Compute workloads are formed from groups of work items called workgroups and processed by the compute shader in the current compute pipeline. A workgroup is a collection of shader invocations that execute the same shader, potentially in parallel. Compute shaders execute in *global workgroups* which are divided into a number of *local workgroups* with a size that **can** be set by assigning a value to the [LocalSize](#) or [LocalSizeId](#) execution mode or via an object decorated by the [WorkgroupSize](#) decoration. An invocation within a local workgroup **can** share data with other members of the local workgroup through shared variables and issue memory and control flow barriers to synchronize with other members of the local workgroup.

9.18. Ray Generation Shaders

A ray generation shader is similar to a compute shader. Its main purpose is to execute ray tracing queries using [pipeline trace ray](#) instructions (such as [OpTraceRayKHR](#)) and process the results.

9.18.1. Ray Generation Shader Execution

One ray generation shader is executed per ray tracing dispatch. Its location in the shader binding table (see [Shader Binding Table](#) for details) is passed directly into `vkCmdTraceRaysKHR` using the `pRaygenShaderBindingTable` parameter or `vkCmdTraceRaysNV` using the `raygenShaderBindingTableBuffer` and `raygenShaderBindingOffset` parameters.

9.19. Intersection Shaders

Intersection shaders enable the implementation of arbitrary, application defined geometric primitives. An intersection shader for a primitive is executed whenever its axis-aligned bounding box is hit by a ray.

Like other ray tracing shader domains, an intersection shader operates on a single ray at a time. It also operates on a single primitive at a time. It is therefore the purpose of an intersection shader to compute the ray-primitive intersections and report them. To report an intersection, the shader calls the `OpReportIntersectionKHR` instruction.

An intersection shader communicates with any-hit and closest shaders by generating attribute values that they **can** read. Intersection shaders **cannot** read or modify the ray payload.

9.19.1. Intersection Shader Execution

The order in which intersections are found along a ray, and therefore the order in which intersection shaders are executed, is unspecified.

The intersection shader of the closest AABB which intersects the ray is guaranteed to be executed at some point during traversal, unless the ray is forcibly terminated.

9.20. Any-Hit Shaders

The any-hit shader is executed after the intersection shader reports an intersection that lies within the current $[t_{\min}, t_{\max}]$ of the ray. The main use of any-hit shaders is to programmatically decide whether or not an intersection will be accepted. The intersection will be accepted unless the shader calls the `OpIgnoreIntersectionKHR` instruction. Any-hit shaders have read-only access to the attributes generated by the corresponding intersection shader, and **can** read or modify the ray payload.

9.20.1. Any-Hit Shader Execution

The order in which intersections are found along a ray, and therefore the order in which any-hit shaders are executed, is unspecified.

The any-hit shader of the closest hit is guaranteed to be executed at some point during traversal, unless the ray is forcibly terminated.

9.21. Closest Hit Shaders

Closest hit shaders have read-only access to the attributes generated by the corresponding intersection shader, and **can** read or modify the ray payload. They also have access to a number of system-generated values. Closest hit shaders **can** call [pipeline trace ray](#) instructions to recursively trace rays.

9.21.1. Closest Hit Shader Execution

Exactly one closest hit shader is executed when traversal is finished and an intersection has been found and accepted.

9.22. Miss Shaders

Miss shaders **can** access the ray payload and **can** trace new rays through the [pipeline trace ray](#) instructions, but **cannot** access attributes since they are not associated with an intersection.

9.22.1. Miss Shader Execution

A miss shader is executed instead of a closest hit shader if no intersection was found during traversal.

9.23. Callable Shaders

Callable shaders **can** access a callable payload that works similarly to ray payloads to do subroutine work.

9.23.1. Callable Shader Execution

A callable shader is executed by calling [OpExecuteCallableKHR](#) from an allowed shader stage.

9.24. Interpolation Decorations

Variables in the [Input](#) storage class in a fragment shader's interface are interpolated from the values specified by the primitive being rasterized.

NOTE

Interpolation decorations can be present on input and output variables in pre-rasterization shaders but have no effect on the interpolation performed.

An undecorated input variable will be interpolated with perspective-correct interpolation according to the primitive type being rasterized. [Lines](#) and [polygons](#) are interpolated in the same way as the primitive's clip coordinates. If the [NoPerspective](#) decoration is present, linear interpolation is instead used for [lines](#) and [polygons](#). For points, as there is only a single vertex, input values are never interpolated and instead take the value written for the single vertex.

If the [Flat](#) decoration is present on an input variable, the value is not interpolated, and instead takes its value directly from the [provoking vertex](#). Fragment shader inputs that are signed or

unsigned integers, integer vectors, or any double-precision floating-point type **must** be decorated with **Flat**.

Interpolation of input variables is performed at an implementation-defined position within the fragment area being shaded. The position is further constrained as follows:

- If the **Centroid** decoration is used, the interpolation position used for the variable **must** also fall within the bounds of the primitive being rasterized.
- If the **Sample** decoration is used, the interpolation position used for the variable **must** be at the position of the sample being shaded by the current fragment shader invocation.
- If a sample count of 1 is used, and the **sampleLocationSampleCounts** limit includes **VK_SAMPLE_COUNT_1_BIT**, the interpolation position **must** be at the position of the sample being shaded by the current fragment shader invocation.
- If a sample count of 1 is used and **VK_SAMPLE_COUNT_1_BIT** is not advertised in the **sampleLocationSampleCounts** limit, the interpolation position **must** be at the center of the fragment area.

NOTE

As **Centroid** constrains the interpolation position to lie within the covered area of the primitive, using it may cause the position to differ between neighboring fragments when it otherwise would not. Derivatives calculated based on these differing locations can produce inconsistent results compared to undecorated inputs. Thus using **Centroid** with input variables used in derivative calculations is not recommended.

If the **PerVertexKHR** decoration is present on an input variable, the value is not interpolated, and instead values from all input vertices are available in an array. Each index of the array corresponds to one of the vertices of the primitive that produced the fragment.

If the **CustomInterpAMD** decoration is present on an input variable, the value **cannot** be accessed directly; instead the extended instruction **InterpolateAtVertexAMD** **must** be used to obtain values from the input vertices.

9.25. Push Constant Decorations

Variables in the **PushConstant** storage class **can** be decorated with additional parameters to control their placement and behavior within push constant banks.

The **BankNV** decoration specifies which hardware push constant bank a variable or block should be placed in. When present on a push constant variable or block, it indicates the hardware bank index to use for accessing the push constant data. When **BankNV** is absent, it behaves as if the value is 0.

The **MemberOffsetNV** decoration specifies an additional offset within a push constant bank for push constant variables or blocks. This decoration allows control over the placement of push constants within the specified bank, enabling more efficient memory layout and access patterns. When **MemberOffsetNV** is absent, it behaves as if the value is 0.

9.26. Static Use

A SPIR-V module declares a global object in memory using the `OpVariable` or `OpUntypedVariableKHR` instruction, which results in a pointer `x` to that object. A specific entry point in a SPIR-V module is said to *statically use* that object if that entry point's call tree contains a function containing a instruction with `x` as an `id` operand. A shader entry point also *statically uses* any variables explicitly declared in its interface.

9.27. Scope

A *scope* describes a set of shader invocations, where each such set is a *scope instance*. Each invocation belongs to one or more scope instances, but belongs to no more than one scope instance for each scope.

The operations available between invocations in a given scope instance vary, with smaller scopes generally able to perform more operations, and with greater efficiency.

9.27.1. Cross Device

All invocations executed in a Vulkan instance fall into a single *cross device scope instance*.

Whilst the `CrossDevice` scope is defined in SPIR-V, it is disallowed in Vulkan. API [synchronization](#) commands **can** be used to communicate between devices.

9.27.2. Device

All invocations executed on a single device form a *device scope instance*.

If the `vulkanMemoryModel` and `vulkanMemoryModelDeviceScope` features are enabled, this scope is represented in SPIR-V by the `Device Scope`, which **can** be used as a `Memory Scope` for barrier and atomic operations.

If both the `shaderDeviceClock` and `vulkanMemoryModelDeviceScope` features are enabled, using the `Device Scope` with the `OpReadClockKHR` instruction will read from a clock that is consistent across invocations in the same device scope instance.

There is no method to synchronize the execution of these invocations within SPIR-V, and this **can** only be done with API synchronization primitives.

Invocations executing on different devices in a device group operate in separate device scope instances.

9.27.3. Queue Family

Invocations executed by queues in a given queue family form a *queue family scope instance*.

This scope is identified in SPIR-V as the `QueueFamily Scope` if the `vulkanMemoryModel` feature is enabled, or if not, the `Device Scope`, which **can** be used as a `Memory Scope` for barrier and atomic operations.

If the `shaderDeviceClock` feature is enabled, but the `vulkanMemoryModelDeviceScope` feature is not enabled, using the `Device Scope` with the `OpReadClockKHR` instruction will read from a clock that is consistent across invocations in the same queue family scope instance.

There is no method to synchronize the execution of these invocations within SPIR-V, and this **can** only be done with API synchronization primitives.

Each invocation in a queue family scope instance **must** be in the same [device scope instance](#).

9.27.4. Command

Any shader invocations executed as the result of a single command such as `vkCmdDispatch` or `vkCmdDraw` form a *command scope instance*. For indirect drawing commands with `drawCount` greater than one, invocations from separate draws are in separate command scope instances. For ray tracing shaders, an invocation group is an implementation-dependent subset of the set of shader invocations of a given shader stage which are produced by a single trace rays command.

There is no specific `Scope` for communication across invocations in a command scope instance. As this has a clear boundary at the API level, coordination here **can** be performed in the API, rather than in SPIR-V.

Each invocation in a command scope instance **must** be in the same [queue-family scope instance](#).

For shaders without defined [workgroups](#), this set of invocations forms an *invocation group* as defined in the [SPIR-V specification](#).

9.27.5. Primitive

Any fragment shader invocations executed as the result of rasterization of a single primitive form a *primitive scope instance*.

There is no specific `Scope` for communication across invocations in a primitive scope instance.

Any generated [helper invocations](#) are included in this scope instance.

Each invocation in a primitive scope instance **must** be in the same [command scope instance](#).

Any input variables decorated with `Flat` are uniform within a primitive scope instance.

9.27.6. Shader Call

Any [shader-call-related](#) invocations that are executed in one or more ray tracing execution models form a *shader call scope instance*.

The `ShaderCallKHR Scope` can be used as `Memory Scope` for barrier and atomic operations.

Each invocation in a shader call scope instance **must** be in the same [queue family scope instance](#).

9.27.7. Workgroup

A *local workgroup* is a set of invocations that can synchronize and share data with each other using

memory in the **Workgroup** storage class.

The **Workgroup Scope** can be used as both an **Execution Scope** and **Memory Scope** for barrier and atomic operations.

Each invocation in a local workgroup **must** be in the same **command scope instance**.

Only task, mesh, and compute shaders have defined workgroups - other shader types **cannot** use workgroup functionality. For shaders that have defined workgroups, this set of invocations forms an *invocation group* as defined in the **SPIR-V specification**.

When variables declared with the **Workgroup** storage class are explicitly laid out (hence they are also decorated with **Block**), the amount of storage consumed is the size of the largest Block variable, not counting any padding at the end. The amount of storage consumed by the non-Block variables declared with the **Workgroup** storage class is implementation-dependent. However, the amount of storage consumed may not exceed the largest block size that would be obtained if all active non-Block variables declared with **Workgroup** storage class were assigned offsets in an arbitrary order by successively taking the smallest valid offset according to the **Standard Storage Buffer Layout** rules, and with **Boolean** values considered as 32-bit integer values for the purpose of this calculation. (This is equivalent to using the GLSL std430 layout rules.)

9.27.8. Subgroup

A *subgroup* (see the subsection “Control Flow” of section 2 of the SPIR-V 1.3 Revision 1 specification) is a set of invocations that can synchronize and share data with each other efficiently.

The **Subgroup Scope** can be used as both an **Execution Scope** and **Memory Scope** for barrier and atomic operations. Other **subgroup features** allow the use of **group operations** with subgroup scope.

If the **shaderSubgroupClock** feature is enabled, using the **Subgroup Scope** with the **OpReadClockKHR** instruction will read from a clock that is consistent across invocations in the same subgroup.

For **shaders that have defined workgroups**, each invocation in a subgroup **must** be in the same **local workgroup**.

In other shader stages, each invocation in a subgroup **must** be in the same **device scope instance**.

Only **shader stages that support subgroup operations** have defined subgroups.

Subgroups are not guaranteed to be a subset of a single command in **shaders that do not have defined workgroups**. Values that are guaranteed to be uniform for a given command or sub command may then not be uniform for the subgroup, and vice versa. As such, applications must take care when dealing with mixed uniformity.

NOTE

A somewhat common example of this would something like trying to optimize access to per-draw data using subgroup operations:

```
buffer { uint draw_data[]; };

flat in int vDrawID; // Passed through from vertex shader
```

```
void main()
{
    uint local_draw_data = subgroupBroadcastFirst(draw_data
[local_draw_data]);
}
```

This can be done in an attempt to optimize the shader to only perform the loads once per subgroup. However, if the implementation packs multiple draws into a single subgroup, invocations from draws with a different drawID are now receiving data from the wrong invocation. Applications should rely on implementations to do this kind of optimization automatically where the implementation can, rather than trying to force it.

9.27.9. Quad

A *quad scope instance* is formed of four shader invocations.

In a fragment shader, each invocation in a quad scope instance is formed of invocations in neighboring framebuffer locations (x_i, y_i) , where:

- i is the index of the invocation within the scope instance.
- w and h are the number of pixels the fragment covers in the x and y axes.
- w and h are identical for all participating invocations.
- $(x_0) = (x_1 - w) = (x_2) = (x_3 - w)$
- $(y_0) = (y_1) = (y_2 - h) = (y_3 - h)$
- Each invocation has the same layer and sample indices.

In a mesh, task, or compute shader, if the **DerivativeGroupQuadsKHR** execution mode is specified, each invocation in a quad scope instance is formed of invocations with adjacent local invocation IDs (x_i, y_i) , where:

- i is the index of the invocation within the quad scope instance.
- $(x_0) = (x_1 - 1) = (x_2) = (x_3 - 1)$
- $(y_0) = (y_1) = (y_2 - 1) = (y_3 - 1)$
- x_0 and y_0 are integer multiples of 2.
- Each invocation has the same z coordinate.

In a mesh, task, or compute shader, if the **DerivativeGroupLinearKHR** execution mode is specified, each invocation in a quad scope instance is formed of invocations with adjacent local invocation indices (l_i) , where:

- i is the index of the invocation within the quad scope instance.
- $(l_0) = (l_1 - 1) = (l_2 - 2) = (l_3 - 3)$
- l_0 is an integer multiple of 4.

In all shaders, each invocation in a quad scope instance is formed of invocations in adjacent subgroup invocation indices (s_i), where:

- i is the index of the invocation within the quad scope instance.
- $(s_0) = (s_1 - 1) = (s_2 - 2) = (s_3 - 3)$
- s_0 is an integer multiple of 4.

Each invocation in a quad scope instance **must** be in the same [subgroup](#).

In a fragment shader, each invocation in a quad scope instance **must** be in the same [primitive scope instance](#).

Fragment, mesh, task, and compute shaders have defined quad scope instances. If the [quadOperationsInAllStages](#) limit is supported, any [shader stages that support subgroup operations](#) also have defined quad scope instances.

9.27.10. Fragment Interlock

A *fragment interlock scope instance* is formed of fragment shader invocations based on their framebuffer locations ($x,y,layer,sample$), executed by commands inside a single [subpass](#).

The specific set of invocations included varies based on the execution mode as follows:

- If the [SampleInterlockOrderedEXT](#) or [SampleInterlockUnorderedEXT](#) execution modes are used, only invocations with identical framebuffer locations ($x,y,layer,sample$) are included.
- If the [PixelInterlockOrderedEXT](#) or [PixelInterlockUnorderedEXT](#) execution modes are used, fragments with different sample ids are also included.
- If the [ShadingRateInterlockOrderedEXT](#) or [ShadingRateInterlockUnorderedEXT](#) execution modes are used, fragments from neighboring framebuffer locations are also included. The [shading rate image](#) or [fragment shading rate](#) determines these fragments.

Only fragment shaders with one of the above execution modes have defined fragment interlock scope instances.

There is no specific [Scope](#) value for communication across invocations in a fragment interlock scope instance. However, this is implicitly used as a memory scope by [OpBeginInvocationInterlockEXT](#) and [OpEndInvocationInterlockEXT](#).

Each invocation in a fragment interlock scope instance **must** be in the same [queue family scope instance](#).

9.27.11. Invocation

The smallest *scope* is a single invocation; this is represented by the [Invocation Scope](#) in SPIR-V.

Fragment shader invocations **must** be in a [primitive scope instance](#).

Invocations in [fragment shaders that have a defined fragment interlock scope](#) **must** be in a [fragment interlock scope instance](#).

Invocations in [shaders that have defined workgroups](#) **must** be in a [local workgroup](#).

Invocations in [shaders that have a defined subgroup scope](#) **must** be in a [subgroup](#).

Invocations in [shaders that have a defined quad scope](#) **must** be in a [quad scope instance](#).

All invocations in all stages **must** be in a [command scope instance](#).

9.28. Group Operations

Group operations are executed by multiple invocations within a [scope instance](#); with each invocation involved in calculating the result. This provides a mechanism for efficient communication between invocations in a particular scope instance.

Group operations all take a [Scope](#) defining the desired [scope instance](#) to operate within. Only the [Subgroup](#) scope **can** be used for these operations; the [subgroupSupportedOperations](#) limit defines which types of operation **can** be used.

9.28.1. Basic Group Operations

Basic group operations include the use of [OpGroupNonUniformElect](#), [OpControlBarrier](#), [OpMemoryBarrier](#), and atomic operations.

[OpGroupNonUniformElect](#) **can** be used to choose a single invocation to perform a task for the whole group. Only the invocation with the lowest id in the group will return [true](#).

The [Memory Model](#) appendix defines the operation of barriers and atomics.

9.28.2. Vote Group Operations

The vote group operations allow invocations within a group to compare values across a group. The types of votes enabled are:

- Do all active group invocations agree that an expression is true?
- Do any active group invocations evaluate an expression to true?
- Do all active group invocations have the same value of an expression?

NOTE

These operations are useful in combination with control flow in that they allow for developers to check whether conditions match across the group and choose potentially faster code-paths in these cases.

9.28.3. Arithmetic Group Operations

The arithmetic group operations allow invocations to perform scans and reductions across a group. The operators supported are add, mul, min, max, and, or, xor.

For reductions, every invocation in a group will obtain the cumulative result of these operators applied to all values in the group. For exclusive scans, each invocation in a group will obtain the cumulative result of these operators applied to all values in invocations with a lower index in the

group. Inclusive scans are identical to exclusive scans, except the cumulative result includes the operator applied to the value in the current invocation.

The order in which these operators are applied is implementation-dependent.

9.28.4. Ballot Group Operations

The ballot group operations allow invocations to perform more complex votes across the group. The ballot functionality allows all invocations within a group to provide a boolean value and get as a result what each invocation provided as their boolean value. The broadcast functionality allows values to be broadcast from an invocation to all other invocations within the group.

9.28.5. Shuffle Group Operations

The shuffle group operations allow invocations to read values from other invocations within a group.

9.28.6. Shuffle Relative Group Operations

The shuffle relative group operations allow invocations to read values from other invocations within the group relative to the current invocation in the group. The relative operations supported allow data to be shifted up and down through the invocations within a group.

9.28.7. Clustered Group Operations

The clustered group operations allow invocations to perform an operation among partitions of a group, such that the operation is only performed within the group invocations within a partition. The partitions for clustered group operations are consecutive power-of-two size groups of invocations and the cluster size **must** be known at pipeline creation time. The operations supported are add, mul, min, max, and, or, xor.

9.28.8. Rotate Group Operations

The rotate group operations allow invocations to read values from other invocations within the group relative to the current invocation and modulo the size of the group. Clustered rotate group operations perform the same operation within individual partitions of a group.

The partitions for clustered rotate group operations are consecutive power-of-two size groups of invocations and the cluster size **must** be known at pipeline creation time.

9.29. Quad Group Operations

Quad group operations (`OpGroupNonUniformQuad*`) are a specialized type of [group operations](#) that only operate on [quad scope instances](#). Whilst these instructions do include a `Scope` parameter, this scope is always overridden; only the [quad scope instance](#) is included in its execution scope.

Fragment shaders that statically execute either `OpGroupNonUniformQuadBroadcast` or `OpGroupNonUniformQuadSwap` **must** launch sufficient invocations to ensure their correct operation; additional [helper invocations](#) are launched for framebuffer locations not covered by rasterized

fragments if necessary.

The index used to select participating invocations is *i*, as described for a [quad scope instance](#), defined as the *quad index* in the [SPIR-V specification](#).

For `OpGroupNonUniformQuadBroadcast` this value is equal to `Index`. For `OpGroupNonUniformQuadSwap`, it is equal to the implicit `Index` used by each participating invocation.

9.30. Derivative Operations

Derivative operations calculate the partial derivative for an expression *P* as a function of an invocation's *x* and *y* coordinates.

Derivative operations operate on a set of invocations known as a *derivative group* as defined in the [SPIR-V specification](#).

A derivative group in a fragment shader is equivalent to the [quad scope instance](#) if the `QuadDerivativesKHR` execution mode is specified, otherwise it is equivalent to the [primitive scope instance](#). A derivative group in a mesh, task, or compute shader is equivalent to the [quad scope instance](#).

Derivatives are calculated assuming that *P* is piecewise linear and continuous within the derivative group.

The following control-flow restrictions apply to derivative operations:

- If the `QuadDerivativesKHR` execution mode is specified, dynamic instances of any derivative operations **must** be executed in control flow that is uniform within the current [quad scope instance](#).
- If the `QuadDerivativesKHR` execution mode is not specified:
 - dynamic instances of explicit derivative instructions (`OpDPdx*`, `OpDPdy*`, and `OpFwidth*`) **must** be executed in control flow that is uniform within a derivative group.
 - dynamic instances of implicit derivative operations **can** be executed in control flow that is not uniform within the derivative group, but results are undefined.

Fragment shaders that statically execute derivative operations **must** launch sufficient invocations to ensure their correct operation; additional [helper invocations](#) are launched for framebuffer locations not covered by rasterized fragments if necessary.

NOTE

In a mesh, task, or compute shader, it is the application's responsibility to ensure that sufficient invocations are launched.

Derivative operations calculate their results as the difference between the result of *P* across invocations in the quad. For fine derivative operations (`OpDPdxFine` and `OpDPdyFine`), the values of $DPdx(P_i)$ are calculated as

$$DPdx(P_0) = DPdx(P_1) = P_1 - P_0$$

$$DPdx(P_2) = DPdx(P_3) = P_3 - P_2$$

and the values of $DPdy(P_i)$ are calculated as

$$DPdy(P_0) = DPdy(P_2) = P_2 - P_0$$

$$DPdy(P_1) = DPdy(P_3) = P_3 - P_1$$

where i is the index of each invocation as described in [Quad](#).

Coarse derivative operations ([OpDPdxCoarse](#) and [OpDPdyCoarse](#)), calculate their results in roughly the same manner, but **may** only calculate two values instead of four (one for each of $DPdx$ and $DPdy$), reusing the same result no matter the originating invocation. If an implementation does this, it **should** use the fine derivative calculations described for P_0 .

NOTE

Derivative values are calculated between fragments rather than pixels. If the fragment shader invocations involved in the calculation cover multiple pixels, these operations cover a wider area, resulting in larger derivative values. This in turn will result in a coarser LOD being selected for image sampling operations using derivatives.

Applications may want to account for this when using multi-pixel fragments; if pixel derivatives are desired, applications should use explicit derivative operations and divide the results by the size of the fragment in each dimension as follows:

$$DPdx(P_n)' = DPdx(P_n) / w$$

$$DPdy(P_n)' = DPdy(P_n) / h$$

where w and h are the size of the fragments in the quad, and $DPdx(P_n)'$ and $DPdy(P_n)'$ are the pixel derivatives.

The results for [OpDPdx](#) and [OpDPdy](#) **may** be calculated as either fine or coarse derivatives, with implementations favoring the most efficient approach. Implementations **must** choose coarse or fine consistently between the two.

Executing [OpFwidthFine](#), [OpFwidthCoarse](#), or [OpFwidth](#) is equivalent to executing the corresponding [OpDPdx*](#) and [OpDPdy*](#) instructions, taking the absolute value of the results, and summing them.

Executing an [OpImage*Sample*ImplicitLod](#) instruction is equivalent to executing [OpDPdx\(Coordinate\)](#) and [OpDPdy\(Coordinate\)](#), and passing the results as the [Grad](#) operands [dx](#) and [dy](#).

NOTE

It is expected that using the [ImplicitLod](#) variants of sampling functions will be substantially more efficient than using the [ExplicitLod](#) variants with explicitly

generated derivatives.

9.31. Helper Invocations

When performing `derivative` or `quad group` operations in a fragment shader, additional invocations **may** be spawned in order to ensure correct results. These additional invocations are known as *helper invocations* and **can** be identified by a non-zero value in the `HelperInvocation` built-in. Stores and atomics performed by helper invocations **must** not have any effect on memory except for the `Function`, `Private` and `Output` storage classes, and values returned by atomic instructions in helper invocations are undefined.

NOTE

While storage to `Output` storage class has an effect even in helper invocations, it does not mean that helper invocations have an effect on the framebuffer. `Output` variables in fragment shaders can be read from as well, and they behave more like `Private` variables for the duration of the shader invocation.

If the `MaximallyReconvergesKHR` execution mode is applied to the entry point, helper invocations **must** remain active for all instructions for the lifetime of the quad scope instance they are a part of. If the `MaximallyReconvergesKHR` execution mode is not applied to the entry point, helper invocations **may** be considered inactive for `group operations` other than `derivative` and `quad group` operations. All invocations in a quad scope instance **may** become permanently inactive at any point once the only remaining invocations in that quad scope instance are helper invocations.

9.32. Cooperative Matrices

A *cooperative matrix* type is a SPIR-V type where the storage for and computations performed on the matrix are spread across the invocations in a scope instance. These types give the implementation freedom in how to optimize matrix multiplies.

SPIR-V defines the types and instructions, but does not specify rules about what sizes/combinations are valid, and it is expected that different implementations **may** support different sizes.

To enumerate the supported cooperative matrix types and operations, call:

```
// Provided by VK_KHR_cooperative_matrix
VkResult vkGetPhysicalDeviceCooperativeMatrixPropertiesKHR(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pPropertyCount,
    VkCooperativeMatrixPropertiesKHR* pProperties);
```

- `physicalDevice` is the physical device.
- `pPropertyCount` is a pointer to an integer related to the number of cooperative matrix properties available or queried.
- `pProperties` is either `NULL` or a pointer to an array of `VkCooperativeMatrixPropertiesKHR` structures.

If `pProperties` is `NULL`, then the number of cooperative matrix properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of cooperative matrix properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available cooperative matrix properties were returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceCooperativeMatrixPropertiesKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceCooperativeMatrixPropertiesKHR-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceCooperativeMatrixPropertiesKHR-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkCooperativeMatrixPropertiesKHR` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To enumerate additional supported cooperative matrix types and operations, call:

```
// Provided by VK_NV_cooperative_matrix2
VkResult vkGetPhysicalDeviceCooperativeMatrixFlexibleDimensionsPropertiesNV(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pPropertyCount,
    VkCooperativeMatrixFlexibleDimensionsPropertiesNV* pProperties);
```

- `physicalDevice` is the physical device.
- `pPropertyCount` is a pointer to an integer related to the number of cooperative matrix properties available or queried.

- `pProperties` is either `NULL` or a pointer to an array of `VkCooperativeMatrixFlexibleDimensionsPropertiesNV` structures.

If `pProperties` is `NULL`, then the number of flexible dimensions properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number flexible dimensions properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available flexible dimensions properties were returned.

If the `cooperativeMatrixFlexibleDimensions` feature is not supported, the implementation **must** advertise zero properties.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceCooperativeMatrixFlexibleDimensionsPropertiesNV-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceCooperativeMatrixFlexibleDimensionsPropertiesNV-pPropertyCount-parameter
`pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceCooperativeMatrixFlexibleDimensionsPropertiesNV-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkCooperativeMatrixFlexibleDimensionsPropertiesNV` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To enumerate the supported cooperative matrix types and operations, call:

```
// Provided by VK_NV_cooperative_matrix
VkResult vkGetPhysicalDeviceCooperativeMatrixPropertiesNV(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pPropertyCount,
    VkCooperativeMatrixPropertiesNV* pProperties);
```

- `physicalDevice` is the physical device.
- `pPropertyCount` is a pointer to an integer related to the number of cooperative matrix properties available or queried.
- `pProperties` is either `NULL` or a pointer to an array of `VkCooperativeMatrixPropertiesNV` structures.

If `pProperties` is `NULL`, then the number of cooperative matrix properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of cooperative matrix properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available cooperative matrix properties were returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceCooperativeMatrixPropertiesNV-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceCooperativeMatrixPropertiesNV-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceCooperativeMatrixPropertiesNV-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkCooperativeMatrixPropertiesNV` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Each [VkCooperativeMatrixPropertiesKHR](#) or [VkCooperativeMatrixPropertiesNV](#) structure describes a single supported combination of types for a matrix multiply/add operation ([OpCooperativeMatrixMulAddKHR](#) or [OpCooperativeMatrixMulAddNV](#)). The multiply **can** be described in terms of the following variables and types (in SPIR-V pseudocode):

```
%A is of type OpTypeCooperativeMatrixKHR %AType %scope %MSize %KSize %MatrixAKHR
%B is of type OpTypeCooperativeMatrixKHR %BType %scope %KSize %NSize %MatrixBKHR
%C is of type OpTypeCooperativeMatrixKHR %CType %scope %MSize %NSize
%MatrixAccumulatorKHR
%Result is of type OpTypeCooperativeMatrixKHR %ResultType %scope %MSize %NSize
%MatrixAccumulatorKHR

%Result = %A * %B + %C // using OpCooperativeMatrixMulAddKHR
```

```
%A is of type OpTypeCooperativeMatrixNV %AType %scope %MSize %KSize
%B is of type OpTypeCooperativeMatrixNV %BType %scope %KSize %NSize
%C is of type OpTypeCooperativeMatrixNV %CType %scope %MSize %NSize
%D is of type OpTypeCooperativeMatrixNV %DType %scope %MSize %NSize

%D = %A * %B + %C // using OpCooperativeMatrixMulAddNV
```

A matrix multiply with these dimensions is known as an $M \times N \times K$ matrix multiply.

The [VkCooperativeMatrixPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_cooperative_matrix
typedef struct VkCooperativeMatrixPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           MSize;
    uint32_t           NSize;
    uint32_t           KSize;
    VkComponentTypeKHR AType;
    VkComponentTypeKHR BType;
    VkComponentTypeKHR CType;
    VkComponentTypeKHR ResultType;
    VkBool32           saturatingAccumulation;
    VkScopeKHR         scope;
} VkCooperativeMatrixPropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **MSize** is the number of rows in matrices **A**, **C**, and **Result**.
- **KSize** is the number of columns in matrix **A** and rows in matrix **B**.
- **NSize** is the number of columns in matrices **B**, **C**, **Result**.

- **AType** is the component type of matrix **A**, of type [VkComponentTypeKHR](#).
- **BType** is the component type of matrix **B**, of type [VkComponentTypeKHR](#).
- **CType** is the component type of matrix **C**, of type [VkComponentTypeKHR](#).
- **ResultType** is the component type of matrix **Result**, of type [VkComponentTypeKHR](#).
- **saturatingAccumulation** indicates whether the **SaturatingAccumulation** operand to [OpCooperativeMatrixMulAddKHR](#) **must** be present or not. If it is [VK_TRUE](#), the **SaturatingAccumulation** operand **must** be present. If it is [VK_FALSE](#), the **SaturatingAccumulation** operand **must** not be present.
- **scope** is the scope of all the matrix types, of type [VkScopeKHR](#).

If some types are preferred over other types (e.g. for performance), they **should** appear earlier in the list enumerated by [vkGetPhysicalDeviceCooperativeMatrixPropertiesKHR](#).

At least one entry in the list **must** have power of two values for all of **MSize**, **KSize**, and **NSize**.

If the [cooperativeMatrixWorkgroupScope](#) feature is not supported, **scope** **must** be [VK_SCOPE_SUBGROUP_KHR](#).

Valid Usage (Implicit)

- VUID-VkCooperativeMatrixPropertiesKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_COOPERATIVE_MATRIX_PROPERTIES_KHR](#)
- VUID-VkCooperativeMatrixPropertiesKHR-pNext-pNext
pNext **must** be [NULL](#)

The [VkCooperativeMatrixFlexibleDimensionsPropertiesNV](#) structure is defined as:

```
// Provided by VK_NV_cooperative_matrix2
typedef struct VkCooperativeMatrixFlexibleDimensionsPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           MGranularity;
    uint32_t           NGranularity;
    uint32_t           KGranularity;
    VkComponentTypeKHR AType;
    VkComponentTypeKHR BType;
    VkComponentTypeKHR CType;
    VkComponentTypeKHR ResultType;
    VkBool32           saturatingAccumulation;
    VkScopeKHR         scope;
    uint32_t           workgroupInvocations;
} VkCooperativeMatrixFlexibleDimensionsPropertiesNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.

- **MGranularity** is the granularity of the number of rows in matrices **A**, **C**, and **Result**. The rows **must** be an integer multiple of this value.
- **KGranularity** is the granularity of columns in matrix **A** and rows in matrix **B**. The columns/rows **must** be an integer multiple of this value.
- **NGranularity** is the granularity of columns in matrices **B**, **C**, **Result**. The columns **must** be an integer multiple of this value.
- **AType** is the component type of matrix **A**, of type **VkComponentTypeKHR**.
- **BType** is the component type of matrix **B**, of type **VkComponentTypeKHR**.
- **CType** is the component type of matrix **C**, of type **VkComponentTypeKHR**.
- **ResultType** is the component type of matrix **Result**, of type **VkComponentTypeKHR**.
- **saturatingAccumulation** indicates whether the **SaturatingAccumulation** operand to **OpCooperativeMatrixMulAddKHR** **must** be present or not. If it is **VK_TRUE**, the **SaturatingAccumulation** operand **must** be present. If it is **VK_FALSE**, the **SaturatingAccumulation** operand **must** not be present.
- **scope** is the scope of all the matrix types, of type **VkScopeKHR**.
- **workgroupInvocations** is the number of invocations in the local workgroup when this combination of values is supported.

Rather than explicitly enumerating a list of supported sizes, **VkCooperativeMatrixFlexibleDimensionsPropertiesNV** advertises size granularities, where the matrix **must** be a multiple of the advertised size. The M and K granularities apply to rows and columns of matrices with Use of **MatrixA**, K, and N apply to rows and columns of matrices with Use of **MatrixB**, M, and N apply to rows and columns of matrices with Use of **MatrixAccumulator**.

For a given type combination, if multiple workgroup sizes are supported there **may** be multiple **VkCooperativeMatrixFlexibleDimensionsPropertiesNV** structures with different granularities.

All granularity values **must** be powers of two.

NOTE

Different A/B types may require different granularities but share the same accumulator type. In such a case, the supported granularity for a matrix with the accumulator type would be the smallest advertised granularity.

Valid Usage (Implicit)

- VUID-VkCooperativeMatrixFlexibleDimensionsPropertiesNV-sType-sType **must** be **VK_STRUCTURE_TYPE_COOPERATIVE_MATRIX_FLEXIBLE_DIMENSIONS_PROPERTIES_NV**
- VUID-VkCooperativeMatrixFlexibleDimensionsPropertiesNV-pNext-pNext **pNext must** be **NULL**

The **VkCooperativeMatrixPropertiesNV** structure is defined as:

```
// Provided by VK_NV_cooperative_matrix
typedef struct VkCooperativeMatrixPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           MSize;
    uint32_t           NSize;
    uint32_t           KSize;
    VkComponentTypeNV  AType;
    VkComponentTypeNV  BType;
    VkComponentTypeNV  CType;
    VkComponentTypeNV  DType;
    VkScopeNV          scope;
} VkCooperativeMatrixPropertiesNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **MSize** is the number of rows in matrices A, C, and D.
- **KSize** is the number of columns in matrix A and rows in matrix B.
- **NSize** is the number of columns in matrices B, C, D.
- **AType** is the component type of matrix A, of type [VkComponentTypeNV](#).
- **BType** is the component type of matrix B, of type [VkComponentTypeNV](#).
- **CType** is the component type of matrix C, of type [VkComponentTypeNV](#).
- **DType** is the component type of matrix D, of type [VkComponentTypeNV](#).
- **scope** is the scope of all the matrix types, of type [VkScopeNV](#).

If some types are preferred over other types (e.g. for performance), they **should** appear earlier in the list enumerated by [vkGetPhysicalDeviceCooperativeMatrixPropertiesNV](#).

At least one entry in the list **must** have power of two values for all of **MSize**, **KSize**, and **NSize**.

Valid Usage (Implicit)

- VUID-VkCooperativeMatrixPropertiesNV-sType-sType
sType must be [VK_STRUCTURE_TYPE_COOPERATIVE_MATRIX_PROPERTIES_NV](#)
- VUID-VkCooperativeMatrixPropertiesNV-pNext-pNext
pNext must be **NULL**

Possible values for [VkScopeKHR](#) include:

```
// Provided by VK_KHR_cooperative_matrix
typedef enum VkScopeKHR {
    VK_SCOPE_DEVICE_KHR = 1,
    VK_SCOPE_WORKGROUP_KHR = 2,
    VK_SCOPE_SUBGROUP_KHR = 3,
    VK_SCOPE_QUEUE_FAMILY_KHR = 5,
    // Provided by VK_NV_cooperative_matrix
    VK_SCOPE_DEVICE_NV = VK_SCOPE_DEVICE_KHR,
    // Provided by VK_NV_cooperative_matrix
    VK_SCOPE_WORKGROUP_NV = VK_SCOPE_WORKGROUP_KHR,
    // Provided by VK_NV_cooperative_matrix
    VK_SCOPE_SUBGROUP_NV = VK_SCOPE_SUBGROUP_KHR,
    // Provided by VK_NV_cooperative_matrix
    VK_SCOPE_QUEUE_FAMILY_NV = VK_SCOPE_QUEUE_FAMILY_KHR,
} VkScopeKHR;
```

```
// Provided by VK_NV_cooperative_matrix
// Equivalent to VkScopeKHR
typedef VkScopeKHR VkScopeNV;
```

- [VK_SCOPE_DEVICE_KHR](#) corresponds to SPIR-V [Device](#) scope.
- [VK_SCOPE_WORKGROUP_KHR](#) corresponds to SPIR-V [Workgroup](#) scope.
- [VK_SCOPE_SUBGROUP_KHR](#) corresponds to SPIR-V [Subgroup](#) scope.
- [VK_SCOPE_QUEUE_FAMILY_KHR](#) corresponds to SPIR-V [QueueFamily](#) scope.

All enum values match the corresponding SPIR-V value.

Possible values for [VkComponentTypeKHR](#) include:

```
// Provided by VK_KHR_cooperative_matrix, VK_NV_cooperative_vector
typedef enum VkComponentTypeKHR {
    VK_COMPONENT_TYPE_FLOAT16_KHR = 0,
    VK_COMPONENT_TYPE_FLOAT32_KHR = 1,
    VK_COMPONENT_TYPE_FLOAT64_KHR = 2,
    VK_COMPONENT_TYPE_SINT8_KHR = 3,
    VK_COMPONENT_TYPE_SINT16_KHR = 4,
    VK_COMPONENT_TYPE_SINT32_KHR = 5,
    VK_COMPONENT_TYPE_SINT64_KHR = 6,
    VK_COMPONENT_TYPE_UINT8_KHR = 7,
    VK_COMPONENT_TYPE_UINT16_KHR = 8,
    VK_COMPONENT_TYPE_UINT32_KHR = 9,
    VK_COMPONENT_TYPE_UINT64_KHR = 10,

- `VK_COMPONENT_TYPE_UINT16_KHR` corresponds to SPIR-V `OpTypeInt` 16 0/1.
- `VK_COMPONENT_TYPE_UINT32_KHR` corresponds to SPIR-V `OpTypeInt` 32 0/1.
- `VK_COMPONENT_TYPE_UINT64_KHR` corresponds to SPIR-V `OpTypeInt` 64 0/1.
- `VK_COMPONENT_TYPE_BFLOAT16_KHR` corresponds to SPIR-V `OpTypeFloat` 16 BFloat16KHR.
- `VK_COMPONENT_TYPE_SINT8_PACKED_NV` corresponds to four 8-bit signed integers packed in a 32-bit unsigned integer.
- `VK_COMPONENT_TYPE_UINT8_PACKED_NV` corresponds to four 8-bit unsigned integers packed in a 32-bit unsigned integer.
- `VK_COMPONENT_TYPE_FLOAT_E4M3_NV` corresponds to a floating-point type with a sign bit in the most significant bit, followed by four exponent bits, followed by three mantissa bits.
- `VK_COMPONENT_TYPE_FLOAT_E5M2_NV` corresponds to a floating-point type with a sign bit in the most significant bit, followed by five exponent bits, followed by two mantissa bits.
- `VK_COMPONENT_TYPE_FLOAT8_E4M3_EXT` corresponds to SPIR-V `OpTypeFloat` 8 Float8E4M3EXT.
- `VK_COMPONENT_TYPE_FLOAT8_E5M2_EXT` corresponds to SPIR-V `OpTypeFloat` 8 Float8E5M2EXT.

9.33. Cooperative Vectors

A *cooperative vector* type is a SPIR-V vector type optimized for the evaluation of small neural networks.

SPIR-V defines the types and instructions, but does not specify rules about what combinations of types are valid, and it is expected that different implementations **may** support different combinations.

To enumerate the supported cooperative vector type combinations, call:

```
// Provided by VK_NV_cooperative_vector
VkResult vkGetPhysicalDeviceCooperativeVectorPropertiesNV(
    VkPhysicalDevice      physicalDevice,
    uint32_t*             pPropertyCount,
    VkCooperativeVectorPropertiesNV* pProperties);
```

- `physicalDevice` is the physical device.
- `pPropertyCount` is a pointer to an integer related to the number of cooperative vector properties available or queried.
- `pProperties` is either `NULL` or a pointer to an array of `VkCooperativeVectorPropertiesNV` structures.

If `pProperties` is `NULL`, then the number of cooperative vector properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the user to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of

structures actually written to `pProperties`. If `pPropertyCount` is less than the number of cooperative vector properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available cooperative vector properties were returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceCooperativeVectorPropertiesNV-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceCooperativeVectorPropertiesNV-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceCooperativeVectorPropertiesNV-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkCooperativeVectorPropertiesNV` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Each `VkCooperativeVectorPropertiesNV` structure describes a single supported combination of types for a matrix-vector multiply (or multiply-add) operation (`OpCooperativeVectorMatrixMulNV` or `OpCooperativeVectorMatrixMulAddNV`).

The `VkCooperativeVectorPropertiesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_vector
typedef struct VkCooperativeVectorPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkComponentTypeKHR inputType;
    VkComponentTypeKHR inputInterpretation;
    VkComponentTypeKHR matrixInterpretation;
    VkComponentTypeKHR biasInterpretation;
    VkComponentTypeKHR resultType;
    VkBool32           transpose;
} VkCooperativeVectorPropertiesNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **inputType** is the component type of vector **Input**, of type **VkComponentTypeKHR**.
- **inputInterpretation** is the value of **InputInterpretation**, of type **VkComponentTypeKHR**.
- **matrixInterpretation** is the value of **MatrixInterpretation**, of type **VkComponentTypeKHR**.
- **biasInterpretation** is the value of **BiasInterpretation**, of type **VkComponentTypeKHR**.
- **resultType** is the component type of **Result Type**, of type **VkComponentTypeKHR**.
- **transpose** is a boolean indicating whether opaque layout matrices with this combination of input and output types supports transposition.

VK_COMPONENT_TYPE_SINT8_PACKED_NV and **VK_COMPONENT_TYPE_UINT8_PACKED_NV** **must** not be used for members other than **inputInterpretation**.

The following combinations **must** be supported (each row is a required combination):

inputType	inputInterpretation	matrixInterpretation	biasInterpretation	resultType
FLOAT16	FLOAT16	FLOAT16	FLOAT16	FLOAT16
UINT32	SINT8_PACKED	SINT8	SINT32	SINT32
SINT8	SINT8	SINT8	SINT32	SINT32
FLOAT32	SINT8	SINT8	SINT32	SINT32
FLOAT16	FLOAT_E4M3	FLOAT_E4M3	FLOAT16	FLOAT16
FLOAT16	FLOAT_E5M2	FLOAT_E5M2	FLOAT16	FLOAT16

Valid Usage (Implicit)

- VUID-VkCooperativeVectorPropertiesNV-sType-sType
sType must be **VK_STRUCTURE_TYPE_COOPERATIVE_VECTOR_PROPERTIES_NV**
- VUID-VkCooperativeVectorPropertiesNV-pNext-pNext
pNext must be **NULL**

- VUID-VkCooperativeVectorPropertiesNV-inputType-parameter **inputType** must be a valid [VkComponentTypeKHR](#) value
- VUID-VkCooperativeVectorPropertiesNV-inputInterpretation-parameter **inputInterpretation** must be a valid [VkComponentTypeKHR](#) value
- VUID-VkCooperativeVectorPropertiesNV-matrixInterpretation-parameter **matrixInterpretation** must be a valid [VkComponentTypeKHR](#) value
- VUID-VkCooperativeVectorPropertiesNV-biasInterpretation-parameter **biasInterpretation** must be a valid [VkComponentTypeKHR](#) value
- VUID-VkCooperativeVectorPropertiesNV-resultType-parameter **resultType** must be a valid [VkComponentTypeKHR](#) value

To query the size of a cooperative vector matrix, or to convert a matrix to another layout and type, call:

```
// Provided by VK_NV_cooperative_vector
VkResult vkConvertCooperativeVectorMatrixNV(
    VkDevice device,
    const VkConvertCooperativeVectorMatrixInfoNV* pInfo);
```

- **device** is the device.
- **pInfo** is a pointer to a [VkConvertCooperativeVectorMatrixInfoNV](#) structure containing information about the layout conversion.

If **pInfo->dstData** is **NULL**, then the number of bytes required to store the converted matrix is returned in **pDstSize**. Otherwise, **pInfo->pDstSize** must point to a variable set by the user to the number of bytes in **pInfo->dstData**, and on return the variable is overwritten with the number of bytes actually written to **pInfo->dstData**. **pInfo->srcData** can be **NULL** when **pInfo->dstData** is **NULL**. If **pInfo->pDstSize** is less than the number of bytes required to store the converted matrix, no bytes will be written, and [VK_INCOMPLETE](#) will be returned instead of [VK_SUCCESS](#), to indicate that not enough space was provided.

Valid Usage

- VUID-vkConvertCooperativeVectorMatrixNV-pInfo-10073
If **pInfo->srcData.hostAddress** is **NULL**, then **pInfo->dstData.hostAddress** must be **NULL**
- VUID-vkConvertCooperativeVectorMatrixNV-pInfo-10074
If **pInfo->srcData.hostAddress** is not **NULL**, then **pInfo->srcSize** must be large enough to contain the source matrix, based either on the standard matrix layout or based on the size filled out by this command
- VUID-vkConvertCooperativeVectorMatrixNV-pInfo-10075
If **pInfo->dstData.hostAddress** is not **NULL**, then the value pointed to by **pInfo->pDstSize** must be large enough to contain the destination matrix, based either on the standard matrix layout or based on the size filled out by this command

- VUID-vkConvertCooperativeVectorMatrixNV-pInfo-10076

If `pInfo->dstData.hostAddress` is not `NULL`, the source and destination memory ranges **must** not overlap

Valid Usage (Implicit)

- VUID-vkConvertCooperativeVectorMatrixNV-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkConvertCooperativeVectorMatrixNV-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkConvertCooperativeVectorMatrixInfoNV` structure

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Each `VkConvertCooperativeVectorMatrixInfoNV` structure describes a request to convert the layout and type of a cooperative vector matrix.

The `VkConvertCooperativeVectorMatrixInfoNV` structure is defined as:

```
// Provided by VK_NV_cooperative_vector
typedef struct VkConvertCooperativeVectorMatrixInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    size_t                   srcSize;
    VkDeviceOrHostAddressConstKHR srcData;
    size_t*                  pDstSize;
    VkDeviceOrHostAddressKHR dstData;
    VkComponentTypeKHR       srcComponentType;
    VkComponentTypeKHR       dstComponentType;
    uint32_t                 numRows;
    uint32_t                 numColumns;
    VkCooperativeVectorMatrixLayoutNV srcLayout;
    size_t                   srcStride;
    VkCooperativeVectorMatrixLayoutNV dstLayout;
    size_t                   dstStride;
} VkConvertCooperativeVectorMatrixInfoNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **srcSize** is the length in bytes of **srcData**.
- **srcData** is either **NULL** or a pointer to the source data in the source layout.
- **pDstSize** is a pointer to an integer related to the number of bytes required or requested to convert.
- **dstData** is either **NULL** or a pointer to the destination data in the destination layout.
- **srcComponentType** is the type of a source matrix element.
- **dstComponentType** is the type of a destination matrix element.
- **numRows** is the number of rows in the matrix.
- **numColumns** is the number of columns in the matrix.
- **srcLayout** is the layout of the source matrix.
- **srcStride** is the number of bytes between a consecutive row or column (depending on **srcLayout**) of the source matrix, if it is row-major or column-major.
- **dstLayout** is the layout the matrix is converted to.
- **dstStride** is the number of bytes between a consecutive row or column (depending on **dstLayout**) of destination matrix, if it is row-major or column-major.

When called from **vkCmdConvertCooperativeVectorMatrixNV**, the **deviceAddress** members of **srcData** and **dstData** are used. When called from **vkConvertCooperativeVectorMatrixNV**, the **hostAddress** members of **srcData** and **dstData** are used.

For each of the source and destination matrix, if the layout is not either **VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_ROW_MAJOR_NV** or **VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_COLUMN_MAJOR_NV**, then the corresponding stride

parameter is ignored.

The size of the destination is only a function of the destination layout information, and does not depend on the source layout information.

Conversion **can** be used to convert between [VK_COMPONENT_TYPE_FLOAT32_KHR](#) or [VK_COMPONENT_TYPE_FLOAT16_KHR](#) and any supported lower-precision floating-point type. In this case, the conversion uses round-to-nearest-even rounding.

Valid Usage

- VUID-VkConvertCooperativeVectorMatrixInfoNV-srcLayout-10077
If **srcLayout** is row-major or column-major, then **srcStride** **must** be greater than the length of a row/column, and a multiple of the element size
- VUID-VkConvertCooperativeVectorMatrixInfoNV-dstLayout-10078
If **dstLayout** is row-major or column-major, then **dstStride** **must** be greater than the length of a row/column, and a multiple of the element size
- VUID-VkConvertCooperativeVectorMatrixInfoNV-srcComponentType-10079
If **srcComponentType** is not a supported [VkCooperativeVectorPropertiesNV::matrixInterpretation](#) value as reported by [vkGetPhysicalDeviceCooperativeVectorPropertiesNV](#), then **srcComponentType** **must** be [VK_COMPONENT_TYPE_FLOAT32_KHR](#)
- VUID-VkConvertCooperativeVectorMatrixInfoNV-dstComponentType-10080
If **dstComponentType** is not a supported [VkCooperativeVectorPropertiesNV::matrixInterpretation](#) value as reported by [vkGetPhysicalDeviceCooperativeVectorPropertiesNV](#), then **dstComponentType** **must** be [VK_COMPONENT_TYPE_FLOAT32_KHR](#)
- VUID-VkConvertCooperativeVectorMatrixInfoNV-srcComponentType-10081
If **srcComponentType** and **dstComponentType** are not equal, then one **must** be [VK_COMPONENT_TYPE_FLOAT32_KHR](#) or [VK_COMPONENT_TYPE_FLOAT16_KHR](#) and the other **must** be a lower-precision floating-point type
- VUID-VkConvertCooperativeVectorMatrixInfoNV-dstComponentType-10082
If **dstComponentType** is [VK_COMPONENT_TYPE_FLOAT_E4M3_NV](#) or [VK_COMPONENT_TYPE_FLOAT_E5M2_NV](#), then **dstLayout** **must** be [VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_INFERENCING_OPTIMAL_NV](#) or [VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_TRAINING_OPTIMAL_NV](#)

Valid Usage (Implicit)

- VUID-VkConvertCooperativeVectorMatrixInfoNV-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_CONVERT_COOPERATIVE_VECTOR_MATRIX_INFO_NV](#)
- VUID-VkConvertCooperativeVectorMatrixInfoNV-pNext-pNext
pNext **must** be NULL

- VUID-VkConvertCooperativeVectorMatrixInfoNV-srcData-parameter **srcData** **must** be a valid [VkDeviceOrHostAddressConstKHR](#) union
- VUID-VkConvertCooperativeVectorMatrixInfoNV-pDstSize-parameter **pDstSize** **must** be a valid pointer to a [size_t](#) value
- VUID-VkConvertCooperativeVectorMatrixInfoNV-dstData-parameter **dstData** **must** be a valid [VkDeviceOrHostAddressKHR](#) union
- VUID-VkConvertCooperativeVectorMatrixInfoNV-srcComponentType-parameter **srcComponentType** **must** be a valid [VkComponentTypeKHR](#) value
- VUID-VkConvertCooperativeVectorMatrixInfoNV-dstComponentType-parameter **dstComponentType** **must** be a valid [VkComponentTypeKHR](#) value
- VUID-VkConvertCooperativeVectorMatrixInfoNV-srcLayout-parameter **srcLayout** **must** be a valid [VkCooperativeVectorMatrixLayoutNV](#) value
- VUID-VkConvertCooperativeVectorMatrixInfoNV-dstLayout-parameter **dstLayout** **must** be a valid [VkCooperativeVectorMatrixLayoutNV](#) value

Possible values for [VkCooperativeVectorMatrixLayoutNV](#) include:

```
// Provided by VK_NV_cooperative_vector
typedef enum VkCooperativeVectorMatrixLayoutNV {
    VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_ROW_MAJOR_NV = 0,
    VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_COLUMN_MAJOR_NV = 1,
    VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_INFERENCING_OPTIMAL_NV = 2,
    VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_TRAINING_OPTIMAL_NV = 3,
} VkCooperativeVectorMatrixLayoutNV;
```

- [VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_ROW_MAJOR_NV](#) corresponds to SPIR-V [RowMajorNV](#) layout.
- [VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_COLUMN_MAJOR_NV](#) corresponds to SPIR-V [ColumnMajorNV](#) layout.
- [VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_INFERENCING_OPTIMAL_NV](#) corresponds to SPIR-V [InferencingOptimalNV](#) layout.
- [VK_COOPERATIVE_VECTOR_MATRIX_LAYOUT_TRAINING_OPTIMAL_NV](#) corresponds to SPIR-V [TrainingOptimalNV](#) layout.

All enum values match the corresponding SPIR-V value.

Row-major layout has elements of each row stored consecutively in memory, with a controllable stride from the start of one row to the start of the next row. Column-major layout has elements of each column stored consecutively in memory, with a controllable stride from the start of one column to the start of the next column. Inferencing-optimal and Training-optimal layouts are implementation-dependent, and the application **can** convert a matrix to those layouts using [vkConvertCooperativeVectorMatrixNV](#) or [vkCmdConvertCooperativeVectorMatrixNV](#). Training-optimal layout with [VK_COMPONENT_TYPE_FLOAT16_KHR](#) or [VK_COMPONENT_TYPE_FLOAT32_KHR](#) type has the additional guarantee that the application **can**

reinterpret the data as an array of elements and perform element-wise operations on the data, and finite values in any padding elements do not affect the result of a matrix-vector multiply (inf/NaN values **may** still cause NaN values in the result).

To convert a matrix to another layout and type, call:

```
// Provided by VK_NV_cooperative_vector
void vkCmdConvertCooperativeVectorMatrixNV(
    VkCommandBuffer          commandBuffer,
    uint32_t                 infoCount,
    const VkConvertCooperativeVectorMatrixInfoNV* pInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of layout conversions to perform.
- `pInfos` is a pointer to an array of `VkConvertCooperativeVectorMatrixInfoNV` structures containing information about the layout conversion.

This command does the same conversions as `vkConvertCooperativeVectorMatrixNV`, but executes on the device. One conversion is performed for each of the `infoCount` elements of `pInfos`.

This command's execution is synchronized using `VK_PIPELINE_STAGE_2_CONVERT_COOPERATIVE_VECTOR_MATRIX_BIT_NV`.

Valid Usage

- VUID-vkCmdConvertCooperativeVectorMatrixNV-pInfo-10083
For each element of `pInfo`, `srcData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdConvertCooperativeVectorMatrixNV-pInfo-10895
For each element of `pInfo`, `dstData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdConvertCooperativeVectorMatrixNV-pInfo-10084
For each element of `pInfo`, `srcData.deviceAddress` **must** be 64 byte aligned
- VUID-vkCmdConvertCooperativeVectorMatrixNV-pInfo-10085
For each element of `pInfo`, `dstData.deviceAddress` **must** be 64 byte aligned
- VUID-vkCmdConvertCooperativeVectorMatrixNV-pInfo-10086
For each element of `pInfo`, `srcSize` **must** be large enough to contain the source matrix, based either on the standard matrix layout or based on the size filled out by `vkConvertCooperativeVectorMatrixNV`
- VUID-vkCmdConvertCooperativeVectorMatrixNV-pInfo-10087
For each element of `pInfo`, the value pointed to by `pDstSize` **must** be large enough to contain the destination matrix, based either on the standard matrix layout or based on the size filled out by `vkConvertCooperativeVectorMatrixNV`
- VUID-vkCmdConvertCooperativeVectorMatrixNV-None-10088
Memory accessed by the sources and destinations of all of the conversions **must** not overlap

Valid Usage (Implicit)

- VUID-vkCmdConvertCooperativeVectorMatrixNV-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdConvertCooperativeVectorMatrixNV-pInfos-parameter **pInfos** **must** be a valid pointer to an array of **infoCount** valid [VkConvertCooperativeVectorMatrixInfoNV](#) structures
- VUID-vkCmdConvertCooperativeVectorMatrixNV-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdConvertCooperativeVectorMatrixNV-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) operations
- VUID-vkCmdConvertCooperativeVectorMatrixNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdConvertCooperativeVectorMatrixNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdConvertCooperativeVectorMatrixNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdConvertCooperativeVectorMatrixNV-infoCount-arraylength
infoCount **must** be greater than 0

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdConvertCooperativeVectorMatrixNV is not affected by [conditional rendering](#)

9.34. Validation Cache

Validation cache objects allow the result of internal validation to be reused, both within a single application run and between multiple runs. Reuse within a single run is achieved by passing the same validation cache object when creating supported Vulkan objects. Reuse across runs of an application is achieved by retrieving validation cache contents in one run of an application, saving the contents, and using them to preinitialize a validation cache on a subsequent run. The contents of the validation cache objects are managed by the validation layers. Applications **can** manage the host memory consumed by a validation cache object and control the amount of data retrieved from a validation cache object.

Validation cache objects are represented by `VkValidationCacheEXT` handles:

```
// Provided by VK_EXT_validation_cache
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkValidationCacheEXT)
```

To create validation cache objects, call:

```
// Provided by VK_EXT_validation_cache
VkResult vkCreateValidationCacheEXT(
    VkDevice                                device,
    const VkValidationCacheCreateInfoEXT*    pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkValidationCacheEXT*                    pValidationCache);
```

- `device` is the logical device that creates the validation cache object.
- `pCreateInfo` is a pointer to a `VkValidationCacheCreateInfoEXT` structure containing the initial parameters for the validation cache object.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pValidationCache` is a pointer to a `VkValidationCacheEXT` handle in which the resulting validation cache object is returned.

NOTE

Applications **can** track and manage the total host memory size of a validation cache object using the `pAllocator`. Applications **can** limit the amount of data retrieved from a validation cache object in `vkGetValidationCacheDataEXT`. Implementations **should** not internally limit the total number of entries added to a validation cache object or the total host memory consumed.

Once created, a validation cache **can** be passed to the `vkCreateShaderModule` command by adding this object to the `VkShaderModuleCreateInfo` structure's `pNext` chain. If a `VkShaderModuleValidationCacheCreateInfoEXT` object is included in the `VkShaderModuleCreateInfo::pNext` chain, and its `validationCache` field is not `VK_NULL_HANDLE`, the implementation will query it for possible reuse opportunities and update it with new content. The use of the validation cache object in these commands is internally synchronized, and the same validation cache object **can** be used in multiple threads simultaneously.

NOTE

Implementations **should** make every effort to limit any critical sections to the actual accesses to the cache, which is expected to be significantly shorter than the duration of the `vkCreateShaderModule` command.

Valid Usage (Implicit)

- VUID-vkCreateValidationCacheEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateValidationCacheEXT-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkValidationCacheCreateInfoEXT` structure
- VUID-vkCreateValidationCacheEXT-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateValidationCacheEXT-pValidationCache-parameter
`pValidationCache` **must** be a valid pointer to a `VkValidationCacheEXT` handle
- VUID-vkCreateValidationCacheEXT-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkValidationCacheCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_validation_cache
typedef struct VkValidationCacheCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkValidationCacheCreateFlagsEXT flags;
    size_t              initialDataSize;
    const void*        pInitialData;
} VkValidationCacheCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.

- `initialDataSize` is the number of bytes in `pInitialData`. If `initialDataSize` is zero, the validation cache will initially be empty.
- `pInitialData` is a pointer to previously retrieved validation cache data. If the validation cache data is incompatible (as defined below) with the device, the validation cache will be initially empty. If `initialDataSize` is zero, `pInitialData` is ignored.

Valid Usage

- VUID-VkValidationCacheCreateInfoEXT-initialDataSize-01534
If `initialDataSize` is not 0, it **must** be equal to the size of `pInitialData`, as returned by `vkGetValidationCacheDataEXT` when `pInitialData` was originally retrieved
- VUID-VkValidationCacheCreateInfoEXT-initialDataSize-01535
If `initialDataSize` is not 0, `pInitialData` **must** have been retrieved from a previous call to `vkGetValidationCacheDataEXT`

Valid Usage (Implicit)

- VUID-VkValidationCacheCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VALIDATION_CACHE_CREATE_INFO_EXT`
- VUID-VkValidationCacheCreateInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkValidationCacheCreateInfoEXT-flags-zero bitmask
`flags` **must** be 0
- VUID-VkValidationCacheCreateInfoEXT-pInitialData-parameter
If `initialDataSize` is not 0, `pInitialData` **must** be a valid pointer to an array of `initialDataSize` bytes

```
// Provided by VK_EXT_validation_cache
typedef VkFlags VkValidationCacheCreateFlagsEXT;
```

`VkValidationCacheCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

Validation cache objects **can** be merged using the command:

```
// Provided by VK_EXT_validation_cache
VkResult vkMergeValidationCachesEXT(
    VkDevice                device,
    VkValidationCacheEXT    dstCache,
    uint32_t                srcCacheCount,
    const VkValidationCacheEXT* pSrcCaches);
```

- **device** is the logical device that owns the validation cache objects.
- **dstCache** is the handle of the validation cache to merge results into.
- **srcCacheCount** is the length of the **pSrcCaches** array.
- **pSrcCaches** is a pointer to an array of validation cache handles, which will be merged into **dstCache**. The previous contents of **dstCache** are included after the merge.

NOTE

The details of the merge operation are implementation-dependent, but implementations **should** merge the contents of the specified validation caches and prune duplicate entries.

Valid Usage

- VUID-vkMergeValidationCachesEXT-dstCache-01536
dstCache must not appear in the list of source caches

Valid Usage (Implicit)

- VUID-vkMergeValidationCachesEXT-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkMergeValidationCachesEXT-dstCache-parameter
dstCache must be a valid [VkValidationCacheEXT](#) handle
- VUID-vkMergeValidationCachesEXT-pSrcCaches-parameter
pSrcCaches must be a valid pointer to an array of **srcCacheCount** valid [VkValidationCacheEXT](#) handles
- VUID-vkMergeValidationCachesEXT-srcCacheCount-arraylength
srcCacheCount must be greater than 0
- VUID-vkMergeValidationCachesEXT-dstCache-parent
dstCache must have been created, allocated, or retrieved from **device**
- VUID-vkMergeValidationCachesEXT-pSrcCaches-parent
Each element of **pSrcCaches must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **dstCache must** be externally synchronized

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Data **can** be retrieved from a validation cache object using the command:

```
// Provided by VK_EXT_validation_cache
VkResult vkGetValidationCacheDataEXT(
    VkDevice                device,
    VkValidationCacheEXT    validationCache,
    size_t*                 pDataSize,
    void*                   pData);
```

- **device** is the logical device that owns the validation cache.
- **validationCache** is the validation cache to retrieve data from.
- **pDataSize** is a pointer to a value related to the amount of data in the validation cache, as described below.
- **pData** is either **NULL** or a pointer to a buffer.

If **pData** is **NULL**, then the maximum size of the data that **can** be retrieved from the validation cache, in bytes, is returned in **pDataSize**. Otherwise, **pDataSize** **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by **pData**, and on return the variable is overwritten with the amount of data actually written to **pData**. If **pDataSize** is less than the maximum size that **can** be retrieved by the validation cache, at most **pDataSize** bytes will be written to **pData**, and **vkGetValidationCacheDataEXT** will return [VK_INCOMPLETE](#) instead of [VK_SUCCESS](#), to indicate that not all of the validation cache was returned.

Any data written to **pData** is valid and **can** be provided as the **pInitialData** member of the [VkValidationCacheCreateInfoEXT](#) structure passed to **vkCreateValidationCacheEXT**.

Two calls to **vkGetValidationCacheDataEXT** with the same parameters **must** retrieve the same data unless a command that modifies the contents of the cache is called between them.

Applications **can** store the data retrieved from the validation cache, and use these data, possibly in a future run of the application, to populate new validation cache objects. The results of validation, however, **may** depend on the vendor ID, device ID, driver version, and other details of the device. To enable applications to detect when previously retrieved data is incompatible with the device, the initial bytes written to **pData** **must** be a header consisting of the following members:

Table 12. Layout for Validation Cache Header Version
[VK_VALIDATION_CACHE_HEADER_VERSION_ONE_EXT](#)

Offset	Size	Meaning
0	4	length in bytes of the entire validation cache header written as a stream of bytes, with the least significant byte first
4	4	a VkValidationCacheHeaderVersionEXT value written as a stream of bytes, with the least significant byte first
8	VK_UUID_SIZE	a layer commit ID expressed as a UUID, which uniquely identifies the version of the validation layers used to generate these validation results

The first four bytes encode the length of the entire validation cache header, in bytes. This value includes all fields in the header including the validation cache version field and the size of the length field.

The next four bytes encode the validation cache version, as described for [VkValidationCacheHeaderVersionEXT](#). A consumer of the validation cache **should** use the cache version to interpret the remainder of the cache header.

If [pDataSize](#) is less than what is necessary to store this header, nothing will be written to [pData](#) and zero will be written to [pDataSize](#).

	This query does not behave consistently with the behavior described in Opaque Binary Data Results , for historical reasons.
NOTE	If the amount of data available is larger than the passed pDataSize , the query returns up to the size of the passed buffer, and signals overflow with a VK_INCOMPLETE success status instead of returning a VK_ERROR_NOT_ENOUGH_SPACE_KHR error status.

Valid Usage (Implicit)

- VUID-vkGetValidationCacheDataEXT-device-parameter
[device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkGetValidationCacheDataEXT-validationCache-parameter
[validationCache](#) **must** be a valid [VkValidationCacheEXT](#) handle
- VUID-vkGetValidationCacheDataEXT-pDataSize-parameter
[pDataSize](#) **must** be a valid pointer to a [size_t](#) value
- VUID-vkGetValidationCacheDataEXT-pData-parameter
If the value referenced by [pDataSize](#) is not 0, and [pData](#) is not [NULL](#), [pData](#) **must** be a valid pointer to an array of [pDataSize](#) bytes
- VUID-vkGetValidationCacheDataEXT-validationCache-parent
[validationCache](#) **must** have been created, allocated, or retrieved from [device](#)

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Possible values of the second group of four bytes in the header returned by [vkGetValidationCacheDataEXT](#), encoding the validation cache version, are:

```
// Provided by VK_EXT_validation_cache
typedef enum VkValidationCacheHeaderVersionEXT {
    VK_VALIDATION_CACHE_HEADER_VERSION_ONE_EXT = 1,
} VkValidationCacheHeaderVersionEXT;
```

- [VK_VALIDATION_CACHE_HEADER_VERSION_ONE_EXT](#) specifies version one of the validation cache.

To destroy a validation cache, call:

```
// Provided by VK_EXT_validation_cache
void vkDestroyValidationCacheEXT(
    VkDevice                device,
    VkValidationCacheEXT    validationCache,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the validation cache object.
- **validationCache** is the handle of the validation cache to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyValidationCacheEXT-validationCache-01537
If **VkAllocationCallbacks** were provided when **validationCache** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyValidationCacheEXT-validationCache-01538
If no **VkAllocationCallbacks** were provided when **validationCache** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyValidationCacheEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyValidationCacheEXT-validationCache-parameter
If `validationCache` is not `VK_NULL_HANDLE`, `validationCache` **must** be a valid `VkValidationCacheEXT` handle
- VUID-vkDestroyValidationCacheEXT-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyValidationCacheEXT-validationCache-parent
If `validationCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `validationCache` **must** be externally synchronized

9.35. CUDA Modules

9.35.1. Creating a CUDA Module

CUDA modules **must** contain some kernel code and **must** expose at least one function entry point.

CUDA modules are represented by `VkCudaModuleNV` handles:

```
// Provided by VK_NV_cuda_kernel_launch
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkCudaModuleNV)
```

To create a CUDA module, call:

```
// Provided by VK_NV_cuda_kernel_launch
VkResult vkCreateCudaModuleNV(
    VkDevice                                device,
    const VkCudaModuleCreateInfoNV*        pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkCudaModuleNV*                        pModule);
```

- `device` is the logical device that creates the shader module.
- `pCreateInfo` is a pointer to a `VkCudaModuleCreateInfoNV` structure.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

- `pModule` is a pointer to a `VkCudaModuleNV` handle in which the resulting CUDA module object is returned.

Once a CUDA module has been created, the application **may** create the function entry point, which **must** refer to one function in the module.

Valid Usage (Implicit)

- VUID-vkCreateCudaModuleNV-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateCudaModuleNV-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkCudaModuleCreateInfoNV` structure
- VUID-vkCreateCudaModuleNV-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateCudaModuleNV-pModule-parameter
`pModule` **must** be a valid pointer to a `VkCudaModuleNV` handle
- VUID-vkCreateCudaModuleNV-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkCudaModuleCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_cuda_kernel_launch
typedef struct VkCudaModuleCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    size_t             dataSize;
    const void*        pData;
} VkCudaModuleCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` **may** be `NULL` or **may** be a pointer to a structure extending this structure.

- `dataSize` is the length of the `pData` array.
- `pData` is a pointer to CUDA code

Valid Usage

- VUID-VkCudaModuleCreateInfoNV-dataSize-09413
`dataSize` **must** be the total size in bytes of the PTX files or binary cache passed to `pData`

Valid Usage (Implicit)

- VUID-VkCudaModuleCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_CUDA_MODULE_CREATE_INFO_NV`
- VUID-VkCudaModuleCreateInfoNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCudaModuleCreateInfoNV-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-VkCudaModuleCreateInfoNV-dataSize-arraylength
`dataSize` **must** be greater than `0`

9.35.2. Creating a CUDA Function Handle

CUDA functions are represented by `VkCudaFunctionNV` handles. Handles to `global` functions **may** then be used to issue a kernel launch (i.e. dispatch) from a commandbuffer. See [Dispatching Command for CUDA PTX kernel](#).

```
// Provided by VK_NV_cuda_kernel_launch
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkCudaFunctionNV)
```

To create a CUDA function, call:

```
// Provided by VK_NV_cuda_kernel_launch
VkResult vkCreateCudaFunctionNV(
    VkDevice                                device,
    const VkCudaFunctionCreateInfoNV*       pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkCudaFunctionNV*                       pFunction);
```

- `device` is the logical device that creates the shader module.
- `pCreateInfo` is a pointer to a `VkCudaFunctionCreateInfoNV` structure.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pFunction` is a pointer to a `VkCudaFunctionNV` handle in which the resulting CUDA function object is returned.

Valid Usage (Implicit)

- VUID-vkCreateCudaFunctionNV-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreateCudaFunctionNV-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkCudaFunctionCreateInfoNV](#) structure
- VUID-vkCreateCudaFunctionNV-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateCudaFunctionNV-pFunction-parameter
pFunction **must** be a valid pointer to a [VkCudaFunctionNV](#) handle
- VUID-vkCreateCudaFunctionNV-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkCudaFunctionCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_cuda_kernel_launch
typedef struct VkCudaFunctionCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkCudaModuleNV     module;
    const char*        pName;
} VkCudaFunctionCreateInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **module** is the CUDA [VkCudaModuleNV](#) module in which the function resides.
- **pName** is a null-terminated UTF-8 string containing the name of the shader entry point for this stage.

Valid Usage (Implicit)

- VUID-VkCudaFunctionCreateInfoNV-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_CUDA_FUNCTION_CREATE_INFO_NV](#)
- VUID-VkCudaFunctionCreateInfoNV-pNext-pNext
pNext **must** be `NULL`
- VUID-VkCudaFunctionCreateInfoNV-module-parameter
module **must** be a valid [VkCudaModuleNV](#) handle
- VUID-VkCudaFunctionCreateInfoNV-pName-parameter
pName **must** be a null-terminated UTF-8 string

9.35.3. Destroying a CUDA Function

To destroy a CUDA function handle, call:

```
// Provided by VK_NV_cuda_kernel_launch
void vkDestroyCudaFunctionNV(
    VkDevice                device,
    VkCudaFunctionNV        function,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the Function.
- **function** is the handle of the CUDA function to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage (Implicit)

- VUID-vkDestroyCudaFunctionNV-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyCudaFunctionNV-function-parameter
function **must** be a valid [VkCudaFunctionNV](#) handle
- VUID-vkDestroyCudaFunctionNV-pAllocator-parameter
If **pAllocator** is not `NULL`, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyCudaFunctionNV-function-parent
function **must** have been created, allocated, or retrieved from **device**

9.35.4. Destroying a CUDA Module

To destroy a CUDA shader module, call:

```
// Provided by VK_NV_cuda_kernel_launch
void vkDestroyCudaModuleNV(
    VkDevice                device,
    VkCudaModuleNV          module,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the shader module.
- **module** is the handle of the CUDA module to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage (Implicit)

- VUID-vkDestroyCudaModuleNV-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyCudaModuleNV-module-parameter
module **must** be a valid [VkCudaModuleNV](#) handle
- VUID-vkDestroyCudaModuleNV-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyCudaModuleNV-module-parent
module **must** have been created, allocated, or retrieved from **device**

9.35.5. Reading back CUDA Module Cache

After uploading the PTX kernel code, the module compiles the code to generate a binary cache with all the necessary information for the device to execute it. It is possible to read back this cache for later use, such as accelerating the initialization of further executions.

To get the CUDA module cache call:

```
// Provided by VK_NV_cuda_kernel_launch
VkResult vkGetCudaModuleCacheNV(
    VkDevice                device,
    VkCudaModuleNV          module,
    size_t*                 pCacheSize,
    void*                   pCacheData);
```

- **device** is the logical device that destroys the Function.
- **module** is the CUDA module.
- **pCacheSize** is a pointer containing the amount of bytes to be copied in **pCacheData**
- **pCacheData** is a pointer to a buffer in which to copy the binary cache

If **pCacheData** is **NULL**, then the size of the binary cache, in bytes, is returned in **pCacheSize**. Otherwise,

`pCacheSize` **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by `pCacheData`, and on return the variable is overwritten with the amount of data actually written to `pCacheData`. If `pCacheSize` is less than the size of the binary shader code, nothing is written to `pCacheData`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`.

The returned cache **may** then be used later for further initialization of the CUDA module, by sending this cache *instead* of the PTX code when using `vkCreateCudaModuleNV`.

NOTE Using the binary cache instead of the original PTX code **should** significantly speed up initialization of the CUDA module, given that the whole compilation and validation will not be necessary.

As with `VkPipelineCache`, the binary cache depends on the specific implementation. The application **must** assume the cache upload might fail in many circumstances and thus **may** have to get ready for falling back to the original PTX code if necessary. Most often, the cache **may** succeed if the same device driver and architecture is used between the cache generation from PTX and the use of this cache. In the event of a new driver version or if using a different device architecture, this cache **may** become invalid.

NOTE This query does not behave consistently with the behavior described in [Opaque Binary Data Results](#), for historical reasons.

If the amount of data available is larger than the passed `pDataSize`, the query returns a `VK_INCOMPLETE` success status instead of a `VK_ERROR_NOT_ENOUGH_SPACE_KHR` error status.

Valid Usage (Implicit)

- VUID-vkGetCudaModuleCacheNV-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetCudaModuleCacheNV-module-parameter
`module` **must** be a valid `VkCudaModuleNV` handle
- VUID-vkGetCudaModuleCacheNV-pCacheSize-parameter
`pCacheSize` **must** be a valid pointer to a `size_t` value
- VUID-vkGetCudaModuleCacheNV-pCacheData-parameter
If the value referenced by `pCacheSize` is not 0, and `pCacheData` is not NULL, `pCacheData` **must** be a valid pointer to an array of `pCacheSize` bytes
- VUID-vkGetCudaModuleCacheNV-module-parent
`module` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_INCOMPLETE`

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

9.35.6. Limitations

CUDA and Vulkan do not use the device in the same configuration. The following limitations **must** be taken into account:

- It is not possible to read or write global parameters from Vulkan. The only way to share resources or send values to the PTX kernel is to pass them as arguments of the function. See [Resources sharing between CUDA Kernel and Vulkan](#) for more details.
- No calls to functions external to the module PTX are supported.
- Vulkan disables some shader/kernel exceptions, which could break CUDA kernels relying on exceptions.
- CUDA kernels submitted to Vulkan are limited to the amount of shared memory, which can be queried from the physical capabilities. It may be less than what CUDA can offer.
- CUDA instruction-level preemption (CILP) does not work.
- CUDA Unified Memory will not work in this extension.
- CUDA Dynamic parallelism is not supported.
- `vk*DispatchIndirect` is not available.

9.36. Shader Instrumentation

Shaders **can** be instrumented to provide a runtime shader cost analysis.

Shader instrumentation is enabled for a pipeline when [VK_PIPELINE_CREATE_2_INSTRUMENT_SHADERS_BIT_ARM](#) is included in [VkPipelineCreateFlags2CreateInfoKHR::flags](#).

Shader instrumentation is enabled for a shader object when [VK_SHADER_CREATE_INSTRUMENT_SHADER_BIT_ARM](#) is included in [VkShaderCreateInfoEXT::flags](#).

NOTE

Shader instrumentation will incur a runtime performance cost. Applications or tools are only expected to enable shader instrumentation during development, for performance profiling or debugging purposes, and to leave it disabled in production use of the applications.

9.36.1. Shader Instrumentation Metrics

To enumerate the available shader instrumentation metrics, call:

```
// Provided by VK_ARM_shader_instrumentation
VkResult vkEnumeratePhysicalDeviceShaderInstrumentationMetricsARM(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pDescriptionCount,
    VkShaderInstrumentationMetricDescriptionARM* pDescriptions);
```

- `physicalDevice` is the physical device.
- `pDescriptionCount` is a pointer to an integer related to the number of shader instrumentation metrics available or queried.
- `pDescriptions` is either `NULL` or a pointer to an array of `VkShaderInstrumentationMetricDescriptionARM` structures.

If `pDescriptions` is `NULL`, then the number of shader instrumentation metrics available is returned in `pDescriptionCount`. Otherwise, `pDescriptionCount` **must** point to a variable set by the application to the number of elements in the `pDescriptions` array, and on return the variable is overwritten with the number of structures actually written to `pDescriptions`. If `pDescriptionCount` is less than the number shader instrumentation metrics available, at most `pDescriptionCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available shader instrumentation metrics were returned.

Valid Usage (Implicit)

- VUID-vkEnumeratePhysicalDeviceShaderInstrumentationMetricsARM-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkEnumeratePhysicalDeviceShaderInstrumentationMetricsARM-pDescriptionCount-parameter
`pDescriptionCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumeratePhysicalDeviceShaderInstrumentationMetricsARM-pDescriptions-parameter
If the value referenced by `pDescriptionCount` is not 0, and `pDescriptions` is not `NULL`, `pDescriptions` **must** be a valid pointer to an array of `pDescriptionCount` `VkShaderInstrumentationMetricDescriptionARM` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkShaderInstrumentationMetricDescriptionARM` structure is defined as:

```
// Provided by VK_ARM_shader_instrumentation
typedef struct VkShaderInstrumentationMetricDescriptionARM {
    VkStructureType    sType;
    void*              pNext;
    char                name[VK_MAX_DESCRIPTION_SIZE];
    char                description[VK_MAX_DESCRIPTION_SIZE];
} VkShaderInstrumentationMetricDescriptionARM;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `name` is an array of [VK_MAX_DESCRIPTION_SIZE](#) `char` containing a null-terminated UTF-8 string which is a short human readable name for this shader instrumentation metric.
- `description` is an array of [VK_MAX_DESCRIPTION_SIZE](#) `char` containing a null-terminated UTF-8 string which is a human readable description for this shader instrumentation metric.

Valid Usage (Implicit)

- VUID-VkShaderInstrumentationMetricDescriptionARM-sType-sType `sType` **must** be [VK_STRUCTURE_TYPE_SHADER_INSTRUMENTATION_METRIC_DESCRIPTION_ARM](#)
- VUID-VkShaderInstrumentationMetricDescriptionARM-pNext-pNext `pNext` **must** be `NULL`
- VUID-VkShaderInstrumentationMetricDescriptionARM-name-parameter `name` **must** be a null-terminated UTF-8 string whose length is less than or equal to [VK_MAX_DESCRIPTION_SIZE](#)
- VUID-VkShaderInstrumentationMetricDescriptionARM-description-parameter `description` **must** be a null-terminated UTF-8 string whose length is less than or equal to [VK_MAX_DESCRIPTION_SIZE](#)

9.36.2. Shader Instrumentation Objects

Shader instrumentation metrics are captured via instrumentation objects.

Shader instrumentation objects are represented by `VkShaderInstrumentationARM` handles:

```
// Provided by VK_ARM_shader_instrumentation
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkShaderInstrumentationARM)
```

To create a shader instrumentation object, call:

```
// Provided by VK_ARM_shader_instrumentation
VkResult vkCreateShaderInstrumentationARM(
    VkDevice device,
    const VkShaderInstrumentationCreateInfoARM* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkShaderInstrumentationARM* pInstrumentation);
```

- `device` is the logical device that creates the shader instrumentation object.
- `pCreateInfo` is a pointer to a `VkShaderInstrumentationCreateInfoARM` structure containing information about how the shader instrumentation object is to be created.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pInstrumentation` is a pointer to a handle in which the resulting shader instrumentation object is returned.

Valid Usage

Valid Usage (Implicit)

- VUID-vkCreateShaderInstrumentationARM-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkCreateShaderInstrumentationARM-pCreateInfo-parameter `pCreateInfo` **must** be a valid pointer to a valid `VkShaderInstrumentationCreateInfoARM` structure
- VUID-vkCreateShaderInstrumentationARM-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateShaderInstrumentationARM-pInstrumentation-parameter `pInstrumentation` **must** be a valid pointer to a `VkShaderInstrumentationARM` handle
- VUID-vkCreateShaderInstrumentationARM-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkShaderInstrumentationCreateInfoARM` structure is defined as:

```
// Provided by VK_ARM_shader_instrumentation
typedef struct VkShaderInstrumentationCreateInfoARM {
    VkStructureType    sType;
    void*              pNext;
} VkShaderInstrumentationCreateInfoARM;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

Valid Usage (Implicit)

- VUID-VkShaderInstrumentationCreateInfoARM-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_SHADER_INSTRUMENTATION_CREATE_INFO_ARM](#)
- VUID-VkShaderInstrumentationCreateInfoARM-pNext-pNext
`pNext` **must** be `NULL`

To destroy a shader instrumentation object, call:

```
// Provided by VK_ARM_shader_instrumentation
void vkDestroyShaderInstrumentationARM(
    VkDevice                device,
    VkShaderInstrumentationARM instrumentation,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the shader instrumentation.
- `instrumentation` is the handle of the shader instrumentation to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyShaderInstrumentationARM-instrumentation-12374
All submitted commands that refer to **instrumentation** **must** have completed execution

Valid Usage (Implicit)

- VUID-vkDestroyShaderInstrumentationARM-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyShaderInstrumentationARM-instrumentation-parameter
If **instrumentation** is not **VK_NULL_HANDLE**, **instrumentation** **must** be a valid **VkShaderInstrumentationARM** handle
- VUID-vkDestroyShaderInstrumentationARM-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyShaderInstrumentationARM-instrumentation-parent
If **instrumentation** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **instrumentation** **must** be externally synchronized

9.36.3. Shader Instrumentation Capture

To begin shader instrumentation, call:

```
// Provided by VK_ARM_shader_instrumentation
void vkCmdBeginShaderInstrumentationARM(
    VkCommandBuffer          commandBuffer,
    VkShaderInstrumentationARM instrumentation);
```

- **commandBuffer** is the command buffer into which this command will be recorded.
- **instrumentation** is the handle of the shader instrumentation object that will capture the metrics.

After beginning shader instrumentation, shader instrumentation is considered *active* within the command buffer it was called in until shader instrumentation is ended.

The shader instrumentation object has an implicit result index where the per-shader metrics will be written. The result index is set to 0 when the object is created by calling **vkCreateShaderInstrumentationARM**, and incremented by 1 for each draw, dispatch, and ray tracing command recorded while the shader instrumentation object is active.

The result index is also incremented by 1 when [vkCmdExecuteGeneratedCommandsEXT](#) is recorded.

While shader instrumentation is active, instrumented shaders write to the instrumentation object. These writes **must** be synchronized using the instrumented shader's stage with access mask [VK_ACCESS_2_SHADER_WRITE_BIT](#). If no instrumentation object is bound, writes are discarded.

If a command buffer is submitted multiple times, the shader instrumented metrics for all submissions will be aggregated in the instrumentation object, unless the metrics are [cleared](#) between submissions.

Valid Usage

- VUID-vkCmdBeginShaderInstrumentationARM-commandBuffer-12375
This command **must** not be recorded while shader instrumentation is active within [commandBuffer](#)
- VUID-vkCmdBeginShaderInstrumentationARM-commandBuffer-12376
[commandBuffer](#) **must** not be a protected command buffer

Valid Usage (Implicit)

- VUID-vkCmdBeginShaderInstrumentationARM-commandBuffer-parameter
[commandBuffer](#) **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdBeginShaderInstrumentationARM-instrumentation-parameter
[instrumentation](#) **must** be a valid [VkShaderInstrumentationARM](#) handle
- VUID-vkCmdBeginShaderInstrumentationARM-commandBuffer-recording
[commandBuffer](#) **must** be in the [recording state](#)
- VUID-vkCmdBeginShaderInstrumentationARM-commandBuffer-cmdpool
The [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), [VK_QUEUE_DATA_GRAPH_BIT_ARM](#), or [VK_QUEUE_GRAPHICS_BIT](#) operations
- VUID-vkCmdBeginShaderInstrumentationARM-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBeginShaderInstrumentationARM-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBeginShaderInstrumentationARM-commonparent
Both of [commandBuffer](#), and [instrumentation](#) **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to [commandBuffer](#) **must** be externally synchronized
- Host access to [instrumentation](#) **must** be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_DATA_GRAPH_BIT_ARM VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_BIT	Action State

Conditional Rendering

`vkCmdBeginShaderInstrumentationARM` is not affected by [conditional rendering](#)

To end shader instrumentation, call:

```
// Provided by VK_ARM_shader_instrumentation
void vkCmdEndShaderInstrumentationARM(
    VkCommandBuffer          commandBuffer);
```

- `commandBuffer` is the command buffer into which this command will be recorded.

Once recorded, shader instrumentation is no longer considered *active* within the command buffer.

Valid Usage

- VUID-vkCmdEndShaderInstrumentationARM-commandBuffer-12377
Shader instrumentation **must** be active within `commandBuffer`
- VUID-vkCmdEndShaderInstrumentationARM-commandBuffer-12378
`commandBuffer` **must** not be a protected command buffer

Valid Usage (Implicit)

- VUID-vkCmdEndShaderInstrumentationARM-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdEndShaderInstrumentationARM-commandBuffer-recording

`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdEndShaderInstrumentationARM-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_DATA_GRAPH_BIT_ARM`, or `VK_QUEUE_GRAPHICS_BIT` operations

- VUID-vkCmdEndShaderInstrumentationARM-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdEndShaderInstrumentationARM-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_DATA_GRAPH_BIT_ARM VK_QUEUE_GRAPHICS_BIT	Action State

Conditional Rendering

`vkCmdEndShaderInstrumentationARM` is not affected by `conditional rendering`

9.36.4. Shader Instrumentation Retrieval

Data **can** be retrieved from an instrumentation object in units of metric blocks. The size of each metric block in bytes is `sizeof(VkShaderInstrumentationMetricDataHeaderARM) + sizeof(uint64_t) × VkPhysicalDeviceShaderInstrumentationPropertiesARM::numMetrics`.

To retrieve metric blocks from an instrumentation object, call:

```
// Provided by VK_ARM_shader_instrumentation
VkResult vkGetShaderInstrumentationValuesARM(
    VkDevice device,
    VkShaderInstrumentationARM instrumentation,
    uint32_t* pMetricBlockCount,
    void* pMetricValues,
    VkShaderInstrumentationValuesFlagsARM flags);
```

- **device** is the logical device that was used to capture shader instrumentation data.
- **instrumentation** is the shader instrumentation object to retrieve values from
- **pMetricBlockCount** is a pointer to an integer related to the number of metric blocks available or queried.
- **pMetricValues** is either **NULL** or a pointer to an application-allocated buffer where the results will be written.
- **flags** is reserved for future use.

If **pMetricValues** is **NULL**, then the number of metric blocks available is returned in **pMetricBlockCount**. Otherwise, **pMetricBlockCount** **must** point to a variable set by the application to the number of elements in the **pMetricValues** array, and on return the variable is overwritten with the number of metric blocks actually written to **pMetricValues**. If **pMetricBlockCount** is less than the number of metric blocks available, at most **pMetricBlockCount** elements will be written, and **VK_INCOMPLETE** will be returned instead of **VK_SUCCESS**, to indicate that not all the available metric blocks were returned.

Metrics are written to **pMetricValues** as a tightly packed array of metric blocks, where each block consists of a **VkShaderInstrumentationMetricDataHeaderARM** header followed by **VkPhysicalDeviceShaderInstrumentationPropertiesARM::numMetrics** unsigned 64-bit values. The order of the metrics matches the order in which they are enumerated by **vkEnumeratePhysicalDeviceShaderInstrumentationMetricsARM**.

Valid Usage (Implicit)

- VUID-vkGetShaderInstrumentationValuesARM-device-parameter **device** **must** be a valid **VkDevice** handle
- VUID-vkGetShaderInstrumentationValuesARM-instrumentation-parameter **instrumentation** **must** be a valid **VkShaderInstrumentationARM** handle
- VUID-vkGetShaderInstrumentationValuesARM-pMetricBlockCount-parameter **pMetricBlockCount** **must** be a valid pointer to a **uint32_t** value
- VUID-vkGetShaderInstrumentationValuesARM-pMetricValues-parameter **pMetricValues** **must** be a pointer value
- VUID-vkGetShaderInstrumentationValuesARM-flags-zero-bitmask **flags** **must** be 0
- VUID-vkGetShaderInstrumentationValuesARM-instrumentation-parent **instrumentation** **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

```
// Provided by VK_ARM_shader_instrumentation
typedef VkFlags VkShaderInstrumentationValuesFlagsARM;
```

[VkShaderInstrumentationValuesFlagsARM](#) is a bitmask type for parameters to the retrieval, but is currently reserved for future use.

The shader instrumentation metrics block header is defined as:

```
// Provided by VK_ARM_shader_instrumentation
typedef struct VkShaderInstrumentationMetricDataHeaderARM {
    uint32_t      resultIndex;
    uint32_t      resultSubIndex;
    VkShaderStageFlags stages;
    uint32_t      basicBlockIndex;
} VkShaderInstrumentationMetricDataHeaderARM;
```

- [resultIndex](#) is the result index of the metric block, as captured when the command was recorded.
- [resultSubIndex](#) is a secondary index with the result index, explained further below.
- [stages](#) is a bitfield of [VkShaderStageFlagBits](#) describing the shader stages that the metric block is for.
- [basicBlockIndex](#) is the index of the basic block within the shader that the metric block is for.

Valid Usage (Implicit)

- VUID-VkShaderInstrumentationMetricDataHeaderARM-stages-parameter [stages](#) **must** be a valid combination of [VkShaderStageFlagBits](#) values
- VUID-VkShaderInstrumentationMetricDataHeaderARM-stages-requiredbitmask [stages](#) **must** not be 0

The `resultIndex` is the index captured during command buffer recording, and identifies the draw, dispatch, or ray tracing command that the metrics are captured for.

Metrics are returned in ascending order of `resultIndex` values. Metrics with the same value of `resultIndex` are returned in ascending order of `resultSubIndex` values. Metrics with the same value of `resultIndex` and `resultSubIndex` are grouped by the value of `stages`. Metrics with the same value of `resultIndex`, `resultSubIndex`, and `stages` are returned in ascending order of `basicBlockIndex` values.

All metrics for commands that record multiple draws (such as indirect drawing commands with `drawCount` greater than one), dispatches, or involve groups of shaders (such as ray tracing pipelines), are returned using the same `resultIndex`.

Implementations **may** use a non-zero `resultSubIndex` to report more fine-grained metrics (such as per draw) for such commands, or aggregate all metrics for the command using `resultSubIndex` zero.

Metrics for commands recorded while multiview is enabled are returned as aggregated values across all views.

Implementations **may** aggregate metrics for multiple shader stages. The value of `stages` describes which shader stages have been aggregated.

`basicBlockIndex` describes the index of the basic block of the shader that metrics are captured for. If `VkPhysicalDeviceShaderInstrumentationPropertiesARM::perBasicBlockGranularity` is `VK_FALSE`, results are aggregated for the entire shader and reported as basic block zero.

9.36.5. Shader Instrumentation Clearing

To clear the value of all metric blocks in an instrumentation object to zero, call:

```
// Provided by VK_ARM_shader_instrumentation
void vkClearShaderInstrumentationMetricsARM(
    VkDevice                device,
    VkShaderInstrumentationARM instrumentation);
```

- `device` is the logical device that owns the shader instrumentation object.
- `instrumentation` is the shader instrumentation object to clear.

Valid Usage (Implicit)

- VUID-vkClearShaderInstrumentationMetricsARM-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkClearShaderInstrumentationMetricsARM-instrumentation-parameter `instrumentation` **must** be a valid `VkShaderInstrumentationARM` handle
- VUID-vkClearShaderInstrumentationMetricsARM-instrumentation-parent `instrumentation` **must** have been created, allocated, or retrieved from `device`

Chapter 10. Pipelines

The following [figure](#) shows a block diagram of the Vulkan pipelines. Some Vulkan commands specify geometric objects to be drawn or computational work to be performed, while others specify state controlling how objects are handled by the various pipeline stages, or control data transfer between memory organized as images and buffers. Commands are effectively sent through a processing pipeline, such as a *graphics pipeline*, a *ray tracing pipeline*, or a *compute pipeline*.

The graphics pipeline can be operated in two modes, as either *primitive shading* or *mesh shading* pipeline.

Primitive Shading

The first stage of the [graphics pipeline](#) ([Input Assembler](#)) assembles vertices to form geometric primitives such as points, lines, and triangles, based on a requested primitive topology. In the next stage ([Vertex Shader](#)) vertices **can** be transformed, computing positions and attributes for each vertex. If [tessellation](#) and/or [geometry](#) shaders are supported, they **can** then generate multiple primitives from a single input primitive, possibly changing the primitive topology or generating additional attribute data in the process.

Cluster Culling Shading

When using the Cluster Culling Shader, a compute-like shader will perform cluster-based culling, a set of new built-in output variables are used to express visible cluster, in addition, a new built-in function is used to emit these variables from the cluster culling shader to the Input Assembler (IA) stage, then IA can use these variables to fetch vertices of visible cluster and drive vertex shader to work.

Mesh Shading

When using the [mesh shading](#) pipeline input primitives are not assembled implicitly, but explicitly through the ([Mesh Shader](#)). The work on the mesh pipeline is initiated by the application [drawing](#) a set of mesh tasks.

If an optional ([Task Shader](#)) is active, each task triggers the execution of a task shader workgroup that will generate a new set of tasks upon completion. Each of these spawned tasks, or each of the original dispatched tasks if no task shader is present, triggers the execution of a mesh shader workgroup that produces an output mesh with a variable-sized number of primitives assembled from vertices stored in the output mesh.

Common

The final resulting primitives are [clipped](#) to a clip volume in preparation for the next stage, [Rasterization](#). The rasterizer produces a series of *fragments* associated with a region of the framebuffer, from a two-dimensional description of a point, line segment, or triangle. These fragments are processed by [fragment operations](#) to determine whether generated values will be written to the framebuffer. [Fragment shading](#) determines the values to be written to the framebuffer attachments. Framebuffer operations then read and write the color and depth/stencil attachments of the framebuffer for a given subpass of a [render pass instance](#). The attachments **can**

be used as input attachments in the fragment shader in a later subpass of the same render pass.

The [compute pipeline](#) is a separate pipeline from the graphics pipeline, which operates on one-, two-, or three-dimensional workgroups which **can** read from and write to buffer and image memory.

This ordering is meant only as a tool for describing Vulkan, not as a strict rule of how Vulkan is implemented, and we present it only as a means to organize the various operations of the pipelines. Actual ordering guarantees between pipeline stages are explained in detail in the [synchronization chapter](#).

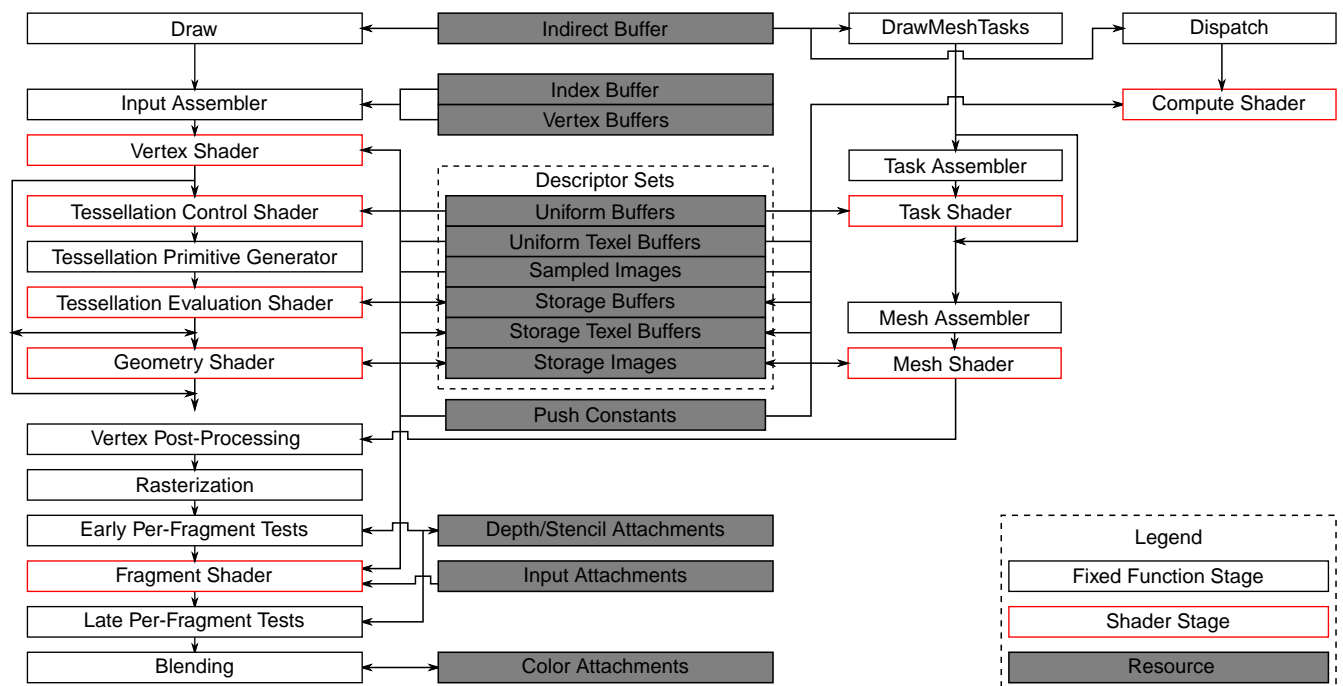

Figure 2. Block diagram of the Vulkan pipeline

Each pipeline is controlled by a monolithic object created from a description of all of the shader stages and any relevant fixed-function stages. [Linking](#) the whole pipeline together allows the optimization of shaders based on their input/outputs and eliminates expensive draw time state validation.

A pipeline object is bound to the current state using [vkCmdBindPipeline](#). Any pipeline object state that is specified as [dynamic](#) is not applied to the current state when the pipeline object is bound, but is instead set by dynamic state setting commands.

If the [commandBufferInheritance](#) feature is not enabled, then no state, including dynamic state, is inherited from one command buffer to another.

If the [commandBufferInheritance](#) feature is enabled, then all graphics and compute state that is valid at the end of the command buffer executed in a queue is inherited and valid at beginning of the command buffer next executed in the same queue. This applies to both primary and secondary command buffers, where a primary command buffer submitted to a queue will inherit state from the previously submitted command buffer to that queue, secondary command buffers will inherit state from the primary or secondary command buffer they are executed in, and after a secondary command buffer is executed, its state is inherited by the primary or secondary command buffer that executed it. Command buffers executed in one queue do not inherit state from any command

buffers executed in another queue.

Compute, ray tracing, and graphics pipelines are each represented by `VkPipeline` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipeline)
```

10.1. Multiple Pipeline Creation

Multiple pipelines **can** be created in a single call by commands such as:

- `vkCreateExecutionGraphPipelinesAMD`,
- `vkCreateRayTracingPipelinesKHR`,
- `vkCreateRayTracingPipelinesNV`,
- `vkCreateDataGraphPipelinesARM`,
- `vkCreateGraphicsPipelines`,
- `vkCreateComputePipelines`.

The creation commands are passed an array `pCreateInfos` of `Vk*PipelineCreateInfo` structures specifying parameters of each pipeline to be created, and return a corresponding array of handles in `pPipelines`. Each element index i of `pPipelines` is created based on the corresponding element i of `pCreateInfos`.

Applications **can** group together similar pipelines to be created in a single call, and implementations are encouraged to look for reuse opportunities when creating a group.

When attempting to create many pipelines in a single command, it is possible that creation **may** fail for a subset of them. In this case, the corresponding elements of `pPipelines` will be `VK_NULL_HANDLE`. If creation fails for a pipeline despite valid arguments (for example, due to out of memory errors), the `VkResult` code returned by the pipeline creation command will indicate why. The implementation will attempt to create all pipelines, and only return `VK_NULL_HANDLE` values for those that actually failed.

If creation fails for a pipeline that has the `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT` set in its `Vk*PipelineCreateInfo`, pipelines at an index in the `pPipelines` array greater than or equal to that of the failing pipeline will be `VK_NULL_HANDLE`.

If creation fails for multiple pipelines, the returned `VkResult` **must** be the return value of any one of the pipelines which did not succeed. An application **can** reliably clean up from a failed call by iterating over the `pPipelines` array and destroying every element that is not `VK_NULL_HANDLE`.

If the entire command fails and no pipelines are created, all elements of `pPipelines` will be `VK_NULL_HANDLE`.

10.2. Pipeline Creation Flags

When creating a pipeline, the application **can** specify a set of flags that control how the pipeline is created and certain aspects of its behavior and capabilities. These flags are specified by chaining the `VkPipelineCreateFlags2CreateInfo` structure to the pipeline creation structure with a bitmask of `VkPipelineCreateFlagBits2`, or by setting the `flags` member of the pipeline creation structure to a bitmask of `VkPipelineCreateFlagBits`.

The `VkPipelineCreateFlags2CreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPipelineCreateFlags2CreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkPipelineCreateFlags2 flags;
} VkPipelineCreateFlags2CreateInfo;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkPipelineCreateFlags2CreateInfo
typedef VkPipelineCreateFlags2CreateInfo VkPipelineCreateFlags2CreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPipelineCreateFlagBits2` specifying how a pipeline will be generated.

If this structure is included in the `pNext` chain of a pipeline creation structure, `flags` is used instead of the corresponding `flags` value passed in that creation structure, allowing additional creation flags to be specified.

Valid Usage (Implicit)

- VUID-VkPipelineCreateFlags2CreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_CREATE_FLAGS_2_CREATE_INFO`
- VUID-VkPipelineCreateFlags2CreateInfo-flags-parameter
`flags` **must** be a valid combination of `VkPipelineCreateFlagBits2` values

Structure Chaining

Extends the structures

- `VkComputePipelineCreateInfo`
- `VkGraphicsPipelineCreateInfo`
- `VkRayTracingPipelineCreateInfoKHR`

- [VkRayTracingPipelineCreateInfoNV](#)

Bits which **can** be set in [VkPipelineCreateFlags2CreateInfo::flags](#), specifying how a pipeline is created, are:

```
// Provided by VK_VERSION_1_4
// Flag bits for VkPipelineCreateFlagBits2
typedef VkFlags64 VkPipelineCreateFlagBits2;
static const VkPipelineCreateFlagBits2 VK_PIPELINE_CREATE_2_DISABLE_OPTIMIZATION_BIT =

0x80000000000ULL;

```

```

// Provided by VK_KHR_maintenance5
// Equivalent to VkPipelineCreateFlags2
typedef VkPipelineCreateFlags2 VkPipelineCreateFlags2KHR;

```

- [VK_PIPELINE_CREATE_2_DISABLE_OPTIMIZATION_BIT](#) specifies that the created pipeline will not be optimized. Using this flag **may** reduce the time taken to create the pipeline.
- [VK_PIPELINE_CREATE_2_ALLOW_DERIVATIVES_BIT](#) specifies that the pipeline to be created is allowed to be the parent of a pipeline that will be created in a subsequent pipeline creation call.
- [VK_PIPELINE_CREATE_2_DERIVATIVE_BIT](#) specifies that the pipeline to be created will be a child of a previously created parent pipeline.
- [VK_PIPELINE_CREATE_2_VIEW_INDEX_FROM_DEVICE_INDEX_BIT](#) specifies that any shader input variables decorated as [ViewIndex](#) will be assigned values as if they were decorated as [DeviceIndex](#).
- [VK_PIPELINE_CREATE_2_DISPATCH_BASE_BIT](#) specifies that a compute pipeline **can** be used with [vkCmdDispatchBase](#) with a non-zero base workgroup.
- [VK_PIPELINE_CREATE_2_DEFER_COMPILE_BIT_NV](#) specifies that a pipeline is created with all shaders in the deferred state. Before using the pipeline the application **must** call [vkCompileDeferredNV](#) exactly once on each shader in the pipeline before using the pipeline.
- [VK_PIPELINE_CREATE_2_CAPTURE_STATISTICS_BIT_KHR](#) specifies that the shader compiler should capture statistics for the pipeline executables produced by the compile process which **can** later be retrieved by calling [vkGetPipelineExecutableStatisticsKHR](#). Enabling this flag **must** not affect the final compiled pipeline but **may** disable pipeline caching or otherwise affect pipeline creation time.
- [VK_PIPELINE_CREATE_2_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR](#) specifies that the shader compiler should capture the internal representations of pipeline executables produced by the compile process which **can** later be retrieved by calling [vkGetPipelineExecutableInternalRepresentationsKHR](#). Enabling this flag **must** not affect the

final compiled pipeline but **may** disable pipeline caching or otherwise affect pipeline creation time. When capturing IR from pipelines created with pipeline libraries, there is no guarantee that IR from libraries **can** be retrieved from the linked pipeline. Applications **should** retrieve IR from each library, and any linked pipelines, separately.

- [VK_PIPELINE_CREATE_2_LIBRARY_BIT_KHR](#) specifies that the pipeline **cannot** be used directly, and instead defines a *pipeline library* that **can** be combined with other pipelines using the [VkPipelineLibraryCreateInfoKHR](#) structure. This is available in ray tracing and graphics pipelines.
- [VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR](#) specifies that an any-hit shader will always be present when an any-hit shader would be executed. A NULL any-hit shader is an any-hit shader which is effectively [VK_SHADER_UNUSED_KHR](#), such as from a shader group consisting entirely of zeros.
- [VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR](#) specifies that a closest hit shader will always be present when a closest hit shader would be executed. A NULL closest hit shader is a closest hit shader which is effectively [VK_SHADER_UNUSED_KHR](#), such as from a shader group consisting entirely of zeros.
- [VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR](#) specifies that a miss shader will always be present when a miss shader would be executed. A NULL miss shader is a miss shader which is effectively [VK_SHADER_UNUSED_KHR](#), such as from a shader group consisting entirely of zeros.
- [VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR](#) specifies that an intersection shader will always be present when an intersection shader would be executed. A NULL intersection shader is an intersection shader which is effectively [VK_SHADER_UNUSED_KHR](#), such as from a shader group consisting entirely of zeros.
- [VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR](#) specifies that all built-in primitives including triangles, spheres, and LSS primitives will be skipped during traversal using [pipeline trace ray](#) instructions.
- [VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_BUILT_IN_PRIMITIVES_BIT_KHR](#) is an alias for [VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR](#).
- [VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_AABBS_BIT_KHR](#) specifies that AABB primitives will be skipped during traversal using [pipeline trace ray](#) instructions.
- [VK_PIPELINE_CREATE_2_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR](#) specifies that the shader group handles **can** be saved and reused on a subsequent run (e.g. for trace capture and replay).
- [VK_PIPELINE_CREATE_2_RAY_TRACING_ALLOW_SPHERES_AND_LINEAR_SWEPT_SPHERES_BIT_NV](#) specifies that the pipeline is allowed to use spheres or linear swept spheres as a geometry type in the acceleration structures. Using this flag **may** affect performance.
- [VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_NV](#) specifies that the pipeline can be used in combination with [Device-Generated Commands](#).
- [VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT](#) specifies that the pipeline **can** be used in a [VkIndirectExecutionSetEXT](#).
- [VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT](#) specifies that pipeline creation will fail if a compile is required for creation of a valid [VkPipeline](#) object;

`VK_PIPELINE_COMPILE_REQUIRED` will be returned by pipeline creation, and the `VkPipeline` will be `VK_NULL_HANDLE`.

- When creating multiple pipelines, `VK_PIPELINE_CREATE_2_EARLY_RETURN_ON_FAILURE_BIT` specifies that control will be returned to the application if any individual pipeline returns a result which is not `VK_SUCCESS` rather than continuing to create additional pipelines.
- `VK_PIPELINE_CREATE_2_RAY_TRACING_ALLOW_MOTION_BIT_NV` specifies that the pipeline is allowed to use `OpTraceRayMotionNV`.
- `VK_PIPELINE_CREATE_2_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR` specifies that the pipeline will be used with a fragment shading rate attachment.
- `VK_PIPELINE_CREATE_2_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT` specifies that the pipeline will be used with a fragment density map attachment.
- `VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` specifies that the pipeline **can** be used with layered fragment density maps.
- `VK_PIPELINE_CREATE_2_LINK_TIME_OPTIMIZATION_BIT_EXT` specifies that pipeline libraries being linked into this library **should** have link time optimizations applied. If this bit is omitted, implementations **should** instead perform linking as rapidly as possible.
- `VK_PIPELINE_CREATE_2_RETAIN_LINK_TIME_OPTIMIZATION_INFO_BIT_EXT` specifies that pipeline libraries should retain any information necessary to later perform an optimal link with `VK_PIPELINE_CREATE_2_LINK_TIME_OPTIMIZATION_BIT_EXT`.
- `VK_PIPELINE_CREATE_2_DESCRIPTOR_BUFFER_BIT_EXT` specifies that a pipeline will be used with `descriptor buffers`, rather than `descriptor sets`.
- `VK_PIPELINE_CREATE_2_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` specifies that the pipeline **may** be used with an attachment `feedback loop` including color attachments.
- `VK_PIPELINE_CREATE_2_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` specifies that the pipeline **may** be used with an attachment `feedback loop` including depth-stencil attachments.
- `VK_PIPELINE_CREATE_2_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT` specifies that the ray tracing pipeline **can** be used with acceleration structures which reference an opacity micromap array.
- `VK_PIPELINE_CREATE_2_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV` specifies that the ray tracing pipeline **can** be used with acceleration structures which reference a displacement micromap array.
- `VK_PIPELINE_CREATE_2_NO_PROTECTED_ACCESS_BIT` specifies that the pipeline **must** not be bound to a protected command buffer.
- `VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT` specifies that the pipeline **must** not be bound to an unprotected command buffer.
- `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` specifies that `VkPipelineBinaryKHR` objects **can** be created from the pipeline. If `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` is used, implementations **should** not store pipeline data to an internal cache, if such a cache exists as stated by `pipelineBinaryInternalCache`. If `pipelineBinaryPrefersInternalCache` is `VK_TRUE`, applications **should** not use `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR`.

- [VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT](#) specifies that the pipeline will be used in a render pass that is begun with [VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT](#).
- [VK_PIPELINE_CREATE_2_EXECUTION_GRAPH_BIT_AMD](#) specifies that the pipeline will be used in an [execution graph](#)
- [VK_PIPELINE_CREATE_2_DISALLOW_OPACITY_MICROMAP_BIT_ARM](#) specifies that the pipeline **must** not be used with acceleration structures which reference an opacity micromap array.
- [VK_PIPELINE_CREATE_2_64_BIT_INDEXING_BIT_EXT](#) specifies that the pipeline enables [64-bit indexing](#).
- [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) specifies that the pipeline will use descriptor heap mappings instead of descriptor set layouts.
- [VK_PIPELINE_CREATE_2_INSTRUMENT_SHADERS_BIT_ARM](#) specifies that the shaders in the pipeline will be instrumented.

It is valid to set both [VK_PIPELINE_CREATE_2_ALLOW_DERIVATIVES_BIT](#) and [VK_PIPELINE_CREATE_2_DERIVATIVE_BIT](#). This allows a pipeline to be both a parent and possibly a child in a pipeline hierarchy. See [Pipeline Derivatives](#) for more information.

When an implementation is looking up a pipeline in a [pipeline cache](#), if that pipeline is being created using linked libraries, implementations **should** always return an equivalent pipeline created with [VK_PIPELINE_CREATE_2_LINK_TIME_OPTIMIZATION_BIT_EXT](#) if available, whether or not that bit was specified.

NOTE

Using [VK_PIPELINE_CREATE_2_LINK_TIME_OPTIMIZATION_BIT_EXT](#) (or not) when linking pipeline libraries is intended as a performance tradeoff between host and device. If the bit is omitted, linking should be faster and produce a pipeline more rapidly, but performance of the pipeline on the target device may be reduced. If the bit is included, linking may be slower but should produce a pipeline with device performance comparable to a monolithically created pipeline. Using both options can allow latency-sensitive applications to generate a suboptimal but usable pipeline quickly, and then perform an optimal link in the background, substituting the result for the suboptimally linked pipeline as soon as it is available.

```
// Provided by VK_VERSION_1_4
typedef VkFlags64 VkPipelineCreateFlags2;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkPipelineCreateFlags2
typedef VkPipelineCreateFlags2 VkPipelineCreateFlags2KHR;
```

[VkPipelineCreateFlags2](#) is a bitmask type for setting a mask of zero or more [VkPipelineCreateFlagBits2](#).

Bits which **can** be set in

- [VkGraphicsPipelineCreateInfo::flags](#)
- [VkComputePipelineCreateInfo::flags](#)
- [VkRayTracingPipelineCreateInfoKHR::flags](#)
- [VkRayTracingPipelineCreateInfoNV::flags](#)

specify how a pipeline is created, and are:

WARNING

This functionality is superseded by [VkPipelineCreateFlagBits2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
typedef enum VkPipelineCreateFlagBits {

} VkPipelineCreateFlagBits;

```

- [VK_PIPELINE_CREATE_DISABLE_OPTIMIZATION_BIT](#) specifies that the created pipeline will not be optimized. Using this flag **may** reduce the time taken to create the pipeline.
- [VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT](#) specifies that the pipeline to be created is allowed to be the parent of a pipeline that will be created in a subsequent pipeline creation call.
- [VK_PIPELINE_CREATE_DERIVATIVE_BIT](#) specifies that the pipeline to be created will be a child of a previously created parent pipeline.
- [VK_PIPELINE_CREATE_VIEW_INDEX_FROM_DEVICE_INDEX_BIT](#) specifies that any shader input variables decorated as [ViewIndex](#) will be assigned values as if they were decorated as [DeviceIndex](#).
- [VK_PIPELINE_CREATE_DISPATCH_BASE_BIT](#) specifies that a compute pipeline **can** be used with [vkCmdDispatchBase](#) with a non-zero base workgroup.
- [VK_PIPELINE_CREATE_DEFER_COMPILE_BIT_NV](#) specifies that a pipeline is created with all shaders in the deferred state. Before using the pipeline the application **must** call [vkCompileDeferredNV](#) exactly once on each shader in the pipeline before using the pipeline.
- [VK_PIPELINE_CREATE_CAPTURE_STATISTICS_BIT_KHR](#) specifies that the shader compiler should capture statistics for the pipeline executables produced by the compile process which **can** later be retrieved by calling [vkGetPipelineExecutableStatisticsKHR](#). Enabling this flag **must** not affect the final compiled pipeline but **may** disable pipeline caching or otherwise affect pipeline creation time.
- [VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR](#) specifies that the shader compiler should capture the internal representations of pipeline executables produced by the compile process which **can** later be retrieved by calling [vkGetPipelineExecutableInternalRepresentationsKHR](#). Enabling this flag **must** not affect the final compiled pipeline but **may** disable pipeline caching or otherwise affect pipeline creation time. When capturing IR from pipelines created with pipeline libraries, there is no guarantee that IR from libraries **can** be retrieved from the linked pipeline. Applications **should** retrieve IR from each library, and any linked pipelines, separately.
- [VK_PIPELINE_CREATE_LIBRARY_BIT_KHR](#) specifies that the pipeline **cannot** be used directly, and instead defines a *pipeline library* that **can** be combined with other pipelines using the [VkPipelineLibraryCreateInfoKHR](#) structure. This is available in ray tracing and graphics pipelines.

- [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR](#) specifies that an any-hit shader will always be present when an any-hit shader would be executed. A NULL any-hit shader is an any-hit shader which is effectively [VK_SHADER_UNUSED_KHR](#), such as from a shader group consisting entirely of zeros.
- [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR](#) specifies that a closest hit shader will always be present when a closest hit shader would be executed. A NULL closest hit shader is a closest hit shader which is effectively [VK_SHADER_UNUSED_KHR](#), such as from a shader group consisting entirely of zeros.
- [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR](#) specifies that a miss shader will always be present when a miss shader would be executed. A NULL miss shader is a miss shader which is effectively [VK_SHADER_UNUSED_KHR](#), such as from a shader group consisting entirely of zeros.
- [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR](#) specifies that an intersection shader will always be present when an intersection shader would be executed. A NULL intersection shader is an intersection shader which is effectively [VK_SHADER_UNUSED_KHR](#), such as from a shader group consisting entirely of zeros.
- [VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR](#) specifies that sphere, LSS and triangle primitives will be skipped during traversal using [pipeline trace ray](#) instructions.
- [VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR](#) specifies that AABB primitives will be skipped during traversal using [pipeline trace ray](#) instructions.
- [VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR](#) specifies that the shader group handles **can** be saved and reused on a subsequent run (e.g. for trace capture and replay).
- [VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV](#) specifies that the pipeline **can** be used in combination with [Device-Generated Commands](#).
- [VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT](#) specifies that pipeline creation will fail if a compile is required for creation of a valid [VkPipeline](#) object; [VK_PIPELINE_COMPILE_REQUIRED](#) will be returned by pipeline creation, and the [VkPipeline](#) will be [VK_NULL_HANDLE](#).
- When creating multiple pipelines, [VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT](#) specifies that control will be returned to the application if any individual pipeline returns a result which is not [VK_SUCCESS](#) rather than continuing to create additional pipelines.
- [VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV](#) specifies that the pipeline is allowed to use [OpTraceRayMotionNV](#).
- [VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR](#) specifies that the pipeline will be used with a fragment shading rate attachment and dynamic rendering.
- [VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT](#) specifies that the pipeline will be used with a fragment density map attachment and dynamic rendering.
- [VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT](#) specifies that pipeline libraries being linked into this library **should** have link time optimizations applied. If this bit is omitted, implementations **should** instead perform linking as rapidly as possible.

- [VK_PIPELINE_CREATE_RETAIN_LINK_TIME_OPTIMIZATION_INFO_BIT_EXT](#) specifies that pipeline libraries should retain any information necessary to later perform an optimal link with [VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT](#).
- [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#) specifies that a pipeline will be used with [descriptor buffers](#), rather than [descriptor sets](#).
- [VK_PIPELINE_CREATE_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT](#) specifies that the pipeline **may** be used with an attachment [feedback loop](#) including color attachments. It is ignored if [VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT](#) is set in [pDynamicStates](#).
- [VK_PIPELINE_CREATE_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT](#) specifies that the pipeline **may** be used with an attachment [feedback loop](#) including depth-stencil attachments. It is ignored if [VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT](#) is set in [pDynamicStates](#).
- [VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT](#) specifies that the ray tracing pipeline **can** be used with acceleration structures which reference an opacity micromap array.
- [VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV](#) specifies that the ray tracing pipeline **can** be used with acceleration structures which reference a displacement micromap array.
- [VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT](#) specifies that the pipeline **must** not be bound to a protected command buffer.
- [VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT](#) specifies that the pipeline **must** not be bound to an unprotected command buffer.

It is valid to set both [VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT](#) and [VK_PIPELINE_CREATE_DERIVATIVE_BIT](#). This allows a pipeline to be both a parent and possibly a child in a pipeline hierarchy. See [Pipeline Derivatives](#) for more information.

When an implementation is looking up a pipeline in a [pipeline cache](#), if that pipeline is being created using linked libraries, implementations **should** always return an equivalent pipeline created with [VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT](#) if available, whether or not that bit was specified.

NOTE

Using [VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT](#) (or not) when linking pipeline libraries is intended as a performance tradeoff between host and device. If the bit is omitted, linking should be faster and produce a pipeline more rapidly, but performance of the pipeline on the target device may be reduced. If the bit is included, linking may be slower but should produce a pipeline with device performance comparable to a monolithically created pipeline. Using both options can allow latency-sensitive applications to generate a suboptimal but usable pipeline quickly, and then perform an optimal link in the background, substituting the result for the suboptimally linked pipeline as soon as it is available.

WARNING

This functionality is superseded by [VkPipelineCreateFlags2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineCreateFlags;
```

`VkPipelineCreateFlags` is a bitmask type for setting a mask of zero or more `VkPipelineCreateFlagBits`.

10.3. Compute Pipelines

Compute pipelines consist of a single static compute shader stage and the pipeline layout.

The compute pipeline represents a compute shader and is created by calling `vkCreateComputePipelines` with `module` and `pName` selecting an entry point from a shader module, where that entry point defines a valid compute shader, in the `VkPipelineShaderStageCreateInfo` structure contained within the `VkComputePipelineCreateInfo` structure.

To create compute pipelines, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateComputePipelines(
    VkDevice                device,
    VkPipelineCache         pipelineCache,
    uint32_t               createInfoCount,
    const VkComputePipelineCreateInfo* pCreateInfos,
    const VkAllocationCallbacks* pAllocator,
    VkPipeline*             pPipelines);
```

- `device` is the logical device that creates the compute pipelines.
- `pipelineCache` is either `VK_NULL_HANDLE`, indicating that pipeline caching is disabled, or to enable caching, the handle of a valid `VkPipelineCache` object. The implementation **must** not access this object outside of the duration of this command.
- `createInfoCount` is the length of the `pCreateInfos` and `pPipelines` arrays.
- `pCreateInfos` is a pointer to an array of `VkComputePipelineCreateInfo` structures.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pPipelines` is a pointer to an array of `VkPipeline` handles in which the resulting compute pipeline objects are returned.

Pipelines are created and returned as described for [Multiple Pipeline Creation](#).

Valid Usage

- VUID-vkCreateComputePipelines-device-09661
`device` **must** support at least one queue family with the `VK_QUEUE_COMPUTE_BIT` capability
- VUID-vkCreateComputePipelines-flags-00695

If the `flags` member of any element of `pCreateInfo`s contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and the `basePipelineIndex` member of that same element is not `-1`, `basePipelineIndex` **must** be less than the index into `pCreateInfo`s that corresponds to that element

- VUID-vkCreateComputePipelines-flags-00696

If the `flags` member of any element of `pCreateInfo`s contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, the base pipeline **must** have been created with the `VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT` flag set

- VUID-vkCreateComputePipelines-pipelineCache-02873

If `pipelineCache` was created with `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`, host access to `pipelineCache` **must** be externally synchronized

- VUID-vkCreateComputePipelines-pNext-09616

If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfo`s, `pipelineCache` **must** be `VK_NULL_HANDLE`

- VUID-vkCreateComputePipelines-pNext-09617

If a `VkPipelineCreateFlags2CreateInfoKHR` structure with the `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag set is included in the `pNext` chain of any element of `pCreateInfo`s, `pipelineCache` **must** be `VK_NULL_HANDLE`

- VUID-vkCreateComputePipelines-binaryCount-09620

If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfo`s, `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` **must** not be set in the `flags` of that element

- VUID-vkCreateComputePipelines-binaryCount-09621

If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfo`s, `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` **must** not be set in the `flags` of that element

- VUID-vkCreateComputePipelines-binaryCount-09622

If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of `pCreateInfo`s, `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT` **must** not be set in the `flags` of that element

- VUID-vkCreateComputePipelines-pCreateInfo-11414

If any element of `pCreateInfo`s sets `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` and includes embedded sampler mappings, there **must** be less than $(\text{maxSamplerAllocationCount} - (\text{minSamplerHeapReservedRangeWithEmbedded} / \text{samplerDescriptorSize}))$ `VkSampler` objects currently created on the device

- VUID-vkCreateComputePipelines-pCreateInfo-11429

If any element of `pCreateInfo`s sets `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` and includes embedded sampler mappings, this command **must** not cause the total number of unique embedded samplers in pipelines and shaders on this device to exceed `maxDescriptorHeapEmbeddedSamplers`

Valid Usage (Implicit)

- VUID-vkCreateComputePipelines-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateComputePipelines-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkCreateComputePipelines-pCreateInfos-parameter
`pCreateInfos` **must** be a valid pointer to an array of `createInfoCount` valid `VkComputePipelineCreateInfo` structures
- VUID-vkCreateComputePipelines-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateComputePipelines-pPipelines-parameter
`pPipelines` **must** be a valid pointer to an array of `createInfoCount` `VkPipeline` handles
- VUID-vkCreateComputePipelines-createInfoCount-arraylength
`createInfoCount` **must** be greater than `0`
- VUID-vkCreateComputePipelines-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_PIPELINE_COMPILE_REQUIRED_EXT`
- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_SHADER_NV`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkComputePipelineCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkComputePipelineCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineCreateFlags    flags;
    VkPipelineShaderStageCreateInfo stage;
    VkPipelineLayout         layout;
    VkPipeline               basePipelineHandle;
    int32_t                  basePipelineIndex;
} VkComputePipelineCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPipelineCreateFlagBits` specifying how the pipeline will be generated.
- `stage` is a `VkPipelineShaderStageCreateInfo` structure describing the compute shader.
- `layout` is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline. If `VkPhysicalDeviceProperties::apiVersion` is greater than or equal to Vulkan 1.3 or `VK_KHR_maintenance4` is enabled `layout` **must** not be accessed by the implementation outside of the duration of the command this structure is passed to.
- `basePipelineHandle` is a pipeline to derive from.
- `basePipelineIndex` is an index into the `pCreateInfo` parameter to use as a pipeline to derive from.

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in [Pipeline Derivatives](#).

If the `pNext` chain includes a `VkPipelineCreateFlags2CreateInfo` structure, `VkPipelineCreateFlags2CreateInfo::flags` from that structure is used instead of `flags` from this structure.

Valid Usage

- VUID-VkComputePipelineCreateInfo-None-09497
If the `pNext` chain does not include a `VkPipelineCreateFlags2CreateInfo` structure, `flags` **must** be a valid combination of `VkPipelineCreateFlagBits` values
- VUID-VkComputePipelineCreateInfo-flags-07984
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineIndex` is -1, `basePipelineHandle` **must** be a valid compute `VkPipeline` handle
- VUID-VkComputePipelineCreateInfo-flags-07985
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` **must** be a valid index into the calling command's `pCreateInfo` parameter
- VUID-VkComputePipelineCreateInfo-flags-07986
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, `basePipelineIndex` **must**

be -1 or `basePipelineHandle` must be `VK_NULL_HANDLE`

- VUID-VkComputePipelineCreateInfo-layout-07987

If a push constant block is declared in a shader and `layout` is not `VK_NULL_HANDLE`, a push constant range in `layout` must match the shader stage

- VUID-VkComputePipelineCreateInfo-layout-10069

If a push constant block is declared in a shader and `layout` is not `VK_NULL_HANDLE`, the block must be contained inside the push constant range in `layout` that matches the stage

- VUID-VkComputePipelineCreateInfo-layout-07988

If a `resource variable` is declared in a shader and `layout` is not `VK_NULL_HANDLE`, the corresponding descriptor set in `layout` must match the shader stage

- VUID-VkComputePipelineCreateInfo-layout-07990

If a `resource variable` is declared in a shader, `layout` is not `VK_NULL_HANDLE`, and the descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the corresponding descriptor set in `layout` must match the descriptor type

- VUID-VkComputePipelineCreateInfo-layout-07991

If a `resource variable` is declared in a shader as an array and `layout` is not `VK_NULL_HANDLE`, the corresponding descriptor binding used to create `layout` must have a `descriptorCount` that is greater than or equal to the length of the array

- VUID-VkComputePipelineCreateInfo-None-10391

If a `resource variables` is declared in a shader as an array of descriptors, then the descriptor type of that variable must not be `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`

- VUID-VkComputePipelineCreateInfo-flags-11798

If `shader64BitIndexing` feature is not enabled, `flags` must not contain `VK_PIPELINE_CREATE_2_64_BIT_INDEXING_BIT_EXT`

- VUID-VkComputePipelineCreateInfo-pipelineCreationCacheControl-02878

If the `pipelineCreationCacheControl` feature is not enabled, `flags` must not include `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` nor `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`

- VUID-VkComputePipelineCreateInfo-pipelineProtectedAccess-07368

If the `pipelineProtectedAccess` feature is not enabled, `flags` must not include `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` nor `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`

- VUID-VkComputePipelineCreateInfo-flags-07369

`flags` must not include both `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` and `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`

- VUID-VkComputePipelineCreateInfo-flags-11311

If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `layout` must be `VK_NULL_HANDLE`

- VUID-VkComputePipelineCreateInfo-flags-11312

If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, all shader variables in the `shader`

resource interface with a `DescriptorSet` and `Binding` decoration **must** have a mapping declared in `VkShaderDescriptorSetAndBindingMappingInfoEXT::pMappings`

- VUID-VkComputePipelineCreateInfo-flags-03365
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`
- VUID-VkComputePipelineCreateInfo-flags-03366
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`
- VUID-VkComputePipelineCreateInfo-flags-03367
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`
- VUID-VkComputePipelineCreateInfo-flags-03368
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`
- VUID-VkComputePipelineCreateInfo-flags-03369
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`
- VUID-VkComputePipelineCreateInfo-flags-03370
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`
- VUID-VkComputePipelineCreateInfo-flags-03576
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`
- VUID-VkComputePipelineCreateInfo-flags-04945
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV`
- VUID-VkComputePipelineCreateInfo-flags-09007
If the `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`
- VUID-VkComputePipelineCreateInfo-flags-09008
If `flags` includes `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`, then the `pNext` chain **must** include a pointer to a valid instance of `VkComputePipelineIndirectBufferInfoNV` specifying the address where the pipeline's metadata will be saved
- VUID-VkComputePipelineCreateInfo-flags-11007
If `flags` includes `VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT`, then the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled
- VUID-VkComputePipelineCreateInfo-stage-00701
The `stage` member of `stage` **must** be `VK_SHADER_STAGE_COMPUTE_BIT`
- VUID-VkComputePipelineCreateInfo-stage-00702
The shader code for the entry point identified by `stage` and the rest of the state identified by this structure **must** adhere to the pipeline linking rules described in the `Shader`

Interfaces chapter

- VUID-VkComputePipelineCreateInfo-layout-01687
If **layout** is not `VK_NULL_HANDLE`, the number of resources in **layout** accessible to the compute shader stage **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageResources`
- VUID-VkComputePipelineCreateInfo-shaderEnqueue-09177
If the **shaderEnqueue** feature is not enabled, **flags** **must** not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`
- VUID-VkComputePipelineCreateInfo-flags-09178
If **flags** does not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`, the shader specified by **stage** **must** not declare the `ShaderEnqueueAMD` capability
- VUID-VkComputePipelineCreateInfo-pipelineStageCreationFeedbackCount-06566
If `VkPipelineCreationFeedbackCreateInfo::pipelineStageCreationFeedbackCount` is not 0, it **must** be 1
- VUID-VkComputePipelineCreateInfo-flags-07367
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT`
- VUID-VkComputePipelineCreateInfo-flags-07996
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV`
- VUID-VkComputePipelineCreateInfo-layout-12396
If **layout** is not `VK_NULL_HANDLE`, it **must** not have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`
- VUID-VkComputePipelineCreateInfo-None-11367
If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, **layout** **must** not be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkComputePipelineCreateInfo-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_COMPUTE_PIPELINE_CREATE_INFO`
- VUID-VkComputePipelineCreateInfo-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either `NULL` or a pointer to a valid instance of `VkComputePipelineIndirectBufferInfoNV`, `VkPipelineBinaryInfoKHR`, `VkPipelineCompilerControlCreateInfoAMD`, `VkPipelineCreateFlags2CreateInfo`, `VkPipelineCreationFeedbackCreateInfo`, `VkPipelineRobustnessCreateInfo`, or `VkSubpassShadingPipelineCreateInfoHUAWEI`
- VUID-VkComputePipelineCreateInfo-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkComputePipelineCreateInfo-stage-parameter
stage **must** be a valid `VkPipelineShaderStageCreateInfo` structure

- VUID-VkComputePipelineCreateInfo-layout-parameter
If **layout** is not `VK_NULL_HANDLE`, **layout** **must** be a valid `VkPipelineLayout` handle
- VUID-VkComputePipelineCreateInfo-commonparent
Both of **basePipelineHandle**, and **layout** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkPipelineShaderStageCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineShaderStageCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineShaderStageCreateFlags flags;
    VkShaderStageFlagBits    stage;
    VkShaderModule            module;
    const char*              pName;
    const VkSpecializationInfo* pSpecializationInfo;
} VkPipelineShaderStageCreateInfo;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is a bitmask of `VkPipelineShaderStageCreateFlagBits` specifying how the pipeline shader stage will be generated.
- **stage** is a `VkShaderStageFlagBits` value specifying a single pipeline stage.
- **module** is optionally a `VkShaderModule` object containing the shader code for this stage. The implementation **must** not access this object outside of the duration of the command this structure is passed to.
- **pName** is a pointer to a null-terminated UTF-8 string specifying the entry point name of the shader for this stage.
- **pSpecializationInfo** is a pointer to a `VkSpecializationInfo` structure, as described in [Specialization Constants](#), or `NULL`.

If **module** is not `VK_NULL_HANDLE`, the shader code used by the pipeline is defined by **module**. If **module** is `VK_NULL_HANDLE`, the shader code is defined by the chained `VkShaderModuleCreateInfo` if present.

If the `shaderModuleIdentifier` feature is enabled, applications **can** omit shader code for **stage** and instead provide a module identifier. This is done by including a `VkPipelineShaderStageModuleIdentifierCreateInfoEXT` structure with **identifierSize** not equal to 0 in the **pNext** chain. A shader stage created in this way is equivalent to one created using a shader module with the same identifier. The identifier allows an implementation to look up a pipeline without consuming a valid SPIR-V module. If a pipeline is not found, pipeline compilation is not possible and the implementation **must** fail as specified by `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT`.

When an identifier is used in lieu of a shader module, implementations **may** fail pipeline compilation with `VK_PIPELINE_COMPILE_REQUIRED` for any reason.

NOTE

The rationale for the relaxed requirement on implementations to return a pipeline with `VkPipelineShaderStageModuleIdentifierCreateInfoEXT` is that layers or tools may intercept pipeline creation calls and require the full SPIR-V context to operate correctly. ICDs are not expected to fail pipeline compilation if the pipeline exists in a cache somewhere.

Applications **can** use identifiers when creating pipelines with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`. When creating such pipelines, `VK_SUCCESS` **may** be returned, but subsequently fail when referencing the pipeline in a `VkPipelineLibraryCreateInfoKHR` struct. Applications **must** allow pipeline compilation to fail during link steps with `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` as it **may** not be possible to determine if a pipeline **can** be created from identifiers until the link step.

Valid Usage

- VUID-VkPipelineShaderStageCreateInfo-descriptorHeap-11314
If the `descriptorHeap` feature is not enabled, `VkShaderDescriptorSetAndBindingMappingInfoEXT::mappingCount` **must** be 0
- VUID-VkPipelineShaderStageCreateInfo-pNext-11315
If the `pNext` chain specifies a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, the mapped resource in the shader **must** be a variable with a structure type decorated with `Block` in the `Uniform Storage Class`
- VUID-VkPipelineShaderStageCreateInfo-pNext-11316
If the `pNext` chain specifies a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, the mapped structure **must** not be larger than the sum of `pushDataOffset` used in the mapping and `maxPushDataSize`
- VUID-VkPipelineShaderStageCreateInfo-pNext-11317
If the `pNext` chain specifies a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, the sum of mapped structure size and `shaderRecordDataOffset` used in the mapping **must** not be larger than `maxShaderGroupStride`
- VUID-VkPipelineShaderStageCreateInfo-pNext-11318
If the `pNext` chain specifies a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, the mapped resource in the shader **must** be one of:
 - A variable with a structure type decorated with `Block` in the `Uniform Storage Class`
 - A variable with a structure type decorated with `BufferBlock` in the `Uniform Storage Class`

- A variable with a structure type decorated with **Block** in the **StorageBuffer Storage Class**
- A **OpTypeAccelerationStructureKHR** variable
- A **OpTypeAccelerationStructureNV** variable
- VUID-VkPipelineShaderStageCreateInfo-pNext-11378
If the **pNext** chain specifies a **descriptor mapping** using **VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT**, **VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT**, or **VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT**, the **OpArrayLength** or **OpUntypedArrayLengthKHR** instruction **must** not be used on that resource
- VUID-VkPipelineShaderStageCreateInfo-pNext-11399
If the **pNext** chain specifies a **descriptor mapping** using **VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT**, **VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT**, **VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT**, **VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT**, or **VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT**, and the mapped resource declaration is an array, the **pEmbeddedSampler** member of the corresponding mapping structure **must** be **NULL**
- VUID-VkPipelineShaderStageCreateInfo-stage-00704
If the **geometryShader** feature is not enabled, **stage** **must** not be **VK_SHADER_STAGE_GEOMETRY_BIT**
- VUID-VkPipelineShaderStageCreateInfo-stage-00705
If the **tessellationShader** feature is not enabled, **stage** **must** not be **VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT** or **VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT**
- VUID-VkPipelineShaderStageCreateInfo-stage-02091
If the **meshShaders** feature is not enabled, **stage** **must** not be **VK_SHADER_STAGE_MESH_BIT_EXT**
- VUID-VkPipelineShaderStageCreateInfo-stage-02092
If the **taskShaders** feature is not enabled, **stage** **must** not be **VK_SHADER_STAGE_TASK_BIT_EXT**
- VUID-VkPipelineShaderStageCreateInfo-clusterCullingShader-07813
If the **clusterCullingShader** feature is not enabled, **stage** **must** not be **VK_SHADER_STAGE_CLUSTER_CULLING_BIT_HUAWEI**
- VUID-VkPipelineShaderStageCreateInfo-stage-00706
stage **must** not be **VK_SHADER_STAGE_ALL_GRAPHICS**, or **VK_SHADER_STAGE_ALL**
- VUID-VkPipelineShaderStageCreateInfo-pName-00707
pName **must** be the name of an **OpEntryPoint** in **module** with an execution model that matches **stage**
- VUID-VkPipelineShaderStageCreateInfo-maxClipDistances-00708
If the identified entry point includes any variable in its interface that is declared with the **ClipDistance BuiltIn** decoration, that variable **must** not have an array size greater than

VkPhysicalDeviceLimits::maxClipDistances

- VUID-VkPipelineShaderStageCreateInfo-maxCullDistances-00709

If the identified entry point includes any variable in its interface that is declared with the **CullDistance BuiltIn** decoration, that variable **must** not have an array size greater than **VkPhysicalDeviceLimits::maxCullDistances**

- VUID-VkPipelineShaderStageCreateInfo-maxCombinedClipAndCullDistances-00710

If the identified entry point includes variables in its interface that are declared with the **ClipDistance BuiltIn** decoration and variables in its interface that are declared with the **CullDistance BuiltIn** decoration, those variables **must** not have array sizes which sum to more than **VkPhysicalDeviceLimits::maxCombinedClipAndCullDistances**

- VUID-VkPipelineShaderStageCreateInfo-maxSampleMaskWords-00711

If the identified entry point includes any variable in its interface that is declared with the **SampleMask BuiltIn** decoration, that variable **must** not have an array size greater than **VkPhysicalDeviceLimits::maxSampleMaskWords**

- VUID-VkPipelineShaderStageCreateInfo-stage-00713

If **stage** is **VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT** or **VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT**, and the identified entry point has an **OpExecutionMode** instruction specifying a patch size with **OutputVertices**, the patch size **must** be greater than **0** and less than or equal to **VkPhysicalDeviceLimits::maxTessellationPatchSize**

- VUID-VkPipelineShaderStageCreateInfo-stage-00714

If **stage** is **VK_SHADER_STAGE_GEOMETRY_BIT**, the identified entry point **must** have an **OpExecutionMode** instruction specifying a maximum output vertex count that is greater than **0** and less than or equal to **VkPhysicalDeviceLimits::maxGeometryOutputVertices**

- VUID-VkPipelineShaderStageCreateInfo-stage-00715

If **stage** is **VK_SHADER_STAGE_GEOMETRY_BIT**, the identified entry point **must** have an **OpExecutionMode** instruction specifying an invocation count that is greater than **0** and less than or equal to **VkPhysicalDeviceLimits::maxGeometryShaderInvocations**

- VUID-VkPipelineShaderStageCreateInfo-stage-02596

If **stage** is either **VK_SHADER_STAGE_VERTEX_BIT**, **VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT**, **VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT**, or **VK_SHADER_STAGE_GEOMETRY_BIT**, and the identified entry point writes to **Layer** for any primitive, it **must** write the same value to **Layer** for all vertices of a given primitive

- VUID-VkPipelineShaderStageCreateInfo-stage-02597

If **stage** is either **VK_SHADER_STAGE_VERTEX_BIT**, **VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT**, **VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT**, or **VK_SHADER_STAGE_GEOMETRY_BIT**, and the identified entry point writes to **ViewportIndex** for any primitive, it **must** write the same value to **ViewportIndex** for all vertices of a given primitive

- VUID-VkPipelineShaderStageCreateInfo-stage-06685

If **stage** is **VK_SHADER_STAGE_FRAGMENT_BIT**, and the identified entry point writes to **FragDepth** in any execution path, all execution paths that are not exclusive to helper

invocations **must** either discard the fragment, or write or initialize the value of `FragDepth`

- VUID-VkPipelineShaderStageCreateInfo-stage-06686

If `stage` is `VK_SHADER_STAGE_FRAGMENT_BIT`, and the identified entry point writes to `FragStencilRefEXT` in any execution path, all execution paths that are not exclusive to helper invocations **must** either discard the fragment, or write or initialize the value of `FragStencilRefEXT`

- VUID-VkPipelineShaderStageCreateInfo-flags-02784

If `flags` has the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag set, the `subgroupSizeControl` feature **must** be enabled

- VUID-VkPipelineShaderStageCreateInfo-flags-02785

If `flags` has the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag set, the `computeFullSubgroups` feature **must** be enabled

- VUID-VkPipelineShaderStageCreateInfo-flags-08988

If `flags` includes `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT`, `stage` **must** be one of `VK_SHADER_STAGE_MESH_BIT_EXT`, `VK_SHADER_STAGE_TASK_BIT_EXT`, or `VK_SHADER_STAGE_COMPUTE_BIT`

- VUID-VkPipelineShaderStageCreateInfo-pNext-02754

If a `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure is included in the `pNext` chain, `flags` **must** not have the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag set

- VUID-VkPipelineShaderStageCreateInfo-pNext-02755

If a `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure is included in the `pNext` chain, the `subgroupSizeControl` feature **must** be enabled, and `stage` **must** be a valid bit specified in `requiredSubgroupSizeStages`

- VUID-VkPipelineShaderStageCreateInfo-pNext-02756

If a `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure is included in the `pNext` chain and `stage` is `VK_SHADER_STAGE_COMPUTE_BIT`, `VK_SHADER_STAGE_MESH_BIT_EXT`, or `VK_SHADER_STAGE_TASK_BIT_EXT`, the local workgroup size of the shader **must** be less than or equal to the product of `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo::requiredSubgroupSize` and `maxComputeWorkgroupSubgroups`

- VUID-VkPipelineShaderStageCreateInfo-pNext-02757

If a `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure is included in the `pNext` chain, and `flags` has the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag set, the local workgroup size in the X dimension of the pipeline **must** be a multiple of `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo::requiredSubgroupSize`

- VUID-VkPipelineShaderStageCreateInfo-flags-02758

If `flags` has both the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` and `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flags set, the local workgroup size in the X dimension of the pipeline **must** be a multiple of

maxSubgroupSize

- VUID-VkPipelineShaderStageCreateInfo-flags-02759

If **flags** has the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag set and **flags** does not have the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag set and no `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure is included in the **pNext** chain, the local workgroup size in the X dimension of the pipeline **must** be a multiple of **subgroupSize**

- VUID-VkPipelineShaderStageCreateInfo-module-08987

If **module** uses the `OpTypeCooperativeMatrixKHR` instruction with a **Scope** equal to `Subgroup`, then the local workgroup size in the X dimension of the pipeline **must** be a multiple of the **effective subgroup size**

- VUID-VkPipelineShaderStageCreateInfo-module-10169

If **module** uses the `OpTypeCooperativeMatrixKHR` instruction with a **Scope** equal to `Workgroup`, then the local workgroup size in the X dimension of the pipeline **must** be a multiple of the **effective subgroup size** and the total local workgroup size **must** be a power of two multiple of the **effective subgroup size** and **must** be less than or equal to `cooperativeMatrixWorkgroupScopeMaxWorkgroupSize`

- VUID-VkPipelineShaderStageCreateInfo-stage-08771

If a shader module identifier is not specified for this **stage**, **module** **must** be a valid `VkShaderModule`, or the **pNext** chain of the parent `Vk*CreateInfo` structure **must** set `VkPipelineBinaryInfoKHR::binaryCount` to a value greater than 0, if none of the following features are enabled:

- `graphicsPipelineLibrary`
- `maintenance5`

- VUID-VkPipelineShaderStageCreateInfo-stage-06845

If a shader module identifier is not specified for this **stage**, **module** **must** be a valid `VkShaderModule`, or there **must** be a valid `VkShaderModuleCreateInfo` structure in the **pNext** chain, or the **pNext** chain of the parent `Vk*CreateInfo` structure **must** set `VkPipelineBinaryInfoKHR::binaryCount` to a value greater than 0,

- VUID-VkPipelineShaderStageCreateInfo-stage-06844

If a shader module identifier is specified for this **stage**, the **pNext** chain **must** not include a `VkShaderModuleCreateInfo` structure

- VUID-VkPipelineShaderStageCreateInfo-stage-06848

If a shader module identifier is specified for this **stage**, **module** **must** be `VK_NULL_HANDLE`

- VUID-VkPipelineShaderStageCreateInfo-pSpecializationInfo-06849

If a shader module identifier is not specified, the shader code used by the pipeline **must** be valid as described by the [Khronos SPIR-V Specification](#) after applying the specializations provided in `pSpecializationInfo`, if any, and then converting all specialization constants into fixed constants

Valid Usage (Implicit)

- VUID-VkPipelineShaderStageCreateInfo-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_PIPELINE_SHADER_STAGE_CREATE_INFO](#)
- VUID-VkPipelineShaderStageCreateInfo-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkDebugUtilsObjectNameInfoEXT](#), [VkPipelineRobustnessCreateInfo](#), [VkPipelineShaderStageModuleIdentifierCreateInfoEXT](#), [VkPipelineShaderStageNodeCreateInfoAMD](#), [VkPipelineShaderStageRequiredSubgroupSizeCreateInfo](#), [VkShaderDescriptorSetAndBindingMappingInfoEXT](#), [VkShaderModuleCreateInfo](#), or [VkShaderModuleValidationCacheCreateInfoEXT](#)
- VUID-VkPipelineShaderStageCreateInfo-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkPipelineShaderStageCreateInfo-flags-parameter
flags **must** be a valid combination of [VkPipelineShaderStageCreateFlagBits](#) values
- VUID-VkPipelineShaderStageCreateInfo-stage-parameter
stage **must** be a valid [VkShaderStageFlagBits](#) value
- VUID-VkPipelineShaderStageCreateInfo-module-parameter
If **module** is not [VK_NULL_HANDLE](#), **module** **must** be a valid [VkShaderModule](#) handle
- VUID-VkPipelineShaderStageCreateInfo-pName-parameter
pName **must** be a null-terminated UTF-8 string
- VUID-VkPipelineShaderStageCreateInfo-pSpecializationInfo-parameter
If **pSpecializationInfo** is not **NULL**, **pSpecializationInfo** **must** be a valid pointer to a valid [VkSpecializationInfo](#) structure

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineShaderStageCreateFlags;
```

[VkPipelineShaderStageCreateFlags](#) is a bitmask type for setting a mask of zero or more [VkPipelineShaderStageCreateFlagBits](#).

Possible values of the **flags** member of [VkPipelineShaderStageCreateInfo](#) specifying how a pipeline shader stage is created, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkPipelineShaderStageCreateFlagBits {
    // Provided by VK_VERSION_1_3
    VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT = 0x00000001,
    // Provided by VK_VERSION_1_3
    VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT = 0x00000002,
    // Provided by VK_EXT_subgroup_size_control
    VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT_EXT =
VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT,
    // Provided by VK_EXT_subgroup_size_control
    VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT_EXT =
VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT,
} VkPipelineShaderStageCreateFlagBits;
```

- `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` specifies that the **SubgroupSize** **may** vary in the shader stage.
- `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` specifies that the subgroup sizes **must** be launched with all invocations active in the task, mesh, or compute stage.

NOTE If `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT_EXT` and `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT_EXT` are specified and **minSubgroupSize** does not equal **maxSubgroupSize** and no **required subgroup size** is specified, then the only way to guarantee that the 'X' dimension of the local workgroup size is a multiple of **SubgroupSize** is to make it a multiple of **maxSubgroupSize**. Under these conditions, you are guaranteed full subgroups but not any particular subgroup size.

Bits which **can** be set by commands and structures, specifying one or more shader stages, are:

```

// Provided by VK_VERSION_1_0
typedef enum VkShaderStageFlagBits {
    VK_SHADER_STAGE_VERTEX_BIT = 0x00000001,
    VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT = 0x00000002,
    VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT = 0x00000004,
    VK_SHADER_STAGE_GEOMETRY_BIT = 0x00000008,
    VK_SHADER_STAGE_FRAGMENT_BIT = 0x00000010,
    VK_SHADER_STAGE_COMPUTE_BIT = 0x00000020,
    VK_SHADER_STAGE_ALL_GRAPHICS = 0x0000001F,
    VK_SHADER_STAGE_ALL = 0x7FFFFFFF,
// Provided by VK_KHR_ray_tracing_pipeline
    VK_SHADER_STAGE_RAYGEN_BIT_KHR = 0x00000100,
// Provided by VK_KHR_ray_tracing_pipeline
    VK_SHADER_STAGE_ANY_HIT_BIT_KHR = 0x00000200,
// Provided by VK_KHR_ray_tracing_pipeline
    VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR = 0x00000400,
// Provided by VK_KHR_ray_tracing_pipeline

// Provided by VK_NV_ray_tracing
    VK_SHADER_STAGE_CLOSEST_HIT_BIT_NV = VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR,
// Provided by VK_NV_ray_tracing
    VK_SHADER_STAGE_MISS_BIT_NV = VK_SHADER_STAGE_MISS_BIT_KHR,
// Provided by VK_NV_ray_tracing
    VK_SHADER_STAGE_INTERSECTION_BIT_NV = VK_SHADER_STAGE_INTERSECTION_BIT_KHR,
// Provided by VK_NV_ray_tracing
    VK_SHADER_STAGE_CALLABLE_BIT_NV = VK_SHADER_STAGE_CALLABLE_BIT_KHR,
// Provided by VK_NV_mesh_shader
    VK_SHADER_STAGE_TASK_BIT_NV = VK_SHADER_STAGE_TASK_BIT_EXT,
// Provided by VK_NV_mesh_shader
    VK_SHADER_STAGE_MESH_BIT_NV = VK_SHADER_STAGE_MESH_BIT_EXT,
} VkShaderStageFlagBits;

```

- [VK_SHADER_STAGE_VERTEX_BIT](#) specifies the vertex stage.

- [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) specifies the tessellation control stage.
- [VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT](#) specifies the tessellation evaluation stage.
- [VK_SHADER_STAGE_GEOMETRY_BIT](#) specifies the geometry stage.
- [VK_SHADER_STAGE_FRAGMENT_BIT](#) specifies the fragment stage.
- [VK_SHADER_STAGE_COMPUTE_BIT](#) specifies the compute stage.
- [VK_SHADER_STAGE_ALL_GRAPHICS](#) is a combination of bits used as shorthand to specify all graphics stages defined above (excluding the compute stage).
- [VK_SHADER_STAGE_ALL](#) is a combination of bits used as shorthand to specify all shader stages supported by the device, including all additional stages which are introduced by extensions.
- [VK_SHADER_STAGE_TASK_BIT_EXT](#) specifies the task stage.
- [VK_SHADER_STAGE_MESH_BIT_EXT](#) specifies the mesh stage.
- [VK_SHADER_STAGE_CLUSTER_CULLING_BIT_HUAWEI](#) specifies the cluster culling stage.
- [VK_SHADER_STAGE_RAYGEN_BIT_KHR](#) specifies the ray generation stage.
- [VK_SHADER_STAGE_ANY_HIT_BIT_KHR](#) specifies the any-hit stage.
- [VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR](#) specifies the closest hit stage.
- [VK_SHADER_STAGE_MISS_BIT_KHR](#) specifies the miss stage.
- [VK_SHADER_STAGE_INTERSECTION_BIT_KHR](#) specifies the intersection stage.
- [VK_SHADER_STAGE_CALLABLE_BIT_KHR](#) specifies the callable stage.

NOTE

[VK_SHADER_STAGE_ALL_GRAPHICS](#) only includes the original five graphics stages included in Vulkan 1.0, and not any stages added by extensions. Thus, it may not have the desired effect in all cases.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkShaderStageFlags;
```

[VkShaderStageFlags](#) is a bitmask type for setting a mask of zero or more [VkShaderStageFlagBits](#).

The [VkPipelineShaderStageRequiredSubgroupSizeCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPipelineShaderStageRequiredSubgroupSizeCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           requiredSubgroupSize;
} VkPipelineShaderStageRequiredSubgroupSizeCreateInfo;
```

```
// Provided by VK_EXT_subgroup_size_control
// Equivalent to VkPipelineShaderStageRequiredSubgroupSizeCreateInfo
typedef VkPipelineShaderStageRequiredSubgroupSizeCreateInfo
VkPipelineShaderStageRequiredSubgroupSizeCreateInfoEXT;
```

or the equivalent

```
// Provided by VK_EXT_shader_object
// Equivalent to VkPipelineShaderStageRequiredSubgroupSizeCreateInfo
typedef VkPipelineShaderStageRequiredSubgroupSizeCreateInfo
VkShaderRequiredSubgroupSizeCreateInfoEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **requiredSubgroupSize** is an unsigned integer value specifying the required subgroup size for the newly created pipeline shader stage.

If a **VkPipelineShaderStageRequiredSubgroupSizeCreateInfo** structure is included in the **pNext** chain of **VkPipelineShaderStageCreateInfo**, it specifies that the pipeline shader stage being compiled has a required subgroup size.

If a **VkShaderRequiredSubgroupSizeCreateInfoEXT** structure is included in the **pNext** chain of **VkShaderCreateInfoEXT**, it specifies that the shader being compiled has a required subgroup size.

Valid Usage

- VUID-VkPipelineShaderStageRequiredSubgroupSizeCreateInfo-requiredSubgroupSize-02760
requiredSubgroupSize **must** be a power-of-two integer
- VUID-VkPipelineShaderStageRequiredSubgroupSizeCreateInfo-requiredSubgroupSize-02761
requiredSubgroupSize **must** be greater or equal to **minSubgroupSize**
- VUID-VkPipelineShaderStageRequiredSubgroupSizeCreateInfo-requiredSubgroupSize-02762
requiredSubgroupSize **must** be less than or equal to **maxSubgroupSize**

Valid Usage (Implicit)

- VUID-VkPipelineShaderStageRequiredSubgroupSizeCreateInfo-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_PIPELINE_SHADER_STAGE_REQUIRED_SUBGROUP_SIZE_CREATE_INFO**

Structure Chaining

Extends the structures

- [VkPipelineShaderStageCreateInfo](#)
- [VkShaderCreateInfoEXT](#)

A subpass shading pipeline is a compute pipeline which **must** be called only in a subpass of a render pass with work dimensions specified by render area size. The subpass shading pipeline shader is a compute shader allowed to access input attachments specified in the calling subpass. To create a subpass shading pipeline, call [vkCreateComputePipelines](#) with [VkSubpassShadingPipelineCreateInfoHUAWEI](#) in the **pNext** chain of [VkComputePipelineCreateInfo](#).

The [VkSubpassShadingPipelineCreateInfoHUAWEI](#) structure is defined as:

```
// Provided by VK_HUAWEI_subpass_shading
typedef struct VkSubpassShadingPipelineCreateInfoHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkRenderPass        renderPass;
    uint32_t            subpass;
} VkSubpassShadingPipelineCreateInfoHUAWEI;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **renderPass** is a handle to a render pass object describing the environment in which the pipeline will be used. The pipeline **must** only be used with a render pass instance compatible with the one provided. See [Render Pass Compatibility](#) for more information. The implementation **must** not access this object outside of the duration of the command this structure is passed to.
- **subpass** is the index of the subpass in the render pass where this pipeline will be used.

Valid Usage

- VUID-VkSubpassShadingPipelineCreateInfoHUAWEI-subpass-04946
subpass **must** be created with [VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI](#) bind point

Valid Usage (Implicit)

- VUID-VkSubpassShadingPipelineCreateInfoHUAWEI-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_SUBPASS_SHADING_PIPELINE_CREATE_INFO_HUAWEI](#)
- VUID-VkSubpassShadingPipelineCreateInfoHUAWEI-renderPass-parameter
renderPass **must** be a valid [VkRenderPass](#) handle

Structure Chaining

Extends the structure

- [VkComputePipelineCreateInfo](#)

A subpass shading pipeline's workgroup size is a 2D vector with number of power-of-two in width and height. The maximum number of width and height is implementation-dependent, and **may** vary for different formats and sample counts of attachments in a render pass.

To query the maximum workgroup size, call:

```
// Provided by VK_HUAWEI_subpass_shading
VkResult vkGetDeviceSubpassShadingMaxWorkgroupSizeHUAWEI(
    VkDevice          device,
    VkRenderPass      renderpass,
    VkExtent2D*       pMaxWorkgroupSize);
```

- **device** is a handle to a local device object that was used to create the given render pass.
- **renderpass** is a handle to a render pass object describing the environment in which the pipeline will be used. The pipeline **must** only be used with a render pass instance compatible with the one provided. See [Render Pass Compatibility](#) for more information.
- **pMaxWorkgroupSize** is a pointer to a [VkExtent2D](#) structure.

Valid Usage (Implicit)

- VUID-vkGetDeviceSubpassShadingMaxWorkgroupSizeHUAWEI-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceSubpassShadingMaxWorkgroupSizeHUAWEI-renderpass-parameter **renderpass** **must** be a valid [VkRenderPass](#) handle
- VUID-vkGetDeviceSubpassShadingMaxWorkgroupSizeHUAWEI-pMaxWorkgroupSize-parameter **pMaxWorkgroupSize** **must** be a valid pointer to [VkExtent2D](#) structures
- VUID-vkGetDeviceSubpassShadingMaxWorkgroupSizeHUAWEI-renderpass-parent **renderpass** **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkPipelineRobustnessCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPipelineRobustnessCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineRobustnessBufferBehavior storageBuffers;
    VkPipelineRobustnessBufferBehavior uniformBuffers;
    VkPipelineRobustnessBufferBehavior vertexInputs;
    VkPipelineRobustnessImageBehavior images;
} VkPipelineRobustnessCreateInfo;
```

```
// Provided by VK_EXT_pipeline_robustness
// Equivalent to VkPipelineRobustnessCreateInfo
typedef VkPipelineRobustnessCreateInfo VkPipelineRobustnessCreateInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageBuffers` sets the behavior of out of bounds accesses made to resources bound as:
 - [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER](#)
 - [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#)
 - [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC](#)
- `uniformBuffers` describes the behavior of out of bounds accesses made to resources bound as:
 - [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#)
 - [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#)
 - [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC](#)
 - [VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#)
- `vertexInputs` describes the behavior of out of bounds accesses made to vertex input attributes
- `images` describes the behavior of out of bounds accesses made to resources bound as:
 - [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#)
 - [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#)

Resources bound as [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#) will have the robustness behavior that covers its active descriptor type.

The scope of the effect of `VkPipelineRobustnessCreateInfo` depends on which structure's `pNext` chain it is included in.

- `VkGraphicsPipelineCreateInfo`, `VkRayTracingPipelineCreateInfoKHR`, `VkComputePipelineCreateInfo`:
The robustness behavior described by `VkPipelineRobustnessCreateInfo` applies to all accesses through this pipeline
- `VkPipelineShaderStageCreateInfo`:
The robustness behavior described by `VkPipelineRobustnessCreateInfo` applies to all accesses emanating from the shader code of this shader stage

If `VkPipelineRobustnessCreateInfo` is specified for both a pipeline and a pipeline stage, the `VkPipelineRobustnessCreateInfo` specified for the pipeline stage will take precedence.

When `VkPipelineRobustnessCreateInfo` is specified for a pipeline, it only affects the subset of the pipeline that is specified by the create info, as opposed to subsets linked from pipeline libraries. For `VkGraphicsPipelineCreateInfo`, that subset is specified by `VkGraphicsPipelineLibraryCreateInfoEXT::flags`. For `VkRayTracingPipelineCreateInfoKHR`, that subset is specified by the specific stages in `VkRayTracingPipelineCreateInfoKHR::pStages`.

Valid Usage

- VUID-VkPipelineRobustnessCreateInfo-pipelineRobustness-06926
If the `pipelineRobustness` feature is not enabled, `storageBuffers` **must** be `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DEVICE_DEFAULT`
- VUID-VkPipelineRobustnessCreateInfo-pipelineRobustness-06927
If the `pipelineRobustness` feature is not enabled, `uniformBuffers` **must** be `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DEVICE_DEFAULT`
- VUID-VkPipelineRobustnessCreateInfo-pipelineRobustness-06928
If the `pipelineRobustness` feature is not enabled, `vertexInputs` **must** be `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DEVICE_DEFAULT`
- VUID-VkPipelineRobustnessCreateInfo-pipelineRobustness-06929
If the `pipelineRobustness` feature is not enabled, `images` **must** be `VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DEVICE_DEFAULT`
- VUID-VkPipelineRobustnessCreateInfo-robustImageAccess-06930
If the `robustImageAccess` feature is not supported, `images` **must** not be `VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS`
- VUID-VkPipelineRobustnessCreateInfo-robustBufferAccess2-06931
If the `robustBufferAccess2` feature is not supported, `storageBuffers` **must** not be `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2`
- VUID-VkPipelineRobustnessCreateInfo-robustBufferAccess2-06932
If the `robustBufferAccess2` feature is not supported, `uniformBuffers` **must** not be `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2`
- VUID-VkPipelineRobustnessCreateInfo-robustBufferAccess2-06933
If the `robustBufferAccess2` feature is not supported, `vertexInputs` **must** not be `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2`

- VUID-VkPipelineRobustnessCreateInfo-robustImageAccess2-06934
If the `robustImageAccess2` feature is not supported, `images` **must** not be `VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS_2`
- VUID-VkPipelineRobustnessCreateInfo-storageBuffers-10636
If `storageBuffers` is `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2`, and either the `descriptorBindingStorageBufferUpdateAfterBind` feature or the `descriptorBindingStorageTexelBufferUpdateAfterBind` feature is enabled on the device, `robustBufferAccessUpdateAfterBind` **must** be `VK_TRUE`
- VUID-VkPipelineRobustnessCreateInfo-uniformBuffers-10637
If `uniformBuffers` is `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2`, and either the `descriptorBindingInlineUniformBlockUpdateAfterBind` feature, the `descriptorBindingUniformBufferUpdateAfterBind` feature, or the `descriptorBindingUniformTexelBufferUpdateAfterBind` feature is enabled on the device, `robustBufferAccessUpdateAfterBind` **must** be `VK_TRUE`
- VUID-VkPipelineRobustnessCreateInfo-images-10638
If `images` is `VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS` or `VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS_2`, and either the `descriptorBindingStorageImageUpdateAfterBind` feature or the `descriptorBindingSampledImageUpdateAfterBind` feature is enabled on the device, `robustBufferAccessUpdateAfterBind` **must** be `VK_TRUE`

Valid Usage (Implicit)

- VUID-VkPipelineRobustnessCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_ROBUSTNESS_CREATE_INFO`
- VUID-VkPipelineRobustnessCreateInfo-storageBuffers-parameter
`storageBuffers` **must** be a valid `VkPipelineRobustnessBufferBehavior` value
- VUID-VkPipelineRobustnessCreateInfo-uniformBuffers-parameter
`uniformBuffers` **must** be a valid `VkPipelineRobustnessBufferBehavior` value
- VUID-VkPipelineRobustnessCreateInfo-vertexInputs-parameter
`vertexInputs` **must** be a valid `VkPipelineRobustnessBufferBehavior` value
- VUID-VkPipelineRobustnessCreateInfo-images-parameter
`images` **must** be a valid `VkPipelineRobustnessImageBehavior` value

Structure Chaining

Extends the structures

- `VkComputePipelineCreateInfo`

- [VkGraphicsPipelineCreateInfo](#)
- [VkPipelineShaderStageCreateInfo](#)
- [VkRayTracingPipelineCreateInfoKHR](#)

Possible values of the `storageBuffers`, `uniformBuffers`, and `vertexInputs` members of [VkPipelineRobustnessCreateInfo](#) are:

```
// Provided by VK_VERSION_1_4
typedef enum VkPipelineRobustnessBufferBehavior {
    VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DEVICE_DEFAULT = 0,
    VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DISABLED = 1,
    VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS = 2,
    VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 = 3,
    // Provided by VK_EXT_pipeline_robustness
    VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DEVICE_DEFAULT_EXT =
VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DEVICE_DEFAULT,
    // Provided by VK_EXT_pipeline_robustness
    VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DISABLED_EXT =
VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DISABLED,
    // Provided by VK_EXT_pipeline_robustness
    VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT =
VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS,
    // Provided by VK_EXT_pipeline_robustness
    VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT =
VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2,
} VkPipelineRobustnessBufferBehavior;
```

```
// Provided by VK_EXT_pipeline_robustness
// Equivalent to VkPipelineRobustnessBufferBehavior
typedef VkPipelineRobustnessBufferBehavior VkPipelineRobustnessBufferBehaviorEXT;
```

- [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DEVICE_DEFAULT](#) specifies that **out of bounds** buffer accesses follow the behavior of robust buffer access features enabled for the device.
- [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DISABLED](#) specifies that buffer accesses **must** not be **out of bounds**.
- [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) specifies that buffer accesses conform to [Robust Buffer Access](#) guarantees.
- [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) specifies that buffer accesses conform to [Robust Buffer Access 2](#) guarantees.

Possible values of the `images` member of [VkPipelineRobustnessCreateInfo](#) are:

```
// Provided by VK_VERSION_1_4
typedef enum VkPipelineRobustnessImageBehavior {
    VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DEVICE_DEFAULT = 0,
    VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DISABLED = 1,
    VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS = 2,
    VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS_2 = 3,
    // Provided by VK_EXT_pipeline_robustness
    VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DEVICE_DEFAULT_EXT =
VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DEVICE_DEFAULT,
    // Provided by VK_EXT_pipeline_robustness
    VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DISABLED_EXT =
VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DISABLED,
    // Provided by VK_EXT_pipeline_robustness
    VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS_EXT =
VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS,
    // Provided by VK_EXT_pipeline_robustness
    VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS_2_EXT =
VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS_2,
} VkPipelineRobustnessImageBehavior;
```

```
// Provided by VK_EXT_pipeline_robustness
// Equivalent to VkPipelineRobustnessImageBehavior
typedef VkPipelineRobustnessImageBehavior VkPipelineRobustnessImageBehaviorEXT;
```

- [VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DEVICE_DEFAULT](#) specifies that [out of bounds](#) image accesses follow the behavior of robust image access features enabled for the device.
- [VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DISABLED](#) specifies that image accesses **must** not be [out of bounds](#).
- [VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS](#) specifies that image accesses conform to [Robust Image Access](#) guarantees.
- [VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS_2](#) specifies that image accesses conform to [Robust Image Access 2](#) guarantees.

An identifier **can** be provided instead of shader code in an attempt to compile pipelines without providing complete SPIR-V to the implementation.

The [VkPipelineShaderStageModuleIdentifierCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPipelineShaderStageModuleIdentifierCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           identifierSize;
    const uint8_t*      pIdentifier;
} VkPipelineShaderStageModuleIdentifierCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `identifierSize` is the size, in bytes, of the buffer pointed to by `pIdentifier`.
- `pIdentifier` is a pointer to a buffer of opaque data specifying an identifier.

Any identifier **can** be used. If the pipeline being created with identifier requires compilation to complete the pipeline creation call, pipeline compilation **must** fail as defined by `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT`.

`pIdentifier` and `identifierSize` **can** be obtained from an `VkShaderModuleIdentifierEXT` queried earlier.

Valid Usage

- VUID-VkPipelineShaderStageModuleIdentifierCreateInfoEXT-pNext-06850
If this structure is included in a `pNext` chain and `identifierSize` is not equal to 0, the `shaderModuleIdentifier` feature **must** be enabled
- VUID-VkPipelineShaderStageModuleIdentifierCreateInfoEXT-pNext-06851
If this structure is included in a `pNext` chain of `VkPipelineShaderStageCreateInfo` and `identifierSize` is not equal to 0, the pipeline **must** be created with the `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` flag set
- VUID-VkPipelineShaderStageModuleIdentifierCreateInfoEXT-identifierSize-06852
`identifierSize` **must** be less-or-equal to `VK_MAX_SHADER_MODULE_IDENTIFIER_SIZE_EXT`

Valid Usage (Implicit)

- VUID-VkPipelineShaderStageModuleIdentifierCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_SHADER_STAGE_MODULE_IDENTIFIER_CREATE_INFO_EXT`
- VUID-VkPipelineShaderStageModuleIdentifierCreateInfoEXT-pIdentifier-parameter
If `identifierSize` is not 0, `pIdentifier` **must** be a valid pointer to an array of `identifierSize` `uint8_t` values

Structure Chaining

Extends the structure

- `VkPipelineShaderStageCreateInfo`

If a compute pipeline is going to be used in `Device-Generated Commands` by specifying its pipeline token with `VkBindPipelineIndirectCommandNV`, then that pipeline's associated metadata **must** be saved at a specified buffer device address for later use in indirect command generation. The buffer

device address **must** be specified at the time of compute pipeline creation with `VkComputePipelineIndirectBufferInfoNV` structure in the `pNext` chain of `VkComputePipelineCreateInfo`.

The `VkComputePipelineIndirectBufferInfoNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands_compute
typedef struct VkComputePipelineIndirectBufferInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceAddress     deviceAddress;
    VkDeviceSize        size;
    VkDeviceAddress     pipelineDeviceAddressCaptureReplay;
} VkComputePipelineIndirectBufferInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceAddress` is the address where the pipeline's metadata will be stored.
- `size` is the size of pipeline's metadata that was queried using `vkGetPipelineIndirectMemoryRequirementsNV`.
- `pipelineDeviceAddressCaptureReplay` is the device address where pipeline's metadata was originally saved and can now be used to re-populate `deviceAddress` for replay.

If `pipelineDeviceAddressCaptureReplay` is zero, no specific address is requested. If `pipelineDeviceAddressCaptureReplay` is not zero, then it **must** be an address retrieved from an identically created pipeline on the same implementation. The pipeline metadata **must** also be placed on an identically created buffer and at the same offset using the `vkCmdUpdatePipelineIndirectBufferNV` command.

Valid Usage

- VUID-VkComputePipelineIndirectBufferInfoNV-deviceGeneratedComputePipelines-09009
The `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines` feature **must** be enabled
- VUID-VkComputePipelineIndirectBufferInfoNV-flags-09010
The pipeline creation flags in `VkComputePipelineCreateInfo::flags` **must** include `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`
- VUID-VkComputePipelineIndirectBufferInfoNV-deviceAddress-09011
`deviceAddress` **must** be aligned to the `VkMemoryRequirements2::memoryRequirements.alignment`, as returned by `vkGetPipelineIndirectMemoryRequirementsNV`
- VUID-VkComputePipelineIndirectBufferInfoNV-deviceAddress-09012
`deviceAddress` **must** have been allocated from a buffer that was created with both the `VK_BUFFER_USAGE_TRANSFER_DST_BIT` and `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flags set

- VUID-VkComputePipelineIndirectBufferInfoNV-size-09013
`size` **must** be greater than or equal to the `VkMemoryRequirements2::memoryRequirements.size`, as returned by `vkGetPipelineIndirectMemoryRequirementsNV`
- VUID-VkComputePipelineIndirectBufferInfoNV-pipelineDeviceAddressCaptureReplay-09014
 If `pipelineDeviceAddressCaptureReplay` is non-zero then the `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputeCaptureReplay` feature **must** be enabled
- VUID-VkComputePipelineIndirectBufferInfoNV-pipelineDeviceAddressCaptureReplay-09015
 If `pipelineDeviceAddressCaptureReplay` is non-zero then that address **must** have been allocated with flag `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` set
- VUID-VkComputePipelineIndirectBufferInfoNV-pipelineDeviceAddressCaptureReplay-09016
 If `pipelineDeviceAddressCaptureReplay` is non-zero, the `pipeline` **must** have been recreated for replay
- VUID-VkComputePipelineIndirectBufferInfoNV-pipelineDeviceAddressCaptureReplay-09017
`pipelineDeviceAddressCaptureReplay` **must** satisfy the `alignment` and `size` requirements similar to `deviceAddress`

Valid Usage (Implicit)

- VUID-VkComputePipelineIndirectBufferInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COMPUTE_PIPELINE_INDIRECT_BUFFER_INFO_NV`
- VUID-VkComputePipelineIndirectBufferInfoNV-deviceAddress-parameter
`deviceAddress` **must** be a valid `VkDeviceAddress` value
- VUID-VkComputePipelineIndirectBufferInfoNV-pipelineDeviceAddressCaptureReplay-parameter
 If `pipelineDeviceAddressCaptureReplay` is not 0, `pipelineDeviceAddressCaptureReplay` **must** be a valid `VkDeviceAddress` value

Structure Chaining

Extends the structure

- `VkComputePipelineCreateInfo`

To save a compute pipeline's metadata at a device address call:

```
// Provided by VK_NV_device_generated_commands_compute
void vkCmdUpdatePipelineIndirectBufferNV(
    VkCommandBuffer                commandBuffer,
    VkPipelineBindPoint            pipelineBindPoint,
    VkPipeline                      pipeline);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pipelineBindPoint** is a [VkPipelineBindPoint](#) value specifying the type of pipeline whose metadata will be saved.
- **pipeline** is the pipeline whose metadata will be saved.

vkCmdUpdatePipelineIndirectBufferNV is only allowed outside of a render pass. This command is treated as a “transfer” operation for the purposes of synchronization barriers. The writes to the address **must** be synchronized using stages [VK_PIPELINE_STAGE_2_COPY_BIT](#) and [VK_PIPELINE_STAGE_COMMAND_PREPROCESS_BIT_NV](#) and with access masks [VK_ACCESS_MEMORY_WRITE_BIT](#) and [VK_ACCESS_COMMAND_PREPROCESS_READ_BIT_NV](#) respectively before using the results in preprocessing.

Valid Usage

- VUID-vkCmdUpdatePipelineIndirectBufferNV-pipelineBindPoint-09018
pipelineBindPoint **must** be [VK_PIPELINE_BIND_POINT_COMPUTE](#)
- VUID-vkCmdUpdatePipelineIndirectBufferNV-pipeline-09019
pipeline **must** have been created with [VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV](#) flag set
- VUID-vkCmdUpdatePipelineIndirectBufferNV-pipeline-09020
pipeline **must** have been created with [VkComputePipelineIndirectBufferInfoNV](#) structure specifying a valid address where its metadata will be saved
- VUID-vkCmdUpdatePipelineIndirectBufferNV-deviceGeneratedComputePipelines-09021
The [VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines](#) feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdUpdatePipelineIndirectBufferNV-commandBuffer-parameter
commandBuffer **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdUpdatePipelineIndirectBufferNV-pipelineBindPoint-parameter
pipelineBindPoint **must** be a valid [VkPipelineBindPoint](#) value
- VUID-vkCmdUpdatePipelineIndirectBufferNV-pipeline-parameter
pipeline **must** be a valid [VkPipeline](#) handle
- VUID-vkCmdUpdatePipelineIndirectBufferNV-commandBuffer-recording
commandBuffer **must** be in the [recording state](#)

- VUID-vkCmdUpdatePipelineIndirectBufferNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, or `VK_QUEUE_TRANSFER_BIT` operations
- VUID-vkCmdUpdatePipelineIndirectBufferNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdUpdatePipelineIndirectBufferNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdUpdatePipelineIndirectBufferNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdUpdatePipelineIndirectBufferNV-commonparent
Both of `commandBuffer`, and `pipeline` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

`vkCmdUpdatePipelineIndirectBufferNV` is not affected by [conditional rendering](#)

10.4. Graphics Pipelines

Graphics pipelines consist of multiple shader stages, multiple fixed-function pipeline stages, and a pipeline layout.

