddressRange-10952
`copyAddressRange.address` **must** be 4 byte aligned
- VUID-VkCopyMemoryToImageIndirectInfoKHR-copyAddressRange-10953
`copyAddressRange.stride` **must** be a multiple of 4 and **must** be greater than or equal to `sizeof(VkCopyMemoryToImageIndirectCommandKHR)`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-10955
The format features of **dstImage** **must** contain [VK_FORMAT_FEATURE_2_COPY_IMAGE_INDIRECT_DST_BIT_KHR](#)
- VUID-VkCopyMemoryToImageIndirectInfoKHR-copyAddressRange-12213
copyAddressRange **must** be a device address range allocated to the application from a buffer created with the [VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT](#) usage flag set

- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-07661
`dstImage` **must** not be a protected image
- VUID-VkCopyMemoryToImageIndirectInfoKHR-aspectMask-07662
The `aspectMask` member for every subresource in `pImageSubresources` **must** only have a single bit set
- VUID-VkCopyMemoryToImageIndirectInfoKHR-aspectMask-12287
The `aspectMask` member for every subresource in `pImageSubresources` **must** specify an aspect present in `dstImage`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-07664
`dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-07665
If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-07973
`dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImageLayout-07667
`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` at the time this command is executed on a `VkDevice`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImageLayout-07669
`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-mipLevel-07670
The specified `mipLevel` of each region in `pImageSubresources` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-12288
If `dstImage` is not of type `VK_IMAGE_TYPE_3D`, and the specified `layerCount` of each region in `pImageSubresources` is not `VK_REMAINING_ARRAY_LAYERS`, the specified `baseArrayLayer` + `layerCount` of each region in `pImageSubresources` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-12289
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, and the specified `layerCount` of each region in `pImageSubresources` is not `VK_REMAINING_ARRAY_LAYERS`, for each destination region, $(\text{imageSubresource.baseArrayLayer} + \text{imageSubresource.layerCount})$ **must** be less than or equal to the depth of the specified subresource
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-12290
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, and the specified `layerCount` of each region in `pImageSubresources` is not `VK_REMAINING_ARRAY_LAYERS`, for each destination region, if $(\text{imageSubresource.baseArrayLayer} + \text{imageSubresource.layerCount})$ does not equal the depth of the specified subresource, `imageSubresource.layerCount` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-12291
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each destination region,

`imageSubresource.baseArrayLayer` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-12292
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each destination region, `imageSubresource.baseArrayLayer` **must** be less than or equal to the depth of the specified subresource
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-07673
`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-commandBuffer-07674
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, for each region, the `aspectMask` member of `pImageSubresources` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-10974
The format features of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-copyAddressRange-10975
Any of the source or destination memory regions specified in `copyAddressRange` **must** not overlap with any of the specified destination memory regions at the time this command is executed on device

Valid Usage (Implicit)

- VUID-VkCopyMemoryToImageIndirectInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_MEMORY_TO_IMAGE_INDIRECT_INFO_KHR`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyMemoryToImageIndirectInfoKHR-srcCopyFlags-parameter
`srcCopyFlags` **must** be a valid combination of `VkAddressCopyFlagBitsKHR` values
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-VkCopyMemoryToImageIndirectInfoKHR-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkCopyMemoryToImageIndirectInfoKHR-pImageSubresources-parameter
`pImageSubresources` **must** be a valid pointer to an array of `copyCount` valid `VkImageSubresourceLayers` structures
- VUID-VkCopyMemoryToImageIndirectInfoKHR-copyCount-arraylength
`copyCount` **must** be greater than 0

The structure describing source and destination memory regions, `VkCopyMemoryToImageIndirectCommandKHR` is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkCopyMemoryToImageIndirectCommandKHR {
    VkDeviceAddress      srcAddress;
    uint32_t             bufferRowLength;
    uint32_t             bufferImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D           imageOffset;
    VkExtent3D           imageExtent;
} VkCopyMemoryToImageIndirectCommandKHR;
```

```
// Provided by VK_NV_copy_memory_indirect
// Equivalent to VkCopyMemoryToImageIndirectCommandKHR
typedef VkCopyMemoryToImageIndirectCommandKHR VkCopyMemoryToImageIndirectCommandNV;
```

- **srcAddress** is the starting address of the source device memory to copy from.
- **bufferRowLength** and **bufferImageHeight** specify in texels a subregion of a larger two- or three-dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the **imageExtent**.
- **imageSubresource** is a **VkImageSubresourceLayers** structure used to specify the specific image subresources of the image used for the destination image data, which **must** match the value specified in corresponding index of the **pCopyMemoryToImageIndirectInfo->pImageSubresources** array of **vkCmdCopyMemoryToImageIndirectKHR** during command recording.
- **imageOffset** selects the initial **x, y, z** offsets in texels of the sub-region of the destination image data.
- **imageExtent** is the size in texels of the destination image in **width, height** and **depth**.

Valid Usage

- VUID-VkCopyMemoryToImageIndirectCommandKHR-srcAddress-10963
The **srcAddress** **must** be 4 byte aligned
- VUID-VkCopyMemoryToImageIndirectCommandKHR-dstImage-12282
If **dstImage** does not have either a depth/stencil format or a **multi-planar format**, **srcAddress** **must** be a multiple of the **texel block size**
- VUID-VkCopyMemoryToImageIndirectCommandKHR-dstImage-12283
If **dstImage** has a **multi-planar format**, **srcAddress** **must** be a multiple of the element size of the compatible format for the format and the **aspectMask** of the **imageSubresource** as defined in **Compatible Formats of Planes of Multi-Planar Formats**
- VUID-VkCopyMemoryToImageIndirectCommandKHR-bufferRowLength-10964
bufferRowLength **must** be 0, or greater than or equal to the **width** member of **imageExtent**
- VUID-VkCopyMemoryToImageIndirectCommandKHR-bufferImageHeight-10965
bufferImageHeight **must** be 0, or greater than or equal to the **height** member of **imageExtent**

- VUID-VkCopyMemoryToImageIndirectCommandKHR-imageOffset-10966
`imageOffset` **must** specify a valid offset in the destination image
- VUID-VkCopyMemoryToImageIndirectCommandKHR-imageExtent-10967
`imageExtent` **must** specify a valid region in the destination image and **can** be 0
- VUID-VkCopyMemoryToImageIndirectCommandKHR-srcAddress-10968
The memory region starting at `srcAddress` and described by `bufferRowLength` and `bufferImageHeight` **must** not exceed the bounds of the memory allocation backing memory at `srcAddress`
- VUID-VkCopyMemoryToImageIndirectCommandKHR-imageOffset-10969
The `imageOffset` and `imageExtent` members of each region **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in [VkQueueFamilyProperties](#)
- VUID-VkCopyMemoryToImageIndirectCommandKHR-imageOffset-10970
For each destination region, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified subresource
- VUID-VkCopyMemoryToImageIndirectCommandKHR-imageOffset-10971
For each destination region, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified subresource
- VUID-VkCopyMemoryToImageIndirectCommandKHR-imageSubresource-12284
The members of `imageSubresource` **must** be identical to the members of the [VkImageSubresourceLayers](#) structure specified in the corresponding index of the `pCopyMemoryToImageIndirectInfo->pImageSubresources` array of [vkCmdCopyMemoryToImageIndirectKHR](#) during command recording
- VUID-VkCopyMemoryToImageIndirectCommandKHR-dstImage-12285
If `dstImage` is of type [VK_IMAGE_TYPE_1D](#), `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1
- VUID-VkCopyMemoryToImageIndirectCommandKHR-dstImage-12286
If `dstImage` is of type [VK_IMAGE_TYPE_1D](#) or [VK_IMAGE_TYPE_2D](#), `imageOffset.z` **must** be 0 and `imageExtent.depth` **must** be 1
- VUID-VkCopyMemoryToImageIndirectCommandKHR-srcAddress-12214
`srcAddress` **must** be a device address allocated to the application from a buffer created with the [VK_BUFFER_USAGE_TRANSFER_SRC_BIT](#) usage flag set

Valid Usage (Implicit)

- VUID-VkCopyMemoryToImageIndirectCommandKHR-srcAddress-parameter
`srcAddress` **must** be a valid [VkDeviceAddress](#) value
- VUID-VkCopyMemoryToImageIndirectCommandKHR-imageSubresource-parameter
`imageSubresource` **must** be a valid [VkImageSubresourceLayers](#) structure

To copy data from a memory region to an image object by specifying copy parameters in memory, call:

```
// Provided by VK_NV_copy_memory_indirect
void vkCmdCopyMemoryToImageIndirectNV(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          copyBufferAddress,
    uint32_t                 copyCount,
    uint32_t                 stride,
    VkImage                  dstImage,
    VkImageLayout            dstImageLayout,
    const VkImageSubresourceLayers* pImageSubresources);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `copyBufferAddress` is the address specifying the copy parameters which are laid out in memory as an array of `VkCopyMemoryToImageIndirectCommandNV` structures.
- `copyCount` is the number of copies to execute, and **can** be zero.
- `stride` is the byte stride between successive sets of copy parameters.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
- `pImageSubresources` is a pointer to an array of `copyCount` `VkImageSubresourceLayers` structures, specifying the image subresources of the destination image data for the copy operation.

Each region in `copyBufferAddress` is copied from the source memory region to an image region in the destination image. If the destination image is of type `VK_IMAGE_TYPE_3D`, the starting slice and number of slices to copy are specified in `pImageSubresources->baseArrayLayer` and `pImageSubresources->layerCount` respectively.

Valid Usage

- VUID-vkCmdCopyMemoryToImageIndirectNV-None-07660
The `indirectCopy` feature **must** be enabled
- VUID-vkCmdCopyMemoryToImageIndirectNV-offset-07676
`copyBufferAddress` **must** be 4 byte aligned
- VUID-vkCmdCopyMemoryToImageIndirectNV-stride-07677
`stride` **must** be a multiple of 4 and **must** be greater than or equal to `sizeof(VkCopyMemoryToImageIndirectCommandNV)`
- VUID-vkCmdCopyMemoryToImageIndirectNV-commandBuffer-10956
The `VkCommandPool` that `commandBuffer` was allocated from **must** support at least one of the queue types specified in `VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR::supportedQueues`
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07661
`dstImage` **must** not be a protected image

- VUID-vkCmdCopyMemoryToImageIndirectNV-aspectMask-07662
The `aspectMask` member for every subresource in `pImageSubresources` **must** only have a single bit set
- VUID-vkCmdCopyMemoryToImageIndirectNV-aspectMask-12287
The `aspectMask` member for every subresource in `pImageSubresources` **must** specify an aspect present in `dstImage`
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07664
`dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07665
If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07973
`dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImageLayout-07667
`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` at the time this command is executed on a `VkDevice`
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImageLayout-07669
`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdCopyMemoryToImageIndirectNV-mipLevel-07670
The specified `mipLevel` of each region in `pImageSubresources` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-12288
If `dstImage` is not of type `VK_IMAGE_TYPE_3D`, and the specified `layerCount` of each region in `pImageSubresources` is not `VK_REMAINING_ARRAY_LAYERS`, the specified `baseArrayLayer` + `layerCount` of each region in `pImageSubresources` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-12289
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, and the specified `layerCount` of each region in `pImageSubresources` is not `VK_REMAINING_ARRAY_LAYERS`, for each destination region, $(\text{imageSubresource.baseArrayLayer} + \text{imageSubresource.layerCount})$ **must** be less than or equal to the depth of the specified subresource
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-12290
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, and the specified `layerCount` of each region in `pImageSubresources` is not `VK_REMAINING_ARRAY_LAYERS`, for each destination region, if $(\text{imageSubresource.baseArrayLayer} + \text{imageSubresource.layerCount})$ does not equal the depth of the specified subresource, `imageSubresource.layerCount` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-12291
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each destination region, `imageSubresource.baseArrayLayer` **must** be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-12292
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each destination region, `imageSubresource.baseArrayLayer` **must** be less than or equal to the depth of the specified subresource
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07673
`dstImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-vkCmdCopyMemoryToImageIndirectNV-commandBuffer-07674
If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, for each region, the `aspectMask` member of `pImageSubresources` **must** not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-10974
The format features of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`
- VUID-vkCmdCopyMemoryToImageIndirectNV-copyBufferAddress-10975
Any of the source or destination memory regions specified in `copyBufferAddress` **must** not overlap with any of the specified destination memory regions at the time this command is executed on device

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToImageIndirectNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMemoryToImageIndirectNV-copyBufferAddress-parameter
`copyBufferAddress` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdCopyMemoryToImageIndirectNV-pImageSubresources-parameter
`pImageSubresources` **must** be a valid pointer to an array of `copyCount` valid `VkImageSubresourceLayers` structures
- VUID-vkCmdCopyMemoryToImageIndirectNV-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyMemoryToImageIndirectNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdCopyMemoryToImageIndirectNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToImageIndirectNV-suspended
This command **must** not be called between suspended render pass instances

- VUID-vkCmdCopyMemoryToImageIndirectNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyMemoryToImageIndirectNV-copyCount-arraylength
copyCount **must** be greater than 0
- VUID-vkCmdCopyMemoryToImageIndirectNV-commonparent
Both of **commandBuffer**, and **dstImage** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyMemoryToImageIndirectNV is not affected by [conditional rendering](#)

25.7. Image Copies With Scaling

To copy regions of a source image into a destination image, potentially performing format conversion, arbitrary scaling, and filtering, call:

```
// Provided by VK_VERSION_1_0
void vkCmdBlitImage(
    VkCommandBuffer          commandBuffer,
    VkImage                  srcImage,
    VkImageLayout            srcImageLayout,
    VkImage                  dstImage,
    VkImageLayout            dstImageLayout,
    uint32_t                 regionCount,
    const VkImageBlit*       pRegions,
    VkFilter                  filter);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the blit.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the blit.
- `regionCount` is the number of regions to blit.
- `pRegions` is a pointer to an array of `VkImageBlit` structures specifying the regions to blit.
- `filter` is a `VkFilter` specifying the filter to apply if the blits require scaling.

`vkCmdBlitImage` **must** not be used for multisampled source or destination images. Use `vkCmdResolveImage` for this purpose.

As the sizes of the source and destination extents **can** differ in any dimension, texels in the source extent are scaled and filtered to the destination extent. Scaling occurs via the following operations:

- For each destination texel, the integer coordinate of that texel is converted to an unnormalized texture coordinate, using the effective inverse of the equations described in [unnormalized to integer conversion](#):

$$u_{\text{base}} = i + \frac{1}{2}$$

$$v_{\text{base}} = j + \frac{1}{2}$$

$$w_{\text{base}} = k + \frac{1}{2}$$

- These base coordinates are then offset by the first destination offset:

$$u_{\text{offset}} = u_{\text{base}} - x_{\text{dst0}}$$

$$v_{\text{offset}} = v_{\text{base}} - y_{\text{dst0}}$$

$$W_{\text{offset}} = W_{\text{base}} - Z_{\text{dst0}}$$

$$a_{\text{offset}} = a - \text{baseArrayCount}_{\text{dst}}$$

- The scale is determined from the source and destination regions, and applied to the offset coordinates:

$$\text{scale}_u = (x_{\text{src1}} - x_{\text{src0}}) / (x_{\text{dst1}} - x_{\text{dst0}})$$

$$\text{scale}_v = (y_{\text{src1}} - y_{\text{src0}}) / (y_{\text{dst1}} - y_{\text{dst0}})$$

$$\text{scale}_w = (z_{\text{src1}} - z_{\text{src0}}) / (z_{\text{dst1}} - z_{\text{dst0}})$$

$$u_{\text{scaled}} = u_{\text{offset}} \times \text{scale}_u$$

$$v_{\text{scaled}} = v_{\text{offset}} \times \text{scale}_v$$

$$w_{\text{scaled}} = w_{\text{offset}} \times \text{scale}_w$$

- Finally the source offset is added to the scaled coordinates, to determine the final unnormalized coordinates used to sample from `srcImage`:

$$u = u_{\text{scaled}} + x_{\text{src0}}$$

$$v = v_{\text{scaled}} + y_{\text{src0}}$$

$$w = w_{\text{scaled}} + z_{\text{src0}}$$

$$q = \text{mipLevel}$$

$$a = a_{\text{offset}} + \text{baseArrayCount}_{\text{src}}$$

These coordinates are used to sample from the source image, as described in [Image Operations chapter](#), with the filter mode equal to that of `filter`, a mipmap mode of `VK_SAMPLER_MIPMAP_MODE_NEAREST` and an address mode of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`. Implementations **must** clamp at the edge of the

source image, and **may** additionally clamp to the edge of the source region.

NOTE

Due to allowable rounding errors in the generation of the source texture coordinates, it is not always possible to guarantee exactly which source texels will be sampled for a given blit. As rounding errors are implementation-dependent, the exact results of a blitting operation are also implementation-dependent.

Blits are done layer by layer starting with the `baseArrayLayer` member of `srcSubresource` for the source and `dstSubresource` for the destination. `layerCount` layers are blitted to the destination image.

When blitting 3D textures, slices in the destination region bounded by `dstOffsets[0].z` and `dstOffsets[1].z` are sampled from slices in the source region bounded by `srcOffsets[0].z` and `srcOffsets[1].z`. If the `filter` parameter is `VK_FILTER_LINEAR` then the value sampled from the source image is taken by doing linear filtering using the interpolated `z` coordinate represented by `w` in the previous equations. If the `filter` parameter is `VK_FILTER_NEAREST` then the value sampled from the source image is taken from the single nearest slice, with an implementation-dependent arithmetic rounding mode.

The following filtering and conversion rules apply:

- Integer formats **can** only be converted to other integer formats with the same signedness.
- No format conversion is supported between depth/stencil images. The formats **must** match.
- Format conversions on unorm, snorm, scaled and packed float formats of the copied aspect of the image are performed by first converting the pixels to float values.
- For sRGB source formats, nonlinear RGB values are converted to linear representation prior to filtering.
- After filtering, the float values are first clamped and then cast to the destination image format. In case of sRGB destination format, linear RGB values are converted to nonlinear representation before writing the pixel to the image.

Signed and unsigned integers are converted by first clamping to the representable range of the destination format, then casting the value.

Valid Usage

- VUID-vkCmdBlitImage-commandBuffer-01834
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdBlitImage-commandBuffer-01835
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdBlitImage-commandBuffer-01836
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdBlitImage-pRegions-00217

The union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory with any texel that **may** be sampled during the blit operation

- VUID-vkCmdBlitImage-srcImage-01999
The `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_BLIT_SRC_BIT`
- VUID-vkCmdBlitImage-srcImage-06421
`srcImage` **must** not use a `format that requires a sampler Y'CBCR conversion`
- VUID-vkCmdBlitImage-srcImage-00219
`srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set
- VUID-vkCmdBlitImage-srcImage-00220
If `srcImage` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBlitImage-srcImageLayout-00221
`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-vkCmdBlitImage-srcImageLayout-01398
`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdBlitImage-srcImage-09459
If `srcImage` and `dstImage` are the same, and an elements of `pRegions` contains the `srcSubresource` and `dstSubresource` with matching `mipLevel` and overlapping array layers, then the `srcImageLayout` and `dstImageLayout` **must** be `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`
- VUID-vkCmdBlitImage-dstImage-02000
The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_BLIT_DST_BIT`
- VUID-vkCmdBlitImage-dstImage-06422
`dstImage` **must** not use a `format that requires a sampler Y'CBCR conversion`
- VUID-vkCmdBlitImage-dstImage-00224
`dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-vkCmdBlitImage-dstImage-00225
If `dstImage` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBlitImage-dstImageLayout-00226
`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-vkCmdBlitImage-dstImageLayout-01399
`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdBlitImage-srcImage-00229
If either of `srcImage` or `dstImage` was created with a signed integer `VkFormat`, the other **must** also have been created with a signed integer `VkFormat`

- VUID-vkCmdBlitImage-srcImage-00230
If either of `srcImage` or `dstImage` was created with an unsigned integer `VkFormat`, the other **must** also have been created with an unsigned integer `VkFormat`
- VUID-vkCmdBlitImage-srcImage-00231
If either of `srcImage` or `dstImage` was created with a depth/stencil format, the other **must** have exactly the same format
- VUID-vkCmdBlitImage-srcImage-00232
If `srcImage` was created with a depth/stencil format, `filter` **must** be `VK_FILTER_NEAREST`
- VUID-vkCmdBlitImage-srcImage-00233
`srcImage` **must** have been created with a `samples` value of `VK_SAMPLE_COUNT_1_BIT`
- VUID-vkCmdBlitImage-dstImage-00234
`dstImage` **must** have been created with a `samples` value of `VK_SAMPLE_COUNT_1_BIT`
- VUID-vkCmdBlitImage-filter-02001
If `filter` is `VK_FILTER_LINEAR`, then the `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdBlitImage-filter-02002
If `filter` is `VK_FILTER_CUBIC_EXT`, then the `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-vkCmdBlitImage-filter-00237
If `filter` is `VK_FILTER_CUBIC_EXT`, `srcImage` **must** be of type `VK_IMAGE_TYPE_2D`
- VUID-vkCmdBlitImage-srcSubresource-01705
The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-vkCmdBlitImage-dstSubresource-01706
The `dstSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-vkCmdBlitImage-srcSubresource-01707
If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer + srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-vkCmdBlitImage-dstSubresource-01708
If `dstSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `dstSubresource.baseArrayLayer + dstSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-vkCmdBlitImage-dstImage-02545
`dstImage` and `srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-vkCmdBlitImage-maintenance8-10207
If the `maintenance8` feature is enabled and `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` **must** be `0`, and `srcSubresource.layerCount` and `dstSubresource.layerCount` **must** each be `1`

- VUID-vkCmdBlitImage-maintenance8-10208
If the `maintenance8` feature is enabled and `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstSubresource.baseArrayLayer` **must** be `0`, and `srcSubresource.layerCount` and `dstSubresource.layerCount` **must** each be `1`
- VUID-vkCmdBlitImage-maintenance8-10579
If the `maintenance8` feature is enabled, `dstImage` is `VK_IMAGE_TYPE_3D`, and `srcImage` is not of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, the absolute difference of the `z` member of each member of `dstOffsets` **must** equal `srcSubresource.layerCount`
- VUID-vkCmdBlitImage-maintenance8-10580
If the `maintenance8` feature is enabled, `srcImage` is `VK_IMAGE_TYPE_3D`, and `dstImage` is not of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, the absolute difference of the `z` member of each member of `srcOffsets` **must** equal `dstSubresource.layerCount`
- VUID-vkCmdBlitImage-srcImage-00240
If the `maintenance8` feature is not enabled and either `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` and `dstSubresource.baseArrayLayer` **must** each be `0`, and `srcSubresource.layerCount` and `dstSubresource.layerCount` **must** each be `1`
- VUID-vkCmdBlitImage-aspectMask-00241
For each element of `pRegions`, `srcSubresource.aspectMask` **must** specify aspects present in `srcImage`
- VUID-vkCmdBlitImage-aspectMask-00242
For each element of `pRegions`, `dstSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-vkCmdBlitImage-srcOffset-00243
For each element of `pRegions`, `srcOffsets[0].x` and `srcOffsets[1].x` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdBlitImage-srcOffset-00244
For each element of `pRegions`, `srcOffsets[0].y` and `srcOffsets[1].y` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdBlitImage-srcImage-00245
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffsets[0].y` **must** be `0` and `srcOffsets[1].y` **must** be `1`
- VUID-vkCmdBlitImage-srcOffset-00246
For each element of `pRegions`, `srcOffsets[0].z` and `srcOffsets[1].z` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdBlitImage-srcImage-00247
If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `srcOffsets[0].z` **must** be `0` and `srcOffsets[1].z` **must** be `1`
- VUID-vkCmdBlitImage-dstOffset-00248
For each element of `pRegions`, `dstOffsets[0].x` and `dstOffsets[1].x` **must** both be greater

than or equal to 0 and less than or equal to the width of the specified `dstSubresource` of `dstImage`

- VUID-vkCmdBlitImage-dstOffset-00249

For each element of `pRegions`, `dstOffsets[0].y` and `dstOffsets[1].y` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `dstSubresource` of `dstImage`

- VUID-vkCmdBlitImage-dstImage-00250

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffsets[0].y` **must** be 0 and `dstOffsets[1].y` **must** be 1

- VUID-vkCmdBlitImage-dstOffset-00251

For each element of `pRegions`, `dstOffsets[0].z` and `dstOffsets[1].z` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `dstSubresource` of `dstImage`

- VUID-vkCmdBlitImage-dstImage-00252

If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `dstOffsets[0].z` **must** be 0 and `dstOffsets[1].z` **must** be 1

Valid Usage (Implicit)

- VUID-vkCmdBlitImage-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdBlitImage-srcImage-parameter

`srcImage` **must** be a valid `VkImage` handle

- VUID-vkCmdBlitImage-srcImageLayout-parameter

`srcImageLayout` **must** be a valid `VkImageLayout` value

- VUID-vkCmdBlitImage-dstImage-parameter

`dstImage` **must** be a valid `VkImage` handle

- VUID-vkCmdBlitImage-dstImageLayout-parameter

`dstImageLayout` **must** be a valid `VkImageLayout` value

- VUID-vkCmdBlitImage-pRegions-parameter

`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkImageBlit` structures

- VUID-vkCmdBlitImage-filter-parameter

`filter` **must** be a valid `VkFilter` value

- VUID-vkCmdBlitImage-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdBlitImage-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations

- VUID-vkCmdBlitImage-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdBlitImage-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdBlitImage-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdBlitImage-regionCount-arraylength

regionCount **must** be greater than 0

- VUID-vkCmdBlitImage-commonparent

Each of **commandBuffer**, **dstImage**, and **srcImage** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_GRAPHICS HICS_BIT	Action

Conditional Rendering

vkCmdBlitImage is not affected by **conditional rendering**

The **VkImageBlit** structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageBlit {
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D srcOffsets[2];
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D dstOffsets[2];
} VkImageBlit;
```

- **srcSubresource** is the subresource to blit from.
- **srcOffsets** is a pointer to an array of two **VkOffset3D** structures specifying the bounds of the source region within **srcSubresource**.
- **dstSubresource** is the subresource to blit into.

- `dstOffsets` is a pointer to an array of two `VkOffset3D` structures specifying the bounds of the destination region within `dstSubresource`.

For each element of the `pRegions` array, a blit operation is performed for the specified source and destination regions.

Valid Usage

- VUID-VkImageBlit-aspectMask-00238
The `aspectMask` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageBlit-layerCount-08800
If neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` members of `srcSubresource` or `dstSubresource` **must** match
- VUID-VkImageBlit-layerCount-08801
If one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member **must** be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

Valid Usage (Implicit)

- VUID-VkImageBlit-srcSubresource-parameter
`srcSubresource` **must** be a valid `VkImageSubresourceLayers` structure
- VUID-VkImageBlit-dstSubresource-parameter
`dstSubresource` **must** be a valid `VkImageSubresourceLayers` structure

A more extensible version of the blit image command is defined below.

To copy regions of a source image into a destination image, potentially performing format conversion, arbitrary scaling, and filtering, call:

```
// Provided by VK_VERSION_1_3
void vkCmdBlitImage2(
    VkCommandBuffer          commandBuffer,
    const VkBlitImageInfo2* pBlitImageInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdBlitImage2
void vkCmdBlitImage2KHR(
    VkCommandBuffer          commandBuffer,
    const VkBlitImageInfo2* pBlitImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pBlitImageInfo` is a pointer to a `VkBlitImageInfo2` structure describing the blit parameters.

This command is functionally identical to `vkCmdBlitImage`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdBlitImage2-commandBuffer-01834
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdBlitImage2-commandBuffer-01835
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdBlitImage2-commandBuffer-01836
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image

Valid Usage (Implicit)

- VUID-vkCmdBlitImage2-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBlitImage2-pBlitImageInfo-parameter
`pBlitImageInfo` **must** be a valid pointer to a valid `VkBlitImageInfo2` structure
- VUID-vkCmdBlitImage2-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBlitImage2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBlitImage2-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBlitImage2-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBlitImage2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_GRAP HICS_BIT	Action

Conditional Rendering

vkCmdBlitImage2 is not affected by [conditional rendering](#)

The `VkBlitImageInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkBlitImageInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             srcImage;
    VkImageLayout       srcImageLayout;
    VkImage             dstImage;
    VkImageLayout       dstImageLayout;
    uint32_t            regionCount;
    const VkImageBlit2* pRegions;
    VkFilter             filter;
} VkBlitImageInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkBlitImageInfo2
typedef VkBlitImageInfo2 VkBlitImageInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the blit.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the blit.
- `regionCount` is the number of regions to blit.
- `pRegions` is a pointer to an array of `VkImageBlit2` structures specifying the regions to blit.
- `filter` is a `VkFilter` specifying the filter to apply if the blits require scaling.

Valid Usage

- VUID-VkBlitImageInfo2-pRegions-00217

The union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory with any texel that **may** be sampled during the blit operation

- VUID-VkBlitImageInfo2-srcImage-01999

The `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_BLIT_SRC_BIT`

- VUID-VkBlitImageInfo2-srcImage-06421

`srcImage` **must** not use a `format that requires a sampler Y'CBCR conversion`

- VUID-VkBlitImageInfo2-srcImage-00219

`srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set

- VUID-VkBlitImageInfo2-srcImage-00220

If `srcImage` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkBlitImageInfo2-srcImageLayout-00221

`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`

- VUID-VkBlitImageInfo2-srcImageLayout-01398

`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`

- VUID-VkBlitImageInfo2-srcImage-09459

If `srcImage` and `dstImage` are the same, and an elements of `pRegions` contains the `srcSubresource` and `dstSubresource` with matching `mipLevel` and overlapping array layers, then the `srcImageLayout` and `dstImageLayout` **must** be `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`

- VUID-VkBlitImageInfo2-dstImage-02000

The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_BLIT_DST_BIT`

- VUID-VkBlitImageInfo2-dstImage-06422

`dstImage` **must** not use a `format that requires a sampler Y'CBCR conversion`

- VUID-VkBlitImageInfo2-dstImage-00224

`dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set

- VUID-VkBlitImageInfo2-dstImage-00225

If `dstImage` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkBlitImageInfo2-dstImageLayout-00226

`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`

- VUID-VkBlitImageInfo2-dstImageLayout-01399

`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`

- VUID-VkBlitImageInfo2-srcImage-00229
If either of `srcImage` or `dstImage` was created with a signed integer `VkFormat`, the other **must** also have been created with a signed integer `VkFormat`
- VUID-VkBlitImageInfo2-srcImage-00230
If either of `srcImage` or `dstImage` was created with an unsigned integer `VkFormat`, the other **must** also have been created with an unsigned integer `VkFormat`
- VUID-VkBlitImageInfo2-srcImage-00231
If either of `srcImage` or `dstImage` was created with a depth/stencil format, the other **must** have exactly the same format
- VUID-VkBlitImageInfo2-srcImage-00232
If `srcImage` was created with a depth/stencil format, `filter` **must** be `VK_FILTER_NEAREST`
- VUID-VkBlitImageInfo2-srcImage-00233
`srcImage` **must** have been created with a `samples` value of `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkBlitImageInfo2-dstImage-00234
`dstImage` **must** have been created with a `samples` value of `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkBlitImageInfo2-filter-02001
If `filter` is `VK_FILTER_LINEAR`, then the `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-VkBlitImageInfo2-filter-02002
If `filter` is `VK_FILTER_CUBIC_EXT`, then the `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-VkBlitImageInfo2-filter-00237
If `filter` is `VK_FILTER_CUBIC_EXT`, `srcImage` **must** be of type `VK_IMAGE_TYPE_2D`
- VUID-VkBlitImageInfo2-srcSubresource-01705
The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkBlitImageInfo2-dstSubresource-01706
The `dstSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkBlitImageInfo2-srcSubresource-01707
If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer + srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkBlitImageInfo2-dstSubresource-01708
If `dstSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `dstSubresource.baseArrayLayer + dstSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkBlitImageInfo2-dstImage-02545
`dstImage` and `srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- VUID-VkBlitImageInfo2-maintenance8-10207
If the `maintenance8` feature is enabled and `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` **must** be `0`, and `srcSubresource.layerCount` and `dstSubresource.layerCount` **must** each be `1`
- VUID-VkBlitImageInfo2-maintenance8-10208
If the `maintenance8` feature is enabled and `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstSubresource.baseArrayLayer` **must** be `0`, and `srcSubresource.layerCount` and `dstSubresource.layerCount` **must** each be `1`
- VUID-VkBlitImageInfo2-maintenance8-10579
If the `maintenance8` feature is enabled, `dstImage` is `VK_IMAGE_TYPE_3D`, and `srcImage` is not of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, the absolute difference of the `z` member of each member of `dstOffsets` **must** equal `srcSubresource.layerCount`
- VUID-VkBlitImageInfo2-maintenance8-10580
If the `maintenance8` feature is enabled, `srcImage` is `VK_IMAGE_TYPE_3D`, and `dstImage` is not of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, the absolute difference of the `z` member of each member of `srcOffsets` **must** equal `dstSubresource.layerCount`
- VUID-VkBlitImageInfo2-srcImage-00240
If the `maintenance8` feature is not enabled and either `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.baseArrayLayer` and `dstSubresource.baseArrayLayer` **must** each be `0`, and `srcSubresource.layerCount` and `dstSubresource.layerCount` **must** each be `1`
- VUID-VkBlitImageInfo2-aspectMask-00241
For each element of `pRegions`, `srcSubresource.aspectMask` **must** specify aspects present in `srcImage`
- VUID-VkBlitImageInfo2-aspectMask-00242
For each element of `pRegions`, `dstSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-VkBlitImageInfo2-srcOffset-00243
For each element of `pRegions`, `srcOffsets[0].x` and `srcOffsets[1].x` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `srcSubresource` of `srcImage`
- VUID-VkBlitImageInfo2-srcOffset-00244
For each element of `pRegions`, `srcOffsets[0].y` and `srcOffsets[1].y` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `srcSubresource` of `srcImage`
- VUID-VkBlitImageInfo2-srcImage-00245
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffsets[0].y` **must** be `0` and `srcOffsets[1].y` **must** be `1`
- VUID-VkBlitImageInfo2-srcOffset-00246
For each element of `pRegions`, `srcOffsets[0].z` and `srcOffsets[1].z` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `srcSubresource` of `srcImage`
- VUID-VkBlitImageInfo2-srcImage-00247

If **srcImage** is of type **VK_IMAGE_TYPE_1D** or **VK_IMAGE_TYPE_2D**, then for each element of **pRegions**, **srcOffsets[0].z** **must** be 0 and **srcOffsets[1].z** **must** be 1

- VUID-VkBlitImageInfo2-dstOffset-00248
For each element of **pRegions**, **dstOffsets[0].x** and **dstOffsets[1].x** **must** both be greater than or equal to 0 and less than or equal to the width of the specified **dstSubresource** of **dstImage**
- VUID-VkBlitImageInfo2-dstOffset-00249
For each element of **pRegions**, **dstOffsets[0].y** and **dstOffsets[1].y** **must** both be greater than or equal to 0 and less than or equal to the height of the specified **dstSubresource** of **dstImage**
- VUID-VkBlitImageInfo2-dstImage-00250
If **dstImage** is of type **VK_IMAGE_TYPE_1D**, then for each element of **pRegions**, **dstOffsets[0].y** **must** be 0 and **dstOffsets[1].y** **must** be 1
- VUID-VkBlitImageInfo2-dstOffset-00251
For each element of **pRegions**, **dstOffsets[0].z** and **dstOffsets[1].z** **must** both be greater than or equal to 0 and less than or equal to the depth of the specified **dstSubresource** of **dstImage**
- VUID-VkBlitImageInfo2-dstImage-00252
If **dstImage** is of type **VK_IMAGE_TYPE_1D** or **VK_IMAGE_TYPE_2D**, then for each element of **pRegions**, **dstOffsets[0].z** **must** be 0 and **dstOffsets[1].z** **must** be 1
- VUID-VkBlitImageInfo2-pRegions-04561
If any element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, then **srcImage** and **dstImage** **must** not be block-compressed images
- VUID-VkBlitImageInfo2KHR-pRegions-06207
If any element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, then **srcImage** **must** be of type **VK_IMAGE_TYPE_2D**
- VUID-VkBlitImageInfo2KHR-pRegions-06208
If any element of **pRegions** contains **VkCopyCommandTransformInfoQCOM** in its **pNext** chain, then **srcImage** **must** not have a **multi-planar format**
- VUID-VkBlitImageInfo2-filter-09204
If **filter** is **VK_FILTER_CUBIC_EXT** and if the **selectableCubicWeights** feature is not enabled then the cubic weights **must** be **VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM**

Valid Usage (Implicit)

- VUID-VkBlitImageInfo2-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_BLIT_IMAGE_INFO_2**
- VUID-VkBlitImageInfo2-pNext-pNext
pNext **must** be **NULL** or a pointer to a valid instance of **VkBlitImageCubicWeightsInfoQCOM**
- VUID-VkBlitImageInfo2-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkBlitImageInfo2-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-VkBlitImageInfo2-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkBlitImageInfo2-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-VkBlitImageInfo2-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-VkBlitImageInfo2-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkImageBlit2` structures
- VUID-VkBlitImageInfo2-filter-parameter
`filter` **must** be a valid `VkFilter` value
- VUID-VkBlitImageInfo2-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-VkBlitImageInfo2-commonparent
Both of `dstImage`, and `srcImage` **must** have been created, allocated, or retrieved from the same `VkDevice`

If `filter` is `VK_FILTER_CUBIC_EXT` and if the `pNext` chain of `VkBlitImageInfo2` includes a `VkBlitImageCubicWeightsInfoQCOM` structure, then that structure specifies cubic weights are used in the blit. If that structure is not present, then cubic weights are considered to be `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`.

The `VkBlitImageCubicWeightsInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_filter_cubic_weights
typedef struct VkBlitImageCubicWeightsInfoQCOM {
    VkStructureType      sType;
    const void*          pNext;
    VkCubicFilterWeightsQCOM cubicWeights;
} VkBlitImageCubicWeightsInfoQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cubicWeights` is a `VkCubicFilterWeightsQCOM` value controlling cubic filter weights for the blit.

Valid Usage (Implicit)

- VUID-VkBlitImageCubicWeightsInfoQCOM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BLIT_IMAGE_CUBIC_WEIGHTS_INFO_QCOM`
- VUID-VkBlitImageCubicWeightsInfoQCOM-cubicWeights-parameter
`cubicWeights` **must** be a valid `VkCubicFilterWeightsQCOM` value

Structure Chaining

Extends the structure

- [VkBlitImageInfo2](#)

The [VkImageBlit2](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkImageBlit2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D          srcOffsets[2];
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D          dstOffsets[2];
} VkImageBlit2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkImageBlit2
typedef VkImageBlit2 VkImageBlit2KHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [srcSubresource](#) is the subresource to blit from.
- [srcOffsets](#) is a pointer to an array of two [VkOffset3D](#) structures specifying the bounds of the source region within [srcSubresource](#).
- [dstSubresource](#) is the subresource to blit into.
- [dstOffsets](#) is a pointer to an array of two [VkOffset3D](#) structures specifying the bounds of the destination region within [dstSubresource](#).

For each element of the [pRegions](#) array, a blit operation is performed for the specified source and destination regions.

Valid Usage

- VUID-VkImageBlit2-aspectMask-00238
The [aspectMask](#) member of [srcSubresource](#) and [dstSubresource](#) **must** match
- VUID-VkImageBlit2-layerCount-08800
If neither of the [layerCount](#) members of [srcSubresource](#) or [dstSubresource](#) are [VK_REMAINING_ARRAY_LAYERS](#), the [layerCount](#) members of [srcSubresource](#) or [dstSubresource](#) **must** match
- VUID-VkImageBlit2-layerCount-08801

If one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member **must** be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

Valid Usage (Implicit)

- VUID-VkImageBlit2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_BLIT_2`
- VUID-VkImageBlit2-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkCopyCommandTransformInfoQCOM`
- VUID-VkImageBlit2-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkImageBlit2-srcSubresource-parameter
`srcSubresource` **must** be a valid `VkImageSubresourceLayers` structure
- VUID-VkImageBlit2-dstSubresource-parameter
`dstSubresource` **must** be a valid `VkImageSubresourceLayers` structure

For `vkCmdBlitImage2`, each region copied can include a rotation. To specify a rotated region, add `VkCopyCommandTransformInfoQCOM` to the `pNext` chain of `VkImageBlit2`. For each region with a rotation specified, [Image Blits with Scaling and Rotation](#) specifies how coordinates are rotated prior to sampling from the source image. When rotation is specified, the source and destination images **must** each be 2D images, have a 1x1x1 `texel block extent`, and only one plane.

25.7.1. Image Blits With Scaling and Rotation

When `VkCopyCommandTransformInfoQCOM` is in the `pNext` chain of `VkImageBlit2`, the specified region is rotated during the blit. The following description of rotated addressing replaces the description in `vkCmdBlitImage`.

The following code computes rotation of normalized coordinates.

```
// rotation of normalized coordinates
VkOffset2D RotateNormUV(VkOffset2D in, VkSurfaceTransformFlagBitsKHR flags)
{
    VkOffset2D output;
    switch (flags)
    {
        case VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR:
            out.x = in.x;
            out.y = in.y;
            break;
        case VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR:
            out.x = in.y;
```

```

        out.y = 1.0 - in.x;
        break;
    case VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR:
        out.x = 1.0 - in.x;
        out.y = 1.0 - in.y;
        break;
    case VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR:
        out.x = 1.0 - in.y;
        out.y = in.x;
        break;
    }
    return out;
}

```

- For each destination texel, the integer coordinate of that texel is converted to an unnormalized texture coordinate, using the effective inverse of the equations described in [unnormalized to integer conversion](#):

$$u_{\text{base}} = i + \frac{1}{2}$$

$$v_{\text{base}} = j + \frac{1}{2}$$

$$w_{\text{base}} = k + \frac{1}{2}$$

- These base coordinates are then offset by the first destination offset:

$$u_{\text{offset}} = u_{\text{base}} - x_{\text{dst0}}$$

$$v_{\text{offset}} = v_{\text{base}} - y_{\text{dst0}}$$

$$w_{\text{offset}} = w_{\text{base}} - z_{\text{dst0}}$$

$$a_{\text{offset}} = a - \text{baseArrayCount}_{\text{dst}}$$

- The UV destination coordinates are scaled by the destination region, rotated, and scaled by the source region.

$$u_{\text{dest_scaled}} = u_{\text{offset}} / (x_{\text{dst1}} - x_{\text{dst0}})$$

$$v_{\text{dest_scaled}} = v_{\text{offset}} / (y_{\text{dst1}} - y_{\text{dst0}})$$

$$(u_{src_scaled}, v_{src_scaled}) = \text{RotateNormUV}(u_{dest_scaled}, v_{dest_scaled}, \text{transform})$$

$$u_{scaled} = u_{src_scaled} \times (x_{src1} - x_{src0})$$

$$v_{scaled} = v_{src_scaled} \times (y_{src1} - y_{src0})$$

- The W coordinate is unaffected by rotation. The scale is determined from the ratio of source and destination regions, and applied to the offset coordinate:

$$\text{scale}_w = (z_{src1} - z_{src0}) / (z_{dst1} - z_{dst0})$$

$$w_{scaled} = w_{offset} \times \text{scale}_w$$

- Finally the source offset is added to the scaled source coordinates, to determine the final unnormalized coordinates used to sample from `srcImage`:

$$u = u_{scaled} + x_{src0}$$

$$v = v_{scaled} + y_{src0}$$

$$w = w_{scaled} + z_{src0}$$

$$q = \text{mipLevel}$$

$$a = a_{offset} + \text{baseArrayCount}_{src}$$

These coordinates are used to sample from the source image as described for [Image Operations](#), with the filter mode equal to that of `filter`; a mipmap mode of `VK_SAMPLER_MIPMAP_MODE_NEAREST`; and an address mode of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`. Implementations **must** clamp at the edge of the source image, and **may** additionally clamp to the edge of the source region.

25.8. Resolving Multisample Images

To resolve a multisample color image to a non-multisample color image, call:

```
// Provided by VK_VERSION_1_0
void vkCmdResolveImage(
    VkCommandBuffer          commandBuffer,
    VkImage                  srcImage,
    VkImageLayout            srcImageLayout,
    VkImage                  dstImage,
    VkImageLayout            dstImageLayout,
    uint32_t                 regionCount,
    const VkImageResolve*    pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the resolve.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the resolve.
- `regionCount` is the number of regions to resolve.
- `pRegions` is a pointer to an array of `VkImageResolve` structures specifying the regions to resolve.

During the resolve the samples corresponding to each pixel location in the source are converted to a single sample before being written to the destination.

If the source format is a floating-point or normalized type, the resolve mode is chosen as implementation-dependent behavior. If the resolve mode requires to calculate the result from multiple samples, such as by computing an average or weighted average of the samples, the values for each pixel are resolved with implementation-defined numerical precision.

If the `numeric format` of `srcImage` uses sRGB encoding and the resolve mode requires the implementation to convert the samples to floating-point to perform the calculations, the implementation **should** convert samples from nonlinear to linear before resolving the samples as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#). In this case, the implementation **must** convert the linear averaged value to nonlinear before writing the resolved result to `dstImage`. If the `maintenance10` feature is enabled, whether a nonlinear to linear conversion happens for sRGB encoded resolve is controlled by `resolveSrgbFormatAppliesTransferFunction`.

If the source format is an integer type, a single sample’s value is selected for each pixel.

`srcOffset` and `dstOffset` select the initial `x`, `y`, and `z` offsets in texels of the sub-regions of the source and destination image data. `extent` is the size in texels of the source image to resolve in `width`, `height` and `depth`. Each element of `pRegions` **must** be a region that is contained within its corresponding image.

Resolves are done layer by layer starting with `baseArrayLayer` member of `srcSubresource` for the source and `dstSubresource` for the destination. `layerCount` layers are resolved to the destination image.

Valid Usage

- VUID-vkCmdResolveImage-commandBuffer-01837
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdResolveImage-commandBuffer-01838
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdResolveImage-commandBuffer-01839
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdResolveImage-pRegions-00255
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-vkCmdResolveImage-srcImage-00256
If `srcImage` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdResolveImage-srcImage-00257
`srcImage` **must** have a sample count equal to any valid sample count value other than `VK_SAMPLE_COUNT_1_BIT`
- VUID-vkCmdResolveImage-dstImage-00258
If `dstImage` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdResolveImage-dstImage-00259
`dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-vkCmdResolveImage-srcImageLayout-00260
`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-vkCmdResolveImage-srcImageLayout-01400
`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdResolveImage-dstImageLayout-00262
`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-vkCmdResolveImage-dstImageLayout-01401
`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdResolveImage-maintenance10-11799
If the `maintenance10` feature is enabled, the `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
- VUID-vkCmdResolveImage-dstImage-02003

The `format` features of `dstImage` **must** contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` if the `maintenance10` feature is not enabled

- VUID-vkCmdResolveImage-linearColorAttachment-06519

If the `linearColorAttachment` feature is enabled and the image is created with `VK_IMAGE_TILING_LINEAR`, the `format` features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV`

- VUID-vkCmdResolveImage-srcImage-01386

`srcImage` and `dstImage` **must** have been created with the same image format

- VUID-vkCmdResolveImage-srcSubresource-01709

The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created

- VUID-vkCmdResolveImage-dstSubresource-01710

The `dstSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created

- VUID-vkCmdResolveImage-srcSubresource-01711

If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer` + `srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created

- VUID-vkCmdResolveImage-dstSubresource-01712

If `dstSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `dstSubresource.baseArrayLayer` + `dstSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created

- VUID-vkCmdResolveImage-dstImage-02546

`dstImage` and `srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- VUID-vkCmdResolveImage-srcImage-04446

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.layerCount` **must** be 1

- VUID-vkCmdResolveImage-srcImage-04447

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstSubresource.baseArrayLayer` **must** be 0 and `dstSubresource.layerCount` **must** be 1

- VUID-vkCmdResolveImage-srcOffset-00269

For each element of `pRegions`, `srcOffset.x` and `(extent.width + srcOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `srcSubresource` of `srcImage`

- VUID-vkCmdResolveImage-srcOffset-00270

For each element of `pRegions`, `srcOffset.y` and `(extent.height + srcOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `srcSubresource` of `srcImage`

- VUID-vkCmdResolveImage-srcImage-00271

If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.y` **must** be 0 and `extent.height` **must** be 1

- VUID-vkCmdResolveImage-srcOffset-00272
For each element of `pRegions`, `srcOffset.z` and `(extent.depth + srcOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdResolveImage-srcImage-00273
If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `srcOffset.z` **must** be 0 and `extent.depth` **must** be 1
- VUID-vkCmdResolveImage-dstOffset-00274
For each element of `pRegions`, `dstOffset.x` and `(extent.width + dstOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `dstSubresource` of `dstImage`
- VUID-vkCmdResolveImage-dstOffset-00275
For each element of `pRegions`, `dstOffset.y` and `(extent.height + dstOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `dstSubresource` of `dstImage`
- VUID-vkCmdResolveImage-dstImage-00276
If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.y` **must** be 0 and `extent.height` **must** be 1
- VUID-vkCmdResolveImage-dstOffset-00277
For each element of `pRegions`, `dstOffset.z` and `(extent.depth + dstOffset.z)` **must** both be greater than or equal to 0 and less than or equal to the depth of the specified `dstSubresource` of `dstImage`
- VUID-vkCmdResolveImage-dstImage-00278
If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `dstOffset.z` **must** be 0 and `extent.depth` **must** be 1
- VUID-vkCmdResolveImage-srcImage-06762
`srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set
- VUID-vkCmdResolveImage-srcImage-06763
The `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`
- VUID-vkCmdResolveImage-dstImage-06764
`dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-vkCmdResolveImage-dstImage-06765
The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`
- VUID-vkCmdResolveImage-srcSubresource-11800
`srcSubresource.aspectMask` for each element in `pRegions` **must** not specify an aspect which is not part of the image format of `srcImage`
- VUID-vkCmdResolveImage-dstSubresource-11801
`dstSubresource.aspectMask` for each element in `pRegions` **must** not specify an aspect which is not part of the image format of `dstImage`

- VUID-vkCmdResolveImage-srcSubresource-11802
`srcSubresource.aspectMask` **must** equal `dstSubresource.aspectMask` for each element in `pRegions`

Valid Usage (Implicit)

- VUID-vkCmdResolveImage-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdResolveImage-srcImage-parameter
`srcImage` **must** be a valid `VkImage` handle
- VUID-vkCmdResolveImage-srcImageLayout-parameter
`srcImageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdResolveImage-dstImage-parameter
`dstImage` **must** be a valid `VkImage` handle
- VUID-vkCmdResolveImage-dstImageLayout-parameter
`dstImageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdResolveImage-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkImageResolve` structures
- VUID-vkCmdResolveImage-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdResolveImage-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdResolveImage-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdResolveImage-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdResolveImage-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdResolveImage-regionCount-arraylength
`regionCount` **must** be greater than 0
- VUID-vkCmdResolveImage-commonparent
Each of `commandBuffer`, `dstImage`, and `srcImage` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally

synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_GRAPHICS HICS_BIT	Action

Conditional Rendering

vkCmdResolveImage is not affected by [conditional rendering](#)

The `VkImageResolve` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageResolve {
    VkImageSubresourceLayers    srcSubresource;
    VkOffset3D                  srcOffset;
    VkImageSubresourceLayers    dstSubresource;
    VkOffset3D                  dstOffset;
    VkExtent3D                  extent;
} VkImageResolve;
```

- `srcSubresource` and `dstSubresource` are `VkImageSubresourceLayers` structures specifying the image subresources of the images used for the source and destination image data, respectively. Resolve of depth/stencil images is not supported. `VkImageResolve2` can support resolve of depth/stencil images with `maintenance10` instead.
- `srcOffset` and `dstOffset` select the initial `x`, `y`, and `z` offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the source image to resolve in `width`, `height` and `depth`.

Valid Usage

- VUID-VkImageResolve-aspectMask-10981
The `aspectMask` member of `srcSubresource` and `dstSubresource` **must** only contain `VK_IMAGE_ASPECT_COLOR_BIT`
- VUID-VkImageResolve-layerCount-08803
If neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` member of `srcSubresource` and `dstSubresource` **must** match

- VUID-VkImageResolve-layerCount-08804

If one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member **must** be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

Valid Usage (Implicit)

- VUID-VkImageResolve-srcSubresource-parameter
`srcSubresource` **must** be a valid `VkImageSubresourceLayers` structure
- VUID-VkImageResolve-dstSubresource-parameter
`dstSubresource` **must** be a valid `VkImageSubresourceLayers` structure

A more extensible version of the resolve image command is defined below.

To resolve a multisample image to a non-multisample image, call:

```
// Provided by VK_VERSION_1_3
void vkCmdResolveImage2(
    VkCommandBuffer                      commandBuffer,
    const VkResolveImageInfo2*          pResolveImageInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdResolveImage2
void vkCmdResolveImage2KHR(
    VkCommandBuffer                      commandBuffer,
    const VkResolveImageInfo2*          pResolveImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pResolveImageInfo` is a pointer to a `VkResolveImageInfo2` structure describing the resolve parameters.