To create graphics pipelines, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateGraphicsPipelines(
    VkDevice                                device,
    VkPipelineCache                        pipelineCache,
    uint32_t                               createInfoCount,
    const VkGraphicsPipelineCreateInfo*    pCreateInfos,
    const VkAllocationCallbacks*          pAllocator,
    VkPipeline*                            pPipelines);
```

- **device** is the logical device that creates the graphics pipelines.
- **pipelineCache** is either [VK_NULL_HANDLE](#), indicating that pipeline caching is disabled, or to enable caching, the handle of a valid [VkPipelineCache](#) object. The implementation **must** not access this object outside of the duration of this command.
- **createInfoCount** is the length of the **pCreateInfos** and **pPipelines** arrays.
- **pCreateInfos** is a pointer to an array of [VkGraphicsPipelineCreateInfo](#) structures.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pPipelines** is a pointer to an array of [VkPipeline](#) handles in which the resulting graphics pipeline objects are returned.

The [VkGraphicsPipelineCreateInfo](#) structure includes an array of [VkPipelineShaderStageCreateInfo](#) structures for each of the desired active shader stages, as well as creation information for all relevant fixed-function stages, and a pipeline layout.

Pipelines are created and returned as described for [Multiple Pipeline Creation](#).

Valid Usage

- VUID-vkCreateGraphicsPipelines-device-09662
device **must** support at least one queue family with the [VK_QUEUE_GRAPHICS_BIT](#) capability
- VUID-vkCreateGraphicsPipelines-flags-00720
If the **flags** member of any element of **pCreateInfos** contains the [VK_PIPELINE_CREATE_DERIVATIVE_BIT](#) flag, and the **basePipelineIndex** member of that same element is not **-1**, **basePipelineIndex** **must** be less than the index into **pCreateInfos** that corresponds to that element
- VUID-vkCreateGraphicsPipelines-flags-00721
If the **flags** member of any element of **pCreateInfos** contains the [VK_PIPELINE_CREATE_DERIVATIVE_BIT](#) flag, the base pipeline **must** have been created with the [VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT](#) flag set
- VUID-vkCreateGraphicsPipelines-pipelineCache-02876
If **pipelineCache** was created with [VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT](#), host access to **pipelineCache** **must** be [externally synchronized](#)

- VUID-vkCreateGraphicsPipelines-pNext-09616
If `VkPipelineBinaryInfoKHR::binaryCount` is not 0 for any element of `pCreateInfos`, `pipelineCache` **must** be `VK_NULL_HANDLE`
- VUID-vkCreateGraphicsPipelines-pNext-09617
If a `VkPipelineCreateFlags2CreateInfoKHR` structure with the `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag set is included in the `pNext` chain of any element of `pCreateInfos`, `pipelineCache` **must** be `VK_NULL_HANDLE`
- VUID-vkCreateGraphicsPipelines-binaryCount-09620
If `VkPipelineBinaryInfoKHR::binaryCount` is not 0 for any element of `pCreateInfos`, `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` **must** not be set in the `flags` of that element
- VUID-vkCreateGraphicsPipelines-binaryCount-09621
If `VkPipelineBinaryInfoKHR::binaryCount` is not 0 for any element of `pCreateInfos`, `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` **must** not be set in the `flags` of that element
- VUID-vkCreateGraphicsPipelines-binaryCount-09622
If `VkPipelineBinaryInfoKHR::binaryCount` is not 0 for any element of `pCreateInfos`, `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT` **must** not be set in the `flags` of that element
- VUID-vkCreateGraphicsPipelines-pCreateInfos-11414
If any element of `pCreateInfos` sets `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` and includes embedded sampler mappings, there **must** be less than $(\text{maxSamplerAllocationCount} - (\text{minSamplerHeapReservedRangeWithEmbedded} / \text{samplerDescriptorSize}))$ `VkSampler` objects currently created on the device
- VUID-vkCreateGraphicsPipelines-pCreateInfos-11429
If any element of `pCreateInfos` sets `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` and includes embedded sampler mappings, this command **must** not cause the total number of unique embedded samplers in pipelines and shaders on this device to exceed `maxDescriptorHeapEmbeddedSamplers`

NOTE

An implicit cache may be provided by the implementation or a layer. For this reason, it is still valid to set `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` on `flags` for any element of `pCreateInfos` while passing `VK_NULL_HANDLE` for `pipelineCache`.

Valid Usage (Implicit)

- VUID-vkCreateGraphicsPipelines-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateGraphicsPipelines-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkCreateGraphicsPipelines-pCreateInfos-parameter

`pCreateInfo` **must** be a valid pointer to an array of `createInfoCount` valid `VkGraphicsPipelineCreateInfo` structures

- VUID-vkCreateGraphicsPipelines-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateGraphicsPipelines-pPipelines-parameter
`pPipelines` **must** be a valid pointer to an array of `createInfoCount` `VkPipeline` handles
- VUID-vkCreateGraphicsPipelines-createInfoCount-arraylength
`createInfoCount` **must** be greater than `0`
- VUID-vkCreateGraphicsPipelines-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from device

Return Codes

Success

- `VK_PIPELINE_COMPILE_REQUIRED_EXT`
- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_SHADER_NV`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkGraphicsPipelineCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkGraphicsPipelineCreateInfo {
    VkStructureType           sType;
    const void*               pNext;
    VkPipelineCreateFlags     flags;
    uint32_t                  stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    const VkPipelineVertexInputStateCreateInfo* pVertexInputState;
    const VkPipelineInputAssemblyStateCreateInfo* pInputAssemblyState;
    const VkPipelineTessellationStateCreateInfo* pTessellationState;
    const VkPipelineViewportStateCreateInfo* pViewportState;
    const VkPipelineRasterizationStateCreateInfo* pRasterizationState;
    const VkPipelineMultisampleStateCreateInfo* pMultisampleState;
    const VkPipelineDepthStencilStateCreateInfo* pDepthStencilState;
    const VkPipelineColorBlendStateCreateInfo* pColorBlendState;
    const VkPipelineDynamicStateCreateInfo* pDynamicState;
    VkPipelineLayout          layout;
    VkRenderPass              renderPass;
    uint32_t                  subpass;
    VkPipeline                basePipelineHandle;
    int32_t                   basePipelineIndex;
} VkGraphicsPipelineCreateInfo;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkPipelineCreateFlagBits](#) specifying how the pipeline will be generated.
- **stageCount** is the number of entries in the **pStages** array.
- **pStages** is a pointer to an array of **stageCount** [VkPipelineShaderStageCreateInfo](#) structures describing the set of the shader stages to be included in the graphics pipeline.
- **pVertexInputState** is a pointer to a [VkPipelineVertexInputStateCreateInfo](#) structure. It is ignored if the pipeline includes a mesh shader stage. It **can** be **NULL** if the pipeline is created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state set.
- **pInputAssemblyState** is a pointer to a [VkPipelineInputAssemblyStateCreateInfo](#) structure which determines input assembly behavior for vertex shading, as described in [Drawing Commands](#). If the [VK_EXT_extended_dynamic_state3](#) extension is enabled, it **can** be **NULL** if the pipeline is created with both [VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE](#), and [VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY](#) dynamic states set and [dynamicPrimitiveTopologyUnrestricted](#) is [VK_TRUE](#). It is ignored if the pipeline includes a mesh shader stage.
- **pTessellationState** is a pointer to a [VkPipelineTessellationStateCreateInfo](#) structure defining tessellation state used by tessellation shaders. It **can** be **NULL** if the pipeline is created with the [VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT](#) dynamic state set.
- **pViewportState** is a pointer to a [VkPipelineViewportStateCreateInfo](#) structure defining viewport state used when rasterization is enabled. If the [VK_EXT_extended_dynamic_state3](#) extension is enabled, it **can** be **NULL** if the pipeline is created with both

VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT, and
VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT dynamic states set.

- **pRasterizationState** is a pointer to a [VkPipelineRasterizationStateCreateInfo](#) structure defining rasterization state. If the [VK_EXT_extended_dynamic_state3](#) extension is enabled, it **can** be **NULL** if the pipeline is created with all of [VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT](#), [VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE](#), [VK_DYNAMIC_STATE_POLYGON_MODE_EXT](#), [VK_DYNAMIC_STATE_CULL_MODE](#), [VK_DYNAMIC_STATE_FRONT_FACE](#), [VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE](#), [VK_DYNAMIC_STATE_DEPTH_BIAS](#), and [VK_DYNAMIC_STATE_LINE_WIDTH](#) dynamic states set.
- **pMultisampleState** is a pointer to a [VkPipelineMultisampleStateCreateInfo](#) structure defining multisample state used when rasterization is enabled. If the [VK_EXT_extended_dynamic_state3](#) extension is enabled, it **can** be **NULL** if the pipeline is created with all of [VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT](#), [VK_DYNAMIC_STATE_SAMPLE_MASK_EXT](#), and [VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT](#) dynamic states set, and either the [alphaToOne](#) feature is not enabled or [VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT](#) is set, in which case [VkPipelineMultisampleStateCreateInfo::sampleShadingEnable](#) is assumed to be [VK_FALSE](#).
- **pDepthStencilState** is a pointer to a [VkPipelineDepthStencilStateCreateInfo](#) structure defining depth/stencil state used when rasterization is enabled for depth or stencil attachments accessed during rendering. If the [VK_EXT_extended_dynamic_state3](#) extension is enabled, it **can** be **NULL** if the pipeline is created with all of [VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE](#), [VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE](#), [VK_DYNAMIC_STATE_DEPTH_COMPARE_OP](#), [VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE](#), [VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE](#), [VK_DYNAMIC_STATE_STENCIL_OP](#), and [VK_DYNAMIC_STATE_DEPTH_BOUNDS](#) dynamic states set.
- **pColorBlendState** is a pointer to a [VkPipelineColorBlendStateCreateInfo](#) structure defining color blend state used when rasterization is enabled for any color attachments accessed during rendering. If the [VK_EXT_extended_dynamic_state3](#) extension is enabled, it **can** be **NULL** if the pipeline is created with all of [VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT](#), [VK_DYNAMIC_STATE_LOGIC_OP_EXT](#), [VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT](#), [VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT](#), [VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT](#), and [VK_DYNAMIC_STATE_BLEND_CONSTANTS](#) dynamic states set.
- **pDynamicState** is a pointer to a [VkPipelineDynamicStateCreateInfo](#) structure defining which properties of the pipeline state object are dynamic and **can** be changed independently of the pipeline state. This **can** be **NULL**, which means no state in the pipeline is considered dynamic.
- **layout** is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline. If [VkPhysicalDeviceProperties::apiVersion](#) is greater than or equal to Vulkan 1.3 or [VK_KHR_maintenance4](#) is enabled **layout** **must** not be accessed by the implementation outside of the duration of the command this structure is passed to.
- **renderPass** is a handle to a render pass object describing the environment in which the pipeline will be used. The pipeline **must** only be used with a render pass instance compatible with the one provided. See [Render Pass Compatibility](#) for more information. The implementation **must** not access this object outside of the duration of the command this structure is passed to.

- `subpass` is the index of the subpass in the render pass where this pipeline will be used.
- `basePipelineHandle` is a pipeline to derive from.
- `basePipelineIndex` is an index into the `pCreateInfo` parameter to use as a pipeline to derive from.

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in [Pipeline Derivatives](#).

If any shader stage fails to compile, the compile log will be reported back to the application, and `VK_ERROR_INVALID_SHADER_NV` will be generated.

NOTE

With `VK_EXT_extended_dynamic_state3`, it is possible that many of the `VkGraphicsPipelineCreateInfo` members above **can** be `NULL` because all their state is dynamic and therefore ignored. This is optional so the application **can** still use a valid pointer if it needs to set the `pNext` or `flags` fields to specify state for other extensions.

The state required for a graphics pipeline is divided into [vertex input state](#), [pre-rasterization shader state](#), [fragment shader state](#), and [fragment output state](#).

Vertex Input State

Vertex input state is defined by:

- [VkPipelineVertexInputStateCreateInfo](#)
- [VkPipelineInputAssemblyStateCreateInfo](#)

If this pipeline specifies [pre-rasterization state](#) either directly or by including it as a pipeline library and its `pStages` includes a vertex shader, this state **must** be specified to create a [complete graphics pipeline](#).

If a pipeline includes `VK_GRAPHICS_PIPELINE_LIBRARY_VERTEX_INPUT_INTERFACE_BIT_EXT` in `VkGraphicsPipelineLibraryCreateInfoEXT::flags` either explicitly or as a default, and either the conditions requiring this state for a [complete graphics pipeline](#) are met or this pipeline does not specify [pre-rasterization state](#) in any way, that pipeline **must** specify this state directly.

Pre-Rasterization Shader State

Pre-rasterization shader state is defined by:

- [VkPipelineShaderStageCreateInfo](#) entries for:
 - Vertex shaders
 - Tessellation control shaders
 - Tessellation evaluation shaders
 - Geometry shaders
 - Task shaders
 - Mesh shaders

- Within the `VkPipelineLayout`, all descriptor sets with pre-rasterization shader bindings if `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` was specified.
 - If `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` was not specified, the full pipeline layout **must** be specified.
- `VkPipelineViewportStateCreateInfo`
- `VkPipelineRasterizationStateCreateInfo`
- `VkPipelineTessellationStateCreateInfo`
- `VkRenderPass` and `subpass` parameter
- The `viewMask` parameter of `VkPipelineRenderingCreateInfo` (formats are ignored)
- `VkPipelineDiscardRectangleStateCreateInfoEXT`
- `VkPipelineFragmentShadingRateStateCreateInfoKHR`
- Inclusion/omission of the `VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` flag

This state **must** be specified to create a complete graphics pipeline.

If either the `pNext` chain includes a `VkGraphicsPipelineLibraryCreateInfoEXT` structure with `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` included in `flags`, or it is not specified and would default to include that value, this state **must** be specified in the pipeline.

Fragment Shader State

Fragment shader state is defined by:

- A `VkPipelineShaderStageCreateInfo` entry for the fragment shader
- Within the `VkPipelineLayout`, all descriptor sets with fragment shader bindings if `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` was specified.
 - If `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` was not specified, the full pipeline layout **must** be specified.
- `VkPipelineMultisampleStateCreateInfo` if `sample shading` is enabled or `renderpass` is not `VK_NULL_HANDLE`
- `VkPipelineDepthStencilStateCreateInfo`
- `VkRenderPass` and `subpass` parameter
- The `viewMask` parameter of `VkPipelineRenderingCreateInfo` (formats are ignored)
- `VkPipelineFragmentShadingRateStateCreateInfoKHR`
- `VkPipelineFragmentShadingRateEnumStateCreateInfoNV`
- `VkPipelineRepresentativeFragmentTestStateCreateInfoNV`
- Inclusion/omission of the `VK_PIPELINE_RASTERIZATION_STATE_CREATE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR` flag
- Inclusion/omission of the

VK_PIPELINE_RASTERIZATION_STATE_CREATE_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT flag

- [VkRenderingInputAttachmentIndexInfo](#)
- Inclusion/omission of the [VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE](#) flag
- The [customResolve](#) parameter of [VkCustomResolveCreateInfoEXT](#). Formats are ignored, and not including the structure behaves identically to setting [customResolve](#) to [VK_FALSE](#), unlike in [fragment output interface state](#).

If a pipeline specifies [pre-rasterization state](#) either directly or by including it as a pipeline library and [rasterizerDiscardEnable](#) is [VK_FALSE](#) or [VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE](#) is used, this state **must** be specified to create a [complete graphics pipeline](#).

If a pipeline includes [VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT](#) in [VkGraphicsPipelineLibraryCreateInfoEXT::flags](#) either explicitly or as a default, and either the conditions requiring this state for a [complete graphics pipeline](#) are met or this pipeline does not specify [pre-rasterization state](#) in any way, that pipeline **must** specify this state directly.

Fragment Output State

Fragment output state is defined by:

- [VkPipelineColorBlendStateCreateInfo](#)
- [VkRenderPass](#) and [subpass](#) parameter
- [VkPipelineMultisampleStateCreateInfo](#)
- The format parameters of [VkPipelineRenderingCreateInfo](#) ([viewMask](#) is ignored)
- [VkAttachmentSampleCountInfoAMD](#)
- [VkAttachmentSampleCountInfoNV](#)
- [VkExternalFormatANDROID](#)
- [VkCustomResolveCreateInfoEXT](#)
- Inclusion/omission of the [VK_PIPELINE_CREATE_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT](#) and [VK_PIPELINE_CREATE_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT](#) flags
- Inclusion/omission of the [VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT](#) flag
- [VkRenderingAttachmentLocationInfo](#)

If a pipeline specifies [pre-rasterization state](#) either directly or by including it as a pipeline library and [rasterizerDiscardEnable](#) is [VK_FALSE](#) or [VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE](#) is used, this state **must** be specified to create a [complete graphics pipeline](#).

If a pipeline includes [VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT](#) in [VkGraphicsPipelineLibraryCreateInfoEXT::flags](#) either explicitly or as a default, and either the conditions requiring this state for a [complete graphics pipeline](#) are met or this pipeline does not specify [pre-rasterization state](#) in any way, that pipeline **must** specify this state directly.

Dynamic State

Dynamic state values set via `pDynamicState` **must** be ignored if the state they correspond to is not otherwise statically set by one of the state subsets used to create the pipeline. Additionally, setting dynamic state values **must** not modify whether state in a linked library is static or dynamic; this is set and unchangeable when the library is created. For example, if a pipeline only included `pre-rasterization shader state`, then any dynamic state value corresponding to depth or stencil testing has no effect. Any linked library that has dynamic state enabled that same dynamic state **must** also be enabled in all the other linked libraries to which that dynamic state applies.

Complete Graphics Pipelines

A complete graphics pipeline always includes `pre-rasterization shader state`, with other subsets included depending on that state as specified in the above sections.

Graphics Pipeline Library Layouts

If different subsets are linked together with pipeline layouts created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, the final effective pipeline layout is effectively the union of the linked pipeline layouts. When binding descriptor sets for this pipeline, the pipeline layout used **must** be compatible with this union. This pipeline layout **can** be overridden when linking with `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT` by providing a `VkPipelineLayout` that is `compatible` with this union other than `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, or when linking without `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT` by providing a `VkPipelineLayout` that is fully `compatible` with this union.

If the `pNext` chain includes a `VkPipelineCreateFlags2CreateInfo` structure, `VkPipelineCreateFlags2CreateInfo::flags` from that structure is used instead of `flags` from this structure.

Valid Usage

- VUID-VkGraphicsPipelineCreateInfo-None-09497
If the `pNext` chain does not include a `VkPipelineCreateFlags2CreateInfo` structure, `flags` **must** be a valid combination of `VkPipelineCreateFlagBits` values
- VUID-VkGraphicsPipelineCreateInfo-flags-07984
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineIndex` is -1, `basePipelineHandle` **must** be a valid graphics `VkPipeline` handle
- VUID-VkGraphicsPipelineCreateInfo-flags-07985
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` **must** be a valid index into the calling command's `pCreateInfos` parameter
- VUID-VkGraphicsPipelineCreateInfo-flags-07986
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, `basePipelineIndex` **must** be -1 or `basePipelineHandle` **must** be `VK_NULL_HANDLE`
- VUID-VkGraphicsPipelineCreateInfo-layout-07987
If a push constant block is declared in a shader and `layout` is not `VK_NULL_HANDLE`, a push constant range in `layout` **must** match the shader stage

- VUID-VkGraphicsPipelineCreateInfo-layout-10069
If a push constant block is declared in a shader and **layout** is not `VK_NULL_HANDLE`, the block must be contained inside the push constant range in **layout** that matches the stage
- VUID-VkGraphicsPipelineCreateInfo-layout-07988
If a **resource variable** is declared in a shader and **layout** is not `VK_NULL_HANDLE`, the corresponding descriptor set in **layout** **must** match the shader stage
- VUID-VkGraphicsPipelineCreateInfo-layout-07990
If a **resource variable** is declared in a shader, **layout** is not `VK_NULL_HANDLE`, and the descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the corresponding descriptor set in **layout** **must** match the descriptor type
- VUID-VkGraphicsPipelineCreateInfo-layout-07991
If a **resource variable** is declared in a shader as an array and **layout** is not `VK_NULL_HANDLE`, the corresponding descriptor binding used to create **layout** **must** have a **descriptorCount** that is greater than or equal to the length of the array
- VUID-VkGraphicsPipelineCreateInfo-None-10391
If a **resource variables** is declared in a shader as an array of descriptors, then the descriptor type of that variable **must** not be `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`
- VUID-VkGraphicsPipelineCreateInfo-flags-11798
If **shader64BitIndexing** feature is not enabled, **flags** **must** not contain `VK_PIPELINE_CREATE_2_64_BIT_INDEXING_BIT_EXT`
- VUID-VkGraphicsPipelineCreateInfo-pipelineCreationCacheControl-02878
If the **pipelineCreationCacheControl** feature is not enabled, **flags** **must** not include `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` nor `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`
- VUID-VkGraphicsPipelineCreateInfo-pipelineProtectedAccess-07368
If the **pipelineProtectedAccess** feature is not enabled, **flags** **must** not include `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` nor `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`
- VUID-VkGraphicsPipelineCreateInfo-flags-07369
flags **must** not include both `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` and `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`
- VUID-VkGraphicsPipelineCreateInfo-flags-11311
If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, **layout** **must** be `VK_NULL_HANDLE`
- VUID-VkGraphicsPipelineCreateInfo-flags-11312
If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, all shader variables in the **shader resource interface** with a **DescriptorSet** and **Binding** decoration **must** have a mapping declared in `VkShaderDescriptorSetAndBindingMappingInfoEXT::pMappings`
- VUID-VkGraphicsPipelineCreateInfo-stage-02096
If the pipeline requires **pre-rasterization shader state** the **stage** member of one element of

pStages **must** be `VK_SHADER_STAGE_VERTEX_BIT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-VkGraphicsPipelineCreateInfo-pStages-02095

If the pipeline requires `pre-rasterization shader state` the geometric shader stages provided in **pStages** **must** be either from the mesh shading pipeline (**stage** is `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`) or from the primitive shading pipeline (**stage** is `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`, or `VK_SHADER_STAGE_GEOMETRY_BIT`)

- VUID-VkGraphicsPipelineCreateInfo-pStages-09631

If the pipeline requires `pre-rasterization shader state` and **pStages** contains both `VK_SHADER_STAGE_TASK_BIT_EXT` and `VK_SHADER_STAGE_MESH_BIT_EXT`, then the mesh shader's entry point **must** not declare a variable with a `DrawIndex BuiltIn` decoration

- VUID-VkGraphicsPipelineCreateInfo-TaskNV-07063

The shader stages for `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT` **must** use either the `TaskNV` and `MeshNV Execution Model` or the `TaskEXT` and `MeshEXT Execution Model`, but **must** not use both

- VUID-VkGraphicsPipelineCreateInfo-pStages-00729

If the pipeline requires `pre-rasterization shader state` and **pStages** includes a tessellation control shader stage, it **must** include a tessellation evaluation shader stage

- VUID-VkGraphicsPipelineCreateInfo-pStages-00730

If the pipeline requires `pre-rasterization shader state` and **pStages** includes a tessellation evaluation shader stage, it **must** include a tessellation control shader stage

- VUID-VkGraphicsPipelineCreateInfo-pStages-09022

If the pipeline requires `pre-rasterization shader state` and **pStages** includes a tessellation control shader stage, and the `VK_EXT_extended_dynamic_state3` extension is not enabled or the `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT` dynamic state is not set, **pTessellationState** **must** be a valid pointer to a valid `VkPipelineTessellationStateCreateInfo` structure

- VUID-VkGraphicsPipelineCreateInfo-pTessellationState-09023

If **pTessellationState** is not `NULL` it **must** be a pointer to a valid `VkPipelineTessellationStateCreateInfo` structure

- VUID-VkGraphicsPipelineCreateInfo-pStages-00732

If the pipeline requires `pre-rasterization shader state` and **pStages** includes tessellation shader stages, the shader code of at least one stage **must** contain an `OpExecutionMode` instruction specifying the type of subdivision in the pipeline

- VUID-VkGraphicsPipelineCreateInfo-pStages-00733

If the pipeline requires `pre-rasterization shader state` and **pStages** includes tessellation shader stages, and the shader code of both stages contain an `OpExecutionMode` instruction specifying the type of subdivision in the pipeline, they **must** both specify the same subdivision mode

- VUID-VkGraphicsPipelineCreateInfo-pStages-00734

If the pipeline requires `pre-rasterization shader state` and **pStages** includes tessellation

shader stages, the shader code of at least one stage **must** contain an `OpExecutionMode` instruction specifying the output patch size in the pipeline

- VUID-VkGraphicsPipelineCreateInfo-pStages-00735

If the pipeline requires `pre-rasterization shader state` and `pStages` includes tessellation shader stages, and the shader code of both contain an `OpExecutionMode` instruction specifying the out patch size in the pipeline, they **must** both specify the same patch size

- VUID-VkGraphicsPipelineCreateInfo-pStages-08888

If the pipeline is being created with `pre-rasterization shader state` and `vertex input state` and `pStages` includes tessellation shader stages, and either `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state is not enabled or `dynamicPrimitiveTopologyUnrestricted` is `VK_FALSE`, the `topology` member of `pInputAssembly` **must** be `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`

- VUID-VkGraphicsPipelineCreateInfo-topology-08889

If the pipeline is being created with `pre-rasterization shader state` and `vertex input state` and the `topology` member of `pInputAssembly` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, and either `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state is not enabled or `dynamicPrimitiveTopologyUnrestricted` is `VK_FALSE`, then `pStages` **must** include tessellation shader stages

- VUID-VkGraphicsPipelineCreateInfo-TessellationEvaluation-07723

If the pipeline is being created with a `TessellationEvaluation Execution Model`, no `Geometry Execution Model`, uses the `PointMode Execution Mode`, and the `shaderTessellationAndGeometryPointSize` feature is enabled, a `PointSize` decorated variable **must** be written to if the `maintenance5` feature is not enabled

- VUID-VkGraphicsPipelineCreateInfo-topology-08773

If the pipeline is being created with a `Vertex Execution Model` and no `TessellationEvaluation` or `Geometry Execution Model`, and the `topology` member of `pInputAssembly` is `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, and either `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state is not enabled or `dynamicPrimitiveTopologyUnrestricted` is `VK_FALSE`, a `PointSize` decorated variable **must** be written to if the `maintenance5` feature is not enabled

- VUID-VkGraphicsPipelineCreateInfo-TessellationEvaluation-07724

If the pipeline is being created with a `TessellationEvaluation Execution Model`, no `Geometry Execution Model`, uses the `PointMode Execution Mode`, and the `shaderTessellationAndGeometryPointSize` feature is not enabled, a `PointSize` decorated variable **must** not be written to

- VUID-VkGraphicsPipelineCreateInfo-shaderTessellationAndGeometryPointSize-08776

If the pipeline is being created with a `Geometry Execution Model`, uses the `OutputPoints Execution Mode`, and the `shaderTessellationAndGeometryPointSize` feature is enabled, a `PointSize` decorated variable **must** be written to for every vertex emitted if the `maintenance5` feature is not enabled

- VUID-VkGraphicsPipelineCreateInfo-Geometry-07726

If the pipeline is being created with a `Geometry Execution Model`, uses the `OutputPoints Execution Mode`, and the `shaderTessellationAndGeometryPointSize` feature is not enabled, a `PointSize` decorated variable **must** not be written to

- VUID-VkGraphicsPipelineCreateInfo-pStages-00738
If the pipeline requires [pre-rasterization shader state](#) and `pStages` includes a geometry shader stage, and does not include any tessellation shader stages, its shader code **must** contain an `OpExecutionMode` instruction specifying an input primitive type that is [compatible](#) with the primitive topology specified in `pInputAssembly`
- VUID-VkGraphicsPipelineCreateInfo-pStages-00739
If the pipeline requires [pre-rasterization shader state](#) and `pStages` includes a geometry shader stage, and also includes tessellation shader stages, its shader code **must** contain an `OpExecutionMode` instruction specifying an input primitive type that is [compatible](#) with the primitive topology that is output by the tessellation stages
- VUID-VkGraphicsPipelineCreateInfo-pStages-00740
If the pipeline requires [pre-rasterization shader state](#) and [fragment shader state](#), it includes both a fragment shader and a geometry shader, and the fragment shader code reads from an input variable that is decorated with `PrimitiveId`, then the geometry shader code **must** write to a matching output variable, decorated with `PrimitiveId`, in all execution paths
- VUID-VkGraphicsPipelineCreateInfo-PrimitiveId-06264
If the pipeline requires [pre-rasterization shader state](#), it includes a mesh shader and the fragment shader code reads from an input variable that is decorated with `PrimitiveId`, then the mesh shader code **must** write to a matching output variable, decorated with `PrimitiveId`, in all execution paths
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06038
If `renderPass` is not `VK_NULL_HANDLE` and the pipeline is being created with [fragment shader state](#) the fragment shader **must** not read from any input attachment that is defined as `VK_ATTACHMENT_UNUSED` in `subpass`
- VUID-VkGraphicsPipelineCreateInfo-pStages-00742
If the pipeline requires [pre-rasterization shader state](#) and multiple pre-rasterization shader stages are included in `pStages`, the shader code for the entry points identified by those `pStages` and the rest of the state identified by this structure **must** adhere to the pipeline linking rules described in the [Shader Interfaces](#) chapter
- VUID-VkGraphicsPipelineCreateInfo-None-04889
If the pipeline requires [pre-rasterization shader state](#) and [fragment shader state](#), the fragment shader and last [pre-rasterization shader stage](#) and any relevant state **must** adhere to the pipeline linking rules described in the [Shader Interfaces](#) chapter
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06041
If `renderPass` is not `VK_NULL_HANDLE`, and the pipeline is being created with [fragment output interface state](#), then for each color attachment in the subpass, if the [potential format features](#) of the format of the corresponding attachment description do not contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`, then the `blendEnable` member of the corresponding element of the `pAttachments` member of `pColorBlendState` **must** be `VK_FALSE`
- VUID-VkGraphicsPipelineCreateInfo-renderPass-07609
If `renderPass` is not `VK_NULL_HANDLE`, the pipeline is being created with [fragment output interface state](#), the `pColorBlendState` pointer is not `NULL`, the `attachmentCount` member of `pColorBlendState` is not ignored, and the subpass uses color attachments, the

`attachmentCount` member of `pColorBlendState` **must** be equal to the `colorAttachmentCount` used to create `subpass`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04130
If the pipeline requires `pre-rasterization shader state`, and `pViewportState->pViewports` is not dynamic, then `pViewportState->pViewports` **must** be a valid pointer to an array of `pViewportState->viewportCount` valid `VkViewport` structures
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04131
If the pipeline requires `pre-rasterization shader state`, and `pViewportState->pScissors` is not dynamic, then `pViewportState->pScissors` **must** be a valid pointer to an array of `pViewportState->scissorCount` `VkRect2D` structures
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-00749
If the pipeline requires `pre-rasterization shader state`, and the `wideLines` feature is not enabled, and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_LINE_WIDTH`, the `lineWidth` member of `pRasterizationState` **must** be `1.0`
- VUID-VkGraphicsPipelineCreateInfo-rasterizerDiscardEnable-09024
If the pipeline requires `pre-rasterization shader state`, and the `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` dynamic state is enabled or the `rasterizerDiscardEnable` member of `pRasterizationState` is `VK_FALSE`, and `related dynamic state is not set`, `pViewportState` **must** be a valid pointer to a valid `VkPipelineViewportStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-pViewportState-09025
If `pViewportState` is not `NULL` it **must** be a valid pointer to a valid `VkPipelineViewportStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-pMultisampleState-09026
If the pipeline requires `fragment output interface state`, and the `VK_EXT_extended_dynamic_state3` extension is not enabled or any of the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT`, `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT`, or `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic states is not set, or the `alphaToOne` feature is enabled and `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` is not set, `pMultisampleState` **must** be a valid pointer to a valid `VkPipelineMultisampleStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-pMultisampleState-09027
If `pMultisampleState` is not `NULL` it **must** be a valid pointer to a valid `VkPipelineMultisampleStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-alphaToCoverageEnable-08891
If the pipeline is being created with `fragment shader state`, the `VkPipelineMultisampleStateCreateInfo::alphaToCoverageEnable` is not ignored and is `VK_TRUE`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`
- VUID-VkGraphicsPipelineCreateInfo-renderPass-09028
If `renderPass` is not `VK_NULL_HANDLE`, the pipeline is being created with `fragment shader state`, and `subpass` uses a depth/stencil attachment, and `related dynamic state is not set`,

`pDepthStencilState` **must** be a valid pointer to a valid `VkPipelineDepthStencilStateCreateInfo` structure

- VUID-VkGraphicsPipelineCreateInfo-pDepthStencilState-09029

If `pDepthStencilState` is not `NULL` it **must** be a valid pointer to a valid `VkPipelineDepthStencilStateCreateInfo` structure

- VUID-VkGraphicsPipelineCreateInfo-renderPass-09030

If `renderPass` is not `VK_NULL_HANDLE`, the pipeline is being created with `fragment output interface state`, and `subpass` uses color attachments, and `related dynamic state is not set`, `pColorBlendState` **must** be a valid pointer to a valid `VkPipelineColorBlendStateCreateInfo` structure

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-00754

If the pipeline requires `pre-rasterization shader state`, the `depthBiasClamp` feature is not enabled, no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_DEPTH_BIAS`, and the `depthBiasEnable` member of `pRasterizationState` is `VK_TRUE`, the `depthBiasClamp` member of `pRasterizationState` **must** be `0.0`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-02510

If the pipeline requires `fragment shader state`, the `VK_EXT_depth_range_unrestricted` extension is not enabled and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_DEPTH_BOUNDS`, and the `depthBoundsTestEnable` member of `pDepthStencilState` is `VK_TRUE`, the `minDepthBounds` and `maxDepthBounds` members of `pDepthStencilState` **must** be between `0.0` and `1.0`, inclusive

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-10913

If the pipeline requires `fragment shader state`, no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_DEPTH_BOUNDS`, and `pDynamicStates` includes `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` or the `depthBoundsTestEnable` member of `pDepthStencilState` is `VK_TRUE`, `minDepthBounds` **must** be less than or equal to `maxDepthBounds`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07610

If the pipeline requires `fragment shader state` or `fragment output interface state`, and `rasterizationSamples` and `sampleLocationsInfo` are not dynamic, and `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` included in the `pNext` chain of `pMultisampleState` is `VK_TRUE`, `sampleLocationsInfo.sampleLocationGridSize.width` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07611

If the pipeline requires `fragment shader state` or `fragment output interface state`, and `rasterizationSamples` and `sampleLocationsInfo` are not dynamic, and `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` the included in the `pNext` chain of `pMultisampleState` is `VK_TRUE` or `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` is used, `sampleLocationsInfo.sampleLocationGridSize.height` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by

`vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07612

If the pipeline requires `fragment shader state` or `fragment output interface state`, and `rasterizationSamples` and `sampleLocationsInfo` are not dynamic, and `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` included in the `pNext` chain of `pMultisampleState` is `VK_TRUE` or `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` is used, `sampleLocationsInfo.sampleLocationsPerPixel` **must** equal `rasterizationSamples`

- VUID-VkGraphicsPipelineCreateInfo-sampleLocationsEnable-01524

If the pipeline requires `fragment shader state`, and the `sampleLocationsEnable` member of a `VkPipelineSampleLocationsStateCreateInfoEXT` structure included in the `pNext` chain of `pMultisampleState` is `VK_TRUE`, the fragment shader code **must** not statically use the extended instruction `InterpolateAtSample`

- VUID-VkGraphicsPipelineCreateInfo-multisampledRenderToSingleSampled-06853

If the pipeline requires `fragment output interface state`, the `multisampledRenderToSingleSampled` feature is not enabled, the `VK_AMD_mixed_attachment_samples` extension is not enabled, the `VK_NV_framebuffer_mixed_samples` extension is not enabled, `rasterizationSamples` is not dynamic, and `subpass` uses color and/or depth/stencil attachments, then the `rasterizationSamples` member of `pMultisampleState` **must** be the same as the sample count for those subpass attachments

- VUID-VkGraphicsPipelineCreateInfo-subpass-01505

If the pipeline requires `fragment output interface state`, and the `VK_AMD_mixed_attachment_samples` extension is enabled, `rasterizationSamples` is not dynamic, and if `subpass` uses color and/or depth/stencil attachments, then the `rasterizationSamples` member of `pMultisampleState` **must** equal the maximum of the sample counts of those subpass attachments

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06854

If `renderPass` is not `VK_NULL_HANDLE`, the `multisampledRenderToSingleSampled` feature is not enabled, `rasterizationSamples` is not dynamic, and `subpass` has a `VkMultisampledRenderToSingleSampledInfoEXT` structure included in the `VkSubpassDescription2::pNext` chain with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the `rasterizationSamples` member of `pMultisampleState` **must** be equal to `VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples`

- VUID-VkGraphicsPipelineCreateInfo-subpass-01411

If the pipeline requires `fragment output interface state`, the `VK_NV_framebuffer_mixed_samples` extension is enabled, `rasterizationSamples` is not dynamic, and if `subpass` has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled, then the `rasterizationSamples` member of `pMultisampleState` **must** be the same as the sample count of the depth/stencil attachment

- VUID-VkGraphicsPipelineCreateInfo-subpass-01412

If the pipeline requires `fragment output interface state`, the `VK_NV_framebuffer_mixed_samples` extension is enabled, `rasterizationSamples` is not dynamic, and if `subpass` has any color attachments, then the `rasterizationSamples` member

of `pMultisampleState` **must** be greater than or equal to the sample count for those subpass attachments

- VUID-VkGraphicsPipelineCreateInfo-coverageReductionMode-02722

If the pipeline requires `fragment output interface state`, the `coverageReductionMode` feature is enabled, and `rasterizationSamples` is not dynamic, the coverage reduction mode specified by `VkPipelineCoverageReductionStateCreateInfoNV::coverageReductionMode`, the `rasterizationSamples` member of `pMultisampleState` and the sample counts for the color and depth/stencil attachments (if the subpass has them) **must** be a valid combination returned by `vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV`

- VUID-VkGraphicsPipelineCreateInfo-subpass-00758

If the pipeline requires `fragment output interface state`, `rasterizationSamples` is not dynamic, and `subpass` does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` member of `pMultisampleState` **must** follow the rules for a `zero-attachment subpass`

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06046

If `renderPass` is not `VK_NULL_HANDLE`, `subpass` **must** be a valid subpass within `renderPass`

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06047

If `renderPass` is not `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state`, `subpass` viewMask is not 0, and `multiviewTessellationShader` is not enabled, then `pStages` **must** not include tessellation shaders

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06048

If `renderPass` is not `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state`, `subpass` viewMask is not 0, and `multiviewGeometryShader` is not enabled, then `pStages` **must** not include a geometry shader

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06050

If `renderPass` is not `VK_NULL_HANDLE` and the pipeline is being created with `pre-rasterization shader state`, and `subpass` viewMask is not 0, then all of the shaders in the pipeline **must** not include variables decorated with the `Layer` built-in decoration in their interfaces

- VUID-VkGraphicsPipelineCreateInfo-renderPass-07064

If `renderPass` is not `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state`, `subpass` viewMask is not 0, and `multiviewMeshShader` is not enabled, then `pStages` **must** not include a mesh shader

- VUID-VkGraphicsPipelineCreateInfo-renderPass-12325

If `renderPass` is not `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state`, `pStages` include a mesh shader, and `subpass` viewMask is not 0, then the index of the most significant bit in `viewMask` **must** be less than `maxMeshMultiviewViewCount`

- VUID-VkGraphicsPipelineCreateInfo-flags-00764

`flags` **must** not contain the `VK_PIPELINE_CREATE_DISPATCH_BASE_BIT` flag

- VUID-VkGraphicsPipelineCreateInfo-pStages-01565

If the pipeline requires `fragment shader state` and an input attachment was referenced by an `aspectMask` at `renderPass` creation time, the fragment shader **must** only read from the aspects that were specified for that input attachment

- VUID-VkGraphicsPipelineCreateInfo-layout-01688
The number of resources in `layout` accessible to each shader stage that is used by the pipeline **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageResources`
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-01715
If the pipeline requires `pre-rasterization shader state`, and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV`, and the `viewportWScalingEnable` member of a `VkPipelineViewportWScalingStateCreateInfoNV` structure, included in the `pNext` chain of `pViewportState`, is `VK_TRUE`, the `pViewportWScalings` member of the `VkPipelineViewportWScalingStateCreateInfoNV` **must** be a pointer to an array of `VkPipelineViewportWScalingStateCreateInfoNV::viewportCount` valid `VkViewportWScalingNV` structures
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04056
If the pipeline requires `pre-rasterization shader state`, and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV`, and if `pViewportState->pNext` chain includes a `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure, and if its `exclusiveScissorCount` member is not `0`, then its `pExclusiveScissors` member **must** be a valid pointer to an array of `exclusiveScissorCount` `VkRect2D` structures
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07854
If `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` is included in the `pDynamicStates` array then the implementation **must** support at least `specVersion 2` of the `VK_NV_scissor_exclusive` extension
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04057
If the pipeline requires `pre-rasterization shader state`, and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV`, and if `pViewportState->pNext` chain includes a `VkPipelineViewportShadingRateImageStateCreateInfoNV` structure, then its `pShadingRatePalettes` member **must** be a valid pointer to an array of `viewportCount` valid `VkShadingRatePaletteNV` structures
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04058
If the pipeline requires `pre-rasterization shader state`, and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT`, and if `pNext` chain includes a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, and if its `discardRectangleCount` member is not `0`, then its `pDiscardRectangles` member **must** be a valid pointer to an array of `discardRectangleCount` `VkRect2D` structures
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07855
If `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` is included in the `pDynamicStates` array then the implementation **must** support at least `specVersion 2` of the `VK_EXT_discard_rectangles` extension
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07856
If `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT` is included in the `pDynamicStates` array then the implementation **must** support at least `specVersion 2` of the `VK_EXT_discard_rectangles` extension

- VUID-VkGraphicsPipelineCreateInfo-pStages-02097
If the pipeline requires [vertex input state](#), and [pVertexInputState](#) is not dynamic, then [pVertexInputState](#) **must** be a valid pointer to a valid [VkPipelineVertexInputStateCreateInfo](#) structure
- VUID-VkGraphicsPipelineCreateInfo-Input-07904
If the [vertexAttributeRobustness](#) feature is not enabled, and the [maintenance9](#) feature is not enabled, and the pipeline is being created with [vertex input state](#) and [pVertexInputState](#) is not dynamic, then all variables with the [Input](#) storage class decorated with [Location](#) in the [Vertex Execution Model OpEntryPoint](#) **must** contain a location in [VkVertexInputAttributeDescription::location](#)
- VUID-VkGraphicsPipelineCreateInfo-Input-08733
If the pipeline requires [vertex input state](#) and [pVertexInputState](#) is not dynamic, then the numeric type associated with all [Input](#) variables of the corresponding [Location](#) in the [Vertex Execution Model OpEntryPoint](#) **must** be the same as [VkVertexInputAttributeDescription::format](#)
- VUID-VkGraphicsPipelineCreateInfo-pVertexInputState-08929
If the pipeline is being created with [vertex input state](#) and [pVertexInputState](#) is not dynamic, and [VkVertexInputAttributeDescription::format](#) has a 64-bit component, then the scalar width associated with all [Input](#) variables of the corresponding [Location](#) in the [Vertex Execution Model OpEntryPoint](#) **must** be 64-bit
- VUID-VkGraphicsPipelineCreateInfo-pVertexInputState-08930
If the pipeline is being created with [vertex input state](#) and [pVertexInputState](#) is not dynamic, and the scalar width associated with a [Location](#) decorated [Input](#) variable in the [Vertex Execution Model OpEntryPoint](#) is 64-bit, then the corresponding [VkVertexInputAttributeDescription::format](#) **must** have a 64-bit component
- VUID-VkGraphicsPipelineCreateInfo-pVertexInputState-09198
If the pipeline is being created with [vertex input state](#) and [pVertexInputState](#) is not dynamic, and [VkVertexInputAttributeDescription::format](#) has a 64-bit component, then all [Input](#) variables at the corresponding [Location](#) in the [Vertex Execution Model OpEntryPoint](#) **must** not use components that are not present in the format
- VUID-VkGraphicsPipelineCreateInfo-dynamicPrimitiveTopologyUnrestricted-09031
If the pipeline requires [vertex input state](#), and [related dynamic state is not set](#), [pInputAssemblyState](#) **must** be a valid pointer to a valid [VkPipelineInputAssemblyStateCreateInfo](#) structure
- VUID-VkGraphicsPipelineCreateInfo-pInputAssemblyState-09032
If [pInputAssemblyState](#) is not [NULL](#) it **must** be a valid pointer to a valid [VkPipelineInputAssemblyStateCreateInfo](#) structure
- VUID-VkGraphicsPipelineCreateInfo-pStages-02317
If the pipeline requires [pre-rasterization shader state](#), the [Xfb](#) execution mode **can** be specified by no more than one shader stage in [pStages](#)
- VUID-VkGraphicsPipelineCreateInfo-pStages-02318
If the pipeline requires [pre-rasterization shader state](#), and any shader stage in [pStages](#) specifies [Xfb](#) execution mode it **must** be the last [pre-rasterization shader stage](#)
- VUID-VkGraphicsPipelineCreateInfo-rasterizationStream-02319

If the pipeline requires [pre-rasterization shader state](#), and a [VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream](#) value other than zero is specified, all variables in the output interface of the entry point being compiled decorated with [Position](#), [PointSize](#), [ClipDistance](#), or [CullDistance](#) **must** be decorated with identical [Stream](#) values that match the [rasterizationStream](#)

- VUID-VkGraphicsPipelineCreateInfo-rasterizationStream-02320

If the pipeline requires [pre-rasterization shader state](#), and [VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream](#) is zero, or not specified, all variables in the output interface of the entry point being compiled decorated with [Position](#), [PointSize](#), [ClipDistance](#), or [CullDistance](#) **must** be decorated with a [Stream](#) value of zero, or **must** not specify the [Stream](#) decoration

- VUID-VkGraphicsPipelineCreateInfo-geometryStreams-02321

If the pipeline requires [pre-rasterization shader state](#), and the last [pre-rasterization shader stage](#) is a geometry shader, and that geometry shader uses the [GeometryStreams](#) capability, then [VkPhysicalDeviceTransformFeedbackFeaturesEXT::geometryStreams](#) feature **must** be enabled

- VUID-VkGraphicsPipelineCreateInfo-None-02322

If the pipeline requires [pre-rasterization shader state](#), and there are any mesh shader stages in the pipeline there **must** not be any shader stage in the pipeline with a [Xfb](#) execution mode

- VUID-VkGraphicsPipelineCreateInfo-lineRasterizationMode-02766

If the pipeline requires [pre-rasterization shader state](#) and at least one of [fragment output interface state](#) or [fragment shader state](#), and [pMultisampleState](#) is not [NULL](#), the [lineRasterizationMode](#) member of a [VkPipelineRasterizationLineStateCreateInfo](#) structure included in the [pNext](#) chain of [pRasterizationState](#) is [VK_LINE_RASTERIZATION_MODE_BRESENHAM](#) or [VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH](#), then the [alphaToCoverageEnable](#), [alphaToOneEnable](#), and [sampleShadingEnable](#) members of [pMultisampleState](#) **must** all be [VK_FALSE](#)

- VUID-VkGraphicsPipelineCreateInfo-stippledLineEnable-02767

If the pipeline requires [pre-rasterization shader state](#), the [stippledLineEnable](#) member of [VkPipelineRasterizationLineStateCreateInfo](#) is [VK_TRUE](#), and no element of the [pDynamicStates](#) member of [pDynamicState](#) is [VK_DYNAMIC_STATE_LINE_STIPPLE](#), then the [lineStippleFactor](#) member of [VkPipelineRasterizationLineStateCreateInfo](#) **must** be in the range [1,256]

- VUID-VkGraphicsPipelineCreateInfo-shaderMeshEnqueue-10187

If the [shaderMeshEnqueue](#) feature is not enabled, shaders specified by [pStages](#) **must** not declare the [ShaderEnqueueAMD](#) capability

- VUID-VkGraphicsPipelineCreateInfo-flags-10188

If [flags](#) does not include [VK_PIPELINE_CREATE_LIBRARY_BIT_KHR](#), shaders specified by [pStages](#) **must** not declare the [ShaderEnqueueAMD](#) capability

- VUID-VkGraphicsPipelineCreateInfo-pStages-10189

If any shader stages in [pStages](#) declare the [ShaderEnqueueAMD](#) capability, [VK_PIPELINE_CREATE_2_EXECUTION_GRAPH_BIT_AMD](#) and [VK_PIPELINE_CREATE_2_LIBRARY_BIT_KHR](#) **must** be included in [flags](#)

- VUID-VkGraphicsPipelineCreateInfo-flags-10190
If `VK_PIPELINE_CREATE_2_EXECUTION_GRAPH_BIT_AMD` is included in `flags`, and the pipeline requires `pre-rasterization shader state`, there **must** not be a task or vertex shader specified in `pStages`
- VUID-VkGraphicsPipelineCreateInfo-flags-10191
If `VK_PIPELINE_CREATE_2_EXECUTION_GRAPH_BIT_AMD` is included in `flags`, all elements of `VkPipelineLibraryCreateInfoKHR::pLibraries` **must** have been created with `VK_PIPELINE_CREATE_2_EXECUTION_GRAPH_BIT_AMD`
- VUID-VkGraphicsPipelineCreateInfo-flags-03372

<code>flags</code>	must	not	include
<code>VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR</code>			
- VUID-VkGraphicsPipelineCreateInfo-flags-03373

<code>flags</code>	must	not	include
<code>VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR</code>			
- VUID-VkGraphicsPipelineCreateInfo-flags-03374

<code>flags</code>	must	not	include
<code>VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR</code>			
- VUID-VkGraphicsPipelineCreateInfo-flags-03375

<code>flags</code>	must	not	include
<code>VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR</code>			
- VUID-VkGraphicsPipelineCreateInfo-flags-03376
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`
- VUID-VkGraphicsPipelineCreateInfo-flags-03377
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`
- VUID-VkGraphicsPipelineCreateInfo-flags-03577

<code>flags</code>	must	not	include
<code>VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR</code>			
- VUID-VkGraphicsPipelineCreateInfo-flags-04947
`flags` **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV`
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-03378
If the `extendedDynamicState` feature is not enabled, and the minimum value of `VkApplicationInfo::apiVersion` used to create the `VkInstance` and `apiVersion` supported by the physical device is less than Version 1.3 there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_CULL_MODE`, `VK_DYNAMIC_STATE_FRONT_FACE`, `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY`, `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT`, `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT`, `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE`, `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE`, `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE`, `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP`, `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE`, `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE`, or `VK_DYNAMIC_STATE_STENCIL_OP`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-03379
If the pipeline requires `pre-rasterization shader state`, and `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` is included in the `pDynamicStates` array then `viewportCount` **must** be zero
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-03380
If the pipeline requires `pre-rasterization shader state`, and `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` is included in the `pDynamicStates` array then `scissorCount` **must** be zero
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04132
If the pipeline requires `pre-rasterization shader state`, and `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` is included in the `pDynamicStates` array then `VK_DYNAMIC_STATE_VIEWPORT` **must** not be present
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04133
If the pipeline requires `pre-rasterization shader state`, and `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` is included in the `pDynamicStates` array then `VK_DYNAMIC_STATE_SCISSOR` **must** not be present
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07065
If the pipeline requires `pre-rasterization shader state`, and includes a mesh shader, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY`, or `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE`
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04868
If the `extendedDynamicState2` feature is not enabled, and the minimum value of `VkApplicationInfo::apiVersion` used to create the `VkInstance` and `apiVersion` supported by the physical device is less than Version 1.3 there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE`, `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE`, or `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE`
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04869
If the `extendedDynamicState2LogicOp` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_LOGIC_OP_EXT`
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04870
If the `extendedDynamicState2PatchControlPoints` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT`
- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07066
If the pipeline requires `pre-rasterization shader state`, and includes a mesh shader, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE`, or `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT`
- VUID-VkGraphicsPipelineCreateInfo-flags-02877
If `flags` includes `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`, then the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` feature **must** be enabled

- VUID-VkGraphicsPipelineCreateInfo-flags-02966
If the pipeline requires `pre-rasterization shader state` and `flags` includes `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`, then all stages **must** not specify `Xfb` execution mode
- VUID-VkGraphicsPipelineCreateInfo-libraryCount-06648
If the pipeline is not created with a `complete set of state`, or `VkPipelineLibraryCreateInfoKHR::libraryCount` is not `0`, `VkGraphicsPipelineShaderGroupsCreateInfoNV::groupCount` and `VkGraphicsPipelineShaderGroupsCreateInfoNV::pipelineCount` **must** be `0`
- VUID-VkGraphicsPipelineCreateInfo-libraryCount-06649
If the pipeline is created with a `complete set of state`, and `VkPipelineLibraryCreateInfoKHR::libraryCount` is `0`, and the `pNext` chain includes an instance of `VkGraphicsPipelineShaderGroupsCreateInfoNV`, `VkGraphicsPipelineShaderGroupsCreateInfoNV::groupCount` **must** be greater than `0`
- VUID-VkGraphicsPipelineCreateInfo-flags-11000
If `flags` includes `VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT`, then the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled
- VUID-VkGraphicsPipelineCreateInfo-flags-11001
If the pipeline requires `pre-rasterization shader state` and `flags` includes `VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT`, then all stages **must** not specify `Xfb` execution mode
- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04494
If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.width` **must** be greater than or equal to `1`
- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04495
If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.height` **must** be greater than or equal to `1`
- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04496
If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.width` **must** be a power-of-two value
- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04497
If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.height` **must** be a power-of-two value
- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04498
If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and

VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR is not included in `pDynamicState->pDynamicStates`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.width` **must** be less than or equal to 4

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04499

If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.height` **must** be less than or equal to 4

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04500

If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, and the `pipelineFragmentShadingRate` feature is not enabled, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.width` and `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.height` **must** both be equal to 1

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-06567

If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::combinerOps[0]` **must** be a valid `VkFragmentShadingRateCombinerOpKHR` value

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-06568

If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::combinerOps[1]` **must** be a valid `VkFragmentShadingRateCombinerOpKHR` value

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04501

If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, and the `primitiveFragmentShadingRate` feature is not enabled, `VkPipelineFragmentShadingRateStateCreateInfoKHR::combinerOps[0]` **must** be `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04502

If the pipeline requires `pre-rasterization shader state` or `fragment shader state` and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, and the `attachmentFragmentShadingRate` feature is not enabled, `VkPipelineFragmentShadingRateStateCreateInfoKHR::combinerOps[1]` **must** be `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR`

- VUID-VkGraphicsPipelineCreateInfo-primitiveFragmentShadingRateWithMultipleViewports-04503

If the pipeline requires `pre-rasterization shader state` and the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` is not included in `pDynamicState->pDynamicStates`, and `VkPipelineViewportStateCreateInfo::viewportCount` is greater than 1, entry points specified in `pStages` **must** not write to the `PrimitiveShadingRateKHR` built-in

- VUID-VkGraphicsPipelineCreateInfo-

primitiveFragmentShadingRateWithMultipleViewports-04504

If the pipeline requires [pre-rasterization shader state](#) and the [primitiveFragmentShadingRateWithMultipleViewports](#) limit is not supported, and entry points specified in [pStages](#) write to the [ViewportIndex](#) built-in, they **must** not also write to the [PrimitiveShadingRateKHR](#) built-in

- VUID-VkGraphicsPipelineCreateInfo-

primitiveFragmentShadingRateWithMultipleViewports-04505

If the pipeline requires [pre-rasterization shader state](#) and the [primitiveFragmentShadingRateWithMultipleViewports](#) limit is not supported, and entry points specified in [pStages](#) write to the [ViewportMaskNV](#) built-in, they **must** not also write to the [PrimitiveShadingRateKHR](#) built-in

- VUID-VkGraphicsPipelineCreateInfo-fragmentShadingRateNonTrivialCombinerOps-04506

If the pipeline requires [pre-rasterization shader state](#) or [fragment shader state](#), the [fragmentShadingRateNonTrivialCombinerOps](#) limit is not supported, and [VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR](#) is not included in [pDynamicState->pDynamicStates](#), elements of [VkPipelineFragmentShadingRateStateCreateInfoKHR::combinerOps](#) **must** be [VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR](#) or [VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR](#)

- VUID-VkGraphicsPipelineCreateInfo-None-06569

If the pipeline requires [fragment shader state](#) and [VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR](#) is not included in [pDynamicState->pDynamicStates](#), [VkPipelineFragmentShadingRateEnumStateCreateInfoNV::shadingRateType](#) **must** be a valid [VkFragmentShadingRateTypeNV](#) value

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-06570

If the pipeline requires [fragment shader state](#) and [VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR](#) is not included in [pDynamicState->pDynamicStates](#), [VkPipelineFragmentShadingRateEnumStateCreateInfoNV::shadingRate](#) **must** be a valid [VkFragmentShadingRateNV](#) value

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-06571

If the pipeline requires [fragment shader state](#) and [VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR](#) is not included in [pDynamicState->pDynamicStates](#), [VkPipelineFragmentShadingRateEnumStateCreateInfoNV::combinerOps\[0\]](#) **must** be a valid [VkFragmentShadingRateCombinerOpKHR](#) value

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-06572

If the pipeline requires [fragment shader state](#) and [VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR](#) is not included in [pDynamicState->pDynamicStates](#), [VkPipelineFragmentShadingRateEnumStateCreateInfoNV::combinerOps\[1\]](#) **must** be a valid [VkFragmentShadingRateCombinerOpKHR](#) value

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04569

If the pipeline requires [fragment shader state](#) and [VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR](#) is not included in [pDynamicState->pDynamicStates](#), and the [fragmentShadingRateEnums](#) feature is not enabled, [VkPipelineFragmentShadingRateEnumStateCreateInfoNV::shadingRateType](#) **must** be equal to [VK_FRAGMENT_SHADING_RATE_TYPE_FRAGMENT_SIZE_NV](#)

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04570

If the pipeline requires fragment shader state and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, and the `pipelineFragmentShadingRate` feature is not enabled, `VkPipelineFragmentShadingRateEnumStateCreateInfoNV::shadingRate` **must** be equal to `VK_FRAGMENT_SHADING_RATE_1_INVOCATION_PER_PIXEL_NV`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04571

If the pipeline requires fragment shader state and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, and the `primitiveFragmentShadingRate` feature is not enabled, `VkPipelineFragmentShadingRateEnumStateCreateInfoNV::combinerOps[0]` **must** be `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-04572

If the pipeline requires fragment shader state and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, and the `attachmentFragmentShadingRate` feature is not enabled, `VkPipelineFragmentShadingRateEnumStateCreateInfoNV::combinerOps[1]` **must** be `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR`

- VUID-VkGraphicsPipelineCreateInfo-fragmentShadingRateNonTrivialCombinerOps-04573

If the pipeline requires fragment shader state, and the `fragmentShadingRateNonTrivialCombinerOps` limit is not supported and `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` is not included in `pDynamicState->pDynamicStates`, elements of `VkPipelineFragmentShadingRateEnumStateCreateInfoNV::combinerOps` **must** be `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR` or `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR`

- VUID-VkGraphicsPipelineCreateInfo-None-04574

If the pipeline requires fragment shader state, and the `supersampleFragmentShadingRates` feature is not enabled, `VkPipelineFragmentShadingRateEnumStateCreateInfoNV::shadingRate` **must** not be equal to `VK_FRAGMENT_SHADING_RATE_2_INVOCATIONS_PER_PIXEL_NV`, `VK_FRAGMENT_SHADING_RATE_4_INVOCATIONS_PER_PIXEL_NV`, `VK_FRAGMENT_SHADING_RATE_8_INVOCATIONS_PER_PIXEL_NV`, or `VK_FRAGMENT_SHADING_RATE_16_INVOCATIONS_PER_PIXEL_NV`

- VUID-VkGraphicsPipelineCreateInfo-None-04575

If the pipeline requires fragment shader state, and the `noInvocationFragmentShadingRates` feature is not enabled, `VkPipelineFragmentShadingRateEnumStateCreateInfoNV::shadingRate` **must** not be equal to `VK_FRAGMENT_SHADING_RATE_NO_INVOCATIONS_NV`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-03578

All elements of the `pDynamicStates` member of `pDynamicState` **must** not be `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04807

If the pipeline requires pre-rasterization shader state and the `vertexInputDynamicState` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07067

If the pipeline requires `pre-rasterization shader state`, and includes a mesh shader, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-04800

If the `colorWriteEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT`

- VUID-VkGraphicsPipelineCreateInfo-rasterizationSamples-04899

If the pipeline requires `fragment shader state`, and the `VK_QCOM_render_pass_shader_resolve` extension or the `customResolve` feature is enabled, `rasterizationSamples` is not dynamic, and if subpass has any input attachments, and if the subpass description contains `VK_SUBPASS_DESCRIPTION_FRAGMENT_REGION_BIT_EXT`, then the sample count of the input attachments **must** equal `rasterizationSamples`

- VUID-VkGraphicsPipelineCreateInfo-sampleShadingEnable-04900

If the pipeline requires `fragment shader state`, and the `VK_QCOM_render_pass_shader_resolve` extension or the `customResolve` feature is enabled, and if the subpass description contains `VK_SUBPASS_DESCRIPTION_FRAGMENT_REGION_BIT_EXT`, then `sampleShadingEnable` **must** be false

- VUID-VkGraphicsPipelineCreateInfo-dynamicRendering-06576

If the `dynamicRendering` feature is not enabled and the pipeline requires `pre-rasterization shader state`, `fragment shader state`, or `fragment output interface state`, `renderPass` **must** not be `VK_NULL_HANDLE`

- VUID-VkGraphicsPipelineCreateInfo-multiview-06577

If the `multiview` feature is not enabled, the pipeline requires `pre-rasterization shader state` or `fragment shader state`, and `renderPass` is `VK_NULL_HANDLE`, `VkPipelineRenderingCreateInfo::viewMask` **must** be 0

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06578

If the pipeline requires `pre-rasterization shader state` or `fragment shader state`, and `renderPass` is `VK_NULL_HANDLE`, the index of the most significant bit in `VkPipelineRenderingCreateInfo::viewMask` **must** be less than `maxMultiviewViewCount`

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06579

If the pipeline requires `fragment output interface state`, and `renderPass` is `VK_NULL_HANDLE`, and `VkPipelineRenderingCreateInfo::colorAttachmentCount` is not 0, `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` **must** be a valid pointer to an array of `colorAttachmentCount` valid `VkFormat` values

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06580

If the pipeline requires `fragment output interface state`, and `renderPass` is `VK_NULL_HANDLE`, each element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` **must** be a valid `VkFormat` value

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06582

If the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and any element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` is not `VK_FORMAT_UNDEFINED`, that format **must** be a format with `potential format features`

that include `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV`

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06583
If the pipeline requires `fragment output interface state`, and `renderPass` is `VK_NULL_HANDLE`, `VkPipelineRenderingCreateInfo::depthAttachmentFormat` **must** be a valid `VkFormat` value
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06584
If the pipeline requires `fragment output interface state`, and `renderPass` is `VK_NULL_HANDLE`, `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` **must** be a valid `VkFormat` value
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06585
If the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkPipelineRenderingCreateInfo::depthAttachmentFormat` is not `VK_FORMAT_UNDEFINED`, it **must** be a format with `potential format features` that include `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06586
If the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` is not `VK_FORMAT_UNDEFINED`, it **must** be a format with `potential format features` that include `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06587
If the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkPipelineRenderingCreateInfo::depthAttachmentFormat` is not `VK_FORMAT_UNDEFINED`, it **must** be a format that includes a depth component
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06588
If the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` is not `VK_FORMAT_UNDEFINED`, it **must** be a format that includes a stencil component
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06589
If the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, `VkPipelineRenderingCreateInfo::depthAttachmentFormat` is not `VK_FORMAT_UNDEFINED`, and `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` is not `VK_FORMAT_UNDEFINED`, `depthAttachmentFormat` **must** equal `stencilAttachmentFormat`
- VUID-VkGraphicsPipelineCreateInfo-renderPass-09033
If `renderPass` is `VK_NULL_HANDLE`, the pipeline is being created with `fragment shader state` and `fragment output interface state`, and either of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` or `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` are not `VK_FORMAT_UNDEFINED`, and the `VK_EXT_extended_dynamic_state3` extension is not enabled or any of the `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE`, `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE`, `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP`, `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE`, `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE`, `VK_DYNAMIC_STATE_STENCIL_OP`, or `VK_DYNAMIC_STATE_DEPTH_BOUNDS` dynamic states are not set, `pDepthStencilState` **must** be a valid pointer to a valid `VkPipelineDepthStencilStateCreateInfo` structure

- VUID-VkGraphicsPipelineCreateInfo-pDepthStencilState-09034
If `pDepthStencilState` is not `NULL` it **must** be a valid pointer to a valid `VkPipelineDepthStencilStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-renderPass-09035
If `renderPass` is `VK_NULL_HANDLE` and the pipeline is being created with `fragment shader state` but not `fragment output interface state`, and the `VK_EXT_extended_dynamic_state3` extension is not enabled, or any of the `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE`, `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE`, `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP`, `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE`, `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE`, `VK_DYNAMIC_STATE_STENCIL_OP`, or `VK_DYNAMIC_STATE_DEPTH_BOUNDS` dynamic states are not set, `pDepthStencilState` **must** be a valid pointer to a valid `VkPipelineDepthStencilStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-pDepthStencilState-09036
If `pDepthStencilState` is not `NULL` it **must** be a valid pointer to a valid `VkPipelineDepthStencilStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-renderPass-09037
If `renderPass` is `VK_NULL_HANDLE`, the pipeline is being created with `fragment output interface state`, and any element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` is not `VK_FORMAT_UNDEFINED`, and the `VK_EXT_extended_dynamic_state3` extension is not enabled, or any of the `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT`, `VK_DYNAMIC_STATE_LOGIC_OP_EXT`, `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT`, `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`, `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`, or `VK_DYNAMIC_STATE_BLEND_CONSTANTS` dynamic states are not set, `pColorBlendState` **must** be a valid pointer to a valid `VkPipelineColorBlendStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-pColorBlendState-09038
If `pColorBlendState` is not `NULL` it **must** be a valid pointer to a valid `VkPipelineColorBlendStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06055
If `renderPass` is `VK_NULL_HANDLE`, `pColorBlendState` is not dynamic, and the pipeline is being created with `fragment output interface state`, `pColorBlendState->attachmentCount` **must** be equal to `VkPipelineRenderingCreateInfo::colorAttachmentCount`
- VUID-VkGraphicsPipelineCreateInfo-renderPass-11504
If `renderPass` is `VK_NULL_HANDLE`, a `VkCustomResolveCreateInfoEXT` is in the `pNext` chain, and the pipeline is being created with `fragment output interface state`, `VkPipelineRenderingCreateInfo::colorAttachmentCount` **must** be equal to `VkCustomResolveCreateInfoEXT::colorAttachmentCount`
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06057
If `renderPass` is `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state`, `VkPipelineRenderingCreateInfo::viewMask` is not `0`, and the `multiviewTessellationShader` feature is not enabled, then `pStages` **must** not include tessellation shaders
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06058

If `renderPass` is `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state`, `VkPipelineRenderingCreateInfo::viewMask` is not `0`, and the `multiviewGeometryShader` feature is not enabled, then `pStages` **must** not include a geometry shader

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06059

If `renderPass` is `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state`, and `VkPipelineRenderingCreateInfo::viewMask` is not `0`, all of the shaders in the pipeline **must** not include variables decorated with the `Layer` built-in decoration in their interfaces

- VUID-VkGraphicsPipelineCreateInfo-renderPass-07720

If `renderPass` is `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state`, and `VkPipelineRenderingCreateInfo::viewMask` is not `0`, and `multiviewMeshShader` is not enabled, then `pStages` **must** not include a mesh shader

- VUID-VkGraphicsPipelineCreateInfo-renderPass-12326

If `renderPass` is `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state`, `pStages` include a mesh shader, and `VkPipelineRenderingCreateInfo::viewMask` is not `0`, then the index of the most significant bit in `viewMask` **must** be less than `maxMeshMultiviewViewCount`

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06061

If the `dynamicRenderingLocalRead` feature is not enabled, the pipeline requires `fragment shader state`, and `renderPass` is `VK_NULL_HANDLE`, fragment shaders in `pStages` **must** not include the `InputAttachment` capability

- VUID-VkGraphicsPipelineCreateInfo-renderPass-08710

If the pipeline requires `fragment shader state` and `renderPass` is not `VK_NULL_HANDLE`, fragment shaders in `pStages` **must** not include any of the `TileImageColorReadAccessEXT`, `TileImageDepthReadAccessEXT`, or `TileImageStencilReadAccessEXT` capabilities

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06062

If the pipeline requires `fragment output interface state` and `renderPass` is `VK_NULL_HANDLE`, for each color attachment format defined by the `pColorAttachmentFormats` member of `VkPipelineRenderingCreateInfo`, if its `potential format features` do not contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`, then the `blendEnable` member of the corresponding element of the `pAttachments` member of `pColorBlendState` **must** be `VK_FALSE`

- VUID-VkGraphicsPipelineCreateInfo-renderPass-06063

If the pipeline requires `fragment output interface state` and `renderPass` is `VK_NULL_HANDLE`, if the `pNext` chain includes `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV`, the `colorAttachmentCount` member of that structure **must** be equal to the value of `VkPipelineRenderingCreateInfo::colorAttachmentCount`

- VUID-VkGraphicsPipelineCreateInfo-flags-06591

If `pStages` includes a fragment shader stage, and the fragment shader declares the `EarlyFragmentTests` execution mode, the `flags` member of `VkPipelineDepthStencilStateCreateInfo` **must** not include `VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT_EXT` or

VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_BIT_EXT

- VUID-VkGraphicsPipelineCreateInfo-flags-06482

If the `dynamicRenderingLocalRead` feature is not enabled, the pipeline requires `fragment output interface state`, and the `flags` member of `VkPipelineColorBlendStateCreateInfo` includes

VK_PIPELINE_COLOR_BLEND_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_BIT_EXT, `renderPass` **must** not be VK_NULL_HANDLE

- VUID-VkGraphicsPipelineCreateInfo-None-09526

If the `dynamicRenderingLocalRead` feature is not enabled, the pipeline requires `fragment output interface state`, and the `flags` member of `VkPipelineDepthStencilStateCreateInfo` includes

VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT_EXT or
VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_BIT_EXT, `renderPass` **must** not be VK_NULL_HANDLE

- VUID-VkGraphicsPipelineCreateInfo-pColorAttachmentSamples-06592

If the `fragment output interface state`, elements of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` **must** be valid `VkSampleCountFlagBits` values

- VUID-VkGraphicsPipelineCreateInfo-depthStencilAttachmentSamples-06593

If the `fragment output interface state` and the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` is not 0, it **must** be a valid `VkSampleCountFlagBits` value

- VUID-VkGraphicsPipelineCreateInfo-renderPass-09527

If the pipeline requires `fragment output interface state`, `renderPass` is not VK_NULL_HANDLE, and the `flags` member of `VkPipelineColorBlendStateCreateInfo` includes

VK_PIPELINE_COLOR_BLEND_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_BIT_EXT `subpass` **must** have been created with
VK_SUBPASS_DESCRIPTION_RASTERIZATION_ORDER_ATTACHMENT_COLOR_ACCESS_BIT_EXT

- VUID-VkGraphicsPipelineCreateInfo-renderPass-09528

If the pipeline requires `fragment shader state`, `renderPass` is not VK_NULL_HANDLE, and the `flags` member of `VkPipelineDepthStencilStateCreateInfo` includes
VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT_EXT, `subpass` **must** have been created with
VK_SUBPASS_DESCRIPTION_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT_EXT

- VUID-VkGraphicsPipelineCreateInfo-renderPass-09529

If the pipeline requires `fragment shader state`, `renderPass` is not VK_NULL_HANDLE, and the `flags` member of `VkPipelineDepthStencilStateCreateInfo` includes
VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_BIT_EXT, `subpass` **must** have been created with
VK_SUBPASS_DESCRIPTION_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_B

IT_EXT

- VUID-VkGraphicsPipelineCreateInfo-pipelineStageCreationFeedbackCount-06594
If `VkPipelineCreationFeedbackCreateInfo::pipelineStageCreationFeedbackCount` is not 0, it **must** be equal to `stageCount`
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06595
If `renderPass` is `VK_NULL_HANDLE`, the pipeline is being created with `pre-rasterization shader state` or `fragment shader state`, and `VkMultiviewPerViewAttributesInfoNVX::perViewAttributesPositionXOnly` is `VK_TRUE` then `VkMultiviewPerViewAttributesInfoNVX::perViewAttributes` **must** also be `VK_TRUE`
- VUID-VkGraphicsPipelineCreateInfo-flags-06596
If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes only one of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes the other flag, the value of `VkMultiviewPerViewAttributesInfoNVX::perViewAttributes` specified in both this pipeline and the library **must** be equal
- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06597
If one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and another element includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, the value of `VkMultiviewPerViewAttributesInfoNVX::perViewAttributes` specified in both libraries **must** be equal
- VUID-VkGraphicsPipelineCreateInfo-flags-06598
If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes only one of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes the other flag, the value of `VkMultiviewPerViewAttributesInfoNVX::perViewAttributesPositionXOnly` specified in both this pipeline and the library **must** be equal
- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06599
If one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and another element includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, the value of `VkMultiviewPerViewAttributesInfoNVX::perViewAttributesPositionXOnly` specified in both libraries **must** be equal
- VUID-VkGraphicsPipelineCreateInfo-pStages-06600
If the pipeline requires `pre-rasterization shader state` or `fragment shader state`, `pStages` **must** be a valid pointer to an array of `stageCount` valid `VkPipelineShaderStageCreateInfo` structures
- VUID-VkGraphicsPipelineCreateInfo-stageCount-09587
If the pipeline does not require `pre-rasterization shader state` or `fragment shader state`, `stageCount` **must** be zero
- VUID-VkGraphicsPipelineCreateInfo-pRasterizationState-06601
If the pipeline requires `pre-rasterization shader state`, and `related dynamic state is not set`,

`pRasterizationState` **must** be a valid pointer to a valid `VkPipelineRasterizationStateCreateInfo` structure

- VUID-VkGraphicsPipelineCreateInfo-pRasterizationState-09039
If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, and related dynamic state is not set, then `pMultisampleState` **must** be a valid pointer to a valid `VkPipelineMultisampleStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-pRasterizationState-09040
If `pRasterizationState` is not `NULL` it **must** be a valid pointer to a valid `VkPipelineRasterizationStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-layout-06602
If the pipeline requires fragment shader state or pre-rasterization shader state, and `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkGraphicsPipelineCreateInfo-renderPass-06603
If the pipeline requires pre-rasterization shader state, fragment shader state, or fragment output state, and `renderPass` is not `VK_NULL_HANDLE`, `renderPass` **must** be a valid `VkRenderPass` handle
- VUID-VkGraphicsPipelineCreateInfo-stageCount-09530
If the pipeline requires pre-rasterization shader state, `stageCount` **must** be greater than 0
- VUID-VkGraphicsPipelineCreateInfo-graphicsPipelineLibrary-06606
If the `graphicsPipelineLibrary` feature is not enabled, and if the `shaderMeshEnqueue` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`
- VUID-VkGraphicsPipelineCreateInfo-flags-06608
If the `shaderMeshEnqueue` feature is not enabled, and the pipeline is being created with all possible state subsets, `flags` **must** not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`
- VUID-VkGraphicsPipelineCreateInfo-flags-06609
If `flags` includes `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT`, pipeline libraries included via `VkPipelineLibraryCreateInfoKHR` **must** have been created with `VK_PIPELINE_CREATE_RETAIN_LINK_TIME_OPTIMIZATION_INFO_BIT_EXT`
- VUID-VkGraphicsPipelineCreateInfo-flags-09245
If `flags` includes `VK_PIPELINE_CREATE_RETAIN_LINK_TIME_OPTIMIZATION_INFO_BIT_EXT`, `flags` **must** also include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`
- VUID-VkGraphicsPipelineCreateInfo-flags-06610
If `flags` includes `VK_PIPELINE_CREATE_RETAIN_LINK_TIME_OPTIMIZATION_INFO_BIT_EXT`, pipeline libraries included via `VkPipelineLibraryCreateInfoKHR` **must** have been created with `VK_PIPELINE_CREATE_RETAIN_LINK_TIME_OPTIMIZATION_INFO_BIT_EXT`
- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06611
Any pipeline libraries included via `VkPipelineLibraryCreateInfoKHR::pLibraries` **must** not include any state subset already defined by this structure or defined by any other pipeline

library in `VkPipelineLibraryCreateInfoKHR::pLibraries`

- VUID-VkGraphicsPipelineCreateInfo-flags-06612

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes only one of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes the other flag, and `layout` was not created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, then the `layout` used by this pipeline and the library **must** be *identically defined*

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06613

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and another element includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and the `layout` specified by either library was not created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, then the `layout` used by each library **must** be *identically defined*

- VUID-VkGraphicsPipelineCreateInfo-flags-06614

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes only one of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes the other subset, and `layout` was created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, then the `layout` used by the library **must** also have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06615

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and another element includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and the `layout` specified by either library was created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, then the `layout` used by both libraries **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`

- VUID-VkGraphicsPipelineCreateInfo-flags-06616

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes only one of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes the other subset, and `layout` was

created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, elements of the `pSetLayouts` array which `layout` was created with that are not `VK_NULL_HANDLE` **must** be **identically defined** to the element at the same index of `pSetLayouts` used to create the library's `layout`

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06617

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and another element includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and the `layout` specified by either library was created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, elements of the `pSetLayouts` array which either `layout` was created with that are not `VK_NULL_HANDLE` **must** be **identically defined** to the element at the same index of `pSetLayouts` used to create the other library's `layout`

- VUID-VkGraphicsPipelineCreateInfo-flags-06618

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes only one of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes the other flag, any descriptor set layout *N* specified by `layout` in both this pipeline and the library which include bindings accessed by shader stages in each **must** be *identically defined*

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06619

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and another element includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, any descriptor set layout *N* specified by `layout` in both libraries which include bindings accessed by shader stages in each **must** be **identically defined**

- VUID-VkGraphicsPipelineCreateInfo-flags-06620

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes only one of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes the other flag, push constants specified in `layout` in both this pipeline and the library which are available to shader stages in each **must** be **identically defined**

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06621

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, and one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and another

element includes [VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT](#), push constants specified in [layout](#) in both this pipeline and the library which are available to shader stages in each **must** be [identically defined](#)

- VUID-VkGraphicsPipelineCreateInfo-flags-06679

If [VkPipelineCreateFlags2CreateInfoKHR::flags](#) does not include [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#), and [VkGraphicsPipelineLibraryCreateInfoEXT::flags](#) includes only one of [VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT](#) or [VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT](#), an element of [VkPipelineLibraryCreateInfoKHR::pLibraries](#) includes the other subset, [VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT](#) was not used, and any element of the [pSetLayouts](#) array when [layout](#) was created and the corresponding element of the [pSetLayouts](#) array used to create the library's [layout](#) **must** not both be [VK_NULL_HANDLE](#)

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06681

If [VkPipelineCreateFlags2CreateInfoKHR::flags](#) does not include [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#), one element of [VkPipelineLibraryCreateInfoKHR::pLibraries](#) includes [VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT](#) and another element includes [VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT](#), [VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT](#) was not used, and any element of the [pSetLayouts](#) array used to create each library's [layout](#) was [VK_NULL_HANDLE](#), then the corresponding element of the [pSetLayouts](#) array used to create the other library's [layout](#) **must** not be [VK_NULL_HANDLE](#)

- VUID-VkGraphicsPipelineCreateInfo-flags-06756

If [VkPipelineCreateFlags2CreateInfoKHR::flags](#) does not include [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#), [VkGraphicsPipelineLibraryCreateInfoEXT::flags](#) includes only one of [VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT](#) or [VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT](#), an element of [VkPipelineLibraryCreateInfoKHR::pLibraries](#) includes the other subset, and any element of the [pSetLayouts](#) array which [layout](#) was created with was [VK_NULL_HANDLE](#), then the corresponding element of the [pSetLayouts](#) array used to create the library's [layout](#) **must** not have shader bindings for shaders in the other subset

- VUID-VkGraphicsPipelineCreateInfo-flags-06757

If [VkPipelineCreateFlags2CreateInfoKHR::flags](#) does not include [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#), [VkGraphicsPipelineLibraryCreateInfoEXT::flags](#) includes only one of [VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT](#) or [VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT](#), an element of [VkPipelineLibraryCreateInfoKHR::pLibraries](#) includes the other subset, and any element of the [pSetLayouts](#) array used to create the library's [layout](#) was [VK_NULL_HANDLE](#), then the corresponding element of the [pSetLayouts](#) array used to create this pipeline's [layout](#) **must** not have shader bindings for shaders in the other subset

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06758

If [VkPipelineCreateFlags2CreateInfoKHR::flags](#) does not include

`VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and another element includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and any element of the `pSetLayouts` array used to create each library's `layout` was `VK_NULL_HANDLE`, then the corresponding element of the `pSetLayouts` array used to create the other library's `layout` **must** not have shader bindings for shaders in the other subset

- VUID-VkGraphicsPipelineCreateInfo-flags-06682

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, and `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes both `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `layout` **must** have been created with no elements of the `pSetLayouts` array set to `VK_NULL_HANDLE`

- VUID-VkGraphicsPipelineCreateInfo-flags-06683

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, and `pRasterizationState->rasterizerDiscardEnable` is `VK_TRUE`, `layout` **must** have been created with no elements of the `pSetLayouts` array set to `VK_NULL_HANDLE`

- VUID-VkGraphicsPipelineCreateInfo-flags-06684

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes at least one of and no more than two of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes one of the other flags, the value of `subpass` **must** be equal to that used to create the library

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06623

If one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes at least one of and no more than two of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, and another element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes one of the other flags, the value of `subpass` used to create each library **must** be identical

- VUID-VkGraphicsPipelineCreateInfo-renderpass-06624

If `renderpass` is not `VK_NULL_HANDLE`, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes at least one of and no more than two of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes one of the other flags, `renderPass` **must** be compatible with that used to create the library

- VUID-VkGraphicsPipelineCreateInfo-renderpass-06625
If `renderpass` is `VK_NULL_HANDLE`, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes at least one of and no more than two of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes one of the other flags, the value of `renderPass` used to create that library **must** also be `VK_NULL_HANDLE`
- VUID-VkGraphicsPipelineCreateInfo-flags-06626
If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes either `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and the other element is included in `VkPipelineLibraryCreateInfoKHR::pLibraries`, and `renderPass` is `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::viewMask` used by this pipeline and that specified by the library **must** be identical
- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06627
If `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT` are included in two elements of `VkPipelineLibraryCreateInfoKHR::pLibraries`, and `renderPass` was `VK_NULL_HANDLE` for both libraries, the value of `VkPipelineRenderingCreateInfo::viewMask` set by each library **must** be identical
- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06628
If one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes at least one of and no more than two of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, and another element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes one of the other flags, the `renderPass` objects used to create each library **must** be compatible or all equal to `VK_NULL_HANDLE`
- VUID-VkGraphicsPipelineCreateInfo-renderpass-06631
If `renderPass` is not `VK_NULL_HANDLE`, the pipeline requires `fragment shader state`, and the `VK_EXT_extended_dynamic_state3` extension is not enabled or any of the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT`, `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT`, or `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic states is not set, or the `alphaToOne` feature is enabled and `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` is not set, then `pMultisampleState` **must** be a valid pointer to a valid `VkPipelineMultisampleStateCreateInfo` structure
- VUID-VkGraphicsPipelineCreateInfo-Input-06632
If the pipeline requires `fragment shader state` with a fragment shader that either enables `sample shading` or decorates any variable in the `Input` storage class with `Sample`, and the `VK_EXT_extended_dynamic_state3` extension is not enabled or any of the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT`, `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT`, or `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic states is not set, or

the `alphaToOne` feature is enabled and `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` is not set, then `pMultisampleState` **must** be a valid pointer to a valid `VkPipelineMultisampleStateCreateInfo` structure

- VUID-VkGraphicsPipelineCreateInfo-flags-11856

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes either `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `VkCustomResolveCreateInfoEXT` is included and `VkCustomResolveCreateInfoEXT::customResolve` is `VK_TRUE`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` also includes either `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, the library **must** also include `VkCustomResolveCreateInfoEXT` and the `VkCustomResolveCreateInfoEXT::customResolve` specified by the library **must** be `VK_TRUE`

- VUID-VkGraphicsPipelineCreateInfo-flags-11857

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes either `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `VkCustomResolveCreateInfoEXT` is not included or `VkCustomResolveCreateInfoEXT::customResolve` is `VK_FALSE`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` also includes either `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, either the library **must** not include `VkCustomResolveCreateInfoEXT` or the `VkCustomResolveCreateInfoEXT::customResolve` specified by the library **must** be `VK_FALSE`

- VUID-VkGraphicsPipelineCreateInfo-customResolve-11858

If one element of `VkPipelineLibraryCreateInfoKHR` includes either `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `VkCustomResolveCreateInfoEXT` is included and `VkCustomResolveCreateInfoEXT::customResolve` is `VK_TRUE`, and another element of `VkPipelineLibraryCreateInfoKHR::pLibraries` also includes either `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, the other library **must** also include `VkCustomResolveCreateInfoEXT` and the `VkCustomResolveCreateInfoEXT::customResolve` specified by the library **must** be `VK_TRUE`

- VUID-VkGraphicsPipelineCreateInfo-customResolve-11859

If one element of `VkPipelineLibraryCreateInfoKHR` includes either `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `VkCustomResolveCreateInfoEXT` is not included or `VkCustomResolveCreateInfoEXT::customResolve` is `VK_FALSE`, and another element of `VkPipelineLibraryCreateInfoKHR::pLibraries` also includes either `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, either the other

library **must** not include `VkCustomResolveCreateInfoEXT` or the `VkCustomResolveCreateInfoEXT::customResolve` specified by the library **must** be `VK_FALSE`

- VUID-VkGraphicsPipelineCreateInfo-flags-06633

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT` with a `pMultisampleState` that was not `NULL`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` was created with `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, `pMultisampleState` **must** be identically defined to that used to create the library

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06634

If an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` was created with `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT` with a `pMultisampleState` that was not `NULL`, and if `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, `pMultisampleState` **must** be identically defined to that used to create the library

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06635

If one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` was created with `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT` with a `pMultisampleState` that was not `NULL`, and if a different element of `VkPipelineLibraryCreateInfoKHR::pLibraries` was created with `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, the `pMultisampleState` used to create each library **must** be identically defined

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06636

If one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` was created with `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` and a value of `pMultisampleState->sampleShadingEnable` equal `VK_TRUE`, and if a different element of `VkPipelineLibraryCreateInfoKHR::pLibraries` was created with `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, the `pMultisampleState` used to create each library **must** be identically defined

- VUID-VkGraphicsPipelineCreateInfo-flags-06637

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, `pMultisampleState->sampleShadingEnable` is `VK_TRUE`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` was created with `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `pMultisampleState` **must** be identically defined to that used to create the library

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-09567

If one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` was created with `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` and a value of `pMultisampleState->sampleShadingEnable` equal `VK_TRUE`, and if `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `pMultisampleState` **must** be identically defined to that used to create the library

- VUID-VkGraphicsPipelineCreateInfo-flags-06638
If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes only one of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and an element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes the other flag, values specified in `VkPipelineFragmentShadingRateStateCreateInfoKHR` for both this pipeline and that library **must** be identical
- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06639
If one element of `VkPipelineLibraryCreateInfoKHR::pLibraries` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` and another element includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, values specified in `VkPipelineFragmentShadingRateStateCreateInfoKHR` for both this pipeline and that library **must** be identical
- VUID-VkGraphicsPipelineCreateInfo-flags-06640
If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `pStages` **must** be a valid pointer to an array of `stageCount` valid `VkPipelineShaderStageCreateInfo` structures
- VUID-VkGraphicsPipelineCreateInfo-flags-06642
If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkGraphicsPipelineCreateInfo-flags-06643
If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, and `renderPass` is not `VK_NULL_HANDLE`, `renderPass` **must** be a valid `VkRenderPass` handle
- VUID-VkGraphicsPipelineCreateInfo-flags-06644
If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` or `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, `stageCount` **must** be greater than 0
- VUID-VkGraphicsPipelineCreateInfo-flags-06645
If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` is non-zero, if `flags` includes `VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR`, any libraries **must** have also been created with `VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR`
- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06646
If `VkPipelineLibraryCreateInfoKHR::pLibraries` includes more than one library, and any library was created with `VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR`, all libraries

must have also been created with `VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR`

- VUID-VkGraphicsPipelineCreateInfo-pLibraries-06647

If `VkPipelineLibraryCreateInfoKHR::pLibraries` includes at least one library, `VkGraphicsPipelineLibraryCreateInfoEXT::flags` is non-zero, and any library was created with `VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR`, **flags must** include `VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR`

- VUID-VkGraphicsPipelineCreateInfo-None-07826

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, the pipeline includes a **complete set of state**, and there are no libraries included in `VkPipelineLibraryCreateInfoKHR::pLibraries`, then `VkPipelineLayout` **must** be a valid pipeline layout

- VUID-VkGraphicsPipelineCreateInfo-layout-07827

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, the pipeline includes a **complete set of state** specified entirely by libraries, and each library was created with a `VkPipelineLayout` created without `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, then **layout must** be **compatible** with the layouts in those libraries

- VUID-VkGraphicsPipelineCreateInfo-flags-06729

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, **flags** includes `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT`, the pipeline includes a **complete set of state** specified entirely by libraries, and each library was created with a `VkPipelineLayout` created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, then **layout must** be **compatible** with the union of the libraries' pipeline layouts other than the inclusion/exclusion of `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`

- VUID-VkGraphicsPipelineCreateInfo-flags-06730

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, **flags** does not include `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT`, the pipeline includes a **complete set of state** specified entirely by libraries, and each library was created with a `VkPipelineLayout` created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, then **layout must** be **compatible** with the union of the libraries' pipeline layouts

- VUID-VkGraphicsPipelineCreateInfo-conservativePointAndLineRasterization-08892

If **conservativePointAndLineRasterization** is not supported and the **effective rasterization input topology** is in line or point topology class, then `VkPipelineRasterizationConservativeStateCreateInfoEXT::conservativeRasterizationMode` **must** be `VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT`

- VUID-VkGraphicsPipelineCreateInfo-pStages-06894

If the pipeline requires **pre-rasterization shader state** but not **fragment shader state**, elements of **pStages must** not have **stage** set to `VK_SHADER_STAGE_FRAGMENT_BIT`

- VUID-VkGraphicsPipelineCreateInfo-pStages-06895

If the pipeline requires [fragment shader state](#) but not [pre-rasterization shader state](#), elements of `pStages` **must** not have `stage` set to a shader stage which participates in pre-rasterization

- VUID-VkGraphicsPipelineCreateInfo-pStages-06896

If the pipeline requires [pre-rasterization shader state](#), all elements of `pStages` **must** have a `stage` set to a shader stage which participates in [fragment shader state](#) or [pre-rasterization shader state](#)

- VUID-VkGraphicsPipelineCreateInfo-stage-06897

If the pipeline requires [fragment shader state](#) and/or [pre-rasterization shader state](#), any value of `stage` **must** not be set in more than one element of `pStages`

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3TessellationDomainOrigin-07370

If the `extendedDynamicState3TessellationDomainOrigin` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to [VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT](#)

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3DepthClampEnable-07371

If the `extendedDynamicState3DepthClampEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to [VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT](#)

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3PolygonMode-07372

If the `extendedDynamicState3PolygonMode` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to [VK_DYNAMIC_STATE_POLYGON_MODE_EXT](#)

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3RasterizationSamples-07373

If the `extendedDynamicState3RasterizationSamples` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to [VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT](#)

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3SampleMask-07374

If the `extendedDynamicState3SampleMask` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to [VK_DYNAMIC_STATE_SAMPLE_MASK_EXT](#)

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3AlphaToCoverageEnable-07375

If the `extendedDynamicState3AlphaToCoverageEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to [VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT](#)

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3AlphaToOneEnable-07376

If the `extendedDynamicState3AlphaToOneEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to [VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT](#)

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3LogicOpEnable-07377

If the `extendedDynamicState3LogicOpEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to [VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT](#)

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ColorBlendEnable-07378
If the `extendedDynamicState3ColorBlendEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ColorBlendEquation-07379
If the `extendedDynamicState3ColorBlendEquation` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ColorWriteMask-07380
If the `extendedDynamicState3ColorWriteMask` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3RasterizationStream-07381
If the `extendedDynamicState3RasterizationStream` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ConservativeRasterizationMode-07382
If the `extendedDynamicState3ConservativeRasterizationMode` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ExtraPrimitiveOverestimationSize-07383
If the `extendedDynamicState3ExtraPrimitiveOverestimationSize` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT`
- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-09639
If the pipeline requires `pre-rasterization shader state`, `pDynamicState` includes `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT`, and `pDynamicState` does not include `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT`, `pRasterizationState` **must** include a `VkPipelineRasterizationConservativeStateCreateInfoEXT` in its `pNext` chain
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3DepthClipEnable-07384
If the `extendedDynamicState3DepthClipEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3SampleLocationsEnable-07385
If the `extendedDynamicState3SampleLocationsEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ColorBlendAdvanced-07386
If the `extendedDynamicState3ColorBlendAdvanced` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to

VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ProvokingVertexMode-07387
If the `extendedDynamicState3ProvokingVertexMode` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3LineRasterizationMode-07388
If the `extendedDynamicState3LineRasterizationMode` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3LineStippleEnable-07389
If the `extendedDynamicState3LineStippleEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3DepthClipNegativeOneToOne-07390
If the `extendedDynamicState3DepthClipNegativeOneToOne` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ViewportWScalingEnable-07391
If the `extendedDynamicState3ViewportWScalingEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ViewportSwizzle-07392
If the `extendedDynamicState3ViewportSwizzle` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3CoverageToColorEnable-07393
If the `extendedDynamicState3CoverageToColorEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3CoverageToColorLocation-07394
If the `extendedDynamicState3CoverageToColorLocation` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV`
- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3CoverageModulationMode-07395
If the `extendedDynamicState3CoverageModulationMode` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV`
- VUID-VkGraphicsPipelineCreateInfo-

extendedDynamicState3CoverageModulationTableEnable-07396

If the `extendedDynamicState3CoverageModulationTableEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV`

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3CoverageModulationTable-07397

If the `extendedDynamicState3CoverageModulationTable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV`

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3CoverageReductionMode-07398

If the `extendedDynamicState3CoverageReductionMode` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV`

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3RepresentativeFragmentTestEnable-07399

If the `extendedDynamicState3RepresentativeFragmentTestEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV`

- VUID-VkGraphicsPipelineCreateInfo-extendedDynamicState3ShadingRateImageEnable-07400

If the `extendedDynamicState3ShadingRateImageEnable` feature is not enabled, there **must** be no element of the `pDynamicStates` member of `pDynamicState` set to `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV`

- VUID-VkGraphicsPipelineCreateInfo-flags-07401

<code>flags</code>	must	not	include
<code>VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT</code>			

- VUID-VkGraphicsPipelineCreateInfo-flags-07997

<code>flags</code>	must	not	include
<code>VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV</code>			

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07730

If the `multiviewPerViewViewports` feature is enabled, `renderpass` is not `VK_NULL_HANDLE`, the pipeline requires `pre-rasterization shader state`, and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT`, then the index of the most significant bit in each element of `VkRenderPassMultiviewCreateInfo::pViewMasks` **must** be less than `pViewportState->viewportCount`

- VUID-VkGraphicsPipelineCreateInfo-pDynamicStates-07731

If the `multiviewPerViewViewports` feature is enabled, `renderpass` is not `VK_NULL_HANDLE`, the pipeline requires `pre-rasterization shader state`, and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT`, then the index of the most significant bit in each element of `VkRenderPassMultiviewCreateInfo::pViewMasks` **must** be less than `pViewportState->scissorCount`

- VUID-VkGraphicsPipelineCreateInfo-multiviewPerViewViewports-12249

If the `multiviewPerViewViewports` feature is enabled, `renderpass` is `VK_NULL_HANDLE`, the

pipeline requires [pre-rasterization shader state](#), and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT`, then the index of the most significant bit in `VkPipelineRenderingCreateInfo::viewMask` **must** be less than `pViewportState->viewportCount`

- VUID-VkGraphicsPipelineCreateInfo-multiviewPerViewViewports-12250

If the `multiviewPerViewViewports` feature is enabled, `renderpass` is `VK_NULL_HANDLE`, the pipeline requires [pre-rasterization shader state](#), and no element of the `pDynamicStates` member of `pDynamicState` is `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT`, then the index of the most significant bit in `VkPipelineRenderingCreateInfo::viewMask` **must** be less than `pViewportState->scissorCount`

- VUID-VkGraphicsPipelineCreateInfo-pStages-08711

If `pStages` includes a fragment shader stage, `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` is not set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` member of `VkPipelineDepthStencilStateCreateInfo` **must** be `VK_FALSE`

- VUID-VkGraphicsPipelineCreateInfo-pStages-08712

If `pStages` includes a fragment shader stage, `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` is not set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpStencilAttachmentReadEXT`, the value of `VkStencilOpState::writeMask` for both `front` and `back` in `VkPipelineDepthStencilStateCreateInfo` **must** be `0`

- VUID-VkGraphicsPipelineCreateInfo-renderPass-08744

If `renderPass` is `VK_NULL_HANDLE`, the pipeline requires [fragment output state](#) or [fragment shader state](#), the pipeline enables [sample shading](#), `rasterizationSamples` is not dynamic, and the `pNext` chain includes a `VkPipelineRenderingCreateInfo` structure, `rasterizationSamples` **must** be a valid `VkSampleCountFlagBits` value that is set in `imageCreateSampleCounts` (as defined in [Image Creation Limits](#)) for every element of `depthAttachmentFormat`, `stencilAttachmentFormat` and the `pColorAttachmentFormats` array which is not `VK_FORMAT_UNDEFINED`

- VUID-VkGraphicsPipelineCreateInfo-flags-08897

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_VERTEX_INPUT_INTERFACE_BIT_EXT`, [pre-rasterization shader state](#) is specified either in a library or by the inclusion of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, and that state includes a vertex shader stage in `pStages`, the pipeline **must** define [vertex input state](#)

- VUID-VkGraphicsPipelineCreateInfo-flags-08898

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_VERTEX_INPUT_INTERFACE_BIT_EXT`, and [pre-rasterization shader state](#) is not specified, the pipeline **must** define [vertex input state](#)

- VUID-VkGraphicsPipelineCreateInfo-flags-08899

If `flags` does not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`, [pre-rasterization shader state](#) is specified either in a library or by the inclusion of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, and that state includes a vertex shader stage in `pStages`, the pipeline **must** either define [vertex](#)

input state or include that state in a linked pipeline library

- VUID-VkGraphicsPipelineCreateInfo-flags-08900

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` the pipeline **must** define pre-rasterization shader state

- VUID-VkGraphicsPipelineCreateInfo-flags-08901

If `flags` does not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`, the pipeline **must** either define pre-rasterization shader state or include that state in a linked pipeline library

- VUID-VkGraphicsPipelineCreateInfo-flags-08903

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, pre-rasterization shader state is specified either in a library or by the inclusion of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, and that state either includes `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` or has `pRasterizationState->rasterizerDiscardEnable` set to `VK_FALSE`, the pipeline **must** define fragment shader state

- VUID-VkGraphicsPipelineCreateInfo-flags-08904

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and pre-rasterization shader state is not specified, the pipeline **must** define fragment shader state

- VUID-VkGraphicsPipelineCreateInfo-flags-08906

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, pre-rasterization shader state is specified either in a library or by the inclusion of `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT`, and that state either includes `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` or has `pRasterizationState->rasterizerDiscardEnable` set to `VK_FALSE`, the pipeline **must** define fragment output interface state

- VUID-VkGraphicsPipelineCreateInfo-flags-08907

If `VkGraphicsPipelineLibraryCreateInfoEXT::flags` includes `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT`, and pre-rasterization shader state is not specified, the pipeline **must** define fragment output interface state

- VUID-VkGraphicsPipelineCreateInfo-flags-08909

If `flags` does not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`, pre-rasterization shader state is specified either in a library or by the inclusion of `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT`, and that state either includes `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` or has `pRasterizationState->rasterizerDiscardEnable` set to `VK_FALSE`, the pipeline **must** define fragment output interface state and fragment shader state or include those states in linked pipeline libraries

- VUID-VkGraphicsPipelineCreateInfo-None-09043

If `pDynamicState->pDynamicStates` does not include `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`, and the format of any color attachment is `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`, the `colorWriteMask` member of the

corresponding element of `pColorBlendState->pAttachments` **must** either include all of `VK_COLOR_COMPONENT_R_BIT`, `VK_COLOR_COMPONENT_G_BIT`, and `VK_COLOR_COMPONENT_B_BIT`, or none of them

- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09301
If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkExternalFormatANDROID::externalFormat` is not 0, `VkPipelineRenderingCreateInfo::viewMask` **must** be 0
- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09304
If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, `VkExternalFormatANDROID::externalFormat` is not 0, and `rasterizationSamples` is not dynamic, `VkPipelineMultisampleStateCreateInfo::rasterizationSamples` **must** be 1
- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09305
If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkExternalFormatANDROID::externalFormat` is not 0, and `blendEnable` is not dynamic, the `blendEnable` member of each element of `pColorBlendState->pAttachments` **must** be `VK_FALSE`
- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09306
If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkExternalFormatANDROID::externalFormat` is not 0, and `pDynamicState->pDynamicStates` does not include `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.width` **must** be 1
- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09307
If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkExternalFormatANDROID::externalFormat` is not 0, and `pDynamicState->pDynamicStates` does not include `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.height` **must** be 1
- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09308
If the `externalFormatResolve` feature is enabled, the pipeline requires `pre-rasterization shader state` and `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkExternalFormatANDROID::externalFormat` is not 0, the last `pre-rasterization shader stage` **must** not statically use a variable with the `PrimitiveShadingRateKHR` built-in
- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09309
If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkExternalFormatANDROID::externalFormat` is not 0, `VkPipelineRenderingCreateInfo::colorAttachmentCount` **must** be 1
- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09310
If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment shader state` and `fragment output interface state`, `renderPass` is `VK_NULL_HANDLE`, and `VkExternalFormatANDROID::externalFormat` is not 0, the fragment shader **must** not declare the `DepthReplacing` or `StencilRefReplacingEXT` execution modes
- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09313

If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is not `VK_NULL_HANDLE`, `subpass` includes an external format resolve attachment, and `rasterizationSamples` is not dynamic, `VkPipelineMultisampleStateCreateInfo::rasterizationSamples` **must** be `VK_SAMPLE_COUNT_1_BIT`

- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09314

If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is not `VK_NULL_HANDLE`, `subpass` includes an external format resolve attachment, and `blendEnable` is not dynamic, the `blendEnable` member of each element of `pColorBlendState->pAttachments` **must** be `VK_FALSE`

- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09315

If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is not `VK_NULL_HANDLE`, `subpass` includes an external format resolve attachment, and `pDynamicState->pDynamicStates` does not include `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.width` **must** be 1

- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09316

If the `externalFormatResolve` feature is enabled, the pipeline requires `fragment output interface state`, `renderPass` is not `VK_NULL_HANDLE`, `subpass` includes an external format resolve attachment, and `pDynamicState->pDynamicStates` does not include `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR`, `VkPipelineFragmentShadingRateStateCreateInfoKHR::fragmentSize.height` **must** be 1

- VUID-VkGraphicsPipelineCreateInfo-externalFormatResolve-09317

If the `externalFormatResolve` feature is enabled, the pipeline requires `pre-rasterization shader state` and `fragment output interface state`, `renderPass` is not `VK_NULL_HANDLE`, and `subpass` includes an external format resolve attachment, the last `pre-rasterization shader stage` **must** not statically use a variable with the `PrimitiveShadingRateKHR` built-in

- VUID-VkGraphicsPipelineCreateInfo-renderPass-09531

If the pipeline is being created with `fragment shader state` and `fragment output state`, the value of `renderPass` is `VK_NULL_HANDLE`, and `VkRenderingInputAttachmentIndexInfo` is included, `VkRenderingInputAttachmentIndexInfo::colorAttachmentCount` **must** be equal to `VkPipelineRenderingCreateInfo::colorAttachmentCount`

- VUID-VkGraphicsPipelineCreateInfo-renderPass-09652

If the pipeline is being created with `fragment shader state` and `fragment output state`, the value of `renderPass` is `VK_NULL_HANDLE`, and `VkRenderingInputAttachmentIndexInfo` is not included, the fragment shader **must** not contain any input attachments with a `InputAttachmentIndex` greater than or equal to `VkPipelineRenderingCreateInfo::colorAttachmentCount`

- VUID-VkGraphicsPipelineCreateInfo-renderPass-09532

If the pipeline is being created with `fragment output state`, and the value of `renderPass` is `VK_NULL_HANDLE`, `VkRenderingAttachmentLocationInfo::colorAttachmentCount` **must** be equal to `VkPipelineRenderingCreateInfo::colorAttachmentCount`

- VUID-VkGraphicsPipelineCreateInfo-flags-11273

If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, all libraries linked to this pipeline

must also have that flag set

- VUID-VkGraphicsPipelineCreateInfo-flags-11274

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, all libraries linked to this pipeline **must** also not have that flag set

- VUID-VkGraphicsPipelineCreateInfo-flags-12355

If `flags` includes `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, all libraries linked to this pipeline **must** also have that flag set

- VUID-VkGraphicsPipelineCreateInfo-flags-12356

If `flags` does not include `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, all libraries linked to this pipeline **must** also not have that flag set

- VUID-VkGraphicsPipelineCreateInfo-flags-12357

If `flags` includes `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT`, all libraries linked to this pipeline **must** also have that flag set

- VUID-VkGraphicsPipelineCreateInfo-flags-12358

If `flags` does not include `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT`, all libraries linked to this pipeline **must** also not have that flag set

- VUID-VkGraphicsPipelineCreateInfo-flags-12359

If `flags` includes `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`, all libraries linked to this pipeline **must** also have that flag set

- VUID-VkGraphicsPipelineCreateInfo-flags-12360

If `flags` does not include `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`, all libraries linked to this pipeline **must** also not have that flag set

Valid Usage (Implicit)

- VUID-VkGraphicsPipelineCreateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_GRAPHICS_PIPELINE_CREATE_INFO`

- VUID-VkGraphicsPipelineCreateInfo-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkAttachmentSampleCountInfoAMD`, `VkCustomResolveCreateInfoEXT`, `VkExternalFormatANDROID`, `VkExternalFormatOHOS`, `VkGraphicsPipelineLibraryCreateInfoEXT`, `VkGraphicsPipelineShaderGroupsCreateInfoNV`, `VkMultiviewPerViewAttributesInfoNVX`, `VkPipelineBinaryInfoKHR`, `VkPipelineCompilerControlCreateInfoAMD`, `VkPipelineCreateFlags2CreateInfo`, `VkPipelineCreationFeedbackCreateInfo`, `VkPipelineDiscardRectangleStateCreateInfoEXT`, `VkPipelineFragmentDensityMapLayeredCreateInfoVALVE`, `VkPipelineFragmentShadingRateEnumStateCreateInfoNV`, `VkPipelineFragmentShadingRateStateCreateInfoKHR`, `VkPipelineLibraryCreateInfoKHR`, `VkPipelineRenderingCreateInfo`, `VkPipelineRepresentativeFragmentTestStateCreateInfoNV`, `VkPipelineRobustnessCreateInfo`, `VkRenderingAttachmentLocationInfo`, or

VkRenderingInputAttachmentIndexInfo

- VUID-VkGraphicsPipelineCreateInfo-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkGraphicsPipelineCreateInfo-pDynamicState-parameter
If **pDynamicState** is not **NULL**, **pDynamicState** **must** be a valid pointer to a valid **VkPipelineDynamicStateCreateInfo** structure
- VUID-VkGraphicsPipelineCreateInfo-commonparent
Each of **basePipelineHandle**, **layout**, and **renderPass** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same **VkDevice**

The **VkPipelineFragmentDensityMapLayeredCreateInfoVALVE** structure is defined as:

```
// Provided by VK_VALVE_fragment_density_map_layered
typedef struct VkPipelineFragmentDensityMapLayeredCreateInfoVALVE {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           maxFragmentDensityMapLayers;
} VkPipelineFragmentDensityMapLayeredCreateInfoVALVE;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxFragmentDensityMapLayers** is the maximum number of layers which can be used with a fragment density map.

Valid Usage

- VUID-VkPipelineFragmentDensityMapLayeredCreateInfoVALVE-maxFragmentDensityMapLayers-10825
maxFragmentDensityMapLayers **must** be less than or equal to **maxFragmentDensityMapLayers**

Valid Usage (Implicit)

- VUID-VkPipelineFragmentDensityMapLayeredCreateInfoVALVE-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_PIPELINE_FRAGMENT_DENSITY_MAP_LAYERED_CREATE_INFO_VALVE**

Structure Chaining

Extends the structure

- **VkGraphicsPipelineCreateInfo**

The `VkPipelineRenderingCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPipelineRenderingCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           viewMask;
    uint32_t           colorAttachmentCount;
    const VkFormat*    pColorAttachmentFormats;
    VkFormat            depthAttachmentFormat;
    VkFormat            stencilAttachmentFormat;
} VkPipelineRenderingCreateInfo;
```

```
// Provided by VK_KHR_dynamic_rendering
// Equivalent to VkPipelineRenderingCreateInfo
typedef VkPipelineRenderingCreateInfo VkPipelineRenderingCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `viewMask` is a bitfield of view indices describing which views are active during rendering. It **must** match `VkRenderingInfo::viewMask` when rendering.
- `colorAttachmentCount` is the number of entries in `pColorAttachmentFormats`
- `pColorAttachmentFormats` is a pointer to an array of `VkFormat` values defining the format of color attachments used in this pipeline.
- `depthAttachmentFormat` is a `VkFormat` value defining the format of the depth attachment used in this pipeline.
- `stencilAttachmentFormat` is a `VkFormat` value defining the format of the stencil attachment used in this pipeline.

When a pipeline is created without a `VkRenderPass`, if the `pNext` chain of `VkGraphicsPipelineCreateInfo` includes this structure, it specifies the view mask and format of attachments used for rendering. If this structure is not specified, and the pipeline does not include a `VkRenderPass`, `viewMask` and `colorAttachmentCount` are 0, and `depthAttachmentFormat` and `stencilAttachmentFormat` are `VK_FORMAT_UNDEFINED`. If a graphics pipeline is created with a valid `VkRenderPass`, parameters of this structure are ignored.

If `depthAttachmentFormat`, `stencilAttachmentFormat`, or any element of `pColorAttachmentFormats` is `VK_FORMAT_UNDEFINED`, it indicates that the corresponding attachment is unused within the render pass. Valid formats indicate that an attachment **can** be used - but it is still valid to set the attachment to `NULL` when beginning rendering.

If the render pass is going to be used with an external format resolve attachment, a `VkExternalFormatANDROID` structure **must** also be included in the `pNext` chain of `VkGraphicsPipelineCreateInfo`, defining the external format of the resolve attachment that will be used.

Valid Usage

- VUID-VkPipelineRenderingCreateInfo-colorAttachmentCount-09533
`colorAttachmentCount` **must** be less than or equal to `maxColorAttachments`

Valid Usage (Implicit)

- VUID-VkPipelineRenderingCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_RENDERING_CREATE_INFO`

Structure Chaining

Extends the structure

- `VkGraphicsPipelineCreateInfo`

The `VkCustomResolveCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_custom_resolve with VK_KHR_dynamic_rendering or VK_VERSION_1_3
typedef struct VkCustomResolveCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           customResolve;
    uint32_t           colorAttachmentCount;
    const VkFormat*    pColorAttachmentFormats;
    VkFormat           depthAttachmentFormat;
    VkFormat           stencilAttachmentFormat;
} VkCustomResolveCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `customResolve` indicates whether this pipeline will be used for a resolve operation.
- `colorAttachmentCount` is the number of entries in `pColorAttachmentFormats`.
- `pColorAttachmentFormats` is a pointer to an array of `VkFormat` values defining the format of color resolve attachments used in custom resolves in the same render pass.
- `depthAttachmentFormat` is a `VkFormat` value defining the format of the depth resolve attachment used in custom resolves in the same render pass.
- `stencilAttachmentFormat` is a `VkFormat` value defining the format of the stencil resolve attachment used in custom resolves in the same render pass.

If the `pNext` chain includes this structure for one of:

- a `VkGraphicsPipelineCreateInfo` for a pipeline created without a `VkRenderPass`

- a [VkCommandBufferInheritanceInfo](#) for a secondary command buffer within a render pass instance begun with [vkCmdBeginRendering](#).

it specifies the formats used in custom resolves within the same render pass. It also specifies that the corresponding object will be used in a render pass which contains a custom resolve operation.

If the [pNext](#) chain includes this structure for a [VkShaderCreateInfoEXT](#) for a fragment shader object, it only specifies that the fragment shader will be used in a custom resolve operation.

If a graphics pipeline is created with a valid [VkRenderPass](#), parameters of this structure are ignored.

If [customResolve](#) is [VK_FALSE](#), the pipeline **can** only be used outside the custom resolve section. If [customResolve](#) is [VK_TRUE](#), the pipeline **can** only be used inside the custom resolve section.

When a dynamic render pass instance contains a custom resolve operation and the [dynamicRenderingUnusedAttachments](#) feature is not enabled, all pipelines used to draw in such render pass **must** include this structure and have identical format information in it. When a dynamic render pass does not contain a custom resolve operation and the [dynamicRenderingUnusedAttachments](#) feature is not enabled, all pipelines used to draw in such render pass **must** not include this structure.

If the [dynamicRenderingUnusedAttachments](#) feature is enabled, then when this structure is not included in the [pNext](#) chain for [VkGraphicsPipelineCreateInfo](#), [customResolve](#) is [VK_FALSE](#), [colorAttachmentCount](#) is 0, and [depthAttachmentFormat](#) and [stencilAttachmentFormat](#) are [VK_FORMAT_UNDEFINED](#).

If [depthAttachmentFormat](#), [stencilAttachmentFormat](#), or any element of [pColorAttachmentFormats](#) is [VK_FORMAT_UNDEFINED](#), it indicates that the corresponding attachment is unused within the resolve portion of the render pass. Valid formats indicate that an attachment **can** be used - but it is still valid to set the attachment to [NULL](#) when beginning rendering.

When passed as a [pNext](#) member to a [VkShaderCreateInfoEXT](#) struct for use with fragment density maps, the [colorAttachmentCount](#), [pColorAttachmentFormats](#), [depthAttachmentFormat](#), and [stencilAttachmentFormat](#) members of this struct are ignored. When not passed as a [pNext](#) member, [customResolve](#) is [VK_FALSE](#).

Valid Usage

- VUID-VkCustomResolveCreateInfoEXT-colorAttachmentCount-11507
[colorAttachmentCount](#) **must** be less than or equal to [maxColorAttachments](#)
- VUID-VkCustomResolveCreateInfoEXT-depthAttachmentFormat-11508
If [depthAttachmentFormat](#) is not [VK_FORMAT_UNDEFINED](#), it **must** be a format that includes a depth component
- VUID-VkCustomResolveCreateInfoEXT-depthAttachmentFormat-11509
If [depthAttachmentFormat](#) is not [VK_FORMAT_UNDEFINED](#), it **must** be a format with
potential format features that include
[VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT](#)

- VUID-VkCustomResolveCreateInfoEXT-pColorAttachmentFormats-11510

If any element of `pColorAttachmentFormats` is not `VK_FORMAT_UNDEFINED`, it **must** be a format with potential format features that include `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT`, or `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV` if the `linearColorAttachment` feature is enabled

- VUID-VkCustomResolveCreateInfoEXT-stencilAttachmentFormat-11511

If `stencilAttachmentFormat` is not `VK_FORMAT_UNDEFINED`, it **must** be a format that includes a stencil aspect

- VUID-VkCustomResolveCreateInfoEXT-stencilAttachmentFormat-11512

If `stencilAttachmentFormat` is not `VK_FORMAT_UNDEFINED`, it **must** be a format with potential format features that include `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`

- VUID-VkCustomResolveCreateInfoEXT-depthAttachmentFormat-11513

If `depthAttachmentFormat` is not `VK_FORMAT_UNDEFINED` and `stencilAttachmentFormat` is not `VK_FORMAT_UNDEFINED`, `depthAttachmentFormat` **must** equal `stencilAttachmentFormat`

Valid Usage (Implicit)

- VUID-VkCustomResolveCreateInfoEXT-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_CUSTOM_RESOLVE_CREATE_INFO_EXT`

Structure Chaining

Extends the structures

- `VkCommandBufferInheritanceInfo`
- `VkGraphicsPipelineCreateInfo`
- `VkShaderCreateInfoEXT`

The `VkPipelineBinaryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           binaryCount;
    const VkPipelineBinaryKHR* pPipelineBinaries;
} VkPipelineBinaryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `binaryCount` is the number of elements in the `pPipelineBinaries` array.

- `pPipelineBinaries` is a pointer to an array of `VkPipelineBinaryKHR` handles.

If a `VkPipelineBinaryInfoKHR` structure with a `binaryCount` greater than 0 is included in the `pNext` chain of any `Vk*PipelineCreateInfo` structure when creating a pipeline, implementations **must** use the data in `pPipelineBinaries` instead of recalculating it. Any shader module identifiers, shader modules, or chained `VkShaderModuleCreateInfo` structures declared in `VkPipelineShaderStageCreateInfo` instances, are ignored. Any `VkShaderDescriptorSetAndBindingMappingInfoEXT` in the `pNext` chains of `VkPipelineShaderStageCreateInfo` instances are ignored.

If this structure is not included in the `pNext` chain, it is equivalent to specifying this structure with a `binaryCount` of 0.

Valid Usage

- VUID-VkPipelineBinaryInfoKHR-binaryCount-09603
`binaryCount` and the order of the elements in `pPipelineBinaries` **must** exactly match that returned by `vkCreatePipelineBinariesKHR` for the matching `Vk*PipelineCreateInfo` structure and its `pNext` chain, ignoring the presence of the `VkPipelineBinaryInfoKHR` structure, the presence of the `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag, and absence of any shader module identifiers, shader modules, or `VkShaderModuleCreateInfo` structures, for the same `global pipeline key`, from either:
 - `VkPipelineBinaryCreateInfoKHR::pPipelineCreateInfo`, or
 - `VkPipelineBinaryCreateInfoKHR::pipeline`

Valid Usage (Implicit)

- VUID-VkPipelineBinaryInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_BINARY_INFO_KHR`
- VUID-VkPipelineBinaryInfoKHR-pPipelineBinaries-parameter
 If `binaryCount` is not 0, `pPipelineBinaries` **must** be a valid pointer to an array of `binaryCount` valid `VkPipelineBinaryKHR` handles

Structure Chaining

Extends the structures

- `VkComputePipelineCreateInfo`
- `VkGraphicsPipelineCreateInfo`
- `VkRayTracingPipelineCreateInfoKHR`

The `VkGraphicsPipelineLibraryCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkGraphicsPipelineLibraryCreateInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkGraphicsPipelineLibraryFlagsEXT flags;
} VkGraphicsPipelineLibraryCreateInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkGraphicsPipelineLibraryFlagBitsEXT](#) specifying the subsets of the graphics pipeline that are being compiled.

If a [VkGraphicsPipelineLibraryCreateInfoEXT](#) structure is included in the **pNext** chain of [VkGraphicsPipelineCreateInfo](#), it specifies the [subsets of the graphics pipeline](#) being created, excluding any subsets from linked pipeline libraries. If the pipeline is created with pipeline libraries, state from those libraries is aggregated with said subset.

If this structure is omitted, and either [VkGraphicsPipelineCreateInfo::flags](#) includes [VK_PIPELINE_CREATE_LIBRARY_BIT_KHR](#) or the [VkGraphicsPipelineCreateInfo::pNext](#) chain includes a [VkPipelineLibraryCreateInfoKHR](#) structure with a **libraryCount** greater than 0, it is as if **flags** is 0. Otherwise if this structure is omitted, it is as if **flags** includes all possible subsets of the graphics pipeline (i.e. a [complete graphics pipeline](#)).

Valid Usage (Implicit)

- VUID-VkGraphicsPipelineLibraryCreateInfoEXT-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_GRAPHICS_PIPELINE_LIBRARY_CREATE_INFO_EXT](#)
- VUID-VkGraphicsPipelineLibraryCreateInfoEXT-flags-parameter
flags **must** be a valid combination of [VkGraphicsPipelineLibraryFlagBitsEXT](#) values
- VUID-VkGraphicsPipelineLibraryCreateInfoEXT-flags-requiredbitmask
flags **must** not be 0

Structure Chaining

Extends the structure

- [VkGraphicsPipelineCreateInfo](#)

```
// Provided by VK_EXT_graphics_pipeline_library
typedef VkFlags VkGraphicsPipelineLibraryFlagsEXT;
```

[VkGraphicsPipelineLibraryFlagsEXT](#) is a bitmask type for setting a mask of zero or more [VkGraphicsPipelineLibraryFlagBitsEXT](#).

Possible values of the `flags` member of `VkGraphicsPipelineLibraryCreateInfoEXT`, specifying the subsets of a graphics pipeline to compile are:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef enum VkGraphicsPipelineLibraryFlagBitsEXT {
    VK_GRAPHICS_PIPELINE_LIBRARY_VERTEX_INPUT_INTERFACE_BIT_EXT = 0x00000001,
    VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT = 0x00000002,
    VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT = 0x00000004,
    VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT = 0x00000008,
} VkGraphicsPipelineLibraryFlagBitsEXT;
```

- `VK_GRAPHICS_PIPELINE_LIBRARY_VERTEX_INPUT_INTERFACE_BIT_EXT` specifies that a pipeline will include [vertex input interface state](#).
- `VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT` specifies that a pipeline will include [pre-rasterization shader state](#).
- `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT` specifies that a pipeline will include [fragment shader state](#).
- `VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT` specifies that a pipeline will include [fragment output interface state](#).

The `VkPipelineDynamicStateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineDynamicStateCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineDynamicStateCreateFlags flags;
    uint32_t                 dynamicStateCount;
    const VkDynamicState*     pDynamicStates;
} VkPipelineDynamicStateCreateInfo;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `dynamicStateCount` is the number of elements in the `pDynamicStates` array.
- `pDynamicStates` is a pointer to an array of [VkDynamicState](#) values specifying which pieces of pipeline state will use the values from dynamic state commands rather than from pipeline state creation information.

Valid Usage

- VUID-VkPipelineDynamicStateCreateInfo-pDynamicStates-01442
Each element of `pDynamicStates` **must** be unique

Valid Usage (Implicit)

- VUID-VkPipelineDynamicStateCreateInfo-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_PIPELINE_DYNAMIC_STATE_CREATE_INFO`
- VUID-VkPipelineDynamicStateCreateInfo-pNext-pNext
pNext **must** be `NULL`
- VUID-VkPipelineDynamicStateCreateInfo-flags-zeroBitmask
flags **must** be `0`
- VUID-VkPipelineDynamicStateCreateInfo-pDynamicStates-parameter
If **dynamicStateCount** is not `0`, **pDynamicStates** **must** be a valid pointer to an array of **dynamicStateCount** valid `VkDynamicState` values

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineDynamicStateCreateFlags;
```

`VkPipelineDynamicStateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

The source of different pieces of dynamic state is specified by the `VkPipelineDynamicStateCreateInfo::pDynamicStates` property of the currently active pipeline, each of whose elements **must** be one of the values:

```
// Provided by VK_VERSION_1_0
typedef enum VkDynamicState {
    VK_DYNAMIC_STATE_VIEWPORT = 0,
    VK_DYNAMIC_STATE_SCISSOR = 1,
    VK_DYNAMIC_STATE_LINE_WIDTH = 2,
    VK_DYNAMIC_STATE_DEPTH_BIAS = 3,
    VK_DYNAMIC_STATE_BLEND_CONSTANTS = 4,
    VK_DYNAMIC_STATE_DEPTH_BOUNDS = 5,
    VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK = 6,
    VK_DYNAMIC_STATE_STENCIL_WRITE_MASK = 7,
    VK_DYNAMIC_STATE_STENCIL_REFERENCE = 8,
    // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_CULL_MODE = 1000267000,
    // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_FRONT_FACE = 1000267001,
    // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY = 1000267002,
    // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT = 1000267003,
    // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT = 1000267004,
    // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE = 1000267005,
    // Provided by VK_VERSION_1_3
```

```
VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE = 1000267006,  
// Provided by VK_VERSION_1_3  
VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE = 1000267007,  
// Provided by VK_VERSION_1_3  
VK_DYNAMIC_STATE_DEPTH_COMPARE_OP = 1000267008,  
// Provided by VK_VERSION_1_3  
VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE = 1000267009,  
// Provided by VK_VERSION_1_3  
VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE = 1000267010,  
// Provided by VK_VERSION_1_3  
VK_DYNAMIC_STATE_STENCIL_OP = 1000267011,  
// Provided by VK_VERSION_1_3  
VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE = 1000377001,  
// Provided by VK_VERSION_1_3  
VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE = 1000377002,  
// Provided by VK_VERSION_1_3

} VkDynamicState;
```

- `VK_DYNAMIC_STATE_VIEWPORT` specifies that the `pViewports` state in `VkPipelineViewportStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetViewport` before any drawing commands. The number of viewports used by a pipeline is still specified by the `viewportCount` member of `VkPipelineViewportStateCreateInfo`.
- `VK_DYNAMIC_STATE_SCISSOR` specifies that the `pScissors` state in `VkPipelineViewportStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetScissor` before any drawing commands. The number of scissor rectangles used by a pipeline is still specified by the `scissorCount` member of `VkPipelineViewportStateCreateInfo`.
- `VK_DYNAMIC_STATE_LINE_WIDTH` specifies that the `lineWidth` state in `VkPipelineRasterizationStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetLineWidth` before any drawing commands that generate line primitives for the rasterizer.
- `VK_DYNAMIC_STATE_DEPTH_BIAS` specifies that any instance of `VkDepthBiasRepresentationInfoEXT` included in the `pNext` chain of `VkPipelineRasterizationStateCreateInfo` as well as the `depthBiasConstantFactor`, `depthBiasClamp` and `depthBiasSlopeFactor` states in `VkPipelineRasterizationStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetDepthBias` or `vkCmdSetDepthBias2EXT` before any draws are performed with `depth bias enabled`.
- `VK_DYNAMIC_STATE_BLEND_CONSTANTS` specifies that the `blendConstants` state in `VkPipelineColorBlendStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetBlendConstants` before any draws are performed with a pipeline state with `VkPipelineColorBlendAttachmentState` member `blendEnable` set to `VK_TRUE` and any of the blend functions using a constant blend color.
- `VK_DYNAMIC_STATE_DEPTH_BOUNDS` specifies that the `minDepthBounds` and `maxDepthBounds` states of `VkPipelineDepthStencilStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetDepthBounds` before any draws are performed with a pipeline state with `VkPipelineDepthStencilStateCreateInfo` member `depthBoundsTestEnable` set to `VK_TRUE`.
- `VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK` specifies that the `compareMask` state in `VkPipelineDepthStencilStateCreateInfo` for both `front` and `back` will be ignored and **must** be set dynamically with `vkCmdSetStencilCompareMask` before any draws are performed with a pipeline state with `VkPipelineDepthStencilStateCreateInfo` member `stencilTestEnable` set to `VK_TRUE`.
- `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` specifies that the `writeMask` state in `VkPipelineDepthStencilStateCreateInfo` for both `front` and `back` will be ignored and **must** be set dynamically with `vkCmdSetStencilWriteMask` before any draws are performed with a pipeline state with `VkPipelineDepthStencilStateCreateInfo` member `stencilTestEnable` set to `VK_TRUE`.
- `VK_DYNAMIC_STATE_STENCIL_REFERENCE` specifies that the `reference` state in `VkPipelineDepthStencilStateCreateInfo` for both `front` and `back` will be ignored and **must** be set dynamically with `vkCmdSetStencilReference` before any draws are performed with a pipeline state with `VkPipelineDepthStencilStateCreateInfo` member `stencilTestEnable` set to `VK_TRUE`.

- `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` specifies that the `pViewportWScalings` state in `VkPipelineViewportWScalingStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetViewportWScalingNV` before any draws are performed with a pipeline state with `VkPipelineViewportWScalingStateCreateInfoNV` member `viewportScalingEnable` set to `VK_TRUE`
- `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` specifies that the `pDiscardRectangles` state in `VkPipelineDiscardRectangleStateCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetDiscardRectangleEXT` before any draw or clear commands.
- `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` specifies that the presence of the `VkPipelineDiscardRectangleStateCreateInfoEXT` structure in the `VkGraphicsPipelineCreateInfo` chain with a `discardRectangleCount` greater than zero does not implicitly enable discard rectangles and they **must** be enabled dynamically with `vkCmdSetDiscardRectangleEnableEXT` before any draw commands. This is available on implementations that support at least `specVersion 2` of the `VK_EXT_discard_rectangles` extension.
- `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT` specifies that the `discardRectangleMode` state in `VkPipelineDiscardRectangleStateCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetDiscardRectangleModeEXT` before any draw commands. This is available on implementations that support at least `specVersion 2` of the `VK_EXT_discard_rectangles` extension.
- `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` specifies that the `sampleLocationsInfo` state in `VkPipelineSampleLocationsStateCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetSampleLocationsEXT` before any draw or clear commands. Enabling custom sample locations is still indicated by the `sampleLocationsEnable` member of `VkPipelineSampleLocationsStateCreateInfoEXT`.
- `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV` specifies that the `pExclusiveScissors` state in `VkPipelineViewportExclusiveScissorStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetExclusiveScissorNV` before any drawing commands.
- `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` specifies that the exclusive scissors **must** be explicitly enabled with `vkCmdSetExclusiveScissorEnableNV` and the `exclusiveScissorCount` value in `VkPipelineViewportExclusiveScissorStateCreateInfoNV` will not implicitly enable them. This is available on implementations that support at least `specVersion 2` of the `VK_NV_scissor_exclusive` extension.
- `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` specifies that the `pShadingRatePalettes` state in `VkPipelineViewportShadingRateImageStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetViewportShadingRatePaletteNV` before any drawing commands.
- `VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV` specifies that the coarse sample order state in `VkPipelineViewportCoarseSampleOrderStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetCoarseSampleOrderNV` before any drawing commands.
- `VK_DYNAMIC_STATE_LINE_STIPPLE` specifies that the `lineStippleFactor` and `lineStipplePattern` state in `VkPipelineRasterizationLineStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetLineStipple` before any draws are performed with a pipeline state with `VkPipelineRasterizationLineStateCreateInfo` member `stippledLineEnable` set to `VK_TRUE`.
- `VK_DYNAMIC_STATE_CULL_MODE` specifies that the `cullMode` state in `VkPipelineRasterizationStateCreateInfo` will be ignored and **must** be set dynamically with

`vkCmdSetCullMode` before any drawing commands.

- `VK_DYNAMIC_STATE_FRONT_FACE` specifies that the `frontFace` state in `VkPipelineRasterizationStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetFrontFace` before any drawing commands.
- `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` specifies that the `topology` state in `VkPipelineInputAssemblyStateCreateInfo` only specifies the `topology class`, and the specific topology order and adjacency **must** be set dynamically with `vkCmdSetPrimitiveTopology` before any drawing commands.
- `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` specifies that the `viewportCount` and `pViewports` state in `VkPipelineViewportStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetViewportWithCount` before any draw call.
- `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` specifies that the `scissorCount` and `pScissors` state in `VkPipelineViewportStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetScissorWithCount` before any draw call.
- `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` specifies that the `stride` state in `VkVertexInputBindingDescription` will be ignored and **must** be set dynamically with `vkCmdBindVertexBuffers2` before any draw call.
- `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE` specifies that the `depthTestEnable` state in `VkPipelineDepthStencilStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetDepthTestEnable` before any draw call.
- `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` specifies that the `depthWriteEnable` state in `VkPipelineDepthStencilStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetDepthWriteEnable` before any draw call.
- `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP` specifies that the `depthCompareOp` state in `VkPipelineDepthStencilStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetDepthCompareOp` before any draw call.
- `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` specifies that the `depthBoundsTestEnable` state in `VkPipelineDepthStencilStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetDepthBoundsTestEnable` before any draw call.
- `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE` specifies that the `stencilTestEnable` state in `VkPipelineDepthStencilStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetStencilTestEnable` before any draw call.
- `VK_DYNAMIC_STATE_STENCIL_OP` specifies that the `failOp`, `passOp`, `depthFailOp`, and `compareOp` states in `VkPipelineDepthStencilStateCreateInfo` for both `front` and `back` will be ignored and **must** be set dynamically with `vkCmdSetStencilOp` before any draws are performed with a pipeline state with `VkPipelineDepthStencilStateCreateInfo` member `stencilTestEnable` set to `VK_TRUE`
- `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT` specifies that the `patchControlPoints` state in `VkPipelineTessellationStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetPatchControlPointsEXT` before any drawing commands.
- `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` specifies that the `rasterizerDiscardEnable` state in `VkPipelineRasterizationStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetRasterizerDiscardEnable` before any drawing commands.

- `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE` specifies that the `depthBiasEnable` state in `VkPipelineRasterizationStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetDepthBiasEnable` before any drawing commands.
- `VK_DYNAMIC_STATE_LOGIC_OP_EXT` specifies that the `logicOp` state in `VkPipelineColorBlendStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetLogicOpEXT` before any drawing commands.
- `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` specifies that the `primitiveRestartEnable` state in `VkPipelineInputAssemblyStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetPrimitiveRestartEnable` before any drawing commands.
- `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` specifies that state in `VkPipelineFragmentShadingRateStateCreateInfoKHR` and `VkPipelineFragmentShadingRateEnumStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetFragmentShadingRateKHR` or `vkCmdSetFragmentShadingRateEnumNV` before any drawing commands.
- `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` specifies that the default stack size computation for the pipeline will be ignored and **must** be set dynamically with `vkCmdSetRayTracingPipelineStackSizeKHR` before any ray tracing calls are performed.
- `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` specifies that the `pVertexInputState` state will be ignored and **must** be set dynamically with `vkCmdSetVertexInputEXT` before any drawing commands
- `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` specifies that the `pColorWriteEnables` state in `VkPipelineColorWriteCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetColorWriteEnableEXT` before any draw call.
- `VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT` specifies that the `domainOrigin` state in `VkPipelineTessellationDomainOriginStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetTessellationDomainOriginEXT` before any draw call.
- `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT` specifies that the `depthClampEnable` state in `VkPipelineRasterizationStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetDepthClampEnableEXT` before any draw call.
- `VK_DYNAMIC_STATE_POLYGON_MODE_EXT` specifies that the `polygonMode` state in `VkPipelineRasterizationStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetPolygonModeEXT` before any draw call.
- `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` specifies that the `rasterizationSamples` state in `VkPipelineMultisampleStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetRasterizationSamplesEXT` before any draw call.
- `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` specifies that the `pSampleMask` state in `VkPipelineMultisampleStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetSampleMaskEXT` before any draw call.
- `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` specifies that the `alphaToCoverageEnable` state in `VkPipelineMultisampleStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetAlphaToCoverageEnableEXT` before any draw call.
- `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` specifies that the `alphaToOneEnable` state in `VkPipelineMultisampleStateCreateInfo` will be ignored and **must** be set dynamically with

`vkCmdSetAlphaToOneEnableEXT` before any draw call.

- `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT` specifies that the `logicOpEnable` state in `VkPipelineColorBlendStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetLogicOpEnableEXT` before any draw call.
- `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` specifies that the `blendEnable` state in `VkPipelineColorBlendAttachmentState` will be ignored and **must** be set dynamically with `vkCmdSetColorBlendEnableEXT` before any draw call.
- `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` specifies that the `srcColorBlendFactor`, `dstColorBlendFactor`, `colorBlendOp`, `srcAlphaBlendFactor`, `dstAlphaBlendFactor`, and `alphaBlendOp` states in `VkPipelineColorBlendAttachmentState` will be ignored and **must** be set dynamically with `vkCmdSetColorBlendEquationEXT` before any draw call.
- `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` specifies that the `colorWriteMask` state in `VkPipelineColorBlendAttachmentState` will be ignored and **must** be set dynamically with `vkCmdSetColorWriteMaskEXT` before any draw call.
- `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` specifies that the `rasterizationStream` state in `VkPipelineRasterizationStateStreamCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetRasterizationStreamEXT` before any draw call.
- `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT` specifies that the `conservativeRasterizationMode` state in `VkPipelineRasterizationConservativeStateCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetConservativeRasterizationModeEXT` before any draw call.
- `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT` specifies that the `extraPrimitiveOverestimationSize` state in `VkPipelineRasterizationConservativeStateCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetExtraPrimitiveOverestimationSizeEXT` before any draw call.
- `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` specifies that the `depthClipEnable` state in `VkPipelineRasterizationDepthClipStateCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetDepthClipEnableEXT` before any draw call.
- `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` specifies that the `sampleLocationsEnable` state in `VkPipelineSampleLocationsStateCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetSampleLocationsEnableEXT` before any draw call.
- `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` specifies that the `colorBlendOp` state in `VkPipelineColorBlendAttachmentState`, and `srcPremultiplied`, `dstPremultiplied`, and `blendOverlap` states in `VkPipelineColorBlendAdvancedStateCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetColorBlendAdvancedEXT` before any draw call.
- `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT` specifies that the `provokingVertexMode` state in `VkPipelineRasterizationProvokingVertexStateCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetProvokingVertexModeEXT` before any draw call.
- `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` specifies that the `lineRasterizationMode` state in `VkPipelineRasterizationLineStateCreateInfo` will be ignored and **must** be set dynamically with `vkCmdSetLineRasterizationModeEXT` before any draw call.
- `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` specifies that the `stippledLineEnable` state in `VkPipelineRasterizationLineStateCreateInfo` will be ignored and **must** be set dynamically with

`vkCmdSetLineStippleEnableEXT` before any draw call.

- `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT` specifies that the `negativeOneToOne` state in `VkPipelineViewportDepthClipControlCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetDepthClipNegativeOneToOneEXT` before any draw call.
- `VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT` specifies that the `depthClampMode` and `pDepthClampRange` state in `VkPipelineViewportDepthClampControlCreateInfoEXT` will be ignored and **must** be set dynamically with `vkCmdSetDepthClampRangeEXT` before any draw call.
- `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV` specifies that the `viewportWScalingEnable` state in `VkPipelineViewportWScalingStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetViewportWScalingEnableNV` before any draw call.
- `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` specifies that the `viewportCount`, and `pViewportSwizzles` states in `VkPipelineViewportSwizzleStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetViewportSwizzleNV` before any draw call.
- `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` specifies that the `coverageToColorEnable` state in `VkPipelineCoverageToColorStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetCoverageToColorEnableNV` before any draw call.
- `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV` specifies that the `coverageToColorLocation` state in `VkPipelineCoverageToColorStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetCoverageToColorLocationNV` before any draw call.
- `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV` specifies that the `coverageModulationMode` state in `VkPipelineCoverageModulationStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetCoverageModulationModeNV` before any draw call.
- `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` specifies that the `coverageModulationTableEnable` state in `VkPipelineCoverageModulationStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetCoverageModulationTableEnableNV` before any draw call.
- `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV` specifies that the `coverageModulationTableCount`, and `pCoverageModulationTable` states in `VkPipelineCoverageModulationStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetCoverageModulationTableNV` before any draw call.
- `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV` specifies that the `shadingRateImageEnable` state in `VkPipelineViewportShadingRateImageStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetShadingRateImageEnableNV` before any draw call.
- `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV` specifies that the `representativeFragmentTestEnable` state in `VkPipelineRepresentativeFragmentTestStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetRepresentativeFragmentTestEnableNV` before any draw call.
- `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` specifies that the `coverageReductionMode` state in `VkPipelineCoverageReductionStateCreateInfoNV` will be ignored and **must** be set dynamically with `vkCmdSetCoverageReductionModeNV` before any draw call.

- [VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT](#) specifies that the [VK_PIPELINE_CREATE_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT](#) and [VK_PIPELINE_CREATE_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT](#) flags will be ignored and **must** be set dynamically with [vkCmdSetAttachmentFeedbackLoopEnableEXT](#) before any draw call.

10.4.1. Valid Combinations of Stages for Graphics Pipelines

Primitive processing can be handled either on a per primitive basis by the vertex, tessellation, and geometry shader stages, or on a per mesh basis using task and mesh shader stages. If the pipeline includes a mesh shader stage, it uses the mesh pipeline, otherwise it uses the primitive pipeline.

If a task shader is omitted, the task shading stage is skipped.

If tessellation shader stages are omitted, the tessellation shading and fixed-function stages of the pipeline are skipped.

If a geometry shader is omitted, the geometry shading stage is skipped.

If a fragment shader is omitted, fragment color outputs have undefined values, and the fragment depth value is determined by [Fragment Operations](#) state. This **can** be useful for depth-only rendering.

Presence of a shader stage in a pipeline is indicated by including a valid [VkPipelineShaderStageCreateInfo](#) with [module](#) and [pName](#) selecting an entry point from a shader module, where that entry point is valid for the stage specified by [stage](#).

Presence of some of the fixed-function stages in the pipeline is implicitly derived from enabled shaders and provided state. For example, the fixed-function tessellator is always present when the pipeline has valid Tessellation Control and Tessellation Evaluation shaders.

For example:

- Depth/stencil-only rendering in a subpass with no color attachments
 - Active Pipeline Shader Stages
 - Vertex Shader
 - Required: Fixed-Function Pipeline Stages
 - [VkPipelineVertexInputStateCreateInfo](#)
 - [VkPipelineInputAssemblyStateCreateInfo](#)
 - [VkPipelineViewportStateCreateInfo](#)
 - [VkPipelineRasterizationStateCreateInfo](#)
 - [VkPipelineMultisampleStateCreateInfo](#)
 - [VkPipelineDepthStencilStateCreateInfo](#)
- Color-only rendering in a subpass with no depth/stencil attachment
 - Active Pipeline Shader Stages
 - Vertex Shader

- Fragment Shader
- Required: Fixed-Function Pipeline Stages
 - [VkPipelineVertexInputStateCreateInfo](#)
 - [VkPipelineInputAssemblyStateCreateInfo](#)
 - [VkPipelineViewportStateCreateInfo](#)
 - [VkPipelineRasterizationStateCreateInfo](#)
 - [VkPipelineMultisampleStateCreateInfo](#)
 - [VkPipelineColorBlendStateCreateInfo](#)
- Rendering pipeline with tessellation and geometry shaders
 - Active Pipeline Shader Stages
 - Vertex Shader
 - Tessellation Control Shader
 - Tessellation Evaluation Shader
 - Geometry Shader
 - Fragment Shader
 - Required: Fixed-Function Pipeline Stages
 - [VkPipelineVertexInputStateCreateInfo](#)
 - [VkPipelineInputAssemblyStateCreateInfo](#)
 - [VkPipelineTessellationStateCreateInfo](#)
 - [VkPipelineViewportStateCreateInfo](#)
 - [VkPipelineRasterizationStateCreateInfo](#)
 - [VkPipelineMultisampleStateCreateInfo](#)
 - [VkPipelineDepthStencilStateCreateInfo](#)
 - [VkPipelineColorBlendStateCreateInfo](#)
- Rendering pipeline with task and mesh shaders
 - Active Pipeline Shader Stages
 - Task Shader
 - Mesh Shader
 - Fragment Shader
 - Required: Fixed-Function Pipeline Stages
 - [VkPipelineViewportStateCreateInfo](#)
 - [VkPipelineRasterizationStateCreateInfo](#)
 - [VkPipelineMultisampleStateCreateInfo](#)
 - [VkPipelineDepthStencilStateCreateInfo](#)
 - [VkPipelineColorBlendStateCreateInfo](#)

10.4.2. Graphics Pipeline Shader Groups

Graphics pipelines can contain multiple shader groups that can be bound individually. Each shader group behaves as if it was a pipeline using the shader group's state. When the pipeline is bound by regular means, it behaves as if the state of group 0 is active, use [vkCmdBindPipelineShaderGroupNV](#) to bind an individual shader group.

The primary purpose of shader groups is allowing the device to bind different pipeline state using [Device-Generated Commands](#).

The [VkGraphicsPipelineShaderGroupsCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkGraphicsPipelineShaderGroupsCreateInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 groupCount;
    const VkGraphicsShaderGroupCreateInfoNV* pGroups;
    uint32_t                 pipelineCount;
    const VkPipeline*         pPipelines;
} VkGraphicsPipelineShaderGroupsCreateInfoNV;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `groupCount` is the number of elements in the `pGroups` array.
- `pGroups` is a pointer to an array of [VkGraphicsShaderGroupCreateInfoNV](#) structures specifying which state of the original [VkGraphicsPipelineCreateInfo](#) each shader group overrides.
- `pipelineCount` is the number of elements in the `pPipelines` array.
- `pPipelines` is a pointer to an array of graphics [VkPipeline](#) structures which are referenced within the created pipeline, including all their shader groups.

When referencing shader groups by index, groups defined in the referenced pipelines are treated as if they were defined as additional entries in `pGroups`. They are appended in the order they appear in the `pPipelines` array and in the `pGroups` array when those pipelines were defined.

The application **must** maintain the lifetime of all such referenced pipelines based on the pipelines that make use of them.

Valid Usage

- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-groupCount-02879
`groupCount` **must** be at least 1 and as maximum `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::maxGraphicsShaderGroupCount`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-groupCount-02880
The sum of `groupCount` including those groups added from referenced `pPipelines` **must** also be as maximum `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV`

`::maxGraphicsShaderGroupCount`

- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-02881
The state of the first element of `pGroups` **must** match its equivalent within the parent's `VkGraphicsPipelineCreateInfo`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-02882
Each element of `pGroups` **must** in combination with the rest of the pipeline state yield a valid state configuration
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-02884
All elements of `pGroups` **must** use the same shader stage combinations unless any mesh shader stage is used, then either combination of task and mesh or just mesh shader is valid
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-02885
Mesh and regular primitive shading stages cannot be mixed across `pGroups`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pPipelines-02886
Each element of `pPipelines` **must** have been created with identical state to the pipeline currently created except the state that can be overridden by `VkGraphicsShaderGroupCreateInfoNV`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-deviceGeneratedCommands-02887
The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_GRAPHICS_PIPELINE_SHADER_GROUPS_CREATE_INFO_NV`
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pGroups-parameter
If `groupCount` is not 0, `pGroups` **must** be a valid pointer to an array of `groupCount` valid `VkGraphicsShaderGroupCreateInfoNV` structures
- VUID-VkGraphicsPipelineShaderGroupsCreateInfoNV-pPipelines-parameter
If `pipelineCount` is not 0, `pPipelines` **must** be a valid pointer to an array of `pipelineCount` valid `VkPipeline` handles

Structure Chaining

Extends the structure

- `VkGraphicsPipelineCreateInfo`

The `VkGraphicsShaderGroupCreateInfoNV` structure provides the state overrides for each shader group. Each shader group behaves like a pipeline that was created from its state as well as the remaining parent's state. It is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkGraphicsShaderGroupCreateInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    const VkPipelineVertexInputStateCreateInfo* pVertexInputState;
    const VkPipelineTessellationStateCreateInfo* pTessellationState;
} VkGraphicsShaderGroupCreateInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **stageCount** is the number of entries in the **pStages** array.
- **pStages** is a pointer to an array [VkPipelineShaderStageCreateInfo](#) structures specifying the set of the shader stages to be included in this shader group.
- **pVertexInputState** is a pointer to a [VkPipelineVertexInputStateCreateInfo](#) structure.
- **pTessellationState** is a pointer to a [VkPipelineTessellationStateCreateInfo](#) structure, and is ignored if the shader group does not include a tessellation control shader stage and tessellation evaluation shader stage.

Valid Usage

- VUID-VkGraphicsShaderGroupCreateInfoNV-stageCount-02888
For **stageCount**, the same restrictions as in [VkGraphicsPipelineCreateInfo::stageCount](#) apply
- VUID-VkGraphicsShaderGroupCreateInfoNV-pStages-02889
For **pStages**, the same restrictions as in [VkGraphicsPipelineCreateInfo::pStages](#) apply
- VUID-VkGraphicsShaderGroupCreateInfoNV-pVertexInputState-02890
For **pVertexInputState**, the same restrictions as in [VkGraphicsPipelineCreateInfo::pVertexInputState](#) apply
- VUID-VkGraphicsShaderGroupCreateInfoNV-pTessellationState-02891
For **pTessellationState**, the same restrictions as in [VkGraphicsPipelineCreateInfo::pTessellationState](#) apply

Valid Usage (Implicit)

- VUID-VkGraphicsShaderGroupCreateInfoNV-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_GRAPHICS_SHADER_GROUP_CREATE_INFO_NV](#)
- VUID-VkGraphicsShaderGroupCreateInfoNV-pNext-pNext
pNext **must** be **NULL**
- VUID-VkGraphicsShaderGroupCreateInfoNV-pStages-parameter
pStages **must** be a valid pointer to an array of **stageCount** valid

[VkPipelineShaderStageCreateInfo](#) structures

- [VUID-VkGraphicsShaderGroupCreateInfoNV-stageCount-arraylength](#)
`stageCount` must be greater than 0

10.5. Ray Tracing Pipelines

Ray tracing pipelines consist of multiple shader stages, fixed-function traversal stages, and a pipeline layout.

10.5.1. Ray Tracing Pipeline Enums and Types

[VK_SHADER_UNUSED_KHR](#) is a special shader index used to indicate that a ray generation, miss, or callable shader member is not used.

```
#define VK_SHADER_UNUSED_KHR          (~0U)
```

```
#define VK_SHADER_UNUSED_NV          VK_SHADER_UNUSED_KHR
```

The [VkRayTracingShaderGroupTypeKHR](#) enumeration is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef enum VkRayTracingShaderGroupTypeKHR {
    VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR = 0,
    VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR = 1,
    VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR = 2,
    // Provided by VK_NV_ray_tracing
    VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_NV =
VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR,
    // Provided by VK_NV_ray_tracing
    VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_NV =
VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR,
    // Provided by VK_NV_ray_tracing
    VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV =
VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR,
} VkRayTracingShaderGroupTypeKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkRayTracingShaderGroupTypeKHR
typedef VkRayTracingShaderGroupTypeKHR VkRayTracingShaderGroupTypeNV;
```

- [VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR](#) specifies that a shader group with a single [VK_SHADER_STAGE_RAYGEN_BIT_KHR](#), [VK_SHADER_STAGE_MISS_BIT_KHR](#), or [VK_SHADER_STAGE_CALLABLE_BIT_KHR](#) shader in it.

- [VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR](#) specifies that a shader group that only hits triangles and **must** not contain an intersection shader, only closest hit and any-hit shaders.
- [VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR](#) specifies that a shader group that only intersects with custom geometry and **must** contain an intersection shader and **may** contain closest hit and any-hit shaders.

NOTE

For current group types, the hit group type could be inferred from the presence or absence of the intersection shader, but we provide the type explicitly for future hit groups that do not have that property.

10.5.2. Ray Tracing Pipeline Creation

To create ray tracing pipelines, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkResult vkCreateRayTracingPipelinesKHR(
    VkDevice                device,
    VkDeferredOperationKHR  deferredOperation,
    VkPipelineCache         pipelineCache,
    uint32_t                createInfoCount,
    const VkRayTracingPipelineCreateInfoKHR* pCreateInfos,
    const VkAllocationCallbacks* pAllocator,
    VkPipeline*              pPipelines);
```

- **device** is the logical device that creates the ray tracing pipelines.
- **deferredOperation** is [VK_NULL_HANDLE](#) or the handle of a valid [VkDeferredOperationKHR](#) request deferral object for this command.
- **pipelineCache** is either [VK_NULL_HANDLE](#), indicating that pipeline caching is disabled, or to enable caching, the handle of a valid [VkPipelineCache](#) object. The implementation **must** not access this object outside of the duration of this command.
- **createInfoCount** is the length of the **pCreateInfos** and **pPipelines** arrays.
- **pCreateInfos** is a pointer to an array of [VkRayTracingPipelineCreateInfoKHR](#) structures.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pPipelines** is a pointer to an array in which the resulting ray tracing pipeline objects are returned.

The [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS](#) error is returned if the implementation is unable to reuse the shader group handles provided in [VkRayTracingShaderGroupCreateInfoKHR::pShaderGroupCaptureReplayHandle](#) when [VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay](#) is enabled.

Pipelines are created and returned as described for [Multiple Pipeline Creation](#).

Valid Usage

- VUID-vkCreateRayTracingPipelinesKHR-device-09677
device **must** support at least one queue family with the `VK_QUEUE_COMPUTE_BIT` capability
- VUID-vkCreateRayTracingPipelinesKHR-flags-03415
If the **flags** member of any element of **pCreateInfos** contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and the **basePipelineIndex** member of that same element is not `-1`, **basePipelineIndex** **must** be less than the index into **pCreateInfos** that corresponds to that element
- VUID-vkCreateRayTracingPipelinesKHR-flags-03416
If the **flags** member of any element of **pCreateInfos** contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, the base pipeline **must** have been created with the `VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT` flag set
- VUID-vkCreateRayTracingPipelinesKHR-flags-03816
flags **must** not contain the `VK_PIPELINE_CREATE_DISPATCH_BASE_BIT` flag
- VUID-vkCreateRayTracingPipelinesKHR-pipelineCache-02903
If **pipelineCache** was created with `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`, host access to **pipelineCache** **must** be externally synchronized
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-03678
Any previous deferred operation that was associated with **deferredOperation** **must** be complete
- VUID-vkCreateRayTracingPipelinesKHR-pNext-09616
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of **pCreateInfos**, **pipelineCache** **must** be `VK_NULL_HANDLE`
- VUID-vkCreateRayTracingPipelinesKHR-pNext-09617
If a `VkPipelineCreateFlags2CreateInfoKHR` structure with the `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag set is included in the **pNext** chain of any element of **pCreateInfos**, **pipelineCache** **must** be `VK_NULL_HANDLE`
- VUID-vkCreateRayTracingPipelinesKHR-binaryCount-09620
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of **pCreateInfos**, `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` **must** not be set in the **flags** of that element
- VUID-vkCreateRayTracingPipelinesKHR-binaryCount-09621
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of **pCreateInfos**, `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` **must** not be set in the **flags** of that element
- VUID-vkCreateRayTracingPipelinesKHR-binaryCount-09622
If `VkPipelineBinaryInfoKHR::binaryCount` is not `0` for any element of **pCreateInfos**, `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT` **must** not be set in the **flags** of that element

- VUID-vkCreateRayTracingPipelinesKHR-pCreateInfos-11414
If any element of `pCreateInfos` sets `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` and includes embedded sampler mappings, there **must** be less than $(\text{maxSamplerAllocationCount} - (\text{minSamplerHeapReservedRangeWithEmbedded} / \text{samplerDescriptorSize}))$ `VkSampler` objects currently created on the device
- VUID-vkCreateRayTracingPipelinesKHR-pCreateInfos-11429
If any element of `pCreateInfos` sets `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` and includes embedded sampler mappings, this command **must** not cause the total number of unique embedded samplers in pipelines and shaders on this device to exceed `maxDescriptorHeapEmbeddedSamplers`
- VUID-vkCreateRayTracingPipelinesKHR-rayTracingPipeline-03586
The `rayTracingPipeline` feature **must** be enabled
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-03587
If `deferredOperation` is not `VK_NULL_HANDLE`, the `flags` member of elements of `pCreateInfos` **must** not include `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`

Valid Usage (Implicit)

- VUID-vkCreateRayTracingPipelinesKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCreateRayTracingPipelinesKHR-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkCreateRayTracingPipelinesKHR-pCreateInfos-parameter
`pCreateInfos` **must** be a valid pointer to an array of `createInfoCount` valid `VkRayTracingPipelineCreateInfoKHR` structures
- VUID-vkCreateRayTracingPipelinesKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateRayTracingPipelinesKHR-pPipelines-parameter
`pPipelines` **must** be a valid pointer to an array of `createInfoCount` `VkPipeline` handles
- VUID-vkCreateRayTracingPipelinesKHR-createInfoCount-arraylength
`createInfoCount` **must** be greater than 0
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`
- VUID-vkCreateRayTracingPipelinesKHR-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- [VK_OPERATION_DEFERRED_KHR](#)
- [VK_OPERATION_NOT_DEFERRED_KHR](#)
- [VK_PIPELINE_COMPILE_REQUIRED_EXT](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkRayTracingPipelineCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkRayTracingPipelineCreateInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    VkPipelineCreateFlags     flags;
    uint32_t                  stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    uint32_t                  groupCount;
    const VkRayTracingShaderGroupCreateInfoKHR* pGroups;
    uint32_t                  maxPipelineRayRecursionDepth;
    const VkPipelineLibraryCreateInfoKHR* pLibraryInfo;
    const VkRayTracingPipelineInterfaceCreateInfoKHR* pLibraryInterface;
    const VkPipelineDynamicStateCreateInfo* pDynamicState;
    VkPipelineLayout          layout;
    VkPipeline                basePipelineHandle;
    int32_t                   basePipelineIndex;
} VkRayTracingPipelineCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkPipelineCreateFlagBits](#) specifying how the pipeline will be generated.
- [stageCount](#) is the number of entries in the [pStages](#) array.
- [pStages](#) is a pointer to an array of [stageCount](#) [VkPipelineShaderStageCreateInfo](#) structures describing the set of the shader stages to be included in the ray tracing pipeline.
- [groupCount](#) is the number of entries in the [pGroups](#) array.

- `pGroups` is a pointer to an array of `groupCount` `VkRayTracingShaderGroupCreateInfoKHR` structures describing the set of the shader stages to be included in each shader group in the ray tracing pipeline.
- `maxPipelineRayRecursionDepth` is the `maximum recursion depth` of shaders executed by this pipeline.
- `pLibraryInfo` is a pointer to a `VkPipelineLibraryCreateInfoKHR` structure defining pipeline libraries to include.
- `pLibraryInterface` is a pointer to a `VkRayTracingPipelineInterfaceCreateInfoKHR` structure defining additional information when using pipeline libraries.
- `pDynamicState` is a pointer to a `VkPipelineDynamicStateCreateInfo` structure, and is used to indicate which properties of the pipeline state object are dynamic and **can** be changed independently of the pipeline state. This **can** be `NULL`, which means no state in the pipeline is considered dynamic.
- `layout` is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline. If `VkPhysicalDeviceProperties::apiVersion` is greater than or equal to Vulkan 1.3 or `VK_KHR_maintenance4` is enabled `layout` **must** not be accessed by the implementation outside of the duration of the command this structure is passed to.
- `basePipelineHandle` is a pipeline to derive from.
- `basePipelineIndex` is an index into the `pCreateInfos` parameter to use as a pipeline to derive from.

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in [Pipeline Derivatives](#).

When `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` is specified, this pipeline defines a *pipeline library* which **cannot** be bound as a ray tracing pipeline directly. Instead, pipeline libraries define common shaders and shader groups which **can** be included in future pipeline creation.

If pipeline libraries are included in `pLibraryInfo`, shaders defined in those libraries are treated as if they were defined as additional entries in `pStages`, appended in the order they appear in the `pLibraries` array and in the `pStages` array when those libraries were defined.

When referencing shader groups in order to obtain a shader group handle, groups defined in those libraries are treated as if they were defined as additional entries in `pGroups`, appended in the order they appear in the `pLibraries` array and in the `pGroups` array when those libraries were defined. The shaders these groups reference are set when the pipeline library is created, referencing those specified in the pipeline library, not in the pipeline that includes it.

The default stack size for a pipeline if `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` is not provided is computed as described in [Ray Tracing Pipeline Stack](#).

If the `pNext` chain includes a `VkPipelineCreateFlags2CreateInfo` structure, `VkPipelineCreateFlags2CreateInfo::flags` from that structure is used instead of `flags` from this structure.

If the `pNext` chain includes a `VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV`

structure, then that structure controls whether cluster acceleration structures are allowed in this ray tracing pipeline.

Valid Usage

- VUID-VkRayTracingPipelineCreateInfoKHR-None-09497
If the `pNext` chain does not include a `VkPipelineCreateFlags2CreateInfo` structure, `flags` **must** be a valid combination of `VkPipelineCreateFlagBits` values
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07984
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineIndex` is -1, `basePipelineHandle` **must** be a valid ray tracing `VkPipeline` handle
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07985
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` **must** be a valid index into the calling command's `pCreateInfos` parameter
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07986
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, `basePipelineIndex` **must** be -1 or `basePipelineHandle` **must** be `VK_NULL_HANDLE`
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07987
If a push constant block is declared in a shader and `layout` is not `VK_NULL_HANDLE`, a push constant range in `layout` **must** match the shader stage
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-10069
If a push constant block is declared in a shader and `layout` is not `VK_NULL_HANDLE`, the block must be contained inside the push constant range in `layout` that matches the stage
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07988
If a `resource variable` is declared in a shader and `layout` is not `VK_NULL_HANDLE`, the corresponding descriptor set in `layout` **must** match the shader stage
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07990
If a `resource variable` is declared in a shader, `layout` is not `VK_NULL_HANDLE`, and the descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the corresponding descriptor set in `layout` **must** match the descriptor type
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07991
If a `resource variable` is declared in a shader as an array and `layout` is not `VK_NULL_HANDLE`, the corresponding descriptor binding used to create `layout` **must** have a `descriptorCount` that is greater than or equal to the length of the array
- VUID-VkRayTracingPipelineCreateInfoKHR-None-10391
If a `resource variables` is declared in a shader as an array of descriptors, then the descriptor type of that variable **must** not be `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11798
If `shader64BitIndexing` feature is not enabled, `flags` **must** not contain `VK_PIPELINE_CREATE_2_64_BIT_INDEXING_BIT_EXT`
- VUID-VkRayTracingPipelineCreateInfoKHR-pipelineCreationCacheControl-02878

If the `pipelineCreationCacheControl` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` nor `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`

- VUID-VkRayTracingPipelineCreateInfoKHR-pipelineProtectedAccess-07368

If the `pipelineProtectedAccess` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` nor `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07369

`flags` **must** not include both `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` and `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11311

If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `layout` **must** be `VK_NULL_HANDLE`

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11312

If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, all shader variables in the `shader resource interface` with a `DescriptorSet` and `Binding` decoration **must** have a mapping declared in `VkShaderDescriptorSetAndBindingMappingInfoEXT::pMappings`

- VUID-VkRayTracingPipelineCreateInfoKHR-pStages-03426

The shader code for the entry points identified by `pStages`, and the rest of the state identified by this structure **must** adhere to the pipeline linking rules described in the `Shader Interfaces` chapter

- VUID-VkRayTracingPipelineCreateInfoKHR-layout-03428

The number of resources in `layout` accessible to each shader stage that is used by the pipeline **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageResources`

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-02904

`flags` **must** not include `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-12341

`flags` **must** not include `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` nor `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`

- VUID-VkRayTracingPipelineCreateInfoKHR-layout-12402

If `layout` is not `VK_NULL_HANDLE`, it **must** not have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`

- VUID-VkRayTracingPipelineCreateInfoKHR-stage-03425

If `flags` does not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`, the `stage` member of at least one element of `pStages`, including those implicitly added by `pLibraryInfo`, **must** be `VK_SHADER_STAGE_RAYGEN_BIT_KHR`

- VUID-VkRayTracingPipelineCreateInfoKHR-maxPipelineRayRecursionDepth-03589

`maxPipelineRayRecursionDepth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayRecursionDepth`

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03465

If `flags` includes `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`, `pLibraryInterface` **must** not

be **NULL**

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03590

If **pLibraryInfo** is not **NULL** and its **libraryCount** member is greater than **0**, **pLibraryInterface** **must** not be **NULL**

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraries-03591

Each element of **pLibraryInfo->pLibraries** **must** have been created with the value of **maxPipelineRayRecursionDepth** equal to that in this pipeline

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03592

If **pLibraryInfo** is not **NULL** and **layout** is not **VK_NULL_HANDLE**, each element of **pLibraryInfo->pLibraries** **must** have been created with a **layout** that is compatible with the **layout** in this pipeline

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03593

If **pLibraryInfo** is not **NULL**, each element of its **pLibraries** member **must** have been created with values of the **maxPipelineRayPayloadSize** and **maxPipelineRayHitAttributeSize** members of **pLibraryInterface** equal to those in this pipeline

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03594

If **flags** includes **VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR**, each element of **pLibraryInfo->pLibraries** **must** have been created with the **VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR** bit set

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04718

If **flags** includes **VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR**, each element of **pLibraryInfo->pLibraries** **must** have been created with the **VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR** bit set

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04719

If **flags** includes **VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR**, each element of **pLibraryInfo->pLibraries** **must** have been created with the **VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR** bit set

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04720

If **flags** includes **VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR**, each element of **pLibraryInfo->pLibraries** **must** have been created with the **VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR** bit set

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04721

If **flags** includes **VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR**, each element of **pLibraryInfo->pLibraries** **must** have been created with the **VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR** bit set

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04722

If **flags** includes **VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR**, each element of **pLibraryInfo->pLibraries** **must** have been created with the **VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR** bit

set

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04723
If **flags** includes `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03595
If the `VK_KHR_pipeline_library` extension is not enabled, `pLibraryInfo` and `pLibraryInterface` **must** be `NULL`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03470
If **flags** includes `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, for each element of `pGroups` with a **type** of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`, the `anyHitShader` of that element **must** not be `VK_SHADER_UNUSED_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03471
If **flags** includes `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, for each element of `pGroups` with a **type** of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`, the `closestHitShader` of that element **must** not be `VK_SHADER_UNUSED_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-rayTraversalPrimitiveCulling-03596
If the `rayTraversalPrimitiveCulling` feature is not enabled, **flags** **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-rayTraversalPrimitiveCulling-03597
If the `rayTraversalPrimitiveCulling` feature is not enabled, **flags** **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-06546
flags **must** not include both `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR` and `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03598
If **flags** includes `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`, `rayTracingPipelineShaderGroupHandleCaptureReplay` **must** be enabled
- VUID-VkRayTracingPipelineCreateInfoKHR-rayTracingPipelineShaderGroupHandleCaptureReplay-03599
If `VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay` is `VK_TRUE` and the `pShaderGroupCaptureReplayHandle` member of any element of `pGroups` is not `NULL`, **flags** **must** include `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_`

KHR

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-07999
If `pLibraryInfo` is `NULL` or its `libraryCount` is `0`, `stageCount` **must** not be `0`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-08700
If `flags` does not include `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` and either `pLibraryInfo` is `NULL` or its `libraryCount` is `0`, `groupCount` **must** not be `0`
- VUID-VkRayTracingPipelineCreateInfoKHR-pDynamicStates-03602
Any element of the `pDynamicStates` member of `pDynamicState` **must** be `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-pipelineStageCreationFeedbackCount-06652
If `VkPipelineCreationFeedbackCreateInfo::pipelineStageCreationFeedbackCount` is not `0`, it **must** be equal to `stageCount`
- VUID-VkRayTracingPipelineCreateInfoKHR-stage-06899
The `stage` value in all `pStages` elements **must** be one of `VK_SHADER_STAGE_RAYGEN_BIT_KHR`, `VK_SHADER_STAGE_ANY_HIT_BIT_KHR`, `VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR`, `VK_SHADER_STAGE_MISS_BIT_KHR`, `VK_SHADER_STAGE_INTERSECTION_BIT_KHR`, or `VK_SHADER_STAGE_CALLABLE_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07403
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-08701
If `flags` includes `VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV`, each element of `pLibraryInfo->pLibraries` **must** have been created with the `VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV` bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-10392
If the `pNext` chain includes a `VkPipelineCreateFlags2CreateInfo` structure, `flags` **must** not include both `VK_PIPELINE_CREATE_2_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT` and `VK_PIPELINE_CREATE_2_DISALLOW_OPACITY_MICROMAP_BIT_ARM`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11275
If `VkPipelineCreateFlags2CreateInfoKHR::flags` includes `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, all libraries linked to this pipeline **must** also have that flag set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11276
If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, all libraries linked to this pipeline **must** also not have that flag set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-12361
If `flags` includes `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, all libraries linked to this pipeline **must** also have that flag set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-12362

If `flags` does not include `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, all libraries linked to this pipeline **must** also not have that flag set

- VUID-VkRayTracingPipelineCreateInfoKHR-None-11369

If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, `layout` **must** not be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkRayTracingPipelineCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_CREATE_INFO_KHR`
- VUID-VkRayTracingPipelineCreateInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkPipelineBinaryInfoKHR`, `VkPipelineCreateFlags2CreateInfo`, `VkPipelineCreationFeedbackCreateInfo`, `VkPipelineRobustnessCreateInfo`, or `VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV`
- VUID-VkRayTracingPipelineCreateInfoKHR-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkRayTracingPipelineCreateInfoKHR-pStages-parameter
If `stageCount` is not 0, `pStages` **must** be a valid pointer to an array of `stageCount` valid `VkPipelineShaderStageCreateInfo` structures
- VUID-VkRayTracingPipelineCreateInfoKHR-pGroups-parameter
If `groupCount` is not 0, `pGroups` **must** be a valid pointer to an array of `groupCount` valid `VkRayTracingShaderGroupCreateInfoKHR` structures
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-parameter
If `pLibraryInfo` is not `NULL`, `pLibraryInfo` **must** be a valid pointer to a valid `VkPipelineLibraryCreateInfoKHR` structure
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInterface-parameter
If `pLibraryInterface` is not `NULL`, `pLibraryInterface` **must** be a valid pointer to a valid `VkRayTracingPipelineInterfaceCreateInfoKHR` structure
- VUID-VkRayTracingPipelineCreateInfoKHR-pDynamicState-parameter
If `pDynamicState` is not `NULL`, `pDynamicState` **must** be a valid pointer to a valid `VkPipelineDynamicStateCreateInfo` structure
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-parameter
If `layout` is not `VK_NULL_HANDLE`, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkRayTracingPipelineCreateInfoKHR-commonparent
Both of `basePipelineHandle`, and `layout` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline with VK_NV_cluster_acceleration_structure
typedef struct VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           allowClusterAccelerationStructure;
} VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `allowClusterAccelerationStructure` controls if cluster acceleration structures are allowed in the ray tracing pipeline.

If no cluster acceleration structures are present in the ray tracing pipeline, `allowClusterAccelerationStructure` **should** not be used to prevent traversal penalty on some implementations.

Valid Usage

- VUID-VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV-clusterAccelerationStructure-10576
The `VkPhysicalDeviceClusterAccelerationStructureFeaturesNV::clusterAccelerationStructure` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_CLUSTER_ACCELERATION_STRUCTURE_CREATE_INFO_NV`

Structure Chaining

Extends the structure

- `VkRayTracingPipelineCreateInfoKHR`

The `VkRayTracingShaderGroupCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkRayTracingShaderGroupCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkRayTracingShaderGroupTypeKHR type;
    uint32_t                  generalShader;
    uint32_t                  closestHitShader;
    uint32_t                  anyHitShader;
    uint32_t                  intersectionShader;
    const void*              pShaderGroupCaptureReplayHandle;
} VkRayTracingShaderGroupCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is the type of hit group specified in this structure.
- `generalShader` is the index of the ray generation, miss, or callable shader from `VkRayTracingPipelineCreateInfoKHR::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR`, and `VK_SHADER_UNUSED_KHR` otherwise.
- `closestHitShader` is the optional index of the closest hit shader from `VkRayTracingPipelineCreateInfoKHR::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`, and `VK_SHADER_UNUSED_KHR` otherwise.
- `anyHitShader` is the optional index of the any-hit shader from `VkRayTracingPipelineCreateInfoKHR::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`, and `VK_SHADER_UNUSED_KHR` otherwise.
- `intersectionShader` is the index of the intersection shader from `VkRayTracingPipelineCreateInfoKHR::pStages` in the group if the shader group has `type` of `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`, and `VK_SHADER_UNUSED_KHR` otherwise.
- `pShaderGroupCaptureReplayHandle` is `NULL` or a pointer to replay information for this shader group queried from `vkGetRayTracingCaptureReplayShaderGroupHandlesKHR`, as described in [Ray Tracing Capture Replay](#). Ignored if `VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay` is `VK_FALSE`.

If the pipeline is created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` and the `pipelineLibraryGroupHandles` feature is enabled, `pShaderGroupCaptureReplayHandle` is inherited by all pipelines which link against this pipeline and remains bitwise identical for any pipeline which references this pipeline library.

Valid Usage

- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03474
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR` then `generalShader` **must** be a valid index into the list of shaders, formed by shaders in `VkRayTracingPipelineCreateInfoKHR::pStages` and the shaders imported from pipeline libraries, referring to a shader of `VK_SHADER_STAGE_RAYGEN_BIT_KHR`, `VK_SHADER_STAGE_MISS_BIT_KHR`, or `VK_SHADER_STAGE_CALLABLE_BIT_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03475
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR` then `closestHitShader`, `anyHitShader`, and `intersectionShader` **must** be `VK_SHADER_UNUSED_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03476
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR` then `intersectionShader` **must** be a valid index into the list of shaders, formed by shaders in `VkRayTracingPipelineCreateInfoKHR::pStages` and the shaders imported from pipeline libraries, referring to a shader of `VK_SHADER_STAGE_INTERSECTION_BIT_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03477
If `type` is `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR` then `intersectionShader` **must** be `VK_SHADER_UNUSED_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-closestHitShader-03478
`closestHitShader` **must** be either `VK_SHADER_UNUSED_KHR` or a valid index into the list of shaders, formed by shaders in `VkRayTracingPipelineCreateInfoKHR::pStages` and the shaders imported from pipeline libraries, referring to a shader of `VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-anyHitShader-03479
`anyHitShader` **must** be either `VK_SHADER_UNUSED_KHR` or a valid index into the list of shaders, formed by shaders in `VkRayTracingPipelineCreateInfoKHR::pStages` and the shaders imported from pipeline libraries, referring to a shader of `VK_SHADER_STAGE_ANY_HIT_BIT_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03603
If `VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is `VK_FALSE` then `pShaderGroupCaptureReplayHandle` **must** not be provided if it has not been provided on a previous call to ray tracing pipeline creation
- VUID-VkRayTracingShaderGroupCreateInfoKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03604
If `VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is `VK_FALSE` then the caller **must** guarantee that no ray tracing pipeline creation commands with `pShaderGroupCaptureReplayHandle` provided execute simultaneously with ray tracing pipeline creation commands without `pShaderGroupCaptureReplayHandle` provided

Valid Usage (Implicit)

- VUID-VkRayTracingShaderGroupCreateInfoKHR-sType-sType
sType must be `VK_STRUCTURE_TYPE_RAY_TRACING_SHADER_GROUP_CREATE_INFO_KHR`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-pNext-pNext
pNext must be `NULL`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-parameter
type must be a valid `VkRayTracingShaderGroupTypeKHR` value

The `VkRayTracingPipelineInterfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkRayTracingPipelineInterfaceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t            maxPipelineRayPayloadSize;
    uint32_t            maxPipelineRayHitAttributeSize;
} VkRayTracingPipelineInterfaceCreateInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **maxPipelineRayPayloadSize** is the maximum payload size in bytes used by any shader in the pipeline.
- **maxPipelineRayHitAttributeSize** is the maximum attribute structure size in bytes used by any shader in the pipeline.

maxPipelineRayPayloadSize is calculated as the maximum size of the block (in bytes) declared in the `RayPayloadKHR` or `IncomingRayPayloadKHR` storage classes. **maxPipelineRayHitAttributeSize** is calculated as the maximum size of any block (in bytes) declared in the `HitAttributeKHR` or `HitObjectAttributeEXT` storage class. As variables in these storage classes do not have explicit offsets, the size should be calculated as if each variable has a `scalar alignment` equal to the largest scalar alignment of any of the block's members.

NOTE

There is no explicit upper limit for **maxPipelineRayPayloadSize**, but in practice it should be kept as small as possible. Similar to invocation local memory, it must be allocated for each shader invocation and for devices which support many simultaneous invocations, this storage can rapidly be exhausted, resulting in failure.

Valid Usage

- VUID-VkRayTracingPipelineInterfaceCreateInfoKHR-maxPipelineRayHitAttributeSize-03605
maxPipelineRayHitAttributeSize must be less than or equal to

Valid Usage (Implicit)

- VUID-VkRayTracingPipelineInterfaceCreateInfoKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_INTERFACE_CREATE_INFO_KHR`
- VUID-VkRayTracingPipelineInterfaceCreateInfoKHR-pNext-pNext **must** be `NULL`

To create ray tracing pipelines, call:

```
// Provided by VK_NV_ray_tracing
VkResult vkCreateRayTracingPipelinesNV(
    VkDevice                                device,
    VkPipelineCache                         pipelineCache,
    uint32_t                               createInfoCount,
    const VkRayTracingPipelineCreateInfoNV* pCreateInfos,
    const VkAllocationCallbacks*           pAllocator,
    VkPipeline*                             pPipelines);
```

- `device` is the logical device that creates the ray tracing pipelines.
- `pipelineCache` is either `VK_NULL_HANDLE`, indicating that pipeline caching is disabled, or to enable caching, the handle of a valid `VkPipelineCache` object. The implementation **must** not access this object outside of the duration of this command.
- `createInfoCount` is the length of the `pCreateInfos` and `pPipelines` arrays.
- `pCreateInfos` is a pointer to an array of `VkRayTracingPipelineCreateInfoNV` structures.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pPipelines` is a pointer to an array in which the resulting ray tracing pipeline objects are returned.

Pipelines are created and returned as described for [Multiple Pipeline Creation](#).

Valid Usage

- VUID-vkCreateRayTracingPipelinesNV-device-09677
`device` **must** support at least one queue family with the `VK_QUEUE_COMPUTE_BIT` capability
- VUID-vkCreateRayTracingPipelinesNV-flags-03415
If the `flags` member of any element of `pCreateInfos` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and the `basePipelineIndex` member of that same element is not `-1`, `basePipelineIndex` **must** be less than the index into `pCreateInfos` that corresponds to that element

- VUID-vkCreateRayTracingPipelinesNV-flags-03416
If the **flags** member of any element of **pCreateInfo**s contains the **VK_PIPELINE_CREATE_DERIVATIVE_BIT** flag, the base pipeline **must** have been created with the **VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT** flag set
- VUID-vkCreateRayTracingPipelinesNV-flags-03816
flags **must** not contain the **VK_PIPELINE_CREATE_DISPATCH_BASE_BIT** flag
- VUID-vkCreateRayTracingPipelinesNV-pipelineCache-02903
If **pipelineCache** was created with **VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT**, host access to **pipelineCache** **must** be externally synchronized
- VUID-vkCreateRayTracingPipelinesNV-pNext-09616
If **VkPipelineBinaryInfoKHR::binaryCount** is not 0 for any element of **pCreateInfo**s, **pipelineCache** **must** be **VK_NULL_HANDLE**
- VUID-vkCreateRayTracingPipelinesNV-pNext-09617
If a **VkPipelineCreateFlags2CreateInfoKHR** structure with the **VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR** flag set is included in the **pNext** chain of any element of **pCreateInfo**s, **pipelineCache** **must** be **VK_NULL_HANDLE**
- VUID-vkCreateRayTracingPipelinesNV-binaryCount-09620
If **VkPipelineBinaryInfoKHR::binaryCount** is not 0 for any element of **pCreateInfo**s, **VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT** **must** not be set in the **flags** of that element
- VUID-vkCreateRayTracingPipelinesNV-binaryCount-09621
If **VkPipelineBinaryInfoKHR::binaryCount** is not 0 for any element of **pCreateInfo**s, **VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT** **must** not be set in the **flags** of that element
- VUID-vkCreateRayTracingPipelinesNV-binaryCount-09622
If **VkPipelineBinaryInfoKHR::binaryCount** is not 0 for any element of **pCreateInfo**s, **VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT** **must** not be set in the **flags** of that element
- VUID-vkCreateRayTracingPipelinesNV-pCreateInfo-11414
If any element of **pCreateInfo**s sets **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT** and includes embedded sampler mappings, there **must** be less than $(\text{maxSamplerAllocationCount} - (\text{minSamplerHeapReservedRangeWithEmbedded} / \text{samplerDescriptorSize}))$ **VkSampler** objects currently created on the device
- VUID-vkCreateRayTracingPipelinesNV-pCreateInfo-11429
If any element of **pCreateInfo**s sets **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT** and includes embedded sampler mappings, this command **must** not cause the total number of unique embedded samplers in pipelines and shaders on this device to exceed **maxDescriptorHeapEmbeddedSamplers**
- VUID-vkCreateRayTracingPipelinesNV-pNext-10150
If a **VkPipelineCreateFlags2CreateInfoKHR** structure is included in the **pNext** chain of any element of **pCreateInfo**s, **VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR** flag **must** not be set

Valid Usage (Implicit)

- VUID-vkCreateRayTracingPipelinesNV-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateRayTracingPipelinesNV-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkCreateRayTracingPipelinesNV-pCreateInfos-parameter
`pCreateInfos` **must** be a valid pointer to an array of `createInfoCount` valid `VkRayTracingPipelineCreateInfoNV` structures
- VUID-vkCreateRayTracingPipelinesNV-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateRayTracingPipelinesNV-pPipelines-parameter
`pPipelines` **must** be a valid pointer to an array of `createInfoCount` `VkPipeline` handles
- VUID-vkCreateRayTracingPipelinesNV-createInfoCount-arraylength
`createInfoCount` **must** be greater than `0`
- VUID-vkCreateRayTracingPipelinesNV-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_PIPELINE_COMPILE_REQUIRED_EXT`
- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_SHADER_NV`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkRayTracingPipelineCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkRayTracingPipelineCreateInfoNV {
    VkStructureType           sType;
    const void*               pNext;
    VkPipelineCreateFlags     flags;
    uint32_t                  stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    uint32_t                  groupCount;
    const VkRayTracingShaderGroupCreateInfoNV* pGroups;
    uint32_t                  maxRecursionDepth;
    VkPipelineLayout          layout;
    VkPipeline                basePipelineHandle;
    int32_t                   basePipelineIndex;
} VkRayTracingPipelineCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPipelineCreateFlagBits` specifying how the pipeline will be generated.
- `stageCount` is the number of entries in the `pStages` array.
- `pStages` is a pointer to an array of `VkPipelineShaderStageCreateInfo` structures specifying the set of the shader stages to be included in the ray tracing pipeline.
- `groupCount` is the number of entries in the `pGroups` array.
- `pGroups` is a pointer to an array of `VkRayTracingShaderGroupCreateInfoNV` structures describing the set of the shader stages to be included in each shader group in the ray tracing pipeline.
- `maxRecursionDepth` is the `maximum recursion depth` of shaders executed by this pipeline.
- `layout` is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline. If `VkPhysicalDeviceProperties::apiVersion` is greater than or equal to Vulkan 1.3 or `VK_KHR_maintenance4` is enabled `layout` **must** not be accessed by the implementation outside of the duration of the command this structure is passed to.
- `basePipelineHandle` is a pipeline to derive from.
- `basePipelineIndex` is an index into the `pCreateInfos` parameter to use as a pipeline to derive from.

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in [Pipeline Derivatives](#).

If the `pNext` chain includes a `VkPipelineCreateFlags2CreateInfo` structure, `VkPipelineCreateFlags2CreateInfo::flags` from that structure is used instead of `flags` from this structure.

Valid Usage

- VUID-VkRayTracingPipelineCreateInfoNV-None-09497

If the `pNext` chain does not include a `VkPipelineCreateFlags2CreateInfo` structure, `flags` **must** be a valid combination of `VkPipelineCreateFlagBits` values

- VUID-VkRayTracingPipelineCreateInfoNV-flags-07984
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineIndex` is -1, `basePipelineHandle` **must** be a valid ray tracing `VkPipeline` handle
- VUID-VkRayTracingPipelineCreateInfoNV-flags-07985
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` **must** be a valid index into the calling command's `pCreateInfos` parameter
- VUID-VkRayTracingPipelineCreateInfoNV-flags-07986
If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, `basePipelineIndex` **must** be -1 or `basePipelineHandle` **must** be `VK_NULL_HANDLE`
- VUID-VkRayTracingPipelineCreateInfoNV-layout-07987
If a push constant block is declared in a shader and `layout` is not `VK_NULL_HANDLE`, a push constant range in `layout` **must** match the shader stage
- VUID-VkRayTracingPipelineCreateInfoNV-layout-10069
If a push constant block is declared in a shader and `layout` is not `VK_NULL_HANDLE`, the block must be contained inside the push constant range in `layout` that matches the stage
- VUID-VkRayTracingPipelineCreateInfoNV-layout-07988
If a `resource variable` is declared in a shader and `layout` is not `VK_NULL_HANDLE`, the corresponding descriptor set in `layout` **must** match the shader stage
- VUID-VkRayTracingPipelineCreateInfoNV-layout-07990
If a `resource variable` is declared in a shader, `layout` is not `VK_NULL_HANDLE`, and the descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the corresponding descriptor set in `layout` **must** match the descriptor type
- VUID-VkRayTracingPipelineCreateInfoNV-layout-07991
If a `resource variable` is declared in a shader as an array and `layout` is not `VK_NULL_HANDLE`, the corresponding descriptor binding used to create `layout` **must** have a `descriptorCount` that is greater than or equal to the length of the array
- VUID-VkRayTracingPipelineCreateInfoNV-None-10391
If a `resource variables` is declared in a shader as an array of descriptors, then the descriptor type of that variable **must** not be `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-11798
If `shader64BitIndexing` feature is not enabled, `flags` **must** not contain `VK_PIPELINE_CREATE_2_64_BIT_INDEXING_BIT_EXT`
- VUID-VkRayTracingPipelineCreateInfoNV-pipelineCreationCacheControl-02878
If the `pipelineCreationCacheControl` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` nor `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`
- VUID-VkRayTracingPipelineCreateInfoNV-pipelineProtectedAccess-07368
If the `pipelineProtectedAccess` feature is not enabled, `flags` **must** not include `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` nor

VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT

- VUID-VkRayTracingPipelineCreateInfoNV-flags-07369
flags must not include both [VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT](#) and [VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT](#)
- VUID-VkRayTracingPipelineCreateInfoNV-flags-11311
If [VkPipelineCreateFlags2CreateInfoKHR::flags](#) includes [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#), **layout must** be [VK_NULL_HANDLE](#)
- VUID-VkRayTracingPipelineCreateInfoNV-flags-11312
If [VkPipelineCreateFlags2CreateInfoKHR::flags](#) includes [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#), all shader variables in the [shader resource interface](#) with a [DescriptorSet](#) and [Binding](#) decoration **must** have a mapping declared in [VkShaderDescriptorSetAndBindingMappingInfoEXT::pMappings](#)
- VUID-VkRayTracingPipelineCreateInfoNV-pStages-03426
The shader code for the entry points identified by [pStages](#), and the rest of the state identified by this structure **must** adhere to the pipeline linking rules described in the [Shader Interfaces](#) chapter
- VUID-VkRayTracingPipelineCreateInfoNV-layout-03428
The number of resources in **layout** accessible to each shader stage that is used by the pipeline **must** be less than or equal to [VkPhysicalDeviceLimits::maxPerStageResources](#)
- VUID-VkRayTracingPipelineCreateInfoNV-flags-02904
flags must not include [VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV](#)
- VUID-VkRayTracingPipelineCreateInfoNV-flags-12341
flags must not include [VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT](#) nor [VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT](#)
- VUID-VkRayTracingPipelineCreateInfoNV-layout-12402
If **layout** is not [VK_NULL_HANDLE](#), it **must** not have been created with [VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT](#)
- VUID-VkRayTracingPipelineCreateInfoNV-stage-06232
The **stage** member of at least one element of [pStages](#) **must** be [VK_SHADER_STAGE_RAYGEN_BIT_KHR](#)
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03456
flags must not include [VK_PIPELINE_CREATE_LIBRARY_BIT_KHR](#)
- VUID-VkRayTracingPipelineCreateInfoNV-maxRecursionDepth-03457
[maxRecursionDepth](#) **must** be less than or equal to [VkPhysicalDeviceRayTracingPropertiesNV::maxRecursionDepth](#)
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03458
flags must not include [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR](#)
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03459
flags must not include [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR](#)

- VUID-VkRayTracingPipelineCreateInfoNV-flags-03460
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03461
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03462
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03463
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-03588
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-04948
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-02957
flags **must** not include both `VK_PIPELINE_CREATE_DEFER_COMPILE_BIT_NV` and `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT` at the same time
- VUID-VkRayTracingPipelineCreateInfoNV-pipelineStageCreationFeedbackCount-06651
If `VkPipelineCreationFeedbackCreateInfo::pipelineStageCreationFeedbackCount` is not 0, it **must** be equal to `stageCount`
- VUID-VkRayTracingPipelineCreateInfoNV-stage-06898
The **stage** value in all **pStages** elements **must** be one of `VK_SHADER_STAGE_RAYGEN_BIT_KHR`, `VK_SHADER_STAGE_ANY_HIT_BIT_KHR`, `VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR`, `VK_SHADER_STAGE_MISS_BIT_KHR`, `VK_SHADER_STAGE_INTERSECTION_BIT_KHR`, or `VK_SHADER_STAGE_CALLABLE_BIT_KHR`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-07402
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-07998
flags **must** not include `VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV`
- VUID-VkRayTracingPipelineCreateInfoNV-flags-11008
flags **must** not include `VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT`
- VUID-VkRayTracingPipelineCreateInfoNV-None-11368
If `VkPipelineCreateFlags2CreateInfoKHR::flags` does not include `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`, **layout** **must** not be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkRayTracingPipelineCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_CREATE_INFO_NV`
- VUID-VkRayTracingPipelineCreateInfoNV-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkPipelineCreateFlags2CreateInfo` or `VkPipelineCreationFeedbackCreateInfo`
- VUID-VkRayTracingPipelineCreateInfoNV-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkRayTracingPipelineCreateInfoNV-pStages-parameter
`pStages` **must** be a valid pointer to an array of `stageCount` valid `VkPipelineShaderStageCreateInfo` structures
- VUID-VkRayTracingPipelineCreateInfoNV-pGroups-parameter
`pGroups` **must** be a valid pointer to an array of `groupCount` valid `VkRayTracingShaderGroupCreateInfoNV` structures
- VUID-VkRayTracingPipelineCreateInfoNV-layout-parameter
If `layout` is not `VK_NULL_HANDLE`, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkRayTracingPipelineCreateInfoNV-stageCount-arraylength
`stageCount` **must** be greater than 0
- VUID-VkRayTracingPipelineCreateInfoNV-groupCount-arraylength
`groupCount` **must** be greater than 0
- VUID-VkRayTracingPipelineCreateInfoNV-commonparent
Both of `basePipelineHandle`, and `layout` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkRayTracingShaderGroupCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkRayTracingShaderGroupCreateInfoNV {
    VkStructureType           sType;
    const void*               pNext;
    VkRayTracingShaderGroupTypeKHR type;
    uint32_t                  generalShader;
    uint32_t                  closestHitShader;
    uint32_t                  anyHitShader;
    uint32_t                  intersectionShader;
} VkRayTracingShaderGroupCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is the type of hit group specified in this structure.

- **generalShader** is the index of the ray generation, miss, or callable shader from `VkRayTracingPipelineCreateInfoNV::pStages` in the group if the shader group has **type** of `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_NV`, and `VK_SHADER_UNUSED_NV` otherwise.
- **closestHitShader** is the optional index of the closest hit shader from `VkRayTracingPipelineCreateInfoNV::pStages` in the group if the shader group has **type** of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_NV` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV`, and `VK_SHADER_UNUSED_NV` otherwise.
- **anyHitShader** is the optional index of the any-hit shader from `VkRayTracingPipelineCreateInfoNV::pStages` in the group if the shader group has **type** of `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_NV` or `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV`, and `VK_SHADER_UNUSED_NV` otherwise.
- **intersectionShader** is the index of the intersection shader from `VkRayTracingPipelineCreateInfoNV::pStages` in the group if the shader group has **type** of `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV`, and `VK_SHADER_UNUSED_NV` otherwise.

Valid Usage

- VUID-VkRayTracingShaderGroupCreateInfoNV-type-02413
If **type** is `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_NV` then **generalShader** **must** be a valid index into `VkRayTracingPipelineCreateInfoNV::pStages` referring to a shader of `VK_SHADER_STAGE_RAYGEN_BIT_NV`, `VK_SHADER_STAGE_MISS_BIT_NV`, or `VK_SHADER_STAGE_CALLABLE_BIT_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-type-02414
If **type** is `VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_NV` then **closestHitShader**, **anyHitShader**, and **intersectionShader** **must** be `VK_SHADER_UNUSED_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-type-02415
If **type** is `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_NV` then **intersectionShader** **must** be a valid index into `VkRayTracingPipelineCreateInfoNV::pStages` referring to a shader of `VK_SHADER_STAGE_INTERSECTION_BIT_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-type-02416
If **type** is `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_NV` then **intersectionShader** **must** be `VK_SHADER_UNUSED_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-closestHitShader-02417
closestHitShader **must** be either `VK_SHADER_UNUSED_NV` or a valid index into `VkRayTracingPipelineCreateInfoNV::pStages` referring to a shader of `VK_SHADER_STAGE_CLOSEST_HIT_BIT_NV`
- VUID-VkRayTracingShaderGroupCreateInfoNV-anyHitShader-02418
anyHitShader **must** be either `VK_SHADER_UNUSED_NV` or a valid index into `VkRayTracingPipelineCreateInfoNV::pStages` referring to a shader of `VK_SHADER_STAGE_ANY_HIT_BIT_NV`

Valid Usage (Implicit)

- VUID-VkRayTracingShaderGroupCreateInfoNV-sType-sType
sType must be [VK_STRUCTURE_TYPE_RAY_TRACING_SHADER_GROUP_CREATE_INFO_NV](#)
- VUID-VkRayTracingShaderGroupCreateInfoNV-pNext-pNext
pNext must be `NULL`
- VUID-VkRayTracingShaderGroupCreateInfoNV-type-parameter
type must be a valid [VkRayTracingShaderGroupTypeKHR](#) value

10.5.3. Ray Tracing Pipeline Queries and Commands

To query the opaque handles of shaders in the ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkResult vkGetRayTracingShaderGroupHandlesKHR(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          firstGroup,
    uint32_t          groupCount,
    size_t            dataSize,
    void*             pData);
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to vkGetRayTracingShaderGroupHandlesKHR
VkResult vkGetRayTracingShaderGroupHandlesNV(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          firstGroup,
    uint32_t          groupCount,
    size_t            dataSize,
    void*             pData);
```

- **device** is the logical device containing the ray tracing pipeline.
- **pipeline** is the ray tracing pipeline object containing the shaders.
- **firstGroup** is the index of the first group to retrieve a handle for from the [VkRayTracingPipelineCreateInfoKHR::pGroups](#) or [VkRayTracingPipelineCreateInfoNV::pGroups](#) array.
- **groupCount** is the number of shader handles to retrieve.
- **dataSize** is the size in bytes of the buffer pointed to by **pData**.
- **pData** is a pointer to an application-allocated buffer where the results will be written.

On success, an array of **groupCount** shader handles will be written to **pData**, with each element being of size [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleSize](#). The first handle

written corresponds to the group identified by `firstGroup`, with subsequent handles corresponding to consecutive shader groups in the order they appear in the `VkRayTracingPipelineCreateInfoKHR::pGroups` or `VkRayTracingPipelineCreateInfoNV::pGroups` array.

If `pipeline` was created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` and the `pipelineLibraryGroupHandles` feature is enabled applications **can** query group handles from that pipeline, even if the pipeline is a library and is never bound to a command buffer. These group handles remain bitwise identical for any `pipeline` which references the pipeline library. Group indices are assigned as-if the pipeline was created without `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`.

Valid Usage

- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-04619
`pipeline` **must** be a ray tracing pipeline
- VUID-vkGetRayTracingShaderGroupHandlesKHR-firstGroup-04050
`firstGroup` **must** be less than the number of shader groups in `pipeline`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-firstGroup-02419
The sum of `firstGroup` and `groupCount` **must** be less than or equal to the number of shader groups in `pipeline`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-dataSize-02420
`dataSize` **must** be at least `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleSize × groupCount`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-07828
If the `pipelineLibraryGroupHandles` feature is not enabled, `pipeline` **must** not have been created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkGetRayTracingShaderGroupHandlesKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-parameter
`pipeline` **must** be a valid `VkPipeline` handle
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkGetRayTracingShaderGroupHandlesKHR-dataSize-arraylength
`dataSize` **must** be greater than 0
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-parent
`pipeline` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To query the opaque capture data of shader groups in a ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkResult vkGetRayTracingCaptureReplayShaderGroupHandlesKHR(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          firstGroup,
    uint32_t          groupCount,
    size_t            dataSize,
    void*             pData);
```

- [device](#) is the logical device containing the ray tracing pipeline.
- [pipeline](#) is the ray tracing pipeline object containing the shaders.
- [firstGroup](#) is the index of the first group to retrieve a handle for from the [VkRayTracingPipelineCreateInfoKHR::pGroups](#) array.
- [groupCount](#) is the number of shader handles to retrieve.
- [dataSize](#) is the size in bytes of the buffer pointed to by [pData](#).
- [pData](#) is a pointer to an application-allocated buffer where the results will be written.

On success, an array of [groupCount](#) shader handles will be written to [pData](#), with each element being of size [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleCaptureReplaySize](#). The first handle written corresponds to the group identified by [firstGroup](#), with subsequent handles corresponding to consecutive shader groups in the order they appear in the [VkRayTracingPipelineCreateInfoKHR::pGroups](#) array.

Once queried, this opaque data **can** be provided at pipeline creation time (in a subsequent execution), using [VkRayTracingShaderGroupCreateInfoKHR::pShaderGroupCaptureReplayHandle](#), as described in [Ray Tracing Capture Replay](#).

If [pipeline](#) was created with [VK_PIPELINE_CREATE_LIBRARY_BIT_KHR](#) and the [pipelineLibraryGroupHandles](#) feature is enabled applications **can** query capture replay group handles from that pipeline. The capture replay handle remains bitwise identical for any [pipeline](#) which references the pipeline library. Group indices are assigned as-if the pipeline was created

without [VK_PIPELINE_CREATE_LIBRARY_BIT_KHR](#).

Valid Usage

- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-04620
pipeline **must** be a ray tracing pipeline
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-firstGroup-04051
firstGroup **must** be less than the number of shader groups in **pipeline**
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-firstGroup-03483
The sum of **firstGroup** and **groupCount** **must** be less than or equal to the number of shader groups in **pipeline**
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-dataSize-03484
dataSize **must** be at least [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleCaptureReplaySize](#) × **groupCount**
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-rayTracingPipelineShaderGroupHandleCaptureReplay-03606
[VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay](#) **must** be enabled to call this function
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-03607
pipeline **must** have been created with a **flags** that included [VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR](#)
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-07829
If the [pipelineLibraryGroupHandles](#) feature is not enabled, **pipeline** **must** not have been created with [VK_PIPELINE_CREATE_LIBRARY_BIT_KHR](#)

Valid Usage (Implicit)

- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-parameter
pipeline **must** be a valid [VkPipeline](#) handle
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pData-parameter
pData **must** be a valid pointer to an array of **dataSize** bytes
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-dataSize-arraylength
dataSize **must** be greater than 0
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-parent
pipeline **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To query the pipeline stack size of shaders in a shader group in the ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkDeviceSize vkGetRayTracingShaderGroupStackSizeKHR(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          group,
    VkShaderGroupShaderKHR groupShader);
```

- [device](#) is the logical device containing the ray tracing pipeline.
- [pipeline](#) is the ray tracing pipeline object containing the shaders groups.
- [group](#) is the index of the shader group to query.
- [groupShader](#) is the type of shader from the group to query.

The return value is the ray tracing pipeline stack size in bytes for the specified shader as called from the specified shader group.

Valid Usage

- VUID-vkGetRayTracingShaderGroupStackSizeKHR-pipeline-04622
[pipeline](#) **must** be a ray tracing pipeline
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-group-03608
The value of [group](#) **must** be less than the number of shader groups in [pipeline](#)
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-groupShader-03609
The shader identified by [groupShader](#) in [group](#) **must** not be [VK_SHADER_UNUSED_KHR](#)

Valid Usage (Implicit)

- VUID-vkGetRayTracingShaderGroupStackSizeKHR-device-parameter
[device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-pipeline-parameter

pipeline must be a valid [VkPipeline](#) handle

- VUID-vkGetRayTracingShaderGroupStackSizeKHR-groupShader-parameter **groupShader** must be a valid [VkShaderGroupShaderKHR](#) value
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-pipeline-parent **pipeline** must have been created, allocated, or retrieved from **device**

Possible values of **groupShader** in [vkGetRayTracingShaderGroupStackSizeKHR](#) are:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef enum VkShaderGroupShaderKHR {
    VK_SHADER_GROUP_SHADER_GENERAL_KHR = 0,
    VK_SHADER_GROUP_SHADER_CLOSEST_HIT_KHR = 1,
    VK_SHADER_GROUP_SHADER_ANY_HIT_KHR = 2,
    VK_SHADER_GROUP_SHADER_INTERSECTION_KHR = 3,
} VkShaderGroupShaderKHR;
```

- [VK_SHADER_GROUP_SHADER_GENERAL_KHR](#) uses the shader specified in the group with [VkRayTracingShaderGroupCreateInfoKHR::generalShader](#)
- [VK_SHADER_GROUP_SHADER_CLOSEST_HIT_KHR](#) uses the shader specified in the group with [VkRayTracingShaderGroupCreateInfoKHR::closestHitShader](#)
- [VK_SHADER_GROUP_SHADER_ANY_HIT_KHR](#) uses the shader specified in the group with [VkRayTracingShaderGroupCreateInfoKHR::anyHitShader](#)
- [VK_SHADER_GROUP_SHADER_INTERSECTION_KHR](#) uses the shader specified in the group with [VkRayTracingShaderGroupCreateInfoKHR::intersectionShader](#)

To [dynamically set](#) the stack size for a ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdSetRayTracingPipelineStackSizeKHR(
    VkCommandBuffer          commandBuffer,
    uint32_t                 pipelineStackSize);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pipelineStackSize** is the stack size to use for subsequent ray tracing trace commands.

This command sets the stack size for subsequent ray tracing commands when the ray tracing pipeline is created with [VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR](#) set in [VkPipelineDynamicStateCreateInfo::pDynamicStates](#). Otherwise, the stack size is computed as described in [Ray Tracing Pipeline Stack](#).