This command is functionally identical to `vkCmdResolveImage`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdResolveImage2-commandBuffer-01837
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdResolveImage2-commandBuffer-01838
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image

- VUID-vkCmdResolveImage2-commandBuffer-01839

If **commandBuffer** is a protected command buffer and **protectedNoFault** is not supported, **dstImage** **must** not be an unprotected image

Valid Usage (Implicit)

- VUID-vkCmdResolveImage2-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdResolveImage2-pResolveImageInfo-parameter
pResolveImageInfo **must** be a valid pointer to a valid **VkResolveImageInfo2** structure
- VUID-vkCmdResolveImage2-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdResolveImage2-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support **VK_QUEUE_GRAPHICS_BIT** operations
- VUID-vkCmdResolveImage2-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdResolveImage2-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdResolveImage2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_GRAP HICS_BIT	Action

Conditional Rendering

vkCmdResolveImage2 is not affected by **conditional rendering**

The `VkResolveImageInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkResolveImageInfo2 {
    VkStructureType      sType;
    const void*          pNext;
    VkImage              srcImage;
    VkImageLayout        srcImageLayout;
    VkImage              dstImage;
    VkImageLayout        dstImageLayout;
    uint32_t             regionCount;
    const VkImageResolve2* pRegions;
} VkResolveImageInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkResolveImageInfo2
typedef VkResolveImageInfo2 VkResolveImageInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the resolve.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the resolve.
- `regionCount` is the number of regions to resolve.
- `pRegions` is a pointer to an array of `VkImageResolve2` structures specifying the regions to resolve.

If the source format is a floating-point or normalized type, the resolve mode is chosen as implementation-dependent behavior, unless `VkResolveImageModeInfoKHR` is included in the `pNext` chain, in which case it is defined by `VkResolveImageModeInfoKHR::resolveMode`. If the resolve mode requires to calculate the result from multiple samples, such as by computing an average or weighted average of the samples, the values for each pixel are resolved with implementation-defined numerical precision.

If the `numeric format` of `srcImage` uses sRGB encoding and the resolve mode requires the implementation to convert the samples to floating-point to perform the calculations, the implementation **should** convert samples from nonlinear to linear before resolving the samples as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#). In this case, the implementation **must** convert the linear averaged value to nonlinear before writing the resolved result to `dstImage`. If the `maintenance10` feature is enabled, whether a nonlinear to linear conversion happens for sRGB encoded resolve is controlled by `resolveSrgbFormatAppliesTransferFunction`. If `VkResolveImageModeInfoKHR` is included in the `pNext` chain, this default behavior **can** be overridden with `VK_RESOLVE_IMAGE_SKIP_TRANSFER_FUNCTION_BIT_KHR` or

VK_RESOLVE_IMAGE_ENABLE_TRANSFER_FUNCTION_BIT_KHR flags.

If the source format is an integer type, a single sample's value is selected for each pixel, unless `VkResolveImageModeInfoKHR` is included in the `pNext` chain, in which case it is defined by `VkResolveImageModeInfoKHR::resolveMode` or `VkResolveImageModeInfoKHR::stencilResolveMode` depending on which aspect is being resolved.

Valid Usage

- VUID-VkResolveImageInfo2-pRegions-00255
The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory
- VUID-VkResolveImageInfo2-srcImage-00256
If `srcImage` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkResolveImageInfo2-srcImage-00257
`srcImage` **must** have a sample count equal to any valid sample count value other than `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkResolveImageInfo2-dstImage-00258
If `dstImage` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkResolveImageInfo2-dstImage-00259
`dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`
- VUID-VkResolveImageInfo2-srcImageLayout-00260
`srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkResolveImageInfo2-srcImageLayout-01400
`srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-VkResolveImageInfo2-dstImageLayout-00262
`dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkResolveImageInfo2-dstImageLayout-01401
`dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`
- VUID-VkResolveImageInfo2-maintenance10-11799
If the `maintenance10` feature is enabled, the `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
- VUID-VkResolveImageInfo2-dstImage-02003
The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` if the `maintenance10` feature is not enabled

- VUID-VkResolveImageInfo2-linearColorAttachment-06519
If the `linearColorAttachment` feature is enabled and the image is created with `VK_IMAGE_TILING_LINEAR`, the `format` features of `dstImage` **must** contain `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV`
- VUID-VkResolveImageInfo2-srcImage-01386
`srcImage` and `dstImage` **must** have been created with the same image format
- VUID-VkResolveImageInfo2-srcSubresource-01709
The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkResolveImageInfo2-dstSubresource-01710
The `dstSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkResolveImageInfo2-srcSubresource-01711
If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer` + `srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created
- VUID-VkResolveImageInfo2-dstSubresource-01712
If `dstSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `dstSubresource.baseArrayLayer` + `dstSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created
- VUID-VkResolveImageInfo2-dstImage-02546
`dstImage` and `srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- VUID-VkResolveImageInfo2-srcImage-04446
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `srcSubresource.layerCount` **must** be 1
- VUID-VkResolveImageInfo2-srcImage-04447
If `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `dstSubresource.baseArrayLayer` **must** be 0 and `dstSubresource.layerCount` **must** be 1
- VUID-VkResolveImageInfo2-srcOffset-00269
For each element of `pRegions`, `srcOffset.x` and `(extent.width + srcOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `srcSubresource` of `srcImage`
- VUID-VkResolveImageInfo2-srcOffset-00270
For each element of `pRegions`, `srcOffset.y` and `(extent.height + srcOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `srcSubresource` of `srcImage`
- VUID-VkResolveImageInfo2-srcImage-00271
If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `srcOffset.y` **must** be 0 and `extent.height` **must** be 1
- VUID-VkResolveImageInfo2-srcOffset-00272

For each element of `pRegions`, `srcOffset.z` and `(extent.depth + srcOffset.z)` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `srcSubresource` of `srcImage`

- VUID-VkResolveImageInfo2-srcImage-00273

If `srcImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `srcOffset.z` **must** be `0` and `extent.depth` **must** be `1`

- VUID-VkResolveImageInfo2-dstOffset-00274

For each element of `pRegions`, `dstOffset.x` and `(extent.width + dstOffset.x)` **must** both be greater than or equal to `0` and less than or equal to the width of the specified `dstSubresource` of `dstImage`

- VUID-VkResolveImageInfo2-dstOffset-00275

For each element of `pRegions`, `dstOffset.y` and `(extent.height + dstOffset.y)` **must** both be greater than or equal to `0` and less than or equal to the height of the specified `dstSubresource` of `dstImage`

- VUID-VkResolveImageInfo2-dstImage-00276

If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `dstOffset.y` **must** be `0` and `extent.height` **must** be `1`

- VUID-VkResolveImageInfo2-dstOffset-00277

For each element of `pRegions`, `dstOffset.z` and `(extent.depth + dstOffset.z)` **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `dstSubresource` of `dstImage`

- VUID-VkResolveImageInfo2-dstImage-00278

If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `dstOffset.z` **must** be `0` and `extent.depth` **must** be `1`

- VUID-VkResolveImageInfo2-srcImage-06762

`srcImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag set

- VUID-VkResolveImageInfo2-srcImage-06763

The `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`

- VUID-VkResolveImageInfo2-dstImage-06764

`dstImage` **must** have been created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag set

- VUID-VkResolveImageInfo2-dstImage-06765

The `format features` of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`

- VUID-VkResolveImageInfo2-srcSubresource-11800

`srcSubresource.aspectMask` for each element in `pRegions` **must** not specify an aspect which is not part of the image format of `srcImage`

- VUID-VkResolveImageInfo2-dstSubresource-11801

`dstSubresource.aspectMask` for each element in `pRegions` **must** not specify an aspect which is not part of the image format of `dstImage`

- VUID-VkResolveImageInfo2-srcSubresource-11802

`srcSubresource.aspectMask` **must** equal `dstSubresource.aspectMask` for each element in `pRegions`

- VUID-VkResolveImageInfo2-pNext-10982
If `VkResolveImageModeInfoKHR` is included in the `pNext` chain, `flags` includes `VK_RESOLVE_IMAGE_SKIP_TRANSFER_FUNCTION_BIT_KHR` or `VK_RESOLVE_IMAGE_ENABLE_TRANSFER_FUNCTION_BIT_KHR`, then the format of `srcImage` and `dstImage` **must** use sRGB encoding
- VUID-VkResolveImageInfo2-srcImage-10983
If `srcImage` has a color format and `VkResolveImageModeInfoKHR` is included in the `pNext` chain, its `resolveMode` **must** not be `VK_RESOLVE_MODE_NONE`
- VUID-VkResolveImageInfo2-srcImage-10984
If `srcImage` has a non-integer color format, and `VkResolveImageModeInfoKHR` is included in the `pNext` chain, its `resolveMode` **must** be `VK_RESOLVE_MODE_AVERAGE_BIT`
- VUID-VkResolveImageInfo2-srcImage-10985
If `srcImage` has an integer color format, and `VkResolveImageModeInfoKHR` is included in the `pNext` chain, its `resolveMode` **must** be `VK_RESOLVE_MODE_SAMPLE_ZERO_BIT`
- VUID-VkResolveImageInfo2-srcImage-10986
If `srcImage` has a depth-stencil format, `VkResolveImageModeInfoKHR` **must** be included in the `pNext` chain
- VUID-VkResolveImageInfo2-srcImage-10987
If `srcImage` has a depth-stencil format, and a depth aspect is referenced by `pRegions`, `VkResolveImageModeInfoKHR::resolveMode` **must** not be `VK_RESOLVE_MODE_NONE`
- VUID-VkResolveImageInfo2-srcImage-10988
If `srcImage` has a depth-stencil format, and a stencil aspect is referenced by `pRegions`, `VkResolveImageModeInfoKHR::stencilResolveMode` **must** not be `VK_RESOLVE_MODE_NONE`
- VUID-VkResolveImageInfo2-srcImage-10989
If `srcImage` has a depth-stencil format, and a depth aspect is referenced by `pRegions`, `VkResolveImageModeInfoKHR::resolveMode` **must** be one of the bits set in `VkPhysicalDeviceDepthStencilResolveProperties::supportedDepthResolveModes`
- VUID-VkResolveImageInfo2-srcImage-10990
If `srcImage` has a depth-stencil format, and a stencil aspect is referenced by `pRegions`, `VkResolveImageModeInfoKHR::stencilResolveMode` **must** be one of the bits set in `VkPhysicalDeviceDepthStencilResolveProperties::supportedStencilResolveModes`
- VUID-VkResolveImageInfo2-srcImage-10991
If `srcImage` has a depth-stencil format, and both a depth aspect and stencil aspect is referenced by `pRegions`, and `VkPhysicalDeviceDepthStencilResolveProperties::independentResolve` is `VK_FALSE`, `VkResolveImageModeInfoKHR::resolveMode` **must** be equal to `VkResolveImageModeInfoKHR::stencilResolveMode`
- VUID-VkResolveImageInfo2-srcImage-10992
If `srcImage` has a depth-stencil format containing both a depth aspect and stencil aspect, and `VkPhysicalDeviceDepthStencilResolveProperties::independentResolveNone` is `VK_FALSE`, every element of `pRegions` **must** contain both depth and stencil aspects

Valid Usage (Implicit)

- VUID-VkResolveImageInfo2-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_RESOLVE_IMAGE_INFO_2](#)
- VUID-VkResolveImageInfo2-pNext-pNext
pNext **must** be **NULL** or a pointer to a valid instance of [VkResolveImageModeInfoKHR](#)
- VUID-VkResolveImageInfo2-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkResolveImageInfo2-srcImage-parameter
srcImage **must** be a valid [VkImage](#) handle
- VUID-VkResolveImageInfo2-srcImageLayout-parameter
srcImageLayout **must** be a valid [VkImageLayout](#) value
- VUID-VkResolveImageInfo2-dstImage-parameter
dstImage **must** be a valid [VkImage](#) handle
- VUID-VkResolveImageInfo2-dstImageLayout-parameter
dstImageLayout **must** be a valid [VkImageLayout](#) value
- VUID-VkResolveImageInfo2-pRegions-parameter
pRegions **must** be a valid pointer to an array of **regionCount** valid [VkImageResolve2](#) structures
- VUID-VkResolveImageInfo2-regionCount-arraylength
regionCount **must** be greater than 0
- VUID-VkResolveImageInfo2-commonparent
Both of **dstImage**, and **srcImage** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

The [VkImageResolve2](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkImageResolve2 {
    VkStructureType      sType;
    const void*          pNext;
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D           srcOffset;
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D           dstOffset;
    VkExtent3D           extent;
} VkImageResolve2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkImageResolve2
typedef VkImageResolve2 VkImageResolve2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcSubresource` and `dstSubresource` are `VkImageSubresourceLayers` structures specifying the image subresources of the images used for the source and destination image data, respectively.
- `srcOffset` and `dstOffset` select the initial `x`, `y`, and `z` offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the source image to resolve in `width`, `height` and `depth`.

Valid Usage

- VUID-VkImageResolve2-aspectMask-10993
The `aspectMask` member of `srcSubresource` and `dstSubresource` **must** only contain `VK_IMAGE_ASPECT_DEPTH_BIT`, `VK_IMAGE_ASPECT_STENCIL_BIT`, or `VK_IMAGE_ASPECT_COLOR_BIT`
- VUID-VkImageResolve2-maintenance10-10994
If `maintenance10` feature is not enabled, `srcSubresource` and `dstSubresource` **must** not contain `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-VkImageResolve2-layerCount-08803
If neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageResolve2-layerCount-08804
If one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member **must** be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

Valid Usage (Implicit)

- VUID-VkImageResolve2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_RESOLVE_2`
- VUID-VkImageResolve2-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageResolve2-srcSubresource-parameter
`srcSubresource` **must** be a valid `VkImageSubresourceLayers` structure
- VUID-VkImageResolve2-dstSubresource-parameter
`dstSubresource` **must** be a valid `VkImageSubresourceLayers` structure

The `VkResolveImageModeInfoKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance10
typedef struct VkResolveImageModeInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkResolveImageFlagsKHR flags;
    VkResolveModeFlagBits resolveMode;
    VkResolveModeFlagBits stencilResolveMode;
} VkResolveImageModeInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkResolveImageFlagBitsKHR](#).
- **resolveMode** is a [VkResolveModeFlagBits](#) value defining how **srcImage** will be resolved into **dstImage** when resolving non-stencil values.
- **stencilResolveMode** is a [VkResolveModeFlagBits](#) value defining how **srcImage** will be resolved into **dstImage** when resolving stencil values.

Valid Usage

- VUID-VkResolveImageModeInfoKHR-flags-10995
If **flags** includes [VK_RESOLVE_IMAGE_SKIP_TRANSFER_FUNCTION_BIT_KHR](#), **flags** **must** not include [VK_RESOLVE_IMAGE_ENABLE_TRANSFER_FUNCTION_BIT_KHR](#)
- VUID-VkResolveImageModeInfoKHR-flags-10996
If **flags** includes [VK_RESOLVE_IMAGE_SKIP_TRANSFER_FUNCTION_BIT_KHR](#) or [VK_RESOLVE_IMAGE_ENABLE_TRANSFER_FUNCTION_BIT_KHR](#), **resolveSrgbFormatSupportsTransferFunctionControl** **must** be [VK_TRUE](#)
- VUID-VkResolveImageModeInfoKHR-flags-10997
If **flags** includes [VK_RESOLVE_IMAGE_SKIP_TRANSFER_FUNCTION_BIT_KHR](#) or [VK_RESOLVE_IMAGE_ENABLE_TRANSFER_FUNCTION_BIT_KHR](#), **resolveMode** **must** be equal to [VK_RESOLVE_MODE_AVERAGE_BIT](#)

Valid Usage (Implicit)

- VUID-VkResolveImageModeInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_RESOLVE_IMAGE_MODE_INFO_KHR](#)
- VUID-VkResolveImageModeInfoKHR-flags-parameter
flags **must** be a valid combination of [VkResolveImageFlagBitsKHR](#) values
- VUID-VkResolveImageModeInfoKHR-resolveMode-parameter
If **resolveMode** is not 0, **resolveMode** **must** be a valid [VkResolveModeFlagBits](#) value
- VUID-VkResolveImageModeInfoKHR-stencilResolveMode-parameter
If **stencilResolveMode** is not 0, **stencilResolveMode** **must** be a valid [VkResolveModeFlagBits](#) value

Structure Chaining

Extends the structure

- [VkResolveImageInfo2](#)

Bits which **can** be set in [VkResolveImageModeInfoKHR::flags](#), describing additional properties of a resolve operation, are:

```
// Provided by VK_KHR_maintenance10
typedef enum VkResolveImageFlagBitsKHR {
    // Provided by VK_KHR_maintenance10 with VK_VERSION_1_3 or VK_KHR_copy_commands2
    VK_RESOLVE_IMAGE_SKIP_TRANSFER_FUNCTION_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_maintenance10 with VK_VERSION_1_3 or VK_KHR_copy_commands2
    VK_RESOLVE_IMAGE_ENABLE_TRANSFER_FUNCTION_BIT_KHR = 0x00000002,
} VkResolveImageFlagBitsKHR;
```

- [VK_RESOLVE_IMAGE_SKIP_TRANSFER_FUNCTION_BIT_KHR](#) specifies that resolve operations happening to an sRGB encoded image **must** not convert samples from nonlinear to linear before averaging.
- [VK_RESOLVE_IMAGE_ENABLE_TRANSFER_FUNCTION_BIT_KHR](#) specifies that resolve operations happening to an sRGB encoded image **must** convert samples from nonlinear to linear before averaging.

```
// Provided by VK_KHR_maintenance10
typedef VkFlags VkResolveImageFlagsKHR;
```

[VkResolveImageFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkResolveImageFlagBitsKHR](#).

25.9. Buffer Markers

Buffer marker write commands are as follows:

[VkMemoryMarkerInfoAMD](#) is defined as:

```
// Provided by VK_KHR_device_address_commands with VK_AMD_buffer_marker
typedef struct VkMemoryMarkerInfoAMD {
    VkStructureType      sType;
    const void*          pNext;
    VkPipelineStageFlags2KHR stage;
    VkDeviceAddressRangeKHR dstRange;
    VkAddressCommandFlagsKHR dstFlags;
    uint32_t             marker;
} VkMemoryMarkerInfoAMD;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **stage** specifies the pipeline stage whose completion triggers the marker write.
- **dstRange** is the [VkDeviceAddressRangeKHR](#) where the marker will be written.
- **dstFlags** is a [VkAddressCommandFlagsKHR](#) value defining the copy flags for the destination address range.
- **marker** is the 32-bit value of the marker.

Valid Usage

- VUID-VkMemoryMarkerInfoAMD-dstRange-13097
If the range specified by **dstRange** is not bound completely to memory when accessed, **dstFlags** **must** not include [VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR](#)
- VUID-VkMemoryMarkerInfoAMD-dstRange-13098
If the buffer from which the range specified by **dstRange** was created with [VK_BUFFER_CREATE_PROTECTED_BIT](#), and **protectedNoFault** is not supported, **dstFlags** **must** include [VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR](#)
- VUID-VkMemoryMarkerInfoAMD-dstRange-13099
If the buffer from which the range specified by **dstRange** was created without [VK_BUFFER_CREATE_PROTECTED_BIT](#), and **protectedNoFault** is not supported, **dstFlags** **must** not include [VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR](#)
- VUID-VkMemoryMarkerInfoAMD-dstFlags-13100
dstFlags **must** not include both [VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR](#) and [VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR](#)
- VUID-VkMemoryMarkerInfoAMD-dstRange-13122
If any buffer, which is bound to a range of [VkDeviceMemory](#) that overlaps the range backing **dstRange**, was created with [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#), **dstFlags** **must** include [VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR](#) or [VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR](#)
- VUID-VkMemoryMarkerInfoAMD-dstRange-13123
If any buffer, which is bound to a range of [VkDeviceMemory](#) that overlaps the range backing **dstRange**, was created without [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#), **dstFlags** **must** not include [VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR](#)
- VUID-VkMemoryMarkerInfoAMD-dstFlags-13101
dstFlags **must** not include both [VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR](#) and [VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR](#)
- VUID-VkMemoryMarkerInfoAMD-dstRange-13124
If any buffer, which is bound to a range of [VkDeviceMemory](#) that overlaps the range backing **dstRange**, was created with [VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT](#), **dstFlags** **must** include

VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or
VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR

- VUID-VkMemoryMarkerInfoAMD-dstRange-13125

If any buffer, which is bound to a range of [VkDeviceMemory](#) that overlaps the range backing [dstRange](#), was created without [VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT](#), [dstFlags](#) **must** not include [VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR](#)

- VUID-VkMemoryMarkerInfoAMD-stage-03929

If the [geometryShader](#) feature is not enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_GEOMETRY_SHADER_BIT](#)

- VUID-VkMemoryMarkerInfoAMD-stage-03930

If the [tessellationShader](#) feature is not enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_TESSELLATION_CONTROL_SHADER_BIT](#) or [VK_PIPELINE_STAGE_2_TESSELLATION_EVALUATION_SHADER_BIT](#)

- VUID-VkMemoryMarkerInfoAMD-stage-03931

If the [conditionalRendering](#) feature is not enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_CONDITIONAL_RENDERING_BIT_EXT](#)

- VUID-VkMemoryMarkerInfoAMD-stage-03932

If the [fragmentDensityMap](#) feature is not enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_FRAGMENT_DENSITY_PROCESS_BIT_EXT](#)

- VUID-VkMemoryMarkerInfoAMD-stage-03933

If the [transformFeedback](#) feature is not enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_TRANSFORM_FEEDBACK_BIT_EXT](#)

- VUID-VkMemoryMarkerInfoAMD-stage-03934

If the [meshShader](#) feature is not enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_MESH_SHADER_BIT_EXT](#)

- VUID-VkMemoryMarkerInfoAMD-stage-03935

If the [taskShader](#) feature is not enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_TASK_SHADER_BIT_EXT](#)

- VUID-VkMemoryMarkerInfoAMD-stage-07316

If neither of the [shadingRateImage](#) or the [attachmentFragmentShadingRate](#) features are enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR](#)

- VUID-VkMemoryMarkerInfoAMD-stage-04957

If the [subpassShading](#) feature is not enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_SUBPASS_SHADER_BIT_HUAWEI](#)

- VUID-VkMemoryMarkerInfoAMD-stage-04995

If the [invocationMask](#) feature is not enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_INVOCATION_MASK_BIT_HUAWEI](#)

- VUID-VkMemoryMarkerInfoAMD-stage-07946

If neither the [VK_NV_ray_tracing](#) extension or the [rayTracingPipeline](#) feature are enabled, [stage](#) **must** not contain [VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_KHR](#)

- VUID-VkMemoryMarkerInfoAMD-stage-10751
If the `accelerationStructure` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_BUILD_BIT_KHR`
- VUID-VkMemoryMarkerInfoAMD-stage-10752
If the `rayTracingMaintenance1` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR`
- VUID-VkMemoryMarkerInfoAMD-stage-10753
If the `micromap` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT`
- VUID-VkMemoryMarkerInfoAMD-stage-13038
`stage` **must** include only a single pipeline stage
- VUID-VkMemoryMarkerInfoAMD-dstRange-13039
The buffer from which `dstRange` was queried **must** have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag
- VUID-VkMemoryMarkerInfoAMD-dstRange-13040
`dstRange.address` **must** be a multiple of 4
- VUID-VkMemoryMarkerInfoAMD-dstRange-13041
`dstRange.size` **must** be greater than or equal to 4

Valid Usage (Implicit)

- VUID-VkMemoryMarkerInfoAMD-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_MARKER_INFO_AMD`
- VUID-VkMemoryMarkerInfoAMD-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMemoryMarkerInfoAMD-stage-parameter
`stage` **must** be a valid combination of `VkPipelineStageFlagBits2KHR` values
- VUID-VkMemoryMarkerInfoAMD-stage-requiredbitmask
`stage` **must** not be 0
- VUID-VkMemoryMarkerInfoAMD-dstFlags-parameter
`dstFlags` **must** be a valid combination of `VkAddressCommandFlagBitsKHR` values

To write a 32-bit marker value into memory as a pipelined operation, call:

```
// Provided by VK_KHR_device_address_commands with VK_AMD_buffer_marker
void vkCmdWriteMarkerToMemoryAMD(
    VkCommandBuffer                commandBuffer,
    const VkMemoryMarkerInfoAMD*   pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` specifies a pointer to an `VkMemoryMarkerInfoAMD` structure defining parameters of this

command.

When `vkCmdWriteMarkerToMemoryAMD` is submitted to a queue, it defines an execution dependency between prior operations and writing the marker value, as well as a memory dependency from earlier [buffer marker write commands](#).

The first [synchronization scope](#) includes operations performed by operations that occur earlier in [submission order](#) in the pipeline stage identified by `pInfo->stage`. It additionally includes other [buffer marker write commands](#) that occur earlier in [submission order](#) that specified either the same `pInfo->stage` or a stage that is [logically earlier](#).

The second [synchronization scope](#) includes only the buffer marker write.

The first [access scope](#) includes only accesses performed by other [buffer marker write commands](#).

The second [access scope](#) is empty.

The access scope for buffer marker writes falls under the `VK_ACCESS_TRANSFER_WRITE_BIT` flag, and is performed by either `pInfo->stage` or `VK_PIPELINE_STAGE_TRANSFER_BIT`. [Synchronization commands](#) should specify this access flag and both pipeline stages when defining dependencies with this command.

NOTE

Similar to `vkCmdWriteTimestamp2`, if an implementation is unable to write a marker at any specific pipeline stage, it **may** instead do so at any logically later stage.

NOTE

Implementations **may** only support a limited number of pipelined marker write operations in flight at a given time. Thus an excessive number of marker write operations **may** degrade command execution performance.

Valid Usage

- VUID-vkCmdWriteMarkerToMemoryAMD-synchronization2-13042
The [synchronization2](#) feature **must** be enabled
- VUID-vkCmdWriteMarkerToMemoryAMD-pInfo-13043
`pInfo->stage` **must** include only stages that are valid for the queue family that was used to create the command pool that `commandBuffer` was allocated from
- VUID-vkCmdWriteMarkerToMemoryAMD-commandBuffer-13044
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `pInfo->dstFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdWriteMarkerToMemoryAMD-commandBuffer-13045
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `pInfo->dstFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-vkCmdWriteMarkerToMemoryAMD-pInfo-13046
If `pInfo->dstFlags` includes `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`, the buffer from which `pInfo->dstRange` was queried **must** have been created with `VK_BUFFER_CREATE_PROTECTED_BIT`

- VUID-vkCmdWriteMarkerToMemoryAMD-pInfo-13047
If `pInfo->dstFlags` does not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`, the buffer from which `pInfo->dstRange` was queried **must** have been created without `VK_BUFFER_CREATE_PROTECTED_BIT`

Valid Usage (Implicit)

- VUID-vkCmdWriteMarkerToMemoryAMD-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdWriteMarkerToMemoryAMD-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkMemoryMarkerInfoAMD` structure
- VUID-vkCmdWriteMarkerToMemoryAMD-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdWriteMarkerToMemoryAMD-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdWriteMarkerToMemoryAMD-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteMarkerToMemoryAMD-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdWriteMarkerToMemoryAMD` is not affected by [conditional rendering](#)

To write a 32-bit marker value into a buffer as a pipelined operation, call:

WARNING

This functionality is superseded by [vkCmdWriteMarkerToMemoryAMD](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_AMD_buffer_marker with VK_VERSION_1_3 or VK_KHR_synchronization2
void vkCmdWriteBufferMarker2AMD(
    VkCommandBuffer          commandBuffer,
    VkPipelineStageFlags2    stage,
    VkBuffer                 dstBuffer,
    VkDeviceSize             dstOffset,
    uint32_t                 marker);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `stage` specifies the pipeline stage whose completion triggers the marker write.
- `dstBuffer` is the buffer where the marker will be written.
- `dstOffset` is the byte offset into the buffer where the marker will be written.
- `marker` is the 32-bit value of the marker.

When `vkCmdWriteBufferMarker2AMD` is submitted to a queue, it defines an execution dependency between prior operations and writing the marker value, as well as a memory dependency from earlier [buffer marker write commands](#).

The first [synchronization scope](#) includes operations performed by operations that occur earlier in [submission order](#) in the pipeline stage identified by `pipelineStage`. It additionally includes other [buffer marker write commands](#) that occur earlier in [submission order](#) that specified either the same `pipelineStage` or a stage that is [logically earlier](#).

The second [synchronization scope](#) includes only the buffer marker write.

The first [access scope](#) includes only accesses performed by other [buffer marker write commands](#).

The second [access scope](#) is empty.

The access scope for buffer marker writes falls under the `VK_ACCESS_TRANSFER_WRITE_BIT` flag, and is performed by either `pipelineStage` or `VK_PIPELINE_STAGE_TRANSFER_BIT`. [Synchronization commands](#) should specify this access flag and both pipeline stages when defining dependencies with this command.

NOTE

Similar to `vkCmdWriteTimestamp2`, if an implementation is unable to write a marker at any specific pipeline stage, it **may** instead do so at any logically later stage.

NOTE

Implementations **may** only support a limited number of pipelined marker write operations in flight at a given time. Thus an excessive number of marker write operations **may** degrade command execution performance.

Valid Usage

- VUID-vkCmdWriteBufferMarker2AMD-stage-03929
If the `geometryShader` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_GEOMETRY_SHADER_BIT`
- VUID-vkCmdWriteBufferMarker2AMD-stage-03930
If the `tessellationShader` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_TESSELLATION_CONTROL_SHADER_BIT` or `VK_PIPELINE_STAGE_2_TESSELLATION_EVALUATION_SHADER_BIT`
- VUID-vkCmdWriteBufferMarker2AMD-stage-03931
If the `conditionalRendering` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_CONDITIONAL_RENDERING_BIT_EXT`
- VUID-vkCmdWriteBufferMarker2AMD-stage-03932
If the `fragmentDensityMap` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_FRAGMENT_DENSITY_PROCESS_BIT_EXT`
- VUID-vkCmdWriteBufferMarker2AMD-stage-03933
If the `transformFeedback` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_TRANSFORM_FEEDBACK_BIT_EXT`
- VUID-vkCmdWriteBufferMarker2AMD-stage-03934
If the `meshShader` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_MESH_SHADER_BIT_EXT`
- VUID-vkCmdWriteBufferMarker2AMD-stage-03935
If the `taskShader` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_TASK_SHADER_BIT_EXT`
- VUID-vkCmdWriteBufferMarker2AMD-stage-07316
If neither of the `shadingRateImage` or the `attachmentFragmentShadingRate` features are enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`
- VUID-vkCmdWriteBufferMarker2AMD-stage-04957
If the `subpassShading` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_SUBPASS_SHADER_BIT_HUAWEI`
- VUID-vkCmdWriteBufferMarker2AMD-stage-04995
If the `invocationMask` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_INVOCATION_MASK_BIT_HUAWEI`
- VUID-vkCmdWriteBufferMarker2AMD-stage-07946
If neither the `VK_NV_ray_tracing` extension or the `rayTracingPipeline` feature are enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_KHR`
- VUID-vkCmdWriteBufferMarker2AMD-stage-10751
If the `accelerationStructure` feature is not enabled, `stage` **must** not contain

VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_BUILD_BIT_KHR

- VUID-vkCmdWriteBufferMarker2AMD-stage-10752
If the `rayTracingMaintenance1` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR`
- VUID-vkCmdWriteBufferMarker2AMD-stage-10753
If the `micromap` feature is not enabled, `stage` **must** not contain `VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT`
- VUID-vkCmdWriteBufferMarker2AMD-synchronization2-03893
The `synchronization2` feature **must** be enabled
- VUID-vkCmdWriteBufferMarker2AMD-stage-03894
`stage` **must** include only a single pipeline stage
- VUID-vkCmdWriteBufferMarker2AMD-stage-03895
`stage` **must** include only stages that are valid for the queue family that was used to create the command pool that `commandBuffer` was allocated from
- VUID-vkCmdWriteBufferMarker2AMD-dstOffset-03896
`dstOffset` **must** be less than or equal to the size of `dstBuffer` minus 4
- VUID-vkCmdWriteBufferMarker2AMD-dstBuffer-03897
`dstBuffer` **must** have been created with the `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag set
- VUID-vkCmdWriteBufferMarker2AMD-dstBuffer-03898
If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdWriteBufferMarker2AMD-dstOffset-03899
`dstOffset` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-vkCmdWriteBufferMarker2AMD-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdWriteBufferMarker2AMD-stage-parameter
`stage` **must** be a valid combination of `VkPipelineStageFlagBits2` values
- VUID-vkCmdWriteBufferMarker2AMD-dstBuffer-parameter
`dstBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdWriteBufferMarker2AMD-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdWriteBufferMarker2AMD-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdWriteBufferMarker2AMD-suspended
This command **must** not be called between suspended render pass instances

- VUID-vkCmdWriteBufferMarker2AMD-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdWriteBufferMarker2AMD-commonparent
Both of **commandBuffer**, and **dstBuffer** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdWriteBufferMarker2AMD is not affected by **conditional rendering**

To write a 32-bit marker value into a buffer as a pipelined operation, call:

```
// Provided by VK_AMD_buffer_marker
void vkCmdWriteBufferMarkerAMD(
    VkCommandBuffer          commandBuffer,
    VkPipelineStageFlagBits  pipelineStage,
    VkBuffer                 dstBuffer,
    VkDeviceSize             dstOffset,
    uint32_t                 marker);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pipelineStage** is a **VkPipelineStageFlagBits** value specifying the pipeline stage whose completion triggers the marker write.
- **dstBuffer** is the buffer where the marker will be written to.

- `dstOffset` is the byte offset into the buffer where the marker will be written to.
- `marker` is the 32-bit value of the marker.

When `vkCmdWriteBufferMarkerAMD` is submitted to a queue, it defines an execution dependency between prior operations and writing the marker value, as well as a memory dependency from earlier [buffer marker write commands](#).

The first [synchronization scope](#) includes operations performed by operations that occur earlier in [submission order](#) in the pipeline stage identified by `pipelineStage`. It additionally includes other [buffer marker write commands](#) that occur earlier in [submission order](#) that specified either the same `pipelineStage` or a stage that is [logically earlier](#).

The second [synchronization scope](#) includes only the buffer marker write.

The first [access scope](#) includes only accesses performed by other [buffer marker write commands](#).

The second [access scope](#) is empty.

The access scope for buffer marker writes falls under the `VK_ACCESS_TRANSFER_WRITE_BIT` flag, and is performed by either `pipelineStage` or `VK_PIPELINE_STAGE_TRANSFER_BIT`. [Synchronization commands](#) should specify this access flag and both pipeline stages when defining dependencies with this command.

NOTE

Similar to `vkCmdWriteTimestamp`, if an implementation is unable to write a marker at any specific pipeline stage, it **may** instead do so at any logically later stage.

NOTE

Implementations **may** only support a limited number of pipelined marker write operations in flight at a given time, thus excessive number of marker write operations **may** degrade command execution performance.

Valid Usage

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04074
`pipelineStage` **must** be a [valid stage](#) for the queue family that was used to create the command pool that `commandBuffer` was allocated from
- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04075
If the `geometryShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT`
- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04076
If the `tessellationShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_TESSELLATION_CONTROL_SHADER_BIT` or `VK_PIPELINE_STAGE_TESSELLATION_EVALUATION_SHADER_BIT`
- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04077
If the `conditionalRendering` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_CONDITIONAL_RENDERING_BIT_EXT`
- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04078

If the `fragmentDensityMap` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT`

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04079

If the `transformFeedback` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT`

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04080

If the `meshShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT`

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-07077

If the `taskShader` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT`

- VUID-vkCmdWriteBufferMarkerAMD-shadingRateImage-07314

If neither of the `shadingRateImage` or the `attachmentFragmentShadingRate` features are enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

- VUID-vkCmdWriteBufferMarkerAMD-synchronization2-06489

If the `synchronization2` feature is not enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_NONE`

- VUID-vkCmdWriteBufferMarkerAMD-rayTracingPipeline-07943

If neither of the `VK_NV_ray_tracing` extension or the `rayTracingPipeline` feature are enabled, `pipelineStage` **must** not be `VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR`

- VUID-vkCmdWriteBufferMarkerAMD-dstOffset-01798

`dstOffset` **must** be less than or equal to the size of `dstBuffer` minus 4

- VUID-vkCmdWriteBufferMarkerAMD-dstBuffer-01799

`dstBuffer` **must** have been created with the `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag set

- VUID-vkCmdWriteBufferMarkerAMD-dstBuffer-01800

If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdWriteBufferMarkerAMD-dstOffset-01801

`dstOffset` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-vkCmdWriteBufferMarkerAMD-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-parameter

If `pipelineStage` is not 0, `pipelineStage` **must** be a valid `VkPipelineStageFlagBits` value

- VUID-vkCmdWriteBufferMarkerAMD-dstBuffer-parameter

`dstBuffer` **must** be a valid `VkBuffer` handle

- VUID-vkCmdWriteBufferMarkerAMD-commandBuffer-recording

`commandBuffer` **must** be in the [recording state](#)

- VUID-vkCmdWriteBufferMarkerAMD-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), [VK_QUEUE_GRAPHICS_BIT](#), or [VK_QUEUE_TRANSFER_BIT](#) operations

- VUID-vkCmdWriteBufferMarkerAMD-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdWriteBufferMarkerAMD-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdWriteBufferMarkerAMD-commonparent

Both of `commandBuffer`, and `dstBuffer` **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdWriteBufferMarkerAMD` is not affected by [conditional rendering](#)

25.10. Copying Data Between Tensors

[vkCmdCopyTensorARM](#) performs tensor copies in a similar manner to a host memcpy. It does not perform general-purpose conversions such as scaling, resizing, or format conversions. Rather, it simply copies raw tensor data. [vkCmdCopyTensorARM](#) **can** copy between tensors with different formats, provided the formats are compatible. Tensor formats are compatible if they share the same class, as shown in the [Compatible Formats](#).

To copy data between tensor objects, call:

```
// Provided by VK_ARM_tensors
void vkCmdCopyTensorARM(
    VkCommandBuffer                      commandBuffer,
    const VkCopyTensorInfoARM*          pCopyTensorInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyTensorInfo` is a pointer to `VkCopyTensorInfoARM` structure describing the copy parameters.

Valid Usage (Implicit)

- VUID-vkCmdCopyTensorARM-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyTensorARM-pCopyTensorInfo-parameter
`pCopyTensorInfo` **must** be a valid pointer to a valid `VkCopyTensorInfoARM` structure
- VUID-vkCmdCopyTensorARM-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyTensorARM-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdCopyTensorARM-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyTensorARM-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyTensorARM-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdCopyTensorARM` is not affected by [conditional rendering](#)

The `VkCopyTensorInfoARM` structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkCopyTensorInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkTensorARM        srcTensor;
    VkTensorARM        dstTensor;
    uint32_t           regionCount;
    const VkTensorCopyARM* pRegions;
} VkCopyTensorInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `srcTensor` is the source tensor.
- `dstTensor` is the destination tensor.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkTensorCopyARM` structures specifying the regions to copy.

Each region in `pRegions` describes a region to be copied from the source tensor to a corresponding region of the destination tensor. `srcTensor` and `dstTensor` **can** be the same tensor or alias the same memory.

The formats of `srcTensor` and `dstTensor` **must** be compatible. Formats are compatible if they share the same class, as shown in the [Compatible Formats](#) table.

`vkCmdCopyTensorARM` allows copying between *size-compatible* internal formats.

Valid Usage

- VUID-VkCopyTensorInfoARM-dimensionCount-09684
`srcTensor` and `dstTensor` **must** have been created with equal values for `VkTensorDescriptionARM::dimensionCount`
- VUID-VkCopyTensorInfoARM-pDimensions-09685
For each of the elements of `VkTensorDescriptionARM::pDimensions`, `srcTensor` and `dstTensor` **must** be the same size
- VUID-VkCopyTensorInfoARM-regionCount-09686
`regionCount` must be equal to 1
- VUID-VkCopyTensorInfoARM-pRegions-09687
Each element of `pRegions` **must** be a `VkTensorCopyARM` structure whose `pSrcOffset` is `NULL` or has all its elements equal to 0
- VUID-VkCopyTensorInfoARM-pRegions-09688
Each element of `pRegions` **must** be a `VkTensorCopyARM` structure whose `pDstOffset` is `NULL` or has all its elements equal to 0
- VUID-VkCopyTensorInfoARM-pRegions-09689
Each element of `pRegions` **must** be a `VkTensorCopyARM` structure whose `pExtent` is `NULL` or equal to the `VkTensorDescriptionARM::pDimensions` array specified when `srcTensor` and `dstTensor` were created
- VUID-VkCopyTensorInfoARM-pRegions-09954
Each element of `pRegions` **must** be a `VkTensorCopyARM` structure whose `dimensionCount`, if it is not equal to 0, is equal to the largest of the `VkTensorDescriptionARM::dimensionCount` of `srcTensor` or `dstTensor`
- VUID-VkCopyTensorInfoARM-srcTensor-09690
The `format` `features` of `srcTensor` **must** contain `VK_FORMAT_FEATURE_2_TRANSFER_SRC_BIT`
- VUID-VkCopyTensorInfoARM-srcTensor-09691
`srcTensor` **must** have been created with the `VK_TENSOR_USAGE_TRANSFER_SRC_BIT_ARM` usage flag set
- VUID-VkCopyTensorInfoARM-dstTensor-09692
The `format` `features` of `dstTensor` **must** contain `VK_FORMAT_FEATURE_2_TRANSFER_DST_BIT`
- VUID-VkCopyTensorInfoARM-dstTensor-09693
`dstTensor` **must** have been created with the `VK_TENSOR_USAGE_TRANSFER_DST_BIT_ARM` usage flag set
- VUID-VkCopyTensorInfoARM-srcTensor-09694
If `srcTensor` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyTensorInfoARM-dstTensor-09695
If `dstTensor` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

Valid Usage (Implicit)

- VUID-VkCopyTensorInfoARM-sType-sType
sType must be `VK_STRUCTURE_TYPE_COPY_TENSOR_INFO_ARM`
- VUID-VkCopyTensorInfoARM-pNext-pNext
pNext must be `NULL`
- VUID-VkCopyTensorInfoARM-srcTensor-parameter
srcTensor must be a valid `VkTensorARM` handle
- VUID-VkCopyTensorInfoARM-dstTensor-parameter
dstTensor must be a valid `VkTensorARM` handle
- VUID-VkCopyTensorInfoARM-pRegions-parameter
pRegions must be a valid pointer to an array of **regionCount** valid `VkTensorCopyARM` structures
- VUID-VkCopyTensorInfoARM-regionCount-arraylength
regionCount must be greater than `0`
- VUID-VkCopyTensorInfoARM-commonparent
Both of **dstTensor**, and **srcTensor** must have been created, allocated, or retrieved from the same `VkDevice`

The `VkTensorCopyARM` structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkTensorCopyARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           dimensionCount;
    const uint64_t*     pSrcOffset;
    const uint64_t*     pDstOffset;
    const uint64_t*     pExtent;
} VkTensorCopyARM;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **dimensionCount** is the number of elements in the **pSrcOffset**, **pDstOffset** and **pExtent** arrays.
- **pSrcOffset** is `NULL` or an array of size **dimensionCount** providing an offset into the source tensor. When **pSrcOffset** is `NULL`, the offset into the source tensor is `0` in all dimensions.
- **pDstOffset** is `NULL` or an array of size **dimensionCount** providing an offset into the destination tensor. When **pDstOffset** is `NULL`, the offset into the destination tensor is `0` in all dimensions.
- **pExtent** is `NULL` or an array of size **dimensionCount** providing the number of elements to copy in each dimension. When **pExtent** is `NULL`, the number of elements to copy is taken as the total number of elements in each dimension of the source tensor.

Valid Usage

- VUID-VkTensorCopyARM-dimensionCount-09955
`dimensionCount` **must** be greater than 0 if `pSrcOffset`, `pDstOffset`, or `pExtent` is not `NULL`

Valid Usage (Implicit)

- VUID-VkTensorCopyARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_TENSOR_COPY_ARM`
- VUID-VkTensorCopyARM-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkTensorCopyARM-pSrcOffset-parameter
If `dimensionCount` is not 0, and `pSrcOffset` is not `NULL`, `pSrcOffset` **must** be a valid pointer to an array of `dimensionCount` `uint64_t` values
- VUID-VkTensorCopyARM-pDstOffset-parameter
If `dimensionCount` is not 0, and `pDstOffset` is not `NULL`, `pDstOffset` **must** be a valid pointer to an array of `dimensionCount` `uint64_t` values
- VUID-VkTensorCopyARM-pExtent-parameter
If `dimensionCount` is not 0, and `pExtent` is not `NULL`, `pExtent` **must** be a valid pointer to an array of `dimensionCount` `uint64_t` values

Chapter 26. Drawing Commands

Drawing commands (commands with **Draw** in the name) provoke work in a graphics pipeline. Drawing commands are recorded into a command buffer and when executed by a queue, will produce work which executes according to the bound graphics pipeline, or if the **shaderObject** feature is enabled, any **shader objects** bound to graphics stages. A graphics pipeline or a combination of one or more graphics shader objects **must** be bound to a command buffer before any drawing commands are recorded in that command buffer.

Drawing can be achieved in two modes:

- **Programmable Mesh Shading**, the mesh shader assembles primitives, or
- **Programmable Primitive Shading**, the input primitives are assembled as follows.

Each draw is made up of zero or more vertices and zero or more instances, which are processed by the device and result in the assembly of primitives. Primitives are assembled according to the **pInputAssemblyState** member of the **VkGraphicsPipelineCreateInfo** structure, which is of type **VkPipelineInputAssemblyStateCreateInfo**:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineInputAssemblyStateCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineInputAssemblyStateCreateFlags flags;
    VkPrimitiveTopology       topology;
    VkBool32                  primitiveRestartEnable;
} VkPipelineInputAssemblyStateCreateInfo;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **topology** is a **VkPrimitiveTopology** defining the primitive topology, as described below.
- **primitiveRestartEnable** controls whether a special vertex index value is treated as restarting the assembly of primitives. This enable only applies to indexed draws (**vkCmdDrawIndexed**, **vkCmdDrawMultiIndexedEXT**, and **vkCmdDrawIndexedIndirect**), and the special index value is either 0xFFFFFFFF when the **indexType** parameter of Vulkan 1.4 or **vkCmdBindIndexBuffer2** or **vkCmdBindIndexBuffer** is equal to **VK_INDEX_TYPE_UINT32**; 0xFF when **indexType** is equal to **VK_INDEX_TYPE_UINT8**; or 0xFFFF when **indexType** is equal to **VK_INDEX_TYPE_UINT16**. Primitive restart is not allowed for “list” topologies, unless one of the features **primitiveTopologyPatchListRestart** (for **VK_PRIMITIVE_TOPOLOGY_PATCH_LIST**) or **primitiveTopologyListRestart** (for all other list topologies) is enabled. If the **primitiveRestartIndex** feature is enabled, **vkCmdSetPrimitiveRestartIndexEXT** can be used to set a custom index for primitive restart.

Restarting the assembly of primitives discards the most recent index values if those elements formed an incomplete primitive, and restarts the primitive assembly using the subsequent indices,

but only assembling the immediately following element through the end of the originally specified elements. The primitive restart index value comparison is performed before adding the `vertexOffset` value to the index value.

Valid Usage

- VUID-VkPipelineInputAssemblyStateCreateInfo-topology-06252
If the `primitiveTopologyListRestart` feature is not enabled, and `topology` is `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY`, or `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, `primitiveRestartEnable` **must** be `VK_FALSE`
- VUID-VkPipelineInputAssemblyStateCreateInfo-topology-06253
If the `primitiveTopologyPatchListRestart` feature is not enabled, and `topology` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, `primitiveRestartEnable` **must** be `VK_FALSE`
- VUID-VkPipelineInputAssemblyStateCreateInfo-topology-00429
If the `geometryShader` feature is not enabled, `topology` **must** not be any of `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY`, `VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY` or `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY`
- VUID-VkPipelineInputAssemblyStateCreateInfo-topology-00430
If the `tessellationShader` feature is not enabled, `topology` **must** not be `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`
- VUID-VkPipelineInputAssemblyStateCreateInfo-triangleFans-04452
If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::triangleFans` is `VK_FALSE`, `topology` **must** not be `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN`

Valid Usage (Implicit)

- VUID-VkPipelineInputAssemblyStateCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_INPUT_ASSEMBLY_STATE_CREATE_INFO`
- VUID-VkPipelineInputAssemblyStateCreateInfo-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPipelineInputAssemblyStateCreateInfo-flags-zerobitmask
`flags` **must** be `0`
- VUID-VkPipelineInputAssemblyStateCreateInfo-topology-parameter
`topology` **must** be a valid `VkPrimitiveTopology` value

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineInputAssemblyStateCreateFlags;
```

`VkPipelineInputAssemblyStateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

To [dynamically control](#) whether a special vertex index value is treated as restarting the assembly of primitives, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetPrimitiveRestartEnable(
    VkCommandBuffer          commandBuffer,
    VkBool32                  primitiveRestartEnable);
```

```
// Provided by VK_EXT_extended_dynamic_state2, VK_EXT_shader_object
// Equivalent to vkCmdSetPrimitiveRestartEnable
void vkCmdSetPrimitiveRestartEnableEXT(
    VkCommandBuffer          commandBuffer,
    VkBool32                  primitiveRestartEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `primitiveRestartEnable` controls whether a special vertex index value is treated as restarting the assembly of primitives. It behaves in the same way as `VkPipelineInputAssemblyStateCreateInfo::primitiveRestartEnable`

This command sets the primitive restart enable for subsequent drawing commands when drawing using [shader objects](#), or when the graphics pipeline is created with [VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE](#) set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`. Otherwise, this state is specified by the `VkPipelineInputAssemblyStateCreateInfo::primitiveRestartEnable` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetPrimitiveRestartEnable-None-08970

At least one of the following **must** be true:

- the `extendedDynamicState2` feature is enabled
- the `shaderObject` feature is enabled
- the value of `VkApplicationInfo::apiVersion` used to create the `VkInstance` parent of `commandBuffer` is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetPrimitiveRestartEnable-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdSetPrimitiveRestartEnable-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdSetPrimitiveRestartEnable-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdSetPrimitiveRestartEnable-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_CODING_BIT	State

Conditional Rendering

`vkCmdSetPrimitiveRestartEnable` is not affected by `conditional rendering`

To `dynamically control` which special vertex index value is treated as restarting the assembly of primitives, call:

```
// Provided by VK_EXT_primitive_restart_index
void vkCmdSetPrimitiveRestartIndexEXT(
    VkCommandBuffer          commandBuffer,
    uint32_t                  primitiveRestartIndex);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `primitiveRestartIndex` controls which special vertex index value is treated as restarting the assembly of primitives. This overrides the default values specified in `VkPipelineInputAssemblyStateCreateInfo::primitiveRestartEnable`.

This command sets a custom primitive restart index for subsequent drawing commands. Binding an index buffer invalidates the custom index value.

Valid Usage

- VUID-vkCmdSetPrimitiveRestartIndexEXT-primitiveRestartIndex-12395
The `primitiveRestartIndex` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdSetPrimitiveRestartIndexEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPrimitiveRestartIndexEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetPrimitiveRestartIndexEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdSetPrimitiveRestartIndexEXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

`vkCmdSetPrimitiveRestartIndexEXT` is not affected by [conditional rendering](#)

26.1. Primitive Topologies

Primitive topology determines how consecutive vertices are organized into primitives, and determines the type of primitive that is used at the beginning of the graphics pipeline. The effective topology for later stages of the pipeline is altered by tessellation or geometry shading (if either is in

use) and depends on the execution modes of those shaders. In the case of mesh shading the only effective topology is defined by the execution mode of the mesh shader.