Valid Usage

- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-pipelineStackSize-03610 **pipelineStackSize** must be large enough for any dynamic execution through the shaders

in the ray tracing pipeline used by a subsequent trace call

Valid Usage (Implicit)

- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#) operations
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	State

Conditional Rendering

`vkCmdSetRayTracingPipelineStackSizeKHR` is not affected by [conditional rendering](#)

Ray tracing pipelines **can** contain more shaders than a graphics or compute pipeline, so to allow parallel compilation of shaders within a pipeline, an application **can** choose to defer compilation until a later point in time.

To compile a deferred shader in a pipeline call:

```
// Provided by VK_NV_ray_tracing
VkResult vkCompileDeferredNV(
    VkDevice          device,
    VkPipeline        pipeline,
    uint32_t          shader);
```

- **device** is the logical device containing the ray tracing pipeline.
- **pipeline** is the ray tracing pipeline object containing the shaders.
- **shader** is the index of the shader to compile.

Valid Usage

- VUID-vkCompileDeferredNV-pipeline-04621
pipeline must be a ray tracing pipeline
- VUID-vkCompileDeferredNV-pipeline-02237
pipeline must have been created with `VK_PIPELINE_CREATE_DEFER_COMPILE_BIT_NV`
- VUID-vkCompileDeferredNV-shader-02238
shader must not have been called as a deferred compile before

Valid Usage (Implicit)

- VUID-vkCompileDeferredNV-device-parameter
device must be a valid `VkDevice` handle
- VUID-vkCompileDeferredNV-pipeline-parameter
pipeline must be a valid `VkPipeline` handle
- VUID-vkCompileDeferredNV-pipeline-parent
pipeline must have been created, allocated, or retrieved from **device**

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

10.6. Pipeline Destruction

To destroy a pipeline, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyPipeline(
    VkDevice          device,
    VkPipeline        pipeline,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the pipeline.
- **pipeline** is the handle of the pipeline to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyPipeline-pipeline-00765
All submitted commands that refer to **pipeline** **must** have completed execution
- VUID-vkDestroyPipeline-pipeline-00766
If **VkAllocationCallbacks** were provided when **pipeline** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipeline-pipeline-00767
If no **VkAllocationCallbacks** were provided when **pipeline** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyPipeline-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyPipeline-pipeline-parameter
If **pipeline** is not **VK_NULL_HANDLE**, **pipeline** **must** be a valid **VkPipeline** handle
- VUID-vkDestroyPipeline-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyPipeline-pipeline-parent
If **pipeline** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **pipeline** **must** be externally synchronized

10.7. Pipeline Derivatives

A pipeline derivative is a child pipeline created from a parent pipeline, where the child and parent are expected to have much commonality.

The goal of derivative pipelines is that they be cheaper to create using the parent as a starting point, and that it be more efficient (on either host or device) to switch/bind between children of the same parent.

A derivative pipeline is created by setting the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag in the `Vk*PipelineCreateInfo` structure. If this is set, then exactly one of `basePipelineHandle` or `basePipelineIndex` members of the structure **must** have a valid handle/index, and specifies the parent pipeline. If `basePipelineHandle` is used, the parent pipeline **must** have already been created. If `basePipelineIndex` is used, then the parent is being created in the same command. `VK_NULL_HANDLE` acts as the invalid handle for `basePipelineHandle`, and -1 is the invalid index for `basePipelineIndex`. If `basePipelineIndex` is used, the base pipeline **must** appear earlier in the array. The base pipeline **must** have been created with the `VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT` flag set.

10.8. Pipeline Cache

Pipeline cache objects allow the result of pipeline construction to be reused between pipelines and between runs of an application. Reuse between pipelines is achieved by passing the same pipeline cache object when creating multiple related pipelines. Reuse across runs of an application is achieved by retrieving pipeline cache contents in one run of an application, saving the contents, and using them to preinitialize a pipeline cache on a subsequent run. The contents of the pipeline cache objects are managed by the implementation. Applications **can** manage the host memory consumed by a pipeline cache object and control the amount of data retrieved from a pipeline cache object.

Pipeline cache objects are represented by `VkPipelineCache` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineCache)
```

10.8.1. Creating a Pipeline Cache

To create pipeline cache objects, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreatePipelineCache(
    VkDevice                                device,
    const VkPipelineCacheCreateInfo*        pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkPipelineCache*                        pPipelineCache);
```

- **device** is the logical device that creates the pipeline cache object.
- **pCreateInfo** is a pointer to a [VkPipelineCacheCreateInfo](#) structure containing initial parameters for the pipeline cache object.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pPipelineCache** is a pointer to a [VkPipelineCache](#) handle in which the resulting pipeline cache object is returned.

NOTE

Applications **can** track and manage the total host memory size of a pipeline cache object using the **pAllocator**. Applications **can** limit the amount of data retrieved from a pipeline cache object in **vkGetPipelineCacheData**. Implementations **should** not internally limit the total number of entries added to a pipeline cache object or the total host memory consumed.

Once created, a pipeline cache **can** be passed to the [vkCreateGraphicsPipelines](#), [vkCreateRayTracingPipelinesKHR](#), [vkCreateRayTracingPipelinesNV](#), [vkCreateDataGraphPipelinesARM](#), and [vkCreateComputePipelines](#) commands. If the pipeline cache passed into these commands is not [VK_NULL_HANDLE](#), the implementation will query it for possible reuse opportunities and update it with new content. The use of the pipeline cache object in these commands is internally synchronized, and the same pipeline cache object **can** be used in multiple threads simultaneously.

If **flags** of **pCreateInfo** includes [VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT](#), all commands that modify the returned pipeline cache object **must** be [externally synchronized](#).

NOTE

Implementations **should** make every effort to limit any critical sections to the actual accesses to the cache, which is expected to be significantly shorter than the duration of the **vkCreate*Pipelines** commands.

Valid Usage (Implicit)

- VUID-vkCreatePipelineCache-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkCreatePipelineCache-pCreateInfo-parameter **pCreateInfo** **must** be a valid pointer to a valid [VkPipelineCacheCreateInfo](#) structure
- VUID-vkCreatePipelineCache-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreatePipelineCache-pPipelineCache-parameter **pPipelineCache** **must** be a valid pointer to a [VkPipelineCache](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkPipelineCacheCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineCacheCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkPipelineCacheCreateFlags flags;
    size_t               initialDataSize;
    const void*          pInitialData;
} VkPipelineCacheCreateInfo;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of [VkPipelineCacheCreateFlagBits](#) specifying the behavior of the pipeline cache.
- `initialDataSize` is the number of bytes in `pInitialData`. If `initialDataSize` is zero, the pipeline cache will initially be empty.
- `pInitialData` is a pointer to previously retrieved pipeline cache data. If the pipeline cache data is incompatible (as defined below) with the device, the pipeline cache will be initially empty. If `initialDataSize` is zero, `pInitialData` is ignored.

Valid Usage

- VUID-VkPipelineCacheCreateInfo-initialDataSize-00768
If `initialDataSize` is not 0, it **must** be equal to the size of `pInitialData`, as returned by `vkGetPipelineCacheData` when `pInitialData` was originally retrieved
- VUID-VkPipelineCacheCreateInfo-initialDataSize-00769
If `initialDataSize` is not 0, `pInitialData` **must** have been retrieved from a previous call to `vkGetPipelineCacheData`
- VUID-VkPipelineCacheCreateInfo-pipelineCreationCacheControl-02892
If the `pipelineCreationCacheControl` feature is not enabled, `flags` **must** not include [VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT](#)
- VUID-VkPipelineCacheCreateInfo-maintenance8-10200
If the `maintenance8` feature is not enabled, `flags` **must** not include [VK_PIPELINE_CACHE_CREATE INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR](#)
- VUID-VkPipelineCacheCreateInfo-flags-10201

If `flags` includes `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`, it **must** not include `VK_PIPELINE_CACHE_CREATE INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR`

Valid Usage (Implicit)

- VUID-VkPipelineCacheCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_CACHE_CREATE_INFO`
- VUID-VkPipelineCacheCreateInfo-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPipelineCacheCreateInfo-flags-parameter
`flags` **must** be a valid combination of `VkPipelineCacheCreateFlagBits` values
- VUID-VkPipelineCacheCreateInfo-pInitialData-parameter
If `initialDataSize` is not `0`, `pInitialData` **must** be a valid pointer to an array of `initialDataSize` bytes

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineCacheCreateFlags;
```

`VkPipelineCacheCreateFlags` is a bitmask type for setting a mask of zero or more `VkPipelineCacheCreateFlagBits`.

Bits which **can** be set in `VkPipelineCacheCreateInfo::flags`, specifying behavior of the pipeline cache, are:

```
// Provided by VK_VERSION_1_0, VK_KHR_maintenance8,
VK_EXT_pipeline_creation_cache_control
typedef enum VkPipelineCacheCreateFlagBits {
    // Provided by VK_VERSION_1_3
    VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT = 0x00000001,
    // Provided by VK_KHR_maintenance8
    VK_PIPELINE_CACHE_CREATE INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR = 0x00000008,
    // Provided by VK_EXT_pipeline_creation_cache_control
    VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT_EXT =
VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT,
} VkPipelineCacheCreateFlagBits;
```

- `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT` specifies that all commands that modify the created `VkPipelineCache` will be **externally synchronized**. When set, the implementation **may** skip any unnecessary processing needed to support simultaneous modification from multiple threads where allowed.
- `VK_PIPELINE_CACHE_CREATE INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR` specifies that when the created `VkPipelineCache` is used as the `dstCache` parameter of `vkMergePipelineCaches`,

it does not need to be [externally synchronized](#). This flag is mutually exclusive with [VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT](#).

10.8.2. Merging Pipeline Caches

Pipeline cache objects **can** be merged using the command:

```
// Provided by VK_VERSION_1_0
VkResult vkMergePipelineCaches(
    VkDevice          device,
    VkPipelineCache   dstCache,
    uint32_t          srcCacheCount,
    const VkPipelineCache* pSrcCaches);
```

- **device** is the logical device that owns the pipeline cache objects.
- **dstCache** is the handle of the pipeline cache to merge results into.
- **srcCacheCount** is the length of the **pSrcCaches** array.
- **pSrcCaches** is a pointer to an array of pipeline cache handles, which will be merged into **dstCache**. The previous contents of **dstCache** are included after the merge.

NOTE

The details of the merge operation are implementation-dependent, but implementations **should** merge the contents of the specified pipelines and prune duplicate entries.

Valid Usage

- VUID-vkMergePipelineCaches-dstCache-00770
dstCache **must** not appear in the list of source caches
- VUID-vkMergePipelineCaches-dstCache-10202
Host access to **dstCache** **must** be externally synchronized if it was not created with [VK_PIPELINE_CACHE_CREATE INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR](#)
- VUID-vkMergePipelineCaches-dstCache-11832
dstCache **must** not have been created with the **headerVersion** member of [VkPipelineCacheCreateInfo::pInitialData](#) equal to [VK_PIPELINE_CACHE_HEADER_VERSION_DATA_GRAPH_QCOM](#)
- VUID-vkMergePipelineCaches-headerVersion-11833
Each member of **pSrcCaches** **must** not have been created with the **headerVersion** member of [VkPipelineCacheCreateInfo::pInitialData](#) equal to [VK_PIPELINE_CACHE_HEADER_VERSION_DATA_GRAPH_QCOM](#)

Valid Usage (Implicit)

- VUID-vkMergePipelineCaches-device-parameter

device must be a valid [VkDevice](#) handle

- VUID-vkMergePipelineCaches-dstCache-parameter
dstCache must be a valid [VkPipelineCache](#) handle
- VUID-vkMergePipelineCaches-pSrcCaches-parameter
pSrcCaches must be a valid pointer to an array of **srcCacheCount** valid [VkPipelineCache](#) handles
- VUID-vkMergePipelineCaches-srcCacheCount-arraylength
srcCacheCount must be greater than 0
- VUID-vkMergePipelineCaches-dstCache-parent
dstCache must have been created, allocated, or retrieved from **device**
- VUID-vkMergePipelineCaches-pSrcCaches-parent
Each element of **pSrcCaches** must have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

10.8.3. Retrieving Pipeline Cache Data

Data **can** be retrieved from a pipeline cache object using the command:

```
// Provided by VK_VERSION_1_0
VkResult vkGetPipelineCacheData(
    VkDevice          device,
    VkPipelineCache    pipelineCache,
    size_t*           pDataSize,
    void*             pData);
```

- **device** is the logical device that owns the pipeline cache.
- **pipelineCache** is the pipeline cache to retrieve data from.
- **pDataSize** is a pointer to a **size_t** value related to the amount of data in the pipeline cache, as described below.
- **pData** is either **NULL** or a pointer to a buffer.

If **pData** is **NULL**, then the maximum size of the data that **can** be retrieved from the pipeline cache, in

bytes, is returned in `pDataSize`. Otherwise, `pDataSize` **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by `pData`, and on return the variable is overwritten with the amount of data actually written to `pData`. If `pDataSize` is less than the maximum size that **can** be retrieved by the pipeline cache, at most `pDataSize` bytes will be written to `pData`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all of the pipeline cache was returned.

Any data written to `pData` is valid and **can** be provided as the `pInitialData` member of the `VkPipelineCacheCreateInfo` structure passed to `vkCreatePipelineCache`.

Two calls to `vkGetPipelineCacheData` with the same parameters **must** retrieve the same data unless a command that modifies the contents of the cache is called between them.

The initial bytes written to `pData` **must** be a header as described in the [Pipeline Cache Header](#) section.

If `pDataSize` is less than what is necessary to store this header, nothing will be written to `pData` and zero will be written to `pDataSize`.

NOTE

This query does not behave consistently with the behavior described in [Opaque Binary Data Results](#), for historical reasons.

If the amount of data available is larger than the passed `pDataSize`, the query returns up to the size of the passed buffer, and signals overflow with a `VK_INCOMPLETE` success status instead of returning a `VK_ERROR_NOT_ENOUGH_SPACE_KHR` error status.

Valid Usage

- VUID-vkGetPipelineCacheData-pipelineCache-11834
`pipelineCache` **must** not have been created with the `headerVersion` member of `VkPipelineCacheCreateInfo::pInitialData` equal to `VK_PIPELINE_CACHE_HEADER_VERSION_DATA_GRAPH_QCOM`

Valid Usage (Implicit)

- VUID-vkGetPipelineCacheData-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetPipelineCacheData-pipelineCache-parameter
`pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkGetPipelineCacheData-pDataSize-parameter
`pDataSize` **must** be a valid pointer to a `size_t` value
- VUID-vkGetPipelineCacheData-pData-parameter
If the value referenced by `pDataSize` is not 0, and `pData` is not `NULL`, `pData` **must** be a valid pointer to an array of `pDataSize` bytes
- VUID-vkGetPipelineCacheData-pipelineCache-parent

`pipelineCache` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

10.8.4. Pipeline Cache Header

Applications **can** store the data retrieved from the pipeline cache, and use these data, possibly in a future run of the application, to populate new pipeline cache objects. The results of pipeline compiles, however, **may** depend on the vendor ID, device ID, driver version, and other details of the device. To enable applications to detect when previously retrieved data is incompatible with the device, the pipeline cache data **must** begin with a valid pipeline cache header.

NOTE

Structures described in this section are not part of the Vulkan API and are only used to describe the representation of data elements in pipeline cache data. Accordingly, the valid usage clauses defined for structures defined in this section do not define valid usage conditions for APIs accepting pipeline cache data as input, as providing invalid pipeline cache data as input to any Vulkan API commands will result in the provided pipeline cache data being ignored.

Version one of the pipeline cache header is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineCacheHeaderVersionOne {
    uint32_t          headerSize;
    VkPipelineCacheHeaderVersion headerVersion;
    uint32_t          vendorID;
    uint32_t          deviceID;
    uint8_t           pipelineCacheUUID[VK_UUID_SIZE];
} VkPipelineCacheHeaderVersionOne;
```

- `headerSize` is the length in bytes of the pipeline cache header.
- `headerVersion` is a `VkPipelineCacheHeaderVersion` value specifying the version of the header. A consumer of the pipeline cache **should** use the cache version to interpret the remainder of the cache header. `headerVersion` **must** be written as exactly 4 bytes.

- `vendorID` is the `VkPhysicalDeviceProperties::vendorID` of the implementation.
- `deviceID` is the `VkPhysicalDeviceProperties::deviceID` of the implementation.
- `pipelineCacheUUID` is the `VkPhysicalDeviceProperties::pipelineCacheUUID` of the implementation.

Unlike most structures declared by the Vulkan API, all fields of this structure are written with the least significant byte first, regardless of host byte-order.

The C language specification does not define the packing of structure members. This layout assumes tight structure member packing, with members laid out in the order listed in the structure, and the intended size of the structure is 32 bytes. If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values at the correct offsets.

Valid Usage

- VUID-VkPipelineCacheHeaderVersionOne-headerSize-04967
`headerSize` **must** be 32
- VUID-VkPipelineCacheHeaderVersionOne-headerVersion-04968
`headerVersion` **must** be `VK_PIPELINE_CACHE_HEADER_VERSION_ONE`
- VUID-VkPipelineCacheHeaderVersionOne-headerSize-08990
`headerSize` **must** not exceed the size of the pipeline cache

Valid Usage (Implicit)

- VUID-VkPipelineCacheHeaderVersionOne-headerVersion-parameter
`headerVersion` **must** be a valid `VkPipelineCacheHeaderVersion` value

Possible values of the `headerVersion` value of the pipeline cache header are:

```
// Provided by VK_VERSION_1_0
typedef enum VkPipelineCacheHeaderVersion {
    VK_PIPELINE_CACHE_HEADER_VERSION_ONE = 1,
    // Provided by VK_QCOM_data_graph_model
    VK_PIPELINE_CACHE_HEADER_VERSION_DATA_GRAPH_QCOM = 1000629000,
} VkPipelineCacheHeaderVersion;
```

- `VK_PIPELINE_CACHE_HEADER_VERSION_ONE` specifies version one of the pipeline cache, described by `VkPipelineCacheHeaderVersionOne`.
- `VK_PIPELINE_CACHE_HEADER_VERSION_DATA_GRAPH_QCOM` specifies a pipeline cache for offline built data graph models, described by `VkPipelineCacheHeaderVersionDataGraphQCOM`.

The data graph pipeline cache header is defined as:

```
// Provided by VK_QCOM_data_graph_model
typedef struct VkPipelineCacheHeaderVersionDataGraphQCOM {
    uint32_t headerSize;
    VkPipelineCacheHeaderVersion headerVersion;
    VkDataGraphModelCacheTypeQCOM cacheType;
    uint32_t cacheVersion;
    uint32_t toolchainVersion
[VK_DATA_GRAPH_MODEL_TOOLCHAIN_VERSION_LENGTH_QCOM];
} VkPipelineCacheHeaderVersionDataGraphQCOM;
```

- **headerSize** is the length in bytes of the pipeline cache header.
- **headerVersion** is a [VkPipelineCacheHeaderVersion](#) value specifying the version of the header. A consumer of the pipeline cache **should** use the cache version to interpret the remainder of the cache header. **headerVersion** **must** be written as exactly 4 bytes.
- **cacheType** is the [VkDataGraphModelCacheTypeQCOM](#) type of data graph cache encoded in the data.
- **cacheVersion** is the version of the encoding of the data graph cache.
- **toolchainVersion** is a null-terminated UTF-8 string specifying the version of the compiler that built the data graph cache.

The application **should** verify that the header info is compatible with the [VkDataGraphProcessingEngineCreateInfoARM](#) passed during pipeline creation. Implementations **may** return [VK_PIPELINE_COMPILE_REQUIRED_EXT](#) from [vkCreateDataGraphPipelinesARM](#) if the cache is not compatible.

NOTE

This cache type is built using offline compilation, therefore Vulkan does not define engine compatibility. The application should refer to the offline compiler used to create the cache for guidance on compatibility.

Unlike most structures declared by the Vulkan API, all fields of this structure are written with the least significant byte first, regardless of host byte-order.

The C language specification does not define the packing of structure members. This layout assumes tight structure member packing, with members laid out in the order listed in the structure, and the intended size of the structure is 28 bytes. If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values at the correct offsets.

Valid Usage

- VUID-VkPipelineCacheHeaderVersionDataGraphQCOM-None-11835
The [dataGraphModel](#) feature **must** be enabled
- VUID-VkPipelineCacheHeaderVersionDataGraphQCOM-headerSize-11836
headerSize **must** be 28
- VUID-VkPipelineCacheHeaderVersionDataGraphQCOM-headerVersion-11837
headerVersion **must** be [VK_PIPELINE_CACHE_HEADER_VERSION_DATA_GRAPH_QCOM](#)

- VUID-VkPipelineCacheHeaderVersionDataGraphQCOM-headerSize-11838
headerSize must not exceed the size of the pipeline cache

Valid Usage (Implicit)

- VUID-VkPipelineCacheHeaderVersionDataGraphQCOM-headerVersion-parameter
headerVersion must be a valid [VkPipelineCacheHeaderVersion](#) value
- VUID-VkPipelineCacheHeaderVersionDataGraphQCOM-cacheType-parameter
cacheType must be a valid [VkDataGraphModelCacheTypeQCOM](#) value

The [VkDataGraphModelCacheTypeQCOM](#) enumeration determines the contents of the pipeline data graph cache.

Possible values are:

```
// Provided by VK_QCOM_data_graph_model
typedef enum VkDataGraphModelCacheTypeQCOM {
    VK_DATA_GRAPH_MODEL_CACHE_TYPE_GENERIC_BINARY_QCOM = 0,
} VkDataGraphModelCacheTypeQCOM;
```

- [VK_DATA_GRAPH_MODEL_CACHE_TYPE_GENERIC_BINARY_QCOM](#) specifies a general binary layout type.

[VK_DATA_GRAPH_MODEL_TOOLCHAIN_VERSION_LENGTH_QCOM](#) is the length in **char** values of an array containing the version of the compiler that built a data graph cache, as returned in [VkPipelineCacheHeaderVersionDataGraphQCOM::toolchainVersion](#).

```
#define VK_DATA_GRAPH_MODEL_TOOLCHAIN_VERSION_LENGTH_QCOM 3U
```

10.8.5. Destroying a Pipeline Cache

To destroy a pipeline cache, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyPipelineCache(
    VkDevice          device,
    VkPipelineCache    pipelineCache,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the pipeline cache object.
- **pipelineCache** is the handle of the pipeline cache to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyPipelineCache-pipelineCache-00771
If `VkAllocationCallbacks` were provided when `pipelineCache` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipelineCache-pipelineCache-00772
If no `VkAllocationCallbacks` were provided when `pipelineCache` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyPipelineCache-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyPipelineCache-pipelineCache-parameter
If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` **must** be a valid `VkPipelineCache` handle
- VUID-vkDestroyPipelineCache-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyPipelineCache-pipelineCache-parent
If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `pipelineCache` **must** be externally synchronized

10.9. Pipeline Binaries

Pipeline binary objects allow the result of pipeline construction to be reused between pipelines and between runs of an application. Reuse is achieved by extracting pipeline binaries from a `VkPipeline` object, associating them with a corresponding `VkPipelineBinaryKeyKHR` and then adding a `VkPipelineBinaryInfoKHR` to the `pNext` chain of any `Vk*PipelineCreateInfo` when creating a pipeline. Pipeline binaries can be reused between runs by extracting `VkPipelineBinaryDataKHR` from `VkPipelineBinaryKHR` objects, saving the contents, and then using them to create a `VkPipelineBinaryKHR` object on subsequent runs.

When creating a pipeline that includes `VkPipelineBinaryInfoKHR` in the `pNext` chain, or has the `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` flag set, the use of `VkPipelineCache` objects is not allowed.

Pipeline binary objects are represented by `VkPipelineBinaryKHR` handles:

```
// Provided by VK_KHR_pipeline_binary
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineBinaryKHR)
```

10.9.1. Generating the Pipeline Key

To generate the key for a particular pipeline creation info, call:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkGetPipelineKeyKHR(
    VkDevice device,
    const VkPipelineCreateInfoKHR* pPipelineCreateInfo,
    VkPipelineBinaryKeyKHR* pPipelineKey);
```

- `device` is the logical device that creates the pipeline object.
- `pPipelineCreateInfo` is `NULL` or a pointer to a `VkPipelineCreateInfoKHR` structure.
- `pPipelineKey` is a pointer to a `VkPipelineBinaryKeyKHR` structure in which the resulting key is returned.

If `pPipelineCreateInfo` is `NULL`, then the implementation **must** return the global key that applies to all pipelines. If the key obtained in this way changes between saving and restoring data obtained from `vkGetPipelineBinaryDataKHR` in a different `VkDevice`, then the application **must** assume that the restored data is invalid and cannot be passed to `vkCreatePipelineBinariesKHR`. Otherwise the application **can** assume the data is still valid.

If `pPipelineCreateInfo` is not `NULL`, the key obtained functions as a method to compare two pipeline creation info structures. Implementations **may** not compare parts of a pipeline creation info which would not contribute to the final binary output. If a shader module identifier is used instead of a shader module, the `pPipelineKey` generated **must** be equal to the key generated when using the shader module from which the identifier was queried. If the content of two `pPipelineKey` are equal, pipelines created with the two `pPipelineCreateInfo->pNext` create infos **must** produce the same `VkPipelineBinaryKHR` contents.

The pipeline key is distinct from pipeline binary key. Pipeline binary keys **can** only be obtained after compilation. The pipeline key is intended to optionally allow associating pipeline create info with multiple pipeline binary keys.

Valid Usage

- VUID-vkGetPipelineKeyKHR-pNext-09605
The `pNext` chain of `pPipelineCreateInfo` **must** not set `VkPipelineBinaryInfoKHR::binaryCount` to a value greater than 0

Valid Usage (Implicit)

- VUID-vkGetPipelineKeyKHR-device-parameter
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkGetPipelineKeyKHR-pPipelineCreateInfo-parameter
If `pPipelineCreateInfo` is not `NULL`, `pPipelineCreateInfo` **must** be a valid pointer to a valid [VkPipelineCreateInfoKHR](#) structure
- VUID-vkGetPipelineKeyKHR-pPipelineKey-parameter
`pPipelineKey` **must** be a valid pointer to a [VkPipelineBinaryKeyKHR](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkPipelineCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineCreateInfoKHR {
    VkStructureType    sType;
    void*              pNext;
} VkPipelineCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is a pointer to a structure extending this structure.

Valid Usage

- VUID-VkPipelineCreateInfoKHR-pNext-09604
`pNext` **must** be pointer to a valid instance of [VkGraphicsPipelineCreateInfo](#), [VkExecutionGraphPipelineCreateInfoAMD](#), [VkRayTracingPipelineCreateInfoKHR](#), or [VkComputePipelineCreateInfo](#)

Valid Usage (Implicit)

- VUID-VkPipelineCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_CREATE_INFO_KHR`

The `VkPipelineBinaryKeyKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryKeyKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           keySize;
    uint8_t             key[VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR];
} VkPipelineBinaryKeyKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `keySize` is the size, in bytes, of valid data returned in `key`.
- `key` is a buffer of opaque data specifying a pipeline binary key.

Any returned values beyond the first `keySize` bytes are undefined. Implementations **must** return a `keySize` greater than 0, and less-or-equal to `VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR`.

Two keys are considered equal if `keySize` is equal and the first `keySize` bytes of `key` compare equal.

Implementations **may** return a different `keySize` for different binaries.

Implementations **should** ensure that `keySize` is large enough to uniquely identify a pipeline binary.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryKeyKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_BINARY_KEY_KHR`
- VUID-VkPipelineBinaryKeyKHR-pNext-pNext
`pNext` **must** be `NULL`

`VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR` is the length in bytes of a binary key, as returned in `VkPipelineBinaryKeyKHR::keySize`.

```
#define VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR 32U
```

10.9.2. Creating Pipeline Binaries

To create pipeline binary objects, call:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkCreatePipelineBinariesKHR(
    VkDevice device,
    const VkPipelineBinaryCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkPipelineBinaryHandlesInfoKHR* pBinaries);
```

- **device** is the logical device that creates the pipeline binary objects.
- **pCreateInfo** is a pointer to a [VkPipelineBinaryCreateInfoKHR](#) structure that contains the data to create the pipeline binaries from.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pBinaries** is a pointer to a [VkPipelineBinaryHandlesInfoKHR](#) structure in which the resulting pipeline binaries are returned.

The implementation will attempt to create all pipeline binaries. If creation fails for any pipeline binary, then:

- The corresponding entry in the **pPipelineBinaries** output array will be filled with [VK_NULL_HANDLE](#).
- The **VkResult** returned by **vkCreatePipelineBinariesKHR** will contain the error value for the first entry in the output array in **pBinaries** containing [VK_NULL_HANDLE](#).

Valid Usage (Implicit)

- VUID-vkCreatePipelineBinariesKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreatePipelineBinariesKHR-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkPipelineBinaryCreateInfoKHR](#) structure
- VUID-vkCreatePipelineBinariesKHR-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreatePipelineBinariesKHR-pBinaries-parameter
pBinaries **must** be a valid pointer to a [VkPipelineBinaryHandlesInfoKHR](#) structure

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_PIPELINE_BINARY_MISSING_KHR](#)

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkPipelineBinaryHandlesInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryHandlesInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             pipelineBinaryCount;
    VkPipelineBinaryKHR* pPipelineBinaries;
} VkPipelineBinaryHandlesInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pipelineBinaryCount](#) is the number of binaries associated with this pipeline or the number of entries in the [pPipelineBinaries](#) array.
- [pPipelineBinaries](#) is [NULL](#) or a pointer to an array of [VkPipelineBinaryKHR](#) handles in which the resulting pipeline binaries are returned.

If [pPipelineBinaries](#) is [NULL](#), the number of binaries that would be created is returned in [pipelineBinaryCount](#). Otherwise, [pipelineBinaryCount](#) **must** be the number of entries in the [pPipelineBinaries](#) array, and on return from [vkCreatePipelineBinariesKHR](#) [pipelineBinaryCount](#) is overwritten with the number of handles actually written to [pPipelineBinaries](#). If the value of [pipelineBinaryCount](#) is less than the number of binaries that would have been created, at most [pipelineBinaryCount](#) handles will be written to [pPipelineBinaries](#) and [VK_INCOMPLETE](#) will be returned instead of [VK_SUCCESS](#), to indicate that [pPipelineBinaries](#) was not large enough to create all the binaries.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryHandlesInfoKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_PIPELINE_BINARY_HANDLES_INFO_KHR](#)
- VUID-VkPipelineBinaryHandlesInfoKHR-pNext-pNext
[pNext](#) **must** be [NULL](#)
- VUID-VkPipelineBinaryHandlesInfoKHR-pPipelineBinaries-parameter
If [pipelineBinaryCount](#) is not 0, and [pPipelineBinaries](#) is not [NULL](#), [pPipelineBinaries](#) **must** be a valid pointer to an array of [pipelineBinaryCount](#) [VkPipelineBinaryKHR](#) handles

The `VkPipelineBinaryCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryCreateInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    const VkPipelineBinaryKeysAndDataKHR* pKeysAndDataInfo;
    VkPipeline                pipeline;
    const VkPipelineCreateInfo* pPipelineCreateInfo;
} VkPipelineBinaryCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pKeysAndDataInfo` is `NULL` or a pointer to a `VkPipelineBinaryKeysAndDataKHR` structure that contains keys and data to create the pipeline binaries from.
- `pipeline` is `VK_NULL_HANDLE` or a `VkPipeline` that contains data to create the pipeline binaries from.
- `pPipelineCreateInfo` is `NULL` or a pointer to a `VkPipelineCreateInfoKHR` structure with the pipeline creation info. This is used to probe the implementation's internal cache for pipeline binaries.

When `pPipelineCreateInfo` is not `NULL`, an implementation will attempt to retrieve pipeline binary data from an internal cache external to the application if `pipelineBinaryInternalCache` is `VK_TRUE`. Applications **can** use this to determine if a pipeline **can** be created without compilation. If the implementation fails to create a pipeline binary due to missing an internal cache entry, `VK_PIPELINE_BINARY_MISSING_KHR` is returned. If creation succeeds, the resulting binary **can** be used to create a pipeline. `VK_PIPELINE_BINARY_MISSING_KHR` **may** be returned for any reason in this situation, even if creating a pipeline binary with the same parameters that succeeded earlier.

If `pipelineBinaryPrecompiledInternalCache` is `VK_TRUE`, the implementation **may** be able to create pipeline binaries even when `pPipelineCreateInfo` has not been used to create binaries before by the application.

NOTE

On some platforms, internal pipeline caches may be pre-populated before running the application.

Valid Usage

- VUID-VkPipelineBinaryCreateInfoKHR-pipeline-09607
If `pipeline` is not `VK_NULL_HANDLE`, `pipeline` **must** have been created with `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR`
- VUID-VkPipelineBinaryCreateInfoKHR-pipeline-09608
If `pipeline` is not `VK_NULL_HANDLE`, `vkReleaseCapturedPipelineDataKHR` **must** not have been called on `pipeline` prior to this command
- VUID-VkPipelineBinaryCreateInfoKHR-pipelineBinaryInternalCache-09609

If `pipelineBinaryInternalCache` is `VK_FALSE` `pPipelineCreateInfo` **must** be `NULL`

- VUID-VkPipelineBinaryCreateInfoKHR-device-09610

If `device` was created with `VkDevicePipelineBinaryInternalCacheControlKHR::disableInternalCache` set to `VK_TRUE`, `pPipelineCreateInfo` **must** be `NULL`

- VUID-VkPipelineBinaryCreateInfoKHR-pKeysAndDataInfo-09619

One and only one of `pKeysAndDataInfo`, `pipeline`, or `pPipelineCreateInfo` **must** be non-`NULL`

- VUID-VkPipelineBinaryCreateInfoKHR-pPipelineCreateInfo-09606

If `pPipelineCreateInfo` is not `NULL`, the `pNext` chain of `pPipelineCreateInfo` **must** not set `VkPipelineBinaryInfoKHR::binaryCount` to a value greater than 0

Valid Usage (Implicit)

- VUID-VkPipelineBinaryCreateInfoKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_BINARY_CREATE_INFO_KHR`

- VUID-VkPipelineBinaryCreateInfoKHR-pNext-pNext

`pNext` **must** be `NULL`

- VUID-VkPipelineBinaryCreateInfoKHR-pKeysAndDataInfo-parameter

If `pKeysAndDataInfo` is not `NULL`, `pKeysAndDataInfo` **must** be a valid pointer to a valid `VkPipelineBinaryKeysAndDataKHR` structure

- VUID-VkPipelineBinaryCreateInfoKHR-pipeline-parameter

If `pipeline` is not `VK_NULL_HANDLE`, `pipeline` **must** be a valid `VkPipeline` handle

- VUID-VkPipelineBinaryCreateInfoKHR-pPipelineCreateInfo-parameter

If `pPipelineCreateInfo` is not `NULL`, `pPipelineCreateInfo` **must** be a valid pointer to a valid `VkPipelineCreateInfoKHR` structure

The `VkPipelineBinaryKeysAndDataKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryKeysAndDataKHR {
    uint32_t                binaryCount;
    const VkPipelineBinaryKeyKHR* pPipelineBinaryKeys;
    const VkPipelineBinaryDataKHR* pPipelineBinaryData;
} VkPipelineBinaryKeysAndDataKHR;
```

- `binaryCount` is the size of the `pPipelineBinaryKeys` and `pPipelineBinaryData` arrays
- `pPipelineBinaryKeys` is a pointer to an array of `VkPipelineBinaryKeyKHR` structures containing the pipeline binary keys
- `pPipelineBinaryData` is a pointer to an array of `VkPipelineBinaryDataKHR` structures containing the pipeline binary data

Valid Usage (Implicit)

- VUID-VkPipelineBinaryKeysAndDataKHR-pPipelineBinaryKeys-parameter
`pPipelineBinaryKeys` **must** be a valid pointer to an array of `binaryCount` valid `VkPipelineBinaryKeyKHR` structures
- VUID-VkPipelineBinaryKeysAndDataKHR-pPipelineBinaryData-parameter
`pPipelineBinaryData` **must** be a valid pointer to an array of `binaryCount` valid `VkPipelineBinaryDataKHR` structures
- VUID-VkPipelineBinaryKeysAndDataKHR-binaryCount-arraylength
`binaryCount` **must** be greater than 0

The `VkPipelineBinaryDataKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryDataKHR {
    size_t    dataSize;
    void*     pData;
} VkPipelineBinaryDataKHR;
```

- `dataSize` is the size of the `pData` buffer in bytes.
- `pData` is a pointer to a buffer of `size` bytes that contains pipeline binary data obtained from `vkGetPipelineBinaryDataKHR`.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryDataKHR-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-VkPipelineBinaryDataKHR-dataSize-arraylength
`dataSize` **must** be greater than 0

10.9.3. Retrieving Pipeline Binary Data

Data **can** be retrieved from a pipeline binary object using the command:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkGetPipelineBinaryDataKHR(
    VkDevice          device,
    const VkPipelineBinaryDataInfoKHR* pInfo,
    VkPipelineBinaryKeyKHR* pPipelineBinaryKey,
    size_t*           pPipelineBinaryDataSize,
    void*             pPipelineBinaryData);
```

- `device` is the logical device that created the pipeline binary.

- `pInfo` is a pointer to a `VkPipelineBinaryDataInfoKHR` structure which describes the pipeline binary to get data from.
- `pPipelineBinaryKey` is a pointer to a `VkPipelineBinaryKeyKHR` structure where the key for this binary will be written.
- `pPipelineBinaryDataSize` is a pointer to a `size_t` value related to the amount of data in the pipeline binary, as described below.
- `pPipelineBinaryData` is either `NULL` or a pointer to a buffer.

If `pPipelineBinaryData` is `NULL`, then the size of the data, in bytes, that is required to store the binary is returned in `pPipelineBinaryDataSize`. Otherwise, `pPipelineBinaryDataSize` **must** contain the size of the buffer, in bytes, pointed to by `pPipelineBinaryData`, and on return `pPipelineBinaryDataSize` is overwritten with the size of the data, in bytes, that is required to store the binary. If `pPipelineBinaryDataSize` is less than the size that is required to store the binary, nothing is written to `pPipelineBinaryData` and `VK_ERROR_NOT_ENOUGH_SPACE_KHR` will be returned, instead of `VK_SUCCESS`.

If the call returns one of the success return codes, the pipeline binary key is written to `pPipelineBinaryKey`, regardless of whether `pPipelineBinaryData` is `NULL` or not.

If `pipelineBinaryCompressedData` is `VK_FALSE`, implementations **should** not return compressed pipeline binary data to the application.

Valid Usage (Implicit)

- VUID-vkGetPipelineBinaryDataKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetPipelineBinaryDataKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkPipelineBinaryDataInfoKHR` structure
- VUID-vkGetPipelineBinaryDataKHR-pPipelineBinaryKey-parameter
`pPipelineBinaryKey` **must** be a valid pointer to a `VkPipelineBinaryKeyKHR` structure
- VUID-vkGetPipelineBinaryDataKHR-pPipelineBinaryDataSize-parameter
`pPipelineBinaryDataSize` **must** be a valid pointer to a `size_t` value
- VUID-vkGetPipelineBinaryDataKHR-pPipelineBinaryData-parameter
If the value referenced by `pPipelineBinaryDataSize` is not `0`, and `pPipelineBinaryData` is not `NULL`, `pPipelineBinaryData` **must** be a valid pointer to an array of `pPipelineBinaryDataSize` bytes

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_NOT_ENOUGH_SPACE_KHR`

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkPipelineBinaryDataInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryDataInfoKHR {
    VkStructureType      sType;
    void*                pNext;
    VkPipelineBinaryKHR  pipelineBinary;
} VkPipelineBinaryDataInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBinary` is the pipeline binary to get data from.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryDataInfoKHR-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_PIPELINE_BINARY_DATA_INFO_KHR](#)
- VUID-VkPipelineBinaryDataInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPipelineBinaryDataInfoKHR-pipelineBinary-parameter
`pipelineBinary` **must** be a valid [VkPipelineBinaryKHR](#) handle

10.9.4. Releasing Captured Pipeline Binary Data

To release pipeline resources captured with [VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR](#), call:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkReleaseCapturedPipelineDataKHR(
    VkDevice device,
    const VkReleaseCapturedPipelineDataInfoKHR* pInfo,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that created the pipeline object.
- `pInfo` is a pointer to a [VkReleaseCapturedPipelineDataInfoKHR](#) structure which describes the pipeline to release the data from.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

The implementation **may** free any resources captured as a result of creating the pipeline with `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` and put the pipeline into a state as if `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` had not been provided at pipeline creation time.

NOTE

Any resources captured as a result of creating the pipeline with `VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR` are implicitly freed by `vkDestroyPipeline`.

Valid Usage

- VUID-vkReleaseCapturedPipelineDataKHR-pipeline-09611
If `VkAllocationCallbacks` were provided when `pipeline` was created, a compatible set of callbacks **must** be provided in `pAllocator`
- VUID-vkReleaseCapturedPipelineDataKHR-pipeline-09612
If no `VkAllocationCallbacks` were provided when `pipeline` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkReleaseCapturedPipelineDataKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkReleaseCapturedPipelineDataKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkReleaseCapturedPipelineDataInfoKHR` structure
- VUID-vkReleaseCapturedPipelineDataKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkReleaseCapturedPipelineDataInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkReleaseCapturedPipelineDataInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkPipeline          pipeline;
} VkReleaseCapturedPipelineDataInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pipeline** the handle of the pipeline object to release the data from.

Valid Usage

- VUID-VkReleaseCapturedPipelineDataInfoKHR-pipeline-09613
pipeline must have been created with [VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR](#)
- VUID-VkReleaseCapturedPipelineDataInfoKHR-pipeline-09618
pipeline must not have been used in a previous call to [vkReleaseCapturedPipelineDataKHR](#)

Valid Usage (Implicit)

- VUID-VkReleaseCapturedPipelineDataInfoKHR-sType-sType
sType must be [VK_STRUCTURE_TYPE_RELEASE_CAPTURED_PIPELINE_DATA_INFO_KHR](#)
- VUID-VkReleaseCapturedPipelineDataInfoKHR-pNext-pNext
pNext must be **NULL**
- VUID-VkReleaseCapturedPipelineDataInfoKHR-pipeline-parameter
pipeline must be a valid [VkPipeline](#) handle

Host Synchronization

- Host access to **pipeline must** be externally synchronized

10.9.5. Destroying Pipeline Binaries

To destroy a [VkPipelineBinaryKHR](#), call:

```
// Provided by VK_KHR_pipeline_binary
void vkDestroyPipelineBinaryKHR(
    VkDevice                device,
    VkPipelineBinaryKHR     pipelineBinary,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that created the pipeline binary object.
- **pipelineBinary** is the handle of the pipeline binary object to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-09614
If **VkAllocationCallbacks** were provided when **pipelineBinary** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-09615
If no **VkAllocationCallbacks** were provided when **pipelineBinary** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyPipelineBinaryKHR-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-parameter
If **pipelineBinary** is not **VK_NULL_HANDLE**, **pipelineBinary** **must** be a valid **VkPipelineBinaryKHR** handle
- VUID-vkDestroyPipelineBinaryKHR-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-parent
If **pipelineBinary** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **pipelineBinary** **must** be externally synchronized

10.10. Specialization Constants

Specialization constants are a mechanism whereby constants in a SPIR-V module **can** have their constant value specified at the time the **VkPipeline** is created. This allows a SPIR-V module to have constants that **can** be modified while executing an application that uses the Vulkan API.

NOTE

Specialization constants are useful to allow a compute shader to have its local workgroup size changed at runtime by the user, for example.

Each **VkPipelineShaderStageCreateInfo** structure contains a **pSpecializationInfo** member, which **can** be **NULL** to indicate no specialization constants, or point to a **VkSpecializationInfo** structure.

The `VkSpecializationInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSpecializationInfo {
    uint32_t          mapEntryCount;
    const VkSpecializationMapEntry* pMapEntries;
    size_t            dataSize;
    const void*        pData;
} VkSpecializationInfo;
```

- `mapEntryCount` is the number of entries in the `pMapEntries` array.
- `pMapEntries` is a pointer to an array of `VkSpecializationMapEntry` structures, which map constant IDs to offsets in `pData`.
- `dataSize` is the byte size of the `pData` buffer.
- `pData` contains the actual constant values to specialize with.

Valid Usage

- VUID-VkSpecializationInfo-offset-00773
The `offset` member of each element of `pMapEntries` **must** be less than `dataSize`
- VUID-VkSpecializationInfo-pMapEntries-00774
The `size` member of each element of `pMapEntries` **must** be less than or equal to `dataSize` minus `offset`
- VUID-VkSpecializationInfo-constantID-04911
The `constantID` value of each element of `pMapEntries` **must** be unique within `pMapEntries`

Valid Usage (Implicit)

- VUID-VkSpecializationInfo-pMapEntries-parameter
If `mapEntryCount` is not 0, `pMapEntries` **must** be a valid pointer to an array of `mapEntryCount` valid `VkSpecializationMapEntry` structures
- VUID-VkSpecializationInfo-pData-parameter
If `dataSize` is not 0, `pData` **must** be a valid pointer to an array of `dataSize` bytes

The `VkSpecializationMapEntry` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSpecializationMapEntry {
    uint32_t    constantID;
    uint32_t    offset;
    size_t      size;
} VkSpecializationMapEntry;
```

- **constantID** is the ID of the specialization constant in SPIR-V.
- **offset** is the byte offset of the specialization constant value within the supplied data buffer.
- **size** is the byte size of the specialization constant value within the supplied data buffer.

If a **constantID** value is not a specialization constant ID used in the shader, that map entry does not affect the behavior of the pipeline.

Valid Usage

- VUID-VkSpecializationMapEntry-constantID-00776

For a **constantID** specialization constant declared in a shader, **size** **must** match the byte size of the **constantID**. If the specialization constant is of type **boolean**, **size** **must** be the byte size of **VkBool32**

In human readable SPIR-V:

```
OpDecorate %x SpecId 13 ; decorate .x component of WorkgroupSize with ID 13
OpDecorate %y SpecId 42 ; decorate .y component of WorkgroupSize with ID 42
OpDecorate %z SpecId 3 ; decorate .z component of WorkgroupSize with ID 3
OpDecorate %wgsiz BuiltIn WorkgroupSize ; decorate WorkgroupSize onto constant
%i32 = OpTypeInt 32 0 ; declare an unsigned 32-bit type
%uvec3 = OpTypeVector %i32 3 ; declare a 3 element vector type of unsigned 32-bit
%x = OpSpecConstant %i32 1 ; declare the .x component of WorkgroupSize
%y = OpSpecConstant %i32 1 ; declare the .y component of WorkgroupSize
%z = OpSpecConstant %i32 1 ; declare the .z component of WorkgroupSize
%wgsiz = OpSpecConstantComposite %uvec3 %x %y %z ; declare WorkgroupSize
```

From the above we have three specialization constants, one for each of the x, y, and z elements of the WorkgroupSize vector.

Now to specialize the above via the specialization constants mechanism:

```
const VkSpecializationMapEntry entries[] =
{
    {
        .constantID = 13,
        .offset = 0 * sizeof(uint32_t),
        .size = sizeof(uint32_t)
    },
    {
        .constantID = 42,
        .offset = 1 * sizeof(uint32_t),
        .size = sizeof(uint32_t)
    },
    {
        .constantID = 3,
        .offset = 2 * sizeof(uint32_t),
```

```

        .size = sizeof(uint32_t)
    }
};

const uint32_t data[] = { 16, 8, 4 }; // our workgroup size is 16x8x4

const VkSpecializationInfo info =
{
    .mapEntryCount = 3,
    .pMapEntries = entries,
    .dataSize = 3 * sizeof(uint32_t),
    .pData = data,
};

```

Then when calling `vkCreateComputePipelines`, and passing the `VkSpecializationInfo` we defined as the `pSpecializationInfo` parameter of `VkPipelineShaderStageCreateInfo`, we will create a compute pipeline with the runtime specified local workgroup size.

Another example would be that an application has a SPIR-V module that has some platform-dependent constants they wish to use.

In human readable SPIR-V:

```

OpDecorate %1 SpecId 0 ; decorate our signed 32-bit integer constant
OpDecorate %2 SpecId 12 ; decorate our 32-bit floating-point constant
%i32 = OpTypeInt 32 1 ; declare a signed 32-bit type
%float = OpTypeFloat 32 ; declare a 32-bit floating-point type
%1 = OpSpecConstant %i32 -1 ; some signed 32-bit integer constant
%2 = OpSpecConstant %float 0.5 ; some 32-bit floating-point constant

```

From the above we have two specialization constants, one is a signed 32-bit integer and the second is a 32-bit floating-point value.

Now to specialize the above via the specialization constants mechanism:

```

struct SpecializationData {
    int32_t data0;
    float data1;
};

const VkSpecializationMapEntry entries[] =
{
    {
        .constantID = 0,
        .offset = offsetof(SpecializationData, data0),
        .size = sizeof(SpecializationData::data0)
    },
    {
        .constantID = 12,

```

```

        .offset = offsetof(SpecializationData, data1),
        .size = sizeof(SpecializationData::data1)
    }
};

SpecializationData data;
data.data0 = -42;    // set the data for the 32-bit integer
data.data1 = 42.0f; // set the data for the 32-bit floating-point

const VkSpecializationInfo info =
{
    .mapEntryCount = 2,
    .pMapEntries = entries,
    .dataSize = sizeof(data),
    .pdata = &data,
};

```

It is legal for a SPIR-V module with specializations to be compiled into a pipeline where no specialization information was provided. SPIR-V specialization constants contain default values such that if a specialization is not provided, the default value will be used. In the examples above, it would be valid for an application to only specialize some of the specialization constants within the SPIR-V module, and let the other constants use their default values encoded within the `OpSpecConstant` declarations.

10.11. Pipeline Libraries

A pipeline library is a special pipeline that was created using the [VK_PIPELINE_CREATE_LIBRARY_BIT_KHR](#) and cannot be bound, instead it defines a set of pipeline state which can be linked into other pipelines. For ray tracing pipelines this includes shaders and shader groups. For graphics pipelines this includes distinct library types defined by [VkGraphicsPipelineLibraryFlagBitsEXT](#). The application **must** maintain the lifetime of a pipeline library based on the pipelines that link with it.

This linkage is achieved by using the following structure within the appropriate creation mechanisms:

The `VkPipelineLibraryCreateInfoKHR` structure is defined as:

```

// Provided by VK_KHR_pipeline_library
typedef struct VkPipelineLibraryCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           libraryCount;
    const VkPipeline*  pLibraries;
} VkPipelineLibraryCreateInfoKHR;

```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- **libraryCount** is the number of pipeline libraries in **pLibraries**.
- **pLibraries** is a pointer to an array of **VkPipeline** structures specifying pipeline libraries to use when creating a pipeline.

Valid Usage

- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-03381
Each element of **pLibraries** **must** have been created with **VK_PIPELINE_CREATE_LIBRARY_BIT_KHR**
- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-06855
If any library in **pLibraries** was created with a shader stage with **VkPipelineShaderStageModuleIdentifierCreateInfoEXT** and **identifierSize** not equal to 0, the pipeline **must** be created with the **VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT** flag set

Valid Usage (Implicit)

- VUID-VkPipelineLibraryCreateInfoKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_PIPELINE_LIBRARY_CREATE_INFO_KHR**
- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-parameter
If **libraryCount** is not 0, **pLibraries** **must** be a valid pointer to an array of **libraryCount** valid **VkPipeline** handles

Structure Chaining

Extends the structure

- **VkGraphicsPipelineCreateInfo**

Pipelines created with **VK_PIPELINE_CREATE_LIBRARY_BIT_KHR** libraries **can** depend on other pipeline libraries in **VkPipelineLibraryCreateInfoKHR**.

A pipeline library is considered in-use, as long as one of the linking pipelines is in-use. This applies recursively if a pipeline library includes other pipeline libraries.

10.12. Pipeline Binding

Once a pipeline has been created, it **can** be bound to the command buffer using the command:

```
// Provided by VK_VERSION_1_0
void vkCmdBindPipeline(
    VkCommandBuffer          commandBuffer,
    VkPipelineBindPoint      pipelineBindPoint,
    VkPipeline                pipeline);
```

- `commandBuffer` is the command buffer that the pipeline will be bound to.
- `pipelineBindPoint` is a `VkPipelineBindPoint` value specifying to which bind point the pipeline is bound. Binding one does not disturb the others.
- `pipeline` is the pipeline to be bound.

Once bound, a pipeline binding affects subsequent commands that interact with the given pipeline type in the command buffer until a different pipeline of the same type is bound to the bind point, or until the pipeline bind point is disturbed by binding a [shader object](#) as described in [Interaction with Pipelines](#). Commands that do not interact with the [given pipeline](#) type **must** not be affected by the pipeline state.

Valid Usage

- VUID-vkCmdBindPipeline-pipelineBindPoint-00777
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_COMPUTE`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdBindPipeline-pipelineBindPoint-00778
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBindPipeline-pipelineBindPoint-00779
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_COMPUTE`, `pipeline` **must** be a compute pipeline
- VUID-vkCmdBindPipeline-pipelineBindPoint-00780
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS`, `pipeline` **must** be a graphics pipeline
- VUID-vkCmdBindPipeline-pipeline-00781
If the `variableMultisampleRate` feature is not supported, `pipeline` is a graphics pipeline, the current subpass [uses no attachments](#), and this is not the first call to this function with a graphics pipeline after transitioning to the current subpass, then the sample count specified by this pipeline **must** match that set in the previous pipeline
- VUID-vkCmdBindPipeline-variableSampleLocations-01525
If `VkPhysicalDeviceSampleLocationsPropertiesEXT::variableSampleLocations` is `VK_FALSE`, and `pipeline` is a graphics pipeline created with a `renderPass` that is not `VK_NULL_HANDLE` and with a `VkPipelineSampleLocationsStateCreateInfoEXT` structure having its `sampleLocationsEnable` member set to `VK_TRUE` but without `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` enabled then the current render pass instance **must** have been begun by specifying a `VkRenderPassSampleLocationsBeginInfoEXT` structure whose

`pPostSubpassSampleLocations` member contains an element with a `subpassIndex` matching the current subpass index and the `sampleLocationsInfo` member of that element **must** match the `sampleLocationsInfo` specified in `VkPipelineSampleLocationsStateCreateInfoEXT` when the pipeline was created

- VUID-vkCmdBindPipeline-None-02323

This command **must** not be recorded when transform feedback is active

- VUID-vkCmdBindPipeline-pipelineBindPoint-02391

If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations

- VUID-vkCmdBindPipeline-pipelineBindPoint-02392

If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR`, `pipeline` **must** be a ray tracing pipeline

- VUID-vkCmdBindPipeline-pipelineBindPoint-06721

If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR`, `commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdBindPipeline-pipelineProtectedAccess-07408

If the `pipelineProtectedAccess` feature is enabled, and `commandBuffer` is a protected command buffer, `pipeline` **must** have been created without `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT`

- VUID-vkCmdBindPipeline-pipelineProtectedAccess-07409

If the `pipelineProtectedAccess` feature is enabled, and `commandBuffer` is not a protected command buffer, `pipeline` **must** have been created without `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT`

- VUID-vkCmdBindPipeline-pipeline-03382

`pipeline` **must** not have been created with `VK_PIPELINE_CREATE_LIBRARY_BIT_KHR` set

- VUID-vkCmdBindPipeline-commandBuffer-04808

If `commandBuffer` is a secondary command buffer with `VkCommandBufferInheritanceViewportScissorInfoNV::viewportScissor2D` enabled and `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS`, then the `pipeline` **must** have been created with `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` or `VK_DYNAMIC_STATE_VIEWPORT`, and `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` or `VK_DYNAMIC_STATE_SCISSOR` enabled

- VUID-vkCmdBindPipeline-commandBuffer-04809

If `commandBuffer` is a secondary command buffer with `VkCommandBufferInheritanceViewportScissorInfoNV::viewportScissor2D` enabled and `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS` and `pipeline` was created with `VkPipelineDiscardRectangleStateCreateInfoEXT` structure and its `discardRectangleCount` member is not `0`, or the pipeline was created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` enabled, then the pipeline **must** have been created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` enabled

- VUID-vkCmdBindPipeline-pipelineBindPoint-04881

If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_GRAPHICS` and the `provokingVertexModePerPipeline` limit is `VK_FALSE`, then pipeline's `VkPipelineRasterizationProvokingVertexStateCreateInfoEXT::provokingVertexMode` **must**

be the same as that of any other pipelines previously bound to this bind point within the current render pass instance, including any pipeline already bound when beginning the render pass instance

- VUID-vkCmdBindPipeline-pipelineBindPoint-04949
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdBindPipeline-pipelineBindPoint-04950
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI`, `pipeline` **must** be a subpass shading pipeline
- VUID-vkCmdBindPipeline-pipelineBindPoint-09910
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_DATA_GRAPH_ARM`, the `VkCommandPool` that `commandBuffer` was allocated from **must** have been created for a queue family that supports `VK_QUEUE_DATA_GRAPH_BIT_ARM`
- VUID-vkCmdBindPipeline-pipelineBindPoint-09911
If `pipelineBindPoint` is `VK_PIPELINE_BIND_POINT_DATA_GRAPH_ARM`, `pipeline` **must** be a data graph pipeline
- VUID-vkCmdBindPipeline-pipeline-09912
If `pipeline` is a data graph pipeline and the `VkDataGraphPipelineCreateInfoARM` structure used to create it had a `VkDataGraphProcessingEngineCreateInfoARM` structure in its `pNext` chain that specified any foreign data processing engines, then the command pool from which `commandBuffer` was allocated **must** have been created with a `VkCommandPoolCreateInfo` structure that had a `VkDataGraphProcessingEngineCreateInfoARM` structure specifying a superset of the foreign data graph processing engines specified at pipeline creation time in its `pNext` chain
- VUID-vkCmdBindPipeline-pipeline-09913
If `pipeline` is a data graph pipeline and the `VkDataGraphPipelineCreateInfoARM` structure used to create it did not have a `VkDataGraphProcessingEngineCreateInfoARM` structure in its `pNext` chain, then the command pool from which `commandBuffer` was allocated **must** not have been created with a `VkCommandPoolCreateInfo` that had a `VkDataGraphProcessingEngineCreateInfoARM` structure in its `pNext` chain

Valid Usage (Implicit)

- VUID-vkCmdBindPipeline-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindPipeline-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-vkCmdBindPipeline-pipeline-parameter
`pipeline` **must** be a valid `VkPipeline` handle
- VUID-vkCmdBindPipeline-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBindPipeline-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support

VK_QUEUE_COMPUTE_BIT, VK_QUEUE_DATA_GRAPH_BIT_ARM, or
VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdBindPipeline-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindPipeline-commonparent
Both of **commandBuffer**, and **pipeline** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_DATA_GRAPH_BIT_ARM VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindPipeline is not affected by **conditional rendering**

Possible values of **vkCmdBindPipeline::pipelineBindPoint**, specifying the bind point of a pipeline object, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkPipelineBindPoint {
    VK_PIPELINE_BIND_POINT_GRAPHICS = 0,
    VK_PIPELINE_BIND_POINT_COMPUTE = 1,
#ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_AMD_shader_enqueue
    VK_PIPELINE_BIND_POINT_EXECUTION_GRAPH_AMD = 1000134000,
#endif
    // Provided by VK_KHR_ray_tracing_pipeline
    VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR = 1000165000,
    // Provided by VK_HUAWEI_subpass_shading
    VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI = 1000369003,
    // Provided by VK_ARM_data_graph
    VK_PIPELINE_BIND_POINT_DATA_GRAPH_ARM = 1000507000,
    // Provided by VK_NV_ray_tracing
    VK_PIPELINE_BIND_POINT_RAY_TRACING_NV = VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR,
} VkPipelineBindPoint;
```

- [VK_PIPELINE_BIND_POINT_COMPUTE](#) specifies binding as a compute pipeline.
- [VK_PIPELINE_BIND_POINT_GRAPHICS](#) specifies binding as a graphics pipeline.
- [VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR](#) specifies binding as a ray tracing pipeline.
- [VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI](#) specifies binding as a subpass shading pipeline.
- [VK_PIPELINE_BIND_POINT_EXECUTION_GRAPH_AMD](#) specifies binding as an [execution graph pipeline](#).

For pipelines that were created with the support of multiple shader groups (see [Graphics Pipeline Shader Groups](#)), the regular `vkCmdBindPipeline` command will bind Shader Group 0. To explicitly bind a shader group use:

```
// Provided by VK_NV_device_generated_commands
void vkCmdBindPipelineShaderGroupNV(
    VkCommandBuffer          commandBuffer,
    VkPipelineBindPoint      pipelineBindPoint,
    VkPipeline               pipeline,
    uint32_t                 groupIndex);
```

- `commandBuffer` is the command buffer that the pipeline will be bound to.
- `pipelineBindPoint` is a [VkPipelineBindPoint](#) value specifying the bind point to which the pipeline will be bound.
- `pipeline` is the pipeline to be bound.
- `groupIndex` is the shader group to be bound.

Valid Usage

- VUID-vkCmdBindPipelineShaderGroupNV-groupIndex-02893
`groupIndex` **must** be `0` or less than the effective `VkGraphicsPipelineShaderGroupsCreateInfoNV::groupCount` including the referenced pipelines
- VUID-vkCmdBindPipelineShaderGroupNV-pipelineBindPoint-02894
The `pipelineBindPoint` **must** be `VK_PIPELINE_BIND_POINT_GRAPHICS`
- VUID-vkCmdBindPipelineShaderGroupNV-groupIndex-02895
The same restrictions as `vkCmdBindPipeline` apply as if the bound pipeline was created only with the Shader Group from the `groupIndex` information
- VUID-vkCmdBindPipelineShaderGroupNV-deviceGeneratedCommands-02896
The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdBindPipelineShaderGroupNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindPipelineShaderGroupNV-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-vkCmdBindPipelineShaderGroupNV-pipeline-parameter
`pipeline` **must** be a valid `VkPipeline` handle
- VUID-vkCmdBindPipelineShaderGroupNV-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBindPipelineShaderGroupNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBindPipelineShaderGroupNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindPipelineShaderGroupNV-commonparent
Both of `commandBuffer`, and `pipeline` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	State

Conditional Rendering

vkCmdBindPipelineShaderGroupNV is not affected by [conditional rendering](#)

10.12.1. Interaction With Shader Objects

If the [shaderObject](#) feature is enabled, applications **can** use both pipelines and [shader objects](#) at the same time. The interaction between pipelines and shader objects is described in [Interaction with Pipelines](#).

10.13. Dynamic State

When a pipeline object is bound, any pipeline object state that is not specified as dynamic is applied to the command buffer state. Pipeline object state that is specified as dynamic is not applied to the command buffer state at this time.

Instead, dynamic state **can** be modified at any time and persists for the lifetime of the command buffer, or until modified by another dynamic state setting command, or made invalid by binding a pipeline in which that state is statically specified.

If the [commandBufferInheritance](#) feature is enabled, all valid state from the previously executed command buffer in the queue is inherited into the next command buffer executed in the same queue. This inherited state does not need to be set again before draw or dispatch commands.

When a pipeline object is bound, the following applies to each state parameter:

- If the state is not specified as dynamic in the new pipeline object, then that command buffer state is overwritten by the state in the new pipeline object. Before any draw or dispatch call with this pipeline there **must** not have been any calls to any of the corresponding dynamic state setting commands after this pipeline was bound.
- If the state is specified as dynamic in the new pipeline object, then that command buffer state is not disturbed. Before any draw or dispatch call with this pipeline there **must** have been at least one call to each of the corresponding dynamic state setting commands. The state-setting commands **must** be recorded after command buffer recording was begun, or after the last command binding a pipeline object with that state specified as static, whichever was the latter.

- If the state is not included (corresponding pointer in [VkGraphicsPipelineCreateInfo](#) was `NULL` or was ignored) in the new pipeline object, then that command buffer state is not disturbed. For example, mesh shading pipelines do not include vertex input state and therefore do not disturb any such command buffer state.

Dynamic state that does not affect the result of operations **can** be left undefined.

NOTE	For example, if blending is disabled by the pipeline object state then the dynamic color blend constants do not need to be specified in the command buffer, even if this state is specified as dynamic in the pipeline object.
NOTE	Applications running on Vulkan implementations advertising a VkPhysicalDeviceDriverProperties::conformanceVersion less than 1.3.8.0 should be aware that rebinding the bound pipeline object may not reapply static state.

10.14. Pipeline Properties and Shader Information

When a pipeline is created, its state and shaders are compiled into zero or more device-specific executables, which are used when executing commands against that pipeline. To query the properties of these pipeline executables, call:

```
// Provided by VK_KHR_pipeline_executable_properties
VkResult vkGetPipelineExecutablePropertiesKHR(
    VkDevice device,
    const VkPipelineInfoKHR* pPipelineInfo,
    uint32_t* pExecutableCount,
    VkPipelineExecutablePropertiesKHR* pProperties);
```

- `device` is the device that created the pipeline.
- `pPipelineInfo` describes the pipeline being queried.
- `pExecutableCount` is a pointer to an integer related to the number of pipeline executables available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of [VkPipelineExecutablePropertiesKHR](#) structures.

If `pProperties` is `NULL`, then the number of pipeline executables associated with the pipeline is returned in `pExecutableCount`. Otherwise, `pExecutableCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pExecutableCount` is less than the number of pipeline executables associated with the pipeline, at most `pExecutableCount` structures will be written, and [VK_INCOMPLETE](#) will be returned instead of [VK_SUCCESS](#), to indicate that not all the available properties were returned.

Valid Usage

- VUID-vkGetPipelineExecutablePropertiesKHR-pipelineExecutableInfo-03270
The `pipelineExecutableInfo` feature **must** be enabled
- VUID-vkGetPipelineExecutablePropertiesKHR-pipeline-03271
The `pipeline` member of `pPipelineInfo` **must** have been created with `device`

Valid Usage (Implicit)

- VUID-vkGetPipelineExecutablePropertiesKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetPipelineExecutablePropertiesKHR-pPipelineInfo-parameter
`pPipelineInfo` **must** be a valid pointer to a valid `VkPipelineInfoKHR` structure
- VUID-vkGetPipelineExecutablePropertiesKHR-pExecutableCount-parameter
`pExecutableCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPipelineExecutablePropertiesKHR-pProperties-parameter
If the value referenced by `pExecutableCount` is not 0, and `pProperties` is not NULL, `pProperties` **must** be a valid pointer to an array of `pExecutableCount` `VkPipelineExecutablePropertiesKHR` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkPipelineExecutablePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutablePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkShaderStageFlags stages;
    char               name[VK_MAX_DESCRIPTION_SIZE];
    char               description[VK_MAX_DESCRIPTION_SIZE];
    uint32_t           subgroupSize;
} VkPipelineExecutablePropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **stages** is a bitmask of zero or more **VkShaderStageFlagBits** indicating which shader stages (if any) were principally used as inputs to compile this pipeline executable.
- **name** is an array of **VK_MAX_DESCRIPTION_SIZE** **char** containing a null-terminated UTF-8 string which is a short human readable name for this pipeline executable.
- **description** is an array of **VK_MAX_DESCRIPTION_SIZE** **char** containing a null-terminated UTF-8 string which is a human readable description for this pipeline executable.
- **subgroupSize** is the subgroup size with which this pipeline executable is dispatched.

Not all implementations have a 1:1 mapping between shader stages and pipeline executables and some implementations **may** reduce a given shader stage to fixed function hardware programming such that no pipeline executable is available. No guarantees are provided about the mapping between shader stages and pipeline executables and **stages** **should** be considered a best effort hint. Because the application **cannot** rely on the **stages** field to provide an exact description, **name** and **description** provide a human readable name and description which more accurately describes the given pipeline executable.

Valid Usage (Implicit)

- VUID-VkPipelineExecutablePropertiesKHR-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_PROPERTIES_KHR**
- VUID-VkPipelineExecutablePropertiesKHR-pNext-pNext
pNext **must** be **NULL**

To query the pipeline properties call:

```
// Provided by VK_EXT_pipeline_properties
VkResult vkGetPipelinePropertiesEXT(
    VkDevice          device,
    const VkPipelineInfoKHR* pPipelineInfo,
    VkBaseOutStructure*      pPipelineProperties);
```

- **device** is the logical device that created the pipeline.

- `pPipelineInfo` is a pointer to a `VkPipelineInfoEXT` structure which describes the pipeline being queried.
- `pPipelineProperties` is a pointer to a `VkBaseOutStructure` structure in which the pipeline properties will be written.

To query a pipeline's `pipelineIdentifier` pass a `VkPipelinePropertiesIdentifierEXT` structure in `pPipelineProperties`. Each pipeline is associated with a `pipelineIdentifier` and the identifier is implementation specific.

Valid Usage

- VUID-vkGetPipelinePropertiesEXT-pipeline-06738
The `pipeline` member of `pPipelineInfo` **must** have been created with `device`
- VUID-vkGetPipelinePropertiesEXT-pPipelineProperties-06739
`pPipelineProperties` **must** be a valid pointer to a `VkPipelinePropertiesIdentifierEXT` structure
- VUID-vkGetPipelinePropertiesEXT-None-06766
The `pipelinePropertiesIdentifier` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetPipelinePropertiesEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetPipelinePropertiesEXT-pPipelineInfo-parameter
`pPipelineInfo` **must** be a valid pointer to a valid `VkPipelineInfoKHR` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkPipelinePropertiesIdentifierEXT` structure is defined as:

```
// Provided by VK_EXT_pipeline_properties
typedef struct VkPipelinePropertiesIdentifierEXT {
    VkStructureType    sType;
    void*              pNext;
    uint8_t            pipelineIdentifier[VK_UUID_SIZE];
} VkPipelinePropertiesIdentifierEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pipelineIdentifier** is an array of **VK_UUID_SIZE** **uint8_t** values into which the pipeline identifier will be written.

Valid Usage (Implicit)

- VUID-VkPipelinePropertiesIdentifierEXT-sType-sType
sType must be **VK_STRUCTURE_TYPE_PIPELINE_PROPERTIES_IDENTIFIER_EXT**
- VUID-VkPipelinePropertiesIdentifierEXT-pNext-pNext
pNext must be **NULL**

The **VkPipelineInfoKHR** structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline          pipeline;
} VkPipelineInfoKHR;
```

```
// Provided by VK_EXT_pipeline_properties
// Equivalent to VkPipelineInfoKHR
typedef VkPipelineInfoKHR VkPipelineInfoEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pipeline** is a **VkPipeline** handle.

Valid Usage (Implicit)

- VUID-VkPipelineInfoKHR-sType-sType
sType must be **VK_STRUCTURE_TYPE_PIPELINE_INFO_KHR**
- VUID-VkPipelineInfoKHR-pNext-pNext
pNext must be **NULL**

- VUID-VkPipelineInfoKHR-pipeline-parameter
pipeline **must** be a valid [VkPipeline](#) handle

Each pipeline executable **may** have a set of statistics associated with it that are generated by the pipeline compilation process. These statistics **may** include things such as instruction counts, amount of spilling (if any), maximum number of simultaneous threads, or anything else which **may** aid developers in evaluating the expected performance of a shader. To query the compile time statistics associated with a pipeline executable, call:

```
// Provided by VK_KHR_pipeline_executable_properties
VkResult vkGetPipelineExecutableStatisticsKHR(
    VkDevice device,
    const VkPipelineExecutableInfoKHR* pExecutableInfo,
    uint32_t* pStatisticCount,
    VkPipelineExecutableStatisticKHR* pStatistics);
```

- **device** is the device that created the pipeline.
- **pExecutableInfo** describes the pipeline executable being queried.
- **pStatisticCount** is a pointer to an integer related to the number of statistics available or queried, as described below.
- **pStatistics** is either **NULL** or a pointer to an array of [VkPipelineExecutableStatisticKHR](#) structures.

If **pStatistics** is **NULL**, then the number of statistics associated with the pipeline executable is returned in **pStatisticCount**. Otherwise, **pStatisticCount** **must** point to a variable set by the application to the number of elements in the **pStatistics** array, and on return the variable is overwritten with the number of structures actually written to **pStatistics**. If **pStatisticCount** is less than the number of statistics associated with the pipeline executable, at most **pStatisticCount** structures will be written, and [VK_INCOMPLETE](#) will be returned instead of [VK_SUCCESS](#), to indicate that not all the available statistics were returned.

Valid Usage

- VUID-vkGetPipelineExecutableStatisticsKHR-pipelineExecutableInfo-03272
The **pipelineExecutableInfo** feature **must** be enabled
- VUID-vkGetPipelineExecutableStatisticsKHR-pipeline-03273
The **pipeline** member of **pExecutableInfo** **must** have been created with **device**
- VUID-vkGetPipelineExecutableStatisticsKHR-pipeline-03274
The **pipeline** member of **pExecutableInfo** **must** have been created with [VK_PIPELINE_CREATE_CAPTURE_STATISTICS_BIT_KHR](#)

Valid Usage (Implicit)

- VUID-vkGetPipelineExecutableStatisticsKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetPipelineExecutableStatisticsKHR-pExecutableInfo-parameter **pExecutableInfo** **must** be a valid pointer to a valid [VkPipelineExecutableInfoKHR](#) structure
- VUID-vkGetPipelineExecutableStatisticsKHR-pStatisticCount-parameter **pStatisticCount** **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPipelineExecutableStatisticsKHR-pStatistics-parameter
If the value referenced by **pStatisticCount** is not 0, and **pStatistics** is not `NULL`, **pStatistics** **must** be a valid pointer to an array of **pStatisticCount** [VkPipelineExecutableStatisticKHR](#) structures

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkPipelineExecutableInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutableInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline          pipeline;
    uint32_t            executableIndex;
} VkPipelineExecutableInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **pipeline** is the pipeline to query.
- **executableIndex** is the index of the pipeline executable to query in the array of executable properties returned by [vkGetPipelineExecutablePropertiesKHR](#).

Valid Usage

- VUID-VkPipelineExecutableInfoKHR-executableIndex-03275

`executableIndex` **must** be less than the number of pipeline executables associated with `pipeline` as returned in the `pExecutableCount` parameter of `vkGetPipelineExecutablePropertiesKHR`

Valid Usage (Implicit)

- VUID-VkPipelineExecutableInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_INFO_KHR`
- VUID-VkPipelineExecutableInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPipelineExecutableInfoKHR-pipeline-parameter
`pipeline` **must** be a valid `VkPipeline` handle

The `VkPipelineExecutableStatisticKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutableStatisticKHR {
    VkStructureType    sType;
    void*              pNext;
    char                name[VK_MAX_DESCRIPTION_SIZE];
    char                description[VK_MAX_DESCRIPTION_SIZE];
    VkPipelineExecutableStatisticFormatKHR format;
    VkPipelineExecutableStatisticValueKHR value;
} VkPipelineExecutableStatisticKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `name` is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which is a short human readable name for this statistic.
- `description` is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which is a human readable description for this statistic.
- `format` is a `VkPipelineExecutableStatisticFormatKHR` value specifying the format of the data found in `value`.
- `value` is the value of this statistic.

Valid Usage (Implicit)

- VUID-VkPipelineExecutableStatisticKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_STATISTIC_KHR`

- VUID-VkPipelineExecutableStatisticKHR-pNext-pNext
pNext must be NULL

The `VkPipelineExecutableStatisticFormatKHR` enum is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef enum VkPipelineExecutableStatisticFormatKHR {
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_BOOL32_KHR = 0,
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_INT64_KHR = 1,
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_UINT64_KHR = 2,
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_FLOAT64_KHR = 3,
} VkPipelineExecutableStatisticFormatKHR;
```

- `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_BOOL32_KHR` specifies that the statistic is returned as a 32-bit boolean value which **must** be either `VK_TRUE` or `VK_FALSE` and **should** be read from the **b32** field of `VkPipelineExecutableStatisticValueKHR`.
- `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_INT64_KHR` specifies that the statistic is returned as a signed 64-bit integer and **should** be read from the **i64** field of `VkPipelineExecutableStatisticValueKHR`.
- `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_UINT64_KHR` specifies that the statistic is returned as an unsigned 64-bit integer and **should** be read from the **u64** field of `VkPipelineExecutableStatisticValueKHR`.
- `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_FLOAT64_KHR` specifies that the statistic is returned as a 64-bit floating-point value and **should** be read from the **f64** field of `VkPipelineExecutableStatisticValueKHR`.

The `VkPipelineExecutableStatisticValueKHR` union is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef union VkPipelineExecutableStatisticValueKHR {
    VkBool32      b32;
    int64_t       i64;
    uint64_t      u64;
    double        f64;
} VkPipelineExecutableStatisticValueKHR;
```

- **b32** is the 32-bit boolean value if the `VkPipelineExecutableStatisticFormatKHR` is `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_BOOL32_KHR`.
- **i64** is the signed 64-bit integer value if the `VkPipelineExecutableStatisticFormatKHR` is `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_INT64_KHR`.
- **u64** is the unsigned 64-bit integer value if the `VkPipelineExecutableStatisticFormatKHR` is `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_UINT64_KHR`.
- **f64** is the 64-bit floating-point value if the `VkPipelineExecutableStatisticFormatKHR` is `VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_FLOAT64_KHR`.

Each pipeline executable **may** have one or more text or binary internal representations associated with it which are generated as part of the compile process. These **may** include the final shader assembly, a binary form of the compiled shader, or the shader compiler's internal representation at any number of intermediate compile steps. To query the internal representations associated with a pipeline executable, call:

```
// Provided by VK_KHR_pipeline_executable_properties
VkResult vkGetPipelineExecutableInternalRepresentationsKHR(
    VkDevice device,
    const VkPipelineExecutableInfoKHR* pExecutableInfo,
    uint32_t* pInternalRepresentationCount,
    VkPipelineExecutableInternalRepresentationKHR* pInternalRepresentations);
```

- **device** is the device that created the pipeline.
- **pExecutableInfo** describes the pipeline executable being queried.
- **pInternalRepresentationCount** is a pointer to an integer related to the number of internal representations available or queried, as described below.
- **pInternalRepresentations** is either **NULL** or a pointer to an array of **VkPipelineExecutableInternalRepresentationKHR** structures.

If **pInternalRepresentations** is **NULL**, then the number of internal representations associated with the pipeline executable is returned in **pInternalRepresentationCount**. Otherwise, **pInternalRepresentationCount** **must** point to a variable set by the application to the number of elements in the **pInternalRepresentations** array, and on return the variable is overwritten with the number of structures actually written to **pInternalRepresentations**. If **pInternalRepresentationCount** is less than the number of internal representations associated with the pipeline executable, at most **pInternalRepresentationCount** structures will be written, and **VK_INCOMPLETE** will be returned instead of **VK_SUCCESS**, to indicate that not all the available representations were returned.

While the details of the internal representations remain implementation-dependent, the implementation **should** order the internal representations in the order in which they occur in the compiled pipeline with the final shader assembly (if any) last.

Valid Usage

- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pipelineExecutableInfo-03276
The **pipelineExecutableInfo** feature **must** be enabled
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pipeline-03277
The **pipeline** member of **pExecutableInfo** **must** have been created with **device**
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pipeline-03278
The **pipeline** member of **pExecutableInfo** **must** have been created with **VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR**

Valid Usage (Implicit)

- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pExecutableInfo-parameter **pExecutableInfo** **must** be a valid pointer to a valid [VkPipelineExecutableInfoKHR](#) structure
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pInternalRepresentationCount-parameter **pInternalRepresentationCount** **must** be a valid pointer to a [uint32_t](#) value
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pInternalRepresentations-parameter
If the value referenced by **pInternalRepresentationCount** is not **0**, and **pInternalRepresentations** is not **NULL**, **pInternalRepresentations** **must** be a valid pointer to an array of **pInternalRepresentationCount** [VkPipelineExecutableInternalRepresentationKHR](#) structures

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkPipelineExecutableInternalRepresentationKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutableInternalRepresentationKHR {
    VkStructureType    sType;
    void*              pNext;
    char               name[VK_MAX_DESCRIPTION_SIZE];
    char               description[VK_MAX_DESCRIPTION_SIZE];
    VkBool32           isText;
    size_t             dataSize;
    void*              pData;
} VkPipelineExecutableInternalRepresentationKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `name` is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which is a short human readable name for this internal representation.
- `description` is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which is a human readable description for this internal representation.
- `isText` specifies whether the returned data is text or opaque data. If `isText` is `VK_TRUE` then the data returned in `pData` is text and is guaranteed to be a null-terminated UTF-8 string.
- `dataSize` is an integer related to the size, in bytes, of the internal representation's data, as described below.
- `pData` is either `NULL` or a pointer to a block of data into which the implementation will write the internal representation.

If `pData` is `NULL`, then the size, in bytes, of the internal representation data is returned in `dataSize`. Otherwise, `dataSize` **must** be the size of the buffer, in bytes, pointed to by `pData` and on return `dataSize` is overwritten with the number of bytes of data actually written to `pData` including any trailing null character. If `dataSize` is less than the size, in bytes, of the internal representation's data, at most `dataSize` bytes of data will be written to `pData`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available representation was returned.

If `isText` is `VK_TRUE` and `pData` is not `NULL` and `dataSize` is not zero, the last byte written to `pData` will be a null character.

Valid Usage (Implicit)

- `VUID-VkPipelineExecutableInternalRepresentationKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_INTERNAL_REPRESENTATION_KHR`
- `VUID-VkPipelineExecutableInternalRepresentationKHR-pNext-pNext` `pNext` **must** be `NULL`

Information about a particular shader that has been compiled as part of a pipeline object can be extracted by calling:

```
// Provided by VK_AMD_shader_info
VkResult vkGetShaderInfoAMD(
    VkDevice          device,
    VkPipeline        pipeline,
    VkShaderStageFlagBits shaderStage,
    VkShaderInfoTypeAMD infoType,
    size_t*           pInfoSize,
    void*             pInfo);
```

- `device` is the device that created `pipeline`.
- `pipeline` is the target of the query.

- **shaderStage** is a [VkShaderStageFlagBits](#) specifying the particular shader within the pipeline about which information is being queried.
- **infoType** describes what kind of information is being queried.
- **pInfoSize** is a pointer to a value related to the amount of data the query returns, as described below.
- **pInfo** is either **NULL** or a pointer to a buffer.

If **pInfo** is **NULL**, then the maximum size of the information that **can** be retrieved about the shader, in bytes, is returned in **pInfoSize**. Otherwise, **pInfoSize** **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by **pInfo**, and on return the variable is overwritten with the amount of data actually written to **pInfo**. If **pInfoSize** is less than the maximum size that **can** be retrieved by the pipeline cache, then at most **pInfoSize** bytes will be written to **pInfo**, and [VK_INCOMPLETE](#) will be returned, instead of [VK_SUCCESS](#), to indicate that not all required of the pipeline cache was returned.

Not all information is available for every shader and implementations may not support all kinds of information for any shader. When a certain type of information is unavailable, the function returns [VK_ERROR_FEATURE_NOT_PRESENT](#).

If information is successfully and fully queried, the function will return [VK_SUCCESS](#).

For **infoType** [VK_SHADER_INFO_TYPE_STATISTICS_AMD](#), a [VkShaderStatisticsInfoAMD](#) structure will be written to the buffer pointed to by **pInfo**. This structure will be populated with statistics regarding the physical device resources used by that shader along with other miscellaneous information and is described in further detail below.

For **infoType** [VK_SHADER_INFO_TYPE_DISASSEMBLY_AMD](#), **pInfo** is a pointer to a null-terminated UTF-8 string containing human-readable disassembly. The exact formatting and contents of the disassembly string are vendor-specific.

The formatting and contents of all other types of information, including **infoType** [VK_SHADER_INFO_TYPE_BINARY_AMD](#), are left to the vendor and are not further specified by this extension.

NOTE	<p>This query does not behave consistently with the behavior described in Opaque Binary Data Results, for historical reasons.</p> <p>If the amount of data available is larger than the passed pInfoSize, the query returns up to the size of the passed buffer, and signals overflow with a VK_INCOMPLETE success status instead of returning a VK_ERROR_NOT_ENOUGH_SPACE_KHR error status.</p>
-------------	---

Valid Usage (Implicit)

- VUID-vkGetShaderInfoAMD-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetShaderInfoAMD-pipeline-parameter

`pipeline` **must** be a valid `VkPipeline` handle

- VUID-vkGetShaderInfoAMD-shaderStage-parameter
`shaderStage` **must** be a valid `VkShaderStageFlagBits` value
- VUID-vkGetShaderInfoAMD-infoType-parameter
`infoType` **must** be a valid `VkShaderInfoTypeAMD` value
- VUID-vkGetShaderInfoAMD-pInfoSize-parameter
`pInfoSize` **must** be a valid pointer to a `size_t` value
- VUID-vkGetShaderInfoAMD-pInfo-parameter
If the value referenced by `pInfoSize` is not `0`, and `pInfo` is not `NULL`, `pInfo` **must** be a valid pointer to an array of `pInfoSize` bytes
- VUID-vkGetShaderInfoAMD-pipeline-parent
`pipeline` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_FEATURE_NOT_PRESENT`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Possible values of `vkGetShaderInfoAMD::infoType`, specifying the information being queried from a shader, are:

```
// Provided by VK_AMD_shader_info
typedef enum VkShaderInfoTypeAMD {
    VK_SHADER_INFO_TYPE_STATISTICS_AMD = 0,
    VK_SHADER_INFO_TYPE_BINARY_AMD = 1,
    VK_SHADER_INFO_TYPE_DISASSEMBLY_AMD = 2,
} VkShaderInfoTypeAMD;
```

- `VK_SHADER_INFO_TYPE_STATISTICS_AMD` specifies that device resources used by a shader will be queried.
- `VK_SHADER_INFO_TYPE_BINARY_AMD` specifies that implementation-specific information will be queried.
- `VK_SHADER_INFO_TYPE_DISASSEMBLY_AMD` specifies that human-readable disassembly of a shader.

The `VkShaderStatisticsInfoAMD` structure is defined as:

```
// Provided by VK_AMD_shader_info
typedef struct VkShaderStatisticsInfoAMD {
    VkShaderStageFlags      shaderStageMask;
    VkShaderResourceUsageAMD resourceUsage;
    uint32_t                numPhysicalVgprs;
    uint32_t                numPhysicalSgprs;
    uint32_t                numAvailableVgprs;
    uint32_t                numAvailableSgprs;
    uint32_t                computeWorkGroupSize[3];
} VkShaderStatisticsInfoAMD;
```

- `shaderStageMask` are the combination of logical shader stages contained within this shader.
- `resourceUsage` is a `VkShaderResourceUsageAMD` structure describing internal physical device resources used by this shader.
- `numPhysicalVgprs` is the maximum number of vector instruction general-purpose registers (VGPRs) available to the physical device.
- `numPhysicalSgprs` is the maximum number of scalar instruction general-purpose registers (SGPRs) available to the physical device.
- `numAvailableVgprs` is the maximum limit of VGPRs made available to the shader compiler.
- `numAvailableSgprs` is the maximum limit of SGPRs made available to the shader compiler.
- `computeWorkGroupSize` is the local workgroup size of this shader in { X, Y, Z } dimensions.

Some implementations may merge multiple logical shader stages together in a single shader. In such cases, `shaderStageMask` will contain a bitmask of all of the stages that are active within that shader. Consequently, if specifying those stages as input to `vkGetShaderInfoAMD`, the same output information **may** be returned for all such shader stage queries.

The number of available VGPRs and SGPRs (`numAvailableVgprs` and `numAvailableSgprs` respectively) are the shader-addressable subset of physical registers that is given as a limit to the compiler for register assignment. These values **may** further be limited by implementations due to performance optimizations where register pressure is a bottleneck.

The `VkShaderResourceUsageAMD` structure is defined as:

```
// Provided by VK_AMD_shader_info
typedef struct VkShaderResourceUsageAMD {
    uint32_t    numUsedVgprs;
    uint32_t    numUsedSgprs;
    uint32_t    ldsSizePerLocalWorkGroup;
    size_t      ldsUsageSizeInBytes;
    size_t      scratchMemUsageInBytes;
} VkShaderResourceUsageAMD;
```

- `numUsedVgprs` is the number of vector instruction general-purpose registers used by this shader.
- `numUsedSgprs` is the number of scalar instruction general-purpose registers used by this shader.
- `ldsSizePerLocalWorkGroup` is the maximum local data store size per work group in bytes.
- `ldsUsageSizeInBytes` is the LDS usage size in bytes per work group by this shader.
- `scratchMemUsageInBytes` is the scratch memory usage in bytes by this shader.

10.15. Pipeline Compiler Control

The compilation of a pipeline **can** be tuned by adding a `VkPipelineCompilerControlCreateInfoAMD` structure to the `pNext` chain of `VkGraphicsPipelineCreateInfo` or `VkComputePipelineCreateInfo`.

```
// Provided by VK_AMD_pipeline_compiler_control
typedef struct VkPipelineCompilerControlCreateInfoAMD {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineCompilerControlFlagsAMD compilerControlFlags;
} VkPipelineCompilerControlCreateInfoAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `compilerControlFlags` is a bitmask of `VkPipelineCompilerControlFlagBitsAMD` affecting how the pipeline will be compiled.

Valid Usage (Implicit)

- VUID-VkPipelineCompilerControlCreateInfoAMD-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_COMPILER_CONTROL_CREATE_INFO_AMD`
- VUID-VkPipelineCompilerControlCreateInfoAMD-compilerControlFlags-zero-bitmask `compilerControlFlags` **must** be 0

Structure Chaining

Extends the structures

- `VkComputePipelineCreateInfo`
- `VkExecutionGraphPipelineCreateInfoAMD`
- `VkGraphicsPipelineCreateInfo`

There are currently no available flags for this extension; flags will be added by future versions of this extension.

```
// Provided by VK_AMD_pipeline_compiler_control
typedef enum VkPipelineCompilerControlFlagBitsAMD {
} VkPipelineCompilerControlFlagBitsAMD;
```

```
// Provided by VK_AMD_pipeline_compiler_control
typedef VkFlags VkPipelineCompilerControlFlagsAMD;
```

`VkPipelineCompilerControlFlagsAMD` is a bitmask type for setting a mask of zero or more `VkPipelineCompilerControlFlagBitsAMD`.

10.16. Pipeline Creation Feedback

Feedback about the creation of a particular pipeline object **can** be obtained by adding a `VkPipelineCreationFeedbackCreateInfo` structure to the `pNext` chain of `VkGraphicsPipelineCreateInfo`, `VkRayTracingPipelineCreateInfoKHR`, `VkRayTracingPipelineCreateInfoNV`, `VkDataGraphPipelineCreateInfoARM`, or `VkComputePipelineCreateInfo`. The `VkPipelineCreationFeedbackCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPipelineCreationFeedbackCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineCreationFeedback* pPipelineCreationFeedback;
    uint32_t                 pipelineStageCreationFeedbackCount;
    VkPipelineCreationFeedback* pPipelineStageCreationFeedbacks;
} VkPipelineCreationFeedbackCreateInfo;
```

```
// Provided by VK_EXT_pipeline_creation_feedback
// Equivalent to VkPipelineCreationFeedbackCreateInfo
typedef VkPipelineCreationFeedbackCreateInfo VkPipelineCreationFeedbackCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pPipelineCreationFeedback` is a pointer to a `VkPipelineCreationFeedback` structure.
- `pipelineStageCreationFeedbackCount` is the number of elements in `pPipelineStageCreationFeedbacks`.
- `pPipelineStageCreationFeedbacks` is a pointer to an array of `pipelineStageCreationFeedbackCount` `VkPipelineCreationFeedback` structures.

An implementation **should** write pipeline creation feedback to `pPipelineCreationFeedback` and **may** write pipeline stage creation feedback to `pPipelineStageCreationFeedbacks`. An implementation **must** set or clear the `VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT` in `VkPipelineCreationFeedback::flags` for `pPipelineCreationFeedback` and every element of

`pPipelineStageCreationFeedbacks`.

NOTE

One common scenario for an implementation to skip per-stage feedback is when `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` is set in `pPipelineCreationFeedback`.

When chained to `VkRayTracingPipelineCreateInfoKHR`, `VkRayTracingPipelineCreateInfoNV`, or `VkGraphicsPipelineCreateInfo`, the `i` element of `pPipelineStageCreationFeedbacks` corresponds to the `i` element of `VkRayTracingPipelineCreateInfoKHR::pStages`, `VkRayTracingPipelineCreateInfoNV::pStages`, or `VkGraphicsPipelineCreateInfo::pStages`. When chained to `VkComputePipelineCreateInfo`, the first element of `pPipelineStageCreationFeedbacks` corresponds to `VkComputePipelineCreateInfo::stage`.

Valid Usage (Implicit)

- VUID-VkPipelineCreationFeedbackCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_CREATION_FEEDBACK_CREATE_INFO`
- VUID-VkPipelineCreationFeedbackCreateInfo-pPipelineCreationFeedback-parameter
`pPipelineCreationFeedback` **must** be a valid pointer to a `VkPipelineCreationFeedback` structure
- VUID-VkPipelineCreationFeedbackCreateInfo-pPipelineStageCreationFeedbacks-parameter
If `pipelineStageCreationFeedbackCount` is not 0, `pPipelineStageCreationFeedbacks` **must** be a valid pointer to an array of `pipelineStageCreationFeedbackCount` `VkPipelineCreationFeedback` structures

Structure Chaining

Extends the structures

- `VkComputePipelineCreateInfo`
- `VkDataGraphPipelineCreateInfoARM`
- `VkExecutionGraphPipelineCreateInfoAMD`
- `VkGraphicsPipelineCreateInfo`
- `VkRayTracingPipelineCreateInfoKHR`
- `VkRayTracingPipelineCreateInfoNV`

The `VkPipelineCreationFeedback` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPipelineCreationFeedback {
    VkPipelineCreationFeedbackFlags    flags;
    uint64_t                           duration;
} VkPipelineCreationFeedback;
```

```
// Provided by VK_EXT_pipeline_creation_feedback
// Equivalent to VkPipelineCreationFeedback
typedef VkPipelineCreationFeedback VkPipelineCreationFeedbackEXT;
```

- **flags** is a bitmask of [VkPipelineCreationFeedbackFlagBits](#) providing feedback about the creation of a pipeline or of a pipeline stage.
- **duration** is the duration spent creating a pipeline or pipeline stage in nanoseconds.

If the [VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT](#) is not set in **flags**, an implementation **must** not set any other bits in **flags**, and the values of all other **VkPipelineCreationFeedback** data members are undefined.

Possible values of the **flags** member of [VkPipelineCreationFeedback](#) are:

```
// Provided by VK_VERSION_1_3
typedef enum VkPipelineCreationFeedbackFlagBits {
    VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT = 0x00000001,
    VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT = 0x00000002,
    VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT = 0x00000004,
    // Provided by VK_EXT_pipeline_creation_feedback
    VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT_EXT =
VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT,
    // Provided by VK_EXT_pipeline_creation_feedback
    VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT_EXT =
VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT,
    // Provided by VK_EXT_pipeline_creation_feedback
    VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT_EXT =
VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT,
} VkPipelineCreationFeedbackFlagBits;
```

```
// Provided by VK_EXT_pipeline_creation_feedback
// Equivalent to VkPipelineCreationFeedbackFlagBits
typedef VkPipelineCreationFeedbackFlagBits VkPipelineCreationFeedbackFlagBitsEXT;
```

- [VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT](#) specifies that the feedback information is valid.
- [VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT](#) specifies that a readily usable pipeline or pipeline stage was found in the **pipelineCache** specified by the application in the pipeline creation command.

An implementation **should** set the `VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT` bit if it was able to avoid the large majority of pipeline or pipeline stage creation work by using the `pipelineCache` parameter of `vkCreateGraphicsPipelines`, `vkCreateRayTracingPipelinesKHR`, `vkCreateRayTracingPipelinesNV`, `vkCreateDataGraphPipelinesARM`, or `vkCreateComputePipelines`. When an implementation sets this bit for the entire pipeline, it **may** leave it unset for any stage.

NOTE

Implementations are encouraged to provide a meaningful signal to applications using this bit. The intention is to communicate to the application that the pipeline or pipeline stage was created “as fast as it gets” using the pipeline cache provided by the application. If an implementation uses an internal cache, it is discouraged from setting this bit as the feedback would be unactionable.

- `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` specifies that the base pipeline specified by the `basePipelineHandle` or `basePipelineIndex` member of the `VkPipelineCreateInfo` structure was used to accelerate the creation of the pipeline.

An implementation **should** set the `VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT` bit if it was able to avoid a significant amount of work by using the base pipeline.

NOTE

While “significant amount of work” is subjective, implementations are encouraged to provide a meaningful signal to applications using this bit. For example, a 1% reduction in duration may not warrant setting this bit, while a 50% reduction would.

```
// Provided by VK_VERSION_1_3
typedef VkFlags VkPipelineCreationFeedbackFlags;
```

```
// Provided by VK_EXT_pipeline_creation_feedback
// Equivalent to VkPipelineCreationFeedbackFlags
typedef VkPipelineCreationFeedbackFlags VkPipelineCreationFeedbackFlagsEXT;
```

`VkPipelineCreationFeedbackFlags` is a bitmask type for providing zero or more `VkPipelineCreationFeedbackFlagBits`.

Chapter 11. Memory Allocation

Vulkan memory is broken up into two categories, *host memory* and *device memory*.

11.1. Host Memory

Host memory is memory needed by the Vulkan implementation for non-device-visible storage.

NOTE

This memory **may** be used to store the implementation's representation and state of Vulkan objects.

Vulkan provides applications the opportunity to perform host memory allocations on behalf of the Vulkan implementation. If this feature is not used, the implementation will perform its own memory allocations. Since most memory allocations are off the critical path, this is not meant as a performance feature. Rather, this **can** be useful for certain embedded systems, for debugging purposes (e.g. putting a guard page after all host allocations), or for memory allocation logging.

Allocators are provided by the application as a pointer to a `VkAllocationCallbacks` structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkAllocationCallbacks {
    void*                                pUserData;
    PFN_vkAllocationFunction              pfnAllocation;
    PFN_vkReallocationFunction            pfnReallocation;
    PFN_vkFreeFunction                   pfnFree;
    PFN_vkInternalAllocationNotification pfnInternalAllocation;
    PFN_vkInternalFreeNotification       pfnInternalFree;
} VkAllocationCallbacks;
```

- `pUserData` is NULL or an application-defined user data pointer to be interpreted by the implementation of the callbacks. When any of the callbacks in `VkAllocationCallbacks` are called, the Vulkan implementation will pass this value as the first parameter to the callback. This value **can** vary each time an allocator is passed into a command, even when the same object takes an allocator in multiple commands.
- `pfnAllocation` is a `PFN_vkAllocationFunction` pointer to an application-defined memory allocation function.
- `pfnReallocation` is a `PFN_vkReallocationFunction` pointer to an application-defined memory reallocation function.
- `pfnFree` is a `PFN_vkFreeFunction` pointer to an application-defined memory free function.
- `pfnInternalAllocation` is a `PFN_vkInternalAllocationNotification` pointer to an application-defined function that is called by the implementation when the implementation makes internal allocations.
- `pfnInternalFree` is a `PFN_vkInternalFreeNotification` pointer to an application-defined function that is called by the implementation when the implementation frees internal allocations.

Valid Usage

- VUID-VkAllocationCallbacks-pfnAllocation-00632
`pfnAllocation` **must** be a valid pointer to a valid application-defined [PFN_vkAllocationFunction](#)
- VUID-VkAllocationCallbacks-pfnReallocation-00633
`pfnReallocation` **must** be a valid pointer to a valid application-defined [PFN_vkReallocationFunction](#)
- VUID-VkAllocationCallbacks-pfnFree-00634
`pfnFree` **must** be a valid pointer to a valid application-defined [PFN_vkFreeFunction](#)
- VUID-VkAllocationCallbacks-pfnInternalAllocation-00635
If either of `pfnInternalAllocation` or `pfnInternalFree` is not `NULL`, both **must** be valid callbacks

The type of `pfnAllocation` is:

```
// Provided by VK_VERSION_1_0
typedef void* (*PFN_vkAllocationFunction)(
    void*                pUserData,
    size_t               size,
    size_t               alignment,
    VkSystemAllocationScope allocationScope);
```

- `pUserData` is the value specified for [VkAllocationCallbacks::pUserData](#) in the allocator specified by the application.
- `size` is the size in bytes of the requested allocation.
- `alignment` is the requested alignment of the allocation in bytes and **must** be a power of two.
- `allocationScope` is a [VkSystemAllocationScope](#) value specifying the allocation scope of the lifetime of the allocation, as described [here](#).

If `pfnAllocation` is unable to allocate the requested memory, it **must** return `NULL`. If the allocation was successful, it **must** return a valid pointer to memory allocation containing at least `size` bytes, and with the pointer value being a multiple of `alignment`.

NOTE

Correct Vulkan operation **cannot** be assumed if the application does not follow these rules.

For example, `pfnAllocation` (or `pfnReallocation`) could cause termination of running Vulkan instance(s) on a failed allocation for debugging purposes, either directly or indirectly. In these circumstances, it **cannot** be assumed that any part of any affected [VkInstance](#) objects are going to operate correctly (even [vkDestroyInstance](#)), and the application **must** ensure it cleans up properly via other means (e.g. process termination).

If `pfnAllocation` returns `NULL`, and if the implementation is unable to continue correct processing of the current command without the requested allocation, it **must** treat this as a runtime error, and generate `VK_ERROR_OUT_OF_HOST_MEMORY` at the appropriate time for the command in which the condition was detected, as described in [Return Codes](#).

If the implementation is able to continue correct processing of the current command without the requested allocation, then it **may** do so, and **must** not generate `VK_ERROR_OUT_OF_HOST_MEMORY` as a result of this failed allocation.

The type of `pfnReallocation` is:

```
// Provided by VK_VERSION_1_0
typedef void* (*PFN_vkReallocationFunction)(
    void*                pUserData,
    void*                pOriginal,
    size_t               size,
    size_t               alignment,
    VkSystemAllocationScope allocationScope);
```

- `pUserData` is the value specified for `VkAllocationCallbacks::pUserData` in the allocator specified by the application.
- `pOriginal` **must** be either `NULL` or a pointer previously returned by `pfnReallocation` or `pfnAllocation` of a compatible allocator.
- `size` is the size in bytes of the requested allocation.
- `alignment` is the requested alignment of the allocation in bytes and **must** be a power of two.
- `allocationScope` is a `VkSystemAllocationScope` value specifying the allocation scope of the lifetime of the allocation, as described [here](#).

If the reallocation was successful, `pfnReallocation` **must** return an allocation with enough space for `size` bytes, and the contents of the original allocation from bytes zero to `min(original size, new size) - 1` **must** be preserved in the returned allocation. If `size` is larger than the old size, the contents of the additional space are undefined. If satisfying these requirements involves creating a new allocation, then the old allocation **should** be freed.

If `pOriginal` is `NULL`, then `pfnReallocation` **must** behave equivalently to a call to `PFN_vkAllocationFunction` with the same parameter values (without `pOriginal`).

If `size` is zero, then `pfnReallocation` **must** behave equivalently to a call to `PFN_vkFreeFunction` with the same `pUserData` parameter value, and `pMemory` equal to `pOriginal`.

If `pOriginal` is non-`NULL`, the implementation **must** ensure that `alignment` is equal to the `alignment` used to originally allocate `pOriginal`.

If this function fails and `pOriginal` is non-`NULL` the application **must** not free the old allocation.

`pfnReallocation` **must** follow the same [rules for return values](#) as `PFN_vkAllocationFunction`.

The type of `pfnFree` is:

```
// Provided by VK_VERSION_1_0
typedef void (*PFN_vkFreeFunction)(
    void*                pUserData,
    void*                pMemory);
```

- `pUserData` is the value specified for `VkAllocationCallbacks::pUserData` in the allocator specified by the application.
- `pMemory` is the allocation to be freed.

`pMemory` **may** be `NULL`, which the callback **must** handle safely. If `pMemory` is non-`NULL`, it **must** be a pointer previously allocated by `pfnAllocation` or `pfnReallocation`. The application **should** free this memory.

The type of `pfnInternalAllocation` is:

```
// Provided by VK_VERSION_1_0
typedef void (*PFN_vkInternalAllocationNotification)(
    void*                pUserData,
    size_t               size,
    VkInternalAllocationType allocationType,
    VkSystemAllocationScope allocationScope);
```

- `pUserData` is the value specified for `VkAllocationCallbacks::pUserData` in the allocator specified by the application.
- `size` is the requested size of an allocation.
- `allocationType` is a `VkInternalAllocationType` value specifying the requested type of an allocation.
- `allocationScope` is a `VkSystemAllocationScope` value specifying the allocation scope of the lifetime of the allocation, as described [here](#).

This is a purely informational callback.

The type of `pfnInternalFree` is:

```
// Provided by VK_VERSION_1_0
typedef void (*PFN_vkInternalFreeNotification)(
    void*                pUserData,
    size_t               size,
    VkInternalAllocationType allocationType,
    VkSystemAllocationScope allocationScope);
```

- `pUserData` is the value specified for `VkAllocationCallbacks::pUserData` in the allocator specified by the application.
- `size` is the requested size of an allocation.

- `allocationType` is a `VkInternalAllocationType` value specifying the requested type of an allocation.
- `allocationScope` is a `VkSystemAllocationScope` value specifying the allocation scope of the lifetime of the allocation, as described [here](#).

Each allocation has an *allocation scope* defining its lifetime and which object it is associated with. Possible values passed to the `allocationScope` parameter of the callback functions specified by `VkAllocationCallbacks`, indicating the allocation scope, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSystemAllocationScope {
    VK_SYSTEM_ALLOCATION_SCOPE_COMMAND = 0,
    VK_SYSTEM_ALLOCATION_SCOPE_OBJECT = 1,
    VK_SYSTEM_ALLOCATION_SCOPE_CACHE = 2,
    VK_SYSTEM_ALLOCATION_SCOPE_DEVICE = 3,
    VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE = 4,
} VkSystemAllocationScope;
```

- `VK_SYSTEM_ALLOCATION_SCOPE_COMMAND` specifies that the allocation is scoped to the duration of the Vulkan command.
- `VK_SYSTEM_ALLOCATION_SCOPE_OBJECT` specifies that the allocation is scoped to the lifetime of the Vulkan object that is being created or used.
- `VK_SYSTEM_ALLOCATION_SCOPE_CACHE` specifies that the allocation is scoped to the lifetime of a `VkPipelineCache` or `VkValidationCacheEXT` object.
- `VK_SYSTEM_ALLOCATION_SCOPE_DEVICE` specifies that the allocation is scoped to the lifetime of the Vulkan device.
- `VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE` specifies that the allocation is scoped to the lifetime of the Vulkan instance.

Most Vulkan commands operate on a single object, or there is a sole object that is being created or manipulated. When an allocation uses an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_OBJECT` or `VK_SYSTEM_ALLOCATION_SCOPE_CACHE`, the allocation is scoped to the object being created or manipulated.

When an implementation requires host memory, it will make callbacks to the application using the most specific allocator and allocation scope available:

- If an allocation is scoped to the duration of a command, the allocator will use the `VK_SYSTEM_ALLOCATION_SCOPE_COMMAND` allocation scope. The most specific allocator available is used: if the object being created or manipulated has an allocator, that object's allocator will be used, else if the parent `VkDevice` has an allocator it will be used, else if the parent `VkInstance` has an allocator it will be used. Else,
- If an allocation is associated with a `VkValidationCacheEXT` or `VkPipelineCache` object, the allocator will use the `VK_SYSTEM_ALLOCATION_SCOPE_CACHE` allocation scope. The most specific allocator available is used (cache, else device, else instance). Else,

- If an allocation is scoped to the lifetime of an object, that object is being created or manipulated by the command, and that object's type is not `VkDevice` or `VkInstance`, the allocator will use an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_OBJECT`. The most specific allocator available is used (object, else device, else instance). Else,
- If an allocation is scoped to the lifetime of a device, the allocator will use an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_DEVICE`. The most specific allocator available is used (device, else instance). Else,
- If the allocation is scoped to the lifetime of an instance and the instance has an allocator, its allocator will be used with an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE`.
- Otherwise an implementation will allocate memory through an alternative mechanism that is unspecified.

Objects that are allocated from pools do not specify their own allocator. When an implementation requires host memory for such an object, that memory is sourced from the object's parent pool's allocator.

The application is not expected to handle allocating memory that is intended for execution by the host due to the complexities of differing security implementations across multiple platforms. The implementation will allocate such memory internally and invoke an application provided informational callback when these *internal allocations* are allocated and freed. Upon allocation of executable memory, `pfnInternalAllocation` will be called. Upon freeing executable memory, `pfnInternalFree` will be called. An implementation will only call an informational callback for executable memory allocations and frees.

The `allocationType` parameter to the `pfnInternalAllocation` and `pfnInternalFree` functions **may** be one of the following values:

```
// Provided by VK_VERSION_1_0
typedef enum VkInternalAllocationType {
    VK_INTERNAL_ALLOCATION_TYPE_EXECUTABLE = 0,
} VkInternalAllocationType;
```

- `VK_INTERNAL_ALLOCATION_TYPE_EXECUTABLE` specifies that the allocation is intended for execution by the host.

An implementation **must** only make calls into an application-provided allocator during the execution of an API command. An implementation **must** only make calls into an application-provided allocator from the same thread that called the provoking API command. The implementation **should** not synchronize calls to any of the callbacks. If synchronization is needed, the callbacks **must** provide it themselves. The informational callbacks are subject to the same restrictions as the allocation callbacks.

If an implementation intends to make calls through a `VkAllocationCallbacks` structure between the time a `vkCreate*` command returns and the time a corresponding `vkDestroy*` command begins, that implementation **must** save a copy of the allocator before the `vkCreate*` command returns. The callback functions and any data structures they rely upon **must** remain valid for the lifetime of the object they are associated with.

If an allocator is provided to a `vkCreate*` command, a *compatible* allocator **must** be provided to the corresponding `vkDestroy*` command. Two `VkAllocationCallbacks` structures are compatible if memory allocated with `pfnAllocation` or `pfnReallocation` in each **can** be freed with `pfnReallocation` or `pfnFree` in the other. An allocator **must** not be provided to a `vkDestroy*` command if an allocator was not provided to the corresponding `vkCreate*` command.

If a non-NULL allocator is used, the `pfnAllocation`, `pfnReallocation` and `pfnFree` members **must** be non-NULL and point to valid implementations of the callbacks. An application **can** choose to not provide informational callbacks by setting both `pfnInternalAllocation` and `pfnInternalFree` to NULL. `pfnInternalAllocation` and `pfnInternalFree` **must** either both be NULL or both be non-NULL.

If `pfnAllocation` or `pfnReallocation` fail, the implementation **may** fail object creation and/or generate a `VK_ERROR_OUT_OF_HOST_MEMORY` error, as appropriate.

Allocation callbacks **must** not call any Vulkan commands.

The following sets of rules define when an implementation is permitted to call the allocator callbacks.

`pfnAllocation` or `pfnReallocation` **may** be called in the following situations:

- Allocations scoped to a `VkDevice` or `VkInstance` **may** be allocated from any API command.
- Allocations scoped to a command **may** be allocated from any API command.
- Allocations scoped to a `VkPipelineCache` **may** only be allocated from:
 - `vkCreatePipelineCache`
 - `vkMergePipelineCaches` for `dstCache`
 - `vkCreateGraphicsPipelines` for `pipelineCache`
 - `vkCreateComputePipelines` for `pipelineCache`
- Allocations scoped to a `VkValidationCacheEXT` **may** only be allocated from:
 - `vkCreateValidationCacheEXT`
 - `vkMergeValidationCachesEXT` for `dstCache`
 - `vkCreateShaderModule` for `validationCache` in `VkShaderModuleValidationCacheCreateInfoEXT`
- Allocations scoped to a `VkDescriptorPool` **may** only be allocated from:
 - any command that takes the pool as a direct argument
 - `vkAllocateDescriptorSets` for the `descriptorPool` member of its `pAllocateInfo` parameter
 - `vkCreateDescriptorPool`
- Allocations scoped to a `VkCommandPool` **may** only be allocated from:
 - any command that takes the pool as a direct argument
 - `vkCreateCommandPool`
 - `vkAllocateCommandBuffers` for the `commandPool` member of its `pAllocateInfo` parameter
 - any `vkCmd*` command whose `commandBuffer` was allocated from that `VkCommandPool`

- Allocations scoped to any other object **may** only be allocated in that object's `vkCreate*` command.

`pfnFree`, or `pfnReallocation` with zero `size`, **may** be called in the following situations:

- Allocations scoped to a `VkDevice` or `VkInstance` **may** be freed from any API command.
- Allocations scoped to a command **must** be freed by any API command which allocates such memory.
- Allocations scoped to a `VkPipelineCache` **may** be freed from `vkDestroyPipelineCache`.
- Allocations scoped to a `VkValidationCacheEXT` **may** be freed from `vkDestroyValidationCacheEXT`.
- Allocations scoped to a `VkDescriptorPool` **may** be freed from
 - any command that takes the pool as a direct argument
- Allocations scoped to a `VkCommandPool` **may** be freed from:
 - any command that takes the pool as a direct argument
 - `vkResetCommandBuffer` whose `commandBuffer` was allocated from that `VkCommandPool`
- Allocations scoped to any other object **may** be freed in that object's `vkDestroy*` command.
- Any command that allocates host memory **may** also free host memory of the same scope.

11.2. Device Memory

Device memory is memory that is visible to the device—for example the contents of the image or buffer objects, which **can** be natively used by the device.

11.2.1. Device Memory Properties

Memory properties of a physical device describe the memory heaps and memory types available.

To query memory properties, call:

WARNING

This functionality is superseded by `vkGetPhysicalDeviceMemoryProperties2`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceMemoryProperties(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceMemoryProperties* pMemoryProperties);
```

- `physicalDevice` is the handle to the device to query.
- `pMemoryProperties` is a pointer to a `VkPhysicalDeviceMemoryProperties` structure in which the properties are returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMemoryProperties-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceMemoryProperties-pMemoryProperties-parameter `pMemoryProperties` **must** be a valid pointer to a `VkPhysicalDeviceMemoryProperties` structure

The `VkPhysicalDeviceMemoryProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceMemoryProperties {
    uint32_t      memoryTypeCount;
    VkMemoryType  memoryTypes[VK_MAX_MEMORY_TYPES];
    uint32_t      memoryHeapCount;
    VkMemoryHeap  memoryHeaps[VK_MAX_MEMORY_HEAPS];
} VkPhysicalDeviceMemoryProperties;
```

- `memoryTypeCount` is the number of valid elements in the `memoryTypes` array.
- `memoryTypes` is an array of `VK_MAX_MEMORY_TYPES` `VkMemoryType` structures describing the *memory types* that **can** be used to access memory allocated from the heaps specified by `memoryHeaps`.
- `memoryHeapCount` is the number of valid elements in the `memoryHeaps` array.
- `memoryHeaps` is an array of `VK_MAX_MEMORY_HEAPS` `VkMemoryHeap` structures describing the *memory heaps* from which memory **can** be allocated.

The `VkPhysicalDeviceMemoryProperties` structure describes a number of *memory heaps* as well as a number of *memory types* that **can** be used to access memory allocated in those heaps. Each heap describes a memory resource of a particular size, and each memory type describes a set of memory properties (e.g. host cached vs. uncached) that **can** be used with a given memory heap. Allocations using a particular memory type will consume resources from the heap indicated by that memory type's heap index. More than one memory type **may** share each heap, and the heaps and memory types provide a mechanism to advertise an accurate size of the physical memory resources while allowing the memory to be used with a variety of different properties.

The number of memory heaps is given by `memoryHeapCount` and is less than or equal to `VK_MAX_MEMORY_HEAPS`. Each heap is described by an element of the `memoryHeaps` array as a `VkMemoryHeap` structure. The number of memory types available across all memory heaps is given by `memoryTypeCount` and is less than or equal to `VK_MAX_MEMORY_TYPES`. Each memory type is described by an element of the `memoryTypes` array as a `VkMemoryType` structure.

At least one heap **must** include `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT` in `VkMemoryHeap::flags`. If there are multiple heaps that all have similar performance characteristics, they **may** all include `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT`. In a unified memory architecture (UMA) system there is often only a single memory heap which is considered to be equally “local” to the host and to the

device, and such an implementation **must** advertise the heap as device-local.

Memory contents within a tile memory heap, denoted by [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#), are only visible across the command buffers executed in a single command buffer submission batch within a [vkQueueSubmit](#) or [vkQueueSubmit2](#) call. If the [VkPhysicalDeviceTileMemoryHeapPropertiesQCOM::queueSubmitBoundary](#) property is set, the visibility is extended across all batches in the submit call. Memory contents are discarded and made undefined after the respective submission batch or submit call. Tile memory **may** have different performance characteristics than non tile memory. Tile memory **can** be used simultaneously by command buffers in other queues without invalidating each others contents. Collectively, these rules define the *tile memory scope*.

NOTE

Tile memory heaps work differently than most heaps as it is allowing addressing on device cache memory. Therefore, the heap's address space is aliased across the different queues, with each queue retaining its individual copy of the heap. The implementation takes care of any required saving and restoring of the tile memory contents.

Effectively, this means that the same address in the heap in different queues have simultaneously different defined contents and the contents has a lifespan scoped to the submit or batch for that specific queues.

Each memory type returned by [vkGetPhysicalDeviceMemoryProperties](#) **must** have its [propertyFlags](#) set to one of the following values:

- 0
- [VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT](#) | [VK_MEMORY_PROPERTY_HOST_COHERENT_BIT](#)
- [VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT](#) | [VK_MEMORY_PROPERTY_HOST_CACHED_BIT](#)
- [VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT](#) | [VK_MEMORY_PROPERTY_HOST_CACHED_BIT](#) | [VK_MEMORY_PROPERTY_HOST_COHERENT_BIT](#)
- [VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT](#)
- [VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT](#) | [VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT](#) | [VK_MEMORY_PROPERTY_HOST_COHERENT_BIT](#)
- [VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT](#) | [VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT](#) | [VK_MEMORY_PROPERTY_HOST_CACHED_BIT](#)
- [VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT](#) | [VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT](#) | [VK_MEMORY_PROPERTY_HOST_CACHED_BIT](#) | [VK_MEMORY_PROPERTY_HOST_COHERENT_BIT](#)
- [VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT](#) |

VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD

- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT |
VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV

There **must** be at least one memory type with both the `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT` and `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` bits set in its `propertyFlags`. There **must** be at least one memory type with the `VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT` bit set in its `propertyFlags`. If the `deviceCoherentMemory` feature is enabled, there **must** be at least one memory type with the `VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD` bit set in its `propertyFlags`.

For each pair of elements **X** and **Y** returned in `memoryTypes`, **X** **must** be placed at a lower index position than **Y** if:

- the set of bit flags returned in the `propertyFlags` member of **X** is a strict subset of the set of bit flags returned in the `propertyFlags` member of **Y**; or
- the `propertyFlags` members of **X** and **Y** are equal, and **X** belongs to a memory heap with greater performance (as determined in an implementation-specific manner); or
- the `propertyFlags` members of **Y** includes `VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD` or `VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD` and **X** does not

NOTE

There is no ordering requirement between **X** and **Y** elements for the case their `propertyFlags` members are not in a subset relation. That potentially allows more than one possible way to order the same set of memory types. Notice that the [list of all allowed memory property flag combinations](#) is written in a valid order. But if instead `VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT` was before `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT` | `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT`, the list would still be in a valid order.

There may be a performance penalty for using device coherent or uncached device memory types, and using these accidentally is undesirable. In order to avoid this, memory types with these properties always appear at the end of the list; but are subject to the same rules otherwise.

This ordering requirement enables applications to use a simple search loop to select the desired memory type along the lines of:

```
// Find a memory in 'memoryTypeBitsRequirement' that includes all of
'requiredProperties'
int32_t findProperties(const VkPhysicalDeviceMemoryProperties* pMemoryProperties,
                     uint32_t memoryTypeBitsRequirement,
                     VkMemoryPropertyFlags requiredProperties) {
    const uint32_t memoryCount = pMemoryProperties->memoryTypeCount;
    for (uint32_t memoryIndex = 0; memoryIndex < memoryCount; ++memoryIndex) {
        const uint32_t memoryTypeBits = (1 << memoryIndex);
        const bool isRequiredMemoryType = memoryTypeBitsRequirement & memoryTypeBits;
```

```

    const VkMemoryPropertyFlags properties =
        pMemoryProperties->memoryTypes[memoryIndex].propertyFlags;
    const bool hasRequiredProperties =
        (properties & requiredProperties) == requiredProperties;

    if (isRequiredMemoryType && hasRequiredProperties)
        return static_cast<int32_t>(memoryIndex);
}

// failed to find memory type
return -1;
}

// Try to find an optimal memory type, or if it does not exist try fallback memory
type
// `device` is the VkDevice
// `image` is the VkImage that requires memory to be bound
// `memoryProperties` properties as returned by vkGetPhysicalDeviceMemoryProperties
// `requiredProperties` are the property flags that must be present
// `optimalProperties` are the property flags that are preferred by the application
VkMemoryRequirements memoryRequirements;
vkGetImageMemoryRequirements(device, image, &memoryRequirements);
int32_t memoryType =
    findProperties(&memoryProperties, memoryRequirements.memoryTypeBits,
optimalProperties);
if (memoryType == -1) // not found; try fallback properties
    memoryType =
        findProperties(&memoryProperties, memoryRequirements.memoryTypeBits,
requiredProperties);

```

`VK_MAX_MEMORY_TYPES` is the length of an array of `VkMemoryType` structures describing memory types, as returned in `VkPhysicalDeviceMemoryProperties::memoryTypes`.

```
#define VK_MAX_MEMORY_TYPES          32U
```

`VK_MAX_MEMORY_HEAPS` is the length of an array of `VkMemoryHeap` structures describing memory heaps, as returned in `VkPhysicalDeviceMemoryProperties::memoryHeaps`.

```
#define VK_MAX_MEMORY_HEAPS         16U
```

To query memory properties, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceMemoryProperties2(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceMemoryProperties2* pMemoryProperties);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceMemoryProperties2
void vkGetPhysicalDeviceMemoryProperties2KHR(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceMemoryProperties2* pMemoryProperties);
```

- **physicalDevice** is the handle to the device to query.
- **pMemoryProperties** is a pointer to a **VkPhysicalDeviceMemoryProperties2** structure in which the properties are returned.

vkGetPhysicalDeviceMemoryProperties2 behaves similarly to **vkGetPhysicalDeviceMemoryProperties**, with the ability to return extended information in a **pNext** chain of output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMemoryProperties2-physicalDevice-parameter **physicalDevice** **must** be a valid **VkPhysicalDevice** handle
- VUID-vkGetPhysicalDeviceMemoryProperties2-pMemoryProperties-parameter **pMemoryProperties** **must** be a valid pointer to a **VkPhysicalDeviceMemoryProperties2** structure

The **VkPhysicalDeviceMemoryProperties2** structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMemoryProperties2 {
    VkStructureType    sType;
    void*              pNext;
    VkPhysicalDeviceMemoryProperties    memoryProperties;
} VkPhysicalDeviceMemoryProperties2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkPhysicalDeviceMemoryProperties2
typedef VkPhysicalDeviceMemoryProperties2 VkPhysicalDeviceMemoryProperties2KHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memoryProperties** is a **VkPhysicalDeviceMemoryProperties** structure which is populated with the

same values as in [vkGetPhysicalDeviceMemoryProperties](#).

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryProperties2-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PROPERTIES_2](#)
- VUID-VkPhysicalDeviceMemoryProperties2-pNext-pNext
pNext must be **NULL** or a pointer to a valid instance of [VkPhysicalDeviceMemoryBudgetPropertiesEXT](#)
- VUID-VkPhysicalDeviceMemoryProperties2-sType-unique
The **sType** value of each structure in the **pNext** chain must be unique

The [VkMemoryHeap](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryHeap {
    VkDeviceSize      size;
    VkMemoryHeapFlags flags;
} VkMemoryHeap;
```

- **size** is the total memory size in bytes in the heap.
- **flags** is a bitmask of [VkMemoryHeapFlagBits](#) specifying attribute flags for the heap.

Bits which **may** be set in [VkMemoryHeap::flags](#), indicating attribute flags for the heap, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkMemoryHeapFlagBits {
    VK_MEMORY_HEAP_DEVICE_LOCAL_BIT = 0x00000001,
    // Provided by VK_VERSION_1_1
    VK_MEMORY_HEAP_MULTI_INSTANCE_BIT = 0x00000002,
    // Provided by VK_QCOM_tile_memory_heap
    VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM = 0x00000008,
    // Provided by VK_KHR_device_group_creation
    VK_MEMORY_HEAP_MULTI_INSTANCE_BIT_KHR = VK_MEMORY_HEAP_MULTI_INSTANCE_BIT,
} VkMemoryHeapFlagBits;
```

- [VK_MEMORY_HEAP_DEVICE_LOCAL_BIT](#) specifies that the heap corresponds to device-local memory. Device-local memory **may** have different performance characteristics than host-local memory, and **may** support different memory property flags.
- [VK_MEMORY_HEAP_MULTI_INSTANCE_BIT](#) specifies that in a logical device representing more than one physical device, there is a per-physical device instance of the heap memory. By default, an allocation from such a heap will be replicated to each physical device's instance of the heap.
- [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) bit specifies that the heap corresponds to tile memory.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryHeapFlags;
```

`VkMemoryHeapFlags` is a bitmask type for setting a mask of zero or more `VkMemoryHeapFlagBits`.

The `VkMemoryType` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryType {
    VkMemoryPropertyFlags    propertyFlags;
    uint32_t                 heapIndex;
} VkMemoryType;
```

- `heapIndex` describes which memory heap this memory type corresponds to, and **must** be less than `memoryHeapCount` from the `VkPhysicalDeviceMemoryProperties` structure.
- `propertyFlags` is a bitmask of `VkMemoryPropertyFlagBits` of properties for this memory type.

Bits which **may** be set in `VkMemoryType::propertyFlags`, indicating properties of a memory type, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkMemoryPropertyFlagBits {
    VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT = 0x00000001,
    VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT = 0x00000002,
    VK_MEMORY_PROPERTY_HOST_COHERENT_BIT = 0x00000004,
    VK_MEMORY_PROPERTY_HOST_CACHED_BIT = 0x00000008,
    VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT = 0x00000010,
// Provided by VK_VERSION_1_1
    VK_MEMORY_PROPERTY_PROTECTED_BIT = 0x00000020,
// Provided by VK_AMD_device_coherent_memory
    VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD = 0x00000040,
// Provided by VK_AMD_device_coherent_memory
    VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD = 0x00000080,
// Provided by VK_NV_external_memory_rdma
    VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV = 0x00000100,
} VkMemoryPropertyFlagBits;
```

- `VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT` bit specifies that memory allocated with this type is the most efficient for device access. This property will be set if and only if the memory type belongs to a heap with the `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT` set.
- `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT` bit specifies that memory allocated with this type **can** be mapped for host access using `vkMapMemory`.
- `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` bit specifies that the host cache management commands `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges` are not needed to manage **availability and visibility** on the host.

- [VK_MEMORY_PROPERTY_HOST_CACHED_BIT](#) bit specifies that memory allocated with this type is cached on the host. Host memory accesses to uncached memory are slower than to cached memory, however uncached memory is always host coherent.
- [VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT](#) bit specifies that the memory type only allows device access to the memory. Memory types **must** not have both [VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT](#) and [VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT](#) set. Additionally, the object's backing memory **may** be provided by the implementation lazily as specified in [Lazily Allocated Memory](#).
- [VK_MEMORY_PROPERTY_PROTECTED_BIT](#) bit specifies that the memory type only allows device access to the memory, and allows protected queue operations to access the memory. Memory types **must** not have [VK_MEMORY_PROPERTY_PROTECTED_BIT](#) set and any of [VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT](#) set, or [VK_MEMORY_PROPERTY_HOST_COHERENT_BIT](#) set, or [VK_MEMORY_PROPERTY_HOST_CACHED_BIT](#) set.
- [VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD](#) bit specifies that device accesses to allocations of this memory type are automatically made [available and visible](#) on the device. If paired with [VK_MEMORY_PROPERTY_HOST_COHERENT_BIT](#), [memory domain operations](#) are also performed automatically between host and device.
- [VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD](#) bit specifies that memory allocated with this type is not cached on the device. Uncached device memory is always device coherent.
- [VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV](#) bit specifies that external devices can access this memory directly.

For any memory allocated with both the [VK_MEMORY_PROPERTY_HOST_COHERENT_BIT](#) and the [VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD](#), host or device accesses also perform automatic memory domain transfer operations, such that writes are always automatically available and visible to both host and device memory domains.

NOTE

Device coherence is a useful property for certain debugging use cases (e.g. crash analysis, where performing separate coherence actions could mean values are not reported correctly). However, device coherent accesses may be slower than equivalent accesses without device coherence, particularly if they are also device uncached. For device uncached memory in particular, repeated accesses to the same or neighboring memory locations over a short time period (e.g. within a frame) may be slower than it would be for the equivalent cached memory type. As such, it is generally inadvisable to use device coherent or device uncached memory except when really needed.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryPropertyFlags;
```

[VkMemoryPropertyFlags](#) is a bitmask type for setting a mask of zero or more [VkMemoryPropertyFlagsBits](#).

If the [VkPhysicalDeviceMemoryBudgetPropertiesEXT](#) structure is included in the [pNext](#) chain of

[VkPhysicalDeviceMemoryProperties2](#), it is filled with the current memory budgets and usages.

The [VkPhysicalDeviceMemoryBudgetPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_memory_budget
typedef struct VkPhysicalDeviceMemoryBudgetPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        heapBudget[VK_MAX_MEMORY_HEAPS];
    VkDeviceSize        heapUsage[VK_MAX_MEMORY_HEAPS];
} VkPhysicalDeviceMemoryBudgetPropertiesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [heapBudget](#) is an array of [VK_MAX_MEMORY_HEAPS](#) [VkDeviceSize](#) values in which memory budgets are returned, with one element for each memory heap. A heap's budget is a rough estimate of how much memory the process **can** allocate from that heap before allocations **may** fail or cause performance degradation. The budget includes any currently allocated device memory.
- [heapUsage](#) is an array of [VK_MAX_MEMORY_HEAPS](#) [VkDeviceSize](#) values in which memory usages are returned, with one element for each memory heap. A heap's usage is an estimate of how much memory the process is currently using in that heap.

The values returned in this structure are not invariant. The [heapBudget](#) and [heapUsage](#) values **must** be zero for array elements greater than or equal to [VkPhysicalDeviceMemoryProperties::memoryHeapCount](#). The [heapBudget](#) value **must** be non-zero for array elements less than [VkPhysicalDeviceMemoryProperties::memoryHeapCount](#). The [heapBudget](#) value **must** be less than or equal to [VkMemoryHeap::size](#) for each heap.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryBudgetPropertiesEXT-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_BUDGET_PROPERTIES_EXT](#)

Structure Chaining

Extends the structure

- [VkPhysicalDeviceMemoryProperties2](#)

11.2.2. Device Memory Objects

A Vulkan device operates on data in device memory via memory objects that are represented in the API by a [VkDeviceMemory](#) handle:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDeviceMemory)
```

11.2.3. Device Memory Allocation

To allocate memory objects, call:

```
// Provided by VK_VERSION_1_0
VkResult vkAllocateMemory(
    VkDevice                                device,
    const VkMemoryAllocateInfo*            pAllocateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkDeviceMemory*                         pMemory);
```

- **device** is the logical device that owns the memory.
- **pAllocateInfo** is a pointer to a [VkMemoryAllocateInfo](#) structure describing parameters of the allocation. A successfully returned allocation **must** use the requested parameters—no substitution is permitted by the implementation.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pMemory** is a pointer to a [VkDeviceMemory](#) handle in which information about the allocated memory is returned.

Allocations returned by **vkAllocateMemory** are guaranteed to meet any alignment requirement of the implementation. For example, if an implementation requires 128 byte alignment for images and 64 byte alignment for buffers, the device memory returned through this mechanism would be 128-byte aligned. This ensures that applications **can** correctly suballocate objects of different types (with potentially different alignment requirements) in the same memory object.

When memory is allocated, its contents are undefined with the following constraint:

- The contents of unprotected memory **must** not be a function of the contents of data protected memory objects, even if those memory objects were previously freed.

NOTE

The contents of memory allocated by one application **should** not be a function of data from protected memory objects of another application, even if those memory objects were previously freed.

The maximum number of valid memory allocations that **can** exist simultaneously within a [VkDevice](#) **may** be restricted by implementation- or platform-dependent limits. The **maxMemoryAllocationCount** feature describes the number of allocations that **can** exist simultaneously before encountering these internal limits.

NOTE

For historical reasons, if **maxMemoryAllocationCount** is exceeded, some implementations may return [VK_ERROR_TOO_MANY_OBJECTS](#). Exceeding this limit will result in undefined behavior, and an application should not rely on the use of

the returned error code in order to identify when the limit is reached.

NOTE

Many protected memory implementations involve complex hardware and system software support, and often have additional and much lower limits on the number of simultaneous protected memory allocations (from memory types with the [VK_MEMORY_PROPERTY_PROTECTED_BIT](#) property) than for non-protected memory allocations. These limits can be system-wide, and depend on a variety of factors outside of the Vulkan implementation, so they cannot be queried in Vulkan. Applications **should** use as few allocations as possible from such memory types by suballocating aggressively, and be prepared for allocation failure even when there is apparently plenty of capacity remaining in the memory heap. As a guideline, the Vulkan conformance test suite requires that at least 80 minimum-size allocations can exist concurrently when no other uses of protected memory are active in the system.

Some platforms **may** have a limit on the maximum size of a single allocation. For example, certain systems **may** fail to create allocations with a size greater than or equal to 4GB. Such a limit is implementation-dependent, and if such a failure occurs then the error [VK_ERROR_OUT_OF_DEVICE_MEMORY](#) **must** be returned. This limit is advertised in [VkPhysicalDeviceMaintenance3Properties::maxMemoryAllocationSize](#).

The cumulative memory size allocated to a heap **can** be limited by the size of the specified heap. In such cases, allocated memory is tracked on a per-device and per-heap basis. Some platforms allow overallocation into other heaps. The overallocation behavior **can** be specified through the [VK_AMD_memory_overallocation_behavior](#) extension.

If the [memoryTypeIndex](#) belongs to a heap with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) bit included in its properties, this allocation is backed by tile memory, which is an on device cache. Unlike other heaps, allocations out of the tile memory will always have a starting address at the start of the heap and its contents are aliased with all other [VkDeviceMemory](#) objects bound to the same range while executing within the same *tile memory scope*.

If the [VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT::pageableDeviceLocalMemory](#) feature is enabled, memory allocations made from a heap that includes [VK_MEMORY_HEAP_DEVICE_LOCAL_BIT](#) in [VkMemoryHeap::flags](#) **may** be transparently moved to host-local memory allowing multiple applications to share device-local memory. If there is no space left in device-local memory when this new allocation is made, other allocations **may** be moved out transparently to make room. The operating system will determine which allocations to move to device-local memory or host-local memory based on platform-specific criteria. To help the operating system make good choices, the application **should** set the appropriate memory priority with [VkMemoryPriorityAllocateInfoEXT](#) and adjust it as necessary with [vkSetDeviceMemoryPriorityEXT](#). Higher priority allocations will moved to device-local memory first.

Memory allocations made on heaps without the [VK_MEMORY_HEAP_DEVICE_LOCAL_BIT](#) property will not be transparently promoted to device-local memory by the operating system.

Valid Usage

- VUID-vkAllocateMemory-pAllocateInfo-01713
`pAllocateInfo->allocationSize` **must** be less than or equal to `VkPhysicalDeviceMemoryProperties::memoryHeaps[memindex].size` where `memindex` = `VkPhysicalDeviceMemoryProperties::memoryTypes[pAllocateInfo->memoryTypeIndex].heapIndex` as returned by `vkGetPhysicalDeviceMemoryProperties` for the `VkPhysicalDevice` that `device` was created from
- VUID-vkAllocateMemory-pAllocateInfo-01714
`pAllocateInfo->memoryTypeIndex` **must** be less than `VkPhysicalDeviceMemoryProperties::memoryTypeCount` as returned by `vkGetPhysicalDeviceMemoryProperties` for the `VkPhysicalDevice` that `device` was created from
- VUID-vkAllocateMemory-deviceCoherentMemory-02790
If the `deviceCoherentMemory` feature is not enabled, `pAllocateInfo->memoryTypeIndex` **must** not identify a memory type supporting `VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD`
- VUID-vkAllocateMemory-maxMemoryAllocationCount-04101
There **must** be less than `VkPhysicalDeviceLimits::maxMemoryAllocationCount` device memory allocations currently allocated on the device
- VUID-vkAllocateMemory-tileMemoryHeap-10976
If the `tileMemoryHeap` feature is not enabled, `pAllocateInfo->memoryTypeIndex` **must** not identify a memory type that corresponds to a `VkMemoryHeap` with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property

Valid Usage (Implicit)

- VUID-vkAllocateMemory-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkAllocateMemory-pAllocateInfo-parameter
`pAllocateInfo` **must** be a valid pointer to a valid `VkMemoryAllocateInfo` structure
- VUID-vkAllocateMemory-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkAllocateMemory-pMemory-parameter
`pMemory` **must** be a valid pointer to a `VkDeviceMemory` handle
- VUID-vkAllocateMemory-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- [VK_ERROR_INVALID_EXTERNAL_HANDLE](#)
- [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkMemoryAllocateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize        allocationSize;
    uint32_t           memoryTypeIndex;
} VkMemoryAllocateInfo;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [allocationSize](#) is the size of the allocation in bytes.
- [memoryTypeIndex](#) is an index identifying a memory type from the [memoryTypes](#) array of the [VkPhysicalDeviceMemoryProperties](#) structure.

The internal data of an allocated device memory object **must** include a reference to implementation-specific resources, referred to as the memory object's *payload*. Applications **can** also import and export that internal data to and from device memory objects to share data between Vulkan instances and other compatible APIs. A [VkMemoryAllocateInfo](#) structure defines a memory import operation if its [pNext](#) chain includes one of the following structures:

- [VkImportMemoryWin32HandleInfoKHR](#) with a non-zero [handleType](#) value
- [VkImportMemoryFdInfoKHR](#) with a non-zero [handleType](#) value
- [VkImportMemoryHostPointerInfoEXT](#) with a non-zero [handleType](#) value
- [VkImportAndroidHardwareBufferInfoANDROID](#) with a non-NULL [buffer](#) value
- [VkImportMemoryZirconHandleInfoFUCHSIA](#) with a non-zero [handleType](#) value
- [VkImportMemoryBufferCollectionFUCHSIA](#)
- [VkImportScreenBufferInfoQNX](#) with a non-NULL [buffer](#) value
- [VkImportMemoryMetalHandleInfoEXT](#) with a non-zero [handleType](#) value

If the parameters define an import operation and the external handle type is [VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT](#),

`VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT`, or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT`, `allocationSize` is ignored. The implementation **must** query the size of these allocations from the OS.

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT`, `allocationSize` is ignored. The implementation **must** query the size of these allocations from the OS.

Whether device memory objects constructed via a memory import operation hold a reference to their payload depends on the properties of the handle type used to perform the import, as defined below for each valid handle type. Importing memory **must** not modify the content of the memory. Implementations **must** ensure that importing memory does not enable the importing Vulkan instance to access any memory or resources in other Vulkan instances other than that corresponding to the memory object imported. Implementations **must** also ensure accessing imported memory which has not been initialized does not allow the importing Vulkan instance to obtain data from the exporting Vulkan instance or vice-versa.

NOTE	How exported and imported memory is isolated is left to the implementation, but applications should be aware that such isolation may prevent implementations from placing multiple exportable memory objects in the same physical or virtual page. Hence, applications should avoid creating many small external memory objects whenever possible.
-------------	--

Importing memory **must** not increase overall heap usage within a system. However, it **must** affect the following per-process values:

- `VkPhysicalDeviceLimits::maxMemoryAllocationCount`
- `VkPhysicalDeviceMemoryBudgetPropertiesEXT::heapUsage`

When performing a memory import operation, it is the responsibility of the application to ensure the external handles and their associated payloads meet all valid usage requirements. However, implementations **must** perform sufficient validation of external handles and payloads to ensure that the operation results in a valid memory object which will not cause program termination, device loss, queue stalls, or corruption of other resources when used as allowed according to its allocation parameters. If the external handle provided does not meet these requirements, the implementation **must** fail the memory import operation with the error code `VK_ERROR_INVALID_EXTERNAL_HANDLE`. If the parameters define an export operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, implementations **should** not strictly follow `memoryTypeIndex`. Instead, they **should** modify the allocation internally to use the required memory type for the application's given usage. This is because for an export operation, there is currently no way for the application to know the memory type index before allocating.

Valid Usage

- VUID-VkMemoryAllocateInfo-allocationSize-07897

If the parameters do not define an `import or export operation`, `allocationSize` **must** be

greater than 0

- VUID-VkMemoryAllocateInfo-None-06657

The parameters **must** not define more than one [import operation](#)

- VUID-VkMemoryAllocateInfo-allocationSize-07899

If the parameters define an export operation and the handle type is not [VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID](#), **allocationSize** **must** be greater than 0

- VUID-VkMemoryAllocateInfo-buffer-06380

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), and [VkMemoryDedicatedAllocateInfo::buffer](#) is present and non-NULL, [VkImportMemoryBufferCollectionFUCHSIA::collection](#) and [VkImportMemoryBufferCollectionFUCHSIA::index](#) **must** match [VkBufferCollectionBufferCreateInfoFUCHSIA::collection](#) and [VkBufferCollectionBufferCreateInfoFUCHSIA::index](#), respectively, of the [VkBufferCollectionBufferCreateInfoFUCHSIA](#) structure used to create the [VkMemoryDedicatedAllocateInfo::buffer](#)

- VUID-VkMemoryAllocateInfo-image-06381

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), and [VkMemoryDedicatedAllocateInfo::image](#) is present and non-NULL, [VkImportMemoryBufferCollectionFUCHSIA::collection](#) and [VkImportMemoryBufferCollectionFUCHSIA::index](#) **must** match [VkBufferCollectionImageCreateInfoFUCHSIA::collection](#) and [VkBufferCollectionImageCreateInfoFUCHSIA::index](#), respectively, of the [VkBufferCollectionImageCreateInfoFUCHSIA](#) structure used to create the [VkMemoryDedicatedAllocateInfo::image](#)

- VUID-VkMemoryAllocateInfo-allocationSize-06382

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), **allocationSize** **must** match [VkMemoryRequirements::size](#) value retrieved by [vkGetImageMemoryRequirements](#) or [vkGetBufferMemoryRequirements](#) for image-based or buffer-based collections respectively

- VUID-VkMemoryAllocateInfo-pNext-06383

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), the **pNext** chain **must** include a [VkMemoryDedicatedAllocateInfo](#) structure with either its **image** or **buffer** field set to a value other than [VK_NULL_HANDLE](#)

- VUID-VkMemoryAllocateInfo-image-06384

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#) and [VkMemoryDedicatedAllocateInfo::image](#) is not [VK_NULL_HANDLE](#), the **image** **must** be created with a [VkBufferCollectionImageCreateInfoFUCHSIA](#) structure chained to its [VkImageCreateInfo::pNext](#) pointer

- VUID-VkMemoryAllocateInfo-buffer-06385

If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#) and [VkMemoryDedicatedAllocateInfo::buffer](#) is not [VK_NULL_HANDLE](#), the **buffer** **must** be created with a [VkBufferCollectionBufferCreateInfoFUCHSIA](#) structure chained to its [VkBufferCreateInfo::pNext](#) pointer

- VUID-VkMemoryAllocateInfo-memoryTypeIndex-06386
If the parameters define an import operation from an [VkBufferCollectionFUCHSIA](#), **memoryTypeIndex** **must** be from [VkBufferCollectionPropertiesFUCHSIA](#) as retrieved by [vkGetBufferCollectionPropertiesFUCHSIA](#)
- VUID-VkMemoryAllocateInfo-pNext-00639
If the **pNext** chain includes a [VkExportMemoryAllocateInfo](#) structure, and any of the handle types specified in [VkExportMemoryAllocateInfo::handleTypes](#) require a dedicated allocation, as reported by [vkGetPhysicalDeviceImageFormatProperties2](#) in [VkExternalImageFormatProperties::externalMemoryProperties.externalMemoryFeatures](#), or by [vkGetPhysicalDeviceExternalBufferProperties](#) in [VkExternalBufferProperties::externalMemoryProperties.externalMemoryFeatures](#), the **pNext** chain **must** include a [VkMemoryDedicatedAllocateInfo](#) or [VkDedicatedAllocationMemoryAllocateInfoNV](#) structure with either its **image** or **buffer** member set to a value other than [VK_NULL_HANDLE](#)
- VUID-VkMemoryAllocateInfo-pNext-09858
If the **pNext** chain includes a [VkExportMemoryAllocateInfo](#) structure, and any of the handle types specified in [VkExportMemoryAllocateInfo::handleTypes](#) require a dedicated allocation, as reported by [vkGetPhysicalDeviceExternalTensorPropertiesARM](#) in [VkExternalTensorPropertiesARM::externalMemoryProperties.externalMemoryFeatures](#), the **pNext** chain **must** include a [VkMemoryDedicatedAllocateInfoTensorARM](#) structure with its **tensor** member set to a value other than [VK_NULL_HANDLE](#)
- VUID-VkMemoryAllocateInfo-pNext-00640
If the **pNext** chain includes a [VkExportMemoryAllocateInfo](#) structure, it **must** not include a [VkExportMemoryAllocateInfoNV](#) or [VkExportMemoryWin32HandleInfoNV](#) structure
- VUID-VkMemoryAllocateInfo-pNext-00641
If the **pNext** chain includes a [VkImportMemoryWin32HandleInfoKHR](#) structure, it **must** not include a [VkImportMemoryWin32HandleInfoNV](#) structure
- VUID-VkMemoryAllocateInfo-allocationSize-01742
If the parameters define an import operation, the external handle specified was created by the Vulkan API, and the external handle type is [VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT](#), then the values of **allocationSize** and **memoryTypeIndex** **must** match those specified when the payload being imported was created
- VUID-VkMemoryAllocateInfo-None-00643
If the parameters define an import operation and the external handle specified was created by the Vulkan API, the device mask specified by [VkMemoryAllocateFlagsInfo](#) **must** match the mask specified when the payload being imported was allocated
- VUID-VkMemoryAllocateInfo-None-00644
If the parameters define an import operation and the external handle specified was created by the Vulkan API, the list of physical devices that comprise the logical device passed to [vkAllocateMemory](#) **must** match the list of physical devices that comprise the logical device on which the payload was originally allocated
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-00645
If the parameters define an import operation and the external handle is an NT handle or a global share handle created outside of the Vulkan API, the value of **memoryTypeIndex** **must** be one of those returned by [vkGetMemoryWin32HandlePropertiesKHR](#)

- VUID-VkMemoryAllocateInfo-allocationSize-01743
If the parameters define an import operation, the external handle was created by the Vulkan API, and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT`, then the values of `allocationSize` and `memoryTypeIndex` **must** match those specified when the payload being imported was created
- VUID-VkMemoryAllocateInfo-allocationSize-00647
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT`, `allocationSize` **must** match the size specified when creating the Direct3D 12 heap from which the payload was extracted
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-00648
If the parameters define an import operation and the external handle is a POSIX file descriptor created outside of the Vulkan API, the value of `memoryTypeIndex` **must** be one of those returned by `vkGetMemoryFdPropertiesKHR`
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-01872
If the `protectedMemory` feature is not enabled, the `VkMemoryAllocateInfo::memoryTypeIndex` **must** not indicate a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-01744
If the parameters define an import operation and the external handle is a host pointer, the value of `memoryTypeIndex` **must** be one of those returned by `vkGetMemoryHostPointerPropertiesEXT`
- VUID-VkMemoryAllocateInfo-allocationSize-01745
If the parameters define an import operation and the external handle is a host pointer, `allocationSize` **must** be an integer multiple of `VkPhysicalDeviceExternalMemoryHostPropertiesEXT::minImportedHostPointerAlignment`
- VUID-VkMemoryAllocateInfo-pNext-02805
If the parameters define an import operation and the external handle is a host pointer, the `pNext` chain **must** not include a `VkDedicatedAllocationMemoryAllocateInfoNV` structure with either its `image` or `buffer` field set to a value other than `VK_NULL_HANDLE`
- VUID-VkMemoryAllocateInfo-pNext-02806
If the parameters define an import operation and the external handle is a host pointer, the `pNext` chain **must** not include a `VkMemoryDedicatedAllocateInfo` structure with either its `image` or `buffer` field set to a value other than `VK_NULL_HANDLE`
- VUID-VkMemoryAllocateInfo-allocationSize-02383
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, `allocationSize` **must** be the size returned by `vkGetAndroidHardwareBufferPropertiesANDROID` for the Android hardware buffer
- VUID-VkMemoryAllocateInfo-pNext-02384
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, and the `pNext` chain does not include a `VkMemoryDedicatedAllocateInfo` structure or

`VkMemoryDedicatedAllocateInfo::image` is `VK_NULL_HANDLE`, the Android hardware buffer **must** have a `AHardwareBuffer_Desc::format` of `AHardwareBuffer_Format::BLOB` and a `AHardwareBuffer_Desc::usage` that includes `AHardwareBuffer_Usage::GPU_DATA_BUFFER`

- VUID-VkMemoryAllocateInfo-memoryTypeIndex-02385

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, `memoryTypeIndex` **must** be one of those returned by `vkGetAndroidHardwareBufferPropertiesANDROID` for the Android hardware buffer

- VUID-VkMemoryAllocateInfo-pNext-01874

If the parameters do not define an import operation, and the `pNext` chain includes a `VkExportMemoryAllocateInfo` structure with `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` included in its `handleTypes` member, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` not equal to `VK_NULL_HANDLE`, then `allocationSize` **must** be 0

- VUID-VkMemoryAllocateInfo-pNext-07900

If the parameters define an export operation, the handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, and the `pNext` does not include a `VkMemoryDedicatedAllocateInfo` structure, `allocationSize` **must** be greater than 0

- VUID-VkMemoryAllocateInfo-pNext-07901

If the parameters define an export operation, the handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `buffer` set to a valid `VkBuffer` object, `allocationSize` **must** be greater than 0

- VUID-VkMemoryAllocateInfo-pNext-02386

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` with `image` that is not `VK_NULL_HANDLE`, the Android hardware buffer's `AHardwareBuffer::usage` **must** include at least one of `AHardwareBuffer_Usage::GPU_FRAMEBUFFER`, `AHardwareBuffer_Usage::GPU_SAMPLED_IMAGE` or `AHardwareBuffer_Usage::GPU_DATA_BUFFER`

- VUID-VkMemoryAllocateInfo-pNext-02387

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` with `image` that is not `VK_NULL_HANDLE`, the format of `image` **must** be `VK_FORMAT_UNDEFINED` or the format returned by `vkGetAndroidHardwareBufferPropertiesANDROID` in `VkAndroidHardwareBufferFormatPropertiesANDROID::format` for the Android hardware buffer

- VUID-VkMemoryAllocateInfo-pNext-02388

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, the width, height, and array layer dimensions of `image` and the Android hardware buffer's `AHardwareBuffer_Desc` **must** be identical

- VUID-VkMemoryAllocateInfo-pNext-02389

If the parameters define an import operation, the external handle is an Android hardware

buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, and the Android hardware buffer's `AHardwareBuffer::usage` includes `AHardwareBuffer_USAGE_GPU_MIPMAP_COMPLETE`, the `image` **must** have a complete mipmap chain

- VUID-VkMemoryAllocateInfo-pNext-02586

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, and the Android hardware buffer's `AHardwareBuffer::usage` does not include `AHardwareBuffer_USAGE_GPU_MIPMAP_COMPLETE`, the `image` **must** have exactly one mipmap level

- VUID-VkMemoryAllocateInfo-pNext-02390

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, each bit set in the usage of `image` **must** be listed in `AHardwareBuffer Usage Equivalence`, and if there is a corresponding `AHardwareBuffer_USAGE` bit listed that bit **must** be included in the Android hardware buffer's `AHardwareBuffer_Desc::usage`

- VUID-VkMemoryAllocateInfo-screenBufferImport-08941

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX::screenBufferImport` **must** be enabled

- VUID-VkMemoryAllocateInfo-allocationSize-08942

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `allocationSize` **must** be the size returned by `vkGetScreenBufferPropertiesQNX` for the QNX Screen buffer

- VUID-VkMemoryAllocateInfo-memoryTypeIndex-08943

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `memoryTypeIndex` **must** be one of those returned by `vkGetScreenBufferPropertiesQNX` for the QNX Screen buffer

- VUID-VkMemoryAllocateInfo-pNext-08944

If the parameters define an import operation, the external handle is a QNX Screen buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` with `image` that is not `VK_NULL_HANDLE`, the QNX Screen's buffer **must** be a valid QNX Screen buffer

- VUID-VkMemoryAllocateInfo-pNext-08945

If the parameters define an import operation, the external handle is an QNX Screen buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` with `image` that is not `VK_NULL_HANDLE`, the format of `image` **must** be `VK_FORMAT_UNDEFINED` or the format returned by `vkGetScreenBufferPropertiesQNX` in `VkScreenBufferFormatPropertiesQNX::format` for the QNX Screen buffer

- VUID-VkMemoryAllocateInfo-pNext-08946

If the parameters define an import operation, the external handle is a QNX Screen buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, the width, height, and array layer dimensions of `image` and the

QNX Screen buffer's `_screen_buffer` **must** be identical

- VUID-VkMemoryAllocateInfo-pNext-10395

If the parameters define an import operation and the external handle is a `VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT`, then `pNext` **must** include a `VkMemoryDedicatedAllocateInfo` with `image` that is not `VK_NULL_HANDLE`

- VUID-VkMemoryAllocateInfo-pNext-10396

If the parameters define an import operation, the external handle is a Metal MTLTexture, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, the width, height, array layer dimensions, and mipmap levels of `image` and the Metal MTLTexture's **must** be identical

- VUID-VkMemoryAllocateInfo-pNext-10397

If the parameters define an import operation, the external handle is a Metal MTLTexture, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, `allocationSize` **must** be 0

- VUID-VkMemoryAllocateInfo-opaqueCaptureAddress-03329

If `VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress` is not zero, `VkMemoryAllocateFlagsInfo::flags` **must** include `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`

- VUID-VkMemoryAllocateInfo-flags-03330

If `VkMemoryAllocateFlagsInfo::flags` includes `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, the `bufferDeviceAddressCaptureReplay` feature **must** be enabled

- VUID-VkMemoryAllocateInfo-flags-03331

If `VkMemoryAllocateFlagsInfo::flags` includes `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT`, the `bufferDeviceAddress` feature **must** be enabled

- VUID-VkMemoryAllocateInfo-pNext-03332

If the `pNext` chain includes a `VkImportMemoryHostPointerInfoEXT` structure, `VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress` **must** be zero

- VUID-VkMemoryAllocateInfo-opaqueCaptureAddress-03333

If the parameters define an import operation, `VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress` **must** be zero

- VUID-VkMemoryAllocateInfo-None-04749

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the value of `memoryTypeIndex` **must** be an index identifying a memory type from the `memoryTypeBits` field of the `VkMemoryZirconHandlePropertiesFUCHSIA` structure populated by a call to `vkGetMemoryZirconHandlePropertiesFUCHSIA`

- VUID-VkMemoryAllocateInfo-allocationSize-07902

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the value of `allocationSize` **must** be greater than 0

- VUID-VkMemoryAllocateInfo-allocationSize-07903

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the value of `allocationSize` **must** be less than or equal to the size of the VMO as determined by `zx_vmo_get_size(handle)` where `handle` is the VMO handle to the imported external memory

- VUID-VkMemoryAllocateInfo-pNext-06780

If the `pNext` chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its `exportObjectType` member **must** be `VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkMemoryAllocateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_INFO`

- VUID-VkMemoryAllocateInfo-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDedicatedAllocationMemoryAllocateInfoNV`, `VkExportMemoryAllocateInfo`, `VkExportMemoryAllocateInfoNV`, `VkExportMemoryWin32HandleInfoKHR`, `VkExportMemoryWin32HandleInfoNV`, `VkExportMetalObjectCreateInfoEXT`, `VkImportAndroidHardwareBufferInfoANDROID`, `VkImportMemoryBufferCollectionFUCHSIA`, `VkImportMemoryFdInfoKHR`, `VkImportMemoryHostPointerInfoEXT`, `VkImportMemoryMetalHandleInfoEXT`, `VkImportMemoryWin32HandleInfoKHR`, `VkImportMemoryWin32HandleInfoNV`, `VkImportMemoryZirconHandleInfoFUCHSIA`, `VkImportMetalBufferInfoEXT`, `VkImportNativeBufferInfoOHOS`, `VkImportScreenBufferInfoQNX`, `VkMemoryAllocateFlagsInfo`, `VkMemoryDedicatedAllocateInfo`, `VkMemoryDedicatedAllocateInfoTensorARM`, `VkMemoryOpaqueCaptureAddressAllocateInfo`, or `VkMemoryPriorityAllocateInfoEXT`

- VUID-VkMemoryAllocateInfo-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique, with the exception of structures of type `VkExportMetalObjectCreateInfoEXT`

If the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure, then that structure includes a handle of the sole buffer or image resource that the memory **can** be bound to.

The `VkMemoryDedicatedAllocateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryDedicatedAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
    VkBuffer            buffer;
} VkMemoryDedicatedAllocateInfo;
```

```
// Provided by VK_KHR_dedicated_allocation
// Equivalent to VkMemoryDedicatedAllocateInfo
typedef VkMemoryDedicatedAllocateInfo VkMemoryDedicatedAllocateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **image** is [VK_NULL_HANDLE](#) or a handle of an image which this memory will be bound to.
- **buffer** is [VK_NULL_HANDLE](#) or a handle of a buffer which this memory will be bound to.

Valid Usage

- VUID-VkMemoryDedicatedAllocateInfo-image-01432
At least one of **image** and **buffer** **must** be [VK_NULL_HANDLE](#)
- VUID-VkMemoryDedicatedAllocateInfo-image-02964
If **image** is not [VK_NULL_HANDLE](#) and the memory is not an imported Android Hardware Buffer or an imported QNX Screen buffer , [VkMemoryAllocateInfo::allocationSize](#) **must** be greater than or equal to the [VkMemoryRequirements::size](#) of the image
- VUID-VkMemoryDedicatedAllocateInfo-image-01434
If **image** is not [VK_NULL_HANDLE](#), **image** **must** have been created without [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#) set in [VkImageCreateInfo::flags](#)
- VUID-VkMemoryDedicatedAllocateInfo-buffer-02965
If **buffer** is not [VK_NULL_HANDLE](#) and the memory is not an imported Android Hardware Buffer or an imported QNX Screen buffer , [VkMemoryAllocateInfo::allocationSize](#) **must** be greater than or equal to the [VkMemoryRequirements::size](#) of the buffer
- VUID-VkMemoryDedicatedAllocateInfo-buffer-01436
If **buffer** is not [VK_NULL_HANDLE](#), **buffer** **must** have been created without [VK_BUFFER_CREATE_SPARSE_BINDING_BIT](#) set in [VkBufferCreateInfo::flags](#)
- VUID-VkMemoryDedicatedAllocateInfo-image-01876
If **image** is not [VK_NULL_HANDLE](#) and [VkMemoryAllocateInfo](#) defines a memory import operation with handle type [VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT](#), [VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT](#), [VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT](#), [VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT](#), [VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT](#), or [VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT](#), and the external handle was created by the Vulkan API, then the memory being imported **must** also be a dedicated image allocation and **image** **must** be identical to the image associated with the imported memory
- VUID-VkMemoryDedicatedAllocateInfo-buffer-01877
If **buffer** is not [VK_NULL_HANDLE](#) and [VkMemoryAllocateInfo](#) defines a memory import operation with handle type [VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT](#),

VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT,
 VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT,
 VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT,
 VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT, or
 VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT, and the external handle
 was created by the Vulkan API, then the memory being imported **must** also be a dedicated
 buffer allocation and **buffer must** be identical to the buffer associated with the imported
 memory

- VUID-VkMemoryDedicatedAllocateInfo-image-01878
 If **image** is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import
 operation with handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT,
 the memory being imported **must** also be a dedicated image allocation and **image must** be
 identical to the image associated with the imported memory
- VUID-VkMemoryDedicatedAllocateInfo-buffer-01879
 If **buffer** is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import
 operation with handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT,
 the memory being imported **must** also be a dedicated buffer allocation and **buffer must**
 be identical to the buffer associated with the imported memory
- VUID-VkMemoryDedicatedAllocateInfo-image-01797
 If **image** is not VK_NULL_HANDLE, **image must** not have been created with
 VK_IMAGE_CREATE_DISJOINT_BIT set in VkImageCreateInfo::flags
- VUID-VkMemoryDedicatedAllocateInfo-image-04751
 If **image** is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import
 operation with handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA, the memory being
 imported **must** also be a dedicated image allocation and **image must** be identical to the
 image associated with the imported memory
- VUID-VkMemoryDedicatedAllocateInfo-buffer-04752
 If **buffer** is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import
 operation with handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA, the memory being
 imported **must** also be a dedicated buffer allocation and **buffer must** be identical to the
 buffer associated with the imported memory

Valid Usage (Implicit)

- VUID-VkMemoryDedicatedAllocateInfo-sType-sType
sType must be VK_STRUCTURE_TYPE_MEMORY_DEDICATED_ALLOCATE_INFO
- VUID-VkMemoryDedicatedAllocateInfo-image-parameter
 If **image** is not VK_NULL_HANDLE, **image must** be a valid VkImage handle
- VUID-VkMemoryDedicatedAllocateInfo-buffer-parameter
 If **buffer** is not VK_NULL_HANDLE, **buffer must** be a valid VkBuffer handle
- VUID-VkMemoryDedicatedAllocateInfo-commonparent

Both of `buffer`, and `image` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Structure Chaining

Extends the structure

- `VkMemoryAllocateInfo`

To bind a range of tile memory to the command buffer, call:

```
// Provided by VK_QCOM_tile_memory_heap
void vkCmdBindTileMemoryQCOM(
    VkCommandBuffer          commandBuffer,
    const VkTileMemoryBindInfoQCOM* pTileMemoryBindInfo);
```

- `commandBuffer` is the command buffer that the tile memory will be bound to.
- `pTileMemoryBindInfo` is `VK_NULL_HANDLE` or a pointer to a `VkTileMemoryBindInfoQCOM` structure defining how tile memory is bound.

Calling `vkCmdBindTileMemoryQCOM` when `pTileMemoryBindInfo` is `NULL` is equivalent to binding no tile memory to the command buffer.

Valid Usage (Implicit)

- VUID-vkCmdBindTileMemoryQCOM-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindTileMemoryQCOM-pTileMemoryBindInfo-parameter
If `pTileMemoryBindInfo` is not `NULL`, `pTileMemoryBindInfo` **must** be a valid pointer to a valid `VkTileMemoryBindInfoQCOM` structure
- VUID-vkCmdBindTileMemoryQCOM-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBindTileMemoryQCOM-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBindTileMemoryQCOM-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBindTileMemoryQCOM-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	State

Conditional Rendering

`vkCmdBindTileMemoryQCOM` is not affected by [conditional rendering](#)

The `VkTileMemoryBindInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_tile_memory_heap
typedef struct VkTileMemoryBindInfoQCOM {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory      memory;
} VkTileMemoryBindInfoQCOM;
```

- `memory` is the tile memory object to be bound.

`memory` is used to bind this memory object to tile memory for all subsequent commands in the `commandBuffer`. Tile memory contents for ranges in the heap outside the bound `memory` are discarded and become undefined for the [active tile memory scope](#) if an action command is executed.

For secondary command buffers executing within a render pass instance, the active bound tile memory object is provided with this structure included in the `pNext` chain of `VkCommandBufferInheritanceInfo`.

If this structure was not specified since recording started for `commandBuffer`, no tile memory is bound to the command buffer and all contents become undefined for the *tile memory scope* if an action command is executed.

Valid Usage

- VUID-VkTileMemoryBindInfoQCOM-memory-10726
`memory` **must** have been allocated from a `VkMemoryHeap` with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property

Valid Usage (Implicit)

- VUID-VkTileMemoryBindInfoQCOM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_TILE_MEMORY_BIND_INFO_QCOM`
- VUID-VkTileMemoryBindInfoQCOM-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle

Structure Chaining

Extends the structure

- `VkCommandBufferInheritanceInfo`

If the `pNext` chain includes a `VkMemoryDedicatedAllocateInfoTensorARM` structure, then that structure includes a handle of the sole tensor resource that the memory **can** be bound to.

The `VkMemoryDedicatedAllocateInfoTensorARM` structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkMemoryDedicatedAllocateInfoTensorARM {
    VkStructureType    sType;
    const void*        pNext;
    VkTensorARM         tensor;
} VkMemoryDedicatedAllocateInfoTensorARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `tensor` is a handle of a tensor which this memory will be bound to.

Valid Usage

- VUID-VkMemoryDedicatedAllocateInfoTensorARM-allocationSize-09710
`VkMemoryAllocateInfo::allocationSize` **must** equal the `VkMemoryRequirements::size` of the tensor
- VUID-VkMemoryDedicatedAllocateInfoTensorARM-tensor-09859
If `VkMemoryAllocateInfo` defines a memory import operation with handle type `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT`, the memory being imported **must** also be a dedicated tensor allocation and `tensor` **must** be identical to the tensor associated with the imported memory

Valid Usage (Implicit)

- VUID-VkMemoryDedicatedAllocateInfoTensorARM-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_DEDICATED_ALLOCATE_INFO_TENSOR_ARM`

- VUID-VkMemoryDedicatedAllocateInfoTensorARM-tensor-parameter `tensor` **must** be a valid `VkTensorARM` handle

Structure Chaining

Extends the structure

- `VkMemoryAllocateInfo`

If the `pNext` chain includes a `VkDedicatedAllocationMemoryAllocateInfoNV` structure, then that structure includes a handle of the sole buffer or image resource that the memory **can** be bound to.

The `VkDedicatedAllocationMemoryAllocateInfoNV` structure is defined as:

```
// Provided by VK_NV_dedicated_allocation
typedef struct VkDedicatedAllocationMemoryAllocateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
    VkBuffer            buffer;
} VkDedicatedAllocationMemoryAllocateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is `VK_NULL_HANDLE` or a handle of an image which this memory will be bound to.
- `buffer` is `VK_NULL_HANDLE` or a handle of a buffer which this memory will be bound to.

Valid Usage

- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00649
At least one of `image` and `buffer` **must** be `VK_NULL_HANDLE`
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00650
If `image` is not `VK_NULL_HANDLE`, the image **must** have been created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-00651
If `buffer` is not `VK_NULL_HANDLE`, the buffer **must** have been created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00652
If `image` is not `VK_NULL_HANDLE`, `VkMemoryAllocateInfo::allocationSize` **must** equal the `VkMemoryRequirements::size` of the image
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-00653

If **buffer** is not `VK_NULL_HANDLE`, `VkMemoryAllocateInfo::allocationSize` **must** equal the `VkMemoryRequirements::size` of the buffer

- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00654
If **image** is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation, the memory being imported **must** also be a dedicated image allocation and **image** **must** be identical to the image associated with the imported memory
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-00655
If **buffer** is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation, the memory being imported **must** also be a dedicated buffer allocation and **buffer** **must** be identical to the buffer associated with the imported memory

Valid Usage (Implicit)

- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_MEMORY_ALLOCATE_INFO_NV`
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-parameter
If **image** is not `VK_NULL_HANDLE`, **image** **must** be a valid `VkImage` handle
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-parameter
If **buffer** is not `VK_NULL_HANDLE`, **buffer** **must** be a valid `VkBuffer` handle
- VUID-VkDedicatedAllocationMemoryAllocateInfoNV-commonparent
Both of **buffer**, and **image** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Structure Chaining

Extends the structure

- `VkMemoryAllocateInfo`

If the **pNext** chain includes a `VkMemoryPriorityAllocateInfoEXT` structure, then that structure includes a priority for the memory.

The `VkMemoryPriorityAllocateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_memory_priority
typedef struct VkMemoryPriorityAllocateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    float               priority;
} VkMemoryPriorityAllocateInfoEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `priority` is a floating-point value between `0` and `1`, indicating the priority of the allocation relative to other memory allocations. Larger values are higher priority. The granularity of the priorities is implementation-dependent.

Memory allocations with higher priority **may** be more likely to stay in device-local memory when the system is under memory pressure.

If this structure is not included, it is as if the `priority` value were `0.5`.

Valid Usage

- VUID-VkMemoryPriorityAllocateInfoEXT-priority-02602
`priority` **must** be between `0` and `1`, inclusive

Valid Usage (Implicit)

- VUID-VkMemoryPriorityAllocateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_PRIORITY_ALLOCATE_INFO_EXT`

Structure Chaining

Extends the structure

- `VkMemoryAllocateInfo`

To modify the priority of an existing memory allocation, call:

```
// Provided by VK_EXT_pageable_device_local_memory
void vkSetDeviceMemoryPriorityEXT(
    VkDevice          device,
    VkDeviceMemory    memory,
    float             priority);
```

- `device` is the logical device that owns the memory.
- `memory` is the `VkDeviceMemory` object to which the new priority will be applied.
- `priority` is a floating-point value between `0` and `1`, indicating the priority of the allocation relative to other memory allocations. Larger values are higher priority. The granularity of the priorities is implementation-dependent.

Memory allocations with higher priority **may** be more likely to stay in device-local memory when the system is under memory pressure.

Valid Usage

- VUID-vkSetDeviceMemoryPriorityEXT-priority-06258
priority **must** be between 0 and 1, inclusive

Valid Usage (Implicit)

- VUID-vkSetDeviceMemoryPriorityEXT-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkSetDeviceMemoryPriorityEXT-memory-parameter
memory **must** be a valid [VkDeviceMemory](#) handle
- VUID-vkSetDeviceMemoryPriorityEXT-memory-parent
memory **must** have been created, allocated, or retrieved from **device**

When allocating memory whose payload **may** be exported to another process or Vulkan instance, add a [VkExportMemoryAllocateInfo](#) structure to the **pNext** chain of the [VkMemoryAllocateInfo](#) structure, specifying the handle types that **may** be exported.

The [VkExportMemoryAllocateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExportMemoryAllocateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlags handleTypes;
} VkExportMemoryAllocateInfo;
```

```
// Provided by VK_KHR_external_memory
// Equivalent to VkExportMemoryAllocateInfo
typedef VkExportMemoryAllocateInfo VkExportMemoryAllocateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **handleTypes** is zero or a bitmask of [VkExternalMemoryHandleTypeFlagBits](#) specifying one or more memory handle types the application **can** export from the resulting allocation. The application **can** request multiple handle types for the same allocation.

Valid Usage

- VUID-VkExportMemoryAllocateInfo-handleTypes-09860
The bits in **handleTypes** **must** be supported and compatible, as reported by [VkExternalTensorPropertiesARM](#), [VkExternalImageFormatProperties](#), or

Valid Usage (Implicit)

- VUID-VkExportMemoryAllocateInfo-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_EXPORT_MEMORY_ALLOCATE_INFO](#)
- VUID-VkExportMemoryAllocateInfo-handleTypes-parameter
handleTypes **must** be a valid combination of [VkExternalMemoryHandleTypeFlagBits](#) values

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

When allocating memory that **may** be exported to another process or Vulkan instance, add a [VkExportMemoryAllocateInfoNV](#) structure to the **pNext** chain of the [VkMemoryAllocateInfo](#) structure, specifying the handle types that **may** be exported.

The [VkExportMemoryAllocateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_external_memory
typedef struct VkExportMemoryAllocateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkExternalMemoryHandleTypeFlagsNV handleTypes;
} VkExportMemoryAllocateInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **handleTypes** is a bitmask of [VkExternalMemoryHandleTypeFlagBitsNV](#) specifying one or more memory handle types that **may** be exported. Multiple handle types **may** be requested for the same allocation as long as they are compatible, as reported by [vkGetPhysicalDeviceExternalImageFormatPropertiesNV](#).

Valid Usage (Implicit)

- VUID-VkExportMemoryAllocateInfoNV-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_EXPORT_MEMORY_ALLOCATE_INFO_NV](#)
- VUID-VkExportMemoryAllocateInfoNV-handleTypes-parameter
handleTypes **must** be a valid combination of [VkExternalMemoryHandleTypeFlagBitsNV](#) values

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

11.2.4. Win32 External Memory

To specify additional attributes of NT handles exported from a memory object, add a [VkExportMemoryWin32HandleInfoKHR](#) structure to the **pNext** chain of the [VkMemoryAllocateInfo](#) structure. The [VkExportMemoryWin32HandleInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkExportMemoryWin32HandleInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    const SECURITY_ATTRIBUTES* pAttributes;
    DWORD                dwAccess;
    LPCWSTR              name;
} VkExportMemoryWin32HandleInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pAttributes** is a pointer to a Windows **SECURITY_ATTRIBUTES** structure specifying security attributes of the handle.
- **dwAccess** is a **DWORD** specifying access rights of the handle.
- **name** is a null-terminated UTF-16 string to associate with the payload referenced by NT handles exported from the created memory.

If [VkExportMemoryAllocateInfo](#) is not included in the same **pNext** chain, this structure is ignored.

If [VkExportMemoryAllocateInfo](#) is included in the **pNext** chain of [VkMemoryAllocateInfo](#) with a Windows **handleType**, but either [VkExportMemoryWin32HandleInfoKHR](#) is not included in the **pNext** chain, or it is included but **pAttributes** is set to **NULL**, default security descriptor values will be used, and child processes created by the application will not inherit the handle, as described in the MSDN documentation for “Synchronization Object Security and Access Rights”¹. Further, if the structure is not present, the access rights used depend on the handle type.

For handles of the following types:

- [VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT](#)

The implementation **must** ensure the access rights allow read and write access to the memory.

Valid Usage

- VUID-VkExportMemoryWin32HandleInfoKHR-handleTypes-00657
If `VkExportMemoryAllocateInfo::handleTypes` does not include `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`, a `VkExportMemoryWin32HandleInfoKHR` structure **must** not be included in the `pNext` chain of `VkMemoryAllocateInfo`

Valid Usage (Implicit)

- VUID-VkExportMemoryWin32HandleInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_KHR`
- VUID-VkExportMemoryWin32HandleInfoKHR-pAttributes-parameter
If `pAttributes` is not `NULL`, `pAttributes` **must** be a valid pointer to a valid `SECURITY_ATTRIBUTES` value

Structure Chaining

Extends the structure

- `VkMemoryAllocateInfo`

To import memory from a Windows handle, add a `VkImportMemoryWin32HandleInfoKHR` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure.

The `VkImportMemoryWin32HandleInfoKHR` structure is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkImportMemoryWin32HandleInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    HANDLE              handle;
    LPCWSTR             name;
} VkImportMemoryWin32HandleInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of `handle` or `name`.
- `handle` is `NULL` or the external handle to import.
- `name` is `NULL` or a null-terminated UTF-16 string naming the payload to import.

Importing memory object payloads from Windows handles does not transfer ownership of the handle to the Vulkan implementation. For handle types defined as NT handles, the application **must** release handle ownership using the `CloseHandle` system call when the handle is no longer needed. For handle types defined as NT handles, the imported memory object holds a reference to its payload.

NOTE

Non-NT handle import operations do not add a reference to their associated payload. If the original object owning the payload is destroyed, all resources and handles sharing that payload will become invalid.

Applications **can** import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct `VkDeviceMemory` object.

Valid Usage

- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-09861
If `handleType` is not `0`, it **must** be supported for import, as reported by `VkExternalTensorPropertiesARM`, `VkExternalImageFormatProperties`, or `VkExternalBufferProperties`
- VUID-VkImportMemoryWin32HandleInfoKHR-handle-00659
The memory from which `handle` was exported, or the memory named by `name` **must** have been created on the same underlying physical device as `device`
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-00660
If `handleType` is not `0`, it **must** be defined as an NT handle or a global share handle
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-01439
If `handleType` is not `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT`, or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT`, `name` **must** be `NULL`
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-01440
If `handleType` is not `0` and `handle` is `NULL`, `name` **must** name a valid memory resource of the type specified by `handleType`
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-00661
If `handleType` is not `0` and `name` is `NULL`, `handle` **must** be a valid handle of the type specified by `handleType`
- VUID-VkImportMemoryWin32HandleInfoKHR-handle-01441
If `handle` is not `NULL`, `name` **must** be `NULL`
- VUID-VkImportMemoryWin32HandleInfoKHR-handle-01518
If `handle` is not `NULL`, it **must** obey any requirements listed for `handleType` in [external memory handle types compatibility](#)
- VUID-VkImportMemoryWin32HandleInfoKHR-name-01519
If `name` is not `NULL`, it **must** obey any requirements listed for `handleType` in [external memory handle types compatibility](#)

Valid Usage (Implicit)

- VUID-VkImportMemoryWin32HandleInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_KHR`
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-parameter
If `handleType` is not `0`, `handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value

Structure Chaining

Extends the structure

- `VkMemoryAllocateInfo`

To export a Windows handle representing the payload of a Vulkan device memory object, call:

```
// Provided by VK_KHR_external_memory_win32
VkResult vkGetMemoryWin32HandleKHR(
    VkDevice device,
    const VkMemoryGetWin32HandleInfoKHR* pGetWin32HandleInfo,
    HANDLE* pHandle);
```

- `device` is the logical device that created the device memory being exported.
- `pGetWin32HandleInfo` is a pointer to a `VkMemoryGetWin32HandleInfoKHR` structure containing parameters of the export operation.
- `pHandle` will return the Windows handle representing the payload of the device memory object.

For handle types defined as NT handles, the handles returned by `vkGetMemoryWin32HandleKHR` are owned by the application and hold a reference to their payload. To avoid leaking resources, the application **must** release ownership of them using the `CloseHandle` system call when they are no longer needed.

NOTE

Non-NT handle types do not add a reference to their associated payload. If the original object owning the payload is destroyed, all resources and handles sharing that payload will become invalid.

Valid Usage (Implicit)

- VUID-vkGetMemoryWin32HandleKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryWin32HandleKHR-pGetWin32HandleInfo-parameter
`pGetWin32HandleInfo` **must** be a valid pointer to a valid `VkMemoryGetWin32HandleInfoKHR` structure

- VUID-vkGetMemoryWin32HandleKHR-pHandle-parameter
pHandle **must** be a valid pointer to a **HANDLE** value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkMemoryGetWin32HandleInfoKHR` structure is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkMemoryGetWin32HandleInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceMemory           memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetWin32HandleInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **memory** is the memory object from which the handle will be exported.
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of handle requested.

The properties of the handle returned depend on the value of **handleType**. See [VkExternalMemoryHandleTypeFlagBits](#) for a description of the properties of the defined external memory handle types.

Valid Usage

- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00662
handleType **must** have been included in [VkExportMemoryAllocateInfo::handleTypes](#) when **memory** was created
- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00663
If **handleType** is defined as an NT handle, [vkGetMemoryWin32HandleKHR](#) **must** be called no more than once for each valid unique combination of **memory** and **handleType**
- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00664

handleType must be defined as an NT handle or a global share handle

Valid Usage (Implicit)

- VUID-VkMemoryGetWin32HandleInfoKHR-sType-sType
sType must be [VK_STRUCTURE_TYPE_MEMORY_GET_WIN32_HANDLE_INFO_KHR](#)
- VUID-VkMemoryGetWin32HandleInfoKHR-pNext-pNext
pNext must be `NULL`
- VUID-VkMemoryGetWin32HandleInfoKHR-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle
- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-parameter
handleType must be a valid [VkExternalMemoryHandleTypeFlagBits](#) value

Windows memory handles compatible with Vulkan **may** also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```
// Provided by VK_KHR_external_memory_win32
VkResult vkGetMemoryWin32HandlePropertiesKHR(
    VkDevice                device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    HANDLE                  handle,
    VkMemoryWin32HandlePropertiesKHR* pMemoryWin32HandleProperties);
```

- **device** is the logical device that will be importing **handle**.
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of the handle **handle**.
- **handle** is the handle which will be imported.
- **pMemoryWin32HandleProperties** is a pointer to a [VkMemoryWin32HandlePropertiesKHR](#) structure in which properties of **handle** are returned.

Valid Usage

- VUID-vkGetMemoryWin32HandlePropertiesKHR-handle-00665
handle must point to a valid Windows memory handle
- VUID-vkGetMemoryWin32HandlePropertiesKHR-handleType-00666
handleType must not be one of the handle types defined as opaque

Valid Usage (Implicit)

- VUID-vkGetMemoryWin32HandlePropertiesKHR-device-parameter

device must be a valid [VkDevice](#) handle

- VUID-vkGetMemoryWin32HandlePropertiesKHR-handleType-parameter **handleType** must be a valid [VkExternalMemoryHandleTypeFlagBits](#) value
- VUID-vkGetMemoryWin32HandlePropertiesKHR-pMemoryWin32HandleProperties-parameter **pMemoryWin32HandleProperties** must be a valid pointer to a [VkMemoryWin32HandlePropertiesKHR](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_EXTERNAL_HANDLE](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkMemoryWin32HandlePropertiesKHR](#) structure returned is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkMemoryWin32HandlePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryWin32HandlePropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **memoryTypeBits** is a bitmask containing one bit set for every memory type which the specified windows handle **can** be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryWin32HandlePropertiesKHR-sType-sType **sType** must be [VK_STRUCTURE_TYPE_MEMORY_WIN32_HANDLE_PROPERTIES_KHR](#)
- VUID-VkMemoryWin32HandlePropertiesKHR-pNext-pNext **pNext** must be [NULL](#)

When [VkExportMemoryAllocateInfoNV::handleTypes](#) includes [VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV](#), add a

`VkExportMemoryWin32HandleInfoNV` structure to the `pNext` chain of the `VkExportMemoryAllocateInfoNV` structure to specify security attributes and access rights for the memory object's external handle.

The `VkExportMemoryWin32HandleInfoNV` structure is defined as:

```
// Provided by VK_NV_external_memory_win32
typedef struct VkExportMemoryWin32HandleInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    const SECURITY_ATTRIBUTES* pAttributes;
    DWORD              dwAccess;
} VkExportMemoryWin32HandleInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pAttributes` is a pointer to a Windows `SECURITY_ATTRIBUTES` structure specifying security attributes of the handle.
- `dwAccess` is a `DWORD` specifying access rights of the handle.

If this structure is not present, or if `pAttributes` is `NULL`, default security descriptor values will be used, and child processes created by the application will not inherit the handle, as described in the MSDN documentation for “Synchronization Object Security and Access Rights”¹. Further, if the structure is not present, the access rights will be

`DXGI_SHARED_RESOURCE_READ | DXGI_SHARED_RESOURCE_WRITE`

1

<https://docs.microsoft.com/en-us/windows/win32/sync/synchronization-object-security-and-access-rights>

Valid Usage (Implicit)

- VUID-VkExportMemoryWin32HandleInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_NV`
- VUID-VkExportMemoryWin32HandleInfoNV-pAttributes-parameter
If `pAttributes` is not `NULL`, `pAttributes` **must** be a valid pointer to a valid `SECURITY_ATTRIBUTES` value

Structure Chaining

Extends the structure

- `VkMemoryAllocateInfo`

To import memory created on the same physical device but outside of the current Vulkan instance, add a [VkImportMemoryWin32HandleInfoNV](#) structure to the `pNext` chain of the [VkMemoryAllocateInfo](#) structure, specifying a handle to and the type of the memory.

The [VkImportMemoryWin32HandleInfoNV](#) structure is defined as:

```
// Provided by VK_NV_external_memory_win32
typedef struct VkImportMemoryWin32HandleInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkExternalMemoryHandleTypeFlagsNV handleType;
    HANDLE              handle;
} VkImportMemoryWin32HandleInfoNV;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is `0` or a [VkExternalMemoryHandleTypeFlagBitsNV](#) value specifying the type of memory handle in `handle`.
- `handle` is a Windows `HANDLE` referring to the memory.

If `handleType` is `0`, this structure is ignored by consumers of the [VkMemoryAllocateInfo](#) structure it is chained from.

Valid Usage

- VUID-VkImportMemoryWin32HandleInfoNV-handleType-01327
`handleType` **must** not have more than one bit set
- VUID-VkImportMemoryWin32HandleInfoNV-handle-01328
`handle` **must** be a valid handle to memory, obtained as specified by `handleType`

Valid Usage (Implicit)

- VUID-VkImportMemoryWin32HandleInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_NV`
- VUID-VkImportMemoryWin32HandleInfoNV-handleType-parameter
`handleType` **must** be a valid combination of [VkExternalMemoryHandleTypeFlagBitsNV](#) values

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

Bits which **can** be set in **handleType** are:

Possible values of **VkImportMemoryWin32HandleInfoNV::handleType**, specifying the type of an external memory handle, are:

```
// Provided by VK_NV_external_memory_capabilities
typedef enum VkExternalMemoryHandleTypeFlagBitsNV {
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV = 0x00000001,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_NV = 0x00000002,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_BIT_NV = 0x00000004,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_KMT_BIT_NV = 0x00000008,
} VkExternalMemoryHandleTypeFlagBitsNV;
```

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_NV** specifies a handle to memory returned by **vkGetMemoryWin32HandleNV**.
- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV** specifies a handle to memory returned by **vkGetMemoryWin32HandleNV**, or one duplicated from such a handle using **DuplicateHandle()**.
- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_BIT_NV** specifies a valid NT handle to memory returned by **IDXGIResource1::CreateSharedHandle**, or a handle duplicated from such a handle using **DuplicateHandle()**.
- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_KMT_BIT_NV** specifies a handle to memory returned by **IDXGIResource::GetSharedHandle()**.

```
// Provided by VK_NV_external_memory_capabilities
typedef VkFlags VkExternalMemoryHandleTypeFlagsNV;
```

VkExternalMemoryHandleTypeFlagsNV is a bitmask type for setting a mask of zero or more **VkExternalMemoryHandleTypeFlagBitsNV**.

To retrieve the handle corresponding to a device memory object created with **VkExportMemoryAllocateInfoNV::handleTypes** set to include **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV** or **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_NV**, call:

```
// Provided by VK_NV_external_memory_win32
VkResult vkGetMemoryWin32HandleNV(
    VkDevice                device,
    VkDeviceMemory          memory,
    VkExternalMemoryHandleTypeFlagsNV handleType,
    HANDLE*                 pHandle);
```

- **device** is the logical device that owns the memory.
- **memory** is the **VkDeviceMemory** object.

- **handleType** is a bitmask of [VkExternalMemoryHandleTypeFlagBitsNV](#) containing a single bit specifying the type of handle requested.
- **pHandle** is a pointer to a Windows **HANDLE** in which the handle is returned.

Valid Usage

- VUID-vkGetMemoryWin32HandleNV-handleType-01326
handleType **must** be a flag specified in [VkExportMemoryAllocateInfoNV::handleTypes](#) when allocating **memory**

Valid Usage (Implicit)

- VUID-vkGetMemoryWin32HandleNV-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetMemoryWin32HandleNV-memory-parameter
memory **must** be a valid [VkDeviceMemory](#) handle
- VUID-vkGetMemoryWin32HandleNV-handleType-parameter
handleType **must** be a valid combination of [VkExternalMemoryHandleTypeFlagBitsNV](#) values
- VUID-vkGetMemoryWin32HandleNV-handleType-requiredbitmask
handleType **must** not be 0
- VUID-vkGetMemoryWin32HandleNV-pHandle-parameter
pHandle **must** be a valid pointer to a **HANDLE** value
- VUID-vkGetMemoryWin32HandleNV-memory-parent
memory **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

11.2.5. File Descriptor External Memory

To import memory from a POSIX file descriptor handle, add a [VkImportMemoryFdInfoKHR](#) structure to the **pNext** chain of the [VkMemoryAllocateInfo](#) structure. The [VkImportMemoryFdInfoKHR](#)

structure is defined as:

```
// Provided by VK_KHR_external_memory_fd
typedef struct VkImportMemoryFdInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    int                      fd;
} VkImportMemoryFdInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the handle type of **fd**.
- **fd** is the external handle to import.

Importing memory from a file descriptor transfers ownership of the file descriptor from the application to the Vulkan implementation. The application **must** not perform any operations on the file descriptor after a successful import. The imported memory object holds a reference to its payload.

Applications **can** import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct [VkDeviceMemory](#) object.

Valid Usage

- VUID-VkImportMemoryFdInfoKHR-handleType-09862
If **handleType** is not **0**, it **must** be supported for import, as reported by [VkExternalTensorPropertiesARM](#), [VkExternalImageFormatProperties](#) or [VkExternalBufferProperties](#)
- VUID-VkImportMemoryFdInfoKHR-fd-00668
The memory from which **fd** was exported **must** have been created on the same underlying physical device as **device**
- VUID-VkImportMemoryFdInfoKHR-handleType-00669
If **handleType** is not **0**, it **must** be [VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT](#) or [VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT](#)
- VUID-VkImportMemoryFdInfoKHR-handleType-00670
If **handleType** is not **0**, **fd** **must** be a valid handle of the type specified by **handleType**
- VUID-VkImportMemoryFdInfoKHR-fd-01746
The memory represented by **fd** **must** have been created from a physical device and driver that is compatible with **device** and **handleType**, as described in [external memory handle types compatibility](#)
- VUID-VkImportMemoryFdInfoKHR-fd-01520

fd **must** obey any requirements listed for **handleType** in [external memory handle types compatibility](#)

Valid Usage (Implicit)

- VUID-VkImportMemoryFdInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IMPORT_MEMORY_FD_INFO_KHR](#)
- VUID-VkImportMemoryFdInfoKHR-handleType-parameter
If **handleType** is not 0, **handleType** **must** be a valid [VkExternalMemoryHandleTypeFlagBits](#) value

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

To export a POSIX file descriptor referencing the payload of a Vulkan device memory object, call:

```
// Provided by VK_KHR_external_memory_fd
VkResult vkGetMemoryFdKHR(
    VkDevice device,
    const VkMemoryGetFdInfoKHR* pGetFdInfo,
    int* pFd);
```

- **device** is the logical device that created the device memory being exported.
- **pGetFdInfo** is a pointer to a [VkMemoryGetFdInfoKHR](#) structure containing parameters of the export operation.
- **pFd** will return a file descriptor referencing the payload of the device memory object.

Each call to **vkGetMemoryFdKHR** **must** create a new file descriptor holding a reference to the memory object's payload and transfer ownership of the file descriptor to the application. To avoid leaking resources, the application **must** release ownership of the file descriptor using the **close** system call when it is no longer needed, or by importing a Vulkan memory object from it. Where supported by the operating system, the implementation **must** set the file descriptor to be closed automatically when an **execve** system call is made.

Valid Usage (Implicit)

- VUID-vkGetMemoryFdKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetMemoryFdKHR-pGetFdInfo-parameter
pGetFdInfo **must** be a valid pointer to a valid [VkMemoryGetFdInfoKHR](#) structure

- VUID-vkGetMemoryFdKHR-pFd-parameter
pFd **must** be a valid pointer to an **int** value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkMemoryGetFdInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_external_memory_fd
typedef struct VkMemoryGetFdInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceMemory           memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetFdInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memory** is the memory object from which the handle will be exported.
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of handle requested.

The properties of the file descriptor exported depend on the value of **handleType**. See [VkExternalMemoryHandleTypeFlagBits](#) for a description of the properties of the defined external memory handle types.

NOTE

The size of the exported file **may** be larger than the size requested by [VkMemoryAllocateInfo::allocationSize](#). If **handleType** is [VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT](#), then the application **can** query the file's actual size with **lseek**.

Valid Usage

- VUID-VkMemoryGetFdInfoKHR-handleType-00671
handleType **must** have been included in [VkExportMemoryAllocateInfo::handleTypes](#) when

`memory` was created

- VUID-VkMemoryGetFdInfoKHR-handleType-00672
`handleType` **must** be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkMemoryGetFdInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_GET_FD_INFO_KHR`
- VUID-VkMemoryGetFdInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMemoryGetFdInfoKHR-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle
- VUID-VkMemoryGetFdInfoKHR-handleType-parameter
`handleType` **must** be a valid `VkExternalMemoryHandleTypeFlagBits` value

POSIX file descriptor memory handles compatible with Vulkan **may** also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```
// Provided by VK_KHR_external_memory_fd
VkResult vkGetMemoryFdPropertiesKHR(
    VkDevice                device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    int                     fd,
    VkMemoryFdPropertiesKHR* pMemoryFdProperties);
```

- `device` is the logical device that will be importing `fd`.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of the handle `fd`.
- `fd` is the handle which will be imported.
- `pMemoryFdProperties` is a pointer to a `VkMemoryFdPropertiesKHR` structure in which the properties of the handle `fd` are returned.

Valid Usage

- VUID-vkGetMemoryFdPropertiesKHR-fd-00673
`fd` **must** point to a valid POSIX file descriptor memory handle
- VUID-vkGetMemoryFdPropertiesKHR-handleType-00674
`handleType` **must** not be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT`

Valid Usage (Implicit)

- VUID-vkGetMemoryFdPropertiesKHR-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetMemoryFdPropertiesKHR-handleType-parameter **handleType** must be a valid [VkExternalMemoryHandleTypeFlagBits](#) value
- VUID-vkGetMemoryFdPropertiesKHR-pMemoryFdProperties-parameter **pMemoryFdProperties** must be a valid pointer to a [VkMemoryFdPropertiesKHR](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_EXTERNAL_HANDLE](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkMemoryFdPropertiesKHR](#) structure returned is defined as:

```
// Provided by VK_KHR_external_memory_fd
typedef struct VkMemoryFdPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryFdPropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **memoryTypeBits** is a bitmask containing one bit set for every memory type which the specified file descriptor **can** be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryFdPropertiesKHR-sType-sType **sType** must be [VK_STRUCTURE_TYPE_MEMORY_FD_PROPERTIES_KHR](#)
- VUID-VkMemoryFdPropertiesKHR-pNext-pNext **pNext** must be [NULL](#)

11.2.6. Host External Memory

To import memory from a host pointer, add a [VkImportMemoryHostPointerInfoEXT](#) structure to the `pNext` chain of the [VkMemoryAllocateInfo](#) structure. The [VkImportMemoryHostPointerInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkImportMemoryHostPointerInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    void*                pHostPointer;
} VkImportMemoryHostPointerInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the handle type.
- `pHostPointer` is the host pointer to import from.

Importing memory from a host pointer shares ownership of the memory between the host and the Vulkan implementation. The application **can** continue to access the memory through the host pointer but it is the application's responsibility to synchronize device and non-device access to the payload as defined in [Host Access to Device Memory Objects](#).

Applications **can** import the same payload into multiple instances of Vulkan and multiple times into a given Vulkan instance. However, implementations **may** fail to import the same payload multiple times into a given physical device due to platform constraints.

Importing memory from a particular host pointer **may** not be possible due to additional platform-specific restrictions beyond the scope of this specification in which case the implementation **must** fail the memory import operation with the error code [VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR](#).

Whether device memory objects imported from a host pointer hold a reference to their payload is undefined. As such, the application **must** ensure that the imported memory range remains valid and accessible for the lifetime of the imported memory object.

Implementations **may** support importing host pointers for memory types which are not host-visible. In this case, after a successful call to [vkAllocateMemory](#), the memory range imported from `pHostPointer` **must** not be accessed by the application until the [VkDeviceMemory](#) has been destroyed. Memory contents for the host memory becomes undefined on import, and is left undefined after the [VkDeviceMemory](#) has been destroyed. Applications **must** also not access host memory which is mapped to the same physical memory as `pHostPointer`, but mapped to a different host pointer while the [VkDeviceMemory](#) handle is valid. Implementations running on general-purpose operating systems **should** not support importing host pointers for memory types which are not host-visible.

NOTE

Using host pointers to back non-host visible allocations is a platform-specific use case, and applications should not attempt to do this unless instructed by the platform.

Valid Usage

- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01747
If `handleType` is not `0`, it **must** be supported for import, as reported in [VkExternalMemoryProperties](#)
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01748
If `handleType` is not `0`, it **must** be [VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT](#) or [VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT](#)
- VUID-VkImportMemoryHostPointerInfoEXT-pHostPointer-01749
`pHostPointer` **must** be a pointer aligned to an integer multiple of `VkPhysicalDeviceExternalMemoryHostPropertiesEXT::minImportedHostPointerAlignment`
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01750
If `handleType` is [VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT](#), `pHostPointer` **must** be a pointer to `allocationSize` number of bytes of host memory, where `allocationSize` is the member of the `VkMemoryAllocateInfo` structure this structure is chained to
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01751
If `handleType` is [VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT](#), `pHostPointer` **must** be a pointer to `allocationSize` number of bytes of host mapped foreign memory, where `allocationSize` is the member of the `VkMemoryAllocateInfo` structure this structure is chained to

Valid Usage (Implicit)

- VUID-VkImportMemoryHostPointerInfoEXT-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_IMPORT_MEMORY_HOST_POINTER_INFO_EXT](#)
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-parameter
`handleType` **must** be a valid [VkExternalMemoryHandleTypeFlagBits](#) value
- VUID-VkImportMemoryHostPointerInfoEXT-pHostPointer-parameter
`pHostPointer` **must** be a pointer value

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

To determine the correct parameters to use when importing host pointers, call:

```
// Provided by VK_EXT_external_memory_host
VkResult vkGetMemoryHostPointerPropertiesEXT(
    VkDevice device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    const void* pHostPointer,
    VkMemoryHostPointerPropertiesEXT* pMemoryHostPointerProperties);
```

- **device** is the logical device that will be importing **pHostPointer**.
- **handleType** is a **VkExternalMemoryHandleTypeFlagBits** value specifying the type of the handle **pHostPointer**.
- **pHostPointer** is the host pointer to import from.
- **pMemoryHostPointerProperties** is a pointer to a **VkMemoryHostPointerPropertiesEXT** structure in which the host pointer properties are returned.

Valid Usage

- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01752
handleType **must** be **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT** or **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT**
- VUID-vkGetMemoryHostPointerPropertiesEXT-pHostPointer-01753
pHostPointer **must** be a pointer aligned to an integer multiple of **VkPhysicalDeviceExternalMemoryHostPropertiesEXT::minImportedHostPointerAlignment**
- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01754
If **handleType** is **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT**, **pHostPointer** **must** be a pointer to host memory
- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01755
If **handleType** is **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT**, **pHostPointer** **must** be a pointer to host mapped foreign memory

Valid Usage (Implicit)

- VUID-vkGetMemoryHostPointerPropertiesEXT-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-parameter
handleType **must** be a valid **VkExternalMemoryHandleTypeFlagBits** value
- VUID-vkGetMemoryHostPointerPropertiesEXT-pHostPointer-parameter
pHostPointer **must** be a pointer value
- VUID-vkGetMemoryHostPointerPropertiesEXT-pMemoryHostPointerProperties-

parameter
`pMemoryHostPointerProperties` **must** be a valid pointer to a
`VkMemoryHostPointerPropertiesEXT` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_EXTERNAL_HANDLE`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkMemoryHostPointerPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkMemoryHostPointerPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryHostPointerPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified host pointer **can** be imported as.

The value returned by `memoryTypeBits` **should** only include bits that identify memory types which are host visible. Implementations **may** include bits that identify memory types which are not host visible. Behavior for imported pointers of such types is defined by `VkImportMemoryHostPointerInfoEXT`.

Valid Usage (Implicit)

- VUID-VkMemoryHostPointerPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_HOST_POINTER_PROPERTIES_EXT`
- VUID-VkMemoryHostPointerPropertiesEXT-pNext-pNext
`pNext` **must** be `NULL`

11.2.7. Android Hardware Buffer External Memory

To import memory created outside of the current Vulkan instance from an Android hardware buffer, add a `VkImportAndroidHardwareBufferInfoANDROID` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkImportAndroidHardwareBufferInfoANDROID` structure is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkImportAndroidHardwareBufferInfoANDROID {
    VkStructureType    sType;
    const void*        pNext;
    struct AHardwareBuffer* buffer;
} VkImportAndroidHardwareBufferInfoANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the Android hardware buffer to import.

If the `vkAllocateMemory` command succeeds, the implementation **must** acquire a reference to the imported hardware buffer, which it **must** release when the device memory object is freed. If the command fails, the implementation **must** not retain a reference.

Valid Usage

- VUID-VkImportAndroidHardwareBufferInfoANDROID-buffer-09863
If `buffer` is not `NULL`, Android hardware buffers **must** be supported for import, as reported by `VkExternalTensorPropertiesARM`, `VkExternalImageFormatProperties`, or `VkExternalBufferProperties`
- VUID-VkImportAndroidHardwareBufferInfoANDROID-buffer-01881
If `buffer` is not `NULL`, it **must** be a valid Android hardware buffer object with `AHardwareBuffer_Desc::usage` compatible with Vulkan as described in [Android Hardware Buffers](#)

Valid Usage (Implicit)

- VUID-VkImportAndroidHardwareBufferInfoANDROID-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_ANDROID_HARDWARE_BUFFER_INFO_ANDROID`
- VUID-VkImportAndroidHardwareBufferInfoANDROID-buffer-parameter
`buffer` **must** be a valid pointer to an `AHardwareBuffer` value

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

To export an Android hardware buffer referencing the payload of a Vulkan device memory object, call:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
VkResult vkGetMemoryAndroidHardwareBufferANDROID(
    VkDevice device,
    const VkMemoryGetAndroidHardwareBufferInfoANDROID* pInfo,
    struct AHardwareBuffer** pBuffer);
```

- **device** is the logical device that created the device memory being exported.
- **pInfo** is a pointer to a [VkMemoryGetAndroidHardwareBufferInfoANDROID](#) structure containing parameters of the export operation.
- **pBuffer** will return an Android hardware buffer referencing the payload of the device memory object.

Each call to **vkGetMemoryAndroidHardwareBufferANDROID** **must** return an Android hardware buffer with a new reference acquired in addition to the reference held by the [VkDeviceMemory](#). To avoid leaking resources, the application **must** release the reference by calling **AHardwareBuffer_release** when it is no longer needed. When called with the same handle in [VkMemoryGetAndroidHardwareBufferInfoANDROID::memory](#), **vkGetMemoryAndroidHardwareBufferANDROID** **must** return the same Android hardware buffer object. If the device memory was created by importing an Android hardware buffer, **vkGetMemoryAndroidHardwareBufferANDROID** **must** return that same Android hardware buffer object.

Valid Usage (Implicit)

- VUID-vkGetMemoryAndroidHardwareBufferANDROID-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetMemoryAndroidHardwareBufferANDROID-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkMemoryGetAndroidHardwareBufferInfoANDROID](#) structure
- VUID-vkGetMemoryAndroidHardwareBufferANDROID-pBuffer-parameter **pBuffer** **must** be a valid pointer to a valid pointer to an [AHardwareBuffer](#) value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkMemoryGetAndroidHardwareBufferInfoANDROID](#) structure is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkMemoryGetAndroidHardwareBufferInfoANDROID {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory     memory;
} VkMemoryGetAndroidHardwareBufferInfoANDROID;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [memory](#) is the memory object from which the Android hardware buffer will be exported.

Valid Usage

- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-handleTypes-01882
[VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID](#) **must** have been included in [VkExportMemoryAllocateInfo::handleTypes](#) when [memory](#) was created
- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-pNext-01883
If the [pNext](#) chain of the [VkMemoryAllocateInfo](#) used to allocate [memory](#) included a [VkMemoryDedicatedAllocateInfo](#) with non-[NULL](#) [image](#) member, then that [image](#) **must** already be bound to [memory](#)

Valid Usage (Implicit)

- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_MEMORY_GET_ANDROID_HARDWARE_BUFFER_INFO_ANDROID](#)
- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-pNext-pNext
[pNext](#) **must** be [NULL](#)
- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-memory-parameter
[memory](#) **must** be a valid [VkDeviceMemory](#) handle

To determine the memory parameters to use when importing an Android hardware buffer, call:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
VkResult vkGetAndroidHardwareBufferPropertiesANDROID(
    VkDevice device,
    const struct AHardwareBuffer* buffer,
    VkAndroidHardwareBufferPropertiesANDROID* pProperties);
```

- **device** is the logical device that will be importing **buffer**.
- **buffer** is the Android hardware buffer which will be imported.
- **pProperties** is a pointer to a **VkAndroidHardwareBufferPropertiesANDROID** structure in which the properties of **buffer** are returned.

Valid Usage

- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-buffer-01884
buffer must be a valid Android hardware buffer object with at least one of the **AHardwareBuffer_USAGE_GPU_*** flags in its **AHardwareBuffer_Desc::usage**

Valid Usage (Implicit)

- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-device-parameter
device must be a valid **VkDevice** handle
- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-buffer-parameter
buffer must be a valid pointer to a valid **AHardwareBuffer** value
- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-pProperties-parameter
pProperties must be a valid pointer to a **VkAndroidHardwareBufferPropertiesANDROID** structure

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

The **VkAndroidHardwareBufferPropertiesANDROID** structure returned is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkAndroidHardwareBufferPropertiesANDROID {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        allocationSize;
    uint32_t            memoryTypeBits;
} VkAndroidHardwareBufferPropertiesANDROID;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **allocationSize** is the size of the external memory
- **memoryTypeBits** is a bitmask containing one bit set for every memory type which the specified Android hardware buffer **can** be imported as.

Valid Usage (Implicit)

- VUID-VkAndroidHardwareBufferPropertiesANDROID-sType-sType **must** be [VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_PROPERTIES_ANDROID](#)
- VUID-VkAndroidHardwareBufferPropertiesANDROID-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkAndroidHardwareBufferFormatProperties2ANDROID](#), [VkAndroidHardwareBufferFormatPropertiesANDROID](#), or [VkAndroidHardwareBufferFormatResolvePropertiesANDROID](#)
- VUID-VkAndroidHardwareBufferPropertiesANDROID-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique

To obtain format properties of an Android hardware buffer, include a [VkAndroidHardwareBufferFormatPropertiesANDROID](#) structure in the **pNext** chain of the [VkAndroidHardwareBufferPropertiesANDROID](#) structure passed to [vkGetAndroidHardwareBufferPropertiesANDROID](#). This structure is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkAndroidHardwareBufferFormatPropertiesANDROID {
    VkStructureType      sType;
    void*                pNext;
    VkFormat              format;
    uint64_t             externalFormat;
    VkFormatFeatureFlags formatFeatures;
    VkComponentMapping    samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange    suggestedYcbcrRange;
    VkChromaLocation       suggestedXChromaOffset;
    VkChromaLocation       suggestedYChromaOffset;
} VkAndroidHardwareBufferFormatPropertiesANDROID;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **format** is the Vulkan format corresponding to the Android hardware buffer's format, or [VK_FORMAT_UNDEFINED](#) if there is not an equivalent Vulkan format.
- **externalFormat** is an implementation-defined external format identifier for use with [VkExternalFormatANDROID](#). It **must** not be zero.
- **formatFeatures** describes the capabilities of this external format when used with an image bound to memory imported from **buffer**.
- **samplerYcbcrConversionComponents** is the component swizzle that **should** be used in [VkSamplerYcbcrConversionCreateInfo](#).
- **suggestedYcbcrModel** is a suggested color model to use in the [VkSamplerYcbcrConversionCreateInfo](#).
- **suggestedYcbcrRange** is a suggested numerical value range to use in [VkSamplerYcbcrConversionCreateInfo](#).
- **suggestedXChromaOffset** is a suggested X chroma offset to use in [VkSamplerYcbcrConversionCreateInfo](#).
- **suggestedYChromaOffset** is a suggested Y chroma offset to use in [VkSamplerYcbcrConversionCreateInfo](#).

If the Android hardware buffer has one of the formats listed in the [Format Equivalence table](#), then **format** **must** have the equivalent Vulkan format listed in the table. Otherwise, **format** **may** be [VK_FORMAT_UNDEFINED](#), indicating the Android hardware buffer **can** only be used with an external format.

The **formatFeatures** member **must** include [VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT](#) and at least one of [VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT](#) or [VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT](#), and **should** include [VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT](#) and [VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT](#).

NOTE

The `formatFeatures` member only indicates the features available when using an `external-format image` created from the Android hardware buffer. Images from Android hardware buffers with a format other than `VK_FORMAT_UNDEFINED` are subject to the format capabilities obtained from `vkGetPhysicalDeviceFormatProperties2`, and `vkGetPhysicalDeviceImageFormatProperties2` with appropriate parameters. These sets of features are independent of each other, e.g. the external format will support sampler $Y'C_B C_R$ conversion even if the non-external format does not, and rendering directly to the external format will not be supported even if the non-external format does support this.

Android hardware buffers with the same external format **must** have the same support for `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`, `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT`, `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`, `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT`, `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT`, and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT` in `formatFeatures`. Other format features **may** differ between Android hardware buffers that have the same external format. This allows applications to use the same `VkSamplerYcbcrConversion` object (and samplers and pipelines created from them) for any Android hardware buffers that have the same external format.

If `format` is not `VK_FORMAT_UNDEFINED`, then the value of `samplerYcbcrConversionComponents` **must** be valid when used as the `components` member of `VkSamplerYcbcrConversionCreateInfo` with that format. If `format` is `VK_FORMAT_UNDEFINED`, all members of `samplerYcbcrConversionComponents` **must** be the `identity swizzle`.

Implementations **may** not always be able to determine the color model, numerical range, or chroma offsets of the image contents, so the values in `VkAndroidHardwareBufferFormatPropertiesANDROID` are only suggestions. Applications **should** treat these values as sensible defaults to use in the absence of more reliable information obtained through some other means. If the underlying physical device is also usable via OpenGL ES with the `GL_OES_EGL_image_external` extension, the implementation **should** suggest values that will produce similar sampled values as would be obtained by sampling the same external image via `samplerExternalOES` in OpenGL ES using equivalent sampler parameters.

NOTE

Since `GL_OES_EGL_image_external` does not require the same sampling and conversion calculations as Vulkan does, achieving identical results between APIs **may** not be possible on some implementations.

Valid Usage (Implicit)

- `VUID-VkAndroidHardwareBufferFormatPropertiesANDROID-sType-sType` **must** be `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_PROPERTIES_ANDROID`

Structure Chaining

Extends the structure

- [VkAndroidHardwareBufferPropertiesANDROID](#)

The format properties of an Android hardware buffer **can** be obtained by including a [VkAndroidHardwareBufferFormatProperties2ANDROID](#) structure in the **pNext** chain of the [VkAndroidHardwareBufferPropertiesANDROID](#) structure passed to [vkGetAndroidHardwareBufferPropertiesANDROID](#). This structure is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer with
VK_KHR_format_feature_flags2 or VK_VERSION_1_3
typedef struct VkAndroidHardwareBufferFormatProperties2ANDROID {
    VkStructureType      sType;
    void*                pNext;
    VkFormat              format;
    uint64_t              externalFormat;
    VkFormatFeatureFlags2 formatFeatures;
    VkComponentMapping    samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange    suggestedYcbcrRange;
    VkChromaLocation       suggestedXChromaOffset;
    VkChromaLocation       suggestedYChromaOffset;
} VkAndroidHardwareBufferFormatProperties2ANDROID;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **format** is the Vulkan format corresponding to the Android hardware buffer's format, or [VK_FORMAT_UNDEFINED](#) if there is not an equivalent Vulkan format.
- **externalFormat** is an implementation-defined external format identifier for use with [VkExternalFormatANDROID](#). It **must** not be zero.
- **formatFeatures** describes the capabilities of this external format when used with an image bound to memory imported from **buffer**.
- **samplerYcbcrConversionComponents** is the component swizzle that **should** be used in [VkSamplerYcbcrConversionCreateInfo](#).
- **suggestedYcbcrModel** is a suggested color model to use in the [VkSamplerYcbcrConversionCreateInfo](#).
- **suggestedYcbcrRange** is a suggested numerical value range to use in [VkSamplerYcbcrConversionCreateInfo](#).
- **suggestedXChromaOffset** is a suggested X chroma offset to use in [VkSamplerYcbcrConversionCreateInfo](#).
- **suggestedYChromaOffset** is a suggested Y chroma offset to use in [VkSamplerYcbcrConversionCreateInfo](#).

The bits reported in `formatFeatures` **must** include the bits reported in the corresponding fields of `VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures`.

Valid Usage (Implicit)

- `VUID-VkAndroidHardwareBufferFormatProperties2ANDROID-sType-sType` **must** be `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_PROPERTIES_2_ANDROID`

Structure Chaining

Extends the structure

- `VkAndroidHardwareBufferPropertiesANDROID`

The `VkAndroidHardwareBufferFormatResolvePropertiesANDROID` structure is defined as:

```
// Provided by VK_ANDROID_external_format_resolve
typedef struct VkAndroidHardwareBufferFormatResolvePropertiesANDROID {
    VkStructureType    sType;
    void*              pNext;
    VkFormat            colorAttachmentFormat;
} VkAndroidHardwareBufferFormatResolvePropertiesANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `colorAttachmentFormat` is a `VkFormat` specifying the format of color attachment images that **must** be used for color attachments when resolving to the specified external format. If the implementation supports external format resolves for the specified external format, this value will be a color format supporting the `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` in `VkFormatProperties::optimalTilingFeatures` as returned by `vkGetPhysicalDeviceFormatProperties` with `format` equal to `colorAttachmentFormat`. If external format resolves are not supported, this value will be `VK_FORMAT_UNDEFINED`.

Any Android hardware buffer created with the `GRALLOC_USAGE_HW_RENDER` flag **must** be renderable in some way in Vulkan, either:

- `VkAndroidHardwareBufferFormatPropertiesANDROID::format` **must** be a format that supports `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT` in `VkFormatProperties::optimalTilingFeatures`; or
- `colorAttachmentFormat` **must** be a format that supports `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` in `VkFormatProperties::optimalTilingFeatures`.

Valid Usage (Implicit)

- VUID-VkAndroidHardwareBufferFormatResolvePropertiesANDROID-sType-sType **must** be `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_RESOLVE_PROPERTIES_ANDROID`

Structure Chaining

Extends the structure

- `VkAndroidHardwareBufferPropertiesANDROID`

11.2.8. Remote Device External Memory

To export an address representing the payload of a Vulkan device memory object accessible by remote devices, call:

```
// Provided by VK_NV_external_memory_rdma
VkResult vkGetMemoryRemoteAddressNV(
    VkDevice device,
    const VkMemoryGetRemoteAddressInfoNV* pMemoryGetRemoteAddressInfo,
    VkRemoteAddressNV* pAddress);
```

- `device` is the logical device that created the device memory being exported.
- `pMemoryGetRemoteAddressInfo` is a pointer to a `VkMemoryGetRemoteAddressInfoNV` structure containing parameters of the export operation.
- `pAddress` is a pointer to a `VkRemoteAddressNV` value in which an address representing the payload of the device memory object is returned.

More communication may be required between the kernel-mode drivers of the devices involved. This information is out of scope of this documentation and should be requested from the vendors of the devices.

Valid Usage (Implicit)

- VUID-vkGetMemoryRemoteAddressNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryRemoteAddressNV-pMemoryGetRemoteAddressInfo-parameter `pMemoryGetRemoteAddressInfo` **must** be a valid pointer to a valid `VkMemoryGetRemoteAddressInfoNV` structure
- VUID-vkGetMemoryRemoteAddressNV-pAddress-parameter `pAddress` **must** be a valid pointer to a `VkRemoteAddressNV` value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_EXTERNAL_HANDLE](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkMemoryGetRemoteAddressInfoNV](#) structure is defined as:

```
// Provided by VK_NV_external_memory_rdma
typedef struct VkMemoryGetRemoteAddressInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceMemory           memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetRemoteAddressInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **memory** is the memory object from which the remote accessible address will be exported.
- **handleType** is the type of handle requested.

Valid Usage

- VUID-VkMemoryGetRemoteAddressInfoNV-handleType-04966
handleType **must** have been included in [VkExportMemoryAllocateInfo::handleTypes](#) when **memory** was created

Valid Usage (Implicit)

- VUID-VkMemoryGetRemoteAddressInfoNV-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_MEMORY_GET_REMOTE_ADDRESS_INFO_NV](#)
- VUID-VkMemoryGetRemoteAddressInfoNV-pNext-pNext
pNext **must** be [NULL](#)
- VUID-VkMemoryGetRemoteAddressInfoNV-memory-parameter
memory **must** be a valid [VkDeviceMemory](#) handle
- VUID-VkMemoryGetRemoteAddressInfoNV-handleType-parameter
handleType **must** be a valid [VkExternalMemoryHandleTypeFlagBits](#) value

[VkRemoteAddressNV](#) represents an address of a memory object accessible by remote devices, as returned in [vkGetMemoryRemoteAddressNV::pAddress](#).

```
// Provided by VK_NV_external_memory_rdma
typedef void* VkRemoteAddressNV;
```

11.2.9. Fuchsia External Memory

On Fuchsia, when allocating memory that **may** be imported from another device, process, or Vulkan instance, add a [VkImportMemoryZirconHandleInfoFUCHSIA](#) structure to the [pNext](#) chain of the [VkMemoryAllocateInfo](#) structure.

External memory on Fuchsia is imported and exported using VMO handles of type [zx_handle_t](#). VMO handles to external memory are canonically obtained from Fuchsia's Sysmem service or from syscalls such as [zx_vmo_create\(\)](#). VMO handles for import can also be obtained by exporting them from another Vulkan instance as described in [exporting fuchsia device memory](#).

Importing VMO handles to the Vulkan instance transfers ownership of the handle to the instance from the application. The application **must** not perform any operations on the handle after successful import.

Applications **can** import the same underlying memory into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct [VkDeviceMemory](#) object.

Importing Fuchsia External Memory

The [VkImportMemoryZirconHandleInfoFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_external_memory
typedef struct VkImportMemoryZirconHandleInfoFUCHSIA {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    zx_handle_t               handle;
} VkImportMemoryZirconHandleInfoFUCHSIA;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [handleType](#) is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of [handle](#).
- [handle](#) is a [zx_handle_t](#) (Zircon) handle to the external memory.

Valid Usage

- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-handleType-04771
[handleType](#) **must**

be

[VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA](#)

- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-handle-04772
handle **must** be a valid VMO handle

Valid Usage (Implicit)

- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IMPORT_MEMORY_ZIRCON_HANDLE_INFO_FUCHSIA](#)
- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-handleType-parameter
If **handleType** is not 0, **handleType** **must** be a valid [VkExternalMemoryHandleTypeFlagBits](#) value

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

To obtain the `memoryTypeIndex` for the [VkMemoryAllocateInfo](#) structure, call `vkGetMemoryZirconHandlePropertiesFUCHSIA`:

```
// Provided by VK_FUCHSIA_external_memory
VkResult vkGetMemoryZirconHandlePropertiesFUCHSIA(
    VkDevice device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    zx_handle_t zirconHandle,
    VkMemoryZirconHandlePropertiesFUCHSIA* pMemoryZirconHandleProperties);
```

- **device** is the [VkDevice](#).
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of **zirconHandle**.
- **zirconHandle** is a `zx_handle_t` (Zircon) handle to the external resource.
- **pMemoryZirconHandleProperties** is a pointer to a [VkMemoryZirconHandlePropertiesFUCHSIA](#) structure in which the result will be stored.

Valid Usage

- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-handleType-04773
handleType **must** be [VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA](#)
- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-zirconHandle-04774
zirconHandle **must** reference a valid VMO

Valid Usage (Implicit)

- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-handleType-parameter **handleType** **must** be a valid [VkExternalMemoryHandleTypeFlagBits](#) value
- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-pMemoryZirconHandleProperties-parameter **pMemoryZirconHandleProperties** **must** be a valid pointer to a [VkMemoryZirconHandlePropertiesFUCHSIA](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_EXTERNAL_HANDLE](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkMemoryZirconHandlePropertiesFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_external_memory
typedef struct VkMemoryZirconHandlePropertiesFUCHSIA {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryZirconHandlePropertiesFUCHSIA;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **memoryTypeBits** a bitmask containing one bit set for every memory type which the specified handle can be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryZirconHandlePropertiesFUCHSIA-sType-sType **sType** **must** be [VK_STRUCTURE_TYPE_MEMORY_ZIRCON_HANDLE_PROPERTIES_FUCHSIA](#)
- VUID-VkMemoryZirconHandlePropertiesFUCHSIA-pNext-pNext **pNext** **must** be [NULL](#)

With `pMemoryZirconHandleProperties` now successfully populated by `vkGetMemoryZirconHandlePropertiesFUCHSIA`, assign the `VkMemoryAllocateInfo` `memoryTypeIndex` field to a memory type which has a bit set in the `VkMemoryZirconHandlePropertiesFUCHSIA` `memoryTypeBits` field.

Exporting Fuchsia Device Memory

Similar to importing, exporting a VMO handle from Vulkan transfers ownership of the handle from the Vulkan instance to the application. The application is responsible for closing the handle with `zx_handle_close()` when it is no longer in use.

To export device memory as a Zircon handle that can be used by another instance, device, or process, retrieve the handle to the `VkDeviceMemory` using the command:

```
// Provided by VK_FUCHSIA_external_memory
VkResult vkGetMemoryZirconHandleFUCHSIA(
    VkDevice device,
    const VkMemoryGetZirconHandleInfoFUCHSIA* pGetZirconHandleInfo,
    zx_handle_t* pZirconHandle);
```

- `device` is the `VkDevice`.
- `pGetZirconHandleInfo` is a pointer to a `VkMemoryGetZirconHandleInfoFUCHSIA` structure.
- `pZirconHandle` is a pointer to a `zx_handle_t` which holds the resulting Zircon handle.

Valid Usage (Implicit)

- VUID-vkGetMemoryZirconHandleFUCHSIA-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryZirconHandleFUCHSIA-pGetZirconHandleInfo-parameter `pGetZirconHandleInfo` **must** be a valid pointer to a valid `VkMemoryGetZirconHandleInfoFUCHSIA` structure
- VUID-vkGetMemoryZirconHandleFUCHSIA-pZirconHandle-parameter `pZirconHandle` **must** be a valid pointer to a `zx_handle_t` value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

VkMemoryGetZirconHandleInfoFUCHSIA is defined as:

```
// Provided by VK_FUCHSIA_external_memory
typedef struct VkMemoryGetZirconHandleInfoFUCHSIA {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceMemory           memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetZirconHandleInfoFUCHSIA;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memory** the [VkDeviceMemory](#) being exported.
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of the handle pointed to by [vkGetMemoryZirconHandleFUCHSIA::pZirconHandle](#).

Valid Usage

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-handleType-04775
handleType **must** be [VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA](#)
- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-handleType-04776
handleType **must** have been included in the **handleTypes** field of the [VkExportMemoryAllocateInfo](#) structure when the external memory was allocated

Valid Usage (Implicit)

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_MEMORY_GET_ZIRCON_HANDLE_INFO_FUCHSIA](#)
- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-pNext-pNext
pNext **must** be **NULL**
- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-memory-parameter
memory **must** be a valid [VkDeviceMemory](#) handle
- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-handleType-parameter
handleType **must** be a valid [VkExternalMemoryHandleTypeFlagBits](#) value

With the result **pZirconHandle** now obtained, the memory properties for the handle can be retrieved using [vkGetMemoryZirconHandlePropertiesFUCHSIA](#) as documented above substituting the dereferenced, retrieved **pZirconHandle** in for the **zirconHandle** argument.

11.2.10. Metal Objects

A Vulkan implementation that is layered on top of Metal on Apple device platform, and implements the [VK_EXT_metal_objects](#) extension, supports the ability to import and export the underlying Metal objects associated with specific Vulkan objects.

The underlying Metal objects associated with certain Vulkan objects can be exported from those Vulkan objects using the `pNext` chain of the [VkExportMetalObjectsInfoEXT](#) parameter of the [vkExportMetalObjectsEXT](#) command.

An [VkDeviceMemory](#) object can be allocated on an existing [MTLBuffer](#) object, by including the [MTLBuffer](#) object in a [VkImportMetalBufferInfoEXT](#) structure in the `pNext` chain of the [VkMemoryAllocateInfo](#) structure in the [vkAllocateMemory](#) command.

A new [VkImage](#) object can be created on an existing [IOSurface](#) object, or one or more existing Metal [MTLTexture](#) objects, by including those Metal objects in either [VkImportMetalIOSurfaceInfoEXT](#) or [VkImportMetalTextureInfoEXT](#) structures in the `pNext` chain of the [VkImageCreateInfo](#) structure in the [vkCreateImage](#) command.

To export Metal objects from Vulkan objects, the application **must** first indicate the intention to do so during the creation of the Vulkan object, by including one or more [VkExportMetalObjectCreateInfoEXT](#) structures in the `pNext` chain of the [VkInstanceCreateInfo](#), [VkMemoryAllocateInfo](#), [VkImageCreateInfo](#), [VkImageViewCreateInfo](#), [VkBufferViewCreateInfo](#), [VkSemaphoreCreateInfo](#), or [VkEventCreateInfo](#), in the corresponding Vulkan object creation command.

The [VkExportMetalObjectCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalObjectCreateInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkExportMetalObjectTypeFlagsEXT exportObjectType;
} VkExportMetalObjectCreateInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `exportObjectType` is a [VkExportMetalObjectTypeFlagsEXT](#) indicating the type of Metal object that the application may request to be exported from the Vulkan object.

Valid Usage (Implicit)

- VUID-VkExportMetalObjectCreateInfoEXT-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECT_CREATE_INFO_EXT](#)
- VUID-VkExportMetalObjectCreateInfoEXT-exportObjectType-parameter
If `exportObjectType` is not `0`, `exportObjectType` **must** be a valid [VkExportMetalObjectTypeFlagsEXT](#) value

Structure Chaining

Extends the structures

- [VkBufferViewCreateInfo](#)
- [VkEventCreateInfo](#)
- [VkImageCreateInfo](#)
- [VkImageViewCreateInfo](#)
- [VkInstanceCreateInfo](#)
- [VkMemoryAllocateInfo](#)
- [VkSemaphoreCreateInfo](#)

Bits which indicate the types of Metal objects that may be exported from a corresponding Vulkan object are:

```
// Provided by VK_EXT_metal_objects
typedef enum VkExportMetalObjectTypeFlagBitsEXT {
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT = 0x00000001,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT = 0x00000002,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT = 0x00000004,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT = 0x00000008,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT = 0x00000010,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT = 0x00000020,
} VkExportMetalObjectTypeFlagBitsEXT;
```

- [VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT](#) specifies that a Metal [MTLDevice](#) may be exported.
- [VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT](#) specifies that a Metal [MTLCommandQueue](#) may be exported.
- [VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT](#) specifies that a Metal [MTLBuffer](#) may be exported.
- [VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT](#) specifies that a Metal [MTLTexture](#) may be exported.
- [VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT](#) specifies that a Metal [IOSurface](#) may be exported.
- [VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT](#) specifies that a Metal [MTLSharedEvent](#) may be exported.

```
// Provided by VK_EXT_metal_objects
typedef VkFlags VkExportMetalObjectTypeFlagsEXT;
```

[VkExportMetalObjectTypeFlagsEXT](#) is a bitmask type for setting a mask of zero or more

[VkExportMetalObjectTypeFlagBitsEXT](#).

To export Metal objects that underlie Vulkan objects, call:

```
// Provided by VK_EXT_metal_objects
void vkExportMetalObjectsEXT(
    VkDevice device,
    VkExportMetalObjectsInfoEXT* pMetalObjectsInfo);
```

- **device** is the device that created the Vulkan objects.
- **pMetalObjectsInfo** is a pointer to a [VkExportMetalObjectsInfoEXT](#) structure whose **pNext** chain contains structures, each identifying a Vulkan object and providing a pointer through which the Metal object will be returned.

Valid Usage (Implicit)

- VUID-vkExportMetalObjectsEXT-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkExportMetalObjectsEXT-pMetalObjectsInfo-parameter **pMetalObjectsInfo** **must** be a valid pointer to a [VkExportMetalObjectsInfoEXT](#) structure

The [VkExportMetalObjectsInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalObjectsInfoEXT {
    VkStructureType sType;
    const void* pNext;
} VkExportMetalObjectsInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

Valid Usage

- VUID-VkExportMetalObjectsInfoEXT-pNext-06791
If the **pNext** chain includes a [VkExportMetalDeviceInfoEXT](#) structure, the [VkInstance](#) **must** have been created with [VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT](#) in the **exportObjectType** member of a [VkExportMetalObjectCreateInfoEXT](#) structure in the **pNext** chain of the [VkInstanceCreateInfo](#) structure in the [vkCreateInstance](#) command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06792
If the **pNext** chain includes a [VkExportMetalCommandQueueInfoEXT](#) structure, the [VkInstance](#) **must** have been created with [VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT](#) in the **exportObjectType** member of a [VkExportMetalObjectCreateInfoEXT](#) structure in the **pNext**

chain of the [VkInstanceCreateInfo](#) structure in the [vkCreateInstance](#) command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06793

If the [pNext](#) chain includes a [VkExportMetalBufferInfoEXT](#) structure, the [VkDeviceMemory](#) in its [memory](#) member **must** have been allocated with [VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT](#) in the [exportObjectType](#) member of a [VkExportMetalObjectCreateInfoEXT](#) structure in the [pNext](#) chain of the [VkMemoryAllocateInfo](#) structure in the [vkAllocateMemory](#) command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06794

If the [pNext](#) chain includes a [VkExportMetalTextureInfoEXT](#) structure, exactly one of its [image](#), [imageView](#), or [bufferView](#) members **must** not be [VK_NULL_HANDLE](#)

- VUID-VkExportMetalObjectsInfoEXT-pNext-06795

If the [pNext](#) chain includes a [VkExportMetalTextureInfoEXT](#) structure, and its [image](#) member is not [VK_NULL_HANDLE](#), the [VkImage](#) in its [image](#) member **must** have been created with [VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT](#) in the [exportObjectType](#) member of a [VkExportMetalObjectCreateInfoEXT](#) structure in the [pNext](#) chain of the [VkImageCreateInfo](#) structure in the [vkCreateImage](#) command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06796

If the [pNext](#) chain includes a [VkExportMetalTextureInfoEXT](#) structure, and its [imageView](#) member is not [VK_NULL_HANDLE](#), the [VkImageView](#) in its [imageView](#) member **must** have been created with [VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT](#) in the [exportObjectType](#) member of a [VkExportMetalObjectCreateInfoEXT](#) structure in the [pNext](#) chain of the [VkImageViewCreateInfo](#) structure in the [vkCreateImageView](#) command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06797

If the [pNext](#) chain includes a [VkExportMetalTextureInfoEXT](#) structure, and its [bufferView](#) member is not [VK_NULL_HANDLE](#), the [VkBufferView](#) in its [bufferView](#) member **must** have been created with [VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT](#) in the [exportObjectType](#) member of a [VkExportMetalObjectCreateInfoEXT](#) structure in the [pNext](#) chain of the [VkBufferViewCreateInfo](#) structure in the [vkCreateBufferView](#) command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06798

If the [pNext](#) chain includes a [VkExportMetalTextureInfoEXT](#) structure, and if either its [image](#) or [imageView](#) member is not [VK_NULL_HANDLE](#), then [plane](#) **must** be [VK_IMAGE_ASPECT_PLANE_0_BIT](#), [VK_IMAGE_ASPECT_PLANE_1_BIT](#), or [VK_IMAGE_ASPECT_PLANE_2_BIT](#)

- VUID-VkExportMetalObjectsInfoEXT-pNext-06799

If the [pNext](#) chain includes a [VkExportMetalTextureInfoEXT](#) structure, and if the [VkImage](#) in its [image](#) member does not have a [multi-planar format](#), then its [plane](#) member **must** be [VK_IMAGE_ASPECT_PLANE_0_BIT](#)

- VUID-VkExportMetalObjectsInfoEXT-pNext-06800

If the [pNext](#) chain includes a [VkExportMetalTextureInfoEXT](#) structure, and if the [VkImage](#) in its [image](#) member has a [multi-planar format](#) with only two planes, then its [plane](#) member **must** not be [VK_IMAGE_ASPECT_PLANE_2_BIT](#)

- VUID-VkExportMetalObjectsInfoEXT-pNext-06801

If the [pNext](#) chain includes a [VkExportMetalTextureInfoEXT](#) structure, and if the [VkImageView](#) in its [imageView](#) member does not have a [multi-planar format](#), then its [plane](#)

member **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06802

If the `pNext` chain includes a `VkExportMetalTextureInfoEXT` structure, and if the `VkImageView` in its `imageView` member has a `multi-planar format` with only two planes, then its `plane` member **must** not be `VK_IMAGE_ASPECT_PLANE_2_BIT`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06803

If the `pNext` chain includes a `VkExportMetalIOSurfaceInfoEXT` structure, the `VkImage` in its `image` member **must** have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkImageCreateInfo` structure in the `vkCreateImage` command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06804

If the `pNext` chain includes a `VkExportMetalSharedEventInfoEXT` structure, exactly one of its `semaphore` or `event` members **must** not be `VK_NULL_HANDLE`

- VUID-VkExportMetalObjectsInfoEXT-pNext-06805

If the `pNext` chain includes a `VkExportMetalSharedEventInfoEXT` structure, and its `semaphore` member is not `VK_NULL_HANDLE`, the `VkSemaphore` in its `semaphore` member **must** have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkSemaphoreCreateInfo` structure in the `vkCreateSemaphore` command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06806

If the `pNext` chain includes a `VkExportMetalSharedEventInfoEXT` structure, and its `event` member is not `VK_NULL_HANDLE`, the `VkEvent` in its `event` member **must** have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkEventCreateInfo` structure in the `vkCreateEvent` command

Valid Usage (Implicit)

- VUID-VkExportMetalObjectsInfoEXT-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECTS_INFO_EXT`

- VUID-VkExportMetalObjectsInfoEXT-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkExportMetalBufferInfoEXT`, `VkExportMetalCommandQueueInfoEXT`, `VkExportMetalDeviceInfoEXT`, `VkExportMetalIOSurfaceInfoEXT`, `VkExportMetalSharedEventInfoEXT`, or `VkExportMetalTextureInfoEXT`

- VUID-VkExportMetalObjectsInfoEXT-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique, with the exception of structures of type `VkExportMetalBufferInfoEXT`, `VkExportMetalCommandQueueInfoEXT`, `VkExportMetalIOSurfaceInfoEXT`, `VkExportMetalSharedEventInfoEXT`, or `VkExportMetalTextureInfoEXT`

To export the Metal `MTLDevice` object underlying the `VkPhysicalDevice` associated with a `VkDevice` object, include a `VkExportMetalDeviceInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalDeviceInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalDeviceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    MTLDevice_id       mtlDevice;
} VkExportMetalDeviceInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlDevice` is the Metal `id<MTLDevice>` object underlying the `VkPhysicalDevice` associated with the `VkDevice` object identified in the call. The implementation will return the `MTLDevice` in this member, or it will return `NULL` if no `MTLDevice` could be found underlying the `VkPhysicalDevice` object.

Valid Usage (Implicit)

- VUID-VkExportMetalDeviceInfoEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_EXPORT_METAL_DEVICE_INFO_EXT`

Structure Chaining

Extends the structure

- `VkExportMetalObjectsInfoEXT`

The type `id<MTLDevice>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLDevice_id` is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLDevice;
typedef __unsafe_unretained id<MTLDevice> MTLDevice_id;
#else
typedef void* MTLDevice_id;
#endif
```

To export the Metal `MTLCommandQueue` object underlying a `VkQueue` object, include a `VkExportMetalCommandQueueInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter

of a [vkExportMetalObjectsEXT](#) call.

The [VkExportMetalCommandQueueInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalCommandQueueInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkQueue             queue;
    MTLCommandQueue_id mtlCommandQueue;
} VkExportMetalCommandQueueInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queue` is a [VkQueue](#).
- `mtlCommandQueue` is the Metal `id<MTLCommandQueue>` object underlying the [VkQueue](#) object in `queue`. The implementation will return the `MTLCommandQueue` in this member, or it will return `NULL` if no `MTLCommandQueue` could be found underlying the [VkQueue](#) object.

Valid Usage (Implicit)

- VUID-VkExportMetalCommandQueueInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_COMMAND_QUEUE_INFO_EXT`
- VUID-VkExportMetalCommandQueueInfoEXT-queue-parameter
`queue` **must** be a valid [VkQueue](#) handle

Structure Chaining

Extends the structure

- [VkExportMetalObjectsInfoEXT](#)

The type `id<MTLCommandQueue>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLCommandQueue_id` is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLCommandQueue;
typedef __unsafe_unretained id<MTLCommandQueue> MTLCommandQueue_id;
#else
typedef void* MTLCommandQueue_id;
#endif
```

To export the Metal `MTLBuffer` object underlying a `VkDeviceMemory` object, include a `VkExportMetalBufferInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalBufferInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalBufferInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory      memory;
    MTLBuffer_id        mtlBuffer;
} VkExportMetalBufferInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is a `VkDeviceMemory`.
- `mtlBuffer` is the Metal `id<MTLBuffer>` object underlying the `VkDeviceMemory` object in `memory`. The implementation will return the `MTLBuffer` in this member, or it will return `NULL` if no `MTLBuffer` could be found underlying the `VkDeviceMemory` object.

Valid Usage (Implicit)

- VUID-VkExportMetalBufferInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_BUFFER_INFO_EXT`
- VUID-VkExportMetalBufferInfoEXT-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle

Structure Chaining

Extends the structure

- `VkExportMetalObjectsInfoEXT`

To import a Metal `MTLBuffer` object to underlie a `VkDeviceMemory` object, include a `VkImportMetalBufferInfoEXT` structure in the `pNext` chain of the `VkMemoryAllocateInfo` structure in a `vkAllocateMemory` command.

The `VkImportMetalBufferInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalBufferInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    MTLBuffer_id       mtlBuffer;
} VkImportMetalBufferInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlBuffer` is the Metal `id<MTLBuffer>` object that is to underlie the `VkDeviceMemory`.

The application **must** ensure that the configuration of the `id<MTLBuffer>` object is compatible with the configuration of the `VkDeviceMemory`. Failure to do so results in undefined behavior.

Valid Usage (Implicit)

- VUID-VkImportMetalBufferInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_METAL_BUFFER_INFO_EXT`

Structure Chaining

Extends the structure

- `VkMemoryAllocateInfo`

The type `id<MTLBuffer>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLBuffer_id` is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLBuffer;
typedef __unsafe_unretained id<MTLBuffer> MTLBuffer_id;
#else
typedef void* MTLBuffer_id;
#endif
```

To export a Metal `MTLTexture` object underlying a `VkImage`, `VkImageView`, or `VkBufferView` object, include a `VkExportMetalTextureInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalTextureInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalTextureInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkImage               image;
    VkImageView           imageView;
    VkBufferView          bufferView;
    VkImageAspectFlagBits plane;
    MTLTexture_id         mtlTexture;
} VkExportMetalTextureInfoEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **image** is **VK_NULL_HANDLE** or a **VkImage**.
- **imageView** is **VK_NULL_HANDLE** or a **VkImageView**.
- **bufferView** is **VK_NULL_HANDLE** or a **VkBufferView**.
- **plane** specifies the plane of a multi-planar **VkImage** or **VkImageView**.
- **mtlTexture** is the Metal **id<MTLTexture>** object underlying the **VkImage**, **VkImageView**, or **VkBufferView** object in **image**, **imageView**, or **bufferView**, respectively, at the plane indicated in **aspectMask**. The implementation will return the **MTLTexture** in this member, or it will return **NULL** if no **MTLTexture** could be found underlying the **VkImage**, **VkImageView**, or **VkBufferView** object, at the plane indicated in **aspectMask**.

Valid Usage (Implicit)

- VUID-VkExportMetalTextureInfoEXT-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_EXPORT_METAL_TEXTURE_INFO_EXT**
- VUID-VkExportMetalTextureInfoEXT-image-parameter
If **image** is not **VK_NULL_HANDLE**, **image** **must** be a valid **VkImage** handle
- VUID-VkExportMetalTextureInfoEXT-imageView-parameter
If **imageView** is not **VK_NULL_HANDLE**, **imageView** **must** be a valid **VkImageView** handle
- VUID-VkExportMetalTextureInfoEXT-bufferView-parameter
If **bufferView** is not **VK_NULL_HANDLE**, **bufferView** **must** be a valid **VkBufferView** handle
- VUID-VkExportMetalTextureInfoEXT-plane-parameter
plane **must** be a valid **VkImageAspectFlagBits** value
- VUID-VkExportMetalTextureInfoEXT-commonparent
Each of **bufferView**, **image**, and **imageView** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same **VkDevice**

Structure Chaining

Extends the structure

- [VkExportMetalObjectsInfoEXT](#)

To import one or more existing Metal [MTLTexture](#) objects to underlie a [VkImage](#) object, include one or more [VkImportMetalTextureInfoEXT](#) structures in the [pNext](#) chain of the [VkImageCreateInfo](#) structure in a [vkCreateImage](#) command.

The [VkImportMetalTextureInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalTextureInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkImageAspectFlagBits plane;
    MTLTexture_id        mtlTexture;
} VkImportMetalTextureInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [plane](#) specifies the plane of the [VkImage](#) that the [id<MTLTexture>](#) object should be attached to.
- [mtlTexture](#) is a the Metal [id<MTLTexture>](#) object that is to underlie the [VkImage](#) plane.

The [pNext](#) chain **must** include one [VkImportMetalTextureInfoEXT](#) structure for each plane in the [VkImage](#). The application **must** ensure that the configuration of the Metal [id<MTLTexture>](#) objects are compatible with the configuration of the [VkImage](#). Failure to do so results in undefined behavior.

NOTE

Due to [id<MTLTexture>](#) already being backed by memory, images created with [VkImportMetalTextureInfoEXT](#) in the [pNext](#) of the [VkImageCreateInfo](#) will be treated as bound to a `VkDeviceMemory`.

Valid Usage (Implicit)

- VUID-VkImportMetalTextureInfoEXT-sType-sType
[sType](#) **must** be `VK_STRUCTURE_TYPE_IMPORT_METAL_TEXTURE_INFO_EXT`
- VUID-VkImportMetalTextureInfoEXT-plane-parameter
[plane](#) **must** be a valid [VkImageAspectFlagBits](#) value

Structure Chaining

Extends the structure

- [VkImageCreateInfo](#)

The type `id<MTLTexture>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLTexture_id` is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLTexture;
typedef __unsafe_unretained id<MTLTexture> MTLTexture_id;
#else
typedef void* MTLTexture_id;
#endif
```

To export the Metal [IOSurfaceRef](#) object underlying a [VkImage](#) object, include a `VkExportMetalIOSurfaceInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalIOSurfaceInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalIOSurfaceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
    IOSurfaceRef        ioSurface;
} VkExportMetalIOSurfaceInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is a [VkImage](#).
- `ioSurface` is the Metal [IOSurfaceRef](#) object underlying the [VkImage](#) object in `image`. The implementation will return the [IOSurfaceRef](#) in this member, or it will return `NULL` if no [IOSurfaceRef](#) could be found underlying the [VkImage](#) object.

Valid Usage (Implicit)

- VUID-VkExportMetalIOSurfaceInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_IO_SURFACE_INFO_EXT`
- VUID-VkExportMetalIOSurfaceInfoEXT-image-parameter
`image` **must** be a valid [VkImage](#) handle

Structure Chaining

Extends the structure

- [VkExportMetalObjectsInfoEXT](#)

To import, or create, a Metal [IOSurfaceRef](#) object to underlie a [VkImage](#) object, include a [VkImportMetalIOSurfaceInfoEXT](#) structure in the `pNext` chain of the [VkImageCreateInfo](#) structure in a [vkCreateImage](#) command.

The [VkImportMetalIOSurfaceInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalIOSurfaceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    IOSurfaceRef        ioSurface;
} VkImportMetalIOSurfaceInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `ioSurface` is [VK_NULL_HANDLE](#) or the Metal [IOSurfaceRef](#) object that is to underlie the [VkImage](#).

If `ioSurface` is not [VK_NULL_HANDLE](#), it will be used to underlie the [VkImage](#). If `ioSurface` is [VK_NULL_HANDLE](#), the implementation will create a new [IOSurface](#) to underlie the [VkImage](#).

If provided, the application **must** ensure that the configuration of the [IOSurfaceRef](#) object is compatible with the configuration of the [VkImage](#). Failure to do so results in undefined behavior.

Valid Usage (Implicit)

- VUID-VkImportMetalIOSurfaceInfoEXT-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_IMPORT_METAL_IO_SURFACE_INFO_EXT](#)

Structure Chaining

Extends the structure

- [VkImageCreateInfo](#)

The type [IOSurfaceRef](#) is defined in Apple's CoreGraphics framework, but to remove an unnecessary compile time dependency, an incomplete type definition of [IOSurfaceRef](#) is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
typedef struct __IOSurface* IOSurfaceRef;
```

To export the Metal `MTLSharedEvent` object underlying a `VkSemaphore` or `VkEvent` object, include a `VkExportMetalSharedEventInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalSharedEventInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalSharedEventInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkSemaphore         semaphore;
    VkEvent             event;
    MTLSharedEvent_id   mtlSharedEvent;
} VkExportMetalSharedEventInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `semaphore` is `VK_NULL_HANDLE` or a `VkSemaphore`.
- `event` is `VK_NULL_HANDLE` or a `VkEvent`.
- `mtlSharedEvent` is the Metal `id<MTLSharedEvent>` object underlying the `VkSemaphore` or `VkEvent` object in `semaphore` or `event`, respectively. The implementation will return the `MTLSharedEvent` in this member, or it will return `NULL` if no `MTLSharedEvent` could be found underlying the `VkSemaphore` or `VkEvent` object.

Valid Usage (Implicit)

- VUID-VkExportMetalSharedEventInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXPORT_METAL_SHARED_EVENT_INFO_EXT`
- VUID-VkExportMetalSharedEventInfoEXT-semaphore-parameter
If `semaphore` is not `VK_NULL_HANDLE`, `semaphore` **must** be a valid `VkSemaphore` handle
- VUID-VkExportMetalSharedEventInfoEXT-event-parameter
If `event` is not `VK_NULL_HANDLE`, `event` **must** be a valid `VkEvent` handle
- VUID-VkExportMetalSharedEventInfoEXT-commonparent
Both of `event`, and `semaphore` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Structure Chaining

Extends the structure

- [VkExportMetalObjectsInfoEXT](#)

To import a Metal `id<MTLSharedEvent>` object to underlie a [VkSemaphore](#) or [VkEvent](#) object, include a [VkImportMetalSharedEventInfoEXT](#) structure in the `pNext` chain of the [VkSemaphoreCreateInfo](#) or [VkEventCreateInfo](#) structure in a [vkCreateSemaphore](#) or [vkCreateEvent](#) command, respectively.

The [VkImportMetalSharedEventInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalSharedEventInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    MTLSharedEvent_id  mtlSharedEvent;
} VkImportMetalSharedEventInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlSharedEvent` is the Metal `id<MTLSharedEvent>` object that is to underlie the [VkSemaphore](#) or [VkEvent](#).

If the `pNext` chain of the [VkSemaphoreCreateInfo](#) structure includes both [VkImportMetalSharedEventInfoEXT](#) and [VkSemaphoreTypeCreateInfo](#), the `signaledValue` property of the imported `id<MTLSharedEvent>` object will be set to [VkSemaphoreTypeCreateInfo::initialValue](#).

Valid Usage (Implicit)

- VUID-VkImportMetalSharedEventInfoEXT-sType-sType
`sType` must be [VK_STRUCTURE_TYPE_IMPORT_METAL_SHARED_EVENT_INFO_EXT](#)

Structure Chaining

Extends the structures

- [VkEventCreateInfo](#)
- [VkSemaphoreCreateInfo](#)

The type `id<MTLSharedEvent>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of [MTLSharedEvent_id](#) is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLSharedEvent;
typedef __unsafe_unretained id<MTLSharedEvent> MTLSharedEvent_id;
#else
typedef void* MTLSharedEvent_id;
#endif
```

11.2.11. QNX Screen Buffer External Memory

To import memory created outside of the current Vulkan instance from a QNX Screen buffer, add a `VkImportScreenBufferInfoQNX` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkImportScreenBufferInfoQNX` structure is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkImportScreenBufferInfoQNX {
    VkStructureType      sType;
    const void*          pNext;
    struct _screen_buffer* buffer;
} VkImportScreenBufferInfoQNX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is a pointer to a `struct _screen_buffer`, the QNX Screen buffer to import

The implementation **may** not acquire a reference to the imported Screen buffer. Therefore, the application **must** ensure that the object referred to by `buffer` stays valid as long as the device memory to which it is imported is being used.

Valid Usage

- VUID-VkImportScreenBufferInfoQNX-buffer-08966
If `buffer` is not `NULL`, QNX Screen Buffers **must** be supported for import, as reported by `VkExternalImageFormatProperties` or `VkExternalBufferProperties`
- VUID-VkImportScreenBufferInfoQNX-buffer-08967
`buffer` is not `NULL`, it **must** be a pointer to `valid QNX Screen buffer`

Valid Usage (Implicit)

- VUID-VkImportScreenBufferInfoQNX-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMPORT_SCREEN_BUFFER_INFO_QNX`

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

To determine the memory parameters to use when importing a QNX Screen buffer, call:

```
// Provided by VK_QNX_external_memory_screen_buffer
VkResult vkGetScreenBufferPropertiesQNX(
    VkDevice device,
    const struct _screen_buffer* buffer,
    VkScreenBufferPropertiesQNX* pProperties);
```

- **device** is the logical device that will be importing **buffer**.
- **buffer** is the QNX Screen buffer which will be imported.
- **pProperties** is a pointer to a [VkScreenBufferPropertiesQNX](#) structure in which the properties of **buffer** are returned.

Valid Usage

- VUID-vkGetScreenBufferPropertiesQNX-buffer-08968
buffer **must** be a [valid QNX Screen buffer](#)

Valid Usage (Implicit)

- VUID-vkGetScreenBufferPropertiesQNX-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetScreenBufferPropertiesQNX-buffer-parameter
buffer **must** be a valid pointer to a valid [_screen_buffer](#) value
- VUID-vkGetScreenBufferPropertiesQNX-pProperties-parameter
pProperties **must** be a valid pointer to a [VkScreenBufferPropertiesQNX](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)

- [VK_ERROR_VALIDATION_FAILED](#)

The [VkScreenBufferPropertiesQNX](#) structure returned is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkScreenBufferPropertiesQNX {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       allocationSize;
    uint32_t           memoryTypeBits;
} VkScreenBufferPropertiesQNX;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **allocationSize** is the size of the external memory.
- **memoryTypeBits** is a bitmask containing one bit set for every memory type which the specified Screen buffer **can** be imported as.

Valid Usage (Implicit)

- VUID-VkScreenBufferPropertiesQNX-sType-sType
sType must be [VK_STRUCTURE_TYPE_SCREEN_BUFFER_PROPERTIES_QNX](#)
- VUID-VkScreenBufferPropertiesQNX-pNext-pNext
pNext must be [NULL](#) or a pointer to a valid instance of [VkScreenBufferFormatPropertiesQNX](#)
- VUID-VkScreenBufferPropertiesQNX-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique

To obtain format properties of a QNX Screen buffer, include a [VkScreenBufferFormatPropertiesQNX](#) structure in the **pNext** chain of the [VkScreenBufferPropertiesQNX](#) structure passed to [vkGetScreenBufferPropertiesQNX](#). This structure is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkScreenBufferFormatPropertiesQNX {
    VkStructureType      sType;
    void*                pNext;
    VkFormat              format;
    uint64_t              externalFormat;
    uint64_t              screenUsage;
    VkFormatFeatureFlags formatFeatures;
    VkComponentMapping    samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange   suggestedYcbcrRange;
    VkChromaLocation       suggestedXChromaOffset;
    VkChromaLocation       suggestedYChromaOffset;
} VkScreenBufferFormatPropertiesQNX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is the Vulkan format corresponding to the Screen buffer's format or `VK_FORMAT_UNDEFINED` if there is not an equivalent Vulkan format.
- `externalFormat` is an implementation-defined external format identifier for use with `VkExternalFormatQNX`. It **must** not be zero.
- `screenUsage` is an implementation-defined external usage identifier for the QNX Screen buffer.
- `formatFeatures` describes the capabilities of this external format when used with an image bound to memory imported from `buffer`.
- `samplerYcbcrConversionComponents` is the component swizzle that **should** be used in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYcbcrModel` is a suggested color model to use in the `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYcbcrRange` is a suggested numerical value range to use in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedXChromaOffset` is a suggested X chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.
- `suggestedYChromaOffset` is a suggested Y chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.

If the QNX Screen buffer has one of the formats listed in the [QNX Screen Format Equivalence table](#), then `format` **must** have the equivalent Vulkan format listed in the table. Otherwise, `format` **may** be `VK_FORMAT_UNDEFINED`, indicating the QNX Screen buffer **can** only be used with an external format. The `formatFeatures` member **must** include `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` and **should** include `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT`.

Valid Usage (Implicit)

- VUID-VkScreenBufferFormatPropertiesQNX-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SCREEN_BUFFER_FORMAT_PROPERTIES_QNX`

Structure Chaining

Extends the structure

- `VkScreenBufferPropertiesQNX`

11.2.12. Metal External Memory

To import memory from a Metal handle, add a `VkImportMemoryMetalHandleInfoEXT` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure.

The `VkImportMemoryMetalHandleInfoEXT` structure is defined as:

```
// Provided by VK_EXT_external_memory_metal
typedef struct VkImportMemoryMetalHandleInfoEXT {
    VkStructureType           sType;
    const void*               pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    void*                     handle;
} VkImportMemoryMetalHandleInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of `handle` or `name`.
- `handle` is `NULL` or the external handle to import.

Importing memory object payloads from Metal handles shares the ownership of the handle to the Vulkan implementation.

Applications **can** import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct `VkDeviceMemory` object.

Valid Usage

- VUID-VkImportMemoryMetalHandleInfoEXT-handleType-10408
If `handleType` is not `0`, it **must** be supported for import, as reported by `VkExternalImageFormatProperties` or `VkExternalBufferProperties`
- VUID-VkImportMemoryMetalHandleInfoEXT-handle-10409

The memory from which **handle** was exported **must** have been created on the same underlying physical device as **device**

- VUID-VkImportMemoryMetalHandleInfoEXT-handleType-10410
If **handleType** is not **0**, it **must** be **VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLBUFFER_BIT_EXT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT** or **VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLHEAP_BIT_EXT**
- VUID-VkImportMemoryMetalHandleInfoEXT-handleType-10411
If **handleType** is not **0**, **handle** **must** be a valid non-NULL handle of the type specified by **handleType**
- VUID-VkImportMemoryMetalHandleInfoEXT-handle-10412
handle **must** obey any requirements listed for **handleType** in **external memory handle types compatibility**

Valid Usage (Implicit)

- VUID-VkImportMemoryMetalHandleInfoEXT-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_IMPORT_MEMORY_METAL_HANDLE_INFO_EXT**
- VUID-VkImportMemoryMetalHandleInfoEXT-handleType-parameter
If **handleType** is not **0**, **handleType** **must** be a valid **VkExternalMemoryHandleTypeFlagBits** value

Structure Chaining

Extends the structure

- **VkMemoryAllocateInfo**

To export a Metal handle representing the payload of a Vulkan device memory object, call:

```
// Provided by VK_EXT_external_memory_metal
VkResult vkGetMemoryMetalHandleEXT(
    VkDevice device,
    const VkMemoryGetMetalHandleInfoEXT* pGetMetalHandleInfo,
    void** pHandle);
```

- **device** is the logical device that created the device memory being exported.
- **pGetMetalHandleInfo** is a pointer to a **VkMemoryGetMetalHandleInfoEXT** structure containing parameters of the export operation.
- **pHandle** will return the Metal handle representing the payload of the device memory object.

Unless the app retains the handle object returned by the call, the lifespan will be the same as the associated **VkDeviceMemory**.

Valid Usage (Implicit)

- VUID-vkGetMemoryMetalHandleEXT-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetMemoryMetalHandleEXT-pGetMetalHandleInfo-parameter **pGetMetalHandleInfo** **must** be a valid pointer to a valid [VkMemoryGetMetalHandleInfoEXT](#) structure
- VUID-vkGetMemoryMetalHandleEXT-pHandle-parameter **pHandle** **must** be a valid pointer to a pointer value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkMemoryGetMetalHandleInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_external_memory_metal
typedef struct VkMemoryGetMetalHandleInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceMemory            memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetMetalHandleInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **memory** is the memory object from which the handle will be exported.
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of handle requested.

The properties of the handle returned depend on the value of **handleType**. See [VkExternalMemoryHandleTypeFlagBits](#) for a description of the properties of the defined external memory handle types.

Valid Usage

- VUID-VkMemoryGetMetalHandleInfoEXT-memory-10413
memory must have been created with a valid [VkExportMemoryAllocateInfo](#)
- VUID-VkMemoryGetMetalHandleInfoEXT-handleType-10414
handleType must have been included in [VkExportMemoryAllocateInfo::handleTypes](#) when **memory** was created
- VUID-VkMemoryGetMetalHandleInfoEXT-handleType-10415
handleType must be [VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLBUFFER_BIT_EXT](#),
[VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT](#) or
[VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLHEAP_BIT_EXT](#)

Valid Usage (Implicit)

- VUID-VkMemoryGetMetalHandleInfoEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_MEMORY_GET_METAL_HANDLE_INFO_EXT](#)
- VUID-VkMemoryGetMetalHandleInfoEXT-pNext-pNext
pNext must be NULL
- VUID-VkMemoryGetMetalHandleInfoEXT-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle
- VUID-VkMemoryGetMetalHandleInfoEXT-handleType-parameter
handleType must be a valid [VkExternalMemoryHandleTypeFlagBits](#) value

Metal memory handles compatible with Vulkan **may** also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```
// Provided by VK_EXT_external_memory_metal
VkResult vkGetMemoryMetalHandlePropertiesEXT(
    VkDevice device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    const void* pHandle,
    VkMemoryMetalHandlePropertiesEXT* pMemoryMetalHandleProperties);
```

- **device** is the logical device that will be importing **pHandle**.
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the type of the handle **pHandle**.
- **pHandle** is the handle which will be imported.
- **pMemoryMetalHandleProperties** is a pointer to a [VkMemoryMetalHandlePropertiesEXT](#) structure in which properties of **pHandle** are returned.

Valid Usage

- VUID-vkGetMemoryMetalHandlePropertiesEXT-handle-10416
pHandle must point to a valid id<MTLBuffer>, id<MTLTexture> or id<MTLDevice>
- VUID-vkGetMemoryMetalHandlePropertiesEXT-handleType-10417
handleType must be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLBUFFER_BIT_EXT`,
`VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT` or
`VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLHEAP_BIT_EXT`

Valid Usage (Implicit)

- VUID-vkGetMemoryMetalHandlePropertiesEXT-device-parameter
device must be a valid `VkDevice` handle
- VUID-vkGetMemoryMetalHandlePropertiesEXT-handleType-parameter
handleType must be a valid `VkExternalMemoryHandleTypeFlagBits` value
- VUID-vkGetMemoryMetalHandlePropertiesEXT-pHandle-parameter
pHandle must be a pointer value
- VUID-vkGetMemoryMetalHandlePropertiesEXT-pMemoryMetalHandleProperties-parameter
pMemoryMetalHandleProperties must be a valid pointer to a
`VkMemoryMetalHandlePropertiesEXT` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_EXTERNAL_HANDLE`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkMemoryMetalHandlePropertiesEXT` structure returned is defined as:

```
// Provided by VK_EXT_external_memory_metal
typedef struct VkMemoryMetalHandlePropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryMetalHandlePropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified Metal handle **can** be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryMetalHandlePropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_METAL_HANDLE_PROPERTIES_EXT`
- VUID-VkMemoryMetalHandlePropertiesEXT-pNext-pNext
`pNext` **must** be `NULL`

11.2.13. Device Group Memory Allocations

If the `pNext` chain of `VkMemoryAllocateInfo` includes a `VkMemoryAllocateFlagsInfo` structure, then that structure includes flags and a device mask controlling how many instances of the memory will be allocated.

The `VkMemoryAllocateFlagsInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryAllocateFlagsInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkMemoryAllocateFlags flags;
    uint32_t           deviceMask;
} VkMemoryAllocateFlagsInfo;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkMemoryAllocateFlagsInfo
typedef VkMemoryAllocateFlagsInfo VkMemoryAllocateFlagsInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkMemoryAllocateFlagBits` controlling the allocation.
- `deviceMask` is a mask of physical devices in the logical device, indicating that memory **must** be allocated on each device in the mask, if `VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT` is set in `flags`.

If `VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT` is not set, the number of instances allocated depends on whether `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` is set in the memory heap. If `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` is set, then memory is allocated for every physical device in the logical device (as if `deviceMask` has bits set for all device indices). If

[VK_MEMORY_HEAP_MULTI_INSTANCE_BIT](#) is not set, then a single instance of memory is allocated (as if [deviceMask](#) is set to one).

On some implementations, allocations from a multi-instance heap **may** consume memory on all physical devices even if the [deviceMask](#) excludes some devices. If [VkPhysicalDeviceGroupProperties::subsetAllocation](#) is [VK_TRUE](#), then memory is only consumed for the devices in the device mask.

NOTE

In practice, most allocations on a multi-instance heap will be allocated across all physical devices. Unicast allocation support is an optional optimization for a minority of allocations.

Valid Usage

- VUID-VkMemoryAllocateFlagsInfo-deviceMask-00675
If [VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT](#) is set, [deviceMask](#) **must** be a valid device mask
- VUID-VkMemoryAllocateFlagsInfo-deviceMask-00676
If [VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT](#) is set, [deviceMask](#) **must** not be zero
- VUID-VkMemoryAllocateFlagsInfo-flags-10760
If the allocation is performing a memory import operation, then [flags](#) **must** not contain [VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT](#)
- VUID-VkMemoryAllocateFlagsInfo-flags-10761
If the allocation uses protected memory, then [flags](#) **must** not contain [VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT](#)

Valid Usage (Implicit)

- VUID-VkMemoryAllocateFlagsInfo-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_FLAGS_INFO](#)
- VUID-VkMemoryAllocateFlagsInfo-flags-parameter
[flags](#) **must** be a valid combination of [VkMemoryAllocateFlagBits](#) values

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

Bits which **can** be set in [VkMemoryAllocateFlagsInfo::flags](#), controlling device memory allocation, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkMemoryAllocateFlagBits {
    VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT = 0x00000001,
    // Provided by VK_VERSION_1_2
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT = 0x00000002,
    // Provided by VK_VERSION_1_2
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT = 0x00000004,
    // Provided by VK_EXT_zero_initialize_device_memory
    VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT = 0x00000008,
    // Provided by VK_KHR_device_group
    VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT_KHR = VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT,
    // Provided by VK_KHR_buffer_device_address
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT_KHR = VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT,
    // Provided by VK_KHR_buffer_device_address
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT,
} VkMemoryAllocateFlagBits;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkMemoryAllocateFlagBits
typedef VkMemoryAllocateFlagBits VkMemoryAllocateFlagBitsKHR;
```

- [VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT](#) specifies that memory will be allocated for the devices in [VkMemoryAllocateFlagsInfo::deviceMask](#).
- [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT](#) specifies that the memory **can** be attached to a buffer object created with the [VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT](#) usage flag set.
- [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#) specifies that the memory's address **can** be saved and reused on a subsequent run (e.g. for trace capture and replay), see [VkBufferOpaqueCaptureAddressCreateInfo](#) for more detail. If this bit is set, [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT](#) **must** also be set.
- [VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT](#) specifies that the memory will be zeroed automatically by the implementation before application is able to access it.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkMemoryAllocateFlags;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkMemoryAllocateFlags
typedef VkMemoryAllocateFlags VkMemoryAllocateFlagsKHR;
```

[VkMemoryAllocateFlags](#) is a bitmask type for setting a mask of zero or more [VkMemoryAllocateFlagBits](#).

11.2.14. Opaque Capture Address Allocation

To request a specific device address for a memory allocation, add a [VkMemoryOpaqueCaptureAddressAllocateInfo](#) structure to the [pNext](#) chain of the [VkMemoryAllocateInfo](#) structure. The [VkMemoryOpaqueCaptureAddressAllocateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkMemoryOpaqueCaptureAddressAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           opaqueCaptureAddress;
} VkMemoryOpaqueCaptureAddressAllocateInfo;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkMemoryOpaqueCaptureAddressAllocateInfo
typedef VkMemoryOpaqueCaptureAddressAllocateInfo
VkMemoryOpaqueCaptureAddressAllocateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [opaqueCaptureAddress](#) is the opaque capture address requested for the memory allocation.

If [opaqueCaptureAddress](#) is zero, no specific address is requested.

If [opaqueCaptureAddress](#) is not zero, it **should** be an address retrieved from [vkGetDeviceMemoryOpaqueCaptureAddress](#) on an identically created memory allocation on the same implementation.

NOTE

In most cases, it is expected that a non-zero [opaqueAddress](#) is an address retrieved from [vkGetDeviceMemoryOpaqueCaptureAddress](#) on an identically created memory allocation. If this is not the case, it is likely that [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS](#) errors will occur.

This is, however, not a strict requirement because trace capture/replay tools may need to adjust memory allocation parameters for imported memory.

If this structure is not present, it is as if [opaqueCaptureAddress](#) is zero.

Valid Usage (Implicit)

- VUID-VkMemoryOpaqueCaptureAddressAllocateInfo-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_MEMORY_OPAQUE_CAPTURE_ADDRESS_ALLOCATE_INFO](#)

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

11.2.15. Freeing Device Memory

To free a memory object, call:

```
// Provided by VK_VERSION_1_0
void vkFreeMemory(
    VkDevice          device,
    VkDeviceMemory    memory,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that owns the memory.
- **memory** is the [VkDeviceMemory](#) object to be freed.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Before freeing a memory object, an application **must** ensure the memory object is no longer in use by the device—for example by command buffers in the *pending state*. Memory **can** be freed whilst still bound to resources, but those resources **must** not be used afterwards. Freeing a memory object releases the reference it held, if any, to its payload. If there are still any bound images or buffers, the memory object's payload **may** not be immediately released by the implementation, but **must** be released by the time all bound images and buffers have been destroyed. Once all references to a payload are released, it is returned to the heap from which it was allocated.

How memory objects are bound to Images and Buffers is described in detail in the [Resource Memory Association](#) section.

If a memory object is mapped at the time it is freed, it is implicitly unmapped.

NOTE

As described [below](#), host writes are not implicitly flushed when the memory object is unmapped, but the implementation **must** guarantee that writes that have not been flushed do not affect any other memory.

Valid Usage

- VUID-vkFreeMemory-memory-00677
All submitted commands that refer to **memory** (via images or buffers) **must** have completed execution

Valid Usage (Implicit)

- VUID-vkFreeMemory-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkFreeMemory-memory-parameter
If `memory` is not `VK_NULL_HANDLE`, `memory` **must** be a valid `VkDeviceMemory` handle
- VUID-vkFreeMemory-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkFreeMemory-memory-parent
If `memory` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `memory` **must** be externally synchronized

11.2.16. Host Access to Device Memory Objects

Memory objects created with `vkAllocateMemory` are not directly host accessible.

Memory objects created with the memory property `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT` are considered *mappable*. Memory objects **must** be mappable in order to be successfully mapped on the host.

To retrieve a host virtual address pointer to a region of a mappable memory object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkMapMemory(
    VkDevice          device,
    VkDeviceMemory    memory,
    VkDeviceSize      offset,
    VkDeviceSize      size,
    VkMemoryMapFlags  flags,
    void**            ppData);
```

- `device` is the logical device that owns the memory.
- `memory` is the `VkDeviceMemory` object to be mapped.
- `offset` is a zero-based byte offset from the beginning of the memory object.
- `size` is the size of the memory range to map, or `VK_WHOLE_SIZE` to map from `offset` to the end of the allocation.
- `flags` is a bitmask of `VkMemoryMapFlagBits` specifying additional parameters of the memory map operation.

- `ppData` is a pointer to a `void*` variable in which a host-accessible pointer to the beginning of the mapped range is returned. The value of the returned pointer minus `offset` **must** be aligned to `VkPhysicalDeviceLimits::minMemoryMapAlignment`.

After a successful call to `vkMapMemory` the memory object `memory` is considered to be currently *host mapped*.

- | | |
|-------------|---|
| NOTE | It is an application error to call <code>vkMapMemory</code> on a memory object that is already <i>host mapped</i> . |
| NOTE | <code>vkMapMemory</code> will fail if the implementation is unable to allocate an appropriately sized contiguous virtual address range, e.g. due to virtual address space fragmentation or platform limits. In such cases, <code>vkMapMemory</code> must return <code>VK_ERROR_MEMORY_MAP_FAILED</code> . The application can improve the likelihood of success by reducing the size of the mapped range and/or removing unneeded mappings using <code>vkUnmapMemory</code> . |

`vkMapMemory` does not check whether the device memory is currently in use before returning the host-accessible pointer. The application **must** guarantee that any previously submitted command that writes to this range has completed before the host reads from or writes to that range, and that any previously submitted command that reads from that range has completed before the host writes to that region (see [here](#) for details on fulfilling such a guarantee). If the device memory was allocated without the `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` set, these guarantees **must** be made for an extended range: the application **must** round down the start of the range to the nearest multiple of `VkPhysicalDeviceLimits::nonCoherentAtomSize`, and round the end of the range up to the nearest multiple of `VkPhysicalDeviceLimits::nonCoherentAtomSize`.

While a range of device memory is host mapped, the application is responsible for synchronizing both device and host access to that memory range.

- | | |
|-------------|---|
| NOTE | It is important for the application developer to become meticulously familiar with all of the mechanisms described in the chapter on Synchronization and Cache Control as they are crucial to maintaining memory access ordering. |
|-------------|---|

Calling `vkMapMemory` is equivalent to calling `vkMapMemory2` with an empty `pNext` chain.

Valid Usage

- VUID-vkMapMemory-memory-00678
`memory` **must** not be currently host mapped
- VUID-vkMapMemory-offset-00679
`offset` **must** be less than the size of `memory`
- VUID-vkMapMemory-size-00680
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be greater than 0
- VUID-vkMapMemory-size-00681
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be less than or equal to the size of the

`memory` minus `offset`

- VUID-vkMapMemory-memory-00682
`memory` **must** have been created with a memory type that reports `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT`
- VUID-vkMapMemory-memory-00683
`memory` **must** not have been allocated with multiple instances
- VUID-vkMapMemory-flags-09568
`VK_MEMORY_MAP_PLACED_BIT_EXT` **must** not be set in `flags`

Valid Usage (Implicit)

- VUID-vkMapMemory-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkMapMemory-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle
- VUID-vkMapMemory-flags-parameter
`flags` **must** be a valid combination of `VkMemoryMapFlagBits` values
- VUID-vkMapMemory-ppData-parameter
`ppData` **must** be a valid pointer to a pointer value
- VUID-vkMapMemory-memory-parent
`memory` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `memory` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_MEMORY_MAP_FAILED`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Bits which **can** be set in `vkMapMemory::flags` and `VkMemoryMapInfo::flags`, specifying additional properties of a memory map, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkMemoryMapFlagBits {
    // Provided by VK_EXT_map_memory_placed
    VK_MEMORY_MAP_PLACED_BIT_EXT = 0x00000001,
} VkMemoryMapFlagBits;
```

- [VK_MEMORY_MAP_PLACED_BIT_EXT](#) requests that the implementation place the memory map at the virtual address specified by the application via [VkMemoryMapPlacedInfoEXT::pPlacedAddress](#), replacing any existing mapping at that address. This flag **must** not be used with [vkMapMemory](#) as there is no way to specify the placement address.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryMapFlags;
```

[VkMemoryMapFlags](#) is a bitmask type for setting a mask of zero or more [VkMemoryMapFlagBits](#).

To retrieve a host virtual address pointer to a region of a mappable memory object, call:

```
// Provided by VK_VERSION_1_4
VkResult vkMapMemory2(
    VkDevice                                device,
    const VkMemoryMapInfo*                  pMemoryMapInfo,
    void**                                  ppData);
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to vkMapMemory2
VkResult vkMapMemory2KHR(
    VkDevice                                device,
    const VkMemoryMapInfo*                  pMemoryMapInfo,
    void**                                  ppData);
```

- [device](#) is the logical device that owns the memory.
- [pMemoryMapInfo](#) is a pointer to a [VkMemoryMapInfo](#) structure describing parameters of the map.
- [ppData](#) is a pointer to a `void *` variable in which is returned a host-accessible pointer to the beginning of the mapped range. This pointer minus [VkMemoryMapInfo::offset](#) **must** be aligned to at least [VkPhysicalDeviceLimits::minMemoryMapAlignment](#).

This function behaves identically to [vkMapMemory](#) except that it gets its parameters via an extensible structure pointer rather than directly as function arguments.

Valid Usage (Implicit)

- VUID-vkMapMemory2-device-parameter [device](#) **must** be a valid [VkDevice](#) handle

- VUID-vkMapMemory2-pMemoryMapInfo-parameter
`pMemoryMapInfo` **must** be a valid pointer to a valid `VkMemoryMapInfo` structure
- VUID-vkMapMemory2-ppData-parameter
`ppData` **must** be a valid pointer to a pointer value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_MEMORY_MAP_FAILED`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkMemoryMapInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkMemoryMapInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkMemoryMapFlags   flags;
    VkDeviceMemory      memory;
    VkDeviceSize        offset;
    VkDeviceSize        size;
} VkMemoryMapInfo;
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to VkMemoryMapInfo
typedef VkMemoryMapInfo VkMemoryMapInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkMemoryMapFlagBits` specifying additional parameters of the memory map operation.
- `memory` is the `VkDeviceMemory` object to be mapped.
- `offset` is a zero-based byte offset from the beginning of the memory object.
- `size` is the size of the memory range to map, or `VK_WHOLE_SIZE` to map from `offset` to the end of the allocation.

Valid Usage

- VUID-VkMemoryMapInfo-memory-07958
`memory` **must** not be currently host mapped
- VUID-VkMemoryMapInfo-offset-07959
`offset` **must** be less than the size of `memory`
- VUID-VkMemoryMapInfo-size-07960
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be greater than 0
- VUID-VkMemoryMapInfo-size-07961
If `size` is not equal to `VK_WHOLE_SIZE`, `size` **must** be less than or equal to the size of the `memory` minus `offset`
- VUID-VkMemoryMapInfo-memory-07962
`memory` **must** have been created with a memory type that reports `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT`
- VUID-VkMemoryMapInfo-memory-07963
`memory` **must** not have been allocated with multiple instances
- VUID-VkMemoryMapInfo-flags-09569
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags`, the `memoryMapPlaced` feature **must** be enabled
- VUID-VkMemoryMapInfo-flags-09570
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags`, the `pNext` chain **must** include a `VkMemoryMapPlacedInfoEXT` structure and `VkMemoryMapPlacedInfoEXT::pPlacedAddress` **must** not be `NULL`
- VUID-VkMemoryMapInfo-flags-09571
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and the `memoryMapRangePlaced` feature is not enabled, `offset` **must** be zero
- VUID-VkMemoryMapInfo-flags-09572
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and the `memoryMapRangePlaced` feature is not enabled, `size` **must** be `VK_WHOLE_SIZE` or `VkMemoryAllocateInfo::allocationSize`
- VUID-VkMemoryMapInfo-flags-09573
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and the `memoryMapRangePlaced` feature is enabled, `offset` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT::minPlacedMemoryMapAlignment`
- VUID-VkMemoryMapInfo-flags-09574
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and `size` is not `VK_WHOLE_SIZE`, `size` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT::minPlacedMemoryMapAlignment`
- VUID-VkMemoryMapInfo-flags-09651
If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags` and `size` is `VK_WHOLE_SIZE`, `VkMemoryAllocateInfo::allocationSize` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT::minPlacedMemoryMapAlignment`

- VUID-VkMemoryMapInfo-flags-09575

If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `flags`, the memory object **must** not have been imported from a handle type of `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkMemoryMapInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_MAP_INFO`
- VUID-VkMemoryMapInfo-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkMemoryMapPlacedInfoEXT`
- VUID-VkMemoryMapInfo-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkMemoryMapInfo-flags-parameter
`flags` **must** be a valid combination of `VkMemoryMapFlagBits` values
- VUID-VkMemoryMapInfo-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle

Host Synchronization

- Host access to `memory` **must** be externally synchronized

If `VK_MEMORY_MAP_PLACED_BIT_EXT` is set in `VkMemoryMapInfo::flags` and the `pNext` chain of `VkMemoryMapInfo` includes a `VkMemoryMapPlacedInfoEXT` structure, then that structure specifies the placement address of the memory map. The implementation will place the memory map at the specified address, replacing any existing maps in the specified memory range. Replacing memory maps in this way does not implicitly unmap Vulkan memory objects. Instead, the application **must** ensure no other Vulkan memory objects are mapped anywhere in the specified virtual address range. If successful, `ppData` will be set to the same value as `VkMemoryMapPlacedInfoEXT::pPlacedAddress` and `vkMapMemory2` will return `VK_SUCCESS`. If it cannot place the map at the requested address for any reason, the memory object is left unmapped and `vkMapMemory2` will return `VK_ERROR_MEMORY_MAP_FAILED`.

The `VkMemoryMapPlacedInfoEXT` structure is defined as:

```
// Provided by VK_EXT_map_memory_placed
typedef struct VkMemoryMapPlacedInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    void*              pPlacedAddress;
} VkMemoryMapPlacedInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pPlacedAddress` is the virtual address at which to place the address. If `VkMemoryMapInfo::flags` does not contain `VK_MEMORY_MAP_PLACED_BIT_EXT`, this value is ignored.

Valid Usage

- VUID-VkMemoryMapPlacedInfoEXT-pPlacedAddress-09577
`pPlacedAddress` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT::minPlacedMemoryMapAlignment`
- VUID-VkMemoryMapPlacedInfoEXT-pPlacedAddress-09578
The address range specified by `pPlacedAddress` and `VkMemoryMapInfo::size` **must** not overlap any existing Vulkan memory object mapping

Valid Usage (Implicit)

- VUID-VkMemoryMapPlacedInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_MAP_PLACED_INFO_EXT`

Structure Chaining

Extends the structure

- `VkMemoryMapInfo`

Two commands are provided to enable applications to work with non-coherent memory allocations: `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges`.

NOTE

If the memory object was created with the `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` set, `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges` are unnecessary and **may** have a performance cost. However, `availability and visibility operations` still need to be managed on the device. See the description of `host access types` for more information.

NOTE

While memory objects imported from a handle type of `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT` are inherently mapped to host address space, they are not considered to be host mapped device memory unless they are explicitly host mapped using `vkMapMemory`. That means flushing or invalidating host caches with respect to host accesses performed on such memory through the original host pointer specified at import time is the responsibility of the application and **must** be performed with appropriate synchronization primitives provided by the platform which are outside the scope of Vulkan. `vkFlushMappedMemoryRanges` and

`vkInvalidateMappedMemoryRanges`, however, **can** still be used on such memory objects to synchronize host accesses performed through the host pointer of the host mapped device memory range returned by `vkMapMemory`.

After a successful call to `vkMapMemory` or `vkMapMemory2` the memory object `memory` is considered to be currently *host mapped*.

To flush ranges of non-coherent memory from the host caches, call:

```
// Provided by VK_VERSION_1_0
VkResult vkFlushMappedMemoryRanges(
    VkDevice          device,
    uint32_t          memoryRangeCount,
    const VkMappedMemoryRange* pMemoryRanges);
```

- `device` is the logical device that owns the memory ranges.
- `memoryRangeCount` is the length of the `pMemoryRanges` array.
- `pMemoryRanges` is a pointer to an array of `VkMappedMemoryRange` structures describing the memory ranges to flush.

`vkFlushMappedMemoryRanges` guarantees that host writes to the memory ranges described by `pMemoryRanges` are made available to the host memory domain, such that they **can** be made available to the device memory domain via *memory domain operations* using the `VK_ACCESS_HOST_WRITE_BIT` access type.

The first *synchronization scope* includes all host operations that happened-before it, as defined by the host memory model.

NOTE

Some systems allow writes that do not directly integrate with the host memory model; these have to be synchronized by the application manually. One example of this is non-temporal store instructions on x86; to ensure these happen-before submission, applications should call `_mm_sfence()`.

The second *synchronization scope* is empty.

The first *access scope* includes host writes to the specified memory ranges.

NOTE

When a host write to a memory location is made available in this way, each whole aligned set of `nonCoherentAtomSize` bytes that the memory location exists in will also be made available as if they were written by the host. For example, with a `nonCoherentAtomSize` of 128, if an application writes to the first byte of a memory object via a host mapping, the first 128 bytes of the memory object will be made available by this command. While the value of the following 127 bytes will be unchanged, this does count as an access for the purpose of synchronization, so care must be taken to avoid data races.

The second *access scope* is empty.

Unmapping non-coherent memory does not implicitly flush the host mapped memory, and host writes that have not been flushed **may** not ever be visible to the device. However, implementations **must** ensure that writes that have not been flushed do not become visible to any other memory.

NOTE

The above guarantee avoids a potential memory corruption in scenarios where host writes to a mapped memory object have not been flushed before the memory is unmapped (or freed), and the virtual address range is subsequently reused for a different mapping (or memory allocation).

Valid Usage (Implicit)

- VUID-vkFlushMappedMemoryRanges-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkFlushMappedMemoryRanges-pMemoryRanges-parameter
pMemoryRanges **must** be a valid pointer to an array of **memoryRangeCount** valid [VkMappedMemoryRange](#) structures
- VUID-vkFlushMappedMemoryRanges-memoryRangeCount-arraylength
memoryRangeCount **must** be greater than 0

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To invalidate ranges of non-coherent memory from the host caches, call:

```
// Provided by VK_VERSION_1_0
VkResult vkInvalidateMappedMemoryRanges(
    VkDevice          device,
    uint32_t          memoryRangeCount,
    const VkMappedMemoryRange* pMemoryRanges);
```

- **device** is the logical device that owns the memory ranges.
- **memoryRangeCount** is the length of the **pMemoryRanges** array.
- **pMemoryRanges** is a pointer to an array of [VkMappedMemoryRange](#) structures describing the memory ranges to invalidate.

`vkInvalidateMappedMemoryRanges` guarantees that device writes to the memory ranges described by `pMemoryRanges`, which have been made available to the host memory domain using the `VK_ACCESS_HOST_WRITE_BIT` and `VK_ACCESS_HOST_READ_BIT` access types, are made visible to the host. If a range of non-coherent memory is written by the host and then invalidated without first being flushed, its contents are undefined.

The first [synchronization scope](#) includes all host operations that happened-before it, as defined by the host memory model.

NOTE

This function does not synchronize with device operations directly - other host [synchronization operations](#) that depend on device operations such as `vkWaitForFences` must be executed beforehand. So for any non-coherent device write to be made visible to the host, there has to be a dependency chain along the following lines:

1. Device write
2. Device memory barrier including host reads in its second scope
3. Signal on the device (e.g. a [fence signal operation](#))
4. Wait on the host (e.g. `vkWaitForFences`)
5. `vkInvalidateMappedMemoryRanges`

The second [synchronization scope](#) includes all host operations that happen-after it, as defined by the host memory model.

The first [access scope](#) is empty.

The second [access scope](#) includes host reads to the specified memory ranges.

NOTE

When a device write to a memory location is made visible to the host in this way, each whole aligned set of `nonCoherentAtomSize` bytes that the memory location exists in will also be made visible as if they were written by the device. For example, with a `nonCoherentAtomSize` of 128, if an application writes to the first byte of a memory object on the device, the first 128 bytes of the memory object will be made visible by this command. While the value of the following 127 bytes will be unchanged, this does count as an access for the purpose of synchronization, so care must be taken to avoid data races.

NOTE

Mapping non-coherent memory does not implicitly invalidate that memory.

Valid Usage (Implicit)

- VUID-vkInvalidateMappedMemoryRanges-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkInvalidateMappedMemoryRanges-pMemoryRanges-parameter `pMemoryRanges` **must** be a valid pointer to an array of `memoryRangeCount` valid `VkMappedMemoryRange` structures

- VUID-vkInvalidateMappedMemoryRanges-memoryRangeCount-arraylength
`memoryRangeCount` **must** be greater than 0

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkMappedMemoryRange` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMappedMemoryRange {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory      memory;
    VkDeviceSize        offset;
    VkDeviceSize        size;
} VkMappedMemoryRange;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is the memory object to which this range belongs.
- `offset` is the zero-based byte offset from the beginning of the memory object.
- `size` is either the size of range, or `VK_WHOLE_SIZE` to affect the range from `offset` to the end of the current mapping of the allocation.

Valid Usage

- VUID-VkMappedMemoryRange-memory-00684
`memory` **must** be currently host mapped
- VUID-VkMappedMemoryRange-size-00685
If `size` is not equal to `VK_WHOLE_SIZE`, `offset` and `size` **must** specify a range contained within the currently mapped range of `memory`
- VUID-VkMappedMemoryRange-size-00686
If `size` is equal to `VK_WHOLE_SIZE`, `offset` **must** be within the currently mapped range of `memory`

- VUID-VkMappedMemoryRange-offset-00687
offset **must** be a multiple of `VkPhysicalDeviceLimits::nonCoherentAtomSize`
- VUID-VkMappedMemoryRange-size-01389
If **size** is equal to `VK_WHOLE_SIZE`, the end of the current mapping of **memory** **must** either be a multiple of `VkPhysicalDeviceLimits::nonCoherentAtomSize` bytes from the beginning of the memory object, or be equal to the end of the memory object
- VUID-VkMappedMemoryRange-size-01390
If **size** is not equal to `VK_WHOLE_SIZE`, **size** **must** either be a multiple of `VkPhysicalDeviceLimits::nonCoherentAtomSize`, or **offset** plus **size** **must** equal the size of **memory**

Valid Usage (Implicit)

- VUID-VkMappedMemoryRange-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_MAPPED_MEMORY_RANGE`
- VUID-VkMappedMemoryRange-pNext-pNext
pNext **must** be `NULL`
- VUID-VkMappedMemoryRange-memory-parameter
memory **must** be a valid `VkDeviceMemory` handle

To unmap a memory object once host access to it is no longer needed by the application, call:

```
// Provided by VK_VERSION_1_0
void vkUnmapMemory(
    VkDevice          device,
    VkDeviceMemory    memory);
```

- **device** is the logical device that owns the memory.
- **memory** is the memory object to be unmapped.

Calling `vkUnmapMemory` is equivalent to calling `vkUnmapMemory2` with an empty **pNext** chain and **flags** set to zero.

Valid Usage

- VUID-vkUnmapMemory-memory-00689
memory **must** be currently host mapped

Valid Usage (Implicit)

- VUID-vkUnmapMemory-device-parameter
device **must** be a valid `VkDevice` handle

- VUID-vkUnmapMemory-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle
- VUID-vkUnmapMemory-memory-parent
memory must have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **memory must** be externally synchronized

To unmap a memory object once host access to it is no longer needed by the application, call:

```
// Provided by VK_VERSION_1_4
VkResult vkUnmapMemory2(
    VkDevice                                device,
    const VkMemoryUnmapInfo*                pMemoryUnmapInfo);
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to vkUnmapMemory2
VkResult vkUnmapMemory2KHR(
    VkDevice                                device,
    const VkMemoryUnmapInfo*                pMemoryUnmapInfo);
```

- **device** is the logical device that owns the memory.
- **pMemoryUnmapInfo** is a pointer to a [VkMemoryUnmapInfo](#) structure describing parameters of the unmap.

This function behaves identically to [vkUnmapMemory](#) except that it gets its parameters via an extensible structure pointer rather than directly as function arguments.

Valid Usage (Implicit)

- VUID-vkUnmapMemory2-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkUnmapMemory2-pMemoryUnmapInfo-parameter
pMemoryUnmapInfo must be a valid pointer to a valid [VkMemoryUnmapInfo](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_MEMORY_MAP_FAILED](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkMemoryUnmapInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkMemoryUnmapInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkMemoryUnmapFlags flags;
    VkDeviceMemory     memory;
} VkMemoryUnmapInfo;
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to VkMemoryUnmapInfo
typedef VkMemoryUnmapInfo VkMemoryUnmapInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of [VkMemoryUnmapFlagBits](#) specifying additional parameters of the memory map operation.
- `memory` is the [VkDeviceMemory](#) object to be unmapped.

Valid Usage

- VUID-VkMemoryUnmapInfo-memory-07964
`memory` **must** be currently host mapped
- VUID-VkMemoryUnmapInfo-flags-09579
If [VK_MEMORY_UNMAP_RESERVE_BIT_EXT](#) is set in `flags`, the `memoryUnmapReserve` **must** be enabled
- VUID-VkMemoryUnmapInfo-flags-09580
If [VK_MEMORY_UNMAP_RESERVE_BIT_EXT](#) is set in `flags`, the memory object **must** not have been imported from a handle type of [VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT](#) or [VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT](#)

Valid Usage (Implicit)

- VUID-VkMemoryUnmapInfo-sType-sType

sType must be [VK_STRUCTURE_TYPE_MEMORY_UNMAP_INFO](#)

- [VUID-VkMemoryUnmapInfo-pNext-pNext](#)
pNext must be `NULL`
- [VUID-VkMemoryUnmapInfo-flags-parameter](#)
flags must be a valid combination of [VkMemoryUnmapFlagBits](#) values
- [VUID-VkMemoryUnmapInfo-memory-parameter](#)
memory must be a valid [VkDeviceMemory](#) handle

Host Synchronization

- Host access to **memory** must be externally synchronized

Bits which **can** be set in [VkMemoryUnmapInfo::flags](#), specifying additional properties of a memory unmap, are:

```
// Provided by VK_VERSION_1_4
typedef enum VkMemoryUnmapFlagBits {
    // Provided by VK_EXT_map_memory_placed
    VK_MEMORY_UNMAP_RESERVE_BIT_EXT = 0x00000001,
} VkMemoryUnmapFlagBits;
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to VkMemoryUnmapFlagBits
typedef VkMemoryUnmapFlagBits VkMemoryUnmapFlagBitsKHR;
```

- [VK_MEMORY_UNMAP_RESERVE_BIT_EXT](#) requests that virtual address range currently occupied by the memory map remain reserved after the [vkUnmapMemory2](#) call completes. Future system memory map operations or calls to [vkMapMemory](#) or [vkMapMemory2](#) will not return addresses in that range unless the range has since been unreserved by the client or the mapping is explicitly placed in that range by calling [vkMapMemory2](#) with [VK_MEMORY_MAP_PLACED_BIT_EXT](#), or doing the system memory map equivalent. When [VK_MEMORY_UNMAP_RESERVE_BIT_EXT](#) is set, the memory unmap operation **may** fail, in which case the memory object will remain host mapped and [vkUnmapMemory2](#) will return [VK_ERROR_MEMORY_MAP_FAILED](#).

```
// Provided by VK_VERSION_1_4
typedef VkFlags VkMemoryUnmapFlags;
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to VkMemoryUnmapFlags
typedef VkMemoryUnmapFlags VkMemoryUnmapFlagsKHR;
```

`VkMemoryUnmapFlags` is a bitmask type for setting a mask of zero or more `VkMemoryUnmapFlagBits`.

11.2.17. Lazily Allocated Memory

If the memory object is allocated from a heap with the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set, that object's backing memory **may** be provided by the implementation lazily. The actual committed size of the memory **may** initially be as small as zero (or as large as the requested size), and monotonically increases as additional memory is needed.

A memory type with this flag set is only allowed to be bound to a `VkImage` whose usage flags include `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`.

NOTE

Using lazily allocated memory objects for framebuffer attachments that are not needed once a render pass instance has completed **may** allow some implementations to never allocate memory for such attachments.

To determine the amount of lazily-allocated memory that is currently committed for a memory object, call:

```
// Provided by VK_VERSION_1_0
void vkGetDeviceMemoryCommitment(
    VkDevice          device,
    VkDeviceMemory    memory,
    VkDeviceSize*     pCommittedMemoryInBytes);
```

- `device` is the logical device that owns the memory.
- `memory` is the memory object being queried.
- `pCommittedMemoryInBytes` is a pointer to a `VkDeviceSize` value in which the number of bytes currently committed is returned, on success.

The implementation **may** update the commitment at any time, and the value returned by this query **may** be out of date.

The implementation guarantees to allocate any committed memory from the `heapIndex` indicated by the memory type that the memory object was created with.

Valid Usage

- VUID-vkGetDeviceMemoryCommitment-memory-00690
`memory` **must** have been created with a memory type that reports `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT`

Valid Usage (Implicit)

- VUID-vkGetDeviceMemoryCommitment-device-parameter

device **must** be a valid [VkDevice](#) handle

- VUID-vkGetDeviceMemoryCommitment-memory-parameter

memory **must** be a valid [VkDeviceMemory](#) handle

- VUID-vkGetDeviceMemoryCommitment-pCommittedMemoryInBytes-parameter

pCommittedMemoryInBytes **must** be a valid pointer to a [VkDeviceSize](#) value

- VUID-vkGetDeviceMemoryCommitment-memory-parent

memory **must** have been created, allocated, or retrieved from **device**

11.2.18. Protected Memory

Protected memory divides device memory into protected device memory and unprotected device memory.

Protected memory adds the following concepts:

- Memory:
 - Unprotected device memory, which **can** be visible to the device and **can** be visible to the host
 - Protected device memory, which **can** be visible to the device but **must** not be visible to the host
- Resources:
 - Unprotected images , unprotected tensors, and unprotected buffers, to which unprotected memory **can** be bound
 - Protected images , protected tensors, and protected buffers, to which protected memory **can** be bound
- Command buffers:
 - Unprotected command buffers, which **can** be submitted to a device queue to execute unprotected queue operations
 - Protected command buffers, which **can** be submitted to a protected-capable device queue to execute protected queue operations
- Device queues:
 - Unprotected device queues, to which unprotected command buffers **can** be submitted
 - Protected-capable device queues, to which unprotected command buffers or protected command buffers **can** be submitted
- Queue submissions
 - Unprotected queue submissions, through which unprotected command buffers **can** be submitted
 - Protected queue submissions, through which protected command buffers **can** be submitted
- Queue operations
 - Unprotected queue operations

- Protected queue operations

NOTE

When the `protectedMemory` feature is enabled, all pipelines **may** be recorded in either protected or unprotected command buffers (or both), which may incur an extra cost on some implementations. This **can** be mitigated by enabling the `pipelineProtectedAccess` feature, in which case pipelines created with `VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT` may only be recorded in protected command buffers, and pipelines created with `VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT` may only be recorded in unprotected command buffers.

Protected Memory Access Rules

If `VkPhysicalDeviceProtectedMemoryProperties::protectedNoFault` is `VK_FALSE`, applications **must** not perform any of the following operations:

- Write to unprotected memory within protected queue operations.
- Access protected memory within protected queue operations other than in framebuffer-space pipeline stages, the compute shader stage, in video decode operations, in video encode operations, or the transfer stage.
- Perform a query within protected queue operations.

If `VkPhysicalDeviceProtectedMemoryProperties::protectedNoFault` is `VK_TRUE`, these operations are valid, but reads will return undefined values, and writes will either be dropped or store undefined values.

Additionally, indirect operations **must** not be performed within protected queue operations.

Whether these operations are valid or not, or if any other invalid usage is performed, the implementation **must** guarantee that:

- Protected device memory **must** never be visible to the host.
- Values written to unprotected device memory **must** not be a function of values from protected memory.

11.2.19. External Memory Handle Types

Android Hardware Buffer

Android's NDK defines `AHardwareBuffer` objects, which represent device memory that is shareable across processes and that **can** be accessed by a variety of media APIs and the hardware used to implement them. These Android hardware buffer objects **may** be imported into `VkDeviceMemory` objects for access via Vulkan, or exported from Vulkan. An `VkImage` or `VkBuffer` or `VkTensorARM` **can** be bound to the imported or exported `VkDeviceMemory` object if it is created with `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`.

To remove an unnecessary compile time dependency, an incomplete type definition of `AHardwareBuffer` is provided in the Vulkan headers:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
struct AHardwareBuffer;
```

The actual [AHardwareBuffer](#) type is defined in Android NDK headers.

NOTE

The NDK format, usage, and size/dimensions of an [AHardwareBuffer](#) object can be obtained with the [AHardwareBuffer_describe](#) function. While Android hardware buffers can be imported to or exported from Vulkan without using that function, valid usage and implementation behavior is defined in terms of the [AHardwareBuffer_Desc](#) properties it returns.

Android hardware buffer objects are reference-counted using Android NDK functions outside of the scope of this specification. A [VkDeviceMemory](#) imported from an Android hardware buffer or that **can** be exported to an Android hardware buffer **must** acquire a reference to its [AHardwareBuffer](#) object, and **must** release this reference when the device memory is freed. During the host execution of a Vulkan command that has an Android hardware buffer as a parameter (including indirect parameters via [pNext](#) chains), the application **must** not decrement the Android hardware buffer's reference count to zero.

Android hardware buffers **can** be mapped and unmapped for CPU access using the NDK functions. These lock and unlock APIs are considered to acquire and release ownership of the Android hardware buffer, and applications **must** follow the rules described in [External Resource Sharing](#) to transfer ownership between the Vulkan instance and these native APIs.

Android hardware buffers **can** be shared with external APIs and Vulkan instances on the same device, and also with foreign devices. When transferring ownership of the Android hardware buffer, the external and foreign special queue families described in [Queue Family Ownership Transfer](#) are not identical. All APIs which produce or consume Android hardware buffers are considered to use foreign devices, except OpenGL ES contexts and Vulkan logical devices that have matching device and driver UUIDs. Implementations **may** treat a transfer to or from the foreign queue family as if it were a transfer to or from the external queue family when the Android hardware buffer's usage only permits it to be used on the same physical device.

Android Hardware Buffer Optimal Usages

Vulkan buffer and image usage flags do not correspond exactly to Android hardware buffer usage flags. When allocating Android hardware buffers with non-Vulkan APIs, if any [AHARDWAREBUFFER_USAGE_GPU_*](#) usage bits are included, by default the allocator **must** allocate the memory in such a way that it supports Vulkan usages and creation flags in the [usage equivalence table](#) which do not have Android hardware buffer equivalents.

An [VkAndroidHardwareBufferUsageANDROID](#) structure **can** be included in the [pNext](#) chain of a [VkImageFormatProperties2](#) structure passed to [vkGetPhysicalDeviceImageFormatProperties2](#) to obtain optimal Android hardware buffer usage flags for specific Vulkan resource creation parameters. Some usage flags returned by these commands are **required** based on the input parameters, but additional vendor-specific usage flags ([AHARDWAREBUFFER_USAGE_VENDOR_*](#)) **may** also be returned. Any Android hardware buffer allocated with these vendor-specific usage flags and imported to Vulkan **must** only be bound to resources created with parameters that are a subset of

the parameters used to obtain the Android hardware buffer usage, since the memory **may** have been allocated in a way incompatible with other parameters. If an Android hardware buffer is successfully allocated with additional non-vendor-specific usage flags in addition to the recommended usage, it **must** support being used in the same ways as an Android hardware buffer allocated with only the recommended usage, and also in ways indicated by the additional usage.

Android Hardware Buffer External Formats

Android hardware buffers **may** represent images using implementation-specific formats, layouts, color models, etc., which do not have Vulkan equivalents. Such *external formats* are commonly used by external image sources such as video decoders or cameras. Vulkan **can** import Android hardware buffers that have external formats, but since the image contents are in a possibly proprietary representation, images with external formats **must** have optimal tiling, and their use is restricted. Images with external formats **must** only be sampled with a sampler that has Y'C_BC_R conversion enabled.

Images that will be backed by an Android hardware buffer **can** use an external format by setting `VkImageCreateInfo::format` to `VK_FORMAT_UNDEFINED` and including a `VkExternalFormatANDROID` structure in the `pNext` chain. Images **can** be created with an external format even if the Android hardware buffer has a format which has an *equivalent Vulkan format* to enable consistent handling of images from sources that might use either category of format. However, all images created with an external format are subject to the valid usage requirements associated with external formats, even if the Android hardware buffer's format has a Vulkan equivalent. The external format of an Android hardware buffer **can** be obtained by passing a `VkAndroidHardwareBufferFormatPropertiesANDROID` structure to `vkGetAndroidHardwareBufferPropertiesANDROID`.

Android Hardware Buffer Image Resources

Android hardware buffers have intrinsic width, height, format, and usage properties, so Vulkan images bound to memory imported from an Android hardware buffer **must** use dedicated allocations: `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` **must** be `VK_TRUE` for images created with `VkExternalMemoryImageCreateInfo::handleTypes` that includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`. When creating an image that will be bound to an imported Android hardware buffer, the image creation parameters **must** be equivalent to the `AHardwareBuffer` properties as described by the valid usage of `VkMemoryAllocateInfo`. Similarly, device memory allocated for a dedicated image **must** not be exported to an Android hardware buffer until it has been bound to that image, and the implementation **must** return an Android hardware buffer with properties derived from the image:

- The `width` and `height` members of `AHardwareBuffer_Desc` **must** be the same as the `width` and `height` members of `VkImageCreateInfo::extent`, respectively.
- The `layers` member of `AHardwareBuffer_Desc` **must** be the same as the `arrayLayers` member of `VkImageCreateInfo`.
- The `format` member of `AHardwareBuffer_Desc` **must** be equivalent to `VkImageCreateInfo::format` as defined by *AHardwareBuffer Format Equivalence*.
- The `usage` member of `AHardwareBuffer_Desc` **must** include bits corresponding to bits included in `VkImageCreateInfo::usage` and `VkImageCreateInfo::flags` where such a correspondence exists

according to [AHardwareBuffer Usage Equivalence](#). It **may** also include additional usage bits, including vendor-specific usages. Presence of vendor usage bits **may** make the Android hardware buffer only usable in ways indicated by the image creation parameters, even when used outside Vulkan, in a similar way that allocating the Android hardware buffer with usage returned in [VkAndroidHardwareBufferUsageANDROID](#) does.

Implementations **may** support fewer combinations of image creation parameters for images with Android hardware buffer external handle type than for non-external images. Support for a given set of parameters **can** be determined by passing [VkExternalImageFormatProperties](#) to [vkGetPhysicalDeviceImageFormatProperties2](#) with [handleType](#) set to [VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID](#). Any Android hardware buffer successfully allocated outside Vulkan with usage that includes [AHARDWAREBUFFER_USAGE_GPU_*](#) **must** be supported when using equivalent Vulkan image parameters. If a given choice of image parameters are supported for import, they **can** also be used to create an image and memory that will be exported to an Android hardware buffer.

Table 13. *AHardwareBuffer Format Equivalence*

AHardwareBuffer Format	Vulkan Format

AHARDWAREBUFFER_FORMAT_D32_FLOAT_S8_UINT	VK_FORMAT_D32_SFLOAT_S8_UINT
AHARDWAREBUFFER_FORMAT_S8_UINT	VK_FORMAT_S8_UINT

Table 14. *AHardwareBuffer Usage Equivalence*

AHardwareBuffer Usage	Vulkan Usage or Creation Flag
None	VK_IMAGE_USAGE_TRANSFER_SRC_BIT
None	VK_IMAGE_USAGE_TRANSFER_DST_BIT
AHARDWAREBUFFER_USAGE_GPU_SAMPLED_IMAGE	VK_IMAGE_USAGE_SAMPLED_BIT
AHARDWAREBUFFER_USAGE_GPU_SAMPLED_IMAGE	VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT
AHARDWAREBUFFER_USAGE_GPU_FRAMEBUFFER ³	VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT
AHARDWAREBUFFER_USAGE_GPU_FRAMEBUFFER ³	VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT

AHardwareBuffer Usage	Vulkan Usage or Creation Flag
AHardwareBuffer_USAGE_GPU_CUBE_MAP	VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT
AHardwareBuffer_USAGE_GPU_MIPMAP_COMPLETE	None ²
AHardwareBuffer_USAGE_PROTECTED_CONTENT	VK_IMAGE_CREATE_PROTECTED_BIT
None	VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT
None	VK_IMAGE_CREATE_EXTENDED_USAGE_BIT
AHardwareBuffer_USAGE_GPU_DATA_BUFFER ⁴	VK_IMAGE_USAGE_STORAGE_BIT

1

Vulkan does not differentiate between `AHardwareBuffer_Format_R8G8B8A8_UNORM` and `AHardwareBuffer_Format_R8G8B8X8_UNORM`: they both behave as `VK_FORMAT_R8G8B8A8_UNORM`. After an external entity writes to a `AHardwareBuffer_Format_R8G8B8X8_UNORM` Android hardware buffer, the values read by Vulkan from the X/A component are undefined. To emulate the traditional behavior of the X component during sampling or blending, applications **should** use `VK_COMPONENT_SWIZZLE_ONE` in image view component mappings and `VK_BLEND_FACTOR_ONE` in color blend factors. There is no way to avoid copying these undefined values when copying from such an image to another image or buffer.

2

The `AHardwareBuffer_USAGE_GPU_MIPMAP_COMPLETE` flag does not correspond to a Vulkan image usage or creation flag. Instead, its presence indicates that the Android hardware buffer contains a complete mipmap chain, and its absence indicates that the Android hardware buffer contains only a single mip level.

3

Only image usages valid for the format are valid. It would be invalid to take a Android Hardware Buffer with a format of `AHardwareBuffer_Format_R8G8B8A8_UNORM` that has a `AHardwareBuffer_USAGE_GPU_FRAMEBUFFER` usage and try to create an image with `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`.

4

In combination with a hardware buffer format other than `BLOB`.

NOTE

When using `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` with Android hardware buffer images, applications **should** use `VkImageFormatListCreateInfo` to inform the implementation which view formats will be used with the image. For some common sets of format, this allows some implementations to provide significantly better performance when accessing the image via Vulkan.

Android Hardware Buffer Resources

Android hardware buffers with a format of `AHardwareBuffer_Format_BLOB` and usage that includes `AHardwareBuffer_USAGE_GPU_DATA_BUFFER` **can** be used as the backing store for `VkBuffer` objects. Such Android hardware buffers have a size in bytes specified by their `width`; `height` and `layers` are both 1.

Unlike images, buffer resources backed by Android hardware buffers do not require dedicated

allocations.

Exported [AHardwareBuffer](#) objects that do not have dedicated images **must** have a format of [AHARDWAREBUFFER_FORMAT_BLOB](#), usage **must** include [AHARDWAREBUFFER_USAGE_GPU_DATA_BUFFER](#), width **must** equal the device memory allocation size, and height and layers **must** be 1.

QNX Screen Buffer

The QNX SDP defines [_screen_buffer](#) objects, which represent a buffer that the QNX Screen graphics subsystem can use directly in its windowing system APIs. More specifically, a Screen buffer is an area of memory that stores pixel data. It can be attached to Screen windows, streams, or pixmaps. These QNX Screen buffer objects **may** be imported into [VkDeviceMemory](#) objects for access via Vulkan. An [VkImage](#) or [VkBuffer](#) **can** be bound to the imported [VkDeviceMemory](#) object if it is created with [VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX](#).

[struct _screen_buffer](#) is strongly typed, so naming the handle type is redundant. The internal layout and therefore size of a [struct _screen_buffer](#) image may depend on native usage flags that do not have corresponding Vulkan counterparts.

QNX Screen Buffer Validity

The design of Screen in the QNX SDP makes it difficult to determine the validity of objects from outside of Screen. Therefore, applications **must** ensure that QNX Screen buffer objects provided used in various Vulkan interfaces are ones created explicitly with QNX Screen APIs. See QNX SDP documentation for more information.

A [VkDeviceMemory](#) imported from a QNX Screen buffer has no way to acquire a reference to its [_screen_buffer](#) object. Therefore, during the host execution of a Vulkan command that has a QNX Screen buffer as a parameter (including indirect parameters via [pNext](#) chains), the application **must** ensure that the QNX Screen buffer resource remains valid.

Generally, for a [_screen_buffer](#) object to be valid for use within a Vulkan implementation, the buffer object **should** have a [_screen_buffer::SCREEN_PROPERTY_USAGE](#) that includes at least one of: [SCREEN_USAGE_VULKAN](#), [SCREEN_USAGE_OPENGL_ES2](#), [SCREEN_USAGE_OPENGL_ES3](#), or [SCREEN_USAGE_NATIVE](#). The exact Screen-native usage flags required depends on the Vulkan implementation, and QNX Screen itself will not necessarily enforce these requirements. Note that Screen-native usage flags are in no way related to usage flags in the Vulkan specification.

QNX Screen Buffer External Formats

QNX Screen buffers **may** represent images using implementation-specific formats, layouts, color models, etc., which do not have Vulkan equivalents. Such *external formats* are commonly used by external image sources such as video decoders or cameras. Vulkan **can** import QNX Screen buffers that have external formats, but since the image contents are in an undiscoverable and possibly proprietary representation, images with external formats **must** only be used as sampled images, **must** only be sampled with a sampler that has Y'C_BC_R conversion enabled, and **must** have optimal tiling.

Images that will be backed by a QNX Screen buffer **can** use an external format by setting [VkImageCreateInfo::format](#) to [VK_FORMAT_UNDEFINED](#) and including a [VkExternalFormatQNX](#)

structure in the **pNext** chain. Images **can** be created with an external format even if the QNX Screen buffer has a format which has an **equivalent Vulkan format** to enable consistent handling of images from sources that might use either category of format. The external format of a QNX Screen buffer **can** be obtained by passing a **VkScreenBufferFormatPropertiesQNX** structure to **vkGetScreenBufferPropertiesQNX**.

QNX Screen Buffer Image Resources

QNX Screen buffers have intrinsic width, height, format, and usage properties, so Vulkan images bound to memory imported from a QNX Screen buffer **must** use dedicated allocations: **VkMemoryDedicatedRequirements::requiresDedicatedAllocation** **must** be **VK_TRUE** for images created with **VkExternalMemoryImageCreateInfo::handleTypes** that includes **VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX**. When creating an image that will be bound to an imported QNX Screen buffer, the image creation parameters **must** be equivalent to the **_screen_buffer** properties as described by the valid usage of **VkMemoryAllocateInfo**.

Table 15. QNX Screen Buffer Format Equivalence

QNX Screen Format	Vulkan Format
SCREEN_FORMAT_RGBA8888	VK_FORMAT_B8G8R8A8_UNORM
SCREEN_FORMAT_RGBX8888 ¹	VK_FORMAT_B8G8R8A8_UNORM
SCREEN_FORMAT_BGRA8888	VK_FORMAT_R8G8B8A8_UNORM
SCREEN_FORMAT_BGRX8888 ¹	VK_FORMAT_R8G8B8A8_UNORM
SCREEN_FORMAT_RGBA1010102	VK_FORMAT_A2R10G10B10_UNORM_PACK32
SCREEN_FORMAT_RGBX1010102 ¹	VK_FORMAT_A2R10G10B10_UNORM_PACK32
SCREEN_FORMAT_BGRA1010102	VK_FORMAT_A2B10G10R10_UNORM_PACK32
SCREEN_FORMAT_BGRX1010102 ¹	VK_FORMAT_A2B10G10R10_UNORM_PACK32
SCREEN_FORMAT_RGBA5551	VK_FORMAT_A1R5G5B5_UNORM_PACK16
SCREEN_FORMAT_RGBX5551 ¹	VK_FORMAT_A1R5G5B5_UNORM_PACK16
SCREEN_FORMAT_RGB565	VK_FORMAT_R5G6B5_UNORM_PACK16
SCREEN_FORMAT_RGB888	VK_FORMAT_R8G8B8_UNORM

1

Vulkan does not differentiate between **SCREEN_FORMAT_RGBA8888** and **SCREEN_FORMAT_RGBX8888**: they both behave as **VK_FORMAT_R8G8B8A8_UNORM**. After an external entity writes to a **SCREEN_FORMAT_RGBX8888** QNX Screen buffer, the values read by Vulkan from the X/A component are undefined. To emulate the traditional behavior of the X component during sampling or blending, applications **should** use **VK_COMPONENT_SWIZZLE_ONE** in image view component mappings and **VK_BLEND_FACTOR_ONE** in color blend factors. There is no way to avoid copying these undefined values when copying from such an image to another image or buffer. The same behavior applies to the following pairs: **SCREEN_FORMAT_BGRA8888** and **SCREEN_FORMAT_BGRX8888**, **SCREEN_FORMAT_RGBA1010102** and **SCREEN_FORMAT_RGBX1010102**, **SCREEN_FORMAT_BGRA1010102** and **SCREEN_FORMAT_BGRX1010102**, **SCREEN_FORMAT_RGBA5551** and **SCREEN_FORMAT_RGBX5551**

11.2.20. Peer Memory Features

Peer memory is memory that is allocated for a given physical device and then bound to a resource and accessed by a different physical device, in a logical device that represents multiple physical devices. Some ways of reading and writing peer memory **may** not be supported by a device.

To determine how peer memory **can** be accessed, call:

```
// Provided by VK_VERSION_1_1
void vkGetDeviceGroupPeerMemoryFeatures(
    VkDevice          device,
    uint32_t          heapIndex,
    uint32_t          localDeviceIndex,
    uint32_t          remoteDeviceIndex,
    VkPeerMemoryFeatureFlags* pPeerMemoryFeatures);
```

```
// Provided by VK_KHR_device_group
// Equivalent to vkGetDeviceGroupPeerMemoryFeatures
void vkGetDeviceGroupPeerMemoryFeaturesKHR(
    VkDevice          device,
    uint32_t          heapIndex,
    uint32_t          localDeviceIndex,
    uint32_t          remoteDeviceIndex,
    VkPeerMemoryFeatureFlags* pPeerMemoryFeatures);
```

- **device** is the logical device that owns the memory.
- **heapIndex** is the index of the memory heap from which the memory is allocated.
- **localDeviceIndex** is the device index of the physical device that performs the memory access.
- **remoteDeviceIndex** is the device index of the physical device that the memory is allocated for.
- **pPeerMemoryFeatures** is a pointer to a [VkPeerMemoryFeatureFlags](#) bitmask indicating which types of memory accesses are supported for the combination of heap, local, and remote devices.

Valid Usage

- VUID-vkGetDeviceGroupPeerMemoryFeatures-heapIndex-00691
heapIndex must be less than **memoryHeapCount**
- VUID-vkGetDeviceGroupPeerMemoryFeatures-localDeviceIndex-00692
localDeviceIndex must be a valid device index
- VUID-vkGetDeviceGroupPeerMemoryFeatures-remoteDeviceIndex-00693
remoteDeviceIndex must be a valid device index
- VUID-vkGetDeviceGroupPeerMemoryFeatures-localDeviceIndex-00694
localDeviceIndex must not equal **remoteDeviceIndex**

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupPeerMemoryFeatures-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetDeviceGroupPeerMemoryFeatures-pPeerMemoryFeatures-parameter **pPeerMemoryFeatures** must be a valid pointer to a [VkPeerMemoryFeatureFlags](#) value

Bits which **may** be set in [vkGetDeviceGroupPeerMemoryFeatures::pPeerMemoryFeatures](#), indicating supported peer memory features, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkPeerMemoryFeatureFlagBits {
    VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT = 0x00000001,
    VK_PEER_MEMORY_FEATURE_COPY_DST_BIT = 0x00000002,
    VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT = 0x00000004,
    VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT = 0x00000008,
    // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT_KHR = VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT,
    // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_COPY_DST_BIT_KHR = VK_PEER_MEMORY_FEATURE_COPY_DST_BIT,
    // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT_KHR =
VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT,
    // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT_KHR =
VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT,
} VkPeerMemoryFeatureFlagBits;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkPeerMemoryFeatureFlagBits
typedef VkPeerMemoryFeatureFlagBits VkPeerMemoryFeatureFlagBitsKHR;
```

- [VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT](#) specifies that the memory **can** be accessed as the source of any [vkCmdCopy*](#) command.
- [VK_PEER_MEMORY_FEATURE_COPY_DST_BIT](#) specifies that the memory **can** be accessed as the destination of any [vkCmdCopy*](#) command.
- [VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT](#) specifies that the memory **can** be read as any memory access type.
- [VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT](#) specifies that the memory **can** be written as any memory access type. Shader atomics are considered to be writes.

NOTE

The peer memory features of a memory heap also apply to any accesses that **may** be performed during [image layout transitions](#).

[VK_PEER_MEMORY_FEATURE_COPY_DST_BIT](#) **must** be supported for all host local heaps and for at least one device-local memory heap.

If a device does not support a peer memory feature, it is still valid to use a resource that includes both local and peer memory bindings with the corresponding access type as long as only the local bindings are actually accessed. For example, an application doing split-frame rendering would use framebuffer attachments that include both local and peer memory bindings, but would scissor the rendering to only update local memory.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkPeerMemoryFeatureFlags;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkPeerMemoryFeatureFlags
typedef VkPeerMemoryFeatureFlags VkPeerMemoryFeatureFlagsKHR;
```

[VkPeerMemoryFeatureFlags](#) is a bitmask type for setting a mask of zero or more [VkPeerMemoryFeatureFlagBits](#).

11.2.21. Opaque Capture Address Query

To query a 64-bit opaque capture address value from a memory object, call:

```
// Provided by VK_VERSION_1_2
uint64_t vkGetDeviceMemoryOpaqueCaptureAddress(
    VkDevice device,
    const VkDeviceMemoryOpaqueCaptureAddressInfo* pInfo);
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to vkGetDeviceMemoryOpaqueCaptureAddress
uint64_t vkGetDeviceMemoryOpaqueCaptureAddressKHR(
    VkDevice device,
    const VkDeviceMemoryOpaqueCaptureAddressInfo* pInfo);
```

- **device** is the logical device that the memory object was allocated on.
- **pInfo** is a pointer to a [VkDeviceMemoryOpaqueCaptureAddressInfo](#) structure specifying the memory object to retrieve an address for.

The 64-bit return value is an opaque address representing the start of **pInfo->memory**.

If the memory object was allocated with a non-zero value of [VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress](#), the return value **must** be the same address.

NOTE	The expected usage for these opaque addresses is only for trace capture/replay tools
-------------	--

to store these addresses in a trace and subsequently specify them during replay.

Valid Usage

- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-None-03334
The `bufferDeviceAddress` and `bufferDeviceAddressCaptureReplay` features **must** be enabled
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-pInfo-10727
`pInfo->memory` **must** have been allocated using the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` flag
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-device-03335
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkDeviceMemoryOpaqueCaptureAddressInfo` structure

The `VkDeviceMemoryOpaqueCaptureAddressInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkDeviceMemoryOpaqueCaptureAddressInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory     memory;
} VkDeviceMemoryOpaqueCaptureAddressInfo;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkDeviceMemoryOpaqueCaptureAddressInfo
typedef VkDeviceMemoryOpaqueCaptureAddressInfo
VkDeviceMemoryOpaqueCaptureAddressInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` specifies the memory whose address is being queried.

Valid Usage

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-memory-03336

memory **must** have been allocated with [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT](#)

Valid Usage (Implicit)

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-sType-sType **must** be [VK_STRUCTURE_TYPE_DEVICE_MEMORY_OPAQUE_CAPTURE_ADDRESS_INFO](#)
- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-pNext-pNext **pNext** **must** be `NULL`
- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-memory-parameter **memory** **must** be a valid [VkDeviceMemory](#) handle

Chapter 12. Resource Creation

Vulkan supports three primary resource types: *buffers*, *images*, and *tensors*. Resources are views of memory with associated formatting and dimensionality. Buffers provide access to raw arrays of bytes, whereas images **can** be multidimensional and **may** have associated metadata. Tensors **can** be multidimensional, contain format information like images and **may** have associated metadata.

Other resource types, such as [acceleration structures](#) and [micromaps](#) use buffers as the backing store for opaque data structures.

12.1. Buffers

Buffers represent linear arrays of data which are used for various purposes by binding them to a graphics or compute pipeline via descriptor sets or certain commands, or by directly specifying them as parameters to certain commands.

Buffers are represented by `VkBuffer` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBuffer)
```

To create buffers, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateBuffer(
    VkDevice                                device,
    const VkBufferCreateInfo*               pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkBuffer*                               pBuffer);
```

- `device` is the logical device that creates the buffer object.
- `pCreateInfo` is a pointer to a `VkBufferCreateInfo` structure containing parameters affecting creation of the buffer.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pBuffer` is a pointer to a `VkBuffer` handle in which the resulting buffer object is returned.

Implementations **may** fail to create a buffer if the [effective usage](#) includes the `VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, and `size` is greater than the maximum of `maxResourceHeapSize` and `maxSamplerHeapSize`. If this happens, `VK_ERROR_OUT_OF_DEVICE_MEMORY` will be returned.

NOTE

This is an issue identified with [VK_EXT_descriptor_heap](#), which we plan to tighten up for the KHR version. Applications using [VK_EXT_descriptor_heap](#) may wish to avoid suballocating heaps from the same buffer, instead creating one buffer per heap, to avoid situations where this causes issues.

Valid Usage

- VUID-vkCreateBuffer-device-09664

device **must** support at least one queue family with one of the [VK_QUEUE_VIDEO_ENCODE_BIT_KHR](#), [VK_QUEUE_VIDEO_DECODE_BIT_KHR](#), [VK_QUEUE_SPARSE_BINDING_BIT](#), [VK_QUEUE_TRANSFER_BIT](#), [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) capabilities

- VUID-vkCreateBuffer-flags-00911

If the **flags** member of **pCreateInfo** includes [VK_BUFFER_CREATE_SPARSE_BINDING_BIT](#), and the **extendedSparseAddressSpace** feature is not enabled, creating this **VkBuffer** **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed [VkPhysicalDeviceLimits::sparseAddressSpaceSize](#)

- VUID-vkCreateBuffer-flags-09383

If the **flags** member of **pCreateInfo** includes [VK_BUFFER_CREATE_SPARSE_BINDING_BIT](#), the **extendedSparseAddressSpace** feature is enabled, and the **usage** member of **pCreateInfo** contains bits not in [VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseBufferUsageFlags](#), creating this **VkBuffer** **must** not cause the total required sparse memory for all currently valid sparse resources on the device, excluding **VkBuffer** created with **usage** member of **pCreateInfo** containing bits in [VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseBufferUsageFlags](#) and **VkImage** created with **usage** member of **pCreateInfo** containing bits in [VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseImageUsageFlags](#), to exceed [VkPhysicalDeviceLimits::sparseAddressSpaceSize](#)

- VUID-vkCreateBuffer-flags-09384

If the **flags** member of **pCreateInfo** includes [VK_BUFFER_CREATE_SPARSE_BINDING_BIT](#) and the **extendedSparseAddressSpace** feature is enabled, creating this **VkBuffer** **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed [VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseAddressSpaceSize](#)

- VUID-vkCreateBuffer-pNext-06387

If using the **VkBuffer** for an import operation from a [VkBufferCollectionFUCHSIA](#) where a [VkBufferCollectionBufferCreateInfoFUCHSIA](#) has been chained to **pNext**, **pCreateInfo** **must** match the [VkBufferConstraintsInfoFUCHSIA::createInfo](#) used when setting the constraints on the buffer collection with [vkSetBufferCollectionBufferConstraintsFUCHSIA](#)

Valid Usage (Implicit)

- VUID-vkCreateBuffer-device-parameter

device **must** be a valid [VkDevice](#) handle

- VUID-vkCreateBuffer-pCreateInfo-parameter

pCreateInfo **must** be a valid pointer to a valid [VkBufferCreateInfo](#) structure

- VUID-vkCreateBuffer-pAllocator-parameter

If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid

[VkAllocationCallbacks](#) structure

- VUID-vkCreateBuffer-pBuffer-parameter
[pBuffer](#) **must** be a valid pointer to a [VkBuffer](#) handle
- VUID-vkCreateBuffer-device-queuecount
The device **must** have been created with at least [1](#) queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkBufferCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkBufferCreateFlags flags;
    VkDeviceSize        size;
    VkBufferUsageFlags  usage;
    VkSharingMode        sharingMode;
    uint32_t            queueFamilyIndexCount;
    const uint32_t*      pQueueFamilyIndices;
} VkBufferCreateInfo;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkBufferCreateFlagBits](#) specifying additional parameters of the buffer.
- [size](#) is the size in bytes of the buffer to be created.
- [usage](#) is a bitmask of [VkBufferUsageFlagBits](#) specifying allowed usages of the buffer.
- [sharingMode](#) is a [VkSharingMode](#) value specifying the sharing mode of the buffer when it will be accessed by multiple queue families.
- [queueFamilyIndexCount](#) is the number of entries in the [pQueueFamilyIndices](#) array.
- [pQueueFamilyIndices](#) is a pointer to an array of queue families that will access this buffer. It is

ignored if `sharingMode` is not `VK_SHARING_MODE_CONCURRENT`.

`usage` defines the effective usage flags for the buffer. If the `pNext` chain includes a `VkBufferUsageFlags2CreateInfo` structure, `VkBufferUsageFlags2CreateInfo::usage` from that structure is used as the effective usage instead of `usage` from this structure.

Valid Usage

- VUID-VkBufferCreateInfo-None-09499
If the `pNext` chain does not include a `VkBufferUsageFlags2CreateInfo` structure, `usage` **must** be a valid combination of `VkBufferUsageFlagBits` values
- VUID-VkBufferCreateInfo-None-09500
If the `pNext` chain does not include a `VkBufferUsageFlags2CreateInfo` structure, `usage` **must** not be 0
- VUID-VkBufferCreateInfo-size-00912
`size` **must** be greater than 0
- VUID-VkBufferCreateInfo-sharingMode-00913
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, `pQueueFamilyIndices` **must** be a valid pointer to an array of `queueFamilyIndexCount` `uint32_t` values
- VUID-VkBufferCreateInfo-maintenance11-13353
If the `maintenance11` feature is enabled and `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` **must** be greater than 0
- VUID-VkBufferCreateInfo-sharingMode-00914
If the `maintenance11` feature is not enabled and `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` **must** be greater than 1
- VUID-VkBufferCreateInfo-sharingMode-01419
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of `pQueueFamilyIndices` **must** be unique and **must** be less than `pQueueFamilyPropertyCount` returned by either `vkGetPhysicalDeviceQueueFamilyProperties2` or `vkGetPhysicalDeviceQueueFamilyProperties` for the `physicalDevice` that was used to create `device`
- VUID-VkBufferCreateInfo-flags-00915
If the `sparseBinding` feature is not enabled, `flags` **must** not contain `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`
- VUID-VkBufferCreateInfo-flags-00916
If the `sparseResidencyBuffer` feature is not enabled, `flags` **must** not contain `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkBufferCreateInfo-flags-00917
If the `sparseResidencyAliased` feature is not enabled, `flags` **must** not contain `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT`
- VUID-VkBufferCreateInfo-flags-00918
If `flags` contains `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` or `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT`, it **must** also contain `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`

- VUID-VkBufferCreateInfo-pNext-00920
If the `pNext` chain includes a `VkExternalMemoryBufferCreateInfo` structure, its `handleTypes` member **must** only contain bits that are also in `VkExternalBufferProperties::externalMemoryProperties.compatibleHandleTypes`, as returned by `vkGetPhysicalDeviceExternalBufferProperties` with `pExternalBufferInfo->handleType` equal to any one of the handle types specified in `VkExternalMemoryBufferCreateInfo::handleTypes`
- VUID-VkBufferCreateInfo-flags-01887
If the `protectedMemory` feature is not enabled, `flags` **must** not contain `VK_BUFFER_CREATE_PROTECTED_BIT`
- VUID-VkBufferCreateInfo-None-01888
If any of the bits `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`, `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` are set, `VK_BUFFER_CREATE_PROTECTED_BIT` **must** not also be set
- VUID-VkBufferCreateInfo-pNext-01571
If the `pNext` chain includes a `VkDedicatedAllocationBufferCreateInfoNV` structure, and the `dedicatedAllocation` member of the chained structure is `VK_TRUE`, then `flags` **must** not include `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`, `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT`
- VUID-VkBufferCreateInfo-deviceAddress-02604
If `VkBufferDeviceAddressCreateInfoEXT::deviceAddress` is not zero, `flags` **must** include `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`
- VUID-VkBufferCreateInfo-opaqueCaptureAddress-03337
If `VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress` is not zero, `flags` **must** include `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`
- VUID-VkBufferCreateInfo-flags-03338
If `flags` includes `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, the `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddressCaptureReplay` feature or the `bufferDeviceAddressCaptureReplay` feature **must** be enabled
- VUID-VkBufferCreateInfo-usage-04813
If `usage` includes `VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR` or `VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR`, and `flags` does not include `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0 and `pProfiles` including at least one `VkVideoProfileInfoKHR` structure with a `videoCodecOperation` member specifying a decode operation
- VUID-VkBufferCreateInfo-usage-04814
If `usage` includes `VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR` or `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR`, and `flags` does not include `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0 and `pProfiles` including at least one `VkVideoProfileInfoKHR` structure with a `videoCodecOperation` member specifying an encode operation

- VUID-VkBufferCreateInfo-flags-08325
If **flags** includes `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then **videoMaintenance1** **must** be enabled
- VUID-VkBufferCreateInfo-pNext-10783
If the **pNext** chain includes a `VkVideoProfileListInfoKHR` structure and for any element of its **pProfiles** member **videoCodecOperation** is `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the **videoDecodeVP9** feature **must** be enabled
- VUID-VkBufferCreateInfo-pNext-10249
If the **pNext** chain includes a `VkVideoProfileListInfoKHR` structure and for any element of its **pProfiles** member **videoCodecOperation** is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the **videoEncodeAV1** feature **must** be enabled
- VUID-VkBufferCreateInfo-pNext-10919
If the **pNext** chain includes a `VkVideoEncodeProfileRgbConversionInfoVALVE` structure, then the **videoEncodeRgbConversion** feature **must** be enabled
- VUID-VkBufferCreateInfo-size-06409
size **must** be less than or equal to `VkPhysicalDeviceMaintenance4Properties::maxBufferSize`
- VUID-VkBufferCreateInfo-usage-08097
If **usage** includes `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`, creating this `VkBuffer` **must** not cause the total required space for all currently valid buffers using this flag on the device to exceed `VkPhysicalDeviceDescriptorBufferPropertiesEXT::samplerDescriptorBufferAddressSpaceSize` or `VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferAddressSpaceSize`
- VUID-VkBufferCreateInfo-usage-08098
If **usage** includes `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`, creating this `VkBuffer` **must** not cause the total required space for all currently valid buffers using this flag on the device to exceed `VkPhysicalDeviceDescriptorBufferPropertiesEXT::resourceDescriptorBufferAddressSpaceSize` or `VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferAddressSpaceSize`
- VUID-VkBufferCreateInfo-flags-08099
If **flags** includes `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the **descriptorBufferCaptureReplay** feature **must** be enabled
- VUID-VkBufferCreateInfo-pNext-08100
If the **pNext** chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, **flags** **must** contain `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`
- VUID-VkBufferCreateInfo-usage-08101
If **usage** includes `VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT`, the **descriptorBufferPushDescriptors** feature **must** be enabled
- VUID-VkBufferCreateInfo-usage-08102
If **usage** includes `VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT`

VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors **must** be VK_FALSE

- VUID-VkBufferCreateInfo-usage-08103

If **usage** includes VK_BUFFER_USAGE_PUSH_DESCRIPTOR_BUFFER_BIT_EXT, **usage must** contain at least one of VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT or VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-VkBufferCreateInfo-tileMemoryHeap-10762

If the **tileMemoryHeap** feature is not enabled, **usage must** not include VK_BUFFER_USAGE_TILE_MEMORY_BIT_QCOM

- VUID-VkBufferCreateInfo-usage-10763

If **usage** includes VK_BUFFER_USAGE_TILE_MEMORY_BIT_QCOM, then **flags must** not contain any of the following bits

- VK_BUFFER_CREATE_SPARSE_BINDING_BIT
- VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT
- VK_BUFFER_CREATE_SPARSE_ALIASED_BIT
- VK_BUFFER_CREATE_PROTECTED_BIT
- VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT
- VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT
- VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR

- VUID-VkBufferCreateInfo-usage-10764

If **usage** includes VK_BUFFER_USAGE_TILE_MEMORY_BIT_QCOM, then only the following **usages** may be set:

- VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT
- VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT
- VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT
- VK_BUFFER_USAGE_STORAGE_BUFFER_BIT
- VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT
- and if VkPhysicalDeviceTileMemoryHeapPropertiesQCOM::tileBufferTransfers is VK_TRUE then additionally VK_BUFFER_USAGE_TRANSFER_SRC_BIT or VK_BUFFER_USAGE_TRANSFER_DST_BIT

- VUID-VkBufferCreateInfo-flags-09641

If **flags** includes VK_BUFFER_CREATE_PROTECTED_BIT, then the **effective usage must** not contain bits other than

- VK_BUFFER_USAGE_TRANSFER_SRC_BIT
- VK_BUFFER_USAGE_TRANSFER_DST_BIT
- VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT
- VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT
- VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT

- `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`
 - `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT`
 - `VK_BUFFER_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR`
 - `VK_BUFFER_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR`
 - `VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT`
- VUID-VkBufferCreateInfo-flags-11277
If the `protectedDescriptorHeaps` property is not supported and the `effective usage` includes the `VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, `flags` **must** not include the `VK_BUFFER_CREATE_PROTECTED_BIT` flag
 - VUID-VkBufferCreateInfo-flags-11279
If the `sparseDescriptorHeaps` property is not supported and the `effective usage` includes the `VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, `flags` **must** not include any of the `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`, `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` flags

Valid Usage (Implicit)

- VUID-VkBufferCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_CREATE_INFO`
- VUID-VkBufferCreateInfo-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkBufferCollectionBufferCreateInfoFUCHSIA`, `VkBufferDeviceAddressCreateInfoEXT`, `VkBufferOpaqueCaptureAddressCreateInfo`, `VkBufferUsageFlags2CreateInfo`, `VkDedicatedAllocationBufferCreateInfoNV`, `VkExternalMemoryBufferCreateInfo`, `VkOpaqueCaptureDescriptorDataCreateInfoEXT`, or `VkVideoProfileListInfoKHR`
- VUID-VkBufferCreateInfo-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkBufferCreateInfo-flags-parameter
`flags` **must** be a valid combination of `VkBufferCreateFlagBits` values
- VUID-VkBufferCreateInfo-sharingMode-parameter
`sharingMode` **must** be a valid `VkSharingMode` value

The `VkBufferUsageFlags2CreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkBufferUsageFlags2CreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkBufferUsageFlags2   usage;
} VkBufferUsageFlags2CreateInfo;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkBufferUsageFlags2CreateInfo
typedef VkBufferUsageFlags2CreateInfo VkBufferUsageFlags2CreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **usage** is a bitmask of [VkBufferUsageFlagBits2](#) specifying allowed usages of the buffer.

If this structure is included in the **pNext** chain of a buffer creation structure, **usage** is used instead of the corresponding **usage** value passed in that creation structure, allowing additional usage flags to be specified. If this structure is included in the **pNext** chain of a buffer query structure, the usage flags of the buffer are returned in **usage** of this structure, and the usage flags representable in **usage** of the buffer query structure are also returned in that field.

Valid Usage (Implicit)

- VUID-VkBufferUsageFlags2CreateInfo-sType-sType
sType must be [VK_STRUCTURE_TYPE_BUFFER_USAGE_FLAGS_2_CREATE_INFO](#)
- VUID-VkBufferUsageFlags2CreateInfo-usage-parameter
usage must be a valid combination of [VkBufferUsageFlagBits2](#) values
- VUID-VkBufferUsageFlags2CreateInfo-usage-requiredbitmask
usage must not be `0`

Structure Chaining

Extends the structures

- [VkBufferCreateInfo](#)
- [VkBufferViewCreateInfo](#)
- [VkDescriptorBufferBindingInfoEXT](#)
- [VkPhysicalDeviceExternalBufferInfo](#)

Bits which **can** be set in [VkBufferUsageFlags2CreateInfo::usage](#), specifying usage behavior of a buffer, are:

```

// Provided by VK_VERSION_1_4
// Flag bits for VkBufferUsageFlagBits2
typedef VkFlags64 VkBufferUsageFlagBits2;
static const VkBufferUsageFlagBits2 VK_BUFFER_USAGE_2_TRANSFER_SRC_BIT =
0x00000001ULL;

```

- [VK_BUFFER_USAGE_2_TRANSFER_SRC_BIT](#) specifies that the buffer **can** be used as the source of a *transfer command* (see the definition of [VK_PIPELINE_STAGE_TRANSFER_BIT](#)).
- [VK_BUFFER_USAGE_2_TRANSFER_DST_BIT](#) specifies that the buffer **can** be used as the destination of a transfer command.
- [VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT](#) specifies that the buffer **can** be used to create a [VkBufferView](#) suitable for occupying a [VkDescriptorSet](#) slot of type [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#).
- [VK_BUFFER_USAGE_2_STORAGE_TEXEL_BUFFER_BIT](#) specifies that the buffer **can** be used to create a [VkBufferView](#) suitable for occupying a [VkDescriptorSet](#) slot of type [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#).
- [VK_BUFFER_USAGE_2_UNIFORM_BUFFER_BIT](#) specifies that the buffer **can** be used in a [VkDescriptorBufferInfo](#) suitable for occupying a [VkDescriptorSet](#) slot either of type [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#) or

VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC.

- VK_BUFFER_USAGE_2_STORAGE_BUFFER_BIT specifies that the buffer **can** be used in a `VkDescriptorBufferInfo` suitable for occupying a `VkDescriptorSet` slot either of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`.
- VK_BUFFER_USAGE_2_INDEX_BUFFER_BIT specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdBindIndexBuffer2` and `vkCmdBindIndexBuffer`.
- VK_BUFFER_USAGE_2_VERTEX_BUFFER_BIT specifies that the buffer is suitable for passing as an element of the `pBuffers` array to `vkCmdBindVertexBuffers`.
- VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdDrawIndirect`, `vkCmdDrawIndexedIndirect`, `vkCmdDrawMeshTasksIndirectNV`, `vkCmdDrawMeshTasksIndirectCountNV`, `vkCmdDrawMeshTasksIndirectEXT`, `vkCmdDrawMeshTasksIndirectCountEXT`, `vkCmdDrawClusterIndirectHUAWEI`, or `vkCmdDispatchIndirect`. It is also suitable for passing as the `buffer` member of `VkIndirectCommandsStreamNV`, or `sequencesCountBuffer` or `sequencesIndexBuffer` or `preprocessedBuffer` member of `VkGeneratedCommandsInfoNV`. It is also suitable for passing as the underlying buffer of either the `preprocessAddress` or `sequenceCountAddress` members of `VkGeneratedCommandsInfoEXT`.
- VK_BUFFER_USAGE_2_CONDITIONAL_RENDERING_BIT_EXT specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdBeginConditionalRenderingEXT`.
- VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT specifies that the buffer is suitable for using for binding as a transform feedback buffer with `vkCmdBindTransformFeedbackBuffers2EXT` or `vkCmdBindTransformFeedbackBuffersEXT`.
- VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT specifies that the buffer is suitable for using as a counter buffer with `vkCmdBeginTransformFeedback2EXT`, `vkCmdEndTransformFeedback2EXT`, `vkCmdBeginTransformFeedbackEXT`, and `vkCmdEndTransformFeedbackEXT`.
- VK_BUFFER_USAGE_2_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT specifies that the buffer is suitable to contain sampler and combined image sampler descriptors when bound as a descriptor buffer. Buffers containing combined image sampler descriptors **must** also specify `VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`.
- VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT specifies that the buffer is suitable to contain resource descriptors when bound as a descriptor buffer.
- VK_BUFFER_USAGE_2_PUSH_DESCRIPTOR_DESCRIPTOR_BUFFER_BIT_EXT specifies that the buffer, when bound, **can** be used by the implementation to support push descriptors when using descriptor buffers.
- VK_BUFFER_USAGE_2_TILE_MEMORY_BIT_QCOM specifies that the buffer **can** be bound to `VkDeviceMemory` allocated from a `VkMemoryHeap` with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property.
- VK_BUFFER_USAGE_2_RAY_TRACING_BIT_NV specifies that the buffer is suitable for use in `vkCmdTraceRaysNV`.
- VK_BUFFER_USAGE_2_SHADER_BINDING_TABLE_BIT_KHR specifies that the buffer is suitable for use as a `Shader Binding Table`.

- [VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR](#) specifies that the buffer is suitable for use as a read-only input to an [acceleration structure build](#).
- [VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR](#) specifies that the buffer is suitable for storage space for a [VkAccelerationStructureKHR](#).
- [VK_BUFFER_USAGE_2_SHADER_DEVICE_ADDRESS_BIT](#) specifies that the buffer **can** be used to retrieve a buffer device address via [vkGetBufferDeviceAddress](#) and use that address to access the buffer's memory from a shader.
- [VK_BUFFER_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR](#) specifies that the buffer **can** be used as the source video bitstream buffer in a [video decode operation](#).
- [VK_BUFFER_USAGE_2_VIDEO_DECODE_DST_BIT_KHR](#) is reserved for future use.
- [VK_BUFFER_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR](#) specifies that the buffer **can** be used as the destination video bitstream buffer in a [video encode operation](#).
- [VK_BUFFER_USAGE_2_VIDEO_ENCODE_SRC_BIT_KHR](#) is reserved for future use.
- [VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMD](#) specifies that the buffer **can** be used for as scratch memory for [execution graph dispatch](#).
- [VK_BUFFER_USAGE_2_PREPROCESS_BUFFER_BIT_EXT](#) specifies that the buffer **can** be used as a preprocess buffer for [Device-Generated Commands](#).
- [VK_BUFFER_USAGE_2_COMPRESSED_DATA_DGF1_BIT_AMD](#) specifies that the buffer is suitable as storage space for [Dense Geometry Format](#) data.
- [VK_BUFFER_USAGE_2_DATA_GRAPH_FOREIGN_DESCRIPTOR_BIT_ARM](#) specifies that the buffer is suitable to contain resource descriptors when bound as a descriptor buffer in command buffers allocated from a command pool that **can** target foreign [data graph processing engines](#).
- [VK_BUFFER_USAGE_2_MEMORY_DECOMPRESSION_BIT_EXT](#) specifies that the buffer **can** be used as a destination buffer in [memory decompression](#).
- [VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT](#) specifies that the buffer **can** be used as a [descriptor heap](#).

```
// Provided by VK_VERSION_1_4
typedef VkFlags64 VkBufferUsageFlags2;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkBufferUsageFlags2
typedef VkBufferUsageFlags2 VkBufferUsageFlags2KHR;
```

[VkBufferUsageFlags2](#) is a bitmask type for setting a mask of zero or more [VkBufferUsageFlagBits2](#).

Bits which **can** be set in [VkBufferCreateInfo::usage](#), specifying usage behavior of a buffer, are:

WARNING

This functionality is superseded by [VkBufferUsageFlagBits2](#). See [Legacy Functionality](#) for more information.

```

- `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` specifies that the buffer **can** be used as the source of a *transfer command* (see the definition of `VK_PIPELINE_STAGE_TRANSFER_BIT`).
- `VK_BUFFER_USAGE_TRANSFER_DST_BIT` specifies that the buffer **can** be used as the destination of a transfer command.
- `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT` specifies that the buffer **can** be used to create a `VkBufferView` suitable for occupying a `VkDescriptorSet` slot of type `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`.
- `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT` specifies that the buffer **can** be used to create a `VkBufferView` suitable for occupying a `VkDescriptorSet` slot of type `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.
- `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` specifies that the buffer **can** be used in a `VkDescriptorBufferInfo` suitable for occupying a `VkDescriptorSet` slot either of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`.
- `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` specifies that the buffer **can** be used in a `VkDescriptorBufferInfo` suitable for occupying a `VkDescriptorSet` slot either of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`.
- `VK_BUFFER_USAGE_INDEX_BUFFER_BIT` specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdBindIndexBuffer2` and `vkCmdBindIndexBuffer`.
- `VK_BUFFER_USAGE_VERTEX_BUFFER_BIT` specifies that the buffer is suitable for passing as an element of the `pBuffers` array to `vkCmdBindVertexBuffers`.
- `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdDrawIndirect`, `vkCmdDrawIndexedIndirect`, `vkCmdDrawMeshTasksIndirectNV`, `vkCmdDrawMeshTasksIndirectCountNV`, `vkCmdDrawMeshTasksIndirectEXT`, `vkCmdDrawMeshTasksIndirectCountEXT`, `vkCmdDrawClusterIndirectHUAWEI`, or `vkCmdDispatchIndirect`. It is also suitable for passing as the `buffer` member of `VkIndirectCommandsStreamNV`, or `sequencesCountBuffer` or `sequencesIndexBuffer` or `preprocessedBuffer` member of `VkGeneratedCommandsInfoNV`. It is also suitable for passing as the underlying buffer of either the `preprocessAddress` or `sequenceCountAddress` members of `VkGeneratedCommandsInfoEXT`.
- `VK_BUFFER_USAGE_CONDITIONAL_RENDERING_BIT_EXT` specifies that the buffer is suitable for passing as the `buffer` parameter to `vkCmdBeginConditionalRenderingEXT`.

- [VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT](#) specifies that the buffer is suitable for using for binding as a transform feedback buffer with [vkCmdBindTransformFeedbackBuffers2EXT](#) or [vkCmdBindTransformFeedbackBuffersEXT](#).
- [VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT](#) specifies that the buffer is suitable for using as a counter buffer with [vkCmdBeginTransformFeedback2EXT](#), [vkCmdEndTransformFeedback2EXT](#), [vkCmdBeginTransformFeedbackEXT](#), and [vkCmdEndTransformFeedbackEXT](#).
- [VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT](#) specifies that the buffer is suitable to contain sampler and combined image sampler descriptors when bound as a descriptor buffer. Buffers containing combined image sampler descriptors **must** also specify [VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT](#).
- [VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT](#) specifies that the buffer is suitable to contain resource descriptors when bound as a descriptor buffer.
- [VK_BUFFER_USAGE_PUSH_DESCRIPTOR_DESCRIPTOR_BUFFER_BIT_EXT](#) specifies that the buffer, when bound, **can** be used by the implementation to support push descriptors when using descriptor buffers.
- [VK_BUFFER_USAGE_TILE_MEMORY_BIT_QCOM](#) specifies that the buffer **can** be bound to [VkDeviceMemory](#) allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property.
- [VK_BUFFER_USAGE_RAY_TRACING_BIT_NV](#) specifies that the buffer is suitable for use in [vkCmdTraceRaysNV](#).
- [VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR](#) specifies that the buffer is suitable for use as a [Shader Binding Table](#).
- [VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR](#) specifies that the buffer is suitable for use as a read-only input to an [acceleration structure build](#).
- [VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR](#) specifies that the buffer is suitable for storage space for a [VkAccelerationStructureKHR](#).
- [VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT](#) specifies that the buffer **can** be used to retrieve a buffer device address via [vkGetBufferDeviceAddress](#) and use that address to access the buffer's memory from a shader.
- [VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR](#) specifies that the buffer **can** be used as the source video bitstream buffer in a [video decode operation](#).
- [VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR](#) is reserved for future use.
- [VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR](#) specifies that the buffer **can** be used as the destination video bitstream buffer in a [video encode operation](#).
- [VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR](#) is reserved for future use.
- [VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMD](#) specifies that the buffer **can** be used for as scratch memory for [execution graph dispatch](#).
- [VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT](#) specifies that the buffer **can** be used as a [descriptor heap](#).

WARNING

This functionality is superseded by [VkBufferUsageFlags2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferUsageFlags;
```

[VkBufferUsageFlags](#) is a bitmask type for setting a mask of zero or more [VkBufferUsageFlagBits](#).

Bits which **can** be set in [VkBufferCreateInfo::flags](#), specifying additional parameters of a buffer, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkBufferCreateFlagBits {
    VK_BUFFER_CREATE_SPARSE_BINDING_BIT = 0x00000001,
    VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT = 0x00000002,
    VK_BUFFER_CREATE_SPARSE_ALIASED_BIT = 0x00000004,
    // Provided by VK_VERSION_1_1
    VK_BUFFER_CREATE_PROTECTED_BIT = 0x00000008,
    // Provided by VK_VERSION_1_2
    VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT = 0x00000010,
    // Provided by VK_EXT_descriptor_buffer
    VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000020,
    // Provided by VK_KHR_video_maintenance1
    VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR = 0x00000040,
    // Provided by VK_EXT_buffer_device_address
    VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT =
VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT,
    // Provided by VK_KHR_buffer_device_address
    VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT,
} VkBufferCreateFlagBits;
```

- [VK_BUFFER_CREATE_SPARSE_BINDING_BIT](#) specifies that the buffer will be backed using sparse memory binding.
- [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) specifies that the buffer **can** be partially backed using sparse memory binding. Buffers created with this flag **must** also be created with the [VK_BUFFER_CREATE_SPARSE_BINDING_BIT](#) flag.
- [VK_BUFFER_CREATE_SPARSE_ALIASED_BIT](#) specifies that the buffer will be backed using sparse memory binding with memory ranges that might also simultaneously be backing another buffer (or another portion of the same buffer). Buffers created with this flag **must** also be created with the [VK_BUFFER_CREATE_SPARSE_BINDING_BIT](#) flag.
- [VK_BUFFER_CREATE_PROTECTED_BIT](#) specifies that the buffer is a protected buffer.
- [VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#) specifies that the buffer's address **can** be saved and reused on a subsequent run (e.g. for trace capture and replay), see [VkBufferOpaqueCaptureAddressCreateInfo](#) for more detail.

- [VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#) specifies that the buffer **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.
- [VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR](#) specifies that the buffer **can** be used in [video coding operations](#) without having to specify at buffer creation time the set of video profiles the buffer will be used with.

See [Sparse Resource Features](#) and [Physical Device Features](#) for details of the sparse memory features supported on a device.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferCreateFlags;
```

[VkBufferCreateFlags](#) is a bitmask type for setting a mask of zero or more [VkBufferCreateFlagBits](#).

If the [pNext](#) chain includes a [VkDedicatedAllocationBufferCreateInfoNV](#) structure, then that structure includes an enable controlling whether the buffer will have a dedicated memory allocation bound to it.

The [VkDedicatedAllocationBufferCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_dedicated_allocation
typedef struct VkDedicatedAllocationBufferCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           dedicatedAllocation;
} VkDedicatedAllocationBufferCreateInfoNV;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [dedicatedAllocation](#) specifies whether the buffer will have a dedicated allocation bound to it.

Valid Usage (Implicit)

- VUID-VkDedicatedAllocationBufferCreateInfoNV-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_BUFFER_CREATE_INFO_NV](#)

Structure Chaining

Extends the structure

- [VkBufferCreateInfo](#)

To define a set of external memory handle types that **may** be used as backing store for a buffer, add

a [VkExternalMemoryBufferCreateInfo](#) structure to the `pNext` chain of the [VkBufferCreateInfo](#) structure. The [VkExternalMemoryBufferCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalMemoryBufferCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkExternalMemoryHandleTypeFlags handleTypes;
} VkExternalMemoryBufferCreateInfo;
```

```
// Provided by VK_KHR_external_memory
// Equivalent to VkExternalMemoryBufferCreateInfo
typedef VkExternalMemoryBufferCreateInfo VkExternalMemoryBufferCreateInfoKHR;
```

NOTE

A [VkExternalMemoryBufferCreateInfo](#) structure with a non-zero `handleTypes` field must be included in the creation parameters for a buffer that will be bound to memory that is either exported or imported.

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleTypes` is zero or a bitmask of [VkExternalMemoryHandleTypeFlagBits](#) specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryBufferCreateInfo-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_BUFFER_CREATE_INFO](#)
- VUID-VkExternalMemoryBufferCreateInfo-handleTypes-parameter
`handleTypes` **must** be a valid combination of [VkExternalMemoryHandleTypeFlagBits](#) values

Structure Chaining

Extends the structure

- [VkBufferCreateInfo](#)

To request a specific device address for a buffer, add a [VkBufferOpaqueCaptureAddressCreateInfo](#) structure to the `pNext` chain of the [VkBufferCreateInfo](#) structure. The [VkBufferOpaqueCaptureAddressCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkBufferOpaqueCaptureAddressCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           opaqueCaptureAddress;
} VkBufferOpaqueCaptureAddressCreateInfo;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkBufferOpaqueCaptureAddressCreateInfo
typedef VkBufferOpaqueCaptureAddressCreateInfo
VkBufferOpaqueCaptureAddressCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **opaqueCaptureAddress** is the opaque capture address requested for the buffer.

If **opaqueCaptureAddress** is zero, no specific address is requested.

If **opaqueCaptureAddress** is not zero, then it **should** be an address retrieved from [vkGetBufferOpaqueCaptureAddress](#) for an identically created buffer on the same implementation.

If this structure is not present, it is as if **opaqueCaptureAddress** is zero.

Applications **should** avoid creating buffers with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS](#) errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the [VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#) flag to all buffers that use [VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT](#), and during capture will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Applications and tools should avoid mixing application-provided and implementation-provided addresses for buffers created with [VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#), to avoid address space allocation conflicts.

Valid Usage (Implicit)

- VUID-VkBufferOpaqueCaptureAddressCreateInfo-sType-sType **must** be [VK_STRUCTURE_TYPE_BUFFER_OPAQUE_CAPTURE_ADDRESS_CREATE_INFO](#)

Structure Chaining

Extends the structure

- [VkBufferCreateInfo](#)

To request a specific device address for a buffer, add a [VkBufferDeviceAddressCreateInfoEXT](#) structure to the [pNext](#) chain of the [VkBufferCreateInfo](#) structure. The [VkBufferDeviceAddressCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_buffer_device_address
typedef struct VkBufferDeviceAddressCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceAddress     deviceAddress;
} VkBufferDeviceAddressCreateInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [deviceAddress](#) is the device address requested for the buffer.

If [deviceAddress](#) is zero, no specific address is requested.

If [deviceAddress](#) is not zero, then it **must** be an address retrieved from an identically created buffer on the same implementation. The buffer **must** also be bound to an identically created [VkDeviceMemory](#) object.

If this structure is not present, it is as if [deviceAddress](#) is zero.

Applications **should** avoid creating buffers with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of [VK_ERROR_INVALID_DEVICE_ADDRESS_EXT](#) errors.

Valid Usage (Implicit)

- VUID-VkBufferDeviceAddressCreateInfoEXT-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_BUFFER_DEVICE_ADDRESS_CREATE_INFO_EXT](#)
- VUID-VkBufferDeviceAddressCreateInfoEXT-deviceAddress-parameter
If [deviceAddress](#) is not 0, [deviceAddress](#) **must** be a valid [VkDeviceAddress](#) value

Structure Chaining

Extends the structure

- [VkBufferCreateInfo](#)

The `VkBufferCollectionBufferCreateInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionBufferCreateInfoFUCHSIA {
    VkStructureType      sType;
    const void*          pNext;
    VkBufferCollectionFUCHSIA collection;
    uint32_t             index;
} VkBufferCollectionBufferCreateInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `collection` is the `VkBufferCollectionFUCHSIA` handle
- `index` is the index of the buffer in the buffer collection from which the memory will be imported

Valid Usage

- VUID-VkBufferCollectionBufferCreateInfoFUCHSIA-index-06388
`index` **must** be less than `VkBufferCollectionPropertiesFUCHSIA::bufferCount`

Valid Usage (Implicit)

- VUID-VkBufferCollectionBufferCreateInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_BUFFER_CREATE_INFO_FUCHSIA`
- VUID-VkBufferCollectionBufferCreateInfoFUCHSIA-collection-parameter
`collection` **must** be a valid `VkBufferCollectionFUCHSIA` handle

Structure Chaining

Extends the structure

- `VkBufferCreateInfo`

To destroy a buffer, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyBuffer(
    VkDevice      device,
    VkBuffer      buffer,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the buffer.

- **buffer** is the buffer to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyBuffer-buffer-00922
All submitted commands that refer to **buffer**, either directly or via a **VkBufferView**, **must** have completed execution
- VUID-vkDestroyBuffer-buffer-00923
If **VkAllocationCallbacks** were provided when **buffer** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyBuffer-buffer-00924
If no **VkAllocationCallbacks** were provided when **buffer** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyBuffer-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyBuffer-buffer-parameter
If **buffer** is not **VK_NULL_HANDLE**, **buffer** **must** be a valid **VkBuffer** handle
- VUID-vkDestroyBuffer-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyBuffer-buffer-parent
If **buffer** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **buffer** **must** be externally synchronized

12.2. Buffer Views

A *buffer view* represents a contiguous range of a buffer and a specific format to be used to interpret the data. Buffer views are used to enable shaders to access buffer contents using [image operations](#). In order to create a valid buffer view, the buffer **must** have been created with at least one of the following usage flags:

- **VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT**
- **VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT**

Buffer views are represented by **VkBufferView** handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBufferView)
```

To create a buffer view, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateBufferView(
    VkDevice                                device,
    const VkBufferViewCreateInfo*           pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkBufferView*                           pView);
```

- **device** is the logical device that creates the buffer view.
- **pCreateInfo** is a pointer to a [VkBufferViewCreateInfo](#) structure containing parameters to be used to create the buffer view.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pView** is a pointer to a [VkBufferView](#) handle in which the resulting buffer view object is returned.

Valid Usage

- VUID-vkCreateBufferView-device-09665
device must support at least one queue family with one of the [VK_QUEUE_COMPUTE_BIT](#) or [VK_QUEUE_GRAPHICS_BIT](#) capabilities

Valid Usage (Implicit)

- VUID-vkCreateBufferView-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkCreateBufferView-pCreateInfo-parameter
pCreateInfo must be a valid pointer to a valid [VkBufferViewCreateInfo](#) structure
- VUID-vkCreateBufferView-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateBufferView-pView-parameter
pView must be a valid pointer to a [VkBufferView](#) handle
- VUID-vkCreateBufferView-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkBufferViewCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferViewCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkBufferViewCreateFlags flags;
    VkBuffer              buffer;
    VkFormat              format;
    VkDeviceSize          offset;
    VkDeviceSize          range;
} VkBufferViewCreateInfo;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is reserved for future use.
- [buffer](#) is a [VkBuffer](#) on which the view will be created.
- [format](#) is a [VkFormat](#) describing the format of the data elements in the buffer.
- [offset](#) is an offset in bytes from the base address of the buffer. Accesses to the buffer view from shaders use addressing that is relative to this starting offset.
- [range](#) is a size in bytes of the buffer view. If [range](#) is equal to [VK_WHOLE_SIZE](#), the range from [offset](#) to the end of the buffer is used. If [VK_WHOLE_SIZE](#) is used and the remaining size of the buffer is not a multiple of the [texel block size](#) of [format](#), the nearest smaller multiple is used.

The buffer view has a *buffer view usage* identifying which descriptor types can be created from it. This usage **can** be defined by including the [VkBufferUsageFlags2CreateInfo](#) structure in the [pNext](#) chain, and specifying the [usage](#) value there. If this structure is not included, it is equal to the [VkBufferCreateInfo::usage](#) value used to create [buffer](#).

Valid Usage

- VUID-VkBufferViewCreateInfo-offset-00925

offset **must** be less than the size of **buffer**

- VUID-VkBufferViewCreateInfo-range-00928

If **range** is not equal to **VK_WHOLE_SIZE**, **range** **must** be greater than 0

- VUID-VkBufferViewCreateInfo-range-00929

If **range** is not equal to **VK_WHOLE_SIZE**, **range** **must** be an integer multiple of the texel block size of **format**

- VUID-VkBufferViewCreateInfo-range-00930

If **range** is not equal to **VK_WHOLE_SIZE**, the number of texel buffer elements given by $\lceil \text{range} / (\text{texel block size}) \rceil \times (\text{texels per block})$ where texel block size and texels per block are as defined in the **Compatible Formats** table for **format**, **must** be less than or equal to **VkPhysicalDeviceLimits::maxTexelBufferElements**

- VUID-VkBufferViewCreateInfo-offset-00931

If **range** is not equal to **VK_WHOLE_SIZE**, the sum of **offset** and **range** **must** be less than or equal to the size of **buffer**

- VUID-VkBufferViewCreateInfo-range-04059

If **range** is equal to **VK_WHOLE_SIZE**, the number of texel buffer elements given by $\lceil (\text{size} - \text{offset}) / (\text{texel block size}) \rceil \times (\text{texels per block})$ where size is the size of **buffer**, and texel block size and texels per block are as defined in the **Compatible Formats** table for **format**, **must** be less than or equal to **VkPhysicalDeviceLimits::maxTexelBufferElements**

- VUID-VkBufferViewCreateInfo-buffer-00932

buffer **must** have been created with at least one of the **VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT** or **VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT** usage flags set

- VUID-VkBufferViewCreateInfo-format-08778

If the **buffer view usage** contains **VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT**, then **format** features of **format** **must** contain **VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT**

- VUID-VkBufferViewCreateInfo-format-08779

If the **buffer view usage** contains **VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT**, then **format** features of **format** **must** contain **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT**

- VUID-VkBufferViewCreateInfo-buffer-00935

If **buffer** is non-sparse then it **must** be bound completely and contiguously to a single **VkDeviceMemory** object

- VUID-VkBufferViewCreateInfo-buffer-02750

If **buffer** was created with the **VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT** usage flag set, **offset** **must** be a multiple of the effective alignment requirement of **format** for **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** as defined by **minTexelBufferOffsetAlignment**

- VUID-VkBufferViewCreateInfo-buffer-02751

If **buffer** was created with the **VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT** usage flag set, **offset** **must** be a multiple of the effective alignment requirement of **format** for **VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER** as defined by

`minTexelBufferOffsetAlignment`

- VUID-VkBufferViewCreateInfo-pNext-06782

If the `pNext` chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its `exportObjectType` member **must** be `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT`

- VUID-VkBufferViewCreateInfo-pNext-08780

If the `pNext` chain includes a `VkBufferUsageFlags2CreateInfo`, its `usage` **must** not contain any other bit than `VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT` or `VK_BUFFER_USAGE_2_STORAGE_TEXEL_BUFFER_BIT`

- VUID-VkBufferViewCreateInfo-pNext-08781

If the `pNext` chain includes a `VkBufferUsageFlags2CreateInfo`, its `usage` **must** be a subset of the `VkBufferCreateInfo::usage` specified or `VkBufferUsageFlags2CreateInfo::usage` from `VkBufferCreateInfo::pNext` when creating `buffer`

- VUID-VkBufferViewCreateInfo-None-12278

If Vulkan 1.3 is not supported and the `ycbcr2plane444Formats` feature is not enabled, `format` **must** not be `VK_FORMAT_G8_B8R8_2PLANE_444_UNORM`, `VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16`, `VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16`, or `VK_FORMAT_G16_B16R16_2PLANE_444_UNORM`

Valid Usage (Implicit)

- VUID-VkBufferViewCreateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_VIEW_CREATE_INFO`

- VUID-VkBufferViewCreateInfo-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkBufferUsageFlags2CreateInfo` or `VkExportMetalObjectCreateInfoEXT`

- VUID-VkBufferViewCreateInfo-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique, with the exception of structures of type `VkExportMetalObjectCreateInfoEXT`

- VUID-VkBufferViewCreateInfo-flags-zero bitmask

`flags` **must** be 0

- VUID-VkBufferViewCreateInfo-buffer-parameter

`buffer` **must** be a valid `VkBuffer` handle

- VUID-VkBufferViewCreateInfo-format-parameter

`format` **must** be a valid `VkFormat` value

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferViewCreateFlags;
```

`VkBufferViewCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future

use.

To destroy a buffer view, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyBufferView(
    VkDevice          device,
    VkBufferView      bufferView,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the buffer view.
- **bufferView** is the buffer view to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyBufferView-bufferView-00936
All submitted commands that refer to **bufferView** **must** have completed execution
- VUID-vkDestroyBufferView-bufferView-00937
If **VkAllocationCallbacks** were provided when **bufferView** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyBufferView-bufferView-00938
If no **VkAllocationCallbacks** were provided when **bufferView** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyBufferView-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyBufferView-bufferView-parameter
If **bufferView** is not **VK_NULL_HANDLE**, **bufferView** **must** be a valid **VkBufferView** handle
- VUID-vkDestroyBufferView-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyBufferView-bufferView-parent
If **bufferView** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **bufferView** **must** be externally synchronized

12.2.1. Buffer View Format Features

Valid uses of a [VkBufferView](#) may depend on the buffer view's *format features*, defined below. Such constraints are documented in the affected valid usage statement.

- If Vulkan 1.3 is supported or the [VK_KHR_format_feature_flags2](#) extension is supported, then the buffer view's set of *format features* is the value of [VkFormatProperties3::bufferFeatures](#) found by calling [vkGetPhysicalDeviceFormatProperties2](#) on the same [format](#) as [VkBufferViewCreateInfo::format](#).

12.3. Buffer Device Addresses

To query a 64-bit buffer device address value which can be used to identify a buffer to API commands or through which buffer memory **can** be accessed, call:

```
// Provided by VK_VERSION_1_2
VkDeviceAddress vkGetBufferDeviceAddress(
    VkDevice          device,
    const VkBufferDeviceAddressInfo* pInfo);
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to vkGetBufferDeviceAddress
VkDeviceAddress vkGetBufferDeviceAddressKHR(
    VkDevice          device,
    const VkBufferDeviceAddressInfo* pInfo);
```

```
// Provided by VK_EXT_buffer_device_address
// Equivalent to vkGetBufferDeviceAddress
VkDeviceAddress vkGetBufferDeviceAddressEXT(
    VkDevice          device,
    const VkBufferDeviceAddressInfo* pInfo);
```

- [device](#) is the logical device that the buffer was created on.
- [pInfo](#) is a pointer to a [VkBufferDeviceAddressInfo](#) structure specifying the buffer to retrieve an address for.

The 64-bit return value, [bufferBaseAddress](#), is an address of the start of [pInfo->buffer](#). Addresses in the range [[bufferBaseAddress](#), [bufferBaseAddress](#) + [VkBufferCreateInfo::size](#)) **can** be used to access the memory bound to this buffer on the device.

A value of zero is reserved as a “null” pointer and **must** not be returned as a valid buffer device address.

If the buffer was created with a non-zero value of [VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress](#) or [VkBufferDeviceAddressCreateInfoEXT::deviceAddress](#), the return value will be the same address that was returned at capture time.

The returned address **must** satisfy the alignment requirement specified by `VkMemoryRequirements::alignment` for the buffer in `VkBufferDeviceAddressInfo::buffer`.

If multiple `VkBuffer` objects are bound to overlapping ranges of `VkDeviceMemory`, implementations **may** return address ranges which overlap. In this case, it is ambiguous which `VkBuffer` is associated with any given device address. For purposes of valid usage, if multiple `VkBuffer` objects **can** be attributed to a device address, a `VkBuffer` is selected such that valid usage passes, if it exists.

Valid Usage

- VUID-vkGetBufferDeviceAddress-bufferDeviceAddress-03324

The `bufferDeviceAddress` feature or the `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddress` feature **must** be enabled, and at least one of the following conditions **must** be met

- `buffer` is sparse
- `buffer` is bound completely and contiguously to a single `VkDeviceMemory` object
- `buffer` was created with the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` flag and the `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddress` feature is enabled on the device

- VUID-vkGetBufferDeviceAddress-device-03325

If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` or `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetBufferDeviceAddress-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetBufferDeviceAddress-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkBufferDeviceAddressInfo` structure

The `VkBufferDeviceAddressInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkBufferDeviceAddressInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer           buffer;
} VkBufferDeviceAddressInfo;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkBufferDeviceAddressInfo
typedef VkBufferDeviceAddressInfo VkBufferDeviceAddressInfoKHR;
```

```
// Provided by VK_EXT_buffer_device_address
// Equivalent to VkBufferDeviceAddressInfo
typedef VkBufferDeviceAddressInfo VkBufferDeviceAddressInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **buffer** specifies the buffer whose address is being queried.

Valid Usage

- VUID-VkBufferDeviceAddressInfo-buffer-02601
buffer **must** have been created with the [VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT](#) usage flag set

Valid Usage (Implicit)

- VUID-VkBufferDeviceAddressInfo-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_BUFFER_DEVICE_ADDRESS_INFO](#)
- VUID-VkBufferDeviceAddressInfo-pNext-pNext
pNext **must** be **NULL**
- VUID-VkBufferDeviceAddressInfo-buffer-parameter
buffer **must** be a valid [VkBuffer](#) handle

To query a 64-bit buffer opaque capture address, call:

```
// Provided by VK_VERSION_1_2
uint64_t vkGetBufferOpaqueCaptureAddress(
    VkDevice device,
    const VkBufferDeviceAddressInfo* pInfo);
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to vkGetBufferOpaqueCaptureAddress
uint64_t vkGetBufferOpaqueCaptureAddressKHR(
    VkDevice device,
    const VkBufferDeviceAddressInfo* pInfo);
```

- **device** is the logical device that the buffer was created on.

- `pInfo` is a pointer to a `VkBufferDeviceAddressInfo` structure specifying the buffer to retrieve an address for.

The 64-bit return value is an opaque capture address of the start of `pInfo->buffer`.

If the buffer was created with a non-zero value of `VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress` the return value **must** be the same address.