The primitive topologies defined by [VkPrimitiveTopology](#) are:

```
// Provided by VK_VERSION_1_0
typedef enum VkPrimitiveTopology {
    VK_PRIMITIVE_TOPOLOGY_POINT_LIST = 0,
    VK_PRIMITIVE_TOPOLOGY_LINE_LIST = 1,
    VK_PRIMITIVE_TOPOLOGY_LINE_STRIP = 2,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST = 3,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP = 4,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN = 5,
    VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY = 6,
    VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY = 7,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY = 8,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY = 9,
    VK_PRIMITIVE_TOPOLOGY_PATCH_LIST = 10,
} VkPrimitiveTopology;
```

- [VK_PRIMITIVE_TOPOLOGY_POINT_LIST](#) specifies a series of [separate point primitives](#).
- [VK_PRIMITIVE_TOPOLOGY_LINE_LIST](#) specifies a series of [separate line primitives](#).
- [VK_PRIMITIVE_TOPOLOGY_LINE_STRIP](#) specifies a series of [connected line primitives](#) with consecutive lines sharing a vertex.
- [VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST](#) specifies a series of [separate triangle primitives](#).
- [VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP](#) specifies a series of [connected triangle primitives](#) with consecutive triangles sharing an edge.
- [VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN](#) specifies a series of [connected triangle primitives](#) with all triangles sharing a common vertex. If the [VK_KHR_portability_subset](#) extension is enabled, and [VkPhysicalDevicePortabilitySubsetFeaturesKHR::triangleFans](#) is [VK_FALSE](#), then triangle fans are not supported by the implementation, and [VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN](#) **must** not be used.
- [VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY](#) specifies a series of [separate line primitives with adjacency](#).
- [VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY](#) specifies a series of [connected line primitives with adjacency](#), with consecutive primitives sharing three vertices.
- [VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY](#) specifies a series of [separate triangle primitives with adjacency](#).
- [VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY](#) specifies [connected triangle primitives with adjacency](#), with consecutive triangles sharing an edge.
- [VK_PRIMITIVE_TOPOLOGY_PATCH_LIST](#) specifies [separate patch primitives](#).

Each primitive topology, and its construction from a list of vertices, is described in detail below with a supporting diagram, according to the following key:

	Vertex	A point in 3-dimensional space. Positions chosen within the diagrams are arbitrary and for illustration only.
5	Vertex Number	Sequence position of a vertex within the provided vertex data.
	Provoking Vertex	Provoking vertex within the main primitive. The tail is angled towards the relevant primitive. Used in flat shading .
	Primitive Edge	An edge connecting the points of a main primitive.
	Adjacency Edge	Points connected by these lines do not contribute to a main primitive, and are only accessible in a geometry shader .
	Winding Order	The relative order in which vertices are defined within a primitive, used in the facing determination . This ordering has no specific start or end point.

The diagrams are supported with mathematical definitions where the vertices (v) and primitives (p) are numbered starting from 0; v_0 is the first vertex in the provided data and p_0 is the first primitive in the set of primitives defined by the vertices and topology.

To [dynamically set](#) primitive topology, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetPrimitiveTopology(
    VkCommandBuffer          commandBuffer,
    VkPrimitiveTopology       primitiveTopology);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetPrimitiveTopology
void vkCmdSetPrimitiveTopologyEXT(
    VkCommandBuffer          commandBuffer,
    VkPrimitiveTopology       primitiveTopology);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `primitiveTopology` specifies the primitive topology to use for drawing.

This command sets the primitive topology for subsequent drawing commands when drawing using [shader objects](#), or when the graphics pipeline is created with [VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY](#) set in [VkPipelineDynamicStateCreateInfo::pDynamicStates](#). Otherwise, this state is specified by the [VkPipelineInputAssemblyStateCreateInfo::topology](#) value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetPrimitiveTopology-None-08971
At least one of the following **must** be true:
 - the `extendedDynamicState` feature is enabled

- the `shaderObject` feature is enabled
- the value of `VkApplicationInfo::apiVersion` used to create the `VkInstance` parent of `commandBuffer` is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetPrimitiveTopology-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPrimitiveTopology-primitiveTopology-parameter `primitiveTopology` **must** be a valid `VkPrimitiveTopology` value
- VUID-vkCmdSetPrimitiveTopology-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdSetPrimitiveTopology-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdSetPrimitiveTopology-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

`vkCmdSetPrimitiveTopology` is not affected by `conditional rendering`

26.1.1. Topology Class

The primitive topologies are grouped into the following topology classes:

Table 35. Topology Classes

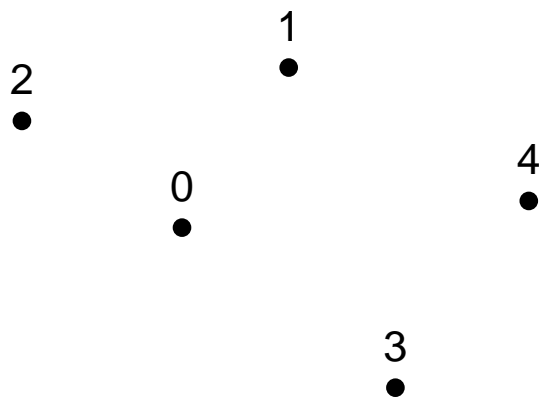

Topology Class	Primitive Topology
Point	VK_PRIMITIVE_TOPOLOGY_POINT_LIST
Line	VK_PRIMITIVE_TOPOLOGY_LINE_LIST , VK_PRIMITIVE_TOPOLOGY_LINE_STRIP , VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY , VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY
Triangle	VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST , VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP , VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN , VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY , VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY
Patch	VK_PRIMITIVE_TOPOLOGY_PATCH_LIST

26.1.2. Point Lists

When the topology is [VK_PRIMITIVE_TOPOLOGY_POINT_LIST](#), each consecutive vertex defines a single point primitive, according to the equation:

$$p_i = \{v_i\}$$

As there is only one vertex, that vertex is the provoking vertex. The number of primitives generated is equal to **vertexCount**.

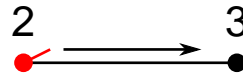

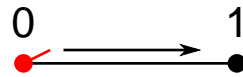

26.1.3. Line Lists

When the primitive topology is [VK_PRIMITIVE_TOPOLOGY_LINE_LIST](#), each consecutive pair of vertices defines a single line primitive, according to the equation:

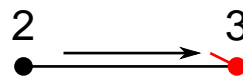

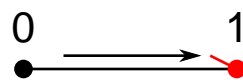

$$p_i = \{v_{2i}, v_{2i+1}\}$$

The number of primitives generated is equal to $\lceil \text{vertexCount}/2 \rceil$.

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for p_i is v_{2i} .

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for p_i is v_{2i+1} .

26.1.4. Line Strips

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_LINE_STRIP`, one line primitive is defined by each vertex and the following vertex, according to the equation:

$$p_i = \{v_i, v_{i+1}\}$$

The number of primitives generated is equal to $\max(0, \text{vertexCount}-1)$.

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for p_i is v_i .

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for p_i is v_{i+1} .

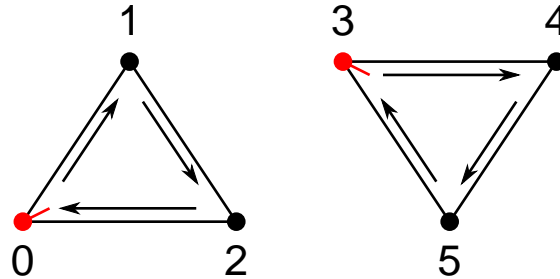

26.1.5. Triangle Lists

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, each consecutive set of three vertices defines a single triangle primitive, according to the equation:

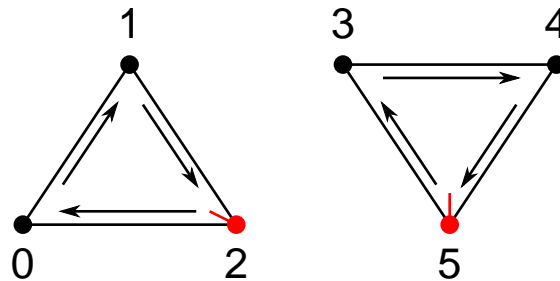

$$p_i = \{v_{3i}, v_{3i+1}, v_{3i+2}\}$$

The number of primitives generated is equal to $\lceil \text{vertexCount}/3 \rceil$.

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for p_i is v_{3i} .

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for p_i is v_{3i+2} .

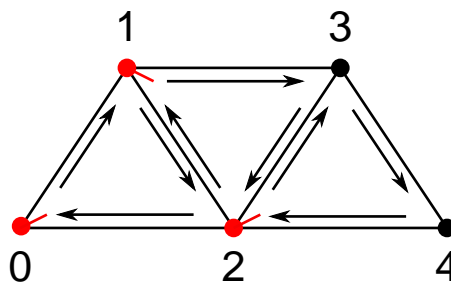

26.1.6. Triangle Strips

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP`, one triangle primitive is defined by each vertex and the two vertices that follow it, according to the equation:

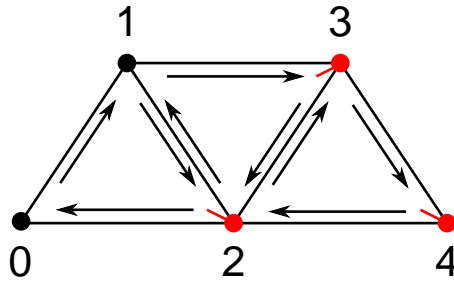

$$p_i = \{v_i, v_{i+(1+i\%2)}, v_{i+(2-i\%2)}\}$$

The number of primitives generated is equal to $\max(0, \text{vertexCount}-2)$.

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for p_i is v_i .

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for p_i is v_{i+2} .

NOTE

The ordering of the vertices in each successive triangle is reversed, so that the winding order is consistent throughout the strip.

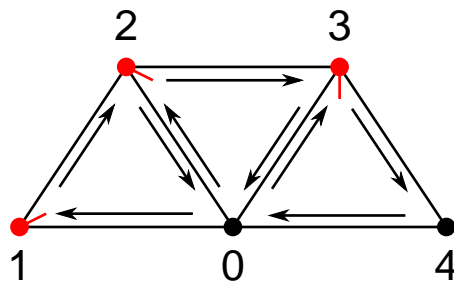

26.1.7. Triangle Fans

When the primitive topology is [VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN](#), triangle primitives are defined around a shared common vertex, according to the equation:

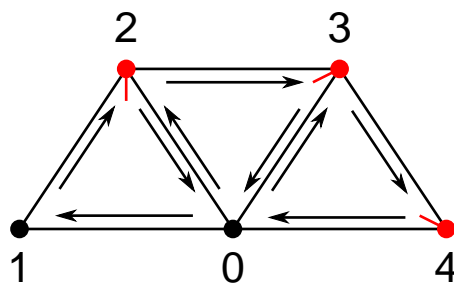

$$p_i = \{v_{i+1}, v_{i+2}, v_0\}$$

The number of primitives generated is equal to $\max(0, \text{vertexCount}-2)$.

When the `provokingVertexMode` is [VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT](#), the provoking vertex for p_i is v_{i+1} .

When the `provokingVertexMode` is [VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT](#), the provoking vertex for p_i is v_{i+2} .

NOTE

If the [VK_KHR_portability_subset](#) extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::triangleFans` is [VK_FALSE](#), then triangle fans are not supported by the implementation, and [VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN](#) **must** not be used.

26.1.8. Line Lists With Adjacency

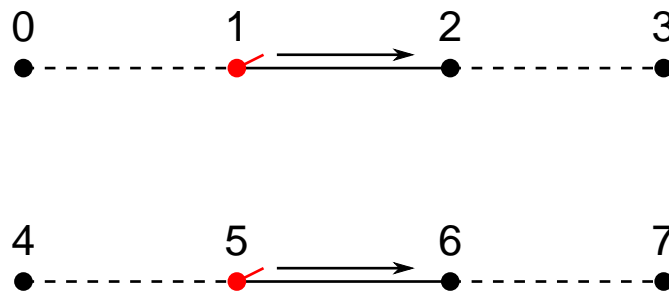

When the primitive topology is [VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY](#), each consecutive set of four vertices defines a single line primitive with adjacency, according to the equation:

$$p_i = \{v_{4i}, v_{4i+1}, v_{4i+2}, v_{4i+3}\}$$

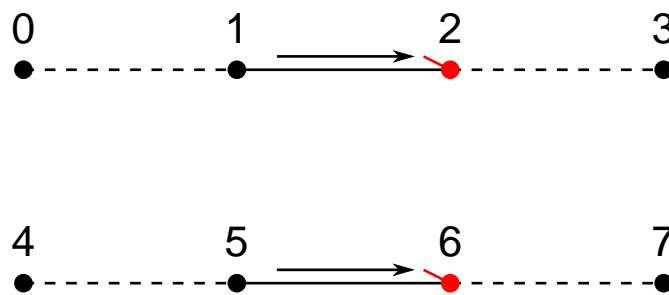

A line primitive is described by the second and third vertices of the total primitive, with the remaining two vertices only accessible in a [geometry shader](#).

The number of primitives generated is equal to $\lfloor \text{vertexCount} / 4 \rfloor$.

When the `provokingVertexMode` is [VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT](#), the provoking vertex for p_i is v_{4i+1} .

When the `provokingVertexMode` is [VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT](#), the provoking vertex for p_i is v_{4i+2} .

26.1.9. Line Strips With Adjacency

When the primitive topology is [VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY](#), one line primitive with adjacency is defined by each vertex and the following vertex, according to the equation:

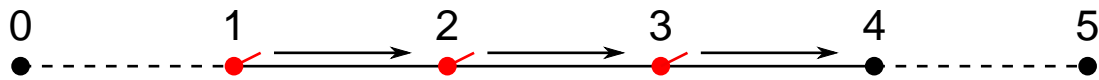

$$p_i = \{v_i, v_{i+1}, v_{i+2}, v_{i+3}\}$$

A line primitive is described by the second and third vertices of the total primitive, with the remaining two vertices only accessible in a [geometry shader](#).

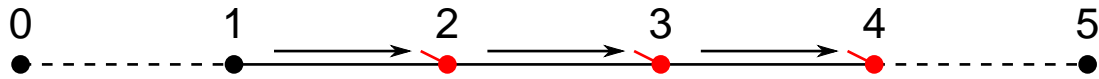

The number of primitives generated is equal to $\max(0, \text{vertexCount} - 3)$.

When the `provokingVertexMode` is [VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT](#), the

provoking vertex for p_i is v_{i+1} .

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for p_i is v_{i+2} .

26.1.10. Triangle Lists With Adjacency

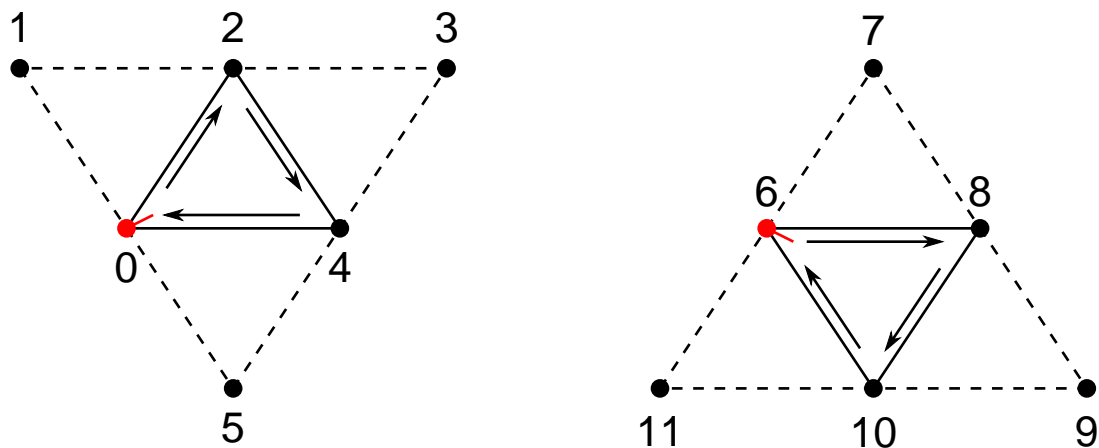

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, each consecutive set of six vertices defines a single triangle primitive with adjacency, according to the equations:

$$p_i = \{v_{6i}, v_{6i+1}, v_{6i+2}, v_{6i+3}, v_{6i+4}, v_{6i+5}\}$$

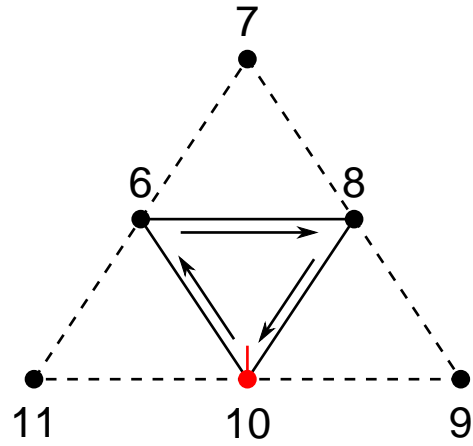

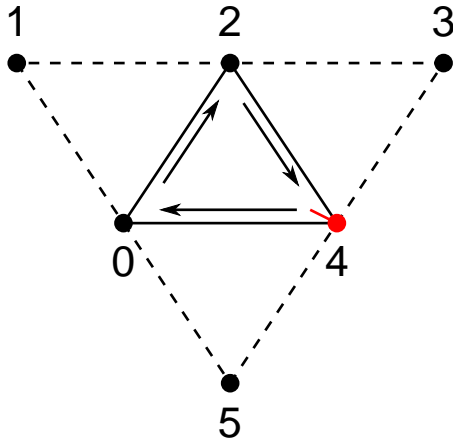

A triangle primitive is described by the first, third, and fifth vertices of the total primitive, with the remaining three vertices only accessible in a [geometry shader](#).

The number of primitives generated is equal to $\lceil \text{vertexCount}/6 \rceil$.

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for p_i is v_{6i} .

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for p_i is v_{6i+4} .

26.1.11. Triangle Strips With Adjacency

When the primitive topology is [VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY](#), one triangle primitive with adjacency is defined by each vertex and the following 5 vertices.

The number of primitives generated, n , is equal to $\lceil \max(0, \text{vertexCount} - 4) / 2 \rceil$.

If $n=1$, the primitive is defined as:

$$p = \{v_0, v_1, v_2, v_5, v_4, v_3\}$$

If $n>1$, the total primitive consists of different vertices according to where it is in the strip:

$$p_i = \{v_{2i}, v_{2i+1}, v_{2i+2}, v_{2i+6}, v_{2i+4}, v_{2i+3}\} \text{ when } i=0$$

$$p_i = \{v_{2i}, v_{2i+3}, v_{2i+4}, v_{2i+6}, v_{2i+2}, v_{2i-2}\} \text{ when } i>0, i<n-1, \text{ and } i\%2=1$$

$$p_i = \{v_{2i}, v_{2i-2}, v_{2i+2}, v_{2i+6}, v_{2i+4}, v_{2i+3}\} \text{ when } i>0, i<n-1, \text{ and } i\%2=0$$

$$p_i = \{v_{2i}, v_{2i+3}, v_{2i+4}, v_{2i+5}, v_{2i+2}, v_{2i-2}\} \text{ when } i=n-1 \text{ and } i\%2=1$$

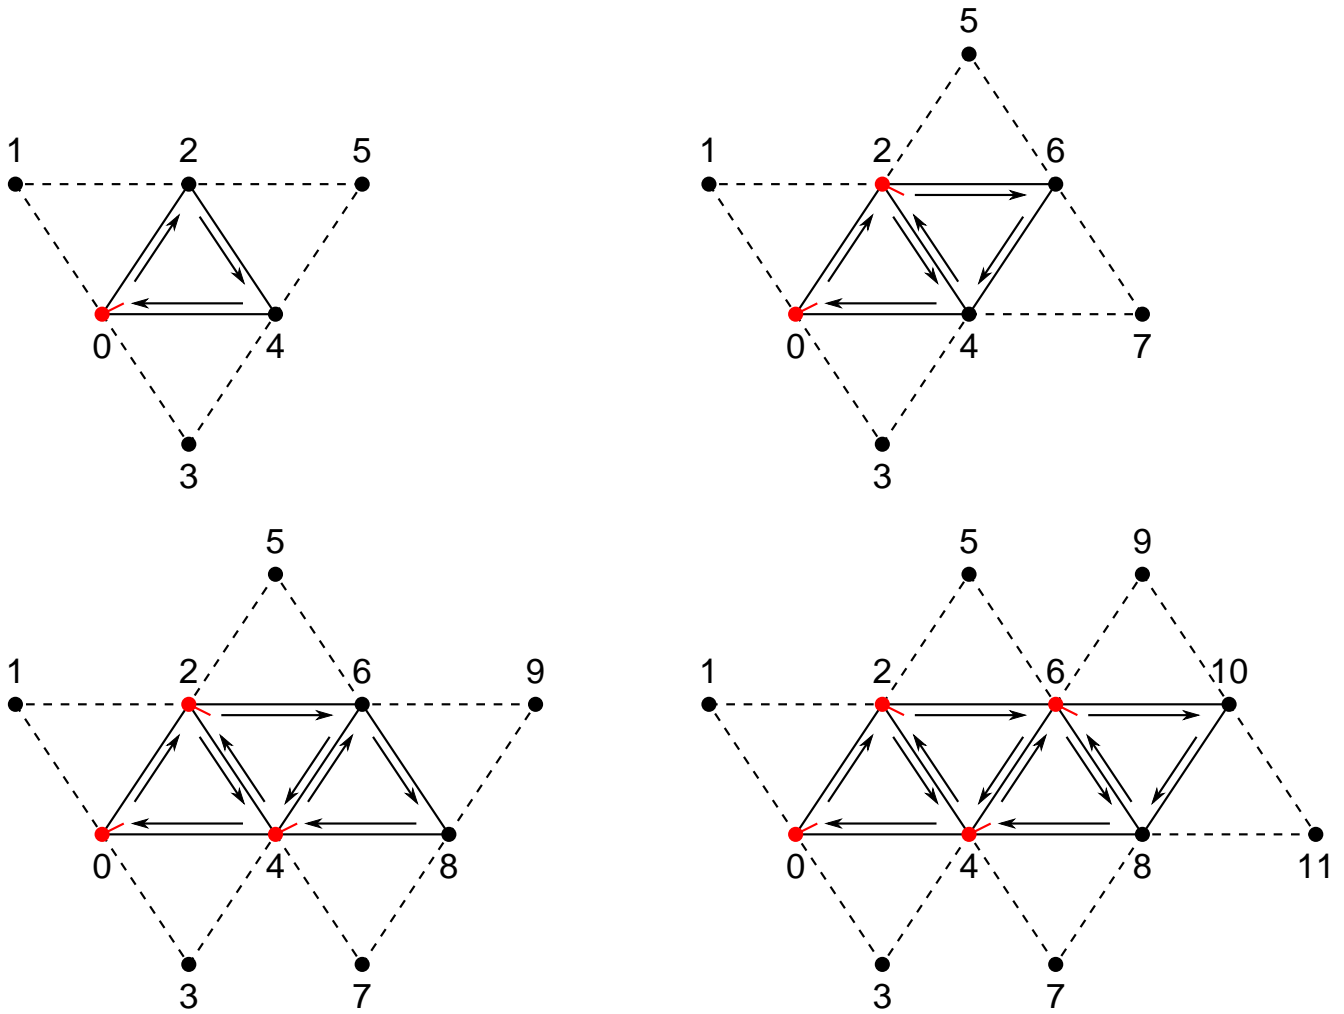

$$p_i = \{v_{2i}, v_{2i-2}, v_{2i+2}, v_{2i+5}, v_{2i+4}, v_{2i+3}\} \text{ when } i=n-1 \text{ and } i\%2=0$$

A triangle primitive is described by the first, third, and fifth vertices of the total primitive in all cases, with the remaining three vertices only accessible in a [geometry shader](#).

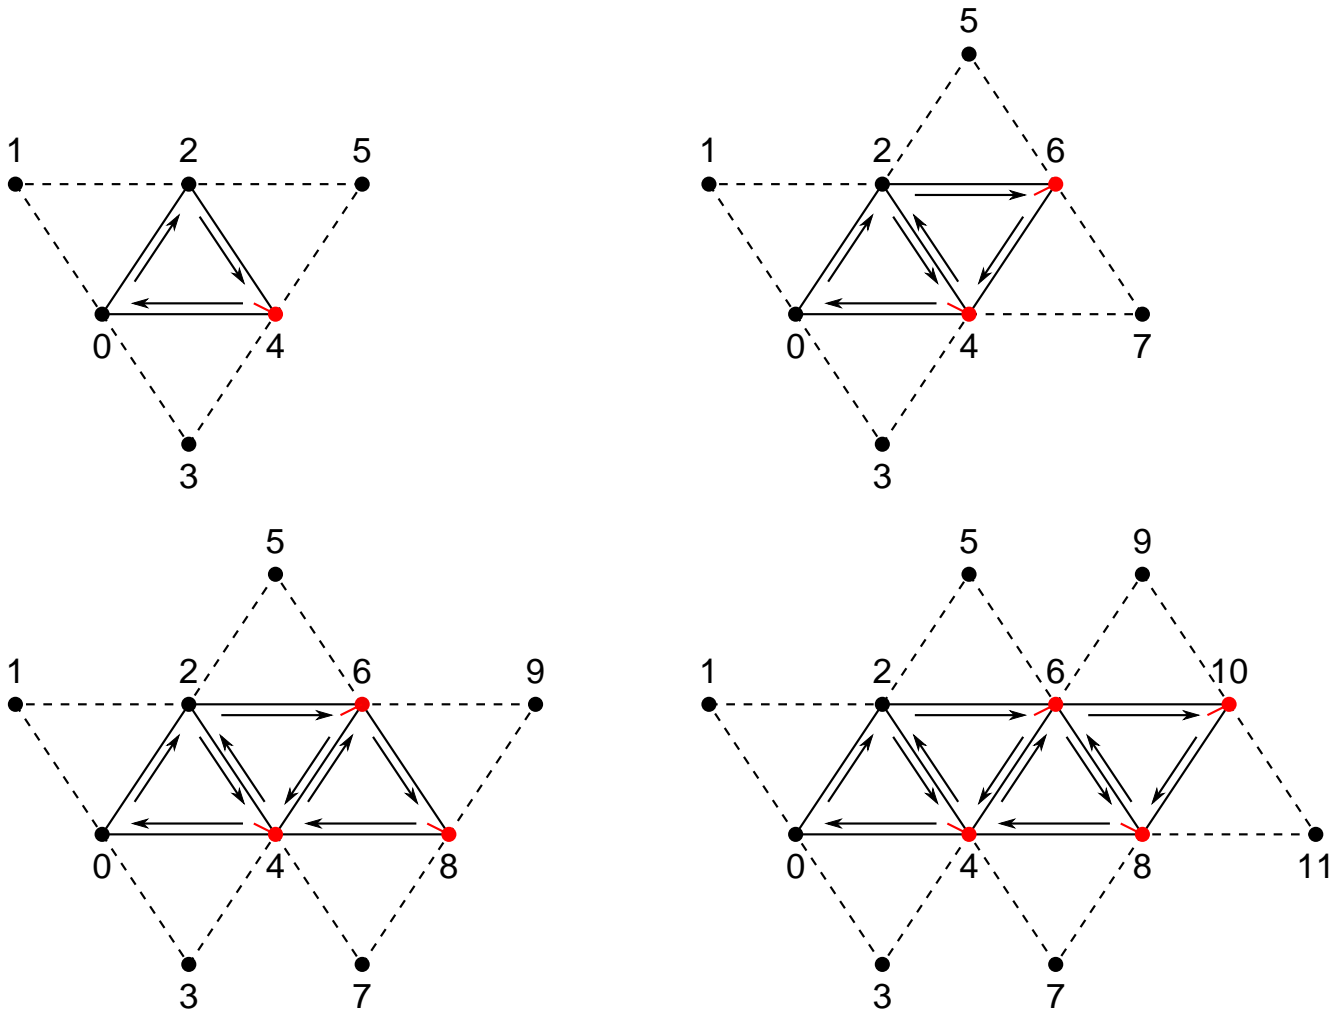

NOTE

The ordering of the vertices in each successive triangle is altered so that the winding order is consistent throughout the strip.

When the `provokingVertexMode` is [VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT](#), the provoking vertex for p_i is always v_{2i} .

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for p_i is always v_{2i+4} .

26.1.12. Patch Lists

When the primitive topology is [VK_PRIMITIVE_TOPOLOGY_PATCH_LIST](#), each consecutive set of m vertices defines a single patch primitive, according to the equation:

$$p_i = \{v_{mi}, v_{mi+1}, \dots, v_{mi+(m-2)}, v_{mi+(m-1)}\}$$

where m is equal to [VkPipelineTessellationStateCreateInfo::patchControlPoints](#).

Patch lists are never passed to [vertex post-processing](#), and as such no provoking vertex is defined for patch primitives. The number of primitives generated is equal to $\lceil \text{vertexCount}/m \rceil$.

The vertices comprising a patch have no implied geometry, and are used as inputs to tessellation shaders and the fixed-function tessellator to generate new point, line, or triangle primitives.

26.2. Effective Primitive Topology

The effective primitive topology is the primitive topology that is consumed or produced by a given stage of the graphics pipeline. The interpretation of this topology depends on the active shader stages and other state set in the graphics pipeline.

26.2.1. Vertex Input Assembler Topology

This is the topology set when the `VK_SHADER_STAGE_VERTEX_BIT` stage is used and `Programmable Primitive Shading` occurs. It **can** be set with `VkPipelineInputAssemblyStateCreateInfo::topology` or `vkCmdSetPrimitiveTopology`.

26.2.2. Clip Space Topology

This is the output of the last pre-rasterization shader stage involved.

- If `VK_SHADER_STAGE_VERTEX_BIT` is the last pre-rasterization stage, the topology is not changed from what was set in the `input assembly`.
- If `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` is the last pre-rasterization stage, the topology depends on the `OpExecutionMode` found in either `tessellation stage`.
 - The `Isolines Execution Mode` is in line `topology class`.
 - The `Triangles` and `Quads Execution Mode` is in triangle `topology class`.
 - The `PointMode Execution Mode` is in point `topology class` and will take precedence over the other tessellation stage `Execution Mode`.
- If `VK_SHADER_STAGE_GEOMETRY_BIT` is the last pre-rasterization stage, the topology depends on the `OpExecutionMode` found in this shader stage.
 - The `OutputPoints Execution Mode` is in point `topology class`.
 - The `OutputLineStrip Execution Mode` is in line `topology class`.
 - The `OutputTriangleStrip Execution Mode` is in triangle `topology class`.
- If `VK_SHADER_STAGE_MESH_BIT_EXT` is the last pre-rasterization stage, the topology depends on the `OpExecutionMode` found in this shader stage.
 - The `OutputPoints Execution Mode` is in point `topology class`.
 - The `OutputLinesEXT Execution Mode` is in line `topology class`.
 - The `OutputTrianglesEXT Execution Mode` is in triangle `topology class`.

26.2.3. Rasterization Input Topology

After clipping and viewport transformations, the `Polygon Mode` **can** set a topology as an input for rasterization. This **can** be different from what was used in `Clip Space Topology`.

If `VkPipelineRasterizationStateCreateInfo::rasterizerDiscardEnable` or `vkCmdSetRasterizerDiscardEnableEXT::rasterizerDiscardEnable` is set to `VK_FALSE`, then this Rasterization Input Topology is not observed.

If the `clip space topology` is in triangle `topology class` then `VK_POLYGON_MODE_LINE` will turn it into line topology and `VK_POLYGON_MODE_POINT` will turn it into point topology.

If the `clip space topology` is in line `topology class` then `VK_POLYGON_MODE_POINT` will turn it into point topology.

26.3. Primitive Order

Primitives generated by [drawing commands](#) progress through the stages of the [graphics pipeline](#) in *primitive order*. Primitive order is initially determined in the following way:

1. Submission order determines the initial ordering
2. For indirect drawing commands, the order in which accessed instances of the [VkDrawIndirectCommand](#) are stored in [buffer](#), from lower indirect buffer addresses to higher addresses.
3. If a drawing command includes multiple instances, the order in which instances are executed, from lower numbered instances to higher.
4. The order in which primitives are specified by a drawing command:
 - For non-indexed draws, from vertices with a lower numbered [vertexIndex](#) to a higher numbered [vertexIndex](#).
 - For indexed draws, vertices sourced from a lower index buffer addresses to higher addresses.
 - For draws using mesh shaders, the order is provided by [mesh shading](#).
 - For draws using cluster culling shaders, the order is provided by [cluster culling shading](#).

Within this order implementations further sort primitives:

5. If tessellation shading is active, by an implementation-dependent order of new primitives generated by [tessellation](#).
6. If geometry shading is active, by the order new primitives are generated by [geometry shading](#).
7. If the [polygon mode](#) is not [VK_POLYGON_MODE_FILL](#), or [VK_POLYGON_MODE_FILL_RECTANGLE_NV](#), by an implementation-dependent ordering of the new primitives generated within the original primitive.

Primitive order is later used to define [rasterization order](#), which determines the order in which fragments output results to a framebuffer.

26.4. Programmable Primitive Shading

Once primitives are assembled, they proceed to the vertex shading stage of the pipeline. If the draw includes multiple instances, then the set of primitives is sent to the vertex shading stage multiple times, once for each instance.

It is implementation-dependent whether vertex shading occurs on vertices that are discarded as part of incomplete primitives, but if it does occur then it operates as if they were vertices in complete primitives and such invocations **can** have side effects.

Vertex shading receives two per-vertex inputs from the primitive assembly stage - the [vertexIndex](#) and the [instanceIndex](#). How these values are generated is defined below, with each command.

Drawing commands fall roughly into two categories:

- Non-indexed drawing commands present a sequential `vertexIndex` to the vertex shader. The sequential index is generated automatically by the device (see [Fixed-Function Vertex Processing](#) for details on both specifying the vertex attributes indexed by `vertexIndex`, as well as binding vertex buffers containing those attributes to a command buffer). These commands are:
 - `vkCmdDraw`
 - `vkCmdDrawIndirect`
 - `vkCmdDrawIndirectCount`
 - `vkCmdDrawIndirectCountKHR`
 - `vkCmdDrawIndirectCountAMD`
 - `vkCmdDrawMultiEXT`
- Indexed drawing commands read index values from an *index buffer* and use this to compute the `vertexIndex` value for the vertex shader. These commands are:
 - `vkCmdDrawIndexed`
 - `vkCmdDrawIndexedIndirect`
 - `vkCmdDrawIndexedIndirectCount`
 - `vkCmdDrawIndexedIndirectCountKHR`
 - `vkCmdDrawIndexedIndirectCountAMD`
 - `vkCmdDrawMultiIndexedEXT`

For indexed drawing commands, indices are sourced from a range of memory bound to the command buffer, referred to as the *bound index buffer range*, and specified by one of the following commands.

To bind an address range as an index buffer to a command buffer, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdBindIndexBuffer3KHR(
    VkCommandBuffer          commandBuffer,
    const VkBindIndexBuffer3InfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pInfo` is a pointer to a `VkBindIndexBuffer3InfoKHR` structure defining parameters of this command.

The *bound index buffer range* is set to the range of memory indicated by `pInfo->addressRange`.

If the `nullDescriptor` feature is enabled, `pInfo->addressRange.size` and `pInfo->addressRange.address` can be 0. When the size and address are 0, every index read from this binding will return a value of zero.

Valid Usage (Implicit)

- VUID-vkCmdBindIndexBuffer3KHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindIndexBuffer3KHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkBindIndexBuffer3InfoKHR` structure
- VUID-vkCmdBindIndexBuffer3KHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBindIndexBuffer3KHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBindIndexBuffer3KHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

`vkCmdBindIndexBuffer3KHR` is not affected by `conditional rendering`

`VkBindIndexBuffer3InfoKHR` is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkBindIndexBuffer3InfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceAddressRangeKHR addressRange;
    VkAddressCommandFlagsKHR addressFlags;
    VkIndexType          indexType;
} VkBindIndexBuffer3InfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **addressRange** is the [VkDeviceAddressRangeKHR](#) of the address range to bind.
- **addressFlags** is a [VkAddressCommandFlagsKHR](#) value defining the flags for the address range.
- **indexType** is a [VkIndexType](#) value specifying the size of the indices.

Valid Usage

- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13097
If the range specified by **addressRange** is not bound completely to memory when accessed, **addressFlags** **must** not include [VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR](#)
- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13098
If the buffer from which the range specified by **addressRange** was created with [VK_BUFFER_CREATE_PROTECTED_BIT](#), and **protectedNoFault** is not supported, **addressFlags** **must** include [VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR](#)
- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13099
If the buffer from which the range specified by **addressRange** was created without [VK_BUFFER_CREATE_PROTECTED_BIT](#), and **protectedNoFault** is not supported, **addressFlags** **must** not include [VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR](#)
- VUID-VkBindIndexBuffer3InfoKHR-addressFlags-13100

addressFlags	must	not	include	both
VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR				and
VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR				
- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13122
If any buffer, which is bound to a range of [VkDeviceMemory](#) that overlaps the range backing **addressRange**, was created with [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#), **addressFlags** **must** include [VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR](#) or [VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR](#)
- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13123
If any buffer, which is bound to a range of [VkDeviceMemory](#) that overlaps the range backing **addressRange**, was created without [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#), **addressFlags** **must** not include [VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR](#)
- VUID-VkBindIndexBuffer3InfoKHR-addressFlags-13101

`addressFlags` **must** **not** **include** **both**
`VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` **and**
`VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13124

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created with `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `addressFlags` **must** include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13125

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created without `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `addressFlags` **must not** include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13051

If `addressRange.address` is not 0, the buffer from which `addressRange` was queried **must** have been created with `VK_BUFFER_USAGE_INDEX_BUFFER_BIT`

- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13052

`addressRange.address` **must** be a multiple of the size of the type indicated by `indexType`

- VUID-VkBindIndexBuffer3InfoKHR-indexType-13053

`indexType` **must not** be `VK_INDEX_TYPE_NONE_KHR`

- VUID-VkBindIndexBuffer3InfoKHR-indexType-13054

If `indexType` is `VK_INDEX_TYPE_UINT8_KHR`, the `indexTypeUint8` feature **must** be enabled

- VUID-VkBindIndexBuffer3InfoKHR-None-13055

If the `nullDescriptor` feature is not enabled, `addressRange.size` **must** be greater than 0

- VUID-VkBindIndexBuffer3InfoKHR-addressRange-13056

If `addressRange.size` is 0, `addressRange.address` **must** be 0

Valid Usage (Implicit)

- VUID-VkBindIndexBuffer3InfoKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_BIND_INDEX_BUFFER_3_INFO_KHR`

- VUID-VkBindIndexBuffer3InfoKHR-pNext-pNext

`pNext` **must** be `NULL`

- VUID-VkBindIndexBuffer3InfoKHR-addressFlags-parameter

`addressFlags` **must** be a valid combination of `VkAddressCommandFlagBitsKHR` values

- VUID-VkBindIndexBuffer3InfoKHR-indexType-parameter

`indexType` **must** be a valid `VkIndexType` value

To bind an index buffer, along with its size, to a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdBindIndexBuffer2(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 buffer,
    VkDeviceSize             offset,
    VkDeviceSize             size,
    VkIndexType              indexType);
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to vkCmdBindIndexBuffer2
void vkCmdBindIndexBuffer2KHR(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 buffer,
    VkDeviceSize             offset,
    VkDeviceSize             size,
    VkIndexType              indexType);
```

- **commandBuffer** is the command buffer into which the command is recorded.
- **buffer** is the buffer being bound.
- **offset** is the starting offset in bytes within **buffer** used in index buffer address calculations.
- **size** is the size in bytes of index data bound from **buffer**.
- **indexType** is a [VkIndexType](#) value specifying the size of the indices.

buffer, **offset**, and **size** specify the [bound index buffer range](#), with a range of memory bound from [**base** + **offset**, **base** + **offset** + **size**), where **base** is the start of **buffer**. If **size** is [VK_WHOLE_SIZE](#) then the range is from **offset** to the end of the **buffer**.

If the [maintenance6](#) feature is enabled, **buffer** can be [VK_NULL_HANDLE](#). If **buffer** is [VK_NULL_HANDLE](#) and the [nullDescriptor](#) feature is enabled, every index fetched results in a value of zero.

Valid Usage

- VUID-vkCmdBindIndexBuffer2-offset-08782
offset **must** be less than the size of **buffer**
- VUID-vkCmdBindIndexBuffer2-offset-08783
The sum of **offset** and the base address of the range of [VkDeviceMemory](#) object that is backing **buffer**, **must** be a multiple of the size of the type indicated by **indexType**
- VUID-vkCmdBindIndexBuffer2-buffer-08784
buffer **must** have been created with the [VK_BUFFER_USAGE_INDEX_BUFFER_BIT](#) usage flag set
- VUID-vkCmdBindIndexBuffer2-buffer-08785
If **buffer** is non-sparse then it **must** be bound completely and contiguously to a single [VkDeviceMemory](#) object

- VUID-vkCmdBindIndexBuffer2-indexType-08786
`indexType` **must** not be `VK_INDEX_TYPE_NONE_KHR`
- VUID-vkCmdBindIndexBuffer2-indexType-08787
If `indexType` is `VK_INDEX_TYPE_UINT8`, the `indexTypeUint8` feature **must** be enabled
- VUID-vkCmdBindIndexBuffer2-None-09493
If the `maintenance6` feature is not enabled, `buffer` **must** not be `VK_NULL_HANDLE`
- VUID-vkCmdBindIndexBuffer2-buffer-09494
If `buffer` is `VK_NULL_HANDLE`, offset **must** be zero
- VUID-vkCmdBindIndexBuffer2-size-08767
If `size` is not `VK_WHOLE_SIZE`, `size` **must** be a multiple of the size of the type indicated by `indexType`
- VUID-vkCmdBindIndexBuffer2-size-08768
If `size` is not `VK_WHOLE_SIZE`, the sum of `offset` and `size` **must** be less than or equal to the size of `buffer`

Valid Usage (Implicit)

- VUID-vkCmdBindIndexBuffer2-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindIndexBuffer2-buffer-parameter
If `buffer` is not `VK_NULL_HANDLE`, `buffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdBindIndexBuffer2-indexType-parameter
`indexType` **must** be a valid `VkIndexType` value
- VUID-vkCmdBindIndexBuffer2-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBindIndexBuffer2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBindIndexBuffer2-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindIndexBuffer2-commonparent
Both of `buffer`, and `commandBuffer` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAP HICS_BIT	State

Conditional Rendering

vkCmdBindIndexBuffer2 is not affected by [conditional rendering](#)

To bind an index buffer to a command buffer, call:

```
// Provided by VK_VERSION_1_0
void vkCmdBindIndexBuffer(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 buffer,
    VkDeviceSize             offset,
    VkIndexType              indexType);
```

- **commandBuffer** is the command buffer into which the command is recorded.
- **buffer** is the buffer being bound.
- **offset** is the starting offset in bytes within **buffer** used in index buffer address calculations.
- **indexType** is a [VkIndexType](#) value specifying the size of the indices.

buffer and **offset** specify the [bound index buffer range](#), with a range of memory bound from [**base** + **offset**, **base** + **offset** + **size**), where **size** is from **offset** to the end of the **buffer**.

If the **maintenance6** feature is enabled, **buffer** can be [VK_NULL_HANDLE](#). If **buffer** is [VK_NULL_HANDLE](#) and the **nullDescriptor** feature is enabled, every index fetched results in a value of zero.

Valid Usage

- VUID-vkCmdBindIndexBuffer-offset-08782
offset **must** be less than the size of **buffer**
- VUID-vkCmdBindIndexBuffer-offset-08783
The sum of **offset** and the base address of the range of [VkDeviceMemory](#) object that is backing **buffer**, **must** be a multiple of the size of the type indicated by **indexType**
- VUID-vkCmdBindIndexBuffer-buffer-08784
buffer **must** have been created with the [VK_BUFFER_USAGE_INDEX_BUFFER_BIT](#) usage flag set

- VUID-vkCmdBindIndexBuffer-buffer-08785
If **buffer** is non-sparse then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object
- VUID-vkCmdBindIndexBuffer-indexType-08786
indexType **must** not be **VK_INDEX_TYPE_NONE_KHR**
- VUID-vkCmdBindIndexBuffer-indexType-08787
If **indexType** is **VK_INDEX_TYPE_UINT8**, the **indexTypeUint8** feature **must** be enabled
- VUID-vkCmdBindIndexBuffer-None-09493
If the **maintenance6** feature is not enabled, **buffer** **must** not be **VK_NULL_HANDLE**
- VUID-vkCmdBindIndexBuffer-buffer-09494
If **buffer** is **VK_NULL_HANDLE**, offset **must** be zero

Valid Usage (Implicit)

- VUID-vkCmdBindIndexBuffer-commandBuffer-parameter
commandBuffer **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdBindIndexBuffer-buffer-parameter
If **buffer** is not **VK_NULL_HANDLE**, **buffer** **must** be a valid **VkBuffer** handle
- VUID-vkCmdBindIndexBuffer-indexType-parameter
indexType **must** be a valid **VkIndexType** value
- VUID-vkCmdBindIndexBuffer-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdBindIndexBuffer-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support **VK_QUEUE_GRAPHICS_BIT** operations
- VUID-vkCmdBindIndexBuffer-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindIndexBuffer-commonparent
Both of **buffer**, and **commandBuffer** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAP HICS_BIT	State

Conditional Rendering

`vkCmdBindIndexBuffer` is not affected by [conditional rendering](#)

Possible values of `vkCmdBindIndexBuffer2::indexType` and `vkCmdBindIndexBuffer::indexType`, specifying the size of indices, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkIndexType {
    VK_INDEX_TYPE_UINT16 = 0,
    VK_INDEX_TYPE_UINT32 = 1,
    // Provided by VK_VERSION_1_4
    VK_INDEX_TYPE_UINT8 = 1000265000,
    // Provided by VK_KHR_acceleration_structure
    VK_INDEX_TYPE_NONE_KHR = 1000165000,
    // Provided by VK_NV_ray_tracing
    VK_INDEX_TYPE_NONE_NV = VK_INDEX_TYPE_NONE_KHR,
    // Provided by VK_EXT_index_type_uint8
    VK_INDEX_TYPE_UINT8_EXT = VK_INDEX_TYPE_UINT8,
    // Provided by VK_KHR_index_type_uint8
    VK_INDEX_TYPE_UINT8_KHR = VK_INDEX_TYPE_UINT8,
} VkIndexType;
```

- `VK_INDEX_TYPE_UINT16` specifies that indices are 16-bit unsigned integer values.
- `VK_INDEX_TYPE_UINT32` specifies that indices are 32-bit unsigned integer values.
- `VK_INDEX_TYPE_NONE_KHR` specifies that no indices are provided.
- `VK_INDEX_TYPE_UINT8` specifies that indices are 8-bit unsigned integer values.

The parameters for each drawing command are specified directly in the command or read from buffer memory, depending on the command. Drawing commands that source their parameters from buffer memory are known as *indirect* drawing commands.

All drawing commands interact with the `robustBufferAccess` feature.