Valid Usage

- VUID-vkGetBufferOpaqueCaptureAddress-None-03326
The `bufferDeviceAddress` and `bufferDeviceAddressCaptureReplay` features **must** be enabled
- VUID-vkGetBufferOpaqueCaptureAddress-pInfo-10725
`pInfo->buffer` **must** have been created with the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` flag
- VUID-vkGetBufferOpaqueCaptureAddress-device-03327
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetBufferOpaqueCaptureAddress-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetBufferOpaqueCaptureAddress-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkBufferDeviceAddressInfo` structure

The `VkStridedDeviceAddressRegionKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkStridedDeviceAddressRegionKHR {
    VkDeviceAddress    deviceAddress;
    VkDeviceSize       stride;
    VkDeviceSize       size;
} VkStridedDeviceAddressRegionKHR;
```

- `deviceAddress` is the device address (as returned by the `vkGetBufferDeviceAddress` command) at which the region starts, or zero if the region is unused.
- `stride` is the byte stride between consecutive elements.
- `size` is the size in bytes of the region starting at `deviceAddress`.

Valid Usage

- VUID-VkStridedDeviceAddressRegionKHR-size-04631

If **size** is not zero, all addresses between **deviceAddress** and **deviceAddress + size - 1** **must** be in the buffer device address range of the same buffer

- VUID-VkStridedDeviceAddressRegionKHR-size-04632

If **size** is not zero, **stride** **must** be less than or equal to the size of the buffer from which **deviceAddress** was queried

Valid Usage (Implicit)

- VUID-VkStridedDeviceAddressRegionKHR-deviceAddress-parameter

If **deviceAddress** is not 0, **deviceAddress** **must** be a valid **VkDeviceAddress** value

12.4. Images

Images are specialized resources that have multi-dimensional access, as outlined in the [Images](#) chapter. Images **can** be used for various purposes, such as [rendering attachments](#), [for copy operations](#), or accessed through shaders via [resource descriptors](#).

Images are represented by **VkImage** handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkImage)
```

To create images, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateImage(
    VkDevice                                device,
    const VkImageCreateInfo*                pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkImage*                                 pImage);
```

- **device** is the logical device that creates the image.
- **pCreateInfo** is a pointer to a **VkImageCreateInfo** structure containing parameters to be used to create the image.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pImage** is a pointer to a **VkImage** handle in which the resulting image object is returned.

Valid Usage

- VUID-vkCreateImage-device-09666

device **must** support at least one queue family with one of the **VK_QUEUE_VIDEO_ENCODE_BIT_KHR**, **VK_QUEUE_VIDEO_DECODE_BIT_KHR**, **VK_QUEUE_OPTICAL_FLOW_BIT_NV**, **VK_QUEUE_SPARSE_BINDING_BIT**,

[VK_QUEUE_TRANSFER_BIT](#), [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) capabilities

- VUID-vkCreateImage-flags-00939

If the **flags** member of **pCreateInfo** includes [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#), and the **extendedSparseAddressSpace** feature is not enabled, creating this **VkImage** **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed **VkPhysicalDeviceLimits::sparseAddressSpaceSize**

- VUID-vkCreateImage-flags-09385

If the **flags** member of **pCreateInfo** includes [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#), the **extendedSparseAddressSpace** feature is enabled, and the **usage** member of **pCreateInfo** contains bits not in **VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseImageUsageFlags**, creating this **VkImage** **must** not cause the total required sparse memory for all currently valid sparse resources on the device, excluding **VkBuffer** created with **usage** member of **pCreateInfo** containing bits in **VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseBufferUsageFlags** and **VkImage** created with **usage** member of **pCreateInfo** containing bits in **VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseImageUsageFlags**, to exceed **VkPhysicalDeviceLimits::sparseAddressSpaceSize**

- VUID-vkCreateImage-flags-09386

If the **flags** member of **pCreateInfo** includes [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#) and the **extendedSparseAddressSpace** feature is enabled, creating this **VkImage** **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed **VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseAddressSpaceSize**

- VUID-vkCreateImage-pNext-06389

If a [VkBufferCollectionImageCreateInfoFUCHSIA](#) has been chained to **pNext**, **pCreateInfo** **must** match the **System** chosen **VkImageCreateInfo** excepting members **VkImageCreateInfo::extent** and **VkImageCreateInfo::usage** in the match criteria

Valid Usage (Implicit)

- VUID-vkCreateImage-device-parameter

device **must** be a valid [VkDevice](#) handle

- VUID-vkCreateImage-pCreateInfo-parameter

pCreateInfo **must** be a valid pointer to a valid [VkImageCreateInfo](#) structure

- VUID-vkCreateImage-pAllocator-parameter

If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure

- VUID-vkCreateImage-pImage-parameter

pImage **must** be a valid pointer to a [VkImage](#) handle

- VUID-vkCreateImage-device-queuecount

The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_COMPRESSION_EXHAUSTED_EXT](#)
- [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkImageCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkImageCreateFlags    flags;
    VkImageType           imageType;
    VkFormat              format;
    VkExtent3D            extent;
    uint32_t              mipLevels;
    uint32_t              arrayLayers;
    VkSampleCountFlagBits samples;
    VkImageTiling          tiling;
    VkImageUsageFlags     usage;
    VkSharingMode          sharingMode;
    uint32_t              queueFamilyIndexCount;
    const uint32_t*       pQueueFamilyIndices;
    VkImageLayout          initialLayout;
} VkImageCreateInfo;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkImageCreateFlagBits](#) describing additional parameters of the image.
- [imageType](#) is a [VkImageType](#) value specifying the basic dimensionality of the image. Layers in array textures do not count as a dimension for the purposes of the image type.
- [format](#) is a [VkFormat](#) describing the format and type of the texel blocks that will be contained in the image.
- [extent](#) is a [VkExtent3D](#) describing the number of texels/pixels in each dimension of the base level.

- `mipLevels` describes the number of levels of detail available for minified sampling of the image.
- `arrayLayers` is the number of layers in the image.
- `samples` is a `VkSampleCountFlagBits` value specifying the number of `samples per texel`.
- `tiling` is a `VkImageTiling` value specifying the tiling arrangement of the texel blocks in memory.
- `usage` is a bitmask of `VkImageUsageFlagBits` describing the intended usage of the image.
- `sharingMode` is a `VkSharingMode` value specifying the sharing mode of the image when it will be accessed by multiple queue families.
- `queueFamilyIndexCount` is the number of entries in the `pQueueFamilyIndices` array.
- `pQueueFamilyIndices` is a pointer to an array of queue families that will access this image. It is ignored if `sharingMode` is not `VK_SHARING_MODE_CONCURRENT`.
- `initialLayout` is a `VkImageLayout` value specifying the initial `VkImageLayout` of all image subresources of the image. See [Image Layouts](#).

Images created with `tiling` equal to `VK_IMAGE_TILING_LINEAR` have further restrictions on their limits and capabilities compared to images created with `tiling` equal to `VK_IMAGE_TILING_OPTIMAL`. Creation of images with tiling `VK_IMAGE_TILING_LINEAR` **may** not be supported unless other parameters meet all of the constraints:

- `imageType` is `VK_IMAGE_TYPE_2D`
- `format` is not a depth/stencil format
- `mipLevels` is 1
- `arrayLayers` is 1
- `samples` is `VK_SAMPLE_COUNT_1_BIT`
- `usage` only includes `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` and/or `VK_IMAGE_USAGE_TRANSFER_DST_BIT`

Images created with one of the [formats that require a sampler Y'C_BC_R conversion](#), have further restrictions on their limits and capabilities compared to images created with other formats. Creation of images with a format requiring [Y'C_BC_R conversion](#) **may** not be supported unless other parameters meet all of the constraints:

- `imageType` is `VK_IMAGE_TYPE_2D`
- `mipLevels` is 1
- `arrayLayers` is 1, unless the `ycbcrImageArrays` feature is enabled, or otherwise indicated by `VkImageFormatProperties::maxArrayLayers`, as returned by `vkGetPhysicalDeviceImageFormatProperties`
- `samples` is `VK_SAMPLE_COUNT_1_BIT`

Images created with the `VK_IMAGE_USAGE_TILE_MEMORY_BIT_QCOM` usage flag set have further restrictions on their limits and capabilities compared to images created without this flag. Creation of images with usage including `VK_IMAGE_USAGE_TILE_MEMORY_BIT_QCOM` **may** not be supported unless parameters meet all of the constraints:

- `flags` is 0 or only includes `VK_IMAGE_CREATE_ALIAS_BIT`
- `imageType` is `VK_IMAGE_TYPE_2D`
- `mipLevels` is 1
- `arrayLayers` is 1
- `samples` is `VK_SAMPLE_COUNT_1_BIT`
- `tiling` is `VK_IMAGE_TILING_OPTIMAL`
- `usage` includes `VK_IMAGE_USAGE_TILE_MEMORY_BIT_QCOM` and any valid combination of the following `VK_IMAGE_USAGE_SAMPLED_BIT`, `VK_IMAGE_USAGE_STORAGE_BIT`, `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`

Implementations **may** support additional limits and capabilities beyond those listed above.

To determine the set of valid `usage` bits for a given format, call `vkGetPhysicalDeviceFormatProperties`.

If the size of the resultant image would exceed `maxResourceSize`, then `vkCreateImage` **must** fail and return `VK_ERROR_OUT_OF_DEVICE_MEMORY`. This failure **may** occur even when all image creation parameters satisfy their valid usage requirements.

If the implementation reports `VK_TRUE` in `VkPhysicalDeviceHostImageCopyProperties::identicalMemoryTypeRequirements`, usage of `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` **must** not affect the memory type requirements of the image as described in [Sparse Resource Memory Requirements](#) and [Resource Memory Association](#).

NOTE

For images created without the `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT` flag set, a `usage` bit is valid if it is supported for the format the image is created with.

For images created with `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT` a `usage` bit is valid if it is supported for at least one of the formats a `VkImageView` created from the image **can** have (see [Image Views](#) for more detail).

Image Creation Limits

Valid values for some image creation parameters are limited by a numerical upper bound or by inclusion in a bitset. For example, `VkImageCreateInfo::arrayLayers` is limited by `imageCreateMaxArrayLayers`, defined below; and `VkImageCreateInfo::samples` is limited by `imageCreateSampleCounts`, also defined below.

Several limiting values are defined below, as well as assisting values from which the limiting values are derived. The limiting values are referenced by the relevant valid usage statements of `VkImageCreateInfo`.

- Let `uint64_t imageCreateDrmFormatModifiers[]` be the set of [Linux DRM format modifiers](#) that the resultant image **may** have.

- If `tiling` is not `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `imageCreateDrmFormatModifiers` is empty.
- If `VkImageCreateInfo::pNext` contains `VkImageDrmFormatModifierExplicitCreateInfoEXT`, then `imageCreateDrmFormatModifiers` contains exactly one modifier, `VkImageDrmFormatModifierExplicitCreateInfoEXT::drmFormatModifier`.
- If `VkImageCreateInfo::pNext` contains `VkImageDrmFormatModifierListCreateInfoEXT`, then `imageCreateDrmFormatModifiers` contains the entire array `VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers`.
- Let `VkBool32 imageCreateMaybelinear` indicate if the resultant image may be linear.
 - If `tiling` is `VK_IMAGE_TILING_LINEAR`, then `imageCreateMaybelinear` is `VK_TRUE`.
 - If `tiling` is `VK_IMAGE_TILING_OPTIMAL`, then `imageCreateMaybelinear` is `VK_FALSE`.
 - If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `imageCreateMaybelinear` is `VK_TRUE` if and only if `imageCreateDrmFormatModifiers` contains `DRM_FORMAT_MOD_LINEAR`.
- Let `VkFormatFeatureFlags imageCreateFormatFeatures` be the set of valid *format features* available during image creation.
 - If `tiling` is `VK_IMAGE_TILING_LINEAR`, then `imageCreateFormatFeatures` is the value of `VkFormatProperties::linearTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` with parameter `format` equal to `VkImageCreateInfo::format`.
 - If `tiling` is `VK_IMAGE_TILING_OPTIMAL`, and if the `pNext` chain includes no `VkExternalFormatANDROID` or `VkExternalFormatQNX` structure with non-zero `externalFormat`, then `imageCreateFormatFeatures` is the value of `VkFormatProperties::optimalTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` with parameter `format` equal to `VkImageCreateInfo::format`.
 - If `tiling` is `VK_IMAGE_TILING_OPTIMAL`, and if the `pNext` chain includes a `VkExternalFormatANDROID` structure with non-zero `externalFormat`, then `imageCreateFormatFeatures` is the value of `VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures` obtained by `vkGetAndroidHardwareBufferPropertiesANDROID` with a matching `externalFormat` value.
 - If `tiling` is `VK_IMAGE_TILING_OPTIMAL`, and if the `pNext` chain includes a `VkExternalFormatQNX` structure with non-zero `externalFormat`, then `imageCreateFormatFeatures` is the value of `VkScreenBufferFormatPropertiesQNX::formatFeatures` obtained by `vkGetScreenBufferPropertiesQNX` with a matching `externalFormat` value.
 - If the `pNext` chain includes a `VkBufferCollectionImageCreateInfoFUCHSIA` structure, then `imageCreateFormatFeatures` is the value of `VkBufferCollectionPropertiesFUCHSIA::formatFeatures` found by calling `vkGetBufferCollectionPropertiesFUCHSIA` with a parameter `collection` equal to `VkBufferCollectionImageCreateInfoFUCHSIA::collection`.
 - If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then the value of

`imageCreateFormatFeatures` is found by calling `vkGetPhysicalDeviceFormatProperties2` with `VkImageFormatProperties::format` equal to `VkImageCreateInfo::format` and with `VkDrmFormatModifierPropertiesListEXT` chained into `VkFormatProperties2`; by collecting all members of the returned array `VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties` whose `drmFormatModifier` belongs to `imageCreateDrmFormatModifiers`; and by taking the bitwise intersection, over the collected array members, of `drmFormatModifierTilingFeatures`. (The resultant `imageCreateFormatFeatures` may be empty).

- Let `VkImageFormatProperties2 imageCreateImageFormatPropertiesList[]` be defined as follows.
 - If `VkImageCreateInfo::pNext` contains no `VkExternalFormatANDROID` or `VkExternalFormatQNX` structure with non-zero `externalFormat`, then `imageCreateImageFormatPropertiesList` is the list of structures obtained by calling `vkGetPhysicalDeviceImageFormatProperties2`, possibly multiple times, as follows:
 - The parameters `VkPhysicalDeviceImageFormatInfo2::format`, `imageType`, `tiling`, `usage`, and `flags` **must** be equal to those in `VkImageCreateInfo`.
 - If `VkImageCreateInfo::pNext` contains a `VkExternalMemoryImageCreateInfo` structure whose `handleTypes` is not `0`, then `VkPhysicalDeviceImageFormatInfo2::pNext` **must** contain a `VkPhysicalDeviceExternalImageFormatInfo` structure whose `handleType` is not `0`; and `vkGetPhysicalDeviceImageFormatProperties2` **must** be called for each handle type in `VkExternalMemoryImageCreateInfo::handleTypes`, successively setting `VkPhysicalDeviceExternalImageFormatInfo::handleType` on each call.
 - If `VkImageCreateInfo::pNext` contains no `VkExternalMemoryImageCreateInfo` structure, or contains a structure whose `handleTypes` is `0`, then `VkPhysicalDeviceImageFormatInfo2::pNext` **must** either contain no `VkPhysicalDeviceExternalImageFormatInfo` structure, or contain a structure whose `handleType` is `0`.
 - If `VkImageCreateInfo::pNext` contains a `VkVideoProfileListInfoKHR` structure then `VkPhysicalDeviceImageFormatInfo2::pNext` **must** also contain the same `VkVideoProfileListInfoKHR` structure on each call.
 - If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then:
 - `VkPhysicalDeviceImageFormatInfo2::pNext` **must** contain a `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure where `sharingMode` is equal to `VkImageCreateInfo::sharingMode`;
 - if `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` and `pQueueFamilyIndices` **must** be equal to those in `VkImageCreateInfo`;
 - if `flags` contains `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, then the `VkImageFormatListCreateInfo` structure included in the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2` **must** be equivalent to the one included in the `pNext` chain of `VkImageCreateInfo`;
 - if `VkImageCreateInfo::pNext` contains a `VkImageCompressionControlEXT`

structure, then the `VkPhysicalDeviceImageFormatInfo2::pNext` chain **must** contain an equivalent structure;

- `vkGetPhysicalDeviceImageFormatProperties2` **must** be called for each modifier in `imageCreateDrmFormatModifiers`, successively setting `VkPhysicalDeviceImageDrmFormatModifierInfoEXT::drmFormatModifier` on each call.
- If `tiling` is not `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `VkPhysicalDeviceImageFormatInfo2::pNext` **must** contain no `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure.
- If any call to `vkGetPhysicalDeviceImageFormatProperties2` returns an error, then `imageCreateInfoFormatPropertiesList` is defined to be the empty list.
- If `VkImageCreateInfo::pNext` contains a `VkExternalFormatANDROID` structure with non-zero `externalFormat`, then `imageCreateInfoFormatPropertiesList` contains a single element where:
 - `VkImageFormatProperties::maxMipLevels` is $\lceil \log_2(\max(\text{extent.width}, \text{extent.height}, \text{extent.depth})) \rceil + 1$.
 - `VkImageFormatProperties::maxArrayLayers` is `VkPhysicalDeviceLimits::maxImageArrayLayers`.
 - Each component of `VkImageFormatProperties::maxExtent` is `VkPhysicalDeviceLimits::maxImageDimension2D`.
 - `VkImageFormatProperties::sampleCounts` contains exactly `VK_SAMPLE_COUNT_1_BIT`.
- Let `uint32_t imageCreateMaxMipLevels` be the minimum value of `VkImageFormatProperties::maxMipLevels` in `imageCreateInfoFormatPropertiesList`. The value is undefined if `imageCreateInfoFormatPropertiesList` is empty.
- Let `uint32_t imageCreateMaxArrayLayers` be the minimum value of `VkImageFormatProperties::maxArrayLayers` in `imageCreateInfoFormatPropertiesList`. The value is undefined if `imageCreateInfoFormatPropertiesList` is empty.
- Let `VkExtent3D imageCreateMaxExtent` be the component-wise minimum over all `VkImageFormatProperties::maxExtent` values in `imageCreateInfoFormatPropertiesList`. The value is undefined if `imageCreateInfoFormatPropertiesList` is empty.
- Let `VkSampleCountFlags imageCreateSampleCounts` be the intersection of each `VkImageFormatProperties::sampleCounts` in `imageCreateInfoFormatPropertiesList`. The value is undefined if `imageCreateInfoFormatPropertiesList` is empty.
- Let `VkVideoFormatPropertiesKHR videoFormatProperties[]` be defined as follows.
 - If `VkImageCreateInfo::pNext` contains a `VkVideoProfileListInfoKHR` structure, then `videoFormatProperties` is the list of structures obtained by calling `vkGetPhysicalDeviceVideoFormatPropertiesKHR` with `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` equal to the `usage` member of `VkImageCreateInfo` and `VkPhysicalDeviceVideoFormatInfoKHR::pNext` containing the same `VkVideoProfileListInfoKHR` structure chained to `VkImageCreateInfo`.
 - If `VkImageCreateInfo::pNext` contains no `VkVideoProfileListInfoKHR` structure, then `videoFormatProperties` is an empty list.

- Let `VkBool32 supportedVideoFormat` indicate if the image parameters are supported by the specified video profiles.
 - `supportedVideoFormat` is `VK_TRUE` if there exists an element in the `videoFormatProperties` list for which all of the following conditions are true:
 - `VkImageCreateInfo::format` equals `VkVideoFormatPropertiesKHR::format`.
 - `VkImageCreateInfo::flags` only contains `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and/or bits also set in `VkVideoFormatPropertiesKHR::imageCreateFlags`.
 - `VkImageCreateInfo::imageType` equals `VkVideoFormatPropertiesKHR::imageType`.
 - `VkImageCreateInfo::tiling` equals `VkVideoFormatPropertiesKHR::imageTiling`.
 - `VkImageCreateInfo::usage` only contains bits also set in `VkVideoFormatPropertiesKHR::imageUsageFlags`, or `VkImageCreateInfo::flags` includes `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT`.
 - Otherwise `supportedVideoFormat` is `VK_FALSE`.

Valid Usage

- VUID-VkImageCreateInfo-imageCreateMaxMipLevels-02251
Each of the following values (as described in [Image Creation Limits](#)) **must** not be undefined : `imageCreateMaxMipLevels`, `imageCreateMaxArrayLayers`, `imageCreateMaxExtent`, and `imageCreateSampleCounts`
- VUID-VkImageCreateInfo-sharingMode-00941
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, `pQueueFamilyIndices` **must** be a valid pointer to an array of `queueFamilyIndexCount` `uint32_t` values
- VUID-VkImageCreateInfo-maintenance11-13354
If the `maintenance11` feature is enabled and `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` **must** be greater than 0
- VUID-VkImageCreateInfo-sharingMode-00942
If the `maintenance11` feature is not enabled and `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` **must** be greater than 1
- VUID-VkImageCreateInfo-sharingMode-01420
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of `pQueueFamilyIndices` **must** be unique and **must** be less than `pQueueFamilyPropertyCount` returned by either `vkGetPhysicalDeviceQueueFamilyProperties` or `vkGetPhysicalDeviceQueueFamilyProperties2` for the `physicalDevice` that was used to create `device`
- VUID-VkImageCreateInfo-pNext-01974
If the `pNext` chain includes a `VkExternalFormatANDROID` structure, and its `externalFormat` member is non-zero the `format` **must** be `VK_FORMAT_UNDEFINED`
- VUID-VkImageCreateInfo-pNext-01975
If the `pNext` chain does not include a `VkExternalFormatANDROID` structure, or does and its `externalFormat` member is 0, the `format` **must** not be `VK_FORMAT_UNDEFINED`

- VUID-VkImageCreateInfo-extent-00944
`extent.width` **must** be greater than 0
- VUID-VkImageCreateInfo-extent-00945
`extent.height` **must** be greater than 0
- VUID-VkImageCreateInfo-extent-00946
`extent.depth` **must** be greater than 0
- VUID-VkImageCreateInfo-mipLevels-00947
`mipLevels` **must** be greater than 0
- VUID-VkImageCreateInfo-arrayLayers-00948
`arrayLayers` **must** be greater than 0
- VUID-VkImageCreateInfo-flags-00949
If `flags` contains `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`, `imageType` **must** be `VK_IMAGE_TYPE_2D`
- VUID-VkImageCreateInfo-flags-08865
If `flags` contains `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`, `extent.width` and `extent.height` **must** be equal
- VUID-VkImageCreateInfo-flags-08866
If `flags` contains `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`, `arrayLayers` **must** be greater than or equal to 6
- VUID-VkImageCreateInfo-initialLayout-10765
If the `zeroInitializeDeviceMemory` feature is not enabled, `initialLayout` **must** not be `VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT`
- VUID-VkImageCreateInfo-flags-02557
If `flags` contains `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`, `imageType` **must** be `VK_IMAGE_TYPE_2D`
- VUID-VkImageCreateInfo-flags-00950
If `flags` contains `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT`, `imageType` **must** be `VK_IMAGE_TYPE_3D`
- VUID-VkImageCreateInfo-flags-09403
If `flags` contains `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT`, `flags` **must** not include `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`, `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, or `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkImageCreateInfo-flags-07755
If `flags` contains `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT`, `imageType` **must** be `VK_IMAGE_TYPE_3D`
- VUID-VkImageCreateInfo-imageType-10197
If `flags` contains `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` and either the `maintenance9` feature is not enabled on the device or `image2DViewOf3DSparse` is `VK_FALSE`, `flags` **must** not include `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`, `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, or `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkImageCreateInfo-extent-02252
`extent.width` **must** be less than or equal to `imageCreateMaxExtent.width` (as defined in [Image Creation Limits](#))
- VUID-VkImageCreateInfo-extent-02253
`extent.height` **must** be less than or equal to `imageCreateMaxExtent.height` (as defined in [Image Creation Limits](#))
- VUID-VkImageCreateInfo-extent-02254
`extent.depth` **must** be less than or equal to `imageCreateMaxExtent.depth` (as defined in [Image Creation Limits](#))
- VUID-VkImageCreateInfo-imageType-00956
If `imageType` is `VK_IMAGE_TYPE_1D`, both `extent.height` and `extent.depth` **must** be 1
- VUID-VkImageCreateInfo-imageType-00957
If `imageType` is `VK_IMAGE_TYPE_2D`, `extent.depth` **must** be 1
- VUID-VkImageCreateInfo-mipLevels-00958
`mipLevels` **must** be less than or equal to the number of levels in the complete mipmap chain based on `extent.width`, `extent.height`, and `extent.depth`
- VUID-VkImageCreateInfo-mipLevels-02255
`mipLevels` **must** be less than or equal to `imageCreateMaxMipLevels` (as defined in [Image Creation Limits](#))
- VUID-VkImageCreateInfo-arrayLayers-02256
`arrayLayers` **must** be less than or equal to `imageCreateMaxArrayLayers` (as defined in [Image Creation Limits](#))
- VUID-VkImageCreateInfo-imageType-00961
If `imageType` is `VK_IMAGE_TYPE_3D`, `arrayLayers` **must** be 1
- VUID-VkImageCreateInfo-samples-02257
If `samples` is not `VK_SAMPLE_COUNT_1_BIT`, then `imageType` **must** be `VK_IMAGE_TYPE_2D`, `flags` **must** not contain `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`, `mipLevels` **must** be equal to 1, and `imageCreateMaybeLinear` (as defined in [Image Creation Limits](#)) **must** be `VK_FALSE`,
- VUID-VkImageCreateInfo-samples-02558
If `samples` is not `VK_SAMPLE_COUNT_1_BIT`, `usage` **must** not contain `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`
- VUID-VkImageCreateInfo-usage-00963
If `usage` includes `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, then bits other than `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` **must** not be set
- VUID-VkImageCreateInfo-usage-00964
If `usage` includes `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, or `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, `extent.width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxFramebufferWidth`

- VUID-VkImageCreateInfo-usage-00965
If **usage** includes **VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT**, **VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT**, **VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT**, or **VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT**, **extent.height** **must** be less than or equal to **VkPhysicalDeviceLimits::maxFramebufferHeight**
- VUID-VkImageCreateInfo-fragmentDensityMapOffset-06514
If the **fragmentDensityMapOffset** feature is not enabled and **usage** includes **VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT**, **extent.width** **must** be less than or equal to $\lceil \frac{\text{maxFramebufferWidth}}{\text{minFragmentDensityTexelSize}_{\text{width}}} \rceil$
- VUID-VkImageCreateInfo-fragmentDensityMapOffset-06515
If the **fragmentDensityMapOffset** feature is not enabled and **usage** includes **VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT**, **extent.height** **must** be less than or equal to $\lceil \frac{\text{maxFramebufferHeight}}{\text{minFragmentDensityTexelSize}_{\text{height}}} \rceil$
- VUID-VkImageCreateInfo-usage-00966
If **usage** includes **VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT**, **usage** **must** also contain at least one of **VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT**, **VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT**, or **VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT**
- VUID-VkImageCreateInfo-samples-02258
samples **must** be a valid **VkSampleCountFlagBits** value that is set in **imageCreateSampleCounts** (as defined in **Image Creation Limits**)
- VUID-VkImageCreateInfo-usage-00968
If the **shaderStorageImageMultisample** feature is not enabled, and **usage** contains **VK_IMAGE_USAGE_STORAGE_BIT**, **samples** **must** be **VK_SAMPLE_COUNT_1_BIT**
- VUID-VkImageCreateInfo-flags-00969
If the **sparseBinding** feature is not enabled, **flags** **must** not contain **VK_IMAGE_CREATE_SPARSE_BINDING_BIT**
- VUID-VkImageCreateInfo-flags-01924
If the **sparseResidencyAliased** feature is not enabled, **flags** **must** not contain **VK_IMAGE_CREATE_SPARSE_ALIASED_BIT**
- VUID-VkImageCreateInfo-tiling-04121
If **tiling** is **VK_IMAGE_TILING_LINEAR**, **flags** **must** not contain **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT**
- VUID-VkImageCreateInfo-imageType-00970
If **imageType** is **VK_IMAGE_TYPE_1D**, **flags** **must** not contain **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT**
- VUID-VkImageCreateInfo-imageType-00971
If the **sparseResidencyImage2D** feature is not enabled, and **imageType** is **VK_IMAGE_TYPE_2D**, **flags** **must** not contain **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT**
- VUID-VkImageCreateInfo-imageType-00972
If the **sparseResidencyImage3D** feature is not enabled, and **imageType** is **VK_IMAGE_TYPE_3D**, **flags** **must** not contain **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT**

- VUID-VkImageCreateInfo-imageType-00973
If the `sparseResidency2Samples` feature is not enabled, `imageType` is `VK_IMAGE_TYPE_2D`, and `samples` is `VK_SAMPLE_COUNT_2_BIT`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkImageCreateInfo-imageType-00974
If the `sparseResidency4Samples` feature is not enabled, `imageType` is `VK_IMAGE_TYPE_2D`, and `samples` is `VK_SAMPLE_COUNT_4_BIT`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkImageCreateInfo-imageType-00975
If the `sparseResidency8Samples` feature is not enabled, `imageType` is `VK_IMAGE_TYPE_2D`, and `samples` is `VK_SAMPLE_COUNT_8_BIT`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkImageCreateInfo-imageType-00976
If the `sparseResidency16Samples` feature is not enabled, `imageType` is `VK_IMAGE_TYPE_2D`, and `samples` is `VK_SAMPLE_COUNT_16_BIT`, `flags` **must** not contain `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkImageCreateInfo-flags-00987
If `flags` contains `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`, it **must** also contain `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`
- VUID-VkImageCreateInfo-None-01925
If any of the bits `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` are set, `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` **must** not also be set
- VUID-VkImageCreateInfo-flags-01890
If the `protectedMemory` feature is not enabled, `flags` **must** not contain `VK_IMAGE_CREATE_PROTECTED_BIT`
- VUID-VkImageCreateInfo-None-01891
If any of the bits `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` are set, `VK_IMAGE_CREATE_PROTECTED_BIT` **must** not also be set
- VUID-VkImageCreateInfo-pNext-00988
If the `pNext` chain includes a `VkExternalMemoryImageCreateInfoNV` structure, it **must** not contain a `VkExternalMemoryImageCreateInfo` structure
- VUID-VkImageCreateInfo-pNext-00990
If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` structure, its `handleTypes` member **must** only contain bits that are also in `VkExternalImageFormatProperties::externalMemoryProperties.compatibleHandleTypes`, as returned by `vkGetPhysicalDeviceImageFormatProperties2` with `format`, `imageType`, `tiling`, `usage`, and `flags` equal to those in this structure, and with a `VkPhysicalDeviceExternalImageFormatInfo` structure included in the `pNext` chain, with a `handleType` equal to any one of the handle types specified in

VkExternalMemoryImageCreateInfo::handleTypes

- VUID-VkImageCreateInfo-pNext-00991

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfoNV` structure, its `handleTypes` member **must** only contain bits that are also in `VkExternalImageFormatPropertiesNV::externalMemoryFeatures.compatibleHandleTypes`, as returned by `vkGetPhysicalDeviceExternalImageFormatPropertiesNV` with `format`, `imageType`, `tiling`, `usage`, and `flags` equal to those in this structure, and with `externalHandleType` equal to any one of the handle types specified in `VkExternalMemoryImageCreateInfoNV::handleTypes`

- VUID-VkImageCreateInfo-physicalDeviceCount-01421

If the logical device was created with `VkDeviceGroupDeviceCreateInfo::physicalDeviceCount` equal to 1, `flags` **must** not contain `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT`

- VUID-VkImageCreateInfo-flags-02259

If `flags` contains `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT`, then `mipLevels` **must** be one, `arrayLayers` **must** be one, `imageType` **must** be `VK_IMAGE_TYPE_2D`, and `imageCreateMayBeLinear` (as defined in Image Creation Limits) **must** be `VK_FALSE`

- VUID-VkImageCreateInfo-flags-01572

If `flags` contains `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT`, then `format` **must** be a compressed image format

- VUID-VkImageCreateInfo-flags-01573

If `flags` contains `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT`, then `flags` **must** also contain `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`

- VUID-VkImageCreateInfo-initialLayout-00993

`initialLayout` **must** be `VK_IMAGE_LAYOUT_UNDEFINED` or `VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT` or `VK_IMAGE_LAYOUT_PREINITIALIZED`

- VUID-VkImageCreateInfo-pNext-01443

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` or `VkExternalMemoryImageCreateInfoNV` structure whose `handleTypes` member is not 0, `initialLayout` **must** be `VK_IMAGE_LAYOUT_UNDEFINED`

- VUID-VkImageCreateInfo-format-06410

If the image `format` is one of the formats that require a sampler $Y'C_B C_R$ conversion, `mipLevels` **must** be 1

- VUID-VkImageCreateInfo-format-06411

If the image `format` is one of the formats that require a sampler $Y'C_B C_R$ conversion, `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`

- VUID-VkImageCreateInfo-format-06412

If the image `format` is one of the formats that require a sampler $Y'C_B C_R$ conversion, `imageType` **must** be `VK_IMAGE_TYPE_2D`

- VUID-VkImageCreateInfo-imageCreateFormatFeatures-02260

If `format` is a *multi-planar* format, and if `imageCreateFormatFeatures` (as defined in Image Creation Limits) does not contain `VK_FORMAT_FEATURE_DISJOINT_BIT`, then `flags` **must** not contain `VK_IMAGE_CREATE_DISJOINT_BIT`

- VUID-VkImageCreateInfo-format-01577
If **format** is not a *multi-planar* format, and **flags** does not include **VK_IMAGE_CREATE_ALIAS_BIT**, **flags** **must** not contain **VK_IMAGE_CREATE_DISJOINT_BIT**
- VUID-VkImageCreateInfo-format-04712
If **format** has a **_422** or **_420** suffix, **extent.width** **must** be a multiple of 2
- VUID-VkImageCreateInfo-format-04713
If **format** has a **_420** suffix, **extent.height** **must** be a multiple of 2
- VUID-VkImageCreateInfo-format-09583
If **format** is one of the **VK_FORMAT_PVRTC1*_IMG** formats, **extent.width** **must** be a power of 2
- VUID-VkImageCreateInfo-format-09584
If **format** is one of the **VK_FORMAT_PVRTC1*_IMG** formats, **extent.height** **must** be a power of 2
- VUID-VkImageCreateInfo-tiling-02261
If **tiling** is **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**, then the **pNext** chain **must** include exactly one of **VkImageDrmFormatModifierListCreateInfoEXT** or **VkImageDrmFormatModifierExplicitCreateInfoEXT** structures
- VUID-VkImageCreateInfo-pNext-02262
If the **pNext** chain includes a **VkImageDrmFormatModifierListCreateInfoEXT** or **VkImageDrmFormatModifierExplicitCreateInfoEXT** structure, then **tiling** **must** be **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**
- VUID-VkImageCreateInfo-tiling-02353
If **tiling** is **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT** and **flags** contains **VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT**, then the **pNext** chain **must** include a **VkImageFormatListCreateInfo** structure with non-zero **viewFormatCount**
- VUID-VkImageCreateInfo-flags-01533
If **flags** contains **VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT** **format** **must** be a depth or depth/stencil format
- VUID-VkImageCreateInfo-pNext-02393
If the **pNext** chain includes a **VkExternalMemoryImageCreateInfo** structure whose **handleTypes** member includes **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID**, **imageType** **must** be **VK_IMAGE_TYPE_2D**
- VUID-VkImageCreateInfo-pNext-02394
If the **pNext** chain includes a **VkExternalMemoryImageCreateInfo** structure whose **handleTypes** member includes **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID**, **mipLevels** **must** either be 1 or equal to the number of levels in the complete mipmap chain based on **extent.width**, **extent.height**, and **extent.depth**
- VUID-VkImageCreateInfo-pNext-02396
If the **pNext** chain includes a **VkExternalFormatANDROID** structure whose **externalFormat** member is not 0, **flags** **must** not include **VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT**
- VUID-VkImageCreateInfo-pNext-02397

If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not `0`, `usage` **must** not include any usages except `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, or `VK_IMAGE_USAGE_SAMPLED_BIT`

- VUID-VkImageCreateInfo-pNext-09457

If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not `0`, and `externalFormatResolve` feature is not enabled, `usage` **must** not include `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` or `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`

- VUID-VkImageCreateInfo-pNext-02398

If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not `0`, `tiling` **must** be `VK_IMAGE_TILING_OPTIMAL`

- VUID-VkImageCreateInfo-pNext-08951

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` structure whose `handleTypes` member includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `imageType` **must** be `VK_IMAGE_TYPE_2D`

- VUID-VkImageCreateInfo-pNext-08952

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` structure whose `handleTypes` member includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `mipLevels` **must** either be `1` or equal to the number of levels in the complete mipmap chain based on `extent.width`, `extent.height`, and `extent.depth`

- VUID-VkImageCreateInfo-pNext-08953

If the `pNext` chain includes a `VkExternalFormatQNX` structure whose `externalFormat` member is not `0`, `flags` **must** not include `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`

- VUID-VkImageCreateInfo-pNext-08954

If the `pNext` chain includes a `VkExternalFormatQNX` structure whose `externalFormat` member is not `0`, `usage` **must** not include any usages except `VK_IMAGE_USAGE_SAMPLED_BIT`

- VUID-VkImageCreateInfo-pNext-08955

If the `pNext` chain includes a `VkExternalFormatQNX` structure whose `externalFormat` member is not `0`, `tiling` **must** be `VK_IMAGE_TILING_OPTIMAL`

- VUID-VkImageCreateInfo-format-02795

If `format` is a depth-stencil format, `usage` includes `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member **must** also include `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`

- VUID-VkImageCreateInfo-format-02796

If `format` is a depth-stencil format, `usage` does not include `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member **must** also not include

VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT

- VUID-VkImageCreateInfo-format-02797

If **format** is a depth-stencil format, **usage** includes [VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT](#), and the **pNext** chain includes a [VkImageStencilUsageCreateInfo](#) structure, then its [VkImageStencilUsageCreateInfo::stencilUsage](#) member **must** also include [VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT](#)

- VUID-VkImageCreateInfo-format-02798

If **format** is a depth-stencil format, **usage** does not include [VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT](#), and the **pNext** chain includes a [VkImageStencilUsageCreateInfo](#) structure, then its [VkImageStencilUsageCreateInfo::stencilUsage](#) member **must** also not include [VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT](#)

- VUID-VkImageCreateInfo-Format-02536

If **Format** is a depth-stencil format and the **pNext** chain includes a [VkImageStencilUsageCreateInfo](#) structure with its **stencilUsage** member including [VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT](#), **extent.width** **must** be less than or equal to [VkPhysicalDeviceLimits::maxFramebufferWidth](#)

- VUID-VkImageCreateInfo-format-02537

If **format** is a depth-stencil format and the **pNext** chain includes a [VkImageStencilUsageCreateInfo](#) structure with its **stencilUsage** member including [VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT](#), **extent.height** **must** be less than or equal to [VkPhysicalDeviceLimits::maxFramebufferHeight](#)

- VUID-VkImageCreateInfo-format-02538

If the **shaderStorageImageMultisample** feature is not enabled, **format** is a depth-stencil format and the **pNext** chain includes a [VkImageStencilUsageCreateInfo](#) structure with its **stencilUsage** including [VK_IMAGE_USAGE_STORAGE_BIT](#), **samples** **must** be [VK_SAMPLE_COUNT_1_BIT](#)

- VUID-VkImageCreateInfo-flags-02050

If **flags** contains [VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV](#), **imageType** **must** be [VK_IMAGE_TYPE_2D](#) or [VK_IMAGE_TYPE_3D](#)

- VUID-VkImageCreateInfo-flags-02051

If **flags** contains [VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV](#), it **must** not contain [VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT](#) and the **format** **must** not be a depth/stencil format

- VUID-VkImageCreateInfo-flags-02052

If **flags** contains [VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV](#) and **imageType** is [VK_IMAGE_TYPE_2D](#), **extent.width** and **extent.height** **must** be greater than 1

- VUID-VkImageCreateInfo-flags-02053

If **flags** contains [VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV](#) and **imageType** is [VK_IMAGE_TYPE_3D](#), **extent.width**, **extent.height**, and **extent.depth** **must** be greater than 1

- VUID-VkImageCreateInfo-imageType-02082

If **usage** includes

VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, **imageType** must be VK_IMAGE_TYPE_2D

- VUID-VkImageCreateInfo-samples-02083

If **usage** includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, **samples** must be VK_SAMPLE_COUNT_1_BIT

- VUID-VkImageCreateInfo-shadingRateImage-07727

If the **shadingRateImage** feature is enabled and **usage** includes VK_IMAGE_USAGE_SHADING_RATE_IMAGE_BIT_NV, **tiling** must be VK_IMAGE_TILING_OPTIMAL

- VUID-VkImageCreateInfo-flags-02565

If **flags** contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, **tiling** must be VK_IMAGE_TILING_OPTIMAL

- VUID-VkImageCreateInfo-flags-02566

If **flags** contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, **imageType** must be VK_IMAGE_TYPE_2D

- VUID-VkImageCreateInfo-flags-02567

If **flags** contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, **flags** must not contain VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT

- VUID-VkImageCreateInfo-flags-02568

If **flags** contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, **mipLevels** must be 1

- VUID-VkImageCreateInfo-usage-04992

If **usage** includes VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI, **tiling** must be VK_IMAGE_TILING_LINEAR

- VUID-VkImageCreateInfo-imageView2DOn3DImage-04459

If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageView2DOn3DImage is VK_FALSE, **flags** must not contain VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT

- VUID-VkImageCreateInfo-multisampleArrayImage-04460

If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::multisampleArrayImage is VK_FALSE, and **samples** is not VK_SAMPLE_COUNT_1_BIT, then **arrayLayers** must be 1

- VUID-VkImageCreateInfo-pNext-06722

If a VkImageFormatListCreateInfo structure was included in the **pNext** chain and **format** is not a multi-planar format and VkImageFormatListCreateInfo::viewFormatCount is not zero, then each format in VkImageFormatListCreateInfo::pViewFormats must either be compatible with the **format** as described in the compatibility table or, if **flags** contains VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT, be an uncompressed format that is size-compatible with **format**

- VUID-VkImageCreateInfo-pNext-10062

If a VkImageFormatListCreateInfo structure was included in the **pNext** chain and **format** is a multi-planar format and **flags** contains VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT and VkImageFormatListCreateInfo::viewFormatCount is not zero, then each format in

`VkImageFormatListCreateInfo::pViewFormats` **must** be compatible with the `VkFormat` for the plane of the image format

- VUID-VkImageCreateInfo-flags-04738

If `flags` does not contain `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` and the `pNext` chain includes a `VkImageFormatListCreateInfo` structure, then `VkImageFormatListCreateInfo::viewFormatCount` **must** be 0 or 1

- VUID-VkImageCreateInfo-usage-04815

If `usage` includes `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, and `flags` does not include `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0 and `pProfiles` including at least one `VkVideoProfileInfoKHR` structure with a `videoCodecOperation` member specifying a decode operation

- VUID-VkImageCreateInfo-usage-04816

If `usage` includes `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, and `flags` does not include `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0 and `pProfiles` including at least one `VkVideoProfileInfoKHR` structure with a `videoCodecOperation` member specifying an encode operation

- VUID-VkImageCreateInfo-flags-08328

If `flags` includes `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then `videoMaintenance1` **must** be enabled

- VUID-VkImageCreateInfo-flags-08329

If `flags` includes `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and `usage` does not include `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, then `usage` **must** not include `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`

- VUID-VkImageCreateInfo-flags-08331

If `flags` includes `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then `usage` **must** not include `VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`

- VUID-VkImageCreateInfo-pNext-06811

If the `pNext` chain includes a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0, then `supportedVideoFormat` **must** be `VK_TRUE`

- VUID-VkImageCreateInfo-pNext-10784

If the `pNext` chain includes a `VkVideoProfileListInfoKHR` structure and for any element of its `pProfiles` member `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `videoDecodeVP9` feature **must** be enabled

- VUID-VkImageCreateInfo-pNext-10250

If the **pNext** chain includes a **VkVideoProfileListInfoKHR** structure and for any element of its **pProfiles** member **videoCodecOperation** is **VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR**, then the **videoEncodeAV1** feature **must** be enabled

- VUID-VkImageCreateInfo-pNext-10920

If the **pNext** chain includes a **VkVideoEncodeProfileRgbConversionInfoVALVE** structure, then the **videoEncodeRgbConversion** feature **must** be enabled

- VUID-VkImageCreateInfo-usage-10251

If **usage** includes **VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR** or **VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR**, then the **videoEncodeQuantizationMap** feature **must** be enabled

- VUID-VkImageCreateInfo-usage-10252

If **usage** includes **VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR** or **VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR**, **imageType** **must** be **VK_IMAGE_TYPE_2D**

- VUID-VkImageCreateInfo-usage-10253

If **usage** includes **VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR** or **VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR**, **samples** **must** be **VK_SAMPLE_COUNT_1_BIT**

- VUID-VkImageCreateInfo-usage-10254

If **usage** includes **VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR** or **VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR**, then the **pNext** chain **must** include a **VkVideoProfileListInfoKHR** structure with **profileCount** equal to 1 and **pProfiles** pointing to a **VkVideoProfileInfoKHR** structure with a **videoCodecOperation** member specifying an encode operation

- VUID-VkImageCreateInfo-usage-10255

If **usage** includes **VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR**, then **VkVideoEncodeCapabilitiesKHR::flags** **must** include **VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the video profile specified in the **pProfiles** member of the **VkVideoProfileListInfoKHR** structure included in the **pNext** chain

- VUID-VkImageCreateInfo-usage-10256

If **usage** includes **VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR**, then **VkVideoEncodeCapabilitiesKHR::flags** **must** include **VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the video profile specified in the **pProfiles** member of the **VkVideoProfileListInfoKHR** structure included in the **pNext** chain

- VUID-VkImageCreateInfo-usage-10257

If **usage** includes **VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR** or

`VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR`, `extent.width` **must** be less than or equal to `VkVideoEncodeQuantizationMapCapabilitiesKHR::maxQuantizationMapExtent.width`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified in the `pProfiles` member of the `VkVideoProfileListInfoKHR` structure included in the `pNext` chain

- VUID-VkImageCreateInfo-usage-10258

If `usage` includes `VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR`, `extent.height` **must** be less than or equal to `VkVideoEncodeQuantizationMapCapabilitiesKHR::maxQuantizationMapExtent.height`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified in the `pProfiles` member of the `VkVideoProfileListInfoKHR` structure included in the `pNext` chain

- VUID-VkImageCreateInfo-pNext-06390

If the `VkImage` is to be used to import memory from a `VkBufferCollectionFUCHSIA`, a `VkBufferCollectionImageCreateInfoFUCHSIA` structure **must** be chained to `pNext`

- VUID-VkImageCreateInfo-multisampledRenderToSingleSampled-06882

If the `multisampledRenderToSingleSampled` feature is not enabled, `flags` **must** not contain `VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT`

- VUID-VkImageCreateInfo-flags-06883

If `flags` contains `VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT`, `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`

- VUID-VkImageCreateInfo-pNext-06743

If the `pNext` chain includes a `VkImageCompressionControlEXT` structure, `format` is a multi-planar format, and `VkImageCompressionControlEXT::flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, then `VkImageCompressionControlEXT::compressionControlPlaneCount` **must** be equal to the number of planes in `format`

- VUID-VkImageCreateInfo-pNext-06744

If the `pNext` chain includes a `VkImageCompressionControlEXT` structure, `format` is not a multi-planar format, and `VkImageCompressionControlEXT::flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, then `VkImageCompressionControlEXT::compressionControlPlaneCount` **must** be 1

- VUID-VkImageCreateInfo-pNext-06746

If the `pNext` chain includes a `VkImageCompressionControlEXT` structure, it **must** not contain a `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure

- VUID-VkImageCreateInfo-flags-08104

If `flags` includes `VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT`, the `descriptorBufferCaptureReplay` or `descriptorHeapCaptureReplay` feature **must** be enabled

- VUID-VkImageCreateInfo-pNext-08105

If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `flags` **must** contain `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

- VUID-VkImageCreateInfo-pNext-06783
If the `pNext` chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its `exportObjectType` member **must** be either `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT` or `VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT`
- VUID-VkImageCreateInfo-pNext-06784
If the `pNext` chain includes a `VkImportMetalTextureInfoEXT` structure its `plane` member **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT`, or `VK_IMAGE_ASPECT_PLANE_2_BIT`
- VUID-VkImageCreateInfo-pNext-06785
If the `pNext` chain includes a `VkImportMetalTextureInfoEXT` structure and the image does not have a `multi-planar` format, then `VkImportMetalTextureInfoEXT::plane` **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`
- VUID-VkImageCreateInfo-pNext-06786
If the `pNext` chain includes a `VkImportMetalTextureInfoEXT` structure and the image has a `multi-planar` format with only two planes, then `VkImportMetalTextureInfoEXT::plane` **must** not be `VK_IMAGE_ASPECT_PLANE_2_BIT`
- VUID-VkImageCreateInfo-imageCreateFormatFeatures-09048
If `imageCreateFormatFeatures` (as defined in `Image Creation Limits`) does not contain `VK_FORMAT_FEATURE_2_HOST_IMAGE_TRANSFER_BIT`, then `usage` **must** not contain `VK_IMAGE_USAGE_HOST_TRANSFER_BIT`
- VUID-VkImageCreateInfo-usage-10245
If `usage` includes `VK_IMAGE_USAGE_HOST_TRANSFER_BIT`, then the `hostImageCopy` feature **must** be enabled
- VUID-VkImageCreateInfo-tileMemoryHeap-10766
If the `tileMemoryHeap` feature is not enabled, `usage` **must** not include `VK_IMAGE_USAGE_TILE_MEMORY_BIT_QCOM`
- VUID-VkImageCreateInfo-pNext-09653
If the `pNext` chain contains a `VkImageAlignmentControlCreateInfoMESA` structure, `tiling` **must** be `VK_IMAGE_TILING_OPTIMAL`
- VUID-VkImageCreateInfo-pNext-09654
If the `pNext` chain contains a `VkImageAlignmentControlCreateInfoMESA` structure, it **must** not contain a `VkExternalMemoryImageCreateInfo` structure
- VUID-VkImageCreateInfo-tiling-09711
If `tiling` is `VK_IMAGE_TILING_LINEAR` then `VK_IMAGE_USAGE_TENSOR_ALIASING_BIT_ARM` **must** not be set in `usage`
- VUID-VkImageCreateInfo-flags-13355
If `flags` contains `VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR`, the `maintenance11` feature **must** be enabled
- VUID-VkImageCreateInfo-flags-13356
If `flags` contains `VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR`, `imageType` **must** be `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`
- VUID-VkImageCreateInfo-None-12279

If Vulkan 1.3 is not supported and the `ycbcr2plane444Formats` feature is not enabled, `format` **must** not be `VK_FORMAT_G8_B8R8_2PLANE_444_UNORM`, `VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16`, `VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16`, or `VK_FORMAT_G16_B16R16_2PLANE_444_UNORM`

- VUID-VkImageCreateInfo-flags-11281

If `VkOpaqueCaptureDataCreateInfoEXT::pData` is not `NULL`, `flags` **must** contain `VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT`

- VUID-VkImageCreateInfo-pData-11286

If `flags` contains `VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT`, and `VkOpaqueCaptureDataCreateInfoEXT::pData` is not `NULL`, `VkOpaqueCaptureDataCreateInfoEXT::pData->size` **must** be equal to `imageCaptureReplayOpaqueDataSize`

Valid Usage (Implicit)

- VUID-VkImageCreateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_CREATE_INFO`

- VUID-VkImageCreateInfo-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkBufferCollectionImageCreateInfoFUCHSIA`, `VkDataGraphOpticalFlowImageFormatInfoARM`, `VkDedicatedAllocationImageCreateInfoNV`, `VkExportMetalObjectCreateInfoEXT`, `VkExternalFormatANDROID`, `VkExternalFormatOHOS`, `VkExternalFormatQNX`, `VkExternalMemoryImageCreateInfo`, `VkExternalMemoryImageCreateInfoNV`, `VkImageAlignmentControlCreateInfoMESA`, `VkImageCompressionControlEXT`, `VkImageDrmFormatModifierExplicitCreateInfoEXT`, `VkImageDrmFormatModifierListCreateInfoEXT`, `VkImageFormatListCreateInfo`, `VkImageStencilUsageCreateInfo`, `VkImageSwapchainCreateInfoKHR`, `VkImportMetalIOSurfaceInfoEXT`, `VkImportMetalTextureInfoEXT`, `VkOpaqueCaptureDataCreateInfoEXT`, `VkOpaqueCaptureDescriptorDataCreateInfoEXT`, `VkOpticalFlowImageFormatInfoNV`, or `VkVideoProfileListInfoKHR`

- VUID-VkImageCreateInfo-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique, with the exception of structures of type `VkExportMetalObjectCreateInfoEXT` or `VkImportMetalTextureInfoEXT`

- VUID-VkImageCreateInfo-flags-parameter

`flags` **must** be a valid combination of `VkImageCreateFlagBits` values

- VUID-VkImageCreateInfo-imageType-parameter

`imageType` **must** be a valid `VkImageType` value

- VUID-VkImageCreateInfo-format-parameter

`format` **must** be a valid `VkFormat` value

- VUID-VkImageCreateInfo-samples-parameter

`samples` **must** be a valid `VkSampleCountFlagBits` value

- VUID-VkImageCreateInfo-tiling-parameter
tiling **must** be a valid [VkImageTiling](#) value
- VUID-VkImageCreateInfo-usage-parameter
usage **must** be a valid combination of [VkImageUsageFlagBits](#) values
- VUID-VkImageCreateInfo-usage-requiredbitmask
usage **must** not be 0
- VUID-VkImageCreateInfo-sharingMode-parameter
sharingMode **must** be a valid [VkSharingMode](#) value
- VUID-VkImageCreateInfo-initialLayout-parameter
initialLayout **must** be a valid [VkImageLayout](#) value

The [VkBufferCollectionImageCreateInfoFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionImageCreateInfoFUCHSIA {
    VkStructureType      sType;
    const void*          pNext;
    VkBufferCollectionFUCHSIA collection;
    uint32_t             index;
} VkBufferCollectionImageCreateInfoFUCHSIA;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure
- **collection** is the [VkBufferCollectionFUCHSIA](#) handle
- **index** is the index of the buffer in the buffer collection from which the memory will be imported

Valid Usage

- VUID-VkBufferCollectionImageCreateInfoFUCHSIA-index-06391
index **must** be less than [VkBufferCollectionPropertiesFUCHSIA::bufferCount](#)

Valid Usage (Implicit)

- VUID-VkBufferCollectionImageCreateInfoFUCHSIA-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_BUFFER_COLLECTION_IMAGE_CREATE_INFO_FUCHSIA](#)
- VUID-VkBufferCollectionImageCreateInfoFUCHSIA-collection-parameter
collection **must** be a valid [VkBufferCollectionFUCHSIA](#) handle

Structure Chaining

Extends the structure

- [VkImageCreateInfo](#)

The [VkImageStencilUsageCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkImageStencilUsageCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImageUsageFlags  stencilUsage;
} VkImageStencilUsageCreateInfo;
```

```
// Provided by VK_EXT_separate_stencil_usage
// Equivalent to VkImageStencilUsageCreateInfo
typedef VkImageStencilUsageCreateInfo VkImageStencilUsageCreateInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [stencilUsage](#) is a bitmask of [VkImageUsageFlagBits](#) describing the intended usage of the stencil aspect of the image.

If the [pNext](#) chain of [VkImageCreateInfo](#) includes a [VkImageStencilUsageCreateInfo](#) structure, then that structure includes the usage flags specific to the stencil aspect of the image for an image with a depth-stencil format.

This structure specifies image usages which only apply to the stencil aspect of a depth/stencil format image. When this structure is included in the [pNext](#) chain of [VkImageCreateInfo](#), the stencil aspect of the image **must** only be used as specified by [stencilUsage](#). When this structure is not included in the [pNext](#) chain of [VkImageCreateInfo](#), the stencil aspect of an image **must** only be used as specified by [VkImageCreateInfo::usage](#). Use of other aspects of an image are unaffected by this structure.

This structure **can** also be included in the [pNext](#) chain of [VkPhysicalDeviceImageFormatInfo2](#) to query additional capabilities specific to image creation parameter combinations including a separate set of usage flags for the stencil aspect of the image using [vkGetPhysicalDeviceImageFormatProperties2](#). When this structure is not included in the [pNext](#) chain of [VkPhysicalDeviceImageFormatInfo2](#) then the implicit value of [stencilUsage](#) matches that of [VkPhysicalDeviceImageFormatInfo2::usage](#).

Valid Usage

- VUID-VkImageStencilUsageCreateInfo-stencilUsage-02539

If `stencilUsage` includes `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, it **must** not include bits other than `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT` or `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`

Valid Usage (Implicit)

- VUID-VkImageStencilUsageCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_STENCIL_USAGE_CREATE_INFO`
- VUID-VkImageStencilUsageCreateInfo-stencilUsage-parameter
`stencilUsage` **must** be a valid combination of `VkImageUsageFlagBits` values
- VUID-VkImageStencilUsageCreateInfo-stencilUsage-requiredbitmask
`stencilUsage` **must** not be 0

Structure Chaining

Extends the structures

- `VkImageCreateInfo`
- `VkPhysicalDeviceImageFormatInfo2`

If the `pNext` chain includes a `VkDedicatedAllocationImageCreateInfoNV` structure, then that structure includes an enable controlling whether the image will have a dedicated memory allocation bound to it.

The `VkDedicatedAllocationImageCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_dedicated_allocation
typedef struct VkDedicatedAllocationImageCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           dedicatedAllocation;
} VkDedicatedAllocationImageCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dedicatedAllocation` specifies whether the image will have a dedicated allocation bound to it.

NOTE

Using a dedicated allocation for color and depth/stencil attachments or other large images **may** improve performance on some devices.

Valid Usage

- VUID-VkDedicatedAllocationImageCreateInfoNV-dedicatedAllocation-00994

If `dedicatedAllocation` is `VK_TRUE`, `VkImageCreateInfo::flags` **must** not include `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`

Valid Usage (Implicit)

- VUID-VkDedicatedAllocationImageCreateInfoNV-sType-sType **must** be `VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_IMAGE_CREATE_INFO_NV`

Structure Chaining

Extends the structure

- [VkImageCreateInfo](#)

To define a set of external memory handle types that **may** be used as backing store for an image, add a `VkExternalMemoryImageCreateInfo` structure to the `pNext` chain of the `VkImageCreateInfo` structure. The `VkExternalMemoryImageCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalMemoryImageCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlags handleTypes;
} VkExternalMemoryImageCreateInfo;
```

```
// Provided by VK_KHR_external_memory
// Equivalent to VkExternalMemoryImageCreateInfo
typedef VkExternalMemoryImageCreateInfo VkExternalMemoryImageCreateInfoKHR;
```

NOTE A `VkExternalMemoryImageCreateInfo` structure with a non-zero `handleTypes` field must be included in the creation parameters for an image that will be bound to memory that is either exported or imported.

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleTypes` is zero or a bitmask of `VkExternalMemoryHandleTypeFlagBits` specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryImageCreateInfo-sType-sType

sType must be [VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_IMAGE_CREATE_INFO](#)

- VUID-VkExternalMemoryImageCreateInfo-handleTypes-parameter

handleTypes must be a valid combination of [VkExternalMemoryHandleTypeFlagBits](#) values

Structure Chaining

Extends the structure

- [VkImageCreateInfo](#)

12.4.1. Use External Memory On Open Harmony OS platform

The [VkExternalFormatOHOS](#) structure is defined as:

```
// Provided by VK_OHOS_external_memory
typedef struct VkExternalFormatOHOS {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           externalFormat;
} VkExternalFormatOHOS;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **externalFormat** is an implementation-defined identifier for the external format.

To obtain additional format that are not provided by [VkFormat](#) for an Open Harmony OS hardware buffer, this structure should be included in the **pNext** chain of another structure. The return value of **externalFormat** indicates whether an additional format exists. If zero is returned, then no external format is used and other format information should be used for implementations, and this is also true if this structure is not present.

Valid Usage (Implicit)

- VUID-VkExternalFormatOHOS-sType-sType
sType must be [VK_STRUCTURE_TYPE_EXTERNAL_FORMAT_OHOS](#)

Structure Chaining

Extends the structures

- [VkAttachmentDescription2](#)
- [VkCommandBufferInheritanceInfo](#)
- [VkGraphicsPipelineCreateInfo](#)

- [VkImageCreateInfo](#)
- [VkSamplerYcbcrConversionCreateInfo](#)

To import memory created outside of the current Vulkan instance from an Open Harmony OS native buffer, add a [VkImportNativeBufferInfoOHOS](#) structure to the [pNext](#) chain of the [VkMemoryAllocateInfo](#) structure. The [VkImportNativeBufferInfoOHOS](#) structure is defined as:

```
// Provided by VK_OHOS_external_memory
typedef struct VkImportNativeBufferInfoOHOS {
    VkStructureType    sType;
    const void*        pNext;
    struct OH_NativeBuffer* buffer;
} VkImportNativeBufferInfoOHOS;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [buffer](#) is a pointer to an [OH_NativeBuffer](#) structure.

A reference to the imported native buffer should be acquired by the implementation if the [vkAllocateMemory](#) command succeeds. Then the reference **must** release when the device memory object is freed. If the command fails, the implementation **must** not retain a reference.

Valid Usage (Implicit)

- VUID-VkImportNativeBufferInfoOHOS-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_IMPORT_NATIVE_BUFFER_INFO_OHOS](#)
- VUID-VkImportNativeBufferInfoOHOS-buffer-parameter
[buffer](#) **must** be a valid pointer to an [OH_NativeBuffer](#) value

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

The [OH_NativeBuffer](#) structure is defined as:

```
// Provided by VK_OHOS_external_memory
struct OH_NativeBuffer;
```

It is the native buffer structure on Open Harmony OS platform. It is defined in Open Harmony OS NDK headers.

To obtain optimal Open Harmony OS native buffer usage flags for specific image creation

parameters, add a `VkNativeBufferUsageOHOS` structure to the `pNext` chain of a `VkImageFormatProperties2` structure passed to `vkGetPhysicalDeviceImageFormatProperties2`.

The `VkNativeBufferUsageOHOS` structure is defined as:

```
// Provided by VK_OHOS_external_memory
typedef struct VkNativeBufferUsageOHOS {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           OHOSNativeBufferUsage;
} VkNativeBufferUsageOHOS;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `OHOSNativeBufferUsage` returns the Open Harmony OS buffer usage flags.

Valid Usage (Implicit)

- VUID-VkNativeBufferUsageOHOS-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_NATIVE_BUFFER_USAGE_OHOS`

Structure Chaining

Extends the structure

- `VkImageFormatProperties2`

To determine the memory parameters to use when importing an Open Harmony OS native buffer:

```
// Provided by VK_OHOS_external_memory
VkResult vkGetNativeBufferPropertiesOHOS(
    VkDevice          device,
    const struct OH_NativeBuffer* buffer,
    VkNativeBufferPropertiesOHOS* pProperties);
```

- `device` is the logical device that will be importing `buffer`.
- `buffer` is the `OH_NativeBuffer` object specifies the buffer for which its properties are to be queried.
- `pProperties` is a pointer to a `VkNativeBufferPropertiesOHOS` structure in which the properties of `buffer` are returned.

Valid Usage (Implicit)

- VUID-vkGetNativeBufferPropertiesOHOS-device-parameter

device must be a valid [VkDevice](#) handle

- VUID-vkGetNativeBufferPropertiesOHOS-buffer-parameter
buffer must be a valid pointer to a valid [OH_NativeBuffer](#) value
- VUID-vkGetNativeBufferPropertiesOHOS-pProperties-parameter
pProperties must be a valid pointer to a [VkNativeBufferPropertiesOHOS](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To obtain an [OH_NativeBuffer](#) object, call:

```
// Provided by VK_OHOS_external_memory
VkResult vkGetMemoryNativeBufferOHOS(
    VkDevice device,
    const VkMemoryGetNativeBufferInfoOHOS* pInfo,
    struct OH_NativeBuffer** pBuffer);
```

- **device** is a valid Vulkan device object.
- **pInfo** is a pointer pointing to a [VkMemoryGetNativeBufferInfoOHOS](#) structure.
- **pBuffer** is a pointer to an [OH_NativeBuffer](#) object.

Valid Usage (Implicit)

- VUID-vkGetMemoryNativeBufferOHOS-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkGetMemoryNativeBufferOHOS-pInfo-parameter
pInfo must be a valid pointer to a valid [VkMemoryGetNativeBufferInfoOHOS](#) structure
- VUID-vkGetMemoryNativeBufferOHOS-pBuffer-parameter
pBuffer must be a valid pointer to a valid pointer to an [OH_NativeBuffer](#) value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkNativeBufferPropertiesOHOS](#) structure is defined as:

```
// Provided by VK_OHOS_external_memory
typedef struct VkNativeBufferPropertiesOHOS {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       allocationSize;
    uint32_t           memoryTypeBits;
} VkNativeBufferPropertiesOHOS;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [allocationSize](#) is the size of the external memory.
- [memoryTypeBits](#) is a bitmask containing one bit set for every memory type which the specified Open Harmony OS native buffer **can** be imported as.

Valid Usage (Implicit)

- VUID-VkNativeBufferPropertiesOHOS-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_NATIVE_BUFFER_PROPERTIES_OHOS](#)
- VUID-VkNativeBufferPropertiesOHOS-pNext-pNext
[pNext](#) **must** be [NULL](#) or a pointer to a valid instance of [VkNativeBufferFormatPropertiesOHOS](#)
- VUID-VkNativeBufferPropertiesOHOS-sType-unique
The [sType](#) value of each structure in the [pNext](#) chain **must** be unique

To obtain format properties of an Open Harmony OS native buffer, include a [VkNativeBufferFormatPropertiesOHOS](#) structure in the [pNext](#) chain of the [VkNativeBufferPropertiesOHOS](#) structure passed to [vkGetNativeBufferPropertiesOHOS](#). The [VkNativeBufferFormatPropertiesOHOS](#) structure is defined as:

```
// Provided by VK_OHOS_external_memory
typedef struct VkNativeBufferFormatPropertiesOHOS {
    VkStructureType      sType;
    void*                pNext;
    VkFormat              format;
    uint64_t              externalFormat;
    VkFormatFeatureFlags formatFeatures;
    VkComponentMapping    samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange    suggestedYcbcrRange;
    VkChromaLocation       suggestedXChromaOffset;
    VkChromaLocation       suggestedYChromaOffset;
} VkNativeBufferFormatPropertiesOHOS;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **format** is the Vulkan format corresponding to the Open Harmony OS native buffer's format, or [VK_FORMAT_UNDEFINED](#) if there is not an equivalent Vulkan format.
- **externalFormat** is an implementation-defined external format identifier for use with [VkExternalFormatOHOS](#).
- **formatFeatures** describes the capabilities of this external format when used with an image bound to memory imported from **buffer**.
- **samplerYcbcrConversionComponents** represents a set of [VkComponentSwizzle](#).
- **suggestedYcbcrModel** represents the color model.
- **suggestedYcbcrRange** represents the numerical value range.
- **suggestedXChromaOffset** represents the X chroma offset.
- **suggestedYChromaOffset** represents the Y chroma offset.

Valid Usage (Implicit)

- VUID-VkNativeBufferFormatPropertiesOHOS-sType-sType
sType must be [VK_STRUCTURE_TYPE_NATIVE_BUFFER_FORMAT_PROPERTIES_OHOS](#)

Structure Chaining

Extends the structure

- [VkNativeBufferPropertiesOHOS](#)

The [VkMemoryGetNativeBufferInfoOHOS](#) structure is defined as:

```
// Provided by VK_OHOS_external_memory
typedef struct VkMemoryGetNativeBufferInfoOHOS {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory     memory;
} VkMemoryGetNativeBufferInfoOHOS;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memory** is a valid [VkDeviceMemory](#) object from which the Open Harmony OS native buffer will be exported.

Valid Usage (Implicit)

- VUID-VkMemoryGetNativeBufferInfoOHOS-sType-sType
sType must be [VK_STRUCTURE_TYPE_MEMORY_GET_NATIVE_BUFFER_INFO_OHOS](#)
- VUID-VkMemoryGetNativeBufferInfoOHOS-pNext-pNext
pNext must be **NULL**
- VUID-VkMemoryGetNativeBufferInfoOHOS-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle

If the **pNext** chain includes a [VkExternalMemoryImageCreateInfoNV](#) structure, then that structure defines a set of external memory handle types that **may** be used as backing store for the image.

The [VkExternalMemoryImageCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_external_memory
typedef struct VkExternalMemoryImageCreateInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlagsNV handleTypes;
} VkExternalMemoryImageCreateInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **handleTypes** is zero or a bitmask of [VkExternalMemoryHandleTypeFlagBitsNV](#) specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryImageCreateInfoNV-sType-sType
sType must be [VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_IMAGE_CREATE_INFO_NV](#)
- VUID-VkExternalMemoryImageCreateInfoNV-handleTypes-parameter

`handleTypes` **must** be a valid combination of `VkExternalMemoryHandleTypeFlagBitsNV` values

Structure Chaining

Extends the structure

- `VkImageCreateInfo`

`VkExternalFormatANDROID` is defined as:

```
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkExternalFormatANDROID {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           externalFormat;
} VkExternalFormatANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalFormat` is an implementation-defined identifier for the external format

When included in the `pNext` chain of another structure, it indicates **additional format information** beyond what is provided by `VkFormat` values for an Android hardware buffer. If `externalFormat` is zero, it indicates that no external format is used, and implementations should rely only on other format information. If this structure is not present, it is equivalent to setting `externalFormat` to zero.

Valid Usage

- VUID-VkExternalFormatANDROID-externalFormat-01894
`externalFormat` **must** be 0 or a value returned in the `externalFormat` member of `VkAndroidHardwareBufferFormatPropertiesANDROID` by an earlier call to `vkGetAndroidHardwareBufferPropertiesANDROID`

Valid Usage (Implicit)

- VUID-VkExternalFormatANDROID-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_FORMAT_ANDROID`

Structure Chaining

Extends the structures

- `VkAttachmentDescription2`

- [VkCommandBufferInheritanceInfo](#)
- [VkGraphicsPipelineCreateInfo](#)
- [VkImageCreateInfo](#)
- [VkSamplerYcbcrConversionCreateInfo](#)

To create an image with an [QNX Screen external format](#), add a [VkExternalFormatQNX](#) structure in the [pNext](#) chain of [VkImageCreateInfo](#). [VkExternalFormatQNX](#) is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkExternalFormatQNX {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           externalFormat;
} VkExternalFormatQNX;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [externalFormat](#) is an implementation-defined identifier for the external format

If [externalFormat](#) is zero, the effect is as if the [VkExternalFormatQNX](#) structure was not present. Otherwise, the [image](#) will have the specified external format.

Valid Usage

- VUID-VkExternalFormatQNX-externalFormat-08956
[externalFormat](#) **must** be [0](#) or a value returned in the [externalFormat](#) member of [VkScreenBufferFormatPropertiesQNX](#) by an earlier call to [vkGetScreenBufferPropertiesQNX](#)

Valid Usage (Implicit)

- VUID-VkExternalFormatQNX-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_EXTERNAL_FORMAT_QNX](#)

Structure Chaining

Extends the structures

- [VkImageCreateInfo](#)
- [VkSamplerYcbcrConversionCreateInfo](#)

If the [pNext](#) chain of [VkImageCreateInfo](#) includes a [VkImageSwapchainCreateInfoKHR](#) structure, then

that structure includes a swapchain handle indicating that the image will be bound to memory from that swapchain.

The `VkImageSwapchainCreateInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkImageSwapchainCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR      swapchain;
} VkImageSwapchainCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is `VK_NULL_HANDLE` or a handle of a swapchain that the image will be bound to.

Valid Usage

- VUID-VkImageSwapchainCreateInfoKHR-swapchain-00995
If `swapchain` is not `VK_NULL_HANDLE`, the fields of `VkImageCreateInfo` **must** match the [implied image creation parameters](#) of the swapchain

Valid Usage (Implicit)

- VUID-VkImageSwapchainCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_SWAPCHAIN_CREATE_INFO_KHR`
- VUID-VkImageSwapchainCreateInfoKHR-swapchain-parameter
If `swapchain` is not `VK_NULL_HANDLE`, `swapchain` **must** be a valid `VkSwapchainKHR` handle

Structure Chaining

Extends the structure

- `VkImageCreateInfo`

If the `pNext` chain of `VkImageCreateInfo` includes a `VkImageFormatListCreateInfo` structure, then that structure contains a list of all formats that **can** be used when creating views of this image.

The `VkImageFormatListCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkImageFormatListCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           viewFormatCount;
    const VkFormat*     pViewFormats;
} VkImageFormatListCreateInfo;
```

```
// Provided by VK_KHR_image_format_list
// Equivalent to VkImageFormatListCreateInfo
typedef VkImageFormatListCreateInfo VkImageFormatListCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **viewFormatCount** is the number of entries in the **pViewFormats** array.
- **pViewFormats** is a pointer to an array of [VkFormat](#) values specifying all formats which **can** be used when creating views of this image.

If **viewFormatCount** is zero, **pViewFormats** is ignored and the image is created as if the **VkImageFormatListCreateInfo** structure were not included in the **pNext** chain of [VkImageCreateInfo](#).

Valid Usage

- VUID-VkImageFormatListCreateInfo-viewFormatCount-09540

If **viewFormatCount** is not 0, each element of **pViewFormats** **must** not be [VK_FORMAT_UNDEFINED](#)

Valid Usage (Implicit)

- VUID-VkImageFormatListCreateInfo-sType-sType

sType **must** be [VK_STRUCTURE_TYPE_IMAGE_FORMAT_LIST_CREATE_INFO](#)

- VUID-VkImageFormatListCreateInfo-pViewFormats-parameter

If **viewFormatCount** is not 0, **pViewFormats** **must** be a valid pointer to an array of **viewFormatCount** valid [VkFormat](#) values

Structure Chaining

Extends the structures

- [VkImageCreateInfo](#)
- [VkPhysicalDeviceImageFormatInfo2](#)
- [VkSwapchainCreateInfoKHR](#)

If the `pNext` chain of `VkImageCreateInfo` includes a `VkImageDrmFormatModifierListCreateInfoEXT` structure, then the image will be created with one of the [Linux DRM format modifiers](#) listed in the structure. The choice of modifier is implementation-dependent.

The `VkImageDrmFormatModifierListCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierListCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           drmFormatModifierCount;
    const uint64_t*     pDrmFormatModifiers;
} VkImageDrmFormatModifierListCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifierCount` is the length of the `pDrmFormatModifiers` array.
- `pDrmFormatModifiers` is a pointer to an array of *Linux DRM format modifiers*.

Valid Usage

- VUID-VkImageDrmFormatModifierListCreateInfoEXT-pDrmFormatModifiers-02263
Each *modifier* in `pDrmFormatModifiers` **must** be compatible with the parameters in `VkImageCreateInfo` and its `pNext` chain, as determined by querying `VkPhysicalDeviceImageFormatInfo2` extended with `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`

Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierListCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_LIST_CREATE_INFO_EXT`
- VUID-VkImageDrmFormatModifierListCreateInfoEXT-pDrmFormatModifiers-parameter
`pDrmFormatModifiers` **must** be a valid pointer to an array of `drmFormatModifierCount` `uint64_t` values
- VUID-VkImageDrmFormatModifierListCreateInfoEXT-drmFormatModifierCount-arraylength
`drmFormatModifierCount` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkImageCreateInfo`

If the `pNext` chain of `VkImageCreateInfo` includes a `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure, then the image will be created with the `Linux DRM format modifier` and memory layout defined by the structure.

The `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierExplicitCreateInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    uint64_t             drmFormatModifier;
    uint32_t             drmFormatModifierPlaneCount;
    const VkSubresourceLayout* pPlaneLayouts;
} VkImageDrmFormatModifierExplicitCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifier` is the *Linux DRM format modifier* with which the image will be created.
- `drmFormatModifierPlaneCount` is the number of *memory planes* in the image (as reported by `VkDrmFormatModifierPropertiesEXT`) as well as the length of the `pPlaneLayouts` array.
- `pPlaneLayouts` is a pointer to an array of `VkSubresourceLayout` structures describing the image's *memory planes*.

The i^{th} member of `pPlaneLayouts` describes the layout of the image's i^{th} *memory plane* (that is, `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT`). In each element of `pPlaneLayouts`, the implementation **must** ignore `size`. The implementation calculates the size of each plane, which the application **can** query with `vkGetImageSubresourceLayout`.

When creating an image with `VkImageDrmFormatModifierExplicitCreateInfoEXT`, it is the application's responsibility to satisfy all valid usage requirements. However, the implementation **must** validate that the provided `pPlaneLayouts`, when combined with the provided `drmFormatModifier` and other creation parameters in `VkImageCreateInfo` and its `pNext` chain, produce a valid image. (This validation is necessarily implementation-dependent and outside the scope of Vulkan, and therefore not described by valid usage requirements). If this validation fails, then `vkCreateImage` returns `VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT`.

Valid Usage

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifier-02264
`drmFormatModifier` **must** be compatible with the parameters in `VkImageCreateInfo` and its `pNext` chain, as determined by querying `VkPhysicalDeviceImageFormatInfo2` extended with `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifierPlaneCount-02265
`drmFormatModifierPlaneCount` **must** be equal to the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with `VkImageCreateInfo::format` and

`drmFormatModifier`, as found by querying [VkDrmFormatModifierPropertiesListEXT](#)

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-size-02267
For each element of `pPlaneLayouts`, `size` **must** be 0
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-arrayPitch-02268
For each element of `pPlaneLayouts`, `arrayPitch` **must** be 0 if [VkImageCreateInfo::arrayLayers](#) is 1
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-depthPitch-02269
For each element of `pPlaneLayouts`, `depthPitch` **must** be 0 if [VkImageCreateInfo::extent.depth](#) is 1

Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_EXPLICIT_CREATE_INFO_EXT](#)
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-pPlaneLayouts-parameter
`pPlaneLayouts` **must** be a valid pointer to an array of `drmFormatModifierPlaneCount` [VkSubresourceLayout](#) structures
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifierPlaneCount-arraylength
`drmFormatModifierPlaneCount` **must** be greater than 0

Structure Chaining

Extends the structure

- [VkImageCreateInfo](#)

If the `pNext` list of [VkImageCreateInfo](#) includes a [VkImageCompressionControlEXT](#) structure, then that structure describes compression controls for this image.

The [VkImageCompressionControlEXT](#) structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkImageCompressionControlEXT {
    VkStructureType           sType;
    const void*               pNext;
    VkImageCompressionFlagsEXT flags;
    uint32_t                  compressionControlPlaneCount;
    VkImageCompressionFixedRateFlagsEXT* pFixedRateFlags;
} VkImageCompressionControlEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkImageCompressionFlagBitsEXT` describing compression controls for the image.
- `compressionControlPlaneCount` is the number of entries in the `pFixedRateFlags` array.
- `pFixedRateFlags` is `NULL` or a pointer to an array of `VkImageCompressionFixedRateFlagsEXT` bitfields describing allowed fixed-rate compression rates of each image plane. It is ignored if `flags` does not include `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`.

If enabled, fixed-rate compression is done in an implementation-defined manner and **may** be applied at block granularity. In that case, a write to an individual texel **may** modify the value of other texels in the same block.

Valid Usage

- VUID-VkImageCompressionControlEXT-flags-06747
`flags` **must** be one of `VK_IMAGE_COMPRESSION_DEFAULT_EXT`, `VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT`, `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, or `VK_IMAGE_COMPRESSION_DISABLED_EXT`
- VUID-VkImageCompressionControlEXT-flags-06748
 If `flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, `pFixedRateFlags` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkImageCompressionControlEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_COMPRESSION_CONTROL_EXT`

Structure Chaining

Extends the structures

- `VkImageCreateInfo`
- `VkPhysicalDeviceImageFormatInfo2`
- `VkSwapchainCreateInfoKHR`

NOTE

Some combinations of compression properties may not be supported. For example, some implementations may not support different fixed-rate compression rates per plane of a `multi-planar format` and will not be able to enable fixed-rate compression for any plane if the requested rates differ.

Possible values of `VkImageCompressionControlEXT::flags`, specifying compression controls for an image, are:

```
// Provided by VK_EXT_image_compression_control
typedef enum VkImageCompressionFlagBitsEXT {
    VK_IMAGE_COMPRESSION_DEFAULT_EXT = 0,
    VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT = 0x00000001,
    VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT = 0x00000002,
    VK_IMAGE_COMPRESSION_DISABLED_EXT = 0x00000004,
} VkImageCompressionFlagBitsEXT;
```

- `VK_IMAGE_COMPRESSION_DEFAULT_EXT` specifies that the default image compression setting is used. Implementations **must** not apply fixed-rate compression.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT` specifies that the implementation **may** choose any supported fixed-rate compression setting in an implementation-defined manner based on the properties of the image.
- `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT` specifies that fixed-rate compression **may** be used and that the allowed compression rates are specified by `VkImageCompressionControlEXT::pFixedRateFlags`.
- `VK_IMAGE_COMPRESSION_DISABLED_EXT` specifies that all lossless and fixed-rate compression **should** be disabled.

If `VkImageCompressionControlEXT::flags` is `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, then the i^{th} member of the `pFixedRateFlags` array specifies the allowed compression rates for the image's i^{th} plane.

NOTE If `VK_IMAGE_COMPRESSION_DISABLED_EXT` is included in `VkImageCompressionControlEXT::flags`, both lossless and fixed-rate compression will be disabled. This is likely to have a negative impact on performance and is only intended to be used for debugging purposes.

```
// Provided by VK_EXT_image_compression_control
typedef VkFlags VkImageCompressionFlagsEXT;
```

`VkImageCompressionFlagsEXT` is a bitmask type for setting a mask of zero or more `VkImageCompressionFlagBitsEXT`.

```
// Provided by VK_EXT_image_compression_control
typedef VkFlags VkImageCompressionFixedRateFlagsEXT;
```

`VkImageCompressionFixedRateFlagsEXT` is a bitmask type for setting a mask of zero or more `VkImageCompressionFixedRateFlagBitsEXT`.

Bits which **can** be set in `VkImageCompressionControlEXT::pFixedRateFlags`, specifying allowed compression rates for an image plane, are:

```
// Provided by VK_EXT_image_compression_control
typedef enum VkImageCompressionFixedRateFlagBitsEXT {
    VK_IMAGE_COMPRESSION_FIXED_RATE_NONE_EXT = 0,
    VK_IMAGE_COMPRESSION_FIXED_RATE_1BPC_BIT_EXT = 0x00000001,
    VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT = 0x00000002,
    VK_IMAGE_COMPRESSION_FIXED_RATE_3BPC_BIT_EXT = 0x00000004,
    VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT = 0x00000008,
    VK_IMAGE_COMPRESSION_FIXED_RATE_5BPC_BIT_EXT = 0x00000010,
    VK_IMAGE_COMPRESSION_FIXED_RATE_6BPC_BIT_EXT = 0x00000020,
    VK_IMAGE_COMPRESSION_FIXED_RATE_7BPC_BIT_EXT = 0x00000040,
    VK_IMAGE_COMPRESSION_FIXED_RATE_8BPC_BIT_EXT = 0x00000080,
    VK_IMAGE_COMPRESSION_FIXED_RATE_9BPC_BIT_EXT = 0x00000100,
    VK_IMAGE_COMPRESSION_FIXED_RATE_10BPC_BIT_EXT = 0x00000200,
    VK_IMAGE_COMPRESSION_FIXED_RATE_11BPC_BIT_EXT = 0x00000400,
    VK_IMAGE_COMPRESSION_FIXED_RATE_12BPC_BIT_EXT = 0x00000800,
    VK_IMAGE_COMPRESSION_FIXED_RATE_13BPC_BIT_EXT = 0x00001000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_14BPC_BIT_EXT = 0x00002000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_15BPC_BIT_EXT = 0x00004000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_16BPC_BIT_EXT = 0x00008000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_17BPC_BIT_EXT = 0x00010000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_18BPC_BIT_EXT = 0x00020000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_19BPC_BIT_EXT = 0x00040000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_20BPC_BIT_EXT = 0x00080000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_21BPC_BIT_EXT = 0x00100000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_22BPC_BIT_EXT = 0x00200000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_23BPC_BIT_EXT = 0x00400000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_24BPC_BIT_EXT = 0x00800000,
} VkImageCompressionFixedRateFlagBitsEXT;
```

- [VK_IMAGE_COMPRESSION_FIXED_RATE_NONE_EXT](#) specifies that fixed-rate compression **must** not be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_1BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [1,2) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [2,3) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_3BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [3,4) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [4,5) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_5BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [5,6) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_6BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [6,7) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_7BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [7,8) bits per component **may** be used.

- [VK_IMAGE_COMPRESSION_FIXED_RATE_8BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [8,9) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_9BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [9,10) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_10BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [10,11) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_11BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of [11,12) bits per component **may** be used.
- [VK_IMAGE_COMPRESSION_FIXED_RATE_12BPC_BIT_EXT](#) specifies that fixed-rate compression with a bitrate of at least 12 bits per component **may** be used.

If the format has a different bit rate for different components, [VkImageCompressionControlEXT::pFixedRateFlags](#) describes the rate of the component with the largest number of bits assigned to it, scaled pro rata. For example, to request that a [VK_FORMAT_A2R10G10B10_UNORM_PACK32](#) format be stored at a rate of 8 bits per pixel, use [VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT](#) (10 bits for the largest component, stored at quarter the original size, 2.5 bits, rounded down).

If [flags](#) includes [VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT](#), and multiple bits are set in [VkImageCompressionControlEXT::pFixedRateFlags](#) for a plane, implementations **should** apply the lowest allowed bitrate that is supported.

NOTE

The choice of “bits per component” terminology was chosen so that the same compression rate describes the same degree of compression applied to formats that differ only in the number of components. For example, [VK_FORMAT_R8G8_UNORM](#) compressed to half its original size is a rate of 4 bits per component, 8 bits per pixel. [VK_FORMAT_R8G8B8A8_UNORM](#) compressed to half *its* original size is 4 bits per component, 16 bits per pixel. Both of these cases can be requested with [VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT](#).

To query the compression properties of an image, add a [VkImageCompressionPropertiesEXT](#) structure to the [pNext](#) chain of the [VkSubresourceLayout2](#) structure in a call to [vkGetImageSubresourceLayout2](#).

To determine the compression rates that are supported for a given image format, add a [VkImageCompressionPropertiesEXT](#) structure to the [pNext](#) chain of the [VkImageFormatProperties2](#) structure in a call to [vkGetPhysicalDeviceImageFormatProperties2](#).

NOTE

Since fixed-rate compression is disabled by default, the [VkImageCompressionPropertiesEXT](#) structure passed to [vkGetPhysicalDeviceImageFormatProperties2](#) will not indicate any fixed-rate compression support unless a [VkImageCompressionControlEXT](#) structure is also included in the [pNext](#) chain of the [VkPhysicalDeviceImageFormatInfo2](#) structure passed to the same command.

The [VkImageCompressionPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkImageCompressionPropertiesEXT {
    VkStructureType      sType;
    void*                pNext;
    VkImageCompressionFlagsEXT  imageCompressionFlags;
    VkImageCompressionFixedRateFlagsEXT  imageCompressionFixedRateFlags;
} VkImageCompressionPropertiesEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **imageCompressionFlags** returns a value describing the compression controls that apply to the image. The value will be either [VK_IMAGE_COMPRESSION_DEFAULT_EXT](#) to indicate no fixed-rate compression, [VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT](#) to indicate fixed-rate compression, or [VK_IMAGE_COMPRESSION_DISABLED_EXT](#) to indicate no compression.
- **imageCompressionFixedRateFlags** returns a [VkImageCompressionFixedRateFlagsEXT](#) value describing the compression rates that apply to the specified aspect of the image.

Valid Usage (Implicit)

- VUID-VkImageCompressionPropertiesEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_IMAGE_COMPRESSION_PROPERTIES_EXT](#)

Structure Chaining

Extends the structures

- [VkImageFormatProperties2](#)
- [VkSubresourceLayout2](#)
- [VkSurfaceFormat2KHR](#)

If the **pNext** list of [VkImageCreateInfo](#) includes a [VkImageAlignmentControlCreateInfoMESA](#) structure, then that structure describes desired alignment for this image.

The [VkImageAlignmentControlCreateInfoMESA](#) structure is defined as:

```
// Provided by VK_MESA_image_alignment_control
typedef struct VkImageAlignmentControlCreateInfoMESA {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             maximumRequestedAlignment;
} VkImageAlignmentControlCreateInfoMESA;
```

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maximumRequestedAlignment` specifies the maximum alignment for the image.

If `maximumRequestedAlignment` is not 0, the implementation **should** choose an image memory layout that requires an alignment no larger than `maximumRequestedAlignment` as reported in `VkMemoryRequirements::alignment`. If such a layout does not exist for the given image creation parameters, the implementation **should** return the smallest alignment which is supported in `VkMemoryRequirements`.

If an implementation needs to disable image compression for `maximumRequestedAlignment` to be honored - where a larger alignment would enable image compression - the implementation **should** not use `maximumRequestedAlignment`, and **should** return the smallest alignment which does not compromise compression. If the `imageCompressionControl` feature is enabled, the application **can** chain a `VkImageCompressionControlEXT` with `VK_IMAGE_COMPRESSION_DISABLED_EXT`. In this case, image compression considerations **should** not apply when implementation decides alignment.

Valid Usage

- VUID-VkImageAlignmentControlCreateInfoMESA-maximumRequestedAlignment-09655
If `maximumRequestedAlignment` is not 0, `maximumRequestedAlignment` **must** be a power of two
- VUID-VkImageAlignmentControlCreateInfoMESA-maximumRequestedAlignment-09656
If `maximumRequestedAlignment` is not 0, the bitwise-and of `maximumRequestedAlignment` and `supportedImageAlignmentMask` **must** be non-zero
- VUID-VkImageAlignmentControlCreateInfoMESA-imageAlignmentControl-09657
`imageAlignmentControl` **must** be enabled

Valid Usage (Implicit)

- VUID-VkImageAlignmentControlCreateInfoMESA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_ALIGNMENT_CONTROL_CREATE_INFO_MESA`

Structure Chaining

Extends the structure

- `VkImageCreateInfo`

Bits which **can** be set in

- `VkImageViewUsageCreateInfo::usage`
- `VkImageStencilUsageCreateInfo::stencilUsage`
- `VkImageCreateInfo::usage`

specify intended usage of an image, and are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageUsageFlagBits {
    VK_IMAGE_USAGE_TRANSFER_SRC_BIT = 0x00000001,
    VK_IMAGE_USAGE_TRANSFER_DST_BIT = 0x00000002,
    VK_IMAGE_USAGE_SAMPLED_BIT = 0x00000004,
    VK_IMAGE_USAGE_STORAGE_BIT = 0x00000008,
    VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT = 0x00000010,
    VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT = 0x00000020,
    VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT = 0x00000040,
    VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT = 0x00000080,
// Provided by VK_VERSION_1_4
    VK_IMAGE_USAGE_HOST_TRANSFER_BIT = 0x00400000,
// Provided by VK_KHR_video_decode_queue
    VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR = 0x00000400,
// Provided by VK_KHR_video_decode_queue
    VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR = 0x00000800,
// Provided by VK_KHR_video_decode_queue
    VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR = 0x00001000,
// Provided by VK_EXT_fragment_density_map
    VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT = 0x00000200,
// Provided by VK_KHR_fragment_shading_rate
    VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR = 0x00000100,
// Provided by VK_KHR_video_encode_queue
    VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR = 0x00002000,
// Provided by VK_KHR_video_encode_queue
    VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR = 0x00004000,
// Provided by VK_KHR_video_encode_queue
    VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR = 0x00008000,
// Provided by VK_EXT_attachment_feedback_loop_layout
    VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT = 0x00080000,
// Provided by VK_HUAWEI_invocation_mask
    VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI = 0x00040000,
// Provided by VK_QCOM_image_processing
    VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM = 0x00100000,
// Provided by VK_QCOM_image_processing
    VK_IMAGE_USAGE_SAMPLE_BLOCK_MATCH_BIT_QCOM = 0x00200000,
// Provided by VK_ARM_tensors
    VK_IMAGE_USAGE_TENSOR_ALIASING_BIT_ARM = 0x00800000,
// Provided by VK_QCOM_tile_memory_heap
    VK_IMAGE_USAGE_TILE_MEMORY_BIT_QCOM = 0x08000000,
// Provided by VK_KHR_video_encode_quantization_map
    VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x02000000,
// Provided by VK_KHR_video_encode_quantization_map
    VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR = 0x04000000,
// Provided by VK_NV_shading_rate_image
    VK_IMAGE_USAGE_SHADING_RATE_IMAGE_BIT_NV =
VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR,
// Provided by VK_EXT_host_image_copy
```

```
VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT = VK_IMAGE_USAGE_HOST_TRANSFER_BIT,  
} VkImageUsageFlagBits;
```

- `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` specifies that the image **can** be used as the source of a transfer command.
- `VK_IMAGE_USAGE_TRANSFER_DST_BIT` specifies that the image **can** be used as the destination of a transfer command.
- `VK_IMAGE_USAGE_SAMPLED_BIT` specifies that the image **can** be used to create a `VkImageView` suitable for occupying a `VkDescriptorSet` slot either of type `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and be sampled by a shader.
- `VK_IMAGE_USAGE_STORAGE_BIT` specifies that the image **can** be used to create a `VkImageView` suitable for occupying a `VkDescriptorSet` slot of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`.
- `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT` specifies that the image **can** be used to create a `VkImageView` suitable for use as a color or resolve attachment in a `VkFramebuffer`.
- `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT` specifies that the image **can** be used to create a `VkImageView` suitable for use as a depth/stencil or depth/stencil resolve attachment in a `VkFramebuffer`.
- `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` specifies that implementations **may** support using memory allocations with the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` to back an image with this usage. This bit **can** be set for any image that **can** be used to create a `VkImageView` suitable for use as a color, resolve, depth/stencil, or input attachment.
- `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` specifies that the image **can** be used to create a `VkImageView` suitable for occupying `VkDescriptorSet` slot of type `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`; be read from a shader as an input attachment; and be used as an input attachment in a framebuffer.
- `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT` specifies that the image **can** be used to create a `VkImageView` suitable for use as a `fragment density map image`.
- `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR` specifies that the image **can** be used to create a `VkImageView` suitable for use as a `fragment shading rate attachment` or `shading rate image`.
- `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` specifies that the image **can** be used as a `decode output picture` in a `video decode operation`.
- `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR` is reserved for future use.
- `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` specifies that the image **can** be used as an `output reconstructed picture` or an `input reference picture` in a `video decode operation`.
- `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR` is reserved for future use.
- `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR` specifies that the image **can** be used as an `encode input picture` in a `video encode operation`.
- `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR` specifies that the image **can** be used as an `output reconstructed picture` or an `input reference picture` in a `video encode operation`.

- [VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT](#) specifies that the image **can** be used as a color or depth/stencil attachment with [feedback loop enabled](#).
- [VK_IMAGE_USAGE_TILE_MEMORY_BIT_QCOM](#) specifies that the image **can** be bound to [VkDeviceMemory](#) allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property.
- [VK_IMAGE_USAGE_HOST_TRANSFER_BIT](#) specifies that the image **can** be used with host copy commands and host layout transitions.
- [VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR](#) specifies that the image **can** be used as a [quantization delta map](#) in a [video encode operation](#).
- [VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR](#) specifies that the image **can** be used as an [emphasis map](#) in a [video encode operation](#).
- [VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT](#) specifies that the image **can** be used with host copy commands and host layout transitions.
- [VK_IMAGE_USAGE_TENSOR_ALIASING_BIT_ARM](#) specifies that the image **can** be transitioned to the [VK_IMAGE_LAYOUT_TENSOR_ALIASING_ARM](#) layout. See [Memory Aliasing](#) for a complete set of rules for tensor/image aliasing.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageUsageFlags;
```

[VkImageUsageFlags](#) is a bitmask type for setting a mask of zero or more [VkImageUsageFlagBits](#).

Bits which **can** be set in [VkImageCreateInfo::flags](#), specifying additional parameters of an image, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageCreateFlagBits {
    VK_IMAGE_CREATE_SPARSE_BINDING_BIT = 0x00000001,
    VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT = 0x00000002,
    VK_IMAGE_CREATE_SPARSE_ALIASED_BIT = 0x00000004,
    VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT = 0x00000008,
    VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT = 0x00000010,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_ALIAS_BIT = 0x00000400,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT = 0x00000040,
    // Provided by VK_VERSION_1_1

// Provided by VK_KHR_bind_memory2
VK_IMAGE_CREATE_ALIAS_BIT_KHR = VK_IMAGE_CREATE_ALIAS_BIT,
// Provided by VK_EXT_descriptor_buffer
VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT =
VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT,
// Provided by VK_QCOM_fragment_density_map_offset
VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_QCOM =
VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_EXT,
} VkImageCreateFlagBits;

```

- [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#) specifies that the image will be backed using sparse memory binding.
- [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) specifies that the image **can** be partially backed using sparse memory binding. Images created with this flag **must** also be created with the [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#) flag.
- [VK_IMAGE_CREATE_SPARSE_ALIASED_BIT](#) specifies that the image will be backed using sparse memory binding with memory ranges that might also simultaneously be backing another image (or another portion of the same image). Images created with this flag **must** also be created with

the `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` flag.

- `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` specifies that the image **can** be used to create a `VkImageView` with a different format from the image. For **multi-planar formats**, `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` specifies that a `VkImageView` can be created of a *plane* of the image.
- `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` specifies that the image **can** be used to create a `VkImageView` of type `VK_IMAGE_VIEW_TYPE_CUBE` or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`.
- `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` specifies that the image **can** be used to create a `VkImageView` of type `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`.
- `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` specifies that the image **can** be used to create a `VkImageView` of type `VK_IMAGE_VIEW_TYPE_2D`.
- `VK_IMAGE_CREATE_PROTECTED_BIT` specifies that the image is a protected image.
- `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` specifies that the image **can** be used with a non-zero value of the `splitInstanceBindRegionCount` member of a `VkBindImageMemoryDeviceGroupInfo` structure passed into `vkBindImageMemory2`. This flag also has the effect of making the image use the standard sparse image block dimensions.
- `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` specifies that the image having a compressed format **can** be used to create a `VkImageView` with an uncompressed format where each texel in the image view corresponds to a compressed texel block of the image.
- `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT` specifies that the image **can** be created with usage flags that are not supported for the format the image is created with but are supported for at least one format a `VkImageView` created from the image **can** have.
- `VK_IMAGE_CREATE_DISJOINT_BIT` specifies that an image with a **multi-planar format** **must** have each plane separately bound to memory, rather than having a single memory binding for the whole image; the presence of this bit distinguishes a *disjoint image* from an image without this bit set.
- `VK_IMAGE_CREATE_ALIAS_BIT` specifies that two images created with the same creation parameters and aliased to the same memory **can** interpret the contents of the memory consistently with each other, subject to the rules described in the **Memory Aliasing** section. This flag further specifies that each plane of a *disjoint* image **can** share an in-memory non-linear representation with single-plane images, and that a single-plane image **can** share an in-memory non-linear representation with a plane of a multi-planar disjoint image, according to the rules in **Compatible Formats of Planes of Multi-Planar Formats**. If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` or `VkExternalMemoryImageCreateInfoNV` structure whose `handleTypes` member is not `0`, it is as if `VK_IMAGE_CREATE_ALIAS_BIT` is set.
- `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` specifies that an image with a depth or depth/stencil format **can** be used with custom sample locations when used as a depth/stencil attachment.
- `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` specifies that the image is a **corner-sampled image**.
- `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT` specifies that an image **can** be in a subsampled format which **may** be more optimal when written as an attachment by a render pass that has a fragment density map attachment. Accessing a subsampled image has additional

considerations:

- Image data read as an image sampler will have undefined values if the sampler was not created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` or was not sampled through a combined `embedded sampler and image mapping` if using descriptor heaps, or the use of a combined image sampler with an immutable sampler in `VkDescriptorSetLayoutBinding`.
- Image data read with an input attachment will have undefined values if the contents were not written as an attachment in an earlier subpass of the same render pass.
- Image data read as an image sampler in the fragment shader will be additionally be read by the device during `VK_PIPELINE_STAGE_VERTEX_SHADER_BIT` if `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledCoarseReconstructionEarlyAccess` is `VK_TRUE` and the sampler was created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT`.
- Image data read with load operations are resampled to the fragment density of the render pass if `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledLoads` is `VK_TRUE`. Otherwise, values of image data are undefined.
- Image contents outside of the render area take on undefined values if the image is stored as a render pass attachment.
- `VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_EXT` specifies that an image **can** be used in a render pass with non-zero `fragment density map offsets`. In a render pass with non-zero offsets, fragment density map attachments, input attachments, color attachments, depth/stencil attachment, resolve attachments, and preserve attachments **must** be created with `VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_EXT`.
- `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` specifies that the image **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see `VkOpaqueCaptureDescriptorDataCreateInfoEXT` for more detail.
- `VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT` specifies that an image **can** be used with `multisampled rendering` as a `single-sampled framebuffer attachment`
- `VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR` specifies that a single layer image view created from this image can be accessed with both `Arrayed` equal to 0 and `Arrayed` equal to 1 in a shader. If accessed with `Arrayed` equal to 1 in a shader, and `VkImageViewCreateInfo::viewType` is `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`, the image is treated as having an array size of 1, and `subresourceRange.baseArrayLayer` is accessed. If accessed with `Arrayed` equal to 0 in a shader, and `VkImageViewCreateInfo::viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, the descriptor is accessed as-if the view was created with `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D` respectively. Cube map view aliasing is not included by this flag bit. Also, image views created with a `multi-planar format` **can** not alias like this.
- `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` specifies that the image **can** be used in `video coding operations` without having to specify at image creation time the set of video profiles the image will be used with, except for images used only as `DPB` pictures, as long as the image is otherwise `compatible` with the video profile in question.

NOTE	This enables exchanging video picture data without additional copies or
-------------	---

conversions when used as:

- [Decode output pictures](#), regardless of the video profile used to produce them.
- [Encode input pictures](#), regardless of the video profile used to consume them.

This includes images created with both [VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR](#) and [VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR](#), which is necessary to use the same video picture as the [reconstructed picture](#) and [decode output picture](#) in a video decode operation on implementations supporting [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR](#).

However, images with only DPB usage remain tied to the video profiles the image was created with, as the data layout of such DPB-only images **may** be implementation- and codec-dependent.

If an application would like to share or reuse the device memory backing such images (e.g. for the purposes of temporal aliasing), then it **should** create separate image objects for each video profile and bind them to the same underlying device memory range, similar to how memory resources **can** be shared across separate video sessions or any other memory-backed resource.

See [Sparse Resource Features](#) and [Sparse Physical Device Features](#) for more details.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageCreateFlags;
```

[VkImageCreateFlags](#) is a bitmask type for setting a mask of zero or more [VkImageCreateFlagBits](#).

Possible values of [VkImageCreateInfo::imageType](#), specifying the basic dimensionality of an image, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageType {
    VK_IMAGE_TYPE_1D = 0,
    VK_IMAGE_TYPE_2D = 1,
    VK_IMAGE_TYPE_3D = 2,
} VkImageType;
```

- [VK_IMAGE_TYPE_1D](#) specifies a one-dimensional image.
- [VK_IMAGE_TYPE_2D](#) specifies a two-dimensional image.
- [VK_IMAGE_TYPE_3D](#) specifies a three-dimensional image.

Possible values of [VkImageCreateInfo::tiling](#), specifying the tiling arrangement of texel blocks in an image, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageTiling {
    VK_IMAGE_TILING_OPTIMAL = 0,
    VK_IMAGE_TILING_LINEAR = 1,
    // Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT = 1000158000,
} VkImageTiling;
```

- [VK_IMAGE_TILING_OPTIMAL](#) specifies optimal tiling (texels are laid out in an implementation-dependent arrangement, for more efficient memory access).
- [VK_IMAGE_TILING_LINEAR](#) specifies linear tiling (texels are laid out in memory in row-major order, possibly with some padding on each row).
- [VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT](#) specifies that the image's tiling is defined by a [Linux DRM format modifier](#). The modifier is specified at image creation with [VkImageDrmFormatModifierListCreateInfoEXT](#) or [VkImageDrmFormatModifierExplicitCreateInfoEXT](#), and **can** be queried with [vkGetImageDrmFormatModifierPropertiesEXT](#).

To query the memory layout of an image subresource, call:

```
// Provided by VK_VERSION_1_0
void vkGetImageSubresourceLayout(
    VkDevice          device,
    VkImage           image,
    const VkImageSubresource* pSubresource,
    VkSubresourceLayout* pLayout);
```

- **device** is the logical device that owns the image.
- **image** is the image whose layout is being queried.
- **pSubresource** is a pointer to a [VkImageSubresource](#) structure selecting a specific image subresource from the image.
- **pLayout** is a pointer to a [VkSubresourceLayout](#) structure in which the layout is returned.

If the image is [linear](#), then the returned layout is valid for [host access](#).

If the image's tiling is [VK_IMAGE_TILING_LINEAR](#) and its format is a [multi-planar format](#), then [vkGetImageSubresourceLayout](#) describes one *format plane* of the image. If the image's tiling is [VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT](#), then [vkGetImageSubresourceLayout](#) describes one *memory plane* of the image. If the image's tiling is [VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT](#) and the image is [non-linear](#), then the returned layout has an implementation-dependent meaning; the vendor of the image's [DRM format modifier](#) **may** provide documentation that explains how to interpret the returned layout.

[vkGetImageSubresourceLayout](#) is invariant for the lifetime of a single image. However, the subresource layout of images in Android hardware buffer or QNX Screen buffer external memory

is not known until the image has been bound to memory, so applications **must** not call `vkGetImageSubresourceLayout` for such an image before it has been bound.

Valid Usage

- VUID-vkGetImageSubresourceLayout-image-07790
The `image` **must** have been created with `tiling` equal to `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`
- VUID-vkGetImageSubresourceLayout-aspectMask-00997
The `aspectMask` member of `pSubresource` **must** only have a single bit set
- VUID-vkGetImageSubresourceLayout-mipLevel-01716
The `mipLevel` member of `pSubresource` **must** be less than the `mipLevels` specified in `image`
- VUID-vkGetImageSubresourceLayout-arrayLayer-01717
The `arrayLayer` member of `pSubresource` **must** be less than the `arrayLayers` specified in `image`
- VUID-vkGetImageSubresourceLayout-format-08886
If `format` of the `image` is a color format that is not a `multi-planar format`, and `tiling` of the `image` is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, the `aspectMask` member of `pSubresource` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`
- VUID-vkGetImageSubresourceLayout-format-04462
If `format` of the `image` has a depth component, the `aspectMask` member of `pSubresource` **must** contain `VK_IMAGE_ASPECT_DEPTH_BIT`
- VUID-vkGetImageSubresourceLayout-format-04463
If `format` of the `image` has a stencil component, the `aspectMask` member of `pSubresource` **must** contain `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkGetImageSubresourceLayout-format-04464
If `format` of the `image` does not contain a stencil or depth component, the `aspectMask` member of `pSubresource` **must** not contain `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-vkGetImageSubresourceLayout-tiling-08717
If the `tiling` of the `image` is `VK_IMAGE_TILING_LINEAR` and has a `multi-planar format`, then the `aspectMask` member of `pSubresource` **must** be a single valid `multi-planar aspect mask` bit
- VUID-vkGetImageSubresourceLayout-image-09432
If `image` was created with the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` external memory handle type, then `image` **must** be bound to memory
- VUID-vkGetImageSubresourceLayout-tiling-09433
If the `tiling` of the `image` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then the `aspectMask` member of `pSubresource` **must** be `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` and the index `i` **must** be less than the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image's `format` and `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier`

Valid Usage (Implicit)

- VUID-vkGetImageSubresourceLayout-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetImageSubresourceLayout-image-parameter **image** must be a valid [VkImage](#) handle
- VUID-vkGetImageSubresourceLayout-pSubresource-parameter **pSubresource** must be a valid pointer to a valid [VkImageSubresource](#) structure
- VUID-vkGetImageSubresourceLayout-pLayout-parameter **pLayout** must be a valid pointer to a [VkSubresourceLayout](#) structure
- VUID-vkGetImageSubresourceLayout-image-parent **image** must have been created, allocated, or retrieved from **device**

The [VkImageSubresource](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresource {
    VkImageAspectFlags    aspectMask;
    uint32_t              mipLevel;
    uint32_t              arrayLayer;
} VkImageSubresource;
```

- **aspectMask** is a [VkImageAspectFlags](#) value selecting the image *aspect*.
- **mipLevel** selects the mipmap level.
- **arrayLayer** selects the array layer.

Valid Usage (Implicit)

- VUID-VkImageSubresource-aspectMask-parameter **aspectMask** must be a valid combination of [VkImageAspectFlagBits](#) values
- VUID-VkImageSubresource-aspectMask-requiredbitmask **aspectMask** must not be 0

Information about the layout of the image subresource is returned in a [VkSubresourceLayout](#) structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSubresourceLayout {
    VkDeviceSize    offset;
    VkDeviceSize    size;
    VkDeviceSize    rowPitch;
    VkDeviceSize    arrayPitch;
    VkDeviceSize    depthPitch;
} VkSubresourceLayout;
```

- **offset** is the byte offset from the start of the image or the plane where the image subresource begins.
- **size** is the size in bytes of the image subresource. **size** includes any extra memory that is required based on **rowPitch**.
- **rowPitch** describes the number of bytes between each row of texels in an image.
- **arrayPitch** describes the number of bytes between each array layer of an image.
- **depthPitch** describes the number of bytes between each slice of 3D image.

If the image is **linear**, then **rowPitch**, **arrayPitch** and **depthPitch** describe the layout of the image subresource in linear memory. For uncompressed formats, **rowPitch** is the number of bytes between texels with the same x coordinate in adjacent rows (y coordinates differ by one). **arrayPitch** is the number of bytes between texels with the same x and y coordinate in adjacent array layers of the image (array layer values differ by one). **depthPitch** is the number of bytes between texels with the same x and y coordinate in adjacent slices of a 3D image (z coordinates differ by one). Expressed as an addressing formula, the starting byte of a texel in the image subresource has address:

```
// (x,y,z,layer) are in texel coordinates
address(x,y,z,layer) = layer*arrayPitch + z*depthPitch + y*rowPitch + x*elementSize +
offset
```

For compressed formats, the **rowPitch** is the number of bytes between compressed texel blocks in adjacent rows. **arrayPitch** is the number of bytes between compressed texel blocks in adjacent array layers. **depthPitch** is the number of bytes between compressed texel blocks in adjacent slices of a 3D image.

```
// (x,y,z,layer) are in compressed texel block coordinates
address(x,y,z,layer) = layer*arrayPitch + z*depthPitch + y*rowPitch + x
*compressedTexelBlockByteSize + offset;
```

The value of **arrayPitch** is undefined for images that were not created as arrays. **depthPitch** is defined only for 3D images.

If the image has a *single-plane* color format and its tiling is **VK_IMAGE_TILING_LINEAR**, then the **aspectMask** member of **VkImageSubresource** **must** be **VK_IMAGE_ASPECT_COLOR_BIT**.

If the image has a depth/stencil format and its tiling is **VK_IMAGE_TILING_LINEAR**, then **aspectMask**

must be either `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`. On implementations that store depth and stencil aspects separately, querying each of these image subresource layouts will return a different **offset** and **size** representing the region of memory used for that aspect. On implementations that store depth and stencil aspects interleaved, the same **offset** and **size** are returned and represent the interleaved memory allocation.

If the image has a **multi-planar format** and its tiling is `VK_IMAGE_TILING_LINEAR`, then the **aspectMask** member of `VkImageSubresource` **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT`, or (for 3-plane formats only) `VK_IMAGE_ASPECT_PLANE_2_BIT`. Querying each of these image subresource layouts will return a different **offset** and **size** representing the region of memory used for that plane. If the image is *disjoint*, then the **offset** is relative to the base address of the plane. If the image is *non-disjoint*, then the **offset** is relative to the base address of the image.

If the image's tiling is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then the **aspectMask** member of `VkImageSubresource` **must** be one of `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT`, where the maximum allowed plane index *i* is defined by the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image's `VkImageCreateInfo::format` and `modifier`. The memory range used by the subresource is described by **offset** and **size**. If the image is *disjoint*, then the **offset** is relative to the base address of the *memory plane*. If the image is *non-disjoint*, then the **offset** is relative to the base address of the image. If the image is **non-linear**, then **rowPitch**, **arrayPitch**, and **depthPitch** have an implementation-dependent meaning.

To query the memory layout of an image subresource, call:

```
// Provided by VK_VERSION_1_4
void vkGetImageSubresourceLayout2(
    VkDevice          device,
    VkImage           image,
    const VkImageSubresource2* pSubresource,
    VkSubresourceLayout2* pLayout);
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to vkGetImageSubresourceLayout2
void vkGetImageSubresourceLayout2KHR(
    VkDevice          device,
    VkImage           image,
    const VkImageSubresource2* pSubresource,
    VkSubresourceLayout2* pLayout);
```

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
// Equivalent to vkGetImageSubresourceLayout2
void vkGetImageSubresourceLayout2EXT(
    VkDevice          device,
    VkImage           image,
    const VkImageSubresource2* pSubresource,
    VkSubresourceLayout2* pLayout);
```

- **device** is the logical device that owns the image.
- **image** is the image whose layout is being queried.
- **pSubresource** is a pointer to a [VkImageSubresource2](#) structure selecting a specific image for the image subresource.
- **pLayout** is a pointer to a [VkSubresourceLayout2](#) structure in which the layout is returned.

[vkGetImageSubresourceLayout2](#) behaves similarly to [vkGetImageSubresourceLayout](#), with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

It is legal to call [vkGetImageSubresourceLayout2](#) with an **image** created with **tiling** equal to [VK_IMAGE_TILING_OPTIMAL](#), but the members of [VkSubresourceLayout2::subresourceLayout](#) will have undefined values in this case.

NOTE

Structures chained from [VkImageSubresource2::pNext](#) will also be updated when **tiling** is equal to [VK_IMAGE_TILING_OPTIMAL](#).

Valid Usage

- VUID-vkGetImageSubresourceLayout2-aspectMask-00997
The **aspectMask** member of **pSubresource** **must** only have a single bit set
- VUID-vkGetImageSubresourceLayout2-mipLevel-01716
The **mipLevel** member of **pSubresource** **must** be less than the **mipLevels** specified in **image**
- VUID-vkGetImageSubresourceLayout2-arrayLayer-01717
The **arrayLayer** member of **pSubresource** **must** be less than the **arrayLayers** specified in **image**
- VUID-vkGetImageSubresourceLayout2-format-08886
If **format** of the **image** is a color format that is not a [multi-planar format](#), and **tiling** of the **image** is [VK_IMAGE_TILING_LINEAR](#) or [VK_IMAGE_TILING_OPTIMAL](#), the **aspectMask** member of **pSubresource** **must** be [VK_IMAGE_ASPECT_COLOR_BIT](#)
- VUID-vkGetImageSubresourceLayout2-format-04462
If **format** of the **image** has a depth component, the **aspectMask** member of **pSubresource** **must** contain [VK_IMAGE_ASPECT_DEPTH_BIT](#)
- VUID-vkGetImageSubresourceLayout2-format-04463
If **format** of the **image** has a stencil component, the **aspectMask** member of **pSubresource** **must** contain [VK_IMAGE_ASPECT_STENCIL_BIT](#)

- VUID-vkGetImageSubresourceLayout2-format-04464
If **format** of the **image** does not contain a stencil or depth component, the **aspectMask** member of **pSubresource** **must** not contain **VK_IMAGE_ASPECT_DEPTH_BIT** or **VK_IMAGE_ASPECT_STENCIL_BIT**
- VUID-vkGetImageSubresourceLayout2-tiling-08717
If the **tiling** of the **image** is **VK_IMAGE_TILING_LINEAR** and has a **multi-planar format**, then the **aspectMask** member of **pSubresource** **must** be a single valid **multi-planar aspect mask** bit
- VUID-vkGetImageSubresourceLayout2-image-09434
If **image** was created with the **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID** external memory handle type, then **image** **must** be bound to memory
- VUID-vkGetImageSubresourceLayout2-tiling-09435
If the **tiling** of the **image** is **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**, then the **aspectMask** member of **pSubresource** **must** be **VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT** and the index **i** **must** be less than the **VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount** associated with the image's **format** and **VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier**

Valid Usage (Implicit)

- VUID-vkGetImageSubresourceLayout2-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkGetImageSubresourceLayout2-image-parameter
image **must** be a valid **VkImage** handle
- VUID-vkGetImageSubresourceLayout2-pSubresource-parameter
pSubresource **must** be a valid pointer to a valid **VkImageSubresource2** structure
- VUID-vkGetImageSubresourceLayout2-pLayout-parameter
pLayout **must** be a valid pointer to a **VkSubresourceLayout2** structure
- VUID-vkGetImageSubresourceLayout2-image-parent
image **must** have been created, allocated, or retrieved from **device**

The **VkImageSubresource2** structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkImageSubresource2 {
    VkStructureType    sType;
    void*              pNext;
    VkImageSubresource imageSubresource;
} VkImageSubresource2;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkImageSubresource2
typedef VkImageSubresource2 VkImageSubresource2KHR;
```

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
// Equivalent to VkImageSubresource2
typedef VkImageSubresource2 VkImageSubresource2EXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **imageSubresource** is a [VkImageSubresource](#) structure.

Valid Usage (Implicit)

- VUID-VkImageSubresource2-sType-sType
sType must be [VK_STRUCTURE_TYPE_IMAGE_SUBRESOURCE_2](#)
- VUID-VkImageSubresource2-pNext-pNext
pNext must be **NULL**
- VUID-VkImageSubresource2-imageSubresource-parameter
imageSubresource must be a valid [VkImageSubresource](#) structure

Information about the layout of the image subresource is returned in a [VkSubresourceLayout2](#) structure:

```
// Provided by VK_VERSION_1_4
typedef struct VkSubresourceLayout2 {
    VkStructureType    sType;
    void*              pNext;
    VkSubresourceLayout subresourceLayout;
} VkSubresourceLayout2;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkSubresourceLayout2
typedef VkSubresourceLayout2 VkSubresourceLayout2KHR;
```

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
// Equivalent to VkSubresourceLayout2
typedef VkSubresourceLayout2 VkSubresourceLayout2EXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subresourceLayout` is a `VkSubresourceLayout` structure.

Valid Usage (Implicit)

- VUID-VkSubresourceLayout2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SUBRESOURCE_LAYOUT_2`
- VUID-VkSubresourceLayout2-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkImageCompressionPropertiesEXT` or `VkSubresourceHostMemcpySize`
- VUID-VkSubresourceLayout2-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique

To query the memory size needed to copy to or from an image using `vkCopyMemoryToImage` or `vkCopyImageToMemory` when the `VK_HOST_IMAGE_COPY_MEMCPY_BIT` flag is specified, add a `VkSubresourceHostMemcpySize` structure to the `pNext` chain of the `VkSubresourceLayout2` structure in a call to `vkGetImageSubresourceLayout2`.

The `VkSubresourceHostMemcpySize` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkSubresourceHostMemcpySize {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       size;
} VkSubresourceHostMemcpySize;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkSubresourceHostMemcpySize
typedef VkSubresourceHostMemcpySize VkSubresourceHostMemcpySizeEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `size` is the size in bytes of the image subresource.

Valid Usage (Implicit)

- VUID-VkSubresourceHostMemcpySize-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SUBRESOURCE_HOST_MEMCPY_SIZE`

Structure Chaining

Extends the structure

- [VkSubresourceLayout2](#)

To query the memory layout of an image subresource, without an image object, call:

```
// Provided by VK_VERSION_1_4
void vkGetDeviceImageSubresourceLayout(
    VkDevice          device,
    const VkDeviceImageSubresourceInfo* pInfo,
    VkSubresourceLayout2* pLayout);
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to vkGetDeviceImageSubresourceLayout
void vkGetDeviceImageSubresourceLayoutKHR(
    VkDevice          device,
    const VkDeviceImageSubresourceInfo* pInfo,
    VkSubresourceLayout2* pLayout);
```

- **device** is the logical device that owns the image.
- **pInfo** is a pointer to a [VkDeviceImageSubresourceInfo](#) structure containing parameters required for the subresource layout query.
- **pLayout** is a pointer to a [VkSubresourceLayout2](#) structure in which the layout is returned.

vkGetDeviceImageSubresourceLayout behaves similarly to [vkGetImageSubresourceLayout2](#), but uses a [VkImageCreateInfo](#) structure to specify the image rather than a [VkImage](#) object.

Valid Usage (Implicit)

- VUID-vkGetDeviceImageSubresourceLayout-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetDeviceImageSubresourceLayout-pInfo-parameter **pInfo** must be a valid pointer to a valid [VkDeviceImageSubresourceInfo](#) structure
- VUID-vkGetDeviceImageSubresourceLayout-pLayout-parameter **pLayout** must be a valid pointer to a [VkSubresourceLayout2](#) structure

The [VkDeviceImageSubresourceInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkDeviceImageSubresourceInfo {
    VkStructureType      sType;
    const void*          pNext;
    const VkImageCreateInfo* pCreateInfo;
    const VkImageSubresource2* pSubresource;
} VkDeviceImageSubresourceInfo;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkDeviceImageSubresourceInfo
typedef VkDeviceImageSubresourceInfo VkDeviceImageSubresourceInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pCreateInfo** is a pointer to a [VkImageCreateInfo](#) structure containing parameters affecting creation of the image to query.
- **pSubresource** is a pointer to a [VkImageSubresource2](#) structure selecting a specific image subresource for the query.

Valid Usage

- VUID-VkDeviceImageSubresourceInfo-aspectMask-00997
The **aspectMask** member of **pSubresource** **must** only have a single bit set
- VUID-VkDeviceImageSubresourceInfo-mipLevel-01716
The **mipLevel** member of **pSubresource** **must** be less than the **mipLevels** specified in **pCreateInfo**
- VUID-VkDeviceImageSubresourceInfo-arrayLayer-01717
The **arrayLayer** member of **pSubresource** **must** be less than the **arrayLayers** specified in **pCreateInfo**
- VUID-VkDeviceImageSubresourceInfo-format-08886
If **format** of the **image** is a color format that is not a [multi-planar format](#), and **tiling** of the **pCreateInfo** is [VK_IMAGE_TILING_LINEAR](#) or [VK_IMAGE_TILING_OPTIMAL](#), the **aspectMask** member of **pSubresource** **must** be [VK_IMAGE_ASPECT_COLOR_BIT](#)
- VUID-VkDeviceImageSubresourceInfo-format-04462
If **format** of the **pCreateInfo** has a depth component, the **aspectMask** member of **pSubresource** **must** contain [VK_IMAGE_ASPECT_DEPTH_BIT](#)
- VUID-VkDeviceImageSubresourceInfo-format-04463
If **format** of the **pCreateInfo** has a stencil component, the **aspectMask** member of **pSubresource** **must** contain [VK_IMAGE_ASPECT_STENCIL_BIT](#)
- VUID-VkDeviceImageSubresourceInfo-format-04464
If **format** of the **pCreateInfo** does not contain a stencil or depth component, the **aspectMask** member of **pSubresource** **must** not contain [VK_IMAGE_ASPECT_DEPTH_BIT](#) or

VK_IMAGE_ASPECT_STENCIL_BIT

- VUID-VkDeviceImageSubresourceInfo-tiling-08717

If the **tiling** of the **pCreateInfo** is [VK_IMAGE_TILING_LINEAR](#) and has a [multi-planar format](#), then the **aspectMask** member of **pSubresource** **must** be a single valid [multi-planar aspect mask](#) bit

Valid Usage (Implicit)

- VUID-VkDeviceImageSubresourceInfo-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_DEVICE_IMAGE_SUBRESOURCE_INFO](#)
- VUID-VkDeviceImageSubresourceInfo-pNext-pNext
pNext **must** be [NULL](#)
- VUID-VkDeviceImageSubresourceInfo-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkImageCreateInfo](#) structure
- VUID-VkDeviceImageSubresourceInfo-pSubresource-parameter
pSubresource **must** be a valid pointer to a valid [VkImageSubresource2](#) structure

If an image was created with [VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT](#), then the image has a [Linux DRM format modifier](#). To query the *modifier*, call:

```
// Provided by VK_EXT_image_drm_format_modifier
VkResult vkGetImageDrmFormatModifierPropertiesEXT(
    VkDevice          device,
    VkImage           image,
    VkImageDrmFormatModifierPropertiesEXT* pProperties);
```

- **device** is the logical device that owns the image.
- **image** is the queried image.
- **pProperties** is a pointer to a [VkImageDrmFormatModifierPropertiesEXT](#) structure in which properties of the image's *DRM format modifier* are returned.

Valid Usage

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-02272
image **must** have been created with **tiling** equal to [VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT](#)

Valid Usage (Implicit)

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-device-parameter
device **must** be a valid [VkDevice](#) handle

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-parameter
image **must** be a valid [VkImage](#) handle
- VUID-vkGetImageDrmFormatModifierPropertiesEXT-pProperties-parameter
pProperties **must** be a valid pointer to a [VkImageDrmFormatModifierPropertiesEXT](#) structure
- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-parent
image **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkImageDrmFormatModifierPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           drmFormatModifier;
} VkImageDrmFormatModifierPropertiesEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **drmFormatModifier** returns the image's [Linux DRM format modifier](#).

If the **image** was created with [VkImageDrmFormatModifierListCreateInfoEXT](#), then the returned **drmFormatModifier** **must** belong to the list of modifiers provided at time of image creation in [VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers](#). If the **image** was created with [VkImageDrmFormatModifierExplicitCreateInfoEXT](#), then the returned **drmFormatModifier** **must** be the modifier provided at time of image creation in [VkImageDrmFormatModifierExplicitCreateInfoEXT::drmFormatModifier](#).

Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierPropertiesEXT-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_PROPERTIES_EXT](#)
- VUID-VkImageDrmFormatModifierPropertiesEXT-pNext-pNext

pNext **must** be **NULL**

To destroy an image, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyImage(
    VkDevice          device,
    VkImage            image,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the image.
- **image** is the image to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyImage-image-01000
All submitted commands that refer to **image**, either directly or via a **VkImageView**, **must** have completed execution
- VUID-vkDestroyImage-image-01001
If **VkAllocationCallbacks** were provided when **image** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyImage-image-01002
If no **VkAllocationCallbacks** were provided when **image** was created, **pAllocator** **must** be **NULL**
- VUID-vkDestroyImage-image-04882
image **must** not have been acquired from [vkGetSwapchainImagesKHR](#)

Valid Usage (Implicit)

- VUID-vkDestroyImage-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyImage-image-parameter
If **image** is not [VK_NULL_HANDLE](#), **image** **must** be a valid [VkImage](#) handle
- VUID-vkDestroyImage-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyImage-image-parent
If **image** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **image** **must** be externally synchronized

12.4.2. Image Format Features

Valid uses of a **VkImage** **may** depend on the image's *format features*, defined below. Such constraints are documented in the affected valid usage statement.

- If the image was created with **VK_IMAGE_TILING_LINEAR**, then its set of *format features* is the value of **VkFormatProperties::linearTilingFeatures** found by calling **vkGetPhysicalDeviceFormatProperties** on the same **format** as **VkImageCreateInfo::format**.
- If the image was created with **VK_IMAGE_TILING_OPTIMAL**, but without an **Android hardware buffer external format**, or a **QNX Screen Buffer external format** or an **VkBufferCollectionImageCreateInfoFUCHSIA**, then its set of *format features* is the value of **VkFormatProperties::optimalTilingFeatures** found by calling **vkGetPhysicalDeviceFormatProperties** on the same **format** as **VkImageCreateInfo::format**.
- If the image was created with an **Android hardware buffer external format**, then its set of *format features* is the value of **VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures** found by calling **vkGetAndroidHardwareBufferPropertiesANDROID** on the Android hardware buffer that was imported to the **VkDeviceMemory** to which the image is bound.
- If the image was created with an **QNX Screen buffer external format**, then its set of *format features* is the value of **VkScreenBufferFormatPropertiesQNX::formatFeatures** found by calling **vkGetScreenBufferPropertiesQNX** on the QNX Screen buffer that was imported to the **VkDeviceMemory** to which the image is bound.
- If the image was created with **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**, then:
 - The image's DRM format modifier is the value of **VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier** found by calling **vkGetImageDrmFormatModifierPropertiesEXT**.
 - Let **VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties** be the array found by calling **vkGetPhysicalDeviceFormatProperties2** on the same **format** as **VkImageCreateInfo::format**.
 - Let **VkDrmFormatModifierPropertiesEXT prop** be the array element whose **drmFormatModifier** member is the value of the image's DRM format modifier.
 - Then the image's set of *format features* is the value of **prop::drmFormatModifierTilingFeatures**.

12.4.3. Corner-Sampled Images

A *corner-sampled image* is an image where unnormalized texel coordinates are centered on integer values rather than half-integer values.

A corner-sampled image has a number of differences compared to conventional texture image:

- Texels are centered on integer coordinates. See [Unnormalized Texel Coordinate Operations](#)
- Normalized coordinates are scaled using $\text{coord} \times (\text{dim} - 1)$ rather than $\text{coord} \times \text{dim}$, where dim is the size of one dimension of the image. See [normalized texel coordinate transform](#).
- Partial derivatives are scaled using $\text{coord} \times (\text{dim} - 1)$ rather than $\text{coord} \times \text{dim}$. See [Scale Factor Operation](#).
- Calculation of the next higher LOD size goes according to $\lceil \text{dim} / 2 \rceil$ rather than $\lceil \text{dim} / 2 \rceil$. See [Image Mip Level Sizing](#).
- The minimum level size is 2x2 for 2D images and 2x2x2 for 3D images. See [Image Mip Level Sizing](#).

Corner-sampling is only supported for 2D and 3D images. When sampling a corner-sampled image, the sampler addressing mode **must** be [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#). Corner-sampled images are not supported as cube maps or depth/stencil images.

12.4.4. Image Mip Level Sizing

A *complete mipmap chain* is the full set of mip levels, from the largest mip level provided, down to the *minimum mip level size*.

Conventional Images

For conventional images, the dimensions of each successive mip level, $n+1$, are:

$$\text{width}_{n+1} = \max(\lceil \text{width}_n / 2 \rceil, 1)$$

$$\text{height}_{n+1} = \max(\lceil \text{height}_n / 2 \rceil, 1)$$

$$\text{depth}_{n+1} = \max(\lceil \text{depth}_n / 2 \rceil, 1)$$

where width_n , height_n , and depth_n are the dimensions of the next larger mip level, n .

The minimum mip level size is:

- 1 for one-dimensional images,
- 1x1 for two-dimensional images, and
- 1x1x1 for three-dimensional images.

The number of levels in a complete mipmap chain is:

$$\lceil \log_2(\max(\text{width}_0, \text{height}_0, \text{depth}_0)) \rceil + 1$$

where width_0 , height_0 , and depth_0 are the dimensions of the largest (most detailed) mip level, 0.

Corner-Sampled Images

For corner-sampled images, the dimensions of each successive mip level, $n+1$, are:

$$\text{width}_{n+1} = \max(\lceil \text{width}_n / 2 \rceil, 2)$$

$$\text{height}_{n+1} = \max(\lceil \text{height}_n / 2 \rceil, 2)$$

$$\text{depth}_{n+1} = \max(\lceil \text{depth}_n / 2 \rceil, 2)$$

where width_n , height_n , and depth_n are the dimensions of the next larger mip level, n .

The minimum mip level size is:

- 2x2 for two-dimensional images, and
- 2x2x2 for three-dimensional images.

The number of levels in a complete mipmap chain is:

$$\lceil \log_2(\max(\text{width}_0, \text{height}_0, \text{depth}_0)) \rceil$$

where width_0 , height_0 , and depth_0 are the dimensions of the largest (most detailed) mip level, 0.

12.4.5. Image Capture Replay for Descriptor Heaps

To allow for a replay tool to capture and replay image descriptors used with [descriptor heaps](#), opaque data **must** be captured during the initial recording and provided when recreating the image during replay, using the following functions:

To get the opaque capture descriptor data for images, call:

```
// Provided by VK_EXT_descriptor_heap
VkResult vkGetImageOpaqueCaptureDataEXT(
    VkDevice          device,
    uint32_t          imageCount,
    const VkImage*     pImages,
    VkHostAddressRangeEXT* pDatas);
```

- **device** is the logical device that gets the data.
- **imageCount** is the number of images to retrieve data from.
- **pImages** is a pointer to an array of [VkImage](#) objects to retrieve the opaque capture data from.
- **pDatas** is a pointer to an array of [VkHostAddressRangeEXT](#) structures defining the host address ranges where each image's opaque capture data will be written.

Valid Usage

- VUID-vkGetImageOpaqueCaptureDataEXT-descriptorHeapCaptureReplay-11282
The `descriptorHeapCaptureReplay` feature **must** be enabled
- VUID-vkGetImageOpaqueCaptureDataEXT-size-11283
The `size` member of each element of `pDatas` **must** be equal to `imageCaptureReplayOpaqueDataSize`
- VUID-vkGetImageOpaqueCaptureDataEXT-device-11284
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkGetImageOpaqueCaptureDataEXT-pImages-11285
Each element of `pImages` **must** have been created with `VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT` set in `VkImageCreateInfo::flags`

Valid Usage (Implicit)

- VUID-vkGetImageOpaqueCaptureDataEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetImageOpaqueCaptureDataEXT-pImages-parameter
`pImages` **must** be a valid pointer to an array of `imageCount` valid `VkImage` handles
- VUID-vkGetImageOpaqueCaptureDataEXT-pDdatas-parameter
`pDdatas` **must** be a valid pointer to an array of `imageCount` `VkHostAddressRangeEXT` structures
- VUID-vkGetImageOpaqueCaptureDataEXT-imageCount-arraylength
`imageCount` **must** be greater than 0
- VUID-vkGetImageOpaqueCaptureDataEXT-pImages-parent
Each element of `pImages` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkOpaqueCaptureDataCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkOpaqueCaptureDataCreateInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    const VkHostAddressRangeConstEXT* pData;
} VkOpaqueCaptureDataCreateInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pData** is a pointer to the range of host memory containing opaque data previously captured via [vkGetImageOpaqueCaptureDataEXT](#).

When an image is created with [VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT](#) set in [VkImageCreateInfo::flags](#), if the **pNext** chain of [VkImageCreateInfo](#) includes this structure, and **pData** is not **NULL**, the implementation will attempt to recreate the image such that descriptors written with [vkWriteResourceDescriptorsEXT](#) will be reproduced with the same bit pattern as during capture if possible. If the implementation is unable to recreate the image based on this data, image creation will fail and return [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS](#).

When a tensor is created with [VK_TENSOR_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_ARM](#) set in [VkTensorCreateInfoARM::flags](#), if the **pNext** chain of [VkTensorCreateInfoARM](#) includes this structure, and **pData** is not **NULL**, the implementation will attempt to recreate the tensor such that descriptors written with [vkWriteResourceDescriptorsEXT](#) will be reproduced with the same bit pattern as during capture if possible. If the implementation is unable to recreate the tensor based on this data, tensor creation will fail and return [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS](#).

If this structure is not present, it is equivalent to setting **pData** to **NULL**.

Valid Usage (Implicit)

- VUID-VkOpaqueCaptureDataCreateInfoEXT-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_OPAQUE_CAPTURE_DATA_CREATE_INFO_EXT](#)
- VUID-VkOpaqueCaptureDataCreateInfoEXT-pData-parameter
If **pData** is not **NULL**, **pData** **must** be a valid pointer to a valid [VkHostAddressRangeConstEXT](#) structure

Structure Chaining

Extends the structures

- [VkImageCreateInfo](#)
- [VkTensorCreateInfoARM](#)

12.4.6. Tensor Capture Replay for Descriptor Heaps

To allow for a replay tool to capture and replay tensor descriptors used with [descriptor heaps](#), opaque data **must** be captured during the initial recording and provided when recreating the tensor during replay, using the following functions:

To get the opaque capture descriptor data for tensors, call:

```
// Provided by VK_EXT_descriptor_heap with VK_ARM_tensors
VkResult vkGetTensorOpaqueCaptureDataARM(
    VkDevice          device,
    uint32_t          tensorCount,
    const VkTensorARM* pTensors,
    VkHostAddressRangeEXT* pDatas);
```

- `device` is the logical device that gets the data.
- `tensorCount` is the number of tensors to retrieve data from.
- `pTensors` is a pointer to an array of [VkTensorARM](#) objects to retrieve the opaque capture data from.
- `pDatas` is a pointer to an array of [VkHostAddressRangeEXT](#) structures defining the host address ranges where each tensor's opaque capture data will be written.

Valid Usage

- VUID-vkGetTensorOpaqueCaptureDataARM-descriptorHeapCaptureReplay-11391
The `descriptorHeapCaptureReplay` feature **must** be enabled
- VUID-vkGetTensorOpaqueCaptureDataARM-size-11392
The `size` member of each element of `pDatas` **must** be equal to `tensorCaptureReplayOpaqueDataSize`
- VUID-vkGetTensorOpaqueCaptureDataARM-device-11393
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkGetTensorOpaqueCaptureDataARM-pTensors-11394
Each element of `pTensors` **must** have been created with `VK_TENSOR_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_ARM` set in `VkTensorCreateInfoARM::flags`

Valid Usage (Implicit)

- VUID-vkGetTensorOpaqueCaptureDataARM-device-parameter
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkGetTensorOpaqueCaptureDataARM-pTensors-parameter
`pTensors` **must** be a valid pointer to an array of `tensorCount` valid [VkTensorARM](#) handles

- VUID-vkGetTensorOpaqueCaptureDataARM-pDatas-parameter
pDatas must be a valid pointer to an array of **tensorCount** **VkHostAddressRangeEXT** structures
- VUID-vkGetTensorOpaqueCaptureDataARM-tensorCount-arraylength
tensorCount must be greater than **0**
- VUID-vkGetTensorOpaqueCaptureDataARM-pTensors-parent
Each element of **pTensors must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

12.5. Image Layouts

Images are stored in implementation-dependent opaque layouts in memory. Each layout has limitations on what kinds of operations are supported for image subresources using the layout. At any given time, the data representing an image subresource in memory exists in a particular layout which is determined by the most recent layout transition that was performed on that image subresource. Applications have control over which layout each image subresource uses, and **can** transition an image subresource from one layout to another. Transitions **can** happen with an image memory barrier, included as part of a **vkCmdPipelineBarrier** or a **vkCmdWaitEvents** command buffer command (see **Image Memory Barriers**), or as part of a subpass dependency within a render pass (see **VkSubpassDependency**).

Image layout is per-image subresource. Separate image subresources of the same image **can** be in different layouts at the same time, with the exception that depth and stencil aspects of a given image subresource **can** only be in different layouts if the **separateDepthStencilLayouts** feature is enabled. When an **VkImageView** descriptor is accessed on the device, all image subresources must be in a valid image layout.

NOTE Each layout **may** offer optimal performance for a specific usage of image memory. For example, an image with a layout of **VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL** **may** provide optimal performance for use as a color attachment, but be unsupported for use in transfer commands. Applications **can** transition an image subresource from one layout to another in order to achieve optimal performance when the image subresource is used for multiple kinds of operations. After initialization, applications need not use

any layout other than the general layout, though this **may** produce suboptimal performance on some implementations.

Upon creation, all image subresources of an image are initially in the same layout, where that layout is selected by the `VkImageCreateInfo::initialLayout` member. The `initialLayout` **must** be either `VK_IMAGE_LAYOUT_UNDEFINED` or `VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT` or `VK_IMAGE_LAYOUT_PREINITIALIZED`. If it is `VK_IMAGE_LAYOUT_PREINITIALIZED`, then the image data **can** be preinitialized by the host while using this layout, and the transition away from this layout will preserve that data. If it is `VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT`, then the image data is interpreted to be zeroed. If the memory bound to this image is not fully zeroed when the image is transitioned to a different layout, the results are undefined. If it is `VK_IMAGE_LAYOUT_UNDEFINED`, then the contents of the data are considered to be undefined, and the transition away from this layout is not guaranteed to preserve that data. For either of these initial layouts, any image subresources **must** be transitioned to another layout before they are accessed by the device.

Host access to image memory is only well-defined for `linear` images and for image subresources of those images which are currently in any of the following layouts:

- `VK_IMAGE_LAYOUT_PREINITIALIZED`
- `VK_IMAGE_LAYOUT_GENERAL`
- `VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT`

Calling `vkGetImageSubresourceLayout` for a linear image returns a subresource layout mapping that is valid for either of those image layouts.

The set of image layouts consists of:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageLayout {
    VK_IMAGE_LAYOUT_UNDEFINED = 0,
    VK_IMAGE_LAYOUT_GENERAL = 1,
    VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL = 2,
    VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL = 3,
    VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL = 4,
    VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL = 5,
    VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL = 6,
    VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL = 7,
    VK_IMAGE_LAYOUT_PREINITIALIZED = 8,
// Provided by VK_VERSION_1_1
    VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL = 1000117000,
// Provided by VK_VERSION_1_1
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL = 1000117001,
// Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL = 1000241000,
// Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL = 1000241001,
// Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL = 1000241002,
```

```

// Provided by VK_VERSION_1_2
VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL = 1000241003,
// Provided by VK_VERSION_1_3
VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL = 1000314000,
// Provided by VK_VERSION_1_3
VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL = 1000314001,
// Provided by VK_VERSION_1_4
VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ = 1000232000,
// Provided by VK_KHR_swapchain
VK_IMAGE_LAYOUT_PRESENT_SRC_KHR = 1000001002,
// Provided by VK_KHR_video_decode_queue
VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR = 1000024000,
// Provided by VK_KHR_video_decode_queue
VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR = 1000024001,
// Provided by VK_KHR_video_decode_queue
VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR = 1000024002,
// Provided by VK_KHR_shared_presentable_image
VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR = 1000111000,
// Provided by VK_EXT_fragment_density_map
VK_IMAGE_LAYOUT_FRAGMENT_DENSITY_MAP_OPTIMAL_EXT = 1000218000,
// Provided by VK_KHR_fragment_shading_rate
VK_IMAGE_LAYOUT_FRAGMENT_SHADING_RATE_ATTACHMENT_OPTIMAL_KHR = 1000164003,
// Provided by VK_KHR_video_encode_queue
VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR = 1000299000,
// Provided by VK_KHR_video_encode_queue
VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR = 1000299001,
// Provided by VK_KHR_video_encode_queue
VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR = 1000299002,
// Provided by VK_EXT_attachment_feedback_loop_layout
VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT = 1000339000,
// Provided by VK_ARM_tensors
VK_IMAGE_LAYOUT_TENSOR_ALIASING_ARM = 1000460000,
// Provided by VK_KHR_video_encode_quantization_map
VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR = 1000553000,
// Provided by VK_EXT_zero_initialize_device_memory
VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT = 1000620000,
// Provided by VK_KHR_maintenance2
VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL,
// Provided by VK_KHR_maintenance2
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL,
// Provided by VK_NV_shading_rate_image
VK_IMAGE_LAYOUT_SHADING_RATE_OPTIMAL_NV =
VK_IMAGE_LAYOUT_FRAGMENT_SHADING_RATE_ATTACHMENT_OPTIMAL_KHR,
// Provided by VK_KHR_dynamic_rendering_local_read
VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ_KHR = VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ,
// Provided by VK_KHR_separate_depth_stencil_layouts
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL,
// Provided by VK_KHR_separate_depth_stencil_layouts

```

```

VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL,
// Provided by VK_KHR_separate_depth_stencil_layouts
VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL,
// Provided by VK_KHR_separate_depth_stencil_layouts
VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL,
// Provided by VK_KHR_synchronization2
VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR = VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL,
// Provided by VK_KHR_synchronization2
VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL_KHR = VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL,
} VkImageLayout;

```

The type(s) of device access supported by each layout are:

- [VK_IMAGE_LAYOUT_UNDEFINED](#) specifies that the layout is unknown. Image memory **cannot** be transitioned into this layout. This layout **can** be used as the [initialLayout](#) member of [VkImageCreateInfo](#). This layout **can** be used in place of the current image layout in a layout transition, but doing so will cause the contents of the image's memory to be undefined.
- [VK_IMAGE_LAYOUT_PREINITIALIZED](#) specifies that an image's memory is in a defined layout and **can** be populated by data, but that it has not yet been initialized by the driver. Image memory **cannot** be transitioned into this layout. This layout **can** be used as the [initialLayout](#) member of [VkImageCreateInfo](#). This layout is intended to be used as the initial layout for an image whose contents are written by the host, and hence the data **can** be written to memory immediately, without first executing a layout transition. Currently, [VK_IMAGE_LAYOUT_PREINITIALIZED](#) is only useful with [linear](#) images because there is not a standard layout defined for [VK_IMAGE_TILING_OPTIMAL](#) images.
- [VK_IMAGE_LAYOUT_GENERAL](#) supports all types of device access, unless specified otherwise.
- [VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT](#) specifies that an image's memory is in a defined layout and is zeroed, but that it has not yet been initialized by the driver. Image memory **cannot** be transitioned into this layout. This layout **can** be used as the [initialLayout](#) member of [VkImageCreateInfo](#). This layout is intended to be used as the initial layout for an image whose contents are already zeroed, either from being explicitly set to zero by an application or from being allocated with [VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT](#).
- [VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL](#) specifies a layout that **must** only be used with attachment accesses in the graphics pipeline.
- [VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL](#) specifies a layout allowing read only access as an attachment, or in shaders as a sampled image, combined image/sampler, or input attachment.
- [VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL](#) **must** only be used as a color or resolve attachment in a [VkFramebuffer](#). This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT](#) usage flag set.
- [VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL](#) specifies a layout for both the depth and stencil aspects of a depth/stencil format image allowing read and write access as a depth/stencil attachment. It is equivalent to [VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL](#) and

[VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL](#).

- [VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL](#) specifies a layout for both the depth and stencil aspects of a depth/stencil format image allowing read only access as a depth/stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to [VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL](#) and [VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL](#).
- [VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL](#) specifies a layout for depth/stencil format images allowing read and write access to the stencil aspect as a stencil attachment, and read only access to the depth aspect as a depth attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to [VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL](#) and [VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL](#).
- [VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL](#) specifies a layout for depth/stencil format images allowing read and write access to the depth aspect as a depth attachment, and read only access to the stencil aspect as a stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to [VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL](#) and [VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL](#).
- [VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL](#) specifies a layout for the depth aspect of a depth/stencil format image allowing read and write access as a depth attachment.
- [VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL](#) specifies a layout for the depth aspect of a depth/stencil format image allowing read-only access as a depth attachment or in shaders as a sampled image, combined image/sampler, or input attachment.
- [VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL](#) specifies a layout for the stencil aspect of a depth/stencil format image allowing read and write access as a stencil attachment.
- [VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL](#) specifies a layout for the stencil aspect of a depth/stencil format image allowing read-only access as a stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment.
- [VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL](#) specifies a layout allowing read-only access in a shader as a sampled image, combined image/sampler, or input attachment. This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_SAMPLED_BIT](#) or [VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT](#) usage bits enabled.
- [VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL](#) **must** only be used as a source image of a transfer command (see the definition of [VK_PIPELINE_STAGE_TRANSFER_BIT](#)). This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_TRANSFER_SRC_BIT](#) usage flag set.
- [VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL](#) **must** only be used as a destination image of a transfer command. This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_TRANSFER_DST_BIT](#) usage flag set.
- [VK_IMAGE_LAYOUT_PRESENT_SRC_KHR](#) **must** only be used for presenting a presentable image for display.
- [VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR](#) is valid only for shared presentable images, and

must be used for any usage the image supports.

- [VK_IMAGE_LAYOUT_FRAGMENT_SHADING_RATE_ATTACHMENT_OPTIMAL_KHR](#) **must** only be used as a [fragment shading rate attachment](#) or [shading rate image](#). This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR](#) usage flag set.
- [VK_IMAGE_LAYOUT_FRAGMENT_DENSITY_MAP_OPTIMAL_EXT](#) **must** only be used as a fragment density map attachment in a [VkRenderPass](#). This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT](#) usage flag set.
- [VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR](#) **must** only be used as a [decode output picture](#) in a [video decode operation](#). This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR](#) usage flag set.
- [VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR](#) is reserved for future use.
- [VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR](#) **must** only be used as an output [reconstructed picture](#) or an input [reference picture](#) in a [video decode operation](#). This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR](#) usage flag set.
- [VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR](#) is reserved for future use.
- [VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR](#) **must** only be used as an [encode input picture](#) in a [video encode operation](#). This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR](#) usage flag set.
- [VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR](#) **must** only be used as an output [reconstructed picture](#) or an input [reference picture](#) in a [video encode operation](#). This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR](#) usage flag set.
- [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) **must** only be used as either a color attachment or depth/stencil attachment and/or read-only access in a shader as a sampled image, combined image/sampler, or input attachment. This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT](#) usage flag set, and either the [VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT](#) or [VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT](#) usage flags set, and either the [VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT](#) or [VK_IMAGE_USAGE_SAMPLED_BIT](#) usage flags set.
- [VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ](#) **must** only be used as either a storage image, or a color or depth/stencil attachment and an input attachment. This layout is valid only for image subresources of images created with either the [VK_IMAGE_USAGE_STORAGE_BIT](#) usage flag set, or both the [VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT](#) and either of the [VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT](#) or [VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT](#) usage flags set.
- [VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR](#) **must** only be used as a [quantization map](#) in a [video encode operation](#). This layout is valid only for image subresources of images created with the

[VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR](#) or
[VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR](#) usage flags set.

- [VK_IMAGE_LAYOUT_TENSOR_ALIASING_ARM](#) specifies the layout that an image created with [VK_IMAGE_TILING_OPTIMAL](#) **must** be in, if the [unifiedImageLayouts](#) feature is disabled, or **may** be in if it is enabled, for it and a tensor bound to the same aliased range of memory to consistently interpret the data in memory. See [Memory Aliasing](#) for a complete set of rules for tensor/image aliasing. This layout is valid only for image subresources of images created with the [VK_IMAGE_USAGE_TENSOR_ALIASING_BIT_ARM](#) usage flag set.

The layout of each image subresource is not a state of the image subresource itself, but is rather a property of how the data in memory is organized, and thus for each mechanism of accessing an image in the API the application **must** specify a parameter or structure member that indicates which image layout the image subresource(s) are considered to be in when the image will be accessed. For transfer commands, this is a parameter to the command (see [Clear Commands](#) and [Copy Commands](#)). For use as a framebuffer attachment, this is a member in the substructures of the [VkRenderPassCreateInfo](#) (see [Render Pass](#)). For use in a descriptor set, this is a member in the [VkDescriptorImageInfo](#) structure (see [Descriptor Set Updates](#)).

If the [unifiedImageLayouts](#) feature is enabled, the [VK_IMAGE_LAYOUT_GENERAL](#) image layout **may** be used in place of the other layouts where allowed with no loss of performance.

NOTE

[VK_IMAGE_LAYOUT_GENERAL](#) can be a useful catch-all image layout, but there are situations where a dedicated image layout must be used instead. Some examples include:

- [VK_IMAGE_LAYOUT_PRESENT_SRC_KHR](#)
- [VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR](#)
- [VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR](#),
[VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR](#),
[VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR](#) without the [unifiedImageLayoutsVideo](#) feature
- [VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR](#),
[VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR](#),
[VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR](#) without the [unifiedImageLayoutsVideo](#) feature
- [VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR](#) without the [unifiedImageLayoutsVideo](#) feature

NOTE

While [VK_IMAGE_LAYOUT_GENERAL](#) suggests that all types of device access is possible, it does not mean that all patterns of memory accesses are safe in all situations. [Common Render Pass Data Races](#) outlines some situations where data races are unavoidable. For example, when a subresource is used as both an attachment and a sampled image (i.e., not an input attachment), [enabling feedback loop](#) adds extra guarantees which [VK_IMAGE_LAYOUT_GENERAL](#) alone does not.

12.5.1. Image Layout Matching Rules

At the time that any command buffer command accessing an image executes on any queue, the layouts of the image subresources that are accessed **must** all match exactly the layout specified via the API controlling those accesses, except in case of accesses to an image with a depth/stencil format performed through descriptors referring to only a single aspect of the image, where the following relaxed matching rules apply:

- Descriptors referring just to the depth aspect of a depth/stencil image only need to match in the image layout of the depth aspect, thus [VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL](#) and [VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL](#) are considered to match.
- Descriptors referring just to the stencil aspect of a depth/stencil image only need to match in the image layout of the stencil aspect, thus [VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL](#) and [VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL](#) are considered to match.

When performing a layout transition on an image subresource, the old layout value **must** either equal the current layout of the image subresource (at the time the transition executes), or else be [VK_IMAGE_LAYOUT_UNDEFINED](#) (implying that the contents of the image subresource need not be preserved). The new layout used in a transition **must** not be any of:

- [VK_IMAGE_LAYOUT_UNDEFINED](#)
- [VK_IMAGE_LAYOUT_PREINITIALIZED](#)
- [VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT](#)

The image layout of each image subresource of a depth/stencil image created with [VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT](#) is dependent on the last sample locations used to render to the image subresource as a depth/stencil attachment, thus applications **must** provide the same sample locations that were last used to render to the given image subresource whenever a layout transition of the image subresource happens, otherwise the contents of the depth aspect of the image subresource become undefined.

In addition, depth reads from a depth/stencil attachment referring to an image subresource range of a depth/stencil image created with [VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT](#) using different sample locations than what have been last used to perform depth writes to the image subresources of the same image subresource range return undefined values.

Similarly, depth writes to a depth/stencil attachment referring to an image subresource range of a depth/stencil image created with [VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT](#) using different sample locations than what have been last used to perform depth writes to the image subresources of the same image subresource range make the contents of the depth aspect of those image subresources undefined.

12.5.2. Image Layout Rules with External Memory

When images created with external memory handle types listed in the [external image implied layouts table](#) are accessed outside of Vulkan, they **must** be in the layout specified in the table, and **can** be assumed to be in that layout when they are accessed in Vulkan after external access.

Table 16. External Image Implied Layouts

External Memory Handle Type	Implied Layout When Accessed Externally
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT	VK_IMAGE_LAYOUT_GENERAL
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT	VK_IMAGE_LAYOUT_GENERAL
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_BIT_NV	VK_IMAGE_LAYOUT_GENERAL
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_KMT_BIT_NV	VK_IMAGE_LAYOUT_GENERAL

12.6. Image Views

Image objects are not directly accessed by pipeline shaders for reading or writing image data. Instead, *image views* representing contiguous ranges of the image subresources and containing additional metadata are used for that purpose. Views **must** be created on images of compatible types, and **must** represent a valid subset of image subresources.

Image views are represented by [VkImageView](#) handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkImageView)
```

[VK_REMAINING_ARRAY_LAYERS](#) is a special constant value used for image views to indicate that all remaining array layers in an image after the base layer should be included in the view.

```
#define VK_REMAINING_ARRAY_LAYERS          (~0U)
```

[VK_REMAINING_MIP_LEVELS](#) is a special constant value used for image views to indicate that all remaining mipmap levels in an image after the base level should be included in the view.

```
#define VK_REMAINING_MIP_LEVELS           (~0U)
```

The types of image views that **can** be created are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageViewType {
    VK_IMAGE_VIEW_TYPE_1D = 0,
    VK_IMAGE_VIEW_TYPE_2D = 1,
    VK_IMAGE_VIEW_TYPE_3D = 2,
    VK_IMAGE_VIEW_TYPE_CUBE = 3,
    VK_IMAGE_VIEW_TYPE_1D_ARRAY = 4,
    VK_IMAGE_VIEW_TYPE_2D_ARRAY = 5,
    VK_IMAGE_VIEW_TYPE_CUBE_ARRAY = 6,
} VkImageViewType;
```

To create an image view, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateImageView(
    VkDevice                                device,
    const VkImageViewCreateInfo*            pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkImageView*                            pView);
```

- **device** is the logical device that creates the image view.
- **pCreateInfo** is a pointer to a [VkImageViewCreateInfo](#) structure containing parameters to be used to create the image view.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pView** is a pointer to a [VkImageView](#) handle in which the resulting image view object is returned.

Valid Usage

- VUID-vkCreateImageView-device-09667
device **must** support at least one queue family with one of the [VK_QUEUE_VIDEO_ENCODE_BIT_KHR](#), [VK_QUEUE_VIDEO_DECODE_BIT_KHR](#), [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) capabilities
- VUID-vkCreateImageView-image-09179
[VkImageViewCreateInfo::image](#) **must** have been created from **device**

Valid Usage (Implicit)

- VUID-vkCreateImageView-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreateImageView-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkImageViewCreateInfo](#) structure
- VUID-vkCreateImageView-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- `VOID-vkCreateImageView-pView-parameter`
`pView` **must** be a valid pointer to a `VkImageView` handle
- `VOID-vkCreateImageView-device-queuecount`
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkImageViewCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageViewCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkImageViewCreateFlags flags;
    VkImage              image;
    VkImageViewType       viewType;
    VkFormat              format;
    VkComponentMapping     components;
    VkImageSubresourceRange subresourceRange;
} VkImageViewCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkImageViewCreateFlagBits` specifying additional parameters of the image view.
- `image` is a `VkImage` on which the view will be created.
- `viewType` is a `VkImageViewType` value specifying the type of the image view.
- `format` is a `VkFormat` specifying the format and type used to interpret texel blocks of the image.
- `components` is a `VkComponentMapping` structure specifying a remapping of color components

(or of depth or stencil components after they have been converted into color components).

- `subresourceRange` is a `VkImageSubresourceRange` structure selecting the set of mipmap levels and array layers to be accessible to the view.

Some of the `image` creation parameters are inherited by the view. In particular, image view creation inherits the implicit parameter `usage` specifying the allowed usages of the image view that, by default, takes the value of the corresponding `usage` parameter specified in `VkImageCreateInfo` at image creation time. The implicit `usage` **can** be overridden by adding a `VkImageViewUsageCreateInfo` structure to the `pNext` chain, but the view usage **must** be a subset of the image usage. If `image` has a depth-stencil format and was created with a `VkImageStencilUsageCreateInfo` structure included in the `pNext` chain of `VkImageCreateInfo`, the usage is calculated based on the `subresource.aspectMask` provided:

- If `aspectMask` includes only `VK_IMAGE_ASPECT_STENCIL_BIT`, the implicit `usage` is equal to `VkImageStencilUsageCreateInfo::stencilUsage`.
- If `aspectMask` includes only `VK_IMAGE_ASPECT_DEPTH_BIT`, the implicit `usage` is equal to `VkImageCreateInfo::usage`.
- If both aspects are included in `aspectMask`, the implicit `usage` is equal to the intersection of `VkImageCreateInfo::usage` and `VkImageStencilUsageCreateInfo::stencilUsage`.

If `image` is a 3D image, its Z range **can** be restricted to a subset by adding a `VkImageViewSlicedCreateInfoEXT` to the `pNext` chain.

If `image`'s format is `multi-planar` and `aspectMask` is one of `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT`, or `VK_IMAGE_ASPECT_PLANE_2_BIT`, the *view format* is the compatible format for the plane. Otherwise the *view format* is the `format` used to create `image`.

If `image` was created with the `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` flag, `format` **can** be set to a `format` that is compatible with the *view format*. If the image was not created with `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, `format` **must** equal the *view format*.

When creating a single-plane view of a `multi-planar image`, `width` and `height` **must** be derived from the multi-planar image's dimensions in the manner listed for `plane compatibility` for the plane.

Views of compatible formats will have the same mapping between texel coordinates and memory locations irrespective of the `format`, with only the interpretation of the bit pattern changing.

If `image` was created with a `multi-planar format`, and the image view's `aspectMask` is one of `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT` or `VK_IMAGE_ASPECT_PLANE_2_BIT`, the view's aspect mask is considered to be equivalent to `VK_IMAGE_ASPECT_COLOR_BIT` when used as a framebuffer attachment.

NOTE

Values intended to be used with one view format **may** not be exactly preserved when written or read through a different format. For example, an integer value that happens to have the bit pattern of a floating-point denorm or NaN **may** be flushed or canonicalized when written or read through a view with a floating-point format. Similarly, a value written through a signed normalized format that has a bit pattern exactly equal to -2^b **may** be changed to $-2^b + 1$ as described in [Conversion from](#)

If **image** was created with the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag, **format** **must** be *compatible* with the image's format as described above; or **must** be an uncompressed format, in which case it **must** be *size-compatible* with the image's format. In this case, the resulting image view's texel dimensions equal the dimensions of the selected mip level divided by the compressed texel block size and rounded up.

The `VkComponentMapping` **components** member describes a remapping from components of the image to components of the vector returned by shader image instructions. This remapping **must** be the identity swizzle for any `VkImageView` used with a combined image sampler that enables `sampler Y'CBCR` *conversion*, input attachment descriptors, framebuffer attachments, and storage image descriptors.

Image views with *formats that require YC_BC_R conversion* or *external formats* **must** be created with a `VkSamplerYcbcrConversionInfo` structure in the `pNext` chain to be used with sampling. Any image view created with a `VkSamplerYcbcrConversionInfo` structure in the `pNext` chain **must** only be sampled using a sampler with an identically defined `VkSamplerYcbcrConversion`. When used in a *video coding* operation, the specified `sampler Y'CBCR` *conversion* has no effect.

Table 17. Image Type and Image View Type Compatibility Requirements

Image View Type	Compatible Image Types
<code>VK_IMAGE_VIEW_TYPE_1D</code>	<code>VK_IMAGE_TYPE_1D</code>
<code>VK_IMAGE_VIEW_TYPE_1D_ARRAY</code>	<code>VK_IMAGE_TYPE_1D</code>
<code>VK_IMAGE_VIEW_TYPE_2D</code>	<code>VK_IMAGE_TYPE_2D</code> , <code>VK_IMAGE_TYPE_3D</code>
<code>VK_IMAGE_VIEW_TYPE_2D_ARRAY</code>	<code>VK_IMAGE_TYPE_2D</code> , <code>VK_IMAGE_TYPE_3D</code>
<code>VK_IMAGE_VIEW_TYPE_CUBE</code>	<code>VK_IMAGE_TYPE_2D</code>
<code>VK_IMAGE_VIEW_TYPE_CUBE_ARRAY</code>	<code>VK_IMAGE_TYPE_2D</code>
<code>VK_IMAGE_VIEW_TYPE_3D</code>	<code>VK_IMAGE_TYPE_3D</code>

Valid Usage

- VUID-VkImageViewCreateInfo-image-01003
If **image** was not created with `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` then **viewType** **must** not be `VK_IMAGE_VIEW_TYPE_CUBE` or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-VkImageViewCreateInfo-viewType-01004
If the `imageCubeArray` feature is not enabled, **viewType** **must** not be `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-VkImageViewCreateInfo-image-06723
If **image** was created with `VK_IMAGE_TYPE_3D` but without `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` set then **viewType** **must** not be `VK_IMAGE_VIEW_TYPE_2D_ARRAY`
- VUID-VkImageViewCreateInfo-image-06728
If **image** was created with `VK_IMAGE_TYPE_3D` but without

VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT or
VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set, then **viewType** **must** not be
VK_IMAGE_VIEW_TYPE_2D

- VUID-VkImageViewCreateInfo-image-04970
If **image** was created with VK_IMAGE_TYPE_3D and **viewType** is VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY then **subresourceRange.levelCount** **must** be 1
- VUID-VkImageViewCreateInfo-image-04972
If **image** was created with a **samples** value not equal to VK_SAMPLE_COUNT_1_BIT then **viewType** **must** be either VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY
- VUID-VkImageViewCreateInfo-image-04441
image **must** have been created with a **usage** value containing at least one of the following:
 - VK_IMAGE_USAGE_SAMPLED_BIT
 - VK_IMAGE_USAGE_STORAGE_BIT
 - VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT
 - VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT
 - VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT
 - VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT
 - VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
 - VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT
 - VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR
 - VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR
 - VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR
 - VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR
 - VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM
 - VK_IMAGE_USAGE_SAMPLE_BLOCK_MATCH_BIT_QCOM
 - VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR
 - VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR
- VUID-VkImageViewCreateInfo-None-02273
The **format features** of the resultant image view **must** contain at least one bit
- VUID-VkImageViewCreateInfo-usage-02274
If **usage** contains VK_IMAGE_USAGE_SAMPLED_BIT, then the **format features** of the resultant image view **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT
- VUID-VkImageViewCreateInfo-usage-02275
If **usage** contains VK_IMAGE_USAGE_STORAGE_BIT, then the image view's **format features** **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT
- VUID-VkImageViewCreateInfo-usage-08931
If **usage** contains VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT, then the image view's **format features** **must** contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT or VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV

- VUID-VkImageViewCreateInfo-usage-02277
If **usage** contains `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
- VUID-VkImageViewCreateInfo-image-08333
If **usage** contains `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR`
- VUID-VkImageViewCreateInfo-image-08334
If **usage** contains `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR`
- VUID-VkImageViewCreateInfo-image-08335
usage **must** not include `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`
- VUID-VkImageViewCreateInfo-image-08336
If **usage** contains `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_VIDEO_ENCODE_INPUT_BIT_KHR`
- VUID-VkImageViewCreateInfo-image-08337
If **usage** contains `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_VIDEO_ENCODE_DPB_BIT_KHR`
- VUID-VkImageViewCreateInfo-image-08338
usage **must** not include `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`
- VUID-VkImageViewCreateInfo-usage-10259
If **usage** contains `VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_2_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`
- VUID-VkImageViewCreateInfo-usage-10260
If **usage** contains `VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR`, then the image view's `format` `features` **must** contain `VK_FORMAT_FEATURE_2_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR`
- VUID-VkImageViewCreateInfo-usage-08932
If **usage** contains `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, and any of the following is true:
 - the `externalFormatResolve` feature is not enabled
 - the `nullColorAttachmentWithExternalFormatResolve` property is `VK_FALSE`
 - **image** was created with an `VkExternalFormatANDROID::externalFormat` value of 0
 then the image view's `format` `features` **must** contain at least one of `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV`

- VUID-VkImageViewCreateInfo-subresourceRange-01478
`subresourceRange.baseMipLevel` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `image` was created
- VUID-VkImageViewCreateInfo-subresourceRange-01718
If `subresourceRange.levelCount` is not `VK_REMAINING_MIP_LEVELS`, `subresourceRange.baseMipLevel + subresourceRange.levelCount` **must** be less than or equal to the `mipLevels` specified in `VkImageCreateInfo` when `image` was created
- VUID-VkImageViewCreateInfo-image-02571
If `image` was created with the `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT` usage flag set, `subresourceRange.levelCount` **must** be 1
- VUID-VkImageViewCreateInfo-image-06724
If `image` is not a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` or `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` set, or `viewType` is not `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, `subresourceRange.baseArrayLayer` **must** be less than the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created
- VUID-VkImageViewCreateInfo-subresourceRange-06725
If `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `image` is not a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` or `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` set, or `viewType` is not `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, `subresourceRange.layerCount` **must** be non-zero and `subresourceRange.baseArrayLayer + subresourceRange.layerCount` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created
- VUID-VkImageViewCreateInfo-image-02724
If `image` is a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` set, and `viewType` is `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, `subresourceRange.baseArrayLayer` **must** be less than the depth computed from `baseMipLevel` and `extent.depth` specified in `VkImageCreateInfo` when `image` was created, according to the formula defined in [Image Mip Level Sizing](#)
- VUID-VkImageViewCreateInfo-subresourceRange-02725
If `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `image` is a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` set, and `viewType` is `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, `subresourceRange.layerCount` **must** be non-zero and `subresourceRange.baseArrayLayer + subresourceRange.layerCount` **must** be less than or equal to the depth computed from `baseMipLevel` and `extent.depth` specified in `VkImageCreateInfo` when `image` was created, according to the formula defined in [Image Mip Level Sizing](#)
- VUID-VkImageViewCreateInfo-image-01761
If `image` was created with the `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` flag, but without the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag, and if the `format` of the `image` is not a [multi-planar format](#), `format` **must** be compatible with the `format` used to create `image`, as defined in [Format Compatibility Classes](#)
- VUID-VkImageViewCreateInfo-image-01583
If `image` was created with the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT`

flag, **format** **must** be compatible with, or **must** be an uncompressed format that is **size-compatible** with, the **format** used to create **image**

- VUID-VkImageViewCreateInfo-image-07072

If **image** was created with the **VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT** flag and **format** is a non-compressed format, the **levelCount** member of **subresourceRange** **must** be 1

- VUID-VkImageViewCreateInfo-image-09487

If **image** was created with the **VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT** flag, the **VkPhysicalDeviceMaintenance6Properties::blockTexelViewCompatibleMultipleLayers** property is not **VK_TRUE**, and **format** is a non-compressed format, then the **layerCount** member of **subresourceRange** **must** be 1

- VUID-VkImageViewCreateInfo-pNext-01585

If a **VkImageFormatListCreateInfo** structure was included in the **pNext** chain of the **VkImageCreateInfo** structure used when creating **image** and **VkImageFormatListCreateInfo::viewFormatCount** is not zero then **format** **must** be one of the formats in **VkImageFormatListCreateInfo::pViewFormats**

- VUID-VkImageViewCreateInfo-image-01586

If **image** was created with the **VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT** flag, if the **format** of the **image** is a **multi-planar format**, and if **subresourceRange.aspectMask** is one of the **multi-planar aspect mask** bits, then **format** **must** be compatible with the **VkFormat** for the plane of the **image format** indicated by **subresourceRange.aspectMask**, as defined in **Compatible Formats of Planes of Multi-Planar Formats**

- VUID-VkImageViewCreateInfo-subresourceRange-07818

subresourceRange.aspectMask **must** only have at most 1 valid **multi-planar aspect mask** bit

- VUID-VkImageViewCreateInfo-image-12397

If **image** was not created with the **VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT** flag **format** **must** be identical to the **format** used to create **image**

- VUID-VkImageViewCreateInfo-format-12398

If the **format** of the **image** is a **multi-planar format** and **subresourceRange.aspectMask** is **VK_IMAGE_ASPECT_COLOR_BIT**, **format** **must** be identical to the **format** used to create **image**

- VUID-VkImageViewCreateInfo-format-06415

If the image view's format **requires a sampler Y'C_BC_R conversion** and **usage** contains **VK_IMAGE_USAGE_SAMPLED_BIT**, then the **pNext** chain **must** include a **VkSamplerYcbcrConversionInfo** structure with a conversion value other than **VK_NULL_HANDLE**

- VUID-VkImageViewCreateInfo-format-04714

If **format** has a **_422** or **_420** suffix then **image** **must** have been created with a width that is a multiple of 2

- VUID-VkImageViewCreateInfo-format-04715

If **format** has a **_420** suffix then **image** **must** have been created with a height that is a multiple of 2

- VUID-VkImageViewCreateInfo-pNext-01970

If the `pNext` chain includes a `VkSamplerYcbcrConversionInfo` structure with a `conversion` value other than `VK_NULL_HANDLE`, all members of `components` **must** have the `identity swizzle`

- VUID-VkImageViewCreateInfo-pNext-06658

If the `pNext` chain includes a `VkSamplerYcbcrConversionInfo` structure with a `conversion` value other than `VK_NULL_HANDLE`, `format` **must** be the same used in `VkSamplerYcbcrConversionCreateInfo::format`

- VUID-VkImageViewCreateInfo-image-01020

If `image` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkImageViewCreateInfo-subResourceRange-01021

`viewType` **must** be compatible with the type of `image` as shown in the `view type compatibility table`

- VUID-VkImageViewCreateInfo-image-02399

If `image` has an `Android external format`, `format` **must** be `VK_FORMAT_UNDEFINED`

- VUID-VkImageViewCreateInfo-image-02400

If `image` has an `Android external format`, the `pNext` chain **must** include a `VkSamplerYcbcrConversionInfo` structure with a `conversion` object created with the same external format as `image`

- VUID-VkImageViewCreateInfo-image-02401

If `image` has an `Android external format`, all members of `components` **must** be the `identity swizzle`

- VUID-VkImageViewCreateInfo-image-08957

If `image` has an `QNX Screen external format`, `format` **must** be `VK_FORMAT_UNDEFINED`

- VUID-VkImageViewCreateInfo-image-08958

If `image` has an `QNX Screen external format`, the `pNext` chain **must** include a `VkSamplerYcbcrConversionInfo` structure with a `conversion` object created with the same external format as `image`

- VUID-VkImageViewCreateInfo-image-08959

If `image` has an `QNX Screen external format`, all members of `components` **must** be the `identity swizzle`

- VUID-VkImageViewCreateInfo-image-02086

If `image` was created with the `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR` usage flag set, `viewType` **must** be `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

- VUID-VkImageViewCreateInfo-image-02087

If the `shadingRateImage` feature is enabled, and `image` was created with the `VK_IMAGE_USAGE_SHADING_RATE_IMAGE_BIT_NV` usage flag set, `format` **must** be `VK_FORMAT_R8_UINT`

- VUID-VkImageViewCreateInfo-attachmentFragmentShadingRate-12386

If the `attachmentFragmentShadingRate` feature is not enabled, the `usage` for the image view **must** not contain `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

- VUID-VkImageViewCreateInfo-usage-04550
If the **usage** for the image view includes `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, then the image view's **format** features **must** contain `VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`
- VUID-VkImageViewCreateInfo-usage-04551
If the **usage** for the image view includes `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, and **layeredShadingRateAttachments** is `VK_FALSE`, **subresourceRange.layerCount** **must** be 1
- VUID-VkImageViewCreateInfo-flags-02572
If the **fragmentDensityMapDynamic** feature is not enabled, **flags** **must** not contain `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT`
- VUID-VkImageViewCreateInfo-flags-03567
If the **fragmentDensityMapDeferred** feature is not enabled, **flags** **must** not contain `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT`
- VUID-VkImageViewCreateInfo-flags-03568
If **flags** contains `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT`, **flags** **must** not contain `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT`
- VUID-VkImageViewCreateInfo-image-03569
If **image** was created with **flags** containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT` and the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set, **subresourceRange.layerCount** **must** be less than or equal to `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::maxSubsampledArrayLayers`
- VUID-VkImageViewCreateInfo-invocationMask-04993
If the **invocationMask** feature is enabled, and **image** was created with the `VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI` usage flag set, **format** **must** be `VK_FORMAT_R8_UINT`
- VUID-VkImageViewCreateInfo-flags-04116
If **flags** does not contain `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT`, and **image** was created with the `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT` usage flag set, its **flags** **must** not contain any of `VK_IMAGE_CREATE_PROTECTED_BIT`, `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`
- VUID-VkImageViewCreateInfo-pNext-02662
If the **pNext** chain includes a `VkImageViewUsageCreateInfo` structure, and **image** was not created with a `VkImageStencilUsageCreateInfo` structure included in the **pNext** chain of `VkImageCreateInfo`, its **usage** member **must** not include any bits that were not set in the **usage** member of the `VkImageCreateInfo` structure used to create **image**
- VUID-VkImageViewCreateInfo-pNext-02663
If the **pNext** chain includes a `VkImageViewUsageCreateInfo` structure, **image** was created with a `VkImageStencilUsageCreateInfo` structure included in the **pNext** chain of `VkImageCreateInfo`, and **subresourceRange.aspectMask** includes

VK_IMAGE_ASPECT_STENCIL_BIT, the `usage` member of the `VkImageViewUsageCreateInfo` structure **must** not include any bits that were not set in the `usage` member of the `VkImageStencilUsageCreateInfo` structure used to create `image`

- VUID-VkImageViewCreateInfo-pNext-02664

If the `pNext` chain includes a `VkImageViewUsageCreateInfo` structure, `image` was created with a `VkImageStencilUsageCreateInfo` structure included in the `pNext` chain of `VkImageCreateInfo`, and `subresourceRange.aspectMask` includes bits other than `VK_IMAGE_ASPECT_STENCIL_BIT`, the `usage` member of the `VkImageViewUsageCreateInfo` structure **must** not include any bits that were not set in the `usage` member of the `VkImageCreateInfo` structure used to create `image`

- VUID-VkImageViewCreateInfo-imageViewType-04973

If `viewType` is `VK_IMAGE_VIEW_TYPE_1D`, `VK_IMAGE_VIEW_TYPE_2D`, or `VK_IMAGE_VIEW_TYPE_3D`; and `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, then `subresourceRange.layerCount` **must** be 1

- VUID-VkImageViewCreateInfo-imageViewType-04974

If `viewType` is `VK_IMAGE_VIEW_TYPE_1D`, `VK_IMAGE_VIEW_TYPE_2D`, or `VK_IMAGE_VIEW_TYPE_3D`; and `subresourceRange.layerCount` is `VK_REMAINING_ARRAY_LAYERS`, then the remaining number of layers **must** be 1

- VUID-VkImageViewCreateInfo-viewType-02960

If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE` and `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `subresourceRange.layerCount` **must** be 6

- VUID-VkImageViewCreateInfo-viewType-02961

If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY` and `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `subresourceRange.layerCount` **must** be a multiple of 6

- VUID-VkImageViewCreateInfo-viewType-02962

If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE` and `subresourceRange.layerCount` is `VK_REMAINING_ARRAY_LAYERS`, the remaining number of layers **must** be 6

- VUID-VkImageViewCreateInfo-viewType-02963

If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY` and `subresourceRange.layerCount` is `VK_REMAINING_ARRAY_LAYERS`, the remaining number of layers **must** be a multiple of 6

- VUID-VkImageViewCreateInfo-imageViewFormatSwizzle-04465

If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageViewFormatSwizzle` is `VK_FALSE`, all elements of `components` **must** have the `identity swizzle`

- VUID-VkImageViewCreateInfo-imageViewFormatReinterpretation-04466

If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageViewFormatReinterpretation` is `VK_FALSE`, the `VkFormat` in `format` **must** not contain a different number of components, or a different number of bits in each component, than the format of the `VkImage` in `image`

- VUID-VkImageViewCreateInfo-image-04817

If `image` was created with the `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` usage flag set, `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, then the `viewType` **must** be `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

- VUID-VkImageViewCreateInfo-image-04818
If **image** was created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR` usage flag set, `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, then the **viewType** **must** be `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`
- VUID-VkImageViewCreateInfo-image-10261
If **image** was created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR` usage flags set, then **viewType** **must** be `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`
- VUID-VkImageViewCreateInfo-flags-08106
If **flags** includes `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the **descriptorBufferCaptureReplay** feature **must** be enabled
- VUID-VkImageViewCreateInfo-pNext-08107
If the **pNext** chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, **flags** **must** contain `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`
- VUID-VkImageViewCreateInfo-pNext-06787
If the **pNext** chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its **exportObjectType** member **must** be `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT`
- VUID-VkImageViewCreateInfo-pNext-06944
If the **pNext** chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then **textureSampleWeighted** feature **must** be enabled
- VUID-VkImageViewCreateInfo-pNext-06945
If the **pNext** chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then **image** **must** have been created with the `VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM` usage flag set
- VUID-VkImageViewCreateInfo-pNext-06946
If the **pNext** chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then **components** **must** be `VK_COMPONENT_SWIZZLE_IDENTITY` for all components
- VUID-VkImageViewCreateInfo-pNext-06947
If the **pNext** chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then **subresourceRange.aspectMask** **must** be `VK_IMAGE_ASPECT_COLOR_BIT`
- VUID-VkImageViewCreateInfo-pNext-06948
If the **pNext** chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then **subresourceRange.levelCount** **must** be 1
- VUID-VkImageViewCreateInfo-pNext-06949
If the **pNext** chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then **viewType** **must** be `VK_IMAGE_VIEW_TYPE_1D_ARRAY` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`
- VUID-VkImageViewCreateInfo-pNext-06950

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and if `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, then `image` **must** have been created with `imageType` `VK_IMAGE_TYPE_1D`

- VUID-VkImageViewCreateInfo-pNext-06951

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, then `subresourceRange.layerCount` **must** be equal to 2

- VUID-VkImageViewCreateInfo-pNext-06952

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, then `image` **must** have been created with `width` equal to or greater than $(numPhases \times \max(\text{align}(\text{filterSize.width}, 4), \text{filterSize.height}))$

- VUID-VkImageViewCreateInfo-pNext-06953

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and if `viewType` is `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, then `image` **must** have been created with `imageType` `VK_IMAGE_TYPE_2D`

- VUID-VkImageViewCreateInfo-pNext-06954

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, then `subresourceRange.layerCount` **must** be equal or greater than `numPhases`

- VUID-VkImageViewCreateInfo-pNext-06955

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, then `image` **must** have been created with `width` equal to or greater than `filterSize.width`

- VUID-VkImageViewCreateInfo-pNext-06956

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_2D_ARRAY`, then `image` **must** have been created with `height` equal to or greater than `filterSize.height`

- VUID-VkImageViewCreateInfo-pNext-06957

If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure then `VkImageViewSampleWeightCreateInfoQCOM::filterSize.height` **must** be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension.height`

- VUID-VkImageViewCreateInfo-subresourceRange-09594

`subresourceRange.aspectMask` **must** be valid for the `format` the `image` was created with

- VUID-VkImageViewCreateInfo-image-13357

If `image` was created with `VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR`, `format` **must** not be a multi-planar format

- VUID-VkImageViewCreateInfo-None-12280

If Vulkan 1.3 is not supported and the `ycbcr2plane444Formats` feature is not enabled, `format` **must** not be `VK_FORMAT_G8_B8R8_2PLANE_444_UNORM`, `VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16`, `VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16`, or `VK_FORMAT_G16_B16R16_2PLANE_444_UNORM`

Valid Usage (Implicit)

- VUID-VkImageViewCreateInfo-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_CREATE_INFO`
- VUID-VkImageViewCreateInfo-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either `NULL` or a pointer to a valid instance of `VkExportMetalObjectCreateInfoEXT`, `VkImageViewASTCDecodeModeEXT`, `VkImageViewMinLodCreateInfoEXT`, `VkImageViewSampleWeightCreateInfoQCOM`, `VkImageViewSlicedCreateInfoEXT`, `VkImageViewUsageCreateInfo`, `VkOpaqueCaptureDescriptorDataCreateInfoEXT`, or `VkSamplerYcbcrConversionInfo`
- VUID-VkImageViewCreateInfo-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique, with the exception of structures of type `VkExportMetalObjectCreateInfoEXT`
- VUID-VkImageViewCreateInfo-flags-parameter
flags **must** be a valid combination of `VkImageViewCreateFlagBits` values
- VUID-VkImageViewCreateInfo-image-parameter
image **must** be a valid `VkImage` handle
- VUID-VkImageViewCreateInfo-viewType-parameter
viewType **must** be a valid `VkImageViewType` value
- VUID-VkImageViewCreateInfo-format-parameter
format **must** be a valid `VkFormat` value
- VUID-VkImageViewCreateInfo-components-parameter
components **must** be a valid `VkComponentMapping` structure
- VUID-VkImageViewCreateInfo-subresourceRange-parameter
subresourceRange **must** be a valid `VkImageSubresourceRange` structure

Bits which **can** be set in `VkImageViewCreateInfo::flags`, specifying additional parameters of an image view, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageViewCreateFlagBits {
    // Provided by VK_EXT_fragment_density_map
    VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT = 0x00000001,
    // Provided by VK_EXT_descriptor_buffer
    VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000004,
    // Provided by VK_EXT_fragment_density_map2
    VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT = 0x00000002,
} VkImageViewCreateFlagBits;
```

- `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT` specifies that the fragment density map will be read by device during `VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT`

- [VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT](#) specifies that the fragment density map will be read by the host during [vkEndCommandBuffer](#) for the primary command buffer that the render pass is recorded into
- [VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#) specifies that the image view **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageViewCreateFlags;
```

[VkImageViewCreateFlags](#) is a bitmask type for setting a mask of zero or more [VkImageViewCreateFlagBits](#).

The set of usages for the created image view **can** be restricted compared to the parent image's [usage](#) flags by adding a [VkImageViewUsageCreateInfo](#) structure to the [pNext](#) chain of [VkImageViewCreateInfo](#).

The [VkImageViewUsageCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageViewUsageCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImageUsageFlags  usage;
} VkImageViewUsageCreateInfo;
```

```
// Provided by VK_KHR_maintenance2
// Equivalent to VkImageViewUsageCreateInfo
typedef VkImageViewUsageCreateInfo VkImageViewUsageCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [usage](#) is a bitmask of [VkImageUsageFlagBits](#) specifying allowed usages of the image view.

When this structure is chained to [VkImageViewCreateInfo](#) the [usage](#) field overrides the implicit [usage](#) parameter inherited from image creation time and its value is used instead for the purposes of determining the valid usage conditions of [VkImageViewCreateInfo](#).

Valid Usage (Implicit)

- VUID-VkImageViewUsageCreateInfo-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_IMAGE_VIEW_USAGE_CREATE_INFO](#)
- VUID-VkImageViewUsageCreateInfo-usage-parameter
[usage](#) **must** be a valid combination of [VkImageUsageFlagBits](#) values

- VUID-VkImageViewUsageCreateInfo-usage-requiredbitmask
`usage` **must** not be 0

Structure Chaining

Extends the structure

- [VkImageViewCreateInfo](#)

The range of 3D slices for the created image view **can** be restricted to a subset of the parent image's Z range by adding a `VkImageViewSlicedCreateInfoEXT` structure to the `pNext` chain of [VkImageViewCreateInfo](#).

The `VkImageViewSlicedCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_sliced_view_of_3d
typedef struct VkImageViewSlicedCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           sliceOffset;
    uint32_t           sliceCount;
} VkImageViewSlicedCreateInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sliceOffset` is the Z-offset for the first 3D slice accessible to the image view.
- `sliceCount` is the number of 3D slices accessible to the image view.

When this structure is chained to [VkImageViewCreateInfo](#) the `sliceOffset` field is treated as a Z-offset for the sliced view and `sliceCount` specifies the range. Shader accesses using a Z coordinate of 0 will access the depth slice corresponding to `sliceOffset` in the image, and in a shader, the maximum in-bounds Z coordinate for the view is `sliceCount` - 1.

A sliced 3D view **must** only be used with a single mip level. The slice coordinates are integer coordinates within the `subresourceRange.baseMipLevel` used to create the image view.

The effective view depth is equal to `extent.depth` used to create the `image` for this view adjusted by `subresourceRange.baseMipLevel` as specified in [Image Mip Level Sizing](#).

Shader access to this image view is only affected by `VkImageViewSlicedCreateInfoEXT` if it uses a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`. For access using any other descriptor type, the contents of `VkImageViewSlicedCreateInfoEXT` are ignored; instead, `sliceOffset` is treated as being equal to 0, and `sliceCount` is treated as being equal to `VK_REMAINING_3D_SLICES_EXT`.

Valid Usage

- VUID-VkImageViewSlicedCreateInfoEXT-sliceOffset-07867
`sliceOffset` **must** be less than the effective view depth as specified in [Image Mip Level Sizing](#)
- VUID-VkImageViewSlicedCreateInfoEXT-sliceCount-07868
If `sliceCount` is not `VK_REMAINING_3D_SLICES_EXT`, it **must** be non-zero and `sliceOffset` + `sliceCount` **must** be less than or equal to the effective view depth as specified in [Image Mip Level Sizing](#)
- VUID-VkImageViewSlicedCreateInfoEXT-image-07869
`image` **must** have been created with `imageType` equal to `VK_IMAGE_TYPE_3D`
- VUID-VkImageViewSlicedCreateInfoEXT-viewType-07909
`viewType` **must** be `VK_IMAGE_VIEW_TYPE_3D`
- VUID-VkImageViewSlicedCreateInfoEXT-None-07870
The image view **must** reference exactly 1 mip level
- VUID-VkImageViewSlicedCreateInfoEXT-None-07871
The `imageSlicedViewOf3D` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkImageViewSlicedCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_SLICED_CREATE_INFO_EXT`

Structure Chaining

Extends the structure

- [VkImageViewCreateInfo](#)

`VK_REMAINING_3D_SLICES_EXT` is a special constant value used for `VkImageViewSlicedCreateInfoEXT::sliceCount` to indicate that all remaining 3D slices in an image after the first slice offset specified should be included in the view.

```
#define VK_REMAINING_3D_SLICES_EXT (~0U)
```

The `VkImageSubresourceRange` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresourceRange {
    VkImageAspectFlags    aspectMask;
    uint32_t              baseMipLevel;
    uint32_t              levelCount;
    uint32_t              baseArrayLayer;
    uint32_t              layerCount;
} VkImageSubresourceRange;
```

- **aspectMask** is a bitmask of [VkImageAspectFlagBits](#) specifying which aspect(s) of the image are included in the view.
- **baseMipLevel** is the first mipmap level accessible to the view.
- **levelCount** is the number of mipmap levels (starting from **baseMipLevel**) accessible to the view.
- **baseArrayLayer** is the first array layer accessible to the view.
- **layerCount** is the number of array layers (starting from **baseArrayLayer**) accessible to the view.

The number of mipmap levels and array layers **must** be a subset of the image subresources in the image. If an application wants to use all mip levels or layers in an image after the **baseMipLevel** or **baseArrayLayer**, it **can** set **levelCount** and **layerCount** to the special values [VK_REMAINING_MIP_LEVELS](#) and [VK_REMAINING_ARRAY_LAYERS](#) without knowing the exact number of mip levels or layers.

For cube and cube array image views, the layers of the image view starting at **baseArrayLayer** correspond to faces in the order +X, -X, +Y, -Y, +Z, -Z. For cube arrays, each set of six sequential layers is a single cube, so the number of cube maps in a cube map array view is **layerCount** / 6, and image array layer (**baseArrayLayer** + i) is face index (i mod 6) of cube i / 6. If the number of layers in the view, whether set explicitly in **layerCount** or implied by [VK_REMAINING_ARRAY_LAYERS](#), is not a multiple of 6, the last cube map in the array **must** not be accessed.

aspectMask **must** be only [VK_IMAGE_ASPECT_COLOR_BIT](#), [VK_IMAGE_ASPECT_DEPTH_BIT](#) or [VK_IMAGE_ASPECT_STENCIL_BIT](#) if **format** is a color, depth-only or stencil-only format, respectively, except if **format** is a [multi-planar format](#). If using a depth/stencil format with both depth and stencil components, **aspectMask** **must** include at least one of [VK_IMAGE_ASPECT_DEPTH_BIT](#) and [VK_IMAGE_ASPECT_STENCIL_BIT](#), and **can** include both.

When the [VkImageSubresourceRange](#) structure is used to select a subset of the slices of a 3D image's mip level in order to create a 2D or 2D array image view of a 3D image created with [VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT](#), **baseArrayLayer** and **layerCount** specify the first slice index and the number of slices to include in the created image view. Such an image view **can** be used as a framebuffer attachment that refers only to the specified range of slices of the selected mip level. If the [maintenance9](#) feature is not enabled, any layout transitions performed on such an attachment view during a render pass instance still apply to the entire subresource referenced which includes all the slices of the selected mip level.

When using an image view of a depth/stencil image to populate a descriptor set (e.g. for sampling in the shader, or for use as an input attachment), the **aspectMask** **must** only include one bit, which selects whether the image view is used for depth reads (i.e. using a floating-point sampler or input

attachment in the shader) or stencil reads (i.e. using an unsigned integer sampler or input attachment in the shader). When an image view of a depth/stencil image is used as a depth/stencil framebuffer attachment, the `aspectMask` is ignored and both depth and stencil image subresources are used.

When creating a `VkImageView`, if `sampler Y'CBCR conversion` is enabled in the sampler, the `aspectMask` of a `subresourceRange` used by the `VkImageView` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`.

When creating a `VkImageView`, if `sampler Y'CBCR conversion` is not enabled in the sampler and the image `format` is `multi-planar format`, the image **must** have been created with `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, and the `aspectMask` of the `VkImageView`'s `subresourceRange` **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT` or `VK_IMAGE_ASPECT_PLANE_2_BIT`.

Valid Usage

- VUID-VkImageSubresourceRange-levelCount-01720
If `levelCount` is not `VK_REMAINING_MIP_LEVELS`, it **must** be greater than 0
- VUID-VkImageSubresourceRange-layerCount-01721
If `layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, it **must** be greater than 0
- VUID-VkImageSubresourceRange-aspectMask-01670
If `aspectMask` includes `VK_IMAGE_ASPECT_COLOR_BIT`, then it **must** not include any of `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT`, or `VK_IMAGE_ASPECT_PLANE_2_BIT`
- VUID-VkImageSubresourceRange-aspectMask-02278
`aspectMask` **must** not include `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` for any index *i*

Valid Usage (Implicit)

- VUID-VkImageSubresourceRange-aspectMask-parameter
`aspectMask` **must** be a valid combination of `VkImageAspectFlagBits` values
- VUID-VkImageSubresourceRange-aspectMask-requiredbitmask
`aspectMask` **must** not be 0

Bits which **can** be set in an aspect mask to specify aspects of an image for purposes such as identifying a subresource, are:

```

// Provided by VK_VERSION_1_0
typedef enum VkImageAspectFlagBits {
    VK_IMAGE_ASPECT_COLOR_BIT = 0x00000001,
    VK_IMAGE_ASPECT_DEPTH_BIT = 0x00000002,
    VK_IMAGE_ASPECT_STENCIL_BIT = 0x00000004,
    VK_IMAGE_ASPECT_METADATA_BIT = 0x00000008,
// Provided by VK_VERSION_1_1
    VK_IMAGE_ASPECT_PLANE_0_BIT = 0x00000010,
// Provided by VK_VERSION_1_1
    VK_IMAGE_ASPECT_PLANE_1_BIT = 0x00000020,
// Provided by VK_VERSION_1_1
    VK_IMAGE_ASPECT_PLANE_2_BIT = 0x00000040,
// Provided by VK_VERSION_1_3
    VK_IMAGE_ASPECT_NONE = 0,
// Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT = 0x00000080,
// Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT = 0x00000100,
// Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT = 0x00000200,
// Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT = 0x00000400,
// Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_ASPECT_PLANE_0_BIT_KHR = VK_IMAGE_ASPECT_PLANE_0_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_ASPECT_PLANE_1_BIT_KHR = VK_IMAGE_ASPECT_PLANE_1_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_ASPECT_PLANE_2_BIT_KHR = VK_IMAGE_ASPECT_PLANE_2_BIT,
// Provided by VK_KHR_maintenance4
    VK_IMAGE_ASPECT_NONE_KHR = VK_IMAGE_ASPECT_NONE,
} VkImageAspectFlagBits;

```

- [VK_IMAGE_ASPECT_NONE](#) specifies no image aspect, or the image aspect is not applicable.
- [VK_IMAGE_ASPECT_COLOR_BIT](#) specifies the color aspect.
- [VK_IMAGE_ASPECT_DEPTH_BIT](#) specifies the depth aspect.
- [VK_IMAGE_ASPECT_STENCIL_BIT](#) specifies the stencil aspect.
- [VK_IMAGE_ASPECT_METADATA_BIT](#) specifies the metadata aspect used for [sparse resource](#) operations.
- [VK_IMAGE_ASPECT_PLANE_0_BIT](#) specifies plane 0 of a *multi-planar* image format.
- [VK_IMAGE_ASPECT_PLANE_1_BIT](#) specifies plane 1 of a *multi-planar* image format.
- [VK_IMAGE_ASPECT_PLANE_2_BIT](#) specifies plane 2 of a *multi-planar* image format.
- [VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT](#) specifies *memory plane 0*.
- [VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT](#) specifies *memory plane 1*.
- [VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT](#) specifies *memory plane 2*.

- [VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT](#) specifies *memory plane 3*.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageAspectFlags;
```

[VkImageAspectFlags](#) is a bitmask type for setting a mask of zero or more [VkImageAspectFlagBits](#).

The [VkComponentMapping](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkComponentMapping {
    VkComponentSwizzle    r;
    VkComponentSwizzle    g;
    VkComponentSwizzle    b;
    VkComponentSwizzle    a;
} VkComponentMapping;
```

- **r** is a [VkComponentSwizzle](#) specifying the component value placed in the R component of the output vector.
- **g** is a [VkComponentSwizzle](#) specifying the component value placed in the G component of the output vector.
- **b** is a [VkComponentSwizzle](#) specifying the component value placed in the B component of the output vector.
- **a** is a [VkComponentSwizzle](#) specifying the component value placed in the A component of the output vector.

Valid Usage (Implicit)

- VUID-VkComponentMapping-r-parameter
r must be a valid [VkComponentSwizzle](#) value
- VUID-VkComponentMapping-g-parameter
g must be a valid [VkComponentSwizzle](#) value
- VUID-VkComponentMapping-b-parameter
b must be a valid [VkComponentSwizzle](#) value
- VUID-VkComponentMapping-a-parameter
a must be a valid [VkComponentSwizzle](#) value

Possible values of the members of [VkComponentMapping](#), specifying the component values placed in each component of the output vector, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkComponentSwizzle {
    VK_COMPONENT_SWIZZLE_IDENTITY = 0,
    VK_COMPONENT_SWIZZLE_ZERO = 1,
    VK_COMPONENT_SWIZZLE_ONE = 2,
    VK_COMPONENT_SWIZZLE_R = 3,
    VK_COMPONENT_SWIZZLE_G = 4,
    VK_COMPONENT_SWIZZLE_B = 5,
    VK_COMPONENT_SWIZZLE_A = 6,
} VkComponentSwizzle;
```

- [VK_COMPONENT_SWIZZLE_IDENTITY](#) specifies that the component is set to the identity swizzle.
- [VK_COMPONENT_SWIZZLE_ZERO](#) specifies that the component is set to zero.
- [VK_COMPONENT_SWIZZLE_ONE](#) specifies that the component is set to either 1 or 1.0, depending on whether the type of the image view format is integer or floating-point respectively, as determined by the [Format Definition](#) section for each [VkFormat](#).
- [VK_COMPONENT_SWIZZLE_R](#) specifies that the component is set to the value of the R component of the image.
- [VK_COMPONENT_SWIZZLE_G](#) specifies that the component is set to the value of the G component of the image.
- [VK_COMPONENT_SWIZZLE_B](#) specifies that the component is set to the value of the B component of the image.
- [VK_COMPONENT_SWIZZLE_A](#) specifies that the component is set to the value of the A component of the image.

Setting the identity swizzle on a component is equivalent to setting the identity mapping on that component. That is:

Table 18. Component Mappings Equivalent To [VK_COMPONENT_SWIZZLE_IDENTITY](#)

Component	Identity Mapping
components.r	VK_COMPONENT_SWIZZLE_R
components.g	VK_COMPONENT_SWIZZLE_G
components.b	VK_COMPONENT_SWIZZLE_B
components.a	VK_COMPONENT_SWIZZLE_A

If the [pNext](#) chain includes a [VkImageViewASTCDecodeModeEXT](#) structure, then that structure includes a parameter specifying the decode mode for image views using ASTC compressed formats.

The [VkImageViewASTCDecodeModeEXT](#) structure is defined as:

```
// Provided by VK_EXT_astc_decode_mode
typedef struct VkImageViewASTCDecodeModeEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkFormat            decodeMode;
} VkImageViewASTCDecodeModeEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `decodeMode` is the intermediate format used to decode ASTC compressed formats.

Valid Usage

- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02230
`decodeMode` **must** be one of `VK_FORMAT_R16G16B16A16_SFLOAT`, `VK_FORMAT_R8G8B8A8_UNORM`, or `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`
- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02231
If the `decodeModeSharedExponent` feature is not enabled, `decodeMode` **must** not be `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`
- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02232
If `decodeMode` is `VK_FORMAT_R8G8B8A8_UNORM` the image view **must** not include blocks using any of the ASTC HDR modes
- VUID-VkImageViewASTCDecodeModeEXT-format-04084
`format` of the image view **must** be one of the [ASTC Compressed Image Formats](#)

If `format` uses sRGB encoding then the `decodeMode` has no effect.

Valid Usage (Implicit)

- VUID-VkImageViewASTCDecodeModeEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_ASTC_DECODE_MODE_EXT`
- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-parameter
`decodeMode` **must** be a valid `VkFormat` value

Structure Chaining

Extends the structure

- [VkImageViewCreateInfo](#)

If the `pNext` chain includes a `VkImageViewSampleWeightCreateInfoQCOM` structure, then that structure includes a parameter specifying the parameters for weight image views used in [weight image sampling](#).

The `VkImageViewSampleWeightCreateInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_image_processing
typedef struct VkImageViewSampleWeightCreateInfoQCOM {
    VkStructureType    sType;
    const void*        pNext;
    VkOffset2D         filterCenter;
    VkExtent2D         filterSize;
    uint32_t           numPhases;
} VkImageViewSampleWeightCreateInfoQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `filterCenter` is a `VkOffset2D` describing the location of the weight filter origin.
- `filterSize` is a `VkExtent2D` specifying weight filter dimensions.
- `numPhases` is the number of sub-pixel filter phases.

The `filterCenter` specifies the origin or center of the filter kernel, as described in [Weight Sampling Operation](#). The `numPhases` describes the number of sub-pixel filter phases as described in [Weight Sampling Phases](#).

Valid Usage

- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterSize-06958
`filterSize.width` **must** be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension.width`
- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterSize-06959
`filterSize.height` **must** be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension.height`
- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterCenter-06960
`filterCenter.x` **must** be less than or equal to $(\text{filterSize.width} - 1)$
- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterCenter-06961
`filterCenter.y` **must** be less than or equal to $(\text{filterSize.height} - 1)$
- VUID-VkImageViewSampleWeightCreateInfoQCOM-numPhases-06962
`numPhases` **must** be a power of two squared value (i.e., 1, 4, 16, 64, 256, etc.)
- VUID-VkImageViewSampleWeightCreateInfoQCOM-numPhases-06963
`numPhases` **must** be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterPhases`

Valid Usage (Implicit)

- VUID-VkImageViewSampleWeightCreateInfoQCOM-sType-sType
`sType` **must** be

Structure Chaining

Extends the structure

- [VkImageViewCreateInfo](#)

To destroy an image view, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyImageView(
    VkDevice          device,
    VkImageView       imageView,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the image view.
- **imageView** is the image view to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyImageView-imageView-01026
All submitted commands that refer to **imageView** **must** have completed execution
- VUID-vkDestroyImageView-imageView-01027
If **VkAllocationCallbacks** were provided when **imageView** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyImageView-imageView-01028
If no **VkAllocationCallbacks** were provided when **imageView** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyImageView-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyImageView-imageView-parameter
If **imageView** is not [VK_NULL_HANDLE](#), **imageView** **must** be a valid [VkImageView](#) handle
- VUID-vkDestroyImageView-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyImageView-imageView-parent
If **imageView** is a valid handle, it **must** have been created, allocated, or retrieved from

`device`

Host Synchronization

- Host access to `imageView` **must** be externally synchronized

To get the handle for an image view, call:

```
// Provided by VK_NVX_image_view_handle
uint32_t vkGetImageViewHandleNVX(
    VkDevice          device,
    const VkImageViewHandleInfoNVX* pInfo);
```

- `device` is the logical device that owns the image view.
- `pInfo` describes the image view to query and type of handle.

Valid Usage (Implicit)

- VUID-vkGetImageViewHandleNVX-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetImageViewHandleNVX-pInfo-parameter `pInfo` **must** be a valid pointer to a valid `VkImageViewHandleInfoNVX` structure

To get the 64-bit handle for an image view, call:

```
// Provided by VK_NVX_image_view_handle
uint64_t vkGetImageViewHandle64NVX(
    VkDevice          device,
    const VkImageViewHandleInfoNVX* pInfo);
```

- `device` is the logical device that owns the image view.
- `pInfo` describes the image view to query and type of handle.

Valid Usage (Implicit)

- VUID-vkGetImageViewHandle64NVX-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetImageViewHandle64NVX-pInfo-parameter `pInfo` **must** be a valid pointer to a valid `VkImageViewHandleInfoNVX` structure

The `VkImageViewHandleInfoNVX` structure is defined as:

```
// Provided by VK_NVX_image_view_handle
typedef struct VkImageViewHandleInfoNVX {
    VkStructureType    sType;
    const void*        pNext;
    VkImageView         imageView;
    VkDescriptorType    descriptorType;
    VkSampler           sampler;
} VkImageViewHandleInfoNVX;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **imageView** is the image view to query.
- **descriptorType** is the type of descriptor for which to query a handle.
- **sampler** is the sampler to combine with the image view when generating the handle.

Valid Usage

- VUID-VkImageViewHandleInfoNVX-descriptorType-02654
descriptorType **must** be [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#),
[VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or
[VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#)
- VUID-VkImageViewHandleInfoNVX-sampler-02655
sampler **must** be a valid [VkSampler](#) if **descriptorType** is
[VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#)
- VUID-VkImageViewHandleInfoNVX-imageView-02656
If **descriptorType** is [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#) or
[VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#), the image that **imageView** was
created from **must** have been created with the [VK_IMAGE_USAGE_SAMPLED_BIT](#) usage
flag set
- VUID-VkImageViewHandleInfoNVX-imageView-02657
If **descriptorType** is [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), the image that **imageView**
was created from **must** have been created with the [VK_IMAGE_USAGE_STORAGE_BIT](#)
usage flag set

Valid Usage (Implicit)

- VUID-VkImageViewHandleInfoNVX-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IMAGE_VIEW_HANDLE_INFO_NVX](#)
- VUID-VkImageViewHandleInfoNVX-pNext-pNext
pNext **must** be **NULL**
- VUID-VkImageViewHandleInfoNVX-imageView-parameter
imageView **must** be a valid [VkImageView](#) handle

- VUID-VkImageViewHandleInfoNVX-descriptorType-parameter
descriptorType **must** be a valid [VkDescriptorType](#) value
- VUID-VkImageViewHandleInfoNVX-sampler-parameter
If **sampler** is not [VK_NULL_HANDLE](#), **sampler** **must** be a valid [VkSampler](#) handle
- VUID-VkImageViewHandleInfoNVX-commonparent
Both of **imageView**, and **sampler** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

To get the device address for an image view, call:

```
// Provided by VK_NVX_image_view_handle
VkResult vkGetImageViewAddressNVX(
    VkDevice                device,
    VkImageView             imageView,
    VkImageViewAddressPropertiesNVX* pProperties);
```

- **device** is the logical device that owns the image view.
- **imageView** is a handle to the image view.
- **pProperties** contains the device address and size when the call returns.

Valid Usage (Implicit)

- VUID-vkGetImageViewAddressNVX-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetImageViewAddressNVX-imageView-parameter
imageView **must** be a valid [VkImageView](#) handle
- VUID-vkGetImageViewAddressNVX-pProperties-parameter
pProperties **must** be a valid pointer to a [VkImageViewAddressPropertiesNVX](#) structure
- VUID-vkGetImageViewAddressNVX-imageView-parent
imageView **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkImageViewAddressPropertiesNVX` structure is defined as:

```
// Provided by VK_NVX_image_view_handle
typedef struct VkImageViewAddressPropertiesNVX {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceAddress     deviceAddress;
    VkDeviceSize        size;
} VkImageViewAddressPropertiesNVX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceAddress` is the device address of the image view.
- `size` is the size in bytes of the image view device memory.

Valid Usage (Implicit)

- VUID-VkImageViewAddressPropertiesNVX-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_ADDRESS_PROPERTIES_NVX`
- VUID-VkImageViewAddressPropertiesNVX-pNext-pNext
`pNext` **must** be `NULL`

To get the handle for a combined image sampler, call:

```
// Provided by VK_NVX_image_view_handle
uint64_t vkGetDeviceCombinedImageSamplerIndexNVX(
    VkDevice                device,
    uint64_t                imageViewIndex,
    uint64_t                samplerIndex);
```

- `device` is the logical device that will use the result handle.
- `imageViewIndex` is the index within the resource heap.
- `samplerIndex` is the index within the sampler heap.

Shaders take `imageViewIndex` and `samplerIndex`, and multiply it by `VkPhysicalDeviceDescriptorHeapPropertiesEXT::imageDescriptorSize` and `VkPhysicalDeviceDescriptorHeapPropertiesEXT::samplerDescriptorSize` respectively to obtain the descriptor offset in bytes.

Valid Usage (Implicit)

- VUID-vkGetDeviceCombinedImageSamplerIndexNVX-device-parameter
`device` **must** be a valid `VkDevice` handle

12.6.1. Image View Format Features

Valid uses of a [VkImageView](#) may depend on the image view's *format features*, defined below. Such constraints are documented in the affected valid usage statement.

- If Vulkan 1.3 is supported or the [VK_KHR_format_feature_flags2](#) extension is supported, and [VkImageViewCreateInfo::image](#) was created with [VK_IMAGE_TILING_LINEAR](#), then the image view's set of *format features* is the value of [VkFormatProperties3::linearTilingFeatures](#) found by calling [vkGetPhysicalDeviceFormatProperties2](#) on the same *format* as [VkImageViewCreateInfo::format](#).
- If Vulkan 1.3 is not supported and the [VK_KHR_format_feature_flags2](#) extension is not supported, and [VkImageViewCreateInfo::image](#) was created with [VK_IMAGE_TILING_LINEAR](#), then the image view's set of *format features* is the union of the value of [VkFormatProperties::linearTilingFeatures](#) found by calling [vkGetPhysicalDeviceFormatProperties](#) on the same *format* as [VkImageViewCreateInfo::format](#), with:
 - [VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT](#) if the format is a depth/stencil format and the image view features also contain [VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT](#).
 - [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#) if the format is one of the [extended storage formats](#) and the [shaderStorageImageReadWithoutFormat](#) feature is enabled.
 - [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#) if the format is one of the [extended storage formats](#) and the [shaderStorageImageWriteWithoutFormat](#) feature is enabled.
- If Vulkan 1.3 is supported or the [VK_KHR_format_feature_flags2](#) extension is supported, and [VkImageViewCreateInfo::image](#) was created with [VK_IMAGE_TILING_OPTIMAL](#), but without an [Android hardware buffer external format](#), or a [QNX Screen buffer external format](#), then the image view's set of *format features* is the value of [VkFormatProperties::optimalTilingFeatures](#) or [VkFormatProperties3::optimalTilingFeatures](#) found by calling [vkGetPhysicalDeviceFormatProperties](#) or [vkGetPhysicalDeviceImageFormatProperties2](#) on the same *format* as [VkImageViewCreateInfo::format](#).
- If Vulkan 1.3 is not supported and the [VK_KHR_format_feature_flags2](#) extension is not supported, and [VkImageViewCreateInfo::image](#) was created with [VK_IMAGE_TILING_OPTIMAL](#), but without an [Android hardware buffer external format](#), or a [QNX Screen buffer external format](#), then the image view's set of *format features* is the union of the value of [VkFormatProperties::optimalTilingFeatures](#) found by calling [vkGetPhysicalDeviceFormatProperties](#) on the same *format* as [VkImageViewCreateInfo::format](#), with:
 - [VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT](#) if the format is a depth/stencil format and the image view features also contain [VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT](#).
 - [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#) if the format is one of the [extended storage formats](#) and the [shaderStorageImageReadWithoutFormat](#) feature is enabled.
 - [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#) if the format is one of the [extended storage formats](#) and the [shaderStorageImageWriteWithoutFormat](#) feature is

enabled.

- If `VkImageViewCreateInfo::image` was created with an `Android hardware buffer external format`, then the image views's set of *format features* is the value of `VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures` found by calling `vkGetAndroidHardwareBufferPropertiesANDROID` on the Android hardware buffer that was imported to the `VkDeviceMemory` to which the `VkImageViewCreateInfo::image` is bound.
- If `VkImageViewCreateInfo::image` was created with a `QNX Screen buffer external format`, then the image views's set of *format features* is the value of `VkScreenBufferFormatPropertiesQNX::formatFeatures` found by calling `vkGetScreenBufferPropertiesQNX` on the QNX Screen buffer that was imported to the `VkDeviceMemory` to which the `VkImageViewCreateInfo::image` is bound.
- If `VkImageViewCreateInfo::image` was created with a chained `VkBufferCollectionImageCreateInfoFUCHSIA`, then the image view's set of *format features* is the value of `VkBufferCollectionPropertiesFUCHSIA::formatFeatures` found by calling `vkGetBufferCollectionPropertiesFUCHSIA` on the buffer collection passed as `VkBufferCollectionImageCreateInfoFUCHSIA::collection` when the image was created.
- If `VkImageViewCreateInfo::image` was created with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then:
 - The image's DRM format modifier is the value of `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier` found by calling `vkGetImageDrmFormatModifierPropertiesEXT`.
 - Let `VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties` be the array found by calling `vkGetPhysicalDeviceFormatProperties2` on the same `format` as `VkImageViewCreateInfo::format`.
 - Let `VkDrmFormatModifierPropertiesEXT prop` be the array element whose `drmFormatModifier` member is the value of the image's DRM format modifier.
 - Then the image view's set of *format features* is `prop::drmFormatModifierTilingFeatures`.

The `VkImageViewMinLodCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_view_min_lod
typedef struct VkImageViewMinLodCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    float               minLod;
} VkImageViewMinLodCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minLod` is the value to clamp the minimum LOD accessible by this `VkImageView`.

If the `pNext` chain includes a `VkImageViewMinLodCreateInfoEXT` structure, then that structure includes a parameter specifying a value to clamp the minimum LOD value during `Image Level(s) Selection`, `Texel Gathering` and `Integer Texel Coordinate Operations`.

If the image view contains `VkImageViewMinLodCreateInfoEXT` and it is used as part of a sampling operation:

`minLodFloatimageView = minLod`

otherwise:

`minLodFloatimageView = 0.0`

An integer variant of this parameter is also defined for sampling operations which access integer mipmap levels:

`minLodIntegerimageView = ⌊minLodFloatimageView⌋`

Valid Usage

- VUID-VkImageViewMinLodCreateInfoEXT-minLod-06455
If the `minLod` feature is not enabled, `minLod` **must** be `0.0`
- VUID-VkImageViewMinLodCreateInfoEXT-minLod-06456
`minLod` **must** be less or equal to the index of the last mipmap level accessible to the view

Valid Usage (Implicit)

- VUID-VkImageViewMinLodCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_MIN_LOD_CREATE_INFO_EXT`

Structure Chaining

Extends the structure

- `VkImageViewCreateInfo`

12.7. Acceleration Structures

Acceleration structures are opaque data structures that are built by the implementation to more efficiently perform spatial queries on the provided geometric data. For these extensions, an acceleration structure is either a top-level acceleration structure containing a set of bottom-level acceleration structures or a bottom-level acceleration structure containing either a set of axis-aligned bounding boxes for custom geometry or a set of triangles.

Each instance in the top-level acceleration structure contains a reference to a bottom-level acceleration structure as well as an instance transform plus information required to index into the shader bindings. The top-level acceleration structure is what is bound to the acceleration descriptor, for example to trace inside the shader in the ray tracing pipeline.

Acceleration structures for the `VK_KHR_acceleration_structure` extension are represented by

`VkAccelerationStructureKHR` handles:

```
// Provided by VK_KHR_acceleration_structure
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkAccelerationStructureKHR)
```

To create an acceleration structure using a device address, call:

```
// Provided by VK_KHR_acceleration_structure with VK_KHR_device_address_commands
VkResult vkCreateAccelerationStructure2KHR(
    VkDevice device,
    const VkAccelerationStructureCreateInfo2KHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkAccelerationStructureKHR* pAccelerationStructure);
```

- `device` is the logical device that creates the acceleration structure object.
- `pCreateInfo` is a pointer to a `VkAccelerationStructureCreateInfo2KHR` structure containing parameters affecting creation of the acceleration structure.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pAccelerationStructure` is a pointer to a `VkAccelerationStructureKHR` handle in which the resulting acceleration structure object is returned.

Similar to other objects in Vulkan, the acceleration structure creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into an acceleration structure is determined by the parameters of `VkAccelerationStructureCreateInfo2KHR`.

The acceleration structure data is stored in the object referred to by `VkAccelerationStructureCreateInfo2KHR::addressRange.address`.

Once the `VkAccelerationStructureKHR` object has been created, it **must** be populated by acceleration structure build or acceleration structure copy commands such as `vkCmdBuildAccelerationStructuresKHR` and `vkCmdCopyAccelerationStructureKHR`. Acceleration structures created with this command **must** not be used by host commands.

NOTE	The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the acceleration structure data using acceleration structure copy commands. During capture the tool will use <code>vkCmdCopyAccelerationStructureToMemoryKHR</code> with a <code>mode</code> of <code>VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR</code> , and <code>vkCmdCopyMemoryToAccelerationStructureKHR</code> with a <code>mode</code> of <code>VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR</code> during replay.
-------------	--

Valid Usage

- VUID-vkCreateAccelerationStructure2KHR-accelerationStructure-03611

The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature

must be enabled

- VUID-vkCreateAccelerationStructure2KHR-device-03489

If **device** was created with multiple physical devices, then the **bufferDeviceAddressMultiDevice** feature **must** be enabled

- VUID-vkCreateAccelerationStructure2KHR-deviceAddressCommands-13086

The **VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR::deviceAddressCommands** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateAccelerationStructure2KHR-device-parameter

device **must** be a valid **VkDevice** handle

- VUID-vkCreateAccelerationStructure2KHR-pCreateInfo-parameter

pCreateInfo **must** be a valid pointer to a valid **VkAccelerationStructureCreateInfo2KHR** structure

- VUID-vkCreateAccelerationStructure2KHR-pAllocator-parameter

If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure

- VUID-vkCreateAccelerationStructure2KHR-pAccelerationStructure-parameter

pAccelerationStructure **must** be a valid pointer to a **VkAccelerationStructureKHR** handle

- VUID-vkCreateAccelerationStructure2KHR-device-queuecount

The device **must** have been created with at least **1** queue

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

The **VkAccelerationStructureCreateInfo2KHR** structure is defined as:

```
// Provided by VK_KHR_acceleration_structure with VK_KHR_device_address_commands
typedef struct VkAccelerationStructureCreateInfo2KHR {
    VkStructureType           sType;
    const void*               pNext;
    VkAccelerationStructureCreateFlagsKHR createFlags;
    VkDeviceAddressRangeKHR    addressRange;
    VkAddressCommandFlagsKHR   addressFlags;
    VkAccelerationStructureTypeKHR type;
} VkAccelerationStructureCreateInfo2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **createFlags** is a bitmask of [VkAccelerationStructureCreateFlagBitsKHR](#) specifying additional creation parameters of the acceleration structure.
- **addressRange** is a [VkDeviceAddressRangeKHR](#) structure defining the size required for the acceleration structure and its starting address.
- **addressFlags** is a [VkAddressCommandFlagsKHR](#) value defining the flags for the address range.
- **type** is a [VkAccelerationStructureTypeKHR](#) value specifying the type of acceleration structure that will be created.

Applications **should** create an acceleration structure with a specific [VkAccelerationStructureTypeKHR](#) other than [VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR](#).

NOTE	VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR is intended to be used by API translation layers. This can be used at acceleration structure creation time in cases where the actual acceleration structure type (top or bottom) is not yet known. The actual acceleration structure type must be specified as VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR when the build is performed.
-------------	--

During replay, if **createFlags** includes [VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR](#), **addressRange.address** **must** be an address used to create an identical acceleration structure on the same implementation. The address **must** be in the range of an identically created [VkBuffer](#) at the same offset.

Applications **should** avoid creating acceleration structures with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR](#) errors.

NOTE	The expected usage for this is that a trace capture/replay tool will add the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT flag and VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT to all buffers used as storage for an acceleration structure with
-------------	--

`VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR` included in `createFlags`. This also means that the tool will need to add `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` to memory allocations to allow the `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Applications and tools should avoid mixing application-provided and implementation-provided addresses for buffers created with `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, to avoid address space allocation conflicts.

If the acceleration structure will be the target of a build operation, the required size for an acceleration structure **can** be queried with `vkGetAccelerationStructureBuildSizesKHR`. If the acceleration structure is going to be the target of a copy, `vkCmdWriteAccelerationStructuresPropertiesKHR` **can** be used to obtain the size required depending on the type of copy.

If the acceleration structure will be the target of a build operation with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` it **must** include `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV` in `createFlags` and include `VkAccelerationStructureMotionInfoNV` as an extension structure in `pNext` with the number of instances as metadata for the object.

Valid Usage

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13097
If the range specified by `addressRange` is not bound completely to memory when accessed, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR`
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13098
If the buffer from which the range specified by `addressRange` was created with `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `addressFlags` **must** include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13099
If the buffer from which the range specified by `addressRange` was created without `VK_BUFFER_CREATE_PROTECTED_BIT`, and `protectedNoFault` is not supported, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR`
- VUID-VkAccelerationStructureCreateInfo2KHR-addressFlags-13100
`addressFlags` **must** not include both `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13122

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created with `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `addressFlags` **must** include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13123

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created without `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR`

- VUID-VkAccelerationStructureCreateInfo2KHR-addressFlags-13101

`addressFlags` **must** not include both `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` and `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13124

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created with `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `addressFlags` **must** include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR` or `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13125

If any buffer, which is bound to a range of `VkDeviceMemory` that overlaps the range backing `addressRange`, was created without `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`, `addressFlags` **must** not include `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11602

`addressRange.address` **must** be a valid `VkDeviceAddress`

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11603

`addressRange` **must** specify a range within a valid address retrieved from `buffer` that was created with a `usage` value containing `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR`

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11604

`addressRange` **must** specify a range within a valid address retrieved from `buffer` that was not created with a `flags` value containing `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11605

`addressRange.address` **must** be a multiple of 256 bytes

- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-11606

If the `address` member of `addressRange` was retrieved from a `VkBuffer` created with `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, `createFlags` **must** include `VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR`

- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-11607

If the `address` member of `addressRange` was retrieved from a `VkBuffer` not created with `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, `createFlags` **must** not

include

[VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR](#)

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11608
`addressRange.size` **must** be greater than zero
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-03613
If `createFlags` includes [VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR](#),
, [VkPhysicalDeviceAccelerationStructureFeaturesKHR](#)
::`accelerationStructureCaptureReplay` **must** be [VK_TRUE](#)
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-04954
If [VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV](#) is set in `createFlags` and
`type` is [VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR](#), one member of the `pNext`
chain **must** be a pointer to a valid instance of [VkAccelerationStructureMotionInfoNV](#)
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-04955
If any geometry includes [VkAccelerationStructureGeometryMotionTrianglesDataNV](#) then
`createFlags` **must** contain [VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV](#)
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-08108
If `createFlags` includes [VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#), the `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-VkAccelerationStructureCreateInfo2KHR-pNext-08109
If the `pNext` chain includes a [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) structure,
`createFlags` **must** contain [VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#)

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCreateInfo2KHR-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_2_KHR](#)
- VUID-VkAccelerationStructureCreateInfo2KHR-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#)
- VUID-VkAccelerationStructureCreateInfo2KHR-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-parameter
`createFlags` **must** be a valid combination of [VkAccelerationStructureCreateFlagBitsKHR](#) values
- VUID-VkAccelerationStructureCreateInfo2KHR-addressFlags-parameter
`addressFlags` **must** be a valid combination of [VkAddressCommandFlagBitsKHR](#) values
- VUID-VkAccelerationStructureCreateInfo2KHR-type-parameter
`type` **must** be a valid [VkAccelerationStructureTypeKHR](#) value

To create an acceleration structure using a buffer, call:

WARNING

This functionality is superseded by [vkCreateAccelerationStructure2KHR](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCreateAccelerationStructureKHR(
    VkDevice device,
    const VkAccelerationStructureCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkAccelerationStructureKHR* pAccelerationStructure);
```

- **device** is the logical device that creates the acceleration structure object.
- **pCreateInfo** is a pointer to a [VkAccelerationStructureCreateInfoKHR](#) structure containing parameters affecting creation of the acceleration structure.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pAccelerationStructure** is a pointer to a [VkAccelerationStructureKHR](#) handle in which the resulting acceleration structure object is returned.

Similar to other objects in Vulkan, the acceleration structure creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into an acceleration structure is determined by the parameters of [VkAccelerationStructureCreateInfoKHR](#).

The acceleration structure data is stored in the object referred to by [VkAccelerationStructureCreateInfoKHR::buffer](#). Once memory has been bound to that buffer, it **must** be populated by acceleration structure build or acceleration structure copy commands such as [vkCmdBuildAccelerationStructuresKHR](#), [vkBuildAccelerationStructuresKHR](#), [vkCmdCopyAccelerationStructureKHR](#), and [vkCopyAccelerationStructureKHR](#).

NOTE

The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the acceleration structure data using acceleration structure copy commands. During capture the tool will use [vkCopyAccelerationStructureToMemoryKHR](#) or [vkCmdCopyAccelerationStructureToMemoryKHR](#) with a **mode** of [VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR](#), and [vkCopyMemoryToAccelerationStructureKHR](#) or [vkCmdCopyMemoryToAccelerationStructureKHR](#) with a **mode** of [VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR](#) during replay.

NOTE

Memory does not need to be bound to the underlying buffer when [vkCreateAccelerationStructureKHR](#) is called.

The input buffers passed to acceleration structure build commands will be referenced by the implementation for the duration of the command. After the command completes, the acceleration structure **may** hold a reference to any acceleration structure specified by an active instance contained therein. Apart from this referencing, acceleration structures **must** be fully self-contained.

The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of ray traversal.

Valid Usage

- VUID-vkCreateAccelerationStructureKHR-accelerationStructure-03611
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCreateAccelerationStructureKHR-device-03489
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkCreateAccelerationStructureKHR-deviceAddress-03488
If `VkAccelerationStructureCreateInfoKHR::deviceAddress` is not zero, the `accelerationStructureCaptureReplay` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateAccelerationStructureKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateAccelerationStructureKHR-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkAccelerationStructureCreateInfoKHR` structure
- VUID-vkCreateAccelerationStructureKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateAccelerationStructureKHR-pAccelerationStructure-parameter
`pAccelerationStructure` **must** be a valid pointer to a `VkAccelerationStructureKHR` handle
- VUID-vkCreateAccelerationStructureKHR-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkAccelerationStructureCreateInfoKHR` structure is defined as:

WARNING

This functionality is superseded by [VkAccelerationStructureCreateInfo2KHR](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureCreateFlagsKHR createFlags;
    VkBuffer                  buffer;
    VkDeviceSize              offset;
    VkDeviceSize              size;
    VkAccelerationStructureTypeKHR type;
    VkDeviceAddress           deviceAddress;
} VkAccelerationStructureCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `createFlags` is a bitmask of [VkAccelerationStructureCreateFlagBitsKHR](#) specifying additional creation parameters of the acceleration structure.
- `buffer` is the buffer on which the acceleration structure will be stored.
- `offset` is an offset in bytes from the base address of the buffer at which the acceleration structure will be stored, and **must** be a multiple of [256](#).
- `size` is the size required for the acceleration structure.
- `type` is a [VkAccelerationStructureTypeKHR](#) value specifying the type of acceleration structure that will be created.
- `deviceAddress` is the device address requested for the acceleration structure, obtained from [vkGetAccelerationStructureDeviceAddressKHR](#), if the `accelerationStructureCaptureReplay` feature is being used. If `deviceAddress` is zero, no specific address is requested.

Applications **should** avoid creating acceleration structures with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR](#) errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the [VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#) flag to all buffers that use [VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT](#), and will add [VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT](#) to all buffers used as storage for an acceleration structure where `deviceAddress` is not zero. This also means that the tool will need to add [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT](#) to memory allocations to allow the flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Applications and tools should avoid mixing application-provided and implementation-provided addresses for buffers created with [VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#), to avoid address space allocation conflicts.

Applications **should** create an acceleration structure with a specific [VkAccelerationStructureTypeKHR](#) other than [VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR](#).

NOTE

[VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR](#) is intended to be used by API translation layers. This can be used at acceleration structure creation time in cases where the actual acceleration structure type (top or bottom) is not yet known. The actual acceleration structure type must be specified as [VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR](#) or [VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR](#) when the build is performed.

If the acceleration structure will be the target of a build operation, the required size for an acceleration structure **can** be queried with [vkGetAccelerationStructureBuildSizesKHR](#). If the acceleration structure is going to be the target of a compacting copy, [vkCmdWriteAccelerationStructuresPropertiesKHR](#) or [vkWriteAccelerationStructuresPropertiesKHR](#) **can** be used to obtain the compacted size required.

If the acceleration structure will be the target of a build operation with [VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV](#) it **must** include [VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV](#) in `createFlags` and include [VkAccelerationStructureMotionInfoNV](#) as an extension structure in `pNext` with the number of instances as metadata for the object.

Valid Usage

- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-03612
If `deviceAddress` is not zero, `createFlags` **must** include [VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR](#)
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09488
If `deviceAddress` is not zero, it **must** have been retrieved from an identically created acceleration structure, except for `buffer` and `deviceAddress`
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09489
If `deviceAddress` is not zero, `buffer` **must** have been created identically to the `buffer` used to create the acceleration structure from which `deviceAddress` was retrieved, except for [VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress](#)
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09490
If `deviceAddress` is not zero, `buffer` **must** have been created with a [VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress](#) that was retrieved from

`vkGetBufferOpaqueCaptureAddress` for the `buffer` that was used to create the acceleration structure from which `deviceAddress` was retrieved

- VUID-VkAccelerationStructureCreateInfoKHR-buffer-03614
`buffer` **must** have been created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR` usage flag set
- VUID-VkAccelerationStructureCreateInfoKHR-buffer-03615
`buffer` **must** not have been created with `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkAccelerationStructureCreateInfoKHR-offset-03616
The sum of `offset` and `size` **must** be less than or equal to the size of `buffer`
- VUID-VkAccelerationStructureCreateInfoKHR-offset-03734
`offset` **must** be a multiple of 256 bytes
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-03613
If `createFlags` includes `VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR`,
`VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureCaptureReplay` **must** be `VK_TRUE`
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-04954
If `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV` is set in `createFlags` and `type` is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, one member of the `pNext` chain **must** be a pointer to a valid instance of `VkAccelerationStructureMotionInfoNV`
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-04955
If any geometry includes `VkAccelerationStructureGeometryMotionTrianglesDataNV` then `createFlags` **must** contain `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV`
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-08108
If `createFlags` includes `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-VkAccelerationStructureCreateInfoKHR-pNext-08109
If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `createFlags` **must** contain `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_KHR`
- VUID-VkAccelerationStructureCreateInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkAccelerationStructureMotionInfoNV` or `VkOpaqueCaptureDescriptorDataCreateInfoEXT`
- VUID-VkAccelerationStructureCreateInfoKHR-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-parameter **createFlags** **must** be a valid combination of **VkAccelerationStructureCreateFlagBitsKHR** values
- VUID-VkAccelerationStructureCreateInfoKHR-buffer-parameter **buffer** **must** be a valid **VkBuffer** handle
- VUID-VkAccelerationStructureCreateInfoKHR-type-parameter **type** **must** be a valid **VkAccelerationStructureTypeKHR** value
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-parameter
If **deviceAddress** is not 0, **deviceAddress** **must** be a valid **VkDeviceAddress** value

The **VkAccelerationStructureMotionInfoNV** structure is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureMotionInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxInstances;
    VkAccelerationStructureMotionInfoFlagsNV flags;
} VkAccelerationStructureMotionInfoNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxInstances** is the maximum number of instances that **may** be used in the motion top-level acceleration structure.
- **flags** is 0 and reserved for future use.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMotionInfoNV-sType-sType **sType** **must** be **VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_MOTION_INFO_NV**
- VUID-VkAccelerationStructureMotionInfoNV-flags-zero bitmask **flags** **must** be 0

Structure Chaining

Extends the structure

- **VkAccelerationStructureCreateInfoKHR**

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef VkFlags VkAccelerationStructureMotionInfoFlagsNV;
```

`VkAccelerationStructureMotionInfoFlagsNV` is a bitmask type for setting a mask, but is currently reserved for future use.

To get the build sizes for an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
void vkGetAccelerationStructureBuildSizesKHR(
    VkDevice device,
    VkAccelerationStructureBuildTypeKHR buildType,
    const VkAccelerationStructureBuildGeometryInfoKHR* pBuildInfo,
    const uint32_t* pMaxPrimitiveCounts,
    VkAccelerationStructureBuildSizesInfoKHR* pSizeInfo);
```

- `device` is the logical device that will be used for creating the acceleration structure.
- `buildType` defines whether host or device operations (or both) are being queried for.
- `pBuildInfo` is a pointer to a `VkAccelerationStructureBuildGeometryInfoKHR` structure describing parameters of a build operation.
- `pMaxPrimitiveCounts` is a pointer to an array of `pBuildInfo->geometryCount` `uint32_t` values defining the number of primitives built into each geometry.
- `pSizeInfo` is a pointer to a `VkAccelerationStructureBuildSizesInfoKHR` structure which returns the size required for an acceleration structure and the sizes required for the scratch buffers, given the build parameters. The size requirements for a scratch buffer **may** be zero.

The `srcAccelerationStructure`, `dstAccelerationStructure`, and `mode` members of `pBuildInfo` are ignored. Any `VkDeviceOrHostAddressKHR` or `VkDeviceOrHostAddressConstKHR` members of `pBuildInfo` are ignored by this command, except that the `hostAddress` member of `VkAccelerationStructureGeometryTrianglesDataKHR::transformData` will be examined to check if it is `NULL`.

An acceleration structure created with the `accelerationStructureSize` returned by this command supports any build or update with a `VkAccelerationStructureBuildGeometryInfoKHR` structure and array of `VkAccelerationStructureBuildRangeInfoKHR` structures subject to the following properties:

- The build command is a host build command, and `buildType` is `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR` or `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR`
- The build command is a device build command, and `buildType` is `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR` or `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR`
- For `VkAccelerationStructureBuildGeometryInfoKHR`:
 - Its `type`, and `flags` members are equal to `pBuildInfo->type` and `pBuildInfo->flags`,

respectively.

- `geometryCount` is less than or equal to `pBuildInfo->geometryCount`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, its `geometryType` member is equal to `pBuildInfo->geometryType`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, its `flags` member is equal to the corresponding member of the same element in `pBuildInfo`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the `vertexFormat` and `indexType` members of `geometry.triangles` are equal to the corresponding members of the same element in `pBuildInfo`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the `maxVertex` member of `geometry.triangles` is less than or equal to the corresponding member of the same element in `pBuildInfo`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the applicable address in the `transformData` member of `geometry.triangles` is not `NULL`, the corresponding `transformData.hostAddress` parameter in `pBuildInfo` is not `NULL`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `numTriangles` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain is less than or equal to the corresponding member of the same element in `pBuildInfo`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `numVertices` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain is less than or equal to the corresponding member of the same element in `pBuildInfo`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `maxPrimitiveIndex` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain is less than or equal to the corresponding member of the same element in `pBuildInfo`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `maxGeometryIndex` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain is less than or equal to the corresponding member of the same element in `pBuildInfo`.
- For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `format` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain is equal to the corresponding member of the same element in `pBuildInfo`.

- For each `VkAccelerationStructureBuildRangeInfoKHR` corresponding to the `VkAccelerationStructureBuildGeometryInfoKHR`:
 - Its `primitiveCount` member is less than or equal to the corresponding element of `pMaxPrimitiveCounts`.
 - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the `pNext` chain contains `VkAccelerationStructureTrianglesOpacityMicromapEXT` the corresponding member of `pBuildInfo` also contains `VkAccelerationStructureTrianglesOpacityMicromapEXT` and with an equivalent `micromap`.
 - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the `pNext` chain contains `VkAccelerationStructureTrianglesDisplacementMicromapNV` the corresponding member of `pBuildInfo` also contains `VkAccelerationStructureTrianglesDisplacementMicromapNV` and with an equivalent `micromap`.
- For each `VkAccelerationStructureBuildRangeInfoKHR` corresponding to the `VkAccelerationStructureBuildGeometryInfoKHR`:
 - Its `primitiveCount` member is less than or equal to the corresponding element of `pMaxPrimitiveCounts`.

Similarly, the `updateScratchSize` value will support any build command specifying the `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` mode under the above conditions, and the `buildScratchSize` value will support any build command specifying the `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR` mode under the above conditions.

Valid Usage

- VUID-vkGetAccelerationStructureBuildSizesKHR-accelerationStructure-08933
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkGetAccelerationStructureBuildSizesKHR-device-03618
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-03619
If `pBuildInfo->geometryCount` is not 0, `pMaxPrimitiveCounts` **must** be a valid pointer to an array of `pBuildInfo->geometryCount` `uint32_t` values
- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-03785
If `pBuildInfo->pGeometries` or `pBuildInfo->ppGeometries` has a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `pMaxPrimitiveCounts[i]` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureBuildSizesKHR-device-parameter

device must be a valid [VkDevice](#) handle

- VUID-vkGetAccelerationStructureBuildSizesKHR-buildType-parameter **buildType** must be a valid [VkAccelerationStructureBuildTypeKHR](#) value
- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-parameter **pBuildInfo** must be a valid pointer to a valid [VkAccelerationStructureBuildGeometryInfoKHR](#) structure
- VUID-vkGetAccelerationStructureBuildSizesKHR-pMaxPrimitiveCounts-parameter
If **pMaxPrimitiveCounts** is not NULL, **pMaxPrimitiveCounts** must be a valid pointer to an array of **pBuildInfo->geometryCount uint32_t** values
- VUID-vkGetAccelerationStructureBuildSizesKHR-pSizeInfo-parameter **pSizeInfo** must be a valid pointer to a [VkAccelerationStructureBuildSizesInfoKHR](#) structure

The [VkAccelerationStructureBuildSizesInfoKHR](#) structure describes the required build sizes for an acceleration structure and scratch buffers and is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildSizesInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        accelerationStructureSize;
    VkDeviceSize        updateScratchSize;
    VkDeviceSize        buildScratchSize;
} VkAccelerationStructureBuildSizesInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **accelerationStructureSize** is the size in bytes required in a [VkAccelerationStructureKHR](#) for a build or update operation.
- **updateScratchSize** is the size in bytes required in a scratch buffer for an update operation.
- **buildScratchSize** is the size in bytes required in a scratch buffer for a build operation.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureBuildSizesInfoKHR-sType-sType **sType** must be [VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_SIZES_INFO_KHR](#)
- VUID-VkAccelerationStructureBuildSizesInfoKHR-pNext-pNext **pNext** must be NULL

Acceleration structures for the [VK_NV_ray_tracing](#) extension are represented by the similar [VkAccelerationStructureNV](#) handles:

```
// Provided by VK_NV_ray_tracing
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkAccelerationStructureNV)
```

To create acceleration structures, call:

```
// Provided by VK_NV_ray_tracing
VkResult vkCreateAccelerationStructureNV(
    VkDevice device,
    const VkAccelerationStructureCreateInfoNV* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkAccelerationStructureNV* pAccelerationStructure);
```

- **device** is the logical device that creates the buffer object.
- **pCreateInfo** is a pointer to a [VkAccelerationStructureCreateInfoNV](#) structure containing parameters affecting creation of the acceleration structure.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pAccelerationStructure** is a pointer to a [VkAccelerationStructureNV](#) handle in which the resulting acceleration structure object is returned.

Similarly to other objects in Vulkan, the acceleration structure creation merely creates an object with a specific “shape” as specified by the information in [VkAccelerationStructureCreateInfoNV](#) and **compactSize** in **pCreateInfo**.

Once memory has been bound to the acceleration structure using [vkBindAccelerationStructureMemoryNV](#), that memory is populated by calls to [vkCmdBuildAccelerationStructureNV](#) and [vkCmdCopyAccelerationStructureNV](#).

Acceleration structure creation uses the count and type information from the geometries, but does not use the data references in the structures.

Valid Usage (Implicit)

- VUID-vkCreateAccelerationStructureNV-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreateAccelerationStructureNV-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkAccelerationStructureCreateInfoNV](#) structure
- VUID-vkCreateAccelerationStructureNV-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateAccelerationStructureNV-pAccelerationStructure-parameter
pAccelerationStructure **must** be a valid pointer to a [VkAccelerationStructureNV](#) handle
- VUID-vkCreateAccelerationStructureNV-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkAccelerationStructureCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkAccelerationStructureCreateInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceSize              compactedSize;
    VkAccelerationStructureInfoNV info;
} VkAccelerationStructureCreateInfoNV;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [compactedSize](#) is the size from the result of [vkCmdWriteAccelerationStructuresPropertiesNV](#) if this acceleration structure is going to be the target of a compacting copy.
- [info](#) is the [VkAccelerationStructureInfoNV](#) structure specifying further parameters of the created acceleration structure.

Valid Usage

- VUID-VkAccelerationStructureCreateInfoNV-compactedSize-02421
If [compactedSize](#) is not 0 then both [info.geometryCount](#) and [info.instanceCount](#) **must** be 0

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCreateInfoNV-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_NV](#)
- VUID-VkAccelerationStructureCreateInfoNV-pNext-pNext
[pNext](#) **must** be [NULL](#) or a pointer to a valid instance of [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#)
- VUID-VkAccelerationStructureCreateInfoNV-sType-unique
The [sType](#) value of each structure in the [pNext](#) chain **must** be unique
- VUID-VkAccelerationStructureCreateInfoNV-info-parameter

info must be a valid [VkAccelerationStructureInfoNV](#) structure

The [VkAccelerationStructureInfoNV](#) structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkAccelerationStructureInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureTypeNV type;
    VkBuildAccelerationStructureFlagsKHR flags;
    uint32_t                 instanceCount;
    uint32_t                 geometryCount;
    const VkGeometryNV*      pGeometries;
} VkAccelerationStructureInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **type** is a [VkAccelerationStructureTypeNV](#) value specifying the type of acceleration structure that will be created.
- **flags** is a bitmask of [VkBuildAccelerationStructureFlagBitsNV](#) specifying additional parameters of the acceleration structure.
- **instanceCount** specifies the number of instances that will be in the new acceleration structure.
- **geometryCount** specifies the number of geometries that will be in the new acceleration structure.
- **pGeometries** is a pointer to an array of **geometryCount** [VkGeometryNV](#) structures containing the scene data being passed into the acceleration structure.

[VkAccelerationStructureInfoNV](#) contains information that is used both for acceleration structure creation with [vkCreateAccelerationStructureNV](#) and in combination with the actual geometric data to build the acceleration structure with [vkCmdBuildAccelerationStructureNV](#).

Valid Usage

- VUID-VkAccelerationStructureInfoNV-geometryCount-02422
geometryCount must be less than or equal to [VkPhysicalDeviceRayTracingPropertiesNV::maxGeometryCount](#)
- VUID-VkAccelerationStructureInfoNV-instanceCount-02423
instanceCount must be less than or equal to [VkPhysicalDeviceRayTracingPropertiesNV::maxInstanceCount](#)
- VUID-VkAccelerationStructureInfoNV-maxTriangleCount-02424
The total number of triangles in all geometries must be less than or equal to [VkPhysicalDeviceRayTracingPropertiesNV::maxTriangleCount](#)
- VUID-VkAccelerationStructureInfoNV-type-02425
If **type** is [VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_NV](#) then **geometryCount** must

be 0

- VUID-VkAccelerationStructureInfoNV-type-02426
If **type** is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_NV` then **instanceCount** **must** be 0
- VUID-VkAccelerationStructureInfoNV-type-02786
If **type** is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_NV` then the **geometryType** member of each geometry in **pGeometries** **must** be the same
- VUID-VkAccelerationStructureInfoNV-type-04623
type **must** not be `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-VkAccelerationStructureInfoNV-flags-02592
If **flags** has the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_NV` bit set, then it **must** not have the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_NV` bit set
- VUID-VkAccelerationStructureInfoNV-scratch-02781
scratch **must** have been created with the `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` usage flag set
- VUID-VkAccelerationStructureInfoNV-instanceData-02782
If **instanceData** is not `VK_NULL_HANDLE`, **instanceData** **must** have been created with the `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` usage flag set

Valid Usage (Implicit)

- VUID-VkAccelerationStructureInfoNV-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_INFO_NV`
- VUID-VkAccelerationStructureInfoNV-pNext-pNext
pNext **must** be `NULL`
- VUID-VkAccelerationStructureInfoNV-type-parameter
type **must** be a valid `VkAccelerationStructureTypeNV` value
- VUID-VkAccelerationStructureInfoNV-flags-parameter
flags **must** be a valid combination of `VkBuildAccelerationStructureFlagBitsKHR` values
- VUID-VkAccelerationStructureInfoNV-pGeometries-parameter
If **geometryCount** is not 0, **pGeometries** **must** be a valid pointer to an array of **geometryCount** valid `VkGeometryNV` structures

Values which **can** be set in `VkAccelerationStructureCreateInfoKHR::type` or `VkAccelerationStructureInfoNV::type` specifying the type of acceleration structure, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureTypeKHR {
    VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR = 0,
    VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR = 1,
    VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR = 2,
    // Provided by VK_NV_ray_tracing
    VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_NV =
VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR,
    // Provided by VK_NV_ray_tracing
    VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_NV =
VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR,
} VkAccelerationStructureTypeKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkAccelerationStructureTypeKHR
typedef VkAccelerationStructureTypeKHR VkAccelerationStructureTypeNV;
```

- [VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR](#) is a top-level acceleration structure containing instance data referring to bottom-level acceleration structures.
- [VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR](#) is a bottom-level acceleration structure containing the AABBs or geometry to be intersected.
- [VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR](#) is an acceleration structure whose type is determined at build time used for special circumstances. In these cases, the acceleration structure type is not known at creation time, but **must** be specified at build time as either top or bottom.

Bits which **can** be set in [VkAccelerationStructureCreateInfoKHR::createFlags](#), specifying additional creation parameters for acceleration structures, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureCreateFlagBitsKHR {
    VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
0x00000001,
    // Provided by VK_EXT_descriptor_buffer
    VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT =
0x00000008,
    // Provided by VK_NV_ray_tracing_motion_blur
    VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV = 0x00000004,
} VkAccelerationStructureCreateFlagBitsKHR;
```

- [VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR](#) specifies that the acceleration structure's address **can** be saved and reused on a subsequent run.
- [VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT](#) specifies that the acceleration structure **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see

[VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.

- [VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV](#) specifies that the acceleration structure will be used with motion information, see [VkAccelerationStructureMotionInfoNV](#) for more detail.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkAccelerationStructureCreateFlagsKHR;
```

[VkAccelerationStructureCreateFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkAccelerationStructureCreateFlagBitsKHR](#).

Bits which **can** be set in [VkAccelerationStructureBuildGeometryInfoKHR::flags](#) or [VkAccelerationStructureInfoNV::flags](#) specifying additional parameters for acceleration structure builds, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkBuildAccelerationStructureFlagBitsKHR {
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR = 0x00000001,
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR = 0x00000002,
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR = 0x00000004,
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR = 0x00000008,
    VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR = 0x00000010,
    // Provided by VK_NV_ray_tracing_motion_blur
    VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV = 0x00000020,
    // Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_EXT =
0x00000040,
    // Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_EXT =
0x00000080,
    // Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT =
0x00000100,
#ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_NV_displacement_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_BIT_NV =
0x00000200,
#endif
    // Provided by VK_KHR_ray_tracing_position_fetch
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_BIT_KHR = 0x00000800,
    // Provided by VK_NV_cluster_acceleration_structure
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_CLUSTER_OPACITY_MICROMAPS_BIT_NV =
0x00001000,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_NV =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_NV =
```

```

VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_NV =
VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_NV =
VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_NV =
VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR,
    // Provided by VK_EXT_opacity_micromap
    // VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT is a legacy
alias
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_EXT,
    // Provided by VK_EXT_opacity_micromap
    // VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_EXT is a legacy
alias
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_EXT =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_EXT,
    // Provided by VK_EXT_opacity_micromap
    // VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT is a
legacy alias
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT,
#ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_NV_displacement_micromap
    // VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_NV is a legacy
alias
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_NV =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_BIT_NV,
#endif
    // Provided by VK_KHR_ray_tracing_position_fetch
    // VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR is a legacy alias
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_BIT_KHR,
} VkBuildAccelerationStructureFlagBitsKHR;

```

```

// Provided by VK_NV_ray_tracing
// Equivalent to VkBuildAccelerationStructureFlagBitsKHR
typedef VkBuildAccelerationStructureFlagBitsKHR
VkBuildAccelerationStructureFlagBitsNV;

```

- [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR](#) specifies that the specified acceleration structure **can** be updated with a **mode** of [VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR](#) in [VkAccelerationStructureBuildGeometryInfoKHR](#) or an **update** of [VK_TRUE](#) in [vkCmdBuildAccelerationStructureNV](#) . For sphere and LSS primitives, only positions and radii may be updated, the provided index buffers and flags **must** remain unchanged from the initial

build.

- [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR](#) specifies that the specified acceleration structure **can** act as the source for a copy acceleration structure command with **mode** of [VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR](#) to produce a compacted acceleration structure.
- [VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR](#) specifies that the given acceleration structure build **should** prioritize trace performance over build time.
- [VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR](#) specifies that the given acceleration structure build **should** prioritize build time over trace performance.
- [VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR](#) specifies that this acceleration structure **should** minimize the size of the scratch memory and the final result acceleration structure, potentially at the expense of build time or trace performance.
- [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_EXT](#) specifies that the opacity micromaps associated with the specified acceleration structure **may** change with an acceleration structure update.
- [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT](#) specifies that the data of the opacity micromaps associated with the specified acceleration structure **may** change with an acceleration structure update.
- [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_EXT](#) specifies that the specified acceleration structure **may** be referenced in an instance with [VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT](#) set.
- [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_CLUSTER_OPACITY_MICROMAPS_BIT_NV](#) specifies that opacity micromaps **may** be associated with the given cluster acceleration structure.
- [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_BIT_KHR](#) specifies that the specified acceleration structure **can** be used when fetching the vertex and radius positions of a hit LSS or sphere primitive, or vertex positions of a hit triangle.
- [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_BIT_NV](#) specifies that the displacement micromaps associated with the specified acceleration structure **may** change with an acceleration structure update.

NOTE

[VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR](#) and [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR](#) **may** take more time and memory than a normal build, and so **should** only be used when those features are needed.

NOTE

[VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR](#) and [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR](#) are allowed to be used together. In that case, the result of the compaction copy is used as the source of a build with **mode** of [VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR](#) to perform the compacted update.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkBuildAccelerationStructureFlagsKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkBuildAccelerationStructureFlagsKHR
typedef VkBuildAccelerationStructureFlagsKHR VkBuildAccelerationStructureFlagsNV;
```

`VkBuildAccelerationStructureFlagsKHR` is a bitmask type for setting a mask of zero or more `VkBuildAccelerationStructureFlagBitsKHR`.

The `VkGeometryNV` structure describes geometry in a bottom-level acceleration structure and is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryNV {
    VkStructureType    sType;
    const void*        pNext;
    VkGeometryTypeKHR  geometryType;
    VkGeometryDataNV   geometry;
    VkGeometryFlagsKHR flags;
} VkGeometryNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `geometryType` specifies the `VkGeometryTypeKHR` which this geometry refers to.
- `geometry` contains the geometry data as described in `VkGeometryDataNV`.
- `flags` has `VkGeometryFlagBitsKHR` describing options for this geometry.

Valid Usage

- VUID-VkGeometryNV-geometryType-03503
`geometryType` **must** be `VK_GEOMETRY_TYPE_TRIANGLES_NV` or `VK_GEOMETRY_TYPE_AABBS_NV`

Valid Usage (Implicit)

- VUID-VkGeometryNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_GEOMETRY_NV`
- VUID-VkGeometryNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkGeometryNV-geometryType-parameter
`geometryType` **must** be a valid `VkGeometryTypeKHR` value

- VUID-VkGeometryNV-geometry-parameter
geometry **must** be a valid [VkGeometryDataNV](#) structure
- VUID-VkGeometryNV-flags-parameter
flags **must** be a valid combination of [VkGeometryFlagBitsKHR](#) values

Geometry types are specified by [VkGeometryTypeKHR](#), which takes values:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryTypeKHR {
    VK_GEOMETRY_TYPE_TRIANGLES_KHR = 0,
    VK_GEOMETRY_TYPE_AABBS_KHR = 1,
    VK_GEOMETRY_TYPE_INSTANCES_KHR = 2,
    // Provided by VK_NV_ray_tracing_linear_swept_spheres
    VK_GEOMETRY_TYPE_SPHERES_NV = 1000429004,
    // Provided by VK_NV_ray_tracing_linear_swept_spheres
    VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV = 1000429005,
#ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_AMD_xe_geometry_format
    VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD = 1000478000,
#endif
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_TYPE_TRIANGLES_NV = VK_GEOMETRY_TYPE_TRIANGLES_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_TYPE_AABBS_NV = VK_GEOMETRY_TYPE_AABBS_KHR,
} VkGeometryTypeKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkGeometryTypeKHR
typedef VkGeometryTypeKHR VkGeometryTypeNV;
```

- [VK_GEOMETRY_TYPE_TRIANGLES_KHR](#) specifies a geometry type consisting of [triangles](#).
- [VK_GEOMETRY_TYPE_AABBS_KHR](#) specifies a geometry type consisting of [axis-aligned bounding boxes](#).
- [VK_GEOMETRY_TYPE_INSTANCES_KHR](#) specifies a geometry type consisting of acceleration structure instances.
- [VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD](#) specifies a geometry type consisting of triangles from compressed data.
- [VK_GEOMETRY_TYPE_SPHERES_NV](#) specifies a geometry type consisting of [spheres](#).
- [VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV](#) specifies a geometry type consisting of [linear swept spheres](#).

Bits specifying additional parameters for geometries in acceleration structure builds, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryFlagBitsKHR {
    VK_GEOMETRY_OPAQUE_BIT_KHR = 0x00000001,
    VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR = 0x00000002,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_OPAQUE_BIT_NV = VK_GEOMETRY_OPAQUE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_NV =
VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR,
} VkGeometryFlagBitsKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkGeometryFlagBitsKHR
typedef VkGeometryFlagBitsKHR VkGeometryFlagBitsNV;
```

- [VK_GEOMETRY_OPAQUE_BIT_KHR](#) specifies that this geometry does not invoke the any-hit shaders even if present in a hit group.
- [VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR](#) specifies that the implementation **must** only call the any-hit shader a single time for each primitive in this geometry. If this bit is absent an implementation **may** invoke the any-hit shader more than once for this geometry.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkGeometryFlagsKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkGeometryFlagsKHR
typedef VkGeometryFlagsKHR VkGeometryFlagsNV;
```

[VkGeometryFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkGeometryFlagBitsKHR](#).

The [VkGeometryDataNV](#) structure specifies geometry in a bottom-level acceleration structure and is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryDataNV {
    VkGeometryTrianglesNV    triangles;
    VkGeometryAABBNV         aabbs;
} VkGeometryDataNV;
```

- [triangles](#) contains triangle data if [VkGeometryNV::geometryType](#) is [VK_GEOMETRY_TYPE_TRIANGLES_NV](#).
- [aabbs](#) contains axis-aligned bounding box data if [VkGeometryNV::geometryType](#) is

Valid Usage (Implicit)

- VUID-VkGeometryDataNV-triangles-parameter
triangles must be a valid [VkGeometryTrianglesNV](#) structure
- VUID-VkGeometryDataNV-aabbs-parameter
aabbs must be a valid [VkGeometryAABBNV](#) structure

The [VkGeometryTrianglesNV](#) structure specifies triangle geometry in a bottom-level acceleration structure and is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryTrianglesNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            vertexData;
    VkDeviceSize        vertexOffset;
    uint32_t           vertexCount;
    VkDeviceSize        vertexStride;
    VkFormat            vertexFormat;
    VkBuffer            indexData;
    VkDeviceSize        indexOffset;
    uint32_t           indexCount;
    VkIndexType         indexType;
    VkBuffer            transformData;
    VkDeviceSize        transformOffset;
} VkGeometryTrianglesNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **vertexData** is the buffer containing vertex data for this geometry.
- **vertexOffset** is the offset in bytes within **vertexData** containing vertex data for this geometry.
- **vertexCount** is the number of valid vertices.
- **vertexStride** is the stride in bytes between each vertex.
- **vertexFormat** is a [VkFormat](#) describing the format of each vertex element.
- **indexData** is the buffer containing index data for this geometry.
- **indexOffset** is the offset in bytes within **indexData** containing index data for this geometry.
- **indexCount** is the number of indices to include in this geometry.
- **indexType** is a [VkIndexType](#) describing the format of each index.
- **transformData** is an optional buffer containing an [VkTransformMatrixNV](#) structure defining a transformation to be applied to this geometry.

- `transformOffset` is the offset in bytes in `transformData` of the transform information described above.

If `indexType` is `VK_INDEX_TYPE_NONE_NV`, then this structure describes a set of triangles determined by `vertexCount`. Otherwise, this structure describes a set of indexed triangles determined by `indexCount`.

Valid Usage

- VUID-VkGeometryTrianglesNV-vertexOffset-02428
`vertexOffset` **must** be less than the size of `vertexData`
- VUID-VkGeometryTrianglesNV-vertexOffset-02429
`vertexOffset` **must** be a multiple of the component size of `vertexFormat`
- VUID-VkGeometryTrianglesNV-vertexFormat-02430
`vertexFormat` **must** be one of `VK_FORMAT_R32G32B32_SFLOAT`, `VK_FORMAT_R32G32_SFLOAT`, `VK_FORMAT_R16G16B16_SFLOAT`, `VK_FORMAT_R16G16_SFLOAT`, `VK_FORMAT_R16G16_SNORM`, or `VK_FORMAT_R16G16B16_SNORM`
- VUID-VkGeometryTrianglesNV-vertexStride-03818
`vertexStride` **must** be less than or equal to $2^{32}-1$
- VUID-VkGeometryTrianglesNV-indexOffset-02431
`indexOffset` **must** be less than the size of `indexData`
- VUID-VkGeometryTrianglesNV-indexOffset-02432
`indexOffset` **must** be a multiple of the element size of `indexType`
- VUID-VkGeometryTrianglesNV-indexType-02433
`indexType` **must** be `VK_INDEX_TYPE_UINT16`, `VK_INDEX_TYPE_UINT32`, or `VK_INDEX_TYPE_NONE_NV`
- VUID-VkGeometryTrianglesNV-indexData-02434
`indexData` **must** be `VK_NULL_HANDLE` if `indexType` is `VK_INDEX_TYPE_NONE_NV`
- VUID-VkGeometryTrianglesNV-indexData-02435
`indexData` **must** be a valid `VkBuffer` handle if `indexType` is not `VK_INDEX_TYPE_NONE_NV`
- VUID-VkGeometryTrianglesNV-indexCount-02436
`indexCount` **must** be 0 if `indexType` is `VK_INDEX_TYPE_NONE_NV`
- VUID-VkGeometryTrianglesNV-transformOffset-02437
`transformOffset` **must** be less than the size of `transformData`
- VUID-VkGeometryTrianglesNV-transformOffset-02438
`transformOffset` **must** be a multiple of 16

Valid Usage (Implicit)

- VUID-VkGeometryTrianglesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_GEOMETRY_TRIANGLES_NV`

- VUID-VkGeometryTrianglesNV-pNext-pNext
pNext must be **NULL**
- VUID-VkGeometryTrianglesNV-vertexData-parameter
If **vertexData** is not **VK_NULL_HANDLE**, **vertexData must** be a valid **VkBuffer** handle
- VUID-VkGeometryTrianglesNV-vertexFormat-parameter
vertexFormat must be a valid **VkFormat** value
- VUID-VkGeometryTrianglesNV-indexData-parameter
If **indexData** is not **VK_NULL_HANDLE**, **indexData must** be a valid **VkBuffer** handle
- VUID-VkGeometryTrianglesNV-indexType-parameter
indexType must be a valid **VkIndexType** value
- VUID-VkGeometryTrianglesNV-transformData-parameter
If **transformData** is not **VK_NULL_HANDLE**, **transformData must** be a valid **VkBuffer** handle
- VUID-VkGeometryTrianglesNV-commonparent
Each of **indexData**, **transformData**, and **vertexData** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same **VkDevice**

The **VkGeometryAABBNV** structure specifies axis-aligned bounding box geometry in a bottom-level acceleration structure, and is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryAABBNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            aabbData;
    uint32_t           numAABBs;
    uint32_t           stride;
    VkDeviceSize        offset;
} VkGeometryAABBNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **aabbData** is the buffer containing axis-aligned bounding box data.
- **numAABBs** is the number of AABBs in this geometry.
- **stride** is the stride in bytes between AABBs in **aabbData**.
- **offset** is the offset in bytes of the first AABB in **aabbData**.

The AABB data in memory is six 32-bit floats consisting of the minimum x, y, and z values followed by the maximum x, y, and z values.

Valid Usage

- VUID-VkGeometryAABBNV-offset-02439

offset **must** be less than the size of **aabbData**

- VUID-VkGeometryAABBNV-offset-02440
offset **must** be a multiple of 8
- VUID-VkGeometryAABBNV-stride-02441
stride **must** be a multiple of 8

Valid Usage (Implicit)

- VUID-VkGeometryAABBNV-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_GEOMETRY_AABB_NV](#)
- VUID-VkGeometryAABBNV-pNext-pNext
pNext **must** be `NULL`
- VUID-VkGeometryAABBNV-aabbData-parameter
If **aabbData** is not [VK_NULL_HANDLE](#), **aabbData** **must** be a valid [VkBuffer](#) handle

To destroy an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
void vkDestroyAccelerationStructureKHR(
    VkDevice                                device,
    VkAccelerationStructureKHR              accelerationStructure,
    const VkAllocationCallbacks*            pAllocator);
```

- **device** is the logical device that destroys the acceleration structure.
- **accelerationStructure** is the acceleration structure to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-08934
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure](#) feature **must** be enabled
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02442
All submitted commands that refer to **accelerationStructure** **must** have completed execution
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02443
If [VkAllocationCallbacks](#) were provided when **accelerationStructure** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02444
If no [VkAllocationCallbacks](#) were provided when **accelerationStructure** was created, **pAllocator** **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyAccelerationStructureKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-parameter
If `accelerationStructure` is not `VK_NULL_HANDLE`, `accelerationStructure` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkDestroyAccelerationStructureKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-parent
If `accelerationStructure` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `accelerationStructure` **must** be externally synchronized

To destroy an acceleration structure, call:

```
// Provided by VK_NV_ray_tracing
void vkDestroyAccelerationStructureNV(
    VkDevice                device,
    VkAccelerationStructureNV accelerationStructure,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the buffer.
- `accelerationStructure` is the acceleration structure to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-03752
All submitted commands that refer to `accelerationStructure` **must** have completed execution
- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-03753
If `VkAllocationCallbacks` were provided when `accelerationStructure` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-03754
If no `VkAllocationCallbacks` were provided when `accelerationStructure` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyAccelerationStructureNV-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-parameter
If `accelerationStructure` is not `VK_NULL_HANDLE`, `accelerationStructure` **must** be a valid `VkAccelerationStructureNV` handle
- VUID-vkDestroyAccelerationStructureNV-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-parent
If `accelerationStructure` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `accelerationStructure` **must** be externally synchronized

An acceleration structure has memory requirements for the structure object itself, scratch space for the build, and scratch space for the update.

Scratch space is allocated as a `VkBuffer`, so for `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV` and `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV` the `pMemoryRequirements->alignment` and `pMemoryRequirements->memoryTypeBits` values returned by this call **must** be filled with zero, and **should** be ignored by the application.

To query the memory requirements, call:

```
// Provided by VK_NV_ray_tracing
void vkGetAccelerationStructureMemoryRequirementsNV(
    VkDevice device,
    const VkAccelerationStructureMemoryRequirementsInfoNV* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- `device` is the logical device on which the acceleration structure was created.
- `pInfo` is a pointer to a `VkAccelerationStructureMemoryRequirementsInfoNV` structure specifying the acceleration structure to get memory requirements for.
- `pMemoryRequirements` is a pointer to a `VkMemoryRequirements2KHR` structure in which the requested acceleration structure memory requirements are returned.

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureMemoryRequirementsNV-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetAccelerationStructureMemoryRequirementsNV-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkAccelerationStructureMemoryRequirementsInfoNV](#) structure
- VUID-vkGetAccelerationStructureMemoryRequirementsNV-pMemoryRequirements-parameter **pMemoryRequirements** **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

The [VkAccelerationStructureMemoryRequirementsInfoNV](#) structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkAccelerationStructureMemoryRequirementsInfoNV {
    VkStructureType           sType;
    const void*               pNext;
    VkAccelerationStructureMemoryRequirementsTypeNV type;
    VkAccelerationStructureNV accelerationStructure;
} VkAccelerationStructureMemoryRequirementsInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **type** selects the type of memory requirement being queried. [VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV](#) returns the memory requirements for the object itself. [VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV](#) returns the memory requirements for the scratch memory when doing a build. [VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV](#) returns the memory requirements for the scratch memory when doing an update.
- **accelerationStructure** is the acceleration structure to be queried for memory requirements.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMemoryRequirementsInfoNV-sType-sType **sType** **must** be [VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_INFO_NV](#)
- VUID-VkAccelerationStructureMemoryRequirementsInfoNV-pNext-pNext **pNext** **must** be [NULL](#)
- VUID-VkAccelerationStructureMemoryRequirementsInfoNV-type-parameter **type** **must** be a valid [VkAccelerationStructureMemoryRequirementsTypeNV](#) value
- VUID-VkAccelerationStructureMemoryRequirementsInfoNV-accelerationStructure-parameter

`accelerationStructure` must be a valid `VkAccelerationStructureNV` handle

Possible values of `type` in `VkAccelerationStructureMemoryRequirementsInfoNV` are:

```
// Provided by VK_NV_ray_tracing
typedef enum VkAccelerationStructureMemoryRequirementsTypeNV {
    VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV = 0,
    VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV = 1,
    VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV = 2,
} VkAccelerationStructureMemoryRequirementsTypeNV;
```

- `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV` requests the memory requirement for the `VkAccelerationStructureNV` backing store.
- `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV` requests the memory requirement for scratch space during the initial build.
- `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV` requests the memory requirement for scratch space during an update.

Possible values of `buildType` in `vkGetAccelerationStructureBuildSizesKHR` are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureBuildTypeKHR {
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR = 0,
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR = 1,
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR = 2,
} VkAccelerationStructureBuildTypeKHR;
```

- `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR` requests the memory requirement for operations performed by the host.
- `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR` requests the memory requirement for operations performed by the device.
- `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR` requests the memory requirement for operations performed by either the host, or the device.

To attach memory to one or more acceleration structures at a time, call:

```
// Provided by VK_NV_ray_tracing
VkResult vkBindAccelerationStructureMemoryNV(
    VkDevice device,
    uint32_t bindInfoCount,
    const VkBindAccelerationStructureMemoryInfoNV* pBindInfos);
```

- `device` is the logical device that owns the acceleration structures and memory.
- `bindInfoCount` is the number of elements in `pBindInfos`.

- `pBindInfos` is a pointer to an array of `VkBindAccelerationStructureMemoryInfoNV` structures describing acceleration structures and memory to bind.

Valid Usage (Implicit)

- VUID-vkBindAccelerationStructureMemoryNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkBindAccelerationStructureMemoryNV-pBindInfos-parameter `pBindInfos` **must** be a valid pointer to an array of `bindInfoCount` valid `VkBindAccelerationStructureMemoryInfoNV` structures
- VUID-vkBindAccelerationStructureMemoryNV-bindInfoCount-arraylength `bindInfoCount` **must** be greater than 0

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkBindAccelerationStructureMemoryInfoNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkBindAccelerationStructureMemoryInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkAccelerationStructureNV accelerationStructure;
    VkDeviceMemory      memory;
    VkDeviceSize        memoryOffset;
    uint32_t            deviceIndexCount;
    const uint32_t*     pDeviceIndices;
} VkBindAccelerationStructureMemoryInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructure` is the acceleration structure to be attached to memory.
- `memory` is a `VkDeviceMemory` object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of memory that is to be bound to the acceleration

structure. The number of bytes returned in the `VkMemoryRequirements::size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified acceleration structure.

- `deviceIndexCount` is the number of elements in `pDeviceIndices`.
- `pDeviceIndices` is a pointer to an array of device indices.

Valid Usage

- VUID-VkBindAccelerationStructureMemoryInfoNV-accelerationStructure-03620 `accelerationStructure` **must** not already be backed by a memory object
- VUID-VkBindAccelerationStructureMemoryInfoNV-memoryOffset-03621 `memoryOffset` **must** be less than the size of `memory`
- VUID-VkBindAccelerationStructureMemoryInfoNV-memory-03622 `memory` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetAccelerationStructureMemoryRequirementsNV` with `accelerationStructure` and `type` of `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV`
- VUID-VkBindAccelerationStructureMemoryInfoNV-memoryOffset-03623 `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetAccelerationStructureMemoryRequirementsNV` with `accelerationStructure` and `type` of `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV`
- VUID-VkBindAccelerationStructureMemoryInfoNV-size-03624 The `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetAccelerationStructureMemoryRequirementsNV` with `accelerationStructure` and `type` of `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV` **must** be less than or equal to the size of `memory` minus `memoryOffset`

Valid Usage (Implicit)

- VUID-VkBindAccelerationStructureMemoryInfoNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_BIND_ACCELERATION_STRUCTURE_MEMORY_INFO_NV`
- VUID-VkBindAccelerationStructureMemoryInfoNV-pNext-pNext `pNext` **must** be `NULL`
- VUID-VkBindAccelerationStructureMemoryInfoNV-accelerationStructure-parameter `accelerationStructure` **must** be a valid `VkAccelerationStructureNV` handle
- VUID-VkBindAccelerationStructureMemoryInfoNV-memory-parameter `memory` **must** be a valid `VkDeviceMemory` handle
- VUID-VkBindAccelerationStructureMemoryInfoNV-pDeviceIndices-parameter If `deviceIndexCount` is not `0`, `pDeviceIndices` **must** be a valid pointer to an array of `deviceIndexCount` `uint32_t` values
- VUID-VkBindAccelerationStructureMemoryInfoNV-commonparent

Both of **accelerationStructure**, and **memory must** have been created, allocated, or retrieved from the same **VkDevice**

To allow constructing geometry instances with device code if desired, we need to be able to query an opaque handle for an acceleration structure. This handle is a value of 8 bytes. To get this handle, call:

```
// Provided by VK_NV_ray_tracing
VkResult vkGetAccelerationStructureHandleNV(
    VkDevice          device,
    VkAccelerationStructureNV accelerationStructure,
    size_t            dataSize,
    void*             pData);
```

- **device** is the logical device that owns the acceleration structures.
- **accelerationStructure** is the acceleration structure.
- **dataSize** is the size in bytes of the buffer pointed to by **pData**.
- **pData** is a pointer to an application-allocated buffer where the results will be written.

Valid Usage

- VUID-vkGetAccelerationStructureHandleNV-dataSize-02240
dataSize must be large enough to contain the result of the query, as described above
- VUID-vkGetAccelerationStructureHandleNV-accelerationStructure-02787
accelerationStructure must be bound completely and contiguously to a single **VkDeviceMemory** object via **vkBindAccelerationStructureMemoryNV**

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureHandleNV-device-parameter
device must be a valid **VkDevice** handle
- VUID-vkGetAccelerationStructureHandleNV-accelerationStructure-parameter
accelerationStructure must be a valid **VkAccelerationStructureNV** handle
- VUID-vkGetAccelerationStructureHandleNV-pData-parameter
pData must be a valid pointer to an array of **dataSize** bytes
- VUID-vkGetAccelerationStructureHandleNV-dataSize-arraylength
dataSize must be greater than 0
- VUID-vkGetAccelerationStructureHandleNV-accelerationStructure-parent
accelerationStructure must have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To query the 64-bit device address for an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
VkDeviceAddress vkGetAccelerationStructureDeviceAddressKHR(
    VkDevice device,
    const VkAccelerationStructureDeviceAddressInfoKHR* pInfo);
```

- **device** is the logical device that the acceleration structure was created on.
- **pInfo** is a pointer to a [VkAccelerationStructureDeviceAddressInfoKHR](#) structure specifying the acceleration structure to retrieve an address for.

The 64-bit return value is an address of the acceleration structure, which can be used for device and shader operations that involve acceleration structures, such as ray traversal and acceleration structure building.

If the acceleration structure was created with [vkCreateAccelerationStructure2KHR](#), the return value will be the same address as **addressRange.address**.

If the acceleration structure was created with [vkCreateAccelerationStructureKHR](#) with a non-zero value of [VkAccelerationStructureCreateInfoKHR::deviceAddress](#), the return value will be the same address.

If the acceleration structure was created with a **type** of [VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR](#), the returned address **must** be consistent with the relative offset to other acceleration structures with **type** [VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR](#) allocated with the same [VkBuffer](#). That is, the difference in returned addresses between the two **must** be the same as the difference in offsets provided at acceleration structure creation.

The returned address **must** be aligned to 256 bytes.

NOTE

For acceleration structures created with [vkCreateAccelerationStructureKHR](#), their device address **may** be different from the buffer device address corresponding to the acceleration structure's start offset in its storage buffer for acceleration

structure types other than [VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR](#).

Valid Usage

- VUID-vkGetAccelerationStructureDeviceAddressKHR-accelerationStructure-08935
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure](#) feature **must** be enabled
- VUID-vkGetAccelerationStructureDeviceAddressKHR-device-03504
If [device](#) was created with multiple physical devices, then the [bufferDeviceAddressMultiDevice](#) feature **must** be enabled
- VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-09541
If the buffer on which [pInfo->accelerationStructure](#) was placed is non-sparse then it **must** be bound completely and contiguously to a single [VkDeviceMemory](#) object
- VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-09542
The buffer on which [pInfo->accelerationStructure](#) was placed **must** have been created with the [VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT](#) usage flag set

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureDeviceAddressKHR-device-parameter
[device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-parameter
[pInfo](#) **must** be a valid pointer to a valid [VkAccelerationStructureDeviceAddressInfoKHR](#) structure

The [VkAccelerationStructureDeviceAddressInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureDeviceAddressInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkAccelerationStructureKHR accelerationStructure;
} VkAccelerationStructureDeviceAddressInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [accelerationStructure](#) specifies the acceleration structure whose address is being queried.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureDeviceAddressInfoKHR-sType-sType
[sType](#) **must** be

[VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_DEVICE_ADDRESS_INFO_KHR](#)

- `VUID-VkAccelerationStructureDeviceAddressInfoKHR-pNext-pNext`
`pNext` **must** be `NULL`
- `VUID-VkAccelerationStructureDeviceAddressInfoKHR-accelerationStructure-parameter`
`accelerationStructure` **must** be a valid [VkAccelerationStructureKHR](#) handle

12.8. Micromaps

Micromaps are opaque data structures that are built by the implementation to encode sub-triangle data to be included in an acceleration structure.

Micromaps are represented by `VkMicromapEXT` handles:

```
// Provided by VK_EXT_opacity_micromap
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkMicromapEXT)
```

To create a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCreateMicromapEXT(
    VkDevice                                device,
    const VkMicromapCreateInfoEXT*          pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkMicromapEXT*                          pMicromap);
```

- `device` is the logical device that creates the micromap object.
- `pCreateInfo` is a pointer to a [VkMicromapCreateInfoEXT](#) structure containing parameters affecting creation of the micromap.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pMicromap` is a pointer to a [VkMicromapEXT](#) handle in which the resulting micromap object is returned.

Similar to other objects in Vulkan, the micromap creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into a micromap is determined by the parameters of [VkMicromapCreateInfoEXT](#).

The micromap data is stored in the object referred to by `VkMicromapCreateInfoEXT::buffer`. Once memory has been bound to that buffer, it **must** be populated by micromap build or micromap copy commands such as [vkCmdBuildMicromapsEXT](#), [vkBuildMicromapsEXT](#), [vkCmdCopyMicromapEXT](#), and [vkCopyMicromapEXT](#).

NOTE

The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the micromap data using micromap copy commands. During capture the tool will use [vkCopyMicromapToMemoryEXT](#) or

`vkCmdCopyMicromapToMemoryEXT` with a `mode` of `VK_COPY_MICROMAP_MODE_SERIALIZE_EXT`, and `vkCopyMemoryToMicromapEXT` or `vkCmdCopyMemoryToMicromapEXT` with a `mode` of `VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT` during replay.

The input buffers passed to micromap build commands will be referenced by the implementation for the duration of the command. Micromaps **must** be fully self-contained. The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of a subsequent acceleration structure build using the micromap or traversal of that acceleration structure.

Valid Usage

- VUID-vkCreateMicromapEXT-micromap-07430
The `micromap` feature **must** be enabled
- VUID-vkCreateMicromapEXT-device-07432
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkCreateMicromapEXT-deviceAddress-07431
If `VkMicromapCreateInfoEXT::deviceAddress` is not zero, the `micromapCaptureReplay` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateMicromapEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateMicromapEXT-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkMicromapCreateInfoEXT` structure
- VUID-vkCreateMicromapEXT-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateMicromapEXT-pMicromap-parameter
`pMicromap` **must** be a valid pointer to a `VkMicromapEXT` handle
- VUID-vkCreateMicromapEXT-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkMicromapCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapCreateInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkMicromapCreateFlagsEXT createFlags;
    VkBuffer              buffer;
    VkDeviceSize          offset;
    VkDeviceSize          size;
    VkMicromapTypeEXT     type;
    VkDeviceAddress        deviceAddress;
} VkMicromapCreateInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [createFlags](#) is a bitmask of [VkMicromapCreateFlagBitsEXT](#) specifying additional creation parameters of the micromap.
- [buffer](#) is the buffer on which the micromap will be stored.
- [offset](#) is an offset in bytes from the base address of the buffer at which the micromap will be stored, and **must** be a multiple of [256](#).
- [size](#) is the size required for the micromap.
- [type](#) is a [VkMicromapTypeEXT](#) value specifying the type of micromap that will be created.
- [deviceAddress](#) is the device address requested for the micromap if the [micromapCaptureReplay](#) feature is being used.

If [deviceAddress](#) is zero, no specific address is requested.

If [deviceAddress](#) is not zero, [deviceAddress](#) **must** be an address retrieved from an identically created micromap on the same implementation. The micromap **must** also be placed on an identically created [buffer](#) and at the same [offset](#).

Applications **should** avoid creating micromaps with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR](#) errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the [VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#) flag to all buffers that use [VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT](#), and will add [VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT](#) to all buffers used as storage

for a micromap where `deviceAddress` is not zero. This also means that the tool will need to add `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` to memory allocations to allow the flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Applications and tools should avoid mixing application-provided and implementation-provided addresses for buffers created with `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, to avoid address space allocation conflicts.

If the micromap will be the target of a build operation, the required size for a micromap **can** be queried with `vkGetMicromapBuildSizesEXT`.

Valid Usage

- VUID-VkMicromapCreateInfoEXT-deviceAddress-07433
If `deviceAddress` is not zero, `createFlags` **must** include `VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT`
- VUID-VkMicromapCreateInfoEXT-createFlags-07434
If `createFlags` includes `VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT`, `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapCaptureReplay` **must** be `VK_TRUE`
- VUID-VkMicromapCreateInfoEXT-buffer-07435
`buffer` **must** have been created with the `VK_BUFFER_USAGE_MICROMAP_STORAGE_BIT_EXT` usage flag set
- VUID-VkMicromapCreateInfoEXT-buffer-07436
`buffer` **must** not have been created with `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`
- VUID-VkMicromapCreateInfoEXT-offset-07437
The sum of `offset` and `size` **must** be less than or equal to the size of `buffer`
- VUID-VkMicromapCreateInfoEXT-offset-07438
`offset` **must** be a multiple of 256 bytes

Valid Usage (Implicit)

- VUID-VkMicromapCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MICROMAP_CREATE_INFO_EXT`
- VUID-VkMicromapCreateInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMicromapCreateInfoEXT-createFlags-parameter
`createFlags` **must** be a valid combination of `VkMicromapCreateFlagBitsEXT` values

- VUID-VkMicromapCreateInfoEXT-buffer-parameter
buffer **must** be a valid [VkBuffer](#) handle
- VUID-VkMicromapCreateInfoEXT-type-parameter
type **must** be a valid [VkMicromapTypeEXT](#) value
- VUID-VkMicromapCreateInfoEXT-deviceAddress-parameter
If **deviceAddress** is not 0, **deviceAddress** **must** be a valid [VkDeviceAddress](#) value

To get the build sizes for a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
void vkGetMicromapBuildSizesEXT(
    VkDevice device,
    VkAccelerationStructureBuildTypeKHR buildType,
    const VkMicromapBuildInfoEXT* pBuildInfo,
    VkMicromapBuildSizesInfoEXT* pSizeInfo);
```

- **device** is the logical device that will be used for creating the micromap.
- **buildType** defines whether host or device operations (or both) are being queried for.
- **pBuildInfo** is a pointer to a [VkMicromapBuildInfoEXT](#) structure describing parameters of a build operation.
- **pSizeInfo** is a pointer to a [VkMicromapBuildSizesInfoEXT](#) structure which returns the size required for a micromap and the sizes required for the scratch buffers, given the build parameters. The size requirements for a scratch buffer **may** be zero.

The **dstMicromap** and **mode** members of **pBuildInfo** are ignored. Any [VkDeviceOrHostAddressKHR](#) members of **pBuildInfo** are ignored by this command.

A micromap created with the **micromapSize** returned by this command supports any build with a [VkMicromapBuildInfoEXT](#) structure subject to the following properties:

- The build command is a host build command, and **buildType** is [VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR](#) or [VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR](#)
- The build command is a device build command, and **buildType** is [VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR](#) or [VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR](#)
- For [VkMicromapBuildInfoEXT](#):
 - Its **type**, and **flags** members are equal to **pBuildInfo->type** and **pBuildInfo->flags**, respectively.
 - The sum of usage information in either **pUsageCounts** or **ppUsageCounts** is equal to the sum of usage information in either **pBuildInfo->pUsageCounts** or **pBuildInfo->ppUsageCounts**.

Similarly, the **buildScratchSize** value will support any build command specifying the [VK_BUILD_MICROMAP_MODE_BUILD_EXT](#) **mode** under the above conditions.

Valid Usage

- VUID-vkGetMicromapBuildSizesEXT-dstMicromap-09180
`VkMicromapBuildInfoEXT::dstMicromap` **must** have been created from `device`
- VUID-vkGetMicromapBuildSizesEXT-micromap-07439
The `micromap` feature **must** be enabled
- VUID-vkGetMicromapBuildSizesEXT-device-07440
If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetMicromapBuildSizesEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetMicromapBuildSizesEXT-buildType-parameter
`buildType` **must** be a valid `VkAccelerationStructureBuildTypeKHR` value
- VUID-vkGetMicromapBuildSizesEXT-pBuildInfo-parameter
`pBuildInfo` **must** be a valid pointer to a valid `VkMicromapBuildInfoEXT` structure
- VUID-vkGetMicromapBuildSizesEXT-pSizeInfo-parameter
`pSizeInfo` **must** be a valid pointer to a `VkMicromapBuildSizesInfoEXT` structure

The `VkMicromapBuildSizesInfoEXT` structure describes the required build sizes for a micromap and scratch buffers and is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapBuildSizesInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize        micromapSize;
    VkDeviceSize        buildScratchSize;
    VkBool32            discardable;
} VkMicromapBuildSizesInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `micromapSize` is the size in bytes required in a `VkMicromapEXT` for a build or update operation.
- `buildScratchSize` is the size in bytes required in a scratch buffer for a build operation.
- `discardable` indicates whether or not the micromap object may be destroyed after an acceleration structure build or update. A false value means that acceleration structures built with this micromap **may** contain references to the data contained therein, and the application **must** not destroy the micromap until ray traversal has concluded. A true value means that the information in the micromap will be copied by value into the acceleration structure, and the

micromap **may** be destroyed after the acceleration structure build concludes.

Valid Usage (Implicit)

- VUID-VkMicromapBuildSizesInfoEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_MICROMAP_BUILD_SIZES_INFO_EXT](#)
- VUID-VkMicromapBuildSizesInfoEXT-pNext-pNext
pNext must be `NULL`

Values which **can** be set in [VkMicromapCreateInfoEXT::type](#) specifying the type of micromap, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkMicromapTypeEXT {
    VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT = 0,
#ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_NV_displacement_micromap
    VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV = 1000397000,
#endif
} VkMicromapTypeEXT;
```

- [VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT](#) is a micromap containing data to control the opacity of a triangle.
- [VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV](#) is a micromap containing data to control the displacement of subtriangles within a triangle.

Bits which **can** be set in [VkMicromapCreateInfoEXT::createFlags](#), specifying additional creation parameters for micromaps, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkMicromapCreateFlagBitsEXT {
    VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT = 0x00000001,
} VkMicromapCreateFlagBitsEXT;
```

- [VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT](#) specifies that the micromap's address **can** be saved and reused on a subsequent run.

```
// Provided by VK_EXT_opacity_micromap
typedef VkFlags VkMicromapCreateFlagsEXT;
```

[VkMicromapCreateFlagsEXT](#) is a bitmask type for setting a mask of zero or more [VkMicromapCreateFlagBitsEXT](#).

Bits which **can** be set in [VkMicromapBuildInfoEXT::flags](#) specifying additional parameters for micromap builds, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkBuildMicromapFlagBitsEXT {
    VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT = 0x00000001,
    VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT = 0x00000002,
    VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT = 0x00000004,
} VkBuildMicromapFlagBitsEXT;
```

- [VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT](#) specifies that the given micromap build **should** prioritize trace performance over build time.
- [VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT](#) specifies that the given micromap build **should** prioritize build time over trace performance.

```
// Provided by VK_EXT_opacity_micromap
typedef VkFlags VkBuildMicromapFlagsEXT;
```

[VkBuildMicromapFlagsEXT](#) is a bitmask type for setting a mask of zero or more [VkBuildMicromapFlagBitsEXT](#).

To destroy a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
void vkDestroyMicromapEXT(
    VkDevice                device,
    VkMicromapEXT           micromap,
    const VkAllocationCallbacks* pAllocator);
```

- [device](#) is the logical device that destroys the micromap.
- [micromap](#) is the micromap to destroy.
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyMicromapEXT-micromap-10382
The [micromap](#) feature **must** be enabled
- VUID-vkDestroyMicromapEXT-micromap-07441
All submitted commands that refer to [micromap](#) **must** have completed execution
- VUID-vkDestroyMicromapEXT-micromap-07442
If [VkAllocationCallbacks](#) were provided when [micromap](#) was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyMicromapEXT-micromap-07443
If no [VkAllocationCallbacks](#) were provided when [micromap](#) was created, [pAllocator](#) **must** be [NULL](#)

Valid Usage (Implicit)

- VUID-vkDestroyMicromapEXT-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyMicromapEXT-micromap-parameter
If **micromap** is not [VK_NULL_HANDLE](#), **micromap** **must** be a valid [VkMicromapEXT](#) handle
- VUID-vkDestroyMicromapEXT-pAllocator-parameter
If **pAllocator** is not [NULL](#), **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyMicromapEXT-micromap-parent
If **micromap** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **micromap** **must** be externally synchronized

12.9. Resource Memory Association

Resources are initially created as *virtual allocations* with no backing memory. Device memory is allocated separately (see [Device Memory](#)) and then associated with the resource. This association is done differently for sparse and non-sparse resources.

Resources created with any of the sparse creation flags are considered sparse resources. Resources created without these flags are non-sparse. The details on resource memory association for sparse resources is described in [Sparse Resources](#).

Non-sparse resources **must** be bound completely and contiguously to a single [VkDeviceMemory](#) object before the resource is passed as a parameter to any of the following operations:

- creating buffer, image, or tensor views
- updating descriptor sets
- recording commands in a command buffer

Once bound, the memory binding is immutable for the lifetime of the resource.

In a logical device representing more than one physical device, buffer and image resources exist on all physical devices but **can** be bound to memory differently on each. Each such replicated resource is an *instance* of the resource. For sparse resources, each instance **can** be bound to memory arbitrarily differently. For non-sparse resources, each instance **can** either be bound to the local or a peer instance of the memory, or for images **can** be bound to rectangular regions from the local and/or peer instances. When a resource is used in a descriptor set, each physical device interprets the descriptor according to its own instance's binding to memory.

NOTE

There are no new copy commands to transfer data between physical devices.

Instead, an application **can** create a resource with a peer mapping and use it as the source or destination of a transfer command executed by a single physical device to copy the data from one physical device to another.

To determine the memory requirements for a buffer resource, call:

```
// Provided by VK_VERSION_1_0
void vkGetBufferMemoryRequirements(
    VkDevice          device,
    VkBuffer          buffer,
    VkMemoryRequirements* pMemoryRequirements);
```

- **device** is the logical device that owns the buffer.
- **buffer** is the buffer to query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements](#) structure in which the memory requirements of the buffer object are returned.

Valid Usage (Implicit)

- VUID-vkGetBufferMemoryRequirements-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetBufferMemoryRequirements-buffer-parameter **buffer** **must** be a valid [VkBuffer](#) handle
- VUID-vkGetBufferMemoryRequirements-pMemoryRequirements-parameter **pMemoryRequirements** **must** be a valid pointer to a [VkMemoryRequirements](#) structure
- VUID-vkGetBufferMemoryRequirements-buffer-parent **buffer** **must** have been created, allocated, or retrieved from **device**

To determine the memory requirements for an image resource which is not created with the [VK_IMAGE_CREATE_DISJOINT_BIT](#) flag set, call:

```
// Provided by VK_VERSION_1_0
void vkGetImageMemoryRequirements(
    VkDevice          device,
    VkImage          image,
    VkMemoryRequirements* pMemoryRequirements);
```

- **device** is the logical device that owns the image.
- **image** is the image to query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements](#) structure in which the memory requirements of the image object are returned.

Valid Usage

- VUID-vkGetImageMemoryRequirements-image-01588
image **must** not have been created with the `VK_IMAGE_CREATE_DISJOINT_BIT` flag set
- VUID-vkGetImageMemoryRequirements-image-04004
If **image** was created with the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` external memory handle type, then **image** **must** be bound to memory
- VUID-vkGetImageMemoryRequirements-image-08960
If **image** was created with the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX` external memory handle type, then **image** **must** be bound to memory

Valid Usage (Implicit)

- VUID-vkGetImageMemoryRequirements-device-parameter
device **must** be a valid `VkDevice` handle
- VUID-vkGetImageMemoryRequirements-image-parameter
image **must** be a valid `VkImage` handle
- VUID-vkGetImageMemoryRequirements-pMemoryRequirements-parameter
pMemoryRequirements **must** be a valid pointer to a `VkMemoryRequirements` structure
- VUID-vkGetImageMemoryRequirements-image-parent
image **must** have been created, allocated, or retrieved from **device**

To determine the memory requirements for a tensor resource, call:

```
// Provided by VK_ARM_tensors
void vkGetTensorMemoryRequirementsARM(
    VkDevice device,
    const VkTensorMemoryRequirementsInfoARM* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- **device** is the logical device that owns the tensor.
- **pInfo** is a pointer to a `VkTensorMemoryRequirementsInfoARM` structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a `VkMemoryRequirements2` structure in which the memory requirements of the tensor object are returned.

Valid Usage (Implicit)

- VUID-vkGetTensorMemoryRequirementsARM-device-parameter
device **must** be a valid `VkDevice` handle

- VUID-vkGetTensorMemoryRequirementsARM-pInfo-parameter
pInfo **must** be a valid pointer to a valid [VkTensorMemoryRequirementsInfoARM](#) structure
- VUID-vkGetTensorMemoryRequirementsARM-pMemoryRequirements-parameter
pMemoryRequirements **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

The [VkTensorMemoryRequirementsInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkTensorMemoryRequirementsInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkTensorARM        tensor;
} VkTensorMemoryRequirementsInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **tensor** is the tensor to query.

Valid Usage (Implicit)

- VUID-VkTensorMemoryRequirementsInfoARM-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_TENSOR_MEMORY_REQUIREMENTS_INFO_ARM](#)
- VUID-VkTensorMemoryRequirementsInfoARM-pNext-pNext
pNext **must** be **NULL**
- VUID-VkTensorMemoryRequirementsInfoARM-tensor-parameter
tensor **must** be a valid [VkTensorARM](#) handle

To determine the memory requirements for a tensor resource without creating an object, call:

```
// Provided by VK_ARM_tensors
void vkGetDeviceTensorMemoryRequirementsARM(
    VkDevice                device,
    const VkDeviceTensorMemoryRequirementsARM* pInfo,
    VkMemoryRequirements2*  pMemoryRequirements);
```

- **device** is the logical device intended to own the tensor.
- **pInfo** is a pointer to a [VkDeviceTensorMemoryRequirementsARM](#) structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements2](#) structure in which the memory requirements of the tensor object are returned.

Valid Usage

- VUID-vkGetDeviceTensorMemoryRequirementsARM-tensors-09831
The **tensors** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceTensorMemoryRequirementsARM-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceTensorMemoryRequirementsARM-pInfo-parameter
pInfo **must** be a valid pointer to a valid [VkDeviceTensorMemoryRequirementsARM](#) structure
- VUID-vkGetDeviceTensorMemoryRequirementsARM-pMemoryRequirements-parameter
pMemoryRequirements **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

The [VkDeviceTensorMemoryRequirementsARM](#) structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkDeviceTensorMemoryRequirementsARM {
    VkStructureType    sType;
    const void*        pNext;
    const VkTensorCreateInfoARM* pCreateInfo;
} VkDeviceTensorMemoryRequirementsARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pCreateInfo** is a pointer to a [VkTensorCreateInfoARM](#) structure containing parameters affecting the creation of the tensor to query.

Valid Usage (Implicit)

- VUID-VkDeviceTensorMemoryRequirementsARM-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_DEVICE_TENSOR_MEMORY_REQUIREMENTS_ARM](#)
- VUID-VkDeviceTensorMemoryRequirementsARM-pNext-pNext
pNext **must** be **NULL**
- VUID-VkDeviceTensorMemoryRequirementsARM-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkTensorCreateInfoARM](#) structure

The [VkMemoryRequirements](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryRequirements {
    VkDeviceSize    size;
    VkDeviceSize    alignment;
    uint32_t        memoryTypeBits;
} VkMemoryRequirements;
```

- **size** is the size, in bytes, of the memory allocation **required** for the resource.
- **alignment** is the alignment, in bytes, of the offset within the allocation **required** for the resource.
- **memoryTypeBits** is a bitmask and contains one bit set for every supported memory type for the resource. Bit **i** is set if and only if the memory type **i** in the **VkPhysicalDeviceMemoryProperties** structure for the physical device is supported for the resource.

The precise size of images that will be bound to external Android hardware buffer memory is unknown until the memory has been imported or allocated, so applications **must** not call **vkGetImageMemoryRequirements** or **vkGetImageMemoryRequirements2** with such a **VkImage** before it has been bound to memory. For this reason, applications also **must** not call **vkGetDeviceImageMemoryRequirements** with a **VkImageCreateInfo** describing an external Android hardware buffer. When importing Android hardware buffer memory, the **allocationSize** **can** be determined by calling **vkGetAndroidHardwareBufferPropertiesANDROID**. When allocating new memory for a **VkImage** that **can** be exported to an Android hardware buffer, the memory's **allocationSize** **must** be zero; the actual size will be determined by the dedicated image's parameters. After the memory has been allocated, the amount of space allocated from the memory's heap **can** be obtained by getting the image's memory requirements or by calling **vkGetAndroidHardwareBufferPropertiesANDROID** with the Android hardware buffer exported from the memory.

When allocating new memory for a **VkBuffer** that **can** be exported to an Android hardware buffer an application **may** still call **vkGetBufferMemoryRequirements** or **vkGetBufferMemoryRequirements2** with **VkBuffer** before it has been bound to memory.

The value of **size** has no meaning and **should** be ignored if the resource being queried was created with any of the following external memory handle types:

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT**
- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT**
- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT**
- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT**

The implementation guarantees certain properties about the memory requirements returned by **vkGetBufferMemoryRequirements2**, **vkGetImageMemoryRequirements2**, **vkGetDeviceBufferMemoryRequirements**, **vkGetDeviceImageMemoryRequirements**, **vkGetDeviceTensorMemoryRequirementsARM**, **vkGetTensorMemoryRequirementsARM**, **vkGetBufferMemoryRequirements** and **vkGetImageMemoryRequirements**:

- The `memoryTypeBits` member always contains at least one bit set.
- If `buffer` is a `VkBuffer` not created with the `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` or `VK_BUFFER_CREATE_PROTECTED_BIT` bits set, or if `image` is a `linear` image that was not created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit set, or if `tensor` is a `VkTensorARM` not created with the `VK_TENSOR_CREATE_PROTECTED_BIT_ARM`, then the `memoryTypeBits` member always contains at least one bit set corresponding to a `VkMemoryType` with a `propertyFlags` that has both the `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT` bit and the `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` bit set. In other words, mappable coherent memory **can** always be attached to these objects.
- If `buffer` was created with `VkExternalMemoryBufferCreateInfo::handleTypes` set to `0` or `image` was created with `VkExternalMemoryImageCreateInfo::handleTypes` set to `0`, or `tensor` was created with `VkExternalMemoryTensorCreateInfoARM::handleTypes` set to `0`, the `memoryTypeBits` member always contains at least one bit set corresponding to a `VkMemoryType` with a `propertyFlags` that has the `VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT` bit set.
- The `memoryTypeBits` member is identical for all `VkBuffer` objects created with the same value for the `flags` and `usage` members in the `VkBufferCreateInfo` structure and the `handleTypes` member of the `VkExternalMemoryBufferCreateInfo` structure passed to `vkCreateBuffer`. Further, if `usage1` and `usage2` of type `VkBufferUsageFlags` are such that the bits set in `usage2` are a subset of the bits set in `usage1`, and they have the same `flags` and `VkExternalMemoryBufferCreateInfo::handleTypes`, then the bits set in `memoryTypeBits` returned for `usage1` **must** be a subset of the bits set in `memoryTypeBits` returned for `usage2`, for all values of `flags`.
- The `alignment` member is a power of two.
- The `alignment` member is identical for all `VkBuffer` objects created with the same combination of values for the `usage` and `flags` members in the `VkBufferCreateInfo` structure passed to `vkCreateBuffer`.
- If the `maintenance4` feature is enabled, then the `alignment` member is identical for all `VkImage` objects created with the same combination of values for the `flags`, `imageType`, `format`, `extent`, `mipLevels`, `arrayLayers`, `samples`, `tiling` and `usage` members in the `VkImageCreateInfo` structure passed to `vkCreateImage`.
- The `alignment` member satisfies the buffer descriptor offset alignment requirements associated with the `VkBuffer`'s `usage`:
 - If `usage` included `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT` or `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT`, `alignment` **must** be an integer multiple of `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`.
 - If `usage` included `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT`, `alignment` **must** be an integer multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`.
 - If `usage` included `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, `alignment` **must** be an integer multiple of `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`.
- For images created with a color format, the `memoryTypeBits` member is identical for all `VkImage` objects created with the same combination of values for the `tiling` member, the `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` bit and `VK_IMAGE_CREATE_PROTECTED_BIT` bit of the `flags` member, the `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` bit of the `flags` member, the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` bit of the `usage` member if the

`VkPhysicalDeviceHostImageCopyProperties::identicalMemoryTypeRequirements` property is `VK_FALSE`, `handleTypes` member of `VkExternalMemoryImageCreateInfo`, and the `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` of the `usage` member in the `VkImageCreateInfo` structure passed to `vkCreateImage`.

- For images created with a depth/stencil format, the `memoryTypeBits` member is identical for all `VkImage` objects created with the same combination of values for the `format` member, the `tiling` member, the `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` bit and `VK_IMAGE_CREATE_PROTECTED_BIT` bit of the `flags` member, the `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` bit of the `flags` member, the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` bit of the `usage` member if the `VkPhysicalDeviceHostImageCopyProperties::identicalMemoryTypeRequirements` property is `VK_FALSE`, `handleTypes` member of `VkExternalMemoryImageCreateInfo`, and the `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` of the `usage` member in the `VkImageCreateInfo` structure passed to `vkCreateImage`.
- If the memory requirements are for a `VkImage`, the `memoryTypeBits` member **must** not refer to a `VkMemoryType` with a `propertyFlags` that has the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set if the `image` did not have `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` bit set in the `usage` member of the `VkImageCreateInfo` structure passed to `vkCreateImage`.
- If the memory requirements are for a `VkBuffer`, the `memoryTypeBits` member **must** not refer to a `VkMemoryType` with a `propertyFlags` that has the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set.
- If the memory requirements are for a `VkTensorARM`, the `memoryTypeBits` member **must** not refer to a `VkMemoryType` with a `propertyFlags` that has the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set.

NOTE

The implication of this requirement is that lazily allocated memory is disallowed for buffers in all cases.

- The `size` member is identical for all `VkBuffer` objects created with the same combination of creation parameters specified in `VkBufferCreateInfo` and its `pNext` chain.
- The `size` member is identical for all `VkImage` objects created with the same combination of creation parameters specified in `VkImageCreateInfo` and its `pNext` chain.
- The `size` member is identical for all `VkTensorARM` objects created with the same combination of creation parameters specified in `VkTensorCreateInfoARM` and its `pNext` chain.

NOTE

This, however, does not imply that they interpret the contents of the bound memory identically with each other. That additional guarantee, however, **can** be explicitly requested using `VK_IMAGE_CREATE_ALIAS_BIT`.

- If the `maintenance4` feature is enabled, these additional guarantees apply:
 - For a `VkBuffer`, the `size` memory requirement is never greater than that of another `VkBuffer` created with a greater or equal `size` specified in `VkBufferCreateInfo`, all other creation parameters being identical.

- For a `VkBuffer`, the `size` memory requirement is never greater than the result of aligning `VkBufferCreateInfo::size` with the `alignment` memory requirement.
- For a `VkImage`, the `size` memory requirement is never greater than that of another `VkImage` created with a greater or equal value in each of `extent.width`, `extent.height`, and `extent.depth`; all other creation parameters being identical.
- The memory requirements returned by `vkGetDeviceBufferMemoryRequirements` are identical to those that would be returned by `vkGetBufferMemoryRequirements2` if it were called with a `VkBuffer` created with the same `VkBufferCreateInfo` values.
- The memory requirements returned by `vkGetDeviceImageMemoryRequirements` are identical to those that would be returned by `vkGetImageMemoryRequirements2` if it were called with a `VkImage` created with the same `VkImageCreateInfo` values.
- The memory requirements returned by `vkGetDeviceTensorMemoryRequirementsARM` are identical to those that would be returned by `vkGetTensorMemoryRequirementsARM` if it were called with a `VkTensorARM` created with the same `VkTensorCreateInfoARM` values, including additional values provided via a `VkExternalMemoryTensorCreateInfoARM` structure.

To determine the memory requirements for a buffer resource, call:

```
// Provided by VK_VERSION_1_1
void vkGetBufferMemoryRequirements2(
    VkDevice          device,
    const VkBufferMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to vkGetBufferMemoryRequirements2
void vkGetBufferMemoryRequirements2KHR(
    VkDevice          device,
    const VkBufferMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- `device` is the logical device that owns the buffer.
- `pInfo` is a pointer to a `VkBufferMemoryRequirementsInfo2` structure containing parameters required for the memory requirements query.
- `pMemoryRequirements` is a pointer to a `VkMemoryRequirements2` structure in which the memory requirements of the buffer object are returned.

Valid Usage (Implicit)

- VUID-vkGetBufferMemoryRequirements2-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetBufferMemoryRequirements2-pInfo-parameter

pInfo **must** be a valid pointer to a valid [VkBufferMemoryRequirementsInfo2](#) structure

- VUID-vkGetBufferMemoryRequirements2-pMemoryRequirements-parameter
pMemoryRequirements **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

To determine the memory requirements for a buffer resource without creating an object, call:

```
// Provided by VK_VERSION_1_3
void vkGetDeviceBufferMemoryRequirements(
    VkDevice          device,
    const VkDeviceBufferMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to vkGetDeviceBufferMemoryRequirements
void vkGetDeviceBufferMemoryRequirementsKHR(
    VkDevice          device,
    const VkDeviceBufferMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- **device** is the logical device intended to own the buffer.
- **pInfo** is a pointer to a [VkDeviceBufferMemoryRequirements](#) structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements2](#) structure in which the memory requirements of the buffer object are returned.

Valid Usage (Implicit)

- VUID-vkGetDeviceBufferMemoryRequirements-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceBufferMemoryRequirements-pInfo-parameter
pInfo **must** be a valid pointer to a valid [VkDeviceBufferMemoryRequirements](#) structure
- VUID-vkGetDeviceBufferMemoryRequirements-pMemoryRequirements-parameter
pMemoryRequirements **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

The [VkBufferMemoryRequirementsInfo2](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBufferMemoryRequirementsInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer           buffer;
} VkBufferMemoryRequirementsInfo2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkBufferMemoryRequirementsInfo2
typedef VkBufferMemoryRequirementsInfo2 VkBufferMemoryRequirementsInfo2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **buffer** is the buffer to query.

Valid Usage (Implicit)

- VUID-VkBufferMemoryRequirementsInfo2-sType-sType
sType must be [VK_STRUCTURE_TYPE_BUFFER_MEMORY_REQUIREMENTS_INFO_2](#)
- VUID-VkBufferMemoryRequirementsInfo2-pNext-pNext
pNext must be **NULL**
- VUID-VkBufferMemoryRequirementsInfo2-buffer-parameter
buffer must be a valid [VkBuffer](#) handle

The [VkDeviceBufferMemoryRequirements](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkDeviceBufferMemoryRequirements {
    VkStructureType      sType;
    const void*          pNext;
    const VkBufferCreateInfo* pCreateInfo;
} VkDeviceBufferMemoryRequirements;
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to VkDeviceBufferMemoryRequirements
typedef VkDeviceBufferMemoryRequirements VkDeviceBufferMemoryRequirementsKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pCreateInfo** is a pointer to a [VkBufferCreateInfo](#) structure containing parameters affecting creation of the buffer to query.

Valid Usage (Implicit)

- VUID-VkDeviceBufferMemoryRequirements-sType-sType
sType must be [VK_STRUCTURE_TYPE_DEVICE_BUFFER_MEMORY_REQUIREMENTS](#)
- VUID-VkDeviceBufferMemoryRequirements-pNext-pNext
pNext must be **NULL**

- VUID-VkDeviceBufferMemoryRequirements-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkBufferCreateInfo](#) structure

To determine the memory requirements for an image resource, call:

```
// Provided by VK_VERSION_1_1
void vkGetImageMemoryRequirements2(
    VkDevice                device,
    const VkImageMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to vkGetImageMemoryRequirements2
void vkGetImageMemoryRequirements2KHR(
    VkDevice                device,
    const VkImageMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- **device** is the logical device that owns the image.
- **pInfo** is a pointer to a [VkImageMemoryRequirementsInfo2](#) structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements2](#) structure in which the memory requirements of the image object are returned.

Valid Usage (Implicit)

- VUID-vkGetImageMemoryRequirements2-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetImageMemoryRequirements2-pInfo-parameter
pInfo **must** be a valid pointer to a valid [VkImageMemoryRequirementsInfo2](#) structure
- VUID-vkGetImageMemoryRequirements2-pMemoryRequirements-parameter
pMemoryRequirements **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

To determine the memory requirements for an image resource without creating an object, call:

```
// Provided by VK_VERSION_1_3
void vkGetDeviceImageMemoryRequirements(
    VkDevice                device,
    const VkDeviceImageMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to vkGetDeviceImageMemoryRequirements
void vkGetDeviceImageMemoryRequirementsKHR(
    VkDevice                device,
    const VkDeviceImageMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- **device** is the logical device intended to own the image.
- **pInfo** is a pointer to a [VkDeviceImageMemoryRequirements](#) structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a [VkMemoryRequirements2](#) structure in which the memory requirements of the image object are returned.

Valid Usage (Implicit)

- VUID-vkGetDeviceImageMemoryRequirements-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceImageMemoryRequirements-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkDeviceImageMemoryRequirements](#) structure
- VUID-vkGetDeviceImageMemoryRequirements-pMemoryRequirements-parameter **pMemoryRequirements** **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

The [VkImageMemoryRequirementsInfo2](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageMemoryRequirementsInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
} VkImageMemoryRequirementsInfo2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkImageMemoryRequirementsInfo2
typedef VkImageMemoryRequirementsInfo2 VkImageMemoryRequirementsInfo2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **image** is the image to query.

Valid Usage

- VUID-VkImageMemoryRequirementsInfo2-image-01589

If **image** was created with a *multi-planar* format and the `VK_IMAGE_CREATE_DISJOINT_BIT` flag, there **must** be a `VkImagePlaneMemoryRequirementsInfo` included in the **pNext** chain of the `VkImageMemoryRequirementsInfo2` structure

- VUID-VkImageMemoryRequirementsInfo2-image-02279

If **image** was created with `VK_IMAGE_CREATE_DISJOINT_BIT` and with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then there **must** be a `VkImagePlaneMemoryRequirementsInfo` included in the **pNext** chain of the `VkImageMemoryRequirementsInfo2` structure

- VUID-VkImageMemoryRequirementsInfo2-image-01590

If **image** was not created with the `VK_IMAGE_CREATE_DISJOINT_BIT` flag, there **must** not be a `VkImagePlaneMemoryRequirementsInfo` included in the **pNext** chain of the `VkImageMemoryRequirementsInfo2` structure

- VUID-VkImageMemoryRequirementsInfo2-image-02280

If **image** was created with a single-plane format and with any **tiling** other than `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then there **must** not be a `VkImagePlaneMemoryRequirementsInfo` included in the **pNext** chain of the `VkImageMemoryRequirementsInfo2` structure

- VUID-VkImageMemoryRequirementsInfo2-image-01897

If **image** was created with the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` external memory handle type, then **image** **must** be bound to memory

- VUID-VkImageMemoryRequirementsInfo2-image-08961

If **image** was created with the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX` external memory handle type, then **image** **must** be bound to memory

Valid Usage (Implicit)

- VUID-VkImageMemoryRequirementsInfo2-sType-sType

sType **must** be `VK_STRUCTURE_TYPE_IMAGE_MEMORY_REQUIREMENTS_INFO_2`

- VUID-VkImageMemoryRequirementsInfo2-pNext-pNext

pNext **must** be `NULL` or a pointer to a valid instance of `VkImagePlaneMemoryRequirementsInfo`

- VUID-VkImageMemoryRequirementsInfo2-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkImageMemoryRequirementsInfo2-image-parameter

image **must** be a valid `VkImage` handle

The `VkDeviceImageMemoryRequirements` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkDeviceImageMemoryRequirements {
    VkStructureType      sType;
    const void*          pNext;
    const VkImageCreateInfo* pCreateInfo;
    VkImageAspectFlagBits planeAspect;
} VkDeviceImageMemoryRequirements;
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to VkDeviceImageMemoryRequirements
typedef VkDeviceImageMemoryRequirements VkDeviceImageMemoryRequirementsKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pCreateInfo** is a pointer to a [VkImageCreateInfo](#) structure containing parameters affecting creation of the image to query.
- **planeAspect** is a [VkImageAspectFlagBits](#) value specifying the aspect corresponding to the image plane to query. This parameter is ignored unless **pCreateInfo->tiling** is [VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT](#), or **pCreateInfo->flags** has [VK_IMAGE_CREATE_DISJOINT_BIT](#) set.

Valid Usage

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06416
The **pCreateInfo->pNext** chain **must** not contain a [VkImageSwapchainCreateInfoKHR](#) structure
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06776
The **pCreateInfo->pNext** chain **must** not contain a [VkImageDrmFormatModifierExplicitCreateInfoEXT](#) structure
- VUID-VkDeviceImageMemoryRequirements-pNext-06996
Applications also **must** not call [vkGetDeviceImageMemoryRequirements](#) with a [VkImageCreateInfo](#) whose **pNext** chain includes a [VkExternalFormatANDROID](#) structure with non-zero **externalFormat**
- VUID-VkDeviceImageMemoryRequirements-pNext-08962
Applications also **must** not call [vkGetDeviceImageMemoryRequirements](#) with a [VkImageCreateInfo](#) whose **pNext** chain includes a [VkExternalFormatQNX](#) structure with non-zero **externalFormat**
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06417
If **pCreateInfo->format** specifies a *multi-planar* format and **pCreateInfo->flags** has [VK_IMAGE_CREATE_DISJOINT_BIT](#) set then **planeAspect** **must** not be [VK_IMAGE_ASPECT_NONE_KHR](#)
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06419
If **pCreateInfo->flags** has [VK_IMAGE_CREATE_DISJOINT_BIT](#) set and if the **pCreateInfo-**

>tiling is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, then `planeAspect` **must** be a single valid `multi-planar aspect mask` bit

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06420

If `pCreateInfo->tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `planeAspect` **must** be a single valid *memory plane* for the image (that is, `aspectMask` **must** specify a plane index that is less than the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image's `format` and `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier`)

- VUID-VkDeviceImageMemoryRequirements-planeAspect-12399

If `planeAspect` is not 0, `pCreateInfo->tiling` is not `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, and `pCreateInfo->flags` does not have `VK_IMAGE_CREATE_DISJOINT_BIT` set, `planeAspect` **must** be a valid `VkImageAspectFlagBits` value

Valid Usage (Implicit)

- VUID-VkDeviceImageMemoryRequirements-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_IMAGE_MEMORY_REQUIREMENTS`
- VUID-VkDeviceImageMemoryRequirements-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkImageCreateInfo` structure

To determine the memory requirements for a plane of a disjoint image, add a `VkImagePlaneMemoryRequirementsInfo` structure to the `pNext` chain of the `VkImageMemoryRequirementsInfo2` structure.

The `VkImagePlaneMemoryRequirementsInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImagePlaneMemoryRequirementsInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImageAspectFlagBits planeAspect;
} VkImagePlaneMemoryRequirementsInfo;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkImagePlaneMemoryRequirementsInfo
typedef VkImagePlaneMemoryRequirementsInfo VkImagePlaneMemoryRequirementsInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `planeAspect` is a `VkImageAspectFlagBits` value specifying the aspect corresponding to the image plane to query.

Valid Usage

- VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-02281
If the image's `tiling` is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, then `planeAspect` **must** be a single valid `multi-planar aspect mask` bit
- VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-02282
If the image's `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `planeAspect` **must** be a single valid *memory plane* for the image (that is, `aspectMask` **must** specify a plane index that is less than the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image's `format` and `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier`)

Valid Usage (Implicit)

- VUID-VkImagePlaneMemoryRequirementsInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_PLANE_MEMORY_REQUIREMENTS_INFO`
- VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-parameter
`planeAspect` **must** be a valid `VkImageAspectFlagBits` value

Structure Chaining

Extends the structure

- `VkImageMemoryRequirementsInfo2`

To determine the tile memory allocation requirements of a buffer or image resource, add a `VkTileMemoryRequirementsQCOM` structure to the `pNext` chain of the `VkMemoryRequirements2` structure passed as the `pMemoryRequirements` parameter of `vkGetBufferMemoryRequirements2` or `vkGetImageMemoryRequirements2`, respectively. The `VkTileMemoryRequirementsQCOM` structure is defined as:

```
// Provided by VK_QCOM_tile_memory_heap
typedef struct VkTileMemoryRequirementsQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       size;
    VkDeviceSize       alignment;
} VkTileMemoryRequirementsQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- **size** is the size, in bytes, of the tile memory allocation required for the resource.
- **alignment** is the alignment, in bytes, of the offset within the tile memory allocation required for the resource.

The **size** and **alignment** **must** be used when the resource is bound to a [VkDeviceMemory](#) object that was allocated from a [VkMemoryType](#) that has a **heapIndex** that corresponds to a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property.

If the resource cannot be bound to tile memory, then **size** and **alignment** is filled with zero by the implementation.

Valid Usage (Implicit)

- VUID-VkTileMemoryRequirementsQCOM-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_TILE_MEMORY_REQUIREMENTS_QCOM](#)

Structure Chaining

Extends the structure

- [VkMemoryRequirements2](#)

The [VkMemoryRequirements2](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryRequirements2 {
    VkStructureType    sType;
    void*              pNext;
    VkMemoryRequirements memoryRequirements;
} VkMemoryRequirements2;
```

```
// Provided by VK_KHR_get_memory_requirements2, VK_NV_ray_tracing with
VK_KHR_get_memory_requirements2 or VK_VERSION_1_1
// Equivalent to VkMemoryRequirements2
typedef VkMemoryRequirements2 VkMemoryRequirements2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memoryRequirements** is a [VkMemoryRequirements](#) structure describing the memory requirements of the resource.

Valid Usage (Implicit)

- VUID-VkMemoryRequirements2-sType-sType

sType **must** be [VK_STRUCTURE_TYPE_MEMORY_REQUIREMENTS_2](#)

- [VUID-VkMemoryRequirements2-pNext-pNext](#)

Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkMemoryDedicatedRequirements](#) or [VkTileMemoryRequirementsQCOM](#)

- [VUID-VkMemoryRequirements2-sType-unique](#)

The **sType** value of each structure in the **pNext** chain **must** be unique

The [VkMemoryDedicatedRequirements](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryDedicatedRequirements {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           prefersDedicatedAllocation;
    VkBool32           requiresDedicatedAllocation;
} VkMemoryDedicatedRequirements;
```

```
// Provided by VK_KHR_dedicated_allocation
// Equivalent to VkMemoryDedicatedRequirements
typedef VkMemoryDedicatedRequirements VkMemoryDedicatedRequirementsKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **prefersDedicatedAllocation** specifies that the implementation would prefer a dedicated allocation for this resource. The application is still free to suballocate the resource but it **may** get better performance if a dedicated allocation is used.
- **requiresDedicatedAllocation** specifies that a dedicated allocation is required for this resource.

To determine the dedicated allocation requirements of a buffer or image or tensor resource, add a [VkMemoryDedicatedRequirements](#) structure to the **pNext** chain of the [VkMemoryRequirements2](#) structure passed as the **pMemoryRequirements** parameter of [vkGetBufferMemoryRequirements2](#), [vkGetTensorMemoryRequirementsARM](#), [vkGetDeviceBufferMemoryRequirements](#), [vkGetDeviceImageMemoryRequirements](#), or [vkGetImageMemoryRequirements2](#) respectively.

Constraints on the values returned for buffer resources are:

- **requiresDedicatedAllocation** **may** be [VK_TRUE](#) if the **pNext** chain of [VkBufferCreateInfo](#) for the call to [vkCreateBuffer](#) used to create the buffer being queried included a [VkExternalMemoryBufferCreateInfo](#) structure, and any of the handle types specified in [VkExternalMemoryBufferCreateInfo::handleTypes](#) requires dedicated allocation, as reported by [vkGetPhysicalDeviceExternalBufferProperties](#) in [VkExternalBufferProperties::externalMemoryProperties.externalMemoryFeatures](#). Otherwise, **requiresDedicatedAllocation** will be [VK_FALSE](#).

- When the implementation sets `requiresDedicatedAllocation` to `VK_TRUE`, it **must** also set `prefersDedicatedAllocation` to `VK_TRUE`.
- If `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` was set in `VkBufferCreateInfo::flags` when `buffer` was created, then both `prefersDedicatedAllocation` and `requiresDedicatedAllocation` will be `VK_FALSE`.

Constraints on the values returned for image resources are:

- `requiresDedicatedAllocation` **may** be `VK_TRUE` if the `pNext` chain of `VkImageCreateInfo` for the call to `vkCreateImage` used to create the image being queried included a `VkExternalMemoryImageCreateInfo` structure, and any of the handle types specified in `VkExternalMemoryImageCreateInfo::handleTypes` requires dedicated allocation, as reported by `vkGetPhysicalDeviceImageFormatProperties2` in `VkExternalImageFormatProperties::externalMemoryProperties.externalMemoryFeatures`.
- `requiresDedicatedAllocation` **may** be `VK_TRUE` if the image's tiling is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`.
- `requiresDedicatedAllocation` will otherwise be `VK_FALSE`.
- If `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` was set in `VkImageCreateInfo::flags` when `image` was created, then both `prefersDedicatedAllocation` and `requiresDedicatedAllocation` will be `VK_FALSE`.

Constraints on the values returned for tensor resources are:

- `requiresDedicatedAllocation` **may** be `VK_TRUE` if the `pNext` chain of `VkTensorCreateInfoARM` for the call to `vkCreateTensorARM` used to create the tensor being queried included a `VkExternalMemoryTensorCreateInfoARM` structure, and any of the handle types specified in `VkExternalMemoryTensorCreateInfoARM::handleTypes` requires dedicated allocation, as reported by `vkGetPhysicalDeviceExternalTensorPropertiesARM` in `VkExternalTensorPropertiesARM::externalMemoryProperties.externalMemoryFeatures`.
- `requiresDedicatedAllocation` will otherwise be `VK_FALSE`.
- When the implementation sets `requiresDedicatedAllocation` to `VK_TRUE`, it **must** also set `prefersDedicatedAllocation` to `VK_TRUE`.

Valid Usage (Implicit)

- VUID-VkMemoryDedicatedRequirements-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_DEDICATED_REQUIREMENTS`

Structure Chaining

Extends the structure

- `VkMemoryRequirements2`

To attach memory to a buffer object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkBindBufferMemory(
    VkDevice          device,
    VkBuffer           buffer,
    VkDeviceMemory     memory,
    VkDeviceSize       memoryOffset);
```

- **device** is the logical device that owns the buffer and memory.
- **buffer** is the buffer to be attached to memory.
- **memory** is a [VkDeviceMemory](#) object describing the device memory to attach.
- **memoryOffset** is the start offset of the region of **memory** which is to be bound to the buffer. The number of bytes returned in the [VkMemoryRequirements::size](#) member in **memory**, starting from **memoryOffset** bytes, will be bound to the specified buffer.

[vkBindBufferMemory](#) is equivalent to passing the same parameters through [VkBindBufferMemoryInfo](#) to [vkBindBufferMemory2](#).

Valid Usage

- VUID-vkBindBufferMemory-buffer-07459
buffer must not have been bound to a memory object
- VUID-vkBindBufferMemory-buffer-01030
buffer must not have been created with any sparse memory binding flags
- VUID-vkBindBufferMemory-memoryOffset-01031
memoryOffset must be less than the size of **memory**
- VUID-vkBindBufferMemory-memory-01035
memory must have been allocated using one of the memory types allowed in the [memoryTypeBits](#) member of the [VkMemoryRequirements](#) structure returned from a call to [vkGetBufferMemoryRequirements](#) with **buffer**
- VUID-vkBindBufferMemory-None-10739
If **memory** was not allocated from a memory heap with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property set, **memoryOffset must** be an integer multiple of the [alignment](#) member of the [VkMemoryRequirements](#) structure returned from a call to [vkGetBufferMemoryRequirements](#) with **buffer**
- VUID-vkBindBufferMemory-memory-10740
If **memory** was allocated from a memory heap with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property set, **memoryOffset must** be an integer multiple of the [alignment](#) member of the [VkTileMemoryRequirementsQCOM](#) structure returned from a call to [vkGetBufferMemoryRequirements](#) with **buffer**
- VUID-vkBindBufferMemory-None-10741
If **memory** was not allocated from a memory heap with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property set, **size** member of the [VkMemoryRequirements](#) structure returned from a call to [vkGetBufferMemoryRequirements](#) with

buffer **must** be less than or equal to the size of **memory** minus **memoryOffset**

- VUID-vkBindBufferMemory-memory-10742

If **memory** was allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, **size** member of the `VkTileMemoryRequirementsQCOM` structure returned from a call to `vkGetBufferMemoryRequirements` with **buffer** **must** be less than or equal to the size of **memory** minus **memoryOffset**

- VUID-vkBindBufferMemory-buffer-01444

If **buffer** requires a dedicated allocation (as reported by `vkGetBufferMemoryRequirements2` in `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` for **buffer**), **memory** **must** have been allocated with `VkMemoryDedicatedAllocateInfo::buffer` equal to **buffer**

- VUID-vkBindBufferMemory-memory-01508

If the `VkMemoryAllocateInfo` provided when **memory** was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its **pNext** chain, and `VkMemoryDedicatedAllocateInfo::buffer` was not `VK_NULL_HANDLE`, then **buffer** **must** equal `VkMemoryDedicatedAllocateInfo::buffer`, and **memoryOffset** **must** be zero

- VUID-vkBindBufferMemory-memory-10925

If the `VkMemoryAllocateInfo` provided when **memory** was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its **pNext** chain, `VkMemoryDedicatedAllocateInfo::image` **must** have been `VK_NULL_HANDLE`

- VUID-vkBindBufferMemory-None-01898

If **buffer** was created with the `VK_BUFFER_CREATE_PROTECTED_BIT` bit set, the buffer **must** be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-vkBindBufferMemory-None-01899

If **buffer** was created with the `VK_BUFFER_CREATE_PROTECTED_BIT` bit not set, the buffer **must** not be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-vkBindBufferMemory-buffer-01038

If **buffer** was created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, **memory** **must** have been allocated with `VkDedicatedAllocationMemoryAllocateInfoNV::buffer` equal to a buffer handle created with identical creation parameters to **buffer** and **memoryOffset** **must** be zero

- VUID-vkBindBufferMemory-apiVersion-07920

If the `VK_KHR_dedicated_allocation` extension is not enabled, `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and **buffer** was not created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, **memory** **must** not have been allocated dedicated for a specific buffer or image

- VUID-vkBindBufferMemory-memory-02726

If the value of `VkExportMemoryAllocateInfo::handleTypes` used to allocate **memory** is not `0`, it **must** include at least one of the handles set in `VkExternalMemoryBufferCreateInfo::handleTypes` when **buffer** was created

- VUID-vkBindBufferMemory-memory-02985

If **memory** was allocated by a memory import operation, that is not `VkImportAndroidHardwareBufferInfoANDROID` with a non-NULL **buffer** value, the external handle type of the imported memory **must** also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` when **buffer** was created

- VUID-vkBindBufferMemory-memory-02986

If **memory** was allocated with the `VkImportAndroidHardwareBufferInfoANDROID` memory import operation with a non-NULL **buffer** value, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` **must** also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` when **buffer** was created

- VUID-vkBindBufferMemory-bufferDeviceAddress-03339

If the `VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddress` feature is enabled and **buffer** was created with the `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` usage flag set, **memory** **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-vkBindBufferMemory-bufferDeviceAddressCaptureReplay-09200

If the `VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddressCaptureReplay` feature is enabled and **buffer** was created with the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set, **memory** **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set

- VUID-vkBindBufferMemory-buffer-06408

If **buffer** was created with `VkBufferCollectionBufferCreateInfoFUCHSIA` chained to `VkBufferCreateInfo::pNext`, **memory** **must** be allocated with a `VkImportMemoryBufferCollectionFUCHSIA` chained to `VkMemoryAllocateInfo::pNext`

- VUID-vkBindBufferMemory-descriptorBufferCaptureReplay-08112

If the **buffer** was created with the `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, **memory** **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-vkBindBufferMemory-buffer-09201

If the **buffer** was created with the `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, **memory** **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set

- VUID-vkBindBufferMemory-buffer-11408

If the **buffer** was created with the `VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT` or `VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT` bit set, **memory** **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

Valid Usage (Implicit)

- VUID-vkBindBufferMemory-device-parameter

device **must** be a valid `VkDevice` handle

- VUID-vkBindBufferMemory-buffer-parameter
buffer **must** be a valid [VkBuffer](#) handle
- VUID-vkBindBufferMemory-memory-parameter
memory **must** be a valid [VkDeviceMemory](#) handle
- VUID-vkBindBufferMemory-buffer-parent
buffer **must** have been created, allocated, or retrieved from **device**
- VUID-vkBindBufferMemory-memory-parent
memory **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **buffer** **must** be externally synchronized

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To attach memory to buffer objects for one or more buffers at a time, call:

```
// Provided by VK_VERSION_1_1
VkResult vkBindBufferMemory2(
    VkDevice                                device,
    uint32_t                                bindInfoCount,
    const VkBindBufferMemoryInfo*          pBindInfos);
```

```
// Provided by VK_KHR_bind_memory2
// Equivalent to vkBindBufferMemory2
VkResult vkBindBufferMemory2KHR(
    VkDevice                                device,
    uint32_t                                bindInfoCount,
    const VkBindBufferMemoryInfo*          pBindInfos);
```

- **device** is the logical device that owns the buffers and memory.

- `bindInfoCount` is the number of elements in `pBindInfos`.
- `pBindInfos` is a pointer to an array of `bindInfoCount` `VkBindBufferMemoryInfo` structures describing buffers and memory to bind.

On some implementations, it **may** be more efficient to batch memory bindings into a single command.

If the `maintenance6` feature is enabled, this command **must** attempt to perform all of the memory binding operations described by `pBindInfos`, and **must** not early exit on the first failure.

If any of the memory binding operations described by `pBindInfos` fail, the `VkResult` returned by this command **must** be the return value of any one of the memory binding operations which did not return `VK_SUCCESS`.

NOTE

If the `vkBindBufferMemory2` command failed, `VkBindMemoryStatus` structures were not included in the `pNext` chains of each element of `pBindInfos`, and `bindInfoCount` was greater than one, then the buffers referenced by `pBindInfos` will be in an indeterminate state, and must not be used.

Applications should destroy these buffers.

Valid Usage (Implicit)

- VUID-vkBindBufferMemory2-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkBindBufferMemory2-pBindInfos-parameter `pBindInfos` **must** be a valid pointer to an array of `bindInfoCount` valid `VkBindBufferMemoryInfo` structures
- VUID-vkBindBufferMemory2-bindInfoCount-arraylength `bindInfoCount` **must** be greater than 0

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

`VkBindBufferMemoryInfo` contains members corresponding to the parameters of

[VkBindBufferMemory](#).

The `VkBindBufferMemoryInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindBufferMemoryInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer            buffer;
    VkDeviceMemory      memory;
    VkDeviceSize        memoryOffset;
} VkBindBufferMemoryInfo;
```

```
// Provided by VK_KHR_bind_memory2
// Equivalent to VkBindBufferMemoryInfo
typedef VkBindBufferMemoryInfo VkBindBufferMemoryInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the buffer to be attached to memory.
- `memory` is a [VkDeviceMemory](#) object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the buffer. The number of bytes returned in the `VkMemoryRequirements::size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified buffer.

Valid Usage

- VUID-VkBindBufferMemoryInfo-buffer-07459
`buffer` **must** not have been bound to a memory object
- VUID-VkBindBufferMemoryInfo-buffer-01030
`buffer` **must** not have been created with any sparse memory binding flags
- VUID-VkBindBufferMemoryInfo-memoryOffset-01031
`memoryOffset` **must** be less than the size of `memory`
- VUID-VkBindBufferMemoryInfo-memory-01035
`memory` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer`
- VUID-VkBindBufferMemoryInfo-None-10739
If `memory` was not allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer`
- VUID-VkBindBufferMemoryInfo-memory-10740

If `memory` was allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkTileMemoryRequirementsQCOM` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer`

- VUID-VkBindBufferMemoryInfo-None-10741

If `memory` was not allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer` **must** be less than or equal to the size of `memory` minus `memoryOffset`

- VUID-VkBindBufferMemoryInfo-memory-10742

If `memory` was allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, `size` member of the `VkTileMemoryRequirementsQCOM` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer` **must** be less than or equal to the size of `memory` minus `memoryOffset`

- VUID-VkBindBufferMemoryInfo-buffer-01444

If `buffer` requires a dedicated allocation (as reported by `vkGetBufferMemoryRequirements2` in `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` for `buffer`), `memory` **must** have been allocated with `VkMemoryDedicatedAllocateInfo::buffer` equal to `buffer`

- VUID-VkBindBufferMemoryInfo-memory-01508

If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, and `VkMemoryDedicatedAllocateInfo::buffer` was not `VK_NULL_HANDLE`, then `buffer` **must** equal `VkMemoryDedicatedAllocateInfo::buffer`, and `memoryOffset` **must** be zero

- VUID-VkBindBufferMemoryInfo-memory-10925

If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, `VkMemoryDedicatedAllocateInfo::image` **must** have been `VK_NULL_HANDLE`

- VUID-VkBindBufferMemoryInfo-None-01898

If `buffer` was created with the `VK_BUFFER_CREATE_PROTECTED_BIT` bit set, the buffer **must** be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-VkBindBufferMemoryInfo-None-01899

If `buffer` was created with the `VK_BUFFER_CREATE_PROTECTED_BIT` bit not set, the buffer **must** not be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-VkBindBufferMemoryInfo-buffer-01038

If `buffer` was created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** have been allocated with `VkDedicatedAllocationMemoryAllocateInfoNV::buffer` equal to a buffer handle created with identical creation parameters to `buffer` and `memoryOffset` **must** be zero

- VUID-VkBindBufferMemoryInfo-apiVersion-07920

If the `VK_KHR_dedicated_allocation` extension is not enabled,

`VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and `buffer` was not created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** not have been allocated dedicated for a specific buffer or image

- VUID-VkBindBufferMemoryInfo-memory-02726

If the value of `VkExportMemoryAllocateInfo::handleTypes` used to allocate `memory` is not `0`, it **must** include at least one of the handles set in `VkExternalMemoryBufferCreateInfo::handleTypes` when `buffer` was created

- VUID-VkBindBufferMemoryInfo-memory-02985

If `memory` was allocated by a memory import operation, that is not `VkImportAndroidHardwareBufferInfoANDROID` with a non-NULL `buffer` value, the external handle type of the imported memory **must** also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` when `buffer` was created

- VUID-VkBindBufferMemoryInfo-memory-02986

If `memory` was allocated with the `VkImportAndroidHardwareBufferInfoANDROID` memory import operation with a non-NULL `buffer` value, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` **must** also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` when `buffer` was created

- VUID-VkBindBufferMemoryInfo-bufferDeviceAddress-03339

If the `VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddress` feature is enabled and `buffer` was created with the `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` usage flag set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-VkBindBufferMemoryInfo-bufferDeviceAddressCaptureReplay-09200

If the `VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddressCaptureReplay` feature is enabled and `buffer` was created with the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set

- VUID-VkBindBufferMemoryInfo-buffer-06408

If `buffer` was created with `VkBufferCollectionBufferCreateInfoFUCHSIA` chained to `VkBufferCreateInfo::pNext`, `memory` **must** be allocated with a `VkImportMemoryBufferCollectionFUCHSIA` chained to `VkMemoryAllocateInfo::pNext`

- VUID-VkBindBufferMemoryInfo-descriptorBufferCaptureReplay-08112

If the `buffer` was created with the `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-VkBindBufferMemoryInfo-buffer-09201

If the `buffer` was created with the `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set

- VUID-VkBindBufferMemoryInfo-buffer-11408

If the **buffer** was created with the `VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT` or `VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT` bit set, **memory** **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-VkBindBufferMemoryInfo-pNext-01605

If the **pNext** chain includes a `VkBindBufferMemoryDeviceGroupInfo` structure, all instances of **memory** specified by `VkBindBufferMemoryDeviceGroupInfo::pDeviceIndices` **must** have been allocated

Valid Usage (Implicit)

- VUID-VkBindBufferMemoryInfo-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_BIND_BUFFER_MEMORY_INFO`
- VUID-VkBindBufferMemoryInfo-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either `NULL` or a pointer to a valid instance of `VkBindBufferMemoryDeviceGroupInfo` or `VkBindMemoryStatus`
- VUID-VkBindBufferMemoryInfo-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkBindBufferMemoryInfo-buffer-parameter
buffer **must** be a valid `VkBuffer` handle
- VUID-VkBindBufferMemoryInfo-memory-parameter
memory **must** be a valid `VkDeviceMemory` handle
- VUID-VkBindBufferMemoryInfo-commonparent
Both of **buffer**, and **memory** **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to **buffer** **must** be externally synchronized

The `VkBindBufferMemoryDeviceGroupInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindBufferMemoryDeviceGroupInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           deviceIndexCount;
    const uint32_t*    pDeviceIndices;
} VkBindBufferMemoryDeviceGroupInfo;
```

```
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
// Equivalent to VkBindBufferMemoryDeviceGroupInfo
typedef VkBindBufferMemoryDeviceGroupInfo VkBindBufferMemoryDeviceGroupInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceIndexCount` is the number of elements in `pDeviceIndices`.
- `pDeviceIndices` is a pointer to an array of device indices.

If the `pNext` chain of `VkBindBufferMemoryInfo` includes a `VkBindBufferMemoryDeviceGroupInfo` structure, then that structure determines how memory is bound to buffers across multiple devices in a device group.

If `deviceIndexCount` is greater than zero, then on device index `i` the buffer is attached to the instance of `memory` on the physical device with device index `pDeviceIndices[i]`.

If `deviceIndexCount` is zero and `memory` comes from a memory heap with the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains consecutive indices from zero to the number of physical devices in the logical device, minus one. In other words, by default each physical device attaches to its own instance of `memory`.

If `deviceIndexCount` is zero and `memory` comes from a memory heap without the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains an array of zeros. In other words, by default each physical device attaches to instance zero.

Valid Usage

- VUID-VkBindBufferMemoryDeviceGroupInfo-deviceIndexCount-01606
`deviceIndexCount` **must** either be zero or equal to the number of physical devices in the logical device
- VUID-VkBindBufferMemoryDeviceGroupInfo-pDeviceIndices-01607
All elements of `pDeviceIndices` **must** be valid device indices

Valid Usage (Implicit)

- VUID-VkBindBufferMemoryDeviceGroupInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_BUFFER_MEMORY_DEVICE_GROUP_INFO`
- VUID-VkBindBufferMemoryDeviceGroupInfo-pDeviceIndices-parameter
If `deviceIndexCount` is not 0, `pDeviceIndices` **must** be a valid pointer to an array of `deviceIndexCount` `uint32_t` values

Structure Chaining

Extends the structure

- [VkBindBufferMemoryInfo](#)

The `VkBindMemoryStatus` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkBindMemoryStatus {
    VkStructureType    sType;
    const void*        pNext;
    VkResult*          pResult;
} VkBindMemoryStatus;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkBindMemoryStatus
typedef VkBindMemoryStatus VkBindMemoryStatusKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pResult` is a pointer to a [VkResult](#) value.

If the `pNext` chain of [VkBindBufferMemoryInfo](#) or [VkBindImageMemoryInfo](#) includes a `VkBindMemoryStatus` structure, then the `VkBindMemoryStatus::pResult` will be populated with a value describing the result of the corresponding memory binding operation.

Valid Usage (Implicit)

- VUID-VkBindMemoryStatus-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_MEMORY_STATUS`
- VUID-VkBindMemoryStatus-pResult-parameter
`pResult` **must** be a valid pointer to a [VkResult](#) value

Structure Chaining

Extends the structures

- [VkBindBufferMemoryInfo](#)
- [VkBindImageMemoryInfo](#)

To attach memory to a `VkImage` object created without the `VK_IMAGE_CREATE_DISJOINT_BIT` set, call:

```
// Provided by VK_VERSION_1_0
VkResult vkBindImageMemory(
    VkDevice          device,
    VkImage           image,
    VkDeviceMemory    memory,
    VkDeviceSize      memoryOffset);
```

- **device** is the logical device that owns the image and memory.
- **image** is the image.
- **memory** is the [VkDeviceMemory](#) object describing the device memory to attach.
- **memoryOffset** is the start offset of the region of **memory** which is to be bound to the image. The number of bytes returned in the [VkMemoryRequirements::size](#) member in **memory**, starting from **memoryOffset** bytes, will be bound to the specified image.

[vkBindImageMemory](#) is equivalent to passing the same parameters through [VkBindImageMemoryInfo](#) to [vkBindImageMemory2](#).

Valid Usage

- VUID-vkBindImageMemory-image-07460
image must not have been bound to a memory object
- VUID-vkBindImageMemory-image-01045
image must not have been created with any sparse memory binding flags
- VUID-vkBindImageMemory-memoryOffset-01046
memoryOffset must be less than the size of **memory**
- VUID-vkBindImageMemory-image-01445
If **image** requires a dedicated allocation (as reported by [vkGetImageMemoryRequirements2](#) in [VkMemoryDedicatedRequirements::requiresDedicatedAllocation](#) for **image**), **memory must** have been created with [VkMemoryDedicatedAllocateInfo::image](#) equal to **image**
- VUID-vkBindImageMemory-memory-02628
If the [dedicatedAllocationImageAliasing](#) feature is not enabled, and the [VkMemoryAllocateInfo](#) provided when **memory** was allocated included a [VkMemoryDedicatedAllocateInfo](#) structure in its **pNext** chain, and [VkMemoryDedicatedAllocateInfo::image](#) was not [VK_NULL_HANDLE](#), then **image must** equal [VkMemoryDedicatedAllocateInfo::image](#) and **memoryOffset must** be zero
- VUID-vkBindImageMemory-memory-02629
If the [dedicatedAllocationImageAliasing](#) feature is enabled, and the [VkMemoryAllocateInfo](#) provided when **memory** was allocated included a [VkMemoryDedicatedAllocateInfo](#) structure in its **pNext** chain, and [VkMemoryDedicatedAllocateInfo::image](#) was not [VK_NULL_HANDLE](#), then **memoryOffset must** be zero, and **image must** be either equal to [VkMemoryDedicatedAllocateInfo::image](#) or an image that was created using the same parameters in [VkImageCreateInfo](#), with the exception that **extent** and **arrayLayers may** differ subject to the following restrictions: every dimension in the **extent** parameter of the

image being bound **must** be equal to or smaller than the original image for which the allocation was created; and the `arrayLayers` parameter of the image being bound **must** be equal to or smaller than the original image for which the allocation was created

- VUID-vkBindImageMemory-memory-10926

If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, `VkMemoryDedicatedAllocateInfo::buffer` **must** have been `VK_NULL_HANDLE`

- VUID-vkBindImageMemory-None-01901

If image was created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit set, the image **must** be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-vkBindImageMemory-None-01902

If image was created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit not set, the image **must** not be bound to a memory object created with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-vkBindImageMemory-image-01050

If `image` was created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** have been created with `VkDedicatedAllocationMemoryAllocateInfoNV::image` equal to an image handle created with identical creation parameters to `image` and `memoryOffset` **must** be zero

- VUID-vkBindImageMemory-apiVersion-07921

If the `VK_KHR_dedicated_allocation` extension is not enabled, `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and `image` was not created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** not have been allocated dedicated for a specific buffer or image

- VUID-vkBindImageMemory-memory-02728

If the value of `VkExportMemoryAllocateInfo::handleTypes` used to allocate `memory` is not `0`, it **must** include at least one of the handles set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-vkBindImageMemory-memory-02989

If `memory` was created by a memory import operation, that is not `VkImportAndroidHardwareBufferInfoANDROID` with a non-NULL `buffer` value, the external handle type of the imported memory **must** also have been set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-vkBindImageMemory-memory-02990

If `memory` was created with the `VkImportAndroidHardwareBufferInfoANDROID` memory import operation with a non-NULL `buffer` value, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` **must** also have been set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-vkBindImageMemory-image-08113

If the `image` was created with the `VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-vkBindImageMemory-image-09202
If the **image** was created with the `VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT` bit set, **memory must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set
- VUID-vkBindImageMemory-image-01608
image must not have been created with the `VK_IMAGE_CREATE_DISJOINT_BIT` set
- VUID-vkBindImageMemory-memory-01047
memory must have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements` with **image**
- VUID-vkBindImageMemory-None-10735
If **memory** was not allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements` with **image**
- VUID-vkBindImageMemory-memory-10736
If **memory** was allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkTileMemoryRequirementsQCOM` structure returned from a call to `vkGetImageMemoryRequirements2` with **image**
- VUID-vkBindImageMemory-None-10737
If **memory** was not allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements` with **image must** be less than or equal to the size of **memory** minus `memoryOffset`
- VUID-vkBindImageMemory-memory-10738
If **memory** was allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, `size` member of the `VkTileMemoryRequirementsQCOM` structure returned from a call to `vkGetImageMemoryRequirements2` with **image must** be less than or equal to the size of **memory** minus `memoryOffset`
- VUID-vkBindImageMemory-image-06392
If **image** was created with `VkBufferCollectionImageCreateInfoFUCHSIA` chained to `VkImageCreateInfo::pNext`, **memory must** be allocated with a `VkImportMemoryBufferCollectionFUCHSIA` chained to `VkMemoryAllocateInfo::pNext`

Valid Usage (Implicit)

- VUID-vkBindImageMemory-device-parameter
device must be a valid `VkDevice` handle
- VUID-vkBindImageMemory-image-parameter
image must be a valid `VkImage` handle

- VUID-vkBindImageMemory-memory-parameter
memory must be a valid [VkDeviceMemory](#) handle
- VUID-vkBindImageMemory-image-parent
image must have been created, allocated, or retrieved from **device**
- VUID-vkBindImageMemory-memory-parent
memory must have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **image must** be externally synchronized

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To attach memory to image objects for one or more images at a time, call:

```
// Provided by VK_VERSION_1_1
VkResult vkBindImageMemory2(
    VkDevice                                device,
    uint32_t                                bindInfoCount,
    const VkBindImageMemoryInfo*            pBindInfos);
```

```
// Provided by VK_KHR_bind_memory2
// Equivalent to vkBindImageMemory2
VkResult vkBindImageMemory2KHR(
    VkDevice                                device,
    uint32_t                                bindInfoCount,
    const VkBindImageMemoryInfo*            pBindInfos);
```

- **device** is the logical device that owns the images and memory.
- **bindInfoCount** is the number of elements in **pBindInfos**.
- **pBindInfos** is a pointer to an array of [VkBindImageMemoryInfo](#) structures, describing images and memory to bind.

On some implementations, it **may** be more efficient to batch memory bindings into a single command.

If the **maintenance6** feature is enabled, this command **must** attempt to perform all of the memory binding operations described by **pBindInfos**, and **must** not early exit on the first failure.

If any of the memory binding operations described by **pBindInfos** fail, the **VkResult** returned by this command **must** be the return value of any one of the memory binding operations which did not return **VK_SUCCESS**.

NOTE

If the **vkBindImageMemory2** command failed, **VkBindMemoryStatus** structures were not included in the **pNext** chains of each element of **pBindInfos**, and **bindInfoCount** was greater than one, then the images referenced by **pBindInfos** will be in an indeterminate state, and must not be used.

Applications should destroy these images.

Valid Usage

- VUID-vkBindImageMemory2-pBindInfos-02858

If any **VkBindImageMemoryInfo::image** was created with **VK_IMAGE_CREATE_DISJOINT_BIT** then all planes of **VkBindImageMemoryInfo::image** **must** be bound individually in separate **pBindInfos**

- VUID-vkBindImageMemory2-pBindInfos-04006

pBindInfos **must** not refer to the same image subresource more than once

Valid Usage (Implicit)

- VUID-vkBindImageMemory2-device-parameter

device **must** be a valid **VkDevice** handle

- VUID-vkBindImageMemory2-pBindInfos-parameter

pBindInfos **must** be a valid pointer to an array of **bindInfoCount** valid **VkBindImageMemoryInfo** structures

- VUID-vkBindImageMemory2-bindInfoCount-arraylength

bindInfoCount **must** be greater than 0

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_OUT_OF_HOST_MEMORY**

- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

`VkBindImageMemoryInfo` contains members corresponding to the parameters of `vkBindImageMemory`.

The `VkBindImageMemoryInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindImageMemoryInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
    VkDeviceMemory      memory;
    VkDeviceSize        memoryOffset;
} VkBindImageMemoryInfo;
```

```
// Provided by VK_KHR_bind_memory2
// Equivalent to VkBindImageMemoryInfo
typedef VkBindImageMemoryInfo VkBindImageMemoryInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the image to be attached to memory.
- `memory` is a [VkDeviceMemory](#) object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the image. The number of bytes returned in the `VkMemoryRequirements::size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified image.

Valid Usage

- VUID-VkBindImageMemoryInfo-image-07460
`image` **must** not have been bound to a memory object
- VUID-VkBindImageMemoryInfo-image-01045
`image` **must** not have been created with any sparse memory binding flags
- VUID-VkBindImageMemoryInfo-memoryOffset-01046
`memoryOffset` **must** be less than the size of `memory`
- VUID-VkBindImageMemoryInfo-image-01445
If `image` requires a dedicated allocation (as reported by [vkGetImageMemoryRequirements2](#) in [VkMemoryDedicatedRequirements::requiresDedicatedAllocation](#) for `image`), `memory` **must** have been created with [VkMemoryDedicatedAllocateInfo::image](#) equal to `image`

- VUID-VkBindImageMemoryInfo-memory-02628

If the `dedicatedAllocationImageAliasing` feature is not enabled, and the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, and `VkMemoryDedicatedAllocateInfo::image` was not `VK_NULL_HANDLE`, then `image` **must** equal `VkMemoryDedicatedAllocateInfo::image` and `memoryOffset` **must** be zero

- VUID-VkBindImageMemoryInfo-memory-02629

If the `dedicatedAllocationImageAliasing` feature is enabled, and the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, and `VkMemoryDedicatedAllocateInfo::image` was not `VK_NULL_HANDLE`, then `memoryOffset` **must** be zero, and `image` **must** be either equal to `VkMemoryDedicatedAllocateInfo::image` or an image that was created using the same parameters in `VkImageCreateInfo`, with the exception that `extent` and `arrayLayers` **may** differ subject to the following restrictions: every dimension in the `extent` parameter of the image being bound **must** be equal to or smaller than the original image for which the allocation was created; and the `arrayLayers` parameter of the image being bound **must** be equal to or smaller than the original image for which the allocation was created

- VUID-VkBindImageMemoryInfo-memory-10926

If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a `VkMemoryDedicatedAllocateInfo` structure in its `pNext` chain, `VkMemoryDedicatedAllocateInfo::buffer` **must** have been `VK_NULL_HANDLE`

- VUID-VkBindImageMemoryInfo-None-01901

If image was created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit set, the image **must** be bound to a memory object allocated with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-VkBindImageMemoryInfo-None-01902

If image was created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit not set, the image **must** not be bound to a memory object created with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`

- VUID-VkBindImageMemoryInfo-image-01050

If `image` was created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** have been created with `VkDedicatedAllocationMemoryAllocateInfoNV::image` equal to an image handle created with identical creation parameters to `image` and `memoryOffset` **must** be zero

- VUID-VkBindImageMemoryInfo-apiVersion-07921

If the `VK_KHR_dedicated_allocation` extension is not enabled, `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and `image` was not created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` **must** not have been allocated dedicated for a specific buffer or image

- VUID-VkBindImageMemoryInfo-memory-02728

If the value of `VkExportMemoryAllocateInfo::handleTypes` used to allocate `memory` is not `0`, it **must** include at least one of the handles set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-VkBindImageMemoryInfo-memory-02989

If `memory` was created by a memory import operation, that is not

`VkImportAndroidHardwareBufferInfoANDROID` with a non-NULL `buffer` value, the external handle type of the imported memory **must** also have been set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-VkBindImageMemoryInfo-memory-02990

If `memory` was created with the `VkImportAndroidHardwareBufferInfoANDROID` memory import operation with a non-NULL `buffer` value, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` **must** also have been set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

- VUID-VkBindImageMemoryInfo-image-08113

If the `image` was created with the `VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

- VUID-VkBindImageMemoryInfo-image-09202

If the `image` was created with the `VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT` bit set, `memory` **must** have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set

- VUID-VkBindImageMemoryInfo-pNext-01615

If the `pNext` chain does not include a `VkBindImagePlaneMemoryInfo` structure, and `memory` was not allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, then `memory` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements2` with `image`

- VUID-VkBindImageMemoryInfo-pNext-01616

If the `pNext` chain does not include a `VkBindImagePlaneMemoryInfo` structure, and `memory` was not allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, then `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements2` with `image`

- VUID-VkBindImageMemoryInfo-pNext-01617

If the `pNext` chain does not include a `VkBindImagePlaneMemoryInfo` structure, and `memory` was not allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, then the difference of the size of `memory` and `memoryOffset` **must** be greater than or equal to the `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements2` with the same `image`

- VUID-VkBindImageMemoryInfo-pNext-12329

If the `pNext` chain does not include a `VkBindImagePlaneMemoryInfo` structure, and `memory` was allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, then `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkTileMemoryRequirementsQCOM` structure returned from a call to `vkGetImageMemoryRequirements2` with `image`

- VUID-VkBindImageMemoryInfo-pNext-12330

If the `pNext` chain does not include a `VkBindImagePlaneMemoryInfo` structure, and `memory` was allocated from a memory heap with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property set, then `size` member of the `VkTileMemoryRequirementsQCOM` structure returned from a call to `vkGetImageMemoryRequirements2` with `image` **must** be less than or equal to the size of `memory` minus `memoryOffset`

- VUID-VkBindImageMemoryInfo-pNext-01618

If the `pNext` chain includes a `VkBindImagePlaneMemoryInfo` structure, `image` **must** have been created with the `VK_IMAGE_CREATE_DISJOINT_BIT` bit set

- VUID-VkBindImageMemoryInfo-image-07736

If `image` was created with the `VK_IMAGE_CREATE_DISJOINT_BIT` bit set, then the `pNext` chain **must** include a `VkBindImagePlaneMemoryInfo` structure

- VUID-VkBindImageMemoryInfo-pNext-01619

If the `pNext` chain includes a `VkBindImagePlaneMemoryInfo` structure, `memory` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements2` with `image` and where `VkBindImagePlaneMemoryInfo::planeAspect` corresponds to the `VkImagePlaneMemoryRequirementsInfo::planeAspect` in the `VkImageMemoryRequirementsInfo2` structure's `pNext` chain

- VUID-VkBindImageMemoryInfo-pNext-01620

If the `pNext` chain includes a `VkBindImagePlaneMemoryInfo` structure, `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements2` with `image` and where `VkBindImagePlaneMemoryInfo::planeAspect` corresponds to the `VkImagePlaneMemoryRequirementsInfo::planeAspect` in the `VkImageMemoryRequirementsInfo2` structure's `pNext` chain

- VUID-VkBindImageMemoryInfo-pNext-01621

If the `pNext` chain includes a `VkBindImagePlaneMemoryInfo` structure, the difference of the size of `memory` and `memoryOffset` **must** be greater than or equal to the `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements2` with the same `image` and where `VkBindImagePlaneMemoryInfo::planeAspect` corresponds to the `VkImagePlaneMemoryRequirementsInfo::planeAspect` in the `VkImageMemoryRequirementsInfo2` structure's `pNext` chain

- VUID-VkBindImageMemoryInfo-pNext-01626

If the `pNext` chain includes a `VkBindImageMemoryDeviceGroupInfo` structure, all instances of `memory` specified by `VkBindImageMemoryDeviceGroupInfo::pDeviceIndices` **must** have been allocated

- VUID-VkBindImageMemoryInfo-pNext-01627

If the `pNext` chain includes a `VkBindImageMemoryDeviceGroupInfo` structure, and `VkBindImageMemoryDeviceGroupInfo::splitInstanceBindRegionCount` is not zero, then `image` **must** have been created with the `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` bit set

- VUID-VkBindImageMemoryInfo-pNext-01628

If the **pNext** chain includes a [VkBindImageMemoryDeviceGroupInfo](#) structure, all elements of [VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions](#) **must** be valid rectangles contained within the dimensions of **image**

- VUID-VkBindImageMemoryInfo-pNext-01629

If the **pNext** chain includes a [VkBindImageMemoryDeviceGroupInfo](#) structure, the union of the areas of all elements of [VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions](#) that correspond to the same instance of **image** **must** cover the entire image

- VUID-VkBindImageMemoryInfo-image-01630

If **image** was created with a valid swapchain handle in [VkImageSwapchainCreateInfoKHR::swapchain](#), then the **pNext** chain **must** include a [VkBindImageMemorySwapchainInfoKHR](#) structure containing the same swapchain handle

- VUID-VkBindImageMemoryInfo-pNext-01631

If the **pNext** chain includes a [VkBindImageMemorySwapchainInfoKHR](#) structure, **memory** **must** be [VK_NULL_HANDLE](#)

- VUID-VkBindImageMemoryInfo-pNext-01632

If the **pNext** chain does not include a [VkBindImageMemorySwapchainInfoKHR](#) structure, **memory** **must** be a valid [VkDeviceMemory](#) handle

Valid Usage (Implicit)

- VUID-VkBindImageMemoryInfo-sType-sType

sType **must** be [VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_INFO](#)

- VUID-VkBindImageMemoryInfo-pNext-pNext

Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either [NULL](#) or a pointer to a valid instance of [VkBindImageMemoryDeviceGroupInfo](#), [VkBindImageMemorySwapchainInfoKHR](#), [VkBindImagePlaneMemoryInfo](#), or [VkBindMemoryStatus](#)

- VUID-VkBindImageMemoryInfo-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkBindImageMemoryInfo-image-parameter

image **must** be a valid [VkImage](#) handle

- VUID-VkBindImageMemoryInfo-commonparent

Both of **image**, and **memory** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **image** **must** be externally synchronized

The [VkBindImageMemoryDeviceGroupInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindImageMemoryDeviceGroupInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           deviceIndexCount;
    const uint32_t*     pDeviceIndices;
    uint32_t           splitInstanceBindRegionCount;
    const VkRect2D*     pSplitInstanceBindRegions;
} VkBindImageMemoryDeviceGroupInfo;
```

```
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
// Equivalent to VkBindImageMemoryDeviceGroupInfo
typedef VkBindImageMemoryDeviceGroupInfo VkBindImageMemoryDeviceGroupInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceIndexCount` is the number of elements in `pDeviceIndices`.
- `pDeviceIndices` is a pointer to an array of device indices.
- `splitInstanceBindRegionCount` is the number of elements in `pSplitInstanceBindRegions`.
- `pSplitInstanceBindRegions` is a pointer to an array of `VkRect2D` structures describing which regions of the image are attached to each instance of memory.

If the `pNext` chain of `VkBindImageMemoryInfo` includes a `VkBindImageMemoryDeviceGroupInfo` structure, then that structure determines how memory is bound to images across multiple devices in a device group.

If `deviceIndexCount` is greater than zero, then on device index `i` `image` is attached to the instance of the memory on the physical device with device index `pDeviceIndices[i]`.

Let `N` be the number of physical devices in the logical device. If `splitInstanceBindRegionCount` is greater than zero, then `pSplitInstanceBindRegions` is a pointer to an array of N^2 rectangles, where the image region specified by the rectangle at element `i*N+j` in resource instance `i` is bound to the memory instance `j`. The blocks of the memory that are bound to each sparse image block region use an offset in memory, relative to `memoryOffset`, computed as if the whole image was being bound to a contiguous range of memory. In other words, horizontally adjacent image blocks use consecutive blocks of memory, vertically adjacent image blocks are separated by the number of bytes per block multiplied by the width in blocks of `image`, and the block at (0,0) corresponds to memory starting at `memoryOffset`.

If `splitInstanceBindRegionCount` and `deviceIndexCount` are zero and the memory comes from a memory heap with the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains consecutive indices from zero to the number of physical devices in the logical device, minus one. In other words, by default each physical device attaches to its own instance of the memory.

If `splitInstanceBindRegionCount` and `deviceIndexCount` are zero and the memory comes from a memory heap without the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains an array of zeros. In other words, by default each physical device attaches to instance zero.

Valid Usage

- VUID-VkBindImageMemoryDeviceGroupInfo-deviceIndexCount-01633
At least one of `deviceIndexCount` and `splitInstanceBindRegionCount` **must** be zero
- VUID-VkBindImageMemoryDeviceGroupInfo-deviceIndexCount-01634
`deviceIndexCount` **must** either be zero or equal to the number of physical devices in the logical device
- VUID-VkBindImageMemoryDeviceGroupInfo-pDeviceIndices-01635
All elements of `pDeviceIndices` **must** be valid device indices
- VUID-VkBindImageMemoryDeviceGroupInfo-splitInstanceBindRegionCount-01636
`splitInstanceBindRegionCount` **must** either be zero or equal to the number of physical devices in the logical device squared
- VUID-VkBindImageMemoryDeviceGroupInfo-pSplitInstanceBindRegions-01637
Elements of `pSplitInstanceBindRegions` that correspond to the same instance of an image **must** not overlap
- VUID-VkBindImageMemoryDeviceGroupInfo-offset-01638
The `offset.x` member of any element of `pSplitInstanceBindRegions` **must** be a multiple of the sparse image block width (`VkSparseImageFormatProperties::imageGranularity.width`) of all non-metadata aspects of the image
- VUID-VkBindImageMemoryDeviceGroupInfo-offset-01639
The `offset.y` member of any element of `pSplitInstanceBindRegions` **must** be a multiple of the sparse image block height (`VkSparseImageFormatProperties::imageGranularity.height`) of all non-metadata aspects of the image
- VUID-VkBindImageMemoryDeviceGroupInfo-extent-01640
The `extent.width` member of any element of `pSplitInstanceBindRegions` **must** either be a multiple of the sparse image block width of all non-metadata aspects of the image, or else `extent.width + offset.x` **must** equal the width of the image subresource
- VUID-VkBindImageMemoryDeviceGroupInfo-extent-01641
The `extent.height` member of any element of `pSplitInstanceBindRegions` **must** either be a multiple of the sparse image block height of all non-metadata aspects of the image, or else `extent.height + offset.y` **must** equal the height of the image subresource

Valid Usage (Implicit)

- VUID-VkBindImageMemoryDeviceGroupInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_DEVICE_GROUP_INFO`
- VUID-VkBindImageMemoryDeviceGroupInfo-pDeviceIndices-parameter
If `deviceIndexCount` is not 0, `pDeviceIndices` **must** be a valid pointer to an array of

`deviceIndexCount` `uint32_t` values

- VUID-VkBindImageMemoryDeviceGroupInfo-pSplitInstanceBindRegions-parameter
If `splitInstanceBindRegionCount` is not 0, `pSplitInstanceBindRegions` **must** be a valid pointer to an array of `splitInstanceBindRegionCount` `VkRect2D` structures

Structure Chaining

Extends the structure

- `VkBindImageMemoryInfo`

If the `pNext` chain of `VkBindImageMemoryInfo` includes a `VkBindImageMemorySwapchainInfoKHR` structure, then that structure includes a swapchain handle and image index indicating that the image will be bound to memory from that swapchain.

The `VkBindImageMemorySwapchainInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkBindImageMemorySwapchainInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint32_t           imageIndex;
} VkBindImageMemorySwapchainInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is `VK_NULL_HANDLE` or a swapchain handle.
- `imageIndex` is an image index within `swapchain`.

If `swapchain` is not `NULL`, the `swapchain` and `imageIndex` are used to determine the memory that the image is bound to, instead of `memory` and `memoryOffset`.

Memory **can** be bound to a swapchain and use the `pDeviceIndices` or `pSplitInstanceBindRegions` members of `VkBindImageMemoryDeviceGroupInfo`.

Valid Usage

- VUID-VkBindImageMemorySwapchainInfoKHR-imageIndex-01644
`imageIndex` **must** be less than the number of images in `swapchain`
- VUID-VkBindImageMemorySwapchainInfoKHR-swapchain-07756
If the `swapchain` has been created with `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR`, `imageIndex` **must** be one that has previously been returned by `vkAcquireNextImageKHR` or

Valid Usage (Implicit)

- VUID-VkBindImageMemorySwapchainInfoKHR-sType-sType
sType must be [VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_SWAPCHAIN_INFO_KHR](#)
- VUID-VkBindImageMemorySwapchainInfoKHR-swapchain-parameter
swapchain must be a valid [VkSwapchainKHR](#) handle

Host Synchronization

- Host access to **swapchain** must be externally synchronized

Structure Chaining

Extends the structure

- [VkBindImageMemoryInfo](#)

In order to bind *planes* of a *disjoint image*, add a [VkBindImagePlaneMemoryInfo](#) structure to the **pNext** chain of [VkBindImageMemoryInfo](#).

The [VkBindImagePlaneMemoryInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindImagePlaneMemoryInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkImageAspectFlagBits planeAspect;
} VkBindImagePlaneMemoryInfo;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkBindImagePlaneMemoryInfo
typedef VkBindImagePlaneMemoryInfo VkBindImagePlaneMemoryInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **planeAspect** is a [VkImageAspectFlagBits](#) value specifying the aspect of the disjoint image plane to bind.

Valid Usage

- VUID-VkBindImagePlaneMemoryInfo-planeAspect-02283
If the image's **tiling** is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, then **planeAspect** **must** be a single valid **multi-planar aspect mask** bit
- VUID-VkBindImagePlaneMemoryInfo-planeAspect-02284
If the image's **tiling** is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then **planeAspect** **must** be a single valid *memory plane* for the image (that is, **aspectMask** **must** specify a plane index that is less than the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image's **format** and `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier`)

Valid Usage (Implicit)

- VUID-VkBindImagePlaneMemoryInfo-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_BIND_IMAGE_PLANE_MEMORY_INFO`
- VUID-VkBindImagePlaneMemoryInfo-planeAspect-parameter
planeAspect **must** be a valid `VkImageAspectFlagBits` value

Structure Chaining

Extends the structure

- `VkBindImageMemoryInfo`

To attach memory to tensor objects call:

```
// Provided by VK_ARM_tensors
VkResult vkBindTensorMemoryARM(
    VkDevice          device,
    uint32_t          bindInfoCount,
    const VkBindTensorMemoryInfoARM* pBindInfos);
```

- **device** is the logical device that owns the buffers and memory.
- **bindInfoCount** is the number of elements in **pBindInfos**.
- **pBindInfos** is a pointer to an array of structures of type `VkBindTensorMemoryInfoARM`, describing tensors and memory to bind.

On some implementations, it **may** be more efficient to batch memory bindings into a single command.

Valid Usage (Implicit)

- VUID-vkBindTensorMemoryARM-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkBindTensorMemoryARM-pBindInfos-parameter **pBindInfos** **must** be a valid pointer to an array of **bindInfoCount** valid [VkBindTensorMemoryInfoARM](#) structures
- VUID-vkBindTensorMemoryARM-bindInfoCount-arraylength **bindInfoCount** **must** be greater than 0

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkBindTensorMemoryInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkBindTensorMemoryInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkTensorARM         tensor;
    VkDeviceMemory      memory;
    VkDeviceSize        memoryOffset;
} VkBindTensorMemoryInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **tensor** is the tensor to be attached to memory.
- **memory** is a [VkDeviceMemory](#) object describing the device memory to attach.
- **memoryOffset** is the start offset of the region of **memory** which is to be bound to the tensor. The number of bytes returned in the [VkMemoryRequirements::size](#) member in **memory**, starting from **memoryOffset** bytes, will be bound to the specified tensor.

Valid Usage

- VUID-VkBindTensorMemoryInfoARM-tensor-09712
tensor must not already be backed by a memory object
- VUID-VkBindTensorMemoryInfoARM-memoryOffset-09713
memoryOffset must be less than the size of **memory**
- VUID-VkBindTensorMemoryInfoARM-memory-09714
memory must have been allocated using one of the memory types allowed in the **memoryTypeBits** member of the **VkMemoryRequirements** structure returned from a call to **vkGetTensorMemoryRequirementsARM** with **tensor**
- VUID-VkBindTensorMemoryInfoARM-memoryOffset-09715
memoryOffset must be an integer multiple of the **alignment** member of the **VkMemoryRequirements** structure returned from a call to **vkGetTensorMemoryRequirementsARM** with **tensor**
- VUID-VkBindTensorMemoryInfoARM-size-09716
The **size** member of the **VkMemoryRequirements** structure returned from a call to **vkGetTensorMemoryRequirementsARM** with **tensor must** be less than or equal to the size of **memory** minus **memoryOffset**
- VUID-VkBindTensorMemoryInfoARM-tensor-09717
If **tensor** requires a dedicated allocation (as reported by **vkGetTensorMemoryRequirementsARM** in **VkMemoryDedicatedRequirements::requiresDedicatedAllocation** for **tensor**), **memory must** have been created with **VkMemoryDedicatedAllocateInfoTensorARM::tensor** equal to **tensor**
- VUID-VkBindTensorMemoryInfoARM-memory-09806
If the **VkMemoryAllocateInfo** provided when **memory** was allocated included a **VkMemoryDedicatedAllocateInfoTensorARM** structure in its **pNext** chain, and **VkMemoryDedicatedAllocateInfoTensorARM::tensor** was not **VK_NULL_HANDLE**, then **tensor must** equal **VkMemoryDedicatedAllocateInfoTensorARM::tensor**, and **memoryOffset must** be zero
- VUID-VkBindTensorMemoryInfoARM-memory-09895
If the value of **VkExportMemoryAllocateInfo::handleTypes** used to allocate **memory** is not **0**, it **must** include at least one of the handles set in **VkExternalMemoryTensorCreateInfoARM::handleTypes** when **tensor** was created
- VUID-VkBindTensorMemoryInfoARM-memory-09896
If **memory** was allocated by a memory import operation, that is not **VkImportAndroidHardwareBufferInfoANDROID** with a non-NULL **buffer** value, the external handle type of the imported memory **must** also have been set in **VkExternalMemoryTensorCreateInfoARM::handleTypes** when **tensor** was created
- VUID-VkBindTensorMemoryInfoARM-memory-09897
If **memory** was allocated with the **VkImportAndroidHardwareBufferInfoANDROID** memory import operation with a non-NULL **buffer** value, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID must** also have been set in **VkExternalMemoryTensorCreateInfoARM::handleTypes** when **tensor** was created

- VUID-VkBindTensorMemoryInfoARM-tensor-09718

If **tensor** was created with the [VK_TENSOR_CREATE_PROTECTED_BIT_ARM](#) bit set, the tensor **must** be bound to a memory object allocated with a memory type that reports [VK_MEMORY_PROPERTY_PROTECTED_BIT](#)

- VUID-VkBindTensorMemoryInfoARM-tensor-09719

If **tensor** was created with the [VK_TENSOR_CREATE_PROTECTED_BIT_ARM](#) bit not set, the tensor **must** not be bound to a memory object allocated with a memory type that reports [VK_MEMORY_PROPERTY_PROTECTED_BIT](#)

- VUID-VkBindTensorMemoryInfoARM-tensor-09943

If **tensor** was created with the [VK_TENSOR_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#) bit set, **memory must** have been allocated with the [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT](#) bit set

- VUID-VkBindTensorMemoryInfoARM-tensor-09944

If **tensor** was created with the [VK_TENSOR_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#) bit set, **memory must** have been allocated with the [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#) bit set

- VUID-VkBindTensorMemoryInfoARM-tensor-11406

If **tensor** was created with the [VK_TENSOR_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_ARM](#) bit set, **memory must** have been allocated with the [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT](#) bit set

- VUID-VkBindTensorMemoryInfoARM-tensor-11407

If **tensor** was created with the [VK_TENSOR_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_ARM](#) bit set, **memory must** have been allocated with the [VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT](#) bit set

Valid Usage (Implicit)

- VUID-VkBindTensorMemoryInfoARM-sType-sType

sType must be [VK_STRUCTURE_TYPE_BIND_TENSOR_MEMORY_INFO_ARM](#)

- VUID-VkBindTensorMemoryInfoARM-pNext-pNext

pNext must be `NULL`

- VUID-VkBindTensorMemoryInfoARM-tensor-parameter

tensor must be a valid [VkTensorARM](#) handle

- VUID-VkBindTensorMemoryInfoARM-memory-parameter

memory must be a valid [VkDeviceMemory](#) handle

- VUID-VkBindTensorMemoryInfoARM-commonparent

Both of **memory**, and **tensor must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **tensor** **must** be externally synchronized

Buffer-Image Granularity

The implementation-dependent limit **bufferImageGranularity** specifies a page-like granularity at which linear and non-linear resources **must** be placed in adjacent memory locations to avoid aliasing. Two resources which do not satisfy this granularity requirement are said to **alias**. **bufferImageGranularity** is specified in bytes, and **must** be a power of two. Implementations which do not impose a granularity restriction **may** report a **bufferImageGranularity** value of one.

NOTE

Despite its name, **bufferImageGranularity** is really a granularity between “linear” and “non-linear” resources. The limit **bufferImageGranularity** also applies to tensor resources.

Given resourceA at the lower memory offset and resourceB at the higher memory offset in the same **VkDeviceMemory** object, where one resource is linear and the other is non-linear (as defined in the [Glossary](#)), and the following:

```
resourceA.end      = resourceA.memoryOffset + resourceA.size - 1
resourceA.endPage  = resourceA.end & ~(bufferImageGranularity-1)
resourceB.start    = resourceB.memoryOffset
resourceB.startPage = resourceB.start & ~(bufferImageGranularity-1)
```

The following property **must** hold:

```
resourceA.endPage < resourceB.startPage
```

That is, the end of the first resource (A) and the beginning of the second resource (B) **must** be on separate “pages” of size **bufferImageGranularity**. **bufferImageGranularity** **may** be different than the physical page size of the memory heap. This restriction is only needed when a linear resource and a non-linear resource are adjacent in memory and will be used simultaneously. The memory ranges of adjacent resources **can** be closer than **bufferImageGranularity**, provided they meet the **alignment** requirement for the objects in question.

Sparse block size in bytes and sparse image and buffer memory alignments **must** all be multiples of the **bufferImageGranularity**. Therefore, memory bound to sparse resources naturally satisfies the **bufferImageGranularity**.

NOTE

The implementation-dependent limit, **bufferImageGranularity** also applies to tensor resources.

12.10. Resource Sharing Mode

Buffer and image objects are created with a *sharing mode* controlling how they **can** be accessed from queues. The supported sharing modes are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSharingMode {
    VK_SHARING_MODE_EXCLUSIVE = 0,
    VK_SHARING_MODE_CONCURRENT = 1,
} VkSharingMode;
```

- [VK_SHARING_MODE_EXCLUSIVE](#) specifies that access to any range or image subresource of the object will be exclusive to a single queue family at a time.
- [VK_SHARING_MODE_CONCURRENT](#) specifies that concurrent access to any range or image subresource of the object from multiple queue families is supported.

NOTE

[VK_SHARING_MODE_CONCURRENT](#) **may** result in lower performance access to the buffer or image than [VK_SHARING_MODE_EXCLUSIVE](#).

Ranges of buffers and image subresources of image objects created using [VK_SHARING_MODE_EXCLUSIVE](#) **must** only be accessed by queues in the queue family that has *ownership* of the resource. Upon creation, such resources are not owned by any queue family; ownership is implicitly acquired upon first use within a queue. Once a resource using [VK_SHARING_MODE_EXCLUSIVE](#) is owned by some queue family, unless the [maintenance9](#) feature is enabled, the application **must** perform a [queue family ownership transfer](#) if it wishes to make the memory contents of a range or image subresource accessible to a different queue family. [VK_SHARING_MODE_EXCLUSIVE](#) resources that are already owned by a queue family **may** be acquired by a different queue family without a queue family ownership transfer, but unless the [maintenance9](#) feature is enabled, their contents become undefined.

If the [maintenance9](#) feature is enabled, the contents of buffer resources, and of linear image resources (i.e., those created with [tiling](#) set to [VK_IMAGE_TILING_LINEAR](#)) are always preserved when they are implicitly acquired by a different queue family on the same logical device (i.e., neither queue family is [VK_QUEUE_FAMILY_FOREIGN_EXT](#) or [VK_QUEUE_FAMILY_EXTERNAL](#)). This means that whenever the [maintenance9](#) feature is enabled, explicit queue family ownership transfers of buffer and linear image resources between different queue families on the same logical device are **optional**.

Additionally, if the [maintenance9](#) feature is enabled, the contents of some optimal image resources (i.e., those created with [VK_IMAGE_TILING_OPTIMAL](#)) are always preserved when they are implicitly acquired by a different queue family on the same logical device (i.e., neither queue family is [VK_QUEUE_FAMILY_FOREIGN_EXT](#) or [VK_QUEUE_FAMILY_EXTERNAL](#)). This applies only to optimal images that are being implicitly acquired by a queue family whose index bit is set in the current queue family's [VkQueueFamilyOwnershipTransferPropertiesKHR::optimalImageTransferToQueueFamilies](#), and that were created without any of the following bits set in [usage](#):

- [VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT](#)
- [VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT](#)
- [VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT](#)
- [VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT](#)
- [VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT](#)
- [VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR](#)

This means that whenever the [maintenance9](#) feature is enabled, explicit queue family ownership transfers of such image resources between such combinations of queue families are **optional**. For all other optimal images and/or combinations of queue families, the application **must** still perform an explicit queue family ownership transfer if it wishes to make the memory contents of an optimal image subresource already owned by a queue family accessible to a different queue family.

NOTE

Applications are allowed to perform explicit queue family ownership transfers in circumstances where they are not required, but there is no functional nor performance advantage in doing so. Performing explicit transfers in such cases remains supported for backward compatibility and is not recommended for new applications.

NOTE

Before being used on the first queue, images still require a [layout transition](#) from these layouts:

- [VK_IMAGE_LAYOUT_UNDEFINED](#)
- [VK_IMAGE_LAYOUT_PREINITIALIZED](#)
- [VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT](#)

A queue family **can** take ownership of an image subresource, tensor subresource, or buffer range of a resource created with [VK_SHARING_MODE_EXCLUSIVE](#), without an ownership transfer, in the same way as for a resource that was just created; however, taking ownership in this way has the effect that the contents of the image subresource or buffer range are undefined.

Ranges of buffers, tensor subresources of tensor objects, and image subresources of image objects created using [VK_SHARING_MODE_CONCURRENT](#) **must** only be accessed by queues from the queue families specified through the [queueFamilyIndexCount](#) and [pQueueFamilyIndices](#) members of the corresponding create info structures.

12.10.1. External Resource Sharing

Resources **should** only be accessed in the Vulkan instance that has exclusive ownership of their underlying memory. Only one Vulkan instance has exclusive ownership of a resource's underlying memory at a given time, regardless of whether the resource was created using [VK_SHARING_MODE_EXCLUSIVE](#) or [VK_SHARING_MODE_CONCURRENT](#). Applications can transfer ownership of a resource's underlying memory only if the memory has been imported from or exported to another instance or external API using external memory handles. The semantics for transferring ownership outside of the instance are similar to those used for transferring ownership

of [VK_SHARING_MODE_EXCLUSIVE](#) resources between queues, and is also accomplished using [VkBufferMemoryBarrier](#) or [VkImageMemoryBarrier](#) operations. To make the contents of the underlying memory accessible in the destination instance or API, applications **must**

1. Release exclusive ownership from the source instance or API.
2. Ensure the release operation has completed using semaphores or fences.
3. Acquire exclusive ownership in the destination instance or API

Unlike queue family ownership transfers, the destination instance or API is not specified explicitly when releasing ownership, nor is the source instance or API specified when acquiring ownership. Instead, the image or memory barrier's [dstQueueFamilyIndex](#) or [srcQueueFamilyIndex](#) parameters are set to the reserved queue family index [VK_QUEUE_FAMILY_EXTERNAL](#) or [VK_QUEUE_FAMILY_FOREIGN_EXT](#) to represent the external destination or source respectively.

Binding a resource to a memory object shared between multiple Vulkan instances or other APIs does not change the ownership of the underlying memory. The first entity to access the resource implicitly acquires ownership. An entity **can** also implicitly take ownership from another entity in the same way without an explicit ownership transfer. However, taking ownership in this way has the effect that the contents of the underlying memory are undefined.

Accessing a resource backed by memory that is owned by a particular instance or API has the same semantics as accessing a [VK_SHARING_MODE_EXCLUSIVE](#) resource, with one exception: Implementations **must** ensure layout transitions performed on one member of a set of identical subresources of identical images that alias the same range of an underlying memory object affect the layout of all the subresources in the set.

As a corollary, writes to any image subresources in such a set **must** not make the contents of memory used by other subresources in the set undefined. An application **can** define the content of a subresource of one image by performing device writes to an identical subresource of another image provided both images are bound to the same region of external memory. Applications **may** also add resources to such a set after the content of the existing set members has been defined without making the content undefined by creating a new image with the initial layout [VK_IMAGE_LAYOUT_UNDEFINED](#) and binding it to the same region of external memory as the existing images.

NOTE

Because layout transitions apply to all identical images aliasing the same region of external memory, the actual layout of the memory backing a new image as well as an existing image with defined content will not be undefined. Such an image is not usable until it acquires ownership of its memory from the existing owner. Therefore, the layout specified as part of this transition will be the true initial layout of the image. The undefined layout specified when creating it is a placeholder to simplify valid usage requirements.

When sharing resources with other APIs, it is generally left to those APIs to define how they interact with the Vulkan concepts of image layouts and fine-grained synchronization. However, some external memory handle types require use of specific image layouts when transitioning to or from external usage, as defined in the [external image implied layouts table](#).

12.11. Memory Aliasing

A range of a `VkDeviceMemory` allocation is *aliased* if it is bound to multiple resources simultaneously, as described below, via `vkBindImageMemory`, `vkBindBufferMemory`, `vkBindAccelerationStructureMemoryNV`, `vkBindTensorMemoryARM`, via [sparse memory bindings](#), or by binding the memory to resources in multiple Vulkan instances or external APIs using external memory handle export and import mechanisms.

Consider two resources, `resourceA` and `resourceB`, bound respectively to memory `rangeA` and `rangeB`. Let `paddedRangeA` and `paddedRangeB` be, respectively, `rangeA` and `rangeB` aligned to `bufferImageGranularity`. If the resources are both linear or both non-linear (as defined in the [Glossary](#)), then the resources *alias* the memory in the intersection of `rangeA` and `rangeB`. If one resource is linear and the other is non-linear, then the resources *alias* the memory in the intersection of `paddedRangeA` and `paddedRangeB`.

Applications **can** alias memory, but use of multiple aliases is subject to several constraints.

NOTE

The implementation-dependent limit `bufferImageGranularity` also applies to tensor resources.

NOTE

Memory aliasing **can** be useful to reduce the total device memory footprint of an application, if some large resources are used for disjoint periods of time.

When a [non-linear](#), non-`VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` image is bound to an aliased range, all image subresources of the image *overlap* the range. When a linear image is bound to an aliased range, the image subresources that (according to the image's advertised layout) include bytes from the aliased range *overlap* the range. When a `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` image has sparse image blocks bound to an aliased range, only image subresources including those sparse image blocks *overlap* the range, and when the memory bound to the image's mip tail overlaps an aliased range all image subresources in the mip tail *overlap* the range.

Buffers, linear tensors, and linear image subresources are considered *host-accessible subresources* when they are in any of these layouts:

- `VK_IMAGE_LAYOUT_PREINITIALIZED`
- `VK_IMAGE_LAYOUT_GENERAL`
- `VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT`

That is, the host has a well-defined addressing scheme to interpret the contents, and thus the layout of the data in memory **can** be consistently interpreted across aliases if each of those aliases is a host-accessible subresource. Non-linear images, non-linear tensors, and linear image subresources in other layouts, are not host-accessible.

If two aliases are both host-accessible, then they interpret the contents of the memory in consistent ways, and data written to one alias **can** be read by the other alias.

For an acceleration structure `AS_2` that is an alias of another acceleration structure `AS_1`, `AS_2` **can** be

used in place of **AS_1** for operations acting on acceleration structures if the following conditions are met:

- The buffer referred to by the **buffer** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_2** was created with **must** be bound to the same **VkDeviceMemory** as the buffer referred to by the **buffer** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_1** was created with.
- The start of the memory range occupied by **AS_2**, defined by the sum of the **offset** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_2** was created with and the offset at which the buffer associated with **AS_2** is bound to a **VkDeviceMemory**, **must** match the start of the memory range occupied by **AS_1**.
- If the **deviceAddress** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_2** was created with is non-zero, it **must** match the **deviceAddress** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_1** was created with.
- The **createFlags** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_2** was created with **must** match the **createFlags** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_1** was created with.
- The **type** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_2** was created with **must** match the **type** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_1** was created with.
- The **size** member of the **VkAccelerationStructureCreateInfoKHR** that **AS_2** was created with **must** be greater or equal to the **size** returned by **vkGetAccelerationStructureBuildSizesKHR** for the build parameters **AS_1** was built with.

After an acceleration structure object is destroyed, aliased acceleration structures **may** continue being used to refer to that acceleration structure for operations acting on acceleration structures.

If two aliases are both images that were created with identical creation parameters, both were created with the **VK_IMAGE_CREATE_ALIAS_BIT** flag set, and both are bound identically to memory except for **VkBindImageMemoryDeviceGroupInfo::pDeviceIndices** and **VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions**, then they interpret the contents of the memory in consistent ways, and data written to one alias **can** be read by the other alias.

Additionally, if an individual plane of a multi-planar image and a single-plane image alias the same memory, then they also interpret the contents of the memory in consistent ways under the same conditions, but with the following modifications:

- Both **must** have been created with the **VK_IMAGE_CREATE_DISJOINT_BIT** flag.
- The single-plane image **must** have a **VkFormat** that is **equivalent** to that of the multi-planar image's individual plane.
- The single-plane image and the individual plane of the multi-planar image **must** be bound identically to memory except for **VkBindImageMemoryDeviceGroupInfo::pDeviceIndices** and **VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions**.
- The **width** and **height** of the single-plane image are derived from the multi-planar image's dimensions in the manner listed for **plane compatibility** for the aliased plane.
- If either image's **tiling** is **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**, then both images

must be [linear](#).

- All other creation parameters **must** be identical

Aliases created by binding the same memory to resources in multiple Vulkan instances or external APIs using external memory handle export and import mechanisms interpret the contents of the memory in consistent ways, and data written to one alias **can** be read by the other alias.

Aliases created by binding the same memory to a tensor and an image subresource interpret the contents of the memory in consistent ways if and only if:

- The image was created with [VK_IMAGE_TILING_LINEAR](#) and the tensor was created with [VK_TENSOR_TILING_LINEAR_ARM](#). The strides for the image subresource, as reported by [vkGetImageSubresourceLayout](#), are compatible with strides passed when creating the tensor, i.e. [VkTensorDescriptionARM::pStrides\[dimensionCount-3\]](#) must be equal to [VkSubresourceLayout::rowPitch](#) if [VkTensorDescriptionARM::dimensionCount](#) is greater than 2 and [VkTensorDescriptionARM::pStrides\[dimensionCount-4\]](#) must be equal to [VkSubresourceLayout::depthPitch](#) if [VkTensorDescriptionARM::dimensionCount](#) is greater than 3.
- The image was created with [VK_IMAGE_TILING_OPTIMAL](#) and the tensor was created with [VK_TENSOR_TILING_OPTIMAL_ARM](#). The image was created with the [VK_IMAGE_USAGE_TENSOR_ALIASING_BIT_ARM](#) usage flag set and the tensor was created with [VK_TENSOR_USAGE_IMAGE_ALIASING_BIT_ARM](#).
- The format of the tensor must be compatible with that of the individual components of the format of the image.
- The number of dimensions of the tensor ([VkTensorDescriptionARM::dimensionCount](#)) is greater than or equal to the number of dimensions of the image (as specified by [VkImageCreateInfo::imageType](#)) plus 1.
- The size of the tensor along its innermost dimension ([VkTensorDescriptionARM::pDimensions\[dimensionCount-1\]](#)) is equal to the number of components of the format of the image ([VkImageCreateInfo::format](#)).
- The size of the tensor along all dimensions other than the N innermost dimensions necessary to represent the image (i.e. the number of dimensions of the image plus 1) must be 1.
- The image subresource is in the [VK_IMAGE_LAYOUT_TENSOR_ALIASING_ARM](#) layout if the image was created with [VK_IMAGE_TILING_OPTIMAL](#) and the [unifiedImageLayouts](#) feature is not enabled. If the [unifiedImageLayouts](#) feature is not enabled, the image **must** be transitioned to [VK_IMAGE_LAYOUT_TENSOR_ALIASING_ARM](#) prior to any reads via the tensor resource for those reads to return data consistent with that provided to the image writes. If the [unifiedImageLayouts](#) feature is not enabled, the image **must** be transitioned to [VK_IMAGE_LAYOUT_TENSOR_ALIASING_ARM](#) prior to any writes performed via the tensor resource for reads performed via the image resource to return data consistent with that provided to the tensor writes.

Otherwise, the aliases interpret the contents of the memory differently, and writes via one alias make the contents of memory partially or completely undefined to the other alias. If the first alias is a host-accessible subresource, then the bytes affected are those written by the memory operations according to its addressing scheme. If the first alias is not host-accessible, then the bytes affected are those overlapped by the image subresources that were written. If the second alias is a host-

accessible subresource, the affected bytes become undefined. If the second alias is not host-accessible, all sparse image blocks (for sparse partially-resident images) or all image subresources (for non-sparse image and fully resident sparse images) that overlap the affected bytes become undefined.

If any image subresources are made undefined due to writes to an alias, then each of those image subresources **must** have its layout transitioned from [VK_IMAGE_LAYOUT_UNDEFINED](#) to a valid layout before it is used, from [VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT](#) if it is zeroed, or from [VK_IMAGE_LAYOUT_PREINITIALIZED](#) if the memory has been written by the host. If any sparse blocks of a sparse image have been made undefined, then only the image subresources containing them **must** be transitioned.

Use of an overlapping range by two aliases **must** be separated by a memory dependency using the appropriate [access types](#) if at least one of those uses performs writes, whether the aliases interpret memory consistently or not. If buffer or image memory barriers are used, the scope of the barrier **must** contain the entire range and/or set of image subresources that overlap.

If two aliasing image views are used in the same framebuffer, then the render pass **must** declare the attachments using the [VK_ATTACHMENT_DESCRIPTION_MAY_ALIAS_BIT](#), and follow the other rules listed in that section.

NOTE

Memory recycled via an application suballocator (i.e. without freeing and reallocating the memory objects) is not substantially different from memory aliasing. However, a suballocator usually waits on a fence before recycling a region of memory, and signaling a fence involves sufficient implicit dependencies to satisfy all the above requirements.

12.11.1. Resource Memory Overlap

Applications **can** safely access resources concurrently via separate device and host operations as long as the accessed memory locations are guaranteed to not overlap, as defined in [Memory Location](#), and the operation, resource, and access are otherwise independently valid.

Some operations have alignment requirements or access ambiguous [memory locations](#), so the semantics of a particular operation **should** be considered when determining the overlap. Such requirements will be described alongside the operation. Operations between host and device when using non-coherent memory are aligned to [nonCoherentAtomSize](#), as defined by [vkFlushMappedMemoryRanges](#) and [vkInvalidateMappedMemoryRanges](#).

NOTE

The intent is that buffers (or linear images) can be accessed concurrently, even when they share cache lines, but otherwise do not access the same memory range. The concept of a device cache line size is not exposed in the memory model.

12.12. Buffer Collections

Fuchsia's FIDL-based Sysmem service interoperates with Vulkan via the [VK_FUCHSIA_buffer_collection](#) extension.

A buffer collection is a set of one or more buffers which were allocated together as a group and which all have the same properties. These properties describe the buffers' internal representation, such as its dimensions and memory layout. This ensures that all of the buffers can be used interchangeably by tasks that require swapping among multiple buffers, such as double-buffered graphics rendering.

On Fuchsia, the Sysmem service uses buffer collections as a core construct in its design.

Buffer collections are represented by `VkBufferCollectionFUCHSIA` handles:

```
// Provided by VK_FUCHSIA_buffer_collection
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBufferCollectionFUCHSIA)
```

12.12.1. Definitions

- FIDL - Fuchsia Interface Definition Language. The declarative language used to define FIDL interprocess communication interfaces on Fuchsia. FIDL files use the `fidl` extension. FIDL is also used to refer to the services defined by interfaces declared in the FIDL language
- Sysmem - The FIDL service that facilitates optimal buffer sharing and reuse on Fuchsia
- client - Any participant of the buffer collection e.g. the Vulkan application
- token - A `zx_handle_t` Zircon channel object that allows participation in the buffer collection

12.12.2. Platform Initialization for Buffer Collections

To initialize a buffer collection on Fuchsia:

- Connect to the Sysmem service to initialize a Sysmem allocator
- Create an initial buffer collection token using the Sysmem allocator
- Duplicate the token for each participant beyond the initiator
- See the Sysmem Overview and `fuchsia.sysmem` FIDL documentation on `fuchsia.dev` for more detailed information

12.12.3. Create the Buffer Collection

To create a `VkBufferCollectionFUCHSIA` for Vulkan to participate in the buffer collection:

```
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkCreateBufferCollectionFUCHSIA(
    VkDevice device,
    const VkBufferCollectionCreateInfoFUCHSIA* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkBufferCollectionFUCHSIA* pCollection);
```

- `device` is the logical device that creates the `VkBufferCollectionFUCHSIA`

- **pCreateInfo** is a pointer to a [VkBufferCollectionCreateInfoFUCHSIA](#) structure containing parameters affecting creation of the buffer collection
- **pAllocator** is a pointer to a [VkAllocationCallbacks](#) structure controlling host memory allocation as described in the [Memory Allocation](#) chapter
- **pCollection** is a pointer to a [VkBufferCollectionFUCHSIA](#) handle in which the resulting buffer collection object is returned

Valid Usage (Implicit)

- VUID-vkCreateBufferCollectionFUCHSIA-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreateBufferCollectionFUCHSIA-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkBufferCollectionCreateInfoFUCHSIA](#) structure
- VUID-vkCreateBufferCollectionFUCHSIA-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateBufferCollectionFUCHSIA-pCollection-parameter
pCollection **must** be a valid pointer to a [VkBufferCollectionFUCHSIA](#) handle
- VUID-vkCreateBufferCollectionFUCHSIA-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_INVALID_EXTERNAL_HANDLE](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Host Access

All functions referencing a [VkBufferCollectionFUCHSIA](#) **must** be externally synchronized with the exception of [vkCreateBufferCollectionFUCHSIA](#).

The [VkBufferCollectionCreateInfoFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionCreateInfoFUCHSIA {
    VkStructureType    sType;
    const void*        pNext;
    zx_handle_t        collectionToken;
} VkBufferCollectionCreateInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `collectionToken` is a `zx_handle_t` containing the System client's buffer collection token

Valid Usage

- VUID-VkBufferCollectionCreateInfoFUCHSIA-collectionToken-06393
`collectionToken` **must** be a valid `zx_handle_t` to a Zircon channel allocated from System (`fuchsia.system.Allocator/AllocateSharedCollection`) with `ZX_DEFAULT_CHANNEL_RIGHTS` rights

Valid Usage (Implicit)

- VUID-VkBufferCollectionCreateInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_CREATE_INFO_FUCHSIA`
- VUID-VkBufferCollectionCreateInfoFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`

12.12.4. Set the Constraints

Buffer collections can be established for `VkImage` allocations or `VkBuffer` allocations.

Set Image-Based Buffer Collection Constraints

Setting the constraints on the buffer collection initiates the format negotiation and allocation of the buffer collection. To set the constraints on a `VkImage` buffer collection, call:

```
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkSetBufferCollectionImageConstraintsFUCHSIA(
    VkDevice                device,
    VkBufferCollectionFUCHSIA collection,
    const VkImageConstraintsInfoFUCHSIA* pImageConstraintsInfo);
```

- `device` is the logical device
- `collection` is the `VkBufferCollectionFUCHSIA` handle
- `pImageConstraintsInfo` is a pointer to a `VkImageConstraintsInfoFUCHSIA` structure

`vkSetBufferCollectionImageConstraintsFUCHSIA` **may** fail if `pImageConstraintsInfo->formatConstraintsCount` is larger than the implementation-defined limit. If that occurs, `vkSetBufferCollectionImageConstraintsFUCHSIA` will return `VK_ERROR_INITIALIZATION_FAILED`.

`vkSetBufferCollectionImageConstraintsFUCHSIA` **may** fail if the implementation does not support any of the formats described by the `pImageConstraintsInfo` structure. If that occurs, `vkSetBufferCollectionImageConstraintsFUCHSIA` will return `VK_ERROR_FORMAT_NOT_SUPPORTED`.

Valid Usage

- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-collection-06394 or `vkSetBufferCollectionImageConstraintsFUCHSIA` or `vkSetBufferCollectionBufferConstraintsFUCHSIA` **must** not have already been called on `collection`

Valid Usage (Implicit)

- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-collection-parameter `collection` **must** be a valid `VkBufferCollectionFUCHSIA` handle
- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-pImageConstraintsInfo-parameter `pImageConstraintsInfo` **must** be a valid pointer to a valid `VkImageConstraintsInfoFUCHSIA` structure
- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-collection-parent `collection` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_FORMAT_NOT_SUPPORTED`
- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkImageConstraintsInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkImageConstraintsInfoFUCHSIA {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 formatConstraintsCount;
    const VkImageFormatConstraintsInfoFUCHSIA* pFormatConstraints;
    VkBufferCollectionConstraintsInfoFUCHSIA  bufferCollectionConstraints;
    VkImageConstraintsInfoFlagsFUCHSIA        flags;
} VkImageConstraintsInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatConstraintsCount` is the number of elements in `pFormatConstraints`.
- `pFormatConstraints` is a pointer to an array of `VkImageFormatConstraintsInfoFUCHSIA` structures of size `formatConstraintsCount` that is used to further constrain buffer collection format selection for image-based buffer collections.
- `bufferCollectionConstraints` is a `VkBufferCollectionConstraintsInfoFUCHSIA` structure used to supply parameters for the negotiation and allocation for buffer-based buffer collections.
- `flags` is a `VkImageConstraintsInfoFlagBitsFUCHSIA` value specifying hints about the type of memory System should allocate for the buffer collection.

Valid Usage

- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06395
All elements of `pFormatConstraints` **must** have at least one bit set in its `VkImageFormatConstraintsInfoFUCHSIA::requiredFormatFeatures`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06396
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_SAMPLED_BIT`, then `pFormatConstraints->requiredFormatFeatures` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06397
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_STORAGE_BIT`, then `pFormatConstraints->requiredFormatFeatures` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06398
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, then `pFormatConstraints->requiredFormatFeatures` **must** contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06399
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, then `pFormatConstraints->requiredFormatFeatures` **must** contain `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`

- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06400
If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, then `pFormatConstraints->requiredFormatFeatures` must contain at least one of `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
- VUID-VkImageConstraintsInfoFUCHSIA-attachmentFragmentShadingRate-06401
If the `attachmentFragmentShadingRate` feature is enabled, and `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, then `pFormatConstraints->requiredFormatFeatures` must contain `VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

Valid Usage (Implicit)

- VUID-VkImageConstraintsInfoFUCHSIA-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_IMAGE_CONSTRAINTS_INFO_FUCHSIA`
- VUID-VkImageConstraintsInfoFUCHSIA-pNext-pNext
`pNext` must be `NULL`
- VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-parameter
`pFormatConstraints` must be a valid pointer to an array of `formatConstraintsCount` valid `VkImageFormatConstraintsInfoFUCHSIA` structures
- VUID-VkImageConstraintsInfoFUCHSIA-bufferCollectionConstraints-parameter
`bufferCollectionConstraints` must be a valid `VkBufferCollectionConstraintsInfoFUCHSIA` structure
- VUID-VkImageConstraintsInfoFUCHSIA-flags-parameter
`flags` must be a valid combination of `VkImageConstraintsInfoFlagBitsFUCHSIA` values
- VUID-VkImageConstraintsInfoFUCHSIA-formatConstraintsCount-arraylength
`formatConstraintsCount` must be greater than 0

```
// Provided by VK_FUCHSIA_buffer_collection
typedef VkFlags VkImageConstraintsInfoFlagsFUCHSIA;
```

`VkImageConstraintsInfoFlagsFUCHSIA` is a bitmask type for setting a mask of zero or more `VkImageConstraintsInfoFlagBitsFUCHSIA` bits.

Bits which can be set in `VkImageConstraintsInfoFlagBitsFUCHSIA::flags` include:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef enum VkImageConstraintsInfoFlagBitsFUCHSIA {
    VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_RARELY_FUCHSIA = 0x00000001,
    VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_OFTEN_FUCHSIA = 0x00000002,
    VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_RARELY_FUCHSIA = 0x00000004,
    VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_OFTEN_FUCHSIA = 0x00000008,
    VK_IMAGE_CONSTRAINTS_INFO_PROTECTED_OPTIONAL_FUCHSIA = 0x00000010,
} VkImageConstraintsInfoFlagBitsFUCHSIA;
```

General hints about the type of memory that should be allocated by Sysmem based on the expected usage of the images in the buffer collection include:

- [VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_RARELY_FUCHSIA](#)
- [VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_OFTEN_FUCHSIA](#)
- [VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_RARELY_FUCHSIA](#)
- [VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_OFTEN_FUCHSIA](#)

For protected memory:

- [VK_IMAGE_CONSTRAINTS_INFO_PROTECTED_OPTIONAL_FUCHSIA](#) specifies that protected memory is optional for the buffer collection.