To record a non-indexed draw, call:

```
// Provided by VK_VERSION_1_0
void vkCmdDraw(
    VkCommandBuffer          commandBuffer,
    uint32_t                 vertexCount,
    uint32_t                 instanceCount,
    uint32_t                 firstVertex,
    uint32_t                 firstInstance);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `vertexCount` is the number of vertices to draw.
- `instanceCount` is the number of instances to draw.
- `firstVertex` is the index of the first vertex to draw.
- `firstInstance` is the instance ID of the first instance to draw.

When the command is executed, primitives are assembled using the current primitive topology and `vertexCount` consecutive vertex indices with the first `vertexIndex` value equal to `firstVertex`. The primitives are drawn `instanceCount` times with `instanceIndex` starting with `firstInstance` and increasing sequentially for each instance. The assembled primitives execute the bound graphics pipeline.

Valid Usage

- VUID-vkCmdDraw-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDraw-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdDraw-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDraw-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of

this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT**

- VUID-vkCmdDraw-unnormalizedCoordinates-09635

If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **levelCount** and **layerCount** **must** be 1

- VUID-vkCmdDraw-None-08609

If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **viewType** **must** be **VK_IMAGE_VIEW_TYPE_1D** or **VK_IMAGE_VIEW_TYPE_2D**

- VUID-vkCmdDraw-None-08610

If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the sampler **must** not be used with any of the SPIR-V **OpImageSample*** or **OpImageSparseSample*** instructions with **ImplicitLod**, **Dref** or **Proj** in their name

- VUID-vkCmdDraw-None-08611

If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the sampler **must** not be used with any of the SPIR-V **OpImageSample*** or **OpImageSparseSample*** instructions that includes a LOD bias or any offset values

- VUID-vkCmdDraw-None-06479

If a **VkImageView** is sampled with **depth comparison**, the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT**

- VUID-vkCmdDraw-None-02691

If a **VkImageView** is accessed using atomic operations as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT**

- VUID-vkCmdDraw-None-07888

If a **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's **format features** **must** contain **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT**

- VUID-vkCmdDraw-None-02692

If a **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT**

- VUID-vkCmdDraw-None-02693

If the **VK_EXT_filter_cubic** extension is not enabled and any **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, it **must** not have a **VkImageViewType** of **VK_IMAGE_VIEW_TYPE_3D**, **VK_IMAGE_VIEW_TYPE_CUBE**, or **VK_IMAGE_VIEW_TYPE_CUBE_ARRAY**

- VUID-vkCmdDraw-filterCubic-02694

Any **VkImageView** being sampled with **VK_FILTER_CUBIC_EXT** as a result of this command **must** have a **VkImageViewType** and format that supports cubic filtering, as specified by **VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic** returned

by [vkGetPhysicalDeviceImageFormatProperties2](#)

- VUID-vkCmdDraw-filterCubicMinmax-02695

Any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) with a reduction mode of either [VK_SAMPLER_REDUCTION_MODE_MIN](#) or [VK_SAMPLER_REDUCTION_MODE_MAX](#) as a result of this command **must** have a [VkImageViewType](#) and format that supports cubic filtering together with minmax filtering, as specified by [VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax](#) returned by [vkGetPhysicalDeviceImageFormatProperties2](#)

- VUID-vkCmdDraw-cubicRangeClamp-09212

If the [cubicRangeClamp](#) feature is not enabled, then any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command **must** not have a [VkSamplerReductionModeCreateInfo::reductionMode](#) equal to [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM](#)

- VUID-vkCmdDraw-reductionMode-09213

Any [VkImageView](#) being sampled with a [VkSamplerReductionModeCreateInfo::reductionMode](#) equal to [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM](#) as a result of this command **must** sample with [VK_FILTER_CUBIC_EXT](#)

- VUID-vkCmdDraw-selectableCubicWeights-09214

If the [selectableCubicWeights](#) feature is not enabled, then any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command **must** have [VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights](#) equal to [VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM](#)

- VUID-vkCmdDraw-flags-02696

Any [VkImage](#) created with a [VkImageCreateInfo::flags](#) containing [VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV](#) sampled as a result of this command **must** only be sampled using a [VkSamplerAddressMode](#) of [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#)

- VUID-vkCmdDraw-OpTypeImage-07027

For any [VkImageView](#) being written as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDraw-OpTypeImage-07028

For any [VkImageView](#) being read as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDraw-OpTypeImage-07029

For any [VkBufferView](#) being written as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDraw-OpTypeImage-07030

Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDraw-None-08600

If a [a bound shader](#) was created with a pipeline layout and statically uses a set n , a descriptor set **must** have been bound to n at the same pipeline bind point, with layouts compatible for set n with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdDraw-None-08601

If a [a bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader

- VUID-vkCmdDraw-None-10068

For each array of resources that is used by a [a bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdDraw-None-08114

Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid if they are accessed as described by [descriptor validity](#) by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDraw-imageLayout-00344

If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)

- VUID-vkCmdDraw-None-08115

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDraw-None-08116

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDraw-None-08604

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdDraw-None-08117

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDraw-None-08119

If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be

resident

- VUID-vkCmdDraw-None-08605

If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdDraw-None-08606

If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdDraw-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdDraw-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDraw-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDraw-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDraw-None-08613

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDraw-commandBuffer-02707

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource

- VUID-vkCmdDraw-viewType-07752

If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#) **must** match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdDraw-format-07753

If a [VkImageView](#) or [VkBufferView](#) is accessed as a result of this command, then the [numeric type](#) of the view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must** match

- VUID-vkCmdDraw-OpImageWrite-08795

If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdDraw-OpImageWrite-08796

If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have four components

- VUID-vkCmdDraw-OpImageWrite-04469

If a [VkBufferView](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdDraw-SampledType-04470

If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64

- VUID-vkCmdDraw-SampledType-04471

If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32

- VUID-vkCmdDraw-SampledType-04472

If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64

- VUID-vkCmdDraw-SampledType-04473

If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32

- VUID-vkCmdDraw-sparseImageInt64Atomics-04474

If the [sparseImageInt64Atomics](#) feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command

- VUID-vkCmdDraw-sparseImageInt64Atomics-04475

If the [sparseImageInt64Atomics](#) feature is not enabled, [VkBuffer](#) objects created with the [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this

command

- VUID-vkCmdDraw-OpImageSampleWeightedQCOM-06971

If `OpImageSampleWeightedQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`

- VUID-vkCmdDraw-OpImageSampleWeightedQCOM-06972

If `OpImageSampleWeightedQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`

- VUID-vkCmdDraw-OpImageBoxFilterQCOM-06973

If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`

- VUID-vkCmdDraw-OpImageBlockMatchSSDQCOM-06974

If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdDraw-OpImageBlockMatchSADQCOM-06975

If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdDraw-OpImageBlockMatchSADQCOM-06976

If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`

- VUID-vkCmdDraw-OpImageSampleWeightedQCOM-06977

If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdDraw-OpImageSampleWeightedQCOM-06978

If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdDraw-OpImageBlockMatchWindow-09215

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdDraw-OpImageBlockMatchWindow-09216

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to

read from an [VkImageView](#) as a result of this command, then the image view's format **must** be a single-component format

- VUID-vkCmdDraw-OpImageBlockMatchWindow-09217

If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)

- VUID-vkCmdDraw-None-07288

Any shader invocation executed by this command **must** [terminate](#)

- VUID-vkCmdDraw-None-09600

If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdDraw-commandBuffer-10746

The [VkDeviceMemory](#) object allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in [commandBuffer](#)

- VUID-vkCmdDraw-None-10678

If this command is recorded inside a [tile shading render pass](#) instance, the stages corresponding to the pipeline bind point used by this command **must** only include [VK_SHADER_STAGE_VERTEX_BIT](#), [VK_SHADER_STAGE_FRAGMENT_BIT](#), and/or [VK_SHADER_STAGE_COMPUTE_BIT](#)

- VUID-vkCmdDraw-None-10679

If this command is recorded where [per-tile execution model](#) is enabled, there **must** be no access to any image while the image was be transitioned to the [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout

- VUID-vkCmdDraw-pDescription-09900

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the underlying [VkTensorARM](#) object **must** have been created with the [VK_TENSOR_USAGE_SHADER_BIT_ARM](#) usage flag set

- VUID-vkCmdDraw-dimensionCount-09905

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the [Rank](#) of the [OpTypeTensorARM](#) of the tensor resource variable **must** be equal to the [dimensionCount](#) provided via [VkTensorCreateInfoARM::pDescription](#) when creating the underlying [VkTensorARM](#) object

- VUID-vkCmdDraw-OpTypeTensorARM-09906

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the element type of the [OpTypeTensorARM](#) of the tensor resource variable **must** be [compatible](#) with the [VkFormat](#) of the [VkTensorViewARM](#) used for the access

- VUID-vkCmdDraw-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a [OpTypeStruct](#) decorated with [Block](#) or [BufferBlock](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [bufferDescriptorAlignment](#)

- VUID-vkCmdDraw-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeImage](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [imageDescriptorAlignment](#)

- VUID-vkCmdDraw-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdDraw-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdDraw-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDraw-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or

[VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDraw-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDraw-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdDraw-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDraw-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDraw-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdDraw-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdDraw-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#)

feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDraw-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDraw-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDraw-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of [pBindInfo->reservedRangeSize](#) set for [vkCmdBindSamplerHeapEXT](#) **must** be greater than or equal to [minSamplerHeapReservedRangeWithEmbedded](#)

- VUID-vkCmdDraw-None-11376

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, and that shader statically uses a push constant value, that value **must** have been set by [vkCmdPushDataEXT](#)

- VUID-vkCmdDraw-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the access **must** not be [out of bounds](#)

- VUID-vkCmdDraw-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDraw-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDraw-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdDraw-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDraw-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdDraw-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdDraw-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and

that sampler descriptor uses a custom border color with an index defined by `VkSamplerCustomBorderColorIndexCreateInfoEXT`, the value of `VkSamplerCustomBorderColorIndexCreateInfoEXT::index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdDraw-protectedNoFault-11455

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, the address that the resource is mapped to **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDraw-protectedNoFault-11456

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the address of the indirect memory **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDraw-renderPass-02684

The current render pass **must** be `compatible` with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`

- VUID-vkCmdDraw-subpass-02685

The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`

- VUID-vkCmdDraw-OpTypeImage-07468

If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass

- VUID-vkCmdDraw-None-07469

Input attachment views accessed in a subpass **must** be created with the same `VkFormat` as the corresponding subpass definition, and be created with a `VkImageView` that is compatible with the attachment referenced by the subpass' `pInputAttachments[InputAttachmentIndex]` in the bound `VkFramebuffer` as specified by [Fragment Input Attachment Compatibility](#)

- VUID-vkCmdDraw-pDepthInputAttachmentIndex-09595

Input attachment views accessed in a dynamic render pass with a `InputAttachmentIndex` referenced by `VkRenderingInputAttachmentIndexInfo`, or no `InputAttachmentIndex` if `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` or `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are `NULL`, **must** be

created with a [VkImageView](#) that is compatible with the corresponding color, depth, or stencil attachment in [VkRenderingInfo](#)

- VUID-vkCmdDraw-pDepthInputAttachmentIndex-09596

Input attachment views accessed in a dynamic render pass via a shader object **must** have an [InputAttachmentIndex](#) if both [VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex](#) and [VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex](#) are non-NULL

- VUID-vkCmdDraw-InputAttachmentIndex-09597

If an input attachment view accessed in a dynamic render pass via a shader object has an [InputAttachmentIndex](#), the [InputAttachmentIndex](#) **must** match an index in [VkRenderingInputAttachmentIndexInfo](#)

- VUID-vkCmdDraw-None-06537

Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command

- VUID-vkCmdDraw-None-10795

If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdDraw-None-10796

If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdDraw-None-10797

If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdDraw-None-12338

If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, the color attachment **must** not be written to by this command

- VUID-vkCmdDraw-None-12339

If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, the depth attachment **must** not be written to by this command

- VUID-vkCmdDraw-None-12340

If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, the stencil attachment **must** not be written to by this command

- VUID-vkCmdDraw-None-09003
If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command
- VUID-vkCmdDraw-None-06886
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, **depth writes must** be disabled
- VUID-vkCmdDraw-None-06887
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back **writeMask** are not zero, and stencil test is enabled, **all stencil ops must** be **VK_STENCIL_OP_KEEP**
- VUID-vkCmdDraw-None-07831
If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_VIEWPORT** dynamic state enabled then **vkCmdSetViewport must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdDraw-None-07832
If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_SCISSOR** dynamic state enabled then **vkCmdSetScissor must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdDraw-None-08617
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_LINE_WIDTH** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **effective rasterization input topology** is in line topology class, then **vkCmdSetLineWidth must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdDraw-None-07834
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_BIAS** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of **depthBiasEnable** is **VK_TRUE**, then **vkCmdSetDepthBias** or **vkCmdSetDepthBias2EXT must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdDraw-None-07835
If a shader object is bound to the **VK_SHADER_STAGE_FRAGMENT_BIT** stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_BLEND_CONSTANTS** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and an active color attachment **current value** of **blendEnable** is **VK_TRUE** with a blend equations where any **VkBlendFactor** member is **VK_BLEND_FACTOR_CONSTANT_COLOR**, **VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR**, **VK_BLEND_FACTOR_CONSTANT_ALPHA**, **VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA**, or **VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA**, then **vkCmdSetBlendConstants must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07836

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_DEPTH_BOUNDS](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [depthBoundsTestEnable](#) is [VK_TRUE](#), then [vkCmdSetDepthBounds](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07837

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilCompareMask](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07838

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_WRITE_MASK](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilWriteMask](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07839

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_REFERENCE](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilReference](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-maxMultiviewInstanceIndex-02688

If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to [VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex](#)

- VUID-vkCmdDraw-sampleLocationsEnable-02689

If the bound graphics pipeline was created with [VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable](#) set to [VK_TRUE](#), then the active depth attachment **must** have been created with the [VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT](#) bit set

- VUID-vkCmdDraw-None-07634

If the [VK_EXT_sample_locations](#) extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT](#) dynamic state enabled, and the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetSampleLocationsEnableEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-06666

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `sampleLocationsEnable` is `VK_TRUE`, then `vkCmdSetSampleLocationsEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07840

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CULL_MODE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCullMode` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07841

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRONT_FACE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFrontFace` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07843

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, `vkCmdSetDepthTestEnable` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07844

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthWriteEnable` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07845

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthCompareOp` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07846

If the `depthBounds` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBoundsTestEnable` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07847

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetStencilTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07848

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_OP` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilOp` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-viewportCount-03417

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetViewportWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-scissorCount-03418

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetScissorWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing

- VUID-vkCmdDraw-viewportCount-03419

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic states enabled, and the state is not inherited, then the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** match the `scissorCount` parameter of `vkCmdSetScissorWithCount`

- VUID-vkCmdDraw-viewportCount-04137

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportWScalingStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDraw-viewportCount-04138

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the `current value` of `viewportWScalingEnable` is `VK_TRUE`, then `vkCmdSetViewportWScalingNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08636

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the **current value** of `viewportWScalingEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportWScalingNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDraw-viewportCount-04139

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportShadingRateImageStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDraw-shadingRateImage-09233

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV` and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoarseSampleOrderNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-shadingRateImage-09234

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `shadingRateImageEnable` is `VK_TRUE`, then `vkCmdSetViewportShadingRatePaletteNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08637

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `shadingRateImageEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportShadingRatePaletteNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDraw-VkPipelineVieportCreateInfo-04141

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportSwizzleStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or

equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDraw-VkPipelineVieportCreateInfo-04142

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDraw-None-07878

If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` dynamic state enabled, then `vkCmdSetExclusiveScissorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07879

If the `exclusiveScissor` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV` dynamic state enabled, and the most recent call to `vkCmdSetExclusiveScissorEnableNV` in the current command buffer set any element of `pExclusiveScissorEnables` to `VK_TRUE`, then `vkCmdSetExclusiveScissorNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-04876

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` dynamic state enabled, then `vkCmdSetRasterizerDiscardEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-04877

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBiasEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-logicOp-04878

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `logicOpEnable` is `VK_TRUE`, then `vkCmdSetLogicOpEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-primitiveFragmentShadingRateWithMultipleViewports-04552

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and any of the

shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdDraw-primitiveFragmentShadingRateWithMultipleViewports-08642

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdDraw-blendEnable-04727

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then for each color attachment, if the corresponding image view's **format features** do not contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`, then the corresponding **current value** of `blendEnable` **must** be `VK_FALSE`

- VUID-vkCmdDraw-None-08644

If a shader object is bound to any graphics stage or a graphics pipeline is bound, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and none of the following is enabled:

- the `VK_AMD_mixed_attachment_samples` extension
- the `VK_NV_framebuffer_mixed_samples` extension
- the `multisampledRenderToSingleSampled` feature

then the **current value** of `rasterizationSamples` **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdDraw-None-08876

If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with `vkCmdBeginRendering`

- VUID-vkCmdDraw-imageView-06172

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDraw-imageView-06173

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDraw-imageView-06174

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of

`pDepthAttachment` is
`VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`, this
command **must** not write any values to the depth attachment

- VUID-vkCmdDraw-imageView-06175

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is
`VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`, this
command **must** not write any values to the stencil attachment

- VUID-vkCmdDraw-imageView-06176

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDraw-imageView-06177

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDraw-viewMask-06178

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::viewMask` equal to `VkRenderingInfo::viewMask`

- VUID-vkCmdDraw-colorAttachmentCount-06179

If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08910

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline

- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08912

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08911

If the `dynamicRenderingUnusedAttachments` feature is enabled, and the current render pass

instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-colorAttachmentCount-09362

If the current render pass instance was begun with `vkCmdBeginRendering`, with a `VkRenderingInfo::colorAttachmentCount` equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdDraw-None-09363

If there is no shader object bound to any graphics stage, the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdDraw-None-09364

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, then `vkCmdSetColorBlendEnableEXT` **must** have set the blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdDraw-None-09365

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdDraw-None-09366

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetColorBlendEnableEXT` **must** have set blend enable to `VK_FALSE` prior to

this drawing command

- VUID-vkCmdDraw-rasterizationSamples-09367

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdDraw-None-09368

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command

- VUID-vkCmdDraw-None-09369

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdDraw-pFragmentSize-09370

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command

- VUID-vkCmdDraw-pFragmentSize-09371

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdDraw-None-07749

If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorWriteEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-attachmentCount-07750

If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the

`attachmentCount` parameter of most recent call to `vkCmdSetColorWriteEnableEXT` in the current command buffer **must** be greater than or equal to the number of active color attachments

- VUID-vkCmdDraw-None-07751

If the `VK_EXT_discard_rectangles` extension is enabled, a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` included a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount`

- VUID-vkCmdDraw-rasterizerDiscardEnable-09236

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` did not include a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPhysicalDeviceDiscardRectanglePropertiesEXT::maxDiscardRectangles`

- VUID-vkCmdDraw-None-07880

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDiscardRectangleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07881

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08913

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08914
If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`
- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08915
If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08916
If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08917
If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08918
If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDraw-imageView-06183
If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`
- VUID-vkCmdDraw-dynamicRenderingLocalRead-11797
If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingLocalRead` feature is enabled, the `VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR` flag is

specified, and an attachment is being used as a feedback loop as specified by `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`, `VkRenderingAttachmentFlagsInfoKHR::flags` for that attachment **must** include `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`

- VUID-vkCmdDraw-imageView-06184

If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`

- VUID-vkCmdDraw-layers-10831

If the current render pass instance was created with `VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` or `VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, and the bound graphics pipeline was created with `VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, then the current render pass instance **must** have a `layers` value less than or equal to `VkPipelineFragmentDensityMapLayeredCreateInfoVALVE::maxFragmentDensityMapLayers`

- VUID-vkCmdDraw-colorAttachmentCount-06185

If the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the corresponding element of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline

- VUID-vkCmdDraw-pDepthAttachment-06186

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDraw-pStencilAttachment-06187

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdDraw-multisampledRenderToSingleSampled-07285

If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled`

feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdDraw-multisampledRenderToSingleSampled-07286

If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDraw-multisampledRenderToSingleSampled-07287

If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdDraw-pNext-07935

If this command is called inside a render pass instance started with `vkCmdBeginRendering`, and the `pNext` chain of `VkRenderingInfo` includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to `VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples`

- VUID-vkCmdDraw-renderPass-06198

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline **must** have been created with a `VkGraphicsPipelineCreateInfo::renderPass` equal to `VK_NULL_HANDLE`

- VUID-vkCmdDraw-pColorAttachments-08963

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->imageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-pColorAttachments-11539

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a

graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->resolveImageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-pDepthAttachment-08964

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-pDepthAttachment-11540

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-pStencilAttachment-08965

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-pStencilAttachment-11860

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-flags-10582

If the current render pass instance was begun with a `vkCmdBeginRendering` call in `commandBuffer`, its `VkRenderingInfo::flags` parameter **must** not have `VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT` set unless `VK_RENDERING_CONTENTS_INLINE_BIT_KHR` is also set

- VUID-vkCmdDraw-primitivesGeneratedQueryWithRasterizerDiscard-06708

If the `primitivesGeneratedQueryWithRasterizerDiscard` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, `rasterization discard` **must** not be enabled

- VUID-vkCmdDraw-primitivesGeneratedQueryWithNonZeroStreams-06709

If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the

`VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, the bound graphics pipeline **must** not have been created with a non-zero value in `VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream`

- VUID-vkCmdDraw-None-07620

If the `depthClamp` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthClampEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07621

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_POLYGON_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetPolygonModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07622

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRasterizationSamplesEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07623

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleMaskEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-alphaToCoverageEnable-08919

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and `alphaToCoverageEnable` was `VK_TRUE` in the last call to `vkCmdSetAlphaToCoverageEnableEXT`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdDraw-alphaToCoverageEnable-08920

If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetAlphaToCoverageEnableEXT` in the current command buffer set `alphaToCoverageEnable` to `VK_TRUE`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdDraw-None-07624

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToCoverageEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07625

If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToOneEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07626

If the `logicOp` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetLogicOpEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07627

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorBlendEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07629

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorWriteMaskEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07630

If the `geometryStreams` feature is enabled, and a shader object is bound to the `VK_SHADER_STAGE_GEOMETRY_BIT` stage or a graphics pipeline is bound which was created with both a `VK_SHADER_STAGE_GEOMETRY_BIT` stage and the `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` dynamic state enabled, then `vkCmdSetRasterizationStreamEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07631

If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetConservativeRasterizationModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07632

If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

`VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `conservativeRasterizationMode` is `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`, then `vkCmdSetExtraPrimitiveOverestimationSizeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-conservativePointAndLineRasterization-07499

If the `VK_EXT_conservative_rasterization` extension is enabled, `conservativePointAndLineRasterization` is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line or point topology class, then the current value of `conservativeRasterizationMode` **must** be `VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT`

- VUID-vkCmdDraw-None-07633

If the `depthClipEnable` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` dynamic state, then `vkCmdSetDepthClipEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07636

If the `VK_EXT_provoking_vertex` extension is enabled, a shader object is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetProvokingVertexModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08666

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineRasterizationModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08669

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineStippleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07849

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stippledLineEnable` is `VK_TRUE`, then `vkCmdSetLineStipple` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-10608

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, the `effective rasterization input topology` is in line topology class, and the current `lineRasterizationMode` is `VK_LINE_RASTERIZATION_MODE_BRESENHAM` or `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be `VK_FALSE`

- VUID-vkCmdDraw-None-07639

If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT` dynamic state enabled, then `vkCmdSetDepthClipNegativeOneToOneEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-09650

If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT` dynamic state enabled, and the `current value` of `depthClampEnable` is `VK_TRUE`, then `vkCmdSetDepthClampRangeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07640

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV` dynamic state enabled, then `vkCmdSetViewportWScalingEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07641

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then `vkCmdSetViewportSwizzleNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07642

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then

`vkCmdSetCoverageToColorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07643

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageToColorEnable` is `VK_TRUE`, then `vkCmdSetCoverageToColorLocationNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07644

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageModulationModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07645

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationMode` is any value other than `VK_COVERAGE_MODULATION_MODE_NONE_NV`, then `vkCmdSetCoverageModulationTableEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07646

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationTableEnable` is `VK_TRUE`, then `vkCmdSetCoverageModulationTableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07647

If the `shadingRateImage` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetShadingRateImageEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-pipelineFragmentShadingRate-09238

If the `pipelineFragmentShadingRate` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, and the

current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFragmentShadingRateKHR` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07648

If the `representativeFragmentTest` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRepresentativeFragmentTestEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07649

If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageReductionModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-rasterizationSamples-07471

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** follow the rules for a `zero-attachment subpass`

- VUID-vkCmdDraw-samples-07472

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the `VkPipelineMultisampleStateCreateInfo::rasterizationSamples` parameter used to create the bound graphics pipeline

- VUID-vkCmdDraw-samples-07473

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state and `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` states enabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the `rasterizationSamples` parameter in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDraw-None-09211

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** be the same as the `rasterizationSamples` member of that structure

- VUID-vkCmdDraw-firstAttachment-07476

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorBlendEnableEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDraw-firstAttachment-07478

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorWriteMaskEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDraw-advancedBlendMaxColorAttachments-07480

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment current value of `blendEnable` is `VK_TRUE`, then the number of active color attachments **must** not exceed `advancedBlendMaxColorAttachments`

- VUID-vkCmdDraw-None-10862

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDraw-rasterizerDiscardEnable-10863

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendAdvancedEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDraw-None-10864

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then either `vkCmdSetColorBlendAdvancedEXT` or `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDraw-primitivesGeneratedQueryWithNonZeroStreams-07481

If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, and the bound graphics pipeline was created with `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` state enabled, the last call to `vkCmdSetRasterizationStreamEXT` **must** have set the `rasterizationStream` to zero

- VUID-vkCmdDraw-sampleLocationsPerPixel-07482

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, and the **current value** of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` member of the `VkPipelineMultisampleStateCreateInfo` structure the bound graphics pipeline has been created with

- VUID-vkCmdDraw-sampleLocationsPerPixel-07483

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the **current value** of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` parameter of the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDraw-sampleLocationsEnable-07484

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT` then the current active depth attachment **must** have been created with the `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` bit set

- VUID-vkCmdDraw-sampleLocationsEnable-07485

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.width` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDraw-sampleLocationsEnable-07486

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if

`sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.height` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDraw-sampleLocationsEnable-07487

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, the fragment shader code **must** not statically use the extended instruction `InterpolateAtSample`

- VUID-vkCmdDraw-sampleLocationsEnable-07936

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.width` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDraw-sampleLocationsEnable-07937

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.height` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDraw-sampleLocationsEnable-07938

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationsPerPixel` **must** equal `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDraw-coverageModulationTableEnable-07488

If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` state enabled, and the last call to `vkCmdSetCoverageModulationTableEnableNV` set `coverageModulationTableEnable` to `VK_TRUE`, then the `coverageModulationTableCount` parameter in the last call to `vkCmdSetCoverageModulationTableNV` **must** equal the current `rasterizationSamples` divided by the number of color samples in the current

active color attachment

- VUID-vkCmdDraw-rasterizationSamples-07489

If the [VK_NV_framebuffer_mixed_samples](#) extension is enabled, and if current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the bound pipeline, then the current [rasterizationSamples](#) **must** be the same as the sample count of the depth/stencil attachment

- VUID-vkCmdDraw-coverageToColorEnable-07490

If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV](#) state enabled and the last call to [vkCmdSetCoverageToColorEnableNV](#) set the [coverageToColorEnable](#) to [VK_TRUE](#), then there **must** be an active color attachment at the location selected by the last call to [vkCmdSetCoverageToColorLocationNV](#) [coverageToColorLocation](#), with a [VkFormat](#) of [VK_FORMAT_R8_UINT](#), [VK_FORMAT_R8_SINT](#), [VK_FORMAT_R16_UINT](#), [VK_FORMAT_R16_SINT](#), [VK_FORMAT_R32_UINT](#), or [VK_FORMAT_R32_SINT](#)

- VUID-vkCmdDraw-rasterizerDiscardEnable-09420

If the [VK_NV_fragment_coverage_to_color](#) extension is enabled, and a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage, and the most recent call to [vkCmdSetRasterizerDiscardEnable](#) in the current command buffer set [rasterizerDiscardEnable](#) to [VK_FALSE](#), and the last call to [vkCmdSetCoverageToColorEnableNV](#) set the [coverageToColorEnable](#) to [VK_TRUE](#), then there **must** be an active color attachment at the location selected by the last call to [vkCmdSetCoverageToColorLocationNV](#) [coverageToColorLocation](#), with a [VkFormat](#) of [VK_FORMAT_R8_UINT](#), [VK_FORMAT_R8_SINT](#), [VK_FORMAT_R16_UINT](#), [VK_FORMAT_R16_SINT](#), [VK_FORMAT_R32_UINT](#), or [VK_FORMAT_R32_SINT](#)

- VUID-vkCmdDraw-coverageReductionMode-07491

If the [coverageReductionMode](#) feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV](#) or [VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT](#) dynamic states enabled, then the current values of [coverageReductionMode](#), [rasterizationSamples](#), the sample counts for the color and depth/stencil attachments (if the subpass has them) **must** be a valid combination returned by [vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV](#)

- VUID-vkCmdDraw-viewportCount-07492

If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT](#) dynamic state enabled, but not the [VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV](#) dynamic state enabled, then the bound graphics pipeline **must** have been created with [VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount](#) greater or equal to the [viewportCount](#) parameter in the last call to [vkCmdSetViewportWithCount](#)

- VUID-vkCmdDraw-viewportCount-07493

If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT](#) and [VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV](#) dynamic states enabled then the [viewportCount](#) parameter in the last call to [vkCmdSetViewportSwizzleNV](#) **must** be greater

than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDraw-viewportCount-09421

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage, then the `viewportCount` parameter in the last call to `vkCmdSetViewportSwizzleNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDraw-rasterizationSamples-07494

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and the `coverageReductionMode` feature is not enabled, or the `current value` of `coverageReductionMode` is not `VK_COVERAGE_REDUCTION_MODE_TRUNCATE_NV`, and the `current value` of `rasterizationSamples` is greater than sample count of the color attachment, then `sample shading` **must** be disabled

- VUID-vkCmdDraw-stippledLineEnable-07495

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR`, then the `stippledRectangularLines` feature **must** be enabled

- VUID-vkCmdDraw-stippledLineEnable-07496

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_BRESENHAM`, then the `stippledBresenhamLines` feature **must** be enabled

- VUID-vkCmdDraw-stippledLineEnable-07497

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the `stippledSmoothLines` feature **must** be enabled

- VUID-vkCmdDraw-stippledLineEnable-07498

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_DEFAULT`, then the `stippledRectangularLines` feature **must** be enabled and `VkPhysicalDeviceLimits::strictLines` **must** be `VK_TRUE`

- VUID-vkCmdDraw-stage-07073

If the bound pipeline was created with the `VkPipelineShaderStageCreateInfo::stage` member of an element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`,

`VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or
`VK_SHADER_STAGE_GEOMETRY_BIT`, then Mesh Shader Queries **must** not be active

- VUID-vkCmdDraw-None-08877

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAttachmentFeedbackLoopEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07850

If dynamic state was inherited from `VkCommandBufferInheritanceViewportScissorInfoNV`, it **must** be set in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-nextStage-10745

For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a `nextStage` including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline

- VUID-vkCmdDraw-None-08684

If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_VERTEX_BIT`

- VUID-vkCmdDraw-None-08685

If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`

- VUID-vkCmdDraw-None-08686

If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`

- VUID-vkCmdDraw-None-08687

If there is no bound graphics pipeline, and the `geometryShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_GEOMETRY_BIT`

- VUID-vkCmdDraw-None-08688

If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_FRAGMENT_BIT`

- VUID-vkCmdDraw-None-08689

If there is no bound graphics pipeline, and the `taskShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TASK_BIT_EXT`

- VUID-vkCmdDraw-None-08690

If there is no bound graphics pipeline, and the `meshShader` feature is enabled,

`vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDraw-None-08693

If there is no bound graphics pipeline, and at least one of the `taskShader` and `meshShader` features is enabled, one of the `VK_SHADER_STAGE_VERTEX_BIT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages **must** have a valid `VkShaderEXT` bound, and the other **must** have no `VkShaderEXT` bound

- VUID-vkCmdDraw-None-08696

If there is no bound graphics pipeline, and a valid `VkShaderEXT` is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage, there **must** be no `VkShaderEXT` bound to either the `VK_SHADER_STAGE_TASK_BIT_EXT` stage or the `VK_SHADER_STAGE_MESH_BIT_EXT` stage

- VUID-vkCmdDraw-None-08698

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, then all shaders created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag in the same `vkCreateShadersEXT` call **must** also be bound

- VUID-vkCmdDraw-None-08699

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, any stages in between stages whose shaders which did not create a shader with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag as part of the same `vkCreateShadersEXT` call **must** not have any `VkShaderEXT` bound

- VUID-vkCmdDraw-None-08878

All bound graphics shader objects **must** have been created with identical or **identically defined** push constant ranges

- VUID-vkCmdDraw-None-08879

All bound graphics shader objects **must** have either been created with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag set, or with identical or **identically defined** arrays of descriptor set layouts

- VUID-vkCmdDraw-colorAttachmentCount-09372

If the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, and a fragment shader is bound, it **must** not declare the `DepthReplacing` or `StencilRefReplacingEXT` execution modes

- VUID-vkCmdDraw-pDynamicStates-08715

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` parameter in the last call to `vkCmdSetDepthWriteEnable` **must** be `VK_FALSE`

- VUID-vkCmdDraw-pDynamicStates-08716

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` set in `VkPipelineDynamicStateCreateInfo`

::pDynamicStates, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpStencilAttachmentReadEXT, the writeMask parameter in the last call to vkCmdSetStencilWriteMask **must** be 0

- VUID-vkCmdDraw-None-09116

If a shader object is bound to any graphics stage or the bound graphics pipeline was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT, and the format of any color attachment is VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, the corresponding element of the pColorWriteMasks parameter of vkCmdSetColorWriteMaskEXT **must** either include all of VK_COLOR_COMPONENT_R_BIT, VK_COLOR_COMPONENT_G_BIT, and VK_COLOR_COMPONENT_B_BIT, or none of them

- VUID-vkCmdDraw-maxFragmentDualSrcAttachments-09239

If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of Location for any output attachment statically used in the Fragment Execution Model executed by this command **must** be less than maxFragmentDualSrcAttachments

- VUID-vkCmdDraw-None-09548

If the current render pass was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, the value of each element of VkRenderingAttachmentLocationInfo::pColorAttachmentLocations in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance

- VUID-vkCmdDraw-None-09549

If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, the value of each element of VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices in the bound pipeline **must** match the value for the corresponding index set currently in the current render pass instance

- VUID-vkCmdDraw-None-10927

If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, the value of VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdDraw-None-10928

If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, the value of VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdDraw-None-09642

If the current render pass was begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT

- VUID-vkCmdDraw-None-09643

If the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass

must have begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag

- VUID-vkCmdDraw-None-10677
If the `per-tile execution model` is enabled, the `tileShadingPerTileDraw` feature **must** be enabled
- VUID-vkCmdDraw-None-10772
If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdDraw-multiviewPerViewViewports-12262
If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `viewportCount`
- VUID-vkCmdDraw-multiviewPerViewViewports-12263
If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `scissorCount`
- VUID-vkCmdDraw-flags-11521
If current render pass instance was begun with `vkCmdBeginRendering` with `VkRenderingInfo::flags` which includes `VK_RENDERING_FRAGMENT_REGION_BIT_EXT`, and if `sample shading` is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdDraw-None-11522
If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a `VkCustomResolveCreateInfoEXT`
- VUID-vkCmdDraw-None-11523
If the current render pass instance was begun with `vkCmdBeginRendering` and does not contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** not have been created with a `VkCustomResolveCreateInfoEXT`
- VUID-vkCmdDraw-customResolve-11524
If the current render pass instance was begun with `vkCmdBeginRendering` and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`
- VUID-vkCmdDraw-customResolve-11525
If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and `vkCmdBeginCustomResolveEXT` has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`
- VUID-vkCmdDraw-None-11861
If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, the bound graphics pipeline **must** have been created with a `VkCustomResolveCreateInfoEXT`

`::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdDraw-None-11862

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline

- VUID-vkCmdDraw-None-11863

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-11864

If the `dynamicRenderingUnusedAttachments` feature is enabled, the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-None-11865

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-None-11866

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-11867

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the

bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-None-11868

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-None-11869

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-11870

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDraw-colorAttachmentCount-11871

If the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0 and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, then for each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE`, the `resolveImageView` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdDraw-pDepthAttachment-11872

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDraw-pStencilAttachment-11873

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdDraw-customResolve-11529

If a shader object is bound to the fragment stage, the current render pass instance was

begun with `vkCmdBeginRendering`, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdDraw-customResolve-11530

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has not yet been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdDraw-flags-13361

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then all bound shader objects **must** have been created with the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit

- VUID-vkCmdDraw-flags-13362

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` set

- VUID-vkCmdDraw-flags-13363

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then there **must** be no binding with `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDraw-flags-13364

If there are any shader objects bound that were created with `flags` that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR` set

- VUID-vkCmdDraw-flags-13365

If there are any shader objects bound that were created with `flags` that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, there **must** be no shader object bound to the `VK_SHADER_STAGE_TASK_BIT_EXT` stage

- VUID-vkCmdDraw-commandBuffer-02712

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, any resource written to by the `VkPipeline` object bound to the pipeline bind point used by this command **must** not be an unprotected resource

- VUID-vkCmdDraw-commandBuffer-02713

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, pipeline stages other than the framebuffer-space and compute stages in the `VkPipeline` object bound to the pipeline bind point used by this command **must** not write to any resource

- VUID-vkCmdDraw-commandBuffer-04617

If any of the shader stages of the `VkPipeline` bound to the pipeline bind point used by this command uses the `RayQueryKHR` capability, then `commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdDraw-None-04007

All vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** have either valid or `VK_NULL_HANDLE` buffers bound

- VUID-vkCmdDraw-None-04008

If the `nullDescriptor` feature is not enabled, all vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** not be `VK_NULL_HANDLE`

- VUID-vkCmdDraw-None-02721

If the `robustBufferAccess` feature is not enabled, and that pipeline was created without enabling `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` for `vertexInputs`, then for a given vertex buffer binding, any attribute data fetched **must** be entirely contained within the corresponding vertex buffer binding, as described in [Vertex Input Description](#)

- VUID-vkCmdDraw-format-10389

For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is a `packed format`, and the `legacyVertexAttributes` feature is not enabled, the value of `attribAddress`, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the `size of the format`

- VUID-vkCmdDraw-format-10390

For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is not a `packed format`, and either the `legacyVertexAttributes` feature is not enabled or `format` has 64-bit components, the value of `attribAddress`, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the `component size of the format`

- VUID-vkCmdDraw-None-07842

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled then `vkCmdSetPrimitiveTopology` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-dynamicPrimitiveTopologyUnrestricted-07500

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled and the

`dynamicPrimitiveTopologyUnrestricted` is `VK_FALSE`, then the `primitiveTopology` parameter of `vkCmdSetPrimitiveTopology` **must** be of the same `topology class` as the pipeline `VkPipelineInputAssemblyStateCreateInfo::topology` state

- VUID-vkCmdDraw-primitiveTopology-10286

If a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage is bound, then the `current value` of `primitiveTopology` **must** be `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command

- VUID-vkCmdDraw-primitiveTopology-10747

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command, then a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage **must** be bound

- VUID-vkCmdDraw-primitiveTopology-10748

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_POINT_LIST` prior to this drawing command, the `maintenance5` feature is not enabled, both a `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` and `VK_SHADER_STAGE_GEOMETRY_BIT` stage are not bound, then the `Vertex Execution Model` **must** have a `PointSize` decorated variable that is statically written to

- VUID-vkCmdDraw-pStrides-04913

If the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, but without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, then `vkCmdBindVertexBuffers2` with a non-NULL `pStrides` parameter or `vkCmdBindVertexBuffers3KHR` with `setStride` set to `VK_TRUE` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdDraw-None-13118

If the bound graphics pipeline was created without the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, and `vkCmdBindVertexBuffers3KHR` was called and not subsequently `invalidated` in the current command buffer prior to this draw command, the value of `setStride` in each of its `pBindInfos` elements must have been `VK_FALSE`

- VUID-vkCmdDraw-None-04914

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then `vkCmdSetVertexInputEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdDraw-Input-07939

If the `vertexAttributeRobustness` feature is not enabled, and the `maintenance9` feature is not enabled, and there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then all variables with the `Input` storage class decorated with `Location` in the `Vertex Execution Model OpEntryPoint` **must** contain a location in `VkVertexInputAttributeDescription2EXT::location`

- VUID-vkCmdDraw-Input-08734

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and either the `legacyVertexAttributes` feature is not enabled or the SPIR-V Type associated with a given `Input` variable of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the numeric type associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be the same as `VkVertexInputAttributeDescription2EXT::format`

- VUID-vkCmdDraw-format-08936

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then the scalar width associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be 64-bit

- VUID-vkCmdDraw-format-08937

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and the scalar width associated with a `Location` decorated `Input` variable in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the corresponding `VkVertexInputAttributeDescription2EXT::format` **must** have a 64-bit component

- VUID-vkCmdDraw-None-09203

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then all `Input` variables at the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** not use components that are not present in the format

- VUID-vkCmdDraw-None-04875

If there is a shader object bound to the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage or the bound graphics pipeline state was created with both a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage and the `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT` dynamic state enabled, and the current value of `primitiveTopology` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, then `vkCmdSetPatchControlPointsEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-04879

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-09637

If the `primitiveTopologyListRestart` feature is not enabled, the `input assembly` is

VK_PRIMITIVE_TOPOLOGY_POINT_LIST, VK_PRIMITIVE_TOPOLOGY_LINE_LIST, VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST, VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY, or VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY, there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE dynamic state enabled, then vkCmdSetPrimitiveRestartEnable **must** be VK_FALSE

- VUID-vkCmdDraw-None-10909

If the primitiveTopologyPatchListRestart feature is not enabled, the input assembly is VK_PRIMITIVE_TOPOLOGY_PATCH_LIST, there is a shader object bound to the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE dynamic state enabled then vkCmdSetPrimitiveRestartEnable **must** be VK_FALSE

- VUID-vkCmdDraw-stage-06481

The bound graphics pipeline **must** not have been created with the VkPipelineShaderStageCreateInfo::stage member of any element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT

- VUID-vkCmdDraw-None-08885

There **must** be no shader object bound to either of the VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT stages

- VUID-vkCmdDraw-None-07619

If a shader object is bound to the VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stage and the VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT dynamic state enabled, then vkCmdSetTessellationDomainOriginEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-OpExecutionMode-12239

If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the type of subdivision, they **must** be the same

- VUID-vkCmdDraw-OpExecutionMode-12240

If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the orientation of triangles, they **must** be the same

- VUID-vkCmdDraw-OpExecutionMode-12241

If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the segment spacing, they **must** be the same

- VUID-vkCmdDraw-OpExecutionMode-12242

If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the output patch size, they **must** be the same

- VUID-vkCmdDraw-pNext-09461

If the bound graphics pipeline state was created with `VkPipelineVertexInputDivisorStateCreateInfo` in the `pNext` chain of `VkGraphicsPipelineCreateInfo::pVertexInputState`, any member of `VkPipelineVertexInputDivisorStateCreateInfo::pVertexBindingDivisors` has a value other than `1` in `divisor`, and `VkPhysicalDeviceVertexAttributeDivisorProperties::supportsNonZeroFirstInstance` is `VK_FALSE`, then `firstInstance` **must** be `0`

- VUID-vkCmdDraw-None-09462

If `shader objects` are used for drawing or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, any member of the `pVertexBindingDescriptions` parameter to the `vkCmdSetVertexInputEXT` call that sets this dynamic state has a value other than `1` in `divisor`, and `VkPhysicalDeviceVertexAttributeDivisorProperties::supportsNonZeroFirstInstance` is `VK_FALSE`, then `firstInstance` **must** be `0`

Valid Usage (Implicit)

- VUID-vkCmdDraw-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdDraw-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdDraw-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations

- VUID-vkCmdDraw-renderpass

This command **must** only be called inside of a render pass instance

- VUID-vkCmdDraw-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdDraw-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAP HICS_BIT	Action

Conditional Rendering

vkCmdDraw is affected by [conditional rendering](#)

To record an indexed draw, call:

```
// Provided by VK_VERSION_1_0
void vkCmdDrawIndexed(
    VkCommandBuffer          commandBuffer,
    uint32_t                 indexCount,
    uint32_t                 instanceCount,
    uint32_t                 firstIndex,
    int32_t                  vertexOffset,
    uint32_t                 firstInstance);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `indexCount` is the number of vertices to draw.
- `instanceCount` is the number of instances to draw.
- `firstIndex` is the base index within the index buffer.
- `vertexOffset` is the value added to the vertex index before indexing into the vertex buffer.
- `firstInstance` is the instance ID of the first instance to draw.

When the command is executed, primitives are assembled using the current primitive topology and `indexCount` vertices whose indices are retrieved from the index buffer. The index buffer is treated as an array of tightly packed unsigned integers of size defined by the `vkCmdBindIndexBuffer2::indexType` or the `vkCmdBindIndexBuffer::indexType` parameter with which the buffer was bound.

The first vertex index is read from `indexAddress + (firstIndex × indexSize)`, where `indexAddress` is the effective address specified for the index buffer by `vkCmdBindIndexBuffer3KHR`, `vkCmdBindIndexBuffer2`, or `vkCmdBindIndexBuffer`, and `indexSize` is the byte size of the type specified by `indexType`. Subsequent index values are retrieved from consecutive locations in the index buffer. Indices are first compared to the primitive restart value, then zero extended to 32 bits (if the `indexType` is `VK_INDEX_TYPE_UINT8` or `VK_INDEX_TYPE_UINT16`) and have `vertexOffset` added to them, before being supplied as the `vertexIndex` value.

The primitives are drawn `instanceCount` times with `instanceIndex` starting with `firstInstance` and

increasing sequentially for each instance. The assembled primitives execute the bound graphics pipeline.

Valid Usage

- VUID-vkCmdDrawIndexed-magFilter-04553

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdDrawIndexed-magFilter-09598

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDrawIndexed-mipmapMode-04770

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdDrawIndexed-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDrawIndexed-unnormalizedCoordinates-09635

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDrawIndexed-None-08609

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdDrawIndexed-None-08610

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdDrawIndexed-None-08611

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any

of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdDrawIndexed-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDrawIndexed-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdDrawIndexed-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdDrawIndexed-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdDrawIndexed-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdDrawIndexed-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDrawIndexed-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDrawIndexed-cubicRangeClamp-09212

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`

- VUID-vkCmdDrawIndexed-reductionMode-09213

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`

- VUID-vkCmdDrawIndexed-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`
- VUID-vkCmdDrawIndexed-flags-02696
Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`
- VUID-vkCmdDrawIndexed-OpTypeImage-07027
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDrawIndexed-OpTypeImage-07028
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDrawIndexed-OpTypeImage-07029
For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDrawIndexed-OpTypeImage-07030
Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDrawIndexed-None-08600
If a `bound shader` was created with a pipeline layout and statically uses a set `n`, a descriptor set **must** have been bound to `n` at the same pipeline bind point, with layouts compatible for set `n` with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDrawIndexed-None-08601
If a `bound shader` was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are `compatible` with the push constant range used to create the shader
- VUID-vkCmdDrawIndexed-None-10068
For each array of resources that is used by a `bound shader`, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDrawIndexed-None-08114
Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid if they are accessed as described by `descriptor validity` by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created

with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDrawIndexed-imageLayout-00344

If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)

- VUID-vkCmdDrawIndexed-None-08115

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDrawIndexed-None-08116

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDrawIndexed-None-08604

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdDrawIndexed-None-08117

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDrawIndexed-None-08119

If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdDrawIndexed-None-08605

If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdDrawIndexed-None-08606

If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdDrawIndexed-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdDrawIndexed-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or

[VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawIndexed-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawIndexed-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawIndexed-None-08613

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawIndexed-commandBuffer-02707

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource

- VUID-vkCmdDrawIndexed-viewType-07752

If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#) **must** match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdDrawIndexed-format-07753

If a [VkImageView](#) or [VkBufferView](#) is accessed as a result of this command, then the [numeric type](#) of the view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must** match

- VUID-vkCmdDrawIndexed-OpImageWrite-08795

If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdDrawIndexed-OpImageWrite-08796

If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have four components

- VUID-vkCmdDrawIndexed-OpImageWrite-04469

If a [VkBufferView](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as

the buffer view's format

- VUID-vkCmdDrawIndexed-SampledType-04470

If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64

- VUID-vkCmdDrawIndexed-SampledType-04471

If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32

- VUID-vkCmdDrawIndexed-SampledType-04472

If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64

- VUID-vkCmdDrawIndexed-SampledType-04473

If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32

- VUID-vkCmdDrawIndexed-sparseImageInt64Atomics-04474

If the [sparseImageInt64Atomics](#) feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command

- VUID-vkCmdDrawIndexed-sparseImageInt64Atomics-04475

If the [sparseImageInt64Atomics](#) feature is not enabled, [VkBuffer](#) objects created with the [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command

- VUID-vkCmdDrawIndexed-OpImageSampleWeightedQCOM-06971

If [OpImageSampleWeightedQCOM](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM](#)

- VUID-vkCmdDrawIndexed-OpImageSampleWeightedQCOM-06972

If [OpImageSampleWeightedQCOM](#) uses a [VkImageView](#) as a sample weight image as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM](#)

- VUID-vkCmdDrawIndexed-OpImageBoxFilterQCOM-06973

If [OpImageBoxFilterQCOM](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM](#)

- VUID-vkCmdDrawIndexed-OpImageBlockMatchSSDQCOM-06974

If [OpImageBlockMatchSSDQCOM](#) is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#)

- VUID-vkCmdDrawIndexed-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDrawIndexed-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDrawIndexed-OpImageSampleWeightedQCOM-06977
If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, or `OpImageBlockMatchSSDQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDrawIndexed-OpImageSampleWeightedQCOM-06978
If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDrawIndexed-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDrawIndexed-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDrawIndexed-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDrawIndexed-None-07288
Any shader invocation executed by this command **must** `terminate`
- VUID-vkCmdDrawIndexed-None-09600
If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDrawIndexed-commandBuffer-10746

The `VkDeviceMemory` object allocated from a `VkMemoryHeap` with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property that is bound to a resource accessed as a result of this command **must** be the active bound `bound tile memory object` in `commandBuffer`

- VUID-vkCmdDrawIndexed-None-10678

If this command is recorded inside a `tile shading render pass` instance, the stages corresponding to the pipeline bind point used by this command **must** only include `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT`, and/or `VK_SHADER_STAGE_COMPUTE_BIT`

- VUID-vkCmdDrawIndexed-None-10679

If this command is recorded where `per-tile execution model` is enabled, there **must** be no access to any image while the image was be transitioned to the `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` layout

- VUID-vkCmdDrawIndexed-pDescription-09900

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the underlying `VkTensorARM` object **must** have been created with the `VK_TENSOR_USAGE_SHADER_BIT_ARM` usage flag set

- VUID-vkCmdDrawIndexed-dimensionCount-09905

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via `VkTensorCreateInfoARM::pDescription` when creating the underlying `VkTensorARM` object

- VUID-vkCmdDrawIndexed-OpTypeTensorARM-09906

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be `compatible` with the `VkFormat` of the `VkTensorViewARM` used for the access

- VUID-vkCmdDrawIndexed-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`

- VUID-vkCmdDrawIndexed-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`

- VUID-vkCmdDrawIndexed-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdDrawIndexed-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdDrawIndexed-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDrawIndexed-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawIndexed-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDrawIndexed-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdDrawIndexed-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawIndexed-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDrawIndexed-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdDrawIndexed-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdDrawIndexed-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawIndexed-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawIndexed-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawIndexed-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of `pBindInfo->reservedRangeSize` set for `vkCmdBindSamplerHeapEXT` **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`

- VUID-vkCmdDrawIndexed-None-11376

If a [bound shader](#) was created as a `VkShaderEXT` with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag or as part of a pipeline with the `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, and that shader statically uses a push constant value, that value **must** have been set by `vkCmdPushDataEXT`

- VUID-vkCmdDrawIndexed-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the access **must** not be [out of bounds](#)

- VUID-vkCmdDrawIndexed-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-vkCmdDrawIndexed-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-vkCmdDrawIndexed-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`

- VUID-vkCmdDrawIndexed-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawIndexed-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdDrawIndexed-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdDrawIndexed-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdDrawIndexed-protectedNoFault-11455

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), the address that the resource is mapped to **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set

- VUID-vkCmdDrawIndexed-protectedNoFault-11456

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was

created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the address of the indirect memory **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDrawIndexed-renderPass-02684

The current render pass **must** be compatible with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`

- VUID-vkCmdDrawIndexed-subpass-02685

The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`

- VUID-vkCmdDrawIndexed-OpTypeImage-07468

If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass

- VUID-vkCmdDrawIndexed-None-07469

Input attachment views accessed in a subpass **must** be created with the same `VkFormat` as the corresponding subpass definition, and be created with a `VkImageView` that is compatible with the attachment referenced by the subpass' `pInputAttachments` [`InputAttachmentIndex`] in the bound `VkFramebuffer` as specified by `Fragment Input Attachment Compatibility`

- VUID-vkCmdDrawIndexed-pDepthInputAttachmentIndex-09595

Input attachment views accessed in a dynamic render pass with a `InputAttachmentIndex` referenced by `VkRenderingInputAttachmentIndexInfo`, or no `InputAttachmentIndex` if `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` or `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are `NULL`, **must** be created with a `VkImageView` that is compatible with the corresponding color, depth, or stencil attachment in `VkRenderingInfo`

- VUID-vkCmdDrawIndexed-pDepthInputAttachmentIndex-09596

Input attachment views accessed in a dynamic render pass via a shader object **must** have an `InputAttachmentIndex` if both `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` and `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are non-`NULL`

- VUID-vkCmdDrawIndexed-InputAttachmentIndex-09597

If an input attachment view accessed in a dynamic render pass via a shader object has an `InputAttachmentIndex`, the `InputAttachmentIndex` **must** match an index in `VkRenderingInputAttachmentIndexInfo`

- VUID-vkCmdDrawIndexed-None-06537

Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command

- VUID-vkCmdDrawIndexed-None-10795

If a color attachment is written by any prior command in this subpass or by the load,

store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdDrawIndexed-None-10796

If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdDrawIndexed-None-10797

If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdDrawIndexed-None-12338

If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, the color attachment **must** not be written to by this command

- VUID-vkCmdDrawIndexed-None-12339

If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, the depth attachment **must** not be written to by this command

- VUID-vkCmdDrawIndexed-None-12340

If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, the stencil attachment **must** not be written to by this command

- VUID-vkCmdDrawIndexed-None-09003

If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command

- VUID-vkCmdDrawIndexed-None-06886

If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, [depth writes](#) **must** be disabled

- VUID-vkCmdDrawIndexed-None-06887

If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back [writeMask](#) are not zero, and stencil test is enabled, [all stencil ops](#) **must** be [VK_STENCIL_OP_KEEP](#)

- VUID-vkCmdDrawIndexed-None-07831

If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VIEWPORT](#) dynamic state enabled then [vkCmdSetViewport](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07832

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SCISSOR` dynamic state enabled then `vkCmdSetScissor` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-08617

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_WIDTH` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `effective rasterization input topology` is in line topology class, then `vkCmdSetLineWidth` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07834

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `depthBiasEnable` is `VK_TRUE`, then `vkCmdSetDepthBias` or `vkCmdSetDepthBias2EXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07835

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_BLEND_CONSTANTS` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment `current value` of `blendEnable` is `VK_TRUE` with a blend equations where any `VkBlendFactor` member is `VK_BLEND_FACTOR_CONSTANT_COLOR`, `VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR`, `VK_BLEND_FACTOR_CONSTANT_ALPHA`, or `VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA`, then `vkCmdSetBlendConstants` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07836

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `depthBoundsTestEnable` is `VK_TRUE`, then `vkCmdSetDepthBounds` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07837

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilCompareMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07838

If a shader object is bound to any graphics stage or a graphics pipeline is bound which

was created with the `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilWriteMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07839

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_REFERENCE` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, the current value of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilReference` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-maxMultiviewInstanceIndex-02688

If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to `VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex`

- VUID-vkCmdDrawIndexed-sampleLocationsEnable-02689

If the bound graphics pipeline was created with `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` set to `VK_TRUE`, then the active depth attachment **must** have been created with the `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` bit set

- VUID-vkCmdDrawIndexed-None-07634

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleLocationsEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-06666

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then `vkCmdSetSampleLocationsEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07840

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CULL_MODE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCullMode` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07841

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRONT_FACE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFrontFace` **must**

have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07843

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE** dynamic state enabled, and the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, **vkCmdSetDepthTestEnable** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07844

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE** dynamic state enabled, and the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of **depthTestEnable** is **VK_TRUE**, then **vkCmdSetDepthWriteEnable** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07845

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_COMPARE_OP** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of **depthTestEnable** is **VK_TRUE**, then **vkCmdSetDepthCompareOp** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07846

If the **depthBounds** feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE** dynamic state enabled, and the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, then **vkCmdSetDepthBoundsTestEnable** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07847

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE** dynamic state enabled, and the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, then **vkCmdSetStencilTestEnable** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07848

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_STENCIL_OP** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, the **current value** of **stencilTestEnable** is **VK_TRUE**, then **vkCmdSetStencilOp** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-viewportCount-03417

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** dynamic state enabled, and the state is not inherited, then **vkCmdSetViewportWithCount** **must** have

been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-scissorCount-03418

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT** dynamic state enabled, and the state is not inherited, then **vkCmdSetScissorWithCount** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing

- VUID-vkCmdDrawIndexed-viewportCount-03419

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the **VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT** and **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** dynamic states enabled, and the state is not inherited, then the **viewportCount** parameter of **vkCmdSetViewportWithCount** **must** match the **scissorCount** parameter of **vkCmdSetScissorWithCount**

- VUID-vkCmdDrawIndexed-viewportCount-04137

If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** dynamic state enabled, but not the **VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV** dynamic state enabled, then the bound graphics pipeline **must** have been created with **VkPipelineViewportWScalingStateCreateInfoNV::viewportCount** greater or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawIndexed-viewportCount-04138

If the **VK_NV_clip_space_w_scaling** extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** and **VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV** dynamic state enabled, the **current value** of **viewportWScalingEnable** is **VK_TRUE**, then **vkCmdSetViewportWScalingNV** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-08636

If the **VK_NV_clip_space_w_scaling** extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** and **VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV** dynamic state enabled, the **current value** of **viewportWScalingEnable** is **VK_TRUE**, then the **viewportCount** parameter in the last call to **vkCmdSetViewportWScalingNV** **must** be greater than or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawIndexed-viewportCount-04139

If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** dynamic state enabled, but not the **VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV** dynamic state enabled, then the bound graphics pipeline **must** have been created with **VkPipelineViewportShadingRateImageStateCreateInfoNV::viewportCount** greater or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawIndexed-shadingRateImage-09233

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV` and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoarseSampleOrderNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-shadingRateImage-09234

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `shadingRateImageEnable` is `VK_TRUE`, then `vkCmdSetViewportShadingRatePaletteNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-08637

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `shadingRateImageEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportShadingRatePaletteNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndexed-VkPipelineVieportCreateInfo-04141

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportSwizzleStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndexed-VkPipelineVieportCreateInfo-04142

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndexed-None-07878

If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` dynamic state enabled, then `vkCmdSetExclusiveScissorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07879
If the `exclusiveScissor` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV` dynamic state enabled, and the most recent call to `vkCmdSetExclusiveScissorEnableNV` in the current command buffer set any element of `pExclusiveScissorEnables` to `VK_TRUE`, then `vkCmdSetExclusiveScissorNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndexed-None-04876
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` dynamic state enabled, then `vkCmdSetRasterizerDiscardEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndexed-None-04877
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBiasEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndexed-logicOp-04878
If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `logicOpEnable` is `VK_TRUE`, then `vkCmdSetLogicOpEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndexed-primitiveFragmentShadingRateWithMultipleViewports-04552
If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1
- VUID-vkCmdDrawIndexed-primitiveFragmentShadingRateWithMultipleViewports-08642
If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1
- VUID-vkCmdDrawIndexed-blendEnable-04727
If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then for each color attachment, if the

corresponding image view's format features do not contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`, then the corresponding current value of `blendEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawIndexed-None-08644

If a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and none of the following is enabled:

- the `VK_AMD_mixed_attachment_samples` extension
- the `VK_NV_framebuffer_mixed_samples` extension
- the `multisampledRenderToSingleSampled` feature

then the current value of `rasterizationSamples` **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdDrawIndexed-None-08876

If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with `vkCmdBeginRendering`

- VUID-vkCmdDrawIndexed-imageView-06172

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawIndexed-imageView-06173

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDrawIndexed-imageView-06174

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawIndexed-imageView-06175

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDrawIndexed-imageView-06176

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawIndexed-imageView-06177
If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment
- VUID-vkCmdDrawIndexed-viewMask-06178
If the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::viewMask` equal to `VkRenderingInfo::viewMask`
- VUID-vkCmdDrawIndexed-colorAttachmentCount-06179
If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`
- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-08910
If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline
- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-08912
If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-08911
If the `dynamicRenderingUnusedAttachments` feature is enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndexed-colorAttachmentCount-09362
If the current render pass instance was begun with `vkCmdBeginRendering`, with a `VkRenderingInfo::colorAttachmentCount` equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a

`VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdDrawIndexed-None-09363

If there is no shader object bound to any graphics stage, the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdDrawIndexed-None-09364

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, then `vkCmdSetColorBlendEnableEXT` **must** have set the blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdDrawIndexed-None-09365

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdDrawIndexed-None-09366

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetColorBlendEnableEXT` **must** have set blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdDrawIndexed-rasterizationSamples-09367

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdDrawIndexed-None-09368

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this

drawing command

- VUID-vkCmdDrawIndexed-None-09369

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdDrawIndexed-pFragmentSize-09370

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command

- VUID-vkCmdDrawIndexed-pFragmentSize-09371

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07749

If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorWriteEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-attachmentCount-07750

If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the `attachmentCount` parameter of most recent call to `vkCmdSetColorWriteEnableEXT` in the current command buffer **must** be greater than or equal to the number of active color attachments

- VUID-vkCmdDrawIndexed-None-07751

If the `VK_EXT_discard_rectangles` extension is enabled, a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` included a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount`

- VUID-vkCmdDrawIndexed-rasterizerDiscardEnable-09236

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` did not include a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPhysicalDeviceDiscardRectanglePropertiesEXT::maxDiscardRectangles`

- VUID-vkCmdDrawIndexed-None-07880

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDiscardRectangleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07881

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-08913

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-08914

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-08915

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-08916
If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-08917
If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-08918
If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndexed-imageView-06183
If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`
- VUID-vkCmdDrawIndexed-dynamicRenderingLocalRead-11797
If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingLocalRead` feature is enabled, the `VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR` flag is specified, and an attachment is being used as a feedback loop as specified by `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`, `VkRenderingAttachmentFlagsInfoKHR::flags` for that attachment **must** include `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`
- VUID-vkCmdDrawIndexed-imageView-06184
If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`
- VUID-vkCmdDrawIndexed-layers-10831
If the current render pass instance was created with `VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` or `VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, and the bound graphics pipeline was created with

VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE, then the current render pass instance **must** have a `layers` value less than or equal to `VkPipelineFragmentDensityMapLayeredCreateInfoVALVE::maxFragmentDensityMapLayers`

- VUID-vkCmdDrawIndexed-colorAttachmentCount-06185

If the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the corresponding element of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline

- VUID-vkCmdDrawIndexed-pDepthAttachment-06186

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDrawIndexed-pStencilAttachment-06187

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdDrawIndexed-multisampledRenderToSingleSampled-07285

If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdDrawIndexed-multisampledRenderToSingleSampled-07286

If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDrawIndexed-multisampledRenderToSingleSampled-07287
If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdDrawIndexed-pNext-07935
If this command is called inside a render pass instance started with `vkCmdBeginRendering`, and the `pNext` chain of `VkRenderingInfo` includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to `VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples`
- VUID-vkCmdDrawIndexed-renderPass-06198
If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline **must** have been created with a `VkGraphicsPipelineCreateInfo::renderPass` equal to `VK_NULL_HANDLE`
- VUID-vkCmdDrawIndexed-pColorAttachments-08963
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->imageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndexed-pColorAttachments-11539
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->resolveImageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndexed-pDepthAttachment-08964
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndexed-pDepthAttachment-11540

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-pStencilAttachment-08965

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-pStencilAttachment-11860

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-flags-10582

If the current render pass instance was begun with a `vkCmdBeginRendering` call in `commandBuffer`, its `VkRenderingInfo::flags` parameter **must** not have `VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT` set unless `VK_RENDERING_CONTENTS_INLINE_BIT_KHR` is also set

- VUID-vkCmdDrawIndexed-primitivesGeneratedQueryWithRasterizerDiscard-06708

If the `primitivesGeneratedQueryWithRasterizerDiscard` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, `rasterization discard` **must** not be enabled

- VUID-vkCmdDrawIndexed-primitivesGeneratedQueryWithNonZeroStreams-06709

If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, the bound graphics pipeline **must** not have been created with a non-zero value in `VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream`

- VUID-vkCmdDrawIndexed-None-07620

If the `depthClamp` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthClampEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07621

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_POLYGON_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then

`vkCmdSetPolygonModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07622

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRasterizationSamplesEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07623

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleMaskEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-alphaToCoverageEnable-08919

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and `alphaToCoverageEnable` was `VK_TRUE` in the last call to `vkCmdSetAlphaToCoverageEnableEXT`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdDrawIndexed-alphaToCoverageEnable-08920

If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetAlphaToCoverageEnableEXT` in the current command buffer set `alphaToCoverageEnable` to `VK_TRUE`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdDrawIndexed-None-07624

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToCoverageEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07625

If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToOneEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07626

If the `logicOp` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetLogicOpEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07627

If a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound which was created with [VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and there are color attachments bound, then [vkCmdSetColorBlendEnableEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07629

If a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound which was created with [VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and there are color attachments bound, then [vkCmdSetColorWriteMaskEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07630

If the [geometryStreams](#) feature is enabled, and a shader object is bound to the [VK_SHADER_STAGE_GEOMETRY_BIT](#) stage or a graphics pipeline is bound which was created with both a [VK_SHADER_STAGE_GEOMETRY_BIT](#) stage and the [VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT](#) dynamic state enabled, then [vkCmdSetRasterizationStreamEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07631

If the [VK_EXT_conservative_rasterization](#) extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT](#) dynamic state enabled, and the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetConservativeRasterizationModeEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07632

If the [VK_EXT_conservative_rasterization](#) extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [conservativeRasterizationMode](#) is [VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT](#), then [vkCmdSetExtraPrimitiveOverestimationSizeEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-conservativePointAndLineRasterization-07499

If the [VK_EXT_conservative_rasterization](#) extension is enabled, [conservativePointAndLineRasterization](#) is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [effective rasterization input topology](#) is in line or point topology class, then the [current value](#) of [conservativeRasterizationMode](#) **must** be [VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT](#)

- VUID-vkCmdDrawIndexed-None-07633

If the `depthClipEnable` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` dynamic state, then `vkCmdSetDepthClipEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07636

If the `VK_EXT_provoking_vertex` extension is enabled, a shader object is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetProvokingVertexModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-08666

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineRasterizationModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-08669

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineStippleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07849

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `stippledLineEnable` is `VK_TRUE`, then `vkCmdSetLineStipple` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-10608

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, the effective rasterization input topology is in line topology class, and the current `lineRasterizationMode` is `VK_LINE_RASTERIZATION_MODE_BRESENHAM` or `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be `VK_FALSE`

- VUID-vkCmdDrawIndexed-None-07639

If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT` dynamic state enabled, then `vkCmdSetDepthClipNegativeOneToOneEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-09650

If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT` dynamic state enabled, and the `current value` of `depthClampEnable` is `VK_TRUE`, then `vkCmdSetDepthClampRangeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07640

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV` dynamic state enabled, then `vkCmdSetViewportWScalingEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07641

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then `vkCmdSetViewportSwizzleNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07642

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageToColorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07643

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `coverageToColorEnable` is `VK_TRUE`, then `vkCmdSetCoverageToColorLocationNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07644

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then

`vkCmdSetCoverageModulationModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07645

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `coverageModulationMode` is any value other than `VK_COVERAGE_MODULATION_MODE_NONE_NV`, then `vkCmdSetCoverageModulationTableEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07646

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `coverageModulationTableEnable` is `VK_TRUE`, then `vkCmdSetCoverageModulationTableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07647

If the `shadingRateImage` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetShadingRateImageEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-pipelineFragmentShadingRate-09238

If the `pipelineFragmentShadingRate` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFragmentShadingRateKHR` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07648

If the `representativeFragmentTest` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRepresentativeFragmentTestEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07649

If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then

`vkCmdSetCoverageReductionModeNV` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-rasterizationSamples-07471

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** follow the rules for a `zero-attachment subpass`

- VUID-vkCmdDrawIndexed-samples-07472

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the `VkPipelineMultisampleStateCreateInfo::rasterizationSamples` parameter used to create the bound graphics pipeline

- VUID-vkCmdDrawIndexed-samples-07473

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state and `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` states enabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the `rasterizationSamples` parameter in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndexed-None-09211

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** be the same as the `rasterizationSamples` member of that structure

- VUID-vkCmdDrawIndexed-firstAttachment-07476

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorBlendEnableEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawIndexed-firstAttachment-07478

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorWriteMaskEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawIndexed-advancedBlendMaxColorAttachments-07480

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the

`VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment `current value` of `blendEnable` is `VK_TRUE`, then the number of active color attachments **must** not exceed `advancedBlendMaxColorAttachments`

- VUID-vkCmdDrawIndexed-None-10862

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable current value` of `VK_TRUE`

- VUID-vkCmdDrawIndexed-rasterizerDiscardEnable-10863

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendAdvancedEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable current value` of `VK_TRUE`

- VUID-vkCmdDrawIndexed-None-10864

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then either `vkCmdSetColorBlendAdvancedEXT` or `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable current value` of `VK_TRUE`

- VUID-vkCmdDrawIndexed-primitivesGeneratedQueryWithNonZeroStreams-07481

If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, and the bound graphics pipeline was created with `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` state enabled, the last call to `vkCmdSetRasterizationStreamEXT` **must** have set the `rasterizationStream` to zero

- VUID-vkCmdDrawIndexed-sampleLocationsPerPixel-07482

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, and the `current value` of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` member of the `VkPipelineMultisampleStateCreateInfo` structure the bound graphics pipeline has been created with

- VUID-vkCmdDrawIndexed-sampleLocationsPerPixel-07483

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` parameter of the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndexed-sampleLocationsEnable-07484

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT` then the current active depth attachment **must** have been created with the `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` bit set

- VUID-vkCmdDrawIndexed-sampleLocationsEnable-07485

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.width` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDrawIndexed-sampleLocationsEnable-07486

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.height` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDrawIndexed-sampleLocationsEnable-07487

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, the fragment shader code **must** not statically use the extended instruction `InterpolateAtSample`

- VUID-vkCmdDrawIndexed-sampleLocationsEnable-07936

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the **current** value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.width` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndexed-sampleLocationsEnable-07937

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the **current** value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.height` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndexed-sampleLocationsEnable-07938

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the **current** value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationsPerPixel` **must** equal `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndexed-coverageModulationTableEnable-07488

If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` state enabled, and the last call to `vkCmdSetCoverageModulationTableEnableNV` set `coverageModulationTableEnable` to `VK_TRUE`, then the `coverageModulationTableCount` parameter in the last call to `vkCmdSetCoverageModulationTableNV` **must** equal the current `rasterizationSamples` divided by the number of color samples in the current active color attachment

- VUID-vkCmdDrawIndexed-rasterizationSamples-07489

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and if current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the bound pipeline, then the current `rasterizationSamples` **must** be the same as the sample count of the depth/stencil attachment

- VUID-vkCmdDrawIndexed-coverageToColorEnable-07490

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` state enabled and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`

- VUID-vkCmdDrawIndexed-rasterizerDiscardEnable-09420
If the `VK_NV_fragment_coverage_to_color` extension is enabled, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`
- VUID-vkCmdDrawIndexed-coverageReductionMode-07491
If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` or `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic states enabled, then the current values of `coverageReductionMode`, `rasterizationSamples`, the sample counts for the color and depth/stencil attachments (if the subpass has them) **must** be a valid combination returned by `vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV`
- VUID-vkCmdDrawIndexed-viewportCount-07492
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`
- VUID-vkCmdDrawIndexed-viewportCount-07493
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic states enabled then the `viewportCount` parameter in the last call to `vkCmdSetViewportSwizzleNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`
- VUID-vkCmdDrawIndexed-viewportCount-09421
If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage, then the `viewportCount` parameter in the last call to `vkCmdSetViewportSwizzleNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`
- VUID-vkCmdDrawIndexed-rasterizationSamples-07494
If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and the `coverageReductionMode` feature is not enabled, or the current value of `coverageReductionMode` is not `VK_COVERAGE_REDUCTION_MODE_TRUNCATE_NV`, and the current value of `rasterizationSamples` is greater than sample count of the color attachment, then `sample shading` **must** be disabled
- VUID-vkCmdDrawIndexed-stippledLineEnable-07495

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR`, then the `stippledRectangularLines` feature **must** be enabled

- VUID-vkCmdDrawIndexed-stippledLineEnable-07496

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_BRESENHAM`, then the `stippledBresenhamLines` feature **must** be enabled

- VUID-vkCmdDrawIndexed-stippledLineEnable-07497

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the `stippledSmoothLines` feature **must** be enabled

- VUID-vkCmdDrawIndexed-stippledLineEnable-07498

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_DEFAULT`, then the `stippledRectangularLines` feature **must** be enabled and `VkPhysicalDeviceLimits::strictLines` **must** be `VK_TRUE`

- VUID-vkCmdDrawIndexed-stage-07073

If the bound pipeline was created with the `VkPipelineShaderStageCreateInfo::stage` member of an element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then Mesh Shader Queries **must** not be active

- VUID-vkCmdDrawIndexed-None-08877

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAttachmentFeedbackLoopEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-07850

If dynamic state was inherited from `VkCommandBufferInheritanceViewportScissorInfoNV`, it **must** be set in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-nextStage-10745

For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a **nextStage** including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline

- VUID-vkCmdDrawIndexed-None-08684

If there is no bound graphics pipeline, **vkCmdBindShadersEXT** **must** have been called in the current command buffer with **pStages** with an element of **VK_SHADER_STAGE_VERTEX_BIT**

- VUID-vkCmdDrawIndexed-None-08685

If there is no bound graphics pipeline, and the **tessellationShader** feature is enabled, **vkCmdBindShadersEXT** **must** have been called in the current command buffer with **pStages** with an element of **VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT**

- VUID-vkCmdDrawIndexed-None-08686

If there is no bound graphics pipeline, and the **tessellationShader** feature is enabled, **vkCmdBindShadersEXT** **must** have been called in the current command buffer with **pStages** with an element of **VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT**

- VUID-vkCmdDrawIndexed-None-08687

If there is no bound graphics pipeline, and the **geometryShader** feature is enabled, **vkCmdBindShadersEXT** **must** have been called in the current command buffer with **pStages** with an element of **VK_SHADER_STAGE_GEOMETRY_BIT**

- VUID-vkCmdDrawIndexed-None-08688

If there is no bound graphics pipeline, **vkCmdBindShadersEXT** **must** have been called in the current command buffer with **pStages** with an element of **VK_SHADER_STAGE_FRAGMENT_BIT**

- VUID-vkCmdDrawIndexed-None-08689

If there is no bound graphics pipeline, and the **taskShader** feature is enabled, **vkCmdBindShadersEXT** **must** have been called in the current command buffer with **pStages** with an element of **VK_SHADER_STAGE_TASK_BIT_EXT**

- VUID-vkCmdDrawIndexed-None-08690

If there is no bound graphics pipeline, and the **meshShader** feature is enabled, **vkCmdBindShadersEXT** **must** have been called in the current command buffer with **pStages** with an element of **VK_SHADER_STAGE_MESH_BIT_EXT**

- VUID-vkCmdDrawIndexed-None-08693

If there is no bound graphics pipeline, and at least one of the **taskShader** and **meshShader** features is enabled, one of the **VK_SHADER_STAGE_VERTEX_BIT** or **VK_SHADER_STAGE_MESH_BIT_EXT** stages **must** have a valid **VkShaderEXT** bound, and the other **must** have no **VkShaderEXT** bound

- VUID-vkCmdDrawIndexed-None-08696

If there is no bound graphics pipeline, and a valid **VkShaderEXT** is bound to the **VK_SHADER_STAGE_VERTEX_BIT** stage, there **must** be no **VkShaderEXT** bound to either the **VK_SHADER_STAGE_TASK_BIT_EXT** stage or the **VK_SHADER_STAGE_MESH_BIT_EXT** stage

- VUID-vkCmdDrawIndexed-None-08698

If any graphics shader is bound which was created with the **VK_SHADER_CREATE_LINK_STAGE_BIT_EXT** flag, then all shaders created with the

`VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag in the same `vkCreateShadersEXT` call **must** also be bound

- VUID-vkCmdDrawIndexed-None-08699

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, any stages in between stages whose shaders which did not create a shader with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag as part of the same `vkCreateShadersEXT` call **must** not have any `VkShaderEXT` bound

- VUID-vkCmdDrawIndexed-None-08878

All bound graphics shader objects **must** have been created with identical or **identically defined** push constant ranges

- VUID-vkCmdDrawIndexed-None-08879

All bound graphics shader objects **must** have either been created with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag set, or with identical or **identically defined** arrays of descriptor set layouts

- VUID-vkCmdDrawIndexed-colorAttachmentCount-09372

If the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to `1`, a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, and a fragment shader is bound, it **must** not declare the `DepthReplacing` or `StencilRefReplacingEXT` execution modes

- VUID-vkCmdDrawIndexed-pDynamicStates-08715

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` parameter in the last call to `vkCmdSetDepthWriteEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawIndexed-pDynamicStates-08716

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpStencilAttachmentReadEXT`, the `writeMask` parameter in the last call to `vkCmdSetStencilWriteMask` **must** be `0`

- VUID-vkCmdDrawIndexed-None-09116

If a shader object is bound to any graphics stage or the bound graphics pipeline was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`, and the format of any color attachment is `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`, the corresponding element of the `pColorWriteMasks` parameter of `vkCmdSetColorWriteMaskEXT` **must** either include all of `VK_COLOR_COMPONENT_R_BIT`, `VK_COLOR_COMPONENT_G_BIT`, and `VK_COLOR_COMPONENT_B_BIT`, or none of them

- VUID-vkCmdDrawIndexed-maxFragmentDualSrcAttachments-09239

If **blending** is enabled for any attachment where either the source or destination blend factors for that attachment **use the secondary color input**, the maximum value of `Location` for any output attachment **statically used** in the `Fragment Execution Model` executed by this command **must** be less than `maxFragmentDualSrcAttachments`

- VUID-vkCmdDrawIndexed-None-09548
If the current render pass was begun with [vkCmdBeginRendering](#), there is no shader object bound to any graphics stage, the value of each element of [VkRenderingAttachmentLocationInfo::pColorAttachmentLocations](#) in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance
- VUID-vkCmdDrawIndexed-None-09549
If the current render pass was begun with [vkCmdBeginRendering](#), and there is no shader object bound to any graphics stage, the value of each element of [VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices](#) in the bound pipeline **must** match the value for the corresponding index set currently in the current render pass instance
- VUID-vkCmdDrawIndexed-None-10927
If the current render pass was begun with [vkCmdBeginRendering](#), and there is no shader object bound to any graphics stage, the value of [VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex](#) in the bound pipeline **must** match the value set currently in the current render pass instance
- VUID-vkCmdDrawIndexed-None-10928
If the current render pass was begun with [vkCmdBeginRendering](#), and there is no shader object bound to any graphics stage, the value of [VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex](#) in the bound pipeline **must** match the value set currently in the current render pass instance
- VUID-vkCmdDrawIndexed-None-09642
If the current render pass was begun with [vkCmdBeginRendering](#) with the [VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT](#) flag, the bound graphics pipeline **must** have been created with [VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT](#)
- VUID-vkCmdDrawIndexed-None-09643
If the bound graphics pipeline was created with [VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT](#), the current render pass **must** have begun with [vkCmdBeginRendering](#) with the [VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT](#) flag
- VUID-vkCmdDrawIndexed-None-10677
If the [per-tile execution model](#) is enabled, the [tileShadingPerTileDraw](#) feature **must** be enabled
- VUID-vkCmdDrawIndexed-None-10772
If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdDrawIndexed-multiviewPerViewViewports-12262
If the [multiviewPerViewViewports](#) feature is enabled, then the index of the most significant bit in current render pass instance [viewMask](#) **must** be less than the [current value](#) of [viewportCount](#)
- VUID-vkCmdDrawIndexed-multiviewPerViewViewports-12263
If the [multiviewPerViewViewports](#) feature is enabled, then the index of the most significant

bit in current render pass instance `viewMask` **must** be less than the `current value` of `scissorCount`

- VUID-vkCmdDrawIndexed-flags-11521

If current render pass instance was begun with `vkCmdBeginRendering` with `VkRenderingInfo::flags` which includes `VK_RENDERING_FRAGMENT_REGION_BIT_EXT`, and if `sample shading` is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0

- VUID-vkCmdDrawIndexed-None-11522

If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a `VkCustomResolveCreateInfoEXT`

- VUID-vkCmdDrawIndexed-None-11523

If the current render pass instance was begun with `vkCmdBeginRendering` and does not contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** not have been created with a `VkCustomResolveCreateInfoEXT`

- VUID-vkCmdDrawIndexed-customResolve-11524

If the current render pass instance was begun with `vkCmdBeginRendering` and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdDrawIndexed-customResolve-11525

If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and `vkCmdBeginCustomResolveEXT` has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdDrawIndexed-None-11861

If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, the bound graphics pipeline **must** have been created with a `VkCustomResolveCreateInfoEXT::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdDrawIndexed-None-11862

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline

- VUID-vkCmdDrawIndexed-None-11863

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of

`VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-11864

If the `dynamicRenderingUnusedAttachments` feature is enabled, the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-None-11865

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-None-11866

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-11867

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-None-11868

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-None-11869

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo`

`::pStencilAttachment->resolveImageView`

- VUID-vkCmdDrawIndexed-dynamicRenderingUnusedAttachments-11870

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndexed-colorAttachmentCount-11871

If the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than `0` and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, then for each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE`, the `resolveImageView` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdDrawIndexed-pDepthAttachment-11872

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDrawIndexed-pStencilAttachment-11873

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdDrawIndexed-customResolve-11529

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering`, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdDrawIndexed-customResolve-11530

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has not yet been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdDrawIndexed-flags-13361

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then all bound shader objects **must** have been created with the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit

- VUID-vkCmdDrawIndexed-flags-13362

If there are any shader objects bound that were created with `flags` that includes the

`VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` set

- VUID-vkCmdDrawIndexed-flags-13363

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then there **must** be no binding with `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawIndexed-flags-13364

If there are any shader objects bound that were created with `flags` that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR` set

- VUID-vkCmdDrawIndexed-flags-13365

If there are any shader objects bound that were created with `flags` that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, there **must** be no shader object bound to the `VK_SHADER_STAGE_TASK_BIT_EXT` stage

- VUID-vkCmdDrawIndexed-commandBuffer-02712

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, any resource written to by the `VkPipeline` object bound to the pipeline bind point used by this command **must** not be an unprotected resource

- VUID-vkCmdDrawIndexed-commandBuffer-02713

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, pipeline stages other than the framebuffer-space and compute stages in the `VkPipeline` object bound to the pipeline bind point used by this command **must** not write to any resource

- VUID-vkCmdDrawIndexed-commandBuffer-04617

If any of the shader stages of the `VkPipeline` bound to the pipeline bind point used by this command uses the `RayQueryKHR` capability, then `commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdDrawIndexed-None-04007

All vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** have either valid or `VK_NULL_HANDLE` buffers bound

- VUID-vkCmdDrawIndexed-None-04008

If the `nullDescriptor` feature is not enabled, all vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** not be

VK_NULL_HANDLE

- VUID-vkCmdDrawIndexed-None-02721

If the `robustBufferAccess` feature is not enabled, and that pipeline was created without enabling `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` for `vertexInputs`, then for a given vertex buffer binding, any attribute data fetched **must** be entirely contained within the corresponding vertex buffer binding, as described in [Vertex Input Description](#)

- VUID-vkCmdDrawIndexed-format-10389

For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is a `packed format`, and the `legacyVertexAttributes` feature is not enabled, the value of `attribAddress`, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the `size of the format`

- VUID-vkCmdDrawIndexed-format-10390

For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is not a `packed format`, and either the `legacyVertexAttributes` feature is not enabled or `format` has 64-bit components, the value of `attribAddress`, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the `component size of the format`

- VUID-vkCmdDrawIndexed-None-07842

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled then `vkCmdSetPrimitiveTopology` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-dynamicPrimitiveTopologyUnrestricted-07500

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled and the `dynamicPrimitiveTopologyUnrestricted` is `VK_FALSE`, then the `primitiveTopology` parameter of `vkCmdSetPrimitiveTopology` **must** be of the same `topology class` as the pipeline `VkPipelineInputAssemblyStateCreateInfo::topology` state

- VUID-vkCmdDrawIndexed-primitiveTopology-10286

If a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage is bound, then the `current value` of `primitiveTopology` **must** be `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command

- VUID-vkCmdDrawIndexed-primitiveTopology-10747

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command, then a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage **must** be bound

- VUID-vkCmdDrawIndexed-primitiveTopology-10748

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_POINT_LIST` prior to this drawing command, the `maintenance5` feature is not enabled, both a `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` and `VK_SHADER_STAGE_GEOMETRY_BIT` stage are not bound, then the `Vertex Execution Model`

must have a `PointSize` decorated variable that is statically written to

- VUID-vkCmdDrawIndexed-pStrides-04913

If the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, but without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, then `vkCmdBindVertexBuffers2` with a non-NULL `pStrides` parameter or `vkCmdBindVertexBuffers3KHR` with `setStride` set to `VK_TRUE` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdDrawIndexed-None-13118

If the bound graphics pipeline was created without the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, and `vkCmdBindVertexBuffers3KHR` was called and not subsequently `invalidated` in the current command buffer prior to this draw command, the value of `setStride` in each of its `pBindInfos` elements must have been `VK_FALSE`

- VUID-vkCmdDrawIndexed-None-04914

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then `vkCmdSetVertexInputEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdDrawIndexed-Input-07939

If the `vertexAttributeRobustness` feature is not enabled, and the `maintenance9` feature is not enabled, and there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then all variables with the `Input` storage class decorated with `Location` in the `Vertex Execution Model OpEntryPoint` **must** contain a location in `VkVertexInputAttributeDescription2EXT::location`

- VUID-vkCmdDrawIndexed-Input-08734

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and either the `legacyVertexAttributes` feature is not enabled or the SPIR-V Type associated with a given `Input` variable of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the numeric type associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be the same as `VkVertexInputAttributeDescription2EXT::format`

- VUID-vkCmdDrawIndexed-format-08936

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then the scalar width associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be 64-bit

- VUID-vkCmdDrawIndexed-format-08937

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and the scalar width associated with a `Location` decorated `Input` variable in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the corresponding `VkVertexInputAttributeDescription2EXT::format` **must** have a 64-bit component

- VUID-vkCmdDrawIndexed-None-09203

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then all `Input` variables at the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** not use components that are not present in the format

- VUID-vkCmdDrawIndexed-None-04875

If there is a shader object bound to the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage or the bound graphics pipeline state was created with both a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage and the `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT` dynamic state enabled, and the current value of `primitiveTopology` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, then `vkCmdSetPatchControlPointsEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-04879

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-None-09637

If the `primitiveTopologyListRestart` feature is not enabled, the `input assembly` is `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY`, or `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled, then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawIndexed-None-10909

If the `primitiveTopologyPatchListRestart` feature is not enabled, the `input assembly` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, there is a shader object bound to the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawIndexed-stage-06481

The bound graphics pipeline **must** not have been created with the `VkPipelineShaderStageCreateInfo::stage` member of any element of

VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT

- VUID-vkCmdDrawIndexed-None-08885

There **must** be no shader object bound to either of the VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT stages

- VUID-vkCmdDrawIndexed-None-07619

If a shader object is bound to the VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stage and the VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT dynamic state enabled, then vkCmdSetTessellationDomainOriginEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndexed-OpExecutionMode-12239

If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the type of subdivision, they **must** be the same

- VUID-vkCmdDrawIndexed-OpExecutionMode-12240

If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the orientation of triangles, they **must** be the same

- VUID-vkCmdDrawIndexed-OpExecutionMode-12241

If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the segment spacing, they **must** be the same

- VUID-vkCmdDrawIndexed-OpExecutionMode-12242

If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the output patch size, they **must** be the same

- VUID-vkCmdDrawIndexed-None-07312

If the maintenance6 feature is not enabled, a valid index buffer **must** be bound

- VUID-vkCmdDrawIndexed-primitiveRestartIndex-12401

If the primitive restart index for this draw operation was set with vkCmdSetPrimitiveRestartIndexEXT, then primitiveRestartIndex **must** not be greater than the maximum representable value for the bound VkIndexType

- VUID-vkCmdDrawIndexed-pNext-09461

If the bound graphics pipeline state was created with VkPipelineVertexInputDivisorStateCreateInfo in the pNext chain of VkGraphicsPipelineCreateInfo::pVertexInputState, any member of VkPipelineVertexInputDivisorStateCreateInfo::pVertexBindingDivisors has a value other than 1 in divisor, and VkPhysicalDeviceVertexAttributeDivisorProperties::supportsNonZeroFirstInstance is VK_FALSE, then firstInstance **must** be 0

- VUID-vkCmdDrawIndexed-None-09462

If [shader objects](#) are used for drawing or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled, any member of the [pVertexBindingDescriptions](#) parameter to the [vkCmdSetVertexInputEXT](#) call that sets this dynamic state has a value other than [1](#) in [divisor](#), and [VkPhysicalDeviceVertexAttributeDivisorProperties::supportsNonZeroFirstInstance](#) is [VK_FALSE](#), then [firstInstance](#) **must** be [0](#)

- VUID-vkCmdDrawIndexed-robustBufferAccess2-08798

If the [robustBufferAccess2](#) feature is not enabled, $(\text{indexSize} \times (\text{firstIndex} + \text{indexCount}))$ **must** be less than or equal to the size of the [bound index buffer range](#), with [indexSize](#) being based on the type specified by [indexType](#), and the other parameters sourced from this command

Valid Usage (Implicit)

- VUID-vkCmdDrawIndexed-commandBuffer-parameter
[commandBuffer](#) **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdDrawIndexed-commandBuffer-recording
[commandBuffer](#) **must** be in the [recording state](#)
- VUID-vkCmdDrawIndexed-commandBuffer-cmdpool
The [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support [VK_QUEUE_GRAPHICS_BIT](#) operations
- VUID-vkCmdDrawIndexed-renderpass
This command **must** only be called inside of a render pass instance
- VUID-vkCmdDrawIndexed-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDrawIndexed-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to [commandBuffer](#) **must** be externally synchronized
- Host access to the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAP HICS_BIT	Action

Conditional Rendering

vkCmdDrawIndexed is affected by [conditional rendering](#)