Note that if all participants in the buffer collection (Vulkan or otherwise) specify that protected memory is optional, Sysmem will not allocate protected memory.

The [VkImageFormatConstraintsInfoFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkImageFormatConstraintsInfoFUCHSIA {
    VkStructureType          sType;
    const void*              pNext;
    VkImageCreateInfo         imageCreateInfo;
    VkFormatFeatureFlags      requiredFormatFeatures;
    VkImageFormatConstraintsFlagsFUCHSIA flags;
    uint64_t                  sysmemPixelFormat;
    uint32_t                  colorSpaceCount;
    const VkSysmemColorSpaceFUCHSIA* pColorSpaces;
} VkImageFormatConstraintsInfoFUCHSIA;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure
- [imageCreateInfo](#) is the [VkImageCreateInfo](#) used to create a [VkImage](#) that is to use memory from the [VkBufferCollectionFUCHSIA](#)
- [requiredFormatFeatures](#) is a bitmask of [VkFormatFeatureFlagBits](#) specifying required features of the buffers in the buffer collection

- `flags` is reserved for future use
- `sysmemPixelFormat` is a `PixelFormatType` value from the `fuchsia.sysmem/image_formats.fidl` FIDL interface
- `colorSpaceCount` is the element count of `pColorSpaces`
- `pColorSpaces` is a pointer to an array of `VkSysmemColorSpaceFUCHSIA` structs of size `colorSpaceCount`

Valid Usage (Implicit)

- VUID-VkImageFormatConstraintsInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_FORMAT_CONSTRAINTS_INFO_FUCHSIA`
- VUID-VkImageFormatConstraintsInfoFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageFormatConstraintsInfoFUCHSIA-imageCreateInfo-parameter
`imageCreateInfo` **must** be a valid `VkImageCreateInfo` structure
- VUID-VkImageFormatConstraintsInfoFUCHSIA-requiredFormatFeatures-parameter
`requiredFormatFeatures` **must** be a valid combination of `VkFormatFeatureFlagBits` values
- VUID-VkImageFormatConstraintsInfoFUCHSIA-requiredFormatFeatures-requiredbitmask
`requiredFormatFeatures` **must** not be `0`
- VUID-VkImageFormatConstraintsInfoFUCHSIA-flags-zerobitmask
`flags` **must** be `0`
- VUID-VkImageFormatConstraintsInfoFUCHSIA-pColorSpaces-parameter
`pColorSpaces` **must** be a valid pointer to an array of `colorSpaceCount` valid `VkSysmemColorSpaceFUCHSIA` structures
- VUID-VkImageFormatConstraintsInfoFUCHSIA-colorSpaceCount-arraylength
`colorSpaceCount` **must** be greater than `0`

```
// Provided by VK_FUCHSIA_buffer_collection
typedef VkFlags VkImageFormatConstraintsFlagsFUCHSIA;
```

`VkImageFormatConstraintsFlagsFUCHSIA` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkBufferCollectionConstraintsInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionConstraintsInfoFUCHSIA {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           minBufferCount;
    uint32_t           maxBufferCount;
    uint32_t           minBufferCountForCamping;
    uint32_t           minBufferCountForDedicatedSlack;
    uint32_t           minBufferCountForSharedSlack;
} VkBufferCollectionConstraintsInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `minBufferCount` is the minimum number of buffers available in the collection
- `maxBufferCount` is the maximum number of buffers allowed in the collection
- `minBufferCountForCamping` is the per-participant minimum buffers for camping
- `minBufferCountForDedicatedSlack` is the per-participant minimum buffers for dedicated slack
- `minBufferCountForSharedSlack` is the per-participant minimum buffers for shared slack

Systemem uses all buffer count parameters in combination to determine the number of buffers it will allocate. Systemem defines buffer count constraints in `fuchsia.systemem/constraints.fidl`.

Camping as referred to by `minBufferCountForCamping`, is the number of buffers that should be available for the participant that are not for transient use. This number of buffers is required for the participant to logically operate.

Slack as referred to by `minBufferCountForDedicatedSlack` and `minBufferCountForSharedSlack`, refers to the number of buffers desired by participants for optimal performance. `minBufferCountForDedicatedSlack` refers to the current participant. `minBufferCountForSharedSlack` refers to buffer slack for all participants in the collection.

Valid Usage (Implicit)

- VUID-VkBufferCollectionConstraintsInfoFUCHSIA-sType-sType **must** be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_CONSTRAINTS_INFO_FUCHSIA`
- VUID-VkBufferCollectionConstraintsInfoFUCHSIA-pNext-pNext **must** be `NULL`

The `VkSystememColorSpaceFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkSysmemColorSpaceFUCHSIA {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           colorSpace;
} VkSysmemColorSpaceFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `colorSpace` value of the Sysmem `ColorSpaceType`

Valid Usage

- VUID-VkSysmemColorSpaceFUCHSIA-colorSpace-06402
`colorSpace` **must** be a `ColorSpaceType` as defined in `fuchsia.sysmem/image_formats.fidl`

Valid Usage (Implicit)

- VUID-VkSysmemColorSpaceFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SYSMEM_COLOR_SPACE_FUCHSIA`
- VUID-VkSysmemColorSpaceFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`

Set Buffer-Based Buffer Collection Constraints

To set the constraints on a `VkBuffer` buffer collection, call:

```
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkSetBufferCollectionBufferConstraintsFUCHSIA(
    VkDevice                device,
    VkBufferCollectionFUCHSIA collection,
    const VkBufferConstraintsInfoFUCHSIA* pBufferConstraintsInfo);
```

- `device` is the logical device
- `collection` is the `VkBufferCollectionFUCHSIA` handle
- `pBufferConstraintsInfo` is a pointer to a `VkBufferConstraintsInfoFUCHSIA` structure

`vkSetBufferCollectionBufferConstraintsFUCHSIA` **may** fail if the implementation does not support the constraints specified in the `bufferCollectionConstraints` structure. If that occurs, `vkSetBufferCollectionBufferConstraintsFUCHSIA` will return `VK_ERROR_FORMAT_NOT_SUPPORTED`.

Valid Usage

- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-collection-06403
`vkSetBufferCollectionImageConstraintsFUCHSIA` or
`vkSetBufferCollectionBufferConstraintsFUCHSIA` **must** not have already been called on
`collection`

Valid Usage (Implicit)

- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-collection-parameter
`collection` **must** be a valid `VkBufferCollectionFUCHSIA` handle
- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-pBufferConstraintsInfo-parameter
`pBufferConstraintsInfo` **must** be a valid pointer to a valid
`VkBufferConstraintsInfoFUCHSIA` structure
- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-collection-parent
`collection` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_FORMAT_NOT_SUPPORTED`
- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkBufferConstraintsInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferConstraintsInfoFUCHSIA {
    VkStructureType           sType;
    const void*               pNext;
    VkBufferCreateInfo         createInfo;
    VkFormatFeatureFlags      requiredFormatFeatures;
    VkBufferCollectionConstraintsInfoFUCHSIA bufferCollectionConstraints;
} VkBufferConstraintsInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `createInfo` is a pointer to a `VkBufferCreateInfo` struct describing the buffer attributes for the buffer collection
- `requiredFormatFeatures` is a bitmask of `VkFormatFeatureFlagBits` required features of the buffers in the buffer collection
- `bufferCollectionConstraints` is used to supply parameters for the negotiation and allocation of the buffer collection

Valid Usage

- VUID-VkBufferConstraintsInfoFUCHSIA-requiredFormatFeatures-06404
The `requiredFormatFeatures` bitmask of `VkFormatFeatureFlagBits` **must** be chosen from among the buffer compatible format features listed in [buffer compatible format features](#)

Valid Usage (Implicit)

- VUID-VkBufferConstraintsInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_CONSTRAINTS_INFO_FUCHSIA`
- VUID-VkBufferConstraintsInfoFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkBufferConstraintsInfoFUCHSIA-createInfo-parameter
`createInfo` **must** be a valid `VkBufferCreateInfo` structure
- VUID-VkBufferConstraintsInfoFUCHSIA-requiredFormatFeatures-parameter
`requiredFormatFeatures` **must** be a valid combination of `VkFormatFeatureFlagBits` values
- VUID-VkBufferConstraintsInfoFUCHSIA-bufferCollectionConstraints-parameter
`bufferCollectionConstraints` **must** be a valid `VkBufferCollectionConstraintsInfoFUCHSIA` structure

12.12.5. Retrieve Buffer Collection Properties

After constraints have been set on the buffer collection by calling `vkSetBufferCollectionImageConstraintsFUCHSIA` or `vkSetBufferCollectionBufferConstraintsFUCHSIA`, call `vkGetBufferCollectionPropertiesFUCHSIA` to retrieve the negotiated and finalized properties of the buffer collection.

The call to `vkGetBufferCollectionPropertiesFUCHSIA` is synchronous. It waits for the System format negotiation and buffer collection allocation to complete before returning.

```
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkGetBufferCollectionPropertiesFUCHSIA(
    VkDevice device,
    VkBufferCollectionFUCHSIA collection,
    VkBufferCollectionPropertiesFUCHSIA* pProperties);
```

- **device** is the logical device handle
- **collection** is the `VkBufferCollectionFUCHSIA` handle
- **pProperties** is a pointer to the retrieved `VkBufferCollectionPropertiesFUCHSIA` struct

For image-based buffer collections, upon calling `vkGetBufferCollectionPropertiesFUCHSIA`, Sysmem will choose an element of the `VkImageConstraintsInfoFUCHSIA::pImageCreateInfos` established by the preceding call to `vkSetBufferCollectionImageConstraintsFUCHSIA`. The index of the element chosen is stored in and can be retrieved from `VkBufferCollectionPropertiesFUCHSIA::createInfoIndex`.

For buffer-based buffer collections, a single `VkBufferCreateInfo` is specified as `VkBufferConstraintsInfoFUCHSIA::createInfo`. `VkBufferCollectionPropertiesFUCHSIA::createInfoIndex` will therefore always be zero.

`vkGetBufferCollectionPropertiesFUCHSIA` **may** fail if Sysmem is unable to resolve the constraints of all of the participants in the buffer collection. If that occurs, `vkGetBufferCollectionPropertiesFUCHSIA` will return `VK_ERROR_INITIALIZATION_FAILED`.

Valid Usage

- VUID-vkGetBufferCollectionPropertiesFUCHSIA-None-06405
Prior to calling `vkGetBufferCollectionPropertiesFUCHSIA`, the constraints on the buffer collection **must** have been set by either `vkSetBufferCollectionImageConstraintsFUCHSIA` or `vkSetBufferCollectionBufferConstraintsFUCHSIA`

Valid Usage (Implicit)

- VUID-vkGetBufferCollectionPropertiesFUCHSIA-device-parameter
device **must** be a valid `VkDevice` handle
- VUID-vkGetBufferCollectionPropertiesFUCHSIA-collection-parameter
collection **must** be a valid `VkBufferCollectionFUCHSIA` handle
- VUID-vkGetBufferCollectionPropertiesFUCHSIA-pProperties-parameter
pProperties **must** be a valid pointer to a `VkBufferCollectionPropertiesFUCHSIA` structure
- VUID-vkGetBufferCollectionPropertiesFUCHSIA-collection-parent
collection **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkBufferCollectionPropertiesFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionPropertiesFUCHSIA {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             memoryTypeBits;
    uint32_t             bufferCount;
    uint32_t             createInfoIndex;
    uint64_t             sysmemPixelFormat;
    VkFormatFeatureFlags formatFeatures;
    VkSysmemColorSpaceFUCHSIA sysmemColorSpaceIndex;
    VkComponentMapping    samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange    suggestedYcbcrRange;
    VkChromaLocation       suggestedXChromaOffset;
    VkChromaLocation       suggestedYChromaOffset;
} VkBufferCollectionPropertiesFUCHSIA;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure
- [memoryTypeBits](#) is a bitmask containing one bit set for every memory type which the buffer collection can be imported as buffer collection
- [bufferCount](#) is the number of buffers in the collection
- [createInfoIndex](#) as described in [Sysmem chosen create infos](#)
- [sysmemPixelFormat](#) is the [Sysmem PixelFormatType](#) as defined in [fuchsia.sysmem/image_formats.fidl](#)
- [formatFeatures](#) is a bitmask of [VkFormatFeatureFlagBits](#) shared by the buffer collection
- [sysmemColorSpaceIndex](#) is a [VkSysmemColorSpaceFUCHSIA](#) struct specifying the color space
- [samplerYcbcrConversionComponents](#) is a [VkComponentMapping](#) structure specifying the component mapping

- `suggestedYcbcrModel` is a `VkSamplerYcbcrModelConversion` value specifying the suggested Y'C_BC_R model
- `suggestedYcbcrRange` is a `VkSamplerYcbcrRange` value specifying the suggested Y'C_BC_R range
- `suggestedXChromaOffset` is a `VkChromaLocation` value specifying the suggested X chroma offset
- `suggestedYChromaOffset` is a `VkChromaLocation` value specifying the suggested Y chroma offset

`systemColorSpace` is only set for image-based buffer collections where the constraints were specified using `VkImageConstraintsInfoFUCHSIA` in a call to `vkSetBufferCollectionImageConstraintsFUCHSIA`.

For image-based buffer collections, `createInfoIndex` will identify both the `VkImageConstraintsInfoFUCHSIA::pImageCreateInfos` element and the `VkImageConstraintsInfoFUCHSIA::pFormatConstraints` element chosen by System when `vkSetBufferCollectionImageConstraintsFUCHSIA` was called. The value of `systemColorSpaceIndex` will be an index to one of the color spaces provided in the `VkImageFormatConstraintsInfoFUCHSIA::pColorSpaces` array.

The implementation **must** have `formatFeatures` with all bits set that were set in `VkImageFormatConstraintsInfoFUCHSIA::requiredFormatFeatures`, by the call to `vkSetBufferCollectionImageConstraintsFUCHSIA`, at `createInfoIndex` (other bits could be set as well).

Valid Usage (Implicit)

- VUID-VkBufferCollectionPropertiesFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_PROPERTIES_FUCHSIA`
- VUID-VkBufferCollectionPropertiesFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`

12.12.6. Memory Allocation

To import memory from a buffer collection into a `VkImage` or a `VkBuffer`, chain a `VkImportMemoryBufferCollectionFUCHSIA` structure to the `pNext` member of the `VkMemoryAllocateInfo` in the call to `vkAllocateMemory`.

The `VkImportMemoryBufferCollectionFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkImportMemoryBufferCollectionFUCHSIA {
    VkStructureType      sType;
    const void*          pNext;
    VkBufferCollectionFUCHSIA collection;
    uint32_t             index;
} VkImportMemoryBufferCollectionFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure

- **collection** is the [VkBufferCollectionFUCHSIA](#) handle
- **index** is the index of the buffer to import from **collection**

Valid Usage

- VUID-VkImportMemoryBufferCollectionFUCHSIA-index-06406
index **must** be less than the value retrieved as [VkBufferCollectionPropertiesFUCHSIA::bufferCount](#)

Valid Usage (Implicit)

- VUID-VkImportMemoryBufferCollectionFUCHSIA-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IMPORT_MEMORY_BUFFER_COLLECTION_FUCHSIA](#)
- VUID-VkImportMemoryBufferCollectionFUCHSIA-collection-parameter
collection **must** be a valid [VkBufferCollectionFUCHSIA](#) handle

Structure Chaining

Extends the structure

- [VkMemoryAllocateInfo](#)

To release a [VkBufferCollectionFUCHSIA](#):

```
// Provided by VK_FUCHSIA_buffer_collection
void vkDestroyBufferCollectionFUCHSIA(
    VkDevice                device,
    VkBufferCollectionFUCHSIA collection,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that creates the [VkBufferCollectionFUCHSIA](#)
- **collection** is the [VkBufferCollectionFUCHSIA](#) handle
- **pAllocator** is a pointer to a [VkAllocationCallbacks](#) structure controlling host memory allocation as described in the [Memory Allocation](#) chapter

Valid Usage

- VUID-vkDestroyBufferCollectionFUCHSIA-collection-06407
[VkImage](#) and [VkBuffer](#) objects that referenced **collection** upon creation by inclusion of a [VkBufferCollectionImageCreateInfoFUCHSIA](#) or [VkBufferCollectionBufferCreateInfoFUCHSIA](#) chained to their [VkImageCreateInfo](#) or [VkBufferCreateInfo](#) structures respectively, **may** outlive **collection**

Valid Usage (Implicit)

- VUID-vkDestroyBufferCollectionFUCHSIA-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyBufferCollectionFUCHSIA-collection-parameter **collection** **must** be a valid [VkBufferCollectionFUCHSIA](#) handle
- VUID-vkDestroyBufferCollectionFUCHSIA-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyBufferCollectionFUCHSIA-collection-parent **collection** **must** have been created, allocated, or retrieved from **device**

12.13. Tensors

Tensors are similar to [images](#), in that they have multi-dimensional access as documented in the [Tensor Operations](#) chapter, but a tensor's dimensions are not predefined. A tensor can have an arbitrary number of dimensions, up to [maxTensorDimensionCount](#), with one index per dimension used to access the tensor.

Tensors **can** be used by binding them to pipelines via descriptor sets, or by directly specifying them as parameters to certain commands.

Tensors are represented by [VkTensorARM](#) handles:

```
// Provided by VK_EXT_descriptor_heap, VK_ARM_tensors
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkTensorARM)
```

To create tensors, call:

```
// Provided by VK_ARM_tensors
VkResult vkCreateTensorARM(
    VkDevice                                device,
    const VkTensorCreateInfoARM*            pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkTensorARM*                            pTensor);
```

- **device** is the logical device that creates the tensor.
- **pCreateInfo** is a pointer to a [VkTensorCreateInfoARM](#) structure containing parameters to be used to create the tensor.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pTensor** is a pointer to a [VkTensorARM](#) handle in which the resulting tensor object is returned.

Valid Usage

- VUID-vkCreateTensorARM-tensors-09832
The **tensors** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateTensorARM-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkCreateTensorARM-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid **VkTensorCreateInfoARM** structure
- VUID-vkCreateTensorARM-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkCreateTensorARM-pTensor-parameter
pTensor **must** be a valid pointer to a **VkTensorARM** handle
- VUID-vkCreateTensorARM-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

The **VkTensorCreateInfoARM** structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkTensorCreateInfoARM {
    VkStructureType      sType;
    const void*          pNext;
    VkTensorCreateFlagsARM flags;
    const VkTensorDescriptionARM* pDescription;
    VkSharingMode         sharingMode;
    uint32_t              queueFamilyIndexCount;
    const uint32_t*       pQueueFamilyIndices;
} VkTensorCreateInfoARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkTensorCreateFlagBitsARM` describing additional parameters of the tensor.
- `pDescription` is a pointer to an instance of `VkTensorDescriptionARM` describing the tensor.
- `sharingMode` is a `VkSharingMode` value specifying the sharing mode of the tensor when it will be accessed by multiple queue families.
- `queueFamilyIndexCount` is the number of entries in the `pQueueFamilyIndices` array.
- `pQueueFamilyIndices` is a list of queue families that will access this tensor (ignored if `sharingMode` is not `VK_SHARING_MODE_CONCURRENT`).

To determine the set of valid `usage` bits for a given tensor format, call `vkGetPhysicalDeviceFormatProperties2` with `VkTensorFormatPropertiesARM` in the `pNext` chain.

Tensor Creation Limits

Valid values for some tensor creation parameters are limited by a numerical upper bound or by inclusion in a bitset.

Several limiting values are defined below. The limiting values are referenced by the relevant valid usage statements of `VkTensorCreateInfoARM`.

- Let the `uint64_t` `tensorElements` define the number of data elements in the tensor computed as the product of all `VkTensorCreateInfoARM::pDescription->pDimensions[i]` for `i` between 0 and `VkTensorCreateInfoARM::pDescription->dimensionCount - 1`.

Valid Usage

- VUID-VkTensorCreateInfoARM-pDescription-09720
If `pDescription->tiling` is `VK_TENSOR_TILING_OPTIMAL_ARM`, `pDescription->pStrides` **must** be `NULL`
- VUID-VkTensorCreateInfoARM-tensorElements-09721
`tensorElements` (as defined in [Tensor Creation Limits](#)) **must** not be greater than

VkPhysicalDeviceTensorPropertiesARM::maxTensorElements

- VUID-VkTensorCreateInfoARM-sharingMode-09722
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, `pQueueFamilyIndices` **must** be a valid pointer to an array of `queueFamilyIndexCount` `uint32_t` values
- VUID-VkTensorCreateInfoARM-maintenance11-13358
If the `maintenance11` feature is enabled and `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` **must** be greater than 0
- VUID-VkTensorCreateInfoARM-sharingMode-09723
If the `maintenance11` feature is not enabled and `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` **must** be greater than 1
- VUID-VkTensorCreateInfoARM-sharingMode-09725
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of `pQueueFamilyIndices` **must** be unique and **must** be less than `pQueueFamilyPropertyCount` returned by either `vkGetPhysicalDeviceQueueFamilyProperties` or `vkGetPhysicalDeviceQueueFamilyProperties2` for the `physicalDevice` that was used to create `device`
- VUID-VkTensorCreateInfoARM-pNext-09864
If the `pNext` chain includes a `VkExternalMemoryTensorCreateInfoARM` structure, its `handleTypes` member **must** only contain bits that are also in `VkExternalTensorPropertiesARM::externalMemoryProperties.compatibleHandleTypes`, as returned by `vkGetPhysicalDeviceExternalTensorPropertiesARM` with `pExternalTensorInfo->handleType` equal to any one of the handle types specified in `VkExternalMemoryTensorCreateInfoARM::handleTypes`
- VUID-VkTensorCreateInfoARM-flags-09726
If `flags` includes `VK_TENSOR_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM`, the `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-VkTensorCreateInfoARM-pNext-09727
If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `flags` **must** contain `VK_TENSOR_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM`
- VUID-VkTensorCreateInfoARM-pDescription-09728
If `pDescription->usage` does not have any of the following bits set (i.e. if it is not possible to create a tensor view for this tensor), then the `format features` **must** contain the format feature flags required by the `usage` flags for `pDescription->format` as indicated in the `Format Feature Dependent Usage Flags` section
 - `VK_TENSOR_USAGE_SHADER_BIT_ARM`
 - `VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM`
- VUID-VkTensorCreateInfoARM-protectedMemory-09729
If the `protectedMemory` feature is not enabled, `flags` **must** not contain `VK_TENSOR_CREATE_PROTECTED_BIT_ARM`
- VUID-VkTensorCreateInfoARM-flags-11395
If `VkOpaqueCaptureDataCreateInfoEXT::pData` is not `NULL`, `flags` **must** contain

`VK_TENSOR_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_ARM`

- VUID-VkTensorCreateInfoARM-flags-11396

If `flags` contains `VK_TENSOR_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_ARM`, `VkOpaqueCaptureDataCreateInfoEXT::pData->size` **must** be equal to `imageCaptureReplayOpaqueDataSize`

Valid Usage (Implicit)

- VUID-VkTensorCreateInfoARM-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_TENSOR_CREATE_INFO_ARM`

- VUID-VkTensorCreateInfoARM-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkExternalMemoryTensorCreateInfoARM`, `VkOpaqueCaptureDataCreateInfoEXT`, or `VkOpaqueCaptureDescriptorDataCreateInfoEXT`

- VUID-VkTensorCreateInfoARM-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique

- VUID-VkTensorCreateInfoARM-flags-parameter

`flags` **must** be a valid combination of `VkTensorCreateFlagBitsARM` values

- VUID-VkTensorCreateInfoARM-pDescription-parameter

`pDescription` **must** be a valid pointer to a valid `VkTensorDescriptionARM` structure

- VUID-VkTensorCreateInfoARM-sharingMode-parameter

`sharingMode` **must** be a valid `VkSharingMode` value

Bits which **can** be set in `VkTensorCreateInfoARM::flags`, specifying additional parameters of a tensor, are:

```
// Provided by VK_ARM_tensors
// Flag bits for VkTensorCreateFlagBitsARM
typedef VkFlags64 VkTensorCreateFlagBitsARM;
static const VkTensorCreateFlagBitsARM VK_TENSOR_CREATE_MUTABLE_FORMAT_BIT_ARM =
0x00000001ULL;
static const VkTensorCreateFlagBitsARM VK_TENSOR_CREATE_PROTECTED_BIT_ARM =
0x00000002ULL;
// Provided by VK_EXT_descriptor_heap with VK_ARM_tensors
static const VkTensorCreateFlagBitsARM
VK_TENSOR_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_ARM = 0x00000008ULL;
// Provided by VK_EXT_descriptor_buffer with VK_ARM_tensors
static const VkTensorCreateFlagBitsARM
VK_TENSOR_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM = 0x00000004ULL;
```

- `VK_TENSOR_CREATE_MUTABLE_FORMAT_BIT_ARM` specifies that the tensor **can** be used to create a `VkTensorViewARM` with a different format from the tensor.
- `VK_TENSOR_CREATE_PROTECTED_BIT_ARM` specifies that the tensor is a protected tensor.

- [VK_TENSOR_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#) specifies that the tensor **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.

```
// Provided by VK_ARM_tensors
typedef VkFlags64 VkTensorCreateFlagsARM;
```

[VkTensorCreateFlagsARM](#) is a bitmask type for setting a mask of zero or more [VkTensorCreateFlagBitsARM](#).

To define a set of external memory handle types that **may** be used as backing store for a tensor, add a [VkExternalMemoryTensorCreateInfoARM](#) structure to the [pNext](#) chain of the [VkTensorCreateInfoARM](#) structure.

The [VkExternalMemoryTensorCreateInfoARM](#) structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkExternalMemoryTensorCreateInfoARM {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalMemoryHandleTypeFlags handleTypes;
} VkExternalMemoryTensorCreateInfoARM;
```

NOTE

A [VkExternalMemoryTensorCreateInfoARM](#) structure with a non-zero [handleTypes](#) field must be included in the creation parameters for a tensor that will be bound to memory that is either exported or imported.

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [handleTypes](#) is zero or a bitmask of [VkExternalMemoryHandleTypeFlagBits](#) specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryTensorCreateInfoARM-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_TENSOR_CREATE_INFO_ARM](#)
- VUID-VkExternalMemoryTensorCreateInfoARM-handleTypes-parameter [handleTypes](#) **must** be a valid combination of [VkExternalMemoryHandleTypeFlagBits](#) values

Structure Chaining

Extends the structure

- [VkTensorCreateInfoARM](#)

To destroy a tensor, call:

```
// Provided by VK_ARM_tensors
void vkDestroyTensorARM(
    VkDevice          device,
    VkTensorARM       tensor,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the tensor.
- **tensor** is the tensor to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyTensorARM-tensor-09730
All submitted commands that refer to **tensor**, either directly or via a **VkTensorViewARM**, **must** have completed execution
- VUID-vkDestroyTensorARM-tensor-09731
If **VkAllocationCallbacks** were provided when **tensor** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyTensorARM-tensor-09732
If no **VkAllocationCallbacks** were provided when **tensor** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyTensorARM-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyTensorARM-tensor-parameter
If **tensor** is not **VK_NULL_HANDLE**, **tensor** **must** be a valid **VkTensorARM** handle
- VUID-vkDestroyTensorARM-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyTensorARM-tensor-parent
If **tensor** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **tensor** **must** be externally synchronized

12.13.1. Tensor Description

The `VkTensorDescriptionARM` structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkTensorDescriptionARM {
    VkStructureType      sType;
    const void*          pNext;
    VkTensorTilingARM    tiling;
    VkFormat              format;
    uint32_t             dimensionCount;
    const int64_t*        pDimensions;
    const int64_t*        pStrides;
    VkTensorUsageFlagsARM usage;
} VkTensorDescriptionARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `tiling` is a `VkTensorTilingARM` value specifying the tiling of the tensor
- `format` is a one component `VkFormat` describing the format and type of the data elements that will be contained in the tensor.
- `dimensionCount` is the number of dimensions for the tensor.
- `pDimensions` is a pointer to an array of integers of size `dimensionCount` providing the number of data elements in each dimension.
- `pStrides` is either `NULL` or is an array of size `dimensionCount` providing the strides in bytes for the tensor in each dimension.
- `usage` is a bitmask of `VkTensorUsageFlagBitsARM` specifying the usage of the tensor.

When describing a tensor created with `VK_TENSOR_TILING_OPTIMAL_ARM`, `pStrides` must be equal to `NULL`. When describing a tensor created with `VK_TENSOR_TILING_LINEAR_ARM`, `pStrides` is either an array of size `dimensionCount` or `NULL`.

The formats that **must** be supported for `format` are documented in [Mandatory tensor format support](#).

Each element in the `pStrides` array describes the offset in bytes between increments of the given dimension. For example, `pStrides[0]` describes the offset between element `[x0,x1,x2,x3]` and element `[x0+1,x1,x2,x3]`. The `pStrides` array **can** be used to determine whether a tensor is *packed* or not. If `pStrides[dimensionCount-1]` is equal to the size of a tensor element and for each dimension `n` greater than 0 and less than `dimensionCount`, `pStrides[n-1]` is equal to `pStrides[n] * pDimensions[n]`, then the tensor is a packed tensor. If the `tensorNonPacked` feature is not enabled, the tensor **must** be a packed tensor.

When a tensor is created with `VK_TENSOR_TILING_LINEAR_ARM` and `pStrides` equal to `NULL` the tensor strides are calculated by the vulkan implementation such that the resulting tensor is a packed tensor.

Expressed as an addressing formula, the starting byte of an element in a 4-dimensional, for example, linear tensor has address:

```
// Assume (x0,x1,x2,x3) are in units of elements.
```

```
address(x0,x1,x2,x3) = x0*pStrides[0] + x1*pStrides[1] + x2*pStrides[2] + x3*pStrides[3]
```

Valid Usage

- VUID-VkTensorDescriptionARM-dimensionCount-09733
`dimensionCount` **must** be less than or equal to `VkPhysicalDeviceTensorPropertiesARM::maxTensorDimensionCount`
- VUID-VkTensorDescriptionARM-pDimensions-09734
For each `i` where `i ≤ dimensionCount-1`, `pDimensions[i]` **must** be greater than `0`
- VUID-VkTensorDescriptionARM-pDimensions-09883
For each `i` where `i ≤ dimensionCount-1`, `pDimensions[i]` **must** be less than or equal to `VkPhysicalDeviceTensorPropertiesARM::maxPerDimensionTensorElements`
- VUID-VkTensorDescriptionARM-format-09735
`format` **must** not be `VK_FORMAT_UNDEFINED` and **must** be a one-component `VkFormat`
- VUID-VkTensorDescriptionARM-pStrides-09736
`pStrides[dimensionCount-1]` **must** equal the size in bytes of a tensor element
- VUID-VkTensorDescriptionARM-pStrides-09737
For each `i`, `pStrides[i]` **must** be a multiple of the element size
- VUID-VkTensorDescriptionARM-pStrides-09738
For each `i`, `pStrides[i]` **must** be greater than `0` and less than or equal to `VkPhysicalDeviceTensorPropertiesARM::maxTensorStride`
- VUID-VkTensorDescriptionARM-pStrides-09884
`pStrides[0] × pDimensions[0]` **must** be less than or equal to `VkPhysicalDeviceTensorPropertiesARM::maxTensorSize`
- VUID-VkTensorDescriptionARM-pStrides-09739
For each `i` greater than `0`, `pStrides[i-1]` **must** be greater than or equal to `pStrides[i] × pDimensions[i]` so that no two elements of the tensor reference the same memory address
- VUID-VkTensorDescriptionARM-None-09740
If the `tensorNonPacked` feature is not enabled, then the members of `VkTensorDescriptionARM` **must** describe a packed tensor
- VUID-VkTensorDescriptionARM-tiling-09741
If `tiling` is `VK_TENSOR_TILING_OPTIMAL_ARM` and `usage` is `VK_TENSOR_USAGE_IMAGE_ALIASING_BIT_ARM` then the size of the tensor along its innermost dimension, i.e. `pDimensions[dimensionCount - 1]`, **must** be less than or equal to `4`
- VUID-VkTensorDescriptionARM-tiling-09742
If `tiling` is `VK_TENSOR_TILING_LINEAR_ARM` then

`VK_TENSOR_USAGE_IMAGE_ALIASING_BIT_ARM` **must** not be set in `usage`

Valid Usage (Implicit)

- `VUID-VkTensorDescriptionARM-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_TENSOR_DESCRIPTION_ARM`
- `VUID-VkTensorDescriptionARM-tiling-parameter`
`tiling` **must** be a valid `VkTensorTilingARM` value
- `VUID-VkTensorDescriptionARM-format-parameter`
`format` **must** be a valid `VkFormat` value
- `VUID-VkTensorDescriptionARM-pDimensions-parameter`
`pDimensions` **must** be a valid pointer to an array of `dimensionCount int64_t` values
- `VUID-VkTensorDescriptionARM-pStrides-parameter`
If `pStrides` is not `NULL`, `pStrides` **must** be a valid pointer to an array of `dimensionCount int64_t` values
- `VUID-VkTensorDescriptionARM-usage-parameter`
`usage` **must** be a valid combination of `VkTensorUsageFlagBitsARM` values
- `VUID-VkTensorDescriptionARM-usage-requiredbitmask`
`usage` **must** not be `0`
- `VUID-VkTensorDescriptionARM-dimensionCount-arraylength`
`dimensionCount` **must** be greater than `0`

Structure Chaining

Extends the structures

- `VkDataGraphPipelineConstantARM`
- `VkDataGraphPipelineResourceInfoARM`

Bits which **can** be set in `VkTensorDescriptionARM::usage`, specifying usage behavior of a tensor, are:

```
// Provided by VK_ARM_tensors
// Flag bits for VkTensorUsageFlagBitsARM
typedef VkFlags64 VkTensorUsageFlagBitsARM;
static const VkTensorUsageFlagBitsARM VK_TENSOR_USAGE_SHADER_BIT_ARM = 0x00000002ULL;
static const VkTensorUsageFlagBitsARM VK_TENSOR_USAGE_TRANSFER_SRC_BIT_ARM =
0x00000004ULL;
static const VkTensorUsageFlagBitsARM VK_TENSOR_USAGE_TRANSFER_DST_BIT_ARM =
0x00000008ULL;
static const VkTensorUsageFlagBitsARM VK_TENSOR_USAGE_IMAGE_ALIASING_BIT_ARM =
0x00000010ULL;
// Provided by VK_ARM_data_graph
static const VkTensorUsageFlagBitsARM VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM =
0x00000020ULL;
```

- [VK_TENSOR_USAGE_SHADER_BIT_ARM](#) specifies that the tensor **can** be used to create a [VkTensorViewARM](#) suitable for occupying a [VkDescriptorSet](#) slot of type [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) accessed by shader stages.
- [VK_TENSOR_USAGE_TRANSFER_SRC_BIT_ARM](#) specifies that the tensor **can** be used as the source of a *transfer command* (see the definition of [VK_PIPELINE_STAGE_TRANSFER_BIT](#)).
- [VK_TENSOR_USAGE_TRANSFER_DST_BIT_ARM](#) specifies that the tensor **can** be used as the destination of a transfer command.
- [VK_TENSOR_USAGE_IMAGE_ALIASING_BIT_ARM](#) specifies that the tensor **can** be bound to a range of memory aliased with an image created with [VK_IMAGE_TILING_OPTIMAL](#). See [Memory Aliasing](#) for a complete set of rules for tensor/image aliasing.
- [VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM](#) specifies that the tensor **can** be used to create a [VkTensorViewARM](#) suitable for occupying a [VkDescriptorSet](#) slot of type [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) accessed by [data graph pipelines](#).

```
// Provided by VK_ARM_tensors
typedef VkFlags64 VkTensorUsageFlagsARM;
```

[VkTensorUsageFlags](#) is a bitmask type for setting a mask of zero or more [VkTensorUsageFlagBitsARM](#).

Possible values of [VkTensorCreateInfoARM::tiling](#), specifying the tiling arrangement of elements in the tensor, are:

```
// Provided by VK_ARM_tensors
typedef enum VkTensorTilingARM {
    VK_TENSOR_TILING_OPTIMAL_ARM = 0,
    VK_TENSOR_TILING_LINEAR_ARM = 1,
} VkTensorTilingARM;
```

- [VK_TENSOR_TILING_OPTIMAL_ARM](#) specifies optimal tiling (elements are laid out in an implementation-dependent arrangement, for more efficient memory access).

- [VK_TENSOR_TILING_LINEAR_ARM](#) specifies linear tiling (elements are laid out linearly and the offset between each element is determined by the [strides](#) of the tensor).

12.14. Tensor Views

Tensor objects are not directly accessed by pipelines for reading or writing tensor data. Instead, *tensor views* representing the tensor subresources and containing additional metadata are used for that purpose. Views **must** be created on tensors of compatible types.

Tensor views are represented by [VkTensorViewARM](#) handles:

```
// Provided by VK_ARM_tensors
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkTensorViewARM)
```

To create a tensor view, call:

```
// Provided by VK_ARM_tensors
VkResult vkCreateTensorViewARM(
    VkDevice                                device,
    const VkTensorViewCreateInfoARM*        pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkTensorViewARM*                        pView);
```

- [device](#) is the logical device that creates the tensor view.
- [pCreateInfo](#) is a pointer to an instance of the [VkTensorViewCreateInfoARM](#) structure containing parameters to be used to create the tensor view.
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.
- [pView](#) is a pointer to a [VkTensorViewARM](#) handle in which the resulting tensor view object is returned.

Some of the tensor creation parameters are inherited by the view. In particular, other than format, the tensor view creation inherits all other parameters from the tensor.

The remaining parameters are contained in [pCreateInfo](#).

Valid Usage (Implicit)

- VUID-vkCreateTensorViewARM-device-parameter
[device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkCreateTensorViewARM-pCreateInfo-parameter
[pCreateInfo](#) **must** be a valid pointer to a valid [VkTensorViewCreateInfoARM](#) structure
- VUID-vkCreateTensorViewARM-pAllocator-parameter
If [pAllocator](#) is not [NULL](#), [pAllocator](#) **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure

- VUID-vkCreateTensorViewARM-pView-parameter
pView **must** be a valid pointer to a [VkTensorViewARM](#) handle
- VUID-vkCreateTensorViewARM-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkTensorViewCreateInfoARM](#) structure is defined as:

```
// Provided by VK_EXT_descriptor_heap, VK_ARM_tensors
typedef struct VkTensorViewCreateInfoARM {
    VkStructureType      sType;
    const void*          pNext;
    VkTensorViewCreateFlagsARM flags;
    VkTensorARM          tensor;
    VkFormat              format;
} VkTensorViewCreateInfoARM;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **tensor** is a [VkTensorARM](#) on which the view will be created.
- **format** is a [VkFormat](#) describing the format and type used to interpret elements in the tensor.

If **tensor** was created with the [VK_TENSOR_CREATE_MUTABLE_FORMAT_BIT_ARM](#) flag, **format** **can** be different from the tensor's format, but if they are not equal they **must** be *compatible*. Tensor format compatibility is defined in the [Format Compatibility Classes](#) section. Views of compatible formats will have the same mapping between element locations irrespective of the **format**, with only the interpretation of the bit pattern changing.

NOTE

Values intended to be used with one view format **may** not be exactly preserved when written or read through a different format. For example, an integer value that happens to have the bit pattern of a floating-point denorm or NaN **may** be flushed or canonicalized when written or read through a view with a floating-point format.

Similarly, a value written through a signed normalized format that has a bit pattern exactly equal to -2^b **may** be changed to $-2^b + 1$ as described in [Conversion from Normalized Fixed-Point to Floating-Point](#).

Valid Usage

- VUID-VkTensorViewCreateInfoARM-tensor-09743
If **tensor** was not created with [VK_TENSOR_CREATE_MUTABLE_FORMAT_BIT_ARM](#) flag, **format** **must** be identical to the **format** used to create **tensor**
- VUID-VkTensorViewCreateInfoARM-tensor-09744
If **tensor** was created with [VK_TENSOR_CREATE_MUTABLE_FORMAT_BIT_ARM](#) flag, **format** **must** be compatible with the **format** used to create **tensor**, as defined in [Format Compatibility Classes](#)
- VUID-VkTensorViewCreateInfoARM-flags-09745
If **flags** includes [VK_TENSOR_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#), the **descriptorBufferCaptureReplay** feature **must** be enabled
- VUID-VkTensorViewCreateInfoARM-pNext-09746
If the **pNext** chain includes a [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) structure, **flags** **must** contain [VK_TENSOR_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#)
- VUID-VkTensorViewCreateInfoARM-usage-09747
The **usage** flags of **tensor** **must** have at least one of the following bits set:
 - [VK_TENSOR_USAGE_SHADER_BIT_ARM](#)
 - [VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM](#)
- VUID-VkTensorViewCreateInfoARM-usage-09748
The tensor view's **format features** **must** contain the format feature flags required by the **usage** flags of **tensor** for **format** as indicated in the [Format Feature Dependent Usage Flags](#) section
- VUID-VkTensorViewCreateInfoARM-tensor-09749
If **tensor** is non-sparse then it **must** be bound completely and contiguously to a single [VkDeviceMemory](#) object

Valid Usage (Implicit)

- VUID-VkTensorViewCreateInfoARM-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_TENSOR_VIEW_CREATE_INFO_ARM](#)
- VUID-VkTensorViewCreateInfoARM-pNext-pNext
pNext **must** be **NULL** or a pointer to a valid instance of [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#)
- VUID-VkTensorViewCreateInfoARM-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkTensorViewCreateInfoARM-flags-parameter
flags **must** be a valid combination of [VkTensorViewCreateFlagBitsARM](#) values
- VUID-VkTensorViewCreateInfoARM-tensor-parameter
tensor **must** be a valid [VkTensorARM](#) handle
- VUID-VkTensorViewCreateInfoARM-format-parameter
format **must** be a valid [VkFormat](#) value

Bits which **can** be set in [VkTensorViewCreateInfoARM::flags](#), specifying additional parameters of an tensor, are:

```
// Provided by VK_ARM_tensors
// Flag bits for VkTensorViewCreateFlagBitsARM
typedef VkFlags64 VkTensorViewCreateFlagBitsARM;
// Provided by VK_EXT_descriptor_buffer with VK_ARM_tensors
static const VkTensorViewCreateFlagBitsARM
VK_TENSOR_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM = 0x00000001ULL;
```

- [VK_TENSOR_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM](#) specifies that the tensor view **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see [VkOpaqueCaptureDescriptorDataCreateInfoEXT](#) for more detail.

```
// Provided by VK_EXT_descriptor_heap, VK_ARM_tensors
typedef VkFlags64 VkTensorViewCreateFlagsARM;
```

[VkTensorViewCreateFlagsARM](#) is a bitmask type for setting a mask of zero or more [VkTensorViewCreateFlagBitsARM](#).

To destroy a tensor view, call:

```
// Provided by VK_ARM_tensors
void vkDestroyTensorViewARM(
    VkDevice                device,
    VkTensorViewARM         tensorView,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the tensor view.
- **tensorView** is the tensor view to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyTensorViewARM-tensorView-09750
All submitted commands that refer to **tensorView** **must** have completed execution

- VUID-vkDestroyTensorViewARM-tensorView-09751
If `VkAllocationCallbacks` were provided when `tensorView` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyTensorViewARM-tensorView-09752
If no `VkAllocationCallbacks` were provided when `tensorView` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyTensorViewARM-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyTensorViewARM-tensorView-parameter
If `tensorView` is not `VK_NULL_HANDLE`, `tensorView` **must** be a valid `VkTensorViewARM` handle
- VUID-vkDestroyTensorViewARM-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyTensorViewARM-tensorView-parent
If `tensorView` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `tensorView` **must** be externally synchronized

12.14.1. Tensor View Format Features

Valid usage of a `VkTensorViewARM` **may** be constrained by the tensor view's format features, defined below. Such constraints are documented in the affected valid usage statement.

- If the view's tensor was created with `VK_TENSOR_TILING_LINEAR_ARM`, then the tensor view's set of *format features* is the value of `VkTensorFormatPropertiesARM::linearTilingTensorFeatures` found by calling `vkGetPhysicalDeviceFormatProperties2` on the same `format` as `VkTensorViewCreateInfoARM::format`.
- If the view's tensor was created with `VK_TENSOR_TILING_OPTIMAL_ARM`, then the tensor view's set of *format features* is the value of `VkTensorFormatPropertiesARM::optimalTilingTensorFeatures` found by calling `vkGetPhysicalDeviceFormatProperties2` on the same `format` as `VkTensorViewCreateInfoARM::format`.

Chapter 13. Images

Images are specialized resources that have multi-dimensional access rather than the typical linear access to memory. These resources allow implementations to optimize the memory layout for common access patterns, by mapping multi-dimensional coordinates to an implementation-dependent offset in the underlying memory.

Additionally, images are homogeneous, with every discrete coordinate associated with data that is in the same format as the data associated with any other coordinate. Each set of data associated with one of these coordinates is referred to in this specification as a *texel*. A texel can consist of up to 4 separate components, labeled as (R,G,B,A) in this chapter.

NOTE

This terminology is historical; texel is a combination of the words “**t**exture” and “**e**lement”, and (R,G,B,A) are abbreviations for **R**ed, **G**reen, **B**lue, and **A**lpha. Early interactive computer graphics only supported operations that allowed image data to be used to add color “texture” to rendered objects, which is just a small subset of what the image operations on images described here enable. These terms are deeply embedded in the industry, and so are still used here by convention, despite images being used in far more varied ways than they were in the past.

Some image formats identify components as D for **d**epth, S for **s**tencil, or X for padding elements. Image format components identified as D are treated as R, and S components are treated as G for the purpose of image accesses. X components are ignored when reading, and **may** be modified in implementation-dependent ways when writing to that texel.

The coordinates used to identify a texel are six-dimensional, made up of the following integer indices:

- x - The first spatial index
- y - The second spatial index
- z - The third spatial index
- layer - The array index for arrayed images
- sample - The sample index
- level - The detail level

Each image is constructed with a number of texels in each dimension, with the integer size in each dimension for that image identified as:

- width - The number of x indices
- height - The number of y indices
- depth - The number of z indices
- layers - The number of layers
- samples - The number of samples
- levels - The number of detail levels

Of these sizes, the number of levels is somewhat unique - each further level reduces the number of indices in each of the x, y, and z dimensions by half, according to these formulae:

- $\text{width}_{\text{level}} = \max(1, \lceil \text{width} / 2^{\text{level}} \rceil)$
- $\text{height}_{\text{level}} = \max(1, \lceil \text{height} / 2^{\text{level}} \rceil)$
- $\text{depth}_{\text{level}} = \max(1, \lceil \text{depth} / 2^{\text{level}} \rceil)$

An image will have no more than one level where all of the above dimensions are set to 1. See [Image Mip Level Sizing](#) for more details.

The Vulkan specification allows the creation of resources with fewer dimensions than this (e.g. texel buffers); these can be considered equivalent to an image with all dimensions specified, with the missing dimensions having a size of 1, and an implicit coordinate value of 0.

These parameters are set for an image during [image creation](#), and are adjusted when accessing an image through an [image view](#).

13.1. Image Coordinate Validation

When accessing an image, a set of (x,y,z,layer,sample,level) coordinates are used to indicate which texel is accessed. These coordinates are first checked to see if they refer to texels within the image dimensions, according to the following equations:

- $x < \text{width}_{\text{level}}$
- $y < \text{height}_{\text{level}}$
- $z < \text{depth}_{\text{level}}$
- $\text{layer} < \text{layers}$
- $\text{sample} < \text{samples}$
- $\text{level} < \text{levels}$

If any of these equations evaluates to false, the coordinate is considered [out of bounds](#), otherwise they are *in bounds*.

13.2. Image Reads

Image reads use a set of (x,y,z,layer,sample,level) coordinates, validated as per [Image Coordinate Validation](#), and return a converted value for the texel at that coordinate. If the coordinates are out of bounds, behavior of the read is as described in [Shader Out-of-Bounds Memory Access](#). If the coordinates are in bounds, but the texel is not backed by memory, behavior of the read is as described in [Accessing Unbound Regions](#). Otherwise, the read proceeds as follows.

13.2.1. Texel Decode

The formatted value of the texel at the (x,y,z,layer,sample,level) coordinate is read and decoded according to the procedures outlined in the [Khronos Data Format Specification](#).

For sRGB formats, the (R,G,B,A) components are first converted as if they are [UNORM](#) formats, and then sRGB to linear conversion is performed on the converted (R,G,B) components, as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#).

13.2.2. Component Substitution

If after conversion, less than four of the (R,G,B,A) components are present, missing components are substituted by the components of (0,0,0,1) for missing (R,G,B,A) components, respectively.

13.2.3. Numeric Encoding

The values are encoded according to the bit width and [numeric format](#) of each component:

- Components with a fixed-point numeric format or with a floating-point numeric format and a bit width less than or equal to 32 are encoded into the [IEEE-754](#) binary32 format.
- Components with a floating-point numeric format and a bit width greater than 32 are encoded into the [IEEE-754](#) binary64 format.
- Components with an integer numeric format and a bit width less than or equal to 32 are directly encoded as 32-bit integer values with the same signedness.
- Components with an integer numeric format and a bit width greater than 32 are directly encoded as 64-bit integer values with the same signedness.

These values are then returned as the result of the image read.

13.3. Image Writes

Image writes also use a set of (x,y,z,layer,sample,level) coordinates, validated as per [Image Coordinate Validation](#), and with a value to be written. If the coordinates are out of bounds, behavior of the write is as described in [Shader Out-of-Bounds Memory Access](#). If the coordinates are in bounds, but the texel is not backed by memory, the write is silently discarded. Otherwise, an image write is performed as follows:

13.3.1. Texel Encode

If the image format is sRGB, a linear to sRGB conversion is applied to the (R,G,B) components of value as described in the “sRGB EOTF” section of the [Khronos Data Format Specification](#).

The converted (R,G,B) and original A values are then encoded to the image format according to the procedures outlined in the [Khronos Data Format Specification](#). Components not present in the image format are discarded.

The final value is then written to the texel at (x,y,z,layer,sample,level).

13.4. SPIR-V Image Access

Images are represented in SPIR-V by variables with the [OpTypeImage](#) type, and operated on by [image instructions](#).

Images are mapped to a shader using image views, which define access to a subset of the base image resource, specified by [VkImageSubresourceRange](#).

13.4.1. SPIR-V Image Read Instructions

Texels **can** be [read from an image](#) using [OpImageRead](#) or [OpImageSparseRead](#). The elements of the *Coordinate* operand and the optional [Sample image operand](#) map to [image coordinates](#), modified by the parameters of the image view used, as:

- $x = u$
- $y = v$
- $z = w$
- $\text{layer} = \text{array_layer}$
- $\text{sample} = \text{Sample}$
- $\text{level} = 0$

Any index missing in the instruction is implicitly set to 0.

After the coordinates are validated, some indices are offset before performing the access as follows:

- $\text{layer} += \text{VkImageSubresourceRange::baseArrayLayer}$
- $\text{level} += \text{VkImageSubresourceRange::baseMipLevel}$
- $z += \text{VkImageViewSlicedCreateInfoEXT::sliceOffset}$

13.4.2. SPIR-V Image Write Instructions

Texels **can** be [written to an image](#) using [OpImageWrite](#). The elements of the *Coordinate* operand and the optional [Sample image operand](#) map to [image coordinates](#), modified by the parameters of the image view used, in the same ways as for [image reads](#).

13.4.3. SPIR-V Image Atomic Instructions

[SPIR-V atomic instructions](#) operate on pointers rather than texels, but **can** be used with texels via [OpImageTexelPointer](#). [OpImageTexelPointer](#) **can** be used to obtain a valid pointer to a specific texel in an image. The elements of the *Coordinate* operand and the optional [Sample image operand](#) map to [image coordinates](#), modified by the parameters of the image view used, in the same ways as for [image reads](#). The resulting pointer **can** be used to access the identified texel, with atomic operations potentially [reading](#) and [writing](#) to that texel.

13.4.4. SPIR-V Image Query Instructions

Query operations return properties of an image, allowing the accessible size of each dimension of an image to be queried from within a shader. Query operations do not access any texels in the image.

- [OpImageQuerySizeLod](#) returns the values of $\text{width}_{\text{level}}$, $\text{height}_{\text{level}}$, $\text{depth}_{\text{level}}$, and layers for the image at a specified level, where level is equal to the sum of the [Level of Detail](#) operand and

`VkImageSubresourceRange::baseMipLevel`. If the image is not a sampled image and `VkImageViewSlicedCreateInfoEXT::sliceCount` is not set to `VK_REMAINING_3D_SLICES_EXT`, `sliceCount` will be returned in place of `depthlevel`. If the image is not a sampled image and `VkImageViewSlicedCreateInfoEXT::sliceCount` is set to `VK_REMAINING_3D_SLICES_EXT`, the value returned will be equal to `depthlevel` minus: `VkImageViewSlicedCreateInfoEXT::sliceOffset`. If `Level of Detail` is greater than `VkImageSubresourceRange::levelCount`, the result is undefined.

- `OpImageQuerySize` is equivalent to `OpImageQuerySizeLod` with `level` set to `VkImageSubresourceRange::baseMipLevel`.
- `OpImageQueryLevels` returns the value of `VkImageSubresourceRange::levelCount` specified for the image view used.
- `OpImageQuerySamples` returns the value of samples for the image.

NOTE | `OpImageQueryLod` is performed as a sampling operation, so is not included here.

If the descriptor bound to the image is a null descriptor, all values returned by the above queries are replaced with 0.

If the image is a [weight image](#), all values returned by the above queries are undefined.

13.4.5. SPIR-V Image Sampling Instructions

Sampling operations **can** also be performed on images, typically in conjunction with a [sampler](#), as defined in the [Sampling](#) chapter.

Chapter 14. Samplers

VkSampler objects represent the state of an image sampler which is used by the implementation to read image data and apply filtering and other transformations for the shader.

Samplers are represented by **VkSampler** handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSampler)
```

To create a sampler object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateSampler(
    VkDevice                                device,
    const VkSamplerCreateInfo*              pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkSampler*                              pSampler);
```

- **device** is the logical device that creates the sampler.
- **pCreateInfo** is a pointer to a **VkSamplerCreateInfo** structure specifying the state of the sampler object.
- **pAllocator** controls host memory allocation as described in the **Memory Allocation** chapter.
- **pSampler** is a pointer to a **VkSampler** handle in which the resulting sampler object is returned.

Valid Usage

- VUID-vkCreateSampler-device-09668
device **must** support at least one queue family with one of the **VK_QUEUE_COMPUTE_BIT** or **VK_QUEUE_GRAPHICS_BIT** capabilities
- VUID-vkCreateSampler-maxSamplerAllocationCount-04110
There **must** be less than **VkPhysicalDeviceLimits::maxSamplerAllocationCount** **VkSampler** objects currently created on the device
- VUID-vkCreateSampler-maxSamplerAllocationCount-11412
If there are any pipelines or shaders with embedded samplers currently created on the device, there **must** be less than $(\text{maxSamplerAllocationCount} - (\text{minSamplerHeapReservedRangeWithEmbedded} / \text{samplerDescriptorSize}))$ **VkSampler** objects currently created on the device

Valid Usage (Implicit)

- VUID-vkCreateSampler-device-parameter
device **must** be a valid **VkDevice** handle

- VUID-vkCreateSampler-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkSamplerCreateInfo](#) structure
- VUID-vkCreateSampler-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateSampler-pSampler-parameter
pSampler **must** be a valid pointer to a [VkSampler](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkSamplerCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSamplerCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkSamplerCreateFlags flags;
    VkFilter            magFilter;
    VkFilter            minFilter;
    VkSamplerMipmapMode mipmapMode;
    VkSamplerAddressMode addressModeU;
    VkSamplerAddressMode addressModeV;
    VkSamplerAddressMode addressModeW;
    float              mipLodBias;
    VkBool32           anisotropyEnable;
    float              maxAnisotropy;
    VkBool32           compareEnable;
    VkCompareOp        compareOp;
    float              minLod;
    float              maxLod;
    VkBorderColor       borderColor;
    VkBool32           unnormalizedCoordinates;
} VkSamplerCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkSamplerCreateFlagBits` describing additional parameters of the sampler.
- `magFilter` is a `VkFilter` value specifying the magnification filter to apply to lookups.
- `minFilter` is a `VkFilter` value specifying the minification filter to apply to lookups.
- `mipmapMode` is a `VkSamplerMipmapMode` value specifying the mipmap filter to apply to lookups.
- `addressModeU` is a `VkSamplerAddressMode` value specifying the `wrapping operation` used when the i coordinate used to sample the image would be out of bounds.
- `addressModeV` is a `VkSamplerAddressMode` value specifying the `wrapping operation` used when the j coordinate used to sample the image would be out of bounds.
- `addressModeW` is a `VkSamplerAddressMode` value specifying the `wrapping operation` used when the k coordinate used to sample the image would be out of bounds. If `unnormalizedCoordinates` is `VK_TRUE`, `addressModeW` is ignored.
- `mipLodBias` is the bias to be added to mipmap LOD calculation and bias provided by image sampling functions in SPIR-V, as described in the `LOD Operation` section.
- `anisotropyEnable` is `VK_TRUE` to enable anisotropic filtering, as described in the `Texel Anisotropic Filtering` section, or `VK_FALSE` otherwise.
- `maxAnisotropy` is the anisotropy value clamp used by the sampler when `anisotropyEnable` is `VK_TRUE`. If `anisotropyEnable` is `VK_FALSE`, `maxAnisotropy` is ignored.
- `compareEnable` is `VK_TRUE` to enable comparison against a reference value during lookups, or `VK_FALSE` otherwise.
 - Note: Some implementations will default to shader state if this member does not match.
- `compareOp` is a `VkCompareOp` value specifying the comparison operator to apply to fetched data before filtering as described in the `Depth Compare Operation` section.
- `minLod` is used to clamp the `minimum of the computed LOD value`.
- `maxLod` is used to clamp the `maximum of the computed LOD value`. To avoid clamping the maximum value, set `maxLod` to the constant `VK_LOD_CLAMP_NONE`.
- `borderColor` is a `VkBorderColor` value specifying the predefined border color to use.
- `unnormalizedCoordinates` controls whether to use unnormalized or normalized texel coordinates to address texels of the image. When `unnormalizedCoordinates` is `VK_TRUE`, the range of the image coordinates used to lookup the texel is in the range of zero to the image size in each dimension. When `unnormalizedCoordinates` is `VK_FALSE`, the range of image coordinates is zero to one.

When `unnormalizedCoordinates` is `VK_TRUE`, images the sampler is used with in the shader have the following requirements:

- The `viewType` **must** be either `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`.
- The image view **must** have a single layer and a single mip level.

When `unnormalizedCoordinates` is `VK_TRUE`, image built-in functions in the shader that use

the sampler have the following requirements:

- The functions **must** not use projection.
- The functions **must** not use offsets.

Mapping of OpenGL to Vulkan Filter Modes

`magFilter` values of `VK_FILTER_NEAREST` and `VK_FILTER_LINEAR` directly correspond to `GL_NEAREST` and `GL_LINEAR` magnification filters. `minFilter` and `mipmapMode` combine to correspond to the similarly named OpenGL minification filter of `GL_minFilter_MIPMAP_mipmapMode` (e.g. `minFilter` of `VK_FILTER_LINEAR` and `mipmapMode` of `VK_SAMPLER_MIPMAP_MODE_NEAREST` correspond to `GL_LINEAR_MIPMAP_NEAREST`).

NOTE

There are no Vulkan filter modes that directly correspond to OpenGL minification filters of `GL_LINEAR` or `GL_NEAREST`, but they **can** be emulated using `VK_SAMPLER_MIPMAP_MODE_NEAREST`, `minLod` = 0, and `maxLod` = 0.25, and using `minFilter` = `VK_FILTER_LINEAR` or `minFilter` = `VK_FILTER_NEAREST`, respectively.

Note that using a `maxLod` of zero would cause `magnification` to always be performed, and the `magFilter` to always be used. This is valid, just not an exact match for OpenGL behavior. Clamping the maximum LOD to 0.25 allows the λ value to be non-zero and minification to be performed, while still always rounding down to the base level. If the `minFilter` and `magFilter` are equal, then using a `maxLod` of zero also works.

The maximum number of sampler objects which **can** be simultaneously created on a device is implementation-dependent and specified by the `maxSamplerAllocationCount` member of the `VkPhysicalDeviceLimits` structure.

NOTE

For historical reasons, if `maxSamplerAllocationCount` is exceeded, some implementations may return `VK_ERROR_TOO_MANY_OBJECTS`. Exceeding this limit will result in undefined behavior, and an application should not rely on the use of the returned error code in order to identify when the limit is reached.

Since `VkSampler` is a non-dispatchable handle type, implementations **may** return the same handle for sampler state vectors that are identical. In such cases, all such objects would only count once against the `maxSamplerAllocationCount` limit.

When this structure is used to write a descriptor via `vkWriteSamplerDescriptorsEXT`, applications **can** give the descriptor a debug name in a similar way to naming an object, via the `VkDebugUtilsObjectNameInfoEXT` structure. However, as there is no actual object, `VkDebugUtilsObjectNameInfoEXT` **must** be passed via the `pNext` chain of this structure, with a `objectType` of `VK_OBJECT_TYPE_UNKNOWN` and a `objectHandle` of `VK_NULL_HANDLE`. The name is attached to the unique set of descriptor bits written by the implementation, and writing the same bits again with new debug info **may** rename the original descriptor.

NOTE

Implementations are not prevented from returning the same bits for different descriptors. This can result in multiple different samplers mapping to the same

name.

`VkDescriptorSetAndBindingMappingEXT` can also be chained in the same way when defining an embedded sampler via `VkDescriptorSetAndBindingMappingEXT`, naming the embedded sampler.

Valid Usage

- VUID-VkSamplerCreateInfo-mipLodBias-01069
The absolute value of `mipLodBias` **must** be less than or equal to `VkPhysicalDeviceLimits::maxSamplerLodBias`
- VUID-VkSamplerCreateInfo-samplerMipLodBias-04467
If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::samplerMipLodBias` is `VK_FALSE`, `mipLodBias` **must** be zero
- VUID-VkSamplerCreateInfo-maxLod-01973
`maxLod` **must** be greater than or equal to `minLod`
- VUID-VkSamplerCreateInfo-anisotropyEnable-01070
If the `samplerAnisotropy` feature is not enabled, `anisotropyEnable` **must** be `VK_FALSE`
- VUID-VkSamplerCreateInfo-anisotropyEnable-01071
If `anisotropyEnable` is `VK_TRUE`, `maxAnisotropy` **must** be between `1.0` and `VkPhysicalDeviceLimits::maxSamplerAnisotropy`, inclusive
- VUID-VkSamplerCreateInfo-minFilter-01645
If `sampler Y'CBCR conversion` is enabled and the `potential format features` of the sampler `Y'CBCR conversion` do not support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT`, `minFilter` and `magFilter` **must** be equal to the sampler `Y'CBCR conversion's chromaFilter`
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01072
If `unnormalizedCoordinates` is `VK_TRUE`, `minFilter` and `magFilter` **must** be equal
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01073
If `unnormalizedCoordinates` is `VK_TRUE`, `mipmapMode` **must** be `VK_SAMPLER_MIPMAP_MODE_NEAREST`
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01074
If `unnormalizedCoordinates` is `VK_TRUE`, `minLod` and `maxLod` **must** be zero
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01075
If `unnormalizedCoordinates` is `VK_TRUE`, `addressModeU` and `addressModeV` **must** each be either `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE` or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER`
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01076
If `unnormalizedCoordinates` is `VK_TRUE`, `anisotropyEnable` **must** be `VK_FALSE`
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01077
If `unnormalizedCoordinates` is `VK_TRUE`, `compareEnable` **must** be `VK_FALSE`
- VUID-VkSamplerCreateInfo-addressModeU-01078

If any of `addressModeU`, `addressModeV` or `addressModeW` are `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER`, `borderColor` **must** be a valid `VkBorderColor` value

- VUID-VkSamplerCreateInfo-addressModeU-01646

If `sampler Y'CBCR` conversion is enabled, `addressModeU`, `addressModeV`, and `addressModeW` **must** be `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`, `anisotropyEnable` **must** be `VK_FALSE`, and `unnormalizedCoordinates` **must** be `VK_FALSE`

- VUID-VkSamplerCreateInfo-None-01647

If `sampler Y'CBCR` conversion is enabled and the `pNext` chain includes a `VkSamplerReductionModeCreateInfo` structure, then the sampler reduction mode **must** be `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`

- VUID-VkSamplerCreateInfo-pNext-06726

If the `samplerFilterMinmax` feature is not enabled and the `pNext` chain includes a `VkSamplerReductionModeCreateInfo` structure, then the sampler reduction mode **must** be `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`

- VUID-VkSamplerCreateInfo-addressModeU-01079

If the `samplerMirrorClampToEdge` feature is not enabled, and if the `VK_KHR_sampler_mirror_clamp_to_edge` extension is not enabled, `addressModeU`, `addressModeV` and `addressModeW` **must** not be `VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE`

- VUID-VkSamplerCreateInfo-compareEnable-01080

If `compareEnable` is `VK_TRUE`, `compareOp` **must** be a valid `VkCompareOp` value

- VUID-VkSamplerCreateInfo-magFilter-01081

If either `magFilter` or `minFilter` is `VK_FILTER_CUBIC_EXT`, `anisotropyEnable` **must** be `VK_FALSE`

- VUID-VkSamplerCreateInfo-magFilter-07911

If the `VK_EXT_filter_cubic` extension is not enabled and either `magFilter` or `minFilter` is `VK_FILTER_CUBIC_IMG`, the `reductionMode` member of `VkSamplerReductionModeCreateInfo` **must** be `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`

- VUID-VkSamplerCreateInfo-compareEnable-01423

If `compareEnable` is `VK_TRUE`, the `reductionMode` member of `VkSamplerReductionModeCreateInfo` **must** be `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`

- VUID-VkSamplerCreateInfo-flags-02574

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `minFilter` and `magFilter` **must** be equal

- VUID-VkSamplerCreateInfo-flags-02575

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `mipmapMode` **must** be `VK_SAMPLER_MIPMAP_MODE_NEAREST`

- VUID-VkSamplerCreateInfo-flags-02576

If `flags` includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then `minLod` and `maxLod` **must** be zero

- VUID-VkSamplerCreateInfo-flags-02577

If **flags** includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then **addressModeU** and **addressModeV** **must** each be either `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE` or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER`

- VUID-VkSamplerCreateInfo-flags-02578

If **flags** includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then **anisotropyEnable** **must** be `VK_FALSE`

- VUID-VkSamplerCreateInfo-flags-02579

If **flags** includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then **compareEnable** **must** be `VK_FALSE`

- VUID-VkSamplerCreateInfo-flags-02580

If **flags** includes `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`, then **unnormalizedCoordinates** **must** be `VK_FALSE`

- VUID-VkSamplerCreateInfo-nonSeamlessCubeMap-06788

If the **nonSeamlessCubeMap** feature is not enabled, **flags** **must** not include `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT`

- VUID-VkSamplerCreateInfo-borderColor-04011

If **borderColor** is one of `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`, then a `VkSamplerCustomBorderColorCreateInfoEXT` **must** be included in the **pNext** chain

- VUID-VkSamplerCreateInfo-customBorderColors-04085

If the **customBorderColors** feature is not enabled, **borderColor** **must** not be `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`

- VUID-VkSamplerCreateInfo-borderColor-04442

If **borderColor** is one of `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`, and `VkSamplerCustomBorderColorCreateInfoEXT::format` is not `VK_FORMAT_UNDEFINED`, `VkSamplerCustomBorderColorCreateInfoEXT::customBorderColor` **must** be within the range of values representable in **format**

- VUID-VkSamplerCreateInfo-None-04012

The maximum number of samplers with custom border colors which **can** be simultaneously created on a device is implementation-dependent and specified by the **maxCustomBorderColorSamplers** member of the `VkPhysicalDeviceCustomBorderColorPropertiesEXT` structure

- VUID-VkSamplerCreateInfo-flags-08110

If **flags** includes `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the **descriptorBufferCaptureReplay** feature **must** be enabled

- VUID-VkSamplerCreateInfo-pNext-08111

If the **pNext** chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, **flags** **must** contain `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

- VUID-VkSamplerCreateInfo-flags-06964

If **flags** includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then **minFilter**

and **magFilter** **must** be `VK_FILTER_NEAREST`

- VUID-VkSamplerCreateInfo-flags-06965

If **flags** includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then **mipmapMode** **must** be `VK_SAMPLER_MIPMAP_MODE_NEAREST`

- VUID-VkSamplerCreateInfo-flags-06966

[If **flags** includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then **minLod** and **maxLod** **must** be zero

- VUID-VkSamplerCreateInfo-flags-06967

If **flags** includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then **addressModeU** and **addressModeV** **must** each be either `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE` or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER`

- VUID-VkSamplerCreateInfo-flags-06968

If **flags** includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, and if **addressModeU** or **addressModeV** is `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER`, then **borderColor** **must** be `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`

- VUID-VkSamplerCreateInfo-flags-06969

If **flags** includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then **anisotropyEnable** **must** be `VK_FALSE`

- VUID-VkSamplerCreateInfo-flags-06970

If **flags** includes `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`, then **compareEnable** **must** be `VK_FALSE`

Valid Usage (Implicit)

- VUID-VkSamplerCreateInfo-sType-sType

sType **must** be `VK_STRUCTURE_TYPE_SAMPLER_CREATE_INFO`

- VUID-VkSamplerCreateInfo-pNext-pNext

Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either `NULL` or a pointer to a valid instance of `VkDebugUtilsObjectNameInfoEXT`, `VkOpaqueCaptureDescriptorDataCreateInfoEXT`, `VkSamplerBlockMatchWindowCreateInfoQCOM`, `VkSamplerBorderColorComponentMappingCreateInfoEXT`, `VkSamplerCubicWeightsCreateInfoQCOM`, `VkSamplerCustomBorderColorCreateInfoEXT`, `VkSamplerCustomBorderColorIndexCreateInfoEXT`, `VkSamplerReductionModeCreateInfo`, or `VkSamplerYcbcrConversionInfo`

- VUID-VkSamplerCreateInfo-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkSamplerCreateInfo-flags-parameter

flags **must** be a valid combination of `VkSamplerCreateFlagBits` values

- VUID-VkSamplerCreateInfo-magFilter-parameter

magFilter **must** be a valid `VkFilter` value

- VUID-VkSamplerCreateInfo-minFilter-parameter
`minFilter` **must** be a valid `VkFilter` value
- VUID-VkSamplerCreateInfo-mipmapMode-parameter
`mipmapMode` **must** be a valid `VkSamplerMipmapMode` value
- VUID-VkSamplerCreateInfo-addressModeU-parameter
`addressModeU` **must** be a valid `VkSamplerAddressMode` value
- VUID-VkSamplerCreateInfo-addressModeV-parameter
`addressModeV` **must** be a valid `VkSamplerAddressMode` value
- VUID-VkSamplerCreateInfo-addressModeW-parameter
`addressModeW` **must** be a valid `VkSamplerAddressMode` value

`VK_LOD_CLAMP_NONE` is a special constant value used for `VkSamplerCreateInfo::maxLod` to indicate that maximum LOD clamping should not be performed.

```
#define VK_LOD_CLAMP_NONE          1000.0F
```

Bits which **can** be set in `VkSamplerCreateInfo::flags`, specifying additional parameters of a sampler, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSamplerCreateFlagBits {
    // Provided by VK_EXT_fragment_density_map
    VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT = 0x00000001,
    // Provided by VK_EXT_fragment_density_map
    VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT = 0x00000002,
    // Provided by VK_EXT_descriptor_buffer
    VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000008,
    // Provided by VK_EXT_non_seamless_cube_map
    VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT = 0x00000004,
    // Provided by VK_QCOM_image_processing
    VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM = 0x00000010,
} VkSamplerCreateFlagBits;
```

- `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` specifies that the sampler will read from an image created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.
- `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT` specifies that the implementation **may** use approximations when reconstructing a full color value for texture access from a subsampled image.
- `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT` specifies that `cube map edge handling` is not performed.
- `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM` specifies that the sampler will read from images using only `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`,

OpImageBlockMatchWindowSSDQCOM, OpImageBlockMatchWindowSADQCOM, OpImageBlockMatchSSDQCOM, or OpImageBlockMatchSADQCOM.

NOTE

The approximations used when `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT` is specified are implementation defined. Some implementations **may** interpolate between fragment density levels in a subsampled image. In that case, this bit **may** be used to decide whether the interpolation factors are calculated per fragment or at a coarser granularity.

- `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` specifies that the sampler **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see `VkOpaqueCaptureDescriptorDataCreateInfoEXT` for more detail.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSamplerCreateFlags;
```

`VkSamplerCreateFlags` is a bitmask type for setting a mask of zero or more `VkSamplerCreateFlagBits`.

The `VkSamplerReductionModeCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkSamplerReductionModeCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkSamplerReductionMode    reductionMode;
} VkSamplerReductionModeCreateInfo;
```

```
// Provided by VK_EXT_sampler_filter_minmax
// Equivalent to VkSamplerReductionModeCreateInfo
typedef VkSamplerReductionModeCreateInfo VkSamplerReductionModeCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `reductionMode` is a `VkSamplerReductionMode` value controlling how texture filtering combines texel values.

If the `pNext` chain of `VkSamplerCreateInfo` includes a `VkSamplerReductionModeCreateInfo` structure, then that structure includes a mode controlling how texture filtering combines texel values.

If this structure is not present, `reductionMode` is considered to be `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`.

Valid Usage (Implicit)

- VUID-VkSamplerReductionModeCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SAMPLER_REDUCTION_MODE_CREATE_INFO`
- VUID-VkSamplerReductionModeCreateInfo-reductionMode-parameter
`reductionMode` **must** be a valid `VkSamplerReductionMode` value

Structure Chaining

Extends the structure

- `VkSamplerCreateInfo`

Reduction modes are specified by `VkSamplerReductionMode`, which takes values:

```
// Provided by VK_VERSION_1_2
typedef enum VkSamplerReductionMode {
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE = 0,
    VK_SAMPLER_REDUCTION_MODE_MIN = 1,
    VK_SAMPLER_REDUCTION_MODE_MAX = 2,
    // Provided by VK_QCOM_filter_cubic_clamp
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM = 1000521000,
    // Provided by VK_EXT_sampler_filter_minmax
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_EXT =
VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE,
    // Provided by VK_EXT_sampler_filter_minmax
    VK_SAMPLER_REDUCTION_MODE_MIN_EXT = VK_SAMPLER_REDUCTION_MODE_MIN,
    // Provided by VK_EXT_sampler_filter_minmax
    VK_SAMPLER_REDUCTION_MODE_MAX_EXT = VK_SAMPLER_REDUCTION_MODE_MAX,
} VkSamplerReductionMode;
```

```
// Provided by VK_EXT_sampler_filter_minmax
// Equivalent to VkSamplerReductionMode
typedef VkSamplerReductionMode VkSamplerReductionModeEXT;
```

- `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE` specifies that texel values are combined by computing a weighted average of values in the footprint, using weights as specified in [the image operations chapter](#).
- `VK_SAMPLER_REDUCTION_MODE_MIN` specifies that texel values are combined by taking the component-wise minimum of values in the footprint with non-zero weights.
- `VK_SAMPLER_REDUCTION_MODE_MAX` specifies that texel values are combined by taking the component-wise maximum of values in the footprint with non-zero weights.
- `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` specifies values are combined as described by `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`,

followed by a [texel range clamp](#).

The `VkSamplerCubicWeightsCreateInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_filter_cubic_weights
typedef struct VkSamplerCubicWeightsCreateInfoQCOM {
    VkStructureType      sType;
    const void*          pNext;
    VkCubicFilterWeightsQCOM cubicWeights;
} VkSamplerCubicWeightsCreateInfoQCOM;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cubicWeights` is a [VkCubicFilterWeightsQCOM](#) value controlling which cubic weights are used.

If the `pNext` chain of [VkSamplerCreateInfo](#) includes a `VkSamplerCubicWeightsCreateInfoQCOM` structure, then that structure specifies which cubic weights are used.

If that structure is not present, `cubicWeights` is considered to be [VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM](#).

Valid Usage (Implicit)

- VUID-VkSamplerCubicWeightsCreateInfoQCOM-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_SAMPLER_CUBIC_WEIGHTS_CREATE_INFO_QCOM](#)
- VUID-VkSamplerCubicWeightsCreateInfoQCOM-cubicWeights-parameter
`cubicWeights` **must** be a valid [VkCubicFilterWeightsQCOM](#) value

Structure Chaining

Extends the structure

- [VkSamplerCreateInfo](#)

Possible values of the `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights`, specifying cubic weights used in [Texel Cubic Filtering](#) are:

```
// Provided by VK_QCOM_filter_cubic_weights
typedef enum VkCubicFilterWeightsQCOM {
    VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM = 0,
    VK_CUBIC_FILTER_WEIGHTS_ZERO_TANGENT_CARDINAL_QCOM = 1,
    VK_CUBIC_FILTER_WEIGHTS_B_SPLINE_QCOM = 2,
    VK_CUBIC_FILTER_WEIGHTS_MITCHELL_NETRAVALI_QCOM = 3,
} VkCubicFilterWeightsQCOM;
```

- [VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM](#) specifies Catmull-Rom weights.
- [VK_CUBIC_FILTER_WEIGHTS_ZERO_TANGENT_CARDINAL_QCOM](#) specifies Zero Tangent Cardinal weights.
- [VK_CUBIC_FILTER_WEIGHTS_B_SPLINE_QCOM](#) specifies B-Spline weights.
- [VK_CUBIC_FILTER_WEIGHTS_MITCHELL_NETRAVALI_QCOM](#) specifies Mitchell-Netravali weights.

Possible values of the [VkSamplerCreateInfo::magFilter](#) and [minFilter](#) parameters, specifying filters used for texture lookups, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkFilter {
    VK_FILTER_NEAREST = 0,
    VK_FILTER_LINEAR = 1,
    // Provided by VK_EXT_filter_cubic
    VK_FILTER_CUBIC_EXT = 1000015000,
    // Provided by VK_IMG_filter_cubic
    VK_FILTER_CUBIC_IMG = VK_FILTER_CUBIC_EXT,
} VkFilter;
```

- [VK_FILTER_NEAREST](#) specifies nearest filtering.
- [VK_FILTER_LINEAR](#) specifies linear filtering.
- [VK_FILTER_CUBIC_EXT](#) specifies cubic filtering.

These filters are described in detail in [Texel Filtering](#).

Possible values of the [VkSamplerCreateInfo::mipmapMode](#), specifying the mipmap mode used for texture lookups, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSamplerMipmapMode {
    VK_SAMPLER_MIPMAP_MODE_NEAREST = 0,
    VK_SAMPLER_MIPMAP_MODE_LINEAR = 1,
} VkSamplerMipmapMode;
```

- [VK_SAMPLER_MIPMAP_MODE_NEAREST](#) specifies nearest filtering.
- [VK_SAMPLER_MIPMAP_MODE_LINEAR](#) specifies linear filtering.

These modes are described in detail in [Texel Filtering](#).

Possible values of the [VkSamplerCreateInfo::addressMode*](#) parameters, corresponding to different [wrapping operations](#) used during sampling, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSamplerAddressMode {
    VK_SAMPLER_ADDRESS_MODE_REPEAT = 0,
    VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT = 1,
    VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE = 2,
    VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER = 3,
    // Provided by VK_VERSION_1_2, VK_KHR_sampler_mirror_clamp_to_edge
    VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE = 4,
    // Provided by VK_KHR_sampler_mirror_clamp_to_edge
    // VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE_KHR is a legacy alias
    VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE_KHR =
VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE,
} VkSamplerAddressMode;
```

- [VK_SAMPLER_ADDRESS_MODE_REPEAT](#) specifies that the repeat wrap mode will be used.
- [VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT](#) specifies that the mirrored repeat wrap mode will be used.
- [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#) specifies that the clamp to edge wrap mode will be used.
- [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER](#) specifies that the clamp to border wrap mode will be used.
- [VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE](#) specifies that the mirror clamp to edge wrap mode will be used. This is only valid if the [samplerMirrorClampToEdge](#) feature is enabled, or if the [VK_KHR_sampler_mirror_clamp_to_edge](#) extension is enabled.

Comparison operators compare a *reference* and a *test* value, and return a true (“passed”) or false (“failed”) value depending on the comparison operator chosen. The supported operators are:

```
// Provided by VK_VERSION_1_0
typedef enum VkCompareOp {
    VK_COMPARE_OP_NEVER = 0,
    VK_COMPARE_OP_LESS = 1,
    VK_COMPARE_OP_EQUAL = 2,
    VK_COMPARE_OP_LESS_OR_EQUAL = 3,
    VK_COMPARE_OP_GREATER = 4,
    VK_COMPARE_OP_NOT_EQUAL = 5,
    VK_COMPARE_OP_GREATER_OR_EQUAL = 6,
    VK_COMPARE_OP_ALWAYS = 7,
} VkCompareOp;
```

- [VK_COMPARE_OP_NEVER](#) specifies that the comparison always evaluates false.
- [VK_COMPARE_OP_LESS](#) specifies that the comparison evaluates *reference* < *test*.
- [VK_COMPARE_OP_EQUAL](#) specifies that the comparison evaluates *reference* = *test*.
- [VK_COMPARE_OP_LESS_OR_EQUAL](#) specifies that the comparison evaluates *reference* ≤ *test*.

- `VK_COMPARE_OP_GREATER` specifies that the comparison evaluates *reference* > *test*.
- `VK_COMPARE_OP_NOT_EQUAL` specifies that the comparison evaluates *reference* ≠ *test*.
- `VK_COMPARE_OP_GREATER_OR_EQUAL` specifies that the comparison evaluates *reference* ≥ *test*.
- `VK_COMPARE_OP_ALWAYS` specifies that the comparison always evaluates true.

Comparison operators are used for:

- The `Depth Compare Operation` operator for a sampler, specified by `VkSamplerCreateInfo::compareOp`.
- The stencil comparison operator for the `stencil test`, specified by `vkCmdSetStencilOp::compareOp` or `VkStencilOpState::compareOp`.
- The `Depth Comparison` operator for the `depth test`, specified by `vkCmdSetDepthCompareOp::depthCompareOp` or `VkPipelineDepthStencilStateCreateInfo::depthCompareOp`.

Each such use describes how the *reference* and *test* values for that comparison are determined.

Possible values of `VkSamplerCreateInfo::borderColor`, specifying the border color used for texture lookups, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkBorderColor {
    VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK = 0,
    VK_BORDER_COLOR_INT_TRANSPARENT_BLACK = 1,
    VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK = 2,
    VK_BORDER_COLOR_INT_OPAQUE_BLACK = 3,
    VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE = 4,
    VK_BORDER_COLOR_INT_OPAQUE_WHITE = 5,
    // Provided by VK_EXT_custom_border_color
    VK_BORDER_COLOR_FLOAT_CUSTOM_EXT = 1000287003,
    // Provided by VK_EXT_custom_border_color
    VK_BORDER_COLOR_INT_CUSTOM_EXT = 1000287004,
} VkBorderColor;
```

- `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK` specifies a transparent, floating-point format, black color.
- `VK_BORDER_COLOR_INT_TRANSPARENT_BLACK` specifies a transparent, integer format, black color.
- `VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK` specifies an opaque, floating-point format, black color.
- `VK_BORDER_COLOR_INT_OPAQUE_BLACK` specifies an opaque, integer format, black color.
- `VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE` specifies an opaque, floating-point format, white color.
- `VK_BORDER_COLOR_INT_OPAQUE_WHITE` specifies an opaque, integer format, white color.
- `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` specifies that a

`VkSamplerCustomBorderColorCreateInfoEXT` structure is included in the `VkSamplerCreateInfo::pNext` chain containing the color data in floating-point format.

- `VK_BORDER_COLOR_INT_CUSTOM_EXT` specifies that a `VkSamplerCustomBorderColorCreateInfoEXT` structure is included in the `VkSamplerCreateInfo::pNext` chain containing the color data in integer format.

These colors are described in detail in [Border Replacement](#).

To destroy a sampler, call:

```
// Provided by VK_VERSION_1_0
void vkDestroySampler(
    VkDevice          device,
    VkSampler         sampler,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the sampler.
- `sampler` is the sampler to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroySampler-sampler-01082
All submitted commands that refer to `sampler` **must** have completed execution
- VUID-vkDestroySampler-sampler-01083
If `VkAllocationCallbacks` were provided when `sampler` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroySampler-sampler-01084
If no `VkAllocationCallbacks` were provided when `sampler` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroySampler-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroySampler-sampler-parameter
If `sampler` is not `VK_NULL_HANDLE`, `sampler` **must** be a valid `VkSampler` handle
- VUID-vkDestroySampler-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroySampler-sampler-parent
If `sampler` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to **sampler** **must** be externally synchronized

14.1. Sampler Y'C_BC_R Conversion

To create a sampler with Y'C_BC_R conversion enabled, add a [VkSamplerYcbcrConversionInfo](#) structure to the **pNext** chain of the [VkSamplerCreateInfo](#) structure. To create a sampler Y'C_BC_R conversion, the **samplerYcbcrConversion** feature **must** be enabled. Conversion **must** be fixed at pipeline creation time, through use of a combined [embedded sampler and image mapping](#) if using descriptor heaps, or a combined image sampler with an immutable sampler in [VkDescriptorSetLayoutBinding](#).

A [VkSamplerYcbcrConversionInfo](#) **must** be provided for samplers to be used with image views that access [VK_IMAGE_ASPECT_COLOR_BIT](#) if the format is one of the [formats that require a sampler Y'C_BC_R conversion](#), or if the image view has an [external format](#).

The [VkSamplerYcbcrConversionInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkSamplerYcbcrConversion conversion;
} VkSamplerYcbcrConversionInfo;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrConversionInfo
typedef VkSamplerYcbcrConversionInfo VkSamplerYcbcrConversionInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **conversion** is a [VkSamplerYcbcrConversion](#) handle created with [vkCreateSamplerYcbcrConversion](#).

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionInfo-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_INFO](#)
- VUID-VkSamplerYcbcrConversionInfo-conversion-parameter
conversion **must** be a valid [VkSamplerYcbcrConversion](#) handle

Structure Chaining

Extends the structures

- [VkImageViewCreateInfo](#)
- [VkSamplerCreateInfo](#)

A sampler Y'C_BC_R conversion is an opaque representation of a device-specific sampler Y'C_BC_R conversion description, represented as a [VkSamplerYcbcrConversion](#) handle:

```
// Provided by VK_VERSION_1_1
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSamplerYcbcrConversion)
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrConversion
typedef VkSamplerYcbcrConversion VkSamplerYcbcrConversionKHR;
```

To create a [VkSamplerYcbcrConversion](#), call:

```
// Provided by VK_VERSION_1_1
VkResult vkCreateSamplerYcbcrConversion(
    VkDevice                                device,
    const VkSamplerYcbcrConversionCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSamplerYcbcrConversion*                pYcbcrConversion);
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to vkCreateSamplerYcbcrConversion
VkResult vkCreateSamplerYcbcrConversionKHR(
    VkDevice                                device,
    const VkSamplerYcbcrConversionCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSamplerYcbcrConversion*                pYcbcrConversion);
```

- [device](#) is the logical device that creates the sampler Y'C_BC_R conversion.
- [pCreateInfo](#) is a pointer to a [VkSamplerYcbcrConversionCreateInfo](#) structure specifying the requested sampler Y'C_BC_R conversion.
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.
- [pYcbcrConversion](#) is a pointer to a [VkSamplerYcbcrConversion](#) handle in which the resulting sampler Y'C_BC_R conversion is returned.

The interpretation of the configured sampler Y'C_BC_R conversion is described in more detail in [the description of sampler Y'C_BC_R conversion](#) in the [Image Operations](#) chapter.

Valid Usage

- VUID-vkCreateSamplerYcbcrConversion-None-01648
The `samplerYcbcrConversion` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateSamplerYcbcrConversion-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateSamplerYcbcrConversion-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkSamplerYcbcrConversionCreateInfo` structure
- VUID-vkCreateSamplerYcbcrConversion-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateSamplerYcbcrConversion-pYcbcrConversion-parameter
`pYcbcrConversion` **must** be a valid pointer to a `VkSamplerYcbcrConversion` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkSamplerYcbcrConversionCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionCreateInfo {
    VkStructureType           sType;
    const void*               pNext;
    VkFormat                  format;
    VkSamplerYcbcrModelConversion ycbcrModel;
    VkSamplerYcbcrRange        ycbcrRange;
    VkComponentMapping         components;
    VkChromaLocation           xChromaOffset;
    VkChromaLocation           yChromaOffset;
    VkFilter                   chromaFilter;
    VkBool32                   forceExplicitReconstruction;
} VkSamplerYcbcrConversionCreateInfo;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrConversionCreateInfo
typedef VkSamplerYcbcrConversionCreateInfo VkSamplerYcbcrConversionCreateInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **format** is the format of the image from which color information will be retrieved.
- **ycbcrModel** describes the color matrix for conversion between color models.
- **ycbcrRange** describes whether the encoded values have headroom and foot room, or whether the encoding uses the full numerical range.
- **components** applies a *swizzle* based on **VkComponentSwizzle** enums prior to range expansion and color model conversion.
- **xChromaOffset** describes the **sample location** associated with downsampled chroma components in the x dimension. **xChromaOffset** has no effect for formats in which chroma components are not downsampled horizontally.
- **yChromaOffset** describes the **sample location** associated with downsampled chroma components in the y dimension. **yChromaOffset** has no effect for formats in which the chroma components are not downsampled vertically.
- **chromaFilter** is the filter for chroma reconstruction.
- **forceExplicitReconstruction** **can** be used to ensure that reconstruction is done explicitly, if supported.

NOTE

Setting **forceExplicitReconstruction** to **VK_TRUE** **may** have a performance penalty on implementations where explicit reconstruction is not the default mode of operation.

If **format** supports **VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT** the **forceExplicitReconstruction** value behaves as if it

were `VK_TRUE`.

If the `pNext` chain includes a `VkExternalFormatANDROID` structure with non-zero `externalFormat` member, the sampler $Y'CbCr$ conversion object represents an *external format conversion*, and `format` **must** be `VK_FORMAT_UNDEFINED`. Such conversions **must** only be used to sample image views with a matching *external format*. When creating an external format conversion, the value of `components` is ignored.

Valid Usage

- VUID-VkSamplerYcbcrConversionCreateInfo-format-01904
If an external format conversion is being created, `format` **must** be `VK_FORMAT_UNDEFINED`
- VUID-VkSamplerYcbcrConversionCreateInfo-format-04061
If an external format conversion is not being created, `format` **must** represent unsigned normalized values (i.e. the format **must** be a `UNORM` format)
- VUID-VkSamplerYcbcrConversionCreateInfo-format-01650
The *potential format features* of the sampler $Y'CbCr$ conversion **must** support `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT` or `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`
- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-01651
If the *potential format features* of the sampler $Y'CbCr$ conversion do not support `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`, `xChromaOffset` and `yChromaOffset` **must** not be `VK_CHROMA_LOCATION_COSITED_EVEN` if the corresponding components are *downsampled*
- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-01652
If the *potential format features* of the sampler $Y'CbCr$ conversion do not support `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT`, `xChromaOffset` and `yChromaOffset` **must** not be `VK_CHROMA_LOCATION_MIDPOINT` if the corresponding components are *downsampled*
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02581
If the format has a `_422` or `_420` suffix, then `components.g` **must** be the *identity swizzle*
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02582
If the format has a `_422` or `_420` suffix, then `components.a` **must** be the *identity swizzle*, `VK_COMPONENT_SWIZZLE_ONE`, or `VK_COMPONENT_SWIZZLE_ZERO`
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02583
If the format has a `_422` or `_420` suffix, then `components.r` **must** be the *identity swizzle* or `VK_COMPONENT_SWIZZLE_B`
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02584
If the format has a `_422` or `_420` suffix, then `components.b` **must** be the *identity swizzle* or `VK_COMPONENT_SWIZZLE_R`
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02585
If the format has a `_422` or `_420` suffix, and if either `components.r` or `components.b` is the *identity swizzle*, both values **must** be the *identity swizzle*

- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrModel-01655
If `ycbcrModel` is not `VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY`, then `components.r`, `components.g`, and `components.b` **must** correspond to components of the format; that is, `components.r`, `components.g`, and `components.b` **must** not be `VK_COMPONENT_SWIZZLE_ZERO` or `VK_COMPONENT_SWIZZLE_ONE`, and **must** not correspond to a component containing zero or one as a consequence of `component substitution`
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrRange-02748
If `ycbcrRange` is `VK_SAMPLER_YCBCR_RANGE_ITU_NARROW`, then the R, G, and B components obtained by applying the `component` swizzle to `format` **must** each have a bit-depth greater than or equal to 8
- VUID-VkSamplerYcbcrConversionCreateInfo-forceExplicitReconstruction-01656
If the `potential format features` of the sampler $Y'CbCr$ conversion do not support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT` `forceExplicitReconstruction` **must** be `VK_FALSE`
- VUID-VkSamplerYcbcrConversionCreateInfo-chromaFilter-01657
If the `potential format features` of the sampler $Y'CbCr$ conversion do not support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT`, `chromaFilter` **must** not be `VK_FILTER_LINEAR`
- VUID-VkSamplerYcbcrConversionCreateInfo-pNext-09207
If the `pNext` chain includes a `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM` structure, and if the `ycbcrDegamma` feature is not enabled, then `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableYDegamma` **must** be `VK_FALSE`
- VUID-VkSamplerYcbcrConversionCreateInfo-pNext-09208
If the `pNext` chain includes a `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM` structure, and if the `ycbcrDegamma` feature is not enabled, then `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableCbCrDegamma` **must** be `VK_FALSE`
- VUID-VkSamplerYcbcrConversionCreateInfo-pNext-09209
If the `pNext` chain includes a `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM` structure, `format` **must** be a format with 8-bit R, G, and B components

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_CREATE_INFO`
- VUID-VkSamplerYcbcrConversionCreateInfo-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkExternalFormatANDROID`, `VkExternalFormatOHOS`, `VkExternalFormatQNX`, or `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM`
- VUID-VkSamplerYcbcrConversionCreateInfo-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkSamplerYcbcrConversionCreateInfo-format-parameter **format** **must** be a valid **VkFormat** value
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrModel-parameter **ycbcrModel** **must** be a valid **VkSamplerYcbcrModelConversion** value
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrRange-parameter **ycbcrRange** **must** be a valid **VkSamplerYcbcrRange** value
- VUID-VkSamplerYcbcrConversionCreateInfo-components-parameter **components** **must** be a valid **VkComponentMapping** structure
- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-parameter **xChromaOffset** **must** be a valid **VkChromaLocation** value
- VUID-VkSamplerYcbcrConversionCreateInfo-yChromaOffset-parameter **yChromaOffset** **must** be a valid **VkChromaLocation** value
- VUID-VkSamplerYcbcrConversionCreateInfo-chromaFilter-parameter **chromaFilter** **must** be a valid **VkFilter** value

If **chromaFilter** is **VK_FILTER_NEAREST**, chroma samples are reconstructed to luma component resolution using nearest-neighbour sampling. Otherwise, chroma samples are reconstructed using interpolation. More details can be found in [the description of sampler Y_{C_BC_R} conversion](#) in the [Image Operations](#) chapter.

VkSamplerYcbcrModelConversion defines the conversion from the source color model to the shader color model. Possible values are:

```
// Provided by VK_VERSION_1_1
typedef enum VkSamplerYcbcrModelConversion {
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY = 0,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY = 1,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709 = 2,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601 = 3,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020 = 4,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020,
} VkSamplerYcbcrModelConversion;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrModelConversion
typedef VkSamplerYcbcrModelConversion VkSamplerYcbcrModelConversionKHR;
```

- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY** specifies that the input values to the conversion are unmodified.
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY** specifies no model conversion but the inputs are range expanded as for Y'C_BC_R.
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709** specifies the color model conversion from Y'C_BC_R to R'G'B' defined in BT.709 and described in the “BT.709 Y'C_BC_R conversion” section of the [Khronos Data Format Specification](#).
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601** specifies the color model conversion from Y'C_BC_R to R'G'B' defined in BT.601 and described in the “BT.601 Y'C_BC_R conversion” section of the [Khronos Data Format Specification](#).
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020** specifies the color model conversion from Y'C_BC_R to R'G'B' defined in BT.2020 and described in the “BT.2020 Y'C_BC_R conversion” section of the [Khronos Data Format Specification](#).

In the **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_*** color models, for the input to the sampler Y'C_BC_R range expansion and model conversion:

- the Y (Y' luma) component corresponds to the G component of an RGB image.

- the CB (C_B or “U” blue color difference) component corresponds to the B component of an RGB image.
- the CR (C_R or “V” red color difference) component corresponds to the R component of an RGB image.
- the alpha component, if present, is not modified by color model conversion.

These rules reflect the mapping of components after the component swizzle operation (controlled by [VkSamplerYcbcrConversionCreateInfo::components](#)).

NOTE

For example, an “YUVA” 32-bit format comprising four 8-bit components can be implemented as [VK_FORMAT_R8G8B8A8_UNORM](#) with a component mapping:

- `components.a` = [VK_COMPONENT_SWIZZLE_IDENTITY](#)
- `components.r` = [VK_COMPONENT_SWIZZLE_B](#)
- `components.g` = [VK_COMPONENT_SWIZZLE_R](#)
- `components.b` = [VK_COMPONENT_SWIZZLE_G](#)

The [VkSamplerYcbcrRange](#) enum describes whether color components are encoded using the full range of numerical values or whether values are reserved for headroom and foot room. [VkSamplerYcbcrRange](#) is defined as:

```
// Provided by VK_VERSION_1_1
typedef enum VkSamplerYcbcrRange {
    VK_SAMPLER_YCBCR_RANGE_ITU_FULL = 0,
    VK_SAMPLER_YCBCR_RANGE_ITU_NARROW = 1,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_RANGE_ITU_FULL_KHR = VK_SAMPLER_YCBCR_RANGE_ITU_FULL,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_RANGE_ITU_NARROW_KHR = VK_SAMPLER_YCBCR_RANGE_ITU_NARROW,
} VkSamplerYcbcrRange;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrRange
typedef VkSamplerYcbcrRange VkSamplerYcbcrRangeKHR;
```

- [VK_SAMPLER_YCBCR_RANGE_ITU_FULL](#) specifies that the full range of the encoded values are valid and interpreted according to the ITU “full range” quantization rules.
- [VK_SAMPLER_YCBCR_RANGE_ITU_NARROW](#) specifies that headroom and foot room are reserved in the numerical range of encoded values, and the remaining values are expanded according to the ITU “narrow range” quantization rules.

The formulae for these conversions is described in the [Sampler Y'C_BC_R Range Expansion](#) section of the [Image Operations](#) chapter.

No range modification takes place if `ycbcrModel` is

`VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY`; the `ycbcrRange` field of `VkSamplerYcbcrConversionCreateInfo` is ignored in this case.

The `VkChromaLocation` enum defines the location of downsampled chroma component samples relative to the luma samples, and is defined as:

```
// Provided by VK_VERSION_1_1
typedef enum VkChromaLocation {
    VK_CHROMA_LOCATION_COSITED_EVEN = 0,
    VK_CHROMA_LOCATION_MIDPOINT = 1,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_CHROMA_LOCATION_COSITED_EVEN_KHR = VK_CHROMA_LOCATION_COSITED_EVEN,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_CHROMA_LOCATION_MIDPOINT_KHR = VK_CHROMA_LOCATION_MIDPOINT,
} VkChromaLocation;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkChromaLocation
typedef VkChromaLocation VkChromaLocationKHR;
```

- `VK_CHROMA_LOCATION_COSITED_EVEN` specifies that downsampled chroma samples are aligned with luma samples with even coordinates.
- `VK_CHROMA_LOCATION_MIDPOINT` specifies that downsampled chroma samples are located half way between each even luma sample and the nearest higher odd luma sample.

Applications **can** enable sRGB to linear conversion for the R, G, and B components of a $Y'C_B C_R$ image during [sampling](#) by including `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM` structure in the `pNext` chain of `VkSamplerYcbcrConversionCreateInfo`.

The `VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_ycbcr_degama
typedef struct VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           enableYDegamma;
    VkBool32           enableCbCrDegamma;
} VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `enableYDegamma` indicates [sRGB to linear](#) conversion is enabled for the G component.
- `enableCbCrDegamma` indicates [sRGB to linear](#) conversion is enabled for the R and B components.

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM-sType-sType **must** be `VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_YCBCR_DEGAMMA_CREATE_INFO_QCOM`

Structure Chaining

Extends the structure

- [VkSamplerYcbcrConversionCreateInfo](#)

To destroy a sampler Y'C_BC_R conversion, call:

```
// Provided by VK_VERSION_1_1
void vkDestroySamplerYcbcrConversion(
    VkDevice          device,
    VkSamplerYcbcrConversion ycbcrConversion,
    const VkAllocationCallbacks* pAllocator);
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to vkDestroySamplerYcbcrConversion
void vkDestroySamplerYcbcrConversionKHR(
    VkDevice          device,
    VkSamplerYcbcrConversion ycbcrConversion,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the Y'C_BC_R conversion.
- **ycbcrConversion** is the conversion to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage (Implicit)

- VUID-vkDestroySamplerYcbcrConversion-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkDestroySamplerYcbcrConversion-ycbcrConversion-parameter
If **ycbcrConversion** is not `VK_NULL_HANDLE`, **ycbcrConversion** **must** be a valid [VkSamplerYcbcrConversion](#) handle
- VUID-vkDestroySamplerYcbcrConversion-pAllocator-parameter
If **pAllocator** is not `NULL`, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroySamplerYcbcrConversion-ycbcrConversion-parent

If `ycbcrConversion` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `ycbcrConversion` **must** be externally synchronized

14.2. Custom Border Colors

In addition to the predefined border color values, applications **can** provide a custom border color value by including the `VkSamplerCustomBorderColorCreateInfoEXT` structure in the `VkSamplerCreateInfo::pNext` chain.

The `VkSamplerCustomBorderColorCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_custom_border_color
typedef struct VkSamplerCustomBorderColorCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkClearColorValue  customBorderColor;
    VkFormat            format;
} VkSamplerCustomBorderColorCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `customBorderColor` is a `VkClearColorValue` representing the desired custom sampler border color.
- `format` is a `VkFormat` representing the format of the sampled image view(s). This field may be `VK_FORMAT_UNDEFINED` if the `customBorderColorWithoutFormat` feature is enabled.

NOTE

If `format` is a depth/stencil format, the aspect is determined by the value of `VkSamplerCreateInfo::borderColor`. If `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`, the depth aspect is considered. If `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_INT_CUSTOM_EXT`, the stencil aspect is considered.

If `format` is `VK_FORMAT_UNDEFINED`, the `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_INT_CUSTOM_EXT`, and the sampler is used with an image with a stencil format, then the implementation **must** source the custom border color from either the first or second components of `VkSamplerCreateInfo::borderColor` and **should** source it from the first component.

Valid Usage

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-07605

If **format** is not [VK_FORMAT_UNDEFINED](#) and **format** is not a depth/stencil format then the [VkSamplerCreateInfo::borderColor](#) type **must** match the sampled type of the provided **format**, as shown in the *SPIR-V Type* column of the [Interpretation of Numeric Format](#) table

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-04014

If the [customBorderColorWithoutFormat](#) feature is not enabled then **format** **must** not be [VK_FORMAT_UNDEFINED](#)

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-04015

If the sampler is used to sample an image view of [VK_FORMAT_B4G4R4A4_UNORM_PACK16](#), [VK_FORMAT_B5G6R5_UNORM_PACK16](#), [VK_FORMAT_A1B5G5R5_UNORM_PACK16](#), or [VK_FORMAT_B5G5R5A1_UNORM_PACK16](#) format then **format** **must** not be [VK_FORMAT_UNDEFINED](#)

Valid Usage (Implicit)

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-sType-sType

sType **must** be [VK_STRUCTURE_TYPE_SAMPLER_CUSTOM_BORDER_COLOR_CREATE_INFO_EXT](#)

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-parameter

format **must** be a valid [VkFormat](#) value

Structure Chaining

Extends the structure

- [VkSamplerCreateInfo](#)

If the sampler is created with [VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK](#), [VK_BORDER_COLOR_INT_OPAQUE_BLACK](#), [VK_BORDER_COLOR_FLOAT_CUSTOM_EXT](#), or [VK_BORDER_COLOR_INT_CUSTOM_EXT](#) **borderColor**, and that sampler will be combined with an image view that does not have an [identity swizzle](#), and [VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::borderColorSwizzleFromImage](#) is not enabled, then it is necessary to specify the component mapping of the border color, by including the [VkSamplerBorderColorComponentMappingCreateInfoEXT](#) structure in the [VkSamplerCreateInfo::pNext](#) chain, to get defined results.

The [VkSamplerBorderColorComponentMappingCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_border_color_swizzle
typedef struct VkSamplerBorderColorComponentMappingCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkComponentMapping components;
    VkBool32           srgb;
} VkSamplerBorderColorComponentMappingCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `components` is a `VkComponentMapping` structure specifying a remapping of the border color components.
- `srgb` indicates that the sampler will be combined with an image view that has an image format which is sRGB encoded.

The `VkComponentMapping components` member describes a remapping from components of the border color to components of the vector returned by shader image instructions when the border color is used.

Valid Usage

- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-borderColorSwizzle-06437
The `borderColorSwizzle` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_SAMPLER_BORDER_COLOR_COMPONENT_MAPPING_CREATE_INFO_EXT`
- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-components-parameter `components` **must** be a valid `VkComponentMapping` structure

Structure Chaining

Extends the structure

- `VkSamplerCreateInfo`

14.2.1. Custom Border Color Registration

When using descriptor heaps, it is possible to create a sampler descriptor without creating a

sampler object. Without this object, implementations using a fixed palette of border colors have no way to know which custom border colors are active or not.

In order to use custom border colors with descriptor heaps, border colors **must** instead be registered with the implementation and unregistered when they are no longer in use, and the registered index provided when writing the sampler descriptor.

To register a custom border color, call:

```
// Provided by VK_EXT_custom_border_color with VK_EXT_descriptor_heap
VkResult vkRegisterCustomBorderColorEXT(
    VkDevice device,
    const VkSamplerCustomBorderColorCreateInfoEXT* pBorderColor,
    VkBool32 requestIndex,
    uint32_t* pIndex);
```

- `device` is the logical device where the border color is registered.
- `pBorderColor` is a pointer to a `VkSamplerCustomBorderColorCreateInfoEXT` structure specifying the custom border color value to register.
- `requestIndex` is a Boolean value indicating if a specific index is requested or not.
- `pIndex` is a pointer to a `uint32_t` index value that will be written by the command upon success.

If `requestIndex` is `VK_TRUE`, the value present in `pIndex` when passed to the command is a requested index, and rather than returning a new index, the implementation will attempt to register that index, leaving the value intact. If the implementation is unable to register a requested index, `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS` will be returned. If an index has not been registered (either explicitly or implicitly by creating a sampler object), or if it has been subsequently unregistered, the implementation **must** register that index successfully.

If `requestIndex` is `VK_FALSE`, the value stored in `pIndex` is ignored, and a new index will be returned if the implementation is able to register a new index. If the implementation is unable to register a new index, `VK_ERROR_TOO_MANY_OBJECTS` will be returned.

If an index is successfully registered, it **can** be used when writing a sampler descriptor or creating a sampler object to use with the custom border color, via `VkSamplerCustomBorderColorIndexCreateInfoEXT`.

NOTE

The type of border color is not specified by this command (`VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` vs. `VK_BORDER_COLOR_INT_CUSTOM_EXT`); the data will be interpreted at the point the border color is sampled with an actual sampler. Implementations are expected to store the data as raw bytes if they do not need the format to be specified.

Valid Usage

- VUID-vkRegisterCustomBorderColorEXT-requestIndex-11287

If `requestIndex` is `VK_TRUE`, the value stored in `pIndex` **must** be less than

Valid Usage (Implicit)

- VUID-vkRegisterCustomBorderColorEXT-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkRegisterCustomBorderColorEXT-pBorderColor-parameter **pBorderColor** must be a valid pointer to a valid [VkSamplerCustomBorderColorCreateInfoEXT](#) structure
- VUID-vkRegisterCustomBorderColorEXT-pIndex-parameter **pIndex** must be a valid pointer to a [uint32_t](#) value

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_TOO_MANY_OBJECTS](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To unregister a custom border color, call:

```
// Provided by VK_EXT_custom_border_color with VK_EXT_descriptor_heap
void vkUnregisterCustomBorderColorEXT(
    VkDevice          device,
    uint32_t          index);
```

- **device** is the logical device where the border color is registered.
- **index** is the [uint32_t](#) index value to unregister.

Valid Usage

- VUID-vkUnregisterCustomBorderColorEXT-index-11288 **index** must be less than [maxCustomBorderColorSamplers](#)

Valid Usage (Implicit)

- VUID-vkUnregisterCustomBorderColorEXT-device-parameter **device** must be a valid [VkDevice](#) handle

The [VkSamplerCustomBorderColorIndexCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_custom_border_color with VK_EXT_descriptor_heap
typedef struct VkSamplerCustomBorderColorIndexCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           index;
} VkSamplerCustomBorderColorIndexCreateInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **index** is the [uint32_t](#) index value to use with the sampler

If this structure is included in the **pNext** chain of [VkSamplerCreateInfo](#), the value of **index** will be used for the custom border color registration. **index** does not need to be registered at the point that a sampler object is created or a sampler descriptor is written; as long as it is registered when any use of the sampler is recorded to a command, and remains registered while the sampler is in use. The color registered with the index and the color specified in the sampler **must** be identically defined.

If this structure is not provided when creating a sampler object with a custom border color, it is equivalent to registering a new custom border color by calling [vkRegisterCustomBorderColorEXT](#) with that custom border color value, and using that value as **index** in this structure. This implicit registration will be implicitly unregistered when the sampler is destroyed.

If this structure is not provided when creating a sampler object without a custom border color, it is equivalent to setting **index** to 0.

Valid Usage

- VUID-VkSamplerCustomBorderColorIndexCreateInfoEXT-index-11289 **index** must be less than [maxCustomBorderColorSamplers](#)

Valid Usage (Implicit)

- VUID-VkSamplerCustomBorderColorIndexCreateInfoEXT-sType-sType **sType** must be [VK_STRUCTURE_TYPE_SAMPLER_CUSTOM_BORDER_COLOR_INDEX_CREATE_INFO_EXT](#)

Structure Chaining

Extends the structure

- [VkSamplerCreateInfo](#)

14.3. Sampler block matching

The [VkSamplerBlockMatchWindowCreateInfoQCOM](#) structure is defined as:

```
// Provided by VK_QCOM_image_processing2
typedef struct VkSamplerBlockMatchWindowCreateInfoQCOM {
    VkStructureType          sType;
    const void*              pNext;
    VkExtent2D               windowExtent;
    VkBlockMatchWindowCompareModeQCOM windowCompareMode;
} VkSamplerBlockMatchWindowCreateInfoQCOM;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [windowExtent](#) is a [VkExtent2D](#) specifying a the width and height of the block match window.
- [windowCompareMode](#) is a [VkBlockMatchWindowCompareModeQCOM](#) specifying the compare mode.

Valid Usage

- VUID-VkSamplerBlockMatchWindowCreateInfoQCOM-WindowExtent-09210
[WindowExtent](#) **must** not be larger than [VkPhysicalDeviceImageProcessing2PropertiesQCOM::maxBlockMatchWindow](#)

Valid Usage (Implicit)

- VUID-VkSamplerBlockMatchWindowCreateInfoQCOM-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_SAMPLER_BLOCK_MATCH_WINDOW_CREATE_INFO_QCOM](#)
- VUID-VkSamplerBlockMatchWindowCreateInfoQCOM-windowCompareMode-parameter
[windowCompareMode](#) **must** be a valid [VkBlockMatchWindowCompareModeQCOM](#) value

Structure Chaining

Extends the structure

- [VkSamplerCreateInfo](#)

The [VkBlockMatchWindowCompareModeQCOM](#) enum describes how block match values within the window are compared. [VkBlockMatchWindowCompareModeQCOM](#) is defined as:

```
// Provided by VK_QCOM_image_processing2
typedef enum VkBlockMatchWindowCompareModeQCOM {
    VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MIN_QCOM = 0,
    VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MAX_QCOM = 1,
} VkBlockMatchWindowCompareModeQCOM;
```

- [VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MIN_QCOM](#) specifies that windowed block match operations return the minimum error within the window.
- [VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MAX_QCOM](#) specifies that windowed block match operations return the maximum error within the window.

Chapter 15. Resource Descriptors

A *descriptor* is an opaque data structure used to access shader resources such as buffers, images, or samplers. Rather than existing as distinct objects, descriptors are handled as opaque data, which can be accessed by a shader through [descriptor heaps](#), [descriptor buffers](#), or [descriptor sets](#).

Shaders access descriptors via the [ResourceHeapEXT](#) and [SamplerHeapEXT](#) built-ins, or through variables decorated with [DescriptorSet](#) and [Binding](#) values linking them to the API. Details of the shader interface mapping are described in the [Shader Resource Interface](#) section.

NOTE

Shaders can also access buffers without going through descriptors by using [Physical Storage Buffer Access](#) to access them through 64-bit addresses.

15.1. Descriptor Types

There are a number of different types of descriptor supported by Vulkan, corresponding to different resources or usage. The following sections describe the API definitions of each descriptor type. The mapping of each type to SPIR-V is listed in the [Shader Resource and Descriptor Type Correspondence](#) and [Shader Resource and Storage Class Correspondence](#) tables in the [Shader Interfaces](#) chapter.

Possible descriptor types are:

```

// Provided by VK_VERSION_1_0
typedef enum VkDescriptorType {
    VK_DESCRIPTOR_TYPE_SAMPLER = 0,
    VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER = 1,
    VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE = 2,
    VK_DESCRIPTOR_TYPE_STORAGE_IMAGE = 3,
    VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER = 4,
    VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER = 5,
    VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER = 6,
    VK_DESCRIPTOR_TYPE_STORAGE_BUFFER = 7,
    VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC = 8,
    VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC = 9,
    VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT = 10,
// Provided by VK_VERSION_1_3
    VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK = 1000138000,
// Provided by VK_KHR_acceleration_structure
    VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR = 1000150000,
// Provided by VK_NV_ray_tracing
    VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV = 1000165000,
// Provided by VK_QCOM_image_processing
    VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM = 1000440000,
// Provided by VK_QCOM_image_processing
    VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM = 1000440001,
// Provided by VK_ARM_tensors
    VK_DESCRIPTOR_TYPE_TENSOR_ARM = 1000460000,
// Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_TYPE_MUTABLE_EXT = 1000351000,
// Provided by VK_NV_partitioned_acceleration_structure
    VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV = 1000570000,
// Provided by VK_EXT_inline_uniform_block
    VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK_EXT =
VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK,
// Provided by VK_VALVE_mutable_descriptor_type
    VK_DESCRIPTOR_TYPE_MUTABLE_VALVE = VK_DESCRIPTOR_TYPE_MUTABLE_EXT,
} VkDescriptorType;

```

- [VK_DESCRIPTOR_TYPE_SAMPLER](#) specifies a [sampler descriptor](#).
- [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#) specifies a [combined image sampler descriptor](#).
- [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#) specifies a [sampled image descriptor](#).
- [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#) specifies a [storage image descriptor](#).
- [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#) specifies a [uniform texel buffer descriptor](#).
- [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#) specifies a [storage texel buffer descriptor](#).
- [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#) specifies a [uniform buffer descriptor](#).
- [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER](#) specifies a [storage buffer descriptor](#).
- [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC](#) specifies a [dynamic uniform buffer](#).

descriptor.

- `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` specifies a dynamic storage buffer descriptor.
- `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` specifies an input attachment descriptor.
- `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` specifies an inline uniform block.
- `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` specifies an acceleration structure descriptor.
- `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` specifies an acceleration structure descriptor.
- `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` specifies a descriptor of mutable type.
- `VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV` specifies a partitioned acceleration structure descriptor.
- `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM` specifies a sampled weight image descriptor.
- `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM` specifies a block matching image descriptor.
- `VK_DESCRIPTOR_TYPE_TENSOR_ARM` specifies a storage tensor descriptor.

15.1.1. Storage Image

A *storage image* (`VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`) is a descriptor type associated with an [image resource](#) via an [image view](#) that load, store, and atomic operations **can** be performed on.

Storage image loads are supported in all shader stages for image views whose [format features](#) contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`.

Stores to storage images are supported in task, mesh and compute shaders for image views whose [format features](#) contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`.

Atomic operations on storage images are supported in task, mesh and compute shaders for image views whose [format features](#) contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`.

When the `fragmentStoresAndAtomics` feature is enabled, stores and atomic operations are also supported for storage images in fragment shaders with the same set of image formats as supported in compute shaders. When the `vertexPipelineStoresAndAtomics` feature is enabled, stores and atomic operations are also supported in vertex, tessellation, and geometry shaders with the same set of image formats as supported in compute shaders.

The image subresources for a storage image **must** be in the `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR` or `VK_IMAGE_LAYOUT_TENSOR_ALIASING_ARM` or `VK_IMAGE_LAYOUT_GENERAL` layout in order to access its data in a shader.

When the `tileShadingColorAttachments` feature is enabled, loads using `OpImageRead` or `OpImageSparseRead` are supported for color [tile attachments](#) in fragment and compute shaders for image views whose [format features](#) contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`.

Additionally, when the `tileShadingColorAttachments` feature is enabled, stores using `OpImageWrite` are supported for color attachments in compute shaders with the same set of image formats as for loads. When the `tileShadingAtomicOps` feature is enabled, tile atomic operations are supported for color attachments in compute shaders with the same set of image formats as for loads.

When the `tileShadingInputAttachments` feature is enabled, loads using `OpImageRead` are supported for input `tile attachments` in fragment and compute shaders with the same set of image formats as for color attachments. Stores to input attachments are not supported.

When the `tileShadingDepthAttachments` or `tileShadingStencilAttachments` feature is enabled, loads using `OpImageRead` or `OpImageSparseRead` are supported for depth or stencil aspects of a depth/stencil `tile attachment` in fragment and compute shaders with the same set of image formats as for color attachments. Stores to depth/stencil attachments are not supported.

15.1.2. Sampler

A *sampler descriptor* (`VK_DESCRIPTOR_TYPE_SAMPLER`) is a descriptor type associated with a `sampler` object, used to control the behavior of `sampling operations` performed on a `sampled image`.

15.1.3. Sampled Image

A *sampled image* (`VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`) is a descriptor type associated with an `image resource` via an `image view` that `sampling operations` **can** be performed on.

Shaders combine a sampled image variable and a sampler variable to perform sampling operations.

Sampled images are supported in all shader stages for image views whose `format features` contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`.

An image subresources for a sampled image **must** be in one of the following layouts:

- `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_GENERAL`
- `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`
- `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`
- `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR`
- `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT`
- `VK_IMAGE_LAYOUT_TENSOR_ALIASING_ARM`

15.1.4. Combined Image Sampler

A *combined image sampler* ([VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#)) is a single descriptor type associated with both a [sampler](#) and an [image resource](#), combining both a [sampler](#) and [sampled image](#) descriptor into a single descriptor.

If the descriptor refers to a sampler that performs [Y'C_BC_R conversion](#) or samples a [subsampled image](#), the sampler **must** only be used to sample the image in the same descriptor. Otherwise, the sampler and image in this type of descriptor **can** be used freely with any other samplers and images.

An image subresources for a combined image sampler **must** be in one of the following layouts:

- [VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL](#)
- [VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL](#)
- [VK_IMAGE_LAYOUT_GENERAL](#)
- [VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR](#)
- [VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL](#)
- [VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL](#)
- [VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL](#)
- [VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL](#)
- [VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR](#)
- [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#)
- [VK_IMAGE_LAYOUT_TENSOR_ALIASING_ARM](#)

NOTE

On some implementations, it **may** be more efficient to sample from an image using a combination of sampler and sampled image that are stored together in the descriptor set in a combined descriptor.

15.1.5. Uniform Texel Buffer

A *uniform texel buffer* ([VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#)) is a descriptor type associated with a [buffer resource](#) via a [buffer view](#) that [image sampling operations](#) **can** be performed on.

Uniform texel buffers define a tightly-packed 1-dimensional linear array of texels, with texels going through format conversion when read in a shader in the same way as they are for an image.

Load operations from uniform texel buffers are supported in all shader stages for buffer view formats which report [format features](#) support for [VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT](#)

15.1.6. Storage Texel Buffer

A *storage texel buffer* ([VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#)) is a descriptor type

associated with a [buffer resource](#) via a [buffer view](#) that [image load](#), [store](#), and [atomic operations](#) **can** be performed on.

Storage texel buffers define a tightly-packed 1-dimensional linear array of texels, with texels going through format conversion when read in a shader in the same way as they are for an image. Unlike [uniform texel buffers](#), these buffers can also be written to in the same way as for [storage images](#).

Storage texel buffer loads are supported in all shader stages for texel buffer view formats which report [format features](#) support for [VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT](#)

Stores to storage texel buffers are supported in task, mesh and compute shaders for texel buffer formats which report [format features](#) support for [VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT](#)

Atomic operations on storage texel buffers are supported in task, mesh and compute shaders for texel buffer formats which report [format features](#) support for [VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT](#)

When the [fragmentStoresAndAtomics](#) feature is enabled, stores and atomic operations are also supported for storage texel buffers in fragment shaders with the same set of texel buffer formats as supported in compute shaders. When the [vertexPipelineStoresAndAtomics](#) feature is enabled, stores and atomic operations are also supported in vertex, tessellation, and geometry shaders with the same set of texel buffer formats as supported in compute shaders.

15.1.7. Storage Buffer

A *storage buffer* ([VK_DESCRIPTOR_TYPE_STORAGE_BUFFER](#)) is a descriptor type associated with a [buffer resource](#) directly, described in a shader as a structure with various members that load, store, and atomic operations **can** be performed on.

NOTE	Atomic operations can only be performed on members of certain types as defined in the SPIR-V environment appendix .
-------------	--

15.1.8. Uniform Buffer

A *uniform buffer* ([VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#)) is a descriptor type associated with a [buffer resource](#) directly, described in a shader as a structure with various members that load operations **can** be performed on.

15.1.9. Dynamic Uniform Buffer

A *dynamic uniform buffer* ([VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC](#)) is almost identical to a [uniform buffer](#), and differs only in how the offset into the buffer is specified. This descriptor type is only valid when using descriptor sets. The base offset calculated by [VkDescriptorBufferInfo](#) when initially [updating a descriptor set](#) is added to a [dynamic offset](#) when binding a descriptor set.

15.1.10. Dynamic Storage Buffer

A *dynamic storage buffer* ([VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC](#)) is almost identical

to a [storage buffer](#), and differs only in how the offset into the buffer is specified. This descriptor type is only valid when using descriptor sets. The base offset calculated by [VkDescriptorBufferInfo](#) when initially [updating a descriptor set](#) is added to a [dynamic offset](#) when binding a descriptor set.

15.1.11. Inline Uniform Block

An *inline uniform block* ([VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#)) is almost identical to a [uniform buffer](#) in how it is accessed in the shader. Where it differs is that its storage is taken directly from a containing descriptor set or descriptor buffer, instead of being backed by a separate buffer object. This descriptor type is not valid when using descriptor heaps; applications **can** directly access the heap pointer in a shader or use the [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT](#) mapping.

Inline uniform blocks are typically used to access a small set of constant data that does not require the additional flexibility provided by the indirection enabled when using a uniform buffer where the descriptor and the referenced buffer memory are decoupled. Compared to push constants, they allow reusing the same set of constant data across multiple disjoint sets of drawing and dispatching commands.

Inline uniform block descriptors **cannot** be aggregated into arrays. Instead, the array size specified for an inline uniform block descriptor binding specifies the binding's capacity in bytes.

15.1.12. Sample Weight Image

A *sample weight image* ([VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#)) is a descriptor type associated with an [image resource](#) via an [image view](#) that **can** be used in [weight image sampling](#). The image view **must** have been created with [VkImageViewSampleWeightCreateInfoQCOM](#).

Shaders **can** combine a weight image variable, a sampled image variable, and a sampler variable to perform [weight image sampling](#).

Weight image sampling is supported in all shader stages if the weight image view specifies a format that supports [format feature VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM](#) and the sampled image view specifies a format that supports [format feature VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM](#).

The image subresources for the weight image **must** be in the [VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL](#), or [VK_IMAGE_LAYOUT_GENERAL](#) layout in order to access its data in a shader.

15.1.13. Block Matching Image

A *block matching image* ([VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#)) is a descriptor type associated with an [image resource](#) via an [image view](#) that **can** be used in [block matching](#).

Shaders **can** combine a target image variable, a reference image variable, and a sampler variable to perform [block matching](#).

Block matching is supported in all shader stages for if both the target view and reference view

specifies a format that supports format feature `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

The image subresources for block matching **must** be in the `VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL` layout in order to access its data in a shader.

15.1.14. Input Attachment

An *input attachment* (`VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`) is a descriptor type associated with an [image resource](#) via an [image view](#) that **can** be used for [framebuffer local](#) load operations in fragment shaders.

All image formats that are supported for color attachments (`VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV`) or depth/stencil attachments (`VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`) for a given image tiling mode are also supported for input attachments.

An image view used as an input attachment **must** be in one of the following layouts:

- `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_GENERAL`
- `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`
- `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`
- `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`
- `VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR`
- `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT`
- `VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ`

15.1.15. Acceleration Structure

An *acceleration structure* (`VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` or `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`) is a descriptor type that is used to retrieve scene geometry from within shaders that are used for ray traversal. Shaders have read-only access to the memory.

15.1.16. Partitioned Acceleration Structure

A *partitioned acceleration structure* (`VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV`) is a descriptor type that references a built partitioned top-level acceleration structure (PTLAS), as defined in [Partitioned Top](#)

[Level Acceleration Structures](#). It is used to retrieve scene geometry from within shaders that are used for ray traversal. From the perspective of ray tracing shaders, a PTLAS descriptor behaves identically to a conventional top-level acceleration structure descriptor. Shaders have read-only access to the memory.

15.1.17. Mutable

A descriptor of *mutable* ([VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#)) type indicates that this descriptor **can** mutate to a number of different types. This descriptor type is not valid when using descriptor heaps, as the elements of a descriptor heap **can** be manually adjusted to hold different descriptor types already. When specified in a descriptor set layout, any of the descriptor types given in the [VkMutableDescriptorTypeListEXT::pDescriptorTypes](#) list of descriptor types in the [pNext](#) chain of [VkDescriptorSetLayoutCreateInfo](#) for this binding. At any point, each individual descriptor of mutable type has an active descriptor type. The active descriptor type **can** be any one of the declared types in [pDescriptorTypes](#). Additionally, a mutable descriptor's active descriptor type **can** be of the [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#) type, which is the initial active descriptor type. The active descriptor type **can** change when the descriptor is updated. When a descriptor is consumed by binding a descriptor buffer or set, the active descriptor type is considered, not [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#).

An active descriptor type of [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#) is considered an undefined descriptor. If a descriptor is consumed where the active descriptor type does not match what the shader expects, the descriptor is considered an undefined descriptor.

NOTE

To find which descriptor types are supported as [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#), the application **can** use [vkGetDescriptorSetLayoutSupport](#) with a [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#) binding, with the list of descriptor types to query in the [VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists](#) array for that binding.

NOTE

The intention of a mutable descriptor type is that implementations allocate N bytes per descriptor, where N is determined by the maximum descriptor size for a given descriptor binding. Implementations are not expected to keep track of the active descriptor type, and it should be considered a C-like union type.

A mutable descriptor type is not considered as efficient in terms of runtime performance as using a non-mutable descriptor type, and applications are not encouraged to use them outside API layering efforts. Mutable descriptor types can be more efficient if the alternative is using many different descriptors to emulate mutable descriptor types.

15.1.18. Storage Tensor

A *storage tensor* ([VK_DESCRIPTOR_TYPE_TENSOR_ARM](#)) is a descriptor type associated with a [tensor resource](#) via a [tensor view](#) that read and write operations **can** be performed on.

Storage tensor reads and writes are supported in shaders for tensor views whose [format features](#)

contain `VK_FORMAT_FEATURE_2_TENSOR_SHADER_BIT_ARM`.

Storage tensor reads and writes are supported in graph pipelines for tensor views whose `format` features contain `VK_FORMAT_FEATURE_2_TENSOR_DATA_GRAPH_BIT_ARM`.

15.2. Physical Storage Buffer Access

Buffer device addresses **can** also be used to access buffer memory in a shader, using the `SPV_KHR_physical_storage_buffer` extension or the equivalent `SPV_EXT_physical_storage_buffer` extension and the `PhysicalStorageBuffer` storage class. For example, this value **can** be stored in a uniform buffer, and the shader **can** read the value from the uniform buffer and use it to do a dependent read/write to this buffer. All loads, stores, and atomics in a shader through `PhysicalStorageBuffer` pointers **must** access addresses in the address range of some buffer.

Chapter 16. Descriptor Heaps

When the `descriptorHeap` feature is enabled, applications can use descriptor heaps to specify the descriptors that they will be accessing from shaders. Descriptor heaps are not objects, rather they are state that is bound to a command buffer indicating the device address of descriptors that can be accessed from a shader. There are two heaps available to the application - the sampler heap and the resource heap. The sampler heap contains sampler descriptors, the resource heap contains image, acceleration structure, tensor, and buffer descriptors.

16.1. Writing Descriptors

Descriptors can be obtained for the different heaps with commands that write descriptors to a host address, with the application responsible for transferring those descriptors into device memory for access via heaps.

To write sampler descriptors to memory, call:

```
// Provided by VK_EXT_descriptor_heap
VkResult vkWriteSamplerDescriptorsEXT(
    VkDevice          device,
    uint32_t          samplerCount,
    const VkSamplerCreateInfo* pSamplers,
    const VkHostAddressRangeEXT* pDescriptors);
```

- `device` is the logical device that the descriptors are for.
- `samplerCount` is the number of elements in `pSamplers` and `pDescriptors`.
- `pSamplers` is a pointer to an array of `VkSamplerCreateInfo` structures defining properties of the sampler descriptors that will be written.
- `pDescriptors` is a pointer to an array of `VkHostAddressRangeEXT` structures defining the host address ranges that will be written to for each descriptor.

Each descriptor will be written to `pDescriptors[i].address` where `i` is the index of its create info in `pSamplers`.

Descriptors written using a fully identical `VkSamplerCreateInfo` structure on the same `VkDevice` will always return the same bit pattern. If the `descriptorHeapCaptureReplay` feature is enabled, descriptors written using a fully identical `VkSamplerCreateInfo` structure on a `VkDevice` created from the same `VkPhysicalDevice` with identical parameters will always return the same bit pattern.

NOTE

$YC_B C_R$ samplers must be embedded in a shader by using `VkShaderDescriptorSetAndBindingMappingInfoEXT`, they cannot be specified here.

Valid Usage

- VUID-vkWriteSamplerDescriptorsEXT-descriptorHeap-11202

The `descriptorHeap` feature **must** be enabled

- VUID-vkWriteSamplerDescriptorsEXT-size-11203

The `size` member of each element of `pDescriptors` **must** be greater than or equal to the value returned by `vkGetPhysicalDeviceDescriptorSizeEXT` with a `descriptorType` equal to `VK_DESCRIPTOR_TYPE_SAMPLER`

- VUID-vkWriteSamplerDescriptorsEXT-pSamplers-11204

Elements of `pSamplers` **must** not include `VkSamplerYcbcrConversionInfo` structures in their `pNext` chains

- VUID-vkWriteSamplerDescriptorsEXT-borderColor-11444

If the `borderColor` of any element of `pSamplers` is `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`, `VkSamplerCustomBorderColorIndexCreateInfoEXT` **must** be included in the `pNext` chain of that element

- VUID-vkWriteSamplerDescriptorsEXT-borderColor-11205

If the `borderColor` of any element of `pSamplers` is `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`, `VkSamplerCustomBorderColorIndexCreateInfoEXT::index` **must** be a value less than `maxCustomBorderColorSamplers`

- VUID-vkWriteSamplerDescriptorsEXT-pNext-11400

If there is a `VkDebugUtilsObjectNameInfoEXT` structure in the `pNext` chain of any element of `pSamplers`, its `objectType` **must** be `VK_OBJECT_TYPE_UNKNOWN`

Valid Usage (Implicit)

- VUID-vkWriteSamplerDescriptorsEXT-device-parameter

`device` **must** be a valid `VkDevice` handle

- VUID-vkWriteSamplerDescriptorsEXT-pSamplers-parameter

`pSamplers` **must** be a valid pointer to an array of `samplerCount` valid `VkSamplerCreateInfo` structures

- VUID-vkWriteSamplerDescriptorsEXT-pDescriptors-parameter

`pDescriptors` **must** be a valid pointer to an array of `samplerCount` valid `VkHostAddressRangeEXT` structures

- VUID-vkWriteSamplerDescriptorsEXT-samplerCount-arraylength

`samplerCount` **must** be greater than 0

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To write resource descriptors to memory, call:

```
// Provided by VK_EXT_descriptor_heap
VkResult vkWriteResourceDescriptorsEXT(
    VkDevice          device,
    uint32_t          resourceCount,
    const VkResourceDescriptorInfoEXT* pResources,
    const VkHostAddressRangeEXT*      pDescriptors);
```

- `device` is the logical device that the descriptors are for.
- `resourceCount` is the number of elements in `pResources` and `pDescriptors`.
- `pResources` is a pointer to an array of [VkResourceDescriptorInfoEXT](#) structures defining properties of the resource descriptors that will be written.
- `pDescriptors` is a pointer to an array of [VkHostAddressRangeEXT](#) structures defining the host address ranges that will be written to for each descriptor.

Each descriptor will be written to `pDescriptors[i].address` where `i` is the index of its create info in `pResources`.

If any image descriptor written by this command includes a [VkSamplerYcbcrConversion](#), multiple descriptors will be written adjacent to each other for that descriptor, equal to [VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount](#) for the image.

If any image descriptor written by this command is for an image created with `flags` containing [VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT](#), multiple descriptors will be written adjacent to each other for that descriptor, equal to [VkSubsampledImageFormatPropertiesEXT::subsampledImageDescriptorCount](#) for the image.

Descriptors using the same `type` and written using a fully identical [VkTexelBufferDescriptorInfoEXT](#) or [VkDeviceAddressRangeKHR](#) structure on the same [VkDevice](#) will always return the same bit pattern. If the [descriptorHeapCaptureReplay](#) feature is enabled, this applies to any [VkDevice](#) created with identical parameters from the same [VkPhysicalDevice](#).

NOTE

Recreating the same buffer descriptor during replay of a prior capture requires that the device address is the same, which requires additional data to be captured and provided during replay when creating a buffer and allocating memory for it.

Image descriptors using the same `type` and written using a fully identical [VkImageDescriptorInfoEXT](#) other than [VkImageDescriptorInfoEXT::pView->image](#), where image was successfully created with [VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT](#) and a [VkOpaqueCaptureDataCreateInfoEXT](#) with data captured via [vkGetImageOpaqueCaptureDataEXT](#)

from an image used previously, will write a descriptor with the same bit pattern if possible; if the same bit pattern cannot be generated, `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS` will be returned instead.

Tensor descriptors using the same `type` and written using a fully identical `VkTensorViewCreateInfoARM` other than `VkTensorViewCreateInfoARM::tensor`, where `tensor` was successfully created with `VkOpaqueCaptureDataCreateInfoEXT` with `VK_TENSOR_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_ARM` and a `VkOpaqueCaptureDataCreateInfoEXT` with data captured via `vkGetTensorOpaqueCaptureDataARM` from a tensor used previously, will write a descriptor with the same bit pattern if possible; if the same bit pattern cannot be generated, `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS` will be returned instead.

NOTE

Image creation is sufficiently complex that it may not be possible to recreate all possible descriptors from an image during replay, even if the image itself was successfully recreated. The conditions for this happening will be largely the same as those which could cause allocating a buffer with the same device address during replay to fail. Replay tools are advised to recreate captured descriptors for an image immediately after recreating the image itself wherever possible. The same is true for tensors.

Valid Usage

- VUID-vkWriteResourceDescriptorsEXT-descriptorHeap-11206

The `descriptorHeap` feature **must** be enabled

- VUID-vkWriteResourceDescriptorsEXT-size-11207

The `size` member of each element of `pDescriptors` **must** be greater than or equal to the value returned by `vkGetPhysicalDeviceDescriptorSizeEXT` with a `descriptorType` equal to `type`

- VUID-vkWriteResourceDescriptorsEXT-pResources-11208

If any element of `pResources` specifies a `VkImageViewCreateInfo` structure with a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain, the corresponding element of `pDescriptors` **must** have a `size` member that is greater than or equal to the product of the value returned by `vkGetPhysicalDeviceDescriptorSizeEXT` with a `descriptorType` equal to `type` and `VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount`, as queried from `VkPhysicalDeviceImageFormatInfo2` with image format info equivalent to the image view the descriptor is being created for

- VUID-vkWriteResourceDescriptorsEXT-pResources-11209

If any element of `pResources` specifies a `VkImageViewCreateInfo` structure with an `image` created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`, the corresponding element of `pDescriptors` **must** have a `size` member that is greater than or equal to the product of the value returned by `vkGetPhysicalDeviceDescriptorSizeEXT` with a `descriptorType` equal to `type` and `VkSubsampledImageFormatPropertiesEXT::subsampledImageDescriptorCount`, as queried from `VkPhysicalDeviceImageFormatInfo2` with image format info equivalent to the image view the descriptor is being created for

Valid Usage (Implicit)

- VUID-vkWriteResourceDescriptorsEXT-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkWriteResourceDescriptorsEXT-pResources-parameter **pResources** **must** be a valid pointer to an array of **resourceCount** valid [VkResourceDescriptorInfoEXT](#) structures
- VUID-vkWriteResourceDescriptorsEXT-pDescriptors-parameter **pDescriptors** **must** be a valid pointer to an array of **resourceCount** valid [VkHostAddressRangeEXT](#) structures
- VUID-vkWriteResourceDescriptorsEXT-resourceCount-arraylength **resourceCount** **must** be greater than 0

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

[VkResourceDescriptorInfoEXT](#) is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkResourceDescriptorInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkDescriptorType          type;
    VkResourceDescriptorDataEXT data;
} VkResourceDescriptorInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **type** is the type of descriptor to get.
- **data** is a [VkResourceDescriptorDataEXT](#) union defining the properties of a resource descriptor according to **type**

If **type** is [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#) or [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#), **data->pTexelBuffer** is used to construct the

descriptor.

If **type** is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, `VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, **data->pAddressRange** is used to construct the descriptor. For acceleration structures, the size of the range is not used by the descriptor, and **can** be set to 0. If a non-zero size is provided though, it **must** be a valid range.

NOTE

Applications may wish to provide a valid range as a way to check their own assumptions about the range they are binding; but it has no bearing on anything except validation. Implementations cannot make any assumptions based on the size of the provided range.

If **type** is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, **data->pImage** is used to construct the descriptor. If **type** is `VK_DESCRIPTOR_TYPE_TENSOR_ARM`, **data->pTensorARM** is used to construct the descriptor.

If the **nullDescriptor** feature is enabled, the corresponding element of **data** **may** be **NULL** to generate a null descriptor.

Applications **can** give resource descriptors a debug name in a similar way to naming an object, via the `VkDebugUtilsObjectNameInfoEXT` structure. However, as there is no actual object, this structure **must** be passed via the **pNext** chain of this structure, with a **objectType** of `VK_OBJECT_TYPE_UNKNOWN` and a **objectHandle** of `VK_NULL_HANDLE`. The name is attached to the unique set of descriptor bits written by the implementation, and writing the same bits again with new debug info **may** rename the original descriptor.

NOTE

Implementations are not prevented from returning the same bits for different descriptors. This can result in multiple different resources mapping to the same name. A common case for this might be something like a uniform buffer and storage buffer with the same device address range.

If a descriptor becomes invalid due to the underlying resource becoming invalid, implementations **may** remove the name association.

Valid Usage

- VUID-VkResourceDescriptorInfoEXT-type-11210

type **must** be one of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`,

VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM,
VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM,
VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR,
VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV,
VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV,
VK_DESCRIPTOR_TYPE_TENSOR_ARM, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT

- VUID-VkResourceDescriptorInfoEXT-None-11211

If the `nullDescriptor` feature is not enabled, and `type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` or `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `data->pImage` **must** not be `NULL`

- VUID-VkResourceDescriptorInfoEXT-type-11469

If `type` is `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `data->pImage` **must** not be `NULL`

- VUID-VkResourceDescriptorInfoEXT-None-11212

If the `nullDescriptor` feature is not enabled, and `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `data->pTexelBuffer` **must** not be `NULL`

- VUID-VkResourceDescriptorInfoEXT-None-11213

If the `nullDescriptor` feature is not enabled, and `type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, `VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `data->pAddressRange` **must** not be `NULL`

- VUID-VkResourceDescriptorInfoEXT-None-11457

If the `nullDescriptor` feature is not enabled, and `type` is `VK_DESCRIPTOR_TYPE_TENSOR_ARM`, `data->pTensorARM` **must** not be `NULL`

- VUID-VkResourceDescriptorInfoEXT-type-12349

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `data->pTexelBuffer->addressRange.address` **must** be a multiple of the effective alignment requirement of `data->pTexelBuffer->format` as determined by `minTexelBufferOffsetAlignment`

- VUID-VkResourceDescriptorInfoEXT-type-12350

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `data->pAddressRange->address` **must** be a multiple of `minUniformBufferOffsetAlignment`

- VUID-VkResourceDescriptorInfoEXT-type-12351

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `data->pAddressRange->address` **must** be a multiple of `minStorageBufferOffsetAlignment`

- VUID-VkResourceDescriptorInfoEXT-type-11454

If `type` is one of

- `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`
- `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`

- `VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV`

`data->pAddressRange->address` **must** be a multiple of 256

- `VUID-VkResourceDescriptorInfoEXT-pNext-11401`

If there is a `VkDebugUtilsObjectNameInfoEXT` structure in the `pNext` chain, its `objectType` **must** be `VK_OBJECT_TYPE_UNKNOWN`

- `VUID-VkResourceDescriptorInfoEXT-type-11422`

If `type` is `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `data.pImage->pView->image` **must** not have been created with an `imageType` of `VK_IMAGE_TYPE_3D`

- `VUID-VkResourceDescriptorInfoEXT-type-11424`

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `data.pImage->pView->viewType` is `VK_IMAGE_VIEW_TYPE_2D`, and the `image2DViewOf3D` feature is not enabled, `data.pImage->pView->image` **must** not have been created with an `imageType` of `VK_IMAGE_TYPE_3D`

- `VUID-VkResourceDescriptorInfoEXT-type-11425`

If `type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `data.pImage->pView->viewType` is `VK_IMAGE_VIEW_TYPE_2D`, and the `sampler2DViewOf3D` feature is not enabled, `data.pImage->pView->image` **must** not have been created with an `imageType` of `VK_IMAGE_TYPE_3D`

- `VUID-VkResourceDescriptorInfoEXT-type-11433`

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `data.pAddressRange->size` **must** not be 0

- `VUID-VkResourceDescriptorInfoEXT-type-11458`

If `type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` and `data.pImage` is not `NULL`, `data.pImage->pView->image` **must** have been created with the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set

- `VUID-VkResourceDescriptorInfoEXT-type-11459`

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` and `data.pImage` is not `NULL`, `data.pImage->pView->image` **must** have been created with the `VK_IMAGE_USAGE_STORAGE_BIT` usage flag set

- `VUID-VkResourceDescriptorInfoEXT-type-11460`

If `type` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` and `data.pImage` is not `NULL`, `data.pImage->pView->image` **must** have been created with the `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` usage flag set

- `VUID-VkResourceDescriptorInfoEXT-type-11461`

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` and `data.pAddressRange` is not `NULL`, `data.pAddressRange` **must** be a device address range allocated to the application from a buffer created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- `VUID-VkResourceDescriptorInfoEXT-type-11462`

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` and `data.pAddressRange` is not `NULL`, `data.pAddressRange` **must** be a device address range allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-VkResourceDescriptorInfoEXT-type-11463
If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` and `data.pTexelBuffer` is not `NULL`, `data.pTexelBuffer->addressRange` **must** be a device address range allocated to the application from a buffer created with the `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT` usage flag set
- VUID-VkResourceDescriptorInfoEXT-type-11464
If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` and `data.pTexelBuffer` is not `NULL`, `data.pTexelBuffer->addressRange` **must** be a device address range allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT` usage flag set
- VUID-VkResourceDescriptorInfoEXT-type-11483
If `type` is `VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV` or `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, and `data.pAddressRange` is not `NULL`, `data.pAddressRange->address` **must** be an acceleration structure address retrieved from a `VkAccelerationStructureKHR` object via `vkGetAccelerationStructureDeviceAddressKHR`
- VUID-VkResourceDescriptorInfoEXT-type-11484
If `type` is `VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV` or `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, `data.pAddressRange` is not `NULL`, and `data.pAddressRange->size` is not 0, `data.pAddressRange` **must** be a device address range allocated to the application from the buffer used to create the acceleration structure that `data.pAddressRange->address` was retrieved from, and within the buffer range bound to that acceleration structure
- VUID-VkResourceDescriptorInfoEXT-type-11467
If `type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` and `data.pAddressRange` is not `NULL`, `data.pAddressRange->address` **must** be an acceleration structure handle retrieved from a `VkAccelerationStructureNV` object via `vkGetAccelerationStructureHandleNV`
- VUID-VkResourceDescriptorInfoEXT-type-11468
If `type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` and `data.pAddressRange` is not `NULL`, `data.pAddressRange->size` **must** be 0

Valid Usage (Implicit)

- VUID-VkResourceDescriptorInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RESOURCE_DESCRIPTOR_INFO_EXT`
- VUID-VkResourceDescriptorInfoEXT-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkDebugUtilsObjectNameInfoEXT`
- VUID-VkResourceDescriptorInfoEXT-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkResourceDescriptorInfoEXT-type-parameter
`type` **must** be a valid `VkDescriptorType` value
- VUID-VkResourceDescriptorInfoEXT-pImage-parameter

If `type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, or `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, and if `pImage` is not `NULL`, the `pImage` member of `data` **must** be a valid pointer to a valid `VkImageDescriptorInfoEXT` structure

- VUID-VkResourceDescriptorInfoEXT-pTexelBuffer-parameter

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, and if `pTexelBuffer` is not `NULL`, the `pTexelBuffer` member of `data` **must** be a valid pointer to a valid `VkTexelBufferDescriptorInfoEXT` structure

- VUID-VkResourceDescriptorInfoEXT-pAddressRange-parameter

If `type` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, and if `pAddressRange` is not `NULL`, the `pAddressRange` member of `data` **must** be a valid pointer to a valid `VkDeviceAddressRangeEXT` structure

- VUID-VkResourceDescriptorInfoEXT-pTensorARM-parameter

If `type` is `VK_DESCRIPTOR_TYPE_TENSOR_ARM`, and if `pTensorARM` is not `NULL`, the `pTensorARM` member of `data` **must** be a valid pointer to a valid `VkTensorViewCreateInfoARM` structure

The `VkResourceDescriptorDataEXT` union is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef union VkResourceDescriptorDataEXT {
    const VkImageDescriptorInfoEXT*      pImage;
    const VkTexelBufferDescriptorInfoEXT* pTexelBuffer;
    const VkDeviceAddressRangeEXT*       pAddressRange;
    const VkTensorViewCreateInfoARM*      pTensorARM;
} VkResourceDescriptorDataEXT;
```

- `pImage` is a pointer to a `VkImageDescriptorInfoEXT` structure.
- `pTexelBuffer` is a pointer to a `VkTexelBufferDescriptorInfoEXT` structure.
- `pAddressRange` is a pointer to a `VkDeviceAddressRangeKHR` structure.
- `pTensorARM` is a pointer to a `VkTensorViewCreateInfoARM` structure.

`VkTexelBufferDescriptorInfoEXT` is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkTexelBufferDescriptorInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkFormat              format;
    VkDeviceAddressRangeEXT addressRange;
} VkTexelBufferDescriptorInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **format** is the [VkFormat](#) of the descriptor.
- **addressRange** is a [VkDeviceAddressRangeKHR](#) defining the range of data backing the descriptor.

Valid Usage (Implicit)

- VUID-VkTexelBufferDescriptorInfoEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_TEXEL_BUFFER_DESCRIPTOR_INFO_EXT](#)
- VUID-VkTexelBufferDescriptorInfoEXT-pNext-pNext
pNext must be **NULL**
- VUID-VkTexelBufferDescriptorInfoEXT-format-parameter
format must be a valid [VkFormat](#) value

[VkImageDescriptorInfoEXT](#) is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkImageDescriptorInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    const VkImageViewCreateInfo* pView;
    VkImageLayout         layout;
} VkImageDescriptorInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pView** is an [VkImageViewCreateInfo](#) describing the descriptor.
- **layout** is the [VkImageLayout](#) that the image view will be in when accessed as a descriptor.

Valid Usage

- VUID-VkImageDescriptorInfoEXT-pView-11426
pView->viewType must not be [VK_IMAGE_VIEW_TYPE_2D_ARRAY](#) if **pView->image** was created with an **imageType** of [VK_IMAGE_TYPE_3D](#)

- VUID-VkImageDescriptorInfoEXT-pView-11427

If `pView->viewType` is `VK_IMAGE_VIEW_TYPE_2D` and `pView->image` was created with an `imageType` of `VK_IMAGE_TYPE_3D`, `pView->image` **must** have been created with `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` set

- VUID-VkImageDescriptorInfoEXT-layout-11219

`layout` **must** be `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`,
`VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL`,
`VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`,
`VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`,
`VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`,
`VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`,
`VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL`,
`VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`,
`VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ_KHR`,
`VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT`, or
`VK_IMAGE_LAYOUT_GENERAL`

- VUID-VkImageDescriptorInfoEXT-layout-11221

If `layout` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`,
`VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`,
`VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`,
`VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, or
`VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, then `pView->aspectMask` **must** not include `VK_IMAGE_ASPECT_COLOR_BIT`

- VUID-VkImageDescriptorInfoEXT-pView-11430

If `pView->image` is a depth/stencil image, `pView->subresourceRange.aspectMask` **must** include either `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` but not both

Valid Usage (Implicit)

- VUID-VkImageDescriptorInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_DESCRIPTOR_INFO_EXT`
- VUID-VkImageDescriptorInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImageDescriptorInfoEXT-pView-parameter
`pView` **must** be a valid pointer to a valid `VkImageViewCreateInfo` structure
- VUID-VkImageDescriptorInfoEXT-layout-parameter
`layout` **must** be a valid `VkImageLayout` value

16.2. Using Heaps

One descriptor heap of each type can be bound to a command buffer for use with shaders. When using descriptor heaps, pipelines **must** be created with `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` and shaders created with

[VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) in order to make use of the heaps.

When any heap state command is recorded to a command buffer, it immediately invalidates all descriptor set and descriptor buffer state set by [vkCmdBindDescriptorSets2](#), [vkCmdPushDescriptorSet2](#), [vkCmdPushDescriptorSetWithTemplate2](#), [vkCmdSetDescriptorBufferOffsets2EXT](#), [vkCmdBindDescriptorBufferEmbeddedSamplers2EXT](#), [vkCmdPushConstants2](#), [vkCmdBindDescriptorSets](#), [vkCmdPushDescriptorSet](#), [vkCmdPushDescriptorSetWithTemplate](#), [vkCmdBindDescriptorBuffersEXT](#), [vkCmdSetDescriptorBufferOffsetsEXT](#), [vkCmdBindDescriptorBufferEmbeddedSamplersEXT](#), or [vkCmdPushConstants](#). Similarly, recording any of these commands immediately invalidates all state set by commands in this chapter.

Implementations **may** require storage in descriptor heaps for their own internal descriptors. Storage for these extra descriptors **must** be allocated by the application as part of each descriptor heap address range, and **must** not be accessed by the application while it is bound as a reserved range, in any command buffer, until all such command buffers are freed or reset. The amount of storage required by an implementation is advertised by [minResourceHeapReservedRange](#) for the resource heap, and [minSamplerHeapReservedRange](#) or [minSamplerHeapReservedRangeWithEmbedded](#) for the sampler heap (the latter being required when using embedded samplers).

Applications **can** set different heaps to use the same address ranges, but **must** take care to ensure that the [reserved ranges](#) for each heap do not overlap with each other or with user ranges.

To bind a sampler heap to a command buffer, call:

```
// Provided by VK_EXT_descriptor_heap
void vkCmdBindSamplerHeapEXT(
    VkCommandBuffer          commandBuffer,
    const VkBindHeapInfoEXT* pBindInfo);
```

- [commandBuffer](#) is the command buffer that the sampler heap will be bound to.
- [pBindInfo](#) is a [VkBindHeapInfoEXT](#) specifying the device address range used for the heap and any implementation reservations.

Addresses in the range defined by [pBindInfo->heapRange](#) are bound as the sampler heap. The application **can** access samplers and data through this heap anywhere except for the reserved range specified by [pBindInfo->reservedRangeOffset](#). Addresses in the range [[pBindInfo->reservedRangeOffset](#), [pBindInfo->reservedRangeOffset](#) + [pBindInfo->reservedRangeSize](#)) are reserved for the implementation and **must** not be accessed by the application at any time from when this command is recorded until there are no command buffers with that range bound.

The reserved range is bound to the command buffer until it has been reset.

NOTE

Implementations may require a larger sampler heap reservation to store embedded sampler descriptors when used in a mapping, as advertised by [minSamplerHeapReservedRangeWithEmbedded](#).

Shaders executed by commands recorded after this command **can** use the specified sampler heap

to access resources. `pBindInfo->heapRange.address` will be available to shaders to access samplers and data through the `SamplerHeapEXT BuiltIn` or via `shader bindings`.

When `vkCmdBindSamplerHeapEXT` is recorded, it `immediately invalidates all non-heap descriptor state`. Similarly, recording any non-heap descriptor state commands immediately invalidates state set by this command.

Valid Usage

- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11223
The sum of `pBindInfo->reservedRangeOffset` and `pBindInfo->reservedRangeSize` **must** be less than or equal to `pBindInfo->heapRange.size`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11224
`pBindInfo->reservedRangeSize` **must** be greater than or equal to `minSamplerHeapReservedRange`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11225
`pBindInfo->heapRange.size` **must** be less than or equal to `maxSamplerHeapSize`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11226
`pBindInfo->heapRange.address` **must** be a multiple of `samplerHeapAlignment`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11434
`pBindInfo->reservedRangeOffset` **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11228
Memory bound to addresses in the range [`pBindInfo->heapRange.address` + `pBindInfo->reservedRangeOffset`, `pBindInfo->heapRange.address` + `pBindInfo->reservedRangeOffset` + `pBindInfo->reservedRangeSize`) **must** not be `bound to any other command buffer as a reserved range` for any heap unless the reserved range matches exactly and it is the same heap type
- VUID-vkCmdBindSamplerHeapEXT-heapRange-11230
`heapRange` **must** be a device address range allocated to the application from a buffer created with the `VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT` usage flag set
- VUID-vkCmdBindSamplerHeapEXT-commandBuffer-11231
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`

Valid Usage (Implicit)

- VUID-vkCmdBindSamplerHeapEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-parameter
`pBindInfo` **must** be a valid pointer to a valid `VkBindHeapInfoEXT` structure
- VUID-vkCmdBindSamplerHeapEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdBindSamplerHeapEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBindSamplerHeapEXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

`vkCmdBindSamplerHeapEXT` is not affected by [conditional rendering](#)

To bind a resource heap to a command buffer, call:

```
// Provided by VK_EXT_descriptor_heap
void vkCmdBindResourceHeapEXT(
    VkCommandBuffer          commandBuffer,
    const VkBindHeapInfoEXT* pBindInfo);
```

- `commandBuffer` is the command buffer that the resource heap will be bound to.
- `pBindInfo` is a `VkBindHeapInfoEXT` specifying the device address range used for the heap and any implementation reservations.

Addresses in the range defined by `pBindInfo->heapRange` are bound as the resource heap. The application **can** access resources and data through this heap anywhere except for the reserved range specified by `pBindInfo->reservedRangeOffset`. Addresses in the range `[pBindInfo->reservedRangeOffset, pBindInfo->reservedRangeOffset + pBindInfo->reservedRangeSize)` are reserved for the implementation and **must** not be accessed by the application at any time from when this

command is recorded until there are no command buffers with that range bound.

The reserved range is bound to the command buffer until it has been reset.

Shaders executed by commands recorded after this command **can** use the specified resource heap to access resources. `pBindInfo->heapRange.address` will be available to shaders to access resources through the `ResourceHeapEXT BuiltIn` or via `shader bindings`.

When `vkCmdBindResourceHeapEXT` is recorded, it **immediately invalidates all non-heap descriptor state**. Similarly, recording any non-heap descriptor state commands immediately invalidates state set by this command.

Valid Usage

- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11232
The sum of `pBindInfo->reservedRangeOffset` and `pBindInfo->reservedRangeSize` **must** be less than or equal to `pBindInfo->heapRange.size`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11233
`pBindInfo->reservedRangeSize` **must** be greater than or equal to `minResourceHeapReservedRange`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11234
`pBindInfo->heapRange.size` **must** be less than or equal to `maxResourceHeapSize`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11235
`pBindInfo->heapRange.address` **must** be a multiple of `resourceHeapAlignment`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11435
`pBindInfo->reservedRangeOffset` **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11436
`pBindInfo->reservedRangeOffset` **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11236
Memory bound to addresses in the range [`pBindInfo->heapRange.address` + `pBindInfo->reservedRangeOffset`, `pBindInfo->heapRange.address` + `pBindInfo->reservedRangeOffset` + `pBindInfo->reservedRangeSize`) **must** not be **bound to any other command buffer as a reserved range** for any heap unless the reserved range matches exactly and it is the same heap type
- VUID-vkCmdBindResourceHeapEXT-heapRange-11237
`heapRange` **must** be a device address range allocated to the application from a buffer created with the `VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT` usage flag set
- VUID-vkCmdBindResourceHeapEXT-commandBuffer-11238
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`

Valid Usage (Implicit)

- VUID-vkCmdBindResourceHeapEXT-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-parameter `pBindInfo` **must** be a valid pointer to a valid `VkBindHeapInfoEXT` structure
- VUID-vkCmdBindResourceHeapEXT-commandBuffer-recording `commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBindResourceHeapEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBindResourceHeapEXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

`vkCmdBindResourceHeapEXT` is not affected by `conditional rendering`

`VkBindHeapInfoEXT` is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkBindHeapInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceAddressRangeEXT heapRange;
    VkDeviceSize          reservedRangeOffset;
    VkDeviceSize          reservedRangeSize;
} VkBindHeapInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **heapRange** is a [VkDeviceAddressRangeKHR](#) defining the device address range used for the heap, inclusive of the implementation reserved range.
- **reservedRangeOffset** is the offset within **heapRange** to the start of the reserved range for the implementation.
- **reservedRangeSize** is the size of the reserved range for the implementation within **heapRange**.

Valid Usage (Implicit)

- VUID-VkBindHeapInfoEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_BIND_HEAP_INFO_EXT](#)
- VUID-VkBindHeapInfoEXT-pNext-pNext
pNext must be **NULL**

SamplerHeapEXT

Decorating a variable with the **SamplerHeapEXT** built-in decoration will back it with the contents of the sampler heap bound by [vkCmdBindSamplerHeapEXT](#).

Valid Usage

- VUID-SamplerHeapEXT-SamplerHeapEXT-11239
The variable decorated with **SamplerHeapEXT must** be declared using the **UniformConstant Storage Class**

ResourceHeapEXT

Decorating a variable with the **ResourceHeapEXT** built-in decoration will back it with the contents of the resource heap bound by [vkCmdBindResourceHeapEXT](#).

Valid Usage

- VUID-ResourceHeapEXT-ResourceHeapEXT-11241
The variable decorated with **ResourceHeapEXT must** be declared using the **UniformConstant Storage Class**

16.2.1. Push Data

Push constants specified by [vkCmdPushConstants](#) or [vkCmdPushConstants2KHR](#) rely on descriptor set layout state, and are not compatible with descriptor heaps. A new push interface is provided for use with descriptor heaps:

To update push data when using descriptor heaps, call:

```
// Provided by VK_EXT_descriptor_heap
void vkCmdPushDataEXT(
    VkCommandBuffer                      commandBuffer,
    const VkPushDataInfoEXT*             pPushDataInfo);
```

- `commandBuffer` is the command buffer in which the push data update will be recorded.
- `pPushDataInfo` is a pointer to a [VkPushDataInfoEXT](#) structure.

When `vkCmdPushDataEXT` is recorded, it [immediately invalidates all non-heap descriptor state](#). Similarly, recording any non-heap descriptor state commands immediately invalidates state set by this command.

All push data is available to all shaders using the existing [PushConstant Storage Class](#).

NOTE

Device addresses in push data are intended as the fast path for shader-constant data that does not fit into push data directly. In order to maximize performance of constant data inputs, addresses should be aligned to [minUniformBufferOffsetAlignment](#), and decorated with `Alignment` and `NonWritable` in the shader when using physical pointers.

Valid Usage (Implicit)

- VUID-vkCmdPushDataEXT-commandBuffer-parameter `commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdPushDataEXT-pPushDataInfo-parameter `pPushDataInfo` **must** be a valid pointer to a valid [VkPushDataInfoEXT](#) structure
- VUID-vkCmdPushDataEXT-commandBuffer-recording `commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdPushDataEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) operations
- VUID-vkCmdPushDataEXT-vidcoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	State

Conditional Rendering

`vkCmdPushDataEXT` is not affected by [conditional rendering](#)

The `VkPushDataInfoEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkPushDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           offset;
    VkHostAddressRangeConstEXT data;
} VkPushDataInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `offset` is the start offset of the push data range to update, in units of bytes.
- `data` is the host address range containing the push data to update.

Valid Usage

- VUID-VkPushDataInfoEXT-offset-11243
The sum of `offset` and `data.size` **must** be less than or equal to `maxPushDataSize`
- VUID-VkPushDataInfoEXT-offset-11418
`offset` **must** be a multiple of 4

- VUID-VkPushDataInfoEXT-data-11419
`data.size` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-VkPushDataInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PUSH_DATA_INFO_EXT`
- VUID-VkPushDataInfoEXT-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPushConstantBankInfoNV`
- VUID-VkPushDataInfoEXT-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPushDataInfoEXT-data-parameter
`data` **must** be a valid `VkHostAddressRangeConstEXT` structure

Push Data Banks

When the `pushConstantBank` feature is enabled, applications **can** specify the hardware bank into which data is pushed using the `VkPushConstantBankInfoNV` structure.

The `VkPushConstantBankInfoNV` structure is defined as:

```
// Provided by VK_NV_push_constant_bank
typedef struct VkPushConstantBankInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           bank;
} VkPushConstantBankInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bank` is the index of the hardware bank into which the data is pushed.

This structure **can** be chained to `VkPushDataInfoEXT`, `VkPushConstantsInfo`, `VkDescriptorSetAndBindingMappingEXT`, and `VkIndirectCommandsLayoutTokenEXT` via the `pNext` chain to specify push constant bank placement:

- When chained to `VkPushDataInfoEXT`, it specifies the hardware bank into which `vkCmdPushDataEXT` pushes the data.
- When chained to `VkPushConstantsInfo`, it specifies the hardware bank into which `vkCmdPushConstants2` pushes the constants.
- When chained to `VkDescriptorSetAndBindingMappingEXT`, it specifies the hardware push data bank from which the push data is read.
- When chained to `VkIndirectCommandsLayoutTokenEXT` with

[VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT](#), it specifies the hardware bank into which indirect push data is placed.

This allows for more flexible push constant management in descriptor heap scenarios where shaders access different root descriptors with specific bank requirements.

Valid Usage

- VUID-VkPushConstantBankInfoNV-bank-12342
When chained to [VkPushDataInfoEXT](#), if the command buffer is executing graphics operations, **bank** **must** be less than [VkPhysicalDevicePushConstantBankPropertiesNV::maxGraphicsPushDataBanks](#)
- VUID-VkPushConstantBankInfoNV-bank-12343
When chained to [VkPushDataInfoEXT](#), if the command buffer is executing compute operations, **bank** **must** be less than [VkPhysicalDevicePushConstantBankPropertiesNV::maxComputePushDataBanks](#)
- VUID-VkPushConstantBankInfoNV-bank-12344
When chained to [VkPushConstantsInfo](#), if [VkPushConstantsInfo::stageFlags](#) includes a graphics stage then **bank** **must** be less than [VkPhysicalDevicePushConstantBankPropertiesNV::maxGraphicsPushConstantBanks](#)
- VUID-VkPushConstantBankInfoNV-bank-12345
When chained to [VkPushConstantsInfo](#), if [VkPushConstantsInfo::stageFlags](#) includes a compute stage then **bank** **must** be less than [VkPhysicalDevicePushConstantBankPropertiesNV::maxComputePushConstantBanks](#)
- VUID-VkPushConstantBankInfoNV-bank-12346
When chained to [VkDescriptorSetAndBindingMappingEXT](#) for a graphics shader stage, **bank** **must** be less than [VkPhysicalDevicePushConstantBankPropertiesNV::maxGraphicsPushDataBanks](#)
- VUID-VkPushConstantBankInfoNV-bank-12347
When chained to [VkDescriptorSetAndBindingMappingEXT](#) for a compute shader stage, **bank** **must** be less than [VkPhysicalDevicePushConstantBankPropertiesNV::maxComputePushDataBanks](#)

Valid Usage (Implicit)

- VUID-VkPushConstantBankInfoNV-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_PUSH_CONSTANT_BANK_INFO_NV](#)

Structure Chaining

Extends the structures

- [VkDescriptorSetAndBindingMappingEXT](#)
- [VkIndirectCommandsLayoutTokenEXT](#)

- [VkPushConstantsInfo](#)
- [VkPushDataInfoEXT](#)

16.3. Shader Bindings

While descriptor heaps can be accessed directly through the [SamplerHeapEXT](#) and [ResourceHeapEXT](#) built-ins, shaders using the existing [DescriptorSet](#) and [Binding](#) decorations **can** map these to heap offsets. In place of descriptor set layouts and pipeline layouts, information **can** be provided at pipeline or shader creation time to indicate how these bindings are mapped, through a combination of constants, push data, and indirections through device addresses. This interface provides significantly more flexibility than descriptor set layouts, enabling applications to specify precisely where they expect each descriptor to be.

The [VkShaderDescriptorSetAndBindingMappingInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkShaderDescriptorSetAndBindingMappingInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 mappingCount;
    const VkDescriptorSetAndBindingMappingEXT* pMappings;
} VkShaderDescriptorSetAndBindingMappingInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [mappingCount](#) is the number of elements in [pMappings](#).
- [pMappings](#) is a pointer to an array of [VkDescriptorSetAndBindingMappingEXT](#) structures specifying mappings for a set of descriptors

Including this structure in the [pNext](#) chain of [VkPipelineShaderStageCreateInfo](#) will set mappings for the shader defined by that structure. Similarly, including this structure in the [pNext](#) chain of a [VkShaderCreateInfoEXT](#) with a [codeType](#) of [VK_SHADER_CODE_TYPE_SPIRV_EXT](#), will set mappings for that shader.

If this structure is not present, it is equivalent to setting [mappingCount](#) to 0.

Valid Usage

- VUID-VkShaderDescriptorSetAndBindingMappingInfoEXT-pMappings-11244
Any two elements of [pMappings](#) **must** not have the same value of [descriptorSet](#), an overlapping range specified by [firstBinding](#) and [bindingCount](#), and any overlapping bits in [resourceMask](#)

Valid Usage (Implicit)

- VUID-VkShaderDescriptorSetAndBindingMappingInfoEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_SHADER_DESCRIPTOR_SET_AND_BINDING_MAPPING_INFO_EXT`
- VUID-VkShaderDescriptorSetAndBindingMappingInfoEXT-pMappings-parameter
If `mappingCount` is not 0, `pMappings` **must** be a valid pointer to an array of `mappingCount` valid `VkDescriptorSetAndBindingMappingEXT` structures

Structure Chaining

Extends the structures

- `VkPipelineShaderStageCreateInfo`
- `VkShaderCreateInfoEXT`

The `VkDescriptorSetAndBindingMappingEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorSetAndBindingMappingEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           descriptorSet;
    uint32_t           firstBinding;
    uint32_t           bindingCount;
    VkSpirvResourceTypeFlagsEXT resourceMask;
    VkDescriptorMappingSourceEXT source;
    VkDescriptorMappingSourceDataEXT sourceData;
} VkDescriptorSetAndBindingMappingEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorSet` is the value of `DescriptorSet` for resources that this mapping affects.
- `firstBinding` is the first value of `Binding` of resources that this mapping affects.
- `bindingCount` is the number of consecutive `Binding` values of resources that this mapping affects.
- `resourceMask` is a mask of `VkSpirvResourceTypeFlagBitsEXT` values indicating which resource types are specified by this mapping.
- `source` is a `VkDescriptorMappingSourceEXT` value specifying the method of mapping specified for the affected resources.
- `sourceData` is a `VkDescriptorMappingSourceDataEXT` that provides the details of how each mapping is specified according to `source`.

Resources specified in a shader with a `DescriptorSet` decoration set to `descriptorSet`, a `Binding`

decoration greater than or equal to `firstBinding` and less than the sum of `firstBinding` and `bindingCount`, and a resource type matching one of the bits in `resourceMask` will be mapped according to `source` and `sourceData`.

NOTE

Applications are free to overspecify bindings that are not present; allowing reuse of the same mapping structures with multiple shaders, even when those shaders only partially reuse those mappings. This includes things like setting binding counts higher than the number used in the shader, specifying bindings that are not present in the shader, and setting `resourceMask` to all possible resources that may be encountered.

If `source` selects an element of `sourceData` defined by a structure, the description of that structure defines how resources are mapped. Source mappings using a single base type are defined here.

If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, the resource will be backed by heap data as specified by `constantOffset`.

If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, the resource will be backed by heap data as specified by `pushIndex`.

If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, the resource will be backed by heap data as specified by `indirectIndex`.

If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the resource will be backed by heap data as specified by `indirectIndexArray`.

If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, the resource will be backed by heap data as specified by `heapData`.

If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, the resource will be backed by push data at a range from `pushDataOffset` to the size of the resource, allowing a uniform buffer to be backed by push data access push data. Accessing data in the uniform buffer at an offset of `shaderOffset` in the shader will access push data at an offset equal to

$$\text{offset} = \text{shaderOffset} + \text{pushDataOffset}.$$

If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, the resource will be backed by data pointed to by a device address in push data at an offset of `pushAddressOffset`. Accessing data via the mapped resource in the shader will access data backing the address specified in push data:

$$\text{address} = ((\text{VkDeviceAddress}^*)\text{pPushData})[\text{pushAddressOffset}/8]$$

where `pPushData` is the total set of push data specified by `vkCmdPushDataEXT`. If the shader resource is an acceleration structure, the address **must** be a valid acceleration structure address.

If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, the resource will be backed by heap data as specified by `indirectAddress`.

NOTE

Accesses to resources using mappings to anything that is not a descriptor in a heap are not subject to robustness guarantees; resources for such mappings must not be accessed out of bounds.

If **source** is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, the resource will be backed by heap data as specified by **shaderRecordIndex**.

If **source** is `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, the resource will be backed by shader record data at a range from **shaderRecordDataOffset** to the size of the resource, allowing a uniform buffer to be used as a way to access shader record data. Accessing data in the uniform buffer at an offset **shaderOffset** in the shader will access shader record data at an offset equal to

$$\text{offset} = \text{shaderOffset} + \text{shaderRecordDataOffset}.$$

If **source** is `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, the resource will be backed by data pointed to by a device address in the shader record at **shaderRecordAddressOffset**. Accessing data via the mapped resource in the shader will access data backing the address specified in shader record data:

$$\text{address} = ((\text{VkDeviceAddress}^*)\text{pShaderRecordData})[\text{shaderRecordAddressOffset}/8]$$

where **pShaderRecord** is the memory associated with a given shader as its shader record. If the shader resource is an acceleration structure, the address **must** be a valid acceleration structure address.

NOTE

Accesses to resources using `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT` mappings are not subject to robustness guarantees; data must not be accessed outside of the allocated memory range.

Mappings must be declared for all variables with a **DescriptorSet** and **Binding** in the [shader resource interface](#).

Valid Usage

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11245

If **source** is `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, **bindingCount** **must** be 1

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11246

If **source** is `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, **sourceData.pushDataOffset** **must** be a multiple of 4

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11247
If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `sourceData.pushAddressOffset` **must** be a multiple of 8
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11248
If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `bindingCount` **must** be 1
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11249
If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `sourceData.shaderRecordDataOffset` **must** be a multiple of 4
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11250
If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `sourceData.shaderRecordAddressOffset` **must** be a multiple of 8
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11251
If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, and `descriptorSet`, `firstBinding`, and `bindingCount` identify any `OpTypeImage` variables, any `heapOffset`, and `heapArrayStride` members of the corresponding member of `sourceData` **must** be 0 or a multiple of `imageDescriptorAlignment`
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11252
If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, and `descriptorSet`, `firstBinding`, and `bindingCount` identify any `OpTypeStruct` variables, any `heapOffset`, and `heapArrayStride` members of the corresponding member of `sourceData` **must** be 0 or a multiple of `bufferDescriptorAlignment`
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11253
If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, and `descriptorSet`, `firstBinding`, and `bindingCount` identify any `OpTypeSampler` variables, any `heapOffset` and `heapArrayStride` members of the corresponding member of `sourceData` **must** be 0 or a multiple of `samplerDescriptorAlignment`
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11254
If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or

VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, and descriptorSet, firstBinding, and bindingCount identify any OpTypeSampledImage variables, any samplerHeapOffset and samplerHeapArrayStride members of the corresponding member of sourceData **must** be 0 or a multiple of samplerDescriptorAlignment

- VUID-VkDescriptorSetAndBindingMappingEXT-source-12406

If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, and descriptorSet, firstBinding, and bindingCount identify any OpTypeSampledImage variables, any heapOffset and heapArrayStride members of the corresponding member of sourceData **must** be 0 or a multiple of imageDescriptorAlignment

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11356

If source is VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, resourceMask **must** include VK_SPIRV_RESOURCE_TYPE_UNIFORM_BUFFER_BIT_EXT

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11357

If source is VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, resourceMask **must** include at least one of VK_SPIRV_RESOURCE_TYPE_UNIFORM_BUFFER_BIT_EXT, VK_SPIRV_RESOURCE_TYPE_READ_ONLY_STORAGE_BUFFER_BIT_EXT, VK_SPIRV_RESOURCE_TYPE_READ_WRITE_STORAGE_BUFFER_BIT_EXT, or VK_SPIRV_RESOURCE_TYPE_ACCELERATION_STRUCTURE_BIT_EXT

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11358

If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, and the mapping sets useCombinedImageSamplerIndex to VK_TRUE, resourceMask **must** include at least one of VK_SPIRV_RESOURCE_TYPE_COMBINED_SAMPLED_IMAGE_BIT_EXT, VK_SPIRV_RESOURCE_TYPE_SAMPLED_IMAGE_BIT_EXT, or VK_SPIRV_RESOURCE_TYPE_SAMPLER_BIT_EXT

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11389

If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, and bindingCount is not 1, the pEmbeddedSampler member of the corresponding mapping structure **must** be NULL

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11390

If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT,

VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT,
 VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT,
 VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or
 VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, and
 descriptorSet, firstBinding, and bindingCount identify any OpTypeTensorARM variables, the
 heapOffset, and heapArrayStride members of the corresponding member of sourceData
must be 0 or a multiple of tensorDescriptorAlignment

Valid Usage (Implicit)

- VUID-VkDescriptorSetAndBindingMappingEXT-sType-sType
sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_AND_BINDING_MAPPING_EXT
- VUID-VkDescriptorSetAndBindingMappingEXT-pNext-pNext
pNext must be NULL or a pointer to a valid instance of VkPushConstantBankInfoNV
- VUID-VkDescriptorSetAndBindingMappingEXT-sType-unique
 The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkDescriptorSetAndBindingMappingEXT-resourceMask-parameter
resourceMask must be a valid combination of VkSpirvResourceTypeFlagBitsEXT values
- VUID-VkDescriptorSetAndBindingMappingEXT-resourceMask-requiredbitmask
resourceMask must not be 0
- VUID-VkDescriptorSetAndBindingMappingEXT-source-parameter
source must be a valid VkDescriptorMappingSourceEXT value
- VUID-VkDescriptorSetAndBindingMappingEXT-constantOffset-parameter
 If **source** is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT,
 the **constantOffset** member of **sourceData must** be a valid
 VkDescriptorMappingSourceConstantOffsetEXT structure
- VUID-VkDescriptorSetAndBindingMappingEXT-pushIndex-parameter
 If **source** is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, the
pushIndex member of **sourceData must** be a valid
 VkDescriptorMappingSourcePushIndexEXT structure
- VUID-VkDescriptorSetAndBindingMappingEXT-indirectIndex-parameter
 If **source** is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, the
indirectIndex member of **sourceData must** be a valid
 VkDescriptorMappingSourceIndirectIndexEXT structure
- VUID-VkDescriptorSetAndBindingMappingEXT-indirectIndexArray-parameter
 If **source** is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the
indirectIndexArray member of **sourceData must** be a valid
 VkDescriptorMappingSourceIndirectIndexArrayEXT structure
- VUID-VkDescriptorSetAndBindingMappingEXT-shaderRecordIndex-parameter
 If **source** is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, the
shaderRecordIndex member of **sourceData must** be a valid

Bits which **can** be set in `VkDescriptorSetAndBindingMappingEXT::resourceMask`, are:

```
// Provided by VK_EXT_descriptor_heap
typedef enum VkSpirvResourceTypeFlagBitsEXT {
    VK_SPIRV_RESOURCE_TYPE_ALL_EXT = 0x7FFFFFFF,
    VK_SPIRV_RESOURCE_TYPE_SAMPLER_BIT_EXT = 0x00000001,
    VK_SPIRV_RESOURCE_TYPE_SAMPLED_IMAGE_BIT_EXT = 0x00000002,
    VK_SPIRV_RESOURCE_TYPE_READ_ONLY_IMAGE_BIT_EXT = 0x00000004,
    VK_SPIRV_RESOURCE_TYPE_READ_WRITE_IMAGE_BIT_EXT = 0x00000008,
    VK_SPIRV_RESOURCE_TYPE_COMBINED_SAMPLED_IMAGE_BIT_EXT = 0x00000010,
    VK_SPIRV_RESOURCE_TYPE_UNIFORM_BUFFER_BIT_EXT = 0x00000020,
    VK_SPIRV_RESOURCE_TYPE_READ_ONLY_STORAGE_BUFFER_BIT_EXT = 0x00000040,
    VK_SPIRV_RESOURCE_TYPE_READ_WRITE_STORAGE_BUFFER_BIT_EXT = 0x00000080,
    // Provided by VK_EXT_descriptor_heap with VK_KHR_ray_tracing_pipeline or
    VK_NV_ray_tracing
    VK_SPIRV_RESOURCE_TYPE_ACCELERATION_STRUCTURE_BIT_EXT = 0x00000100,
    // Provided by VK_EXT_descriptor_heap with VK_ARM_tensors
    VK_SPIRV_RESOURCE_TYPE_TENSOR_BIT_ARM = 0x00000200,
} VkSpirvResourceTypeFlagBitsEXT;
```

- `VK_SPIRV_RESOURCE_TYPE_ALL_EXT` specifies that all resource declarations are included.
- `VK_SPIRV_RESOURCE_TYPE_SAMPLER_BIT_EXT` specifies `OpTypeSampler` variables.
- `VK_SPIRV_RESOURCE_TYPE_SAMPLED_IMAGE_BIT_EXT` specifies `OpTypeImage` variables with a `Sampled` parameter of 1.
- `VK_SPIRV_RESOURCE_TYPE_READ_ONLY_IMAGE_BIT_EXT` specifies `OpTypeImage` variables with a `Sampled` parameter of 2 and decorated with `NonWritable`.
- `VK_SPIRV_RESOURCE_TYPE_READ_WRITE_IMAGE_BIT_EXT` specifies `OpTypeImage` variables with a `Sampled` parameter of 2 and not decorated with `NonWritable`.
- `VK_SPIRV_RESOURCE_TYPE_COMBINED_SAMPLED_IMAGE_BIT_EXT` specifies `OpTypeSampledImage` variables.
- `VK_SPIRV_RESOURCE_TYPE_UNIFORM_BUFFER_BIT_EXT` specifies `OpTypeStruct` variables in the `Uniform` storage class decorated with `Block`
- `VK_SPIRV_RESOURCE_TYPE_READ_ONLY_STORAGE_BUFFER_BIT_EXT` specifies `OpTypeStruct` variables either in the `StorageBuffer` storage class decorated with `Block` or in the `Uniform` storage class decorated with `BufferBlock`, and decorated with `NonWritable`
- `VK_SPIRV_RESOURCE_TYPE_READ_WRITE_STORAGE_BUFFER_BIT_EXT` specifies `OpTypeStruct` variables either in the `StorageBuffer` storage class decorated with `Block` or in the `Uniform` storage class decorated with `BufferBlock`, but not decorated with `NonWritable`
- `VK_SPIRV_RESOURCE_TYPE_ACCELERATION_STRUCTURE_BIT_EXT` specifies `OpTypeAccelerationStructureKHR` variables
- `VK_SPIRV_RESOURCE_TYPE_TENSOR_BIT_ARM` specifies `OpTypeTensorARM` variables

```
// Provided by VK_EXT_descriptor_heap
typedef VkFlags VkSpirvResourceTypeFlagsEXT;
```

`VkSpirvResourceTypeFlagsEXT` is a bitmask type for setting a mask of zero or more `VkSpirvResourceTypeFlagBitsEXT`.

The possible mapping sources for a shader binding are:

```
// Provided by VK_EXT_descriptor_heap
typedef enum VkDescriptorMappingSourceEXT {
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT = 0,
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT = 1,
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT = 2,
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT = 3,
    VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT = 4,
    VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT = 5,
    VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT = 6,
    VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT = 7,
    // Provided by VK_EXT_descriptor_heap with VK_KHR_ray_tracing_pipeline or
    // VK_NV_ray_tracing
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT = 8,
    // Provided by VK_EXT_descriptor_heap with VK_KHR_ray_tracing_pipeline or
    // VK_NV_ray_tracing
    VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT = 9,
    // Provided by VK_EXT_descriptor_heap with VK_KHR_ray_tracing_pipeline or
    // VK_NV_ray_tracing
    VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT = 10,
} VkDescriptorMappingSourceEXT;
```

- `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT` specifies that the resource will be backed by a descriptor from the heap at a constant index.
- `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT` specifies that the resource will be backed by a descriptor from the heap at an index sourced from push data, added to a constant index.
- `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` specifies that the resource will be backed by a descriptor from the heap at an index sourced from an address in push data, added to a constant index. If the mapping is an array, the array will be mapped to a base offset in indirect memory, and subsequent elements are mapped as offsets to that base.
- `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT` specifies that the resource will be backed by a descriptor from the heap at an index sourced from an address in push data, added to a constant index. If the mapping is an array, each array element will be mapped to a separate index in indirect memory.
- `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT` specifies that the resource will be backed by heap data directly.
- `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT` specifies that the resource will be backed

by push data directly.

- [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#) specifies that the resource will be backed by an address in push data.
- [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#) specifies that the resource will be backed by an address sourced via another address in push data.
- [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#) specifies that the resource will be backed by a descriptor from the heap at an index sourced from shader record data, added to a constant index.
- [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT](#) specifies that the resource will be backed by shader record data directly.
- [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#) specifies that the resource will be backed by an address in shader record data.