To record an ordered sequence of draws which have no state changes between them, call:

```
// Provided by VK_EXT_multi_draw
void vkCmdDrawMultiEXT(
    VkCommandBuffer          commandBuffer,
    uint32_t                 drawCount,
    const VkMultiDrawInfoEXT* pVertexInfo,
    uint32_t                 instanceCount,
    uint32_t                 firstInstance,
    uint32_t                 stride);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `drawCount` is the number of draws to execute, and **can** be zero.
- `pVertexInfo` is a pointer to an array of `VkMultiDrawInfoEXT` with vertex information to be drawn.
- `instanceCount` is the number of instances per draw.
- `firstInstance` is the instance ID of the first instance in each draw.
- `stride` is the byte stride between consecutive elements of `pVertexInfo`.

The number of draws recorded is `drawCount`, with each draw reading, sequentially, a `firstVertex` and a `vertexCount` from `pVertexInfo`. For each recorded draw, primitives are assembled as for `vkCmdDraw`, and drawn `instanceCount` times with `instanceIndex` starting with `firstInstance` and sequentially for each instance.

Valid Usage

- VUID-vkCmdDrawMultiEXT-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDrawMultiEXT-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdDrawMultiEXT-mipmapMode-04770

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdDrawMultiEXT-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDrawMultiEXT-unnormalizedCoordinates-09635

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDrawMultiEXT-None-08609

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdDrawMultiEXT-None-08610

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdDrawMultiEXT-None-08611

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdDrawMultiEXT-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDrawMultiEXT-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdDrawMultiEXT-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdDrawMultiEXT-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdDrawMultiEXT-None-02693
If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-vkCmdDrawMultiEXT-filterCubic-02694
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdDrawMultiEXT-filterCubicMinmax-02695
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdDrawMultiEXT-cubicRangeClamp-09212
If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`
- VUID-vkCmdDrawMultiEXT-reductionMode-09213
Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`
- VUID-vkCmdDrawMultiEXT-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`
- VUID-vkCmdDrawMultiEXT-flags-02696
Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`
- VUID-vkCmdDrawMultiEXT-OpTypeImage-07027
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdDrawMultiEXT-OpTypeImage-07028
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDrawMultiEXT-OpTypeImage-07029
For any [VkBufferView](#) being written as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)
- VUID-vkCmdDrawMultiEXT-OpTypeImage-07030
Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)
- VUID-vkCmdDrawMultiEXT-None-08600
If a [a bound shader](#) was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdDrawMultiEXT-None-08601
If a [a bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader
- VUID-vkCmdDrawMultiEXT-None-10068
For each array of resources that is used by [a bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDrawMultiEXT-None-08114
Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid if they are accessed as described by [descriptor validity](#) by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDrawMultiEXT-imageLayout-00344
If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)
- VUID-vkCmdDrawMultiEXT-None-08115
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDrawMultiEXT-None-08116
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDrawMultiEXT-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this

command

- VUID-vkCmdDrawMultiEXT-None-08117

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDrawMultiEXT-None-08119

If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdDrawMultiEXT-None-08605

If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdDrawMultiEXT-None-08606

If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdDrawMultiEXT-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdDrawMultiEXT-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMultiEXT-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMultiEXT-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMultiEXT-None-08613

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMultiEXT-commandBuffer-02707

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by `bound shaders` **must** not be a protected resource

- VUID-vkCmdDrawMultiEXT-viewType-07752

If a `VkImageView` is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdDrawMultiEXT-format-07753

If a `VkImageView` or `VkBufferView` is accessed as a result of this command, then the `numeric type` of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match

- VUID-vkCmdDrawMultiEXT-OpImageWrite-08795

If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdDrawMultiEXT-OpImageWrite-08796

If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components

- VUID-vkCmdDrawMultiEXT-OpImageWrite-04469

If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdDrawMultiEXT-SampledType-04470

If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdDrawMultiEXT-SampledType-04471

If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdDrawMultiEXT-SampledType-04472

If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdDrawMultiEXT-SampledType-04473

If a `VkBufferView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdDrawMultiEXT-sparseImageInt64Atomics-04474
If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdDrawMultiEXT-sparseImageInt64Atomics-04475
If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdDrawMultiEXT-OpImageSampleWeightedQCOM-06971
If `OpImageSampleWeightedQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`
- VUID-vkCmdDrawMultiEXT-OpImageSampleWeightedQCOM-06972
If `OpImageSampleWeightedQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`
- VUID-vkCmdDrawMultiEXT-OpImageBoxFilterQCOM-06973
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`
- VUID-vkCmdDrawMultiEXT-OpImageBlockMatchSSDQCOM-06974
If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDrawMultiEXT-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDrawMultiEXT-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDrawMultiEXT-OpImageSampleWeightedQCOM-06977
If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDrawMultiEXT-OpImageSampleWeightedQCOM-06978
If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`,

`OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdDrawMultiEXT-OpImageBlockMatchWindow-09215

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdDrawMultiEXT-OpImageBlockMatchWindow-09216

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format

- VUID-vkCmdDrawMultiEXT-OpImageBlockMatchWindow-09217

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`

- VUID-vkCmdDrawMultiEXT-None-07288

Any shader invocation executed by this command **must** `terminate`

- VUID-vkCmdDrawMultiEXT-None-09600

If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdDrawMultiEXT-commandBuffer-10746

The `VkDeviceMemory` object allocated from a `VkMemoryHeap` with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property that is bound to a resource accessed as a result of this command **must** be the active bound `bound tile memory object` in `commandBuffer`

- VUID-vkCmdDrawMultiEXT-None-10678

If this command is recorded inside a `tile shading render pass` instance, the stages corresponding to the pipeline bind point used by this command **must** only include `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT`, and/or `VK_SHADER_STAGE_COMPUTE_BIT`

- VUID-vkCmdDrawMultiEXT-None-10679

If this command is recorded where `per-tile execution model` is enabled, there **must** be no access to any image while the image was be transitioned to the `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` layout

- VUID-vkCmdDrawMultiEXT-pDescription-09900

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the underlying `VkTensorARM` object **must** have been created with the `VK_TENSOR_USAGE_SHADER_BIT_ARM` usage flag set

- VUID-vkCmdDrawMultiEXT-dimensionCount-09905

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via `VkTensorCreateInfoARM::pDescription` when creating the underlying `VkTensorARM` object

- VUID-vkCmdDrawMultiEXT-OpTypeTensorARM-09906

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be `compatible` with the `VkFormat` of the `VkTensorViewARM` used for the access

- VUID-vkCmdDrawMultiEXT-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`

- VUID-vkCmdDrawMultiEXT-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`

- VUID-vkCmdDrawMultiEXT-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`

- VUID-vkCmdDrawMultiEXT-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeTensorARM` using that mapping, the calculated offset for the resource heap **must** be a multiple of `tensorDescriptorAlignment`

- VUID-vkCmdDrawMultiEXT-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDrawMultiEXT-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawMultiEXT-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDrawMultiEXT-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdDrawMultiEXT-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawMultiEXT-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDrawMultiEXT-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdDrawMultiEXT-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the

`VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands

- VUID-vkCmdDrawMultiEXT-None-11372

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdDrawMultiEXT-None-11373

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdDrawMultiEXT-None-11374

If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdDrawMultiEXT-pBindInfo-11375

If any `bound shader` uses an embedded sampler via a `descriptor mapping`, the value of `pBindInfo->reservedRangeSize` set for `vkCmdBindSamplerHeapEXT` **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`

- VUID-vkCmdDrawMultiEXT-None-11376

If a `bound shader` was created as a `VkShaderEXT` with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag or as part of a pipeline with the `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, and that shader statically uses a push constant value, that value **must** have been set by `vkCmdPushDataEXT`

- VUID-vkCmdDrawMultiEXT-None-11398

If a `bound shader` was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the access **must** not be `out of bounds`

- VUID-vkCmdDrawMultiEXT-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawMultiEXT-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawMultiEXT-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdDrawMultiEXT-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawMultiEXT-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdDrawMultiEXT-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#)

using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdDrawMultiEXT-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdDrawMultiEXT-protectedNoFault-11455

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), the address that the resource is mapped to **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set

- VUID-vkCmdDrawMultiEXT-protectedNoFault-11456

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), the address of the indirect memory **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set

- VUID-vkCmdDrawMultiEXT-renderPass-02684

The current render pass **must** be [compatible](#) with the [renderPass](#) member of the [VkGraphicsPipelineCreateInfo](#) structure specified when creating the [VkPipeline](#) bound to [VK_PIPELINE_BIND_POINT_GRAPHICS](#)

- VUID-vkCmdDrawMultiEXT-subpass-02685

The subpass index of the current render pass **must** be equal to the [subpass](#) member of the [VkGraphicsPipelineCreateInfo](#) structure specified when creating the [VkPipeline](#) bound to [VK_PIPELINE_BIND_POINT_GRAPHICS](#)

- VUID-vkCmdDrawMultiEXT-OpTypeImage-07468

If any shader executed by this pipeline accesses an [OpTypeImage](#) variable with a [Dim](#) operand of [SubpassData](#), it **must** be decorated with an [InputAttachmentIndex](#) that corresponds to a valid input attachment in the current subpass

- VUID-vkCmdDrawMultiEXT-None-07469

Input attachment views accessed in a subpass **must** be created with the same [VkFormat](#) as the corresponding subpass definition, and be created with a [VkImageView](#) that is compatible with the attachment referenced by the subpass' [pInputAttachments](#) [[InputAttachmentIndex](#)] in the bound [VkFramebuffer](#) as specified by [Fragment Input Attachment Compatibility](#)

- VUID-vkCmdDrawMultiEXT-pDepthInputAttachmentIndex-09595
Input attachment views accessed in a dynamic render pass with a [InputAttachmentIndex](#) referenced by [VkRenderingInputAttachmentIndexInfo](#), or no [InputAttachmentIndex](#) if [VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex](#) or [VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex](#) are [NULL](#), **must** be created with a [VkImageView](#) that is compatible with the corresponding color, depth, or stencil attachment in [VkRenderingInfo](#)
- VUID-vkCmdDrawMultiEXT-pDepthInputAttachmentIndex-09596
Input attachment views accessed in a dynamic render pass via a shader object **must** have an [InputAttachmentIndex](#) if both [VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex](#) and [VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex](#) are non-[NULL](#)
- VUID-vkCmdDrawMultiEXT-InputAttachmentIndex-09597
If an input attachment view accessed in a dynamic render pass via a shader object has an [InputAttachmentIndex](#), the [InputAttachmentIndex](#) **must** match an index in [VkRenderingInputAttachmentIndexInfo](#)
- VUID-vkCmdDrawMultiEXT-None-06537
Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdDrawMultiEXT-None-10795
If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMultiEXT-None-10796
If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMultiEXT-None-10797
If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMultiEXT-None-12338
If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, the color attachment **must** not be written to by this command

- VUID-vkCmdDrawMultiEXT-None-12339
If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdDrawMultiEXT-None-12340
If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdDrawMultiEXT-None-09003
If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command
- VUID-vkCmdDrawMultiEXT-None-06886
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, [depth writes](#) **must** be disabled
- VUID-vkCmdDrawMultiEXT-None-06887
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back [writeMask](#) are not zero, and stencil test is enabled, [all stencil ops](#) **must** be [VK_STENCIL_OP_KEEP](#)
- VUID-vkCmdDrawMultiEXT-None-07831
If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VIEWPORT](#) dynamic state enabled then [vkCmdSetViewport](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiEXT-None-07832
If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_SCISSOR](#) dynamic state enabled then [vkCmdSetScissor](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiEXT-None-08617
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_LINE_WIDTH](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [effective rasterization input topology](#) is in line topology class, then [vkCmdSetLineWidth](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiEXT-None-07834
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_DEPTH_BIAS](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [depthBiasEnable](#) is [VK_TRUE](#), then [vkCmdSetDepthBias](#) or [vkCmdSetDepthBias2EXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07835

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_BLEND_CONSTANTS` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment `current value` of `blendEnable` is `VK_TRUE` with a blend equations where any `VkBlendFactor` member is `VK_BLEND_FACTOR_CONSTANT_COLOR`, `VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR`, `VK_BLEND_FACTOR_CONSTANT_ALPHA`, or `VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA`, then `vkCmdSetBlendConstants` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07836

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `depthBoundsTestEnable` is `VK_TRUE`, then `vkCmdSetDepthBounds` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07837

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilCompareMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07838

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilWriteMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07839

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_REFERENCE` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilReference` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-maxMultiviewInstanceIndex-02688

If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to `VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex`

- VUID-vkCmdDrawMultiEXT-sampleLocationsEnable-02689

If the bound graphics pipeline was created with

VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable set to VK_TRUE, then the active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set

- VUID-vkCmdDrawMultiEXT-None-07634

If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetSampleLocationsEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-06666

If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of sampleLocationsEnable is VK_TRUE, then vkCmdSetSampleLocationsEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07840

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CULL_MODE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCullMode **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07841

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRONT_FACE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetFrontFace **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07843

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, vkCmdSetDepthTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07844

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthTestEnable is VK_TRUE, then vkCmdSetDepthWriteEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07845

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_COMPARE_OP dynamic state enabled,

the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthCompareOp` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07846

If the `depthBounds` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBoundsTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07847

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetStencilTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07848

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_OP` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilOp` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-viewportCount-03417

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetViewportWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-scissorCount-03418

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetScissorWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing

- VUID-vkCmdDrawMultiEXT-viewportCount-03419

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic states enabled, and the state is not inherited, then the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** match the `scissorCount` parameter of `vkCmdSetScissorWithCount`

- VUID-vkCmdDrawMultiEXT-viewportCount-04137

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, then the bound

graphics pipeline **must** have been created with `VkPipelineViewportWScalingStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiEXT-viewportCount-04138

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the `current value` of `viewportWScalingEnable` is `VK_TRUE`, then `vkCmdSetViewportWScalingNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-08636

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the `current value` of `viewportWScalingEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportWScalingNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiEXT-viewportCount-04139

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportShadingRateImageStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiEXT-shadingRateImage-09233

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV` and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoarseSampleOrderNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-shadingRateImage-09234

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `shadingRateImageEnable` is `VK_TRUE`, then `vkCmdSetViewportShadingRatePaletteNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-08637

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

`VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `shadingRateImageEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportShadingRatePaletteNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiEXT-VkPipelineVieportCreateInfo-04141

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportSwizzleStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiEXT-VkPipelineVieportCreateInfo-04142

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiEXT-None-07878

If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` dynamic state enabled, then `vkCmdSetExclusiveScissorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07879

If the `exclusiveScissor` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV` dynamic state enabled, and the most recent call to `vkCmdSetExclusiveScissorEnableNV` in the current command buffer set any element of `pExclusiveScissorEnables` to `VK_TRUE`, then `vkCmdSetExclusiveScissorNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-04876

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` dynamic state enabled, then `vkCmdSetRasterizerDiscardEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-04877

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBiasEnable` **must** have been called and not subsequently `invalidated` in

the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-logicOp-04878

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `logicOpEnable` is `VK_TRUE`, then `vkCmdSetLogicOpEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-primitiveFragmentShadingRateWithMultipleViewports-04552

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdDrawMultiEXT-primitiveFragmentShadingRateWithMultipleViewports-08642

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdDrawMultiEXT-blendEnable-04727

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then for each color attachment, if the corresponding image view's `format features` do not contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`, then the corresponding `current value` of `blendEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawMultiEXT-None-08644

If a shader object is bound to any graphics stage or a graphics pipeline is bound, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and none of the following is enabled:

- the `VK_AMD_mixed_attachment_samples` extension
- the `VK_NV_framebuffer_mixed_samples` extension
- the `multisampledRenderToSingleSampled` feature

then the `current value` of `rasterizationSamples` **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdDrawMultiEXT-None-08876

If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with `vkCmdBeginRendering`

- VUID-vkCmdDrawMultiEXT-imageView-06172

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawMultiEXT-imageView-06173

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDrawMultiEXT-imageView-06174

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawMultiEXT-imageView-06175

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDrawMultiEXT-imageView-06176

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawMultiEXT-imageView-06177

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDrawMultiEXT-viewMask-06178

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::viewMask` equal to `VkRenderingInfo::viewMask`

- VUID-vkCmdDrawMultiEXT-colorAttachmentCount-06179

If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-08910

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have

been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-08912

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-08911

If the `dynamicRenderingUnusedAttachments` feature is enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-colorAttachmentCount-09362

If the current render pass instance was begun with `vkCmdBeginRendering`, with a `VkRenderingInfo::colorAttachmentCount` equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiEXT-None-09363

If there is no shader object bound to any graphics stage, the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiEXT-None-09364

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, then `vkCmdSetColorBlendEnableEXT` **must** have set the blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-09365

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-09366

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetColorBlendEnableEXT` **must** have set blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdDrawMultiEXT-rasterizationSamples-09367

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-09368

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-09369

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdDrawMultiEXT-pFragmentSize-09370

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command

- VUID-vkCmdDrawMultiEXT-pFragmentSize-09371

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07749

If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorWriteEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-attachmentCount-07750

If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the `attachmentCount` parameter of most recent call to `vkCmdSetColorWriteEnableEXT` in the current command buffer **must** be greater than or equal to the number of active color attachments

- VUID-vkCmdDrawMultiEXT-None-07751

If the `VK_EXT_discard_rectangles` extension is enabled, a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` included a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount`

- VUID-vkCmdDrawMultiEXT-rasterizerDiscardEnable-09236

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` did not include a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPhysicalDeviceDiscardRectanglePropertiesEXT::maxDiscardRectangles`

- VUID-vkCmdDrawMultiEXT-None-07880

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDiscardRectangleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07881

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

`VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-08913

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-08914

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-08915

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-08916

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-08917

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-08918

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`, the value of the format **must** be

VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMultiEXT-imageView-06183

If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingLocalRead-11797

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingLocalRead` feature is enabled, the `VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR` flag is specified, and an attachment is being used as a feedback loop as specified by `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`, `VkRenderingAttachmentFlagsInfoKHR::flags` for that attachment **must** include `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`

- VUID-vkCmdDrawMultiEXT-imageView-06184

If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`

- VUID-vkCmdDrawMultiEXT-layers-10831

If the current render pass instance was created with `VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` or `VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, and the bound graphics pipeline was created with `VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, then the current render pass instance **must** have a `layers` value less than or equal to `VkPipelineFragmentDensityMapLayeredCreateInfoVALVE::maxFragmentDensityMapLayers`

- VUID-vkCmdDrawMultiEXT-colorAttachmentCount-06185

If the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the corresponding element of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiEXT-pDepthAttachment-06186

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDrawMultiEXT-pStencilAttachment-06187
If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdDrawMultiEXT-multisampledRenderToSingleSampled-07285
If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline
- VUID-vkCmdDrawMultiEXT-multisampledRenderToSingleSampled-07286
If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`
- VUID-vkCmdDrawMultiEXT-multisampledRenderToSingleSampled-07287
If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdDrawMultiEXT-pNext-07935
If this command is called inside a render pass instance started with `vkCmdBeginRendering`, and the `pNext` chain of `VkRenderingInfo` includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to `VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples`
- VUID-vkCmdDrawMultiEXT-renderPass-06198
If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline **must** have been created with a `VkGraphicsPipelineCreateInfo::renderPass` equal to `VK_NULL_HANDLE`
- VUID-vkCmdDrawMultiEXT-pColorAttachments-08963

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->imageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-pColorAttachments-11539

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->resolveImageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-pDepthAttachment-08964

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-pDepthAttachment-11540

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-pStencilAttachment-08965

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-pStencilAttachment-11860

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-flags-10582
If the current render pass instance was begun with a `vkCmdBeginRendering` call in `commandBuffer`, its `VkRenderingInfo::flags` parameter **must** not have `VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT` set unless `VK_RENDERING_CONTENTS_INLINE_BIT_KHR` is also set
- VUID-vkCmdDrawMultiEXT-primitivesGeneratedQueryWithRasterizerDiscard-06708
If the `primitivesGeneratedQueryWithRasterizerDiscard` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, `rasterization discard` **must** not be enabled
- VUID-vkCmdDrawMultiEXT-primitivesGeneratedQueryWithNonZeroStreams-06709
If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, the bound graphics pipeline **must** not have been created with a non-zero value in `VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream`
- VUID-vkCmdDrawMultiEXT-None-07620
If the `depthClamp` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthClampEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiEXT-None-07621
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_POLYGON_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetPolygonModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiEXT-None-07622
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRasterizationSamplesEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiEXT-None-07623
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleMaskEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiEXT-alphaToCoverageEnable-08919
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and `alphaToCoverageEnable` was `VK_TRUE` in the last call to `vkCmdSetAlphaToCoverageEnableEXT`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdDrawMultiEXT-alphaToCoverageEnable-08920

If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetAlphaToCoverageEnableEXT` in the current command buffer set `alphaToCoverageEnable` to `VK_TRUE`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdDrawMultiEXT-None-07624

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToCoverageEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07625

If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToOneEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07626

If the `logicOp` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetLogicOpEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07627

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorBlendEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07629

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorWriteMaskEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07630

If the `geometryStreams` feature is enabled, and a shader object is bound to the `VK_SHADER_STAGE_GEOMETRY_BIT` stage or a graphics pipeline is bound which was created with both a `VK_SHADER_STAGE_GEOMETRY_BIT` stage and the `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` dynamic state enabled, then `vkCmdSetRasterizationStreamEXT` **must** have been called and not subsequently

invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07631

If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetConservativeRasterizationModeEXT` **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07632

If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `conservativeRasterizationMode` is `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`, then `vkCmdSetExtraPrimitiveOverestimationSizeEXT` **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-conservativePointAndLineRasterization-07499

If the `VK_EXT_conservative_rasterization` extension is enabled, `conservativePointAndLineRasterization` is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line or point topology class, then the current value of `conservativeRasterizationMode` **must** be `VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT`

- VUID-vkCmdDrawMultiEXT-None-07633

If the `depthClipEnable` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` dynamic state, then `vkCmdSetDepthClipEnableEXT` **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07636

If the `VK_EXT_provoking_vertex` extension is enabled, a shader object is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetProvokingVertexModeEXT` **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-08666

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineRasterizationModeEXT` **must** have been called and not subsequently invalidated in the current command buffer prior

to this drawing command

- VUID-vkCmdDrawMultiEXT-None-08669

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `effective rasterization input topology` is in line topology class, then `vkCmdSetLineStippleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07849

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stippledLineEnable` is `VK_TRUE`, then `vkCmdSetLineStipple` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-10608

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, the `effective rasterization input topology` is in line topology class, and the current `lineRasterizationMode` is `VK_LINE_RASTERIZATION_MODE_BRESENHAM` or `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be `VK_FALSE`

- VUID-vkCmdDrawMultiEXT-None-07639

If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT` dynamic state enabled, then `vkCmdSetDepthClipNegativeOneToOneEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-09650

If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT` dynamic state enabled, and the `current value` of `depthClampEnable` is `VK_TRUE`, then `vkCmdSetDepthClampRangeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07640

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV` dynamic state enabled, then `vkCmdSetViewportWScalingEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07641

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then `vkCmdSetViewportSwizzleNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07642

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageToColorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07643

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageToColorEnable` is `VK_TRUE`, then `vkCmdSetCoverageToColorLocationNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07644

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageModulationModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07645

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationMode` is any value other than `VK_COVERAGE_MODULATION_MODE_NONE_NV`, then `vkCmdSetCoverageModulationTableEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07646

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationTableEnable` is `VK_TRUE`, then `vkCmdSetCoverageModulationTableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07647

If the `shadingRateImage` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetShadingRateImageEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-pipelineFragmentShadingRate-09238

If the `pipelineFragmentShadingRate` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFragmentShadingRateKHR` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07648

If the `representativeFragmentTest` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRepresentativeFragmentTestEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07649

If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageReductionModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-rasterizationSamples-07471

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** follow the rules for a `zero-attachment subpass`

- VUID-vkCmdDrawMultiEXT-samples-07472

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the `VkPipelineMultisampleStateCreateInfo::rasterizationSamples` parameter used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiEXT-samples-07473

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state and `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` states enabled, then the `samples`

parameter in the last call to [vkCmdSetSampleMaskEXT](#) **must** be greater or equal to the [rasterizationSamples](#) parameter in the last call to [vkCmdSetRasterizationSamplesEXT](#)

- VUID-vkCmdDrawMultiEXT-None-09211

If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT](#) state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a [VkMultisampledRenderToSingleSampledInfoEXT](#) structure with [multisampledRenderToSingleSampledEnable](#) equal to [VK_TRUE](#), then the [rasterizationSamples](#) in the last call to [vkCmdSetRasterizationSamplesEXT](#) **must** be the same as the [rasterizationSamples](#) member of that structure

- VUID-vkCmdDrawMultiEXT-firstAttachment-07476

If a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound was created with the [VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT](#) dynamic states enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then the last call to [vkCmdSetColorBlendEnableEXT](#) in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawMultiEXT-firstAttachment-07478

If a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound was created with the [VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT](#) dynamic states enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then the last call to [vkCmdSetColorWriteMaskEXT](#) in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawMultiEXT-advancedBlendMaxColorAttachments-07480

If a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound was created with the [VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT](#) and [VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT](#) dynamic states enabled, the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and an active color attachment current value of [blendEnable](#) is [VK_TRUE](#), then the number of active color attachments **must** not exceed [advancedBlendMaxColorAttachments](#)

- VUID-vkCmdDrawMultiEXT-None-10862

If a graphics pipeline is bound was created with [VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT](#), but not the [VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT](#) dynamic state enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetColorBlendEquationEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command for all active color attachments with the [blendEnable](#) current value of [VK_TRUE](#)

- VUID-vkCmdDrawMultiEXT-rasterizerDiscardEnable-10863

If a graphics pipeline is bound was created with [VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT](#), but not the [VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT](#) dynamic state enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetColorBlendAdvancedEXT](#) **must** have been called and not subsequently

`invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDrawMultiEXT-None-10864

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then either `vkCmdSetColorBlendAdvancedEXT` or `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDrawMultiEXT-primitivesGeneratedQueryWithNonZeroStreams-07481

If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, and the bound graphics pipeline was created with `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` state enabled, the last call to `vkCmdSetRasterizationStreamEXT` **must** have set the `rasterizationStream` to zero

- VUID-vkCmdDrawMultiEXT-sampleLocationsPerPixel-07482

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` member of the `VkPipelineMultisampleStateCreateInfo` structure the bound graphics pipeline has been created with

- VUID-vkCmdDrawMultiEXT-sampleLocationsPerPixel-07483

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` parameter of the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawMultiEXT-sampleLocationsEnable-07484

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT` then the current active depth attachment **must** have been created with the `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` bit set

- VUID-vkCmdDrawMultiEXT-sampleLocationsEnable-07485

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if

`sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.width` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDrawMultiEXT-sampleLocationsEnable-07486

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.height` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDrawMultiEXT-sampleLocationsEnable-07487

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, the fragment shader code **must** not statically use the extended instruction `InterpolateAtSample`

- VUID-vkCmdDrawMultiEXT-sampleLocationsEnable-07936

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.width` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawMultiEXT-sampleLocationsEnable-07937

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.height` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawMultiEXT-sampleLocationsEnable-07938

If the bound graphics pipeline state was created with the

VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationsPerPixel **must** equal rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT

- VUID-vkCmdDrawMultiEXT-coverageModulationTableEnable-07488

If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV state enabled, and the last call to vkCmdSetCoverageModulationTableEnableNV set coverageModulationTableEnable to VK_TRUE, then the coverageModulationTableCount parameter in the last call to vkCmdSetCoverageModulationTableNV **must** equal the current rasterizationSamples divided by the number of color samples in the current active color attachment

- VUID-vkCmdDrawMultiEXT-rasterizationSamples-07489

If the VK_NV_framebuffer_mixed_samples extension is enabled, and if current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the bound pipeline, then the current rasterizationSamples **must** be the same as the sample count of the depth/stencil attachment

- VUID-vkCmdDrawMultiEXT-coverageToColorEnable-07490

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV state enabled and the last call to vkCmdSetCoverageToColorEnableNV set the coverageToColorEnable to VK_TRUE, then there **must** be an active color attachment at the location selected by the last call to vkCmdSetCoverageToColorLocationNV coverageToColorLocation, with a VkFormat of VK_FORMAT_R8_UINT, VK_FORMAT_R8_SINT, VK_FORMAT_R16_UINT, VK_FORMAT_R16_SINT, VK_FORMAT_R32_UINT, or VK_FORMAT_R32_SINT

- VUID-vkCmdDrawMultiEXT-rasterizerDiscardEnable-09420

If the VK_NV_fragment_coverage_to_color extension is enabled, and a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and the last call to vkCmdSetCoverageToColorEnableNV set the coverageToColorEnable to VK_TRUE, then there **must** be an active color attachment at the location selected by the last call to vkCmdSetCoverageToColorLocationNV coverageToColorLocation, with a VkFormat of VK_FORMAT_R8_UINT, VK_FORMAT_R8_SINT, VK_FORMAT_R16_UINT, VK_FORMAT_R16_SINT, VK_FORMAT_R32_UINT, or VK_FORMAT_R32_SINT

- VUID-vkCmdDrawMultiEXT-coverageReductionMode-07491

If the coverageReductionMode feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV or VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic states enabled, then the current values of coverageReductionMode, rasterizationSamples, the sample counts for the color and depth/stencil attachments (if the subpass has them) **must** be a valid combination returned by vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV

- VUID-vkCmdDrawMultiEXT-viewportCount-07492

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiEXT-viewportCount-07493

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic states enabled then the `viewportCount` parameter in the last call to `vkCmdSetViewportSwizzleNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiEXT-viewportCount-09421

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage, then the `viewportCount` parameter in the last call to `vkCmdSetViewportSwizzleNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiEXT-rasterizationSamples-07494

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and the `coverageReductionMode` feature is not enabled, or the `current value` of `coverageReductionMode` is not `VK_COVERAGE_REDUCTION_MODE_TRUNCATE_NV`, and the `current value` of `rasterizationSamples` is greater than sample count of the color attachment, then `sample shading` **must** be disabled

- VUID-vkCmdDrawMultiEXT-stippledLineEnable-07495

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR`, then the `stippledRectangularLines` feature **must** be enabled

- VUID-vkCmdDrawMultiEXT-stippledLineEnable-07496

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_BRESENHAM`, then the `stippledBresenhamLines` feature **must** be enabled

- VUID-vkCmdDrawMultiEXT-stippledLineEnable-07497

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the

`stippledSmoothLines` feature **must** be enabled

- VUID-vkCmdDrawMultiEXT-stippledLineEnable-07498

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_DEFAULT`, then the `stippledRectangularLines` feature **must** be enabled and `VkPhysicalDeviceLimits::strictLines` **must** be `VK_TRUE`

- VUID-vkCmdDrawMultiEXT-stage-07073

If the bound pipeline was created with the `VkPipelineShaderStageCreateInfo::stage` member of an element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then Mesh Shader Queries **must** not be active

- VUID-vkCmdDrawMultiEXT-None-08877

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAttachmentFeedbackLoopEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-07850

If dynamic state was inherited from `VkCommandBufferInheritanceViewportScissorInfoNV`, it **must** be set in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-nextStage-10745

For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a `nextStage` including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline

- VUID-vkCmdDrawMultiEXT-None-08684

If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_VERTEX_BIT`

- VUID-vkCmdDrawMultiEXT-None-08685

If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`

- VUID-vkCmdDrawMultiEXT-None-08686

If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`

- VUID-vkCmdDrawMultiEXT-None-08687

If there is no bound graphics pipeline, and the `geometryShader` feature is enabled,

`vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_GEOMETRY_BIT`

- VUID-vkCmdDrawMultiEXT-None-08688

If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_FRAGMENT_BIT`

- VUID-vkCmdDrawMultiEXT-None-08689

If there is no bound graphics pipeline, and the `taskShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TASK_BIT_EXT`

- VUID-vkCmdDrawMultiEXT-None-08690

If there is no bound graphics pipeline, and the `meshShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawMultiEXT-None-08693

If there is no bound graphics pipeline, and at least one of the `taskShader` and `meshShader` features is enabled, one of the `VK_SHADER_STAGE_VERTEX_BIT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages **must** have a valid `VkShaderEXT` bound, and the other **must** have no `VkShaderEXT` bound

- VUID-vkCmdDrawMultiEXT-None-08696

If there is no bound graphics pipeline, and a valid `VkShaderEXT` is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage, there **must** be no `VkShaderEXT` bound to either the `VK_SHADER_STAGE_TASK_BIT_EXT` stage or the `VK_SHADER_STAGE_MESH_BIT_EXT` stage

- VUID-vkCmdDrawMultiEXT-None-08698

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, then all shaders created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag in the same `vkCreateShadersEXT` call **must** also be bound

- VUID-vkCmdDrawMultiEXT-None-08699

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, any stages in between stages whose shaders which did not create a shader with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag as part of the same `vkCreateShadersEXT` call **must** not have any `VkShaderEXT` bound

- VUID-vkCmdDrawMultiEXT-None-08878

All bound graphics shader objects **must** have been created with identical or **identically defined** push constant ranges

- VUID-vkCmdDrawMultiEXT-None-08879

All bound graphics shader objects **must** have either been created with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag set, or with identical or **identically defined** arrays of descriptor set layouts

- VUID-vkCmdDrawMultiEXT-colorAttachmentCount-09372

If the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, a color attachment with a resolve

mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, and a fragment shader is bound, it **must** not declare the `DepthReplacing` or `StencilRefReplacingEXT` execution modes

- VUID-vkCmdDrawMultiEXT-pDynamicStates-08715

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` parameter in the last call to `vkCmdSetDepthWriteEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawMultiEXT-pDynamicStates-08716

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpStencilAttachmentReadEXT`, the `writeMask` parameter in the last call to `vkCmdSetStencilWriteMask` **must** be `0`

- VUID-vkCmdDrawMultiEXT-None-09116

If a shader object is bound to any graphics stage or the bound graphics pipeline was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`, and the format of any color attachment is `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`, the corresponding element of the `pColorWriteMasks` parameter of `vkCmdSetColorWriteMaskEXT` **must** either include all of `VK_COLOR_COMPONENT_R_BIT`, `VK_COLOR_COMPONENT_G_BIT`, and `VK_COLOR_COMPONENT_B_BIT`, or none of them

- VUID-vkCmdDrawMultiEXT-maxFragmentDualSrcAttachments-09239

If `blending` is enabled for any attachment where either the source or destination blend factors for that attachment **use the secondary color input**, the maximum value of `Location` for any output attachment **statically used** in the `Fragment Execution Model` executed by this command **must** be less than `maxFragmentDualSrcAttachments`

- VUID-vkCmdDrawMultiEXT-None-09548

If the current render pass was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, the value of each element of `VkRenderingAttachmentLocationInfo::pColorAttachmentLocations` in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance

- VUID-vkCmdDrawMultiEXT-None-09549

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of each element of `VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices` in the bound pipeline **must** match the value for the corresponding index set currently in the current render pass instance

- VUID-vkCmdDrawMultiEXT-None-10927

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdDrawMultiEXT-None-10928

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdDrawMultiEXT-None-09642

If the current render pass was begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`

- VUID-vkCmdDrawMultiEXT-None-09643

If the bound graphics pipeline was created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`, the current render pass **must** have begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag

- VUID-vkCmdDrawMultiEXT-None-10677

If the `per-tile execution model` is enabled, the `tileShadingPerTileDraw` feature **must** be enabled

- VUID-vkCmdDrawMultiEXT-None-10772

If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass

- VUID-vkCmdDrawMultiEXT-multiviewPerViewViewports-12262

If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `viewportCount`

- VUID-vkCmdDrawMultiEXT-multiviewPerViewViewports-12263

If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `scissorCount`

- VUID-vkCmdDrawMultiEXT-flags-11521

If current render pass instance was begun with `vkCmdBeginRendering` with `VkRenderingInfo::flags` which includes `VK_RENDERING_FRAGMENT_REGION_BIT_EXT`, and if `sample shading` is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0

- VUID-vkCmdDrawMultiEXT-None-11522

If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a `VkCustomResolveCreateInfoEXT`

- VUID-vkCmdDrawMultiEXT-None-11523

If the current render pass instance was begun with `vkCmdBeginRendering` and does not contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** not have been created with a `VkCustomResolveCreateInfoEXT`

- VUID-vkCmdDrawMultiEXT-customResolve-11524

If the current render pass instance was begun with `vkCmdBeginRendering` and

`vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdDrawMultiEXT-customResolve-11525

If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and `vkCmdBeginCustomResolveEXT` has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdDrawMultiEXT-None-11861

If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, the bound graphics pipeline **must** have been created with a `VkCustomResolveCreateInfoEXT::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdDrawMultiEXT-None-11862

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiEXT-None-11863

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-11864

If the `dynamicRenderingUnusedAttachments` feature is enabled, the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-None-11865

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-None-11866

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-11867

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-None-11868

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-None-11869

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdDrawMultiEXT-dynamicRenderingUnusedAttachments-11870

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiEXT-colorAttachmentCount-11871

If the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than `0` and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, then for each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE`, the `resolveImageView` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdDrawMultiEXT-pDepthAttachment-11872

If the current render pass instance was begun with `vkCmdBeginRendering`,

`vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDrawMultiEXT-pStencilAttachment-11873

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdDrawMultiEXT-customResolve-11529

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering`, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdDrawMultiEXT-customResolve-11530

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has not yet been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdDrawMultiEXT-flags-13361

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then all bound shader objects **must** have been created with the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit

- VUID-vkCmdDrawMultiEXT-flags-13362

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` set

- VUID-vkCmdDrawMultiEXT-flags-13363

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then there **must** be no binding with `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawMultiEXT-flags-13364

If there are any shader objects bound that were created with `flags` that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, the pipeline layout of the bound descriptor sets **must** have been created with

[VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR](#) set

- VUID-vkCmdDrawMultiEXT-flags-13365

If there are any shader objects bound that were created with `flags` that includes both the [VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR](#) and [VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT](#) bits, there **must** be no shader object bound to the [VK_SHADER_STAGE_TASK_BIT_EXT](#) stage

- VUID-vkCmdDrawMultiEXT-commandBuffer-02712

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, any resource written to by the `VkPipeline` object bound to the pipeline bind point used by this command **must** not be an unprotected resource

- VUID-vkCmdDrawMultiEXT-commandBuffer-02713

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, pipeline stages other than the framebuffer-space and compute stages in the `VkPipeline` object bound to the pipeline bind point used by this command **must** not write to any resource

- VUID-vkCmdDrawMultiEXT-commandBuffer-04617

If any of the shader stages of the `VkPipeline` bound to the pipeline bind point used by this command uses the `RayQueryKHR` capability, then `commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdDrawMultiEXT-None-04007

All vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** have either valid or [VK_NULL_HANDLE](#) buffers bound

- VUID-vkCmdDrawMultiEXT-None-04008

If the `nullDescriptor` feature is not enabled, all vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** not be [VK_NULL_HANDLE](#)

- VUID-vkCmdDrawMultiEXT-None-02721

If the `robustBufferAccess` feature is not enabled, and that pipeline was created without enabling [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) for `vertexInputs`, then for a given vertex buffer binding, any attribute data fetched **must** be entirely contained within the corresponding vertex buffer binding, as described in [Vertex Input Description](#)

- VUID-vkCmdDrawMultiEXT-format-10389

For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is a `packed format`, and the `legacyVertexAttributes` feature is not enabled, the value of `attribAddress`, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the `size of the format`

- VUID-vkCmdDrawMultiEXT-format-10390

For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is not a `packed format`, and either the `legacyVertexAttributes` feature is not

enabled or **format** has 64-bit components, the value of **attribAddress**, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the [component size of the format](#)

- VUID-vkCmdDrawMultiEXT-None-07842

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY](#) dynamic state enabled then [vkCmdSetPrimitiveTopology](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-dynamicPrimitiveTopologyUnrestricted-07500

If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY](#) dynamic state enabled and the [dynamicPrimitiveTopologyUnrestricted](#) is [VK_FALSE](#), then the [primitiveTopology](#) parameter of [vkCmdSetPrimitiveTopology](#) **must** be of the same [topology class](#) as the pipeline [VkPipelineInputAssemblyStateCreateInfo::topology](#) state

- VUID-vkCmdDrawMultiEXT-primitiveTopology-10286

If a [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) stage is bound, then the [current value](#) of [primitiveTopology](#) **must** be [VK_PRIMITIVE_TOPOLOGY_PATCH_LIST](#) prior to this drawing command

- VUID-vkCmdDrawMultiEXT-primitiveTopology-10747

If [vkCmdSetPrimitiveTopology](#) set [primitiveTopology](#) to [VK_PRIMITIVE_TOPOLOGY_PATCH_LIST](#) prior to this drawing command, then a [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) stage **must** be bound

- VUID-vkCmdDrawMultiEXT-primitiveTopology-10748

If [vkCmdSetPrimitiveTopology](#) set [primitiveTopology](#) to [VK_PRIMITIVE_TOPOLOGY_POINT_LIST](#) prior to this drawing command, the [maintenance5](#) feature is not enabled, both a [VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT](#) and [VK_SHADER_STAGE_GEOMETRY_BIT](#) stage are not bound, then the [Vertex Execution Model](#) **must** have a [PointSize](#) decorated variable that is statically written to

- VUID-vkCmdDrawMultiEXT-pStrides-04913

If the bound graphics pipeline was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE](#) dynamic state enabled, but without the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled, then [vkCmdBindVertexBuffers2](#) with a non-NULL [pStrides](#) parameter or [vkCmdBindVertexBuffers3KHR](#) with [setStride](#) set to [VK_TRUE](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this draw command

- VUID-vkCmdDrawMultiEXT-None-13118

If the bound graphics pipeline was created without the [VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE](#) dynamic state enabled, without the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled, and [vkCmdBindVertexBuffers3KHR](#) was called and not subsequently [invalidated](#) in the current command buffer prior to this draw command, the value of [setStride](#) in each of its [pBindInfos](#) elements must have been [VK_FALSE](#)

- VUID-vkCmdDrawMultiEXT-None-04914

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the

bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then `vkCmdSetVertexInputEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdDrawMultiEXT-Input-07939

If the `vertexAttributeRobustness` feature is not enabled, and the `maintenance9` feature is not enabled, and there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then all variables with the `Input` storage class decorated with `Location` in the `Vertex Execution Model OpEntryPoint` **must** contain a location in `VkVertexInputAttributeDescription2EXT::location`

- VUID-vkCmdDrawMultiEXT-Input-08734

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and either the `legacyVertexAttributes` feature is not enabled or the SPIR-V Type associated with a given `Input` variable of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the numeric type associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be the same as `VkVertexInputAttributeDescription2EXT::format`

- VUID-vkCmdDrawMultiEXT-format-08936

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then the scalar width associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be 64-bit

- VUID-vkCmdDrawMultiEXT-format-08937

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and the scalar width associated with a `Location` decorated `Input` variable in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the corresponding `VkVertexInputAttributeDescription2EXT::format` **must** have a 64-bit component

- VUID-vkCmdDrawMultiEXT-None-09203

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then all `Input` variables at the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** not use components that are not present in the format

- VUID-vkCmdDrawMultiEXT-None-04875

If there is a shader object bound to the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage or the bound graphics pipeline state was created with both a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage

and the `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT` dynamic state enabled, and the current value of `primitiveTopology` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, then `vkCmdSetPatchControlPointsEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-04879

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-None-09637

If the `primitiveTopologyListRestart` feature is not enabled, the input assembly is `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY`, or `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled, then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawMultiEXT-None-10909

If the `primitiveTopologyPatchListRestart` feature is not enabled, the input assembly is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, there is a shader object bound to the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawMultiEXT-stage-06481

The bound graphics pipeline **must** not have been created with the `VkPipelineShaderStageCreateInfo::stage` member of any element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawMultiEXT-None-08885

There **must** be no shader object bound to either of the `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages

- VUID-vkCmdDrawMultiEXT-None-07619

If a shader object is bound to the `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stage or a graphics pipeline is bound which was created with both a `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stage and the `VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT` dynamic state enabled, then `vkCmdSetTessellationDomainOriginEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiEXT-OpExecutionMode-12239

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the type of subdivision, they **must** be the same

- VUID-vkCmdDrawMultiEXT-OpExecutionMode-12240

If a shader is bound to both the [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) and [VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT](#) stages, and if both stages contain an [OpExecutionMode](#) instruction specifying the orientation of triangles, they **must** be the same

- VUID-vkCmdDrawMultiEXT-OpExecutionMode-12241

If a shader is bound to both the [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) and [VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT](#) stages, and if both stages contain an [OpExecutionMode](#) instruction specifying the segment spacing, they **must** be the same

- VUID-vkCmdDrawMultiEXT-OpExecutionMode-12242

If a shader is bound to both the [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) and [VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT](#) stages, and if both stages contain an [OpExecutionMode](#) instruction specifying the output patch size, they **must** be the same

- VUID-vkCmdDrawMultiEXT-pNext-09461

If the bound graphics pipeline state was created with [VkPipelineVertexInputDivisorStateCreateInfo](#) in the [pNext](#) chain of [VkGraphicsPipelineCreateInfo::pVertexInputState](#), any member of [VkPipelineVertexInputDivisorStateCreateInfo::pVertexBindingDivisors](#) has a value other than [1](#) in [divisor](#), and [VkPhysicalDeviceVertexAttributeDivisorProperties::supportsNonZeroFirstInstance](#) is [VK_FALSE](#), then [firstInstance](#) **must** be [0](#)

- VUID-vkCmdDrawMultiEXT-None-09462

If [shader objects](#) are used for drawing or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled, any member of the [pVertexBindingDescriptions](#) parameter to the [vkCmdSetVertexInputEXT](#) call that sets this dynamic state has a value other than [1](#) in [divisor](#), and [VkPhysicalDeviceVertexAttributeDivisorProperties::supportsNonZeroFirstInstance](#) is [VK_FALSE](#), then [firstInstance](#) **must** be [0](#)

- VUID-vkCmdDrawMultiEXT-None-04933

The [multiDraw](#) feature **must** be enabled

- VUID-vkCmdDrawMultiEXT-drawCount-04934

[drawCount](#) **must** be less than [VkPhysicalDeviceMultiDrawPropertiesEXT::maxMultiDrawCount](#)

- VUID-vkCmdDrawMultiEXT-drawCount-04935

If [drawCount](#) is greater than zero, [pVertexInfo](#) **must** be a valid pointer to memory containing one or more valid instances of [VkMultiDrawInfoEXT](#) structures

- VUID-vkCmdDrawMultiEXT-drawCount-09628

If [drawCount](#) is greater than [1](#), [stride](#) **must** be a multiple of [4](#) and **must** be greater than or equal to [sizeof\(VkMultiDrawInfoEXT\)](#)

Valid Usage (Implicit)

- VUID-vkCmdDrawMultiEXT-commandBuffer-parameter
[commandBuffer](#) **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdDrawMultiEXT-commandBuffer-recording

`commandBuffer` **must** be in the [recording state](#)

- VUID-vkCmdDrawMultiEXT-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support [VK_QUEUE_GRAPHICS_BIT](#) operations

- VUID-vkCmdDrawMultiEXT-renderpass

This command **must** only be called inside of a render pass instance

- VUID-vkCmdDrawMultiEXT-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdDrawMultiEXT-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

`vkCmdDrawMultiEXT` is affected by [conditional rendering](#)

To record an ordered sequence of indexed draws which have no state changes between them, call:

```
// Provided by VK_EXT_multi_draw
void vkCmdDrawMultiIndexedEXT(
    VkCommandBuffer                commandBuffer,
    uint32_t                        drawCount,
    const VkMultiDrawIndexedInfoEXT* pIndexInfo,
    uint32_t                        instanceCount,
    uint32_t                        firstInstance,
    uint32_t                        stride,
    const int32_t*                  pVertexOffset);
```

- `commandBuffer` is the command buffer into which the command is recorded.

- `drawCount` is the number of draws to execute, and **can** be zero.
- `pIndexInfo` is a pointer to an array of `VkMultiDrawIndexedInfoEXT` with index information to be drawn.
- `instanceCount` is the number of instances per draw.
- `firstInstance` is the instance ID of the first instance in each draw.
- `stride` is the byte stride between consecutive elements of `pIndexInfo`.
- `pVertexOffset` is `NULL` or a pointer to the value added to the vertex index before indexing into the vertex buffer. When specified, `VkMultiDrawIndexedInfoEXT::offset` is ignored.

The number of draws recorded is `drawCount`, with each draw reading, sequentially, a `firstIndex` and an `indexCount` from `pIndexInfo`. For each recorded draw, primitives are assembled as for `vkCmdDrawIndexed`, and drawn `instanceCount` times with `instanceIndex` starting with `firstInstance` and sequentially for each instance. If `pVertexOffset` is `NULL`, a `vertexOffset` is also read from `pIndexInfo`, otherwise the value from dereferencing `pVertexOffset` is used.

Valid Usage

- VUID-vkCmdDrawMultiIndexedEXT-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDrawMultiIndexedEXT-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdDrawMultiIndexedEXT-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDrawMultiIndexedEXT-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdDrawMultiIndexedEXT-unnormalizedCoordinates-09635
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and

layerCount must be 1

- VUID-vkCmdDrawMultiIndexedEXT-None-08609

If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **viewType** must be **VK_IMAGE_VIEW_TYPE_1D** or **VK_IMAGE_VIEW_TYPE_2D**

- VUID-vkCmdDrawMultiIndexedEXT-None-08610

If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the sampler must not be used with any of the SPIR-V **OpImageSample*** or **OpImageSparseSample*** instructions with **ImplicitLod**, **Dref** or **Proj** in their name

- VUID-vkCmdDrawMultiIndexedEXT-None-08611

If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the sampler must not be used with any of the SPIR-V **OpImageSample*** or **OpImageSparseSample*** instructions that includes a LOD bias or any offset values

- VUID-vkCmdDrawMultiIndexedEXT-None-06479

If a **VkImageView** is sampled with **depth comparison**, the image view's **format features** must contain **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT**

- VUID-vkCmdDrawMultiIndexedEXT-None-02691

If a **VkImageView** is accessed using atomic operations as a result of this command, then the image view's **format features** must contain **VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT**

- VUID-vkCmdDrawMultiIndexedEXT-None-07888

If a **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's **format features** must contain **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT**

- VUID-vkCmdDrawMultiIndexedEXT-None-02692

If a **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, then the image view's **format features** must contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT**

- VUID-vkCmdDrawMultiIndexedEXT-None-02693

If the **VK_EXT_filter_cubic** extension is not enabled and any **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, it must not have a **VkImageViewType** of **VK_IMAGE_VIEW_TYPE_3D**, **VK_IMAGE_VIEW_TYPE_CUBE**, or **VK_IMAGE_VIEW_TYPE_CUBE_ARRAY**

- VUID-vkCmdDrawMultiIndexedEXT-filterCubic-02694

Any **VkImageView** being sampled with **VK_FILTER_CUBIC_EXT** as a result of this command must have a **VkImageViewType** and format that supports cubic filtering, as specified by **VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic** returned by **vkGetPhysicalDeviceImageFormatProperties2**

- VUID-vkCmdDrawMultiIndexedEXT-filterCubicMinmax-02695

Any **VkImageView** being sampled with **VK_FILTER_CUBIC_EXT** with a reduction mode of either **VK_SAMPLER_REDUCTION_MODE_MIN** or **VK_SAMPLER_REDUCTION_MODE_MAX** as a result of this command must have a **VkImageViewType** and format that supports

cubic filtering together with minmax filtering, as specified by [VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax](#) returned by [vkGetPhysicalDeviceImageFormatProperties2](#)

- VUID-vkCmdDrawMultiIndexedEXT-cubicRangeClamp-09212

If the [cubicRangeClamp](#) feature is not enabled, then any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command **must** not have a [VkSamplerReductionModeCreateInfo::reductionMode](#) equal to [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM](#)

- VUID-vkCmdDrawMultiIndexedEXT-reductionMode-09213

Any [VkImageView](#) being sampled with a [VkSamplerReductionModeCreateInfo::reductionMode](#) equal to [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM](#) as a result of this command **must** sample with [VK_FILTER_CUBIC_EXT](#)

- VUID-vkCmdDrawMultiIndexedEXT-selectableCubicWeights-09214

If the [selectableCubicWeights](#) feature is not enabled, then any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command **must** have [VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights](#) equal to [VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM](#)

- VUID-vkCmdDrawMultiIndexedEXT-flags-02696

Any [VkImage](#) created with a [VkImageCreateInfo::flags](#) containing [VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV](#) sampled as a result of this command **must** only be sampled using a [VkSamplerAddressMode](#) of [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#)

- VUID-vkCmdDrawMultiIndexedEXT-OpTypeImage-07027

For any [VkImageView](#) being written as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDrawMultiIndexedEXT-OpTypeImage-07028

For any [VkImageView](#) being read as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDrawMultiIndexedEXT-OpTypeImage-07029

For any [VkBufferView](#) being written as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDrawMultiIndexedEXT-OpTypeImage-07030

Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDrawMultiIndexedEXT-None-08600

If a [bound shader](#) was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdDrawMultiIndexedEXT-None-08601
If a [bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader
- VUID-vkCmdDrawMultiIndexedEXT-None-10068
For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDrawMultiIndexedEXT-None-08114
Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid if they are accessed as described by [descriptor validity](#) by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDrawMultiIndexedEXT-imageLayout-00344
If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)
- VUID-vkCmdDrawMultiIndexedEXT-None-08115
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDrawMultiIndexedEXT-None-08116
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDrawMultiIndexedEXT-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdDrawMultiIndexedEXT-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDrawMultiIndexedEXT-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDrawMultiIndexedEXT-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor

memory **must** be resident

- VUID-vkCmdDrawMultiIndexedEXT-None-08606

If the **shaderObject** feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdDrawMultiIndexedEXT-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the **VkPipeline** object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdDrawMultiIndexedEXT-uniformBuffers-06935

If any stage of the **VkPipeline** object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS** or **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2** for **uniformBuffers**, and the **robustBufferAccess** feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMultiIndexedEXT-None-08612

If the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMultiIndexedEXT-storageBuffers-06936

If any stage of the **VkPipeline** object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS** or **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2** for **storageBuffers**, and the **robustBufferAccess** feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMultiIndexedEXT-None-08613

If the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMultiIndexedEXT-commandBuffer-02707

If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, any resource accessed by **bound shaders** **must** not be a protected resource

- VUID-vkCmdDrawMultiIndexedEXT-viewType-07752

If a **VkImageView** is accessed as a result of this command, then the image view's **viewType** **must** match the **Dim** operand of the **OpTypeImage** as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdDrawMultiIndexedEXT-format-07753

If a **VkImageView** or **VkBufferView** is accessed as a result of this command, then the

numeric type of the view's format and the Sampled Type operand of the OpTypeImage must match

- VUID-vkCmdDrawMultiIndexedEXT-OpImageWrite-08795
If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the Type of the `Texel` operand of that instruction must have at least as many components as the image view's format
- VUID-vkCmdDrawMultiIndexedEXT-OpImageWrite-08796
If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the Type of the `Texel` operand of that instruction must have four components
- VUID-vkCmdDrawMultiIndexedEXT-OpImageWrite-04469
If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the Type of the `Texel` operand of that instruction must have at least as many components as the buffer view's format
- VUID-vkCmdDrawMultiIndexedEXT-SampledType-04470
If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction must have a Width of 64
- VUID-vkCmdDrawMultiIndexedEXT-SampledType-04471
If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction must have a Width of 32
- VUID-vkCmdDrawMultiIndexedEXT-SampledType-04472
If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction must have a Width of 64
- VUID-vkCmdDrawMultiIndexedEXT-SampledType-04473
If a `VkBufferView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction must have a Width of 32
- VUID-vkCmdDrawMultiIndexedEXT-sparseImageInt64Atomics-04474
If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag must not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a Width of 64 by this command
- VUID-vkCmdDrawMultiIndexedEXT-sparseImageInt64Atomics-04475
If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag must not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a Width of 64 by this command
- VUID-vkCmdDrawMultiIndexedEXT-OpImageSampleWeightedQCOM-06971
If `OpImageSampleWeightedQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's format features must contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`

- VUID-vkCmdDrawMultiIndexedEXT-OpImageSampleWeightedQCOM-06972
If `OpImageSampleWeightedQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`
- VUID-vkCmdDrawMultiIndexedEXT-OpImageBoxFilterQCOM-06973
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`
- VUID-vkCmdDrawMultiIndexedEXT-OpImageBlockMatchSSDQCOM-06974
If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDrawMultiIndexedEXT-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDrawMultiIndexedEXT-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdDrawMultiIndexedEXT-OpImageSampleWeightedQCOM-06977
If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDrawMultiIndexedEXT-OpImageSampleWeightedQCOM-06978
If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdDrawMultiIndexedEXT-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdDrawMultiIndexedEXT-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDrawMultiIndexedEXT-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail

integer texel coordinate validation

- VUID-vkCmdDrawMultiIndexedEXT-None-07288
Any shader invocation executed by this command **must** [terminate](#)
- VUID-vkCmdDrawMultiIndexedEXT-None-09600
If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDrawMultiIndexedEXT-commandBuffer-10746
The [VkDeviceMemory](#) object allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in [commandBuffer](#)
- VUID-vkCmdDrawMultiIndexedEXT-None-10678
If this command is recorded inside a [tile shading render pass](#) instance, the stages corresponding to the pipeline bind point used by this command **must** only include [VK_SHADER_STAGE_VERTEX_BIT](#), [VK_SHADER_STAGE_FRAGMENT_BIT](#), and/or [VK_SHADER_STAGE_COMPUTE_BIT](#)
- VUID-vkCmdDrawMultiIndexedEXT-None-10679
If this command is recorded where [per-tile execution model](#) is enabled, there **must** be no access to any image while the image was be transitioned to the [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout
- VUID-vkCmdDrawMultiIndexedEXT-pDescription-09900
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the underlying [VkTensorARM](#) object **must** have been created with the [VK_TENSOR_USAGE_SHADER_BIT_ARM](#) usage flag set
- VUID-vkCmdDrawMultiIndexedEXT-dimensionCount-09905
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the [Rank](#) of the [OpTypeTensorARM](#) of the tensor resource variable **must** be equal to the [dimensionCount](#) provided via [VkTensorCreateInfoARM::pDescription](#) when creating the underlying [VkTensorARM](#) object
- VUID-vkCmdDrawMultiIndexedEXT-OpTypeTensorARM-09906
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the element type of the [OpTypeTensorARM](#) of the tensor resource variable **must** be [compatible](#) with the [VkFormat](#) of the [VkTensorViewARM](#) used for the access
- VUID-vkCmdDrawMultiIndexedEXT-None-11297
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or

`VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`

- VUID-vkCmdDrawMultiIndexedEXT-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`

- VUID-vkCmdDrawMultiIndexedEXT-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`

- VUID-vkCmdDrawMultiIndexedEXT-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeTensorARM` using that mapping, the calculated offset for the resource heap **must** be a multiple of `tensorDescriptorAlignment`

- VUID-vkCmdDrawMultiIndexedEXT-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDrawMultiIndexedEXT-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid `VkDeviceAddress` backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawMultiIndexedEXT-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDrawMultiIndexedEXT-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdDrawMultiIndexedEXT-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawMultiIndexedEXT-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDrawMultiIndexedEXT-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdDrawMultiIndexedEXT-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdDrawMultiIndexedEXT-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawMultiIndexedEXT-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this

command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdDrawMultiIndexedEXT-None-11374

If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdDrawMultiIndexedEXT-pBindInfo-11375

If any `bound shader` uses an embedded sampler via a `descriptor mapping`, the value of `pBindInfo->reservedRangeSize` set for `vkCmdBindSamplerHeapEXT` **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`

- VUID-vkCmdDrawMultiIndexedEXT-None-11376

If a `bound shader` was created as a `VkShaderEXT` with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag or as part of a pipeline with the `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, and that shader statically uses a push constant value, that value **must** have been set by `vkCmdPushDataEXT`

- VUID-vkCmdDrawMultiIndexedEXT-None-11398

If a `bound shader` was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the access **must** not be `out of bounds`

- VUID-vkCmdDrawMultiIndexedEXT-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-vkCmdDrawMultiIndexedEXT-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or

[VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawMultiIndexedEXT-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdDrawMultiIndexedEXT-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawMultiIndexedEXT-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdDrawMultiIndexedEXT-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdDrawMultiIndexedEXT-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation,

with an identically defined color

- VUID-vkCmdDrawMultiIndexedEXT-protectedNoFault-11455

If **protectedNoFault** is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a **descriptor mapping** using **VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT**, **VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT**, or **VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT**, the address that the resource is mapped to **must** have been queried from a buffer created without the **VK_BUFFER_CREATE_PROTECTED_BIT** create flag set

- VUID-vkCmdDrawMultiIndexedEXT-protectedNoFault-11456

If **protectedNoFault** is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a **descriptor mapping** using **VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT** or **VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT**, the address of the indirect memory **must** have been queried from a buffer created without the **VK_BUFFER_CREATE_PROTECTED_BIT** create flag set

- VUID-vkCmdDrawMultiIndexedEXT-renderPass-02684

The current render pass **must** be **compatible** with the **renderPass** member of the **VkGraphicsPipelineCreateInfo** structure specified when creating the **VkPipeline** bound to **VK_PIPELINE_BIND_POINT_GRAPHICS**

- VUID-vkCmdDrawMultiIndexedEXT-subpass-02685

The subpass index of the current render pass **must** be equal to the **subpass** member of the **VkGraphicsPipelineCreateInfo** structure specified when creating the **VkPipeline** bound to **VK_PIPELINE_BIND_POINT_GRAPHICS**

- VUID-vkCmdDrawMultiIndexedEXT-OpTypeImage-07468

If any shader executed by this pipeline accesses an **OpTypeImage** variable with a **Dim** operand of **SubpassData**, it **must** be decorated with an **InputAttachmentIndex** that corresponds to a valid input attachment in the current subpass

- VUID-vkCmdDrawMultiIndexedEXT-None-07469

Input attachment views accessed in a subpass **must** be created with the same **VkFormat** as the corresponding subpass definition, and be created with a **VkImageView** that is compatible with the attachment referenced by the subpass' **pInputAttachments** [**InputAttachmentIndex**] in the bound **VkFramebuffer** as specified by **Fragment Input Attachment Compatibility**

- VUID-vkCmdDrawMultiIndexedEXT-pDepthInputAttachmentIndex-09595

Input attachment views accessed in a dynamic render pass with a **InputAttachmentIndex** referenced by **VkRenderingInputAttachmentIndexInfo**, or no **InputAttachmentIndex** if **VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex** or **VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex** are **NULL**, **must** be created with a **VkImageView** that is compatible with the corresponding color, depth, or stencil attachment in **VkRenderingInfo**

- VUID-vkCmdDrawMultiIndexedEXT-pDepthInputAttachmentIndex-09596

Input attachment views accessed in a dynamic render pass via a shader object **must** have

an `InputAttachmentIndex` if both `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` and `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are non-NULL

- VUID-vkCmdDrawMultiIndexedEXT-InputAttachmentIndex-09597
If an input attachment view accessed in a dynamic render pass via a shader object has an `InputAttachmentIndex`, the `InputAttachmentIndex` **must** match an index in `VkRenderingInputAttachmentIndexInfo`
- VUID-vkCmdDrawMultiIndexedEXT-None-06537
Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdDrawMultiIndexedEXT-None-10795
If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_COLOR_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMultiIndexedEXT-None-10796
If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_DEPTH_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMultiIndexedEXT-None-10797
If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_STENCIL_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMultiIndexedEXT-None-12338
If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_COLOR_BIT` on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdDrawMultiIndexedEXT-None-12339
If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_DEPTH_BIT` on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdDrawMultiIndexedEXT-None-12340
If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_STENCIL_BIT` on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdDrawMultiIndexedEXT-None-09003
If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command

- VUID-vkCmdDrawMultiIndexedEXT-None-06886
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, **depth writes must** be disabled
- VUID-vkCmdDrawMultiIndexedEXT-None-06887
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back **writeMask** are not zero, and stencil test is enabled, **all stencil ops must** be **VK_STENCIL_OP_KEEP**
- VUID-vkCmdDrawMultiIndexedEXT-None-07831
If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_VIEWPORT** dynamic state enabled then **vkCmdSetViewport must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-None-07832
If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_SCISSOR** dynamic state enabled then **vkCmdSetScissor must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-None-08617
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_LINE_WIDTH** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **effective rasterization input topology** is in line topology class, then **vkCmdSetLineWidth must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-None-07834
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_BIAS** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of **depthBiasEnable** is **VK_TRUE**, then **vkCmdSetDepthBias** or **vkCmdSetDepthBias2EXT must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-None-07835
If a shader object is bound to the **VK_SHADER_STAGE_FRAGMENT_BIT** stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_BLEND_CONSTANTS** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and an active color attachment **current value** of **blendEnable** is **VK_TRUE** with a blend equations where any **VkBlendFactor** member is **VK_BLEND_FACTOR_CONSTANT_COLOR**, **VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR**, **VK_BLEND_FACTOR_CONSTANT_ALPHA**, **VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA**, or **VK_BLEND_FACTOR_CONSTANT_ALPHA**, then **vkCmdSetBlendConstants must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-None-07836
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_BOUNDS** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of

`depthBoundsTestEnable` is `VK_TRUE`, then `vkCmdSetDepthBounds` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07837

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilCompareMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07838

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilWriteMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07839

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_REFERENCE` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilReference` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-maxMultiviewInstanceIndex-02688

If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to `VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex`

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsEnable-02689

If the bound graphics pipeline was created with `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` set to `VK_TRUE`, then the active depth attachment **must** have been created with the `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` bit set

- VUID-vkCmdDrawMultiIndexedEXT-None-07634

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleLocationsEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-06666

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `sampleLocationsEnable` is

VK_TRUE, then `vkCmdSetSampleLocationsEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07840

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CULL_MODE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCullMode` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07841

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRONT_FACE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFrontFace` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07843

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, `vkCmdSetDepthTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07844

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthWriteEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07845

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthCompareOp` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07846

If the `depthBounds` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBoundsTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07847

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then

`vkCmdSetStencilTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07848

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_OP` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilOp` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-viewportCount-03417

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetViewportWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-scissorCount-03418

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetScissorWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing

- VUID-vkCmdDrawMultiIndexedEXT-viewportCount-03419

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic states enabled, and the state is not inherited, then the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** match the `scissorCount` parameter of `vkCmdSetScissorWithCount`

- VUID-vkCmdDrawMultiIndexedEXT-viewportCount-04137

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportWScalingStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiIndexedEXT-viewportCount-04138

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the `current value` of `viewportWScalingEnable` is `VK_TRUE`, then `vkCmdSetViewportWScalingNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-08636

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and

VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV dynamic state enabled, the **current value** of **viewportWScalingEnable** is VK_TRUE, then the **viewportCount** parameter in the last call to **vkCmdSetViewportWScalingNV** **must** be greater than or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawMultiIndexedEXT-viewportCount-04139

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, then the bound graphics pipeline **must** have been created with **VkPipelineViewportShadingRateImageStateCreateInfoNV::viewportCount** greater or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawMultiIndexedEXT-shadingRateImage-09233

If the **shadingRateImage** feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV and the **current value** of **rasterizerDiscardEnable** is VK_FALSE, then **vkCmdSetCoarseSampleOrderNV** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-shadingRateImage-09234

If the **shadingRateImage** feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is VK_FALSE, and the **current value** of **shadingRateImageEnable** is VK_TRUE, then **vkCmdSetViewportShadingRatePaletteNV** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-08637

If the **shadingRateImage** feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is VK_FALSE, and the **current value** of **shadingRateImageEnable** is VK_TRUE, then the **viewportCount** parameter in the last call to **vkCmdSetViewportShadingRatePaletteNV** **must** be greater than or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawMultiIndexedEXT-VkPipelineVieportCreateInfo-04141

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled and a **VkPipelineViewportSwizzleStateCreateInfoNV** structure chained from **VkPipelineViewportStateCreateInfo**, then the bound graphics pipeline **must** have been created with **VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount** greater or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawMultiIndexedEXT-VkPipelineVieportCreateInfo-04142

If the bound graphics pipeline state was created with the

`VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiIndexedEXT-None-07878

If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` dynamic state enabled, then `vkCmdSetExclusiveScissorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07879

If the `exclusiveScissor` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV` dynamic state enabled, and the most recent call to `vkCmdSetExclusiveScissorEnableNV` in the current command buffer set any element of `pExclusiveScissorEnables` to `VK_TRUE`, then `vkCmdSetExclusiveScissorNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-04876

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` dynamic state enabled, then `vkCmdSetRasterizerDiscardEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-04877

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBiasEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-logicOp-04878

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `logicOpEnable` is `VK_TRUE`, then `vkCmdSetLogicOpEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-primitiveFragmentShadingRateWithMultipleViewports-04552

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command

buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdDrawMultiIndexedEXT-

`primitiveFragmentShadingRateWithMultipleViewports-08642`

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdDrawMultiIndexedEXT-blendEnable-04727

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then for each color attachment, if the corresponding image view's `format features` do not contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`, then the corresponding `current value` of `blendEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawMultiIndexedEXT-None-08644

If a shader object is bound to any graphics stage or a graphics pipeline is bound, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and none of the following is enabled:

- the `VK_AMD_mixed_attachment_samples` extension
- the `VK_NV_framebuffer_mixed_samples` extension
- the `multisampledRenderToSingleSampled` feature

then the `current value` of `rasterizationSamples` **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdDrawMultiIndexedEXT-None-08876

If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with `vkCmdBeginRendering`

- VUID-vkCmdDrawMultiIndexedEXT-imageView-06172

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawMultiIndexedEXT-imageView-06173

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDrawMultiIndexedEXT-imageView-06174

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is

`VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawMultiIndexedEXT-imageView-06175
If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment
- VUID-vkCmdDrawMultiIndexedEXT-imageView-06176
If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment
- VUID-vkCmdDrawMultiIndexedEXT-imageView-06177
If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment
- VUID-vkCmdDrawMultiIndexedEXT-viewMask-06178
If the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::viewMask` equal to `VkRenderingInfo::viewMask`
- VUID-vkCmdDrawMultiIndexedEXT-colorAttachmentCount-06179
If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`
- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-08910
If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline
- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-08912
If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-08911
If the `dynamicRenderingUnusedAttachments` feature is enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo`

`::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-colorAttachmentCount-09362

If the current render pass instance was begun with `vkCmdBeginRendering`, with a `VkRenderingInfo::colorAttachmentCount` equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiIndexedEXT-None-09363

If there is no shader object bound to any graphics stage, the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiIndexedEXT-None-09364

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, then `vkCmdSetColorBlendEnableEXT` **must** have set the blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-09365

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-09366

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetColorBlendEnableEXT` **must** have set blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-rasterizationSamples-09367
If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-None-09368
If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-None-09369
If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-pFragmentSize-09370
If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-pFragmentSize-09371
If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-None-07749
If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorWriteEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-attachmentCount-07750
If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the `attachmentCount` parameter of most recent call to `vkCmdSetColorWriteEnableEXT` in the

current command buffer **must** be greater than or equal to the number of active color attachments

- VUID-vkCmdDrawMultiIndexedEXT-None-07751

If the `VK_EXT_discard_rectangles` extension is enabled, a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` included a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount`

- VUID-vkCmdDrawMultiIndexedEXT-rasterizerDiscardEnable-09236

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` did not include a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPhysicalDeviceDiscardRectanglePropertiesEXT::maxDiscardRectangles`

- VUID-vkCmdDrawMultiIndexedEXT-None-07880

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDiscardRectangleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07881

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-08913

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was `VK_NULL_HANDLE`, the `value` of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-08914

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-08915

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-08916

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-08917

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-08918

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-imageView-06183

If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingLocalRead-11797

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingLocalRead` feature is enabled, the `VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR` flag is specified, and an attachment is being used as a feedback loop as specified by

VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR, `VkRenderingAttachmentFlagsInfoKHR::flags` for that attachment **must** include VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR

- VUID-vkCmdDrawMultiIndexedEXT-imageView-06184

If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView` was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT

- VUID-vkCmdDrawMultiIndexedEXT-layers-10831

If the current render pass instance was created with VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE or VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE, and the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE, then the current render pass instance **must** have a `layers` value less than or equal to `VkPipelineFragmentDensityMapLayeredCreateInfoVALVE::maxFragmentDensityMapLayers`

- VUID-vkCmdDrawMultiIndexedEXT-colorAttachmentCount-06185

If the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to VK_NULL_HANDLE **must** have been created with a sample count equal to the corresponding element of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiIndexedEXT-pDepthAttachment-06186

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pDepthAttachment->imageView` was not VK_NULL_HANDLE, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDrawMultiIndexedEXT-pStencilAttachment-06187

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pStencilAttachment->imageView` was not VK_NULL_HANDLE, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdDrawMultiIndexedEXT-multisampledRenderToSingleSampled-07285

If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in

the render pass instance, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdDrawMultiIndexedEXT-multisampledRenderToSingleSampled-07286
If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`
- VUID-vkCmdDrawMultiIndexedEXT-multisampledRenderToSingleSampled-07287
If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdDrawMultiIndexedEXT-pNext-07935
If this command is called inside a render pass instance started with `vkCmdBeginRendering`, and the `pNext` chain of `VkRenderingInfo` includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to `VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples`
- VUID-vkCmdDrawMultiIndexedEXT-renderPass-06198
If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline **must** have been created with a `VkGraphicsPipelineCreateInfo::renderPass` equal to `VK_NULL_HANDLE`
- VUID-vkCmdDrawMultiIndexedEXT-pColorAttachments-08963
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->imageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawMultiIndexedEXT-pColorAttachments-11539
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color

attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->resolveImageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-pDepthAttachment-08964

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-pDepthAttachment-11540

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-pStencilAttachment-08965

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-pStencilAttachment-11860

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-flags-10582

If the current render pass instance was begun with a `vkCmdBeginRendering` call in `commandBuffer`, its `VkRenderingInfo::flags` parameter **must** not have `VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT` set unless `VK_RENDERING_CONTENTS_INLINE_BIT_KHR` is also set

- VUID-vkCmdDrawMultiIndexedEXT-primitivesGeneratedQueryWithRasterizerDiscard-06708

If the `primitivesGeneratedQueryWithRasterizerDiscard` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, `rasterization discard` **must** not be enabled

- VUID-vkCmdDrawMultiIndexedEXT-primitivesGeneratedQueryWithNonZeroStreams-06709

If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, the bound graphics pipeline **must** not have been created with a non-zero value in `VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream`

- VUID-vkCmdDrawMultiIndexedEXT-None-07620

If the `depthClamp` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthClampEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07621

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_POLYGON_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetPolygonModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07622

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRasterizationSamplesEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07623

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleMaskEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-alphaToCoverageEnable-08919

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and `alphaToCoverageEnable` was `VK_TRUE` in the last call to `vkCmdSetAlphaToCoverageEnableEXT`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdDrawMultiIndexedEXT-alphaToCoverageEnable-08920

If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetAlphaToCoverageEnableEXT` in the current command buffer set `alphaToCoverageEnable` to `VK_TRUE`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdDrawMultiIndexedEXT-None-07624

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToCoverageEnableEXT` **must** have been called and not subsequently

[invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07625

If the [alphaToOne](#) feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT](#) dynamic state enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetAlphaToOneEnableEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07626

If the [logicOp](#) feature is enabled, a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT](#) dynamic state enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetLogicOpEnableEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07627

If a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound which was created with [VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT](#) dynamic state enabled, the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and there are color attachments bound, then [vkCmdSetColorBlendEnableEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07629

If a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound which was created with [VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT](#) dynamic state enabled, the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and there are color attachments bound, then [vkCmdSetColorWriteMaskEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07630

If the [geometryStreams](#) feature is enabled, and a shader object is bound to the [VK_SHADER_STAGE_GEOMETRY_BIT](#) stage or a graphics pipeline is bound which was created with both a [VK_SHADER_STAGE_GEOMETRY_BIT](#) stage and the [VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT](#) dynamic state enabled, then [vkCmdSetRasterizationStreamEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07631

If the [VK_EXT_conservative_rasterization](#) extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT](#) dynamic state enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetConservativeRasterizationModeEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07632

If the [VK_EXT_conservative_rasterization](#) extension is enabled, a shader object is bound to

any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `conservativeRasterizationMode` is `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`, then `vkCmdSetExtraPrimitiveOverestimationSizeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-conservativePointAndLineRasterization-07499

If the `VK_EXT_conservative_rasterization` extension is enabled, `conservativePointAndLineRasterization` is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line or point topology class, then the current value of `conservativeRasterizationMode` **must** be `VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT`

- VUID-vkCmdDrawMultiIndexedEXT-None-07633

If the `depthClipEnable` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` dynamic state, then `vkCmdSetDepthClipEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07636

If the `VK_EXT_provoking_vertex` extension is enabled, a shader object is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetProvokingVertexModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-08666

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineRasterizationModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-08669

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineStippleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07849

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stippledLineEnable` is `VK_TRUE`, then `vkCmdSetLineStipple` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-10608

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, the `effective rasterization input topology` is in line topology class, and the `current lineRasterizationMode` is `VK_LINE_RASTERIZATION_MODE_BRESENHAM` or `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the `current alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be `VK_FALSE`

- VUID-vkCmdDrawMultiIndexedEXT-None-07639

If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT` dynamic state enabled, then `vkCmdSetDepthClipNegativeOneToOneEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-09650

If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT` dynamic state enabled, and the `current value` of `depthClampEnable` is `VK_TRUE`, then `vkCmdSetDepthClampRangeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07640

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV` dynamic state enabled, then `vkCmdSetViewportWScalingEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07641

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then `vkCmdSetViewportSwizzleNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07642

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` dynamic state enabled, and the

current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageToColorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07643

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageToColorEnable` is `VK_TRUE`, then `vkCmdSetCoverageToColorLocationNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07644

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageModulationModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07645

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationMode` is any value other than `VK_COVERAGE_MODULATION_MODE_NONE_NV`, then `vkCmdSetCoverageModulationTableEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07646

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationTableEnable` is `VK_TRUE`, then `vkCmdSetCoverageModulationTableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07647

If the `shadingRateImage` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetShadingRateImageEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-pipelineFragmentShadingRate-09238

If the `pipelineFragmentShadingRate` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetFragmentShadingRateKHR **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07648

If the representativeFragmentTest feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetRepresentativeFragmentTestEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07649

If the coverageReductionMode feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCoverageReductionModeNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-rasterizationSamples-07471

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass

- VUID-vkCmdDrawMultiIndexedEXT-samples-07472

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the samples parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the VkPipelineMultisampleStateCreateInfo::rasterizationSamples parameter used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiIndexedEXT-samples-07473

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state and VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT states enabled, then the samples parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the rasterizationSamples parameter in the last call to vkCmdSetRasterizationSamplesEXT

- VUID-vkCmdDrawMultiIndexedEXT-None-09211

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** be the same as the rasterizationSamples member of that structure

- VUID-vkCmdDrawMultiIndexedEXT-firstAttachment-07476

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorBlendEnableEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawMultiIndexedEXT-firstAttachment-07478

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorWriteMaskEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawMultiIndexedEXT-advancedBlendMaxColorAttachments-07480

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment current value of `blendEnable` is `VK_TRUE`, then the number of active color attachments **must** not exceed `advancedBlendMaxColorAttachments`

- VUID-vkCmdDrawMultiIndexedEXT-None-10862

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDrawMultiIndexedEXT-rasterizerDiscardEnable-10863

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendAdvancedEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDrawMultiIndexedEXT-None-10864

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then either `vkCmdSetColorBlendAdvancedEXT` or `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDrawMultiIndexedEXT-primitivesGeneratedQueryWithNonZeroStreams-07481

If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, and the bound graphics pipeline was created with `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` state enabled, the last call to `vkCmdSetRasterizationStreamEXT` **must** have set the `rasterizationStream` to zero

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsPerPixel-07482

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` member of the `VkPipelineMultisampleStateCreateInfo` structure the bound graphics pipeline has been created with

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsPerPixel-07483

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` parameter of the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsEnable-07484

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT` then the current active depth attachment **must** have been created with the `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` bit set

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsEnable-07485

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.width` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsEnable-07486

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the

VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if `sampleLocationsEnable` was VK_TRUE in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.height` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsEnable-07487

If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if `sampleLocationsEnable` was VK_TRUE in the last call to `vkCmdSetSampleLocationsEnableEXT`, the fragment shader code **must** not statically use the extended instruction `InterpolateAtSample`

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsEnable-07936

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the `current` value of `sampleLocationsEnable` is VK_TRUE, then `sampleLocationsInfo.sampleLocationGridSize.width` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsEnable-07937

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the `current` value of `sampleLocationsEnable` is VK_TRUE, then `sampleLocationsInfo.sampleLocationGridSize.height` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawMultiIndexedEXT-sampleLocationsEnable-07938

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the `current` value of `sampleLocationsEnable` is VK_TRUE, then `sampleLocationsInfo.sampleLocationsPerPixel` **must** equal `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawMultiIndexedEXT-coverageModulationTableEnable-07488

If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV state enabled, and the last call to `vkCmdSetCoverageModulationTableEnableNV` set `coverageModulationTableEnable` to VK_TRUE, then the `coverageModulationTableCount` parameter in the last call to `vkCmdSetCoverageModulationTableNV` **must** equal the

current `rasterizationSamples` divided by the number of color samples in the current active color attachment

- VUID-vkCmdDrawMultiIndexedEXT-rasterizationSamples-07489

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and if current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the bound pipeline, then the current `rasterizationSamples` **must** be the same as the sample count of the depth/stencil attachment

- VUID-vkCmdDrawMultiIndexedEXT-coverageToColorEnable-07490

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` state enabled and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`

- VUID-vkCmdDrawMultiIndexedEXT-rasterizerDiscardEnable-09420

If the `VK_NV_fragment_coverage_to_color` extension is enabled, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`

- VUID-vkCmdDrawMultiIndexedEXT-coverageReductionMode-07491

If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` or `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic states enabled, then the current values of `coverageReductionMode`, `rasterizationSamples`, the sample counts for the color and depth/stencil attachments (if the subpass has them) **must** be a valid combination returned by `vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV`

- VUID-vkCmdDrawMultiIndexedEXT-viewportCount-07492

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiIndexedEXT-viewportCount-07493

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic states enabled then the

`viewportCount` parameter in the last call to `vkCmdSetViewportSwizzleNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiIndexedEXT-viewportCount-09421

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage, then the `viewportCount` parameter in the last call to `vkCmdSetViewportSwizzleNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawMultiIndexedEXT-rasterizationSamples-07494

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and the `coverageReductionMode` feature is not enabled, or the `current value` of `coverageReductionMode` is not `VK_COVERAGE_REDUCTION_MODE_TRUNCATE_NV`, and the `current value` of `rasterizationSamples` is greater than sample count of the color attachment, then `sample shading` **must** be disabled

- VUID-vkCmdDrawMultiIndexedEXT-stippledLineEnable-07495

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR`, then the `stippledRectangularLines` feature **must** be enabled

- VUID-vkCmdDrawMultiIndexedEXT-stippledLineEnable-07496

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_BRESENHAM`, then the `stippledBresenhamLines` feature **must** be enabled

- VUID-vkCmdDrawMultiIndexedEXT-stippledLineEnable-07497

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the `stippledSmoothLines` feature **must** be enabled

- VUID-vkCmdDrawMultiIndexedEXT-stippledLineEnable-07498

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_DEFAULT`, then the `stippledRectangularLines` feature **must** be enabled and `VkPhysicalDeviceLimits::strictLines` **must** be `VK_TRUE`

- VUID-vkCmdDrawMultiIndexedEXT-stage-07073

If the bound pipeline was created with the `VkPipelineShaderStageCreateInfo::stage` member of an element of `VkGraphicsPipelineCreateInfo::pStages` set to

VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then Mesh Shader Queries **must** not be active

- VUID-vkCmdDrawMultiIndexedEXT-None-08877

If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAttachmentFeedbackLoopEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-07850

If dynamic state was inherited from VkCommandBufferInheritanceViewportScissorInfoNV, it **must** be set in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-nextStage-10745

For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a nextStage including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline

- VUID-vkCmdDrawMultiIndexedEXT-None-08684

If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_VERTEX_BIT

- VUID-vkCmdDrawMultiIndexedEXT-None-08685

If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT

- VUID-vkCmdDrawMultiIndexedEXT-None-08686

If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT

- VUID-vkCmdDrawMultiIndexedEXT-None-08687

If there is no bound graphics pipeline, and the geometryShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_GEOMETRY_BIT

- VUID-vkCmdDrawMultiIndexedEXT-None-08688

If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_FRAGMENT_BIT

- VUID-vkCmdDrawMultiIndexedEXT-None-08689

If there is no bound graphics pipeline, and the taskShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TASK_BIT_EXT

- VUID-vkCmdDrawMultiIndexedEXT-None-08690

If there is no bound graphics pipeline, and the `meshShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawMultiIndexedEXT-None-08693

If there is no bound graphics pipeline, and at least one of the `taskShader` and `meshShader` features is enabled, one of the `VK_SHADER_STAGE_VERTEX_BIT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages **must** have a valid `VkShaderEXT` bound, and the other **must** have no `VkShaderEXT` bound

- VUID-vkCmdDrawMultiIndexedEXT-None-08696

If there is no bound graphics pipeline, and a valid `VkShaderEXT` is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage, there **must** be no `VkShaderEXT` bound to either the `VK_SHADER_STAGE_TASK_BIT_EXT` stage or the `VK_SHADER_STAGE_MESH_BIT_EXT` stage

- VUID-vkCmdDrawMultiIndexedEXT-None-08698

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, then all shaders created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag in the same `vkCreateShadersEXT` call **must** also be bound

- VUID-vkCmdDrawMultiIndexedEXT-None-08699

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, any stages in between stages whose shaders which did not create a shader with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag as part of the same `vkCreateShadersEXT` call **must** not have any `VkShaderEXT` bound

- VUID-vkCmdDrawMultiIndexedEXT-None-08878

All bound graphics shader objects **must** have been created with identical or **identically defined** push constant ranges

- VUID-vkCmdDrawMultiIndexedEXT-None-08879

All bound graphics shader objects **must** have either been created with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag set, or with identical or **identically defined** arrays of descriptor set layouts

- VUID-vkCmdDrawMultiIndexedEXT-colorAttachmentCount-09372

If the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, and a fragment shader is bound, it **must** not declare the `DepthReplacing` or `StencilRefReplacingEXT` execution modes

- VUID-vkCmdDrawMultiIndexedEXT-pDynamicStates-08715

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` parameter in the last call to `vkCmdSetDepthWriteEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawMultiIndexedEXT-pDynamicStates-08716

If the bound graphics pipeline state includes a fragment shader stage, was created with

`VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpStencilAttachmentReadEXT`, the `writeMask` parameter in the last call to `vkCmdSetStencilWriteMask` **must** be 0

- VUID-vkCmdDrawMultiIndexedEXT-None-09116

If a shader object is bound to any graphics stage or the bound graphics pipeline was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`, and the format of any color attachment is `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`, the corresponding element of the `pColorWriteMasks` parameter of `vkCmdSetColorWriteMaskEXT` **must** either include all of `VK_COLOR_COMPONENT_R_BIT`, `VK_COLOR_COMPONENT_G_BIT`, and `VK_COLOR_COMPONENT_B_BIT`, or none of them

- VUID-vkCmdDrawMultiIndexedEXT-maxFragmentDualSrcAttachments-09239

If `blending` is enabled for any attachment where either the source or destination blend factors for that attachment [use the secondary color input](#), the maximum value of `Location` for any output attachment [statically used](#) in the `Fragment Execution Model` executed by this command **must** be less than `maxFragmentDualSrcAttachments`

- VUID-vkCmdDrawMultiIndexedEXT-None-09548

If the current render pass was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, the value of each element of `VkRenderingAttachmentLocationInfo::pColorAttachmentLocations` in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance

- VUID-vkCmdDrawMultiIndexedEXT-None-09549

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of each element of `VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices` in the bound pipeline **must** match the value for the corresponding index set currently in the current render pass instance

- VUID-vkCmdDrawMultiIndexedEXT-None-10927

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdDrawMultiIndexedEXT-None-10928

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdDrawMultiIndexedEXT-None-09642

If the current render pass was begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`

- VUID-vkCmdDrawMultiIndexedEXT-None-09643

If the bound graphics pipeline was created with

VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass **must** have begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag

- VUID-vkCmdDrawMultiIndexedEXT-None-10677
If the `per-tile execution model` is enabled, the `tileShadingPerTileDraw` feature **must** be enabled
- VUID-vkCmdDrawMultiIndexedEXT-None-10772
If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdDrawMultiIndexedEXT-multiviewPerViewViewports-12262
If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `viewportCount`
- VUID-vkCmdDrawMultiIndexedEXT-multiviewPerViewViewports-12263
If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `scissorCount`
- VUID-vkCmdDrawMultiIndexedEXT-flags-11521
If current render pass instance was begun with `vkCmdBeginRendering` with `VkRenderingInfo::flags` which includes `VK_RENDERING_FRAGMENT_REGION_BIT_EXT`, and if `sample shading` is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdDrawMultiIndexedEXT-None-11522
If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a `VkCustomResolveCreateInfoEXT`
- VUID-vkCmdDrawMultiIndexedEXT-None-11523
If the current render pass instance was begun with `vkCmdBeginRendering` and does not contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** not have been created with a `VkCustomResolveCreateInfoEXT`
- VUID-vkCmdDrawMultiIndexedEXT-customResolve-11524
If the current render pass instance was begun with `vkCmdBeginRendering` and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`
- VUID-vkCmdDrawMultiIndexedEXT-customResolve-11525
If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and `vkCmdBeginCustomResolveEXT` has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`
- VUID-vkCmdDrawMultiIndexedEXT-None-11861
If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, the

bound graphics pipeline **must** have been created with a `VkCustomResolveCreateInfoEXT::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdDrawMultiIndexedEXT-None-11862

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline

- VUID-vkCmdDrawMultiIndexedEXT-None-11863

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-11864

If the `dynamicRenderingUnusedAttachments` feature is enabled, the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-None-11865

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-None-11866

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-11867

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and

the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-None-11868

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-None-11869

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdDrawMultiIndexedEXT-dynamicRenderingUnusedAttachments-11870

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawMultiIndexedEXT-colorAttachmentCount-11871

If the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than `0` and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, then for each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE`, the `resolveImageView` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdDrawMultiIndexedEXT-pDepthAttachment-11872

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDrawMultiIndexedEXT-pStencilAttachment-11873

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdDrawMultiIndexedEXT-customResolve-11529

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering`, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdDrawMultiIndexedEXT-customResolve-11530

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has not yet been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdDrawMultiIndexedEXT-flags-13361

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then all bound shader objects **must** have been created with the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit

- VUID-vkCmdDrawMultiIndexedEXT-flags-13362

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` set

- VUID-vkCmdDrawMultiIndexedEXT-flags-13363

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then there **must** be no binding with `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawMultiIndexedEXT-flags-13364

If there are any shader objects bound that were created with `flags` that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR` set

- VUID-vkCmdDrawMultiIndexedEXT-flags-13365

If there are any shader objects bound that were created with `flags` that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, there **must** be no shader object bound to the `VK_SHADER_STAGE_TASK_BIT_EXT` stage

- VUID-vkCmdDrawMultiIndexedEXT-commandBuffer-02712

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, any resource written to by the `VkPipeline` object bound to the pipeline bind point used by this command **must** not be an unprotected resource

- VUID-vkCmdDrawMultiIndexedEXT-commandBuffer-02713
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, pipeline stages other than the framebuffer-space and compute stages in the `VkPipeline` object bound to the pipeline bind point used by this command **must** not write to any resource
- VUID-vkCmdDrawMultiIndexedEXT-commandBuffer-04617
If any of the shader stages of the `VkPipeline` bound to the pipeline bind point used by this command uses the `RayQueryKHR` capability, then `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDrawMultiIndexedEXT-None-04007
All vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** have either valid or `VK_NULL_HANDLE` buffers bound
- VUID-vkCmdDrawMultiIndexedEXT-None-04008
If the `nullDescriptor` feature is not enabled, all vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** not be `VK_NULL_HANDLE`
- VUID-vkCmdDrawMultiIndexedEXT-None-02721
If the `robustBufferAccess` feature is not enabled, and that pipeline was created without enabling `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` for `vertexInputs`, then for a given vertex buffer binding, any attribute data fetched **must** be entirely contained within the corresponding vertex buffer binding, as described in [Vertex Input Description](#)
- VUID-vkCmdDrawMultiIndexedEXT-format-10389
For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is a `packed format`, and the `legacyVertexAttributes` feature is not enabled, the value of `attribAddress`, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the `size of the format`
- VUID-vkCmdDrawMultiIndexedEXT-format-10390
For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is not a `packed format`, and either the `legacyVertexAttributes` feature is not enabled or `format` has 64-bit components, the value of `attribAddress`, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the `component size of the format`
- VUID-vkCmdDrawMultiIndexedEXT-None-07842
If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled then `vkCmdSetPrimitiveTopology` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMultiIndexedEXT-dynamicPrimitiveTopologyUnrestricted-07500
If the bound graphics pipeline state was created with the

`VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled and the `dynamicPrimitiveTopologyUnrestricted` is `VK_FALSE`, then the `primitiveTopology` parameter of `vkCmdSetPrimitiveTopology` **must** be of the same `topology class` as the pipeline `VkPipelineInputAssemblyStateCreateInfo::topology` state

- VUID-vkCmdDrawMultiIndexedEXT-primitiveTopology-10286

If a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage is bound, then the `current value` of `primitiveTopology` **must** be `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-primitiveTopology-10747

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command, then a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage **must** be bound

- VUID-vkCmdDrawMultiIndexedEXT-primitiveTopology-10748

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_POINT_LIST` prior to this drawing command, the `maintenance5` feature is not enabled, both a `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` and `VK_SHADER_STAGE_GEOMETRY_BIT` stage are not bound, then the `Vertex Execution Model` **must** have a `PointSize` decorated variable that is statically written to

- VUID-vkCmdDrawMultiIndexedEXT-pStrides-04913

If the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, but without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, then `vkCmdBindVertexBuffers2` with a non-NULL `pStrides` parameter or `vkCmdBindVertexBuffers3KHR` with `setStride` set to `VK_TRUE` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdDrawMultiIndexedEXT-None-13118

If the bound graphics pipeline was created without the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, and `vkCmdBindVertexBuffers3KHR` was called and not subsequently `invalidated` in the current command buffer prior to this draw command, the value of `setStride` in each of its `pBindInfos` elements must have been `VK_FALSE`

- VUID-vkCmdDrawMultiIndexedEXT-None-04914

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then `vkCmdSetVertexInputEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdDrawMultiIndexedEXT-Input-07939

If the `vertexAttributeRobustness` feature is not enabled, and the `maintenance9` feature is not enabled, and there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then all variables with the `Input` storage class decorated with `Location` in the `Vertex Execution Model OpEntryPoint` **must** contain a location in `VkVertexInputAttributeDescription2EXT::location`

- VUID-vkCmdDrawMultiIndexedEXT-Input-08734

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled and either the [LegacyVertexAttributes](#) feature is not enabled or the SPIR-V Type associated with a given [Input](#) variable of the corresponding [Location](#) in the [Vertex Execution Model OpEntryPoint](#) is 64-bit, then the numeric type associated with all [Input](#) variables of the corresponding [Location](#) in the [Vertex Execution Model OpEntryPoint](#) **must** be the same as [VkVertexInputAttributeDescription2EXT::format](#)

- VUID-vkCmdDrawMultiIndexedEXT-format-08936

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled and [VkVertexInputAttributeDescription2EXT::format](#) has a 64-bit component, then the scalar width associated with all [Input](#) variables of the corresponding [Location](#) in the [Vertex Execution Model OpEntryPoint](#) **must** be 64-bit

- VUID-vkCmdDrawMultiIndexedEXT-format-08937

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled and the scalar width associated with a [Location](#) decorated [Input](#) variable in the [Vertex Execution Model OpEntryPoint](#) is 64-bit, then the corresponding [VkVertexInputAttributeDescription2EXT::format](#) **must** have a 64-bit component

- VUID-vkCmdDrawMultiIndexedEXT-None-09203

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled and [VkVertexInputAttributeDescription2EXT::format](#) has a 64-bit component, then all [Input](#) variables at the corresponding [Location](#) in the [Vertex Execution Model OpEntryPoint](#) **must** not use components that are not present in the format

- VUID-vkCmdDrawMultiIndexedEXT-None-04875

If there is a shader object bound to the [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) stage or the bound graphics pipeline state was created with both a [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) stage and the [VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT](#) dynamic state enabled, and the [current value](#) of [primitiveTopology](#) is [VK_PRIMITIVE_TOPOLOGY_PATCH_LIST](#), then [vkCmdSetPatchControlPointsEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-04879

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE](#) dynamic state enabled then [vkCmdSetPrimitiveRestartEnable](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-None-09637

If the `primitiveTopologyListRestart` feature is not enabled, the `input assembly` is `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY`, or `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled, then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawMultiIndexedEXT-None-10909

If the `primitiveTopologyPatchListRestart` feature is not enabled, the `input assembly` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, there is a shader object bound to the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawMultiIndexedEXT-stage-06481

The bound graphics pipeline **must** not have been created with the `VkPipelineShaderStageCreateInfo::stage` member of any element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawMultiIndexedEXT-None-08885

There **must** be no shader object bound to either of the `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages

- VUID-vkCmdDrawMultiIndexedEXT-None-07619

If a shader object is bound to the `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stage or a graphics pipeline is bound which was created with both a `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stage and the `VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT` dynamic state enabled, then `vkCmdSetTessellationDomainOriginEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMultiIndexedEXT-OpExecutionMode-12239

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the type of subdivision, they **must** be the same

- VUID-vkCmdDrawMultiIndexedEXT-OpExecutionMode-12240

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the orientation of triangles, they **must** be the same

- VUID-vkCmdDrawMultiIndexedEXT-OpExecutionMode-12241

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the segment spacing, they **must** be the same

- VUID-vkCmdDrawMultiIndexedEXT-OpExecutionMode-12242

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain

an `OpExecutionMode` instruction specifying the output patch size, they **must** be the same

- VUID-vkCmdDrawMultiIndexedEXT-None-07312

If the `maintenance6` feature is not enabled, a valid index buffer **must** be bound

- VUID-vkCmdDrawMultiIndexedEXT-primitiveRestartIndex-12401

If the primitive restart index for this draw operation was set with `vkCmdSetPrimitiveRestartIndexEXT`, then `primitiveRestartIndex` **must** not be greater than the maximum representable value for the bound `VkIndexType`

- VUID-vkCmdDrawMultiIndexedEXT-pNext-09461

If the bound graphics pipeline state was created with `VkPipelineVertexInputDivisorStateCreateInfo` in the `pNext` chain of `VkGraphicsPipelineCreateInfo::pVertexInputState`, any member of `VkPipelineVertexInputDivisorStateCreateInfo::pVertexBindingDivisors` has a value other than `1` in `divisor`, and `VkPhysicalDeviceVertexAttributeDivisorProperties::supportsNonZeroFirstInstance` is `VK_FALSE`, then `firstInstance` **must** be `0`

- VUID-vkCmdDrawMultiIndexedEXT-None-09462

If `shader objects` are used for drawing or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, any member of the `pVertexBindingDescriptions` parameter to the `vkCmdSetVertexInputEXT` call that sets this dynamic state has a value other than `1` in `divisor`, and `VkPhysicalDeviceVertexAttributeDivisorProperties::supportsNonZeroFirstInstance` is `VK_FALSE`, then `firstInstance` **must** be `0`

- VUID-vkCmdDrawMultiIndexedEXT-robustBufferAccess2-08798

If the `robustBufferAccess2` feature is not enabled, $(\text{indexSize} \times (\text{firstIndex} + \text{indexCount}))$ **must** be less than or equal to the size of the bound index buffer range, with `indexSize` being based on the type specified by `indexType`, and the other parameters sourced from this command

- VUID-vkCmdDrawMultiIndexedEXT-None-04937

The `multiDraw` feature **must** be enabled

- VUID-vkCmdDrawMultiIndexedEXT-drawCount-04939

`drawCount` **must** be less than `VkPhysicalDeviceMultiDrawPropertiesEXT::maxMultiDrawCount`

- VUID-vkCmdDrawMultiIndexedEXT-drawCount-04940

If `drawCount` is greater than zero, `pIndexInfo` **must** be a valid pointer to memory containing one or more valid instances of `VkMultiDrawIndexedInfoEXT` structures

- VUID-vkCmdDrawMultiIndexedEXT-drawCount-09629

If `drawCount` is greater than `1`, `stride` **must** be a multiple of `4` and **must** be greater than or equal to `sizeof(VkMultiDrawIndexedInfoEXT)`

Valid Usage (Implicit)

- VUID-vkCmdDrawMultiIndexedEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDrawMultiIndexedEXT-pVertexOffset-parameter

If `pVertexOffset` is not `NULL`, `pVertexOffset` **must** be a valid pointer to a valid `int32_t` value

- VUID-vkCmdDrawMultiIndexedEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdDrawMultiIndexedEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdDrawMultiIndexedEXT-renderpass
This command **must** only be called inside of a render pass instance
- VUID-vkCmdDrawMultiIndexedEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDrawMultiIndexedEXT-vidocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

`vkCmdDrawMultiIndexedEXT` is affected by `conditional rendering`

The `VkMultiDrawInfoEXT` structure is defined as:

```
// Provided by VK_EXT_multi_draw
typedef struct VkMultiDrawInfoEXT {
    uint32_t    firstVertex;
    uint32_t    vertexCount;
} VkMultiDrawInfoEXT;
```

- `firstVertex` is the first vertex to draw.
- `vertexCount` is the number of vertices to draw.

The members of `VkMultiDrawInfoEXT` have the same meaning as the `firstVertex` and `vertexCount` parameters in `vkCmdDraw`.

The `VkMultiDrawIndexedInfoEXT` structure is defined as:

```
// Provided by VK_EXT_multi_draw
typedef struct VkMultiDrawIndexedInfoEXT {
    uint32_t    firstIndex;
    uint32_t    indexCount;
    int32_t     vertexOffset;
} VkMultiDrawIndexedInfoEXT;
```

- `firstIndex` is the first index to draw.
- `indexCount` is the number of vertices to draw.
- `vertexOffset` is the value added to the vertex index before indexing into the vertex buffer for indexed multidraws.

The `firstIndex`, `indexCount`, and `vertexOffset` members of `VkMultiDrawIndexedInfoEXT` have the same meaning as the `firstIndex`, `indexCount`, and `vertexOffset` parameters, respectively, of `vkCmdDrawIndexed`.

`VkDrawIndirect2InfoKHR` is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkDrawIndirect2InfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkStridedDeviceAddressRangeKHR addressRange;
    VkAddressCommandFlagsKHR addressFlags;
    uint32_t           drawCount;
} VkDrawIndirect2InfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `addressRange` is the `VkStridedDeviceAddressRangeKHR` containing draw parameters.
- `addressFlags` is a `VkAddressCommandFlagsKHR` value defining the flags for the address range.
- `drawCount` is the number of draws to execute, and **can** be zero.

Valid Usage

- VUID-VkDrawIndirect2InfoKHR-addressRange-13097
If the range specified by `addressRange` is not bound completely to memory when accessed, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR`
- VUID-VkDrawIndirect2InfoKHR-addressRange-13098

If the buffer from which the range specified by `addressRange` was created with `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `addressFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

- VUID-VkDrawIndirect2InfoKHR-addressRange-13099

If the buffer from which the range specified by `addressRange` was created without `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`

- VUID-VkDrawIndirect2InfoKHR-addressFlags-13100

`addressFlags` **must** not include both `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-VkDrawIndirect2InfoKHR-addressRange-13122

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `addressFlags` **must** include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-VkDrawIndirect2InfoKHR-addressRange-13123

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created without `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-VkDrawIndirect2InfoKHR-addressFlags-13101

`addressFlags` **must** not include both `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkDrawIndirect2InfoKHR-addressRange-13124

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created with `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `addressFlags` **must** include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkDrawIndirect2InfoKHR-addressRange-13125

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created without `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkDrawIndirect2InfoKHR-addressRange-13107

The buffer from which `addressRange` was queried **must** have been created with `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag

- VUID-VkDrawIndirect2InfoKHR-protectedNoFault-13108

If `protectedNoFault` is not supported, the buffer from which `addressRange` was queried **must** not have been created with `VK_BUFFER_CREATE_PROTECTED_BIT`

- VUID-VkDrawIndirect2InfoKHR-addressRange-13109
`addressRange.address` **must** be a multiple of 4
- VUID-VkDrawIndirect2InfoKHR-drawCount-02718
If the `multiDrawIndirect` feature is not enabled, `drawCount` **must** be 0 or 1
- VUID-VkDrawIndirect2InfoKHR-drawCount-02719
`drawCount` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDrawIndirectCount`

Valid Usage (Implicit)

- VUID-VkDrawIndirect2InfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DRAW_INDIRECT_2_INFO_KHR`
- VUID-VkDrawIndirect2InfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDrawIndirect2InfoKHR-addressFlags-parameter
`addressFlags` **must** be a valid combination of `VkAddressCommandFlagBitsKHR` values

To record a non-indexed indirect drawing command, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdDrawIndirect2KHR(
    VkCommandBuffer                commandBuffer,
    const VkDrawIndirect2InfoKHR*  pInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pInfo` is a pointer to a `VkDrawIndirect2InfoKHR` structure defining parameters of this command.

`vkCmdDrawIndirect2KHR` behaves similarly to `vkCmdDraw` except that the parameters are read by the device from an address range during execution. `pInfo->drawCount` draws are executed by the command, with parameters taken from `pInfo->addressRange` starting at `addressRange.address` and increasing by `addressRange.stride` bytes for each successive draw. The parameters of each draw are encoded in an array of `VkDrawIndirectCommand` structures.

Valid Usage

- VUID-vkCmdDrawIndirect2KHR-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDrawIndirect2KHR-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and

`reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDrawIndirect2KHR-mipmapMode-04770

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdDrawIndirect2KHR-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDrawIndirect2KHR-unnormalizedCoordinates-09635

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDrawIndirect2KHR-None-08609

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdDrawIndirect2KHR-None-08610

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdDrawIndirect2KHR-None-08611

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdDrawIndirect2KHR-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDrawIndirect2KHR-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdDrawIndirect2KHR-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features`

must contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdDrawIndirect2KHR-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdDrawIndirect2KHR-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdDrawIndirect2KHR-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDrawIndirect2KHR-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDrawIndirect2KHR-cubicRangeClamp-09212

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`

- VUID-vkCmdDrawIndirect2KHR-reductionMode-09213

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`

- VUID-vkCmdDrawIndirect2KHR-selectableCubicWeights-09214

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`

- VUID-vkCmdDrawIndirect2KHR-flags-02696

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`

- VUID-vkCmdDrawIndirect2KHR-OpTypeImage-07027

For any `VkImageView` being written as a storage image where the image format field of

the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDrawIndirect2KHR-OpTypeImage-07028

For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDrawIndirect2KHR-OpTypeImage-07029

For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDrawIndirect2KHR-OpTypeImage-07030

Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdDrawIndirect2KHR-None-08600

If a `bound shader` was created with a pipeline layout and statically uses a set n , a descriptor set **must** have been bound to n at the same pipeline bind point, with layouts compatible for set n with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdDrawIndirect2KHR-None-08601

If a `bound shader` was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are `compatible` with the push constant range used to create the shader

- VUID-vkCmdDrawIndirect2KHR-None-10068

For each array of resources that is used by a `bound shader`, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdDrawIndirect2KHR-None-08114

Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid if they are accessed as described by `descriptor validity` by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdDrawIndirect2KHR-imageLayout-00344

If an image descriptor is accessed by a shader, the `VkImageLayout` **must** match the subresource accessible from the `VkImageView` as defined by the `image layout matching rules`

- VUID-vkCmdDrawIndirect2KHR-None-08115

If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdBindDescriptorSets`, the bound `VkPipeline` **must** have been created without `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdDrawIndirect2KHR-None-08116

Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by the

[VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDrawIndirect2KHR-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdDrawIndirect2KHR-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdDrawIndirect2KHR-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDrawIndirect2KHR-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdDrawIndirect2KHR-None-08606
If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDrawIndirect2KHR-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDrawIndirect2KHR-uniformBuffers-06935
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawIndirect2KHR-None-08612
If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawIndirect2KHR-storageBuffers-06936
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either

VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or
VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for
storageBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not
access values outside of the range of the buffer as specified in the descriptor set bound to
the same pipeline bind point

- VUID-vkCmdDrawIndirect2KHR-None-08613
If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage
corresponding to the pipeline bind point used by this command accesses a storage buffer,
it **must** not access values outside of the range of the buffer as specified in the descriptor
set bound to the same pipeline bind point
- VUID-vkCmdDrawIndirect2KHR-commandBuffer-02707
If commandBuffer is an unprotected command buffer and protectedNoFault is not supported,
any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDrawIndirect2KHR-viewType-07752
If a VkImageView is accessed as a result of this command, then the image view's viewType
must match the Dim operand of the OpTypeImage as described in Compatibility Between
SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDrawIndirect2KHR-format-07753
If a VkImageView or VkBufferView is accessed as a result of this command, then the
numeric type of the view's format and the Sampled Type operand of the OpTypeImage **must**
match
- VUID-vkCmdDrawIndirect2KHR-OpImageWrite-08795
If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed
using OpImageWrite as a result of this command, then the Type of the Texel operand of that
instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDrawIndirect2KHR-OpImageWrite-08796
If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using
OpImageWrite as a result of this command, then the Type of the Texel operand of that
instruction **must** have four components
- VUID-vkCmdDrawIndirect2KHR-OpImageWrite-04469
If a VkBufferView is accessed using OpImageWrite as a result of this command, then the
Type of the Texel operand of that instruction **must** have at least as many components as
the buffer view's format
- VUID-vkCmdDrawIndirect2KHR-SampledType-04470
If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a
result of this command, the SampledType of the OpTypeImage operand of that instruction
must have a Width of 64
- VUID-vkCmdDrawIndirect2KHR-SampledType-04471
If a VkImageView with a VkFormat that has a component width less than 64-bit is
accessed as a result of this command, the SampledType of the OpTypeImage operand of that
instruction **must** have a Width of 32
- VUID-vkCmdDrawIndirect2KHR-SampledType-04472
If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a
result of this command, the SampledType of the OpTypeImage operand of that instruction

must have a **Width** of 64

- VUID-vkCmdDrawIndirect2KHR-SampledType-04473

If a **VkBufferView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdDrawIndirect2KHR-sparseImageInt64Atomics-04474

If the **sparseImageInt64Atomics** feature is not enabled, **VkImage** objects created with the **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdDrawIndirect2KHR-sparseImageInt64Atomics-04475

If the **sparseImageInt64Atomics** feature is not enabled, **VkBuffer** objects created with the **VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdDrawIndirect2KHR-OpImageSampleWeightedQCOM-06971

If **OpImageSampleWeightedQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM**

- VUID-vkCmdDrawIndirect2KHR-OpImageSampleWeightedQCOM-06972

If **OpImageSampleWeightedQCOM** uses a **VkImageView** as a sample weight image as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM**

- VUID-vkCmdDrawIndirect2KHR-OpImageBoxFilterQCOM-06973

If **OpImageBoxFilterQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM**

- VUID-vkCmdDrawIndirect2KHR-OpImageBlockMatchSSDQCOM-06974

If **OpImageBlockMatchSSDQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdDrawIndirect2KHR-OpImageBlockMatchSADQCOM-06975

If **OpImageBlockMatchSADQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdDrawIndirect2KHR-OpImageBlockMatchSADQCOM-06976

If **OpImageBlockMatchSADQCOM** or **OpImageBlockMatchSSDQCOM** is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail **integer texel coordinate validation**

- VUID-vkCmdDrawIndirect2KHR-OpImageSampleWeightedQCOM-06977

If **OpImageSampleWeightedQCOM**, **OpImageBoxFilterQCOM**, **OpImageBlockMatchWindowSSDQCOM**, **OpImageBlockMatchWindowSADQCOM**, **OpImageBlockMatchGatherSSDQCOM**, **OpImageBlockMatchGatherSADQCOM**, **OpImageBlockMatchSSDQCOM**, or **OpImageBlockMatchSADQCOM** uses a **VkSampler** as a result of this command, then the sampler **must** have been created

with [VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM](#)

- VUID-vkCmdDrawIndirect2KHR-OpImageSampleWeightedQCOM-06978

If any command other than [OpImageSampleWeightedQCOM](#), [OpImageBoxFilterQCOM](#), [OpImageBlockMatchWindowSSDQCOM](#), [OpImageBlockMatchWindowSADQCOM](#), [OpImageBlockMatchGatherSSDQCOM](#), [OpImageBlockMatchGatherSADQCOM](#), [OpImageBlockMatchSSDQCOM](#), or [OpImageBlockMatchSADQCOM](#) uses a [VkSampler](#) as a result of this command, then the sampler **must** not have been created with [VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM](#)

- VUID-vkCmdDrawIndirect2KHR-OpImageBlockMatchWindow-09215

If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#)

- VUID-vkCmdDrawIndirect2KHR-OpImageBlockMatchWindow-09216

If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's format **must** be a single-component format

- VUID-vkCmdDrawIndirect2KHR-OpImageBlockMatchWindow-09217

If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)

- VUID-vkCmdDrawIndirect2KHR-None-07288

Any shader invocation executed by this command **must** [terminate](#)

- VUID-vkCmdDrawIndirect2KHR-None-09600

If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdDrawIndirect2KHR-commandBuffer-10746

The [VkDeviceMemory](#) object allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in [commandBuffer](#)

- VUID-vkCmdDrawIndirect2KHR-None-10678

If this command is recorded inside a [tile shading render pass](#) instance, the stages corresponding to the pipeline bind point used by this command **must** only include [VK_SHADER_STAGE_VERTEX_BIT](#), [VK_SHADER_STAGE_FRAGMENT_BIT](#), and/or [VK_SHADER_STAGE_COMPUTE_BIT](#)

- VUID-vkCmdDrawIndirect2KHR-None-10679

If this command is recorded where [per-tile execution model](#) is enabled, there **must** be no access to any image while the image was be transitioned to the [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout

- VUID-vkCmdDrawIndirect2KHR-pDescription-09900
If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the underlying `VkTensorARM` object **must** have been created with the `VK_TENSOR_USAGE_SHADER_BIT_ARM` usage flag set
- VUID-vkCmdDrawIndirect2KHR-dimensionCount-09905
If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via `VkTensorCreateInfoARM::pDescription` when creating the underlying `VkTensorARM` object
- VUID-vkCmdDrawIndirect2KHR-OpTypeTensorARM-09906
If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be `compatible` with the `VkFormat` of the `VkTensorViewARM` used for the access
- VUID-vkCmdDrawIndirect2KHR-None-11297
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDrawIndirect2KHR-None-11298
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdDrawIndirect2KHR-None-11299
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdDrawIndirect2KHR-None-11397
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`,

[VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdDrawIndirect2KHR-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDrawIndirect2KHR-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawIndirect2KHR-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDrawIndirect2KHR-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdDrawIndirect2KHR-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawIndirect2KHR-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdDrawIndirect2KHR-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdDrawIndirect2KHR-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdDrawIndirect2KHR-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawIndirect2KHR-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawIndirect2KHR-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawIndirect2KHR-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of [pBindInfo->reservedRangeSize](#) set for [vkCmdBindSamplerHeapEXT](#) **must** be greater than or equal to [minSamplerHeapReservedRangeWithEmbedded](#)

- VUID-vkCmdDrawIndirect2KHR-None-11376

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, and that shader statically uses a push constant value, that value **must** have been set by [vkCmdPushDataEXT](#)

- VUID-vkCmdDrawIndirect2KHR-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#),

VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT,
VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT,
VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or
VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds

- VUID-vkCmdDrawIndirect2KHR-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawIndirect2KHR-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawIndirect2KHR-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdDrawIndirect2KHR-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawIndirect2KHR-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a

storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdDrawIndirect2KHR-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a `VkAccelerationStructureKHR` object via `vkGetAccelerationStructureDeviceAddressKHR` or handle retrieved from a `VkAccelerationStructureNV` object via `vkGetAccelerationStructureHandleNV`

- VUID-vkCmdDrawIndirect2KHR-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by `VkSamplerCustomBorderColorIndexCreateInfoEXT`, the value of `VkSamplerCustomBorderColorIndexCreateInfoEXT::index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdDrawIndirect2KHR-protectedNoFault-11455

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, the address that the resource is mapped to **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDrawIndirect2KHR-protectedNoFault-11456

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the address of the indirect memory **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDrawIndirect2KHR-renderPass-02684

The current render pass **must** be `compatible` with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`

- VUID-vkCmdDrawIndirect2KHR-subpass-02685

The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`

- VUID-vkCmdDrawIndirect2KHR-OpTypeImage-07468
If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass
- VUID-vkCmdDrawIndirect2KHR-None-07469
Input attachment views accessed in a subpass **must** be created with the same `VkFormat` as the corresponding subpass definition, and be created with a `VkImageView` that is compatible with the attachment referenced by the subpass' `pInputAttachments` [`InputAttachmentIndex`] in the bound `VkFramebuffer` as specified by [Fragment Input Attachment Compatibility](#)
- VUID-vkCmdDrawIndirect2KHR-pDepthInputAttachmentIndex-09595
Input attachment views accessed in a dynamic render pass with a `InputAttachmentIndex` referenced by `VkRenderingInputAttachmentIndexInfo`, or no `InputAttachmentIndex` if `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` or `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are `NULL`, **must** be created with a `VkImageView` that is compatible with the corresponding color, depth, or stencil attachment in `VkRenderingInfo`
- VUID-vkCmdDrawIndirect2KHR-pDepthInputAttachmentIndex-09596
Input attachment views accessed in a dynamic render pass via a shader object **must** have an `InputAttachmentIndex` if both `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` and `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are non-`NULL`
- VUID-vkCmdDrawIndirect2KHR-InputAttachmentIndex-09597
If an input attachment view accessed in a dynamic render pass via a shader object has an `InputAttachmentIndex`, the `InputAttachmentIndex` **must** match an index in `VkRenderingInputAttachmentIndexInfo`
- VUID-vkCmdDrawIndirect2KHR-None-06537
Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdDrawIndirect2KHR-None-10795
If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_COLOR_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawIndirect2KHR-None-10796
If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_DEPTH_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawIndirect2KHR-None-10797
If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_STENCIL_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdDrawIndirect2KHR-None-12338
If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdDrawIndirect2KHR-None-12339
If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdDrawIndirect2KHR-None-12340
If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdDrawIndirect2KHR-None-09003
If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command
- VUID-vkCmdDrawIndirect2KHR-None-06886
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, [depth writes](#) **must** be disabled
- VUID-vkCmdDrawIndirect2KHR-None-06887
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back [writeMask](#) are not zero, and stencil test is enabled, [all stencil ops](#) **must** be [VK_STENCIL_OP_KEEP](#)
- VUID-vkCmdDrawIndirect2KHR-None-07831
If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VIEWPORT](#) dynamic state enabled then [vkCmdSetViewport](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndirect2KHR-None-07832
If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_SCISSOR](#) dynamic state enabled then [vkCmdSetScissor](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndirect2KHR-None-08617
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_LINE_WIDTH](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [effective rasterization input topology](#) is in line topology class, then [vkCmdSetLineWidth](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndirect2KHR-None-07834
If a shader object is bound to any graphics stage or a graphics pipeline is bound which

was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `depthBiasEnable` is `VK_TRUE`, then `vkCmdSetDepthBias` or `vkCmdSetDepthBias2EXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07835

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_BLEND_CONSTANTS` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment current value of `blendEnable` is `VK_TRUE` with a blend equations where any `VkBlendFactor` member is `VK_BLEND_FACTOR_CONSTANT_COLOR`, `VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR`, `VK_BLEND_FACTOR_CONSTANT_ALPHA`, or `VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA`, then `vkCmdSetBlendConstants` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07836

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `depthBoundsTestEnable` is `VK_TRUE`, then `vkCmdSetDepthBounds` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07837

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilCompareMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07838

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilWriteMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07839

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_REFERENCE` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, the current value of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilReference` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-maxMultiviewInstanceIndex-02688

If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to `VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex`

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsEnable-02689

If the bound graphics pipeline was created with `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` set to `VK_TRUE`, then the active depth attachment **must** have been created with the `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` bit set

- VUID-vkCmdDrawIndirect2KHR-None-07634

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleLocationsEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-06666

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then `vkCmdSetSampleLocationsEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07840

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CULL_MODE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCullMode` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07841

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRONT_FACE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFrontFace` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07843

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, `vkCmdSetDepthTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07844

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthWriteEnable` **must** have been

called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07845

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_COMPARE_OP** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of **depthTestEnable** is **VK_TRUE**, then **vkCmdSetDepthCompareOp** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07846

If the **depthBounds** feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE** dynamic state enabled, and the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, then **vkCmdSetDepthBoundsTestEnable** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07847

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE** dynamic state enabled, and the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, then **vkCmdSetStencilTestEnable** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07848

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_STENCIL_OP** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, the **current value** of **stencilTestEnable** is **VK_TRUE**, then **vkCmdSetStencilOp** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-viewportCount-03417

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** dynamic state enabled, and the state is not inherited, then **vkCmdSetViewportWithCount** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-scissorCount-03418

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT** dynamic state enabled, and the state is not inherited, then **vkCmdSetScissorWithCount** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing

- VUID-vkCmdDrawIndirect2KHR-viewportCount-03419

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the **VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT** and **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** dynamic states enabled, and the state is not inherited, then the **viewportCount** parameter of **vkCmdSetViewportWithCount** **must** match

the `scissorCount` parameter of `vkCmdSetScissorWithCount`

- VUID-vkCmdDrawIndirect2KHR-viewportCount-04137

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportWScalingStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndirect2KHR-viewportCount-04138

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the **current value** of `viewportWScalingEnable` is `VK_TRUE`, then `vkCmdSetViewportWScalingNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-08636

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the **current value** of `viewportWScalingEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportWScalingNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndirect2KHR-viewportCount-04139

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportShadingRateImageStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndirect2KHR-shadingRateImage-09233

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV` and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoarseSampleOrderNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-shadingRateImage-09234

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `shadingRateImageEnable` is `VK_TRUE`, then `vkCmdSetViewportShadingRatePaletteNV` **must**

have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-08637

If the **shadingRateImage** feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** and **VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of **shadingRateImageEnable** is **VK_TRUE**, then the **viewportCount** parameter in the last call to **vkCmdSetViewportShadingRatePaletteNV** **must** be greater than or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawIndirect2KHR-VkPipelineVieportCreateInfo-04141

If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** dynamic state enabled and a **VkPipelineViewportSwizzleStateCreateInfoNV** structure chained from **VkPipelineViewportStateCreateInfo**, then the bound graphics pipeline **must** have been created with **VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount** greater or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawIndirect2KHR-VkPipelineVieportCreateInfo-04142

If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** dynamic state enabled and a **VkPipelineViewportExclusiveScissorStateCreateInfoNV** structure chained from **VkPipelineViewportStateCreateInfo**, then the bound graphics pipeline **must** have been created with **VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount** greater or equal to the **viewportCount** parameter in the last call to **vkCmdSetViewportWithCount**

- VUID-vkCmdDrawIndirect2KHR-None-07878

If the **exclusiveScissor** feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV** dynamic state enabled, then **vkCmdSetExclusiveScissorEnableNV** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07879

If the **exclusiveScissor** feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV** dynamic state enabled, and the most recent call to **vkCmdSetExclusiveScissorEnableNV** in the current command buffer set any element of **pExclusiveScissorEnables** to **VK_TRUE**, then **vkCmdSetExclusiveScissorNV** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-04876

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE** dynamic state enabled, then **vkCmdSetRasterizerDiscardEnable** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-04877

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBiasEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-logicOp-04878

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `logicOpEnable` is `VK_TRUE`, then `vkCmdSetLogicOpEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-primitiveFragmentShadingRateWithMultipleViewports-04552

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdDrawIndirect2KHR-primitiveFragmentShadingRateWithMultipleViewports-08642

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdDrawIndirect2KHR-blendEnable-04727

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then for each color attachment, if the corresponding image view's `format features` do not contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`, then the corresponding `current value` of `blendEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawIndirect2KHR-None-08644

If a shader object is bound to any graphics stage or a graphics pipeline is bound, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and none of the following is enabled:

- the `VK_AMD_mixed_attachment_samples` extension
- the `VK_NV_framebuffer_mixed_samples` extension
- the `multisampledRenderToSingleSampled` feature

then the **current value** of **rasterizationSamples** **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdDrawIndirect2KHR-None-08876

If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with **vkCmdBeginRendering**

- VUID-vkCmdDrawIndirect2KHR-imageView-06172

If the current render pass instance was begun with **vkCmdBeginRendering**, the **imageView** member of **pDepthAttachment** is not **VK_NULL_HANDLE**, and the **layout** member of **pDepthAttachment** is **VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL**, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawIndirect2KHR-imageView-06173

If the current render pass instance was begun with **vkCmdBeginRendering**, the **imageView** member of **pStencilAttachment** is not **VK_NULL_HANDLE**, and the **layout** member of **pStencilAttachment** is **VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL**, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDrawIndirect2KHR-imageView-06174

If the current render pass instance was begun with **vkCmdBeginRendering**, the **imageView** member of **pDepthAttachment** is not **VK_NULL_HANDLE**, and the **layout** member of **pDepthAttachment** is **VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL**, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawIndirect2KHR-imageView-06175

If the current render pass instance was begun with **vkCmdBeginRendering**, the **imageView** member of **pStencilAttachment** is not **VK_NULL_HANDLE**, and the **layout** member of **pStencilAttachment** is **VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL**, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDrawIndirect2KHR-imageView-06176

If the current render pass instance was begun with **vkCmdBeginRendering**, the **imageView** member of **pDepthAttachment** is not **VK_NULL_HANDLE**, and the **layout** member of **pDepthAttachment** is **VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL**, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawIndirect2KHR-imageView-06177

If the current render pass instance was begun with **vkCmdBeginRendering**, the **imageView** member of **pStencilAttachment** is not **VK_NULL_HANDLE**, and the **layout** member of **pStencilAttachment** is **VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL**, this command **must** not write any values to the stencil attachment

- VUID-vkCmdDrawIndirect2KHR-viewMask-06178

If the current render pass instance was begun with **vkCmdBeginRendering**, the bound graphics pipeline **must** have been created with a **VkPipelineRenderingCreateInfo::viewMask** equal to **VkRenderingInfo::viewMask**

- VUID-vkCmdDrawIndirect2KHR-colorAttachmentCount-06179

If the **dynamicRenderingUnusedAttachments** feature is not enabled and the current render pass instance was begun with **vkCmdBeginRendering**, the bound graphics pipeline **must**

have been created with a `VkPipelineRenderingCreateInfo::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-08910
If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline
- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-08912
If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-08911
If the `dynamicRenderingUnusedAttachments` feature is enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndirect2KHR-colorAttachmentCount-09362
If the current render pass instance was begun with `vkCmdBeginRendering`, with a `VkRenderingInfo::colorAttachmentCount` equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline
- VUID-vkCmdDrawIndirect2KHR-None-09363
If there is no shader object bound to any graphics stage, the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdDrawIndirect2KHR-None-09364

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, then `vkCmdSetColorBlendEnableEXT` **must** have set the blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-09365

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-09366

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetColorBlendEnableEXT` **must** have set blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-rasterizationSamples-09367

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-09368

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-09369

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-pFragmentSize-09370

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior

to this drawing command

- VUID-vkCmdDrawIndirect2KHR-pFragmentSize-09371

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the [VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID](#) resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07749

If the `colorWriteEnable` feature is enabled, a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT](#) dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorWriteEnableEXT` **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-attachmentCount-07750

If the `colorWriteEnable` feature is enabled, a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT](#) dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the `attachmentCount` parameter of most recent call to `vkCmdSetColorWriteEnableEXT` in the current command buffer **must** be greater than or equal to the number of active color attachments

- VUID-vkCmdDrawIndirect2KHR-None-07751

If the [VK_EXT_discard_rectangles](#) extension is enabled, a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT](#) dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` included a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command for each discard rectangle in `VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount`

- VUID-vkCmdDrawIndirect2KHR-rasterizerDiscardEnable-09236

If the [VK_EXT_discard_rectangles](#) extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with [VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT](#) dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` did not include a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command for each discard rectangle in `VkPhysicalDeviceDiscardRectanglePropertiesEXT::maxDiscardRectangles`

- VUID-vkCmdDrawIndirect2KHR-None-07880

If the [VK_EXT_discard_rectangles](#) extension is enabled, a shader object is bound to any

graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDiscardRectangleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07881

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-08913

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-08914

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-08915

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-08916

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-08917

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo`

`::pStencilAttachment->imageView`

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-08918

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-imageView-06183

If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingLocalRead-11797

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingLocalRead` feature is enabled, the `VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR` flag is specified, and an attachment is being used as a feedback loop as specified by `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`, `VkRenderingAttachmentFlagsInfoKHR::flags` for that attachment **must** include `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`

- VUID-vkCmdDrawIndirect2KHR-imageView-06184

If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`

- VUID-vkCmdDrawIndirect2KHR-layers-10831

If the current render pass instance was created with `VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` or `VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, and the bound graphics pipeline was created with `VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, then the current render pass instance **must** have a `layers` value less than or equal to `VkPipelineFragmentDensityMapLayeredCreateInfoVALVE::maxFragmentDensityMapLayers`

- VUID-vkCmdDrawIndirect2KHR-colorAttachmentCount-06185

If the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the corresponding element of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline

- VUID-vkCmdDrawIndirect2KHR-pDepthAttachment-06186
If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`
- VUID-vkCmdDrawIndirect2KHR-pStencilAttachment-06187
If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdDrawIndirect2KHR-multisampledRenderToSingleSampled-07285
If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline
- VUID-vkCmdDrawIndirect2KHR-multisampledRenderToSingleSampled-07286
If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`
- VUID-vkCmdDrawIndirect2KHR-multisampledRenderToSingleSampled-07287
If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdDrawIndirect2KHR-pNext-07935
If this command is called inside a render pass instance started with `vkCmdBeginRendering`, and the `pNext` chain of `VkRenderingInfo` includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the value of

`rasterizationSamples` for the bound graphics pipeline **must** be equal to `VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples`

- VUID-vkCmdDrawIndirect2KHR-renderPass-06198

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline **must** have been created with a `VkGraphicsPipelineCreateInfo::renderPass` equal to `VK_NULL_HANDLE`

- VUID-vkCmdDrawIndirect2KHR-pColorAttachments-08963

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->imageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-pColorAttachments-11539

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->resolveImageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-pDepthAttachment-08964

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-pDepthAttachment-11540

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-pStencilAttachment-08965

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-pStencilAttachment-11860
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdDrawIndirect2KHR-flags-10582
If the current render pass instance was begun with a `vkCmdBeginRendering` call in `commandBuffer`, its `VkRenderingInfo::flags` parameter **must** not have `VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT` set unless `VK_RENDERING_CONTENTS_INLINE_BIT_KHR` is also set
- VUID-vkCmdDrawIndirect2KHR-primitivesGeneratedQueryWithRasterizerDiscard-06708
If the `primitivesGeneratedQueryWithRasterizerDiscard` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, `rasterization discard` **must** not be enabled
- VUID-vkCmdDrawIndirect2KHR-primitivesGeneratedQueryWithNonZeroStreams-06709
If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, the bound graphics pipeline **must** not have been created with a non-zero value in `VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream`
- VUID-vkCmdDrawIndirect2KHR-None-07620
If the `depthClamp` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthClampEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndirect2KHR-None-07621
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_POLYGON_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetPolygonModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndirect2KHR-None-07622
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRasterizationSamplesEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdDrawIndirect2KHR-None-07623
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleMaskEXT` **must** have been called and not subsequently `invalidated` in the

current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-alphaToCoverageEnable-08919

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and `alphaToCoverageEnable` was `VK_TRUE` in the last call to `vkCmdSetAlphaToCoverageEnableEXT`, then the **Fragment Output Interface** **must** contain a variable for the alpha **Component** word in **Location** 0 at **Index** 0

- VUID-vkCmdDrawIndirect2KHR-alphaToCoverageEnable-08920

If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetAlphaToCoverageEnableEXT` in the current command buffer set `alphaToCoverageEnable` to `VK_TRUE`, then the **Fragment Output Interface** **must** contain a variable for the alpha **Component** word in **Location** 0 at **Index** 0

- VUID-vkCmdDrawIndirect2KHR-None-07624

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToCoverageEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07625

If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToOneEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07626

If the `logicOp` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetLogicOpEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07627

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorBlendEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07629

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorWriteMaskEXT` **must** have been called and not subsequently

[invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07630

If the [geometryStreams](#) feature is enabled, and a shader object is bound to the [VK_SHADER_STAGE_GEOMETRY_BIT](#) stage or a graphics pipeline is bound which was created with both a [VK_SHADER_STAGE_GEOMETRY_BIT](#) stage and the [VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT](#) dynamic state enabled, then [vkCmdSetRasterizationStreamEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07631

If the [VK_EXT_conservative_rasterization](#) extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT](#) dynamic state enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetConservativeRasterizationModeEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07632

If the [VK_EXT_conservative_rasterization](#) extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT](#) dynamic state enabled, the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the current value of [conservativeRasterizationMode](#) is [VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT](#), then [vkCmdSetExtraPrimitiveOverestimationSizeEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-conservativePointAndLineRasterization-07499

If the [VK_EXT_conservative_rasterization](#) extension is enabled, [conservativePointAndLineRasterization](#) is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the effective rasterization input topology is in line or point topology class, then the current value of [conservativeRasterizationMode](#) **must** be [VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT](#)

- VUID-vkCmdDrawIndirect2KHR-None-07633

If the [depthClipEnable](#) feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT](#) dynamic state, then [vkCmdSetDepthClipEnableEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07636

If the [VK_EXT_provoking_vertex](#) extension is enabled, a shader object is bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT](#) dynamic state enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetProvokingVertexModeEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-08666

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineRasterizationModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-08669

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineStippleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07849

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `stippledLineEnable` is `VK_TRUE`, then `vkCmdSetLineStipple` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-10608

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, the effective rasterization input topology is in line topology class, and the current `lineRasterizationMode` is `VK_LINE_RASTERIZATION_MODE_BRESENHAM` or `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be `VK_FALSE`

- VUID-vkCmdDrawIndirect2KHR-None-07639

If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT` dynamic state enabled, then `vkCmdSetDepthClipNegativeOneToOneEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-09650

If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT` dynamic state enabled, and the current value of `depthClampEnable` is `VK_TRUE`, then `vkCmdSetDepthClampRangeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07640

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV` dynamic state enabled, then `vkCmdSetViewportWScalingEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07641

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then `vkCmdSetViewportSwizzleNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07642

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageToColorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07643

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageToColorEnable` is `VK_TRUE`, then `vkCmdSetCoverageToColorLocationNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07644

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageModulationModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07645

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationMode` is any value other than `VK_COVERAGE_MODULATION_MODE_NONE_NV`, then `vkCmdSetCoverageModulationTableEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07646

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to

any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationTableEnable` is `VK_TRUE`, then `vkCmdSetCoverageModulationTableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07647

If the `shadingRateImage` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetShadingRateImageEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-pipelineFragmentShadingRate-09238

If the `pipelineFragmentShadingRate` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFragmentShadingRateKHR` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07648

If the `representativeFragmentTest` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRepresentativeFragmentTestEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07649

If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageReductionModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-rasterizationSamples-07471

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** follow the rules for a `zero-attachment subpass`

- VUID-vkCmdDrawIndirect2KHR-samples-07472

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the

`VkPipelineMultisampleStateCreateInfo::rasterizationSamples` parameter used to create the bound graphics pipeline

- VUID-vkCmdDrawIndirect2KHR-samples-07473

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state and `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` states enabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the `rasterizationSamples` parameter in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndirect2KHR-None-09211

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** be the same as the `rasterizationSamples` member of that structure

- VUID-vkCmdDrawIndirect2KHR-firstAttachment-07476

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorBlendEnableEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawIndirect2KHR-firstAttachment-07478

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorWriteMaskEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawIndirect2KHR-advancedBlendMaxColorAttachments-07480

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment current value of `blendEnable` is `VK_TRUE`, then the number of active color attachments **must** not exceed `advancedBlendMaxColorAttachments`

- VUID-vkCmdDrawIndirect2KHR-None-10862

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDrawIndirect2KHR-rasterizerDiscardEnable-10863

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendAdvancedEXT` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDrawIndirect2KHR-None-10864

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then either `vkCmdSetColorBlendAdvancedEXT` or `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdDrawIndirect2KHR-primitivesGeneratedQueryWithNonZeroStreams-07481

If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, and the bound graphics pipeline was created with `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` state enabled, the last call to `vkCmdSetRasterizationStreamEXT` **must** have set the `rasterizationStream` to zero

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsPerPixel-07482

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` member of the `VkPipelineMultisampleStateCreateInfo` structure the bound graphics pipeline has been created with

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsPerPixel-07483

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` parameter of the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsEnable-07484

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT` then the current active depth attachment **must** have been created with the `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` bit set

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsEnable-07485

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.width` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsEnable-07486

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.height` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsEnable-07487

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, the fragment shader code **must** not statically use the extended instruction `InterpolateAtSample`

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsEnable-07936

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.width` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsEnable-07937

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.height` **must** evenly divide

`VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndirect2KHR-sampleLocationsEnable-07938

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationsPerPixel` **must** equal `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdDrawIndirect2KHR-coverageModulationTableEnable-07488

If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` state enabled, and the last call to `vkCmdSetCoverageModulationTableEnableNV` set `coverageModulationTableEnable` to `VK_TRUE`, then the `coverageModulationTableCount` parameter in the last call to `vkCmdSetCoverageModulationTableNV` **must** equal the current `rasterizationSamples` divided by the number of color samples in the current active color attachment

- VUID-vkCmdDrawIndirect2KHR-rasterizationSamples-07489

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and if current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the bound pipeline, then the current `rasterizationSamples` **must** be the same as the sample count of the depth/stencil attachment

- VUID-vkCmdDrawIndirect2KHR-coverageToColorEnable-07490

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` state enabled and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`

- VUID-vkCmdDrawIndirect2KHR-rasterizerDiscardEnable-09420

If the `VK_NV_fragment_coverage_to_color` extension is enabled, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`

- VUID-vkCmdDrawIndirect2KHR-coverageReductionMode-07491

If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` or

VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic states enabled, then the current values of coverageReductionMode, rasterizationSamples, the sample counts for the color and depth/stencil attachments (if the subpass has them) **must** be a valid combination returned by vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV

- VUID-vkCmdDrawIndirect2KHR-viewportCount-07492

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic state enabled, then the bound graphics pipeline **must** have been created with VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount greater or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdDrawIndirect2KHR-viewportCount-07493

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic states enabled then the viewportCount parameter in the last call to vkCmdSetViewportSwizzleNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdDrawIndirect2KHR-viewportCount-09421

If the VK_NV_viewport_swizzle extension is enabled, and a shader object is bound to any graphics stage, then the viewportCount parameter in the last call to vkCmdSetViewportSwizzleNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdDrawIndirect2KHR-rasterizationSamples-07494

If the VK_NV_framebuffer_mixed_samples extension is enabled, and the coverageReductionMode feature is not enabled, or the current value of coverageReductionMode is not VK_COVERAGE_REDUCTION_MODE_TRUNCATE_NV, and the current value of rasterizationSamples is greater than sample count of the color attachment, then sample shading **must** be disabled

- VUID-vkCmdDrawIndirect2KHR-stippledLineEnable-07495

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the stippledRectangularLines feature **must** be enabled

- VUID-vkCmdDrawIndirect2KHR-stippledLineEnable-07496

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines feature **must** be enabled

- VUID-vkCmdDrawIndirect2KHR-stippledLineEnable-07497

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the `stippledSmoothLines` feature **must** be enabled

- VUID-vkCmdDrawIndirect2KHR-stippledLineEnable-07498

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_DEFAULT`, then the `stippledRectangularLines` feature **must** be enabled and `VkPhysicalDeviceLimits::strictLines` **must** be `VK_TRUE`

- VUID-vkCmdDrawIndirect2KHR-stage-07073

If the bound pipeline was created with the `VkPipelineShaderStageCreateInfo::stage` member of an element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then `Mesh Shader Queries` **must** not be active

- VUID-vkCmdDrawIndirect2KHR-None-08877

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAttachmentFeedbackLoopEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-07850

If dynamic state was inherited from `VkCommandBufferInheritanceViewportScissorInfoNV`, it **must** be set in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-nextStage-10745

For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a `nextStage` including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline

- VUID-vkCmdDrawIndirect2KHR-None-08684

If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_VERTEX_BIT`

- VUID-vkCmdDrawIndirect2KHR-None-08685

If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`

- VUID-vkCmdDrawIndirect2KHR-None-08686

If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled,

`vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`

- VUID-vkCmdDrawIndirect2KHR-None-08687

If there is no bound graphics pipeline, and the `geometryShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_GEOMETRY_BIT`

- VUID-vkCmdDrawIndirect2KHR-None-08688

If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_FRAGMENT_BIT`

- VUID-vkCmdDrawIndirect2KHR-None-08689

If there is no bound graphics pipeline, and the `taskShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TASK_BIT_EXT`

- VUID-vkCmdDrawIndirect2KHR-None-08690

If there is no bound graphics pipeline, and the `meshShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawIndirect2KHR-None-08693

If there is no bound graphics pipeline, and at least one of the `taskShader` and `meshShader` features is enabled, one of the `VK_SHADER_STAGE_VERTEX_BIT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages **must** have a valid `VkShaderEXT` bound, and the other **must** have no `VkShaderEXT` bound

- VUID-vkCmdDrawIndirect2KHR-None-08696

If there is no bound graphics pipeline, and a valid `VkShaderEXT` is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage, there **must** be no `VkShaderEXT` bound to either the `VK_SHADER_STAGE_TASK_BIT_EXT` stage or the `VK_SHADER_STAGE_MESH_BIT_EXT` stage

- VUID-vkCmdDrawIndirect2KHR-None-08698

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, then all shaders created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag in the same `vkCreateShadersEXT` call **must** also be bound

- VUID-vkCmdDrawIndirect2KHR-None-08699

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, any stages in between stages whose shaders which did not create a shader with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag as part of the same `vkCreateShadersEXT` call **must** not have any `VkShaderEXT` bound

- VUID-vkCmdDrawIndirect2KHR-None-08878

All bound graphics shader objects **must** have been created with identical or `identically defined` push constant ranges

- VUID-vkCmdDrawIndirect2KHR-None-08879

All bound graphics shader objects **must** have either been created with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag set, or with identical or `identically`

defined arrays of descriptor set layouts

- VUID-vkCmdDrawIndirect2KHR-colorAttachmentCount-09372

If the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, and a fragment shader is bound, it **must** not declare the `DepthReplacing` or `StencilRefReplacingEXT` execution modes

- VUID-vkCmdDrawIndirect2KHR-pDynamicStates-08715

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` parameter in the last call to `vkCmdSetDepthWriteEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawIndirect2KHR-pDynamicStates-08716

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpStencilAttachmentReadEXT`, the `writeMask` parameter in the last call to `vkCmdSetStencilWriteMask` **must** be 0

- VUID-vkCmdDrawIndirect2KHR-None-09116

If a shader object is bound to any graphics stage or the bound graphics pipeline was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`, and the format of any color attachment is `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`, the corresponding element of the `pColorWriteMasks` parameter of `vkCmdSetColorWriteMaskEXT` **must** either include all of `VK_COLOR_COMPONENT_R_BIT`, `VK_COLOR_COMPONENT_G_BIT`, and `VK_COLOR_COMPONENT_B_BIT`, or none of them

- VUID-vkCmdDrawIndirect2KHR-maxFragmentDualSrcAttachments-09239

If `blending` is enabled for any attachment where either the source or destination blend factors for that attachment [use the secondary color input](#), the maximum value of `Location` for any output attachment [statically used](#) in the `Fragment Execution Model` executed by this command **must** be less than `maxFragmentDualSrcAttachments`

- VUID-vkCmdDrawIndirect2KHR-None-09548

If the current render pass was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, the value of each element of `VkRenderingAttachmentLocationInfo::pColorAttachmentLocations` in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance

- VUID-vkCmdDrawIndirect2KHR-None-09549

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of each element of `VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices` in the bound pipeline **must** match the value for the corresponding index set currently in the current render pass instance

- VUID-vkCmdDrawIndirect2KHR-None-10927

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader

object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdDrawIndirect2KHR-None-10928

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdDrawIndirect2KHR-None-09642

If the current render pass was begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`

- VUID-vkCmdDrawIndirect2KHR-None-09643

If the bound graphics pipeline was created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`, the current render pass **must** have begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag

- VUID-vkCmdDrawIndirect2KHR-None-10677

If the `per-tile execution model` is enabled, the `tileShadingPerTileDraw` feature **must** be enabled

- VUID-vkCmdDrawIndirect2KHR-None-10772

If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass

- VUID-vkCmdDrawIndirect2KHR-multiviewPerViewViewports-12262

If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `viewportCount`

- VUID-vkCmdDrawIndirect2KHR-multiviewPerViewViewports-12263

If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `scissorCount`

- VUID-vkCmdDrawIndirect2KHR-flags-11521

If current render pass instance was begun with `vkCmdBeginRendering` with `VkRenderingInfo::flags` which includes `VK_RENDERING_FRAGMENT_REGION_BIT_EXT`, and if `sample shading` is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0

- VUID-vkCmdDrawIndirect2KHR-None-11522

If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a `VkCustomResolveCreateInfoEXT`

- VUID-vkCmdDrawIndirect2KHR-None-11523

If the current render pass instance was begun with `vkCmdBeginRendering` and does not contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not

enabled, the graphics pipeline bound **must** not have been created with a [VkCustomResolveCreateInfoEXT](#)

- VUID-vkCmdDrawIndirect2KHR-customResolve-11524

If the current render pass instance was begun with [vkCmdBeginRendering](#) and [vkCmdBeginCustomResolveEXT](#) has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with [VkCustomResolveCreateInfoEXT::customResolve](#) as [VK_TRUE](#)

- VUID-vkCmdDrawIndirect2KHR-customResolve-11525

If the current render pass instance was begun with [vkCmdBeginRendering](#) and contains a custom resolve, and [vkCmdBeginCustomResolveEXT](#) has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with [VkCustomResolveCreateInfoEXT::customResolve](#) as [VK_FALSE](#)

- VUID-vkCmdDrawIndirect2KHR-None-11861

If the [dynamicRenderingUnusedAttachments](#) feature is not enabled and the current render pass instance was begun with [vkCmdBeginRendering](#) and contains a custom resolve, the bound graphics pipeline **must** have been created with a [VkCustomResolveCreateInfoEXT::colorAttachmentCount](#) equal to [VkRenderingInfo::colorAttachmentCount](#)

- VUID-vkCmdDrawIndirect2KHR-None-11862

If the [dynamicRenderingUnusedAttachments](#) feature is not enabled, and the current render pass instance was begun with [vkCmdBeginRendering](#), it contains a custom resolve, and [VkRenderingInfo::colorAttachmentCount](#) greater than 0, then each element of the [VkRenderingInfo::pColorAttachments](#) array with an [resolveImageView](#) not equal to [VK_NULL_HANDLE](#) **must** have been created with a [VkFormat](#) equal to the corresponding element of [VkCustomResolveCreateInfoEXT::pColorAttachmentFormats](#) used to create the bound graphics pipeline

- VUID-vkCmdDrawIndirect2KHR-None-11863

If the [dynamicRenderingUnusedAttachments](#) feature is not enabled, and the current render pass instance was begun with [vkCmdBeginRendering](#), it contains a custom resolve, and [VkRenderingInfo::colorAttachmentCount](#) greater than 0, then each element of the [VkRenderingInfo::pColorAttachments](#) array with an [resolveImageView](#) equal to [VK_NULL_HANDLE](#) **must** have the corresponding element of [VkCustomResolveCreateInfoEXT::pColorAttachmentFormats](#) used to create the bound pipeline equal to [VK_FORMAT_UNDEFINED](#)

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-11864

If the [dynamicRenderingUnusedAttachments](#) feature is enabled, the current render pass instance was begun with [vkCmdBeginRendering](#), it contains a custom resolve, and [VkRenderingInfo::colorAttachmentCount](#) greater than 0, then each element of the [VkRenderingInfo::pColorAttachments](#) array with an [resolveImageView](#) not equal to [VK_NULL_HANDLE](#) **must** have been created with a [VkFormat](#) equal to the corresponding element of [VkCustomResolveCreateInfoEXT::pColorAttachmentFormats](#) used to create the bound graphics pipeline, or the corresponding element of [VkCustomResolveCreateInfoEXT::pColorAttachmentFormats](#), if it exists, **must** be [VK_FORMAT_UNDEFINED](#)

- VUID-vkCmdDrawIndirect2KHR-None-11865

If the current render pass instance was begun with [vkCmdBeginRendering](#), it contains a

custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-None-11866

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-11867

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-None-11868

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-None-11869

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdDrawIndirect2KHR-dynamicRenderingUnusedAttachments-11870

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdDrawIndirect2KHR-colorAttachmentCount-11871

If the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than `0` and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, then for each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView`

not equal to `VK_NULL_HANDLE`, the `resolveImageView` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdDrawIndirect2KHR-pDepthAttachment-11872

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdDrawIndirect2KHR-pStencilAttachment-11873

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdDrawIndirect2KHR-customResolve-11529

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering`, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdDrawIndirect2KHR-customResolve-11530

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has not yet been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdDrawIndirect2KHR-flags-13361

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then all bound shader objects **must** have been created with the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit

- VUID-vkCmdDrawIndirect2KHR-flags-13362

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` set

- VUID-vkCmdDrawIndirect2KHR-flags-13363

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then there **must** be no binding with `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawIndirect2KHR-flags-13364

If there are any shader objects bound that were created with **flags** that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR` set

- VUID-vkCmdDrawIndirect2KHR-flags-13365

If there are any shader objects bound that were created with **flags** that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, there **must** be no shader object bound to the `VK_SHADER_STAGE_TASK_BIT_EXT` stage

- VUID-vkCmdDrawIndirect2KHR-None-04007

All vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** have either valid or `VK_NULL_HANDLE` buffers bound

- VUID-vkCmdDrawIndirect2KHR-None-04008

If the **nullDescriptor** feature is not enabled, all vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** not be `VK_NULL_HANDLE`

- VUID-vkCmdDrawIndirect2KHR-None-02721

If the **robustBufferAccess** feature is not enabled, and that pipeline was created without enabling `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` for **vertexInputs**, then for a given vertex buffer binding, any attribute data fetched **must** be entirely contained within the corresponding vertex buffer binding, as described in [Vertex Input Description](#)

- VUID-vkCmdDrawIndirect2KHR-format-10389

For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is a **packed format**, and the **legacyVertexAttributes** feature is not enabled, the value of **attribAddress**, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the **size of the format**

- VUID-vkCmdDrawIndirect2KHR-format-10390

For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is not a **packed format**, and either the **legacyVertexAttributes** feature is not enabled or **format** has 64-bit components, the value of **attribAddress**, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the **component size of the format**

- VUID-vkCmdDrawIndirect2KHR-None-07842

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled then `vkCmdSetPrimitiveTopology` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-dynamicPrimitiveTopologyUnrestricted-07500

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled and the `dynamicPrimitiveTopologyUnrestricted` is `VK_FALSE`, then the `primitiveTopology` parameter of `vkCmdSetPrimitiveTopology` **must** be of the same `topology` class as the pipeline `VkPipelineInputAssemblyStateCreateInfo::topology` state

- VUID-vkCmdDrawIndirect2KHR-primitiveTopology-10286

If a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage is bound, then the `current` value of `primitiveTopology` **must** be `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-primitiveTopology-10747

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command, then a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage **must** be bound

- VUID-vkCmdDrawIndirect2KHR-primitiveTopology-10748

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_POINT_LIST` prior to this drawing command, the `maintenance5` feature is not enabled, both a `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` and `VK_SHADER_STAGE_GEOMETRY_BIT` stage are not bound, then the `Vertex Execution Model` **must** have a `PointSize` decorated variable that is statically written to

- VUID-vkCmdDrawIndirect2KHR-pStrides-04913

If the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, but without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, then `vkCmdBindVertexBuffers2` with a non-NULL `pStrides` parameter or `vkCmdBindVertexBuffers3KHR` with `setStride` set to `VK_TRUE` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdDrawIndirect2KHR-None-13118

If the bound graphics pipeline was created without the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, and `vkCmdBindVertexBuffers3KHR` was called and not subsequently `invalidated` in the current command buffer prior to this draw command, the value of `setStride` in each of its `pBindInfos` elements must have been `VK_FALSE`

- VUID-vkCmdDrawIndirect2KHR-None-04914

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then `vkCmdSetVertexInputEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdDrawIndirect2KHR-Input-07939

If the `vertexAttributeRobustness` feature is not enabled, and the `maintenance9` feature is not enabled, and there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then all variables with the `Input` storage class decorated with `Location` in the `Vertex Execution Model OpEntryPoint`

must contain a location in `VkVertexInputAttributeDescription2EXT::location`

- VUID-vkCmdDrawIndirect2KHR-Input-08734

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and either the `LegacyVertexAttributes` feature is not enabled or the SPIR-V Type associated with a given `Input` variable of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the numeric type associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be the same as `VkVertexInputAttributeDescription2EXT::format`

- VUID-vkCmdDrawIndirect2KHR-format-08936

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then the scalar width associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be 64-bit

- VUID-vkCmdDrawIndirect2KHR-format-08937

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and the scalar width associated with a `Location` decorated `Input` variable in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the corresponding `VkVertexInputAttributeDescription2EXT::format` **must** have a 64-bit component

- VUID-vkCmdDrawIndirect2KHR-None-09203

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then all `Input` variables at the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** not use components that are not present in the format

- VUID-vkCmdDrawIndirect2KHR-None-04875

If there is a shader object bound to the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage or the bound graphics pipeline state was created with both a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage and the `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT` dynamic state enabled, and the current value of `primitiveTopology` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, then `vkCmdSetPatchControlPointsEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-04879

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-None-09637

If the `primitiveTopologyListRestart` feature is not enabled, the `input assembly` is `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY`, or `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled, then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawIndirect2KHR-None-10909

If the `primitiveTopologyPatchListRestart` feature is not enabled, the `input assembly` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, there is a shader object bound to the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdDrawIndirect2KHR-stage-06481

The bound graphics pipeline **must** not have been created with the `VkPipelineShaderStageCreateInfo::stage` member of any element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdDrawIndirect2KHR-None-08885

There **must** be no shader object bound to either of the `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages

- VUID-vkCmdDrawIndirect2KHR-None-07619

If a shader object is bound to the `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stage or a graphics pipeline is bound which was created with both a `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stage and the `VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT` dynamic state enabled, then `vkCmdSetTessellationDomainOriginEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect2KHR-OpExecutionMode-12239

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the type of subdivision, they **must** be the same

- VUID-vkCmdDrawIndirect2KHR-OpExecutionMode-12240

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the orientation of triangles, they **must** be the same

- VUID-vkCmdDrawIndirect2KHR-OpExecutionMode-12241

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the segment spacing, they **must** be the same

- VUID-vkCmdDrawIndirect2KHR-OpExecutionMode-12242

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and

`VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the output patch size, they **must** be the same

- VUID-vkCmdDrawIndirect2KHR-pInfo-13110
If `pInfo->drawCount` is greater than 0, `pInfo->addressRange.size` **must** be greater than or equal to $(pInfo->drawCount - 1) \times pInfo->addressRange.stride + \text{sizeof}(\text{VkDrawIndirectCommand})$
- VUID-vkCmdDrawIndirect2KHR-pInfo-13111
If `pInfo->drawCount` is greater than 1, `pInfo->addressRange.stride` **must** not be 0
- VUID-vkCmdDrawIndirect2KHR-pInfo-13112
If `pInfo->addressRange.stride` is not 0, `pInfo->addressRange.stride` **must** be greater than or equal to `sizeof(VkDrawIndirectCommand)`
- VUID-vkCmdDrawIndirect2KHR-pInfo-13113
If `pInfo->addressRange.stride` is not 0, `pInfo->addressRange.stride` **must** be a multiple of 4
- VUID-vkCmdDrawIndirect2KHR-commandBuffer-13057
`commandBuffer` **must** not be a protected command buffer

Valid Usage (Implicit)

- VUID-vkCmdDrawIndirect2KHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDrawIndirect2KHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkDrawIndirect2InfoKHR` structure
- VUID-vkCmdDrawIndirect2KHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdDrawIndirect2KHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdDrawIndirect2KHR-renderpass
This command **must** only be called inside of a render pass instance
- VUID-vkCmdDrawIndirect2KHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDrawIndirect2KHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT HICS_BIT	Action

Conditional Rendering

vkCmdDrawIndirect2KHR is affected by [conditional rendering](#)

To record a non-indexed indirect drawing command, call:

```
// Provided by VK_VERSION_1_0
void vkCmdDrawIndirect(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 buffer,
    VkDeviceSize             offset,
    uint32_t                 drawCount,
    uint32_t                 stride);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `buffer` is the buffer containing draw parameters.
- `offset` is the byte offset into `buffer` where parameters begin.
- `drawCount` is the number of draws to execute, and **can** be zero.
- `stride` is the byte stride between successive sets of draw parameters.

`vkCmdDrawIndirect` behaves similarly to `vkCmdDraw` except that the parameters are read by the device from a buffer during execution. `drawCount` draws are executed by the command, with parameters taken from `buffer` starting at `offset` and increasing by `stride` bytes for each successive draw. The parameters of each draw are encoded in an array of `VkDrawIndirectCommand` structures. If `drawCount` is less than or equal to one, `stride` is ignored.

Valid Usage

- VUID-vkCmdDrawIndirect-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdDrawIndirect-magFilter-09598

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDrawIndirect-mipmapMode-04770

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdDrawIndirect-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdDrawIndirect-unnormalizedCoordinates-09635

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDrawIndirect-None-08609

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdDrawIndirect-None-08610

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdDrawIndirect-None-08611

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdDrawIndirect-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDrawIndirect-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdDrawIndirect-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic

operations as a result of this command, then the storage texel buffer's **format features must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdDrawIndirect-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's **format features must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdDrawIndirect-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdDrawIndirect-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDrawIndirect-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdDrawIndirect-cubicRangeClamp-09212

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`

- VUID-vkCmdDrawIndirect-reductionMode-09213

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`

- VUID-vkCmdDrawIndirect-selectableCubicWeights-09214

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`

- VUID-vkCmdDrawIndirect-flags-02696

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`

- VUID-vkCmdDrawIndirect-OpTypeImage-07027

For any [VkImageView](#) being written as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDrawIndirect-OpTypeImage-07028

For any [VkImageView](#) being read as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDrawIndirect-OpTypeImage-07029

For any [VkBufferView](#) being written as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDrawIndirect-OpTypeImage-07030

Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdDrawIndirect-None-08600

If a [a bound shader](#) was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdDrawIndirect-None-08601

If a [a bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader

- VUID-vkCmdDrawIndirect-None-10068

For each array of resources that is used by a [a bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdDrawIndirect-None-08114

Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid if they are accessed as described by [descriptor validity](#) by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDrawIndirect-imageLayout-00344

If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)

- VUID-vkCmdDrawIndirect-None-08115

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdDrawIndirect-None-08116

Descriptors in bound descriptor buffers, specified via

`vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdDrawIndirect-None-08604
Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdDrawIndirect-None-08117
If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdSetDescriptorBufferOffsetsEXT`, the bound `VkPipeline` **must** have been created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdDrawIndirect-None-08119
If a descriptor is dynamically used with a `VkPipeline` created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, the descriptor memory **must** be resident
- VUID-vkCmdDrawIndirect-None-08605
If a descriptor is dynamically used with a `VkShaderEXT` created with a `VkDescriptorSetLayout` that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, the descriptor memory **must** be resident
- VUID-vkCmdDrawIndirect-None-08606
If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDrawIndirect-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the `VkPipeline` object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDrawIndirect-uniformBuffers-06935
If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawIndirect-None-08612
If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawIndirect-storageBuffers-06936
If any stage of the `VkPipeline` object bound to the pipeline bind point used by this

command accesses a storage buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawIndirect-None-08613

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawIndirect-commandBuffer-02707

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by `bound shaders` **must** not be a protected resource

- VUID-vkCmdDrawIndirect-viewType-07752

If a `VkImageView` is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdDrawIndirect-format-07753

If a `VkImageView` or `VkBufferView` is accessed as a result of this command, then the `numeric type` of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match

- VUID-vkCmdDrawIndirect-OpImageWrite-08795

If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdDrawIndirect-OpImageWrite-08796

If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components

- VUID-vkCmdDrawIndirect-OpImageWrite-04469

If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdDrawIndirect-SampledType-04470

If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdDrawIndirect-SampledType-04471

If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdDrawIndirect-SampledType-04472

If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a

result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64

- VUID-vkCmdDrawIndirect-SampledType-04473

If a **VkBufferView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdDrawIndirect-sparseImageInt64Atomics-04474

If the **sparseImageInt64Atomics** feature is not enabled, **VkImage** objects created with the **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdDrawIndirect-sparseImageInt64Atomics-04475

If the **sparseImageInt64Atomics** feature is not enabled, **VkBuffer** objects created with the **VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdDrawIndirect-OpImageSampleWeightedQCOM-06971

If **OpImageSampleWeightedQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM**

- VUID-vkCmdDrawIndirect-OpImageSampleWeightedQCOM-06972

If **OpImageSampleWeightedQCOM** uses a **VkImageView** as a sample weight image as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM**

- VUID-vkCmdDrawIndirect-OpImageBoxFilterQCOM-06973

If **OpImageBoxFilterQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM**

- VUID-vkCmdDrawIndirect-OpImageBlockMatchSSDQCOM-06974

If **OpImageBlockMatchSSDQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdDrawIndirect-OpImageBlockMatchSADQCOM-06975

If **OpImageBlockMatchSADQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdDrawIndirect-OpImageBlockMatchSADQCOM-06976

If **OpImageBlockMatchSADQCOM** or **OpImageBlockMatchSSDQCOM** is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail **integer texel coordinate validation**

- VUID-vkCmdDrawIndirect-OpImageSampleWeightedQCOM-06977

If **OpImageSampleWeightedQCOM**, **OpImageBoxFilterQCOM**, **OpImageBlockMatchWindowSSDQCOM**, **OpImageBlockMatchWindowSADQCOM**, **OpImageBlockMatchGatherSSDQCOM**, **OpImageBlockMatchGatherSADQCOM**, **OpImageBlockMatchSSDQCOM**, or **OpImageBlockMatchSADQCOM**

uses a [VkSampler](#) as a result of this command, then the sampler **must** have been created with [VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM](#)

- VUID-vkCmdDrawIndirect-OpImageSampleWeightedQCOM-06978
If any command other than [OpImageSampleWeightedQCOM](#), [OpImageBoxFilterQCOM](#), [OpImageBlockMatchWindowSSDQCOM](#), [OpImageBlockMatchWindowSADQCOM](#), [OpImageBlockMatchGatherSSDQCOM](#), [OpImageBlockMatchGatherSADQCOM](#), [OpImageBlockMatchSSDQCOM](#), or [OpImageBlockMatchSADQCOM](#) uses a [VkSampler](#) as a result of this command, then the sampler **must** not have been created with [VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM](#)
- VUID-vkCmdDrawIndirect-OpImageBlockMatchWindow-09215
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#)
- VUID-vkCmdDrawIndirect-OpImageBlockMatchWindow-09216
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDrawIndirect-OpImageBlockMatchWindow-09217
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)
- VUID-vkCmdDrawIndirect-None-07288
Any shader invocation executed by this command **must** [terminate](#)
- VUID-vkCmdDrawIndirect-None-09600
If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDrawIndirect-commandBuffer-10746
The [VkDeviceMemory](#) object allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in [commandBuffer](#)
- VUID-vkCmdDrawIndirect-None-10678
If this command is recorded inside a [tile shading render pass](#) instance, the stages corresponding to the pipeline bind point used by this command **must** only include [VK_SHADER_STAGE_VERTEX_BIT](#), [VK_SHADER_STAGE_FRAGMENT_BIT](#), and/or [VK_SHADER_STAGE_COMPUTE_BIT](#)
- VUID-vkCmdDrawIndirect-None-10679
If this command is recorded where [per-tile execution model](#) is enabled, there **must** be no access to any image while the image was be transitioned to the

[VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout

- VUID-vkCmdDrawIndirect-pDescription-09900

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the underlying [VkTensorARM](#) object **must** have been created with the [VK_TENSOR_USAGE_SHADER_BIT_ARM](#) usage flag set

- VUID-vkCmdDrawIndirect-dimensionCount-09905

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the [Rank](#) of the [OpTypeTensorARM](#) of the tensor resource variable **must** be equal to the [dimensionCount](#) provided via [VkTensorCreateInfoARM::pDescription](#) when creating the underlying [VkTensorARM](#) object

- VUID-vkCmdDrawIndirect-OpTypeTensorARM-09906

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the element type of the [OpTypeTensorARM](#) of the tensor resource variable **must** be [compatible](#) with the [VkFormat](#) of the [VkTensorViewARM](#) used for the access

- VUID-vkCmdDrawIndirect-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a [OpTypeStruct](#) decorated with [Block](#) or [BufferBlock](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [bufferDescriptorAlignment](#)

- VUID-vkCmdDrawIndirect-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeImage](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [imageDescriptorAlignment](#)

- VUID-vkCmdDrawIndirect-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdDrawIndirect-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#),

VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeTensorARM` using that mapping, the calculated offset for the resource heap **must** be a multiple of `tensorDescriptorAlignment`

- VUID-vkCmdDrawIndirect-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDrawIndirect-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid `VkDeviceAddress` backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawIndirect-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid `VkDeviceAddress`

- VUID-vkCmdDrawIndirect-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdDrawIndirect-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid `VkDeviceAddress` backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawIndirect-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid `VkDeviceAddress`

- VUID-vkCmdDrawIndirect-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdDrawIndirect-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdDrawIndirect-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawIndirect-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawIndirect-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdDrawIndirect-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of [pBindInfo->reservedRangeSize](#) set for [vkCmdBindSamplerHeapEXT](#) **must** be greater than or equal to [minSamplerHeapReservedRangeWithEmbedded](#)

- VUID-vkCmdDrawIndirect-None-11376

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, and that shader statically uses a push constant value, that value **must** have been set by [vkCmdPushDataEXT](#)

- VUID-vkCmdDrawIndirect-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT](#),

VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT,
VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT,
VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT,
VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or
VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds

- VUID-vkCmdDrawIndirect-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawIndirect-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawIndirect-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdDrawIndirect-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdDrawIndirect-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or

`VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdDrawIndirect-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a `VkAccelerationStructureKHR` object via `vkGetAccelerationStructureDeviceAddressKHR` or handle retrieved from a `VkAccelerationStructureNV` object via `vkGetAccelerationStructureHandleNV`

- VUID-vkCmdDrawIndirect-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by `VkSamplerCustomBorderColorIndexCreateInfoEXT`, the value of `VkSamplerCustomBorderColorIndexCreateInfoEXT::index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdDrawIndirect-protectedNoFault-11455

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, the address that the resource is mapped to **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDrawIndirect-protectedNoFault-11456

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the address of the indirect memory **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdDrawIndirect-renderPass-02684

The current render pass **must** be `compatible` with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`

- VUID-vkCmdDrawIndirect-subpass-02685

The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to

VK_PIPELINE_BIND_POINT_GRAPHICS

- VUID-vkCmdDrawIndirect-OpTypeImage-07468

If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass

- VUID-vkCmdDrawIndirect-None-07469

Input attachment views accessed in a subpass **must** be created with the same `VkFormat` as the corresponding subpass definition, and be created with a `VkImageView` that is compatible with the attachment referenced by the subpass' `pInputAttachments` [`InputAttachmentIndex`] in the bound `VkFramebuffer` as specified by [Fragment Input Attachment Compatibility](#)

- VUID-vkCmdDrawIndirect-pDepthInputAttachmentIndex-09595

Input attachment views accessed in a dynamic render pass with a `InputAttachmentIndex` referenced by `VkRenderingInputAttachmentIndexInfo`, or no `InputAttachmentIndex` if `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` or `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are `NULL`, **must** be created with a `VkImageView` that is compatible with the corresponding color, depth, or stencil attachment in `VkRenderingInfo`

- VUID-vkCmdDrawIndirect-pDepthInputAttachmentIndex-09596

Input attachment views accessed in a dynamic render pass via a shader object **must** have an `InputAttachmentIndex` if both `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` and `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are non-`NULL`

- VUID-vkCmdDrawIndirect-InputAttachmentIndex-09597

If an input attachment view accessed in a dynamic render pass via a shader object has an `InputAttachmentIndex`, the `InputAttachmentIndex` **must** match an index in `VkRenderingInputAttachmentIndexInfo`

- VUID-vkCmdDrawIndirect-None-06537

Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command

- VUID-vkCmdDrawIndirect-None-10795

If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_COLOR_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdDrawIndirect-None-10796

If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_DEPTH_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdDrawIndirect-None-10797

If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_STENCIL_BIT` on that attachment, it **must** not be accessed in any way

other than as an attachment by this command

- VUID-vkCmdDrawIndirect-None-12338

If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, the color attachment **must** not be written to by this command

- VUID-vkCmdDrawIndirect-None-12339

If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, the depth attachment **must** not be written to by this command

- VUID-vkCmdDrawIndirect-None-12340

If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, the stencil attachment **must** not be written to by this command

- VUID-vkCmdDrawIndirect-None-09003

If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command

- VUID-vkCmdDrawIndirect-None-06886

If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, [depth writes](#) **must** be disabled

- VUID-vkCmdDrawIndirect-None-06887

If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back [writeMask](#) are not zero, and stencil test is enabled, [all stencil ops](#) **must** be [VK_STENCIL_OP_KEEP](#)

- VUID-vkCmdDrawIndirect-None-07831

If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VIEWPORT](#) dynamic state enabled then [vkCmdSetViewport](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07832

If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_SCISSOR](#) dynamic state enabled then [vkCmdSetScissor](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-08617

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_LINE_WIDTH](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [effective rasterization input topology](#) is in line topology class, then [vkCmdSetLineWidth](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07834

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `depthBiasEnable` is `VK_TRUE`, then `vkCmdSetDepthBias` or `vkCmdSetDepthBias2EXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07835

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_BLEND_CONSTANTS` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment `current value` of `blendEnable` is `VK_TRUE` with a blend equations where any `VkBlendFactor` member is `VK_BLEND_FACTOR_CONSTANT_COLOR`, `VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR`, `VK_BLEND_FACTOR_CONSTANT_ALPHA`, or `VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA`, then `vkCmdSetBlendConstants` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07836

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `depthBoundsTestEnable` is `VK_TRUE`, then `vkCmdSetDepthBounds` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07837

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilCompareMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07838

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilWriteMask` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07839

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_REFERENCE` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilReference` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-maxMultiviewInstanceIndex-02688

If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to `VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex`

- VUID-vkCmdDrawIndirect-sampleLocationsEnable-02689

If the bound graphics pipeline was created with `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` set to `VK_TRUE`, then the active depth attachment **must** have been created with the `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` bit set

- VUID-vkCmdDrawIndirect-None-07634

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleLocationsEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-06666

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then `vkCmdSetSampleLocationsEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07840

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CULL_MODE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCullMode` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07841

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRONT_FACE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFrontFace` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07843

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, `vkCmdSetDepthTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07844

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current

value of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthWriteEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07845

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthCompareOp` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07846

If the `depthBounds` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBoundsTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07847

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetStencilTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07848

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_OP` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, the current value of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilOp` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-viewportCount-03417

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetViewportWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-scissorCount-03418

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetScissorWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing

- VUID-vkCmdDrawIndirect-viewportCount-03419

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic states enabled, and the state is

not inherited, then the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** match the `scissorCount` parameter of `vkCmdSetScissorWithCount`

- VUID-vkCmdDrawIndirect-viewportCount-04137

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportWScalingStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndirect-viewportCount-04138

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the **current value** of `viewportWScalingEnable` is `VK_TRUE`, then `vkCmdSetViewportWScalingNV` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-08636

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the **current value** of `viewportWScalingEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportWScalingNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndirect-viewportCount-04139

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportShadingRateImageStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndirect-shadingRateImage-09233

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV` and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoarseSampleOrderNV` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-shadingRateImage-09234

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of

`shadingRateImageEnable` is `VK_TRUE`, then `vkCmdSetViewportShadingRatePaletteNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-08637

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `shadingRateImageEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportShadingRatePaletteNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndirect-VkPipelineVieportCreateInfo-04141

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportSwizzleStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndirect-VkPipelineVieportCreateInfo-04142

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdDrawIndirect-None-07878

If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` dynamic state enabled, then `vkCmdSetExclusiveScissorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-07879

If the `exclusiveScissor` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV` dynamic state enabled, and the most recent call to `vkCmdSetExclusiveScissorEnableNV` in the current command buffer set any element of `pExclusiveScissorEnables` to `VK_TRUE`, then `vkCmdSetExclusiveScissorNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-04876

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` dynamic state enabled, then `vkCmdSetRasterizerDiscardEnable` **must** have been called and not

subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-None-04877

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE** dynamic state enabled, and the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, then **vkCmdSetDepthBiasEnable** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-logicOp-04878

If a shader object is bound to the **VK_SHADER_STAGE_FRAGMENT_BIT** or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_LOGIC_OP_EXT** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of **logicOpEnable** is **VK_TRUE**, then **vkCmdSetLogicOpEXT** **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdDrawIndirect-primitiveFragmentShadingRateWithMultipleViewports-04552

If the **primitiveFragmentShadingRateWithMultipleViewports** limit is not supported, the bound graphics pipeline was created with the **VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT** dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the **PrimitiveShadingRateKHR** built-in, then **vkCmdSetViewportWithCount** **must** have been called in the current command buffer prior to this drawing command, and the **viewportCount** parameter of **vkCmdSetViewportWithCount** **must** be 1

- VUID-vkCmdDrawIndirect-primitiveFragmentShadingRateWithMultipleViewports-08642

If the **primitiveFragmentShadingRateWithMultipleViewports** limit is not supported, and any shader object bound to a graphics stage writes to the **PrimitiveShadingRateKHR** built-in, then **vkCmdSetViewportWithCount** **must** have been called in the current command buffer prior to this drawing command, and the **viewportCount** parameter of **vkCmdSetViewportWithCount** **must** be 1

- VUID-vkCmdDrawIndirect-blendEnable-04727

If a shader object is bound to the **VK_SHADER_STAGE_FRAGMENT_BIT** stage or a graphics pipeline is bound which was created with **VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, then for each color attachment, if the corresponding image view's **format features** do not contain **VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT**, then the corresponding **current value** of **blendEnable** **must** be **VK_FALSE**

- VUID-vkCmdDrawIndirect-None-08644

If a shader object is bound to any graphics stage or a graphics pipeline is bound, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and none of the following is enabled:

- the **VK_AMD_mixed_attachment_samples** extension
- the **VK_NV_framebuffer_mixed_samples** extension
- the **multisampledRenderToSingleSampled** feature

then the `current value` of `rasterizationSamples` **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdDrawIndirect-None-08876

If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with `vkCmdBeginRendering`

- VUID-vkCmdDrawIndirect-imageView-06172

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdDrawIndirect-imageView-06173