The [VkDescriptorMappingSourceDataEXT](#) union is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef union VkDescriptorMappingSourceDataEXT {
    VkDescriptorMappingSourceConstantOffsetEXT    constantOffset;
    VkDescriptorMappingSourcePushIndexEXT         pushIndex;
    VkDescriptorMappingSourceIndirectIndexEXT     indirectIndex;
    VkDescriptorMappingSourceIndirectIndexArrayEXT indirectIndexArray;
    VkDescriptorMappingSourceHeapDataEXT          heapData;
    uint32_t                                     pushDataOffset;
    uint32_t                                     pushAddressOffset;
    VkDescriptorMappingSourceIndirectAddressEXT    indirectAddress;
    VkDescriptorMappingSourceShaderRecordIndexEXT shaderRecordIndex;
    uint32_t                                     shaderRecordDataOffset;
    uint32_t                                     shaderRecordAddressOffset;
} VkDescriptorMappingSourceDataEXT;
```

- [constantOffset](#) is a [VkDescriptorMappingSourceConstantOffsetEXT](#) structure specifying the mapping for resources at a constant byte offset into a heap.
- [pushIndex](#) is a [VkDescriptorMappingSourcePushIndexEXT](#) structure specifying the mapping for resources at an index into a heap source from push data.
- [indirectIndex](#) is a [VkDescriptorMappingSourceIndirectIndexEXT](#) structure specifying the mapping for resources at an index into a heap source from an address in push data.
- [indirectIndexArray](#) is a [VkDescriptorMappingSourceIndirectIndexArrayEXT](#) structure specifying the mapping for resources to an array of indices into a heap source from an address in push data.
- [heapData](#) is a [VkDescriptorMappingSourceHeapDataEXT](#) structure specifying an offset into heap data for a uniform buffer to map to.
- [pushDataOffset](#) an offset into push data for a uniform buffer to map to.
- [pushAddressOffset](#) an offset into push data storing an address for a resource to map to.

- `indirectAddress` is a `VkDescriptorMappingSourceIndirectAddressEXT` structure specifying an address in push data containing another address for a resource to map to.
- `shaderRecordIndex` is a `VkDescriptorMappingSourceShaderRecordIndexEXT` structure specifying the mapping for resources at an index into a heap source from shader record data.
- `shaderRecordDataOffset` an offset into shader record data for a uniform buffer to map to.
- `shaderRecordAddressOffset` an offset into shader record data storing an address for a resource to map to.

The `VkDescriptorMappingSourceConstantOffsetEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceConstantOffsetEXT {
    uint32_t          heapOffset;
    uint32_t          heapArrayStride;
    const VkSamplerCreateInfo* pEmbeddedSampler;
    uint32_t          samplerHeapOffset;
    uint32_t          samplerHeapArrayStride;
} VkDescriptorMappingSourceConstantOffsetEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped resource or sampler.
- `heapArrayStride` is a constant byte stride that multiplies the shader binding and array index.
- `pEmbeddedSampler` is an optional `VkSamplerCreateInfo` structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- `samplerHeapOffset` is used only when mapping a combined image sampler, used in place of `heapOffset` to retrieve the sampler.
- `samplerHeapArrayStride` is used only when mapping a combined image sampler, used in place of `heapArrayStride` to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

$$\text{shaderIndex} = (\text{Binding} - \text{firstBinding}) + \text{arrayIndex}$$

$$\text{offset} = \text{heapOffset} + (\text{shaderIndex} * \text{heapArrayStride})$$

where `Binding` is the binding value in the shader, `arrayIndex` is the index into the array if the shader binding is declared as an array.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

$$\text{offset} = \text{samplerHeapOffset} + (\text{shaderIndex} * \text{samplerHeapArrayStride})$$

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`,

the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourceConstantOffsetEXT-pEmbeddedSampler-11445
If `pEmbeddedSampler` is a valid pointer to a `VkSamplerCreateInfo`, its `borderColor` **must** not be `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- VUID-VkDescriptorMappingSourceConstantOffsetEXT-pEmbeddedSampler-11415
If `pEmbeddedSampler` is a valid pointer to a `VkSamplerCreateInfo`, and there is a `VkDebugUtilsObjectNameInfoEXT` structure in its `pNext` chain, its `objectType` **must** be `VK_OBJECT_TYPE_UNKNOWN`

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourceConstantOffsetEXT-pEmbeddedSampler-parameter
If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid `VkSamplerCreateInfo` structure

The `VkDescriptorMappingSourcePushIndexEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourcePushIndexEXT {
    uint32_t      heapOffset;
    uint32_t      pushOffset;
    uint32_t      heapIndexStride;
    uint32_t      heapArrayStride;
    const VkSamplerCreateInfo* pEmbeddedSampler;
    VkBool32      useCombinedImageSamplerIndex;
    uint32_t      samplerHeapOffset;
    uint32_t      samplerPushOffset;
    uint32_t      samplerHeapIndexStride;
    uint32_t      samplerHeapArrayStride;
} VkDescriptorMappingSourcePushIndexEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped resource or sampler.
- `pushOffset` is an index into push data where an index into the heap for the mapped resource will be retrieved.
- `heapIndexStride` is a constant byte stride that multiplies the index in push data.
- `heapArrayStride` is a constant byte stride that multiplies the shader binding and array index.
- `pEmbeddedSampler` is an optional `VkSamplerCreateInfo` structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- `useCombinedImageSamplerIndex` specifies whether the generated index value will be decoded as

two packed indices if the mapped resource is an `OpTypeSampledImage`.

- `samplerHeapOffset` is used only when mapping a combined image sampler, used in place of `heapOffset` to retrieve the sampler.
- `samplerPushOffset` is used only when mapping a combined image sampler, used in place of `pushOffset` to retrieve the sampler.
- `samplerHeapIndexStride` is used only when mapping a combined image sampler, used in place of `heapIndexStride` to retrieve the sampler.
- `samplerHeapArrayStride` is used only when mapping a combined image sampler, used in place of `heapArrayStride` to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

$$\text{pushIndex} = ((\text{uint32_t}^*)\text{pPushData})[\text{pushOffset}/4]$$
$$\text{shaderIndex} = (\text{Binding} - \text{firstBinding}) + \text{arrayIndex}$$
$$\text{offset} = \text{heapOffset} + (\text{pushIndex} \times \text{heapIndexStride}) + (\text{shaderIndex} \times \text{heapArrayStride})$$

where `Binding` is the binding value in the shader, `arrayIndex` is the index into the array if the shader binding is declared as an array, and `pPushData` is the total set of push data specified by `vkCmdPushDataEXT`.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

$$\text{samplerPushIndex} = ((\text{uint32_t}^*)\text{pPushData})[\text{samplerPushOffset}/4]$$
$$\text{offset} = \text{samplerHeapOffset} + (\text{samplerPushIndex} \times \text{samplerHeapIndexStride}) + (\text{shaderIndex} \times \text{samplerHeapArrayStride})$$

If `useCombinedImageSamplerIndex` is `VK_TRUE`, and the mapped resource is a `OpTypeSampledImage`, `pushIndex` and `samplerPushIndex` in the above equations are instead calculated as

$$\text{pushIndex} = ((\text{uint32_t}^*)\text{pPushData})[\text{pushOffset}/4] \& 0xFFFFF$$
$$\text{samplerPushIndex} = (((\text{uint32_t}^*)\text{pPushData})[\text{pushOffset}/4] \gg 20) \& 0xFFF$$

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`, the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourcePushIndexEXT-pushOffset-11258
`pushOffset` **must** be a multiple of 4
- VUID-VkDescriptorMappingSourcePushIndexEXT-pushOffset-11259
`pushOffset` **must** be less than or equal to `maxPushDataSize` - 4
- VUID-VkDescriptorMappingSourcePushIndexEXT-pEmbeddedSampler-11446
If `pEmbeddedSampler` is a valid pointer to a `VkSamplerCreateInfo`, its `borderColor` **must** not be `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- VUID-VkDescriptorMappingSourcePushIndexEXT-pEmbeddedSampler-11402
If `pEmbeddedSampler` is a valid pointer to a `VkSamplerCreateInfo`, and there is a `VkDebugUtilsObjectNameInfoEXT` structure in its `pNext` chain, its `objectType` **must** be `VK_OBJECT_TYPE_UNKNOWN`

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourcePushIndexEXT-pEmbeddedSampler-parameter
If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid `VkSamplerCreateInfo` structure

The `VkDescriptorMappingSourceIndirectIndexEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceIndirectIndexEXT {
    uint32_t      heapOffset;
    uint32_t      pushOffset;
    uint32_t      addressOffset;
    uint32_t      heapIndexStride;
    uint32_t      heapArrayStride;
    const VkSamplerCreateInfo* pEmbeddedSampler;
    VkBool32      useCombinedImageSamplerIndex;
    uint32_t      samplerHeapOffset;
    uint32_t      samplerPushOffset;
    uint32_t      samplerAddressOffset;
    uint32_t      samplerHeapIndexStride;
    uint32_t      samplerHeapArrayStride;
} VkDescriptorMappingSourceIndirectIndexEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped resource or sampler.
- `pushOffset` is an offset into push data where an the indirect address will be.
- `addressOffset` is an index into the address in push data where an index into the heap for the mapped resource will be retrieved.

- `heapIndexStride` is a constant byte stride that multiplies the index in indirect data.
- `heapArrayStride` is a constant byte stride that multiplies the shader binding and array index.
- `pEmbeddedSampler` is an optional `VkSamplerCreateInfo` structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- `useCombinedImageSamplerIndex` specifies whether the generated index value will be decoded as two packed indices if the mapped resource is an `OpTypeSampledImage`.
- `samplerHeapOffset` is used only when mapping a combined image sampler, used in place of `heapOffset` to retrieve the sampler.
- `samplerPushOffset` is used only when mapping a combined image sampler, used in place of `pushOffset` to retrieve the sampler.
- `samplerAddressOffset` is used only when mapping a combined image sampler, used in place of `addressOffset` to retrieve the sampler.
- `samplerHeapIndexStride` is used only when mapping a combined image sampler, used in place of `heapIndexStride` to retrieve the sampler.
- `samplerHeapArrayStride` is used only when mapping a combined image sampler, used in place of `heapArrayStride` to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

```
uint32_t *indirectAddress = ((VkDeviceAddress*)pPushData)[pushOffset/8]
```

```
indirectIndex = indirectAddress[(addressOffset / 4)]
```

```
shaderIndex = (Binding - firstBinding) + arrayIndex
```

```
offset = heapOffset + (indirectIndex × heapIndexStride) + (shaderIndex × heapArrayStride)
```

where `Binding` is the binding value in the shader, `arrayIndex` is the index into the array if the shader binding is declared as an array, and `pPushData` is the total set of push data specified by `vkCmdPushDataEXT`. The value of the address in push data **must** be a multiple of 4. Index reads through `indirectAddress` are performed as non-volatile uniform buffer reads, and can be synchronized using `VK_ACCESS_2_UNIFORM_READ_BIT`. The value in memory **must** remain static while any shader invocation using this mapping is in flight to avoid a data race.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

```
uint32_t *samplerIndirectAddress = ((VkDeviceAddress*)pPushData)[samplerPushOffset/8]
```

```
samplerIndirectIndex = samplerIndirectAddress[(samplerAddressOffset / 4)]
```

$$\text{offset} = \text{samplerHeapOffset} + (\text{samplerIndirectIndex} \times \text{samplerHeapIndexStride}) + (\text{shaderIndex} \times \text{samplerHeapArrayStride})$$

If `useCombinedImageSamplerIndex` is `VK_TRUE`, and the mapped resource is a `OpTypeSampledImage`, `indirectIndex` and `samplerIndirectIndex` in the above equations are instead calculated as

$$\text{indirectIndex} = \text{indirectAddress}[\text{addressOffset}/4] \& 0xFFFFF$$

$$\text{samplerIndirectIndex} = \text{indirectAddress}[\text{addressOffset}/4] \gg 20 \& 0xFFF$$

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`, the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pushOffset-11260
`pushOffset` **must** be a multiple of 8
- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pushOffset-11261
`pushOffset` **must** be less than or equal to `maxPushDataSize` - 8
- VUID-VkDescriptorMappingSourceIndirectIndexEXT-addressOffset-11262
`addressOffset` **must** be a multiple of 4
- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pEmbeddedSampler-11447
If `pEmbeddedSampler` is a valid pointer to a `VkSamplerCreateInfo`, its `borderColor` **must** not be `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pEmbeddedSampler-11403
If `pEmbeddedSampler` is a valid pointer to a `VkSamplerCreateInfo`, and there is a `VkDebugUtilsObjectNameInfoEXT` structure in its `pNext` chain, its `objectType` **must** be `VK_OBJECT_TYPE_UNKNOWN`

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pEmbeddedSampler-parameter
If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid `VkSamplerCreateInfo` structure

The `VkDescriptorMappingSourceIndirectIndexArrayEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceIndirectIndexArrayEXT {
    uint32_t heapOffset;
    uint32_t pushOffset;
    uint32_t addressOffset;
    uint32_t heapIndexStride;
    const VkSamplerCreateInfo* pEmbeddedSampler;
    VkBool32 useCombinedImageSamplerIndex;
    uint32_t samplerHeapOffset;
    uint32_t samplerPushOffset;
    uint32_t samplerAddressOffset;
    uint32_t samplerHeapIndexStride;
} VkDescriptorMappingSourceIndirectIndexArrayEXT;
```

- **heapOffset** is a constant byte offset added to the heap address for the mapped resource or sampler.
- **pushOffset** is an offset into push data where an the indirect address will be.
- **addressOffset** is an index into the address in push data where an index into the heap for the mapped resource will be retrieved.
- **heapIndexStride** is a constant byte stride that multiplies the index in indirect data.
- **pEmbeddedSampler** is an optional [VkSamplerCreateInfo](#) structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- **useCombinedImageSamplerIndex** specifies whether the generated index value will be decoded as two packed indices if the mapped resource is an [OpTypeSampledImage](#).
- **samplerHeapOffset** is used only when mapping a combined image sampler, used in place of **heapOffset** to retrieve the sampler.
- **samplerPushOffset** is used only when mapping a combined image sampler, used in place of **pushOffset** to retrieve the sampler.
- **samplerAddressOffset** is used only when mapping a combined image sampler, used in place of **addressOffset** to retrieve the sampler.
- **samplerHeapIndexStride** is used only when mapping a combined image sampler, used in place of **heapIndexStride** to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

```
uint32_t *indirectAddress = ((VkDeviceAddress*)pPushData)[pushOffset/8]
```

```
shaderIndex = (Binding - firstBinding) + arrayIndex
```

```
indirectIndex = indirectAddress[(addressOffset / 4) + shaderIndex]
```

$$\text{offset} = \text{heapOffset} + (\text{indirectIndex} \times \text{heapIndexStride})$$

where `Binding` is the binding value in the shader, `arrayIndex` is the index into the array if the shader binding is declared as an array, and `pPushData` is the total set of push data specified by [vkCmdPushDataEXT](#). The value of the address in push data **must** be a multiple of 4. Index reads through `indirectAddress` are performed as non-volatile uniform buffer reads, and can be synchronized using [VK_ACCESS_2_UNIFORM_READ_BIT](#). The value in memory **must** remain static while any shader invocation using this mapping is in flight to avoid a data race.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

$$\text{uint32_t} * \text{samplerIndirectAddress} = ((\text{VkDeviceAddress} *) \text{pPushData})[\text{samplerPushOffset}/8]$$

$$\text{samplerIndirectIndex} = \text{samplerAddr}[(\text{samplerAddressOffset} / 4) + \text{shaderIndex}]$$

$$\text{offset} = \text{samplerHeapOffset} + (\text{samplerIndirectIndex} \times \text{samplerHeapIndexStride})$$

If `useCombinedImageSamplerIndex` is [VK_TRUE](#), and the mapped resource is a `OpTypeSampledImage`, `indirectIndex` and `samplerIndirectIndex` in the above equations are instead calculated as

$$\text{indirectIndex} = \text{indirectAddress}[\text{addressOffset}/4 + \text{shaderIndex}] \& 0\text{FFFFFF}$$

$$\text{samplerIndirectIndex} = \text{indirectAddress}[\text{addressOffset}/4 + \text{shaderIndex}] \gg 20) \& 0\text{FFF}$$

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`, the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pushOffset-11359
`pushOffset` **must** be a multiple of 8
- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pushOffset-11360
`pushOffset` **must** be less than or equal to `maxPushDataSize` - 8
- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-addressOffset-11361
`addressOffset` **must** be a multiple of 4
- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pEmbeddedSampler-11448
If `pEmbeddedSampler` is a valid pointer to a [VkSamplerCreateInfo](#), its `borderColor` **must** not be [VK_BORDER_COLOR_FLOAT_CUSTOM_EXT](#) or [VK_BORDER_COLOR_INT_CUSTOM_EXT](#)
- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pEmbeddedSampler-11404
If `pEmbeddedSampler` is a valid pointer to a [VkSamplerCreateInfo](#), and there is a [VkDebugUtilsObjectNameInfoEXT](#) structure in its `pNext` chain, its `objectType` **must** be

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pEmbeddedSampler-parameter

If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid `VkSamplerCreateInfo` structure

The `VkDescriptorMappingSourceHeapDataEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceHeapDataEXT {
    uint32_t    heapOffset;
    uint32_t    pushOffset;
} VkDescriptorMappingSourceHeapDataEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped buffer.
- `pushOffset` is an index into push data where an additional offset into the heap for the mapped resource will be retrieved.

Uniform buffers using this mapping will be backed directly by data in the heap. Accessing data in the uniform buffer at an offset of `shaderOffset` in the shader will access heap data at an offset equal to

$$\text{offset} = \text{shaderOffset} + \text{heapOffset} + ((\text{uint32_t}^*)\text{pPushData})[\text{pushOffset}/4]$$

where `pPushData` is the total set of push data specified by `vkCmdPushDataEXT`. Shader reads through the heap mapped in this way are performed according to the mapped resource.

Valid Usage

- VUID-VkDescriptorMappingSourceHeapDataEXT-heapOffset-11263
`heapOffset` **must** be a multiple of `minUniformBufferOffsetAlignment`
- VUID-VkDescriptorMappingSourceHeapDataEXT-pushOffset-11264
`pushOffset` **must** be a multiple of 4
- VUID-VkDescriptorMappingSourceHeapDataEXT-pushOffset-11265
`pushOffset` **must** be less than or equal to `maxPushDataSize - 4`

The `VkDescriptorMappingSourceIndirectAddressEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceIndirectAddressEXT {
    uint32_t    pushOffset;
    uint32_t    addressOffset;
} VkDescriptorMappingSourceIndirectAddressEXT;
```

- **pushOffset** is a byte offset into push data where an indirect address containing the address for the mapped resource will be retrieved.
- **addressOffset** is a byte offset into the indirect address where the address for the mapped resource will be retrieved.

Accessing data via the mapped resource in the shader will access data backing the address specified in the indirect address at the supplied offset:

```
indirectAddress = ((VkDeviceAddress*)pPushData)[pushOffset/8]
```

```
resourceAddress = ((VkDeviceAddress*)indirectAddress)[addressOffset/8]
```

where pPushData is the total set of push data specified by [vkCmdPushDataEXT](#). Reads through indirectAddress are performed as non-volatile uniform buffer reads, and can be synchronized using [VK_ACCESS_2_UNIFORM_READ_BIT](#). Shader reads through resourceAddress are performed according to the mapped resource. If the shader resource is an acceleration structure, the address **must** be a valid acceleration structure address.

Valid Usage

- VUID-VkDescriptorMappingSourceIndirectAddressEXT-pushOffset-11266
pushOffset must be a multiple of 8
- VUID-VkDescriptorMappingSourceIndirectAddressEXT-pushOffset-11267
pushOffset must be less than or equal to **maxPushDataSize** - 8
- VUID-VkDescriptorMappingSourceIndirectAddressEXT-addressOffset-11268
addressOffset must be a multiple of 8

The [VkDescriptorMappingSourceShaderRecordIndexEXT](#) structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceShaderRecordIndexEXT {
    uint32_t heapOffset;
    uint32_t shaderRecordOffset;
    uint32_t heapIndexStride;
    uint32_t heapArrayStride;
    const VkSamplerCreateInfo* pEmbeddedSampler;
    VkBool32 useCombinedImageSamplerIndex;
    uint32_t samplerHeapOffset;
    uint32_t samplerShaderRecordOffset;
    uint32_t samplerHeapIndexStride;
    uint32_t samplerHeapArrayStride;
} VkDescriptorMappingSourceShaderRecordIndexEXT;
```

- **heapOffset** is a constant byte offset added to the heap address for the mapped resource or sampler.
- **shaderRecordOffset** is an index into shader record data where an index into the heap for the mapped resource will be retrieved.
- **heapIndexStride** is a constant byte stride that multiplies the index in shader record data.
- **heapArrayStride** is a constant byte stride that multiplies the shader binding and array index.
- **pEmbeddedSampler** is an optional [VkSamplerCreateInfo](#) structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- **useCombinedImageSamplerIndex** specifies whether the generated index value will be decoded as two packed indices if the mapped resource is an [OpTypeSampledImage](#).
- **samplerHeapOffset** is used only when mapping a combined image sampler, used in place of **heapOffset** to retrieve the sampler.
- **samplerShaderRecordOffset** is used only when mapping a combined image sampler, used in place of **shaderRecordOffset** to retrieve the sampler.
- **samplerHeapIndexStride** is used only when mapping a combined image sampler, used in place of **heapIndexStride** to retrieve the sampler.
- **samplerHeapArrayStride** is used only when mapping a combined image sampler, used in place of **heapArrayStride** to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

$$\text{shaderRecordIndex} = ((\text{uint32_t}^*)\text{pShaderRecordData})[\text{shaderRecordOffset}/4]$$

$$\text{shaderIndex} = (\text{Binding} - \text{firstBinding}) + \text{arrayIndex}$$

$$\text{offset} = \text{heapOffset} + (\text{shaderRecordIndex} \times \text{heapIndexStride}) + (\text{shaderIndex} \times \text{heapArrayStride})$$

where Binding is the binding value in the shader, arrayIndex is the index into the array if the shader binding is declared as an array, and pShaderRecordData is the set of shader record data accessible to the shader.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

$$\text{samplerShaderRecordIndex} = ((\text{uint32_t}^*)\text{pShaderRecordData})[\text{samplerShaderRecordOffset}/4]$$
$$\text{offset} = \text{samplerHeapOffset} + (\text{samplerShaderRecordIndex} \times \text{samplerHeapIndexStride}) + (\text{shaderIndex} \times \text{samplerHeapArrayStride})$$

If `useCombinedImageSamplerIndex` is `VK_TRUE`, and the mapped resource is a `OpTypeSampledImage`, `shaderRecordIndex` and `samplerShaderRecordIndex` in the above equations are instead calculated as

$$\text{shaderRecordIndex} = ((\text{uint32_t}^*)\text{pShaderRecordData})[\text{shaderRecordOffset}/4] \& 0xFFFF$$
$$\text{samplerShaderRecordIndex} = (((\text{uint32_t}^*)\text{pShaderRecordData})[\text{shaderRecordOffset}/4] \gg 20) \& 0xFFF$$

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`, the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-shaderRecordOffset-11269
`shaderRecordOffset` **must** be a multiple of 4
- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-shaderRecordOffset-11270
`shaderRecordOffset` **must** be less than or equal to `maxShaderGroupStride - 4`
- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-pEmbeddedSampler-11449
If `pEmbeddedSampler` is a valid pointer to a `VkSamplerCreateInfo`, its `borderColor` **must** not be `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-pEmbeddedSampler-11405
If `pEmbeddedSampler` is a valid pointer to a `VkSamplerCreateInfo`, and there is a `VkDebugUtilsObjectNameInfoEXT` structure in its `pNext` chain, its `objectType` **must** be `VK_OBJECT_TYPE_UNKNOWN`

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-pEmbeddedSampler-parameter
If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid

16.4. Packing descriptors more tightly

For simplicity, descriptor sizes are advertised and treated by default as equal to the advertised descriptor size limits:

- `samplerDescriptorSize`
- `bufferDescriptorSize`
- `imageDescriptorSize`
- `tensorDescriptorSize`

However, for some specific use cases it is useful to be able to pack specific descriptors into memory more tightly than this when the implementation allows for this.

To query the size of heap descriptor for a specific `VkDescriptorType`, call:

```
// Provided by VK_EXT_descriptor_heap
VkDeviceSize vkGetPhysicalDeviceDescriptorSizeEXT(
    VkPhysicalDevice      physicalDevice,
    VkDescriptorType      descriptorType);
```

- `physicalDevice` is the physical device from which to query the descriptor sizes.
- `descriptorType` is a `VkDescriptorType` specifying the type of heap descriptor to query the size for.

The return value of this function will be a `VkDeviceSize` indicating the size in bytes (N) of a heap descriptor with a type equal to `descriptorType`. When a descriptor of this type is written by `vkWriteResourceDescriptorsEXT` or `vkWriteSamplerDescriptorsEXT`, only the first N bytes are written; the rest will not be accessed and **can** be safely discarded when copying descriptors around. Additionally, those first N bytes are the only bytes that will be accessed when the descriptor is accessed in the shader. N will never be larger than the applicable limits in `VkPhysicalDeviceDescriptorHeapTensorPropertiesARM` or `VkPhysicalDeviceDescriptorHeapPropertiesEXT`.

NOTE

Values returned by this function have other requirements, so for example may not be power-of-two values.

NOTE

This command is not intended for general use, and is for tools that already take advantage of tighter packing with other similar features (e.g. `VK_EXT_descriptor_buffer`) to optimize accesses in some cases. Applications can safely ignore this function and are advised to do so, to avoid depending on non-portable packing.

Valid Usage

- VUID-vkGetPhysicalDeviceDescriptorSizeEXT-type-11362

type must be one of [VK_DESCRIPTOR_TYPE_SAMPLER](#), [VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER](#), [VK_DESCRIPTOR_TYPE_STORAGE_BUFFER](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), [VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER](#), [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#), [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR](#), [VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV](#), [VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV](#), [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#)

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDescriptorSizeEXT-physicalDevice-parameter
physicalDevice must be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceDescriptorSizeEXT-descriptorType-parameter
descriptorType must be a valid [VkDescriptorType](#) value

Chapter 17. Descriptor Sets

A descriptor set object is an opaque object containing storage for a set of descriptors, where the types and number of descriptors is defined by a descriptor set layout. The layout object **may** be used to define the association of each descriptor binding with memory or other implementation resources. The layout is used both for determining the resources that need to be associated with the descriptor set, and determining the interface between shader stages and shader resources.

17.1. Descriptor Set Layout

A descriptor set layout object is defined by an array of zero or more descriptor bindings. Each individual descriptor binding is specified by a descriptor type, a count (array size) of the number of descriptors in the binding, a set of shader stages that **can** access the binding, and (if using immutable samplers) an array of sampler descriptors.

Descriptor set layout objects are represented by `VkDescriptorSetLayout` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorSetLayout)
```

To create descriptor set layout objects, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateDescriptorSetLayout(
    VkDevice                device,
    const VkDescriptorSetLayoutCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDescriptorSetLayout* pSetLayout);
```

- `device` is the logical device that creates the descriptor set layout.
- `pCreateInfo` is a pointer to a `VkDescriptorSetLayoutCreateInfo` structure specifying the state of the descriptor set layout object.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pSetLayout` is a pointer to a `VkDescriptorSetLayout` handle in which the resulting descriptor set layout object is returned.

Valid Usage

- VUID-vkCreateDescriptorSetLayout-support-09582
If the descriptor layout exceeds the limits reported through the [physical device limits](#), then `vkGetDescriptorSetLayoutSupport` **must** have returned `VkDescriptorSetLayoutSupport` with `support` equal to `VK_TRUE` for `pCreateInfo`

Valid Usage (Implicit)

- VUID-vkCreateDescriptorSetLayout-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreateDescriptorSetLayout-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkDescriptorSetLayoutCreateInfo](#) structure
- VUID-vkCreateDescriptorSetLayout-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateDescriptorSetLayout-pSetLayout-parameter
pSetLayout **must** be a valid pointer to a [VkDescriptorSetLayout](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Information about the descriptor set layout is passed in a [VkDescriptorSetLayoutCreateInfo](#) structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetLayoutCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkDescriptorSetLayoutCreateFlags flags;
    uint32_t                 bindingCount;
    const VkDescriptorSetLayoutBinding* pBindings;
} VkDescriptorSetLayoutCreateInfo;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkDescriptorSetLayoutCreateFlagBits](#) specifying options for descriptor set layout creation.
- **bindingCount** is the number of elements in **pBindings**.
- **pBindings** is a pointer to an array of [VkDescriptorSetLayoutBinding](#) structures.

Valid Usage

- VUID-VkDescriptorSetLayoutCreateInfo-binding-00279
If the `perStageDescriptorSet` feature is not enabled, or `flags` does not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV`, then the `VkDescriptorSetLayoutBinding::binding` members of the elements of the `pBindings` array **must** each have different values
- VUID-VkDescriptorSetLayoutCreateInfo-flags-10354
If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`, and the `VK_KHR_push_descriptor` extension is not enabled, `pushDescriptor` **must** be enabled
- VUID-VkDescriptorSetLayoutCreateInfo-flags-00280
If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`, then all elements of `pBindings` **must** not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`
- VUID-VkDescriptorSetLayoutCreateInfo-flags-02208
If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`, then all elements of `pBindings` **must** not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`
- VUID-VkDescriptorSetLayoutCreateInfo-flags-00281
If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`, then the total number of elements of all bindings **must** be less than or equal to `VkPhysicalDevicePushDescriptorProperties::maxPushDescriptors`
- VUID-VkDescriptorSetLayoutCreateInfo-flags-04590
If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`, `flags` **must** not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`
- VUID-VkDescriptorSetLayoutCreateInfo-flags-04591
If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`, `pBindings` **must** not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkDescriptorSetLayoutCreateInfo-flags-03000
If any binding has the `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` bit set, `flags` **must** include `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`
- VUID-VkDescriptorSetLayoutCreateInfo-descriptorType-03001
If any binding has the `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` bit set, then all bindings **must** not have `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`
- VUID-VkDescriptorSetLayoutCreateInfo-flags-04592
If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, `flags` **must** not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`
- VUID-VkDescriptorSetLayoutCreateInfo-pBindings-07303
If any element `pBindings[i]` has a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`,

then the `pNext` chain **must** include a `VkMutableDescriptorTypeCreateInfoEXT` structure, and `mutableDescriptorTypeListCount` **must** be greater than i

- VUID-VkDescriptorSetLayoutCreateInfo-descriptorType-04594

If a binding has a `descriptorType` value of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, then `pImmutableSamplers` **must** be NULL

- VUID-VkDescriptorSetLayoutCreateInfo-mutableDescriptorType-04595

If `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` is not enabled, `pBindings` **must** not contain a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-04596

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`, `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` **must** be enabled

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08000

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, then all elements of `pBindings` **must** not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08001

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, `flags` **must** also contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08002

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, then `flags` **must** not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08003

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, then `flags` **must** not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`

- VUID-VkDescriptorSetLayoutCreateInfo-flags-09463

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV`, then `perStageDescriptorSet` **must** be enabled

- VUID-VkDescriptorSetLayoutCreateInfo-flags-09464

If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV`, then there **must** not be any two elements of the `pBindings` array with the same `VkDescriptorSetLayoutBinding::binding` value and their `VkDescriptorSetLayoutBinding::stageFlags` containing the same bit

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutCreateInfo-sType-sType

sType **must** be [VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO](#)

- [VUID-VkDescriptorSetLayoutCreateInfo-pNext-pNext](#)

Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkDescriptorSetLayoutBindingFlagsCreateInfo](#) or [VkMutableDescriptorTypeCreateInfoEXT](#)

- [VUID-VkDescriptorSetLayoutCreateInfo-sType-unique](#)

The **sType** value of each structure in the **pNext** chain **must** be unique

- [VUID-VkDescriptorSetLayoutCreateInfo-flags-parameter](#)

flags **must** be a valid combination of [VkDescriptorSetLayoutCreateFlagBits](#) values

- [VUID-VkDescriptorSetLayoutCreateInfo-pBindings-parameter](#)

If **bindingCount** is not 0, **pBindings** **must** be a valid pointer to an array of **bindingCount** valid [VkDescriptorSetLayoutBinding](#) structures

If the **pNext** chain of a [VkDescriptorSetLayoutCreateInfo](#) or [VkDescriptorPoolCreateInfo](#) structure includes a [VkMutableDescriptorTypeCreateInfoEXT](#) structure, then that structure specifies information about the possible descriptor types for mutable descriptor types.

The [VkMutableDescriptorTypeCreateInfoEXT](#) structure is defined as:

WARNING

This functionality is superseded by [VK_EXT_descriptor_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkMutableDescriptorTypeCreateInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 mutableDescriptorTypeListCount;
    const VkMutableDescriptorTypeListEXT* pMutableDescriptorTypeLists;
} VkMutableDescriptorTypeCreateInfoEXT;
```

```
// Provided by VK_VALVE_mutable_descriptor_type
// Equivalent to VkMutableDescriptorTypeCreateInfoEXT
typedef VkMutableDescriptorTypeCreateInfoEXT VkMutableDescriptorTypeCreateInfoVALVE;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **mutableDescriptorTypeListCount** is the number of elements in **pMutableDescriptorTypeLists**.
- **pMutableDescriptorTypeLists** is a pointer to an array of [VkMutableDescriptorTypeListEXT](#) structures.

If **mutableDescriptorTypeListCount** is zero or if this structure is not included in the **pNext** chain, the [VkMutableDescriptorTypeListEXT](#) for each element is considered to be zero or **NULL** for each member. Otherwise, the descriptor set layout binding at [VkDescriptorSetLayoutCreateInfo](#)

`::pBindings[i]` uses the descriptor type lists in `VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists[i]`.

Valid Usage (Implicit)

- VUID-VkMutableDescriptorTypeCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MUTABLE_DESCRIPTOR_TYPE_CREATE_INFO_EXT`
- VUID-VkMutableDescriptorTypeCreateInfoEXT-pMutableDescriptorTypeLists-parameter
If `mutableDescriptorTypeListCount` is not 0, `pMutableDescriptorTypeLists` **must** be a valid pointer to an array of `mutableDescriptorTypeListCount` valid `VkMutableDescriptorTypeListEXT` structures

Structure Chaining

Extends the structures

- `VkDescriptorPoolCreateInfo`
- `VkDescriptorSetLayoutCreateInfo`

The list of potential descriptor types a given mutable descriptor **can** mutate to is passed in a `VkMutableDescriptorTypeListEXT` structure.

The `VkMutableDescriptorTypeListEXT` structure is defined as:

WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkMutableDescriptorTypeListEXT {
    uint32_t      descriptorTypeCount;
    const VkDescriptorType* pDescriptorTypes;
} VkMutableDescriptorTypeListEXT;
```

```
// Provided by VK_VALVE_mutable_descriptor_type
// Equivalent to VkMutableDescriptorTypeListEXT
typedef VkMutableDescriptorTypeListEXT VkMutableDescriptorTypeListVALVE;
```

- `descriptorTypeCount` is the number of elements in `pDescriptorTypes`.
- `pDescriptorTypes` is `NULL` or a pointer to an array of `descriptorTypeCount` `VkDescriptorType` values defining which descriptor types a given binding may mutate to.

Valid Usage

- VUID-VkMutableDescriptorTypeListEXT-descriptorTypeCount-04597
`descriptorTypeCount` **must** not be `0` if the corresponding binding is of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04598
`pDescriptorTypes` **must** be a valid pointer to an array of `descriptorTypeCount` valid, unique `VkDescriptorType` values if the given binding is of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` type
- VUID-VkMutableDescriptorTypeListEXT-descriptorTypeCount-04599
`descriptorTypeCount` **must** be `0` if the corresponding binding is not of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04600
`pDescriptorTypes` **must** not contain `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04601
`pDescriptorTypes` **must** not contain `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04602
`pDescriptorTypes` **must** not contain `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04603
`pDescriptorTypes` **must** not contain `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-09696
`pDescriptorTypes` **must** not contain `VK_DESCRIPTOR_TYPE_TENSOR_ARM`

Valid Usage (Implicit)

- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-parameter
If `descriptorTypeCount` is not `0`, `pDescriptorTypes` **must** be a valid pointer to an array of `descriptorTypeCount` valid `VkDescriptorType` values

Bits which **can** be set in `VkDescriptorSetLayoutCreateInfo::flags`, specifying options for descriptor set layout, are:

```

// Provided by VK_VERSION_1_0
typedef enum VkDescriptorSetLayoutCreateFlagBits {
    // Provided by VK_VERSION_1_2
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT = 0x00000002,
    // Provided by VK_VERSION_1_4
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT = 0x00000001,
    // Provided by VK_EXT_descriptor_buffer
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT = 0x00000010,
    // Provided by VK_EXT_descriptor_buffer
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT = 0x00000020,
    // Provided by VK_NV_device_generated_commands_compute
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_INDIRECT_BINDABLE_BIT_NV = 0x00000080,
    // Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT = 0x00000004,
    // Provided by VK_NV_per_stage_descriptor_set
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV = 0x00000040,
    // Provided by VK_KHR_push_descriptor
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR =
VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT_EXT =
VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT,
    // Provided by VK_VALVE_mutable_descriptor_type
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_VALVE =
VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT,
} VkDescriptorSetLayoutCreateFlagBits;

```

- [VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT](#) specifies that descriptor sets **must** not be allocated using this layout, and descriptors are instead pushed by [vkCmdPushDescriptorSet](#).
- [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) specifies that descriptor sets using this layout **must** be allocated from a descriptor pool created with the [VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT](#) bit set. Descriptor set layouts created with this bit set have alternate limits for the maximum number of descriptors per-stage and per-pipeline layout. The non-UpdateAfterBind limits only count descriptors in sets created without this flag. The UpdateAfterBind limits count all descriptors, but the limits **may** be higher than the non-UpdateAfterBind limits.
- [VK_DESCRIPTOR_SET_LAYOUT_CREATE_INDIRECT_BINDABLE_BIT_NV](#) specifies that descriptor sets using this layout allows them to be bound with compute pipelines that are created with [VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV](#) flag set to be used in [Device-Generated Commands](#).
- [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#) specifies that this layout **must** only be used with descriptor buffers.
- [VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT](#) specifies that this is a layout only containing immutable samplers that **can** be bound by [vkCmdBindDescriptorBufferEmbeddedSamplersEXT](#). Unlike normal immutable samplers, embedded immutable samplers do not require the application to provide them in a descriptor

buffer.

- [VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT](#) specifies that descriptor sets using this layout **must** be allocated from a descriptor pool created with the [VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT](#) bit set. Descriptor set layouts created with this bit have no expressible limit for maximum number of descriptors per-stage. Host descriptor sets are limited only by available host memory, but **may** be limited for implementation specific reasons. Implementations **may** limit the number of supported descriptors to UpdateAfterBind limits or non-UpdateAfterBind limits, whichever is larger.
- [VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV](#) specifies that binding numbers in descriptor sets using this layout **may** represent different resources and/or types of resources in each stage.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorSetLayoutCreateFlags;
```

[VkDescriptorSetLayoutCreateFlags](#) is a bitmask type for setting a mask of zero or more [VkDescriptorSetLayoutCreateFlagBits](#).

The [VkDescriptorSetLayoutBinding](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetLayoutBinding {
    uint32_t          binding;
    VkDescriptorType   descriptorType;
    uint32_t          descriptorCount;
    VkShaderStageFlags stageFlags;
    const VkSampler*   pImmutableSamplers;
} VkDescriptorSetLayoutBinding;
```

- [binding](#) is the binding number of this entry and corresponds to a resource of the same binding number in the shader stages.
- [descriptorType](#) is a [VkDescriptorType](#) specifying which type of resource descriptors are used for this binding.
- [descriptorCount](#) is the number of descriptors contained in the binding, accessed in a shader as an array, except if [descriptorType](#) is [VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#) in which case [descriptorCount](#) is the size in bytes of the inline uniform block. If [descriptorCount](#) is zero this binding entry is reserved and the resource **must** not be accessed from any stage via this binding within any pipeline using the set layout.
- [stageFlags](#) member is a bitmask of [VkShaderStageFlagBits](#) specifying which pipeline shader stages **can** access a resource for this binding. [VK_SHADER_STAGE_ALL](#) is a shorthand specifying that all defined shader stages, including any additional stages defined by extensions, **can** access the resource.

If a shader stage is not included in [stageFlags](#), then a resource **must** not be accessed from that stage via this binding within any pipeline using the set layout. Other than input attachments

which are limited to the fragment shader, there are no limitations on what combinations of stages **can** use a descriptor binding, and in particular a binding **can** be used by both graphics stages and the compute stage.

- `pImmutableSamplers` affects initialization of samplers. If `descriptorType` specifies a `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` type descriptor, then `pImmutableSamplers` **can** be used to initialize a set of *immutable samplers*. Immutable samplers are permanently bound into the set layout and **must** not be changed; updating a `VK_DESCRIPTOR_TYPE_SAMPLER` descriptor with immutable samplers is not allowed and updates to a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor with immutable samplers does not modify the samplers (the image views are updated, but the sampler updates are ignored). If `pImmutableSamplers` is not `NULL`, then it is a pointer to an array of sampler handles that will be copied into the set layout and used for the corresponding binding. Only the sampler handles are copied; the sampler objects **must** not be destroyed before the final use of the set layout and any descriptor pools and sets created using it. If `pImmutableSamplers` is `NULL`, then the sampler slots are dynamic and sampler handles **must** be bound into descriptor sets using this layout. If `descriptorType` is not one of these descriptor types, then `pImmutableSamplers` is ignored.

The above layout definition allows the descriptor bindings to be specified sparsely such that not all binding numbers between 0 and the maximum binding number need to be specified in the `pBindings` array. Bindings that are not specified have a `descriptorCount` and `stageFlags` of zero, and the value of `descriptorType` is undefined. However, all binding numbers between 0 and the maximum binding number in the `VkDescriptorSetLayoutCreateInfo::pBindings` array **may** consume memory in the descriptor set layout even if not all descriptor bindings are used, though it **should** not consume additional memory from the descriptor pool.

NOTE

The maximum binding number specified **should** be as compact as possible to avoid wasted memory.

Valid Usage

- VUID-VkDescriptorSetLayoutBinding-descriptorType-00282
If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `descriptorCount` is not 0 and `pImmutableSamplers` is not `NULL`, `pImmutableSamplers` **must** be a valid pointer to an array of `descriptorCount` valid `VkSampler` handles
- VUID-VkDescriptorSetLayoutBinding-descriptorType-12200
If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `descriptorCount` is not 0 and `pImmutableSamplers` is not `NULL`, either each element of `pImmutableSamplers` **must** be a `VkSampler` that enables `sampler Y'CBCR conversion` or none of them enable `sampler Y'CBCR conversion`
- VUID-VkDescriptorSetLayoutBinding-descriptorType-12215
If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER`, each element of `pImmutableSamplers` **must** not be a `VkSampler` object that enables `sampler Y'CBCR conversion`
- VUID-VkDescriptorSetLayoutBinding-descriptorType-04604

If the `inlineUniformBlock` feature is not enabled, `descriptorType` **must** not be `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`

- VUID-VkDescriptorSetLayoutBinding-descriptorType-02209

If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` **must** be a multiple of 4

- VUID-VkDescriptorSetLayoutBinding-descriptorType-08004

If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` and `VkDescriptorSetLayoutCreateInfo::flags` does not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` then `descriptorCount` **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxInlineUniformBlockSize`

- VUID-VkDescriptorSetLayoutBinding-flags-08005

If `VkDescriptorSetLayoutCreateInfo::flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, `descriptorType` **must** be `VK_DESCRIPTOR_TYPE_SAMPLER`

- VUID-VkDescriptorSetLayoutBinding-flags-08006

If `VkDescriptorSetLayoutCreateInfo::flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, `descriptorCount` **must** be less than or equal to 1

- VUID-VkDescriptorSetLayoutBinding-flags-08007

If `VkDescriptorSetLayoutCreateInfo::flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, and `descriptorCount` is equal to 1, `pImmutableSamplers` **must** not be `NULL`

- VUID-VkDescriptorSetLayoutBinding-descriptorCount-09465

If `descriptorCount` is not 0, `stageFlags` **must** be `VK_SHADER_STAGE_ALL` or a valid combination of other `VkShaderStageFlagBits` values

- VUID-VkDescriptorSetLayoutBinding-descriptorType-01510

If `descriptorType` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` and `descriptorCount` is not 0, then `stageFlags` **must** be 0 or `VK_SHADER_STAGE_FRAGMENT_BIT`

- VUID-VkDescriptorSetLayoutBinding-pImmutableSamplers-04009

The sampler objects indicated by `pImmutableSamplers` **must** not have a `borderColor` with one of the values `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`

- VUID-VkDescriptorSetLayoutBinding-descriptorType-04605

If `descriptorType` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, then `pImmutableSamplers` **must** be `NULL`

- VUID-VkDescriptorSetLayoutBinding-flags-09466

If `VkDescriptorSetLayoutCreateInfo::flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV`, and `descriptorCount` is not 0, then `stageFlags` **must** be a valid combination of `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`, `VK_SHADER_STAGE_GEOMETRY_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT` and `VK_SHADER_STAGE_COMPUTE_BIT` values

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutBinding-descriptorType-parameter
`descriptorType` **must** be a valid `VkDescriptorType` value

If the `pNext` chain of a `VkDescriptorSetLayoutCreateInfo` structure includes a `VkDescriptorSetLayoutBindingFlagsCreateInfo` structure, then that structure includes an array of flags, one for each descriptor set layout binding.

The `VkDescriptorSetLayoutBindingFlagsCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetLayoutBindingFlagsCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           bindingCount;
    const VkDescriptorBindingFlags* pBindingFlags;
} VkDescriptorSetLayoutBindingFlagsCreateInfo;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorSetLayoutBindingFlagsCreateInfo
typedef VkDescriptorSetLayoutBindingFlagsCreateInfo
VkDescriptorSetLayoutBindingFlagsCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bindingCount` is zero or the number of elements in `pBindingFlags`.
- `pBindingFlags` is a pointer to an array of `VkDescriptorBindingFlags` bitfields, one for each descriptor set layout binding.

If `bindingCount` is zero or if this structure is not included in the `pNext` chain, the `VkDescriptorBindingFlags` for each descriptor set layout binding is considered to be zero. Otherwise, the descriptor set layout binding at `VkDescriptorSetLayoutCreateInfo::pBindings[i]` uses the flags in `pBindingFlags[i]`.

Valid Usage

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-bindingCount-03002
If `bindingCount` is not zero, `bindingCount` **must** equal `VkDescriptorSetLayoutCreateInfo::bindingCount`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-flags-03003
If `VkDescriptorSetLayoutCreateInfo::flags` includes `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`, then all elements of `pBindingFlags` **must** not include `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`,

VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT,
VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT

or

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-03004
If an element of `pBindingFlags` includes `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, then it **must** be the element with the highest `binding` number
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUniformBufferUpdateAfterBind-03005
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUniformBufferUpdateAfterBind` is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingSampledImageUpdateAfterBind-03006
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingSampledImageUpdateAfterBind` is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageImageUpdateAfterBind-03007
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageImageUpdateAfterBind` is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageBufferUpdateAfterBind-03008
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageBufferUpdateAfterBind` is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUniformTexelBufferUpdateAfterBind-03009
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUniformTexelBufferUpdateAfterBind` is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageTexelBufferUpdateAfterBind-03010
If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageTexelBufferUpdateAfterBind` is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-

descriptorBindingInlineUniformBlockUpdateAfterBind-02211

If `VkPhysicalDeviceInlineUniformBlockFeatures::descriptorBindingInlineUniformBlockUpdateAfterBind` is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingAccelerationStructureUpdateAfterBind-03570

If `VkPhysicalDeviceAccelerationStructureFeaturesKHR::descriptorBindingAccelerationStructureUpdateAfterBind` is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` or `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-None-03011

All bindings with descriptor type `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUpdateUnusedWhilePending-03012

If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUpdateUnusedWhilePending` is not enabled, all elements of `pBindingFlags` **must** not include `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingPartiallyBound-03013

If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingPartiallyBound` is not enabled, all elements of `pBindingFlags` **must** not include `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingVariableDescriptorCount-03014

If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingVariableDescriptorCount` is not enabled, all elements of `pBindingFlags` **must** not include `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-03015

If an element of `pBindingFlags` includes `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, that element's `descriptorType` **must** not be `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageTensorUpdateAfterBind-09697

If `VkPhysicalDeviceTensorFeaturesARM::descriptorBindingStorageTensorUpdateAfterBind` is not enabled, all bindings with descriptor type `VK_DESCRIPTOR_TYPE_TENSOR_ARM` **must** not use `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-sType-sType **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_BINDING_FLAGS_CREATE_INFO
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-parameter
If **bindingCount** is not 0, **pBindingFlags** **must** be a valid pointer to an array of **bindingCount** valid combinations of **VkDescriptorBindingFlagBits** values

Structure Chaining

Extends the structure

- **VkDescriptorSetLayoutCreateInfo**

Bits which **can** be set in each element of **VkDescriptorSetLayoutBindingFlagsCreateInfo::pBindingFlags**, specifying options for the corresponding descriptor set layout binding, are:

```
// Provided by VK_VERSION_1_2
typedef enum VkDescriptorBindingFlagBits {
    VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT = 0x00000001,
    VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT = 0x00000002,
    VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT = 0x00000004,
    VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT = 0x00000008,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT_EXT =
VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT_EXT =
VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT_EXT =
VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT_EXT =
VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT,
} VkDescriptorBindingFlagBits;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorBindingFlagBits
typedef VkDescriptorBindingFlagBits VkDescriptorBindingFlagBitsEXT;
```

- **VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT** specifies that if descriptors in this binding are updated between when the descriptor set is bound in a command buffer and when that command buffer is submitted to a queue, then the submission will use the most recently set

descriptors for this binding and the updates do not invalidate the command buffer. Descriptor bindings created with this flag are also partially exempt from the external synchronization requirement in [vkUpdateDescriptorSetWithTemplateKHR](#) and [vkUpdateDescriptorSets](#). Multiple descriptors with this flag set **can** be updated concurrently in different threads, though the same descriptor **must** not be updated concurrently by two threads. Descriptors with this flag set **can** be updated concurrently with the set being bound to a command buffer in another thread, but not concurrently with the set being reset or freed.

- [VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT](#) specifies that descriptors in this binding that are not *dynamically used* need not contain valid descriptors at the time the descriptors are consumed. A descriptor is dynamically used if any shader invocation executes an instruction that performs any memory access using the descriptor. If a descriptor is not dynamically used, any resource referenced by the descriptor is not considered to be referenced during command execution.
- [VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT](#) specifies that descriptors in this binding **can** be updated after a command buffer has bound this descriptor set, or while a command buffer that uses this descriptor set is pending execution, as long as the descriptors that are updated are not used by those command buffers. Descriptor bindings created with this flag are also partially exempt from the external synchronization requirement in [vkUpdateDescriptorSetWithTemplateKHR](#) and [vkUpdateDescriptorSets](#) in the same way as for [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#). If [VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT](#) is also set, then descriptors **can** be updated as long as they are not dynamically used by any shader invocations. If [VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT](#) is not set, then descriptors **can** be updated as long as they are not statically used by any shader invocations.
- [VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT](#) specifies that this is a *variable-sized descriptor binding* whose size will be specified when a descriptor set is allocated using this layout. The value of `descriptorCount` is treated as an upper bound on the size of the binding. This **must** only be used for the last binding in the descriptor set layout (i.e. the binding with the largest value of `binding`). For the purposes of counting against limits such as `maxDescriptorSet*` and `maxPerStageDescriptor*`, the full value of `descriptorCount` is counted, except for descriptor bindings with a descriptor type of [VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#), when `VkDescriptorSetLayoutCreateInfo::flags` does not contain [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#). In this case, `descriptorCount` specifies the upper bound on the byte size of the binding; thus it counts against the `maxInlineUniformBlockSize` and `maxInlineUniformTotalSize` limits instead.

NOTE

Note that while [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#) and [VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT](#) both involve updates to descriptor sets after they are bound, [VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT](#) is a weaker requirement since it is only about descriptors that are not used, whereas [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#) requires the implementation to observe updates to descriptors that are used.

```
// Provided by VK_VERSION_1_2
typedef VkFlags VkDescriptorBindingFlags;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorBindingFlags
typedef VkDescriptorBindingFlags VkDescriptorBindingFlagsEXT;
```

VkDescriptorBindingFlags is a bitmask type for setting a mask of zero or more **VkDescriptorBindingFlagBits**.

To query information about whether a descriptor set layout **can** be created, call:

```
// Provided by VK_VERSION_1_1
void vkGetDescriptorSetLayoutSupport(
    VkDevice                device,
    const VkDescriptorSetLayoutCreateInfo* pCreateInfo,
    VkDescriptorSetLayoutSupport* pSupport);
```

```
// Provided by VK_KHR_maintenance3
// Equivalent to vkGetDescriptorSetLayoutSupport
void vkGetDescriptorSetLayoutSupportKHR(
    VkDevice                device,
    const VkDescriptorSetLayoutCreateInfo* pCreateInfo,
    VkDescriptorSetLayoutSupport* pSupport);
```

- **device** is the logical device that would create the descriptor set layout.
- **pCreateInfo** is a pointer to a **VkDescriptorSetLayoutCreateInfo** structure specifying the state of the descriptor set layout object.
- **pSupport** is a pointer to a **VkDescriptorSetLayoutSupport** structure, in which information about support for the descriptor set layout object is returned.

Some implementations have limitations on what fits in a descriptor set which are not easily expressible in terms of existing limits like **maxDescriptorSet***, for example if all descriptor types share a limited space in memory but each descriptor is a different size or alignment. This command returns information about whether a descriptor set satisfies this limit. If the descriptor set layout satisfies the **VkPhysicalDeviceMaintenance3Properties::maxPerSetDescriptors** limit, this command is guaranteed to return **VK_TRUE** in **VkDescriptorSetLayoutSupport::supported**. If the descriptor set layout exceeds the **VkPhysicalDeviceMaintenance3Properties::maxPerSetDescriptors** limit, whether the descriptor set layout is supported is implementation-dependent and **may** depend on whether the descriptor sizes and alignments cause the layout to exceed an internal limit.

This command does not consider other limits such as **maxPerStageDescriptor***, and so a descriptor set layout that is supported according to this command **must** still satisfy the pipeline layout limits such as **maxPerStageDescriptor*** in order to be used in a pipeline layout.

NOTE

This is a `VkDevice` query rather than `VkPhysicalDevice` because the answer **may** depend on enabled features.

Valid Usage (Implicit)

- `VUID-vkGetDescriptorSetLayoutSupport-device-parameter`
`device` **must** be a valid `VkDevice` handle
- `VUID-vkGetDescriptorSetLayoutSupport-pCreateInfo-parameter`
`pCreateInfo` **must** be a valid pointer to a valid `VkDescriptorSetLayoutCreateInfo` structure
- `VUID-vkGetDescriptorSetLayoutSupport-pSupport-parameter`
`pSupport` **must** be a valid pointer to a `VkDescriptorSetLayoutSupport` structure

Information about support for the descriptor set layout is returned in a `VkDescriptorSetLayoutSupport` structure:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorSetLayoutSupport {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           supported;
} VkDescriptorSetLayoutSupport;
```

```
// Provided by VK_KHR_maintenance3
// Equivalent to VkDescriptorSetLayoutSupport
typedef VkDescriptorSetLayoutSupport VkDescriptorSetLayoutSupportKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supported` specifies whether the descriptor set layout **can** be created.

`supported` will be `VK_TRUE` if the descriptor set **can** be created, or else `VK_FALSE`.

Valid Usage (Implicit)

- `VUID-VkDescriptorSetLayoutSupport-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_SUPPORT`
- `VUID-VkDescriptorSetLayoutSupport-pNext-pNext`
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkDescriptorSetVariableDescriptorCountLayoutSupport`
- `VUID-VkDescriptorSetLayoutSupport-sType-unique`
The `sType` value of each structure in the `pNext` chain **must** be unique

If the `pNext` chain of a `VkDescriptorSetLayoutSupport` structure includes a `VkDescriptorSetVariableDescriptorCountLayoutSupport` structure, then that structure returns additional information about whether the descriptor set layout is supported.

```
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetVariableDescriptorCountLayoutSupport {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVariableDescriptorCount;
} VkDescriptorSetVariableDescriptorCountLayoutSupport;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorSetVariableDescriptorCountLayoutSupport
typedef VkDescriptorSetVariableDescriptorCountLayoutSupport
VkDescriptorSetVariableDescriptorCountLayoutSupportEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxVariableDescriptorCount` indicates the maximum number of descriptors supported in the highest numbered binding of the layout, if that binding is variable-sized. If the highest numbered binding of the layout has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `maxVariableDescriptorCount` indicates the maximum byte size supported for the binding, if that binding is variable-sized.

If the `VkDescriptorSetLayoutCreateInfo` structure specified in `vkGetDescriptorSetLayoutSupport::pCreateInfo` includes a variable-sized descriptor, then `supported` is determined assuming the requested size of the variable-sized descriptor, and `maxVariableDescriptorCount` is the maximum size of that descriptor that **can** be successfully created (which is greater than or equal to the requested size passed in). If the `VkDescriptorSetLayoutCreateInfo` structure does not include a variable-sized descriptor, or if the `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingVariableDescriptorCount` feature is not enabled, then `maxVariableDescriptorCount` is zero. For the purposes of this command, a variable-sized descriptor binding with a `descriptorCount` of zero is treated as having a `descriptorCount` of four if `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, or one otherwise, and thus the binding is not ignored and the maximum descriptor count will be returned. If the layout is not supported, then the value written to `maxVariableDescriptorCount` is undefined.

Valid Usage (Implicit)

- VUID-VkDescriptorSetVariableDescriptorCountLayoutSupport-sType-sType `sType` must be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_LAYOUT_SUPPORT`

Structure Chaining

Extends the structure

- [VkDescriptorSetLayoutSupport](#)

The following examples show a shader snippet using two descriptor sets, and application code that creates corresponding descriptor set layouts.

GLSL Example

```
//  
// binding to a single sampled image descriptor in set 0  
//  
layout (set=0, binding=0) uniform texture2D mySampledImage;  
  
//  
// binding to an array of sampled image descriptors in set 0  
//  
layout (set=0, binding=1) uniform texture2D myArrayOfSampledImages[12];  
  
//  
// binding to a single uniform buffer descriptor in set 1  
//  
layout (set=1, binding=0) uniform myUniformBuffer  
{  
    vec4 myElement[32];  
};
```

SPIR-V Example

```
...  
%1 = OpExtInstImport "GLSL.std.450"  
...  
OpName %9 "mySampledImage"  
OpName %14 "myArrayOfSampledImages"  
OpName %18 "myUniformBuffer"  
OpMemberName %18 0 "myElement"  
OpName %20 ""  
OpDecorate %9 DescriptorSet 0  
OpDecorate %9 Binding 0  
OpDecorate %14 DescriptorSet 0  
OpDecorate %14 Binding 1  
OpDecorate %17 ArrayStride 16  
OpMemberDecorate %18 0 Offset 0  
OpDecorate %18 Block  
OpDecorate %20 DescriptorSet 1  
OpDecorate %20 Binding 0  
%2 = OpTypeVoid  
%3 = OpTypeFunction %2
```

```

%6 = OpTypeFloat 32
%7 = OpTypeImage %6 2D 0 0 0 1 Unknown
%8 = OpTypePointer UniformConstant %7
%9 = OpVariable %8 UniformConstant
%10 = OpTypeInt 32 0
%11 = OpConstant %10 12
%12 = OpTypeArray %7 %11
%13 = OpTypePointer UniformConstant %12
%14 = OpVariable %13 UniformConstant
%15 = OpTypeVector %6 4
%16 = OpConstant %10 32
%17 = OpTypeArray %15 %16
%18 = OpTypeStruct %17
%19 = OpTypePointer Uniform %18
%20 = OpVariable %19 Uniform
...

```

API Example

```

VkResult myResult;

const VkDescriptorSetLayoutBinding myDescriptorSetLayoutBinding[] =
{
    // binding to a single image descriptor
    {
        .binding = 0,
        .descriptorType = VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
        .descriptorCount = 1,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    },

    // binding to an array of image descriptors
    {
        .binding = 1,
        .descriptorType = VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
        .descriptorCount = 12,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    },

    // binding to a single uniform buffer descriptor
    {
        .binding = 0,
        .descriptorType = VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER,
        .descriptorCount = 1,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    }
};

```

```

const VkDescriptorSetLayoutCreateInfo myDescriptorSetLayoutCreateInfo[] =
{
    // Information for first descriptor set with two descriptor bindings
    {
        .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO,
        .pNext = NULL,
        .flags = 0,
        .bindingCount = 2,
        .pBindings = &myDescriptorSetLayoutBinding[0]
    },

    // Information for second descriptor set with one descriptor binding
    {
        .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO,
        .pNext = NULL,
        .flags = 0,
        .bindingCount = 1,
        .pBindings = &myDescriptorSetLayoutBinding[2]
    }
};

VkDescriptorSetLayout myDescriptorSetLayout[2];

//
// Create first descriptor set layout
//
myResult = vkCreateDescriptorSetLayout(
    myDevice,
    &myDescriptorSetLayoutCreateInfo[0],
    NULL,
    &myDescriptorSetLayout[0]);

//
// Create second descriptor set layout
//
myResult = vkCreateDescriptorSetLayout(
    myDevice,
    &myDescriptorSetLayoutCreateInfo[1],
    NULL,
    &myDescriptorSetLayout[1]);

```

To destroy a descriptor set layout, call:

```

// Provided by VK_VERSION_1_0
void vkDestroyDescriptorSetLayout(
    VkDevice                device,
    VkDescriptorSetLayout    descriptorSetLayout,
    const VkAllocationCallbacks* pAllocator);

```

- `device` is the logical device that destroys the descriptor set layout.
- `descriptorSetLayout` is the descriptor set layout to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-00284
If `VkAllocationCallbacks` were provided when `descriptorSetLayout` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-00285
If no `VkAllocationCallbacks` were provided when `descriptorSetLayout` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorSetLayout-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-parameter
If `descriptorSetLayout` is not `VK_NULL_HANDLE`, `descriptorSetLayout` **must** be a valid `VkDescriptorSetLayout` handle
- VUID-vkDestroyDescriptorSetLayout-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-parent
If `descriptorSetLayout` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `descriptorSetLayout` **must** be externally synchronized

17.2. Pipeline Layouts

Access to descriptor sets from a pipeline is accomplished through a *pipeline layout*. Zero or more descriptor set layouts and zero or more push constant ranges are combined to form a pipeline layout object describing the complete set of resources that **can** be accessed by a pipeline. The pipeline layout represents a sequence of descriptor sets with each having a specific layout. This sequence of layouts is used to determine the interface between shader stages and shader resources. Each pipeline is created using a pipeline layout.

Pipeline layout objects are represented by `VkPipelineLayout` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineLayout)
```

To create a pipeline layout, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreatePipelineLayout(
    VkDevice device,
    const VkPipelineLayoutCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkPipelineLayout* pPipelineLayout);
```

- **device** is the logical device that creates the pipeline layout.
- **pCreateInfo** is a pointer to a [VkPipelineLayoutCreateInfo](#) structure specifying the state of the pipeline layout object.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pPipelineLayout** is a pointer to a [VkPipelineLayout](#) handle in which the resulting pipeline layout object is returned.

Valid Usage (Implicit)

- VUID-vkCreatePipelineLayout-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreatePipelineLayout-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkPipelineLayoutCreateInfo](#) structure
- VUID-vkCreatePipelineLayout-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreatePipelineLayout-pPipelineLayout-parameter
pPipelineLayout **must** be a valid pointer to a [VkPipelineLayout](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkPipelineLayoutCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineLayoutCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineLayoutCreateFlags flags;
    uint32_t                 setLayoutCount;
    const VkDescriptorSetLayout* pSetLayouts;
    uint32_t                 pushConstantRangeCount;
    const VkPushConstantRange* pPushConstantRanges;
} VkPipelineLayoutCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPipelineLayoutCreateFlagBits` specifying options for pipeline layout creation.
- `setLayoutCount` is the number of descriptor sets included in the pipeline layout.
- `pSetLayouts` is a pointer to an array of `VkDescriptorSetLayout` objects. The implementation **must** not access these objects outside of the duration of the command this structure is passed to.
- `pushConstantRangeCount` is the number of push constant ranges included in the pipeline layout.
- `pPushConstantRanges` is a pointer to an array of `VkPushConstantRange` structures defining a set of push constant ranges for use in a single pipeline layout. In addition to descriptor set layouts, a pipeline layout also describes how many push constants **can** be accessed by each stage of the pipeline.

NOTE

Push constants represent a high speed path to modify constant data in pipelines that is expected to outperform memory-backed resource updates.

Valid Usage

- VUID-VkPipelineLayoutCreateInfo-setLayoutCount-00286
`setLayoutCount` **must** be less than or equal to `VkPhysicalDeviceLimits::maxBoundDescriptorSets`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03016
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorSamplers`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03017
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a

`descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` and `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorUniformBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03018

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` and `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorStorageBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-06939

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorSampledImages`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03020

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorStorageImages`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03021

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorInputAttachments`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-02214

The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set and with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible to any given shader stage across all elements of `pSetLayouts`, **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxPerStageDescriptorInlineUniformBlocks`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03022

If the `descriptorBindingSampledImageUpdateAfterBind` feature is supported on the device, the total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to

VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindSamplers

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03023

If the `descriptorBindingUniformBufferUpdateAfterBind` feature is supported on the device, the total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` and `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindUniformBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03024

If the `descriptorBindingStorageBufferUpdateAfterBind` feature is supported on the device, the total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` and `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindStorageBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03025

If the `descriptorBindingSampledImageUpdateAfterBind` feature is supported on the device, the total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindSampledImages`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03026

If the `descriptorBindingStorageImageUpdateAfterBind` feature is supported on the device, the total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindStorageImages`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03027

If any element of `pSetLayouts` is created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set, the total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindInputAttachments`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-02215

If the `descriptorBindingInlineUniformBlockUpdateAfterBind` feature is supported on the

device, the total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03028

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetSamplers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03029

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03030

If the `maintenance7` feature is not enabled, the total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-maintenance7-10003

If the `maintenance7` feature is enabled, the total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalUniformBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03031

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffers`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03032

If the `maintenance7` feature is not enabled, the total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-maintenance7-10004
If the `maintenance7` feature is enabled, the total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalStorageBuffersDynamic`
- VUID-VkPipelineLayoutCreateInfo-None-10005
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalBuffersDynamic`
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-10006
If either the `descriptorBindingStorageBufferUpdateAfterBind` or `descriptorBindingUniformBufferUpdateAfterBind` feature is supported on the device, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetUpdateAfterBindTotalBuffersDynamic`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03033
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetSampledImages`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03034
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetStorageImages`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03035
The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetInputAttachments`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-02216

The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxDescriptorSetInlineUniformBlocks`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03036

If the `descriptorBindingSampledImageUpdateAfterBind` feature is supported on the device, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindSamplers`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03037

If the `descriptorBindingUniformBufferUpdateAfterBind` feature is supported on the device, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindUniformBuffers`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03038

If the `descriptorBindingUniformBufferUpdateAfterBind` feature is supported on the device, and if the `maintenance7` feature is not enabled, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetUpdateAfterBindUniformBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-maintenance7-10007

If the `descriptorBindingUniformBufferUpdateAfterBind` feature is supported on the device, and the `maintenance7` feature is enabled, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03039

If the `descriptorBindingStorageBufferUpdateAfterBind` feature is supported on the device, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindStorageBuffers`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03040

If the `descriptorBindingStorageBufferUpdateAfterBind` feature is supported on the device, and if the `maintenance7` feature is not enabled, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDescriptorSetUpdateAfterBindStorageBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-maintenance7-10008

If the `descriptorBindingStorageBufferUpdateAfterBind` feature is supported on the device, and if the `maintenance7` feature is enabled, the total number of descriptors of the type

`VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03041

If the `descriptorBindingSampledImageUpdateAfterBind` feature is supported on the device, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindSampledImages`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03042

If the `descriptorBindingStorageImageUpdateAfterBind` feature is supported on the device, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindStorageImages`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03043

If any element of `pSetLayouts` is created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set, the total number of descriptors of the type `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindInputAttachments`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-02217

If the `descriptorBindingInlineUniformBlockUpdateAfterBind` feature is supported on the device, the total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxDescriptorSetUpdateAfterBindInlineUniformBlocks`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-06531

The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceVulkan13Properties::maxInlineUniformTotalSize`

- VUID-VkPipelineLayoutCreateInfo-pPushConstantRanges-00292

Any two elements of `pPushConstantRanges` **must** not include the same stage in `stageFlags`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-00293

`pSetLayouts` **must** not contain more than one descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT` set

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03571

The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorAccelerationStructures`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03572

The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorUpdateAfterBindAccelerationStructures`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03573

The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxDescriptorSetAccelerationStructures`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03574

The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxDescriptorSetUpdateAfterBindAccelerationStructures`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-02381

The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxDescriptorSetAccelerationStructures`

- VUID-VkPipelineLayoutCreateInfo-pImmutableSamplers-03566

The total number of `pImmutableSamplers` created with `flags` containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` or `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT` across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::maxDescriptorSetSubsampledSamplers`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-04606

Any element of `pSetLayouts` **must** not have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT` bit set

- VUID-VkPipelineLayoutCreateInfo-graphicsPipelineLibrary-06753

If the `graphicsPipelineLibrary` feature is not enabled, elements of `pSetLayouts` **must** be valid `VkDescriptorSetLayout` objects

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-08008

If any element of `pSetLayouts` was created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set, all

elements of `pSetLayouts` **must** have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-09698

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_TENSOR_ARM` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceTensorPropertiesARM::maxPerStageDescriptorSetStorageTensors`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-09699

The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_TENSOR_ARM` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceTensorPropertiesARM::maxDescriptorSetStorageTensors`

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-09878

The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_TENSOR_ARM` accessible across all shader stages and across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceTensorPropertiesARM::maxDescriptorSetUpdateAfterBindStorageTensors`

- VUID-VkPipelineLayoutCreateInfo-descriptorType-09879

The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_TENSOR_ARM` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceTensorPropertiesARM::maxPerStageDescriptorUpdateAfterBindStorageTensors`

- VUID-VkPipelineLayoutCreateInfo-flags-13352

If `flags` has `VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR` set, then `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` **must** also be set

Valid Usage (Implicit)

- VUID-VkPipelineLayoutCreateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_LAYOUT_CREATE_INFO`

- VUID-VkPipelineLayoutCreateInfo-flags-parameter

`flags` **must** be a valid combination of `VkPipelineLayoutCreateFlagBits` values

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-parameter

If `setLayoutCount` is not 0, `pSetLayouts` **must** be a valid pointer to an array of `setLayoutCount` valid or `VK_NULL_HANDLE` `VkDescriptorSetLayout` handles

- VUID-VkPipelineLayoutCreateInfo-pPushConstantRanges-parameter

If `pushConstantRangeCount` is not 0, `pPushConstantRanges` **must** be a valid pointer to an array of `pushConstantRangeCount` valid `VkPushConstantRange` structures

Structure Chaining

Extends the structures

- [VkBindDescriptorBufferEmbeddedSamplersInfoEXT](#)
- [VkBindDescriptorSetsInfo](#)
- [VkIndirectCommandsLayoutCreateInfoEXT](#)
- [VkPushConstantsInfo](#)
- [VkPushDescriptorSetInfo](#)
- [VkPushDescriptorSetWithTemplateInfo](#)
- [VkSetDescriptorBufferOffsetsInfoEXT](#)

```
// Provided by VK_VERSION_1_0, VK_EXT_graphics_pipeline_library
typedef enum VkPipelineLayoutCreateFlagBits {
    // Provided by VK_EXT_graphics_pipeline_library
    VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT = 0x00000002,
    // Provided by VK_KHR_maintenance11 with VK_EXT_shader_object and
    // (VK_EXT_mesh_shader or VK_NV_mesh_shader)
    VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR = 0x00000004,
} VkPipelineLayoutCreateFlagBits;
```

- [VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT](#) specifies that implementations **must** ensure that the properties and/or absence of a particular descriptor set do not influence any other properties of the pipeline layout. This allows pipelines libraries linked without [VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT](#) to be created with a subset of the total descriptor sets.
- [VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR](#), when used in combination with [VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT](#), specifies that this pipeline layout will only be used to draw with shader objects created with [VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT](#).

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineLayoutCreateFlags;
```

[VkPipelineLayoutCreateFlags](#) is a bitmask type for setting a mask of [VkPipelineLayoutCreateFlagBits](#).

The [VkPushConstantRange](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPushConstantRange {
    VkShaderStageFlags    stageFlags;
    uint32_t              offset;
    uint32_t              size;
} VkPushConstantRange;
```

- **stageFlags** is a set of stage flags describing the shader stages that will access a range of push constants. If a particular stage is not included in the range, then accessing members of that range of push constants from the corresponding shader stage will return undefined values.
- **offset** and **size** are the start offset and size, respectively, consumed by the range. Both **offset** and **size** are in units of bytes and **must** be a multiple of 4. The layout of the push constant variables is specified in the shader.

Valid Usage

- VUID-VkPushConstantRange-offset-00294
offset must be less than `VkPhysicalDeviceLimits::maxPushConstantsSize`
- VUID-VkPushConstantRange-offset-00295
offset must be a multiple of 4
- VUID-VkPushConstantRange-size-00296
size must be greater than 0
- VUID-VkPushConstantRange-size-00297
size must be a multiple of 4
- VUID-VkPushConstantRange-size-00298
size must be less than or equal to `VkPhysicalDeviceLimits::maxPushConstantsSize` minus **offset**

Valid Usage (Implicit)

- VUID-VkPushConstantRange-stageFlags-parameter
stageFlags must be a valid combination of `VkShaderStageFlagBits` values
- VUID-VkPushConstantRange-stageFlags-requiredbitmask
stageFlags must not be 0

Once created, pipeline layouts **can** be used as part of pipeline creation (see [Pipelines](#)), as part of binding descriptor sets (see [Descriptor Set Binding](#)), and as part of setting push constants (see [Push Constant Updates](#)). Pipeline creation accepts a pipeline layout as input, and the layout **may** be used to map (set, binding, arrayElement) tuples to implementation resources or memory locations within a descriptor set. The assignment of implementation resources depends only on the bindings defined in the descriptor sets that comprise the pipeline layout, and not on any shader source.

All resource variables [statically used](#) in all shaders in a pipeline **must** be declared with a (set,

binding, arrayElement) that exists in the corresponding descriptor set layout and is of an appropriate descriptor type and includes the set of shader stages it is used by in `stageFlags`. The pipeline layout **can** include entries that are not used by a particular pipeline. The pipeline layout allows the application to provide a consistent set of bindings across multiple pipeline compiles, which enables those pipelines to be compiled in a way that the implementation **may** cheaply switch pipelines without reprogramming the bindings.

Similarly, the push constant block declared in each shader (if present) **must** only place variables at offsets that are each included in a push constant range with `stageFlags` including the bit corresponding to the shader stage that uses it. The pipeline layout **can** include ranges or portions of ranges that are not used by a particular pipeline.

There is a limit on the total number of resources of each type that **can** be included in bindings in all descriptor set layouts in a pipeline layout as shown in [Pipeline Layout Resource Limits](#). The “Total Resources Available” column gives the limit on the number of each type of resource that **can** be included in bindings in all descriptor sets in the pipeline layout. Some resource types count against multiple limits. Additionally, there are limits on the total number of each type of resource that **can** be used in any pipeline stage as described in [Shader Resource Limits](#).

Table 19. Pipeline Layout Resource Limits

Total Resources Available	Resource Types
<code>maxDescriptorSetSamplers</code> or <code>maxDescriptorSetUpdateAfterBindSamplers</code>	sampler
	combined image sampler
<code>maxDescriptorSetSampledImages</code> or <code>maxDescriptorSetUpdateAfterBindSampledImages</code>	sampled image
	combined image sampler
	uniform texel buffer
<code>maxDescriptorSetStorageImages</code> or <code>maxDescriptorSetUpdateAfterBindStorageImages</code>	storage image
	storage texel buffer
<code>maxDescriptorSetUniformBuffers</code> or <code>maxDescriptorSetUpdateAfterBindUniformBuffers</code>	uniform buffer
	uniform buffer dynamic
<code>maxDescriptorSetUniformBuffersDynamic</code> or <code>maxDescriptorSetUpdateAfterBindUniformBuffersDynamic</code> or <code>maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic</code>	uniform buffer dynamic
<code>maxDescriptorSetStorageBuffers</code> or <code>maxDescriptorSetUpdateAfterBindStorageBuffers</code>	storage buffer
	storage buffer dynamic
<code>maxDescriptorSetStorageBuffersDynamic</code> or <code>maxDescriptorSetUpdateAfterBindStorageBuffersDynamic</code> or <code>maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic</code>	storage buffer dynamic

Total Resources Available	Resource Types
<code>maxDescriptorSetInputAttachments</code> or <code>maxDescriptorSetUpdateAfterBindInputAttachments</code>	input attachment
<code>maxDescriptorSetInlineUniformBlocks</code> or <code>maxDescriptorSetUpdateAfterBindInlineUniformBlocks</code>	inline uniform block
<code>maxDescriptorSetAccelerationStructures</code> or <code>maxDescriptorSetUpdateAfterBindAccelerationStructures</code>	acceleration structure
<code>maxDescriptorSetStorageTensors</code> or <code>maxDescriptorSetUpdateAfterBindStorageTensors</code>	storage tensor

To destroy a pipeline layout, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyPipelineLayout(
    VkDevice          device,
    VkPipelineLayout  pipelineLayout,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the pipeline layout.
- `pipelineLayout` is the pipeline layout to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyPipelineLayout-pipelineLayout-00299
If `VkAllocationCallbacks` were provided when `pipelineLayout` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipelineLayout-pipelineLayout-00300
If no `VkAllocationCallbacks` were provided when `pipelineLayout` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyPipelineLayout-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyPipelineLayout-pipelineLayout-parameter
If `pipelineLayout` is not `VK_NULL_HANDLE`, `pipelineLayout` **must** be a valid `VkPipelineLayout` handle
- VUID-vkDestroyPipelineLayout-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid

VkAllocationCallbacks structure

- VUID-vkDestroyPipelineLayout-pipelineLayout-parent

If `pipelineLayout` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `pipelineLayout` **must** be externally synchronized

17.2.1. Pipeline Layout Compatibility

Two pipeline layouts are defined to be “compatible for `push constants`” if they were created with identical push constant ranges. Two pipeline layouts are defined to be “compatible for set N” if they were created with `identically defined` descriptor set layouts for sets zero through N, if both of them either were or were not created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`, and if they were created with identical push constant ranges.

When binding a descriptor set (see [Descriptor Set Binding](#)) to set number N, a previously bound descriptor set bound with lower index M than N is disturbed if the pipeline layouts for set M and N are not compatible for set M. Otherwise, the bound descriptor set in M is not disturbed.

If, additionally, the previously bound descriptor set for set N was bound using a pipeline layout not compatible for set N, then all bindings in sets numbered greater than N are disturbed.

When binding a pipeline, the pipeline **can** correctly access any previously bound descriptor set N if it was bound with compatible pipeline layout for set N, and it was not disturbed.

Layout compatibility means that descriptor sets **can** be bound to a command buffer for use by any pipeline created with a compatible pipeline layout, and without having bound a particular pipeline first. It also means that descriptor sets **can** remain valid across a pipeline change, and the same resources will be accessible to the newly bound pipeline.

When a descriptor set is disturbed by binding descriptor sets, the disturbed set is considered to contain undefined descriptors bound with the same pipeline layout as the disturbing descriptor set.

Implementor’s Note

A consequence of layout compatibility is that when the implementation compiles a pipeline layout and maps pipeline resources to implementation resources, the mechanism for set N **should** only be a function of sets [0..N].

NOTE

Place the least frequently changing descriptor sets near the start of the pipeline layout, and place the descriptor sets representing the most frequently changing resources near the end. When pipelines are switched, only the descriptor set bindings that have been invalidated will need to be updated and the remainder of

the descriptor set bindings will remain in place.

The maximum number of descriptor sets that **can** be bound to a pipeline layout is queried from physical device properties (see `maxBoundDescriptorSets` in [Limits](#)).

API Example

```
const VkDescriptorSetLayout layouts[] = { layout1, layout2 };

const VkPushConstantRange ranges[] =
{
    {
        .stageFlags = VK_SHADER_STAGE_VERTEX_BIT,
        .offset = 0,
        .size = 4
    },
    {
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .offset = 4,
        .size = 4
    },
};

const VkPipelineLayoutCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_PIPELINE_LAYOUT_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .setLayoutCount = 2,
    .pSetLayouts = layouts,
    .pushConstantRangeCount = 2,
    .pPushConstantRanges = ranges
};

VkPipelineLayout myPipelineLayout;
myResult = vkCreatePipelineLayout(
    myDevice,
    &createInfo,
    NULL,
    &myPipelineLayout);
```

17.3. Allocation of Descriptor Sets

A *descriptor pool* maintains a pool of descriptors, from which descriptor sets are allocated. Descriptor pools are externally synchronized, meaning that the application **must** not allocate and/or free descriptor sets from the same pool in multiple threads simultaneously.

Descriptor pools are represented by `VkDescriptorPool` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorPool)
```

To create a descriptor pool object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateDescriptorPool(
    VkDevice                                device,
    const VkDescriptorPoolCreateInfo*       pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkDescriptorPool*                       pDescriptorPool);
```

- **device** is the logical device that creates the descriptor pool.
- **pCreateInfo** is a pointer to a [VkDescriptorPoolCreateInfo](#) structure specifying the state of the descriptor pool object.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pDescriptorPool** is a pointer to a [VkDescriptorPool](#) handle in which the resulting descriptor pool object is returned.

The created descriptor pool is returned in **pDescriptorPool**.

Valid Usage (Implicit)

- VUID-vkCreateDescriptorPool-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreateDescriptorPool-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkDescriptorPoolCreateInfo](#) structure
- VUID-vkCreateDescriptorPool-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateDescriptorPool-pDescriptorPool-parameter
pDescriptorPool **must** be a valid pointer to a [VkDescriptorPool](#) handle
- VUID-vkCreateDescriptorPool-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_FRAGMENTATION_EXT](#)

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Additional information about the pool is passed in a [VkDescriptorPoolCreateInfo](#) structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorPoolCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkDescriptorPoolCreateFlags  flags;
    uint32_t              maxSets;
    uint32_t              poolSizeCount;
    const VkDescriptorPoolSize* pPoolSizes;
} VkDescriptorPoolCreateInfo;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkDescriptorPoolCreateFlagBits](#) specifying certain supported operations on the pool.
- [maxSets](#) is the maximum number of descriptor sets that **can** be allocated from the pool.
- [poolSizeCount](#) is the number of elements in [pPoolSizes](#).
- [pPoolSizes](#) is a pointer to an array of [VkDescriptorPoolSize](#) structures, each containing a descriptor type and number of descriptors of that type to be allocated in the pool.

If multiple [VkDescriptorPoolSize](#) structures containing the same descriptor type appear in the [pPoolSizes](#) array then the pool will be created with enough storage for the total number of descriptors of each type.

Fragmentation of a descriptor pool is possible and **may** lead to descriptor set allocation failures. A failure due to fragmentation is defined as failing a descriptor set allocation despite the sum of all outstanding descriptor set allocations from the pool plus the requested allocation requiring no more than the total number of descriptors requested at pool creation. Implementations provide certain guarantees of when fragmentation **must** not cause allocation failure, as described below.

If a descriptor pool has not had any descriptor sets freed since it was created or most recently reset then fragmentation **must** not cause an allocation failure (note that this is always the case for a pool created without the [VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT](#) bit set). Additionally, if all sets allocated from the pool since it was created or most recently reset use the same number of descriptors (of each type) and the requested allocation also uses that same number of descriptors (of each type), then fragmentation **must** not cause an allocation failure.

If an allocation failure occurs due to fragmentation, an application **can** create an additional descriptor pool to perform further descriptor set allocations.

If `flags` has the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit set, descriptor pool creation **may** fail with the error `VK_ERROR_FRAGMENTATION` if the total number of descriptors across all pools (including this one) created with this bit set exceeds `maxUpdateAfterBindDescriptorsInAllPools`, or if fragmentation of the underlying hardware resources occurs.

If a `pPoolSizes[i>::type` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, a `VkMutableDescriptorTypeCreateInfoEXT` structure in the `pNext` chain **can** be used to specify which mutable descriptor types **can** be allocated from the pool. If included in the `pNext` chain, `VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists[i]` specifies which kind of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` descriptors **can** be allocated from this pool entry. If `VkMutableDescriptorTypeCreateInfoEXT` does not exist in the `pNext` chain, or `VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists[i]` is out of range, the descriptor pool allocates enough memory to be able to allocate a `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` descriptor with any supported `VkDescriptorType` as a mutable descriptor. A mutable descriptor **can** be allocated from a pool entry if the type list in `VkDescriptorSetLayoutCreateInfo` is a subset of the type list declared in the descriptor pool, or if the pool entry is created without a descriptor type list. Multiple `pPoolSizes` entries with `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` **can** be declared. When multiple such pool entries are present in `pPoolSizes`, they specify sets of supported descriptor types which either fully overlap, partially overlap, or are disjoint. Two sets fully overlap if the sets of supported descriptor types are equal. If the sets are not disjoint they partially overlap. A pool entry without a `VkMutableDescriptorTypeListEXT` assigned to it is considered to partially overlap any other pool entry which has a `VkMutableDescriptorTypeListEXT` assigned to it. The application **must** ensure that partial overlap does not exist in `pPoolSizes`.

NOTE

The requirement of no partial overlap is intended to resolve ambiguity for validation as there is no confusion which `pPoolSizes` entries will be allocated from. An implementation is not expected to depend on this requirement.

Valid Usage

- VUID-VkDescriptorPoolCreateInfo-descriptorPoolOverallocation-09227

If the `descriptorPoolOverallocation` feature is not enabled, or `flags` does not have `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV` set, `maxSets` **must** be greater than 0

- VUID-VkDescriptorPoolCreateInfo-flags-09228

If `flags` has the `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV` or `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV` bits set, then `descriptorPoolOverallocation` **must** be enabled

- VUID-VkDescriptorPoolCreateInfo-flags-04607

If `flags` has the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` bit set, then the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit **must** not be set

- VUID-VkDescriptorPoolCreateInfo-mutableDescriptorType-04608

If `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` is not

enabled, `pPoolSizes` **must** not contain a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`

- VUID-VkDescriptorPoolCreateInfo-flags-04609
If `flags` has the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` bit set, `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` **must** be enabled
- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-04787
If `pPoolSizes` contains a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, any other `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` element in `pPoolSizes` **must** not have sets of supported descriptor types which partially overlap
- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-09424
If `pPoolSizes` contains a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, the `pNext` chain **must** include a `VkDescriptorPoolInlineUniformBlockCreateInfo` structure whose `maxInlineUniformBlockBindings` member is not zero
- VUID-VkDescriptorPoolCreateInfo-pNext-09946
If a `VkDataGraphProcessingEngineCreateInfoARM` structure is included in the `pNext` chain, each member of `pProcessingEngines` **must** be identical to an `VkQueueFamilyDataGraphPropertiesARM::engine` retrieved from `vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM` with the `physicalDevice` that was used to create `device`

Valid Usage (Implicit)

- VUID-VkDescriptorPoolCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_POOL_CREATE_INFO`
- VUID-VkDescriptorPoolCreateInfo-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDataGraphProcessingEngineCreateInfoARM`, `VkDescriptorPoolInlineUniformBlockCreateInfo`, or `VkMutableDescriptorTypeCreateInfoEXT`
- VUID-VkDescriptorPoolCreateInfo-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkDescriptorPoolCreateInfo-flags-parameter
`flags` **must** be a valid combination of `VkDescriptorPoolCreateFlagBits` values
- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-parameter
If `poolSizeCount` is not 0, `pPoolSizes` **must** be a valid pointer to an array of `poolSizeCount` valid `VkDescriptorPoolSize` structures

In order to be able to allocate descriptor sets having `inline uniform block` bindings the descriptor pool **must** be created with specifying the inline uniform block binding capacity of the descriptor pool, in addition to the total inline uniform data capacity in bytes which is specified through a `VkDescriptorPoolSize` structure with a `descriptorType` value of

[VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#). This **can** be done by adding a [VkDescriptorPoolInlineUniformBlockCreateInfo](#) structure to the [pNext](#) chain of [VkDescriptorPoolCreateInfo](#).

The [VkDescriptorPoolInlineUniformBlockCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkDescriptorPoolInlineUniformBlockCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           maxInlineUniformBlockBindings;
} VkDescriptorPoolInlineUniformBlockCreateInfo;
```

```
// Provided by VK_EXT_inline_uniform_block
// Equivalent to VkDescriptorPoolInlineUniformBlockCreateInfo
typedef VkDescriptorPoolInlineUniformBlockCreateInfo
VkDescriptorPoolInlineUniformBlockCreateInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [maxInlineUniformBlockBindings](#) is the number of inline uniform block bindings to allocate.

Valid Usage (Implicit)

- VUID-VkDescriptorPoolInlineUniformBlockCreateInfo-sType-sType [sType](#) **must** be [VK_STRUCTURE_TYPE_DESCRIPTOR_POOL_INLINE_UNIFORM_BLOCK_CREATE_INFO](#)

Structure Chaining

Extends the structure

- [VkDescriptorPoolCreateInfo](#)

Bits which **can** be set in [VkDescriptorPoolCreateInfo::flags](#), enabling operations on a descriptor pool, are:

```

// Provided by VK_VERSION_1_0
typedef enum VkDescriptorPoolCreateFlagBits {
    VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT = 0x00000001,
    // Provided by VK_VERSION_1_2
    VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT = 0x00000002,
    // Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT = 0x00000004,
    // Provided by VK_NV_descriptor_pool_overallocation
    VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV = 0x00000008,
    // Provided by VK_NV_descriptor_pool_overallocation
    VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV = 0x00000010,
    // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT_EXT =
VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT,
    // Provided by VK_VALVE_mutable_descriptor_type
    VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_VALVE =
VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT,
} VkDescriptorPoolCreateFlagBits;

```

- [VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT](#) specifies that descriptor sets **can** return their individual allocations to the pool, i.e. all of [vkAllocateDescriptorSets](#), [vkFreeDescriptorSets](#), and [vkResetDescriptorPool](#) are allowed. Otherwise, descriptor sets allocated from the pool **must** not be individually freed back to the pool, i.e. only [vkAllocateDescriptorSets](#) and [vkResetDescriptorPool](#) are allowed.
- [VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT](#) specifies that descriptor sets allocated from this pool **can** include bindings with the [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#) bit set. It is valid to allocate descriptor sets that have bindings that do not set the [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#) bit from a pool that has [VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT](#) set.
- [VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT](#) specifies that this descriptor pool and the descriptor sets allocated from it reside entirely in host memory and cannot be bound. Similar to descriptor sets allocated without this flag, applications **can** copy-from and copy-to descriptors sets allocated from this descriptor pool. Descriptor sets allocated from this pool are partially exempt from the external synchronization requirement in [vkUpdateDescriptorSetWithTemplateKHR](#) and [vkUpdateDescriptorSets](#). Descriptor sets and their descriptors can be updated concurrently in different threads, though the same descriptor **must** not be updated concurrently by two threads.
- [VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV](#) specifies that the implementation should allow the application to allocate more than [VkDescriptorPoolCreateInfo::maxSets](#) descriptor set objects from the descriptor pool as available resources allow. The implementation **may** use the [maxSets](#) value to allocate the initial available sets, but using zero is permitted.
- [VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV](#) specifies that the implementation should allow the application to allocate more descriptors from the pool than was specified by the [VkDescriptorPoolSize::descriptorCount](#) for any descriptor type as specified

by `VkDescriptorPoolCreateInfo::poolSizeCount` and `VkDescriptorPoolCreateInfo::pPoolSizes`, as available resources allow. The implementation **may** use the `descriptorCount` for each descriptor type to allocate the initial pool, but the application is allowed to set the `poolSizeCount` to zero, or any of the `descriptorCount` values in the `pPoolSizes` array to zero.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorPoolCreateFlags;
```

`VkDescriptorPoolCreateFlags` is a bitmask type for setting a mask of zero or more `VkDescriptorPoolCreateFlagBits`.

The `VkDescriptorPoolSize` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorPoolSize {
    VkDescriptorType    type;
    uint32_t            descriptorCount;
} VkDescriptorPoolSize;
```

- `type` is the type of descriptor.
- `descriptorCount` is the number of descriptors of that type to allocate. If `type` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` is the number of bytes to allocate for descriptors of this type.

NOTE

When creating a descriptor pool that will contain descriptors for combined image samplers of [multi-planar formats](#), an application needs to account for non-trivial descriptor consumption when choosing the `descriptorCount` value, as indicated by `VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount`.

For simplicity the application **can** use the `VkPhysicalDeviceMaintenance6Properties::maxCombinedImageSamplerDescriptorCount` property, which is sized to accommodate any and all [formats that require a sampler Y'C_BC_R conversion](#) supported by the implementation.

Valid Usage

- VUID-VkDescriptorPoolSize-descriptorCount-00302
`descriptorCount` **must** be greater than 0
- VUID-VkDescriptorPoolSize-type-02218
If `type` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-VkDescriptorPoolSize-type-parameter
type must be a valid [VkDescriptorType](#) value

To destroy a descriptor pool, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyDescriptorPool(
    VkDevice                device,
    VkDescriptorPool         descriptorPool,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the descriptor pool.
- **descriptorPool** is the descriptor pool to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

When a pool is destroyed, all descriptor sets allocated from the pool are implicitly freed and become invalid. Descriptor sets allocated from a given pool do not need to be freed before destroying that descriptor pool.

Valid Usage

- VUID-vkDestroyDescriptorPool-descriptorPool-00303
All submitted commands that refer to **descriptorPool** (via any allocated descriptor sets) **must** have completed execution
- VUID-vkDestroyDescriptorPool-descriptorPool-00304
If **VkAllocationCallbacks** were provided when **descriptorPool** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDescriptorPool-descriptorPool-00305
If no **VkAllocationCallbacks** were provided when **descriptorPool** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorPool-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyDescriptorPool-descriptorPool-parameter
If **descriptorPool** is not [VK_NULL_HANDLE](#), **descriptorPool** **must** be a valid [VkDescriptorPool](#) handle
- VUID-vkDestroyDescriptorPool-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid

[VkAllocationCallbacks](#) structure

- VUID-vkDestroyDescriptorPool-descriptorPool-parent

If [descriptorPool](#) is a valid handle, it **must** have been created, allocated, or retrieved from [device](#)

Host Synchronization

- Host access to [descriptorPool](#) **must** be externally synchronized

Descriptor sets are allocated from descriptor pool objects, and are represented by [VkDescriptorSet](#) handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorSet)
```

To allocate descriptor sets from a descriptor pool, call:

```
// Provided by VK_VERSION_1_0
VkResult vkAllocateDescriptorSets(
    VkDevice device,
    const VkDescriptorSetAllocateInfo* pAllocateInfo,
    VkDescriptorSet* pDescriptorSets);
```

- [device](#) is the logical device that owns the descriptor pool.
- [pAllocateInfo](#) is a pointer to a [VkDescriptorSetAllocateInfo](#) structure describing parameters of the allocation.
- [pDescriptorSets](#) is a pointer to an array of [VkDescriptorSet](#) handles in which the resulting descriptor set objects are returned.

The allocated descriptor sets are returned in [pDescriptorSets](#).

When a descriptor set is allocated, the initial state is largely uninitialized and all descriptors are undefined, with the exception that samplers with a non-null [pImmutableSamplers](#) are initialized on allocation. Descriptors also become undefined if the underlying resource or view object is destroyed. Descriptor sets containing undefined descriptors **can** still be bound and used, subject to the following conditions:

- For descriptor set bindings created with the [VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT](#) bit set, all descriptors in that binding that are dynamically used **must** have been populated before the descriptor set is [consumed](#).
- For descriptor set bindings created without the [VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT](#) bit set, all descriptors in that binding that are statically used **must** have been populated before the descriptor set is [consumed](#).

- Descriptor bindings with descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` **can** be undefined when the descriptor set is **consumed**; though values in that block will be undefined.
- Entries that are not used by a pipeline **can** have undefined descriptors.

If a call to `vkAllocateDescriptorSets` would cause the total number of descriptor sets allocated from the pool to exceed the value of `VkDescriptorPoolCreateInfo::maxSets` used to create `pAllocateInfo->descriptorPool`, then the allocation **may** fail due to lack of space in the descriptor pool. Similarly, the allocation **may** fail due to lack of space if the call to `vkAllocateDescriptorSets` would cause the number of any given descriptor type to exceed the sum of all the `descriptorCount` members of each element of `VkDescriptorPoolCreateInfo::pPoolSizes` with a `type` equal to that type.

Additionally, the allocation **may** also fail if a call to `vkAllocateDescriptorSets` would cause the total number of inline uniform block bindings allocated from the pool to exceed the value of `VkDescriptorPoolInlineUniformBlockCreateInfo::maxInlineUniformBlockBindings` used to create the descriptor pool.

If the allocation fails due to no more space in the descriptor pool, and not because of system or device memory exhaustion, then `VK_ERROR_OUT_OF_POOL_MEMORY` **must** be returned.

`vkAllocateDescriptorSets` **can** be used to create multiple descriptor sets. If the creation of any of those descriptor sets fails, then the implementation **must** destroy all successfully created descriptor set objects from this command, set all entries of the `pDescriptorSets` array to `VK_NULL_HANDLE` and return the error.

Valid Usage (Implicit)

- VUID-vkAllocateDescriptorSets-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkAllocateDescriptorSets-pAllocateInfo-parameter
`pAllocateInfo` **must** be a valid pointer to a valid `VkDescriptorSetAllocateInfo` structure
- VUID-vkAllocateDescriptorSets-pDescriptorSets-parameter
`pDescriptorSets` **must** be a valid pointer to an array of `pAllocateInfo->descriptorSetCount` `VkDescriptorSet` handles
- VUID-vkAllocateDescriptorSets-device-queuecount
The device **must** have been created with at least `1` queue
- VUID-vkAllocateDescriptorSets-pAllocateInfo::descriptorSetCount-arraylength
`pAllocateInfo->descriptorSetCount` **must** be greater than `0`

Return Codes

Success

- `VK_SUCCESS`

Failure

- [VK_ERROR_FRAGMENTED_POOL](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_OUT_OF_POOL_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkDescriptorSetAllocateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetAllocateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkDescriptorPool      descriptorPool;
    uint32_t             descriptorSetCount;
    const VkDescriptorSetLayout* pSetLayouts;
} VkDescriptorSetAllocateInfo;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [descriptorPool](#) is the pool which the sets will be allocated from.
- [descriptorSetCount](#) determines the number of descriptor sets to be allocated from the pool.
- [pSetLayouts](#) is a pointer to an array of descriptor set layouts, with each member specifying how the corresponding descriptor set is allocated.

Valid Usage

- VUID-VkDescriptorSetAllocateInfo-apiVersion-07895
If the [VK_KHR_maintenance1](#) extension is not enabled and [VkPhysicalDeviceProperties::apiVersion](#) is less than Vulkan 1.1, [descriptorSetCount](#) **must** not be greater than the number of sets that are currently available for allocation in [descriptorPool](#)
- VUID-VkDescriptorSetAllocateInfo-apiVersion-07896
If the [VK_KHR_maintenance1](#) extension is not enabled and [VkPhysicalDeviceProperties::apiVersion](#) is less than Vulkan 1.1, [descriptorPool](#) **must** have enough free descriptor capacity remaining to allocate the descriptor sets of the specified layouts
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-00308
Each element of [pSetLayouts](#) **must** not have been created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT](#) set
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-03044
If any element of [pSetLayouts](#) was created with the [VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT](#) bit set,

`descriptorPool` **must** have been created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set

- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-09380

If `pSetLayouts[i]` was created with an element of `pBindingFlags` that includes `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, and `VkDescriptorSetVariableDescriptorCountAllocateInfo` is included in the `pNext` chain, and `VkDescriptorSetVariableDescriptorCountAllocateInfo::descriptorSetCount` is not zero, then `VkDescriptorSetVariableDescriptorCountAllocateInfo::pDescriptorCounts[i]` **must** be less than or equal to `VkDescriptorSetLayoutBinding::descriptorCount` for the corresponding binding used to create `pSetLayouts[i]`

- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-04610

If any element of `pSetLayouts` was created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT` bit set, `descriptorPool` **must** have been created with the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` flag set

- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-08009

Each element of `pSetLayouts` **must** not have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set

Valid Usage (Implicit)

- VUID-VkDescriptorSetAllocateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_ALLOCATE_INFO`

- VUID-VkDescriptorSetAllocateInfo-pNext-pNext

`pNext` **must** be `NULL` or a pointer to a valid instance of `VkDescriptorSetVariableDescriptorCountAllocateInfo`

- VUID-VkDescriptorSetAllocateInfo-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique

- VUID-VkDescriptorSetAllocateInfo-descriptorPool-parameter

`descriptorPool` **must** be a valid `VkDescriptorPool` handle

- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-parameter

`pSetLayouts` **must** be a valid pointer to an array of `descriptorSetCount` valid `VkDescriptorSetLayout` handles

- VUID-VkDescriptorSetAllocateInfo-descriptorSetCount-arraylength

`descriptorSetCount` **must** be greater than 0

- VUID-VkDescriptorSetAllocateInfo-commonparent

Both of `descriptorPool`, and the elements of `pSetLayouts` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `descriptorPool` **must** be externally synchronized

If the `pNext` chain of a `VkDescriptorSetAllocateInfo` structure includes a `VkDescriptorSetVariableDescriptorCountAllocateInfo` structure, then that structure includes an array of descriptor counts for variable-sized descriptor bindings, one for each descriptor set being allocated.

The `VkDescriptorSetVariableDescriptorCountAllocateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetVariableDescriptorCountAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           descriptorSetCount;
    const uint32_t*     pDescriptorCounts;
} VkDescriptorSetVariableDescriptorCountAllocateInfo;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorSetVariableDescriptorCountAllocateInfo
typedef VkDescriptorSetVariableDescriptorCountAllocateInfo
VkDescriptorSetVariableDescriptorCountAllocateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorSetCount` is zero or the number of elements in `pDescriptorCounts`.
- `pDescriptorCounts` is a pointer to an array of descriptor counts, with each member specifying the number of descriptors in a variable-sized descriptor binding in the corresponding descriptor set being allocated.

If `descriptorSetCount` is zero or this structure is not included in the `pNext` chain, then the variable lengths are considered to be zero. Otherwise, `pDescriptorCounts[i]` is the number of descriptors in the variable-sized descriptor binding in the corresponding descriptor set layout. If the variable-sized descriptor binding in the corresponding descriptor set layout has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `pDescriptorCounts[i]` specifies the binding's capacity in bytes. If `VkDescriptorSetAllocateInfo::pSetLayouts[i]` does not include a variable-sized descriptor binding, then `pDescriptorCounts[i]` is ignored.

Valid Usage

- VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-descriptorSetCount-03045
If `descriptorSetCount` is not zero, `descriptorSetCount` **must** equal `VkDescriptorSetAllocateInfo::descriptorSetCount`

Valid Usage (Implicit)

- VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_ALLOCATE_INFO`

- VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-pDescriptorCounts-parameter
If `descriptorSetCount` is not 0, `pDescriptorCounts` **must** be a valid pointer to an array of `descriptorSetCount` `uint32_t` values

Structure Chaining

Extends the structure

- `VkDescriptorSetAllocateInfo`

To free allocated descriptor sets, call:

```
// Provided by VK_VERSION_1_0
VkResult vkFreeDescriptorSets(
    VkDevice          device,
    VkDescriptorPool   descriptorPool,
    uint32_t          descriptorSetCount,
    const VkDescriptorSet* pDescriptorSets);
```

- `device` is the logical device that owns the descriptor pool.
- `descriptorPool` is the descriptor pool from which the descriptor sets were allocated.
- `descriptorSetCount` is the number of elements in the `pDescriptorSets` array.
- `pDescriptorSets` is a pointer to an array of handles to `VkDescriptorSet` objects.

After calling `vkFreeDescriptorSets`, all descriptor sets in `pDescriptorSets` are invalid.

Valid Usage

- VUID-vkFreeDescriptorSets-pDescriptorSets-00309
All submitted commands that refer to any element of `pDescriptorSets` **must** have completed execution
- VUID-vkFreeDescriptorSets-pDescriptorSets-00310
`pDescriptorSets` **must** be a valid pointer to an array of `descriptorSetCount` `VkDescriptorSet` handles, each element of which **must** either be a valid handle or `VK_NULL_HANDLE`
- VUID-vkFreeDescriptorSets-descriptorPool-00312
`descriptorPool` **must** have been created with the `VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT` flag

Valid Usage (Implicit)

- VUID-vkFreeDescriptorSets-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkFreeDescriptorSets-descriptorPool-parameter
`descriptorPool` **must** be a valid `VkDescriptorPool` handle
- VUID-vkFreeDescriptorSets-descriptorSetCount-arraylength
`descriptorSetCount` **must** be greater than `0`
- VUID-vkFreeDescriptorSets-descriptorPool-parent
`descriptorPool` **must** have been created, allocated, or retrieved from `device`
- VUID-vkFreeDescriptorSets-pDescriptorSets-parent
Each element of `pDescriptorSets` that is a valid handle **must** have been created, allocated, or retrieved from `descriptorPool`

Host Synchronization

- Host access to `descriptorPool` **must** be externally synchronized
- Host access to each member of `pDescriptorSets` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To return all descriptor sets allocated from a given pool to the pool, rather than freeing individual descriptor sets, call:

```
// Provided by VK_VERSION_1_0
VkResult vkResetDescriptorPool(
    VkDevice                device,
    VkDescriptorPool        descriptorPool,
    VkDescriptorPoolResetFlags flags);
```

- `device` is the logical device that owns the descriptor pool.
- `descriptorPool` is the descriptor pool to be reset.
- `flags` is reserved for future use.

Resetting a descriptor pool recycles all of the resources from all of the descriptor sets allocated from the descriptor pool back to the descriptor pool, and the descriptor sets are implicitly freed.

Valid Usage

- VUID-vkResetDescriptorPool-descriptorPool-00313
All uses of `descriptorPool` (via any allocated descriptor sets) **must** have completed execution

Valid Usage (Implicit)

- VUID-vkResetDescriptorPool-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkResetDescriptorPool-descriptorPool-parameter
`descriptorPool` **must** be a valid `VkDescriptorPool` handle
- VUID-vkResetDescriptorPool-flags-zeroBitmask
`flags` **must** be 0
- VUID-vkResetDescriptorPool-descriptorPool-parent
`descriptorPool` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `descriptorPool` **must** be externally synchronized
- Host access to any `VkDescriptorSet` objects allocated from `descriptorPool` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorPoolResetFlags;
```

`VkDescriptorPoolResetFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

17.4. Descriptor Set Updates

Once allocated, descriptor sets **can** be updated with a combination of write and copy operations. To update descriptor sets, call:

```
// Provided by VK_VERSION_1_0
void vkUpdateDescriptorSets(
    VkDevice          device,
    uint32_t          descriptorWriteCount,
    const VkWriteDescriptorSet* pDescriptorWrites,
    uint32_t          descriptorCopyCount,
    const VkCopyDescriptorSet* pDescriptorCopies);
```

- **device** is the logical device that updates the descriptor sets.
- **descriptorWriteCount** is the number of elements in the **pDescriptorWrites** array.
- **pDescriptorWrites** is a pointer to an array of **VkWriteDescriptorSet** structures describing the descriptor sets to write to.
- **descriptorCopyCount** is the number of elements in the **pDescriptorCopies** array.
- **pDescriptorCopies** is a pointer to an array of **VkCopyDescriptorSet** structures describing the descriptor sets to copy between.

The operations described by **pDescriptorWrites** are performed first, followed by the operations described by **pDescriptorCopies**. Within each array, the operations are performed in the order they appear in the array.

Each element in the **pDescriptorWrites** array describes an operation updating the descriptor set using descriptors for resources specified in the structure.

Each element in the **pDescriptorCopies** array is a **VkCopyDescriptorSet** structure describing an operation copying descriptors between sets.

If the **dstSet** member of any element of **pDescriptorWrites** or **pDescriptorCopies** is bound, accessed, or modified by any command that was recorded to a command buffer which is currently in the **recording or executable state**, and any of the descriptor bindings that are updated were not created with the **VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT** or **VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT** bits set, that command buffer becomes **invalid**.

Copying a descriptor from a descriptor set does not constitute a use of the referenced resource or view, as it is the reference itself that is copied. Applications **can** copy a descriptor referencing a destroyed resource, and it **can** copy an undefined descriptor. The destination descriptor becomes undefined in both cases.

Valid Usage

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06236

For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, elements of the `pTexelBufferView` member of `pDescriptorWrites[i]` **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06237

For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, the `buffer` member of any element of the `pBufferInfo` member of `pDescriptorWrites[i]` **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06238

For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `dstSet` was not allocated with a layout that included immutable samplers for `dstBinding` with `descriptorType`, the `sampler` member of any element of the `pImageInfo` member of `pDescriptorWrites[i]` **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06239

For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` the `imageView` member of any element of `pDescriptorWrites[i]` **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06240

For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, elements of the `pAccelerationStructures` member of a `VkWriteDescriptorSetAccelerationStructureKHR` structure in the `pNext` chain of `pDescriptorWrites[i]` **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06241

For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, elements of the `pAccelerationStructures` member of a `VkWriteDescriptorSetAccelerationStructureNV` structure in the `pNext` chain of `pDescriptorWrites[i]` **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-12324

For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_TENSOR_ARM`, elements of the `pTensorViews` member of a `VkWriteDescriptorSetTensorARM` structure in the `pNext` chain of `pDescriptorWrites[i]` **must** have been created on device

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06493

For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`,

VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, or
VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, pDescriptorWrites[i].pImageInfo **must** be a valid pointer to an array of pDescriptorWrites[i].descriptorCount valid VkDescriptorImageInfo structures

- VUID-vkUpdateDescriptorSets-None-03047

The dstSet member of each element of pDescriptorWrites or pDescriptorCopies for bindings which were created without the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT or VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT bits set **must** not be used by any command that was recorded to a command buffer which is in the pending state

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06993

Host access to pDescriptorWrites[i].dstSet and pDescriptorCopies[i].dstSet **must** be externally synchronized unless explicitly denoted otherwise for specific flags

Valid Usage (Implicit)

- VUID-vkUpdateDescriptorSets-device-parameter

device **must** be a valid VkDevice handle

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-parameter

If descriptorWriteCount is not 0, pDescriptorWrites **must** be a valid pointer to an array of descriptorWriteCount valid VkWriteDescriptorSet structures

- VUID-vkUpdateDescriptorSets-pDescriptorCopies-parameter

If descriptorCopyCount is not 0, pDescriptorCopies **must** be a valid pointer to an array of descriptorCopyCount valid VkCopyDescriptorSet structures

The VkWriteDescriptorSet structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkWriteDescriptorSet {
    VkStructureType    sType;
    const void*        pNext;
    VkDescriptorSet     dstSet;
    uint32_t           dstBinding;
    uint32_t           dstArrayElement;
    uint32_t           descriptorCount;
    VkDescriptorType    descriptorType;
    const VkDescriptorImageInfo* pImageInfo;
    const VkDescriptorBufferInfo* pBufferInfo;
    const VkBufferView* pTexelBufferView;
} VkWriteDescriptorSet;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.

- `dstSet` is the destination descriptor set to update.
- `dstBinding` is the descriptor binding within that set.
- `dstArrayElement` is the starting element in that array. If the descriptor binding identified by `dstSet` and `dstBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `dstArrayElement` specifies the starting byte offset within the binding.
- `descriptorCount` is the number of descriptors to update. If the descriptor binding identified by `dstSet` and `dstBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, then `descriptorCount` specifies the number of bytes to update. Otherwise, `descriptorCount` is one of
 - the number of elements in `pImageInfo`
 - the number of elements in `pBufferInfo`
 - the number of elements in `pTexelBufferView`
 - a value matching the `dataSize` member of a `VkWriteDescriptorSetInlineUniformBlock` structure in the `pNext` chain
 - a value matching the `accelerationStructureCount` of a `VkWriteDescriptorSetAccelerationStructureKHR` or `VkWriteDescriptorSetAccelerationStructureNV` structure in the `pNext` chain
 - a value matching the `descriptorCount` of a `VkWriteDescriptorSetTensorARM` structure in the `pNext` chain
- `descriptorType` is a `VkDescriptorType` specifying the type of each descriptor in `pImageInfo`, `pBufferInfo`, or `pTexelBufferView`, as described below. If `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is not equal to `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, `descriptorType` **must** be the same type as the `descriptorType` specified in `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding`. The type of the descriptor also controls which array the descriptors are taken from.
- `pImageInfo` is a pointer to an array of `VkDescriptorImageInfo` structures or is ignored, as described below.
- `pBufferInfo` is a pointer to an array of `VkDescriptorBufferInfo` structures or is ignored, as described below.
- `pTexelBufferView` is a pointer to an array of `VkBufferView` handles as described in the [Buffer Views](#) section or is ignored, as described below.

Members of `pImageInfo`, `pBufferInfo` and `pTexelBufferView` are only accessed by the implementation when they correspond to a descriptor type being defined - otherwise they are ignored. The members accessed are as follows for each descriptor type:

- For `VK_DESCRIPTOR_TYPE_SAMPLER`, only the `sampler` member of each element of `VkWriteDescriptorSet::pImageInfo` is accessed.
- For `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, only the `imageView` and `imageLayout` members of each element of `VkWriteDescriptorSet::pImageInfo` are accessed.
- For `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, all members of each element of

`VkWriteDescriptorSet::pImageInfo` are accessed.

- For `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, all members of each element of `VkWriteDescriptorSet::pBufferInfo` are accessed.
- For `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, each element of `VkWriteDescriptorSet::pTexelBufferView` is accessed.

When updating descriptor sets with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, none of the `pImageInfo`, `pBufferInfo`, or `pTexelBufferView` members are accessed, instead the source data of the descriptor update operation is taken from the `VkWriteDescriptorSetInlineUniformBlock` structure in the `pNext` chain of `VkWriteDescriptorSet`. When updating descriptor sets with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, none of the `pImageInfo`, `pBufferInfo`, or `pTexelBufferView` members are accessed, instead the source data of the descriptor update operation is taken from the `VkWriteDescriptorSetAccelerationStructureKHR` structure in the `pNext` chain of `VkWriteDescriptorSet`. When updating descriptor sets with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, none of the `pImageInfo`, `pBufferInfo`, or `pTexelBufferView` members are accessed, instead the source data of the descriptor update operation is taken from the `VkWriteDescriptorSetAccelerationStructureNV` structure in the `pNext` chain of `VkWriteDescriptorSet`. When updating descriptor sets with a `descriptorType` of `VK_DESCRIPTOR_TYPE_TENSOR_ARM`, none of the `pImageInfo`, `pBufferInfo`, or `pTexelBufferView` members are accessed, instead the source data of the descriptor update operation is taken from the instance of `VkWriteDescriptorSetTensorARM` in the `pNext` chain of `VkWriteDescriptorSet`.

If the `nullDescriptor` feature is enabled, the buffer, acceleration structure, tensor, imageView, or bufferView **can** be `VK_NULL_HANDLE`. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded. A null acceleration structure descriptor results in the miss shader being invoked.

If the destination descriptor is a mutable descriptor, the active descriptor type for the destination descriptor becomes `descriptorType`.

Consecutive Binding Updates

If the `dstBinding` has fewer than `descriptorCount` array elements remaining starting from `dstArrayElement`, then the remainder will be used to update the subsequent binding - `dstBinding+1` starting at array element zero. If a binding has a `descriptorCount` of zero, it is skipped. This behavior applies recursively, with the update affecting consecutive bindings as needed to update all `descriptorCount` descriptors. Consecutive bindings **must** have identical `VkDescriptorType`, `VkShaderStageFlags`, `VkDescriptorBindingFlagBits`, and immutable samplers references. In addition, if the `VkDescriptorType` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the supported descriptor types in `VkMutableDescriptorTypeCreateInfoEXT` **must** be equally defined.

NOTE

The same behavior applies to bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` where `descriptorCount` specifies the number of bytes to update while `dstArrayElement` specifies the starting byte offset, thus in this case if the `dstBinding` has a smaller byte size than the sum of

`dstArrayElement` and `descriptorCount`, then the remainder will be used to update the subsequent binding - `dstBinding+1` starting at offset zero. This falls out as a special case of the above rule.

Valid Usage

- VUID-VkWriteDescriptorSet-dstBinding-00315
`dstBinding` **must** be less than or equal to the maximum value of `binding` of all `VkDescriptorSetLayoutBinding` structures specified when `dstSet`'s descriptor set layout was created
- VUID-VkWriteDescriptorSet-dstBinding-00316
`dstBinding` **must** be a binding with a non-zero `descriptorCount`
- VUID-VkWriteDescriptorSet-dstBinding-10009
`dstBinding` **must** be a binding with a non-zero `VkDescriptorSetLayoutCreateInfo::bindingCount`
- VUID-VkWriteDescriptorSet-descriptorCount-00317
All consecutive bindings updated via a single `VkWriteDescriptorSet` structure, except those with a `descriptorCount` of zero, **must** have identical `descriptorType`
- VUID-VkWriteDescriptorSet-descriptorCount-10776
All consecutive bindings updated via a single `VkWriteDescriptorSet` structure, except those with a `descriptorCount` of zero, **must** have identical `stageFlags`
- VUID-VkWriteDescriptorSet-descriptorCount-00318
All consecutive bindings updated via a single `VkWriteDescriptorSet` structure, except those with a `descriptorCount` of zero, **must** all either use immutable samplers or **must** all not use immutable samplers
- VUID-VkWriteDescriptorSet-descriptorCount-10777
All consecutive bindings updated via a single `VkWriteDescriptorSet` structure, except those with a `descriptorCount` of zero, **must** have identical `VkDescriptorBindingFlagBits`
- VUID-VkWriteDescriptorSet-descriptorType-00319
`descriptorType` **must** match the type of `dstBinding` within `dstSet`
- VUID-VkWriteDescriptorSet-dstSet-00320
`dstSet` **must** be a valid `VkDescriptorSet` handle
- VUID-VkWriteDescriptorSet-dstArrayElement-00321
The sum of `dstArrayElement` and `descriptorCount` **must** be less than or equal to the number of array elements in the descriptor set binding specified by `dstBinding`, and all applicable consecutive bindings
- VUID-VkWriteDescriptorSet-descriptorType-02219
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `dstArrayElement` **must** be an integer multiple of 4
- VUID-VkWriteDescriptorSet-descriptorType-02220
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `descriptorCount` **must** be an integer multiple of 4

- VUID-VkWriteDescriptorSet-descriptorType-02994
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, each element of `pTexelBufferView` **must** be either a valid `VkBufferView` handle or `VK_NULL_HANDLE`
- VUID-VkWriteDescriptorSet-descriptorType-02995
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` and the `nullDescriptor` feature is not enabled, each element of `pTexelBufferView` **must** not be `VK_NULL_HANDLE`
- VUID-VkWriteDescriptorSet-descriptorType-00324
If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, `pBufferInfo` **must** be a valid pointer to an array of `descriptorCount` valid `VkDescriptorBufferInfo` structures
- VUID-VkWriteDescriptorSet-descriptorType-00325
If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `dstSet` was not allocated with a layout that included immutable samplers for `dstBinding` with `descriptorType`, the `sampler` member of each element of `pImageInfo` **must** be a valid `VkSampler` object
- VUID-VkWriteDescriptorSet-descriptorType-02996
If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, the `imageView` member of each element of `pImageInfo` **must** be either a valid `VkImageView` handle or `VK_NULL_HANDLE`
- VUID-VkWriteDescriptorSet-descriptorType-02997
If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and the `nullDescriptor` feature is not enabled, the `imageView` member of each element of `pImageInfo` **must** not be `VK_NULL_HANDLE`
- VUID-VkWriteDescriptorSet-descriptorType-07683
If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, then the `imageView` member of each element of `pImageInfo` **must** not be `VK_NULL_HANDLE`
- VUID-VkWriteDescriptorSet-descriptorType-02221
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, the `pNext` chain **must** include a `VkWriteDescriptorSetInlineUniformBlock` structure whose `dataSize` member equals `descriptorCount`
- VUID-VkWriteDescriptorSet-descriptorType-02382
If `descriptorType` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, the `pNext` chain **must** include a `VkWriteDescriptorSetAccelerationStructureKHR` structure whose `accelerationStructureCount` member equals `descriptorCount`
- VUID-VkWriteDescriptorSet-descriptorType-03817
If `descriptorType` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, the `pNext`

chain **must** include a `VkWriteDescriptorSetAccelerationStructureNV` structure whose `accelerationStructureCount` member equals `descriptorCount`

- VUID-VkWriteDescriptorSet-descriptorType-09945

If `descriptorType` is `VK_DESCRIPTOR_TYPE_TENSOR_ARM`, the `pNext` chain **must** include a `VkWriteDescriptorSetTensorARM` structure whose `tensorViewCount` member equals `descriptorCount`

- VUID-VkWriteDescriptorSet-descriptorType-01946

If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, then the `imageView` member of each `pImageInfo` element **must** have been created without a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain

- VUID-VkWriteDescriptorSet-descriptorType-02738

If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and if any element of `pImageInfo` has an `imageView` member that was created with a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain, then `dstSet` **must** have been allocated with a layout that included immutable samplers for `dstBinding`, and the corresponding immutable sampler **must** have been created with an **identically defined** `VkSamplerYcbcrConversionInfo` object

- VUID-VkWriteDescriptorSet-descriptorType-01948

If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `dstSet` was allocated with a layout that included immutable samplers for `dstBinding`, then the `imageView` member of each element of `pImageInfo` which corresponds to an immutable sampler that enables **sampler Y'C_BC_R conversion** **must** have been created with a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain with an **identically defined** `VkSamplerYcbcrConversionInfo` to the corresponding immutable sampler

- VUID-VkWriteDescriptorSet-descriptorType-09506

If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `dstSet` was allocated with a layout that included immutable samplers for `dstBinding`, and those samplers enable **sampler Y'C_BC_R conversion**, then `imageView` **must** not be `VK_NULL_HANDLE`

- VUID-VkWriteDescriptorSet-descriptorType-00327

If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, the `offset` member of each element of `pBufferInfo` **must** be a multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`

- VUID-VkWriteDescriptorSet-descriptorType-00328

If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, the `offset` member of each element of `pBufferInfo` **must** be a multiple of `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`

- VUID-VkWriteDescriptorSet-descriptorType-00329

If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, and the `buffer` member of any element of `pBufferInfo` is the handle of a non-sparse buffer, then that buffer **must** be

bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkWriteDescriptorSet-descriptorType-00330

If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, the `buffer` member of each element of `pBufferInfo` **must** have been created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-VkWriteDescriptorSet-descriptorType-00331

If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, the `buffer` member of each element of `pBufferInfo` **must** have been created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-VkWriteDescriptorSet-descriptorType-00332

If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, the `range` member of each element of `pBufferInfo`, or the `effective range` if `range` is `VK_WHOLE_SIZE`, **must** be less than or equal to `VkPhysicalDeviceLimits::maxUniformBufferRange`

- VUID-VkWriteDescriptorSet-descriptorType-00333

If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, and the `shader64BitIndexing` feature is not enabled, the `range` member of each element of `pBufferInfo`, or the `effective range` if `range` is `VK_WHOLE_SIZE`, **must** be less than or equal to `VkPhysicalDeviceLimits::maxStorageBufferRange`

- VUID-VkWriteDescriptorSet-descriptorType-08765

If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, the `pTexelBufferView` `buffer` `view` `usage` **must** include `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT`

- VUID-VkWriteDescriptorSet-descriptorType-08766

If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, the `pTexelBufferView` `buffer` `view` `usage` **must** include `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT`

- VUID-VkWriteDescriptorSet-descriptorType-00336

If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `imageView` member of each element of `pImageInfo` **must** have been created with the `identity swizzle`

- VUID-VkWriteDescriptorSet-descriptorType-00337

If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the `imageView` member of each element of `pImageInfo` **must** have been created with the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set

- VUID-VkWriteDescriptorSet-descriptorType-04149

If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in `Sampled Image`

- VUID-VkWriteDescriptorSet-descriptorType-04150

If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` the `imageLayout`

member of each element of **pImageInfo** **must** be a member of the list given in [Combined Image Sampler](#)

- VUID-VkWriteDescriptorSet-descriptorType-04151
If **descriptorType** is [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) the **imageLayout** member of each element of **pImageInfo** **must** be a member of the list given in [Input Attachment](#)
- VUID-VkWriteDescriptorSet-descriptorType-04152
If **descriptorType** is [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#) the **imageLayout** member of each element of **pImageInfo** **must** be a member of the list given in [Storage Image](#)
- VUID-VkWriteDescriptorSet-descriptorType-00338
If **descriptorType** is [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#), the **imageView** member of each element of **pImageInfo** **must** have been created with the [VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT](#) usage flag set
- VUID-VkWriteDescriptorSet-descriptorType-00339
If **descriptorType** is [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), the **imageView** member of each element of **pImageInfo** **must** have been created with the [VK_IMAGE_USAGE_STORAGE_BIT](#) usage flag set
- VUID-VkWriteDescriptorSet-descriptorType-02752
If **descriptorType** is [VK_DESCRIPTOR_TYPE_SAMPLER](#), then **dstSet** **must** not have been allocated with a layout that included immutable samplers for **dstBinding**
- VUID-VkWriteDescriptorSet-dstSet-04611
If the [VkDescriptorSetLayoutBinding](#) for **dstSet** at **dstBinding** is [VK_DESCRIPTOR_TYPE_MUTABLE_EXT](#), the new active descriptor type **descriptorType** **must** exist in the corresponding [pMutableDescriptorTypeLists](#) list for **dstBinding**
- VUID-VkWriteDescriptorSet-descriptorType-06450
If **descriptorType** is [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#), the **imageView** member of each element of **pImageInfo** **must** have either been created without a [VkImageViewMinLodCreateInfoEXT](#) included in the **pNext** chain or with a [VkImageViewMinLodCreateInfoEXT::minLod](#) of **0.0**
- VUID-VkWriteDescriptorSet-descriptorType-06942
If **descriptorType** is [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), the **imageView** member of each element of **pImageInfo** **must** have been created with a view created with an **image** created with the [VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM](#) usage flag set
- VUID-VkWriteDescriptorSet-descriptorType-06943
If **descriptorType** is [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), the **imageView** member of each element of **pImageInfo** **must** have been created with a view created with an **image** created with the [VK_IMAGE_USAGE_SAMPLE_BLOCK_MATCH_BIT_QCOM](#) usage flag set

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSet-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET](#)

- VUID-VkWriteDescriptorSet-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkWriteDescriptorSetAccelerationStructureKHR**, **VkWriteDescriptorSetAccelerationStructureNV**, **VkWriteDescriptorSetInlineUniformBlock**, **VkWriteDescriptorSetPartitionedAccelerationStructureNV**, or **VkWriteDescriptorSetTensorARM**
- VUID-VkWriteDescriptorSet-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkWriteDescriptorSet-descriptorType-parameter
descriptorType **must** be a valid **VkDescriptorType** value
- VUID-VkWriteDescriptorSet-descriptorCount-arraylength
descriptorCount **must** be greater than 0
- VUID-VkWriteDescriptorSet-commonparent
Both of **dstSet**, and the elements of **pTexelBufferView** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same **VkDevice**

The **VkDescriptorBufferInfo** structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorBufferInfo {
    VkBuffer      buffer;
    VkDeviceSize  offset;
    VkDeviceSize  range;
} VkDescriptorBufferInfo;
```

- **buffer** is **VK_NULL_HANDLE** or the buffer resource.
- **offset** is the offset in bytes from the start of **buffer**. Access to buffer memory via this descriptor uses addressing that is relative to this starting offset.
- **range** is the size in bytes that is used for this descriptor update, or **VK_WHOLE_SIZE** to use the range from **offset** to the end of the buffer.

NOTE

When setting **range** to **VK_WHOLE_SIZE**, the **effective range** **must** not be larger than the maximum range for the descriptor type (**maxUniformBufferRange** or **maxStorageBufferRange**). This means that **VK_WHOLE_SIZE** is not typically useful in the common case where uniform buffer descriptors are suballocated from a buffer that is much larger than **maxUniformBufferRange**.

For **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC** and **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC** descriptor types, **offset** is the base offset from which the dynamic offset is applied and **range** is the static size used for all dynamic offsets.

When **range** is **VK_WHOLE_SIZE** the effective range is calculated at **vkUpdateDescriptorSets** is by taking the size of **buffer** minus the **offset**.

Valid Usage

- VUID-VkDescriptorBufferInfo-offset-00340
`offset` **must** be less than the size of `buffer`
- VUID-VkDescriptorBufferInfo-range-00341
If `range` is not equal to `VK_WHOLE_SIZE`, `range` **must** be greater than 0
- VUID-VkDescriptorBufferInfo-range-00342
If `range` is not equal to `VK_WHOLE_SIZE`, `range` **must** be less than or equal to the size of `buffer` minus `offset`
- VUID-VkDescriptorBufferInfo-buffer-02998
If the `nullDescriptor` feature is not enabled, `buffer` **must** not be `VK_NULL_HANDLE`
- VUID-VkDescriptorBufferInfo-buffer-02999
If `buffer` is `VK_NULL_HANDLE`, `offset` **must** be zero and `range` **must** be `VK_WHOLE_SIZE`

Valid Usage (Implicit)

- VUID-VkDescriptorBufferInfo-buffer-parameter
If `buffer` is not `VK_NULL_HANDLE`, `buffer` **must** be a valid `VkBuffer` handle

The `VkDescriptorImageInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorImageInfo {
    VkSampler      sampler;
    VkImageView    imageView;
    VkImageLayout  imageLayout;
} VkDescriptorImageInfo;
```

- `sampler` is a sampler handle, and is used in descriptor updates for types `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` if the binding being updated does not use immutable samplers.
- `imageView` is `VK_NULL_HANDLE` or an image view handle, and is used in descriptor updates for types `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`.
- `imageLayout` is the layout that the image subresources accessible from `imageView` will be in at the time this descriptor is accessed. `imageLayout` is used in descriptor updates for types `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`.

Members of `VkDescriptorImageInfo` that are not used in an update (as described above) are ignored.

Valid Usage

- VUID-VkDescriptorImageInfo-imageView-06712
`imageView` **must** not be a 2D array image view created from a 3D image
- VUID-VkDescriptorImageInfo-imageView-07795
If `imageView` is a 2D view created from a 3D image, then `descriptorType` **must** be `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`
- VUID-VkDescriptorImageInfo-imageView-07796
If `imageView` is a 2D view created from a 3D image, then the image **must** have been created with `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT` set
- VUID-VkDescriptorImageInfo-descriptorType-06713
If the `image2DViewOf3D` feature is not enabled or `descriptorType` is not `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` then `imageView` **must** not be a 2D view created from a 3D image
- VUID-VkDescriptorImageInfo-descriptorType-06714
If the `sampler2DViewOf3D` feature is not enabled or `descriptorType` is not `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` then `imageView` **must** not be a 2D view created from a 3D image
- VUID-VkDescriptorImageInfo-imageView-01976
If `imageView` is created from a depth/stencil image, the `aspectMask` used to create the `imageView` **must** include either `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` but not both
- VUID-VkDescriptorImageInfo-imageLayout-09425
If `imageLayout` is `VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL`, then the `aspectMask` used to create `imageView` **must** not include either `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-VkDescriptorImageInfo-imageLayout-09426
If `imageLayout` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL` or `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, then the `aspectMask` used to create `imageView` **must** not include `VK_IMAGE_ASPECT_COLOR_BIT`
- VUID-VkDescriptorImageInfo-sampler-01564
If `sampler` is used and the `VkFormat` of the image is a multi-planar format, the image **must** have been created with `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, and the `aspectMask` of the `imageView` **must** be a valid multi-planar aspect mask bit
- VUID-VkDescriptorImageInfo-mutableComparisonSamplers-04450

If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::mutableComparisonSamplers` is `VK_FALSE`, then `sampler` **must** have been created with `VkSamplerCreateInfo::compareEnable` set to `VK_FALSE`

Valid Usage (Implicit)

- VUID-VkDescriptorImageInfo-commonparent
Both of `imageView`, and `sampler` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

If the `descriptorType` member of `VkWriteDescriptorSet` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then the data to write to the descriptor set is specified through a `VkWriteDescriptorSetInlineUniformBlock` structure included in the `pNext` chain of `VkWriteDescriptorSet`.

The `VkWriteDescriptorSetInlineUniformBlock` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkWriteDescriptorSetInlineUniformBlock {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           dataSize;
    const void*        pData;
} VkWriteDescriptorSetInlineUniformBlock;
```

```
// Provided by VK_EXT_inline_uniform_block
// Equivalent to VkWriteDescriptorSetInlineUniformBlock
typedef VkWriteDescriptorSetInlineUniformBlock
VkWriteDescriptorSetInlineUniformBlockEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataSize` is the number of bytes of inline uniform block data pointed to by `pData`.
- `pData` is a pointer to `dataSize` number of bytes of data to write to the inline uniform block.

Valid Usage

- VUID-VkWriteDescriptorSetInlineUniformBlock-dataSize-02222
`dataSize` **must** be an integer multiple of 4

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetInlineUniformBlock-sType-sType **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_INLINE_UNIFORM_BLOCK`
- VUID-VkWriteDescriptorSetInlineUniformBlock-pData-parameter `pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-VkWriteDescriptorSetInlineUniformBlock-dataSize-arraylength `dataSize` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkWriteDescriptorSet`

The `VkWriteDescriptorSetAccelerationStructureKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkWriteDescriptorSetAccelerationStructureKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           accelerationStructureCount;
    const VkAccelerationStructureKHR* pAccelerationStructures;
} VkWriteDescriptorSetAccelerationStructureKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructureCount` is the number of elements in `pAccelerationStructures`.
- `pAccelerationStructures` is a pointer to an array of `VkAccelerationStructureKHR` structures specifying the acceleration structures to update.

Valid Usage

- VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-03579
Each acceleration structure in `pAccelerationStructures` **must** have been created with a `type` of `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-03580
If the `nullDescriptor` feature is not enabled, each element of `pAccelerationStructures` **must** not be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetAccelerationStructureKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_ACCELERATION_STRUCTURE_KHR`
- VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-parameter `pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid or `VK_NULL_HANDLE` `VkAccelerationStructureKHR` handles
- VUID-VkWriteDescriptorSetAccelerationStructureKHR-accelerationStructureCount-arraylength `accelerationStructureCount` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkWriteDescriptorSet`

If the `descriptorType` member of `VkWriteDescriptorSet` is `VK_DESCRIPTOR_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_NV`, then the data to write to the descriptor set is specified through a `VkWriteDescriptorSetPartitionedAccelerationStructureNV` structure included in the `pNext` chain of `VkWriteDescriptorSet`.

The `VkWriteDescriptorSetPartitionedAccelerationStructureNV` structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkWriteDescriptorSetPartitionedAccelerationStructureNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           accelerationStructureCount;
    const VkDeviceAddress* pAccelerationStructures;
} VkWriteDescriptorSetPartitionedAccelerationStructureNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructureCount` is the number of elements in `pAccelerationStructures`.
- `pAccelerationStructures` is a pointer to an array of `accelerationStructureCount` device addresses pointing to previously built PTLAS.

Valid Usage

- VUID-VkWriteDescriptorSetPartitionedAccelerationStructureNV-accelerationStructureCount-10511

`accelerationStructureCount` **must** be equal to `descriptorCount` in the extended structure

- VUID-VkWriteDescriptorSetPartitionedAccelerationStructureNV-pAccelerationStructures-10512

Each entry in `pAccelerationStructures` **must** be a valid address of a PTLAS

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetPartitionedAccelerationStructureNV-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_PARTITIONED_ACCELERATION_STRUCTURE_NV`
- VUID-VkWriteDescriptorSetPartitionedAccelerationStructureNV-pAccelerationStructures-parameter `pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` or `VK_NULL_HANDLE` `VkDeviceAddress` values
- VUID-VkWriteDescriptorSetPartitionedAccelerationStructureNV-accelerationStructureCount-arraylength `accelerationStructureCount` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkWriteDescriptorSet`

The `VkWriteDescriptorSetAccelerationStructureNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkWriteDescriptorSetAccelerationStructureNV {
    VkStructureType           sType;
    const void*               pNext;
    uint32_t                  accelerationStructureCount;
    const VkAccelerationStructureNV* pAccelerationStructures;
} VkWriteDescriptorSetAccelerationStructureNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructureCount` is the number of elements in `pAccelerationStructures`.
- `pAccelerationStructures` is a pointer to an array of `VkAccelerationStructureNV` structures specifying the acceleration structures to update.

Valid Usage

- VUID-VkWriteDescriptorSetAccelerationStructureNV-pAccelerationStructures-03748
Each acceleration structure in `pAccelerationStructures` **must** have been created with `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`
- VUID-VkWriteDescriptorSetAccelerationStructureNV-pAccelerationStructures-03749
If the `nullDescriptor` feature is not enabled, each member of `pAccelerationStructures` **must** not be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetAccelerationStructureNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_ACCELERATION_STRUCTURE_NV`
- VUID-VkWriteDescriptorSetAccelerationStructureNV-pAccelerationStructures-parameter
`pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid or `VK_NULL_HANDLE` `VkAccelerationStructureNV` handles
- VUID-VkWriteDescriptorSetAccelerationStructureNV-accelerationStructureCount-arraylength
`accelerationStructureCount` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkWriteDescriptorSet`

The `VkWriteDescriptorSetTensorARM` structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkWriteDescriptorSetTensorARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           tensorViewCount;
    const VkTensorViewARM* pTensorViews;
} VkWriteDescriptorSetTensorARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `tensorViewCount` is the number of elements in `pTensorViews`.
- `pTensorViews` are the tensor views that will be used to update the descriptor set.

Valid Usage

- VUID-VkWriteDescriptorSetTensorARM-nullDescriptor-09898

If the `nullDescriptor` feature is not enabled, each element of `pTensorViews` **must** not be `VK_NULL_HANDLE`

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetTensorARM-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_TENSOR_ARM`
- VUID-VkWriteDescriptorSetTensorARM-pTensorViews-parameter
`pTensorViews` **must** be a valid pointer to an array of `tensorViewCount` valid or `VK_NULL_HANDLE` `VkTensorViewARM` handles
- VUID-VkWriteDescriptorSetTensorARM-tensorViewCount-arraylength
`tensorViewCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- `VkWriteDescriptorSet`

The `VkCopyDescriptorSet` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkCopyDescriptorSet {
    VkStructureType    sType;
    const void*        pNext;
    VkDescriptorSet     srcSet;
    uint32_t           srcBinding;
    uint32_t           srcArrayElement;
    VkDescriptorSet     dstSet;
    uint32_t           dstBinding;
    uint32_t           dstArrayElement;
    uint32_t           descriptorCount;
} VkCopyDescriptorSet;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcSet`, `srcBinding`, and `srcArrayElement` are the source set, binding, and array element, respectively. If the descriptor binding identified by `srcSet` and `srcBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `srcArrayElement` specifies the starting byte offset within the binding to copy from.

- `dstSet`, `dstBinding`, and `dstArrayElement` are the destination set, binding, and array element, respectively. If the descriptor binding identified by `dstSet` and `dstBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `dstArrayElement` specifies the starting byte offset within the binding to copy to.
- `descriptorCount` is the number of descriptors to copy from the source to destination. If `descriptorCount` is greater than the number of remaining array elements in the source or destination binding, those affect consecutive bindings in a manner similar to `VkWriteDescriptorSet` above. If the descriptor binding identified by `srcSet` and `srcBinding` has a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` specifies the number of bytes to copy and the remaining array elements in the source or destination binding refer to the remaining number of bytes in those.

If the `VkDescriptorSetLayoutBinding` for `dstBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` and `srcBinding` is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the new active descriptor type becomes the descriptor type of `srcBinding`. If both `VkDescriptorSetLayoutBinding` for `srcBinding` and `dstBinding` are `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the active descriptor type in each source descriptor is copied into the corresponding destination descriptor. The active descriptor type **can** be different for each source descriptor.

NOTE

The intention is that copies to and from mutable descriptors is a simple memcpy. Copies between non-mutable and mutable descriptors are expected to require one memcpy per descriptor to handle the difference in size, but this use case with more than one `descriptorCount` is considered rare.

Valid Usage

- VUID-VkCopyDescriptorSet-srcBinding-00345
`srcBinding` **must** be a valid binding within `srcSet`
- VUID-VkCopyDescriptorSet-srcArrayElement-00346
The sum of `srcArrayElement` and `descriptorCount` **must** be less than or equal to the number of array elements in the descriptor set binding specified by `srcBinding`, and all applicable `consecutive bindings`
- VUID-VkCopyDescriptorSet-dstBinding-00347
`dstBinding` **must** be a valid binding within `dstSet`
- VUID-VkCopyDescriptorSet-dstArrayElement-00348
The sum of `dstArrayElement` and `descriptorCount` **must** be less than or equal to the number of array elements in the descriptor set binding specified by `dstBinding`, and all applicable `consecutive bindings`
- VUID-VkCopyDescriptorSet-dstBinding-02632
The type of `dstBinding` within `dstSet` **must** be equal to the type of `srcBinding` within `srcSet`
- VUID-VkCopyDescriptorSet-srcSet-00349
If `srcSet` is equal to `dstSet`, then the source and destination ranges of descriptors **must** not overlap, where the ranges **may** include array elements from `consecutive bindings`
- VUID-VkCopyDescriptorSet-srcBinding-02223
If the descriptor type of the descriptor set binding specified by `srcBinding` is

`VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `srcArrayElement` **must** be an integer multiple of 4

- VUID-VkCopyDescriptorSet-dstBinding-02224

If the descriptor type of the descriptor set binding specified by `dstBinding` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `dstArrayElement` **must** be an integer multiple of 4

- VUID-VkCopyDescriptorSet-srcBinding-02225

If the descriptor type of the descriptor set binding specified by either `srcBinding` or `dstBinding` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `descriptorCount` **must** be an integer multiple of 4

- VUID-VkCopyDescriptorSet-srcSet-01918

If `srcSet`'s layout was created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` flag set, then `dstSet`'s layout **must** also have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` flag set

- VUID-VkCopyDescriptorSet-srcSet-04885

If `srcSet`'s layout was created without either the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT` flag or the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` flag set, then `dstSet`'s layout **must** have been created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` flag set

- VUID-VkCopyDescriptorSet-srcSet-01920

If the descriptor pool from which `srcSet` was allocated was created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set, then the descriptor pool from which `dstSet` was allocated **must** also have been created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set

- VUID-VkCopyDescriptorSet-srcSet-04887

If the descriptor pool from which `srcSet` was allocated was created without either the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` flag or the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set, then the descriptor pool from which `dstSet` was allocated **must** have been created without the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set

- VUID-VkCopyDescriptorSet-dstBinding-02753

If the descriptor type of the descriptor set binding specified by `dstBinding` is `VK_DESCRIPTOR_TYPE_SAMPLER`, then `dstSet` **must** not have been allocated with a layout that included immutable samplers for `dstBinding`

- VUID-VkCopyDescriptorSet-dstSet-04612

If `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the new active descriptor type **must** exist in the corresponding `pMutableDescriptorTypeLists` list for `dstBinding` if the new active descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`

- VUID-VkCopyDescriptorSet-srcSet-04613

If `VkDescriptorSetLayoutBinding` for `srcSet` at `srcBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` and the `VkDescriptorSetLayoutBinding` for `dstSet` at

`dstBinding` is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the active descriptor type for the source descriptor **must** match the descriptor type of `dstBinding`

- VUID-VkCopyDescriptorSet-dstSet-04614

If `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, and the new active descriptor type is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the `pMutableDescriptorTypeLists` for `srcBinding` and `dstBinding` **must** match exactly

Valid Usage (Implicit)

- VUID-VkCopyDescriptorSet-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_DESCRIPTOR_SET`
- VUID-VkCopyDescriptorSet-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkCopyDescriptorSet-srcSet-parameter
`srcSet` **must** be a valid `VkDescriptorSet` handle
- VUID-VkCopyDescriptorSet-dstSet-parameter
`dstSet` **must** be a valid `VkDescriptorSet` handle
- VUID-VkCopyDescriptorSet-commonparent
Both of `dstSet`, and `srcSet` **must** have been created, allocated, or retrieved from the same `VkDevice`

17.5. Descriptor Update Templates

A descriptor update template specifies a mapping from descriptor update information in host memory to descriptors in a descriptor set. It is designed to avoid passing redundant information to the driver when frequently updating the same set of descriptors in descriptor sets.

Descriptor update template objects are represented by `VkDescriptorUpdateTemplate` handles:

```
// Provided by VK_VERSION_1_1
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorUpdateTemplate)
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplate
typedef VkDescriptorUpdateTemplate VkDescriptorUpdateTemplateKHR;
```

17.6. Descriptor Set Updates With Templates

Updating a large `VkDescriptorSet` array **can** be an expensive operation since an application **must** specify one `VkWriteDescriptorSet` structure for each descriptor or descriptor array to update, each

of which re-specifies the same state when updating the same descriptor in multiple descriptor sets. For cases when an application wishes to update the same set of descriptors in multiple descriptor sets allocated using the same [VkDescriptorSetLayout](#), [vkUpdateDescriptorSetWithTemplate](#) **can** be used as a replacement for [vkUpdateDescriptorSets](#).

[VkDescriptorUpdateTemplate](#) allows implementations to convert a set of descriptor update operations on a single descriptor set to an internal format. In conjunction with [vkCmdPushDescriptorSetWithTemplate](#) or [vkUpdateDescriptorSetWithTemplate](#), this **can** be more efficient compared to calling [vkCmdPushDescriptorSet](#) or [vkUpdateDescriptorSets](#). The descriptors themselves are not specified in the [VkDescriptorUpdateTemplate](#), rather, offsets into an application provided pointer to host memory are specified, which are combined with a pointer passed to [vkCmdPushDescriptorSetWithTemplate](#) or [vkUpdateDescriptorSetWithTemplate](#). This allows large batches of updates to be executed without having to convert application data structures into a strictly-defined Vulkan data structure.

To create a descriptor update template, call:

```
// Provided by VK_VERSION_1_1
VkResult vkCreateDescriptorUpdateTemplate(
    VkDevice                                device,
    const VkDescriptorUpdateTemplateCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkDescriptorUpdateTemplate*              pDescriptorUpdateTemplate);
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to vkCreateDescriptorUpdateTemplate
VkResult vkCreateDescriptorUpdateTemplateKHR(
    VkDevice                                device,
    const VkDescriptorUpdateTemplateCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkDescriptorUpdateTemplate*              pDescriptorUpdateTemplate);
```

- **device** is the logical device that creates the descriptor update template.
- **pCreateInfo** is a pointer to a [VkDescriptorUpdateTemplateCreateInfo](#) structure specifying the set of descriptors to update with a single call to [vkCmdPushDescriptorSetWithTemplate](#) or [vkUpdateDescriptorSetWithTemplate](#).
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pDescriptorUpdateTemplate** is a pointer to a [VkDescriptorUpdateTemplate](#) handle in which the resulting descriptor update template object is returned.

Valid Usage (Implicit)

- VUID-vkCreateDescriptorUpdateTemplate-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkCreateDescriptorUpdateTemplate-pCreateInfo-parameter

`pCreateInfo` **must** be a valid pointer to a valid `VkDescriptorUpdateTemplateCreateInfo` structure

- VUID-vkCreateDescriptorUpdateTemplate-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateDescriptorUpdateTemplate-pDescriptorUpdateTemplate-parameter
`pDescriptorUpdateTemplate` **must** be a valid pointer to a `VkDescriptorUpdateTemplate` handle
- VUID-vkCreateDescriptorUpdateTemplate-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkDescriptorUpdateTemplateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorUpdateTemplateCreateInfo {
    VkStructureType             sType;
    const void*                 pNext;
    VkDescriptorUpdateTemplateCreateFlags flags;
    uint32_t                    descriptorUpdateEntryCount;
    const VkDescriptorUpdateTemplateEntry* pDescriptorUpdateEntries;
    VkDescriptorUpdateTemplateType templateType;
    VkDescriptorSetLayout        descriptorSetLayout;
    VkPipelineBindPoint          pipelineBindPoint;
    VkPipelineLayout             pipelineLayout;
    uint32_t                     set;
} VkDescriptorUpdateTemplateCreateInfo;
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplateCreateInfo
typedef VkDescriptorUpdateTemplateCreateInfo VkDescriptorUpdateTemplateCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `descriptorUpdateEntryCount` is the number of elements in the `pDescriptorUpdateEntries` array.
- `pDescriptorUpdateEntries` is a pointer to an array of `VkDescriptorUpdateTemplateEntry` structures describing the descriptors to be updated by the descriptor update template.
- `templateType` Specifies the type of the descriptor update template. If set to `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET` it **can** only be used to update descriptor sets with a fixed `descriptorSetLayout`. If set to `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS` it **can** only be used to push descriptor sets using the provided `pipelineBindPoint`, `pipelineLayout`, and `set` number.
- `descriptorSetLayout` is the descriptor set layout used to build the descriptor update template. All descriptor sets which are going to be updated through the newly created descriptor update template **must** be created with a layout that matches (is the same as, or defined identically to) this layout. This parameter is ignored if `templateType` is not `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET`. The implementation **must** not access this object outside of the duration of the command this structure is passed to.
- `pipelineBindPoint` is a `VkPipelineBindPoint` indicating the type of the pipeline that will use the descriptors. This parameter is ignored if `templateType` is not `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS`.
- `pipelineLayout` is a `VkPipelineLayout` object used to program the bindings. This parameter is ignored if `templateType` is not `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS`.
- `set` is the set number of the descriptor set in the pipeline layout that will be updated. This parameter is ignored if `templateType` is not `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS`.

Valid Usage

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00350
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET`, `descriptorSetLayout` **must** be a valid `VkDescriptorSetLayout` handle
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-10355
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS`, and the `VK_KHR_push_descriptor` extension is not enabled, `pushDescriptor` **must** be enabled
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00351
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS`, `pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00352
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS`, `pipelineLayout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00353
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS`, `set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-04615
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET`, `descriptorSetLayout` **must** not contain a binding with type `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`

Valid Usage (Implicit)

- VUID-VkDescriptorUpdateTemplateCreateInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO`
- VUID-VkDescriptorUpdateTemplateCreateInfo-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDescriptorUpdateTemplateCreateInfo-flags-zeroBitmask
`flags` **must** be `0`
- VUID-VkDescriptorUpdateTemplateCreateInfo-pDescriptorUpdateEntries-parameter
`pDescriptorUpdateEntries` **must** be a valid pointer to an array of `descriptorUpdateEntryCount` valid `VkDescriptorUpdateTemplateEntry` structures
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-parameter
`templateType` **must** be a valid `VkDescriptorUpdateTemplateType` value
- VUID-VkDescriptorUpdateTemplateCreateInfo-descriptorUpdateEntryCount-arraylength
`descriptorUpdateEntryCount` **must** be greater than `0`
- VUID-VkDescriptorUpdateTemplateCreateInfo-commonparent
Both of `descriptorSetLayout`, and `pipelineLayout` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkDescriptorUpdateTemplateCreateFlags;
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplateCreateFlags
typedef VkDescriptorUpdateTemplateCreateFlags
VkDescriptorUpdateTemplateCreateFlagsKHR;
```

`VkDescriptorUpdateTemplateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

The descriptor update template type is determined by the `VkDescriptorUpdateTemplateCreateInfo::templateType` property, which takes the following values:

```
// Provided by VK_VERSION_1_1
typedef enum VkDescriptorUpdateTemplateType {
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET = 0,
    // Provided by VK_VERSION_1_4
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS = 1,
    // Provided by VK_KHR_descriptor_update_template with VK_KHR_push_descriptor,
    // VK_KHR_push_descriptor with VK_VERSION_1_1 or VK_KHR_descriptor_update_template
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR =
VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS,
    // Provided by VK_KHR_descriptor_update_template
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET_KHR =
VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET,
} VkDescriptorUpdateTemplateType;
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplateType
typedef VkDescriptorUpdateTemplateType VkDescriptorUpdateTemplateTypeKHR;
```

- [VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET](#) specifies that the descriptor update template will be used for descriptor set updates only.
- [VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS](#) specifies that the descriptor update template will be used for push descriptor updates only.

The `VkDescriptorUpdateTemplateEntry` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorUpdateTemplateEntry {
    uint32_t        dstBinding;
    uint32_t        dstArrayElement;
    uint32_t        descriptorCount;
    VkDescriptorType descriptorType;
    size_t          offset;
    size_t          stride;
} VkDescriptorUpdateTemplateEntry;
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplateEntry
typedef VkDescriptorUpdateTemplateEntry VkDescriptorUpdateTemplateEntryKHR;
```

- `dstBinding` is the descriptor binding to update when using this descriptor update template.
- `dstArrayElement` is the starting element in the array belonging to `dstBinding`. If the descriptor binding identified by `dstBinding` has a descriptor type of [VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK](#) then `dstArrayElement` specifies the starting byte offset to update.

- **descriptorCount** is the number of descriptors to update. If **descriptorCount** is greater than the number of remaining array elements in the destination binding, those affect consecutive bindings in a manner similar to **VkWriteDescriptorSet** above. If the descriptor binding identified by **dstBinding** has a descriptor type of **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK** then **descriptorCount** specifies the number of bytes to update and the remaining array elements in the destination binding refer to the remaining number of bytes in it.
- **descriptorType** is a **VkDescriptorType** specifying the type of the descriptor.
- **offset** is the offset in bytes of the first binding in the raw data structure.
- **stride** is the stride in bytes between two consecutive array elements of the descriptor update information in the raw data structure. The actual pointer ptr for each array element j of update entry i is computed using the following formula:

```
const char *ptr = (const char *)pData + pDescriptorUpdateEntries[i].offset + j
* pDescriptorUpdateEntries[i].stride
```

The stride is useful in case the bindings are stored in structs along with other data. If **descriptorType** is **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK** then the value of **stride** is ignored and the stride is assumed to be 1, i.e. the descriptor update information for them is always specified as a contiguous range.

Valid Usage

- VUID-VkDescriptorUpdateTemplateEntry-dstBinding-00354
dstBinding **must** be a valid binding in the descriptor set layout implicitly specified when using a descriptor update template to update descriptors
- VUID-VkDescriptorUpdateTemplateEntry-dstArrayElement-00355
dstArrayElement and **descriptorCount** **must** be less than or equal to the number of array elements in the descriptor set binding implicitly specified when using a descriptor update template to update descriptors, and all applicable **consecutive bindings**
- VUID-VkDescriptorUpdateTemplateEntry-descriptor-02226
If **descriptor** type is **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK**, **dstArrayElement** **must** be an integer multiple of 4
- VUID-VkDescriptorUpdateTemplateEntry-descriptor-02227
If **descriptor** type is **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK**, **descriptorCount** **must** be an integer multiple of 4

Valid Usage (Implicit)

- VUID-VkDescriptorUpdateTemplateEntry-descriptorType-parameter
descriptorType **must** be a valid **VkDescriptorType** value

To destroy a descriptor update template, call:

```
// Provided by VK_VERSION_1_1
void vkDestroyDescriptorUpdateTemplate(
    VkDevice                                device,
    VkDescriptorUpdateTemplate              descriptorUpdateTemplate,
    const VkAllocationCallbacks*           pAllocator);
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to vkDestroyDescriptorUpdateTemplate
void vkDestroyDescriptorUpdateTemplateKHR(
    VkDevice                                device,
    VkDescriptorUpdateTemplate              descriptorUpdateTemplate,
    const VkAllocationCallbacks*           pAllocator);
```

- **device** is the logical device that has been used to create the descriptor update template
- **descriptorUpdateTemplate** is the descriptor update template to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyDescriptorUpdateTemplate-descriptorSetLayout-00356
If **VkAllocationCallbacks** were provided when **descriptorUpdateTemplate** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDescriptorUpdateTemplate-descriptorSetLayout-00357
If no **VkAllocationCallbacks** were provided when **descriptorUpdateTemplate** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorUpdateTemplate-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyDescriptorUpdateTemplate-descriptorUpdateTemplate-parameter
If **descriptorUpdateTemplate** is not **VK_NULL_HANDLE**, **descriptorUpdateTemplate** **must** be a valid **VkDescriptorUpdateTemplate** handle
- VUID-vkDestroyDescriptorUpdateTemplate-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyDescriptorUpdateTemplate-descriptorUpdateTemplate-parent
If **descriptorUpdateTemplate** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to `descriptorUpdateTemplate` **must** be externally synchronized

Once a `VkDescriptorUpdateTemplate` has been created, descriptor sets **can** be updated by calling:

```
// Provided by VK_VERSION_1_1
void vkUpdateDescriptorSetWithTemplate(
    VkDevice                device,
    VkDescriptorSet         descriptorSet,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const void*             pData);
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to vkUpdateDescriptorSetWithTemplate
void vkUpdateDescriptorSetWithTemplateKHR(
    VkDevice                device,
    VkDescriptorSet         descriptorSet,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const void*             pData);
```

- `device` is the logical device that updates the descriptor set.
- `descriptorSet` is the descriptor set to update
- `descriptorUpdateTemplate` is a `VkDescriptorUpdateTemplate` object specifying the update mapping between `pData` and the descriptor set to update.
- `pData` is a pointer to memory containing one or more `VkDescriptorImageInfo`, `VkDescriptorBufferInfo`, or `VkBufferView` structures or `VkAccelerationStructureKHR` or `VkAccelerationStructureNV` handles used to write the descriptors.

Valid Usage

- VUID-vkUpdateDescriptorSetWithTemplate-pData-01685
`pData` **must** be a valid pointer to a memory containing one or more valid instances of `VkAccelerationStructureKHR` handles, `VkAccelerationStructureNV` handles, `VkDescriptorImageInfo`, `VkDescriptorBufferInfo`, or `VkBufferView` in a layout defined by `descriptorUpdateTemplate` when it was created with `vkCreateDescriptorUpdateTemplate`
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-06995
Host access to `descriptorSet` **must** be `externally synchronized` unless explicitly denoted otherwise for specific flags

Valid Usage (Implicit)

- VUID-vkUpdateDescriptorSetWithTemplate-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-parameter **descriptorSet** **must** be a valid [VkDescriptorSet](#) handle
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorUpdateTemplate-parameter **descriptorUpdateTemplate** **must** be a valid [VkDescriptorUpdateTemplate](#) handle
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-parent **descriptorSet** **must** have been created, allocated, or retrieved from **device**
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorUpdateTemplate-parent **descriptorUpdateTemplate** **must** have been created, allocated, or retrieved from **device**

API Example

```
struct AppBufferView {
    VkBufferView bufferView;
    uint32_t      applicationRelatedInformation;
};

struct AppDataStructure
{
    VkDescriptorImageInfo  imageInfo;           // a single image info
    VkDescriptorBufferInfo bufferInfoArray[3]; // 3 buffer infos in an array
    AppBufferView          bufferView[2];      // An application-defined structure
containing a bufferView
    // ... some more application-related data
};

const VkDescriptorUpdateTemplateEntry descriptorUpdateTemplateEntries[] =
{
    // binding to a single image descriptor
    {
        .binding = 0,
        .dstArrayElement = 0,
        .descriptorCount = 1,
        .descriptorType = VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER,
        .offset = offsetof(AppDataStructure, imageInfo),
        .stride = 0           // stride not required if descriptorCount is 1
    },

    // binding to an array of buffer descriptors
    {
        .binding = 1,
        .dstArrayElement = 0,
        .descriptorCount = 3,
        .descriptorType = VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER,
    }
};
```

```

        .offset = offsetof(AppDataStructure, bufferInfoArray),
        .stride = sizeof(VkDescriptorBufferInfo)    // descriptor buffer infos are
compact
    },

    // binding to an array of buffer views
    {
        .binding = 2,
        .dstArrayElement = 0,
        .descriptorCount = 2,
        .descriptorType = VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER,
        .offset = offsetof(AppDataStructure, bufferView) +
                    offsetof(AppBufferView, bufferView),
        .stride = sizeof(AppBufferView)            // bufferViews do not have to be
compact
    },
};

// create a descriptor update template for descriptor set updates
const VkDescriptorUpdateTemplateCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .descriptorUpdateEntryCount = 3,
    .pDescriptorUpdateEntries = descriptorUpdateTemplateEntries,
    .templateType = VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET,
    .descriptorSetLayout = myLayout,
    .pipelineBindPoint = 0,    // ignored by given templateType
    .pipelineLayout = 0,      // ignored by given templateType
    .set = 0,                 // ignored by given templateType
};

VkDescriptorUpdateTemplate myDescriptorUpdateTemplate;
myResult = vkCreateDescriptorUpdateTemplate(
    myDevice,
    &createInfo,
    NULL,
    &myDescriptorUpdateTemplate);

AppDataStructure appData;

// fill appData here or cache it in your engine
vkUpdateDescriptorSetWithTemplate(myDevice, myDescriptorSet,
myDescriptorUpdateTemplate, &appData);

```

17.7. Descriptor Set Binding

To bind one or more descriptor sets to a command buffer, call:

```
// Provided by VK_VERSION_1_0
void vkCmdBindDescriptorSets(
    VkCommandBuffer                commandBuffer,
    VkPipelineBindPoint            pipelineBindPoint,
    VkPipelineLayout               layout,
    uint32_t                      firstSet,
    uint32_t                      descriptorSetCount,
    const VkDescriptorSet*         pDescriptorSets,
    uint32_t                      dynamicOffsetCount,
    const uint32_t*                pDynamicOffsets);
```

- `commandBuffer` is the command buffer that the descriptor sets will be bound to.
- `pipelineBindPoint` is a [VkPipelineBindPoint](#) indicating the type of the pipeline that will use the descriptors. There is a separate set of bind points for each pipeline type, so binding one does not disturb the others.
- `layout` is a [VkPipelineLayout](#) object used to program the bindings.
- `firstSet` is the set number of the first descriptor set to be bound.
- `descriptorSetCount` is the number of elements in the `pDescriptorSets` array.
- `pDescriptorSets` is a pointer to an array of handles to [VkDescriptorSet](#) objects describing the descriptor sets to bind to.
- `dynamicOffsetCount` is the number of dynamic offsets in the `pDynamicOffsets` array.
- `pDynamicOffsets` is a pointer to an array of `uint32_t` values specifying dynamic offsets.

`vkCmdBindDescriptorSets` binds descriptor sets `pDescriptorSets[0..descriptorSetCount-1]` to set numbers `[firstSet..firstSet+descriptorSetCount-1]` for subsequent [bound pipeline commands](#) set by `pipelineBindPoint`. Any bindings that were previously applied via these sets, or calls to [vkCmdSetDescriptorBufferOffsetsEXT](#) or [vkCmdBindDescriptorBufferEmbeddedSamplersEXT](#), are no longer valid.

Once bound, a descriptor set affects rendering of subsequent commands that interact with the given pipeline type in the command buffer until either a different set is bound to the same set number, or the set is disturbed as described in [Pipeline Layout Compatibility](#).

A compatible descriptor set **must** be bound for all set numbers that any shaders in a pipeline access, at the time that a drawing or dispatching command is recorded to execute using that pipeline. However, if none of the shaders in a pipeline statically use any bindings with a particular set number, then no descriptor set need be bound for that set number, even if the pipeline layout includes a non-trivial descriptor set layout for that set number.

When consuming a descriptor, a descriptor is considered valid if the descriptor is not undefined as described by [descriptor set allocation](#). If the `nullDescriptor` feature is enabled, a null descriptor is also considered valid. A descriptor that was disturbed by [Pipeline Layout Compatibility](#), or was never bound by `vkCmdBindDescriptorSets` is not considered valid. For any given descriptor, [VkDescriptorBindingFlagBits](#) and [VkDescriptorSetLayoutCreateFlagBits](#) determine if validity is defined in terms of the descriptor being statically accessed, or dynamically accessed. If the

descriptor is determined to be accessed by the appropriate definition, the consuming descriptor type in the pipeline **must** match the [VkDescriptorType](#) in [VkDescriptorSetLayoutCreateInfo](#) for the descriptor to be considered valid. If a descriptor is a mutable descriptor, the consuming descriptor type in the pipeline **must** match the active descriptor type for the descriptor to be considered valid.

NOTE

Further validation may be carried out beyond validation for descriptor types, e.g. [Texel Input Validation](#).

If any of the sets being bound include dynamic uniform or storage buffers, then [pDynamicOffsets](#) includes one element for each array element in each dynamic descriptor type binding in each set. Values are taken from [pDynamicOffsets](#) in an order such that all entries for set N come before set N+1; within a set, entries are ordered by the binding numbers in the descriptor set layouts; and within a binding array, elements are in order. [dynamicOffsetCount](#) **must** equal the total number of dynamic descriptors in the sets being bound.

The effective offset used for dynamic uniform and storage buffer bindings is the sum of the relative offset taken from [pDynamicOffsets](#), and the base address of the buffer plus base offset in the descriptor set. The range of the dynamic uniform and storage buffer bindings is the buffer range as specified in the descriptor set.

Each of the [pDescriptorSets](#) **must** be compatible with the pipeline layout specified by [layout](#). The layout used to program the bindings **must** also be compatible with the pipeline used in subsequent [bound pipeline commands](#) with that pipeline type, as defined in the [Pipeline Layout Compatibility](#) section.

The descriptor set contents bound by a call to [vkCmdBindDescriptorSets](#) **may** be consumed at the following times:

- For descriptor bindings created with the [VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT](#) bit set, the contents **may** be consumed when the command buffer is submitted to a queue, or during shader execution of the resulting draws and dispatches, or any time in between. Otherwise,
- during host execution of the command, or during shader execution of the resulting draws and dispatches, or any time in between.

Thus, the contents of a descriptor set binding **must** not be altered (overwritten by an update command, or freed) between the first point in time that it **may** be consumed, and when the command completes executing on the queue.

The contents of [pDynamicOffsets](#) are consumed immediately during execution of [vkCmdBindDescriptorSets](#). Once all pending uses have completed, it is legal to update and reuse a descriptor set.

Valid Usage

- VUID-vkCmdBindDescriptorSets-commandBuffer-11295

If [commandBuffer](#) is a secondary command buffer, it **must** have begun with [VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo](#) equal to

NULL

- VUID-vkCmdBindDescriptorSets-commandBuffer-11296

If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to NULL

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-00358

Each element of `pDescriptorSets` that is not `VK_NULL_HANDLE` **must** have been allocated with a `VkDescriptorSetLayout` that matches (is the same as, or identically defined as) the `VkDescriptorSetLayout` at set n in `layout`, where n is the sum of `firstSet` and the index into `pDescriptorSets`

- VUID-vkCmdBindDescriptorSets-dynamicOffsetCount-00359

`dynamicOffsetCount` **must** be equal to the total number of dynamic descriptors in `pDescriptorSets`

- VUID-vkCmdBindDescriptorSets-firstSet-00360

The sum of `firstSet` and `descriptorSetCount` **must** be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created

- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-01971

Each element of `pDynamicOffsets` which corresponds to a descriptor binding with type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** be a multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`

- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-01972

Each element of `pDynamicOffsets` which corresponds to a descriptor binding with type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** be a multiple of `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-01979

For each dynamic uniform or storage buffer binding in `pDescriptorSets`, the sum of the `effective offset` and the range of the binding **must** be less than or equal to the size of the buffer

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-06715

For each dynamic uniform or storage buffer binding in `pDescriptorSets`, if the range was set with `VK_WHOLE_SIZE` then `pDynamicOffsets` which corresponds to the descriptor binding **must** be 0

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-04616

Each element of `pDescriptorSets` **must** not have been allocated from a `VkDescriptorPool` with the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` flag set

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-06563

If the `graphicsPipelineLibrary` feature is not enabled, each element of `pDescriptorSets` **must** be a valid `VkDescriptorSet`

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-08010

Each element of `pDescriptorSets` **must** have been allocated with a `VkDescriptorSetLayout` which was not created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-09914

If any element of `pDescriptorSets` was allocated from a descriptor pool created with a `VkDescriptorPoolCreateInfo` structure that had a `VkDataGraphProcessingEngineCreateInfoARM` structure specifying foreign data processing engines in its `pNext` chain, then the command pool from which `commandBuffer` was allocated **must** have been created with a `VkCommandPoolCreateInfo` structure that had a `VkDataGraphProcessingEngineCreateInfoARM` structure in its `pNext` chain specifying a superset of all the foreign data processing engines specified when creating the descriptor pools from which the elements of `pDescriptorSets` were allocated

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-09915

If none of the elements of `pDescriptorSets` were allocated from a descriptor pool created with a `VkDescriptorPoolCreateInfo` structure that had a `VkDataGraphProcessingEngineCreateInfoARM` structure specifying foreign data processing engines in its `pNext` chain, then the command pool from which `commandBuffer` was allocated **must** not have been created with a `VkCommandPoolCreateInfo` structure that had a `VkDataGraphProcessingEngineCreateInfoARM` structure in its `pNext` chain

- VUID-vkCmdBindDescriptorSets-pipelineBindPoint-00361

`pipelineBindPoint` **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorSets-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdBindDescriptorSets-pipelineBindPoint-parameter

`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value

- VUID-vkCmdBindDescriptorSets-layout-parameter

`layout` **must** be a valid `VkPipelineLayout` handle

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-parameter

`pDescriptorSets` **must** be a valid pointer to an array of `descriptorSetCount` valid or `VK_NULL_HANDLE` `VkDescriptorSet` handles

- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-parameter

If `dynamicOffsetCount` is not 0, `pDynamicOffsets` **must** be a valid pointer to an array of `dynamicOffsetCount` `uint32_t` values

- VUID-vkCmdBindDescriptorSets-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdBindDescriptorSets-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_DATA_GRAPH_BIT_ARM`, or `VK_QUEUE_GRAPHICS_BIT` operations

- VUID-vkCmdBindDescriptorSets-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdBindDescriptorSets-descriptorSetCount-arraylength

`descriptorSetCount` **must** be greater than 0

- VUID-vkCmdBindDescriptorSets-commonparent

Each of `commandBuffer`, `layout`, and the elements of `pDescriptorSets` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_DATA_GRAPH_BIT_ARM VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

`vkCmdBindDescriptorSets` is not affected by [conditional rendering](#)

To bind one or more descriptor sets to a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdBindDescriptorSets(
    VkCommandBuffer          commandBuffer,
    const VkBindDescriptorSetsInfo* pBindDescriptorSetsInfo);
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to vkCmdBindDescriptorSets2
void vkCmdBindDescriptorSets2KHR(
    VkCommandBuffer          commandBuffer,
    const VkBindDescriptorSetsInfo* pBindDescriptorSetsInfo);
```

- `commandBuffer` is the command buffer that the descriptor sets will be bound to.

- `pBindDescriptorSetsInfo` is a pointer to a `VkBindDescriptorSetsInfo` structure.

Valid Usage

- VUID-vkCmdBindDescriptorSets2-commandBuffer-11295
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorSets2-commandBuffer-11296
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorSets2-pBindDescriptorSetsInfo-09467
Each bit in `pBindDescriptorSetsInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorSets2-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindDescriptorSets2-pBindDescriptorSetsInfo-parameter
`pBindDescriptorSetsInfo` **must** be a valid pointer to a valid `VkBindDescriptorSetsInfo` structure
- VUID-vkCmdBindDescriptorSets2-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBindDescriptorSets2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdBindDescriptorSets2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	State

Conditional Rendering

vkCmdBindDescriptorSets2 is not affected by [conditional rendering](#)

The `VkBindDescriptorSetsInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkBindDescriptorSetsInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkShaderStageFlags   stageFlags;
    VkPipelineLayout      layout;
    uint32_t             firstSet;
    uint32_t             descriptorSetCount;
    const VkDescriptorSet* pDescriptorSets;
    uint32_t             dynamicOffsetCount;
    const uint32_t*       pDynamicOffsets;
} VkBindDescriptorSetsInfo;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkBindDescriptorSetsInfo
typedef VkBindDescriptorSetsInfo VkBindDescriptorSetsInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages the descriptor sets will be bound to.
- `layout` is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, `layout` **can** be `VK_NULL_HANDLE` and the layout **must** be specified by chaining the `VkPipelineLayoutCreateInfo` structure off the `pNext`.
- `firstSet` is the set number of the first descriptor set to be bound.
- `descriptorSetCount` is the number of elements in the `pDescriptorSets` array.

- `pDescriptorSets` is a pointer to an array of handles to `VkDescriptorSet` objects describing the descriptor sets to bind to.
- `dynamicOffsetCount` is the number of dynamic offsets in the `pDynamicOffsets` array.
- `pDynamicOffsets` is a pointer to an array of `uint32_t` values specifying dynamic offsets.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`.

Valid Usage

- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-00358
Each element of `pDescriptorSets` that is not `VK_NULL_HANDLE` **must** have been allocated with a `VkDescriptorSetLayout` that matches (is the same as, or identically defined as) the `VkDescriptorSetLayout` at set n in `layout`, where n is the sum of `firstSet` and the index into `pDescriptorSets`
- VUID-VkBindDescriptorSetsInfo-dynamicOffsetCount-00359
`dynamicOffsetCount` **must** be equal to the total number of dynamic descriptors in `pDescriptorSets`
- VUID-VkBindDescriptorSetsInfo-firstSet-00360
The sum of `firstSet` and `descriptorSetCount` **must** be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-VkBindDescriptorSetsInfo-pDynamicOffsets-01971
Each element of `pDynamicOffsets` which corresponds to a descriptor binding with type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** be a multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`
- VUID-VkBindDescriptorSetsInfo-pDynamicOffsets-01972
Each element of `pDynamicOffsets` which corresponds to a descriptor binding with type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** be a multiple of `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-01979
For each dynamic uniform or storage buffer binding in `pDescriptorSets`, the sum of the `effective offset` and the range of the binding **must** be less than or equal to the size of the buffer
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-06715
For each dynamic uniform or storage buffer binding in `pDescriptorSets`, if the range was set with `VK_WHOLE_SIZE` then `pDynamicOffsets` which corresponds to the descriptor binding **must** be 0
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-04616
Each element of `pDescriptorSets` **must** not have been allocated from a `VkDescriptorPool`

with the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` flag set

- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-06563
If the `graphicsPipelineLibrary` feature is not enabled, each element of `pDescriptorSets` **must** be a valid `VkDescriptorSet`
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-08010
Each element of `pDescriptorSets` **must** have been allocated with a `VkDescriptorSetLayout` which was not created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-09914
If any element of `pDescriptorSets` was allocated from a descriptor pool created with a `VkDescriptorPoolCreateInfo` structure that had a `VkDataGraphProcessingEngineCreateInfoARM` structure specifying foreign data processing engines in its `pNext` chain, then the command pool from which `commandBuffer` was allocated **must** have been created with a `VkCommandPoolCreateInfo` structure that had a `VkDataGraphProcessingEngineCreateInfoARM` structure in its `pNext` chain specifying a superset of all the foreign data processing engines specified when creating the descriptor pools from which the elements of `pDescriptorSets` were allocated
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-09915
If none of the elements of `pDescriptorSets` were allocated from a descriptor pool created with a `VkDescriptorPoolCreateInfo` structure that had a `VkDataGraphProcessingEngineCreateInfoARM` structure specifying foreign data processing engines in its `pNext` chain, then the command pool from which `commandBuffer` was allocated **must** not have been created with a `VkCommandPoolCreateInfo` structure that had a `VkDataGraphProcessingEngineCreateInfoARM` structure in its `pNext` chain
- VUID-VkBindDescriptorSetsInfo-None-09495
If the `dynamicPipelineLayout` feature is not enabled, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkBindDescriptorSetsInfo-layout-09496
If `layout` is `VK_NULL_HANDLE`, the `pNext` chain **must** include a valid `VkPipelineLayoutCreateInfo` structure

Valid Usage (Implicit)

- VUID-VkBindDescriptorSetsInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_DESCRIPTOR_SETS_INFO`
- VUID-VkBindDescriptorSetsInfo-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`
- VUID-VkBindDescriptorSetsInfo-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkBindDescriptorSetsInfo-stageFlags-parameter
`stageFlags` **must** be a valid combination of `VkShaderStageFlagBits` values
- VUID-VkBindDescriptorSetsInfo-stageFlags-requiredbitmask

`stageFlags` **must** not be 0

- VUID-VkBindDescriptorSetsInfo-layout-parameter
If `layout` is not `VK_NULL_HANDLE`, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-parameter
`pDescriptorSets` **must** be a valid pointer to an array of `descriptorSetCount` valid `VkDescriptorSet` handles
- VUID-VkBindDescriptorSetsInfo-pDynamicOffsets-parameter
If `dynamicOffsetCount` is not 0, and `pDynamicOffsets` is not `NULL`, `pDynamicOffsets` **must** be a valid pointer to an array of `dynamicOffsetCount` or `VK_NULL_HANDLE` `uint32_t` values
- VUID-VkBindDescriptorSetsInfo-descriptorSetCount-arraylength
`descriptorSetCount` **must** be greater than 0
- VUID-VkBindDescriptorSetsInfo-commonparent
Both of `layout`, and the elements of `pDescriptorSets` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

17.8. Push Descriptor Updates

In addition to allocating descriptor sets and binding them to a command buffer, an application **can** record descriptor updates into the command buffer.

To push descriptor updates into a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdPushDescriptorSet(
    VkCommandBuffer          commandBuffer,
    VkPipelineBindPoint      pipelineBindPoint,
    VkPipelineLayout         layout,
    uint32_t                 set,
    uint32_t                 descriptorWriteCount,
    const VkWriteDescriptorSet* pDescriptorWrites);
```

```
// Provided by VK_KHR_push_descriptor
// Equivalent to vkCmdPushDescriptorSet
void vkCmdPushDescriptorSetKHR(
    VkCommandBuffer          commandBuffer,
    VkPipelineBindPoint      pipelineBindPoint,
    VkPipelineLayout         layout,
    uint32_t                 set,
    uint32_t                 descriptorWriteCount,
    const VkWriteDescriptorSet* pDescriptorWrites);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `pipelineBindPoint` is a `VkPipelineBindPoint` indicating the type of the pipeline that will use the descriptors. There is a separate set of push descriptor bindings for each pipeline type, so

binding one does not disturb the others.

- **layout** is a [VkPipelineLayout](#) object used to program the bindings.
- **set** is the set number of the descriptor set in the pipeline layout that will be updated.
- **descriptorWriteCount** is the number of elements in the **pDescriptorWrites** array.
- **pDescriptorWrites** is a pointer to an array of [VkWriteDescriptorSet](#) structures describing the descriptors to be updated.

Push descriptors are a small bank of descriptors whose storage is internally managed by the command buffer rather than being written into a descriptor set and later bound to a command buffer. Push descriptors allow for incremental updates of descriptors without managing the lifetime of descriptor sets.

When a command buffer begins recording, all push descriptors are undefined. Push descriptors **can** be updated incrementally and cause shaders to use the updated descriptors for subsequent [bound pipeline commands](#) with the pipeline type set by **pipelineBindPoint** until the descriptor is overwritten, or else until the set is disturbed as described in [Pipeline Layout Compatibility](#). When the set is disturbed or push descriptors with a different descriptor set layout are set, all push descriptors are undefined.

Push descriptors that are [statically used](#) by a pipeline **must** not be undefined at the time that a drawing or dispatching command is recorded to execute using that pipeline. This includes immutable sampler descriptors, which **must** be pushed before they are accessed by a pipeline (the immutable samplers are pushed, rather than the samplers in **pDescriptorWrites**). Push descriptors that are not statically used **can** remain undefined.

Push descriptors do not use dynamic offsets. Instead, the corresponding non-dynamic descriptor types **can** be used and the **offset** member of [VkDescriptorBufferInfo](#) **can** be changed each time the descriptor is written.

Each element of **pDescriptorWrites** is interpreted as in [VkWriteDescriptorSet](#), except the **dstSet** member is ignored.

To push an immutable sampler, use a [VkWriteDescriptorSet](#) with **dstBinding** and **dstArrayElement** selecting the immutable sampler's binding. If the descriptor type is [VK_DESCRIPTOR_TYPE_SAMPLER](#), the **pImageInfo** parameter is ignored and the immutable sampler is taken from the push descriptor set layout in the pipeline layout. If the descriptor type is [VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER](#), the **sampler** member of the **pImageInfo** parameter is ignored and the immutable sampler is taken from the push descriptor set layout in the pipeline layout.

Valid Usage

- VUID-vkCmdPushDescriptorSet-commandBuffer-11295
If **commandBuffer** is a secondary command buffer, it **must** have begun with [VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo](#) equal to **NULL**
- VUID-vkCmdPushDescriptorSet-commandBuffer-11296

If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`

- VUID-vkCmdPushDescriptorSet-set-00364
`set` **must** be less than `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-vkCmdPushDescriptorSet-set-00365
`set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`
- VUID-vkCmdPushDescriptorSet-pDescriptorWrites-06494
For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `pDescriptorWrites[i].pImageInfo` **must** be a valid pointer to an array of `pDescriptorWrites[i].descriptorCount` valid `VkDescriptorImageInfo` structures
- VUID-vkCmdPushDescriptorSet-pipelineBindPoint-00363
`pipelineBindPoint` **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family
- VUID-vkCmdPushDescriptorSet-None-10356
If the `VK_KHR_push_descriptor` extension is not enabled, `pushDescriptor` **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSet-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushDescriptorSet-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-vkCmdPushDescriptorSet-layout-parameter
`layout` **must** be a valid `VkPipelineLayout` handle
- VUID-vkCmdPushDescriptorSet-pDescriptorWrites-parameter
`pDescriptorWrites` **must** be a valid pointer to an array of `descriptorWriteCount` valid `VkWriteDescriptorSet` structures
- VUID-vkCmdPushDescriptorSet-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdPushDescriptorSet-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdPushDescriptorSet-vidcoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdPushDescriptorSet-descriptorWriteCount-arraylength
`descriptorWriteCount` **must** be greater than `0`

- VUID-vkCmdPushDescriptorSet-commonparent

Both of **commandBuffer**, and **layout must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	State

Conditional Rendering

vkCmdPushDescriptorSet is not affected by **conditional rendering**

To push descriptor updates into a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdPushDescriptorSet2(
    VkCommandBuffer                commandBuffer,
    const VkPushDescriptorSetInfo* pPushDescriptorSetInfo);
```

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
// Equivalent to vkCmdPushDescriptorSet2
void vkCmdPushDescriptorSet2KHR(
    VkCommandBuffer                commandBuffer,
    const VkPushDescriptorSetInfo* pPushDescriptorSetInfo);
```

- **commandBuffer** is the command buffer that the descriptors will be recorded in.
- **pPushDescriptorSetInfo** is a pointer to a **VkPushDescriptorSetInfo** structure.

Valid Usage

- VUID-vkCmdPushDescriptorSet2-commandBuffer-11295
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdPushDescriptorSet2-commandBuffer-11296
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdPushDescriptorSet2-pPushDescriptorSetInfo-09468
Each bit in `pPushDescriptorSetInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family
- VUID-vkCmdPushDescriptorSet2-None-10357
If the `VK_KHR_push_descriptor` extension is not enabled, `pushDescriptor` **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSet2-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushDescriptorSet2-pPushDescriptorSetInfo-parameter
`pPushDescriptorSetInfo` **must** be a valid pointer to a valid `VkPushDescriptorSetInfo` structure
- VUID-vkCmdPushDescriptorSet2-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdPushDescriptorSet2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdPushDescriptorSet2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	State

Conditional Rendering

vkCmdPushDescriptorSet2 is not affected by [conditional rendering](#)

The `VkPushDescriptorSetInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPushDescriptorSetInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkShaderStageFlags       stageFlags;
    VkPipelineLayout         layout;
    uint32_t                 set;
    uint32_t                 descriptorWriteCount;
    const VkWriteDescriptorSet* pDescriptorWrites;
} VkPushDescriptorSetInfo;
```

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
// Equivalent to VkPushDescriptorSetInfo
typedef VkPushDescriptorSetInfo VkPushDescriptorSetInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages that will use the descriptors.
- `layout` is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, `layout` **can** be `VK_NULL_HANDLE` and the layout **must** be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`
- `set` is the set number of the descriptor set in the pipeline layout that will be updated.
- `descriptorWriteCount` is the number of elements in the `pDescriptorWrites` array.
- `pDescriptorWrites` is a pointer to an array of `VkWriteDescriptorSet` structures describing the descriptors to be updated.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`.

Valid Usage

- VUID-VkPushDescriptorSetInfo-set-00364
`set` **must** be less than `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created
- VUID-VkPushDescriptorSetInfo-set-00365
`set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`
- VUID-VkPushDescriptorSetInfo-pDescriptorWrites-06494
For each element `i` where `pDescriptorWrites[i].descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, `pDescriptorWrites[i].pImageInfo` **must** be a valid pointer to an array of `pDescriptorWrites[i].descriptorCount` valid `VkDescriptorImageInfo` structures
- VUID-VkPushDescriptorSetInfo-None-09495
If the `dynamicPipelineLayout` feature is not enabled, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkPushDescriptorSetInfo-layout-09496
If `layout` is `VK_NULL_HANDLE`, the `pNext` chain **must** include a valid `VkPipelineLayoutCreateInfo` structure

Valid Usage (Implicit)

- VUID-VkPushDescriptorSetInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PUSH_DESCRIPTOR_SET_INFO`
- VUID-VkPushDescriptorSetInfo-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`
- VUID-VkPushDescriptorSetInfo-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPushDescriptorSetInfo-stageFlags-parameter
`stageFlags` **must** be a valid combination of `VkShaderStageFlagBits` values
- VUID-VkPushDescriptorSetInfo-stageFlags-requiredbitmask
`stageFlags` **must** not be `0`

- VUID-VkPushDescriptorSetInfo-layout-parameter
If `layout` is not `VK_NULL_HANDLE`, `layout` **must** be a valid `VkPipelineLayout` handle
- VUID-VkPushDescriptorSetInfo-pDescriptorWrites-parameter
`pDescriptorWrites` **must** be a valid pointer to an array of `descriptorWriteCount` valid `VkWriteDescriptorSet` structures
- VUID-VkPushDescriptorSetInfo-descriptorWriteCount-arraylength
`descriptorWriteCount` **must** be greater than 0

17.9. Push Descriptor Updates With Descriptor Update Templates

To use a descriptor update template to specify the push descriptors to update in a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdPushDescriptorSetWithTemplate(
    VkCommandBuffer          commandBuffer,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    VkPipelineLayout         layout,
    uint32_t                 set,
    const void*               pData);
```

```
// Provided by VK_KHR_descriptor_update_template with VK_KHR_push_descriptor,
VK_KHR_push_descriptor with VK_VERSION_1_1 or VK_KHR_descriptor_update_template
// Equivalent to vkCmdPushDescriptorSetWithTemplate
void vkCmdPushDescriptorSetWithTemplateKHR(
    VkCommandBuffer          commandBuffer,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    VkPipelineLayout         layout,
    uint32_t                 set,
    const void*               pData);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `descriptorUpdateTemplate` is a descriptor update template defining how to interpret the descriptor information in `pData`.
- `layout` is a `VkPipelineLayout` object used to program the bindings. It **must** be compatible with the layout used to create the `descriptorUpdateTemplate` handle.
- `set` is the set number of the descriptor set in the pipeline layout that will be updated. This **must** be the same number used to create the `descriptorUpdateTemplate` handle.
- `pData` is a pointer to memory containing descriptors for the templated update.

Valid Usage

- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-11295

If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`

- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-11296

If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`

- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-00366

The `pipelineBindPoint` specified during the creation of the descriptor update template **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

- VUID-vkCmdPushDescriptorSetWithTemplate-pData-01686

`pData` **must** be a valid pointer to a memory containing one or more valid instances of `VkDescriptorImageInfo`, `VkDescriptorBufferInfo`, or `VkBufferView` in a layout defined by `descriptorUpdateTemplate` when it was created with `vkCreateDescriptorUpdateTemplate`

- VUID-vkCmdPushDescriptorSetWithTemplate-layout-07993

`layout` **must** be compatible with the layout used to create `descriptorUpdateTemplate`

- VUID-vkCmdPushDescriptorSetWithTemplate-descriptorUpdateTemplate-07994

`descriptorUpdateTemplate` **must** have been created with a `templateType` of `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS`

- VUID-vkCmdPushDescriptorSetWithTemplate-set-07995

`set` **must** be the same value used to create `descriptorUpdateTemplate`

- VUID-vkCmdPushDescriptorSetWithTemplate-set-07304

`set` **must** be less than `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created

- VUID-vkCmdPushDescriptorSetWithTemplate-set-11854

`set` **must** reference a valid `VkDescriptorSetLayout` handle in `layout`

- VUID-vkCmdPushDescriptorSetWithTemplate-set-07305

`set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT`

- VUID-vkCmdPushDescriptorSetWithTemplate-None-10358

If the `VK_KHR_push_descriptor` extension is not enabled, `pushDescriptor` **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdPushDescriptorSetWithTemplate-descriptorUpdateTemplate-parameter

`descriptorUpdateTemplate` **must** be a valid `VkDescriptorUpdateTemplate` handle

- VUID-vkCmdPushDescriptorSetWithTemplate-layout-parameter
`layout` **must** be a valid `VkPipelineLayout` handle
- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdPushDescriptorSetWithTemplate-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdPushDescriptorSetWithTemplate-commonparent
Each of `commandBuffer`, `descriptorUpdateTemplate`, and `layout` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

`vkCmdPushDescriptorSetWithTemplate` is not affected by `conditional rendering`

API Example

```
struct AppDataStructure
{
    VkDescriptorImageInfo imageInfo;           // a single image info
    // ... some more application-related data
};

const VkDescriptorUpdateTemplateEntry descriptorUpdateTemplateEntries[] =
{
```

```

// binding to a single image descriptor
{
    .binding = 0,
    .dstArrayElement = 0,
    .descriptorCount = 1,
    .descriptorType = VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER,
    .offset = offsetof(AppDataStructure, imageInfo),
    .stride = 0    // not required if descriptorCount is 1
}
};

// create a descriptor update template for push descriptor set updates
const VkDescriptorUpdateTemplateCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .descriptorUpdateEntryCount = 1,
    .pDescriptorUpdateEntries = descriptorUpdateTemplateEntries,
    .templateType = VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTOR,
    .descriptorSetLayout = 0,    // ignored by given templateType
    .pipelineBindPoint = VK_PIPELINE_BIND_POINT_GRAPHICS,
    .pipelineLayout = myPipelineLayout,
    .set = 0,
};

VkDescriptorUpdateTemplate myDescriptorUpdateTemplate;
myResult = vkCreateDescriptorUpdateTemplate(
    myDevice,
    &createInfo,
    NULL,
    &myDescriptorUpdateTemplate);

AppDataStructure appData;
// fill appData here or cache it in your engine
vkCmdPushDescriptorSetWithTemplate(myCmdBuffer, myDescriptorUpdateTemplate,
myPipelineLayout, 0, &appData);

```

To use a descriptor update template to specify the push descriptors to update in a command buffer, call:

```

// Provided by VK_VERSION_1_4
void vkCmdPushDescriptorSetWithTemplate2(
    VkCommandBuffer                commandBuffer,
    const VkPushDescriptorSetWithTemplateInfo* pPushDescriptorSetWithTemplateInfo);

```

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
// Equivalent to vkCmdPushDescriptorSetWithTemplate2
void vkCmdPushDescriptorSetWithTemplate2KHR(
    VkCommandBuffer                                commandBuffer,
    const VkPushDescriptorSetWithTemplateInfo*      pPushDescriptorSetWithTemplateInfo);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `pPushDescriptorSetWithTemplateInfo` is a pointer to a `VkPushDescriptorSetWithTemplateInfo` structure.

Valid Usage

- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-11295
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-11296
If `commandBuffer` is a secondary command buffer, it **must** have begun with `VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo` equal to `NULL`

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPushDescriptorSetWithTemplate2-pPushDescriptorSetWithTemplateInfo-parameter
`pPushDescriptorSetWithTemplateInfo` **must** be a valid pointer to a valid `VkPushDescriptorSetWithTemplateInfo` structure
- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdPushDescriptorSetWithTemplate2-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	State

Conditional Rendering

`vkCmdPushDescriptorSetWithTemplate2` is not affected by [conditional rendering](#)

The `VkPushDescriptorSetWithTemplateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPushDescriptorSetWithTemplateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkDescriptorUpdateTemplate descriptorUpdateTemplate;
    VkPipelineLayout          layout;
    uint32_t                  set;
    const void*              pData;
} VkPushDescriptorSetWithTemplateInfo;
```

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
// Equivalent to VkPushDescriptorSetWithTemplateInfo
typedef VkPushDescriptorSetWithTemplateInfo VkPushDescriptorSetWithTemplateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorUpdateTemplate` is a descriptor update template defining how to interpret the descriptor information in `pData`.
- `layout` is a `VkPipelineLayout` object used to program the bindings. It **must** be compatible with the layout used to create the `descriptorUpdateTemplate` handle. If the `dynamicPipelineLayout` feature is enabled, `layout` **can** be `VK_NULL_HANDLE` and the layout **must** be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`
- `set` is the set number of the descriptor set in the pipeline layout that will be updated. This **must** be the same number used to create the `descriptorUpdateTemplate` handle.
- `pData` is a pointer to memory containing descriptors for the templated update.

Valid Usage

- VUID-VkPushDescriptorSetWithTemplateInfo-commandBuffer-00366
The `pipelineBindPoint` specified during the creation of the descriptor update template **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family
- VUID-VkPushDescriptorSetWithTemplateInfo-pData-01686
`pData` **must** be a valid pointer to a memory containing one or more valid instances of `VkDescriptorImageInfo`, `VkDescriptorBufferInfo`, or `VkBufferView` in a layout defined by `descriptorUpdateTemplate` when it was created with `vkCreateDescriptorUpdateTemplate`
